

# LHC Cryogenics Control

**Enrique BLANCO**

*Industrial Controls Engineering Group*

**EN** Engineering Department

1. Introduction
2. CERN
  1. Networking
  2. Controls Architecture
3. LHC Cryogenics
4. LHC Cryogenics Controls Architecture
  1. Production & Tunnel
  2. Communications view
  3. Frameworks: UNICOS & FESA
  4. Supervision: PVSS SCADA
  5. Interfaces: LHC Logging (long term archiving)
5. Shared responsibilities: EN/ICE – TE/CRG

# 1.- Introduction: Control systems

- Classical **industrial control systems** covers the three layers of the typical control pyramid

- ✓ The control layer may use not only PLCs but also special equipment like gateways (**FECs**) running linux
- **UNICOS** provides a **framework** and specialized **generation tools** to create automatically such industrial control systems both in the PLC and the SCADA.
  - ✓ Rapid startup of commissioning
  - ✓ Manual intervention is required for the control logic and HMI synoptics (process dependent)
- Talk goal: **To give the cryogenics operator an overview of the technologies and architectures deployed in the cryogenics control system**

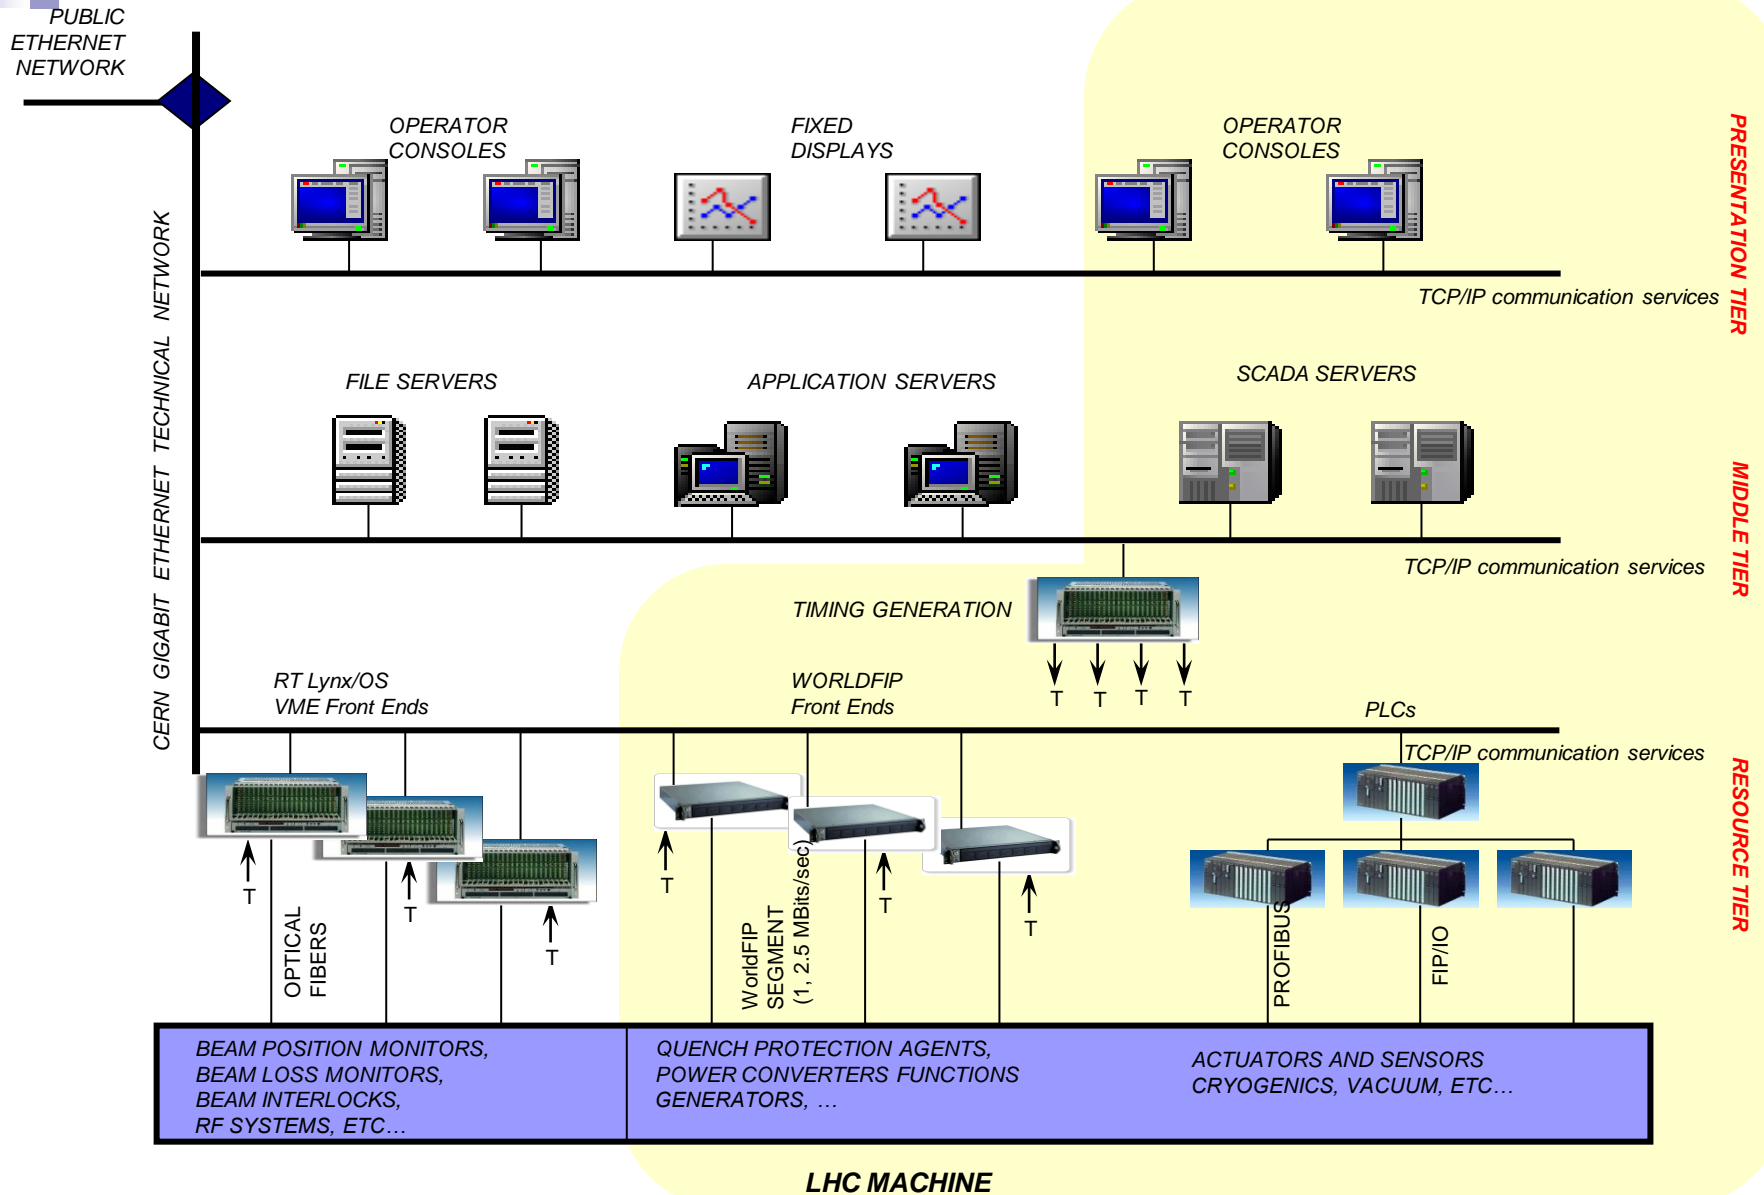

# 2.- CERN Architecture: networking

## Desktop Computing (GPN) vs. Technical Network (TN) Windows Terminal Servers (WTS)

# 2.- CERN Architecture: Controls

## LHC cryogenics overview

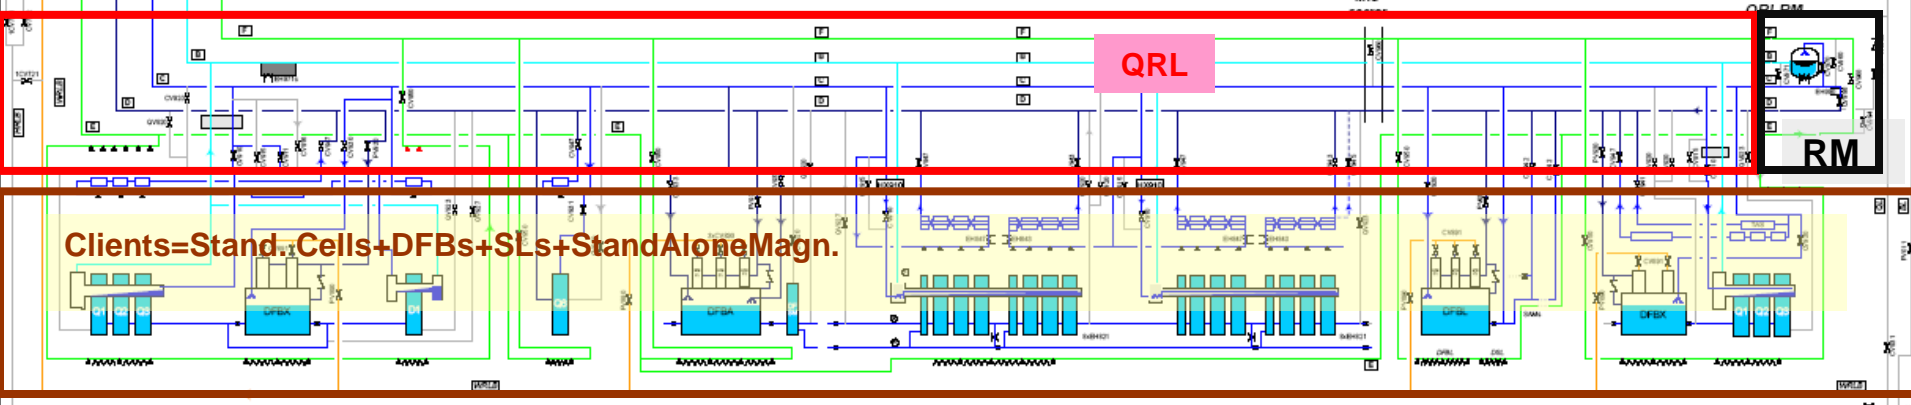

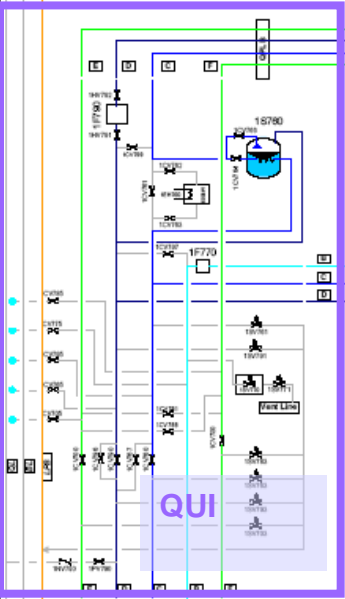

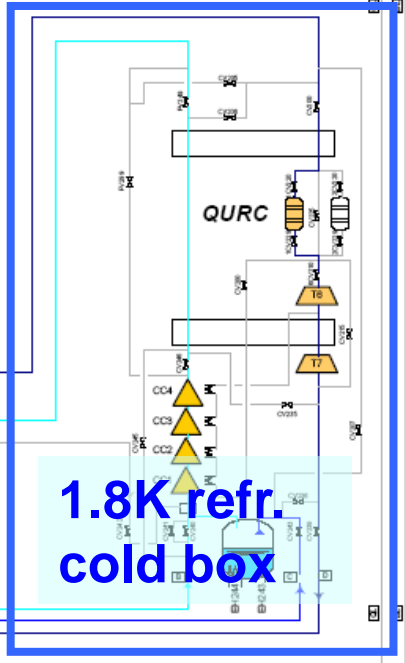

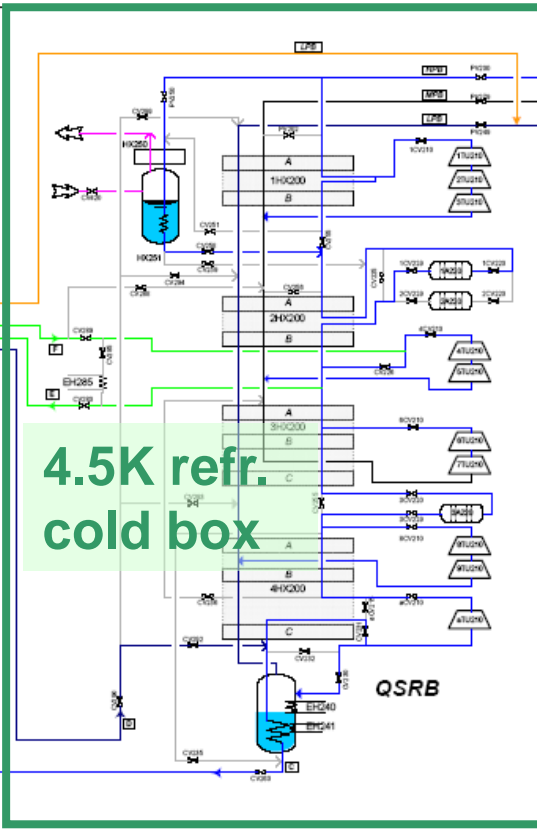

LHC tunnel (27 km)

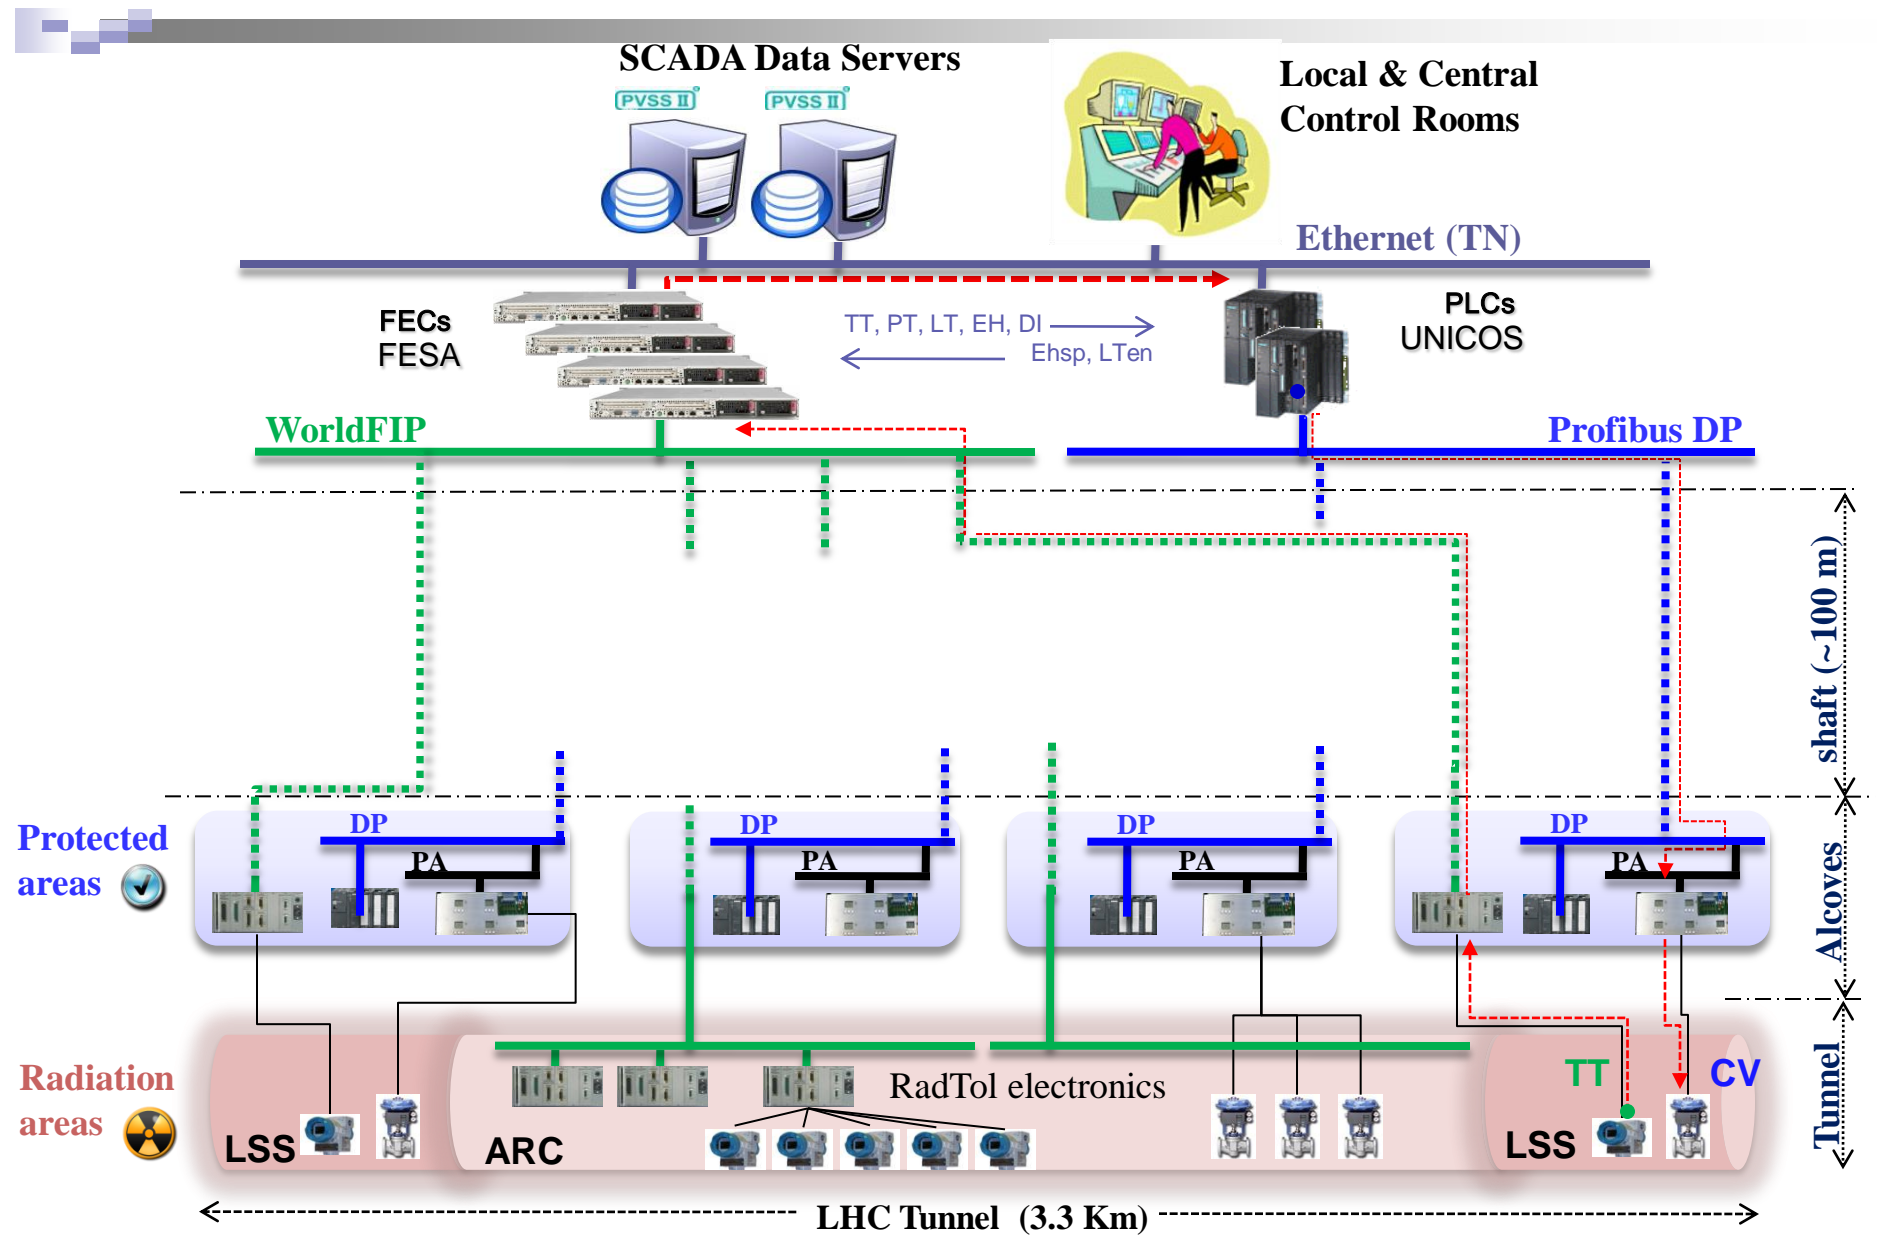

3.3 km

# 4.- Cryogenics Control System: Tunnel Architecture

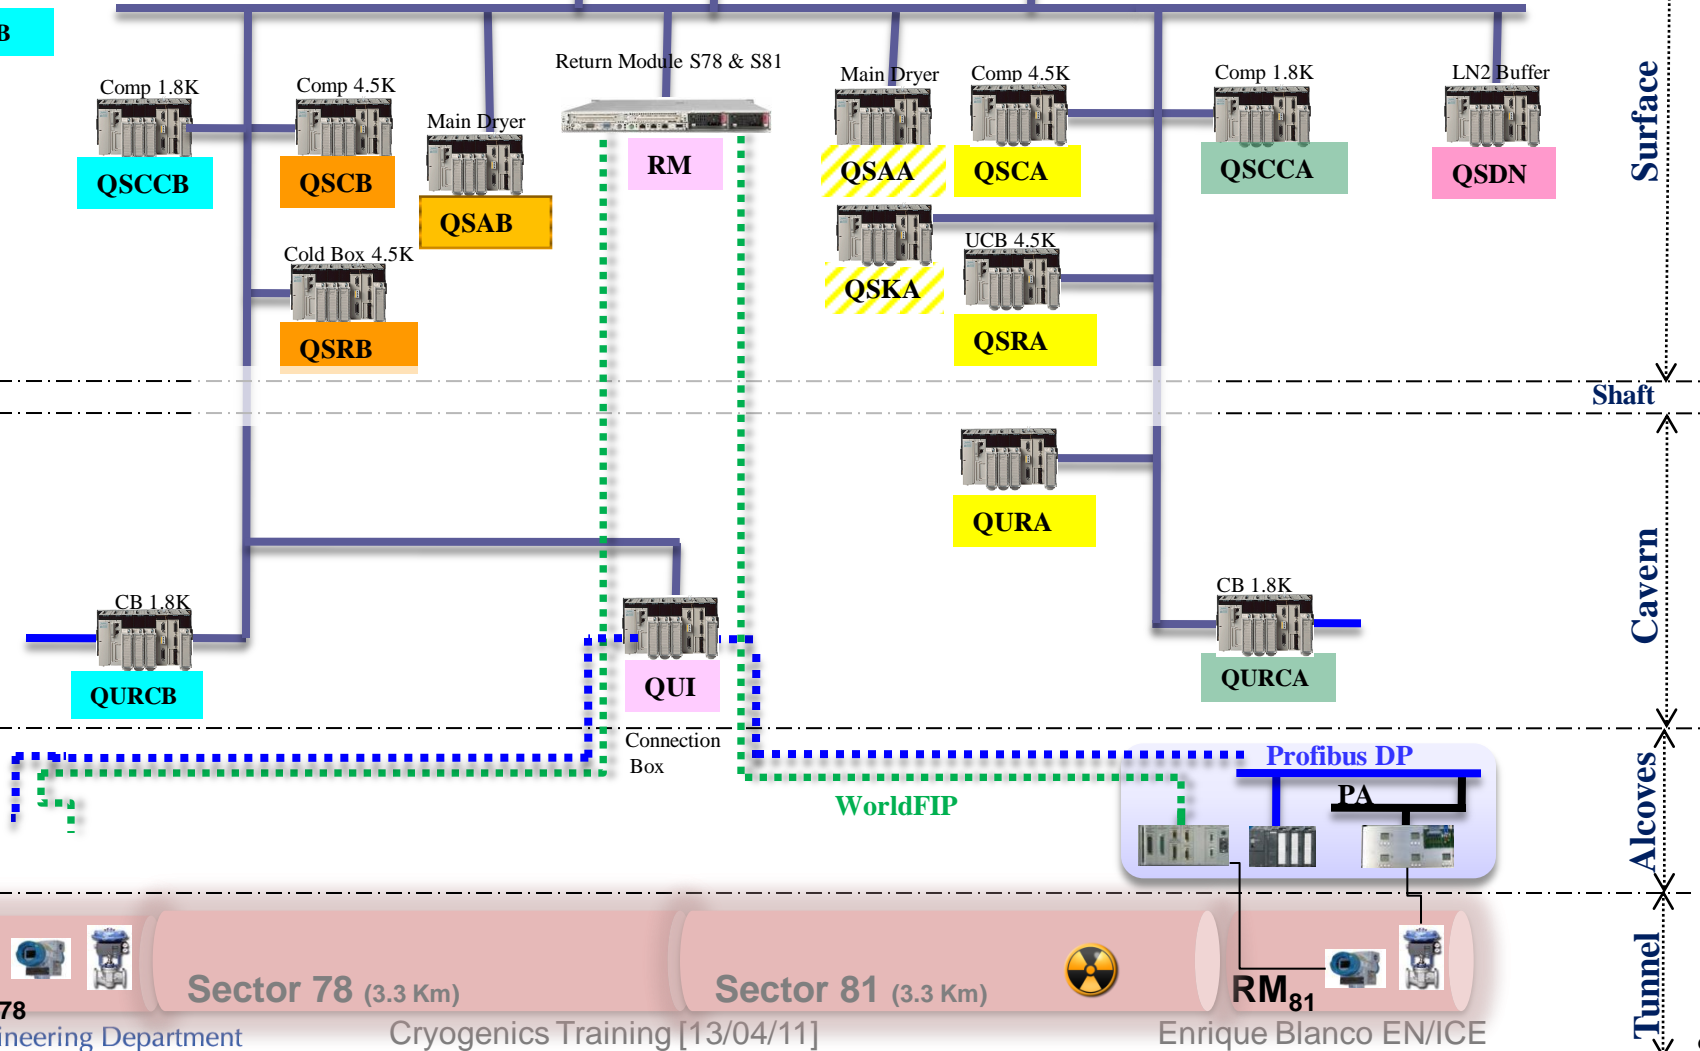

# 4.- Cryogenics Control System: Refrigerators Architecture (P8)

- LHCA
- LHCCA
- LHCB
- LHCCB

SCADA Data Servers

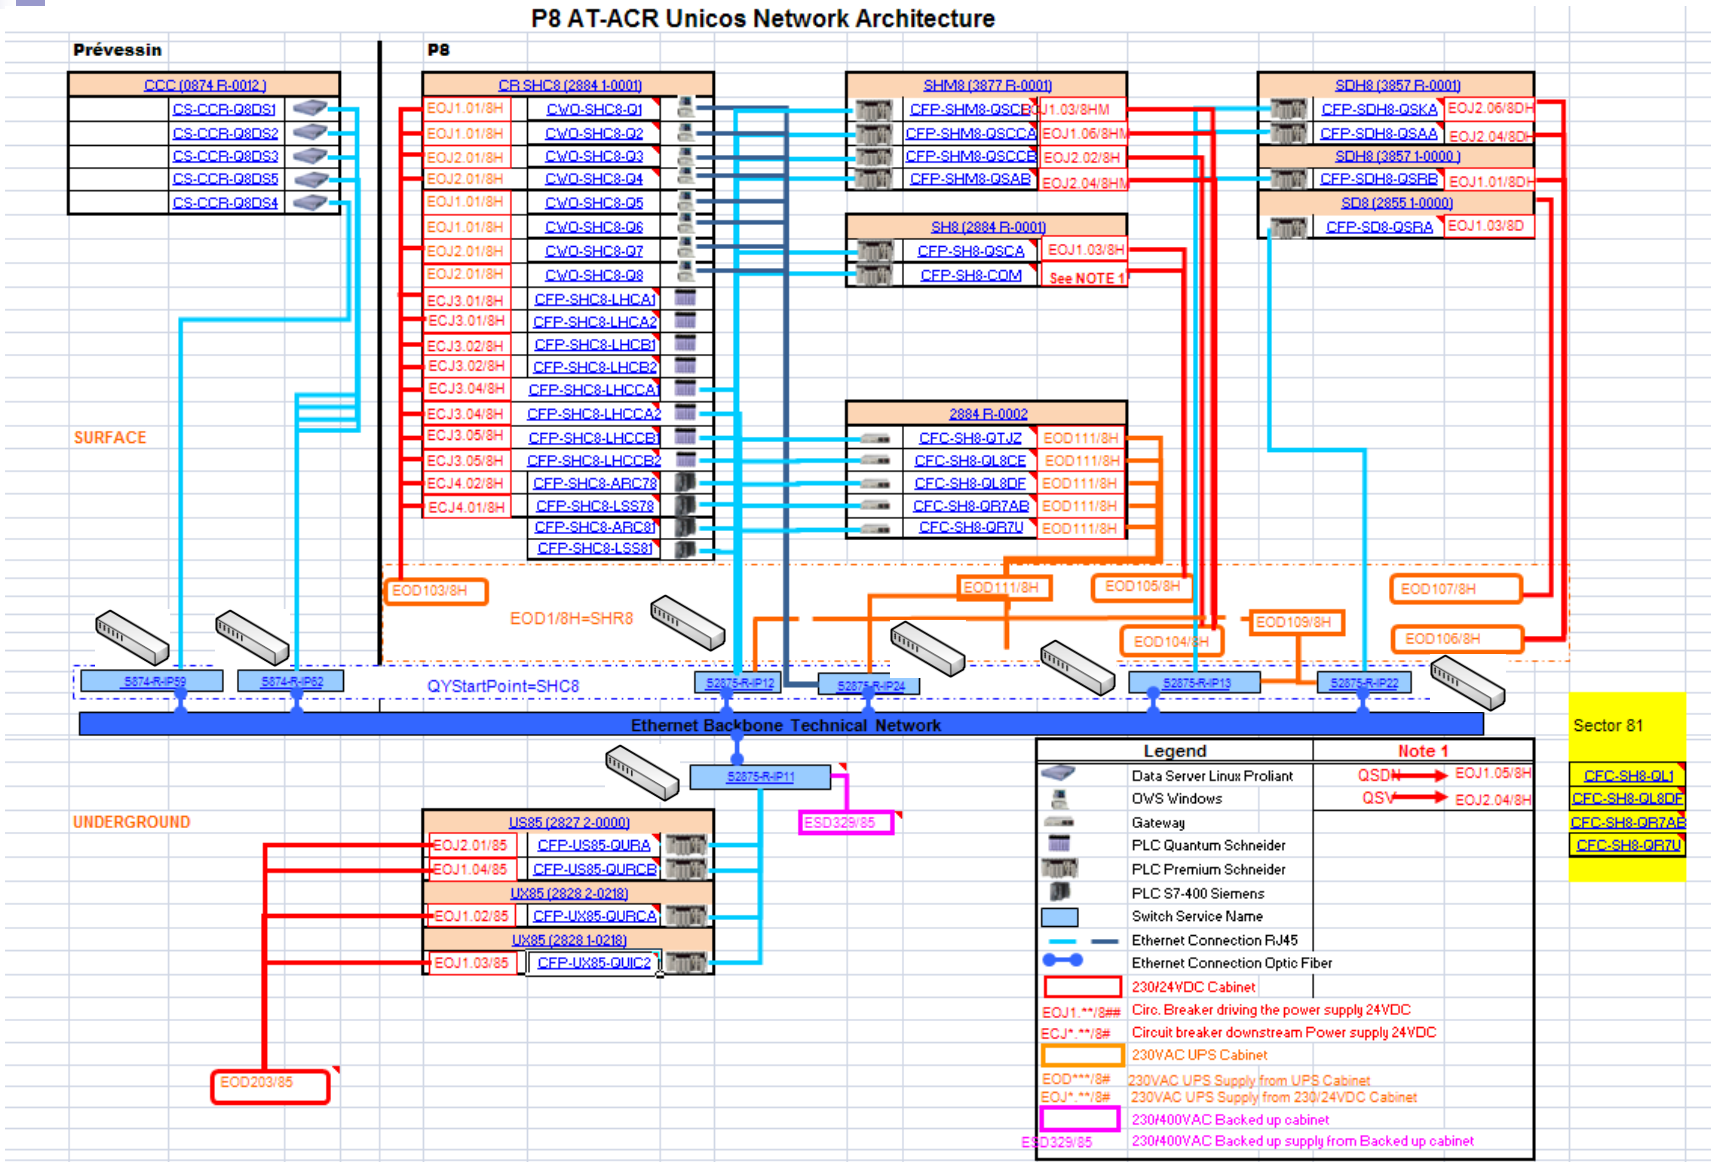

Local & Central Control Rooms

Surface  
Shaft  
Cavern  
Alcoves  
Tunnel

# 4. Cryogenics Control System: Network components (P8)

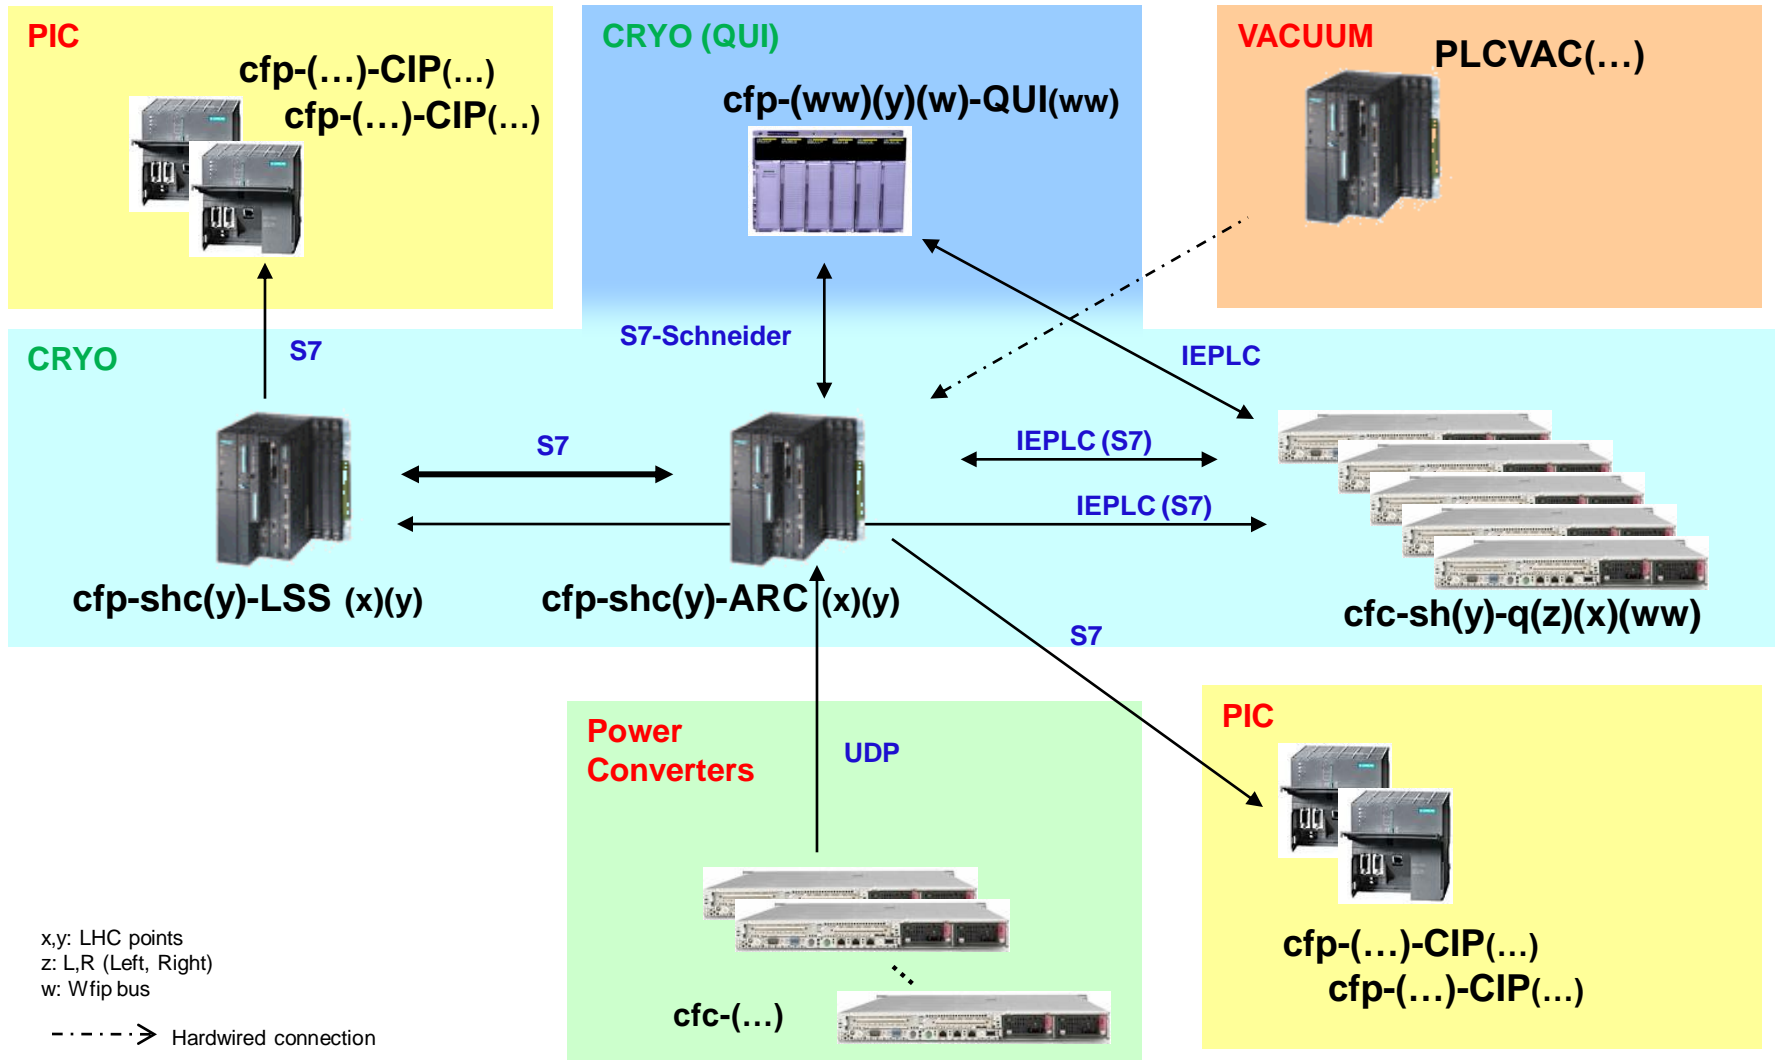

# 4.- Cryogenics Control System: Industrial Communications

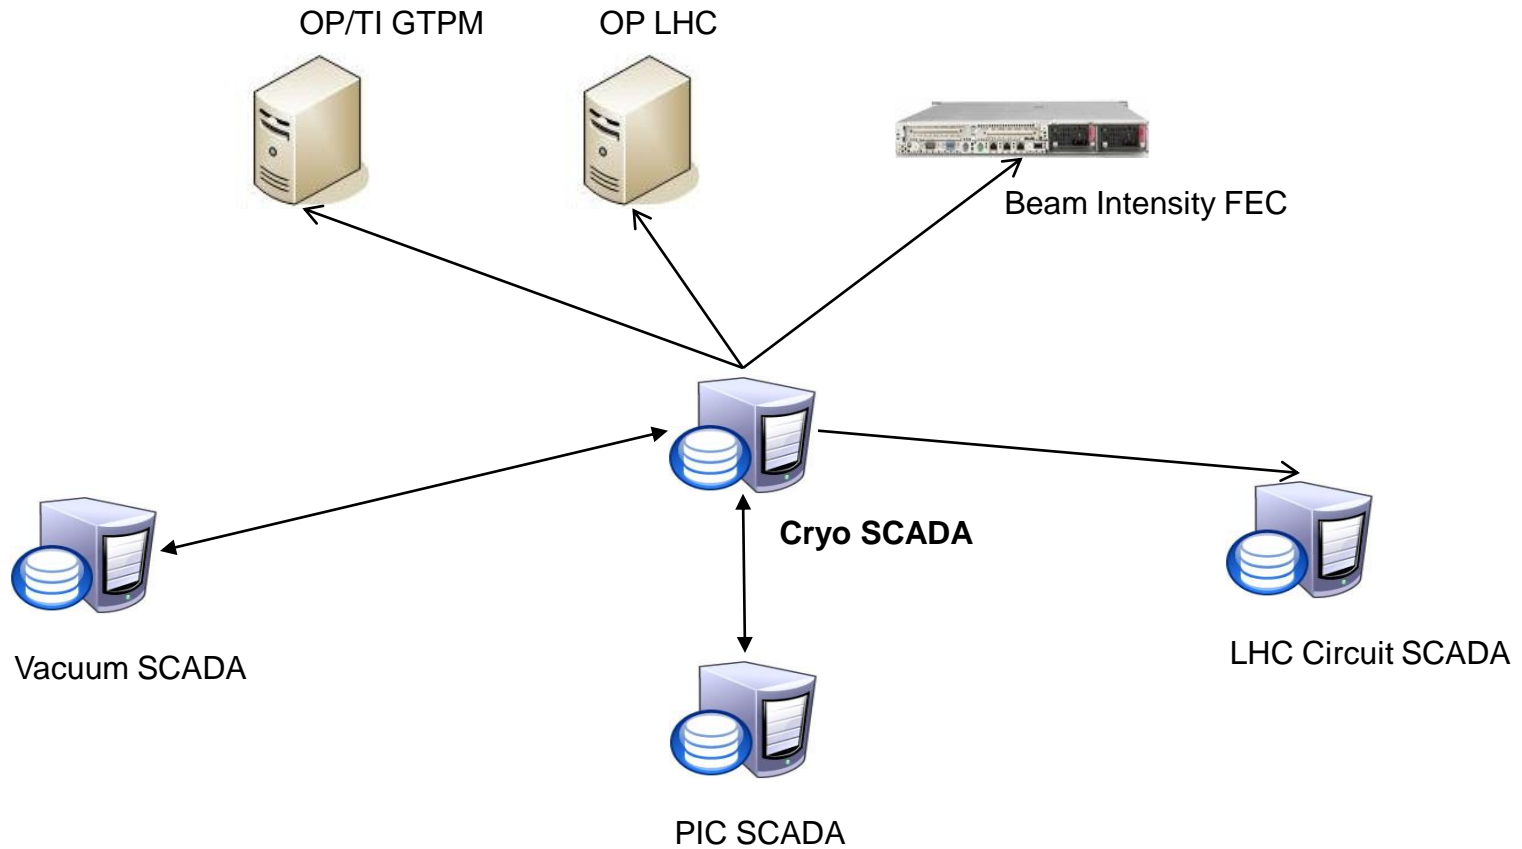

- WorldFip Copper cable
- WorldFip Fiber
- Profibus DP Copper cable
- Profibus Fiber
- Ethernet UTP

# 4.- Cryogenics Control System: PLC tunnel communications

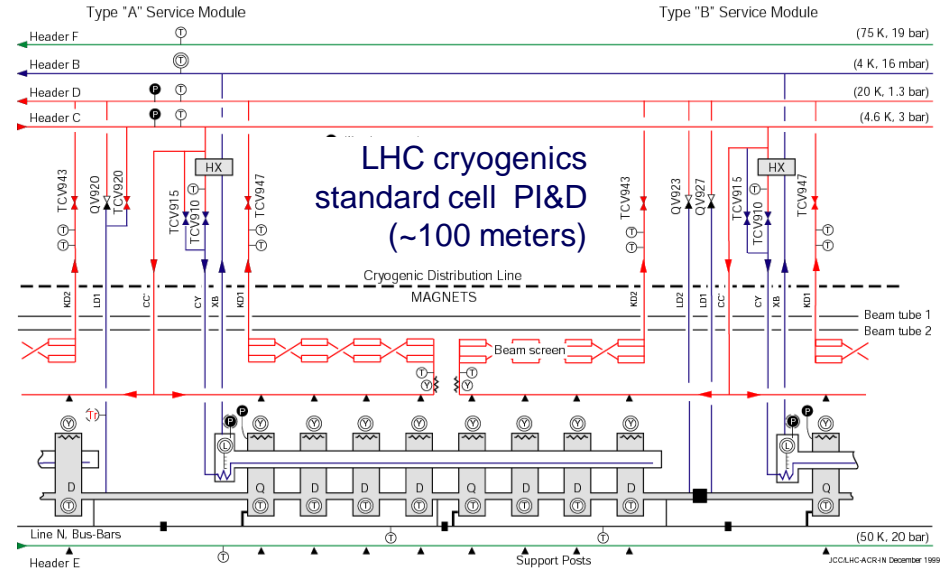

# 4.- Cryogenics Control System: SCADA communications

- ✓ Large number of sensors and actuators.

Instruments	Range	Total
TT (temperature)	1.6- 300K	9500
PT (pressure)	0-20 bar	2200
LT (level)	Various	540
EH (heaters)	Various	2500
CV (Control Valves)	0 - 100 %	3800
PV/QV (On Off Valves)	--	2000

- ✓ Tunnel instrumentation exposed to **radiation** (custom development to withstand the hostile environment)

RadTol Signal Conditioners

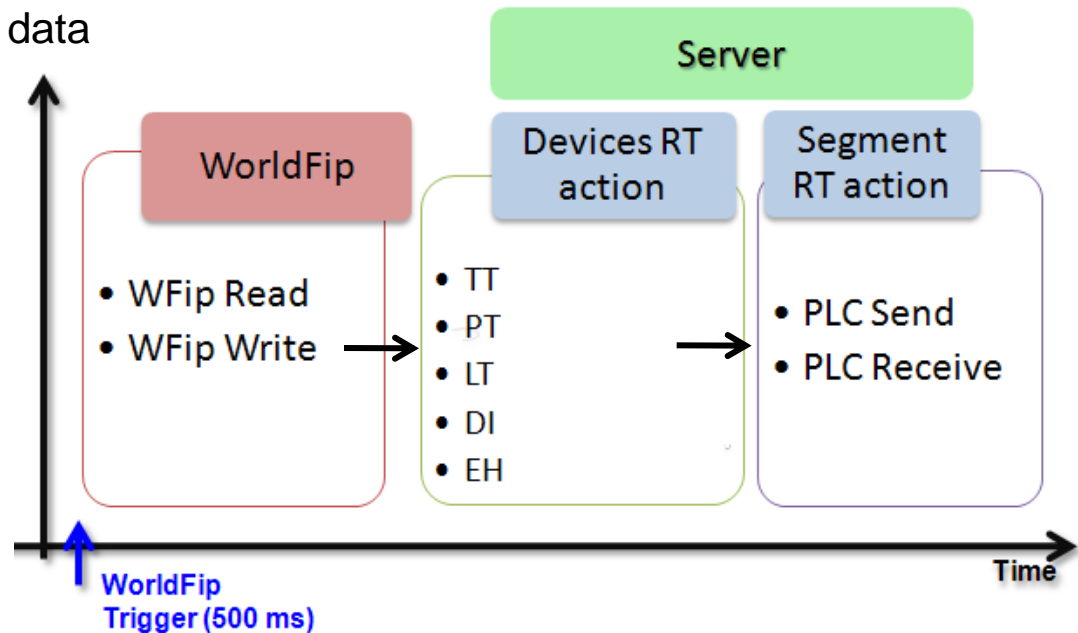

# 4.- Cryogenics Control System: Frameworks **FESA**

## ■ Front-End Software Architecture\*

- ✓ CERN accelerator real-time software model
- ✓ Deployed to **F**ront-**E**nd **C**omputers (**FECs**) running Linux/LynxOS

## ■ FEC processes

- ✓ **WorldFip**: Read/Write Worldfip agents
- ✓ **Real-Time** action
  - Device: Calculates devices data (Minimize electronics cards calculations)
  - Segment: Groups devices and communicates to the PLC
- ✓ **Server**: CMW Exchange data

## UNified Industrial COntrol System

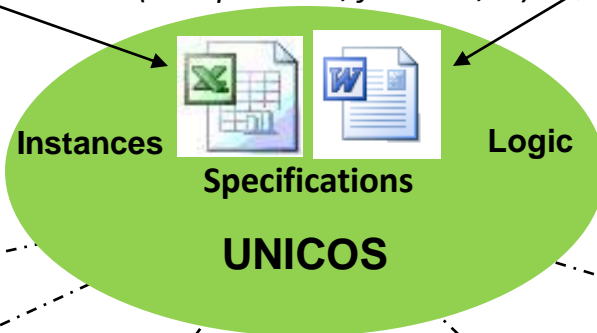

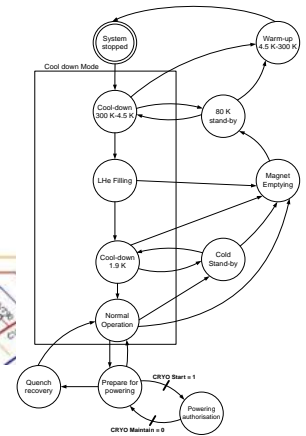

I/O Channels

Field Objects  
(Valves, Heaters, ...)

Process Control Objects  
(Compressors, feedbox, ...)

PLC and SCADA  
Baseline

CMW interface  
Long-Term archiving  
LHC alarm system

Generates PLC and  
SCADA Devices

Diagnostics tools

Placeholders where  
the control engineer  
must write the  
process logic

Simplified HMI tool to  
create process  
synoptics (drag & drop)

Operators

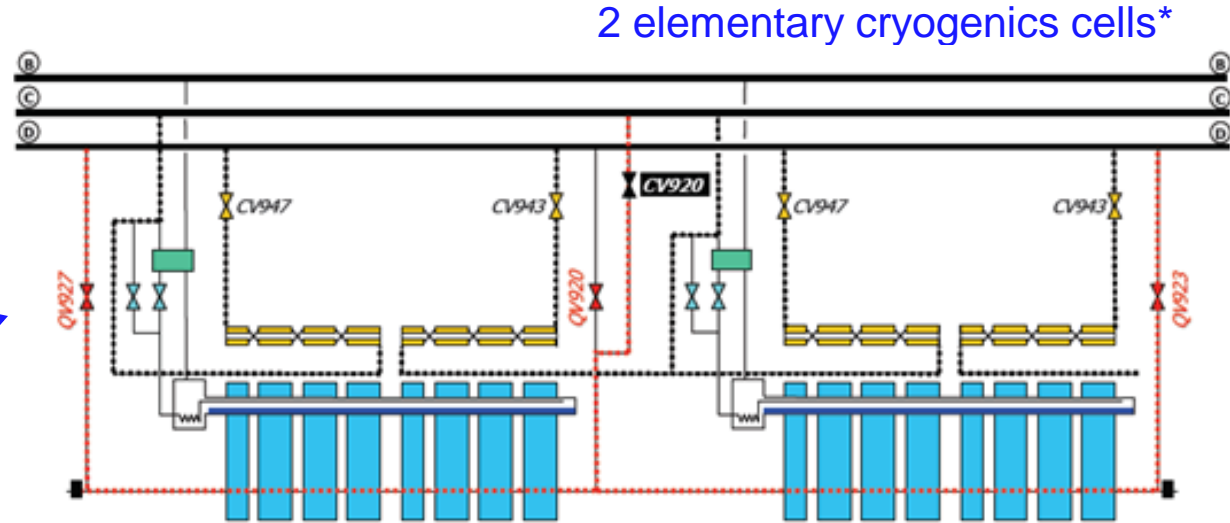

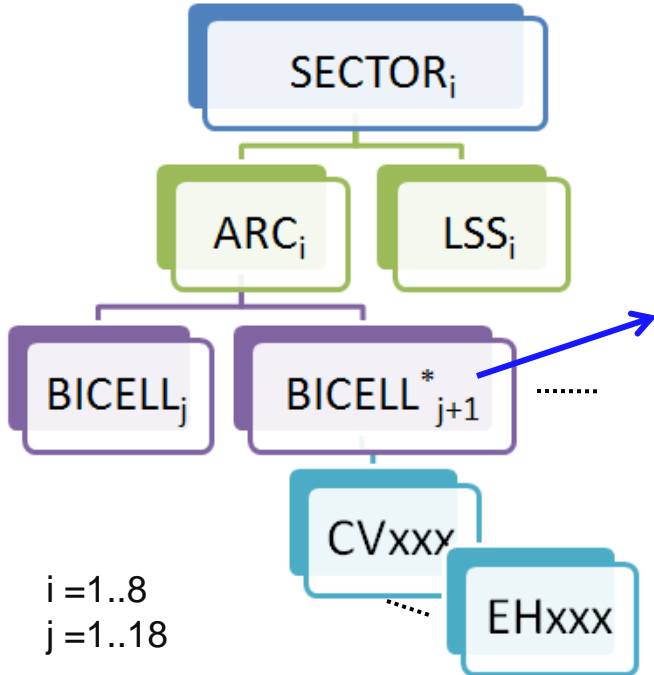

Process Engineer

Control Engineer

# 4.- Cryogenics Control System: i.e.: UNICOS Objects design

## Sector Cryogenics Process Control Objects (PCO)

- **Process Decomposition** exercise (e.g.: Tunnel) :
  - Control a basic tunnel equipment (bi-cell)
  - Reduce the amount of logic to create by using a few templates which will be parameterized and generated automatically (e.g.: Controllers)

### I/O objects + Controller (field objects)

Objects	Tunnel
Analog Inputs	12136
Analog Outputs	4856
Digital Inputs	4536
Digital Outputs	1568
Close Loop Controllers	3680

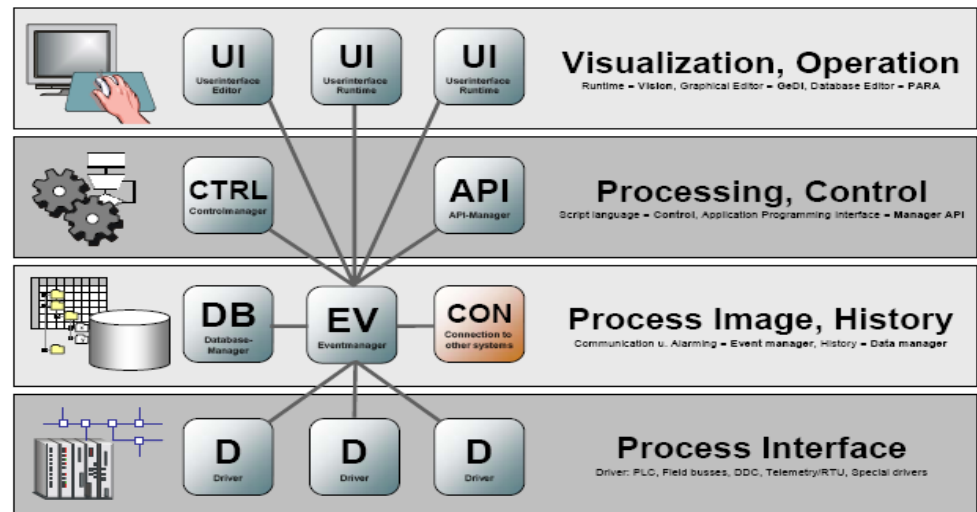

### Process Decomposition: Controllers example

LHC	Sector	Arc	Bi-cell
3680	500	250	20

## Modular architecture: **Managers**

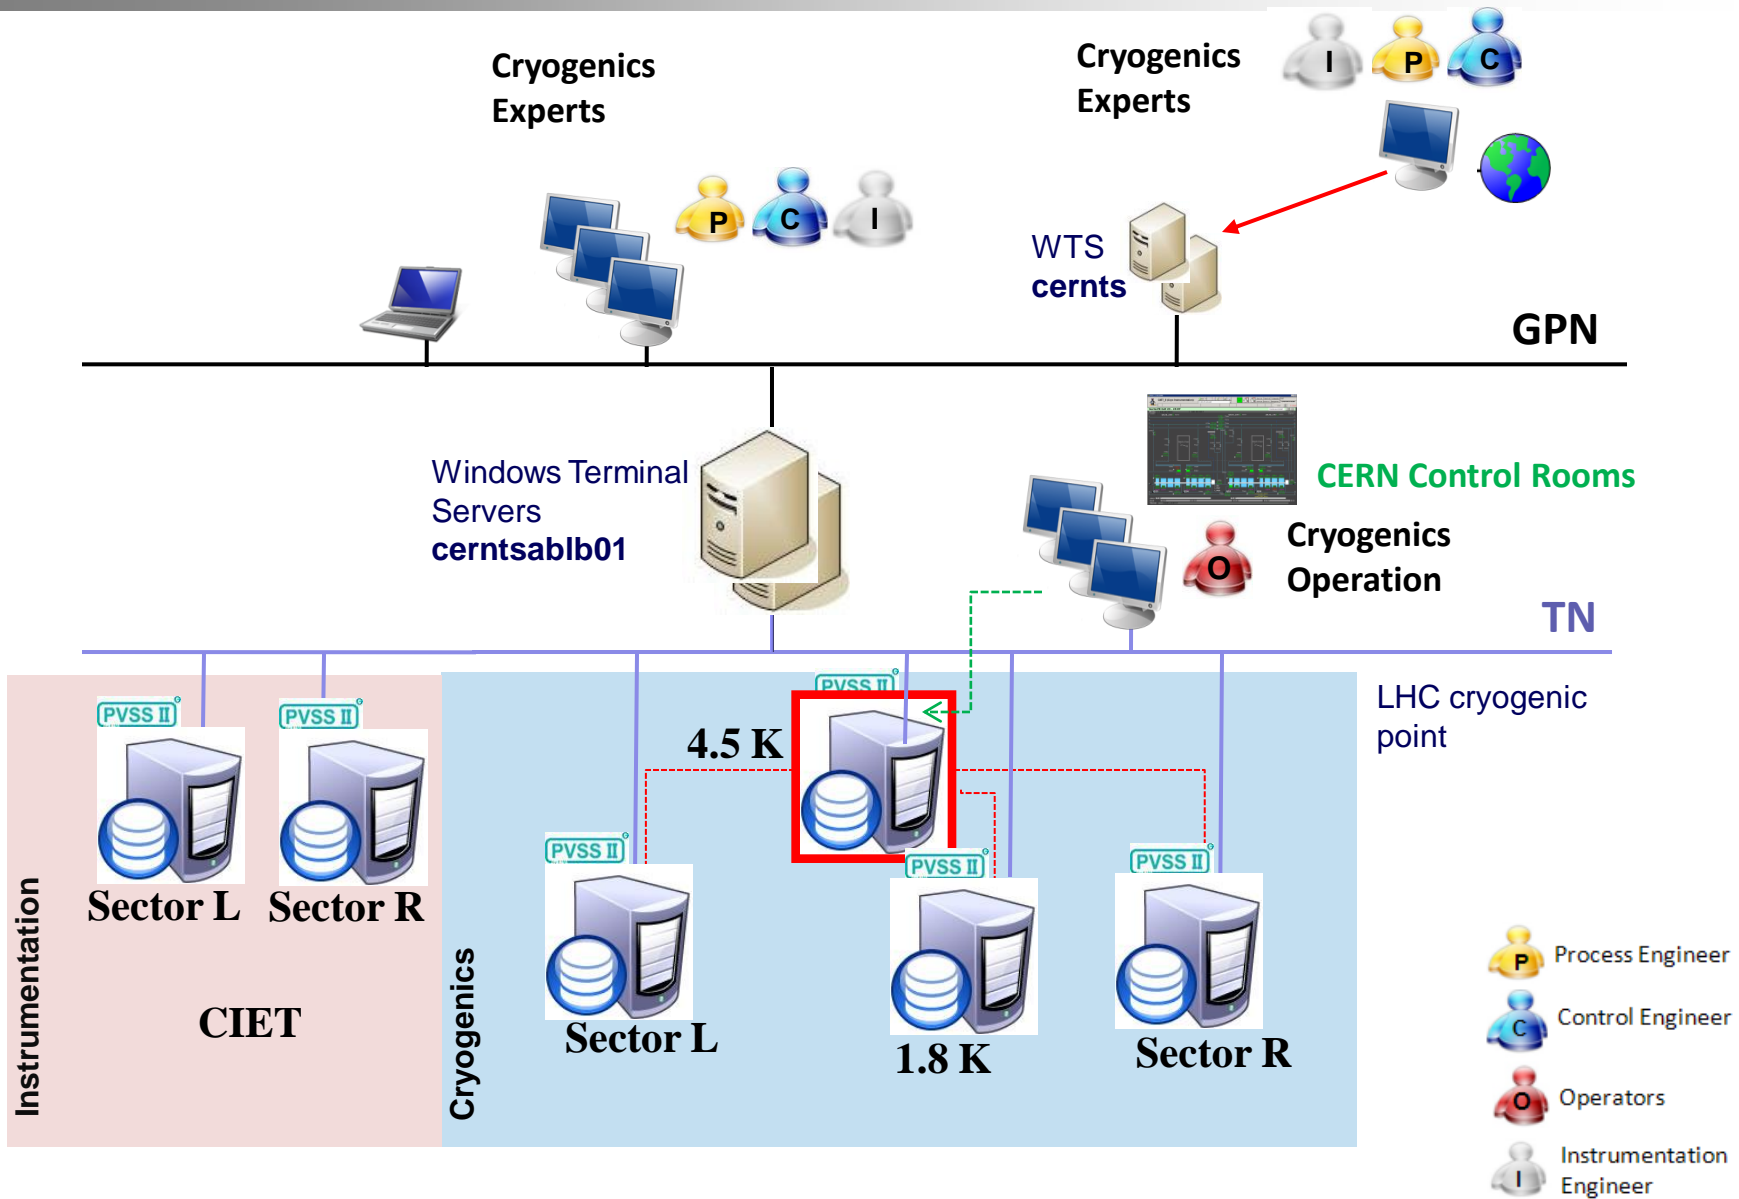

- **Drivers (D):** Process Interface (PLCs,...)
- Central processing: **Event manager (EV)** holds the current image of the process variables in memory
- **Data Manager (DB)** parameterization and archiving of value changes
- **User interface (UI)** : graphical display

**Managers can run in different machines!**

# 4.- Cryogenics Control System: Interfaces - LHC Logging

## 4.- Current shared responsibilities: **EN/ICE** vs **TE/CRG**

- Current assignments:
  - ✓ **Refrigerators**
    - **SCADA & PLC**
      - EN/ICE
  - ✓ **Tunnel**
    - **SCADA**
      - EN/ICE
    - **FECs & WFip**
      - EN/ICE
    - **PLC & Instrumentation**
      - TE/CRG
- Please contact support **EN/ICE** in case of problems with the **refrigerators** and **TE/CRG** in case of tunnel issues whenever the reason is not understood.
- Support GENERAL EN/ICE [icecontrols.support@cern.ch](mailto:icecontrols.support@cern.ch)
- Or alternatively: [cryocontrol.support@cern.ch](mailto:cryocontrol.support@cern.ch)

Urgent interventions (Piquet service) Tlf: **164930**
