The Vaccine Adverse Event Reporting System (VAERS) Results

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	909095-1	on 12/24/2020 the resident was sleepy and stayed in bed most of the shift. He stated he was doing okay but requested pain medication for his legs at 250PM. At 255AM on 12/25/2020 the resident was observed in bed lying still, pale, eyes half open and foam coming from mouth and unresponsive. He was not breathing and with no pulse
COVID19 VACCINE (COVID19)	Death	910363-1	Patient had mild hypotension, decreased oral intake, somnolence starting 3 days after vaccination and death 5 days after administration. He did have advanced dementia and was hospice eligible based on history of aspiration pneumonia.
COVID19 VACCINE (COVID19)	Death	913143-1	Vaccine administered with no immediate adverse reaction at 11:29am. Vaccine screening questions were completed and resident was not feeling sick and temperature was 98F. At approximately 1:30pm the resident passed away.
COVID19 VACCINE (COVID19)	Death	913733-1	My grandmother died a few hours after receiving the moderna covid vaccine booster 1. While I don't expect that the events are related, the treating hospital did not acknowledge this and I wanted to be sure a report was made.
COVID19 VACCINE (COVID19)	Death	914604-1	Spouse awoke 12/20 and found spouse dead. Client was not transferred to hospital.
COVID19 VACCINE (COVID19)	Death	914621-1	Resident in our long term care facility who received first dose of Moderna COVID-19 Vaccine on 12/22/2020, only documented side effect was mild fatigue after receiving. She passed away on 12/27/2020 of natural causes per report. Has previously been in & out of hospice care, resided in nursing home for 9+ years, elderly with dementia. Due to proximity of vaccination we felt we should report the death, even though it is not believed to be related.
COVID19 VACCINE (COVID19)	Death	914690-1	Within 24 hours of receiving the vaccine, fever and respiratory distress, and anxiety developed requiring oxygen, morphine and ativan. My Mom passed away on the evening of 12/26/2020.
COVID19 VACCINE (COVID19)	Death	914805-1	RESIDENT CODED AND EXPIRED
COVID19 VACCINE (COVID19)	Death	914895-1	Injection given on 12/28/20 - no adverse events and no issues yesterday; Death today, 12/30/20, approx.. 2am today (unknown if related - Administrator marked as natural causes)
COVID19 VACCINE (COVID19)	Death	914917-1	Death by massive heart attack. Pfizer-BioNTech COVID-19 Vaccine EUA
COVID19 VACCINE (COVID19)	Death	914961-1	pt passed away with an hour and 1/2 of receiving vaccine. per nursing home staff they did not expect pt to make it many more days. pt was unresponsive in room when shot was given. per nursing home staff pt was 14 + days post covid
COVID19 VACCINE (COVID19)	Death	914994-1	pt was a nursing home pt. pt received first dose of covid vaccine. pt was monitored for 15 minutes after getting shot. staff reported that pt was 15 days post covid. Pt passed away with in 90 minutes of getting vaccine
COVID19 VACCINE (COVID19)	Death	915562-1	pt received vaccine at covid clinic on 12/30 at approximately 3:30, pt vomited 4 minutes after receiving shot-- dark brown vomit, staff reported pt had vomited night before. Per staff report pt became short of breath between 6 and 7 pm that night. Pt had DNR on file. pt passed away at approximately 10pm. Staff reported pt was 14 + days post covid
COVID19 VACCINE (COVID19)	Death	915682-1	Resident received vaccine per pharmacy at the facility at 5 pm. Approximately 6:45 resident found unresponsive and EMS contacted. Upon EMS arrival at facility, resident went into cardiac arrest, code initiated by EMS and transported to hospital. Resident expired at hospital at approximately 8 pm
COVID19 VACCINE (COVID19)	Death	915880-1	Patient died within 12 hours of receiving the vaccine.
COVID19 VACCINE (COVID19)	Death	915920-1	Resident received vaccine in am and expired that afternoon.
COVID19 VACCINE (COVID19)	Death	917117-1	After vaccination, patient tested positive for COVID-19. Patient was very ill and had numerous chronic health issues prior to vaccination. Facility had a number of patients who had already tested positive for COVID-19. Vaccination continued in an effort to prevent this patient from contracting the virus or to mitigate his risk. This was unsuccessful and patient died.
COVID19 VACCINE (COVID19)	Death	917790-1	At the time of vaccination, there was an outbreak of residents who had already tested positive for COVID 19 at the nursing home where patient was a resident. About a week later, patient tested positive for COVID 19. She had a number of chronic, underlying health conditions. The vaccine did not have enough time to prevent COVID 19. There is no evidence that the vaccination caused patient's death. It simply didn't have time to save her life.
COVID19 VACCINE (COVID19)	Death	917793-1	Prior to the administration of the COVID 19 vaccine, the nursing home had an outbreak of COVID-19. Patient was vaccinated and about a week later she tested positive for COVID-19. She had underlying thyroid and diabetes disease. She died as a result of COVID-19 and her underlying health conditions and not as a result of the vaccine.
COVID19 VACCINE (COVID19)	Death	918065-1	1/1/2020: Residents was found unresponsive. Pronounced deceased at 6:02pm
COVID19 VACCINE (COVID19)	Death	918388-1	Resident found unresponsive without pulse, respirations at 04:30 CPR performed, expired at 04:52 by Rescue

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	918418-1	Resident became SOB, congested and hypoxic requiring oxygen, respiratory treatments and suctioning. Stabilized after treatment and for the next 72 hours with oxygen saturations in the 90s. On 1/3/2021 was found without pulse and respirations. Resident was a DNR on Hospice.
COVID19 VACCINE (COVID19)	Death	918487-1	Two days post vaccine patient went into cardiac arrest and passed away.
COVID19 VACCINE (COVID19)	Death	918518-1	syncopal episode - arrested - CPR - death
COVID19 VACCINE (COVID19)	Death	919108-1	Fever, Malaise
COVID19 VACCINE (COVID19)	Death	919537-1	Resident exhibited no adverse events during 30 minute monitoring following vaccine administration. Resident found without pulse at 1900.
COVID19 VACCINE (COVID19)	Death	920326-1	Redness and warmth with edema to right side of neck and under chin. Resident was on Hospice services and expired on 1.1.21
COVID19 VACCINE (COVID19)	Death	920368-1	12/30/2020 07:02 AM Resident noted to have some redness in face and respiration were fast. Resident vital signs were abnormal except blood pressure. Temp at the time was 102.0 F taken temporal. Resident respirations were 22 labored at times. Pulse is 105 and pulse ox 94% on room air. Resident is made comfortable in bed. Notified triage of change in condition also made triage aware of resident receiving Covid vaccination yesterday morning. Resident appetite and fluid consumption has been poor for few days. 12/30/2020 07:32 AM Received order from agency to administer Acetaminophen 650mg suppos rectally due to resident not wanting to swallow anything including fluids, medications and food. This writer administered medication as NP ordered. Will monitor for effectiveness and adverse effects if any. 12/30/2020 08:41 AM Received new orders to obtain Flu swab, obtain CBC and BMP, and Chest Xray all to be obtained today. Notified family of resident having temperature and vital signs excluding b/p that was abnormal. Family was thankful for call and inierated to nurse that family does not want resident sent to hospital. Did educate family on benefits of Hospice services, but family persistant on continued daily care provided by nursing staff. Requests visits if decline continues. Family assured if resident continues to decline, facility will accomandate resident family to be able to be at bedside when time comes to do so. NP ordered IVF and IV Levaquin on 12/31/20. Family chose at that time to sign for Hospice services and not have resident provided with IVF or IV Antibiotics
COVID19 VACCINE (COVID19)	Death	920545-1	"The resident received is vaccine around 11:00 am and tolerated it without any difficulty or immediate adverse effects. He was at therapy from 12:36 pm until 1:22 pm when he stated he was too tired and could not do anymore. The therapist took him back to his room at that time and he got into bed himself but stated his legs felt heavy. At 1:50 pm the CNA answered his call light and found he had taken himself to the bathroom. She stated that when he went to get back into the bed it was ""abnormal"" how he was getting into it so she assisted him. At that time he quit breathing and she called a RN into the room immediately. He was found without a pulse, respirations, or blood pressure at 1:54 pm. He was a DNR."
COVID19 VACCINE (COVID19)	Death	920815-1	Found deceased in her home, unknown cause, 6 days after vaccine.
COVID19 VACCINE (COVID19)	Death	920832-1	Vaccine 12/30/2020 Screening PCR done 12/31/2020 Symptoms 1/1/2021 COVID test result came back positive 1/2/2021 Deceased 1/4/2021
COVID19 VACCINE (COVID19)	Death	921175-1	Resident received Covid Vaccine, noted after 30 mins with labored breathing BP 161/77, HR 116, R 38, T 101.4,
COVID19 VACCINE (COVID19)	Death	921481-1	Vaccine given on 12/29/20 by Pharmacy. On 1/1/21, resident became lethargic and sluggish and developed a rash on forearms. He was a Hospice recipient and doctor and Hospice ordered no treatment, just to continue to monitor. When no improvement of codition reported, doctor and Hospice ordered comfort meds (Morphine, Ativan, Levsin). Resident expired on 1/4/2021
COVID19 VACCINE (COVID19)	Death	921547-1	DEATH ON 1/4/2021, RESIDENT RECIEVED VACCINE ON 1/2/20
COVID19 VACCINE (COVID19)	Death	921572-1	Resident had body aches, a low O2 sat and had chills starting on 12/30/20. He had stated that they had slightly improved. On 1/1/21 he sustained a fall with a diagnosis of a displaced hip fracture. On 1/2/21 during the NOC shift his O2 sat dropped again. He later went unresponsive and passed away.
COVID19 VACCINE (COVID19)	Death	921667-1	LTCF Pfizer Vaccine clinic conducted 12/29/2020 Vaccine lead received a call indicating that a staff member deceased somewhere between 1/3/2021 and 1/4/2021. Cause of death is unknown, and an autopsy is being performed.
COVID19 VACCINE (COVID19)	Death	921768-1	Vaccine received at about 0900 on 01/04/2021 at her place of work, Medical Center, where she was employed as a housekeeper. About one hour after receiving the vaccine she experienced a hot flash, nausea, and feeling like she was going to pass out after she had bent down. Later at about 1500 hours she appeared tired and lethargic, then a short time later, at about 1600 hours, upon arrival to a friends home she complained of feeling hot and having difficulty breathing. She then collapsed, then when medics arrived, she was still breathing slowly then went into cardiac arrest and was unable to be revived.
COVID19 VACCINE (COVID19)	Death	921880-1	The resident was found deceased a little less than 12 hours following COVID vaccination, and he had had some changes over the last 2 days. He was 96 and had been on hospice care for a little while. Noone noticed any side effects from vaccine after it was given
COVID19 VACCINE (COVID19)	Death	922977-1	Fever, RespDepression & COVID positive REMDESIVIR (EUA) 200 mg x1 then 100 mg daily

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	923993-1	Patient was vaccinated Dec 30, 2020. Prime dose of Moderna vaccine. Observed for full 15 minutes post-injection. No complaints when asked during observation. Released. Subsequently, vaccine clinic staff learned from the patient's supervisor that on Jan 4, 2021 that the patient had expired on Jan 2, 2021. By report from the supervisor, the patient was found dead at his home. The patient's primary care provider was unaware of his death when contacted by this reporter today (Jan 6, 2021). Electronic Medical Record without any information since the vaccination.
COVID19 VACCINE (COVID19)	Death	924126-1	resident expired 1/1/2021
COVID19 VACCINE (COVID19)	Death	924186-1	Resident expired 1/3/21
COVID19 VACCINE (COVID19)	Death	924456-1	Patient did not display any obvious signs or symptoms; the vaccination was administered at approximately 10:00 AM and the patient continued throughout her day without any complaints or signs of adverse reaction. Patient was helped to bed by the nursing assistant estimated at around 9:00 PM. The facility received notification from the lab around 11:00 PM that the patient's COVID-19 specimen collection from Sunday, 1/3/21, detected COVID-19. When the nursing staff went to the room to check on the resident and prepare her to move to a COVID-19 care area the patient was found unresponsive, no movement, no chest rises, noted regurgitated small amount of food to mouth left side, lying on left side. Pupils non reactive.
COVID19 VACCINE (COVID19)	Death	924464-1	coughing up blood, significant hemoptysis -- > cardiac arrest. started day after vaccine but likely related to ongoing progression of lung cancer
COVID19 VACCINE (COVID19)	Death	924664-1	At approximately, 1855, I was alerted by caregiver, resident was not responding. Per caregiver, she was doing her rounds and found resident in bed, unresponsive, mouth open, observed gurgling noises and tongue hanging out of mouth. This primary caregiver observed resident at baseline and ambulating after dinner at approximately, 1800 less than an hour prior to incident. This PCG called 911 for EMS and gave report of incident. Resident was taken to Medical Center Emergency Department. At ER, CT scan and X-ray was performed. Per report from ER RN, CT scan and x-ray revealed an intracranial aneurysm and fluid in the lungs. Per RN, resident was still unresponsive and was admitted to Medical Center for observation and comfort measures. This primary caregiver reported to RN, resident recently received the first dose of COVID-19 vaccine on 1/2/21. Primary caregiver received a call from Castle RN at 0700, resident expired at 0615.
COVID19 VACCINE (COVID19)	Death	925154-1	Deceased
COVID19 VACCINE (COVID19)	Death	925264-1	PT was found deceased in his home on 1/5/2021
COVID19 VACCINE (COVID19)	Death	925556-1	Expired 1/05/2021
COVID19 VACCINE (COVID19)	Death	926269-1	"Pt last seen at 1200 by nurse for ID band check. No visible signs of distress noted. Pt states ""I just want to be left alone"". 1230 nurse was called to pt room. Pt was noted unresponsive, no pulse and respiration noted. CPR started immediately, at 1239 first shock given. 1245 EMT took over, at 1319 EMT called time of death"
COVID19 VACCINE (COVID19)	Death	926462-1	Patient developed hypoxia on 1/4/2021 and did not respond to maximal treatment and passed way on 1/5/2021
COVID19 VACCINE (COVID19)	Death	926568-1	patient declined 12/30/2020 and was transferred to hospital where he did not respond to treatment and passed away 1/4/2020
COVID19 VACCINE (COVID19)	Death	926600-1	Patient did not report any signs or symptoms of adverse reaction to vaccine. Patient suffered from several comorbidities (diabetes and renal insufficiency). Patient reported not feeling well 01/06/2021 and passed away that day.
COVID19 VACCINE (COVID19)	Death	926797-1	had a vaccination on 12/31/2020 late morning passed away early morning 01/01/2020. This is a 93 year old with significant heart issues. EF of 20% among other comorbidities. He died suddenly approximately 0430, it is unlikely it was related to receiving the vaccine.
COVID19 VACCINE (COVID19)	Death	927189-1	Patient was vaccinated at 11am and was found at the facility in his room deceased at approximately 3:00pm. Nurse did not have cause of death
COVID19 VACCINE (COVID19)	Death	927260-1	No adverse effects noted after vaccination. Patient with cardiac history was found unresponsive at 16:45 on 1/6/21. Abnormal breathing patterns, eyes partially closed SPO2 was 41%, pulseless with no cardiac sounds upon auscultation. CPR and pulse was regained and patient was breathing. Patient sent to Hospital ER where she remained in an unstable condition had multiple cardiac arrest and severe bradycardia and in the end the hospital was unable to bring her back.
COVID19 VACCINE (COVID19)	Death	928062-1	vomiting later on 01/05/21. Lethargy and hypoxia in pm of 01/06/21. Hypotension am of 01/07/21. Hospitalized, intubated, cardiac arrest, died 01/07/21.
COVID19 VACCINE (COVID19)	Death	928513-1	Resident passed away in her sleep
COVID19 VACCINE (COVID19)	Death	928933-1	Patient had been diagnosed with COVID-19 on Dec. 11th, 2020. Symptoms were thought to have started on 12/5/2020. Received Moderna vaccine on 12/23. Unexpected death on 1/8/2021. Resuscitation attempts unsuccessful
COVID19 VACCINE (COVID19)	Death	929359-1	3:07 pm lung sounds diminished oxygen sats 68%, oxygen applied Oxygen sats remained low for next 36 hours (patient on Hospice care) expired 6:22 am 1-8-21

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	929764-1	The patient was found deceased at home about 24 hours after immunization. Date of Death:: 12/29/2020; estimated time of death 6:00pm
COVID19 VACCINE (COVID19)	Death	929997-1	Patient received vaccine on 1/4/2021. He was in Hospice for CHF and renal failure, but was able to get up in his wheelchair and eat and take medications and talk. On 1/5/2021 am, he was noted to be very lethargic an could only mumble, could not swallow. No localizing neurologic findings. He was too lethargic to get up in chair.
COVID19 VACCINE (COVID19)	Death	930154-1	Notified today that he passed away. No other details known at this time.
COVID19 VACCINE (COVID19)	Death	930386-1	Patient received first dose of vaccine on 12/28, developed COVID-19 infection shortly thereafter and expired on 1/6/2021.
COVID19 VACCINE (COVID19)	Death	930418-1	Patient received first dose of vaccine on 12/28, developed COVID-19 infection shortly thereafter and expired on 1/4/2021
COVID19 VACCINE (COVID19)	Death	930431-1	Cardiac event, 2 days after vaccination, patient expired.
COVID19 VACCINE (COVID19)	Death	930466-1	Fever, shortness of breath and chest pain that resulted in a heart attack a few hours after vaccination
COVID19 VACCINE (COVID19)	Death	930487-1	Medical docter state patient has a acute cardiac attack
COVID19 VACCINE (COVID19)	Death	930876-1	Death
COVID19 VACCINE (COVID19)	Death	930910-1	Patient received COVID vaccination around 12:15pm. Patient was monitored for the appropriate amount of time by nursing staff. Patient passed away at 2:15pm.
COVID19 VACCINE (COVID19)	Death	930912-1	Diarrhea followed by death 24 hrs after vaccination
COVID19 VACCINE (COVID19)	Death	932346-1	1/7-21 - Received second dose of pfizer covid-19 vaccine 1/8/21 - Fever, dizziness, headache 1/10/21 0250 was found not breathing. EMS performed CPR and patient deceased
COVID19 VACCINE (COVID19)	Death	932787-1	RECIEVED VACCINE 1/8/21 EXPIRED UNEXPECTED 1/10/21, NO ADVERSE REACTIONS NOTED
COVID19 VACCINE (COVID19)	Death	932898-1	The patient had an apparent cardiac arrest on 12/23/20 and was admitted to the ICU. He was taken off of life support on 12/30/20. He had known cardiac disease.
COVID19 VACCINE (COVID19)	Death	933090-1	Patient died, I have a copy of his vaccination card
COVID19 VACCINE (COVID19)	Death	933578-1	Pronounced dead 1/9/2021 at 12:42. Received first dose of vaccine 1/8/2021
COVID19 VACCINE (COVID19)	Death	933739-1	"Staff member checked on her at 3am and patient stated that she felt like she couldn't breathe. 911 was called and taken to the hospital. While in the ambulance, patient coded. Patient was given CPR and ""brought back"". Once at the hospital, patient was placed on a ventilator and efforts were made to contact the guardian for end of life decisions. Two EEGs were given to determine that patient had no brain activity. Guardian, made the decision to end all life saving measures. Patient was taken off the ventilator on 1/9/2021 and passed away at 1:30am on 1/10/2021. The initial indication from the ICU doctor was the patient had a mucus plug that she couldn't clear."
COVID19 VACCINE (COVID19)	Death	933846-1	"1-2-2021 10:30 PM Complained Right arm/back hurt - took Tylenol 1-3-2021 Complained Right arm hurt, dizzy 1-4-2021 Felt better - did laundry, daughter found her deceased at 3:30 pm. Dr. at hospital said it was ""cardiac event"" according to death certificate."
COVID19 VACCINE (COVID19)	Death	934050-1	Staff reported that patient was found Friday morning (Jan 8) sitting at a table with his head tilted forward and unresponsive to verbal or physical stimuli. Staff lowered patient to floor and started CPR. EMS was called and continued CPR at scene, however they were not able to revive patient. Patient was pronounced dead at the scene. Staff written statements following the death of patient show that he had a fall about 1 hr. prior. It is unknown if this fall contributed to patient's death. An autopsy has been requested.
COVID19 VACCINE (COVID19)	Death	934059-1	Acute anterior MI with death
COVID19 VACCINE (COVID19)	Death	934263-1	The resident resides in an independent living facility/apartment. The reporter at the center was informed by his daughter he was not feeling well on 1/1/2021 (specific symptoms could not be ascertained). He reportedly went to be COVID tested on 1/1/2020 and observed to be deceased in his apartment on 1/2/2020. I do not have confirmation of his COVID results, although the reporter indicates his daughter reports his test was positive.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	934373-1	Patient went to bed around 11pm on Saturday PM and sometime between then and 1:30am on Sunday morning got up and went into the living room without waking up her husband (which is normal). At 1:30am, the husband got up to use the restroom and she was out of bed then, but the husband did not know if she was having any problems at this time. When he got up at 7:45am, she was in the recliner and did not move or anything, which is normal for her. At 8:45am, the husband went back into the living room and tried to wake his wife and that is when he noticed there was no pulse and he called 9-1-1 at this time. EMS got on scene and did CPR for 30 mins and she was pronounced dead at 9:21am.
COVID19 VACCINE (COVID19)	Death	934507-1	Resident died suddenly and expectantly on 01/05/2021
COVID19 VACCINE (COVID19)	Death	934539-1	Patient received COVID-19 (Moderna) vaccine from the Health Department on afternoon of January 8, 2021 and went to sleep approximately 2300 that night. Was found unresponsive in bed the following morning and pronounced dead at 1336 on January 9, 2021
COVID19 VACCINE (COVID19)	Death	934963-1	Death; This is a spontaneous report from a contactable Physician. An elderly male patient received BNT162B2 (COVID vaccine), via an unspecified route of administration on an unspecified date in Dec2020 at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced death in Jan2021. It was unknown if an autopsy was performed. It was unknown if any treatment was received for the event. It was unknown if the patient was diagnosed with COVID prior vaccination or if the patient had been tested for COVID post vaccination. Seriousness criteria for the event was reported as death and hospitalization. Pfizer is a marketing authorization holder of [COVID vaccine] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [COVID vaccine] has submitted the same report to the regulatory authorities. Information about lot/batch number has been requested.; Sender's Comments: Current information is very limited for full assessment. Further information such medical history, concomitant medications, concurrent illness and event term details especially death cause and autopsy results are needed for meaningful evaluation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: Death
COVID19 VACCINE (COVID19)	Death	934966-1	COVID-19; COVID-19; Pneumonia; respiratory failure; This is a spontaneous report from a contactable consumer. An 80-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 02Jan2021 for COVID-19 immunization. Medical history included Alzheimer's and others. No known allergies. Concomitant medications included unspecified medications. The reporter's mother in law was tested for COVID-19 at a nursing facility on 25Dec2020 and she was negative. On 02Jan2021, she received the first dose of Pfizer vaccine. On 04Jan2020, she developed a high fever, needed oxygen and was positive for COVID-19. Date of death was 04Jan2021. The cause of her death was listed as pneumonia, respiratory failure and COVID-19. No autopsy performed. No treatment received. No one knew if the vaccination contributed to her death. It was hard to know if her death was due to the administration of the vaccine or it exacerbated the COVID19 symptoms which led to her death. Since this was unknown, it could have been a possibility. The reporter wanted to give us this information because we might want to consider having high risk population, patients with underlying conditions, older population tested for COVID-19 prior to the vaccination, as this is not currently a recommendation or a requirement. All is very new and they are all learning so the reporter wanted to share this information with us. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There are medications the patient received within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19. The outcome of the events was fatal. Information about Lot/Batch has been requested.; Sender's Comments: The association between the fatal event lack of effect (pneumonia, respiratory failure and COVID-19) with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.; Reported Cause(s) of Death: Pneumonia, respiratory failure and COVID-19; Pneumonia, respiratory failure and COVID-19; Pneumonia, respiratory failure and COVID-19; Pneumonia, respiratory failure and COVID-19

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	934968-1	he passed away; not responsive; mind just seemed like it was racing; body was hyper dried; Restless; not feeling well; ate a bit but not much; kind of pale; Agitated; Vomiting; trouble in breathing; This is a spontaneous report from a contactable consumer (brother of the patient). A 54-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on 04Jan2021 (at the age of 54-years-old) as a single dose for COVID-19 immunization. Medical history included diabetes and high blood pressure. Concomitant medications included metformin (MANUFACTURER UNKNOWN) taken for diabetes, glimepiride (MANUFACTURER UNKNOWN) taken for diabetes, lisinopril (MANUFACTURER UNKNOWN), and amlodipine (MANUFACTURER UNKNOWN). The patient experienced not feeling well, ate a bit but not much, kind of pale, vomiting, trouble in breathing, and agitated on 04Jan2021; body was hyper dried and restless on 05Jan2021; mind just seemed like it was racing on 06Jan2021; and not responsive and he passed away on 06Jan2021 at 10:15 (reported as: around 10:15 AM). The clinical course was reported as follows: The patient received the vaccine on 04Jan2021, after which he started not feeling well. He went right home and went to bed. He woke up and ate a bit but not much and then was kind of pale. The patient then started to vomit, which continued throughout the night. He was having trouble in breathing. Emergency services were called, and they took his vitals and said that everything was okay, but he was very agitated; reported as not like this prior to the vaccine. The patient was taken to urgent care where they gave him an unspecified steroid shot and unspecified medication for vomiting. The patient was told he was probably having a reaction to the vaccine, but he was just dried up. The patient continued to vomit throughout the day and then he was very agitated again and would fall asleep for may be 15-20 minutes. When the patient woke up, he was very restless (reported as: his body was just amped up and could not calm down). The patient calmed down just a little bit in the evening. When the patient was awoken at 6:00 AM in the morning, he was still agitated. The patient stated that he couldn't breathe, and his mind was racing. The patient's other brother went to him and he was not responsive, and he passed away on 06Jan2021 around 10:15 AM. It was reported that none of the symptoms occurred until the patient received the vaccine. Therapeutic measures were taken as a result of vomiting as aforementioned. The clinical outcome of all of the events was unknown; not responsive was not recovered, the patient died on 06Jan2021. The cause of death was unknown (reported as: not known by reporter). An autopsy was not performed. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Reported Cause(s) of Death: not responsive and he passed away
COVID19 VACCINE (COVID19)	Death	935222-1	Patient was reported to be deceased at home by law enforcement on 1/7/21
COVID19 VACCINE (COVID19)	Death	935343-1	There were no adverse reactions. Resident Died, she had a history of issues with her health prior to the vaccine.
COVID19 VACCINE (COVID19)	Death	935350-1	Patient was found unresponsive at home with SpO2 20% 1/2/2021
COVID19 VACCINE (COVID19)	Death	935511-1	Patient received the 1st dose of Moderna and was found deceased in her home the next day.
COVID19 VACCINE (COVID19)	Death	935767-1	My mother was given Pfizer vaccine on Thursday and she died 3 days later yesterday on Sunday!!!
COVID19 VACCINE (COVID19)	Death	935815-1	Difficulty breathing, death.
COVID19 VACCINE (COVID19)	Death	936043-1	RESIDENT 1ST DOSE OF MODERNA VACCINE ADMINISTERED ON 01/04/2021 AT 8:30PM, RESIDENT FOUND UNRESPONSIVE ON 01/05/2021.
COVID19 VACCINE (COVID19)	Death	936738-1	loss of consciousness Narrative: Patient received COVID-19 vaccine dose #1 on 1/6/21 w/o complications. Per 1/6/21- 1/9/21 nursing notes, patient did not experience any injection site reactions, denied pain or tenderness at injection site, no dizziness, no n/v, remained afebrile. Around 1/9/21 @1810, patient became acutely nonresponsive after being helped to the edge of bed. Per nurses, he was previously awake/alert, talking and asymptomatic. Patient is DNR/DNI but facility rapid response emergency team called d/t patient's sudden change of condition. Emergency team helped patient into lying position. Per 1/9/21 ICU emergency team note, patient appeared comfortable w/ no palpable radial pulse and had minimal shallow agonal breathing. Pulse ox 94%, HR in 60s per machine. BP unmeasurably low by BP cuffx3. Resident passed at 18:20 pm.
COVID19 VACCINE (COVID19)	Death	936805-1	Patient received the vaccine on 12/22/20 without complication. It was reported today that the patient was found unresponsive and subsequently expired at home on 1/11/21.
COVID19 VACCINE (COVID19)	Death	937127-1	The facility had positive cases of COVID when we were able to begin vaccinating residents. Within about a week of vaccination, patient was tested positive for COVID. He was 91 years old and his immune system did not have the time to allow the vaccine to begin working before exposure. His age was a major contributing factor to his death.
COVID19 VACCINE (COVID19)	Death	937152-1	The facility had positive cases for COVID 19 when the vaccine was received and administered to patient. With her advanced age and chronic conditions, she did not have time to build immunity between the time of vaccination and her testing positive.
COVID19 VACCINE (COVID19)	Death	937186-1	The facility had a number of positive COVID 19 cases prior to patients vaccination. Due to her advanced age, chronic condition, and exposure, patient did not have the time to build immunity after exposure before becoming positive.
COVID19 VACCINE (COVID19)	Death	937434-1	Pt expired due to possible cardiac arrest. Unsure if this was vaccine related.
COVID19 VACCINE (COVID19)	Death	937444-1	Resident was found deceased at approximately 6pm in her apartment

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	937527-1	unsure if related to vaccine, but was notified by her next of kin that she died on 1/4/2021. No reports of side effects or hospitalization were reported to the facility prior to the notification of death.
COVID19 VACCINE (COVID19)	Death	937569-1	patient reported expired 1/7/2021
COVID19 VACCINE (COVID19)	Death	937773-1	Patient was sent to the ED due to significant hematuria. He was afebrile.
COVID19 VACCINE (COVID19)	Death	938097-1	died; This is a spontaneous report from a non-contactable consumer via a Pfizer-sponsored program. A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. It was reported the patient was a doctor, died after the vaccine with no apparent disease. It was not reported if an autopsy was performed. No follow-up attempts are possible. Information about lot/batch number cannot be obtained.; Reported Cause(s) of Death: Unknown cause of death
COVID19 VACCINE (COVID19)	Death	938118-1	on 1/8/2021 17:30 patient taken to ER, cerebellar hemorrhage, stroke, aneurysm
COVID19 VACCINE (COVID19)	Death	938974-1	Hospice Resident received first Covid 19 vaccine dose on 1/6/21. 1/7/21 resident had decreased appetite noted in am but ate 100% of meal at dinner. 1/9/21 resident had decreased appetite with emesis x 2, loose BM x 2. Call placed to hospice. 1/10/21 5:44 am resident able to take HS meds, ingest 2 cups of shake. No emesis or loose stool noted. 12PM nurse noted resident not eating meals but ingesting milkshake and medications without any problems. Hospice contacted for change in condition. 1:00 pm hospice ordered Phenergan 12.5 mg Q 6 hrs PRN. Labs to be drawn 1/11/21. Hospice notified POA. 1/11/21 12:24am Resident had blood in stool. Resident denies any pain, on 2L of O2 for comfort.
COVID19 VACCINE (COVID19)	Death	939050-1	Patient vaccinated on 12/28. Approximately one day later, develops cough and on azithromycin x 1 week. On 1/3, patient develops left-sided weakness and aphasia. Taken to the hospital, tested COVID+, required intubation -- acute hypoxic respiratory failure secondary to COVID - on H&P. Patient died on 1/4/21 at 7:20am.
COVID19 VACCINE (COVID19)	Death	939270-1	Sudden cardiac death
COVID19 VACCINE (COVID19)	Death	939845-1	Three hours after receiving COVID 19 vaccination, Patient oxygen level decreased to a critical level and went into cardiac arrest. Staff performed full code but was unable to bring back patient from cardiac arrest.
COVID19 VACCINE (COVID19)	Death	940602-1	"Patient received vaccine on 1/8/2021. On 1/9/2021 I checked on patient via phone for symptoms or problems and he reported none but mild soreness at injection site. On 1/10/2021 family friend called me to tell me that patient had expired at about 8:00 pm. Patient reportedly complained of ""pain"" unspecific and collapsed at home. Hospital reportedly told family that it appeared to be a ""heart attack""."
COVID19 VACCINE (COVID19)	Death	940822-1	patient passed away after receiving the Covid vaccine; This is a spontaneous report from a contactable nurse. An 81-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular into the right arm on 07Jan2021 at 0.3 mL, single for covid-19 immunization. There was no medical history and no concomitant medications. On 08Jan2021, the patient passed away after receiving the COVID vaccine. The patient died on 08Jan2021. An autopsy was not performed. Investigations indicate that unspecified labs were done, but nothing two weeks prior; no further details were provided. The patient received the first dose the day prior. The reporting nurse discussed it with the medical director, and he thought that he potentially passed away from the COVID vaccine. The relatedness of the event to the suspect vaccine was reported as related by the reporting nurse per The Agency. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: Based on the limited information available, it is medically not possible to make meaningful causality assessment, it is unlikely the vaccine could have contributed to the death of the patient based on the known safety profile. However case will be reevaluated when additional information is received during the follow-up The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: Stated that the patient passed away after receiving the Covid vaccine
COVID19 VACCINE (COVID19)	Death	940855-1	Patient received her vaccination on 1/12/21 administered by pharmacy*+. She expired on 1/12/21 an approximately 7:30pm. Resident did not have any adverse reactions and was a hospice patient.
COVID19 VACCINE (COVID19)	Death	940866-1	"Patient was found ""acting abnormal"" on 1/9/2021 at 1215. VS HR 20-30's. EMS activated. EMS arrived and patient was found pulseless in PEA/ asystole, CPR and ACLS initiated and then transported to the MC. Unsuccessful resuscitation and expired on 1/09/2021 at 1348. Clinical impression Cardiopulmonary arrest."
COVID19 VACCINE (COVID19)	Death	940950-1	thrombopenia; pulmonary embolism; neutropenia fever; This is a spontaneous report from a Pfizer-sponsored program. A contactable consumer reported for a patient that received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced thrombopenia, pulmonary embolism and neutropenia fever on an unspecified date. The clinical outcome of thrombopenia, pulmonary embolism and neutropenia fever was fatal. The patient died on an unspecified date. It was unknown if an autopsy was performed. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Reported Cause(s) of Death: thrombopenia; pulmonary embolism; neutropenia fever

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	940954-1	"Heart attack; This is a spontaneous report from a contactable consumer. An 82-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: and Expiration Date: Unknown), via an unspecified route of administration in the left arm on 05Jan2021 at 13:00 at a single dose for COVID-19 immunization; administered in doctor's office/urgent care. The patient's medical history and concomitant medications were not reported. It was unknown if the patient received any other vaccines within four weeks prior to the COVID vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. On 05Jan2021, the patient experienced heart attack; which resulted in death and was assessed as medically significant. The patient also experienced the associated symptoms of cold sweats, chest pain, shortness of breath. Therapeutic measures were taken as a result of heart attack, which included ""life saving measures"" by the paramedics performed upon arrival with no success. The clinical outcome of the event, heart attack, was fatal. The patient died on 05Jan2021 due to heart attack; as ruled by the paramedics. It was unknown if an autopsy was performed. The batch/lot numbers for the vaccine, PFIZER-BIONTECH COVID-19 MRNA VACCINE, were not provided and will be requested during follow up.; Reported Cause(s) of Death: Heart attack"
COVID19 VACCINE (COVID19)	Death	940955-1	"Cardiac Arrest; Patient was found pulseless and breathless 20 minutes following the vaccine administration.; Patient was found pulseless and breathless 20 minutes following the vaccine administration.; This is a spontaneous report from a contactable other healthcare professional (HCP). A 66-year-old female patient (pregnant at the time of vaccination: no) received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL1284) via intramuscular at left arm on 11Jan2021 12:15 PM at single dose for COVID-19 immunization. Medical history included diastolic CHF, spinal stenosis, morbid obesity, epilepsy, pulmonary hypertension and COVID-19 (Prior to vaccination, the patient was diagnosed with COVID-19). The patient received medication within 2 weeks of vaccination included amiodarone, melatonin, venlafaxine hydrochloride (EFFEXOR), ibuprofen, aripiprazole (ABILIFY), lisinopril, cranberry capsules, diltiazem, paracetamol (TYLENOL), famotidine, furosemide (LASIX [FUROSEMIDE]), ipratropium bromide, salbutamol sulfate (IPRATROPIUM/ALBUTEROL), buspirone, senna alexandrina leaf (SENNA [SENNA ALEXANDRINA LEAF]), polyethylene glycol 3350 and morphine. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Patient used took Penicillin, propranolol, quetiapine, topiramate, Lamictal and had allergy to them. Patient used took the first dose of BNT162B2 (lot number: EJ1685) via intramuscular at right arm on 21Dec2020 12:00 PM at single dose for COVID-19 immunization. Since the vaccination, the patient been tested for COVID-19 (Sars-cov-2 PCR) via nasal swab on 06Jan2021, covid test result was negative. Patient was found pulseless and breathless 20 minutes following the vaccine administration (11Jan2021 12:30 AM). MD found no signs of anaphylaxis. Patient died on 11Jan2021 12:30 AM because of cardiac arrest. No treatment received for the events. Outcome of pulseless and breathless was unknown. the autopsy was performed, and autopsy remarks was unknown. Autopsy-determined cause of death was unknown. It was reported as non-serious, not results in death, Life threatening, caused/prolonged hospitalization, disabling/Incapacitating nor congenital anomaly/birth defect.; Sender's Comments: Based on the available information this patient had multiple underlying medical conditions including morbid obesity, diastolic CHF, epilepsy, pulmonary hypertension and COVID-19 diagnosed prior to vaccination. All these conditions more likely contributed to patients cardiac arrest resulting in death. However, based on a close temporal association ("Patient was found pulseless and breathless 20 minutes following the second dose of BNT162B2 vaccine administration, contributory role of BNT162B2 vaccine to the onset of reported events cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: Cardiac arrest; Autopsy-determined Cause(s) of Death: autopsy remarks was unknown. Autopsy-determined cause of death was unknown"
COVID19 VACCINE (COVID19)	Death	941215-1	Actual event and cause of death were unknown; This is a spontaneous report from a non-contactable consumer. A 90-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 06Jan2021 at single dose for COVID Prevention. The relevant medical history included aortic valve replacement from Nov2019. Concomitant medications were not reported. The consumer stated that she was taking the reporting responsibilities to report that a friend of hers, informed that the patient passed away on Friday, and had received the COVID vaccine on Wednesday. The consumer stated that it was unknown to her at this time, if the friend had called to complete a report herself, regarding the incident. Their conversation was very brief. The patient was 90 years old, and it was her friend's mother that was the patient. Actual event and cause of death were unknown. The patient had her vaccine on Wednesday 06Jan2021, and then the patient collapsed in front of the reporter at Friday night on 08Jan2021 and passed away that same day. The autopsy was unknown. The outcome of the event was fatal. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Reported Cause(s) of Death: Actual event and cause of death were unknown
COVID19 VACCINE (COVID19)	Death	941561-1	Staff walked into resident's room around 10:00am and noted resident's left side of his face was flaccid. Nurse was called and upon assessment resident noted to have an unequal hand grasp with left worse. He was able to talk but was mumbled and hard to understand. Physician, hospice, and family were notified. Resident had a stroke at 10:06 am on 1/8/2020. He lost all ability to use his left side. Resident passed away on 1/11/2020.
COVID19 VACCINE (COVID19)	Death	941607-1	The patient passed away today, 1/13/2021. She was a hospice patient. She showed no adverse effects after receiving the vaccine on 1/12/2021. This morning she woke up as normal and during her morning shower she had a bowel movement, went limp and was non-responsive. The patient passed away at 7:45 am.
COVID19 VACCINE (COVID19)	Death	941743-1	This person was found to be deceased on routine rounds during the night, 3am. No symptoms of reaction noted post vaccine. No injection site reaction. No reports of any allergic reaction.
COVID19 VACCINE (COVID19)	Death	941811-1	Resident began having fever on 1/11/21 @0600. VS= T-102 B/P- 100/57 P- 112 RR- 24 O2 Sat 92% on RA. MD called. Rapid COVID Test was negative. CBC,CMP, U/A were ordered as well as CXR. Resident's condition declined. At 3:00pm resident started having respiratory distress and hypoxia O2 Sat 89%. Supplemental O2/mask @ 5LPM. Neb TX, EKG, and Rocephin 1 GM ordered. Condition worsened. Resident sent to nearest ER for evaluation. Later in the evening the staff AT Medical Center called to inform staff that resident had expired @ 2230 as a result of Respiratory Failure and Sepsis.
COVID19 VACCINE (COVID19)	Death	942040-1	little bit of a reaction light headed after 5 minutes. vials were low, so observed for 30 minutes after being light headed. Patient was found unresponsive and pronounced dead later that day.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	942072-1	Death occurred 3 days after vaccine receipt; attributed to complications of her chronic advanced dementia with aspiration at age 87. No evidence of acute vaccine reaction.
COVID19 VACCINE (COVID19)	Death	942085-1	No adverse effects from vaccination seen on 1/2/21. On 1/6/21 resident was seen by Dr and her baclofen pump was refilled with 20 ml Baclofen 4,000mcg/ml. ITB Rate increased by 6% to 455.5 mcg/day simple continuous rate over 3 days. On 1/8/21 at 0615 resident was shaking, lower extremities mottled, SaO2 70%, pulse 45. Oxygen started at 2 L/m per NC. At 0715 her primary physician was notified as well as her daughter. Oxygen increased to 4 L/min, sats at 83%. SOA noted, reported all over pain. At 0850 when they attempted to reposition the resident, she was not responsive. Licensed nurse assessed her and no heartbeat heard or pulse found.
COVID19 VACCINE (COVID19)	Death	942106-1	54 y/o M with PMH of HTN, HLD, Alcoholic Cirrhosis, Aortic Valve Stenosis, and angina BIBA as a Medical Alert for cardiac arrest noted PTA. Per EMS, the patient called because he was having constant, diffuse abdominal pain x 1 day that radiated to his chest. On scene, the patient had a witnessed arrest with EMS starting CPR. He was given 3 rounds of epi without ROSC. Pt had no associated shockable rhythm. Of note, pt's wife, had noted pt had received covid vaccine the prior day.
COVID19 VACCINE (COVID19)	Death	942290-1	Resident received 1st dose on 1/4/2021. On 1/6/2021 resident having SOB, increased weakness with O2 sats at 91% RA. On 8th resident sustained a fall, O2 sats 88-92, dizzy, weakness. Rapid COVID test performed with negative results. Evening of 8th resident was lethargic and diaphoretic with fever of 99.9. Resident transferred to ER, on 5lt of oxygen. Resident returned from the ER on 1/9/2021 with new diagnosis of Leukemia and orders for hospice. Continued with fever, crackles and N/V and loss of appetite from the 9th and 10th of January. Resident expired at 820am on 1/11/2021.
COVID19 VACCINE (COVID19)	Death	943266-1	Initial pain in back of head and extreme headache. Some vomiting. At emergency, went into coma and was intubated. Hole drilled in skull to relieve pressure. MRI taken. Lot of bleeding in brain - aneurism lead to death approximately 14 hours after initial symptoms.
COVID19 VACCINE (COVID19)	Death	943362-1	Pt collapsed at home approx 5:30 pm and died
COVID19 VACCINE (COVID19)	Death	943397-1	On day due for 2nd dose, Patient was found unresponsive at work in the hospital. Patient pupils were fixed and dilated. Full ACLS was initiated for 55 minutes with multiple rounds of bicarb, calcium chloride, magnesium, and epinephrine. Patient was intubated. Patient continued into V. Fib arrest and was shocked multiple times.
COVID19 VACCINE (COVID19)	Death	943442-1	Systemic: reported by staff patient expired under suspicious circumstances after receiving vaccine. Patient was on hospice, reported not expected to pass this soon; symptoms lasted 0 days
COVID19 VACCINE (COVID19)	Death	943889-1	No adverse reactions observed after administration of medication. Patient starting complaining of shortness of breath around 0500 the following morning. SP02 checked in the 80s. Patient expired 01/09/2021;
COVID19 VACCINE (COVID19)	Death	944273-1	death 2 days after vaccine; 101 fever on day of booster shot; This is a spontaneous report from a contactable consumer. A 65-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, on 09Jan2021 (at the age of 65-years-old) as a single dose for COVID-19 immunization. Medical history included high blood pressure, high cholesterol, enlarged prostate, and lifelong digestive issues/irritable bowel syndrome (IBS). Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had no allergies to medications, food, or other products. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced 101 fever on day of booster shot on 09Jan2021 and death 2 days after vaccine on 10Jan2021. The event, death 2 days after vaccine, was reported as fatal. The patient underwent lab tests and procedures, which included body temperature: 101 on 09Jan2021. The patient did not receive treatment for the events. The clinical outcome of 101 fever on day of booster shot was unknown and of death 2 days after vaccine was fatal. The patient died on 10Jan2021. The cause of death was unknown. It was unknown if an autopsy was done. It was also reported that since the vaccination, the patient had not been tested for COVID-19. The batch/lot number for the vaccine, BNT162B2, was not provided and has been requested during follow up.; Reported Cause(s) of Death: death 2 days after vaccine
COVID19 VACCINE (COVID19)	Death	944282-1	resident coded on 09Jan at 8am and expired; This is a spontaneous report from a contactable Other Health Professional. A 70-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL0140), intramuscularly in left arm on 05Jan2021 15:15 at single dose for COVID-19 immunization. Medical history included DM2(Type two diabetes mellitus), CHF(congestive heart failure), open wound, wound infection, heart failure. Allergies to medications, food, or other products: none. Concomitant medications included unspecified products (List of any other medications the patient received within 2 weeks of vaccination: yes). If the patient received any other vaccines within 4 weeks prior to the COVID vaccine: Unknown. Facility where the most recent COVID-19 vaccine was administered: Nursing Home/Senior Living Facility. The resident coded on 09Jan2021 at 8 AM and expired. The patient died on 09Jan2021. An autopsy was not performed. AE resulted in: patient died. Death cause: unknown at this time. Was treatment received for the adverse event: Unknown. Prior to vaccination, was the patient diagnosed with COVID-19: No. Since the vaccination, has the patient been tested for COVID-19: No. Serious: Yes. Seriousness criteria-Results in death: Yes. Seriousness criteria-Life threatening: No. Seriousness criteria-Caused/prolonged hospitalization: No. Seriousness criteria-Disabling/Incapacitating: No. Seriousness criteria-Congenital anomaly/birth defect: No.; Sender's Comments: The old patient had diabetes mellitus, congestive heart failure, open wound complicated by infection, all these pre-existing medical conditions contribute to the patient death. More information including complete medical history, concomitant medications and event term details especially death cause and autopsy results are needed for a full assessment of the case. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate; Reported Cause(s) of Death: resident coded on 09Jan at 8am and expired
COVID19 VACCINE (COVID19)	Death	944365-1	Resident expired on 12/30/20, dx cardiac arrest.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Death	944439-1	Resident expired on 1/2/21.
COVID19 VACCINE (COVID19)	Death	944595-1	Cardiac arrest within 1 hour Patient had the second vaccine approximately 2 pm on Tuesday Jan 12th He works at the extended care community and was in good health that morning with no complaints. He waited 10-15 minutes at the vaccine admin site and then told them he felt fine and was ready to get back to work. He then was found unresponsive at 3 pm within an hour of the 2nd vaccine. EMS called immediately worked on him 30 minutes in field then 30 minutes at ER was able to put him on life support yet deemed Brain dead 1-14-21 and pronounced dead an hour or so later
COVID19 VACCINE (COVID19)	Death	944641-1	Patient died on 1/21-2021
COVID19 VACCINE (COVID19)	Death	944659-1	Patient died. A friend called to let us know.
COVID19 VACCINE (COVID19)	Death	944732-1	Resident found unresponsive and without pulse at 05:45am.
COVID19 VACCINE (COVID19)	Death	944998-1	On 1/11/21 noted with headache, nausea/vomiting, severe melaise. On 1/12/21 resident expired.
COVID19 VACCINE (COVID19)	Death	945241-1	71yo female resident who died after receiving Pfizer BioNTech vaccine. On 1/14/2021, VS taken at 10am, B/P 99/60, O2 sats, 95% (trach w/O2). At 11:30am, Patient showed no s/sx of distress, A&Ox3. At 11:50am, a nurse went to perform a COVID test and assessment (the facility is experiencing an outbreak), and found the patient unresponsive on the bathroom floor. CPR was immediately started; no shock advised per AED; 12:15pm EMS arrived and took over. At 12:38pm, EMT called time of death.
COVID19 VACCINE (COVID19)	Death	945247-1	Has underlying dementia and often with difficulty eating. 1 week after immunization she developed a stroke with left sided weakness and difficulty swallowing. Comfort measures instituted. Not sure if this is related to the vaccine, but thought I should report
COVID19 VACCINE (COVID19)	Death	945253-1	"83yo female resident who died after receiving Pfizer BioNTech vaccine. On 1/14/2021, the patient reportedly got up in the middle of the night with c/o feeling ""blah"", restlessness, and nausea. VS normal, no other s/sx. At 4:15am, the patient was asked to go back to bed, assisted by a nurse and GNA. At 6am, GNA was going to do morning VS and found the patient unresponsive, no pulse, no respirations. GNA notified the nurse. At 6:03am, CPR started and EMS called. At 6:15am, EMS arrived and took over. At or around 6:30am, EMT called time of death"
COVID19 VACCINE (COVID19)	Death	945578-1	No reactions immediately after vaccine was given. Resident has dementia, has had multiple hospitalizations related to a renal stone recently. Had a tooth that was bothering her, went to see her dentist and it was extracted on 1/6/21. On 1/10 they noted feet and ankles are dark purple with white splotches appears to be mottling. Minimally responsive to voice and touch. Not eating. Compassionate visit with family. Family did not want hospice, did not feel it was needed, said, what more could they do for her than you're already doing? On 1/11 at 1950 was determined to be deceased.
COVID19 VACCINE (COVID19)	Death	945603-1	Had no immediate issues with the vaccine. He had returned from the hospital on 12/21 and had some concerns about his weight which were shared with his physician on 1/4/21. On 1/5/21 had a visit with his cardiologist for a pacemaker check. On 1/8/21 staff were called to his room, he was on the floor, bluish skin color. No vital signs found, no heart rhythm heard at 2200.
COVID19 VACCINE (COVID19)	Death	946097-1	died 3 days after receiving the vaccine/Death cause: Pneumonia per doctor; This is a spontaneous report from a contactable consumer. An 85-year-old non-pregnant female patient (reporter's mother) received the first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 07Jan2021 at single dose for covid-19 immunization. Medical history included dementia from an unknown date. The patient's concomitant medications were not reported. The patient died 3 days after receiving the vaccine on 10Jan2021 11:00, death cause was pneumonia per doctor. The event was reported as serious as resulted in death. It was unknown if the patient received treatment for the event. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination, and it was unknown if the patient has been tested for COVID-19 since the vaccination. The patient died on 10Jan2021. It was not reported if an autopsy was performed. Information about lot/batch number has been requested.; Reported Cause(s) of Death: Pneumonia
COVID19 VACCINE (COVID19)	Death	946225-1	At approximately 10:30pm on 1/14/2021, resident was noted to have a rash on her face, hands, arms, and chest. VS:100.2, 113, 20,108/59, 84% room air. applied nasal cannula at 4-L, telephoned Physician orders 6mg Decadron one time order, a second set of Vitals , reads 99.3, 110, 20, 106/60, 90% on 4-L N/C. On coming shift advised. At approximately 2:00am on 1/15/2021, resident congested and coughing. BP 151/70, pulse 124, temp 98.1 forehead, resp 20 and pulse oc 79% on 3L. At approximately 2:30am PRN cough syrup and breathing tx. Resident's condition began to worsen with breathing tx. This LPN updated at 0248 doctor on resident's condition. Doctor gave permission for resident to go to hospital. At 4:19am the Er called to say resident passed away.
COVID19 VACCINE (COVID19)	Death	946293-1	51 year old M with h/o O2 dependent COPD, Severe pulmonary fibrosis became increasingly hypoxic around 1800hours 1/7/2021. He was transported to hospital for acute on chronic hypoxia respiratory failure. On 1/12/2021 he decompensated further, and after discussing with family and palliative care, He was changed to comfort care. He expired on 1/12/2021@2325 at medical center.
COVID19 VACCINE (COVID19)	Life Threatening	902946-1	Swelling of hands followed by angioedema
COVID19 VACCINE (COVID19)	Life Threatening	903123-1	About 5 minutes after the vaccine developed chest tightness, increased work of breathing, palpitations and severe dizziness. Transferred to the ED where i received oxygen, IV benadryl, IV fluids and monitoring. Released after about 4 hours and continue to take benadryl 50 mg PO q 4 hours. Also developed red facial rash (unknown time) Pain at injection site began the morning after the injection.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	903132-1	40 year female received Pfizer-BioNTech COVID-19 Vaccine today Patient reported prior h/o severe allergic reaction to influenza vaccine with eggs preservative. She has received flu vaccine w/o egg w/o problem. Due to her prior history of severe allergic reaction/ anaphylaxis to another vaccine, in this case flu vaccine with eggs, we should proceed with caution. She was told we could defer vaccination until more information becomes available. She opted to proceed with receiving Pfizer-BioNTech COVID-19 Vaccine and be observed for 30 minute observation period. Patient developed throat tightening approximately 20 minutes after vaccination. She received EpiPen within 1 minute of symptoms and was sent to ER immediately in wheelchair by nursing staff. Patient was evaluated in ED and was hemodynamically stable. She was given IV benadryl and was stable throughout observation
COVID19 VACCINE (COVID19)	Life Threatening	903324-1	40 min after injection my throat and tongue started to feel weird and tight, pharmacy at my work hospital gave me 25 mg Benadryl and 650mg Tylenol. At about 1 hr 45 min after injection my throat got to the point of so swollen and itchy I couldn't swallow. I went to nearest emergency room hospital they administered decadron orally, Pepcid P.O., and Toradol via IM.
COVID19 VACCINE (COVID19)	Life Threatening	903400-1	"5 minutes after the Pfizer Covid-19 vaccine administration, the patient developed flushing, hives, felt warm and eventually short of breath. She started to wheeze and was wheeled into ER c/o "I can't breathe while holding throat and thrashing with facial flushness noted. PT took 2 Benadryls and had several Epi shots. She was then discharged from the ER and later on that day, started to feel short of breath again. In the ED today she was audibly gasping for air, however had no wheezing, had a normal saturation and a normal blood pressure. She had taken another dose of her EpiPen IM and diphenhydramine 50 mg by mouth prior to coming. She was then admitted to the hospital for further observation. While on the floor, she started to feel short of breath again (about 9 am on 12/18/2020), which required an RRT . Patient received another dose of diphenhydramine IV, methylprednisolone 125 mg IV and several doses of IM epinephrine. She also required oxygen. She was then transferred to an ICU for further care."
COVID19 VACCINE (COVID19)	Life Threatening	903592-1	Not all or limited to: anaphylactic reaction: Feeling lump in throat, tongue feeling funny with numbness, feeling of hard to swallow, throat tightness, shortness of breath, tachycardia, tachypnea, pressure, tingling, and numbness from head to toe, dizziness/lightheadedness, cough, voice changes.
COVID19 VACCINE (COVID19)	Life Threatening	904029-1	15 minutes after getting the vaccine began itching that quickly developed into rash/hives to face, neck, chest, abdomen. At 20 minutes post vaccine developed severe leg weakness with lightheadedness, chest tightness, and SOB. 22 minutes out collapsed to the floor unable to bear weight due to leg weakness and had severe cramping and tingling in legs, still unable to move them. Was rushed to the ER from employee health and arrived approximately 30 minutes post vaccine administration at that time there was significant mottling to arms and hands with polar nail beds. Vital signs were stable, no strider. Given Solumedrol, Benadryl, and Pepcid STAT. Rash/hives and SOB improved, but legs weakness/tingling, cramping did not and noted purple feet with cyanotic nail beds and mottling to hands/ arms that would come and go. Rash/hives reappeared much worse 2 hours post meds to face, neck, and upper chest. Was given another series of Solumedrol and Benadryl and admitted to the hospital. I am now 19 hours post vaccine with improved but persistent leg weakness, now able to bear my own weight independently and walk a few steps, but still having legs cramps and intermittent tingling to feet. Color has improved with resolved mottling/cyanosis. I continue to have hives reappear with scheduled Benadryl, Solumedrol, and Pepcid.
COVID19 VACCINE (COVID19)	Life Threatening	904260-1	12 minutes after injection, I felt flushed and dizzy. They hooked me up to a vital sign monitor which showed my heart increasing to 133 bpm, SaO2 98%. A manual blood pressure check was 168/110. My heart felt like it was pounding, I was hot and sweating. After 10 minutes or so, I felt increasingly dizzy and my vision started fading. VS still showed tachycardia and hypertension. It became difficult to swallow and my tongue was feeling fat. A Rapid Response Team was alerted, they started and IV, and took me to the Emergency Department. I became very cold and shaky. My hands and feet became a little mottled. They gave me 50 mg IV benedryl, 20 mg IV pepcid, a dose of solumedrol, and IM epinephrine 0.3mg, and 1 Liter of fluid. My symptoms resolved and I was discharged home a couple hours later.
COVID19 VACCINE (COVID19)	Life Threatening	904334-1	Angioedema, hives, tachycardia, shortness of breath
COVID19 VACCINE (COVID19)	Life Threatening	904436-1	The patient was well prior to vaccination (12/17). The day after, he felt mildly unwell and had a low grade fever. The following day, he had a fever of 102. He received 1L of fluid at Urgent Care and had a BP on the 80s. Shortly thereafter, he felt palpitations and developed AF. He came to the hospital where he was tachycardia to 200 bpm and hypotensive to SBP70s. He received aggressive fluid resuscitation (4L), IV metoprolol and was started on empiric Abx. Within several hours, the HR lowered, BP increased, and AF spontaneously converted to sinus. He had no dysuria. Cultures so far have not shown growth at our hospital. Urinary culture from urgent care has reportedly shows 20k gram positive cocci.
COVID19 VACCINE (COVID19)	Life Threatening	904498-1	Ventricular tachycardia. Defibrillator paced me out of rhythm. I have had my ICD for 3 years. This is the first abnormal rhythm I have had where it delivered a therapy to abort it.
COVID19 VACCINE (COVID19)	Life Threatening	904504-1	Throat closure (angioedema/anaphylaxis) requiring ambulance transport to Hospital emergency room and stay IV infusion of Benedryl, solumedrol, and Pepcid with excellent results. Observed twelve hours, then discharged.
COVID19 VACCINE (COVID19)	Life Threatening	904553-1	Within a few minutes of taking the vaccine, my lower lip began swelling. I was moved to the emergency department of Hospital and monitored and treated for four hours. Then I was released. At around 1:30 p.m. I felt my skin singling and started having difficulty breathing. Since I was no longer at my work (Hospital) I went to the closest hospital. This reaction was much worse. My husband drove. My heart rate increased. I was released at around 6:30 pm
COVID19 VACCINE (COVID19)	Life Threatening	905544-1	Pt expressed feeling tachycardic, jittery, shaky, site edema, shortness of breath and dizziness. Pt received epipen 0.3 mg IM injection x1 dose and benadryl PO, responded favorably and transported to ED for follow up care.
COVID19 VACCINE (COVID19)	Life Threatening	906988-1	PT WAS OBSERVED IN HOLDING AREA LEANING FORWARD IN HER CHAIR ABOUT 7 MINUTES AFTER RECEIVING THE VACCINE. RN ASSESSED AND NOTED: AUDIBLE WHEEZE, RESP 40/MIN, LIP SWELLING AND PT COMPLAINED OF NAUSEA. PT WAS ESCORTED TO ER IN WHEELCHAIR ACCOMPANIED BY 2 RN'S (2 MINUTE WALK) ONE HOUR LATER - AS REPORTED BY DR (ER) WORKING DIAGNOSIS - ANAPHYLAXIS / STATUS ASTHMATICUS MEDS RECEIVED: SOLUMEDROL 125, DIPHENHYDRAMINE 50MG, FAMOTIDINE 20MG --ALL IV EPINEPHRINE 0.3MG IM X1 FOLLOWED BY 0.3MG IV X 1 FOLLOWED BY 0.1MG IV X1 PT IS RECEIVING O2 - AND PROGRESSING TO BIPAP

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	907022-1	Anaphylaxis/Angioedema Patient was given EpiPen 0.3 mg IM; Methylprednisolone 125 mg once; Diphenhydramine 25 mg IV push once; Famotidine 20 mg IV push once; Dexamethasone 10 mg IV push once Patient was intubated and put on propofol and midazolam drips for sedation
COVID19 VACCINE (COVID19)	Life Threatening	907042-1	Received vaccine around 10:40 am, by 10:50 started to feel dizzy, eyes felt full, dry, tingly, swollen, voice became raspy and throat itched. Received 25 mg Benadryl PO at around 10:55. Face, arms, chest and abdomen developed a fine red itchy rash, tongue swollen and itchy, lips tingling, wheezing, blood pressure elevated, pulse thready given 25 mg PO Benadryl, taken to the Emergency Room, symptoms persisted, stomach hurt became nauseated, received IV solumedrol, Pepcid, IV fluids, nebulized albuterol. Sent home once stable after 3 hours, with instruction to take Benadryl every 4-6 hours fir the next 2 days, albuterol as needed, and prednisonone for the next 5 days.
COVID19 VACCINE (COVID19)	Life Threatening	907075-1	Patient experienced bronchospasm with coughing and tongue itching approximately 10 minutes after the injection.
COVID19 VACCINE (COVID19)	Life Threatening	907101-1	patient felt slightly nauseated at 10 minutes after injection, then developed slight sweating; BP 160/81; 83 at 5:45 and then 158/87 with HR 82 at 5: 52 pm. Her lungs were clear, she was speaking in full sentences and was denying any chest pressure, her usual sense of asthma exacerbation. At 6:05 it was 164/83 with HR 79 and patient developed a dry cough; we decided to have her wait just a bit longer, then cough worsened, so at 6:25, decision was made to have patient seen in ER for further assessment, and en route in wheelchair to ER the dry cough became persistent, spasmodic and patient was unable to speak. Epi-Pen was injected in right mid thigh, and patient transported to ED urgent eval. She noted immediate palpitations, and slight improvement of breathing, was able to speak in four word sentences. On arrival to the ED, patient was administered Duonebs, Albuterol neb, IV Benedryl, IV Solumedrol; CXR was obtained, with results pending. Patient was sent to observation for ongoing monitoring and assessment of breathing. at 6:30 PM in the ER, she
COVID19 VACCINE (COVID19)	Life Threatening	908003-1	ANAPHLACTIC REACTION, SOB, CHEST PRESSURE, TIGHTNESS IN THROAT, TACHYCARDIA
COVID19 VACCINE (COVID19)	Life Threatening	908157-1	Initially started with nausea around min 5, shortly after then itching on arms. Around min 15 ?lump? sensation in throat. Around min 20 swelling of tongue, worsening feeling in throat, wheezing, itching around mouth. Sent to ER, received IM Epi, IV: Steroids, Benadryl, Zofran, Pepcid, Albuterol inhaler.
COVID19 VACCINE (COVID19)	Life Threatening	908685-1	throat swelling, SVT
COVID19 VACCINE (COVID19)	Life Threatening	908869-1	12/18/2020: COVID19 vaccine received. 12/19/2020: Patient noticed petechiae/bruising on arms, legs and face. Worsened over next 48 hours. 12/21/2020: Patient had blood drawn (CMP, PT/INR, CBC) at lab. 12/22/2020: Labs resulted; CMP and PT/INR WNL (exceptions: SCr 1.24, Tbil 1.7); CBC with platelet count of 1,000 resulting in patient admission to Hospital. At admission he received 80 mg of prednisone, 40 g of IV Ig and a unit of platelets. 12/23/2020: Continued hospitalization. Patient's platelets improved to 20,000 and he received another 35g of IV Ig. 12/24/2020: Patient discharged with platelets of 38,000.
COVID19 VACCINE (COVID19)	Life Threatening	908973-1	15 min after receiving Covid 19 vaccine patient started to feel like her heart was racing / felt faint. Burning feeling in upper thigh and pelvic area. BP 180/100 HR 130. Rapid Response called / transported to ER. Admitted for 24 hr observation.. Solu -medrol, Benadryl and Ativan given in ER. Released home the next day. 72 hrs later patient states she has numbness and tingling in hands and feet. 12/24/2020 patient reports she is feeling better today / no symptoms noted.
COVID19 VACCINE (COVID19)	Life Threatening	909031-1	Patient presented with signs and symptoms of sepsis, developing over 12 to 24 hours 6 days after vaccination. was hypotensive and confused (beyond baseline)
COVID19 VACCINE (COVID19)	Life Threatening	909061-1	Reported sensation of tongue swelling during post-vaccination observation at 10 minutes. Epinephrine was refused and she was taken to ED for observation where she was given oral dose of Benadryl and Pepcid. Discharged with instructions to return PRN and follow up with PCP. Elevated BP noted.
COVID19 VACCINE (COVID19)	Life Threatening	909130-1	Acute NSTEMI with symptom onset 4 days after vaccination
COVID19 VACCINE (COVID19)	Life Threatening	909146-1	listed before
COVID19 VACCINE (COVID19)	Life Threatening	909147-1	Approximately 2 minutes after injection, felt flushed and tingly. This subsided, but developed a cough. Felt fine enough to leave the vaccination area after being monitored for 15 minutes. Cough continued, and developed a scratchy throat that eventually led to swelling of the throat at approximately 30-35 mins post administration. Sought care in the ED, where I was tachycardic and hypertensive. Received IV Benadryl, steroids, and IV fluids. Discharged home, but symptoms returned around 2pm. Sought care in a different ED, where I remained hypertensive and tachycardic. Received additional IV fluids, IV Benadryl and steroids. Eventually was treated with IM epinephrine after my heart rate was decreased to about 100bpm with IV metoprolol.
COVID19 VACCINE (COVID19)	Life Threatening	909165-1	At the time of the injection sharp pain across my back , then at about 5 mins after feelings of light headedness, progressing pain across my back, trouble feeling like I could get enough air in with breathing and dizziness and I tried to get to the floor to sit or lay down but passed out. Then the next event I recall was a sharp pain in my thigh(apparently administered Eli pen) . I regained consciousness and was gasping andI was told I had been given a shot of epi.
COVID19 VACCINE (COVID19)	Life Threatening	909278-1	Rapid onset of hoarseness, throat tingling and tightness
COVID19 VACCINE (COVID19)	Life Threatening	909481-1	O had the vaccine at 9 am this morning waited 15 mins after vaccine before leaving while driving I had a pounding heart rate and hot I rolled down the window felt better. 1 hour later while at home.e started with nausea diarrhea rapid heart rate headed to medical office while in care tongue swelled I called 911 pulled over when the ambulance got to me my throat swelled and I had hives on chest they took me emergency while there I had sever pounding heart and vomiting treated with meds sent home with medication and benadryl

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	909577-1	Dizziness, dyspnea, neck swelling
COVID19 VACCINE (COVID19)	Life Threatening	909614-1	Fever, muscle aches, hypertension, rapid heart heart
COVID19 VACCINE (COVID19)	Life Threatening	909635-1	Palpitations, shortness of breath, chest tightness, presyncope, which led to New onset atrial fibrillation with rapid ventricular response and required synchronized cardioversion and hospitalization. Discharged on anticoagulation and beta-blocker.
COVID19 VACCINE (COVID19)	Life Threatening	909720-1	12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.
COVID19 VACCINE (COVID19)	Life Threatening	910035-1	right after the vaccine she felt light headed felt better in observation after about 7 minutes employee c/o heart racing, Chest pressure, feeling light headed, throat scratchy and tight. allergy to MRI contrast dye only - Gadolinium. Has had lots of vaccines in the past without problems. Taken to ED via W/C was talking all the way not SOB admitted to ED. 12-28 States she was admitted to the hospital overnight for anaphylaxis on a second trip to ED. She will not be able to get her second dose of the vaccine. this should be entered into the VAERS reporting system. She is till using the benedryl.
COVID19 VACCINE (COVID19)	Life Threatening	911462-1	she is better but still not good; not to be able to breath; sore right arm; This is a spontaneous report from a contactable nurse (patient herself). A 62-year-old female patient received bnt162b2 (BNT162B2, lot EK5730), intramuscular on 18Dec2020 at single dose for immunisation. Medical history included asthma (hospitalized on Jan2020 and has not had any issues since that time, referring to her asthma) diabetes, high blood pressure, swelling, sciatica, blood cholesterol abnormal, rosacea, reflux, allergies, sinus congestion, shingles and post carpal tunnel surgery. Concomitant medications included lisinopril, hydrochlorothiazide, gabapentin, rosuvastatin, metformin, glipizide, doxycycline, sucralfate, cetirizine hydrochloride (ZYRTEC), pseudoephedrine, ascorbic acid, ergocalciferol, nicotinamide, retinol, riboflavin, thiamine hydrochloride (VITAMINS) and tramadol. The patient reported that she not to be able to breath (seriousness criteria-life threatening) on 22Dec2020. She woke up this morning and could not breathe and there was no reason for her to not be able to breath. She thought she may have had a reaction to the COVID vaccine. It was the only thing she could think of that might have caused her not to be able to breathe this morning. As treatment for not to be able to breath, she used Budesonide and Levosalbutamol in her nebulizer. She had sore right arm on 18Dec2020. She informed that she had done everything she can and she was better but still not good. She planned to take the second dose of the COVID Vaccine because she thought it was more important to be protected. She suspected that the vaccine was related to the events sore right arm and could not breathe. The outcome of the event not to be able to breath was recovering; for sore right arm was recovered on unknown date in Dec2020; for she is better but still not good was unknown.; Sender's Comments: Severe allergic reaction including anaphylaxis is the known risk factor; a possible causal association between administration of BNT162B2 and the onset of not being able to breath cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Life Threatening	911511-1	anaphylaxis; This is a spontaneous report from a contactable physician reporting on behalf of patient. A patient of unspecified age and gender received single dose of BNT162B2 (batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunisation. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced anaphylaxis with a very protracted course requiring an epi dose for 4.5 days and was still in the ICU (date/s unspecified) following administration of the COVID vaccine. The physician would like to use a drop of leftover vaccine from one of the vials to do a future skin test after the patient is stable. They were unsure if they needed permission as this was standard practice in allergy to test afterwards but wanted to check in with the company. The outcome of event was unknown. Information about batch/lot number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Life Threatening	911943-1	Adverse reaction post Covid vaccine. Waited for 20 min post vaccine. Experienced S/S Heart palpitations, shortness of breath, tingling in extremities, diaphoretic after leaving clinic observation. Drove back to hospital, escorted by pre surgical testing hospital staff and taken by wheelchair to ED.
COVID19 VACCINE (COVID19)	Life Threatening	912137-1	Was given the vaccine and about 5 minutes later started having swelling and my eyes and face. It was watched for a few minutes and was assessed by EMS and taken to the emergency department. I was given epinephrine, Benadryl, Solu-Medrol, Pepcid, IV fluids, DuoNeb and observed overnight. I was given multiple rounds of Benadryl, steroids, Pepcid, DuoNeb
COVID19 VACCINE (COVID19)	Life Threatening	912271-1	Subject received vaccination Wednesday Dec 16th in the afternoon. He became symptomatic (shortness of breath, low grade fever) the next day. Went to the Emergency room on Saturday Dec. 26th, 2020 due to shortness of breath, had an O2 Sat of 60%, and was hospitalized in the ICU at another hospital (due to bed unavailability).
COVID19 VACCINE (COVID19)	Life Threatening	912511-1	Received vaccine at 1:30 pm yesterday, noted onset of symptoms at 8:45 pm. Numbness and tingling to mouth and bilateral upper and lower extremities, mild vision change, feeling of some swelling to bilateral eyelids. Also swelling to lips. She also did take zinc gluconate 50 mg last night and this morning. Has never taken zinc 50 mg, but has taken zinc as component of multivitamin/pre-natal vitamins. Patient was prescribed Pepcid 20 mg BID, Medrol 4 mg dose pack 21 pill taper until complete. Also given Benadryl 25 mg - 50 mg every 4 - 6 hours for allergy symptoms. And provided with an Epi-Pen for home.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	912574-1	Rushed to ER. Has now been tubed and put into the ICU and has had full-cardiac arrest less than 24 hours after receiving the vaccine.
COVID19 VACCINE (COVID19)	Life Threatening	912602-1	Hospitalized 12/29, has now been tubed and put into the ICU
COVID19 VACCINE (COVID19)	Life Threatening	912785-1	Monitored x 15 min per guidelines. Began to experience SOB and throat swelling, after which pt presented to the ED for tx, dx acute hypertensive urgency with severe hypertension.
COVID19 VACCINE (COVID19)	Life Threatening	912826-1	Itching, cough. Given benadryl 50mg and epinephrine 0.3 in vaccine clinic, and taken to ED for further tx.
COVID19 VACCINE (COVID19)	Life Threatening	912930-1	"Patient was monitored for >15 minutes after vaccination. Patient told a nurse that her knees felt weak. Patient then fainted and was laying on the floor when i arrived. Patient reported she felt like she was ""floating"" and she did not want to ""fall"". She was also nausea and wanted to vomit and did not end up vomiting anything up. Patient fainted several more times. Her BP was around 143/80 and unsure about the pulse. Patient then become unresponsive for 20-30 seconds."
COVID19 VACCINE (COVID19)	Life Threatening	913061-1	10 MINUTES FOLLOWING VACCINE - SOB, COUGH, TIGHTNESS IN CHEST, THROAT SWELLING, DIFFICULTY SWALLOWING, LIGHT HEADEDNESS, AND ELEVATED HEART RATE. ORAL AND IM BENADRYL ADMINISTERED, 2 DOSE OF EPINEPHRINE, 2 NEB TREATMENTS, O2 PLACED. 911 CALLED AND TRANSPORTED TO EMERGENCY FOR FURTHER TREATMENT AND MONITORING. AT HOSPITAL IV STEROID ADMINISTERED. SYMPTOMS SUBSIDED WITH SECOND DOSE OF EPINEPHRINE, HOWEVER RETURNED 3 HOURS LATER AND ANOTHER DOSE OF BENADRYL ADMINISTERED. ELEVATED HEART RATE CONTINUED AND IV FLUIDS ADMINISTERED TO ATTEMPT IN BRINGING DOWN HEART RATE. IV FLUIDS WERE NOT EFFECTIVE. HEART RATE (118-120) REMAINED ELEVATED INTO THE OVERNIGHT HOURS AND SUBSIDED AROUND 1:30A ON 12/29/2020. CONTINUED HEADACHE, NAUSEA ONSET, FATIGUE, DIFFICULTY SWALLOWING AND COUGH ON 12/29/2020.
COVID19 VACCINE (COVID19)	Life Threatening	913238-1	Pt. developed tachycardia, hypertension and felt weak with decreased verbal responsiveness, alert but lethargic. She complained of dry throat, took a sip of water then began persistent coughing and writhing also C/O itching of her throat. She denied difficulty breathing, there were no cutaneous signs of edema, tongue enlargement, etc.
COVID19 VACCINE (COVID19)	Life Threatening	913239-1	Pt. began to feel weak with palpitations about 8-10 minutes after vaccination, her pulse was extremely fast, she then began to complain of lower mid-esophageal burning
COVID19 VACCINE (COVID19)	Life Threatening	913445-1	Pt developed anaphylaxis, was given IM Benadryl, and was sent to the ED. Pt spent 1 night in the hospital, went home, and has come back and is in the ICU. Pt had hives, itching, chest tightness, swollen lips.
COVID19 VACCINE (COVID19)	Life Threatening	913854-1	anxiety, tachycardia, flushing, diaphoresis, HTN, SOB
COVID19 VACCINE (COVID19)	Life Threatening	914103-1	10 minutes after receiving vaccination, a significant increase in HR was noted, along with a tingling sensation through out body. Also, scratchy throat was noted. Alert by patient made to staff at vaccination site. Sweating noted and shortness of breath at that time. Epi pen given via L thigh IM. PIV started and benadryl and solumedrol given. Relief of symptoms noted very shortly after Epi administration. Taken to ER for 4 hour observation. Sent home after 4 hours and given prednisone to be taken at home, 50mg daily for 4 days. No further adverse symptoms noted.
COVID19 VACCINE (COVID19)	Life Threatening	914309-1	Within 3 minutes of vaccination patient became fully flushed head and neck, with rapid heart rate (112), and feeling like her airways were tightening.. Nurse immediately called for response, administered EpiPen, when response arrived applied oxygen and transported to ED. Solumedrol 125 mg, Bendadryl 25 mg, and Famotidine 20 mg, she responded well and was released home with Rx Prednisone 40 mg x 3 days. Only residual effect was a dry/sore throat.
COVID19 VACCINE (COVID19)	Life Threatening	914392-1	12/30 9:30 am developed angioedema. Swelling of face, lips, tight throat. Also had bright red rash over body trunk and arms. Both palms were red, hot and painful.
COVID19 VACCINE (COVID19)	Life Threatening	914596-1	Anaphalaxis reaction, stridor an unable to breathe. Happened in 30 seconds
COVID19 VACCINE (COVID19)	Life Threatening	914730-1	Near syncopal episode approximately 2.5 hours after vaccination. Sudden onset of dizziness, nausea, and diaphoresis. Was admitted to ED and observed overnight. Full cardiac work up was done and shown to be within normal limits. I have no pre-existing conditions and considered to be a healthy adult.
COVID19 VACCINE (COVID19)	Life Threatening	914798-1	On Dec. 20, 2020 around 11:30 PM, 2 days after patient received her COVID-19 vaccination, she was found on the bathroom floor , obtunded, very pale, diaphoretic, nauseous, and complaining of severe chest pain. Paramedics was called and patient was transported to the nearest emergency room. According to paramedics, on the way to the ER while patient was in the ambulance, she was noted with a sudden drop in heart rate about 19 beats/minute and have to be given Atropine IV Push, oxygen and was connected to transcutaneous pacing which improves her heart rate. In the ER patient continued to have chest pain and she was given Morphine, Oxygen, Nitroglycerine and Aspirin. IM had an EKG which showed Sinus Bradycardia with a Right Bundle Branch Block. She had serial ekgs, a chest x-ray, laboratory testing which included Troponin. Her first Troponin level came back elevated prompting her hospital admission to Telemetry. Her next 2 Troponin level improved and return to normal range and her chest pain has resolved.. She underwent a Stress Test which came back negative. Patient was admitted for a total of 20 hours in the Telemetry unit with Cardiology consultation before being discharged home last . She was re-evaluated by the cardiologist yesterday which diagnosed her a chest pain of unknown origin.
COVID19 VACCINE (COVID19)	Life Threatening	914821-1	Rash, Itching and swelling of left arm. Progressed to tachycardia in the 150's, hypertension 200/114. Tingling of lips, dizziness

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	915199-1	Itchy throat, red eyes after 30 minutes. EMS on site gave IV Benadryl, epi pen shot and took to ER for monitoring. Vitals were good so he was discharged.
COVID19 VACCINE (COVID19)	Life Threatening	915464-1	10 minutes after receiving vaccine, patient reported numbness across upper lip which progressed to her tongue. Felt tingling and dryness of tongue and swelling. No difficulty breathing or swallowing, no chest pain, no wheezing, no rash, no itching. Taken to ED and given methylprednisolone 125mg IV, diphenhydramine 50mg IV, famotidine 20mg PO. Patient improved and monitored x 4 hours with resolution of symptoms. Prescribed prednisone 50mg po x 4 days.
COVID19 VACCINE (COVID19)	Life Threatening	915765-1	Patient had an anaphylactic reaction to the vaccine the day after it was given and went to the nearest ER.
COVID19 VACCINE (COVID19)	Life Threatening	915813-1	Patient stated he stopped his blood pressure medications 3 days prior to vaccination due to a previous reaction to losartan, a medication he was no longer taking. Patient took aspirin and a MVI on day of vaccination and drank lemon water. Patient developed tingling sensation in his mouth after eating dinner around 18:00. Patient stated he ate tacos with apple cider and noticed tingling after dinner. Patient stated he took two benadryl with no relief. His tongue continued to swell and he took two additional benadryl at 22:00. Once he developed difficulty swallowing he went to the emergency department. Patient presented to the ED with tongue swelling and difficulty swallowing. At 23:57 he was administered 0.3mg of epinephrine IM, diphenhydramine 25mg IV, famotidine 40mg IV, dexamethasone 10mg IV at 0114, methylprednisolone 60mg q6hrs started at 0417, diphenhydramine 25mg q6hrs IV started at 0416, albuterol 2.5mg via neb q6hrs started at 0710
COVID19 VACCINE (COVID19)	Life Threatening	915928-1	Started feeling a reaction immediately after the vaccine, felt blurred vision, dizziness, racing heartbeat, chest rash and face, itching all over, difficulty swallowing, tongue tingling and wheezing. Sent to ED. EPI and Benadryl. 1800 Went to see her in the ED, room 33. She has red rash to neck, shaky hands itching to neck and chest. ED Dr to discharge, she stated husband to pick her up and she will follow up with OH tomorrow. -----RN ED gave her Epinephrine 0.3 mg, Methylprednisolone 125mg, Diphenhydramine HCL 50 mg, Zofran 4mg, Lorazepam 1 mg, Hydroxyzine HCL 50 mg Sumatriptan 6mg , Discharge from ED at 1902 -----RN RN 12/29/2020 1715 called to check on patient. left voicemail for her to call OH. ???????..? 12/29/2020 1838 left voicemail for patient to call OH. ??????????????????????. 12/30/20 2030 spoke with her. Tuesday 12/29 3pm-4pm dizziness, confusion, sob. Wheezing. Ambulance called. Hospital admitted. Intubated for less than 24 hours. Breathing treatments, epi drip. Now just on steroids and walking around and feeling better. Still admitted at hospital. Hoping discharged tomorrow. -----RN
COVID19 VACCINE (COVID19)	Life Threatening	916268-1	Shortly after receiving the vaccine (within 10 minutes) the patient's tongue swelled, facial redness, gasping for air. This resident was marked for a 30 minute observation due to previous anaphylaxis type reaction. Immediately administered 0.3mg epinephrine x 1 dose. Then administered 50mg IM Diphenhydramine. This treatment course resolved the adverse reaction. Patient was monitored onsite at facility. Her husband came to pick her up and take her home. Tried to reach patient several hours after but was unable to at this time.
COVID19 VACCINE (COVID19)	Life Threatening	916414-1	approximately 30 minutes after receiving vaccination i began to develop tongue and lip swelling as well as difficulty swallowing and breathing , i then proceeded immediately to the nearest er
COVID19 VACCINE (COVID19)	Life Threatening	916497-1	Patient started having myalgia, chills, nausea on the next day of the vaccination. on 2nd day (12/29) patient had chest pressure which made her present to Hospital ED. She had troponin elevation to 1.14. Cardiac Catheterization was done which was negative. On Trans Thoracic Echocardiogram, patient was found to have hypokinesia of the mid and distal segment with some sparing of apex proving Takotsubo (stress induced) cardiomyopathy. Patient did not have any underlying emotional or physical stress going on in her life or family. Till now extensive infectious as well as inflammatory work up is done to rule out any secondary causes of cardiomyopathy which till date have remained negative. As a diagnosis of exclusion, her presentation seems to be COVID-19 vaccine induced Takotsubo Cardiomyopathy
COVID19 VACCINE (COVID19)	Life Threatening	916538-1	"15-20 mins after receiving the vaccine she reported she had difficulty swallowing and difficulty breathing and was ?shaking.?" a PA wrote in her note that when she ran in to help, she found the patient to be tachypneic, diaphoretic, warm with some red blotchy patches on face, chest & neck. Able to speak easily c/o trouble breathing & sensation of throat swelling & extremities feeling abnormal. No stridor. No facial edema noted by that clinician. Administered epi-pen 0.3mg - IV started , Benadryl 50mg IVP and solumedrol 125mg IVP. Patient reports she subsequently arched her back and had rigidity of her arms/legs and tremors. Clinic PA reports that while she was there, pt was never hypotensive. Initially hypertensive after epi as expected with some favorable response after 10-15 min Staff there gave her IM epinephrine, IV Solu-Medrol and 50 mg IV Benadryl. EMS was contacted and transported to the emergency room. She arrived at the ER, was monitored for 2 hours, was started on pepcid and benadryl and discharged from the ER. She had a diffuse itchy rash. The following day she again developed recurrence of throat swelling. Went back to a different ER. Developed dyspnea immediately prior to arrival at ER. There was again given solumedrol and benadryl and pepcid and developed muscle rigidity and arched back for 10 minutes. Symptoms of SOB and dyspnea resolved with epinephrine. Was discharged from the ER with prednisone after being monitored for 5 hours. Is continuing to take prednisone and benadryl. Rash is still present but improving with scheduled benadryl. Has new redness at injection site today. Continues to feel some throat swelling but no tightness today. This information was gathered from talking with pt today for a phone appt and also from her medical chart regarding her vaccination visit and two ER visits."
COVID19 VACCINE (COVID19)	Life Threatening	916710-1	Acute appendicitis, onset morning of 1/1/2021 (Reporting this because Pfizer covid vaccine had 3-4x higher risk of appendicitis, although data not reported for Moderna covid vaccine)
COVID19 VACCINE (COVID19)	Life Threatening	916742-1	Within 15 minutes of receiving the vaccine I began to get very itchy and blotchy with a hoarse voice. The paramedic downstairs walked me up to the emergency room. I was treated with medications to help calm the itching and burning feeling. By 940 I went anaphylactic and had several doses of epinephrine to help calm this. I continued to have rashes and the feeling of my throat closing. I was transferred by ambulance to medical center in the ICU. I am still here and have had two toner anaphylactic episodes since. I have been on a epi drip, steroids, famotidine, Ativan and Benadryl. I also had a picc like placed.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	916746-1	Anaphylaxis. Immediately experienced shortness of breath, rapid heart rate, and rash. I am a Nurse Practitioner in the emergency department. Had went down to the temporary vaccine station to receive my vaccine, immediately returned to the ER and began to experience symptoms of anaphylaxis. Was immediately placed in a treatment room and received treatment by the ER physician, which included oxygen, intravenous Benadryl, Solumedrol, and Normal Saline. Was observed for several hours and then eventually sent home with prescription for Prednisone and Pepcid. I do have a allergy to shellfish, was never asked about my allergies and nothing on the paperwork I was given prior to the injection noted a concern for shellfish allergies.
COVID19 VACCINE (COVID19)	Life Threatening	916790-1	Flushing, sweating, increased heart rate proceeded to feel difficulty swallowing and clearing my throat. I was taken to the ER. The symptoms progressed to feeling dizziness, difficulty speaking, and chest pressure with increased SBP/DBP. General nausea and feeling very unwell.
COVID19 VACCINE (COVID19)	Life Threatening	916859-1	The vaccine was received at 1:12 PM, and I felt fairly fine, aside from injection site pain and some tingling in my left arm until I had sudden significant elevation of heart rate, with shortness of breath, and throat swelling/tightening at approximately 1:26PM. I cold compress was applied to my forehead and I was put in a reclining position & then received Epinephrine at 1:28PM. EMS (present onsite) arrived for transport at 1:31PM. 4L of oxygen was applied after O2 sat of 89% noted by EMS. Blood pressure was elevated to >200/100 initially by EMS. Symptoms improved quickly following epinephrine, with some residual feelings of very mild throat fullness, and I developed chills which improved over time. I was transported to emergency department where I was evaluated (symptoms mostly resolved at that time, but ED physician noted a little swelling remaining in my uvula), then IV Benadryl and Decadron were given. Later acetaminophen was also given for headache that developed during my ED stay. My vitals were monitored throughout and observation occurred until I was discharged at approximately 5:00PM, as symptoms had not recurred.
COVID19 VACCINE (COVID19)	Life Threatening	916890-1	HIVES, SOB, THROAT CLOSING UP, WHEEZING
COVID19 VACCINE (COVID19)	Life Threatening	917210-1	30YO F ICU nurse obesity (BMI 35) COVID 19 on Dec 2 symptoms, Dec 3 tested positive for COVID-19. never hospitalized, outpatient only. 12/12 completed isolation 12/21 received vaccine 12/7 developed Fever chills diarrhea SOB cough Urgent care visit. COVID19 VACCINE (COVID19)	Life Threatening	917712-1	Anaphylaxis. The COVID shot was given, no reaction then. After 7 minutes, congestion, severe cough, vomiting phlegm, feeling like throat closing started happening. Code was called, Benadryl was immediately given intramuscular in the left arm, blood pressure, pulse ox was taken, and then was taken to the Emergency Department. In the ED, I was given prednisone, one EPI, anti-nausea medication all through I.V. and many more medications given to me via I.V. that I don't sincerely remember. I was under observation for 4 hours. I was discharged after all symptoms dissipated and was given Prednisone 20 MG (3 tabs a day) to take to help my lungs. Management followed up almost immediately, everyone from the moment I had the anaphylactic reaction was quick and prepared.
COVID19 VACCINE (COVID19)	Life Threatening	917784-1	Pt had vaccination at city site. Waited 15 min after shot and was cleared to go. Reported to wife that he was very thirsty, so they stopped at a convenience store on the way home. While there, he felt worse and asked to go to the Emergency room. They chose Methodist to enter. Pt went to triage and while at triage, had syncopal episode, then full arrest. After short course of CPR and defib, he had ROSC. Was taken to cath lab for intervention (stents) and is now in ICU.
COVID19 VACCINE (COVID19)	Life Threatening	917835-1	Tactile fever ,arm pain, headache and malaise in 24 hrs following injection Next day generalized achiness ,retrosternal chest pain and bilateral forearm tingly pain similar to Nov 2019 and went to Hospital UC,CXR and EKG normal but with short PR interval on EKG ,elevated troponin 3.5 Transferred to hospital troponin 12.1 ng/ml IVIG given SARS IGG positive on admission PCR negative
COVID19 VACCINE (COVID19)	Life Threatening	918839-1	Gallbladder removed, septic, 11mm axillary lymph node.
COVID19 VACCINE (COVID19)	Life Threatening	919087-1	Acute Pericarditis. Patient was admitted from 12/27-12/28/2020 at hospital by cardiology team who strongly felt the acute pericarditis was due to the Pfizer Vaccine (Dr. was senior cardiologist).
COVID19 VACCINE (COVID19)	Life Threatening	919252-1	Employee received COVID 19 vaccination at 9:45am on 12/30/20. ~15 min. later she developed a rash down her left arm, then down her Rt. arm. about 4 hours later she decided to go to the emergency room for Hearty Palpitations, Fever, Chest discomfort and feeling of generalized sunburn. Later developed severe headache..
COVID19 VACCINE (COVID19)	Life Threatening	919546-1	thrombotic stroke -necessitating hospitalization; and craniotomy; required mechanical ventilator for 2 days. Patient now extubated, breathing on her own. Patient remains hospitalized with marked deficits (aphasic)
COVID19 VACCINE (COVID19)	Life Threatening	919593-1	Patient developed a septic knee (history of arthroplasty) need for immediate surgery, hospitalization and months to years of antibiotics in his future now.
COVID19 VACCINE (COVID19)	Life Threatening	919604-1	Presented to the ED after developing chest tightness, cough, lightheadedness, and throat closing sensation. She received the Moderna COVID-19 vaccine on the morning of presentation. Within 15 minutes of receiving the vaccine she developed pain and numbness, starting at the injection site traveling down the ulnar aspect of her arm, and nausea. Over the next several hours she continued to develop worsening nausea, chest tightness, cough, lightheadedness, and the sensation that her throat closing. She took PO Benadryl 25mg; however, her symptoms were not alleviated. She was subsequently evaluated in the ED. á Received PO Benadryl 25mg, IV Benadryl 25mg, Epinephrine 0.3mg x 2, IV Famotidine 20mg, IV Solumedrol 125mg & 60mg, DuoNeb's x 3, Raccpinephrine x 1.
COVID19 VACCINE (COVID19)	Life Threatening	919620-1	Decompensation and temp 103.6.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	919629-1	20 minutes after receiving the vaccination the resident started to not feel well. She said she felt very far away and just kept repeating I don't feel well. She was diaphoretic and her chest was very red and she kept scratching and rubbing it at it. I asked if she wanted IM Benadryl or epipen and she at first denied. She also said she felt like she needed to focus on her breathing. At this time we decided it was best to administer Epipen x 1 dose. Immediately after she felt better. She was observed for another 30 minutes and then went home. at 7:17pm I called and spoke with her. She said her arm was sore and that her oxygen levels were about 88-89% which is low for her but she said she felt fine and is currently working right now.
COVID19 VACCINE (COVID19)	Life Threatening	920224-1	had a positive COVID test; had a positive COVID test; O2 Saturation of 80% / Hypoxia; shortness of breath; He has a CT scan which showed extensive infiltration in the lungs; muscle pain; chills; body aches; low grade fever; cough; This is a spontaneous report from a contactable physician (pulmonary medicine). This physician reported similar events for 2 patients. This is 1st of 2 reports. A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. There were no medical history and concomitant medications. Caller stated that his close friend who was ER physician (front line worker) and within 24 hours after receiving the COVID vaccine, developed COVID or symptoms of COVID. Patient received the COVID vaccine on 18Dec2020 and the same night patient started with a low grade fever, body aches, chills, muscle pain, shortness of breath, cough, O2 saturation of 80% (hypoxia) and was in the intensive care unit now. Patient swore this was related to the vaccine. This patient tested positive for COVID. He had a CT (computerised tomogram) scan which showed extensive infiltration in the lungs in Dec2020. Patient was admitted to the hospital on 24Dec2020 and then was moved to the ICU 2 days later, on 26Dec2020. Caller thought patient had a positive COVID test at another hospital. Caller did know that tested positive at the current hospital on 26Dec2020 which was done to confirm the previous positive test. Caller thought patient had his first positive COVID test either the same day or the next day after receiving the vaccine. Event of O2 Saturation of 80% / hypoxia was reported as hospitalization from 24Dec2020 and life threatening; infiltration in the lungs and shortness of breath caused hospitalization from 24Dec2020, muscle pain, chills and positive COVID test was reported as medically significant; and other events were reported as non-serious. Outcome of O2 saturation of 80% / hypoxia and shortness of breath was not recovered, outcome of cough was recovering; and outcome of other events were unknown. Information about lot/batch number has been requested. ; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine BNT162B2 in this patient cannot be completely excluded.,Linked Report(s) : US-PFIZER INC-2020519020 same reporter/drug , different patient/AE.
COVID19 VACCINE (COVID19)	Life Threatening	920367-1	Patient (myself) had anaphylactoid reaction to the vaccine and required IV solucortef, IV Benadryl and Pepcid, and required hospitalization x 24 hours
COVID19 VACCINE (COVID19)	Life Threatening	920628-1	6-7 hours after the vaccine she developed arm pain, fever and chills. About an hour later she started to have abdominal pain which worsened over the course of the day to excruciating. She went to the Emergency Room where a CT scan revealed a perforation of her sigmoid colon and had a resection of the area of the colon and a diverting colostomy surgery done the evening of 1/3/2021.
COVID19 VACCINE (COVID19)	Life Threatening	920784-1	Anaphylactic Reaction, facial swelling, facial Redness, Face felt like it was burning, face flushing, throat swelling, heart palpitations, trouble swallowing , feet swelling, light headed, anxiety. Hospitalized from the 12/23/20 to 12/26/2020 . Medications now on Epinephrine, diphenhydramine, cetirizine, famotidine, prednisone, lorazepam, cephalexin. on 1/1/2021 was taken to E.R. by ambulance around 11:00 am left hand was tingle started to go numb traveled up my arm into left side of my face ,ear, tongue, and then down to the left side of my leg and into left foot, could not move left side of body for a good 7 to 8 mins then went away transferred to ambulance enroute to ER blood pressure was high and and started having right ear pain and right side frontal severe headache, arrived to ER and was given diphenhydramine ,ketorolac, metoclopramide HCl, lorazepam. MRI was ordered and Neurologist found two small lesions on right side of frontal brain, following up now with neurologist. added more meds naproxen
COVID19 VACCINE (COVID19)	Life Threatening	920787-1	2 minutes after vaccine was administered, noticed swelling back of tongue, progressed to posterior 2/3 of tongue, tachycardia, elevated BP. Progressive angioedema involving larynx, cough, shortness of breath. No wheezing. Physical exam did do show any obvious swelling. O2 sat decreased to 80, 1st epinephrine IM administered, 50mg benadryl IV and Famotidine administered. some improvement in symptoms. In 30mins, reoccurrence of angioedema and second epinephrine vaccine administered. Monitored for 2 hours without reoccurrence of symptoms and discharged from ER.
COVID19 VACCINE (COVID19)	Life Threatening	920994-1	PATIENT VACCINATED AROUND 9AM. SHE REPORTS SHE FELT WARM/FLUSHING, FAINT AND STOMACH SPASMS WITHIN ABOUT 4-5 MINS. SHE FELT BETTER AND GOT UP TO WALK ABOUT 30 MINS LATER. SYMPTOMS WORSENER AFTER WALKING ~9:45AM: FAINT AGAIN, SEVERE RETCHING, BP196/140 TO 199/164, TROUBLE SWALLOWING, SOB, WHEEZING. AT 9:58AM, EPI PEN 0.3MG ADMINISTERED AND EMS ACTIVATED. SYMPTOMS REPORTED IMPROVED FOLLOWING EPI. EMS ARRIVED 10:05AM. PATIENT REPORTED RECEIVING 2 BAGS OF PEPCID, STEROIDS, AND ZOFRAN AT HOSPITAL. WAS RELEASED BETWEEN 11:30AM-12PM ON 1/4/21, BP 140/90 AND ACUTE SYMPTOMS RESOLVED. FOLLOW UP WITH PATIENT 1/5/21: NO PRIOR HX OF HTN, BP 120/60, NO SOB/ BREATHING DIFFICULTY. C/O SEVERE HEADACHE, LOW TEMP, FATIGUE, MUSCLE ACHES, SORE THROAT.
COVID19 VACCINE (COVID19)	Life Threatening	921641-1	Administered first dose of COVID19 vaccine at 1:29pm on 1/4/21. At approximately 11:00pm resident exhibited acute respiratory decompensation with very limited air entry and hypoxemia. Patient received Benadryl, steroids, epinephrine, and Duoneb without improvement. Resident was referred to the emergency room and found to be COVID positive. No fever or rash were reported.
COVID19 VACCINE (COVID19)	Life Threatening	921989-1	Anaphylactic reaction (swelling and redness of face and torso, shortness of breath, constriction of airway and dizziness)
COVID19 VACCINE (COVID19)	Life Threatening	922264-1	Immediate warm rush to my head and body. Heart was beating out of my chest and difficulty breathing. Heart rate spiked to 150 (normal around 55). Hand, legs, and mouth started to go numb. Eventually settled down after about 1 hr. Have not felt normal since which has been 3 days.
COVID19 VACCINE (COVID19)	Life Threatening	922279-1	Patient presented to receive COVID-19 vaccine, received vaccine at approximately 10 am. Patient waited 15 minutes for observation and left observation area without complaining of any sx. Patient returned a few minutes after reporting tongue tingling which eventually got to her lips. . No difficulty breathing or any other sx. No history of allergies. NP/RN administered PO Benadryl 25 mg. As of report of this iReport no additional symptoms or intervention needed. Last vitals: 131/83 75spo2. BP higher than usual per patient, spo2 normal.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	923000-1	Severe right lower quadrant pain, anorexia over 12 hours. Went to the emergency department. Lab results showed elevated WBC and CT scan showed acute appendicitis. Admitted for urgent surgery: laparoscopic appendectomy. Was hospitalized from 12/26/20-12/28/20.
COVID19 VACCINE (COVID19)	Life Threatening	923015-1	Rapid heart rate, shakiness, headache, rash, scratchy throat, raspy voice, dizziness, extreme weakness
COVID19 VACCINE (COVID19)	Life Threatening	924050-1	anaphylaxis, dyspnea
COVID19 VACCINE (COVID19)	Life Threatening	924078-1	"Client received vaccine at approximately 3:50pm, waited in observational area x30min. Left with husband, stated that she got a few miles down the road and starting experiencing tightness in her chest and flushing. She took 50 mg of Benadryl, 30mg of prednisone and two puffs on her inhaler. She returned to the clinic, upon assessment from nursing she looked extremely flushed and anxious, she stated that she still felt tightness and that she had a history of anaphylaxis once before and had used an epi pen in the past. She had an epi pen with her and questioned whether or not she should give it to herself. BP was 190/68, pulse was normal, respirations normal, she continued to experience tightness and ""not able to catch my breath"", encouraged to use epi pen. She administered epi pen to right thigh at approximately 4:45PM, 911 called. Within a few minutes, she stated she was feeling better, less tightness in the chest, flushing was subsiding. BP at 190/70 at 4:52. EMS on scene at 5:03pm. Vitals normal , EKG normal. Client decided not to transport with EMS."
COVID19 VACCINE (COVID19)	Life Threatening	924201-1	Patient tolerated the vaccine well with no apparent side effects. Ten days later awoke 12:30 AM with severe chest and upper back pain, presented to Med Center where he was found to have an Acute Coronary Syndrome. Transferred to Medical Center where he underwent successful PCI with two drug eluting stents for a 99% mid-LAD stenosis
COVID19 VACCINE (COVID19)	Life Threatening	924524-1	PATIENT REPORTING ITCHING AT 30 MINUTES POST INJECTION. AT 1.5 HOURS POST INJECTION PATIENT REPORTED ITCHY THROAT AND NUMBESS OF LEFT SIDE OF FACE. AT THAT TIME ADVISED TO GO TO EMERGENCY ROOM. NEXT DAY WHEN I FOLLOWED UP WITH PATIENT, SHE REPORTED HER AIRWAY STARTED TO CLOSE AND SHE RECEIVED EPINEPHRINE, AFTER 5 HOURS HER STARTED TO CLOSE AGAIN AND RECEIVED ANOTHER DOSE OF EPINEPHERINE, WAS RELEASED FROM HOSPITAL ROUGHLY 15-16 HOURS AFTER GOING TO ER.
COVID19 VACCINE (COVID19)	Life Threatening	924657-1	5 minutes after injection, my feet and palms itched and I was lightheaded but I tried to shake it off and it faded over the next 10 minutes. I did report it and stayed longer and was ok. Then i went straight home and layed down because i did not sleep well night before (was on call) i awoke 1 hour post injection dry heaving, very nauseated, mild headache, achy, itchy over different parts of my body and weak. Sat up and my face was getting itchier, lips started to swell, tongue started to swell and itch, throat felt like someone was strangling me, had trouble swallowing and trouble breathing. took 2 benadryls immediately and went out into cold air, thought about calling 911 but got better in 10-15 minutes. never have had a reaction like this in my life. have had hives though in the past. If I would have had an epi pen I would have used it (never have had an epi pen) I was frightened but the benadryl worked and I slept due to the benadryl for 5 hours, when I woke up the benadryl wore off and it started again. took more benadryl, and it improved. before bedtime, the benadryl wore off and I had a hard time swallowing my night time meds like my throat was swollen. Took 2 more benadryls, today I am weak and nauseated and ate very little and feel like my face is still red and itchy. I told my sister and she said she is allergic to PEG which i later noted was in the vaccine. i am very disappointed that I had this reaction- I have desparately wanted this vaccine as a medical worker with a lot of covid patients- I onlu hopr this one shot will protect me enough because it is clear to me that i cannot take this vaccine again.
COVID19 VACCINE (COVID19)	Life Threatening	924658-1	Severe Hypotension, Redness, Warmth and sensitivity all over skin surfaces, lack of responsiveness, low oxygen saturation.
COVID19 VACCINE (COVID19)	Life Threatening	926042-1	Developed shortness of breath, swelling of tongue, persistent cough within 5 minutes of vaccination. Was treated with EpiPen and kept in ER for observation overnight. Symptoms resolved.
COVID19 VACCINE (COVID19)	Life Threatening	926703-1	Guillain Barre syndrome/AIDP event. Paresthesia and nerve pain developed in bilateral legs 4 hours after shot and progressed slowly for 4 days in intensity and area involved. Symptoms progressed distally to superior. On the 5th day symptoms progressed rapidly and involved bilateral legs up to the groin, left arm up to lateral shoulder, and right hand. I went to the hospital and was admitted to start IVIG treatment for Guillain Barre Syndrome/AIDP.
COVID19 VACCINE (COVID19)	Life Threatening	926787-1	Resident had the COVID vaccine 12/30/2020. 12/31/20, resident has been in bed all shift. Staff became concerned when resident was not easily aroused. Resident displayed signs of tremors, twitching, confusion, in and out of consciousness, low O2 sats, elevated pulse and fever, fatigue and weakness. Writer called NP. NP stated this is most likely a reaction d/t the COVID vaccine. She gave orders for Benadryl 25mg IM x1 now and Tylenol 1000 mg now. NP also stated resident will not be getting the second dose of vaccine. Will continue to monitor and update NP if worsening symptoms. After receiving Benadryl and Tylenol at 145pm, resident began to appear as though she was feeling better and was talking to talk, fever had gone down. Tonight resident is not easily aroused, lethargic, continues to have tremors and twitches, almost appearing as convulsions. When asked if she knows where she is or what day it is, resident can properly answer. Resident denies SOB but staff has noted loud squeals while breathing. NP was updated and gave new orders to give Benadryl 25 mg IM x1 if needed and Ok to send resident to ED. Resident currently refuses to go to the hospital. Will continue to monitor. BP 152/112, P 116, T 99.1, O2 87-91. Resident's O2 at 1205am was 80% on 3LPM. Resident unable to be aroused from sleep by writer. NAR called to assist. NAR could not arouse resident. Writer and NAR attempted to reposition resident and resident's breathing became more labored. Resident turned back to previous position and writer called on call MD at approx. 1220am. MD returned call approx. 1235am with orders to send resident to ED. 911 called and ambulance arrived about 1245am. History of present condition given to EMTs and they stated resident would be going to Hospital. Writer has attempted to contact Hospital ED x3 but have been unable to get through. An EMT did just call to clarify when vaccine was given, what symptoms have been present and when they started. She said she has everything she should need and she will let Hospital ED staff know to call if they need anything else. Writer will again attempt to contact them though. Resident's temp was 97.5 and BG 128. When EMTs arrived they got an O2 reading of 60%. Resident did open her eyes a couple times during transfer from bed to stretcher and while stretcher was going outside but no responses from resident were made.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	927223-1	Nausea, hives, anaphylactic shock, throat swelling, hypotension, headache, dizziness, weakness . The symptoms returned at 1:25pm the best day as well. I?ve now had two anaphylactic reactions
COVID19 VACCINE (COVID19)	Life Threatening	928209-1	Swollen lips/tongue, shortness of breath, cough, hives, nausea, headache Epi shot, Benadryl, Pepcid, prednisone
COVID19 VACCINE (COVID19)	Life Threatening	928240-1	Less than 5 minutes after vaccine, nose drained, weird taste in mouth, tingle in nose and on tongue. Throat and tongue swelled, couldn?t speak. Dizzy and slurring speech. Was taken to ambulance outside, BP was 191/101. Given beta blockade. Confused and dizzy for next 2 hours in ER. Evaluated for stroke and given a 12-lead ECG. Given benedryl and prednisone. Felt better after 3 1/2 hours. Continued steroids for 5 days and had to take benedryl every 4 hours for 3 days or swelling/itching/bad taste in mouth would return. Sore arm on day 3.
COVID19 VACCINE (COVID19)	Life Threatening	928378-1	Congestion Shortness of breath Tachycardia Transferred out 911. Per hospital, patient had a myocardial infarction, is unresponsive, and on hospice services.
COVID19 VACCINE (COVID19)	Life Threatening	928461-1	Anaphylactic reaction, Severe edema and raised red rash entire body, Severe itching ,Soft tissue edema of throat. Swelling of, eyes, lips, face. Multiple trips to ER, treated with steroids, Benadryl, prevacid. , CURRENTLY IN ICU ON EPINEPHRINE DRIP, STEROIDS, MULTIPLE MEDS
COVID19 VACCINE (COVID19)	Life Threatening	929391-1	1/6/21 Pt received vaccine and complained of difficulty swallowing and rapid heart rate. Pt received methylprednisolone 125mg IVP, diphenhydramine 25mg IVP, & famotidine 20mg IVP. Pt reported improvement and was discharged. Sent home on diphenhydramine and oral prednisone. 1/7/21 Pt unable to swallow her own secretions and experienced eyelid swelling. Pt vomitted. Pt received epinephrine and Benadryl X 1 dose each. Pt then transported to hospital via ambulance. Reason for admission - acute respiratory failure secondary to anaphylactic reaction. Decision was made to emergently intubate the patient for airway protection despite aggressive intervention. Pt successfully extubated 1/8/21. Plan to discharge home and start Medrol Dose Pack 1/9/21.
COVID19 VACCINE (COVID19)	Life Threatening	929418-1	Swelling of lips & tongue, tightening of throat. Quivering of arms & legs. Tightening of chest. Dizziness lightheaded.
COVID19 VACCINE (COVID19)	Life Threatening	929526-1	Anaphylactic reaction 6 days post vaccine 24Dec2020; I had severe chest tightness; SOB; throat soreness; hoarse voice; mouth swelling; This is a spontaneous report from a contactable physician, the patient. A 34-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EL0140), via an unspecified route of administration in the left arm on 18Dec2020 at 15:30 (at the age of 34-years-old) as a single dose for COVID-19 immunization. Medical history included severe dust mite allergy (based on skin test). Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included cetirizine hydrochloride (MANUFACTURER UNKNOWN), hydrocodone bitartrate/paracetamol (NORCO), ibuprofen (MANUFACTURER UNKNOWN), and ondansetron (ZOFTRAN); all for unspecified indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 24Dec2020 at 10:00, 6 days post vaccination, the patient experienced anaphylactic reaction, severe chest tightness, shortness of breath, throat soreness, hoarse voice, and mouth swelling; all reported as life threatening. The events led to an emergency room visit and she was given epinephrine (EPI-PEN), methylprednisolone (SOLUMEDROL), and diphenhydramine hydrochloride (BENADRYL) as treatment. The patient stated that she developed the reactions 45 minutes after she took premedications for a dilatation and curettage procedure. The premedications included ibuprofen, hydrocodone bitartrate/paracetamol, ondansetron. She stated she had taken these medications several times before and this was the first time she had this reaction. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of the anaphylactic reaction, severe chest tightness, shortness of breath, throat soreness, hoarse voice, and mouth swelling were recovered on unknown dates.; Sender's Comments: Anaphylactic reactions presented as chest tightness, shortness of breath, throat soreness, hoarse voice, and mouth swelling, developed 45 minutes after premedications including included ibuprofen, hydrocodone bitartrate/paracetamol, ondansetron for a dilatation and curettage procedure and 6 days post vaccination with BNT162B2, the event therefore is most likely attributed to these premedications unrelated to the vaccine use. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Life Threatening	929689-1	Fever to 103.7F, respiratory rate 36. Was transferred from facility to hospital. Since then has been found to have gram-negative rod bacteremia, although urinalysis was negative, urine culture pending. Patient has since defervesced after receiving 1 dose of cefepime. Overall the most likely cause of fever seems to be urosepsis w/ bacteremia, pending confirmation with urine & blood cultures.
COVID19 VACCINE (COVID19)	Life Threatening	930079-1	Swelling of throat and tongue, anaphylaxis, hives, redness, swelling
COVID19 VACCINE (COVID19)	Life Threatening	930153-1	ITP Plt 2
COVID19 VACCINE (COVID19)	Life Threatening	930508-1	Initial itching at injection site, observed and returned to work. Came back ~30-40 minutes later with itchiness in throat and hives to arm. Given Benadryl PO and observed for extended period of time. Symptoms not resolving. Patient transferred to Emergency Department for further care. At that point observed to have full body rash, SOB. Given Epi while in ED. Developed tachycardia, hypotension. Treatment continued.
COVID19 VACCINE (COVID19)	Life Threatening	930611-1	Developed hypercapnic respiratory failure, CHF exacerbation - readmitted to Hospital. In ICU with BIPAP
COVID19 VACCINE (COVID19)	Life Threatening	930777-1	Patient presented to the emergency department with sensory loss and loss of reflexes, evaluated by neurology and diagnosed with Guillain- Barre Syndrome thought to be secondary to the Pfizer Covid Vaccine
COVID19 VACCINE (COVID19)	Life Threatening	930889-1	I had a myocardial infarction on December 27, 2020. I had received my first vaccination for COVID-19 on December 22, 2020. Not sure if these are related but I felt I should report it.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	930894-1	Low grade Fever, headache needing admission Intracranial hemorrhage with hypertension Medical management for hypertensive emergency Received surgical evacuation admitted in Intensive care,
COVID19 VACCINE (COVID19)	Life Threatening	930897-1	Shortness of breath, cough, rash on face and neck, arthralgia
COVID19 VACCINE (COVID19)	Life Threatening	931417-1	"Myocardial Infarction: patient began to complain of severe chest pain 3 hours after the vaccine was given .. Vaccine NDC # 59267-1000-1. 0.3 ml given by RN. Patient called his PCP: ""... I had very bad chest and shoulder pains, neck pains and slight fever from 9 pm until early this morning (Jan 8). My blood pressure was 155/95 mmHg. Should I see you today? Still feel sore all upper body. Above message received at 0720 am (Jan 8) and the patient was called back at 0757 am (Jan 8): patient was told that many of the side effects above were related to the vaccine but the chest pain was worrisome and the provider requested the patient go to the emergency room. Patient understood the importance to seek medical attention..... Emergency Room notes: seen by MD on Jan 9. Note at 0749: patient complained of chest pain on/off since received COVID vaccine on Jan 7. Pain was substernal and radiated to the left shoulder, assoc with some SOB. EKG obtained and revealed ST segment elevation and a ""cardiac alert"" was called."
COVID19 VACCINE (COVID19)	Life Threatening	931558-1	7 day after site itching, hot swelling. Unsure if related 9 day after suffered CVA and have hyper coagulation
COVID19 VACCINE (COVID19)	Life Threatening	931772-1	Anaphylaxis
COVID19 VACCINE (COVID19)	Life Threatening	931851-1	I am currently breastfeeding my 5-month-old son. I received my first vaccine on 12/28/2020 and directly breastfed within 4 hours of receiving the vaccine. Two days after my vaccine my son was at daycare and had two large diarrhea blowouts and two large emeses followed by a 1-minute episode where he was limp with entire body cyanosis and in-and-out of consciousness. He also had a maculopapular rash on his torso. EMS was called. He was observed in the emergency department for a few hours then recovered well without intervention and did not require hospitalization. EKG was normal. He has continued to be well and back to baseline since the event.
COVID19 VACCINE (COVID19)	Life Threatening	932145-1	Patient came into the emergency department on 1/8/21 with an acute ischemic stroke with complete occlusion of her left MCA. She had acute and complete flaccid paresis of her right face, arm, and leg, complete aphasia, and neglect of the right side of her body. NIHSS of 27. Onset of deficit was between 6:30pm-7:10pm. She received her 1st COVID-19 vaccine dose that morning at 10:31am.
COVID19 VACCINE (COVID19)	Life Threatening	932366-1	The patient presented with left eye peripheral visual loss, left upper and lower extremity and facial numbness sensation and weakness. This started 1 hour after receiving COVID-19 vaccine at her place of employment. Pt was brought to CRMC via EMS.
COVID19 VACCINE (COVID19)	Life Threatening	932367-1	Facial (cheek) numbness and swelling with slight face droop Swelling continued on 1/7/2021 On 1/8/2021, lip swelling and numbness and tongue numbness By 1/9/2021 4pm, swelling and numbness resolved but chills and muscle aches began
COVID19 VACCINE (COVID19)	Life Threatening	932420-1	I am not sure if related on not. This event was 13 days after my COVID-19 1/2 immunization. Otherwise, I am a very healthy physician, normal BMI, I have also been tested 5-6 times negative for COVID. I do get exposed in my job, but wear proper PPE. Viral infection in FEB that was like COVID-19 sx, I did AB test as soon as it was available, and negative. ---The Event: Monday morning (1/4/21), after getting out of shower, I was talking to my husband (who is MD)and started having BROCA's aphasia sx (could not get words out coherently), then fell into bed and started right wrist and right foot posturing. This lasted 10 min. I have non-memory of it, but my MD husband witnessed it. After 10 minutes, I was back to normal, except shaky and some word finding difficulties. After 30 min, totally back to normal.
COVID19 VACCINE (COVID19)	Life Threatening	932614-1	Throat closing Pruritic throat and tongue Tingling lips and tongue Throat clearing Hoarse voice
COVID19 VACCINE (COVID19)	Life Threatening	932623-1	Acute ischemic stroke, basilar occlusion
COVID19 VACCINE (COVID19)	Life Threatening	932915-1	Severe thrombocytopenia (plts 3k/uL), oral mucosal bleeding, bruising
COVID19 VACCINE (COVID19)	Life Threatening	933142-1	Pain at site of injection, eyes, throat, face swelling. Unclear thinking, hoarse speech, headache, hives, swelling. Intervention taken immediately. Ongoing 11 days: SOB, headaches, nose bleeds, coughing, blood sugars triple, hair falling out, major swelling, dizziness.
COVID19 VACCINE (COVID19)	Life Threatening	933369-1	Anaphylactic reaction
COVID19 VACCINE (COVID19)	Life Threatening	933935-1	Sever thrombocytopenia (platelet count 2,000) 8 days following Moderna COVID vaccine. Clinically suspicious for ITP.
COVID19 VACCINE (COVID19)	Life Threatening	934156-1	01/06/21 at 6 pm, body aches, and chills 01/07/21 at 12am T102.2, SPO2 62% on room air. Was sent to ER and returned. 01/08/21 at SPO@ less then 60% on room air, non responsive to verbal tactile stimuli. Responsive to sternal rub only. Was sent to ER and admitted to ICU.
COVID19 VACCINE (COVID19)	Life Threatening	934676-1	Chills Hip pain
COVID19 VACCINE (COVID19)	Life Threatening	934745-1	Resident had seizure like activity followed by a vagel response with large bowel movement. Resident then began to show signs of blood clot to left lower extremity. No pedal pulse, area on leg warm to touch. Left lower leg now cold to touch, stiff, purple and white in color. No other signs of modeling, body warm to touch, no fever noted. Respirations and pulse increased with low oxygen levels. Resident not responding to stimuli.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	934749-1	38-year-old female who is healthcare worker and received first dose of COVID vaccine (Pfizer). Immediately after receiving the vaccine, patient developed lightheadedness, flushing, hives, wheezing and throat swelling. Patient was treated in an emergency department with epinephrine, gradually improved and was able to be sent home with an EpiPen, prednisone, hydroxyzine, and famotidine. The next day, patient again developed shortness of breath and her husband administered the EpiPen. EMS arrived and gave another dose of IM epinephrine and IV diphenhydramine. On arrival to the emergency department, the patient was altered, diaphoretic, tachypneic, tachycardic, and stridulous. Patient was given multiple doses of IM epinephrine and started on epinephrine drip. Stridor continued and was unresponsive to nebulized albuterol. Patient was then intubated and placed on mechanical ventilation. Other treatments included solumedrol, pepcid, magnesium sulfate, nebulized epinephrine, and IV fluids. admitted to the intensive care unit, weaned off epinephrine drip, and extubated the next day. Patient was monitored on hospital floor for one additional day and was then discharged with no residual symptoms.
COVID19 VACCINE (COVID19)	Life Threatening	935090-1	SOB, Sleeplessness,
COVID19 VACCINE (COVID19)	Life Threatening	935180-1	Scratchy throat, dizziness and eventually feeling like her throat is closing in
COVID19 VACCINE (COVID19)	Life Threatening	935478-1	right after vaccine was given i got a head to toe hot flush. i thought it was just anxiety. within 2 minutes i had explosive diarrhea, felt dizzy. looked in the mirror and saw my neck and chest covered in red rash and hives. felt hot flush again. dr came in noticed hives all over both my arms as well. felt sob and if someone was holding my neck with their hand. given benadryl and epi taken to local er.
COVID19 VACCINE (COVID19)	Life Threatening	935939-1	Metallic taste in the back of throat between 15-20 minutes post vaccination, noticeable swallowing and throat irritation at 20-25 minutes post vaccination, tongue and lip numbness and throat tightness at 25-30 minutes, dry hacking cough at 30 minutes. Treated in the ED approximately 1 hour post vaccination, at time of arrival in respiratory distress with subcostal retractions, coughing, speaking 1-2 word sentences, with tachycardia and tachypnea. Treated with IM epinephrine, IV solumedrol and IV Benadryl and IV Benadryl with marked improvement in symptoms.
COVID19 VACCINE (COVID19)	Life Threatening	936011-1	Anaphylaxis within 5 minutes of dose given. Tachycardia 130-140s, hot body temperature, trouble swallowing, lightheaded/dizzy, ekg changes, feeling like I was going to pass out even when in bed. IV fluids, benedryl, solumedrol, famotadine and IM epi given.
COVID19 VACCINE (COVID19)	Life Threatening	936026-1	Trouble swallowing, tingling around the mouth within 5 minutes of vaccine administration. IV started with 25mg Benadryl within 5 minutes of symptom onset. Transfer to ER at 1430. Symptoms unresolved, hr - 120, bp 140/100, O2 sats 100, resp: 21 Additional 25mg Benadryl, 125mg solumedrol, 1ml Ativan given IV at 1435. Symptoms began to resolve, patient discharged at 1600 to home with instructions to return if needed. Patient returned to ER Sunday January 10 at 1300 complaining of throat tightness. Patient was seen by doctor, no acute distress and airway issues seen. Patient elected to stay for 50mg benadryl and 40mg prednisone PO. Patient was discharged to home with script for 40mg prednisone q day for 3 days. Patient feels any remaining allergic symptoms have resolved.
COVID19 VACCINE (COVID19)	Life Threatening	936612-1	anaphylaxis; throat tightening; throat tightening/tingling; throat tightening/tingling/soreness; dry wheezy cough a little dizziness; dizziness; tachycardia; Itching; chills; numb R foot; Low grade temp; h/a today; This is a spontaneous report from a contactable Nurse (patient). A 51-years-old female patient (no pregnant) started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number el3248), via an unspecified route of administration on 06Jan2021 11:00 at the first single dose at left arm for covid-19 immunisation. Medical history included supraventricular tachycardia, adrenal insufficiency, hypothyroidism, attention deficit hyperactivity disorder, hypermobility syndrome, developmental hip. Concomitant medication included hydrocortisone, trazodone, levothyroxine sodium (LEVOTHROID), bupropion hydrochloride (WELLBUTRIN). The patient previously took erythromycin, morphine and experienced drug hypersensitivity. The patient experienced anaphylaxis, throat tightening/tingling/soreness, dry wheezy cough a little dizziness and tachycardia. Itching, numb R foot, Low grade temp and chills and headache on 06Jan2021 11:15. Seriousness criteria reported as life threatening. Taken to ER had IV benadryl, solumedrol, pepcid for anaphylaxis. Placed on O2 and given albuterol nebulizer. Had IV fluid bolus. Now on benadryl and 5 days of prednisone. The patient felt completely fine prior to vaccine. The patient underwent lab tests and procedures which included sars-cov-2 test: negative on 06Jan2021. The outcome of events was recovering. No other vaccine in four weeks; No covid prior vaccination.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis presented as throat tightening/tingling/soreness, dry wheezy cough a little dizziness and tachycardia. Itching, numb R foot, Low grade temp and chills and headache cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The underlying predisposing condition of drug allergies may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Life Threatening	936618-1	Soreness at injection site started at 1600 Body aches, headache, and low grade fever woke me up around 0100

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	936666-1	Anaphylactic reaction; Flushed; Diaphoretic; redness and rash; hives on chest; Tachycardia; shortness of breath; Chest tightness; Dizziness; Headache; This is a spontaneous report from a contactable nurse, the patient. A 47-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EL1283), via an unspecified route of administration on 08Jan2021 at 08:49 (at the age of 47-years-old) as a single dose for COVID-19 immunization. There were no known medical history or concomitant medications. The patient previously received the first dose of BNT162B2 on 18Dec2020 (Lot Number: EK5730) for COVID-19 immunization and experienced nausea, headache, and fatigue. On 08Jan2021, about 5-10 minutes after the second dose, the patient experienced anaphylactic reaction, flushed, diaphoretic, redness and rash, hives on chest, tachycardia, shortness of breath, and chest tightness, reported as life-threatening. She reported that these events occurred within less than 10 minutes of receiving the vaccine. She went to the emergency room and was treated with methylprednisolone (SOLUMEDROL), diphenhydramine hydrochloride (BENADRYL), famotidine (PEPCID), and epinephrine (MANUFACTURER UNKNOWN). She was sent home and prescribed methylprednisolone and epinephrine (EPI-PEN). Later on 08Jan2021, she experienced dizziness and headache, which were consistent. She stated she would most likely take ibuprofen (MOTRIN) as treatment (not specified if taken). The clinical outcomes of the flushed, diaphoretic, redness and rash, hives on chest, tachycardia, shortness of breath, and chest tightness were recovered on 08Jan2021; while the outcomes of the dizziness and headache were not recovered and that of the anaphylaxis was reported as recovering.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Life Threatening	936715-1	Approx 10-15 post vaccine, employee said she felt lightheaded and like her heart was racing. Within 10 minutes she said she felt difficulty breathing, She then vomited. The observation nurse at the clinic administered Epi Pen and called a Code. The employee was transported to the Emergency Dep't and then to intensive care. She was placed on an Epi drip.
COVID19 VACCINE (COVID19)	Life Threatening	937932-1	Patient presented with myalgias, fevers, and chest pain on 1/10/21 and was found to have diffuse ST elevation and elevation troponin. He was evaluated by cardiology and diagnosed with acute myopericarditis. He was treated with NSAIDs and colchicine. He improved with this treatment and was discharged on 1/12/21 with ibuprofen and colchicine and outpatient cardiology follow up.
COVID19 VACCINE (COVID19)	Life Threatening	938118-1	on 1/8/2021 17:30 patient taken to ER, cerebellar hemorrhage, stroke, aneurysm
COVID19 VACCINE (COVID19)	Life Threatening	938425-1	Woke up on 1/6/2021 with hot flashes, palpitations, dizziness and heart racing. Went to urgent care and they did an EKG which showed A-Fib, so I was sent to the ER and from there, I was transferred to an ICU at a different facility . I stayed until 1/8/2021. No cause was found and no history of A-Fib or family history.
COVID19 VACCINE (COVID19)	Life Threatening	938443-1	immediate tingling of lips, followed by fullness of posterior oropharynx, hoarseness and pruritus
COVID19 VACCINE (COVID19)	Life Threatening	938524-1	first day after shot, nausea, body aches, 2nd day Sunday headache, Monday 5 am woke up itching, then 9 am hives everywhere, trouble breathing, anaphylaxis, went to ER, got epi X 2, solumedrol, benadryl, pepcid, then still with hives, tachycardia, dyspnea, iv fluids were infusing and epi drip started, went to ICU
COVID19 VACCINE (COVID19)	Life Threatening	938820-1	Within 3 minutes of receiving vaccine felt flush and throat swelling, responded to Epi Pen and Benadryl p.o. EMS took him to ED where he remained several hours receiving 1 liter NS 125 mg solumedrol IV, discharge with 4 days of prednisone 40 mg daily and a prescription for an Epi Pen. As of 1.12 he is totally okay with no after effects.
COVID19 VACCINE (COVID19)	Life Threatening	938829-1	First Day after the injection I had a headache and nausea the entire day into the next day. The second day I still had the headache and the nausea. I work overnights. When I awoke in the afternoon, my throat was closing up. It was hard to swallow and I struggled to breath. I immediately drank liquid Benadryl and called my doctor in the morning.
COVID19 VACCINE (COVID19)	Life Threatening	938868-1	-0715 vaccine administered. -0735 started to feel dizzy/off and right side of tongue felt like it was mildly swelling and itchy. -0735 asked to have blood pressure taken as know when I am having anaphylaxis my blood pressure escalates. -0740 took blood pressure and it was 141/86 in right arm. Normal is 110s/60s-70s. No anxiety feelings. -0740 throat started to have increased mucous production. Had the tickle and tightness in throat. Asked and received 25mg Benadryl with cup of water. -0742 started clearing throat frequently and slight cough. Knew it was anaphylaxis and told the team I need to go to the ER. Asked for additional 25mg Benadryl. Also took 20mg Famotidine and 2 puffs Albuterol inhaler--this is my prescribed anaphylaxis routine. Had Epi pens on standby. -0743 put on O2 saturation monitor and watched O2 drop into 90-92 range. Asked for epipen on standby as I know when I need to start it. Didn't want to take that when I knew I was about to get it in the ER and knowing self hadn't progressed that far. Felt chest tightness and shortness of breath. Voice started becoming hoarse. -0800 EMS arrived (delay as team didn't know if they were supposed to call 911 or a Code--they chose EMS even though in hospital). Then staff at COVID vaccine clinic kept emphasizing need to go in ambulance while EMS and self fought to go through hospital (much quicker route). Finally cleared to go through hospital to ER. To get some air via breathing in had to sit up leaning forward. Voice completely hoarse by this time. -About 0817 arrived to ER bay. At this time, frequently coughing and cough started to sound stridorous. Difficulty getting breaths in. Had chest pain near heart. Greeted by MD, 2 RNS, and technician. -0819 received IM epinephrine. Attached to 5 lead EKG monitoring and O2 monitoring. Blood pressure done again. Higher than previous. -About 0821 had working IV (previous two attempts failed as veins were constricting). Given IV Solumedrol. Started bolus of 1L Normal Saline. -Not sure how long after by cough subsided, increased mucous production subsided, as well as hoarseness decreased. -Held for observation for 2hours (would be longer if not resolved). - Discharged around 1015. At this time, hoarseness almost all gone. Minimal throat clearing. Cough resolved. -Prescribed epipen inhalers (mine expired) and Prednisone. Prednisone is PRN for mild breathing difficulties if it starts again tomorrow 1/13/21. -At 1400 took 50mg Benadryl and 20mg Famotidine as previously prescribed for anaphylaxis maintenance. Will continue this as previously prescribed every 6hours until symptoms stay resolved. -Made follow up appointment with Primary Care Physician per protocol

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Life Threatening	939190-1	Started to feel lightheaded, weak, faint like I was going to pass out, heart rate increased, confusion, trouble speaking, brought to the ED, throat started to swell and started having thick spit and clearing my throat excessively. Diagnosed as anaphylaxis.
COVID19 VACCINE (COVID19)	Life Threatening	939194-1	within 1 hr post-vaccine on 1/7 I had a mild headache that resolved with Tylenol. At about 12 hours post-vaccine I developed nausea, fever (100.4) and chills and secondary to this had poor sleep. The next day I took scheduled alternating Tylenol & ibuprofen during the day and then overnight 1 episode of chills that woke me up. no events Saturday or Sunday. Then Monday 1/11 in the early morning I started to develop a rash on my b/l elbow and right foot 3rd toe. I applied mometasone topical cream to these locations. while at work the rash extended down both forearms then by 5pm it was on both hips and extending along both legs. I applied Benadryl cream to the most irritated sites and took PO Benadryl 50mg at bedtime and again at 1am when the itching woke me up. I repeated Benadryl 25mg at 8am. The rash seems to be getting better on the arms but then by noon I had a new breakout on my neck and face. I took Benadryl 50mg at 1pm. The rash continued to have a rapid progression over the next hour and resulted in angioedema with my throat swelling, lips puffed and numb and eye swelling. I was injected with an epi pen and sent to the ED where I received PO prednisone, famotidine, and Benadryl. The face/neck rash then greatly improved and I was sent home on prednisone 40mg daily for 3 days.
COVID19 VACCINE (COVID19)	Life Threatening	939216-1	Blurred vision, difficulty breathing (pale skin/blue lips), profuse sweating, muscle fatigue, headache. This lasted about 15 minutes. Until severity went down. Followed by 20 minutes of profuse sweating and headache. I thought I was going to die
COVID19 VACCINE (COVID19)	Life Threatening	939914-1	2230 feeling of unease, body aches, site arm tingling, general mild aches 0220 awoke from sleep choking, having difficulty breathing, felt very SOB, worse with exertion or trying to speak, great difficulty swallowing and speaking even in brief words. Took 50mg of Benadryl PO and went to the ED, about a 15 minute car ride. Had tingling and numbness of the tongue and back of throat by arrival but still able to breath with focus. Exertion of just walking into the ED greatly increased the SOB. Was triaged, Benadryl starting to help, was able to speak a little better, 3-4 words without too much SOB caused. Was walked to a room, SOB milder with that exertion. Seen by Dr. Given IV Sol-u-Medrol and 50mg Benadryl. Was observed on cardiac monitor/Q15VS for a few hours and discharged home around 5:30. Given Rx of Prednisone 20mg -3tabs x2 days, 2tabs x5 days all once a days and told to take 50mg of Benadryl Q4H for the next 24 hours at least and to return prn. I did need to stay on Benadryl, as the Sol-u-Medrol wore off some of the swelling in thr throat did return but not severe, Benadryl did help, along with taking my Asthmnex I already had. I also continued my normal HS antihistamines. I had SOB on exertion, progressively better from the 6th-10th with it mostly resolved to yesterday. Body aches have continued but also progressively better. Yeasterday1/12/21 the Rx of prednisone was completed and I did have some mild swelling /tingling in the throat/face/mouth return in the evening, took Benadryl 50mg again and inhaler used. I have an appointment today to seek further care at my primary doctor's office. Asthmmax used again this morning as well, only mild tightness in the throat currently with mild body aches this whole time.
COVID19 VACCINE (COVID19)	Life Threatening	941118-1	At first I has some injection site pain and soreness nothing too bad. But around 01:30 I awoke with a really high fever. My fever was 102.8 when I first woke up. I was very nauseous and my fever felt worse. My thermometer would not read any more until my temp came down. I can only guess how high it got but at least 103 degrees. I took Advil Liquid Gells and then my fever broke. I was actually scare for my life. In March I actually caught coronavirus and developed anti bodies for Covid. I can only guess my body was fighting for it's life.
COVID19 VACCINE (COVID19)	Life Threatening	941476-1	Patient received vaccine in afternoon of 12/28. She works in ER as housekeeper 7pm-7am. The day she received the vaccine she became ill with fever chills and nausea and left work at 2am. On 12/31 she developed hemianopia. She went to ER and they did CT scan. She was told it was complex migraine. She left and came Home. On 1/1/21 her vision was back to normal. On 1/3 she suffered bilateral cerebellum ischemic stroke. She is currently in medical center. In Trauma.
COVID19 VACCINE (COVID19)	Life Threatening	941522-1	I was short of breath and went to emergency room on 1/5/2021. I was diagnosed with bilateral pulmonary embolisms. I was Covid negative and had no other symptoms.
COVID19 VACCINE (COVID19)	Life Threatening	941576-1	Employee was awoken at 5:30 am on 1/13/2021 by chills and a feverish feeling. She then became nauseous and faint. She passed out and was noted by her mother who is a RN to have a seizure. She remained out for several minutes and then aroused. She has remained groggy the rest of today but has improved. She has a history of non-epileptic seizures since she was 14 and has been on medications for this. Employee stated she has not has any seizure activity in over a year. She did not see medical attention due to recovering quickly from this.
COVID19 VACCINE (COVID19)	Life Threatening	941834-1	about 14 hours after vaccination I experienced what appeared to be a severe case of Cytokine storm. I had a moderate case of COVID in May 2020 and had positive IgG AB in August. The symptoms started with heavy shaking chills, lasting 1 1/2 hours , fever and most concerning sustained tachycardia with heart rate of 180' to 200' over hours, which then destabilized into runs of Vtach and complex ventricular dysrhythmia, low BP, profound weakness, head aches and joint and muscle pains (similar to the experienced COVID symptoms)
COVID19 VACCINE (COVID19)	Permanent Disability	904385-1	Patient is a pleasant 83 y.o. female pediatrician with history of Sjogren's, hypothyroidism, hyperlipidemia, hypertension who had been at Hospital to get her Covid vaccine. 30 minutes after doing so she reports being in the lobby and about to walk upstairs and feeling fine. The next thing she knows she wakes up on the stairs with her nose and face bleeding surrounded by healthcare team. She denies any precipitating symptoms such as chest pain, shortness of breath, fevers dizziness, headache. She reports feeling well otherwise in the last few days. I did a thorough bony palpation exam including spine and he only point of tenderness besides on her face was the area above her right ankle. She does not have a history of syncope or collapse
COVID19 VACCINE (COVID19)	Permanent Disability	906782-1	Received COVID-19 vaccine on 12/18/2020 around 1225pm, ten minutes later while being monitored I started to feel hot flash, got dizzy like about to pass out, I asked to let me lay down, I felt the medication bitter taste in the back of my throat, I was clammy pale, I lay on a stretcher and put my feet up elevated, rapid response was called and BP was checked and Spo2, my hands were getting cold and tingling I was talking to RN, another RN, after laying down for ten minutes I sit up I was getting my BP back to normal, I sat down in the chair again for another 10 minutes, I was offered to go to the ER but I decline, I said I was getting better, after 15 minutes I left monitored by my supervisor I felt the medication in my stomach, after the tingling my fingers were numbed for the next days until present.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	907860-1	Chest pressure, dizziness, increased troponin lab value.
COVID19 VACCINE (COVID19)	Permanent Disability	910649-1	"low grade fever; Her blood pressure was high/ still really high/ blood pressure was up; headache; Fifteen to twenty minutes after she received the vaccine she became light headed and dizzy/ light headedness and dizziness; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received BNT162B2 (Lot#: EK5730) via an unspecified route of administration on 17Dec2020 afternoon at single dose in the left arm for COVID-19 immunization. Caller was unable to confirm the manufacturer of the vaccine that she received. It is not written on the card, and she didn't see the vial. The patient medical history was not reported. Concomitant medications included oral contraception pill, but the name was unknown. Fifteen to twenty minutes after she received the vaccine on 17Dec2020 she became light headed and dizzy. She had to catch her breath. She couldn't shake it off. The light headedness and dizziness lasted at that intensity for 10 minutes, but it never went away. They encouraged her to be admitted in the emergency room (ER). She would say that the seriousness of being light headed and dizzy was disabling. Caller didn't remember the exact numbers for her blood pressure. It was 160's over 105. Her heart rate was in the low 100's, around 105. She stayed at the first monitoring station in the vaccine area for 2 hours. They were taking her blood pressure every five minutes. She was given diphenhydramine hydrochloride (BENADRYL) there and lots of water. After 3 hours and she was not improving they called a ""code medic"" that got the medical director and nursing supervisor to come. They encouraged her to go to the ER for continual monitoring. She stayed in the ER for 4 hours and was given meds to help with the blood pressure. She was discharged from the ER home. She was nervous because of all this stemming from the vaccine. She had a low grade fever on 18Dec2020 (Friday) night. Caller stated her work had already reported her reaction. Occupational safety and the medical director are aware. Caller does not have reference number to provide. On 18Dec2020 (Friday) she was not overly concerned because it was the next day. Her blood pressure was high and her heart rate was in the 100's. They monitored her for a couple of hours and she was given a diphenhydramine hydrochloride (BENADRYL). She went to the emergency room (ER) for a few more hours and received additional treatment. They sent her home to be monitored at home. She has been taking her blood pressure every day since and it had not come down. It was still really high. She called her primary care doctor. He was wanting her to start blood pressure for medication it. She was concerned about starting it with the assumption that it was related to the vaccine. She would like to know the right thing to do. It seems safe to take the medicine, but it was unknown that whether it was going to mask the blood pressure and something else be going on. On 18Dec2020 she still had a headache and didn't feel well, but she thought she needed to give it some time. She had been anticipating not to feel well on 18Dec2020 (Friday). On 19Dec2020 she felt better considering she didn't have a headache. On 19Dec2020 (Saturday) her blood pressure was 138/90 and she felt good. Then on 20Dec2020 she had the bad headache and her blood pressure was up. On 20Dec2020 (Sunday) she had a bad headache and her blood pressure was 156/100. She came to work today and her blood pressure had been high all day. She still had a headache and the light headedness continued. The outcome of the event low grade fever was unknown, of other remain events was not recovered.; Sender's Comments: A causal association between BNT162B2 and the event dizziness cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Permanent Disability	911465-1	positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; Soreness at injection site; This is a spontaneous report from a contactable nurse (patient). A 40-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 17:30 in the left arm at single dose for COVID-19 immunization. There was no medical history or concomitant medications. The patient experienced soreness at injection site, cough, body aches on 19Dec2020; sore throat, voice changes from coughing on 20Dec2020; tested positive for covid on 21Dec2020; mild low congestion, loss of taste and smell on 22Dec2020. The nurse stated that he got the vaccine on Friday (18Dec2020). The next day (19Dec2020) he had common side effects: Soreness at the injection site and body aches, which were expected. He also had a cough on top of that, which progressed to the next day. His body aches and coughing were infrequent. The afternoon of Sunday (20Dec2020), he developed sore throat. Yesterday(21Dec2020), he said he could not work because he was still coughing and had a sore throat. His voice was also changing due to the coughing. He was getting better now. The doctor from Employee Heath said that the cough was concerning so he got a COVID swab test yesterday(21Dec2020), and today (22Dec2020) it came back positive. This morning (22Dec2020) he had loss of taste and smell. He no longer had sore throat or cough. He had the vaccine before the test. He wanted to know where they were at with information on this. Was this being monitored? How did this happen? Was it possible that the test was a false positive because he had the vaccine prior? He would like someone to give him an answer, if the test was a false positive due to the vaccine? His doctor could not tell if the test was legit a positive because of the vaccine. He was not able to work right now. He did not even know if the COVID was from the vaccine or not. Will he get compensation for this? Will his workplace cover his absences? In the case he went to the hospital, will this be considered a work related or vaccine related issue? The outcome of event soreness at injection site was recovered on 21Dec2020. The outcome of event tested positive for COVID was not recovered. The nurse considered the cough was disabling as this was not part of the symptoms to watch for after getting the vaccine. All of the symptoms currently besides the cough are not serious as of now, but it has put him out of work. The nurse considered all other events as non-serious except for cough (disabling). Information on the lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with BNT162B2 in this patient might not be completely excluded.
COVID19 VACCINE (COVID19)	Permanent Disability	911854-1	I received the vaccine shot on 12/23/20 at 3 pm. By 12/24/20, I had pain in my left arm that radiated to my neck and back on the left side. Over the past 4/5 days, I continue to have pain in my left arm, back and neck
COVID19 VACCINE (COVID19)	Permanent Disability	913469-1	Shortness of breath Hives, Fever, chills joint pains. I was Tx in the ER with Pepcid IV Solumedrol IV, Benadryl IV ,Tylenol and IV fluids. I was discharged on prednisone , Benadryl and Tylenol.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	914137-1	decreased range of motion in vaccinated arm: unable to raise left arm above shoulder x 72 hours now due to pain. no associated numbness or swelling. I am a surgeon and this impacts my work and driving. I would not have been able to operate during these last 3 days and while the pain is better 72hrs later, my arm is still out of commission. I think we need to inform healthcare providers who perform procedures that they may want to schedule the vaccine when no planned procedures for at least 72 hrs. Due to this issue I will be unable to proceed with the second dose, unless I can take it a week later than the scheduled January 24, 2021. It is taking too long to regain full function of the arm but i expect it will be back to normal as it is better today 72 hrs later.
COVID19 VACCINE (COVID19)	Permanent Disability	914473-1	Weakness, fatigue, decreased appetite, upper extremity shaking, sternal red blotchy rash, decreased mental status, non-verbal, decreased level of conscious, mottling, left side facial droop, hypertensive, fever, unable to follow commands
COVID19 VACCINE (COVID19)	Permanent Disability	914496-1	At about 6am after receiving the shot I felt very tender at the injection site almost as if it was bruised. Then over the course of the day I started to feel very itchy all over my body but mainly on my right side. 10pm I got up for work, and could barely move, I'm feeling intense back pain on my lower back on the right side. I can walk but its all very limited motion, I can really only manage by putting all my weight on my left side.
COVID19 VACCINE (COVID19)	Permanent Disability	915612-1	Received my vaccine on December 22nd, 2020 at around 830 Am. That afternoon, about 3 PM, I started to have a reaction. It started with tingling/numbness in my right hand which progressed up my arm into my elbow. About 10 minutes later, it then progressed into my right foot, and my left foot. About 10 minutes after that, I started to get flushed and a neck rash (diagnosed from Dr.). I took Benadryl and Ibuprofen 800mg PO every 6 hours for the next 24 hours. The numbness in my right foot and left foot along with the flushness went away a couple hours later. Although, the numbness in my right hand never went away. It came and went for the next 4 days until December 27th and 28th when it started getting worse. On December 28th evening, it got so bad that I was debating going to the emergency room around 1 am. The numbness and tingling was in my right hand and started shooting up my arm. The nerve pain around my wrist was unbearable. I finally fell asleep and the next morning, it was not nearly as bad, but was still there. The numbness and tingling moved from my right hand mainly to right hand, right foot, right leg, left foot and left hand today (12-30-2020).
COVID19 VACCINE (COVID19)	Permanent Disability	916741-1	on dec 22 I felt some myalgias, chills, fatigue, HA --quite normal. That evening, noted small amount swelling R hand --I iced and took acetaminophen. By Dec 25, hand very swollen and painful with decreased ROM all fingers
COVID19 VACCINE (COVID19)	Permanent Disability	917549-1	Soreness and weakness of left arm for more than 5 days. Intermittent headaches and runny nose
COVID19 VACCINE (COVID19)	Permanent Disability	918757-1	"Rapid onset numbness/tingling and weakness/in my right hand up the arm, right foot, and left foot; Rapid onset numbness/tingling and weakness/in my right hand up the arm, right foot, and left foot; weakness 8 hours after the vaccine in my right hand up the arm, right foot, and left foot; flushing; This is a spontaneous report from a contactable pharmacist. A 33-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular on the left arm on 22Dec2020 08:00 at single dose for COVID-19 immunisation. The patient had no medical history. The patient's concomitant medications were not reported. The patient stated that on 22Dec2020, ""rapid onset numbness/tingling and weakness 8 hours after the vaccine in my right hand up the arm, right foot, and left foot. I also had flushing that required 50mg of BENADRYL every 8 hours for 16 hours. The numbness and tingling has persisted since and I still have it today in my right hand and right foot. It comes and goes with no specific identifying factors. I was vaccinated in my left arm"" (events reported as AE-resulted-in: Doctor or other healthcare professional office/clinic visit, Disability or permanent damage). The outcome of the events was recovering.; Sender's Comments: Based on the compatible temporal association, there was a reasonable possibility that the vaccination with BNT162B2 played a contributory role in triggering the onset of the events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Permanent Disability	918985-1	Approximately 4 days after vaccine I started experiencing sharp lower back and left hip pain. Also my left foot feels like pins and needles.
COVID19 VACCINE (COVID19)	Permanent Disability	919022-1	Complete loss of vision in the left eye 12 hours after receiving second dose (Moderna mRNA-1273) while having a fever of 102 F for 6 hours. Loss of vision lasted for 1 minute. Loss of vision occurred while standing. Referral to primary care and ophthalmology specialist found normal eye exam and MRI of orbits but presence of tachycardia especially while standing (fluctuations between 60 beats at rest/laying down to 130 beats per minute standing). Postural tachycardia syndrome (POTS) is suspected. Currently pursuing cardiac workup with cardiologist and Covid POTS specialist. POTS specialist believes autoantibody development after vaccination could be suspected as recovering covid patients similarly present to clinic with POTS like symptoms.
COVID19 VACCINE (COVID19)	Permanent Disability	919053-1	12/18 VACCINATION 12/19 WOKE UP, RINGING IN BOTH EARS. CALLED PCP, CONSULTED ENT ABNORMALITY - L INNER EAR; HIGH DOSE STEROIDS, 10 DAYS, 60 MG/DAY. WEEK 2; TINNITUS GOT WORSE. DR. PRIMARY CARE PHYSICIAN MEDICAL EXAM ON 1/6/2021 INJECTION OF STEROIDS.
COVID19 VACCINE (COVID19)	Permanent Disability	919373-1	noticed twitching in L arm shortly after receiving vaccine, numbness , weakness and pain in arm and shoulder girdle, diagnosed with parsonage turner syndrome by neurologist, currently taking neurontin for pain as steroids not tolerated
COVID19 VACCINE (COVID19)	Permanent Disability	919444-1	12/21 had covid vaccine (dose 1). On evening of 12/29 had sudden onset of mild neck pain and significant weakness and numbness of left arm, weak hand grip, clumsiness in hand . Did not improve after trying to shake arm/move around , and took prednisone 40mg oral. Went to ER and had CT Cspine which did not show evidence of cervical pathology. Continued with corticosteroids, sought consultation with PMR and neurology specialists, and steroid dose increased to 60mg/day. Some improvement in strength , but still have diminished sensation and strength in left hand/arm. Unable to perform full job tasks as I am left hand dominant. Likely brachial neuritis / parsonage turner syndrome per both specialists seen. Continuing with corticosteroids at this time, pending bloodwork and OT evaluation
COVID19 VACCINE (COVID19)	Permanent Disability	919546-1	thrombotic stroke -necessitating hospitalization; and craniotomy; required mechanical ventilator for 2 days. Patient now extubated, breathing on her own. Patient remains hospitalized with marked deficits (aphasic)

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	919783-1	On 12/24 at around 10 PM, circulation to my 4th left digit significantly decreased after being outside of my car for around 15 minutes during a temperature of about 50 degrees. I realized when sharp pain was felt at the digit. After about 5 minutes the digit felt numb. I got in my car, turned on the heater, and massaged my finger. Sharp pain was felt again as circulation returned to the digit. The event lasted approximately 10 minutes from the moment I realized the finger was pale until color returned. This occurred again on 12/27 at around 2 PM as I walked from my car into a store at a temperature of about 40 degrees. This time, discoloration occurred bilaterally on my left 3rd, 4th, and 5th digits and my right 2nd, 3rd, 4th, and 5th digits. The event lasted more than 15 minutes with constant massaging. This has occurred two more times since then, both times occurring bilaterally with minimal exposure to cold.
COVID19 VACCINE (COVID19)	Permanent Disability	920958-1	felt like she had a stroke; fell down; Pain in leg; itchiness in her head; left leg not functioning normally; This is a spontaneous report from a contactable nurse (reporting for herself). A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), via an unspecified route of administration in the left deltoid on 21Dec2020 at 10:00 (at the age of 51-years-old) as a single dose for COVID-19 immunization. Medical history was none. There were no concomitant medications. There were no prior vaccinations within 4 weeks prior to the first administration of the suspect vaccine. On 21Dec2020, the patient experienced left leg not functioning normally, which was reported with the seriousness criteria of disability. On 21Dec2020, the patient had itchiness in her head. The patient felt like she had a stroke, fell down and pain in leg on 22Dec2020, which were all reported with the seriousness criteria of disability. The patient called the doctor office and spoke with the doctor on call and was told to use diphenhydramine hydrochloride (BENADRYL). No further details provided. The patient was sent home for 10 days and she was sent back to work. The patient underwent lab tests and procedures which included COVID: negative in Dec2020. The outcome of the events was not recovered. The reported assessed the events related to the suspect product, BNT162B2.; Sender's Comments: The reported events leg dragging, leg pain and fall and suspected stroke were possibly related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship. However, stroke was not diagnosed. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	921950-1	Bell?s palsy
COVID19 VACCINE (COVID19)	Permanent Disability	922015-1	Pt describes falling with onset of weakness below the hip level about 6 inches above the patella with missing clonus reflex. The pt cannot squat down with associated observable loss of strength, pt is not able to stand up. The pt has fallen 7 times since symptom onset around lunchtime between 1200 and 1300. Pt denies LOC.
COVID19 VACCINE (COVID19)	Permanent Disability	922206-1	Arm weakness increased each day by post vaccine day 4 arm weak and unable to raise arm, conduct ADLs, painful interrupting sleep. Unable to initiate movement in arm. Use other arm to help move arm. Went to ED on post vaccine day 4. Wbc 12. Crp 4. CT no abscess. Mri on 1/4 shows bursitis. DX SIRVA. Bursa aspirated. Pending cultures. PO MEDROL DOSEPAK.
COVID19 VACCINE (COVID19)	Permanent Disability	924690-1	Three to four hours after vaccine had bruising, major loss of range of motion, severe sharp pain, elevated temp and chills due to reaction of injection site Treatment given 24 hrs later- strong antibiotics, anti inflammatory, exercise, and three days out of work Due to loss of function of left arm due to inflammation
COVID19 VACCINE (COVID19)	Permanent Disability	925219-1	Woke up Thursday am with hives on right lower abdomen and leg getting progressively worse throughout the day. By that afternoon had back pain in right back and continuing hives. Woke up Friday with numbness to right leg, hives, and back pain all on right side of body. Had numbness to foot, face but especially thigh, back and across upper buttocks. Saturday hives subsiding, numbness receding to face, upper thigh and foot only on right side of body. Sunday, back pain some improved, no hives or hives minimal, numbness persists upper thigh face and foot on right side of body. Monday, Tuesday and Wednesday the same. Woke up Thursday with shingles rash to upper thigh back, numbness to foot face and upper thigh persist only on right side of body. Darn!!!
COVID19 VACCINE (COVID19)	Permanent Disability	925636-1	Moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection; Moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection; This is a spontaneous report from a contactable physician (patient). A 37-year-old female non-pregnant patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 17:15 at single dose on her left arm for covid-19 immunization. Medical history included known allergies to penicillin. The patient had no other medical history. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and the patient was not received list of any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection on 23Dec2020. These events resulted in doctor or other healthcare professional office/clinic visit, disability or permanent damage. The patient had received prednisone to treat the events. The outcome of the events was not recovered.; Sender's Comments: A possible contribution role of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) to the onset of sensorineural hearing loss in left ear and headache cannot be excluded due to temporal relationship. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	925745-1	numbness and weakness in left arm; numbness and weakness in left arm; had a brachial plexus pathology; her grip and fine motor are affected in her left arm/she could not do her job; This is a spontaneous report from a contactable physician (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EH9899), via an unspecified route of administration in right arm on 21Dec2020 at single dose for Covid-19 immunisation. Medical history included ongoing birth control. No other medical history. Concomitant drug included other medication she took for birth control. On 29Dec2020, the patient experienced numbness and weakness in left arm, had a brachial plexus pathology, went to the emergency department on 30Dec2020 and was seen by one of the facility doctors and stated this doctor had her on steroids for treatment. She got the vaccine in her right arm, stated her grip and fine motor are affected in her left arm. States this was disabling since she could not do her job. She was following up with neurology on Monday (unspecified), that she had a CT scan of her neck and it was normal. Only other medication she was taking was for birth control, but she did not feel like it was relevant. The outcome of events numbness and weakness in left arm was recovering, while outcome of other events was unknown. This case was reported as serious, seriousness criteria was disabling.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	926433-1	Hemorrhagic Stroke. Began with vision difficulty in the morning. Then I noticed she had left sided neglect. Went to ER. Treated with Andresxa (to counteract Elaquis). In SICU for 2 nights then telemetry unit for 3 nights. Currenly in Rehab.
COVID19 VACCINE (COVID19)	Permanent Disability	926473-1	When vaccine was administered, seemed high on my arm. I had immediate soreness and shoulder discomfort, I was told this was normal. It continued to progress and I eventually had decreased ROM, weakness and sharp shooting pain in my shoulder. Working at OI, I consulted provider, xrays were obtained and I was evaluated. He strongly suggested an MRI be obtained as well. That was completed the same day as my evaluation on 12/31/2020 (1 week and 2 days after the vaccine was administered). The provider informed me that they have had patients with similar situations that were evaluated for frozen shoulder after having a vaccine d/t administration site and vaccine going into subacromial space. He does report that this was my case/situation, upon my exam, I had severe inflammation with this as well-he is now having me follow up for a surgical consultation for my shoulder to be repaired. Today's date is 1/7/2021, I have these same ongoing symptoms that have continued since day of administration, without diminishing in severity. He is unable to provide an injection d/t my upcoming second dose of the COVID vaccine this next week, 1/12/2021. He strongly suggests that my 2nd vaccine be administered elsewhere-advised NOT be administered in the same shoulder OR in opposite to cause these symptoms to flare. He advised in gluteus if possible to avoid any further issues if at all possible.
COVID19 VACCINE (COVID19)	Permanent Disability	926703-1	Guillain Barre syndrome/AIDP event. Paresthesia and nerve pain developed in bilateral legs 4 hours after shot and progressed slowly for 4 days in intensity and area involved. Symptoms progressed distally to superior. On the 5th day symptoms progressed rapidly and involved bilateral legs up to the groin, left arm up to lateral shoulder, and right hand. I went to the hospital and was admitted to start IVIG treatment for Guillain Barre Syndrome/AIDP.
COVID19 VACCINE (COVID19)	Permanent Disability	926909-1	Immediate pain and loss of range of movement of left shoulder. Physical examination today demonstrates a healing injection site which is fairly superior on the left shoulder, and abduction of the left shoulder which is limited secondary to pain. Patient's physician's impression is that he has a subdeltoid bursitis which was temporally associated to the COVID-19 vaccination. (SIRVA)
COVID19 VACCINE (COVID19)	Permanent Disability	928318-1	headache, sore throat, runny nose, arm pain that migrated to the axilla and down the side of the body, joint pain (hands, wrist, feet, hips, knees, spine, neck), insomnia, general malaise, fatigue, and lower grade fever. Most symptoms lasted about 7 -10 days. However, it is now day 20 after the initial vaccine and I still have joint pain that has not gone away. esp in hands, wrists, and feet. When I sleep I still wake up with all my joints hurting it gets better as I start moving but the wrist, hands, and feet pain has not gone away. This pain will wake me in the night when I change positions. I called my doctor today to inquire if it is a good idea if I should take the second dose because the first dose made me so dibiliated. Awaiting for a response. I am due to take the second vaccine on 2/9/21.
COVID19 VACCINE (COVID19)	Permanent Disability	928861-1	Initial event was soreness at site which resolved on its own within a few days. 2 days after receiving vaccine, I began having an allergy reaction to the same brand N95 that I had been utilizing since the beginning of the pandemic. Symptoms are swollen cheeks and welts , sudden itchiness at the site of my mask placement. The reason for this report is a sudden onset of excruciating and debilitating pain throughout my body specifically pain of my right shoulder radiating down my sprightly arm. I have been receiving testing and treatment for ongoing neuropathy due to Longhailer syndrome, however This recent pain is so debilitating, I spend most of my time in bed. I have been experiencing chills then profuse sweating. I also so fatigued, I sleep much of the day. I have been having episodes of tachycardia with chest tightness which has increased since after having the vaccine. I also become short winded on exertion. I?ve been waking up in a panic and sweating.
COVID19 VACCINE (COVID19)	Permanent Disability	929162-1	Cp initially that resolved in seconds. Then severe muscle aches, fatigue, temp 1 week,excruciating joint pain continues now. Malaise.
COVID19 VACCINE (COVID19)	Permanent Disability	930081-1	shoulder joint pain, injection was given in joint.... I am now on prednisone, physical therapy, if this doesnt help will need a MRI .
COVID19 VACCINE (COVID19)	Permanent Disability	930777-1	Patient presented to the emergency department with sensory loss and loss of reflexes, evaluated by neurology and diagnosed with Guillain- Barre Syndrome thought to be secondary to the Pfizer Covid Vaccine
COVID19 VACCINE (COVID19)	Permanent Disability	930889-1	I had a myocardial infarction on December 27, 2020. I had received my first vaccination for COVID-19 on December 22, 2020. Not sure if these are related but I felt I should report it.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	931224-1	Pt experienced extreme fatigue and sleepiness the day following her second vaccination for Covid 19 and was found by her family after collapsing on 1/6/21 at 05:30. Upon arousal, she experienced headache, vomiting, weakness, difficulty speaking and difficulty walking with lower extremity weakness. She was taken to urgent care and subsequently admitted for evaluation at hospital and found to have a normal chemistry, blood count, normal lumbar puncture and normal imaging of her neck and brain. Discharge summary notes 3/5 strength and hyporeflexia throughout. Pt had televisit consult with psychiatry and neurology. She is subsequently to be discharged to a Facility without explanation for her sudden onset of progressive lower extremity and vocal weakness. She is noted to have a history of shellfish allergy. She experienced mild symptoms after the first vaccination, but no neurologic or vascular symptoms at that time.
COVID19 VACCINE (COVID19)	Permanent Disability	931558-1	7 day after site itching, hot swelling. Unsure if related 9 day after suffered CVA and have hyper coagulation
COVID19 VACCINE (COVID19)	Permanent Disability	931567-1	sudden sensorineural hearing loss in the right ear, audiology and ENT assessment, currently being treated with steroid medication
COVID19 VACCINE (COVID19)	Permanent Disability	931774-1	After the vaccine was administered I walked away maybe 50' and I started to feel dizzy I felt light headed and as if I was drunk my legs feel real weak they took me outside so I could catch some fridge fresh air and they set me down on a chair I was very dizzy my legs and my knees felt like I couldn't stand up and they were very weak I kept seeing a the rails double vision and I started to have a tightness in the back of my neck I felt they warrant come over my head and my forehead got very very cold And then I felt as I was gonna blackout and pass out and I was gasping for air and suddenly my tongue went into a spasm and it went to the top of my the roof of my Roof of my mouth and I couldn't breathe and I was able to send a message for someone to come and help me as I was sitting there by myself they rushed over by now looking at my text message it was for 02 which was within 15 minutes of the vaccine when I had my 1st episode and then minutes after that 3 more came with the same oh unable to swallow I lost the ability to swallow and my tongue fell like I had no control it was just automatically stuck to the roof of my mouth.. Upon the arrival of Ems I was told there was no treatment and there was nothing they could do told me to wait 24 to 48 hours in the symptoms should subside it's been over 72 hours in the symptoms are still occurring. I continue to feel dizzy light headed and now have high blood pressure which was not present before visit ER prescriptions for steroids with issued, I Told to go home and rest. Followed up with family doctor in the morning and was told it was not an allergic anaphylactic reaction probably more so neurologically ransom blood tests waiting for results continue to have loss of control over tounge spasms unable to eat Accompanied by fatigue dizziness and high blood pressure
COVID19 VACCINE (COVID19)	Permanent Disability	931845-1	On 01/07/2021 I woke up at 0300am with chills, headache, body aches, joint pain, fever of 101.2 and swollen left axillary lymph nodes. I took Tylenol and Benadryl and it relieved the fever/headache/body aches/joint pain, however the lymph nodes in my left axillary remained swollen. I continue to take Tylenol for the fever/body aches/pains without relief for the swollen and painful axillary lymph nodes. Warm compresses do help to relieve the pain temporarily but they remain painfully swollen. On 01/08/21 I called my doctors office to ask if it was normal to experience such painfully swollen axillary lymph nodes to which they stated ?we don't know, it is too soon for us to tell what's normal and what isn't normal right now.? They did not offer any suggestions to relieve the pain or swelling. The morning of 01/09/2021 , I called Employee Health at my hospital (my place of work and also where I received the vaccine) and they also stated they didn't know if this was a normal reaction due to the newness of the vaccine. A couple hours later, employee health emailed me a link to the VAERS reporting website and asked me to file a report.
COVID19 VACCINE (COVID19)	Permanent Disability	932145-1	Patient came into the emergency department on 1/8/21 with an acute ischemic stroke with complete occlusion of her left MCA. She had acute and complete flaccid paresis of her right face, arm, and leg, complete aphasia, and neglect of the right side of her body. NIHSS of 27. Onset of deficit was between 6:30pm-7:10pm. She recieved her 1st COVID-19 vaccine dose that morning at 10:31am.
COVID19 VACCINE (COVID19)	Permanent Disability	932189-1	I was injected high on my shoulder, significantly higher than I've ever been injected in my life. I believe I have SIRVA. The pain has become so severe that I cannot use my left arm. The pain is intolerable. I take four Advil every six hours, ice my arm regularly, and keep my arm in a sling. The pain has gotten significantly worse with time (not better). I've never experienced pain like this from a vaccine in my life. No history of bursitis or shoulder injury. Again, the pain gets worse with time. I'm almost 48 hours post injection
COVID19 VACCINE (COVID19)	Permanent Disability	932702-1	I immediately felt dizzy, and there was ringing in my ears, I felt faint. I also felt shakely. I have had these symptoms for 12 days, unchanged. I cannot work because of these symptoms. I have been to urgent care and have had lab work and an EKG
COVID19 VACCINE (COVID19)	Permanent Disability	933101-1	Moderna vaccine dose #1 received in right shoulder on 12/31/20 at 2:15PM. Injection was uneventful other than sensation of pressure. I did notice at the time, but could not fully see, that the injection appeared to be much higher on the shoulder than normal. I immediately came home afterwards and relaxed. Approximately 2hrs later, I began experiencing extreme pain in my right shoulder. As the night progressed, the pain worsened to 10/10 with inability to move my arm. Later that night after requiring assistance to take off my shirt, I noticed that the bandaaid overlying the injection site was very high, immediately below and bordering the acromion process. This was concerning but I was hopeful the pain would go away over the next few days. I took tylenol that night. I woke up multiple times during the night because the pain was so severe. When I woke up, the pain and inability to move my arm were still present. I began taking 800mg ibuprofen and 1000mg tylenol alternating Q4 throughout the next few days. The pain and disability remained so severe that I required assistance performing ADLs for the next 4 days. On day four, with the pain not resolved and still severe despite consistent advil and tylenol use, I began having concern for shoulder injury related to vaccine administration. The next day I decided to seek an evaluation by an orthopedist. I am a physician and was unable to perform basic tasks and ADLs. I happened to have a few days off after the injection but would not have been able to work had I not. After an evaluation by the an orthopedic PA, I obtained an MRI of my right shoulder with results shown below - as I expected evidence of rotator cuff tendinopathy and subdeltoid bursitis consistent with SIRVA. As of now, I still have limited range of motion and shoulder pain on the right which has improved slightly but is far from resolved. I still have difficulty with certain ADLs including putting clothes on and off, lifting items, and tasks that require raising my right arm above my head. I am concerned with the possibility of long term and/or permanent damage after reviewing the literature. I am also concerned about how many other healthcare workers the person who gave me my vaccine may be injuring and/or causing permanent harm to.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	933273-1	Complete loss of smell and taste; Complete loss of smell and taste; This is a spontaneous report from a contactable physician reported for herself. A 37-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; brand: PfizerbioNtech, lot number: EH9888) intramuscularly at left arm on 17Dec2020 at 03:00 PM at a single dose (dose number: 1) for COVID-19 immunization. Medical history was reported as none. No known allergies (no allergies to medications, food, or other products). The patient was not pregnant. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No other medications the patient received within 2 weeks of vaccination. Facility where the most recent COVID-19 vaccine was administered was at hospital. The patient experienced adverse event complete loss of smell and taste on 19Dec2020 at 07:00 AM. The event was considered as serious due to resulted in disability or permanent damage. No treatment received for the event. The outcome of event was not resolved. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events complete loss of smell and taste cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	934922-1	Followed by neurological symptoms starting day 4; parasthesias of both upper extremity; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; Flu like symptoms first 3 days; This is a spontaneous report from a contactable physician (patient). A 39-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ek5730) at left arm, via an unspecified route of administration on 16Dec2020 at single dose for covid-19 immunisation. Medical history included hypertension, diabetes, migraines, Eosinophilic granulomatosis with polyangiitis (EGPA) remission. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient did not have any allergies to medications, food, or other products. The patient's concomitant medications were not reported. On 21Dec2020, the patient experienced flu like symptoms first 3 days. Followed by neurological symptoms starting day 4, parasthesias of both upper extremity with progression to muscle weakness of all four extremities. Leading to 2 ER visits and hospital admission. Evaluation by internal medicine, neurology and rheumatology. Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop. The events resulted in Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, Hospitalization, Disability or permanent damage. The treatment for events included High dose steroid. Covid test included Nasal Swab: negative on 19Dec2020. The outcome of events was not recovered.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events influenza like illness, neurological symptom, paraesthesia, muscular weakness and peroneal nerve palsy cannot be excluded. The information available in this report is limited. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	934937-1	blasting headaches; chills all night; dry heaving all night; Nausea; no fever but her skin felt hot; sore left arm; This is a spontaneous report from a contactable nurse for herself. This 64-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscular on 18Dec2020 at single dose on left upper arm (lot: EKS730), via an unspecified route of administration on 05Jan2021 14:30 at single dose (lot: EL1284 or EK1284) for COVID-19 immunisation. Medical history and concomitant medications were none. The patient did not have anything with the first shot except a sore left arm on 18Dec2020. She stated that if she lays on left side it is sore. The patient had the sore left arm both times that she got the vaccine. She got second dose of vaccine on 05Jan2021 at 2:30pm and had a blasting headache and just had chills that went away about hour ago on 05Jan2021. She did not have a fever but her skin felt hot on 05Jan2021. She stated that she had dry heaves on 05Jan2021. The patient started that she had a blasting headache within a few hours of the vaccine and it gradually got worst by the time she went to bed. Stated that the chills and dry heaves started then and throughout the night. The chills stopped an hour before she got up. Stated that she went to check her temperature and did not have a fever despite having chills and her skin feeling hot. Stated that nausea started about 10 at night on 05Jan2021. Seriousness for blasting headache, chills and dry heaves was disabling, for nausea was medically significant, for other events was non-serious. The patient took Ibuprofen for the headache. Stated that she was going to try to drink something. The outcome of sore left arm was not recovered; of chills was recovered on 06Jan2021. The outcome of other events was recovering. The causality for blasting headache, chills, dry heaves, nausea and skin felt hot was related (Source of assessment: Primary Source Reporter, Method of assessment: Agency Information on the batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the headache, chills, dry heaves and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	934946-1	Joint pain /felt like it was worsening joint pain; just severe pain to where she couldn't walk; This is a spontaneous report from a contactable Other HCP. A 70-year-old female patient received BNT162B2(Lot Number: ET1685), via an unspecified route of administration at Deltoid Left on 23Dec2020 08:00 at the 70 years old at single dose for COVID-19 immunization. The medical history included rheumatoid arthritis. The concomitant medications were none. The patient received the shot on 23Dec2020 and experienced Joint pain afterward on 02Jan2021. The patient did have rheumatoid arthritis so there was that. The patient felt like it was worsening joint pain on 02Jan2021. She has had no fever, just severe pain to where she couldn't walk on 02Jan2021. The joint pain has gotten worse and it has gotten to where she is going to advise her not to take the second shot. The Reporter assessed the seriousness for the events was Disabling. The events did not require a visit to Emergency Room but required a Physician Office visit on 06Jan2021. The patient received a steroid injection on 06Jan2021. There was none History of all previous immunization with the Pfizer vaccine considered as suspect. There was none Additional Vaccines Administered on Same Date of the Pfizer Suspect. There was no Prior Vaccinations within 4 weeks. The patient underwent lab tests and procedures, which included x-rays on 06Jan2021: unknown results (they were awaiting the X-rays). The outcome of the events was not recovered. The information on the batch number has been requested.; Sender's Comments: Based on the available information the events worsening joint pain and walking difficulty are attributed to underlying Rheumatoid arthritis; however, based on a compatible temporal association, contributory role of BNT162B2 vaccine to events occurrence cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	935978-1	Woke up 1/4/21 with right sided facial weakness consistent with Bell's Palsy. Started high dose Prednisone and Valtex. Received IVIG infusion on 1/6/21 and 1/7/21. Mild improvement 1/11/21.
COVID19 VACCINE (COVID19)	Permanent Disability	936149-1	Herpatic infection left eye causing a herpatic dendrite
COVID19 VACCINE (COVID19)	Permanent Disability	936151-1	One week after administration, I had sudden onset inability to move left arm. I was transported to ER immediately. Treated, scanned with CT of brain, MRI of brain, c-spine and brachioplexus. In hospital for 2 days and no answers. Still no answers to left arm paresthesia and proprioceptor deficits. Spreading into left leg and mild systemic symptoms. I have been to the ER, seen by primary physician, Physiatrist and Neurology and Occupational Therapy. I am scheduled for many more appointments and trying to find and answer.
COVID19 VACCINE (COVID19)	Permanent Disability	936767-1	Approximately 1 - 2 hours after receiving I had numbness and soreness to my neck. A few days later started experiencing tingling, buzzing, weakness and heaviness to my right arm and leg. I reported this to my MS doctor who ordered an MRI of the brain and told me to report to you
COVID19 VACCINE (COVID19)	Permanent Disability	938068-1	patient developed acute onset of right-sided facial palsy and pain; patient developed acute onset of right-sided facial palsy and pain; Brain MRI done showing T2 hyperintensity in the brainstem and basal ganglia, suspicious for inflammation; This is a spontaneous report from a contactable physician. A 46-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), on 18Dec2020 at SINGLE DOSE for COVID-19 immunization. Medical history included psoriasis. No COVID prior vaccination. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine.No known allergies. Concomitant medications (received within 2 weeks of vaccination) included fluoxetine. days following vaccination,on 23Dec2020,the patient developed acute onset of right-sided facial palsy and pain. Brain MRI done showing T2 hyperintensity in the brainstem and basal ganglia, suspicious for inflammation. Work-up is ongoing. AE Resulted in: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, Disability or permanent damage].It was unknown if the event was treated. The event was assessed as serious for Disabling/Incapacitating. The patient had been tested for COVID post vaccination (covid test result-Negative). The outcome of the events werenot recovered Information about lot/batch number has been requested.; Sender's Comments: A possible causal relationship between acute onset of right-sided facial palsy and pain with MRI findings suspicious for brain inflammation and BNT162B2 cannot be completely ruled out considering the temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	938074-1	Tested positive for COVID-19; CT showed increased infiltrates 10-15%; Dehydration/Dehydrated; Chills; Tested positive for COVID-19; Hypotensive; Achy; Severe achy cramps/Severe cramps all over body; This is a spontaneous report from a contactable nephrologist (patient himself). This 78-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EK5730), via an unknown route, on 17Dec2020 at single dose for COVID-19 immunisation. Age at vaccination was 78-year-old. The patient was diabetic and hypertensive. Additional medical history included hyperlipidaemia. No relevant concomitant medications were provided. On 18Dec2020, the patient developed severe achy cramps/severe cramps all over body. On 19Dec2020, the patient developed achy. On 20Dec2020, the patient was dehydrated and hypotensive, he had also chills. On unknown date, blood pressure was down to 76/50. His symptoms for COVID were severe achy cramps, hypotension, and dehydration. On 20Dec2020, COVID-19 test was positive. On 21Dec2020, the patient was given monoclonal antibodies. A computerized tomogram (CT) of the lungs was performed on 21Dec2020 and it was ok. A week later (Dec2020), he had a repeat CT which showed increased infiltrates of 10 to 15%. He then started on dexamethasone, apixaban (ELIQUIS) and the rest of the things. He had a repeat CT on 05Jan2021 which showed resolution of the infiltrates; most of the lesions went gone. CT results had improved significantly. The patient underwent a second COVID test a week ago which was still positive. He had a third COVID on 06Jan2021, but results were not available yet. The patient queried if he can proceed with second dose planned on 07Jan2021 or if he should wait. The clinical outcome was recovered for the event 'severe achy cramps/severe cramps all over body' on 19Dec2020, for 'dehydration/dehydrated' on 20Dec2020, for 'chills' on unknown date in Dec2020, for 'achy' on 30Dec2020, for 'hypotensive' on 20Dec2020; the outcome of the event 'CT showed increased infiltrates 10-15%' was recovering; the outcome for 'Tested positive for COVID-19' was unknown. The reporter considered the events 'achy' and 'severe achy cramps/severe cramps all over body' serious because causing disability; the events 'tested positive for COVID-19', 'dehydration/dehydrated', 'chills' and 'hypotensive' were considered medically significant. The reporter considered the events 'Tested positive for COVID-19', 'CT showed increased infiltrates 10-15%' and 'dehydrated/dehydration' unrelated to BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE).; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. Case will be reassessed when new information is received. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	938126-1	Following the first COVID vaccine dose on Dec/18/2020, I had headaches that started on the third day and ended on the tenth day. The headaches were usually light, unilateral, and alternating from one side to the other. I was usually functional except on the fourth and seventh days where the headaches were moderate to severe, and I took naps to help with the headaches for those two days. I have never had an issue with headaches before, and these symptoms were a new experience for me. I did not take any medications as treatment for the headaches. Following the second COVID vaccine dose on January/7/2021, I felt fatigue and generalized muscle aches within six to twelve hours, and these symptoms lasted for two days. On January/10 /2021, when I woke up that morning I again felt light, unilateral, and alternating headaches. In addition, I noticed that I was unable to move the left side of my face. I felt moderate tingling sensations associated with the distribution of the paralysis. When I looked in the mirror, I could quite noticeably see asymmetry in my face. I immediately went to the emergency department at the hospital where my primary care doctor is located. I was kept in the hospital into the next day for observation. After evaluation by a neurology team and an MRI, I was provided with the diagnosis of Bells Palsy. I have never previously been diagnosed with Bells Palsy, and I have never previously had a hospital stay before. The doctors prescribed medications which I am currently taking. As of today January/12/2021, the symptoms have had some improvement, but the symptoms still continue.
COVID19 VACCINE (COVID19)	Permanent Disability	938301-1	GIVEN ON 12/23. SORENESS FELT ON LEFT ARM SITE THE NEXT DAY, WITH DECREASED MOBILITY AND STRENGTH DUE TO SEVERE SORENESS AND PAIN. PAIN PROGRESSIVELY LESSENER BUT THE SORENESS STILL VERY APPARENT. ON 1/5, SPOKE TO PRIMARY MD, XRAY ON LEFT SHOULDER DONE ON 1/6. ON 1/7, STIFFNESS WITH SEVERE PAIN UPON MOVEMENT NOTED ESP IN THE MORNING. ULTRASOUND WAS DONE ON 1/8, NOTED BICEPS TENOSYNOVITIS. ORTHOPEDIC SURGEON SEEN ON 1/11, W DX OF ADHESIVE CAPSULITIS, SUGGESTED FOR PT FOR NOW, AND OFF WORK, AND TO BE FOLLOWED UP ON 2/1 BY SAME ORTHO SURGEON. WILL NOT OFFER CORTISONE SHOT FOR NOW AS IT MAY COMPROMISED OR WEAKEN IMMUNE RESPONSE, IN WHICH MY SECOND COVID SHOT DUE ON THE 15TH OF JANUARY. FIRST APPT FOR PT ON 1/15
COVID19 VACCINE (COVID19)	Permanent Disability	938310-1	Sudden hearing loss right ear accompanied by tinnitus
COVID19 VACCINE (COVID19)	Permanent Disability	938332-1	Sudden hearing loss right arm accompanied by tinnitus

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Permanent Disability	940791-1	severe stabbing-shooting lower back pain; severe stabbing-shooting lower back pain that radiated to both legs; Pricking, pins and needles sensations in the hands and feet; numbness; weakness to both legs but mostly the right leg; Coordination problems, unsteadiness; Coordination problems, unsteadiness; This is a spontaneous report from a contactable nurse (patient). A 39-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL0140), intramuscular on 20Dec2020 08:00 at single dose at left arm for covid-19 immunization. Medical history included hypertension from an unknown date and unknown if ongoing. The patient's concomitant medications in two weeks included multivitamins. Patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. No known allergies to medications, food, or other products. On 22Dec2020 at approximately 19:15, the patient experienced sudden onset of severe stabbing-shooting lower back pain that radiated to both legs. Pricking, pins and needles sensations in the hands and feet. Coordination problems, unsteadiness, numbness, and weakness to both legs but mostly the right leg. The patient underwent lab tests and procedures post-vaccination which included nasal swab for covid test: negative on 30Dec2020 (Antigen Test). Adverse events resulted in doctor or other healthcare professional office/clinic visit, emergency room/department or urgent care, disability or permanent damage. Patient received pain medication, steroid dose pack, MRI (pending), and physical therapy (pending) as treatment. Outcome of all events was not recovered.; Sender's Comments: Based on the compatible temporal association, a contributory role of vaccination with BNT162B2 in the onset of the events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	940794-1	First dose on 16Dec2020, second dose on 05Jan2021; Tinnitus; constant ringing in ears; louder this time; This is a spontaneous report from a contactable nurse (patient). A 51-year-old female patient (no pregnancy) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), with first dose (lot number: EH9899) on 16Dec2020 via intramuscular route, with second dose (lot number: EK4176) on 05Jan2021 via an unspecified route of administration, both at single dose for covid-19 immunization. Medical history included allergies: penicillin. Concomitant medication included famotidine, ibuprofen (DUEXIS), iron (IRON) and multivitamins, all received within two weeks of vaccination. On 17Dec2020, the patient experienced tinnitus, constant ringing in ears that started 24 hours after first vaccine, lasted about 2-3 days and went away. Ringing in ears started again and is louder this time on 06Jan2021. Facility where the most recent COVID-19 vaccine was administered was in hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No treatment received for the adverse event. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The event was identified as serious and resulted in disability or permanent damage. The outcome of event tinnitus was not recovered. The outcome of the other event was unknown.; Sender's Comments: Based on the compatible temporal association with positive rechallenge result, the Company considers the event tinnitus is possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Permanent Disability	941080-1	5 days after Moderna vaccine, developed severe abd pain, mid epigastrium. No Nausea or vomiting. No fever. Mild diarrhea. after 48 hrs with no improvement went to ED
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	907175-1	Congenital anomaly or birth defect; This is a spontaneous report from a contactable consumer (patient). A 57-year-old female non-pregnant patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunization. Medical history included high blood pressure and hypertension and more epileptic seizures. Concomitant medication included unspecified pneumococcal vaccine on 12Dec2020 for immunization. The patient previously received flu shot (Influenza virus vaccine) and pneumonia shot (Pneumonia vaccine) both on 20Oct2020 for immunization. The patient experienced congenital anomaly or birth defect (as reported) on an unspecified date with outcome of unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported information is unclear. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	912669-1	Chest pain, short of breath. Morphine, sublingual Nitro, IV Nitro drip & Heparin drip
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	918227-1	About 6 hours after receiving dose, experienced aching in both arms that extended down into both hands - hands was resolved by next morning. Achiness in both arms remained x 48 hours
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	927415-1	4 days later after the vaccine my left eye turned really red with crust and mucus coming out. I went to walk in clinic and was being treated for pink eye. I was started on an antibiotic eye drop. A day later my right eye started to have the same problem. I scheduled an appt with a eye specialist where he examined both eyes and said I had a major infection. I was started on steroid eye drops which I am still taking but seems my eyes are not getting better. I have a follow up with another specialist next week for further testing. I have been out of work due to this matter.
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	932107-1	Pfizer-BioNTech COVID-19 Vaccine EUA Miscarriage - (date of vaccination 1/6/21, miscarriage symptoms (cramping) started 1/8/21, confirmed 1/10/21; estimated date of delivery 8/30/21)
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	932787-1	RECIEVED VACCINE 1/8/21 EXPIRED UNEXPECTED 1/10/21, NO ADVERSE REACTIONS NOTED
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	939757-1	swelling at the injection site, pain, headache, feeling like numb, change in the taste, fever the 1st day x2, body ache, lower back pain.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Congenital Anomaly / Birth Defect *	940392-1	Became dizzy, headache, felt like she was going to faint, rigors and a temperature of 101.5. Next morning she had upset stomach, feeling dizzy, thought she was going to faint and a headache.
COVID19 VACCINE (COVID19)	Hospitalized	902479-1	"rPfizer-BionNTech COVID-19 Vaccine EUA 5-7 minutes after the vaccine Associate stated she did not feel right, mentioned chest pain. ""My chest feels funny. It feels like when you have really bad heartburn coming on"". ""I feel flushed like when you get contrast for a CT"". Pulse 90 BP 160/90 checked later 130/90"
COVID19 VACCINE (COVID19)	Hospitalized	903260-1	Approximately 10 minutes after vaccine administration, patient reported wheezing and coughing. Patient received epinephrine IM, IV Benadryl, IV solumedrol and racemic epinephrine SVN. Patient never developed a rash, hypotension, swelling of the lips, mouth or tongue, other GI side effects . Per ER attending and admitting physician, this reaction seems to be a clear exacerbation of the patient's tracheomalacia. The patient was more responsive to racemic epi SVN as opposed to IM epi. Patient admits that psychological stress may have been a component of her symptoms. The admitting physician does not consider this to be an anaphylactic reaction to the vaccination.
COVID19 VACCINE (COVID19)	Hospitalized	903332-1	Seizure approximately 24 hours after vaccination
COVID19 VACCINE (COVID19)	Hospitalized	903400-1	"5 minutes after the Pfizer Covid-19 vaccine administration, the patient developed flushing, hives, felt warm and eventually short of breath. She started to wheeze and was wheeled into ER c/o ""I can't breathe while holding throat and thrashing with facial flushness noted. PT took 2 Benadryls and had several Epi shots. She was then discharged from the ER and later on that day, started to feel short of breath again. In the ED today she was audibly gasping for air, however had no wheezing, had a normal saturation and a normal blood pressure. She had taken another dose of her EpiPen IM and diphenhydramine 50 mg by mouth prior to coming. She was then admitted to the hospital for further observation. While on the floor, she started to feel short of breath again (about 9 am on 12/18/2020), which required an RRT . Patient received another dose of diphenhydramine IV, methylprednisolone 125 mg IV and several doses of IM epinephrine. She also required oxygen. She was then transferred to an ICU for further care."
COVID19 VACCINE (COVID19)	Hospitalized	903592-1	Not all or limited to: anaphylactic reaction: Feeling lump in throat, tongue feeling funny with numbness, feeling of hard to swallow, throat tightness, shortness of breath, tachycardia, tachypnea, pressure, tingling, and numbness from head to toe, dizziness/lightheartedness, cough, voice changes.
COVID19 VACCINE (COVID19)	Hospitalized	903638-1	"Patient is a very pleasant 62 year old gentleman with a history of HTN, hyperlipidemia who presented with left facial numbness and left UE numbness. He states that it is worse medially on his arm. Present in upper and lower face. He states it started around 730 am this morning. He also notes intermittent ""foggy"" sensation since Monday associated with some blurred vision that comes and goes. Denies focal weakness, unsteady gait, difficulty with speech and swallow. He denies f/c, cp, sob, rash, pruritis, n/v/d, edema. He did receive the Pfizer COVID vaccine yesterday"
COVID19 VACCINE (COVID19)	Hospitalized	903766-1	Angioedema
COVID19 VACCINE (COVID19)	Hospitalized	903800-1	sob, nausea, malaise, vomit, chest pain, throat tightness
COVID19 VACCINE (COVID19)	Hospitalized	903806-1	Resident became short of breath 7 hours after vaccine, went to hospital, was COVID+
COVID19 VACCINE (COVID19)	Hospitalized	903820-1	Day following vaccine, fever, sob - went to hospital, COVID+
COVID19 VACCINE (COVID19)	Hospitalized	903931-1	Presented with periumbilical pain to emergency department (patient works at Medical Center). Admitted to hospital for small bowel obstruction. Labs were consistent with dehydration (Hct 55, Cr 1.25), as well as CRP 1.10. A CT Abd/Pelvis identified proximal dilation and fecalization of small bowel, with a transition point in the left lower quadrant. Distal to the transition point, the small bowel appears thick, with hyperenhancement and inflammation progressing into the cecum. General Surgery was consulted and patient admitted to hospital for management of this small bowel obstruction.
COVID19 VACCINE (COVID19)	Hospitalized	903938-1	rash appeared at site of injection, very painful, hot to touch, hard, with rash spreading to torso
COVID19 VACCINE (COVID19)	Hospitalized	904072-1	Chest Tightness and shortness of breath
COVID19 VACCINE (COVID19)	Hospitalized	904107-1	Resident short of breath approximately 10 minutes post vaccination. Staff noted that his baseline upon activity and transferring is generally shortness of breath. Resident wears 2L NC, O2 saturation was 92%, increased to NC to 4 Liters O2 saturation up to 96%. 170/80, heart rate 94, regular rhythm. Sent to hospital.
COVID19 VACCINE (COVID19)	Hospitalized	904234-1	Rach, tachycardia, palpitations, shortness of breath shortly after receiving vaccine - given epi, solumedrol, Benadryl. persistent symptoms the following day.
COVID19 VACCINE (COVID19)	Hospitalized	904264-1	Patient presented to the emergency department at 8:45pm on 12/18/20 with lower abdominal pain, nausea, vomiting, and constipation that started approximately 2 hours prior to presentation, at approximately 6:45pm. Her labs were significant for a lipase of > 6000 IU/L, and a CT scan of her abdomen/pelvis was done that demonstrated evidence of acute pancreatitis. Given the fact that she does not have a history of heavy alcohol use, with normal triglycerides and no evidence of gallstones on her current admission, and no recent gastroenterology procedures, there is no clear etiology of her pancreatitis; concern for post-vaccination pancreatitis. The patient is currently admitted to the hospital, on hospital day #1 of her current condition.
COVID19 VACCINE (COVID19)	Hospitalized	904349-1	acute, mild pancreatitis, associated with symptoms associated with Nausea and vomiting and abdominal pain. Patient's symptoms started 1 day after her vaccination.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	904385-1	Patient is a pleasant 83 y.o. female pediatrician with history of Sjogren's, hypothyroidism, hyperlipidemia, hypertension who had been at Hospital to get her Covid vaccine. 30 minutes after doing so she reports being in the lobby and about to walk upstairs and feeling fine. The next thing she knows she wakes up on the stairs with her nose and face bleeding surrounded by healthcare team. She denies any precipitating symptoms such as chest pain, shortness of breath, fevers dizziness, headache. She reports feeling well otherwise in the last few days. I did a thorough bony palpation exam including spine and the only point of tenderness besides on her face was the area above her right ankle. She does not have a history of syncope or collapse
COVID19 VACCINE (COVID19)	Hospitalized	904386-1	Patient had vaccine at 1330 on 12/20. At around 1815 she began experiencing heart palpitations. She presented to the ED and she was found to have a heart rate in the 130s. EKG showed junctional tachycardia. She was given 6mg of adenosine and an EKG was repeated and showed sinus tachycardia. Eventually her heart rate decreased to the 70s-90s. She was noted to have a potassium of 3.4 which was repleted. She was admitted overnight for observation. In the morning her potassium was normal and she remained in sinus rhythm. She was discharged later that afternoon.
COVID19 VACCINE (COVID19)	Hospitalized	904436-1	The patient was well prior to vaccination (12/17). The day after, he felt mildly unwell and had a low grade fever. The following day, he had a fever of 102. He received 1L of fluid at Urgent Care and had a BP ion the 80s. Shortly thereafter, he felt palpitations and developed AF. He came to the hospital where he was tachycardia to 200 bpm and hypotensive to SBP70s. He received aggressive fluid resuscitation (4L), IV metoprolol and was started on empiric Abx. Within several hours, the HR lowered, BP increased, and AF spontaneously converted to sinus. He had no dysuria. Cultures so far have not shown growth at our hospital. Urinary culture from urgent care has reportedly shows 20k gram positive cocci.
COVID19 VACCINE (COVID19)	Hospitalized	904555-1	I had no reaction following the vaccination. The next day I had very mild soreness at the injection site. The next morning (about 36 hours after the vaccination) I woke up with fatigue and a sore throat. I had breakfast and about 10 minutes later I vomited everything (projectile vomiting, no nausea or abdominal pain). An hour later I had episode of severe watery diarrhea (just one episode). Felt very weak so I decided to sit down, stumbled to a chair, and then proceeded to have a syncopal episode with about 4 minutes of seizure like activity (witnessed, I don't remember that part). Decided to go to the ER, where I had labs, EKG, CXR, head CT scan, MRI and EEG. I was admitted for 24 hour observation, all the tests were normal.
COVID19 VACCINE (COVID19)	Hospitalized	904719-1	Day 1: palpitations, dizziness Day 2: headache, redness, swelling, itching on vaccination site; GI disturbance Day 3: vaccination arm had paresthesia, heaviness, almost stroke-like symptoms; the symptoms started suddenly ** treated in the ER; IV steroids- for possible allergic reaction; tpa- for the stroke-like signs; halfway through the tpa, I felt an improvement with the arm
COVID19 VACCINE (COVID19)	Hospitalized	905191-1	Do not suspect that vaccine caused patient condition and resulting inpatient admission. Suspect patient had COVID-19 at time of vaccination, but had not developed symptoms yet. Here is timeline: Patient went to ED on 12-18-2020 at 22:51 with complaint for fever and shortness of breath. Patient ended up testing positive for COVID-19, 12-19-2020 00:09, but was not symptomatic at time of vaccine. As of 12/21/2020 12:04 pm, patient is still inpatient and on comfort care/hospice.
COVID19 VACCINE (COVID19)	Hospitalized	905320-1	severe abdominal pain experience 2 days post vaccination of dose 1 of 2. Diagnoses with early acute appendicitis on Friday December 18th and had a laproscopic appendectomy on Saturday December 19th.
COVID19 VACCINE (COVID19)	Hospitalized	905345-1	Patient received Pfizer COVID 19 vaccine last Thursday 12/17. Admitted today (12/21) with bleeding and low platelet count - working up for ITP, TTP. Given recency of vaccination and no known contributory allergy or medical history, physician thought potentially associated with vaccination.
COVID19 VACCINE (COVID19)	Hospitalized	905774-1	Nurse reports that patient had no problems after receiving vaccination. Patient went home and EMS was called early the next morning and team administered vaccination was contacted physician that the associate works for stating the patient had a heart attack.
COVID19 VACCINE (COVID19)	Hospitalized	905974-1	Left sided weakness of face, arm and left leg, onset 15 minutes after receiving vaccination Brought immediately to ED, subjective feeling of closing of throat. Given IM epinephrine 0.3mg x 1. Upon evaluation in the ED by tele-neurology consult, she received 88.5mg of alteplase on 12/20/20 at 1721 She was admitted to the Intensive Care Unit on 12/20/20 at 2208 Seen by neurology on 12/21/20 at 1227. Evaluation showed weakness on the left side but is noted that it could be effort-related. Neurologist noted that patient was treated with alteplase; CT angiogram showed no significant blockage or stenosis. Noted that this is could be related to a vasovagal effect, psychogenic or an acute ischemic stroke. As of 12/21/20 at 1615, attending provider noted left-sided paresthesia, left-sided tics and possible transient ischemic attack
COVID19 VACCINE (COVID19)	Hospitalized	906064-1	Rapid heart beat, difficulty breathing, itching, rash, clamminess, cold sweats, nausea
COVID19 VACCINE (COVID19)	Hospitalized	906132-1	waves of heat feeling; tachycardia; chest tightness; This is a spontaneous report from contactable physician via Pfizer Sales Representative. A 50-year-old female patient received bnt162b2, via an unspecified route of administration in 2020 at single dose for immunization. The patient's medical history and concomitant medications were not reported. The patient experienced waves of heat feeling, tachycardia, chest tightness 15 min after receiving the vaccine in 2020. Patient received several doses of steroid and was kept overnight in hospital and recovered. The outcome of events was recovered in 2020. Information on the Lot/Batch number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, waves of heat feeling, tachycardia, chest tightness, there is a reasonable possibility that the events are related to BNT162 vaccine.The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this reviews well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	906282-1	Given the vaccine at 712 pm on 12/20/20. At approximately 715 pm, she began to clear her throat and then became unable to speak, followed by audible wheezes and short, shallow breaths. At 1923, Epinephrine was administered. At 1928, she was able to speak again and was transported to the ED. The patient reports after arrival to the ER, the symptoms returned. She was given PO Benadryl, followed by IV Benadryl, and then a 2nd dose of Epinephrine. She was admitted to the ICU for observation.
COVID19 VACCINE (COVID19)	Hospitalized	906285-1	At work patient had ALOC x10 minutes. Rapid response called. Transf to Hospital (12/18-12/20). D/C Dx ACUTE CORONARY SYNDROME (NON-STEMI)

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	906318-1	57-year-old female history of hypertension, hyperlipidemia, type 2 diabetes, COPD, subsegmental PE is not on anticoagulation, multiple cardiac stents presenting with greater than 12 hrs of worsening left-sided chest pressure, headache and shortness of breath. Patient takes a daily aspirin and had no improvement of symptoms with her at-home nitroglycerin. Here afebrile, HTN, remaining vitals wnl. Non-toxic, in moderate distress 2/2 to pain. EKG with minimal ST depressions in leads II and III. Will plan for CXR and labs. Pt given zofran and morphine for pain control. Will give additional aspirin for total 324 mg in last 24 hrs. On re-evaluation, pt with mild improvement in pain. Troponin elevated at 0.18, remaining labs wnl. At this time concerned for NSTEMI, pt treated with 1 mg/kg of lovenox and MOD consulted for admission. MOD evaluated pt and cardiology was consulted. Given concerning PMHx and current hx of chest pain with findings consistent with NSTEMI, cardiology at recommended likely transfer for cardiac cath. Will pend repeat troponin and EKG for dispo decision.
COVID19 VACCINE (COVID19)	Hospitalized	906333-1	Approximately 65 hours post-vaccination patient felt profound fatigue, no appetite, and had increase in baseline chronic cough, and anosmia. Patient was admitted to the hospital on 12/21 due to worsening respiratory symptoms that required supplemental oxygen-initially 2L via nasal cannula. Patient was upgraded to ICU-level of care at 6:30PM 12/21 to receive high-flow nasal cannula, and has had one episode of fever (100.6) 12/22 at 7:00 AM.
COVID19 VACCINE (COVID19)	Hospitalized	906506-1	Burning in throat, flushed face and neck. Developed stridor. Benadryl 25 mg PO given, Epinephrine 0.5mg given IM, albuterol inhaler 4 puffs. Transferred to the Emergency department and admitted to the hospital.
COVID19 VACCINE (COVID19)	Hospitalized	906514-1	Patient was administered the Covid19 vaccine. She was advised to wait 30 minutes post vaccination. While the patient was waiting, she reported having an itchy throat, throat tightness, then a hoarse voice and a cough developed. This happened at about 20 minutes after she received the vaccine. The patient was assessed by the nursing and provider staff. She received an adult epi pen injection and EMS was called. Patient was taken to the ER by EMS. She reports she received two more epi injections, benadryl, and Solu Medrol. She was stabilized. Patient was discharged from the ED after several hours. She then reports a second episode of throat tightening and worsening cough at 12:30 am and was taken by ambulance to the ICU and admitted. She is still in the hospital at this time 12/22/2020.
COVID19 VACCINE (COVID19)	Hospitalized	906529-1	When I got the vaccination I was 32weeks pregnant and on Saturday I had spontaeous rupture of the amniotic fluids and went immediately to the hospital and was immediately given steroid, magnesium for the baby. And on Sunday around 3:45PM I got a second round of the steroids and was transferred for observation. On Monday, at 8:06am I went into early labor I delivered my baby at 33weeks gestation and she weighed 3lb 11oz. Expected Date of Delivery-2/8/2021. I was a high risk patient d/t Fibroids but have experienced no issues the entire pregnancy and my last ultrasound was 12/17 and baby was healthy with no complications at that time.
COVID19 VACCINE (COVID19)	Hospitalized	906532-1	seizure, resident sent to er and in CCU
COVID19 VACCINE (COVID19)	Hospitalized	906708-1	"bronchitis or pneumonia; pain down arm into fingers; injection site tingling; Chest felt heavy and difficulty breathing; Chest felt heavy and difficulty breathing; bronchitis or pneumonia; rash on both arms with bright purple skin; rash on both arms with bright purple skin; felt like everything was numb and like she was on drugs; felt like everything was numb and like she was on drugs; Severe headache; This is a spontaneous report from a contactable consumer (nurse) via a Pfizer sales representative. A female patient of an unspecified age received the first dose of the bnt162b2 (BNT162B2; also reported as COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced: bronchitis or pneumonia (medically significant), pain down arm into fingers, injection site tingling, chest felt heavy and difficulty breathing, rash on both arms with bright purple skin, felt like everything was numb and like she was on drugs, and severe headache; all of which required hospitalization. The clinical course was reported as follows: The female patient (nurse) took the first dose of the vaccine and experienced pain down arm into fingers, injection site tingling. The patient's chest felt heavy and difficulty breathing; however, the ""tongue never swelled."" Rapid response was called, and the patient was taken to the hospital. The patient was given a ""cocktail"" to treat the reaction. The patient ""felt like everything was numb and like she was on drugs"" The patient also felt like she had bronchitis or pneumonia. The patient also experienced a ""rash on both arms with bright purple skin""; along with a severe headache. Therapeutic measures were taken as a result of pain down arm into fingers, injection site tingling, and chest felt heavy and difficulty breathing. The clinical outcome of the events was unknown. No follow-up attempt possible; information about batch/lot number cannot be obtained."
COVID19 VACCINE (COVID19)	Hospitalized	906733-1	anaphylaxis
COVID19 VACCINE (COVID19)	Hospitalized	906910-1	HPI: 56 y.o. male with no pmhx c/o generalized bruising for 2 days, noticed small blood tinged spots generalized. Gradual onset, severe on severity, no alleviating or aggravating factors. Patient denies fevers, chills, N/V/D, abdominal pain. In ER: Platelet <1. Platelet transfusion in ER. Admitted for Thrombocytopenia/ITP
COVID19 VACCINE (COVID19)	Hospitalized	907022-1	Anaphylaxis/Angioedema Patient was given EpiPen 0.3 mg IM; Methylprednisolone 125 mg once; Diphenhydramine 25 mg IV push once; Famotidine 20 mg IV push once; Dexamethasone 10 mg IV push once Patient was intubated and put on propofol and midazolam drips for sedation
COVID19 VACCINE (COVID19)	Hospitalized	907074-1	EMS called after patient displayed a heart rate of 160, a little over an hour after vaccine administration. Patient was taken to the hospital and diagnosed with an episode of RVR Afib; she was admitted to the hospital.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	907101-1	patient felt slightly nauseated at 10 minutes after injection, then developed slight sweating; BP 160/81; 83 at 5:45 and then 158/87 with HR 82 at 5: 52 pm. Her lungs were clear, she was speaking in full sentences and was denying any chest pressure, her usual sense of asthma exacerbation. At 6:05 it was 164/83 with HR 79 and patient developed a dry cough; we decided to have her wait just a bit longer, then cough worsened, so at 6:25, decision was made to have patient seen in ER for further assessment, and en route in wheelchair to ER the dry cough became persistent, spasmodic and patient was unable to speak. Epi-Pen was injected in right mid thigh, and patient transported to ED urgent eval. She noted immediate palpitations, and slight improvement of breathing, was able to speak in four word sentences. On arrival to the ED, patient was administered Duonebs, Albuterol neb, IV Benedryl, IV Solumedrol; CXR was obtained, with results pending. Patient was sent to observation for ongoing monitoring and assessment of breathing. at 6:30 PM in the ER, she
COVID19 VACCINE (COVID19)	Hospitalized	907330-1	Employee presented to COVID Clinic for Moderna COVID 19 vaccination 1st dose. Given to left arm. Left clinic prior to completing 15 minute observation time and told an MA in waiting area that she felt ill of her stomach and having trouble taking deep breaths. Employee found in nearby Bathroom sitting on the floor, she had vomited, reported she was lightheaded, couldn't breath, shaking, abdominal discomfort sweating, attempted to move employee to wheelchair, did respond well to transfer to Wheelchair, She reported symptoms worsening: HA, abdominal pain and developed blotchy skin, hyperventilating, and dizzy. CODE Blue called, patient given Epinephrine injection 0.5mg patient sent to ER
COVID19 VACCINE (COVID19)	Hospitalized	907423-1	Onset of symptoms began approximately 1.5 hours after vaccination. Patient became weak c/o tongue swelling, nausea, difficulty breathing, numbness especially in lower extremities. Felt she couldn't breath, numbness continued to get worse and affected her upper extremities as well, weak speech.
COVID19 VACCINE (COVID19)	Hospitalized	907426-1	48 y.o female with history of atrial tachycardia who presents to the ED via EMS for a possible adverse reaction to Covid vaccine. Patient received her Covid vaccine around 1600 today, and soon became diaphoretic, shaky, and lightheaded. She had presented to the emergency department. Currently she denies any chest pain, difficulty breathing, throat swelling, tongue swelling, or any other symptoms currently except for palpitations. Allergic Reaction The primary symptoms are shortness of breath. The primary symptoms do not include cough, abdominal pain, vomiting, dizziness or rash. The current episode started 1 to 2 hours ago. The problem has not changed since onset. The onset of the reaction was associated with a new medication. Significant symptoms also include flushing. 48-year-old female with a history of atrial septal defect, status post atrial septal defect repair in 1980. She works as a nurse at Hospital and has been experiencing increasing rapid palpitations associated with chest pain, and hypertension. With her episodes, she experiences marked lightheadedness, dyspnea, and feeling marked anxiety, as well as chest tightness. She received the COVID-19 vaccine today and while waiting in the observation room, she started feeling unwell, with rapid palpitations, associated with lightheadedness and dyspnea. She last had a sustained episode 2 - 3 weeks ago and had presented to ER and Hospital. No syncope. No orthopnea, PND or increased lower extremity swelling. Active Hospital Problems á Diagnosis ? Atrial paroxysmal tachycardia ? History of repair of atrial septal defect á á 1. Paroxysmal atrial tachycardia in setting of prior atrial septal defect repair - she is having breakthrough episodes through flecainide/digoxin - it is likely her atrial tachycardia is related to her ASD patch. Will hold flecainide/digoxin for now, and try to schedule an ablation during her hospital admission due to highly symptomatic episodes resulting in multiple ER visits. á 2. Acute renal insufficiency - most likely pre-renal - iv fluids started. á 3. Possible COVID-19 vaccine reaction - she probably had an incidental atrial tachycardia episode post vaccine administration, rather than an actual adverse reaction. Continue to monitor.
COVID19 VACCINE (COVID19)	Hospitalized	907478-1	Seizure (Grand mal)
COVID19 VACCINE (COVID19)	Hospitalized	907616-1	12-22 HPI 53-year-old female with a history of Addison's disease, anaphylactic reaction who presents to the ED complaining of hives and shortness of breath. Patient reports that 3 days ago she received the COVID-19 pfizer vaccine. She reports that since that time she has developed progressively worsening hives on her legs and arms. Approximately 1 hour ago she began to develop shortness of breath and so she presented to the ER. Patient reports a previous history of anaphylactic reactions multiple times. Denies any other acute complaints at this time. MDM Patient came in with shortness of breath and hives. Suspect allergic reaction to the COVID-19 vaccine. Patient had already taken 50 mg of Benadryl. She was given Solu-Medrol and EpiPen. She reported feeling better with improvement in the pruritus. She reports that she has had rebound reaction requiring EpiPen at 24 hours. Given the distance that she lives from adequate medical care and the possibility for recurrent severe reactions, the patient will be hospitalized for further observation. 12-23 Female with history of asthma and addison's had anaphylaxis to covid vaccine. Admitted over night to ensure that she did not rebound. Received IV Dex and this am has had no reoccurrence of hives or shortness of breath. Will discharge home on epipen, hydrocortisone prn, prednisone bid for 5 days. Return to ER or go to PCP for worsening symptoms.
COVID19 VACCINE (COVID19)	Hospitalized	907635-1	Patient received covid 19 vaccine. She began to experience itching throat and swollen tongue. She was sent to the Emergency Department. She received IV Benadryl 50 mg, IV famotidine 20 mg and 125 mg IV solu-medrol. Around 930, patient stated that symptoms had resolved, except for tongue being slightly swollen. Patient was admitted to the observation unit of the hospital.
COVID19 VACCINE (COVID19)	Hospitalized	907805-1	First night following after vaccine I woke up with chest pain (i though pleuritic) which went away. I had mild body aches and fatigue, chills. next day I experienced chest(again I thought pleuritic) discomfort especially when taking a deep breath. i felt better then had mild fatigue and body aches again. day 3 post vaccine I woke up with discomfort when taking a deep breath with continued discomfort. i felt tired through the day. Then that evening i developed SOB, severe palpitations and chest pain and went to ER. Diagnosis New onset rapid A fib. I was hospitalized and once my work up was finished and I had normal sinus rhythm I was discharged home the next evening.
COVID19 VACCINE (COVID19)	Hospitalized	907860-1	Chest pressure, dizziness, increased troponin lab value.
COVID19 VACCINE (COVID19)	Hospitalized	908003-1	ANAPHLACTIC REACTION, SOB, CHEST PRESSURE, TIGHTNESS IN THROAT, TACHYCARDIA

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	908262-1	Anaphylaxis; This is a spontaneous report from a contactable pharmacist. A 55-year-old female patient received the bnt162b2 (BNT162B2; also reported as: PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included eosinophil process allergic reaction, fish, iodine and shellfish allergy; all from an unknown date and unknown if ongoing. Concomitant medications were not reported. The patient previously took rabies vaccine for immunization and experienced anaphylactic reaction on an unspecified date. On 17Dec2020, the patient experienced anaphylaxis; which required hospitalization, and was assessed as medically significant. The patient was hospitalized for anaphylaxis from 18Dec2020 to an unknown date. The clinical course was reported as follows: The pharmacist called about a patient who received the COVID-19 vaccine on 17Dec2020 and started having a reaction approximately 30 minutes later. The patient used epinephrine (EPIPEN) and 50 mg of diphenhydramine hydrochloride (BENADRYL) and returned to the hospital on 18Dec2020. The patient was currently in the intensive care unit (ICU) receiving an epinephrine drip. The patient had a previous history of an anaphylactic reaction to the rabies vaccine, eosinophil process allergic reaction, fish, iodine and shellfish allergy. The patient was stabilized but continued to have reactions (not specified). The pharmacist had not seen the patient and was reaching out to Pfizer on behalf of the physicians. The pharmacist believed this had been reported by the hospital. The pharmacist had no patient information. Therapeutic measures were taken as a result of anaphylaxis. The clinical outcome of the event, anaphylaxis, was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event anaphylaxis due to temporal association. However patient previous history of allergic reaction cannot be excluded to have played a contributory role
COVID19 VACCINE (COVID19)	Hospitalized	908401-1	Vaccine administered at 0730. Pt went home and went to bed. Woke up at 0930 with shaking, chills and feeling like she was going to pass out. Evaluated in ER and noted to have sinus tachycardia in 140-160's. Given 5mg IV Lopressor which took heart rate down to 110's. Admitted to hospital 12/23/2020.
COVID19 VACCINE (COVID19)	Hospitalized	908448-1	Left arm leg and face numbness bilateral legweakness Vaccine given at 915 am Symptoms started at 11 am Called Pfizer to report at 1151 am Saw primary doctor at 2 pm Return to primary md again 12/22/20 Referral to neurosurgeon 11/22/20 Hospitalized 11/22/20 to 11/24/20 lept Meningeal inflammation hospital
COVID19 VACCINE (COVID19)	Hospitalized	908663-1	Within minutes I had lower chest pain and wired sensation in my lungs. My throat was swelling. I was very hot and red. I the gurney my right arm was tingling. Opposite arm from vaccine.
COVID19 VACCINE (COVID19)	Hospitalized	908685-1	throat swelling, SVT
COVID19 VACCINE (COVID19)	Hospitalized	908869-1	12/18/2020: COVID19 vaccine received. 12/19/2020: Patient noticed petechiae/bruising on arms, legs and face. Worsened over next 48 hours. 12/21/2020: Patient had blood drawn (CMP, PT/INR, CBC) at lab. 12/22/2020: Labs resulted; CMP and PT/INR WNL (exceptions: SCR 1.24, TBil 1.7); CBC with platelet count of 1,000 resulting in patient admission to Hospital. At admission he received 80 mg of prednisone, 40 g of IV Ig and a unit of platelets. 12/23/2020: Continued hospitalization. Patient's platelets improved to 20,000 and he received another 35g of IV Ig. 12/24/2020: Patient discharged with platelets of 38,000.
COVID19 VACCINE (COVID19)	Hospitalized	908877-1	He was fine ate lunch, in a room with a patient, felt light headed and dizziness, passed out, he became unresponsive, he was hypotensive, he is now in the ER.
COVID19 VACCINE (COVID19)	Hospitalized	908893-1	Patient vaccinated at Nursing home. Transferred to ER the following day when patient developed fever and altered mental status. Found to have acute kidney injury on chronic kidney disease, hyperkalemia. Required emergent hemodialysis for hyperkalemia with ECG findings of peaked T waves.
COVID19 VACCINE (COVID19)	Hospitalized	908917-1	Patient is a 47 y.o. female who arrived by Car presented to the emergency department for Stroke symptoms. Patient awoke at 6:15 this morning, some difficulty seeing out of the right eye and also was stumbling towards the left and to table. Concerned about things not being right so brought to the emergency department. Patient feels her speaking and swallowing are okay. She did drink a bit of coffee earlier. She denies headache or significant vision problems presently. Continues to not feel normal on her left side. No history of stroke and parents or siblings. She does give personal history of an occipital migraine many years ago at which time she did not have a headache but had some vision troubles. Physical Exam Vitals signs and nursing note reviewed. Constitutional: General: She is not in acute distress. Appearance: She is not ill-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Right Ear: Tympanic membrane normal. Left Ear: Tympanic membrane normal. Nose: Nose normal. Mouth/Throat: Mouth: Mucous membranes are moist. Pharynx: No oropharyngeal exudate or posterior oropharyngeal erythema. Eyes: Conjunctiva/sclera: Conjunctivae normal. Pupils: Pupils are equal, round, and reactive to light. Comments: Patient displays absence of left lateral movement Neck: Musculoskeletal: Normal range of motion. No muscular tenderness. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Heart sounds: No murmur. Pulmonary: Effort: Pulmonary effort is normal. Breath sounds: Normal breath sounds. Abdominal: General: Bowel sounds are normal. There is no distension. Palpations: Abdomen is soft. Tenderness: There is no abdominal tenderness. Musculoskeletal: Right lower leg: No edema. Left lower leg: No edema. Lymphadenopathy: Cervical: No cervical adenopathy. Skin: Findings: No rash. Neurological: Mental Status: She is alert. Cranial Nerves: Cranial nerve deficit (left facial droop, dysarthria) present. Comments: Patient's speech seems a bit slurred to me. Absence of ocular movements towards left noted as well as upward movements. Tongue is midline. Patient is unable to shrug the left shoulder or lift the left arm off the bed. Grip strength is 4 out of 5 on the left. Left leg strength is 3 out of 5. Extremity strength on right arm and leg is 5 out of 5. After consultation with a neurologist, the patient is being transferred from the ED.
COVID19 VACCINE (COVID19)	Hospitalized	908918-1	This resident received the first dose of the Pfizer Covid vaccine at the Covid vaccine clinic at medical Facility. He had a rapid response, experienced low blood glucose and low heart rate. NP and medical director were in attendance. Heart rate remained low despite all measures. He was transferred to Hospital for bradycardia.
COVID19 VACCINE (COVID19)	Hospitalized	908969-1	Starting that night 12/19/20 at approx 8pm I became nauseous with a 100.8f fever. I felt achy for the 2 days with the fever subsided. On Monday 12/21/20 I was at work (Firefighter) when I started to have palpitations. I was able to obtain a 12 lead EKG right away which showed a ventricular rhythm lasting for approx 5 min. After that I was having multiple PVC's / Ventricular beats. I was taken to Hospital where I was admitted. Over night the rhythm subsided, all my labs were good with other test's being done. I was discharged home. I have not had any other episodes since Monday. I was cleared by our Occ Health Doc who suggested I fill this out.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	908973-1	15 min after receiving Covid 19 vaccine patient started to feel like her heart was racing / felt faint. Burning feeling in upper thigh and pelvic area. BP 180/100 HR 130. Rapid Response called / transported to ER. Admitted for 24 hr observation.. Solu -medrol, Benadryl and Ativan given in ER. Released home the next day. 72 hrs later patient states she has numbness and tingling in hands and feet. 12/24/2020 patient reports she is feeling better today / no symptoms noted.
COVID19 VACCINE (COVID19)	Hospitalized	909031-1	Patient presented with signs and symptoms of sepsis, developing over 12 to 24 hours 6 days after vaccination. was hypotensive and confused (beyond baseline)
COVID19 VACCINE (COVID19)	Hospitalized	909130-1	Acute NSTEMI with symptom onset 4 days after vaccination
COVID19 VACCINE (COVID19)	Hospitalized	909146-1	listed before
COVID19 VACCINE (COVID19)	Hospitalized	909379-1	near syncope, hypotension, nausea/vomiting, tachycardia (120-150) within 5 minutes of administration. did not resolve and worsened within 1 hour. Pt went to ER for workups. Received IV benadryl without improvement. Admitted to hospital overnight for continuous cardiac monitoring. Improved overnight and discharged in the afternoon 12/24/20.
COVID19 VACCINE (COVID19)	Hospitalized	909490-1	The patient developed palpitations, lightheadedness and nausea and came to the ED and was found to have sinus tachycardia. Unclear if it is a vaccine reaction or due to anxiety or severe iron deficiency anemia.
COVID19 VACCINE (COVID19)	Hospitalized	909577-1	Dizziness, dyspnea, neck swelling
COVID19 VACCINE (COVID19)	Hospitalized	909586-1	The patient was vaccinated on 12/17/20. Wife was diagnosis with COVID-19 on 12/18/20. He was diagnosis with COVID-19 on 12/21/20. Symptoms worsened on 12/26/20. And he had chest exam (x-ray's), pneumonia bi-lateral and he was hospitalized on 12/26/20.
COVID19 VACCINE (COVID19)	Hospitalized	909635-1	Palpitations, shortness of breath, chest tightness, presyncope, which led to New onset atrial fibrillation with rapid ventricular response and required synchronized cardioversion and hospitalization. Discharged on anticoagulation and beta-blocker.
COVID19 VACCINE (COVID19)	Hospitalized	909720-1	12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.
COVID19 VACCINE (COVID19)	Hospitalized	909778-1	8:27 Hives, itching all over chest and on tongue, tongue swelling, slight difficulty swallowing. 8:30 epi administered/ benedryl 8:32 pseudo seizures begin off and on till the 27th
COVID19 VACCINE (COVID19)	Hospitalized	909911-1	12/20/2020 12:00 PM DEVELOPED LAPID ATRIAL FIB. WENT TO ER WHEN IT PERSISTED, MEDICAL CENTER. ADMITTED TO INPATIENT; 12/21/2020 - ELECTRICAL CARDIOVERSION. MONITORED OVERNIGHT. 12/22/2020 - DISCHARGED *ON CHRONIC BLOOD THINNER
COVID19 VACCINE (COVID19)	Hospitalized	910053-1	15 minute post vaccination observation patient denied any symptoms. Later in the day patient experienced significant nausea and vomiting followed by mild SOB and throat swelling.
COVID19 VACCINE (COVID19)	Hospitalized	910059-1	Numbness in sole of feet. Unable to walk, develop high fever, resp failure resulting in intubation, acute kidney injury
COVID19 VACCINE (COVID19)	Hospitalized	910133-1	Noted tongue starting to swell on 12/24 at 1030. Started on left side, then progressed to right side. No SOB, difficulty swallowing or breathing, but staff noted difficulty understanding her speech. Presented to ED at 1300. 50mg Benadryl given IV on 12/24 at 1328 and 125mg solumedrol given IV at 1327. Pt reported improvement in tongue swelling at 1630.
COVID19 VACCINE (COVID19)	Hospitalized	910202-1	Pediatrician working in the hospital. Was exposed the an office contact wo had covid. Shoulder in soreness. At work on Wednesday. Felt lightheaded had to sit in chair. That's all he remembers. He workup to a CODE team putting oxygen on him. He has a seizure. Took the COVID test has COVID. Admitted to hospital for 2 days. Likely a syncopal event.
COVID19 VACCINE (COVID19)	Hospitalized	910251-1	41-year-old male who presents to the ED today with a complaint of weakness in his bilateral arms and legs. He states he fell slightly weak yesterday but this morning when he woke up around 6 AM he was not able to get out of bed because he was so weak. He states he feels like he has no muscle strength in his arms and legs. He denies any fever. He denies any cough or shortness of breath. He denies any chest pain or abdominal pain. He denies any nausea, vomiting or diarrhea. He denies any numbness in his extremities. He denies any neck or back pain. He did receive the first Covid vaccination on December 17.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	910316-1	TTP; This is a spontaneous report from a non-contactable pharmacist. A 22-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 17Dec2020 as a single dose for COVID-19 immunization. The patient did not have any known relevant medical history. The patient had no allergies to medications, food or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. It was unknown if the patient received any other vaccines within four weeks prior to the vaccination. On 21Dec2020, the patient experienced thrombotic thrombocytopenic purpura (TTP); which was serious for hospitalization. The clinical course was as follows: The patient went to the emergency room/urgent care and was admitted in the early morning of 21Dec2020 due to TTP. Work-up was ongoing with no known results. On 21Dec2020, the patient also had a COVID-19 test which was negative. The patient was treated with unspecified corticosteroids and platelets. The clinical outcome of the TTP was unknown. The reporter assessed that it was unknown if the TTP was related to the vaccination. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Current limited information does not allow a full medically meaningful assessment, especially lack of medical history, concomitant medications, concurrent illness and diagnostic workups such as coagulation test, Combs test, bacterial/virologic/immunological biomarkers to identify the etiology. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	910580-1	Started to have a cough wheezing high respiratory distress again; anaphylaxis; Shortness of breath; Hives; she had red rash on her chest that progressed to her face; Swelling of tongue; Angioedema; Stroke; This is a spontaneous report from a contactable physician. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; lot number EK5730), intramuscular into the left deltoid on 17Dec2020, at 11:as single doses for covid-19 immunization and epinephrine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for a cough wheezing high respiratory distress again, , diphenhydramine hydrochloride (BENADRYL), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, dexamethasone sodium succinate (DECADRON), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, famotidine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication. Medical history included asthma, hyperlipidemia, hypothyroidism and allergies in the past to food, corn and dye (reported as she's had allergies in the past to food, corn and dye), all since unspecified dates. Concomitant medication included levothyroxine (MANUFACTURER UNKNOWN) and montelukast sodium (SINGULAIR). The patient experienced the following events with outcomes: patient started to have a cough wheezing high respiratory distress again involving hospitalization on 17Dec2020, at 23:20 with outcome of unknown; hives involving hospitalization on 17Dec2020 with outcome of unknown; shortness of breath involving hospitalization on 17Dec2020 with outcome of unknown; anaphylaxis involving hospitalization on 17Dec2020 with outcome of unknown; stroke that was medically significant in Dec2020 with outcome of unknown; angioedema that was medically significant in Dec2020 with outcome of unknown; swelling of tongue in Dec2020 with outcome of unknown; on 17Dec2020, she had red rash on her chest that progressed to her face with outcome of unknown. Therapeutic measures were taken as a result of started to have a cough wheezing high respiratory distress again, shortness of breath, anaphylaxis, stroke, angioedema, swelling of tongue and she had red rash on her chest that progressed to her face. Details were as follows: The physician reported that the patient was in the ICU, and admitted for anaphylaxis reaction to BNT162B2. Relating to causality, the physician said yes as the patient had allergic reaction in the past and showed protracted anaphylaxis. Patient had a unspecified rabies vaccine in the past, for which she had respiratory distress afterwards. The physician guessed some skin redness but no she didn't have any there is no need for intervention or anything like that didn't have the details exactly but she said that she had a response to it, it didn't seem like anaphylaxis reaction; she was pre-medicated prior to the vaccine, which was elaborated as got 4 of Decadron and 25 of Benadryl. She didn't have anything to eat other than cereal what she had before with no reaction. She immediately after the vaccine (Covid vaccine) was administered, she said that she had red rash on her chest that progressed to her face. She started to experience shortness of breath and then respiratory distress. She gave herself EpiPen and then she was given steroids, famotidine and epinephrine in the hospital in the emergency department. The patient was sent home with the Benadryl and instructed to take two sips. At 11:20 that day, at night patient started to have a cough wheezing high respiratory distress again. She gave herself a dose of Epinephrine from her Epi and once she got more Epinephrine, Famotidine steroid, Benadryl and then she was admitted had another episode of stroke and then rash and it progressed to angioedema and tongue swelling. She got intramuscular steroids and was currently on an epinephrine drip. Patient was hospitalized in the surgical intensive care unit. The outcome of the events were unknow. Reaction assessment per the reporter for anaphylaxis reaction to the BNT162B2, noted that patient showed protracted anaphylaxis; the method of assessment: Global Introspection reported a drug result of related. Pfizer is a marketing authorization holder of epinephrine in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of epinephrine has submitted the same report to the regulatory authorities.; Sender's Comments: There is a reasonable possibility that the events respiratory distress, anaphylactic reaction, angioedema, dyspnea, and urticaria, were related to BNT162b2 based on known drug safety profile and temporal relationship. The association between stroke and BNT162b2 can not be completely excluded based on the limited information. There is a reasonable possibility that the events stroke, anaphylaxis, angioedema, dyspnea, and urticaria, were related to epinephrine use based on known drug safety profile and temporal relationship. The association between the event respiratory distress with epinephrine use can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	910602-1	"pancreatitis; acute lower abdominal pain; This is a spontaneous report from a contactable pharmacist. A 46-year-old non-pregnant female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), intramuscularly on 18Dec2020 at 08:00 (as reported) at 46-years-old at a single dose for COVID-19 immunisation. The patient medical history was not reported. The patient had no known drug allergy (NKDA). Concomitant medications included acetaminophen (MANUFACTURER UNKNOWN), propranolol (MANUFACTURER UNKNOWN), sertraline hcl (MANUFACTURER UNKNOWN), sertraline hydrochloride (ZOLOFT); all taken for an unspecified indication from an unspecified date to an unspecified date (which were received within two weeks of vaccination). On 18Dec2020 at 17:00, the patient experienced pancreatitis and acute lower abdominal pain; which required hospitalization and were assessed as medically significant. The patient was hospitalized for pancreatitis and acute lower abdominal pain for 3 days on unspecified dates. The clinical course was reported as follows: The patient received the vaccine "" at some point in the AM on 18Dec2020 (as reported)."" That evening, the patient presented to the emergency department (ED) with acute lower abdominal pain. The patient was diagnosed with pancreatitis and was admitted overnight. It was unknown if the patient received any other vaccines within four weeks prior to the COVID vaccine. Prior to the vaccination, it was unknown if the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Therapeutic measures were taken as a result of pancreatitis and acute lower abdominal pain. The clinical outcome of the events was recovering.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment. Other than a temporal association, there is no evidence or argument to suggest a causal relationship between BNT162B2 and the events pancreatitis and acute lower abdominal pain. The events are likely due to an underlying medical condition. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Hospitalized	910624-1	Admitted to the hospital with hypertensive basal ganglia bleed, had a head bleed; This is a spontaneous report from a contactable consumer. A male patient of unspecified age received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in 2020 at single dose for COVID-19 immunization. Medical history included hypertension. The patient's concomitant medications were not reported. After vaccination, the patient was admitted to the hospital with hypertensive basal ganglia bleed, had a head bleed in 2020. The outcome of event was unknown. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Hospitalized	910626-1	resp distress; This is a spontaneous report from a non-contactable consumer (patient). An elderly male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at 16Dec2020 12:00 pm at single dose for covid-19 immunization. Vaccine location was right arm and it was the first dose. The patient medical history and concomitant medications were not reported. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced respiratory distress on 19Dec2020, he was hospitalized for three days. Patient received treatment for the adverse event. Since the vaccination, the patient has been tested for COVID-19 with nasal swab on 19Dec2020, it was negative. The action taken in response to the events for BNT162B2 was not applicable. The outcome of events was unknown. The event was serious, the seriousness criteria was Caused/prolonged hospitalization. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	910641-1	Weakness and tingling down left arm; Weakness and tingling down left arm; Lightheaded; PVC's every 3 beats; emotional too and just very tired; Can not read the vaccination card as she does not have her glasses; Palpitations; Fatigue; Slept a lot; Thready pulse and vertigo; Thready pulse and vertigo; Soreness in left arm at the injection site and down the left arm; Soreness in left arm at the injection site and down the left arm; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, reason for no lot number of COVID Vaccine: Can not read the vaccination card as she does not have her glasses, Expiry Date unknown), via an unspecified route of administration in the left arm on 18Dec2020 at single dose for 'Work with COVID patients'. Medical history included none. There were no concomitant medications. The patient experienced weakness and tingling down left arm (hospitalization) on 22Dec2020, lightheaded (hospitalization) on 22Dec2020, PVC's every 3 beats (hospitalization) on 22Dec2020, soreness in left arm at the injection site and down the left arm on 18Dec2020, thready pulse and vertigo on 19Dec2020, fatigue on 20Dec2020, slept a lot on 19Dec2020, palpitations on 21Dec2020. Details as follows: Caller says she received the vaccine, she is a nurse. She got the vaccine on Friday, 18Dec2020. She had soreness in her arm and at the injection site on Friday but that was it. On Saturday (19Dec2020) she noticed a thready pulse, but went on with her day with only a little arm pain. Sunday (20Dec2020) she was fatigued and the thready pulse continued. She slept a lot on Saturday (19Dec2020) and Sunday (20Dec2020). Yesterday (21Dec2020) she felt a little better, but had palpitations here and there. This morning (22Dec2020) she went into work, was very lightheaded, had tingling down her left arm, and had palpitations. So she hooked herself up to a monitor. Her pulse ox was between 97-99%. Her heart rate would be in the 90s and then drop to 48, so she went down to the ED. She has had a CT, and she is throwing PVC's every 3 beats. She has not been admitted as they are still waiting for results. She is still in the ED. They did a CT to see if there was a possible clot. On 18Dec2020 she received the vaccine around 2 PM. She had soreness at the injections site and down the left arm, which went away by Sunday (20Dec2020). She now (22Dec2020) has weakness and tingling down the left arm. It was never red or anything at the injection site. Saturday, 19Dec2020, she had thready pulse and Vertigo which lasted until Sunday 20Dec2020. She would be laying in bed and try to flip to the other side and having vertigo. When the fatigue started on Sunday (20Dec2020) she did not feel like herself. She was very emotional too and just very tired. Since she went to the ED she has had a CT scan, one with contrast and one without. She had a chest X-ray, and she is on a cardiac monitor. Results are pending. She has Trigeminy PVCs. She says she never goes to the hospital. But she is not admitted yet (pending clarification). Can not read the vaccination card as she does not have her glasses. Unable to read off the NDC, lot, and expiration date. History: Has been on the same vitamins for two years with nothing new. Blood pressure: Normal base line is 130s/80s maybe lower. Heart rate: Currently within her normal limits of 80s-90s. Depending on what happens, it was asked if she should get the second dose. The patient underwent other lab tests and procedures which included blood pressure measurement: 163/76 on 22Dec2020, chest x-ray: unknown result on 22Dec2020 (Result: Pending), computerized tomogram (CT scan): unknown result on 22Dec2020 (Result: Pending), heart rate: 80s-90s on 22Dec2020, Pulse oximetry: 97-99 % on 22Dec2020, cardiac monitor: results are pending on 22Dec2020. The outcome of events weakness and tingling down left arm, pvc's every 3 beats, lightheaded, palpitations and fatigue was not recovered. The outcome of the event soreness in left arm at the injection site and down the left arm was recovered on 20Dec2020. The outcome of the events thready pulse and vertigo was recovered on 20Dec2020. The outcome of the event slept a lot was recovered on 20Dec2020. The outcome of other events was unknown. Information on the lot/Batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	910723-1	10 minutes after the vaccination, she began clearing her throat, within 30 minutes began coughing, which led to chest tightness. Was evaluated in the ER and admitted for observation. Given: Prednisone 40mg po, Benadryl 25mg po Duoneb x 3 and Pepcid 20mg
COVID19 VACCINE (COVID19)	Hospitalized	910750-1	Patient was found slumped over in wheelchair, drooling and unable to respond/follow simple instructions; sent to ED for evaluation. CT scans and MRI NEGATIVE for new/recent stroke; resident slurred speech likely due to hypertensive urgency
COVID19 VACCINE (COVID19)	Hospitalized	910822-1	SNEEZING, STUFFY NOSE, LIP SWELLING, TINGLING MOUTH, THROAT CLOSING, UVULA SWOLLEN 1. Allergic reaction (Allergy, unspecified, initial encounter) . Pt. received Moderna COVID vaccine the morning of 12/22/20 and developed angioedema reaction the afternoon of 12/23 Vaccine is only new medication reported by pt. - denies any new products, foods, etc History of hives with spironolactone 2.5 months ago; taking HCTZ now - unknown if reaction is related to this med rather than vaccine? Due to severity of her reaction and uncertainty if all attributable to vaccine versus some other culprit I would recommend Epi pen at time of discharge Has received IM epinephrine, racemic epi neb, Solu-Medrol, Benadryl, Pepcid in the ED Continue with Benadryl 25mg IV q6h, Pepcid 20mg IV q12h, and Solu-Medrol 40mg IV q6h 2. Angioedema (Angioneurotic edema, initial encounter) . Arrived to the ED with R. side lip, tongue, and uvula and oral cavity edema Airway patent, room air O2 sats WNL - monitor throughout the night for any worsening of angioedema or airway involvement Treatment as above
COVID19 VACCINE (COVID19)	Hospitalized	910948-1	Difficulty breathing 5 minutes after receiving first dose of Covid-19 vaccine by Pfizer/BioNTech, small erythematous spots to bilateral arms.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	910959-1	33 y.o. male with no significant past medical history except for obesity who has been working as a nurse in the emergency room department in our hospital and today he received COVID-19 vaccine and 30 minutes later patient started having increased saliva, cold hands and feet, left-sided pressure-like headache and some numbness in his legs at the same time he suddenly started talking only in first language and lost his ability to speak in second language. He understand second language but replying first language stating that he is talking in second language. On exam he was alert oriented confused by people not understanding his second language stating that his numbness and cold feeling in the hands and feet have improved. Initially patient received 10 mg of Decadron for possible allergic reaction he had a head CT scan that was negative and his labs were remarkable only for hypokalemia. Patient had no prior history of any neurological symptoms he was advised admission to the hospital for observation. Patient symptoms resolved next day, he is alert oriented able to communicate in second language he had a head MRI and head neck MRA that came back negative and had an EEG that showed no seizure activities. Patient was seen in neurology consultation who felt that patient most likely had an episode of migraine headache. Patient is going to be discharged home and to have a follow-up with his primary care physician next week.
COVID19 VACCINE (COVID19)	Hospitalized	910996-1	Patient reports taking Pfizer Covid vaccine and 2 hours after that she reports feeling not well. She recorded that one of the side effects was heart arrhythmias and hence she had her coworker checked her rhythm and she reported that her heart rate was in 180s and hence she was brought to the emergency department for further evaluation. She reports at the time she had palpitations and felt mild lightheadedness and dizziness. She was found to be in SVT with heart rate in the range of 180-220 and she received 1 dose of 6 mg Adenoscan after which she converted to normal sinus rhythm. At the time of my evaluation she is in normal sinus rhythm with heart rate in the range of 90-100. She denies any further palpitations. She reports she had chest tightness for the last 3 days which was assumed to be secondary to asthma and for which she was prescribed prednisone. Currently with the prednisone she does not feel any further chest tightness. She denies any chest pain shortness of breath, fever or chills. She reports remote history of arrhythmia following her foot surgery in the past however does not recall what arrhythmia she had at that time.
COVID19 VACCINE (COVID19)	Hospitalized	911025-1	Patient presents to the emergency department 12/26 complaining of dry cough associated with fever and chills and headache associated with myalgia and diarrhea for 1 week duration. She had Covid vaccine 12/20 and the symptoms started the same night, she denied any sick contacts at home however she works at the Covid unit and reports constant exposure to sick Covid patients.
COVID19 VACCINE (COVID19)	Hospitalized	911035-1	"Approximately 7 hours after receiving the vaccine patient who is a L&D Nurse return to work in her area. She describes that after finishing with a C-section she felt burning in both of her eyes (she thought this feels like an allergic reaction, but I am not sweating and haven't rubbed my eyes). She went to the restroom to get a cloth to wash her eyes; afterwards she reports her vision went totally black in both eyes. She reports feeling frustrated that no one came to help and some panic in trying to figure out how to get out of the restroom. She did make it out of the bathroom. Her Staff reports she postured and turned arms inward, head going to one side and passed out. They also report ~ 10 minutes of incoherent conversation and stating ""I got the vaccine, maybe I was given the wrong thing and now I'm blind"". Upon waking, patient vision fully restored and patient does not remember incoherent conversation. Differential diagnosis- TIA vs. CVA > seizure disorder>>> complex migraine"
COVID19 VACCINE (COVID19)	Hospitalized	911511-1	anaphylaxis; This is a spontaneous report from a contactable physician reporting on behalf of patient. A patient of unspecified age and gender received single dose of BNT162B2 (batch/lot number and exp date not reported), via an unspecified route of administration on an unspecified date for immunisation. The patient's medical history and concomitant medications were not reported. On an unspecified date, the patient experienced anaphylaxis with a very protracted course requiring an epi dose for 4.5 days and was still in the ICU (date/s unspecified) following administration of the COVID vaccine. The physician would like to use a drop of leftover vaccine from one of the vials to do a future skin test after the patient is stable. They were unsure if they needed permission as this was standard practice in allergy to test afterwards but wanted to check in with the company. The outcome of event was unknown. Information about batch/lot number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	911636-1	I received my vaccine on 12/22 around noon. I woke up at 4am this morning 12/25 with tingling in my lips and tongue, in addition to the left side of my face being swollen. Not entirely sure what these side effects are from exactly but thought it best to report my experiences I was hospitalized on 12/25 to 12/26 because my reaction did get worse. I was experiencing numbness on the left side of my body and swelling, numbness, and redness on the left side of my face as well. The hospital didn't really give any explanations but I'm only now have mild swelling and numbness on the left side of my face. Everything else has resolved at this point in time.
COVID19 VACCINE (COVID19)	Hospitalized	911829-1	Resident found unresponsive in her room. Note from earlier: Resident appears to be weak today. Resident ate a few bites of dinner before refusing the tray. Writer encouraged fluids. Vitals 123/72 80HR BS 166. Will log for Doctor and continue to monitor. Was sent out 911.
COVID19 VACCINE (COVID19)	Hospitalized	912137-1	Was given the vaccine and about 5 minutes later started having swelling and my eyes and face. It was watched for a few minutes and was assessed by EMS and taken to the emergency department. I was given epinephrine, Benadryl, Solu-Medrol, Pepcid, IV fluids, DuoNeb and observed overnight. I was given multiple rounds of Benadryl, steroids, Pepcid, DuoNeb
COVID19 VACCINE (COVID19)	Hospitalized	912271-1	Subject received vaccination Wednesday Dec 16th in the afternoon. He became symptomatic (shortness of breath, low grade fever) the next day. Went to the Emergency room on Saturday Dec. 26th, 2020 due to shortness of breath, had an O2 Sat of 60%, and was hospitalized in the ICU at another hospital (due to bed unavailability).
COVID19 VACCINE (COVID19)	Hospitalized	912574-1	Rushed to ER. Has now been intubated and put into the ICU and has had full-cardiac arrest less than 24 hours after receiving the vaccine.
COVID19 VACCINE (COVID19)	Hospitalized	912602-1	Hospitalized 12/29, has now been intubated and put into the ICU

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	912609-1	Patient observed for 15 minutes in the clinic after vaccine with no issues. Patient is a NP and left clinic. 10 min after leaving, was in physician lounge and had tachycardia, dizziness, flushing. Hospitalist in lounge recorded pulse as 180 normal rhythm. Patient taken to ED. In SVT - heart rate eventually reduced. Patient released on cardiac monitor to home. Later that night, patient had increased heart rate again - 160's - while in bed. Admitted to hospital.
COVID19 VACCINE (COVID19)	Hospitalized	912669-1	Chest pain, short of breath. Morphine, sublingual Nitro, IV Nitro drip & Heparin drip
COVID19 VACCINE (COVID19)	Hospitalized	912701-1	Hospitalization 12/26 for Covid PNA
COVID19 VACCINE (COVID19)	Hospitalized	912766-1	Client was vaccinated approx 10:00am at the Health Dept. Client left after 15min without incident. Client went to report to work and began feeling nauseated, dizzy, and feeling as if was going to faint. Client returned to Health Department approx 12:30. Client was diaphoretic, HR was 140bpm, and BP was 178/120. Client was given 50mg/20mL of diphenhydramine PO and EMS was called and client taken to local ER. Client remained A+Ox3 at time of EMS transport. Spoke with client evening of 12/28/2020. He reports he was transferred to another facility and was told was in a-fib. He reports that he is feeling much better but heart still fluttering. Spoke with client afternoon of 12/29/2020. He reports that he is being discharged in a few hours and is being sent home on metoprolol and a baby ASA. He reports they had been working on getting his BP down. He reports that he is feeling better and is going to be scheduled for a heart cath outpatient. He reports that he was initially in a-fib, then a-flutter, and then arrhythmia. He reports that he has been seen by Dr. a Cardiologist, while hospitalized.
COVID19 VACCINE (COVID19)	Hospitalized	912834-1	With five minutes of vaccine Increased heart rate shot up to 198 bpm. Regular resting heart rate for me is in the 50s. Left pupil dilated completely, right eye constricted to pin size. Extremities went numb and ice cold. Went to emergency room Per request of EMTs at vaccination center. Was given high-dose Benadryl and Saline IV. Heart rate return to normal and all other symptoms disappeared after treatment.
COVID19 VACCINE (COVID19)	Hospitalized	912883-1	Difficulty catching my breath, stiff joints in legs
COVID19 VACCINE (COVID19)	Hospitalized	912954-1	Fever, coughing, tachypnea, tachycardia
COVID19 VACCINE (COVID19)	Hospitalized	912957-1	Received vaccine at 13 15. At 1351 c/o mild chest pain. 1353 c/o throat fullness and anxiety; 1354 bp 148/81 HR 99 O2 sat 100% c/o difficulty swallowing, SOB and itching. Rapid response called. Benadryl 50 mg IVP given at 1355. 1356 Solumedrol 125mg given IV; 1357 Epinephrine given; 1358 Pepcid 20 mg given. 1400 Normal saline 250 mg IV; 1415 transported by ambulance to local ER. In waiting area in local ER no attention. Came back to Hospital and admitted to observation
COVID19 VACCINE (COVID19)	Hospitalized	913106-1	The morning after getting vaccine, patient had high BP 213/159, 92% on room air, shaking, chills, LCTAB with diminishment at bases, emesis. Admitted to hospital for pneumonia.
COVID19 VACCINE (COVID19)	Hospitalized	913218-1	headache, nausea, light headed, swelling of the hands Patient was given 1000mg of acetaminophen and 25mg diphenhydramine. Patient was monitored for 60 minutes.
COVID19 VACCINE (COVID19)	Hospitalized	913445-1	Pt developed anaphylaxis, was given IM Benadryl, and was sent to the ED. Pt spent 1 night in the hospital, went home, and has come back and is in the ICU. Pt had hives, itching, chest tightness, swollen lips.
COVID19 VACCINE (COVID19)	Hospitalized	913560-1	Approximately 15 minutes after IM injection, patient developed chest tightness. Patient was taken to the Emergency Department for treatment. Was given sublingual nitroglycerin and subsequently admitted to the hospital for observation. Patient discharged home the following morning in good condition.
COVID19 VACCINE (COVID19)	Hospitalized	913764-1	About 3 am after the injection I woke up with severe chest pains and headache and went to the ER. I was admitted for 2 days and was released with a prescription of Isosorb Monoer, Metoprol, aspirin which is used as a blood thinner. The diagnosis and prognosis was severe migranes and cardioartery disease.
COVID19 VACCINE (COVID19)	Hospitalized	913807-1	Left side of my face went numb. 5 minutes later tongue was dry and tingly. Went back to place of work and went to monitoring room. Went to ER to be checked out. Got better over that day. I was admitted the same day and discharged the next day.
COVID19 VACCINE (COVID19)	Hospitalized	913866-1	Patient administered Pfizer-BioNtech vaccine, dose #1 in series at 810AM, without notable concerns for 10 minutes. At 10 minutes post vaccination, patient developed itching and some blotching, throat becoming scratchy. No known allergies to components listed in vaccine, though does have a listed allergy to contrast dye, does not carry an epi-pen. Patient was walked to urgent/emergency care in the clinic, where she was seen immediately. Patient was given diphenhydramine 25 mg IV, pantoprazole 40 mg IV, with mild uticaria continuing. Patient notes she feels her 'back is on fire'. Patient was then given methylprednisolone 125 mg IV. At this time, no SOB is noted, uticaria is still present. 0930 patient reports swelling in throat and respiratory difficulties at this time with visible edema in the neck. 0.3 mg Epinephrine given at 0935, epinephrine drip and racemic epinephrine neb given. 1006 Patient on epinephrine drip 2.5 mics/hour. Patient transferred to Medical Center ICU, where she remains at the time of this report.
COVID19 VACCINE (COVID19)	Hospitalized	914139-1	Facial numbness radiating down left side of neck to left arm, elbow and chest. Went to ED, admitted for observation overnight.
COVID19 VACCINE (COVID19)	Hospitalized	914280-1	Patient presented to the ER on 12/26/2020 with complaints of fever, chills and SOB for about 3 days. Stated it was a gradual onset and has been intermittent. Also reported some nausea and chronic loose stools, mild loss of smell and sinus drainage, non productive cough. Discharged to observation and then home on 12/27/2020. Patient readmitted to hospital on 12/30/2020.
COVID19 VACCINE (COVID19)	Hospitalized	914474-1	headache 15 minutes after receiving vaccine, 3 to 4 hours later broke out in rash on upper extremities, ABD pain, itchy, and arm swelling, throat hurts. SOB

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	914479-1	Left sided weakness, fatigue for 3 days post immunization. Patient was seen by health care provider on 12/30/2020. Provider transferred patient to Hospital ER for further evaluation.
COVID19 VACCINE (COVID19)	Hospitalized	914521-1	Patient presents with ? Altered Mental Status ? Headache á á HPI Patient presents to ER by EMS ambulance after family called 911 as patient was incomprehensible with slurred speech and moaning on the phone this evening. On arrival of EMS patient was asleep in bed and reportedly unresponsive other than to localize to pain. EMS transferred patient to ER. On arrival to ER patient had GCS 7. Reportedly patient is locum nurse who works in a Nursing Home and patient reportedly received COVID vaccination 2 days ago and that night reportedly began complaining to family on the phone of headache, nasal congestion, sore throat, cough, fever, chills, nausea, emesis, myalgias, and lethargy. Per the medical record patient has history of seizures, migraines, and sciatica. No other information is known on patient arrival to ER. 1. Peripheral IV right dorsal hand placed by EMS in route to ER. 2. On arrival to ER GCS 7 (E1M5V1) and roving eye movements with episodic lateral conjugate and at times disconjugate gaze concerning for seizure activity. Arms and legs with moderately increased tone but no clonic movements and patient able to localize bilaterally. 3. Ativan 1 mg IVP for seizure, then further 2 mg IVP for persistent seizure. 4. Fosphenytoin 1,000 mg IVPB in ER for loading dose of antiseizure medication. 5. Patient had significant improvement following completion of Ativan 3 mg IVP and GCS improved to 14 (E3M6V5) from GCS of 7 (E1M5V1). 6. Patient able to communicate after improvement as above and reports she has had headache or migraine for past several days as well as dysuria with bilateral CVA pain and has significant pain on percussion of bilateral CVA and moderate pain on palpation of bilateral flanks. No nuchal rigidity or pain with ROM of neck. Additionally, she complains of severe headache and diffuse pain of back and abdomen/pelvis. She reports a history of seizures in the past and reports she had one last month and was treated at a hospital in her home state. She denies antiseizure medications. Additionally, patient reports nonproductive cough, sore throat, nasal congestion, fever, chills, myalgias, lethargy, and episodic emesis over the past 2 days. She has anterograde amnesia following seizure and does not recall events. 7. Normal saline 1,000 mL IV bolus, then 100 mL/hour in ER. 8. CT of head with and without contrast performed and negative for intracranial hemorrhage, lesions, stroke, or other acute pathology. 9. CT of chest/abdomen /pelvis with IV contrast shows no acute pathology or notable abnormalities. 10. Lactic acid drawn and normal. 11. UA and urine microscopy collected by straight catheterization and culture collected and pending. 12. Blood cultures x 2 collected and pending. 13. Rocephin 2 mg IVPB in ER after blood cultures collected. 14. Vancomycin 20 mg/kg (1,500 mg) IVPB following Rocephin. 15. Dexamethasone 10 mg IVP in ER. 16. Duoneb nebulizer in ER. 17. Called to discuss with patient's daughter and the family's preferred contact who is 23 years old. She reports patient had COVID vaccination 2 days ago and beginning that night patient has complained of headache, fever, chills, nonproductive cough, sore throat, nasal congestion, myalgias, and lethargy. Additionally, she reports patient has history of seizures on at least 1 occasion in the past a few months ago but is not on antiseizure medications. She reports patient had MRI and MRA of her brain at that time and reportedly and intracranial aneurysm was identified at that time. 18. Called to request transfer to another facility and spoke with hospitalist who states there is no neurologist there and suggests transfer to larger tertiary care facility with neurology. 19. Called to request transfer and accepted by ER provider. 20. Transfer by ALS ground ambulance with telemetry, pulse oximetry, O2 to keep > 02%, vitals every 30 minutes, normal saline at 100 mL/hour, Rocephin 2 grams IVPB, vancomycin 20 mg/kg (1,500 mg) IVPB in ER. á DISPOSITION Patient Stabilized and Transferred Data Unavailable Wed Dec 30, 2020 2:12 AM CST
COVID19 VACCINE (COVID19)	Hospitalized	914730-1	Near syncopal episode approximately 2.5 hours after vaccination. Sudden onset of dizziness, nausea, and diaphoresis. Was admitted to ED and observed overnight. Full cardiac work up was done and shown to be within normal limits. I have no pre-existing conditions and considered to be a healthy adult.
COVID19 VACCINE (COVID19)	Hospitalized	914798-1	On Dec. 20, 2020 around 11:30 PM, 2 days after patient received her COVID-19 vaccination, she was found on the bathroom floor, obtunded, very pale, diaphoretic, nauseous, and complaining of severe chest pain. Paramedics was called and patient was transported to the nearest emergency room. According to paramedics, on the way to the ER while patient was in the ambulance, she was noted with a sudden drop in heart rate about 19 beats/minute and have to be given Atropine IV Push, oxygen and was connected to transcutaneous pacing which improves her heart rate. In the ER patient continued to have chest pain and she was given Morphine, Oxygen, Nitroglycerine and Aspirin. IM had an EKG which showed Sinus Bradycardia with a Right Bundle Branch Block. She had serial ekgs, a chest x-ray, laboratory testing which included Troponin. Her first Troponin level came back elevated prompting her hospital admission to Telemetry. Her next 2 Troponin level improved and return to normal range and her chest pain has resolved.. She underwent a Stress Test which came back negative. Patient was admitted for a total of 20 hours in the Telemetry unit with Cardiology consultation before being discharged home last. She was re-evaluated by the cardiologist yesterday which diagnosed her a chest pain of unknown origin.
COVID19 VACCINE (COVID19)	Hospitalized	914835-1	Went to Emergency room on 12/28/20 because he was short of breath. Tested positive for COVID_19 and was admitted with hypoxia.
COVID19 VACCINE (COVID19)	Hospitalized	915119-1	The patient had COVID19 infection diagnosed 12/14/2020, and he stated 5 to 10 days after this, he developed shortness of breath. Had vaccine on 12/24/2020. Hypoxic and short of breath with COVID19 pneumonia on 12/29/2020. I do not know if this is an adverse effect or temporally related or if the vaccine activated prior infection.

COVID19 VACCINE (COVID19)	Hospitalized	915161-1	"my left arm and breast were tender with some mild body aches and low grade headache/Arm soreness; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache/ left breast was increasingly painful with swollen palpable lymph nodes; my left arm and breast were tender with some mild body aches and low grade headache; body soreness and stiffness; This is a spontaneous report from a contactable healthcare professional. A 34-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient stated, ""the day after the injection, my left arm and breast were tender with some mild body aches and low grade headache. Sunday Arm soreness went away but left breast was increasingly painful with swollen palpable lymph nodes, with body soreness and stiffness. Monday left breast is still remarkably tender with palpable lymph nodes"" on 19Dec2020 (reported as Seriousness criteria-Caused/prolonged hospitalization: Yes, on an unspecified date in Dec2020). The outcome of the event was not recovered.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Hospitalized	915478-1	erythema, tachycardia, tachypnea, headache, uncontrolled dystonic shaking
COVID19 VACCINE (COVID19)	Hospitalized	915480-1	Developed sudden onset of shaking chills and fevers as high as 103.0. She has developed a small circular 5 x 5 area of erythema and firmness at the injection site of her left upper arm.
COVID19 VACCINE (COVID19)	Hospitalized	915613-1	angiodema. hospitalized overnight. During the hospitalization pt was started on an epi gtt and given MTP 125 mg. He had subsequent hyperglycemia, and increased his rate on his insulin pump to 2 U/hr (from 0.83 U/hr). Pt then decreased his rate to 1.4 U/hr while on the epi gtt, and then to 1.1 U/hr when off of the epi gtt. He also strengthened his carb ratio from 1:12 to 1:10 last night.Pt reports he had postprandial hyperglycemia overnight after his meal, but then BG corrected overnight. Pt reports fasting this morning is in the 110s. This morning's breakfast on 1:10 CR with well controlled BG.
COVID19 VACCINE (COVID19)	Hospitalized	915690-1	Due Date unknown/6-7 wks pregnant -nausea -Body felt heavy -headache -in & out consciousness -Fatigue, severe -Heart Racing
COVID19 VACCINE (COVID19)	Hospitalized	915813-1	Patient stated he stopped his blood pressure medications 3 days prior to vaccination due to a previous reaction to losartan, a medication he was no longer taking. Patient took aspirin and a MVI on day of vaccination and drank lemon water. Patient developed tingling sensation in his mouth after eating dinner around 18:00. Patient stated he ate tacos with apple cider and noticed tingling after dinner. Patient stated he took two benadryl with no relief. His tongue continued to swell and he took two additional benadryl at 22:00. Once he developed difficulty swallowing he went to the emergency department. Patient presented to the ED with tongue swelling and difficulty swallowing. At 23:57 he was administered 0.3mg of epinephrine IM, diphenhydramine 25mg IV, famotidine 40mg IV, dexamethasone 10mg IV at 0114, methylprednisolone 60mg q6hrs started at 0417, diphenhydramine 25mg q6hrs IV started at 0416, albuterol 2.5mg via neb q6hrs started at 0710
COVID19 VACCINE (COVID19)	Hospitalized	915928-1	Started feeling a reaction immediately after the vaccine, felt blurred vision, dizziness, racing heartbeat, chest rash and face, itching all over, difficulty swallowing, tongue tingling and wheezing. Sent to ED. EPI and Benadryl. 1800 Went to see her in the ED, room 33. She has red rash to neck, shaky hands itching to neck and chest. ED Dr to discharge, she stated husband to pick her up and she will follow up with OH tomorrow. -----RN ED gave her Epinephrine 0.3 mg, Methylprednisolone 125mg, Diphenhydramine HCL 50 mg, Zofran 4mg, Lorazepam 1 mg, Hydroxyzine HCL 50 mg Sumatriptan 6mg , Discharge from ED at 1902 -----RN RN 12/29/2020 1715 called to check on patient. left voicemail for her to call OH. ????????..? 12/29/2020 1838 left voicemail for patient to call OH. ??????????????????????. 12/30/20 2030 spoke with her. Tuesday 12/29 3pm-4pm dizziness, confusion, sob. Wheezing. Ambulance called. Hospital admitted. Intubated for less than 24 hours. Breathing treatments, epi drip. Now just on steroids and walking around and feeling better. Still admitted at hospital. Hoping discharged tomorrow. -----RN
COVID19 VACCINE (COVID19)	Hospitalized	915956-1	Patient received dose 1 of COVID vaccine 12/24. He developed symptoms consistent with COVID infection on 12/25. He was seen in the emergency room at Hospital on 12/27, was diagnosed as COVID positive, and was discharged to home. He returned to the emergency room on 12/29 and was admitted to the hospital for treatment related to COVID infection. He is currently admitted to Hospital.
COVID19 VACCINE (COVID19)	Hospitalized	916042-1	10 minutes after vaccine numbness and tingling in left foot, hand and left side of face. Spacing out feeling. Feel like i'm going to pass out.
COVID19 VACCINE (COVID19)	Hospitalized	916065-1	EDD - 4/1/2021 - Contractions at 26 w 3 days sent to L&D to be monitored on 12/28/20. Covid-19 Sars Vaccine given 1st dose 12/27/20. Patient was diagnosed with Fetal Hydrops. Patient Hospitalized 12/28/20 - current MFM consulting in hospital & outpatient
COVID19 VACCINE (COVID19)	Hospitalized	916247-1	Redness about 1 1/2 inches around injection site, edema to right arm, r side of neck, r breast, r shoulder, temp 99.3, increased blood pressure. Patient went to primary care physician. She was then sent to the ER. She was Covid (+) in July 2020
COVID19 VACCINE (COVID19)	Hospitalized	916473-1	Patient complained of a headache, then patient was losing consciousness and gasp for air. EpiPen was utilized due to being unresponsive then began to seizing. Patient started to flatline and an AED was used while a paramedic came. Patient was put on her side then facility gave something for seizures. Lastly, ambulance took her to the hospital.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	916497-1	Patient started having myalgia, chills, nausea on the next day of the vaccination. on 2nd day (12/29) patient had chest pressure which made her present to Hospital ED. She had troponin elevation to 1.14. Cardiac Catheterization was done which was negative. On Trans Thoracic Echocardiogram, patient was found to have hypokinesia of the mid and distal segment with some sparing of apex proving Takotsubo (stress induced) cardiomyopathy. Patient did not have any underlying emotional or physical stress going on in her life or family. Till now extensive infectious as well as inflammatory work up is done to rule out any secondary causes of cardiomyopathy which till date have remained negative. As a diagnosis of exclusion, her presentation seems to be COVID-19 vaccine induced Takotsubo Cardiomyopathy
COVID19 VACCINE (COVID19)	Hospitalized	916508-1	Pt received 1st dose of Moderna vaccine in am at COVID vaccination clinic. On presentation to clinic he stated he was feeling well. Pt was brought to ER in pm with hypoxic, requiring 15L supplemental O2. Per pt's family, pt was not feeling well for the last couple of days but didn't think it was related to COVID. Abbott COVID + in ER. Possible vaccine reaction, though seems unlikely.
COVID19 VACCINE (COVID19)	Hospitalized	916710-1	Acute appendicitis, onset morning of 1/1/2021 (Reporting this because Pfizer covid vaccine had 3-4x higher risk of appendicitis, although data not reported for Moderna covid vaccine)
COVID19 VACCINE (COVID19)	Hospitalized	916742-1	Within 15 minutes of receiving the vaccine I began to get very itchy and blotchy with a hoarse voice. The paramedic downstairs walked me up to the emergency room. I was treated with medications to help calm the itching and burning feeling. By 940 I went anaphylactic and had several doses of epinephrine to help calm this. I continued to have rashes and the feeling of my throat closing. I was transferred by ambulance to medical center in the ICU. I am still here and have had two toner anaphylactic episodes since. I have been on a epi drip, steroids, famotidine, Ativan and Benadryl. I also had a picc like placed.
COVID19 VACCINE (COVID19)	Hospitalized	916809-1	CAREGIVER RECEIVED FIRST VACCINE DOSE AND SOON AFTER BEGAN TO FEEL DIZZY AND HER EYES BEGAN TO TWITCH, FOLLOWED BY UNCONTROLLED SHAKING, WITH HIGH FEVER FOLLOWED BY SEVERE SHORTNESS OF BREATH AND GASPING, WITH TIGHTNESS AROUND THE CHEST. TRANSPORTED TO EMERGENCY DEPARTMENT. HAD MULTIPLE EPISODES OF ITEMS LISTED ABOVE WHILE IN ED, INCLUDING HEAVINESS IN HER LEGS AND TINGLING IN ARMS. SHE WAS DISCHARGED FROM ED AT 10:30PM BUT WAS READMITTED ON 12/24 TO ED FOLLOWING SIMILAR ISSUES. TO DATE SHE HAS HAD 5 RAPID RESPONSES IN HOSPITAL DUE TO REPEAT OF SIGNS/SYMPTOMS. CT AND PULMONOLOGY CONSULT SCHEDULED FOR 12/28/2020.
COVID19 VACCINE (COVID19)	Hospitalized	916836-1	Patient is a 55 year old male with no past medical history who presents with complaint of sudden onset of left-sided nonradiating chest discomfort of sudden onset approximately 1 hour prior to presentation while doing administrative work at rest. He describes the pain as a dull heaviness sensation and approximate 3/10 pain severity. Chest discomfort was associated with a feeling of flushing that was quite transient but chest discomfort was persistent. Patient immediately presented to the ED for further evaluation. He denies experiencing any chest pain upon waking up this morning. Does note that he did have a transient episode of epistaxis on his way to work for which he had to pull over and apply pressure to his nose but this subsequently subsided and he attributed this to dry air as he has experienced epistaxis in the past but with less severity previously. In the ER, vital signs noted for BP 133/76, pulse ranging 91-114, respiratory rate 16-20, 96% on room air. Initial laboratory parameters were completely normal including normal CBC, CMP, LFT, lipase, UA, and normal D-dimer. Initial troponin was negative x1. EKG with sinus tachycardia, heart rate of 115. Noted Q waves inferiorly. No acute ST or T wave changes appreciated. Chest x-ray with mild increased density in the left lower lobe. Given this, patient was tested for rapid Covid which was negative but PCR was positive for COVID. CT of the chest noted for focal subsegmental groundglass infiltrate at the superior segment of the LLL, likely infectious versus inflammatory. Also noted small nonspecific groundglass attenuation with focal septal thickening at the right upper lobe which could be infectious or inflammatory, bibasilar atelectasis. Patient was treated with aspirin 324 mg in the ED. Of note, patient actually just received the COVID-19 vaccination on 12/24/20. He denies any shortness of breath, no cough, denies any nausea or vomiting, denies any change in taste or smell nor change in appetite. Does note 1 single episode of loose stool but otherwise denies any diarrhea. Does report that he had approximate 48 to 72-hour period of fatigue and soreness at the site of the left deltoid injection following the vaccination but otherwise no further symptoms. It is also noted that he does have a positive family history of coronary artery disease as his dad had an MI at the age of 49. Patient has never undergone a cardiac catheterization in the past but does report having a negative stress test at the age of 42. He is being admitted under the hospitalist service for further management Patient was initially admitted under observation for chest pain obs. However patient's Covid test came back positive and patient also had dynamic EKG changes concerning for possible unstable angina. Patient was treated with aspirin Plavix full-strength Lovenox along with beta-blocker and a cardiology consult. Serial troponins were negative. Echocardiogram revealed normal EF of 55 to 60% with no hemodynamically significant valvular disease. Cardiology felt that patient likely has underlying coronary artery disease have recommended discharge home with aspirin and Plavix with outpatient stress testing given his positive Covid testing. At the time of discharge patient denied any chest pain or shortness of breath. Patient was borderline diabetic with a hemoglobin A1c of 6.1. Patient was discharged home with Metformin along with glucometer, glucoce strip, lancets. Given patient's tachycardia patient's Metformin 25 mg twice daily was changed to Toprol 25 mg daily. (Please note clarification in comparison to discharge home med list. Toprol XL 25 mg daily was called to pharmacy in place of the metoprolol.)
COVID19 VACCINE (COVID19)	Hospitalized	916890-1	HIVES, SOB, THROAT CLOSING UP, WHEEZING
COVID19 VACCINE (COVID19)	Hospitalized	917026-1	12/28/2020, Pharmacy staff administered Moderna COVID Vaccine. 12/29/2020, he had not eaten breakfast or lunch but did consume fluids and take his medications. BP =150/70, Temp. = 101.6, Pulse= 102, Respirations= 18 and Oxygen saturation= 97%. Tylenol 650 mg given. It was difficult for him to swallow. Also had no use of right upper extremity and unable to move lower extremity, mouth was drooping and was drooling. Physician in attendance and ordered to send to ER. 1/1/2021, received information from nurse at hospital that patient received a Peg Tube this afternoon and Clinical indication of a stroke.
COVID19 VACCINE (COVID19)	Hospitalized	917042-1	I received the vaccine at 6:30pm on 12/27. I worked at 7pm and took lunch at 2:00am. After lunch, I immediately felt sick to my stomach and threw up. I went home after my shift and went to bed. After 5 hours, I woke up and went to the couch to lay down while kids watched TV. Next, I woke to several people in my house. I had a seizure and my son had called 911. I was taken to emergency department. I was admitted and stayed 2 nights in the hospital.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	917122-1	A little over ab hour after receiving the vaccine I noticed a burning sensation in my sinuses. By 130am 1/1/2021 I awoke from my sleep terribly dizzy, shaking violently and experiencing a fever of 101.3 F. I took advil and tylenol and fell asleep about an hour later. I woke up with similar symptoms at approximately 830am on 1/1/2021 took an additional dose of advil and tylenol and slept till 12p. I woke up with a bad headache and coughing fits similar to when I had covid back in March. I went to an urgent care who assessed me and ordered me to the ER. medical center administered IV fluids, an inhaler, steroids, epinephrine and benadryl and a few hours later my symptoms had subsided for the most part and a dose of IV antibiotics was administered. I am currently admitted for observation with likely discharge on 1/2/2021.
COVID19 VACCINE (COVID19)	Hospitalized	917210-1	30YO F ICU nurse obesity (BMI 35) COVID 19 on Dec 2 symptoms, Dec 3 tested positive for COVID-19. never hospitalized, outpatient only. 12/12 completed isolation 12/21 received vaccine 12/7 developed Fever chills diarrhea SOB cough Urgent care visit. RLL consolidation on CXR given doxycycline 100 mg po bid worse, fever 40 targetoid lesions to LE (started before doxy) WBC 22K tachycardic tachypneic admitted requiring 2-4L oxygen CT angio without clot, diffuse ground glass and RML dense infiltrate DDimer 7.8 LDH 599 CRP 41 procal 0.67 ferritin 500 Viral respiratory PCR negative Sputum cx with oral flora (pending) COVID ag testing neg COVID PCR 1/3 targets positive (called as indeterminate).
COVID19 VACCINE (COVID19)	Hospitalized	917375-1	Within 5 minutes of the vaccine, patient had wheezing, shortness of breath and chest pain. patient given epi x 4, decadron, fluids with some improvement and then hospitalized. IN the hospital, patient continued to have chest pain and satting well but with protracted course and is still in the hospital.
COVID19 VACCINE (COVID19)	Hospitalized	917497-1	Vaccine given at 7:05am 12:00noon, 5 hours later, I started experiencing severe chest pain, jaw pain and shortness of breath in which EMS was called and I was taken to the hospital. Since then, I lost feeling in my hands and feet, numbness and tingling. I've improved however, during my recovery suffered with spinal pain, shortness of breath, very winded, muscle pain and loss of appetite to especially meat.
COVID19 VACCINE (COVID19)	Hospitalized	917702-1	On 12/29: lightheadedness, flushed, felt like I was going to pass out, numbness/tingling down arms and hands, chest tightness, clammy hands and feet.
COVID19 VACCINE (COVID19)	Hospitalized	917727-1	Patient with a history of thalassemia and Gilbert's disease, developed severe jaundice three days after vaccination. Had mild headache and sore arm but otherwise felt well. Had labs drawn - found to have highly elevated bilirubin (23) and LFTs in the 700s. Was admitted to the hospital and had CT showing Cholelithiasis, choledocholithiasis and minimal intrahepatic biliary ductal dilatation. Left hospital and was admitted to another facility where plan was for ERCP and cholecystectomy. Ultimately unclear if at all related to the vaccination - may be coincidental.
COVID19 VACCINE (COVID19)	Hospitalized	917784-1	Pt had vaccination at city site. Waitied 15 min after shot and was cleared to go. Reported to wife that he was very thirsty, so they stopped at a convenience store on the way home. While there, he felt worse and asked to go to the Emergency room. They chose Methodist to enter. Pt went to triage and while at triage, had syncopal episode, then full arrest. After short course of CPR and defib, he had ROSC. Was taken to cath lab for intervention (stents) and is now in ICU.
COVID19 VACCINE (COVID19)	Hospitalized	917835-1	Tactile fever ,arm pain, headache and malaise in 24 hrs following injection Next day generalized achiness ,retrosternal chest pain and bilateral forearm tingly pain similar to Nov 2019 and went to Hospital UC,CXR and EKG normal but with short PR interval on EKG ,elevated troponin 3.5 Transferred to hospital troponin 12.1 ng/ml IVIG given SARS IGG positive on admission PCR negative
COVID19 VACCINE (COVID19)	Hospitalized	917855-1	ON 1/1/21 THE DAY AFTER I RECEIVED THE VACCINE I WAS TAKING A NAP AND MY WATCH KEPT SENDING ME ALERTS. HOWEVER I DID NOT CHECK MY WATCH UNTIL 5:30 WHEN I WOKE UP AND I FELT LIKE I WAS HAVING HEART PALPITATIONS. I WENT TO THE EMERGENCY ROOM WHERE I WAS TREATED. I WAS TOLD THAT I WAS FEBRILE WITH A TEMPERATURE OF 102. I WAS GIVEN IV FLUIDS, CHEST X-RAY, EKG AND LAB WORK. I WAS RELEASED ON 1/2/21 AT APPROXIMATELY 0030 (MIDNIGHT).
COVID19 VACCINE (COVID19)	Hospitalized	917882-1	"Patient is hospital employee who completed screening form for COVID-19 vaccine by answering ""no"" to all contraindication questions. Approx 10 minutes after receiving COVID-19 vaccine dose # 1, patient was still in vaccine clinic area and complained of dizziness, palpitations and flushing. I observed patient fanning herself with papers. She was escorted out of the immediate clinic room, and assessed by paramedics present as having an anaphylactic reaction. Epinephrine 0.3 mg IM and diphenhydramine 50 mg IV given in clinic, Rapid Response was called overhead and patient immediately transported down the hall to the Emergency Dept. In ED, pt was noted as having swollen tongue, large areas of erythema on face, arms and chest, shortness of breath, nausea, dizziness (per ED physician notes). Pt reported being hospitalized in ICU with COVID disease more than 3 months ago, including intubation (not treated at this hospital), and has been back at work since August 2020. ED physical exam noted bilateral wheezing and patient in acute distress. In ED, pt administered racemic epinephrine 2.25% 0.5 mL via neb, epinephrine 0.3 mg IM, diphenhydramine 50 mg IV, Solu-Medrol 125 mg IV, famotidine 20 mg IV and epinephrine 5 mg/250 mL IV drip (started at 0.118 mcg/kg/min). Acute symptoms reported to resolve in ED. COVID test was negative. ED physician discovered that pt had history of multiple medications, including previous anaphylactic reaction to radiocontrast dye requiring intubation (which was not disclosed on the vaccine screening form). Pt admitted to Telemetry floor for observation. Overnight course was unremarkable, and patient was discharged the following day with prescription for Prednisone taper and prescription for Epi-pen. Advised not to return for second dose of COVID vaccine. EMR updated to reflect possible anaphylactic reaction to Moderna COVID-19 vaccine."
COVID19 VACCINE (COVID19)	Hospitalized	917961-1	I suffer from lingering SOB with exertion after COVID infection. On the night of 12/31/2020 I began to feel more SOB than usual and was unable to correct my SOB with rescue inhaler. Became more SOB with exacerbated tachycardia and tachypnea, My family had to call 911 because I became aphasic and showing signs of possible stroke. I was taken to the ER and admitted for respiratory recovery and to role out stroke. The stroke was ruled out and I recovered with IV prednisone therapy, twice daily and supplemental oxygen. Released after HR, BP, & respiratory effort returned to normal: 01/03/2021
COVID19 VACCINE (COVID19)	Hospitalized	918034-1	I was 28 weeks and 5 days pregnant when I received the first dose of the COVID19 vaccine. Two days later (12/25/2020 in the afternoon), I noticed decreased motion of the baby. The baby was found to not have a heartbeat in the early am on 12/26/2020 and I delivered a 2lb 7oz nonviable female fetus at 29 weeks gestation. I was 35 years old at the time of the fetal demise and the only pregnancy history for this pregnancy included a velamentous cord insertion that was being closely monitored by a high risk OB. My estimated due was March 12, 2021.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	918051-1	At around 40 hours post vaccination, developed severe abdominal pain and went to an emergency room for evaluation on 1/1/21. Abdominal pain was eventually diagnosed as appendicitis requiring appendectomy on 1/2/21. Emergency room visit and hospital discharged patient early on 1/2/21. It was then determined that the on-call team covering mis-read the CT scan and acute appendicitis was found. Patient then went to Medical Center on 1/2/21 for appendectomy and was discharged later that night following operation.
COVID19 VACCINE (COVID19)	Hospitalized	918084-1	Hospitalized with COVID-related pneumonia on 03 Jan 2021. Close contact exposure on 25 Dec, with positive COVID PCR test on 29 Dec... managed as outpatient until respiratory sxms prompted hospitalization on 03 Jan. Care team anticipates at least 4 inpatient days... but patient remains hospitalized at date of this report.
COVID19 VACCINE (COVID19)	Hospitalized	918086-1	Patient developed SVT 15 minutes after receiving vaccine. Admitted to ICU. ER presentation: BP: 160/109 heart rate 132. No e/o anaphylaxis or allergic reaction.
COVID19 VACCINE (COVID19)	Hospitalized	918200-1	Pfizer-BioNTech COVID-19 Vaccine EUA - Patient witnessed another patient with syncope prior to her injection. She was already anxious about receiving vaccination and this increased her anxiety, though she proceeded with immunization. Patient was in 15 min observation window in a chair and began to feel light-headed like she may pass out. A SWAT was called. With RN assistance, patient was lowered to the floor, with no loss of consciousness. Patient was pale and reported anxiety, racing /pounding heart, and felt hot with facial flushing. Patient was transferred to ED and was noted to be tachycardic (120s), but dropped to 80s. She noted that this episode felt different than her prior syncopal episodes associated with anemia. Patient was observed for 5 hours and discharged to home. Patient returned to ED roughly 2.5 hours later complaining of continued dizziness and unsteady gait. Patient was pale and anxious. Patient reported had not eaten/drank enough during her shift and received vaccine immediately post a stressful shift. Additionally, patient witnessed another patient have syncopal episode prior to her receiving her vaccine which made her anxious. Patient was given IV fluids and had electrolytes replacement. Patient additionally received diazepam. Patient was discharged at 2358 on 12/23. Patient returned to ED on 12/24 at 0239 complaining of near syncope and lightheadedness. Patient had tachycardia and self-reported palpitations. Received IV fluids and observation on telemetry with no rhythm disturbance. Patient discharged 1428 on 12/24. On 12/29, patient returned to ED at 0326 for continued dizziness, fatigue and near syncope. Was admitted for cardiac evaluation. Noted to have unprovoked tachycardia and was discharged with a Halter Monitor to evaluate cardiac symptoms. patient was discharged 12/31 at 1619
COVID19 VACCINE (COVID19)	Hospitalized	918211-1	"Pfizer-BioNTech COVID-19 Vaccine EUA - Patient with history of anaphylaxis requiring intubation to benzonatate. Patient answered ""no"" to questionnaire about allergic reactions prior to vaccination. 11 minutes after vaccination, patient reported tingling of lips and swelling of face. Developed hoarseness. SWAT was called and patient given benadryl and taken to ED (1055). Patient received steroids and H1/H2 blockers in addition to epinephrine. Patient brought to ICU for monitoring. Patient continued on therapy and was discharged 1/2 at 1113. Patient returned to ED on 1/3 at 1558 with macular papular rash on leg, chest and back with itching on eyelids and face. No respiratory involvement. Patient given benadryl and prednisone and discharged from ED at 2016."
COVID19 VACCINE (COVID19)	Hospitalized	918409-1	Patient complained of increased shortness of breath, generalized weakness and fatigue with mild cough worsening today and was admitted on 12/25/20. Patient is an employee of the hospital in the ICU and received the covid-19 vaccine on 12/25/20. Patient believes symptoms started after the vaccination. On admission, patient was in sinus tachycardia with O2 saturation 91% on room air. Tested SARs CoV 2 RNA, RT PCR positive on 12/24/20. Transferred to ICU for closer monitoring after transitioning to high flow nasal cannula on 12/26. Patient recovered and discharged on 12/31/20.
COVID19 VACCINE (COVID19)	Hospitalized	918552-1	Severe diarrhea, cold chills, 101 fever, and nausea
COVID19 VACCINE (COVID19)	Hospitalized	918608-1	""Pfizer-BioNTech COVID-19 Vaccine"" 12/29 patient developed SOB, fever tmax 103 degrees F, diaphoretic, dry heaves all started approximately 16 hours after vaccination given. patient then transferred to Hospital for further treatment and observation. 12/30 seen at injection site- erythema, swelling, warmth and tenderness Discharged back to home on 1/1 with RX for cephalexin to treat cellulitis of injection site"
COVID19 VACCINE (COVID19)	Hospitalized	918740-1	Scratchy throat; itching lips; This is a spontaneous report from a non-contactable nurse. A 36-year-old patient of an unspecified gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number EK5730, via an unspecified route of administration on Right arm from 22Dec2020 to 22Dec2020 as single dose for COVID-19 immunization. Medical history included food allergy (Shrimp). The patient's concomitant medications were not reported. The patient experienced scratchy throat and itching lips for approximately 1.5 hours starting 20 mins post vaccine on 22Dec2020. The event caused prolonged hospitalization. The outcome of the events was recovered on 22Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: Based on temporal association, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported events throat irritation and lip itching. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	918741-1	delirious; hypoxic; fever; ataxic; incontinent; confused; Chills; HA; anorexia/had no appetite; myalgias; extreme fatigue; slept all and had no appetite; This is a spontaneous report from a contactable physician. A 74-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 15Dec2020 16:00 at single dose for COVID-19 immunization. Medical history included diabetes mellitus (DM). The patient has no known allergies. The patient's concomitant medications were not reported. He was an ER doctor and the medical director of his hospital. The patient was asymptomatic when he got the vaccine on 15Dec2020. 3 hours after the vaccine he began to get chills, HA, anorexia, myalgias, and extreme fatigue. This worsened and he slept all and had no appetite. On 19Dec2020 he woke up delirious with a fever and was ataxic, hypoxic, incontinent, and confused. The patient was hospitalized due to the events on 15Dec2020. The events also caused prolonged hospitalization due to the events. The patient was not diagnosed with COVID prior to vaccination. The patient was tested for COVID via nasal swab post vaccination with unknown results. The patient did not receive any other vaccines within 4 weeks prior to COVID vaccine. The outcome of the events was not recovered. Therapeutic measures were taken as a result of the events as the patient required oxygen, plasma, and remdisivir. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of reported serious events might not be excluded, considering the plausible temporal relationship. Fever, chills, headache, fatigue and muscle pain are the known adverse event profile of the suspect product. More information such as detailed underlying medical conditions and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	918758-1	Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; This is a spontaneous report from a contactable physician (patient). A 61-years-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscularly on 21Dec2020 12:30 to at single dose on left arm for COVID-19 immunization in hospital. Medical history included crohn's disease. No known allergies. Concomitant medications within 2 weeks of vaccination included estradiol, progesterone, colestipol hydrochloride (COLESTID), ustekinumab (STELARA), cyanocobalamin (B12). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection on 22Dec2020 22:00 with outcome of recovered in Dec2020. The adverse events resulted in emergency room/department or urgent care, hospitalization for 3 days. Therapeutic measures were taken as a result of event included inpatient observation, nothing by mouth (reported as NPO), intravenous fluids. No COVID prior vaccination, COVID test nasal swab was negative on 23Dec2020 post vaccination. It was not reported as serious.; Sender's Comments: There is not a reasonable possibility that reported events small bowel obstruction and lymphadenopathy are related to BNT162B2 vaccine. The patient had underlying Crohn's disease, which put patient at risk of developing the event. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	918763-1	She was hospitalized for a month Occurred after a flu two months prior and a stomach flu 2-3 weeks prior; She was hospitalized for a month Occurred after a flu two months prior and a stomach flu 2-3 weeks prior; This is a spontaneous report from a contactable consumer. A 75-year-old female patient received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 vaccination. Medical history included guillain-barre syndrome from 2011 at the age of 65 and Levaquin allergy. The patient's concomitant medications were not reported. On an unspecified date, the patient was hospitalized for a month that occurred after a flu two months prior and a stomach flu 2-3 weeks prior. The outcome of the events was unknown. Information about lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Hospitalized	918770-1	Difficulty breathing; This is a spontaneous report from a contactable pharmacist. A 54-year-old female patient received her first dose of intramuscular BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 22Dec2020 at 04:15 PM at single dose in left arm for COVID-19 immunisation at the age of 54-year-old. Lot number was ELO140. Medical history was unknown, concomitant medications were unspecified. Patient was not pregnant at the time of vaccination. On 22Dec2020 at 04:30 PM, the patient experienced difficulty in breathing, and she was hospitalized for one day. The patient was treated with EPI for the event. The patient was recovering from the event.; Sender's Comments: Based on the compatible temporal association, the Company considers the event difficulty in breathing is possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	918774-1	abdominal pain; nausea; high blood pressure; This is a spontaneous report from a contactable consumer. A 93-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. Medical history included diabetic and irritable bowel. The patient's concomitant medications were not reported. The patient received the COVID vaccine and had abdominal pain, nausea and high blood pressure within 12 to 18 hours of vaccine received. The events lead to nursing home to emergency room and admitted to hospital. The patient was hospitalized due to events since 23Dec2020. Outcome of the events was recovering.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	918783-1	<p>"left sided weakness; it has weakened his heart; stutter; severe stroke like symptoms; Ventricular tachycardia/help keep his heart rate at bay; Loss of balance; extreme numbness and tingling in left hand and foot; tingling in left hand and foot; oral motor impairment; mouth weakness and not coordinated/mouth is fatigued easily; Issues finding words and trouble speaking; Issues finding words and trouble speaking; Ejection fraction down to 25%; The initial case was missing the following minimum criteria: adverse event. Upon receipt of follow-up information on 28Dec2020, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable other healthcare professional (HCP). A 29-years-old male patient received bnt162b2 (lot number: EJ1685), intramuscular (deltoid left) on 21Dec2020 at 05:30 at 0.3 mL single (first dose) for Covid. Medical history was reported as ""none"". Concomitant medications were not reported. The patient previously received Flu vaccine in Oct2020 for immunization. The patient is an Occupational Therapist, and he called to report an adverse event that he experienced with the first dose of the COVID Vaccine. He received the vaccine last Monday, 21Dec2020 at 5:30AM before his shift at work, then 20 minutes later, he was having severe stroke like symptoms. He experienced severe left sided weakness, loss of balance, extreme numbness and tingling in his left hand and foot, he had issues finding his words and he couldn't speak, and he had an oral motor impairment where his mouth was weak and not coordinated. The staff at the hospital did a neurological exam on him, and he failed, so he had to go to the emergency room (ER). The patient added that he was already in the hospital when this happened, and the ER doctors suspected that he had a CVA, and they gave him TPA to prevent any permanent brain damage and it worked. The patient then added that due to the shock of this whole event, from everything that happened, it has weakened his heart. Reportedly, he is a healthy 29 year old man, with no preexisting conditions, and he works out, and he has no heart conditions, but he had to get a cardiology follow up a few days after he got the vaccine, because he started going in to Ventricular Tachycardia, which he had never had in his life. So, the doctors at the hospital went ahead and did an Echocardiogram and an EKG, and he was told that his Ejection Fraction is down to 25%. He stated his heart is so weak, that he cannot work right now, but the structure of his heart is fine and has not had any damage. The hospital staff thought that maybe the patient had a chronic heart issue that he just did not know about, and that the stress of this event maybe made it kick into overdrive, but he states that the cardiologist said that was not the case, because the structure of his heart is fine, and the only thing they can see is that the heart is pumping weak. One physician even suggested that due to the shock of the event, he might have Takotsubo Cardiomyopathy, which is a broken heart, but because the structure of his heart is okay, it should be reversible. He stated that he is hoping he will heal up good, because he is young and has no pre-existing conditions. He added that his heart is in such a state right now; he has to wear an external defibrillator. The patient stated that all these happened about 20 minutes after he received the vaccine, and he was admitted to the hospital from 21Dec2020 to 25Dec2020. His neurological symptoms have resolved except that he has a stutter that he did not have before and his mouth is fatigued easily, so he has to slow down when he is eating, but now he can eat regular for the most part. The patient confirmed that he was not specifically prescribed the product; it was administered to him at his place of work, but it was optional. He stated he considered how he is working with COVID patients every day, and given the circumstance, he thought that it would be a best practice for him to get the vaccine. He had not gone to his primary care doctor in a while because he had been fine and healthy, but he called them and found out that his primary care had retired, so he has to find a new one now. Regarding the issues finding words and trouble speaking, he stated that he has improved, but it is still ongoing, he is just stuck in a plateau zone. With the Ventricular Tachycardia, he stated that this is an ongoing issue, as he has to wear the life vest even though he has no need to activate it yet. He did have one minor bought of the VTach, but because he is a therapist, he knows how to take care of it with relaxation techniques, he knows how to manage it. He had one bought of VTach the evening prior, but he was able to get it under control. The doctors have him on medication to help keep his heart rate at bay. He has never had to use medication before and is on the following medications to help keep his heart rate at bay: Metoprolol 25mg one tablet once daily by mouth and Lisinopril 5mg one tablet once daily by mouth. The VTach has improved, it was good enough he was able to discharge home, but it is still a concern. His cardiologist said that, basically his hope, is that once his body recover from the whole shock of everything, then his ejection fraction will heal, and his heart will heal. He again stated that the doctor told him that the structure of his heart is perfectly fine; he has thick walls in his heart, no leaking valves, and the heart was not conducting any abnormal signals. The doctor just said that right now, his heart is super weak and that it is an acute problem. With the Takotsubo Cardiomyopathy, he states that two doctors mentioned this diagnosis, but he confirmed that he was not actually diagnosed with this issue, he was just diagnosed with Ventricular Tachycardia. The outcome of the ejection fraction down to 25% was unknown to the patient at this time as he has not had another EKG or echocardiogram, but the cardiologist told him that the cardiologist expects that this will not be resolved quickly anyway. The patient confirmed that he did not receive any other vaccines on the same day he received the COVID vaccine. The only other vaccine he had this year was the flu vaccine which he got back in Oct2020. He has gone on to his online portal and there are the bloodwork results and all the imaging results on there from his CTs and MRIs, but he did not see the EKG or Echocardiogram results yet. He does not have this pulled up at this time, but he does have access to this stuff and can provide it later, if requested. He is curious about the next steps from here to how his case is processed. He is also curious if this information would help Pfizer make modifications to the vaccine if it is found that a lot of people are having the same reaction as he did. He is also wondering, given his situation, that probably he is not going to get the second dose, for his safety, but he is wondering what percentage of effectiveness the first dose does having just covered. The events left sided weakness, loss of balance, extreme numbness and tingling in left hand and foot resolved on 25Dec2020; severe stroke like symptoms and oral motor impairment; mouth weakness and not coordinated/mouth is fatigued easily resolved in 2020. The events ventricular tachycardia/help keep his heart rate at bay and issues finding words and trouble speaking were resolving, stutter had not resolved while the outcome of the events it has weakened his heart, and ejection fraction down to 25% was unknown.; Sender's Comments: The reported information is unclear and does not allow a meaningful assessment of the case. It will be reassessed upon receipt of follow up information. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	918789-1	She had an immediate reaction of accelerated heart rate and elevated blood pressure; She has very slightly elevated heart enzymes.; She had an immediate reaction of accelerated heart rate and elevated blood pressure; She's very anxious and very anxious tonight being alone at the hospital.; This is a spontaneous report from a contactable consumer (patient's father). A 30-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient had an immediate reaction of accelerated heart rate and elevated blood pressure. She was monitored for an hour and it subsided. On unspecified date in Dec2020 at 1:00am in the morning she had racing heart rate and went to ER. She was still in hospital. Things were not entirely stabilized. She had very slightly elevated heart enzymes in Dec2020 with outcome of unknown. They keep her overnight for an echocardiogram in morning. The patient was very anxious being alone at the hospital. Caller questioned if this has been reported with the vaccine. Lot/Batch and Expiry date has been requested.
COVID19 VACCINE (COVID19)	Hospitalized	919036-1	Patient with extreme nausea and vomiting that started soon after receiving the Moderna vaccine. Patient with loss of consciousness, diaphoresis and garbled speech during a foley catheter exchange thought to be from dehydration. Patient was admitted to Hospital for observation for 2 days
COVID19 VACCINE (COVID19)	Hospitalized	919087-1	Acute Pericarditis. Patient was admitted from 12/27-12/28/2020 at hospital by cardiology team who strongly felt the acute pericarditis was due to the Pfizer Vaccine (Dr. was senior cardiologist).
COVID19 VACCINE (COVID19)	Hospitalized	919129-1	After the 15 min monitoring, I went back to work 15 min later. the left side of my face started tingling which went to a numbing feeling down the left side of my body affecting my neck, shoulder, arm, elbow and up the upper left torso. My face and neck was numb for about 48 hrs and the rest came back to sensation within 24 hrs. D/T the numbness I was admitted into the hospital for a 24hr observation.
COVID19 VACCINE (COVID19)	Hospitalized	919152-1	""Pfizer-BioNTech COVID-19 Vaccine EUA."" Patient received first dose of vaccine on 12/21/2020. Patient called on 1/3/2021 to notify that she developed symptoms on 12/27/2020 and had an appendectomy on 12/28/2020 at another facility. Patient also reports that CDC V-Safe Application was used to report event as well. Patient reports that she is recovering well."
COVID19 VACCINE (COVID19)	Hospitalized	919154-1	Patients adverse reactions started day of vaccination with right arm pain up to right ear as well as complete tongue numbness. On 1-1-21 patient had increased Bell's Palsy symptoms including; inability to raise left eyebrow, inability to close left eye in its entirety, teeth being numb on left side, and numbness and tingling in left foot and left hand (from palm to fingers). ER physician prescribed on 1-1 Prednisone, Keflex and Valtrex. Patient went to ER again on 1-2-21 with lower extremity numbness on left side that is moving proximally toward her hip. Patient went home on 1-3-21 with an RX for Prednisone as well as Valtrex. Symptoms have improved but have not fully resolved at this time.
COVID19 VACCINE (COVID19)	Hospitalized	919230-1	She was hospitalized on 01/04 but exact situation unknown. COVID +. Hospitalized at Medical Center.
COVID19 VACCINE (COVID19)	Hospitalized	919252-1	Employee received COVID 19 vaccination at 9:45am on 12/30/20. ~15 min. later she developed a rash down her left arm, then down her Rt. arm. about 4 hours later she decided to go to the emergency room for Hearty Palpitations, Fever, Chest discomfort and feeling of generalized sunburn. Later developed severe headache..
COVID19 VACCINE (COVID19)	Hospitalized	919320-1	Right arm swelling very bad right after shot, next day woke up to get ready to work I started to get light headed, dizzy, sweating, felt like I was going to pass out. My husband then called 911. They took me to Hospital ,I stayed there for a couple hours then released. They told me to stay home and the next day I felt fine. I did a televisit with my Nephrologist (Kidney doctor) the following week.
COVID19 VACCINE (COVID19)	Hospitalized	919428-1	Felt slight warmth throughout body about 5 minutes after vaccine. Disappeared 2 minutes later. Arm started to feel sore as the day went on and was very sore by nighttime. Next day, arm started to feel better and over the next 3 days was no longer sore. On the morning of the 30th, woke up feeling fine, took a 3.5 mile walk and felt fine. Around 12:30 pm, experienced sudden pain and a burning sensation in the chest and both upper arms. Thought it was possibly heartburn ; took a Prilosec. The discomfort (mild but steady) continued so checked blood pressure which was 141/91. Called cardiologist and went to emergency room per instruction, around 1:30. Admitted overnight with the diagnosis of a mild heart attack and performed a heart catheterization where they found no major blockage. One artery noted 30% blocked but that overall heart function looked good. Discharged on 12/31/2020. -reported by patient via email, on 1/3/2021 @ 4:49pm
COVID19 VACCINE (COVID19)	Hospitalized	919436-1	Bell's palsy, right side of face is numb, with difficulty closing eyes, smiling, raising eyebrows, eating, drinking, swallowing.
COVID19 VACCINE (COVID19)	Hospitalized	919546-1	thrombotic stroke -necessitating hospitalization; and craniotomy; required mechanical ventilator for 2 days. Patient now extubated, breathing on her own. Patient remains hospitalized with marked deficits (aphasic)
COVID19 VACCINE (COVID19)	Hospitalized	919584-1	Lightheadedness, throat tightness. Increasing chest tightness. History of atrial fibrillation and bilateral breast implants. Received two doses of epinephrine and one dose of diphenhydramine.
COVID19 VACCINE (COVID19)	Hospitalized	919593-1	Patient developed a septic knee (history of arthroplasty) need for immediate surgery, hospitalization and months to years of antibiotics in his future now.
COVID19 VACCINE (COVID19)	Hospitalized	919604-1	Presented to the ED after developing chest tightness, cough, lightheadedness, and throat closing sensation. She received the Moderna COVID-19 vaccine on the morning of presentation. Within 15 minutes of receiving the vaccine she developed pain and numbness, starting at the injection site traveling down the ulnar aspect of her arm, and nausea. Over the next several hours she continued to develop worsening nausea, chest tightness, cough, lightheadedness, and the sensation that her throat closing. She took PO Benadryl 25mg; however, her symptoms were not alleviated. She was subsequently evaluated in the ED. á Received PO Benadryl 25mg, IV Benadryl 25mg, Epinephrine 0.3mg x 2, IV Famotidine 20mg, IV Solumedrol 125mg & 60mg, DuoNeb x 3, Racepinephrine x 1.
COVID19 VACCINE (COVID19)	Hospitalized	919620-1	Decompensation and temp 103.6.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	919624-1	Around 10 or 11 pm, arm pain, chills, fatigue, headache, nausea, swollen lymph nodes, lightheadedness, fainted in tub. Next day, fatigue all day, couldn't talk, or eat. Went back to bed again. The following day hot flashes, weakness. went to ER. Felt like blood pressure was dropping, tingling in legs, difficulty lifting her head.
COVID19 VACCINE (COVID19)	Hospitalized	919633-1	Presented to the ED with cc of left sided facial and LUE numbness and weakness x 1 days. Patient received her COVID-19 vaccination on 12/30/2020 around 1PM. Immediately after the injection in her left shoulder, she began to feel warmth and numbness in her left shoulder, arm, neck, face, and chest. She reports later experiencing nausea, palpitations, and left arm weakness. Her symptoms persisted, and her family noted a left sided facial droop which prompted her ED visit. In the ED, patient was noted to have some left sided facial droop and left arm and leg weakness. CT head and CTA showed no acute abnormalities. Tele-neurology was consulted who recommended admission to rule out acute stroke. Ultimately, work up was negative and symptoms resolved. Symptoms appear to be related to the vaccine.
COVID19 VACCINE (COVID19)	Hospitalized	919665-1	Severe joint aches, fever-type symptoms, nausea
COVID19 VACCINE (COVID19)	Hospitalized	919827-1	Began experiencing nausea and general stomach pains the morning after receiving the vaccine. After one day of pain and discomfort I woke the following morning (~44hrs after receiving the vaccine) to extreme acute abdominal pain in the lower right abdomen. Went to Urgent Care facility and was diagnosed by CT scan as having acute appendicitis. An emergency appendectomy was scheduled and performed for later that evening. I stayed at the Hospital overnight on 12/24/2020 post operatively on IV antibiotics to recover from the appendectomy. Was discharged from the hospital on 12/25/2020 and have been recovering for about 10 days now with limited activity.
COVID19 VACCINE (COVID19)	Hospitalized	920224-1	had a positive COVID test; had a positive COVID test; O2 Saturation of 80% / Hypoxia; shortness of breath; He has a CT scan which showed extensive infiltration in the lungs; muscle pain; chills; body aches; low grade fever; cough; This is a spontaneous report from a contactable physician (pulmonary medicine). This physician reported similar events for 2 patients. This is 1st of 2 reports. A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. There were no medical history and concomitant medications. Caller stated that his close friend who was ER physician (front line worker) and within 24 hours after receiving the COVID vaccine, developed COVID or symptoms of COVID. Patient received the COVID vaccine on 18Dec2020 and the same night patient started with a low grade fever, body aches, chills, muscle pain, shortness of breath, cough, O2 saturation of 80% (hypoxia) and was in the intensive care unit now. Patient swore this was related to the vaccine. This patient tested positive for COVID. He had a CT (computerised tomogram) scan which showed extensive infiltration in the lungs in Dec2020. Patient was admitted to the hospital on 24Dec2020 and then was moved to the ICU 2 days later, on 26Dec2020. Caller thought patient had a positive COVID test at another hospital. Caller did know that tested positive at the current hospital on 26Dec2020 which was done to confirm the previous positive test. Caller thought patient had his first positive COVID test either the same day or the next day after receiving the vaccine. Event of O2 Saturation of 80% / hypoxia was reported as hospitalization from 24Dec2020 and life threatening; infiltration in the lungs and shortness of breath caused hospitalization from 24Dec2020, muscle pain, chills and positive COVID test was reported as medically significant; and other events were reported as non-serious. Outcome of O2 saturation of 80% / hypoxia and shortness of breath was not recovered, outcome of cough was recovering; and outcome of other events were unknown. Information about lot/batch number has been requested. ; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine BNT162B2 in this patient cannot be completely excluded.,Linked Report(s) : US-PFIZER INC-2020519020 same reporter/drug , different patient/AE.
COVID19 VACCINE (COVID19)	Hospitalized	920225-1	Anaphylactic reaction requiring two doses of Epinephren to control. Still having issues; other vaccine same date product received; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on right arm at 12:30 PM on 18Dec2020 at single dose for COVID-19 immunization, and first dose of other Pfizer vaccine same date product (other vaccine same date lot number: elt9899) on right deltoid on 18Dec2020 for unknown indication. Medical history reported as none. Concomitant medication included vitamin C and colecalciferol (VITAMIN D). The patient experienced anaphylactic reaction at 12:30 PM on 18Dec2020 requiring two doses of epinephren to control. still having issues, resulted in: Doctor or other healthcare professional office/clinic visit, Hospitalization in Dec2020. days hospitalization: 1. The patient received treatment: 2 doses of epinephrine, solumedrol, benadryl, IV and O2 for event anaphylactic reaction to vaccine. The outcome of anaphylactic reaction was not recovered. Lot/Batch and Expiration date has been requested.; Sender's Comments: The information available in this report is limited and anecdotal and does not allow a medically meaningful assessment of the case. There is a plausible temporal association between vaccines administration and onset of the reported event. It is unclear what is the nature of the vaccine co-administered with BNT162b2. Currently no information is available on the co-administration of the Pfizer-BioNTech COVID-19 Vaccine with other vaccines.
COVID19 VACCINE (COVID19)	Hospitalized	920317-1	Rhonchi, frothy sputum, low grade temp, elevated HR, 12/30 MD assessed 1:00PM and increased prednisone and added Cefdinir. Sent to hospital 12/30 at approximately 6:30PM with worsening symptoms
COVID19 VACCINE (COVID19)	Hospitalized	920367-1	Patient (myself) had anaphylactoid reaction to the vaccine and required IV solucortef, IV Benadryl and Pepcid, and required hospitalization x 24 hours
COVID19 VACCINE (COVID19)	Hospitalized	920388-1	Patient received her Vaccine on 12/16/2020. Afterwards she developed symptoms of fever, chills, diarrhea, nausea, vomiting and headache that became worse over time and on day os presentation to our hospital on 1/2/2021 she was having photophobia. Current headache at time of admission had been persistent for over a week. Patient has no immunocompromising risk factors and was diagnosed with confirmed CMV meningitis. She was also admitted with transaminitis.
COVID19 VACCINE (COVID19)	Hospitalized	920628-1	6-7 hours after the vaccine she developed arm pain, fever and chills. About an hour later she started to have abdominal pain which worsened over the course of the day to excruciating. She went to the Emergency Room where a CT scan revealed a perforation of her sigmoid colon and had a resection of the area of the colon and a diverting colostomy surgery done the evening of 1/3/2021.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	920719-1	starting to feel lethargic and weak. Had menses with increased blessed. Called physician to have blood work done to see if I was experiencing anemia. Blood work complete on 12/31/2020. On 1/3/2021, I woke up with blood blisters all over the inside of my mouth and petechia on my trunk and bilateral upper and lower extremities. I called my primary physician to report the symptoms. He suggested to go to the ER if my symptoms worsened. Later that evening I started with a nose bleed and did go to the ER. Upon arrival to the ER, my platelet count was 9. I was admitted to the hospital and diagnosed with ITP.
COVID19 VACCINE (COVID19)	Hospitalized	920726-1	12/31/20 around 11am Numbness in right hand and right cheek, 5 minutes later, slurred speech. Episode lasted approximately 10 minutes. Treated in ER. Labs, MRI, all normal 1/3/21 Swollen lymph node to left axilla 1/4/21 Rash to injection site
COVID19 VACCINE (COVID19)	Hospitalized	920771-1	Tachycardia, resident was sent out to the hospital for evaluation on 12/30/2020 and came back to the facility on 12/31/2020.
COVID19 VACCINE (COVID19)	Hospitalized	920784-1	Anaphylactic Reaction, facial swelling, facial Redness, Face felt like it was burning, face flushing, throat swelling, heart palpitations, trouble swallowing , feet swelling, light headed, anxiety. Hospitalized from the 12/23/20 to 12/26/2020 . Medications now on Epinephrine, diphenhydramine, cetirizine, famotidine, prednisone, lorazepam, cephalexin. on 1/1/2021 was taken to E.R. by ambulance around 11:00 am left hand was tingle started to go numb traveled up my arm into left side of my face ,ear, tongue, and then down to the left side of my leg and into left foot, could not move left side of body for a good 7 to 8 mins then went away transferred to ambulance enroute to ER blood pressure was high and and started having right ear pain and right side frontal severe headache, arrived to ER and was given diphenhydramine ,ketorolac, metoclopramide HCl, lorazepam. MRI was ordered and Neurologist found two small lesions on right side of frontal brain, following up now with neurologist. added more meds naproxen
COVID19 VACCINE (COVID19)	Hospitalized	920805-1	palpitations, chest tightness/heaviness, scratchy throat/frequent throat clearing, head heaviness, blurred vision, elevated blood pressure. Evaluated in ED received solumedrol, benadryl. Discharged home and returned to hospital as direct admit due to continued symptoms. Pertinent labs reveled AKI, elevated LFTs. AKI and LFTs improved with IVFs.
COVID19 VACCINE (COVID19)	Hospitalized	920879-1	Abdominal pain that proceeded to get worse into the next day. Connected with PCP, had labs drawn and ultrasound ordered. Ended up going to ER. Determined to have Appendicitis, needed and had appendectomy on 12/29/2020.
COVID19 VACCINE (COVID19)	Hospitalized	921053-1	"Patient had SVT; flushing; hives; heart rate increased to 160's (had been 180's earlier in the day); This is a spontaneous report from a contactable pharmacist. A 46-year-old female patient received the first dose of BNT162B2 (lot number: EK5730), via intramuscular, on 28Dec2020 at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient was not pregnant at the time of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, it's unknown if the patient was tested for COVID-19. No other vaccines were received within 4 weeks prior to the COVID vaccine. The patient's medical history and concomitant medications were not reported. The patient had SVT, flushing, hives 20 min after receiving vaccine on 28Dec2020. Patient was taken to ED and evaluated. SVT resolved. Patient sent home on heart monitor. Later that night while in bed, heart rate increased to 160's (had been 180's earlier in the day) and patient was admitted to hospital. Patient is a NP. Treatment received for the adverse event included cold water to face, vagal massage. The outcome of the event""Patient had SVT"" was recovered on 28Dec2020 and of other events was recovering. ; Sender's Comments: A causal association between BNT162B2 and the reported events supraventricular tachycardia, flushing, hives, heart rate increased cannot be excluded based on the compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Hospitalized	921062-1	a high fever; extreme fatigue; have allergies; This is spontaneous report from a non-contactable consumer. This consumer reported similar events for eight patients. This is the first of eight reports. Only this report is serious. A patient of unspecified age and gender received bnt162b2 (BNT162B2 also reported as Pfizer version of the vaccine, lot/batch number and expiry date were not reported), via an unspecified route of administration on unknown date in Dec2020 at single dose, for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient got the vaccine at a facility then had a high fever and extreme fatigue after getting the vaccine on Dec2020. The patient was admitted to the ICU. The patient had allergies, but it was unknown what the allergies are to. The outcome of events was unknown. No follow-up attempts are possible. Information on batch/Lot number can not be obtained. No further information is expected. ; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020520700 same reporter/drug/AE, different patients;US-PFIZER INC-2020520703 same reporter/drug/AE, different patients;US-PFIZER INC-2020520699 same reporter/drug/AE, different patients;US-PFIZER INC-2020520704 same reporter/drug/AE, different patients;US-PFIZER INC-2020520705 same reporter/drug/AE, different patients;US-PFIZER INC-2020520701 same reporter/drug/AE, different patients;US-PFIZER INC-2020520702 same reporter/drug/AE, different patients;US-PFIZER INC-2020520700 same reporter, drug, events, and different patients
COVID19 VACCINE (COVID19)	Hospitalized	921087-1	Pt received COVID Vaccine at 1055, 1120 pt began coughing severely and could not stop, unable to speak. 1120 25mg Benadryl liquid given, Pepcid 20 mg given PO, cough worsening. 1122 second dose of Benadryl given, called for MD. Brought pt to Private room via wheelchair. Upon arrival, audible stridor noted. Epinephrine 0.3 mg IM given at 1126. IV started, placed patient on monitor and O2 via 1L NC. MD at bedside along with RT and pharmacy. 1134 Solumedrol 125 mg IV given, 1 puff of Ventolin given. Lungs clear. 1140 Coughing stopped, pt able to speak now. Vital signs: 1130 SPO2 99% Pulse 142 1135 99% pulse 106 BP 168/102 1140 sats 100% HR 93 BP 157/105 1145 sats 100% HR 97 BP 159/93 1200 sats 99% HR 103 155/97 114
COVID19 VACCINE (COVID19)	Hospitalized	921090-1	Pt vaccinated on 12/23. PCP notified that SOB and fatigue getting worse on 1/4. Unable to keep pre-op Dental work planned prior to mitral valve surgery on 1/14/2021. PCP referred her to our ED where she was diagnosed with COVID-19 and transferred to facility, which is where her surgery was planned.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	921091-1	Pt received vaccination and left after 15 min. observation symptom free. He drove a short distance away from the clinical site when he felt profuse sweating and had syncope (seconds) crashing into curb. He was aroused from impact and was able to stop car. He then developed profuse nausea and sudden urge to defecate. He went to restroom. Given these events he returned to the clinical site in another vehicle. Upon arrival he denied chest pain, shortness of breath or ongoing nausea or abdominal pain. He reported his AM blood sugar was 72 and does not take insulin. No history of coronary disease or syncope. EMS was activated and assumed care.
COVID19 VACCINE (COVID19)	Hospitalized	921151-1	The resident who was known to have seizures, and under control for many years with Keppra 1000 mg twice a day, on the second day after vaccination developed recurrent seizures requiring hospitalization to an intensive care unit, with intubation and mechanical ventilation until 1/5/21 (to be extubated today). She is still at the hospital.
COVID19 VACCINE (COVID19)	Hospitalized	921171-1	RECEIVED VACCINE ON 12/22; ON 12/24, STARTED FEELING WEAK AND HAVING GI ISSUES WITH DIARRHEA. ON 12/27, STARTED HAVING SHORTNESS OF BREATH AND WHEEZING MORE THAN HER NORMAL WITH HER ASTHMA ILLNESS AND CAME TO ER. WAS TESTED AND FOUND TO BE COVID POSITIVE.
COVID19 VACCINE (COVID19)	Hospitalized	921175-1	Resident received Covid Vaccine, noted after 30 mins with labored breathing BP 161/77, HR 116, R 38, T 101.4,
COVID19 VACCINE (COVID19)	Hospitalized	921188-1	22 year old patient with no known allergies or medical history admitted 12/21 with TTP and currently being worked up. Currently unclear if related or unrelated to COVID vaccination, but received Pfizer vaccine Thursday 12/17.
COVID19 VACCINE (COVID19)	Hospitalized	921465-1	51-year-old female with history of intermittent asthma presented to the ED with 1 week of intermittent fevers, myalgias, arthralgias and headache. Patient reports receiving first dose of moderna vaccine last week. She initially developed arm soreness followed by chills and body aches. Subsequently developed frontal headache, photophobia, back pain, nausea and vomiting. She was seen in the ER on 1/1/21, when her work-up including labs, CT spine, chest x-ray were negative therefore she was discharged home. She continued to have symptoms and also developed bilateral intermittent ear pain. She also developed rash in her extremities and torso. Rash is pruritic but not painful. reports ongoing history of neck pain for which she sees PT. Denies sore throat, cough, chest pain or shortness of breath.
COVID19 VACCINE (COVID19)	Hospitalized	921557-1	Began experiencing increased temp of 101.4 on 1/4/2021 at 0701. Temp did not resolve with the use of Tylenol. HR increased to >100 and BP was decreasing below baseline. Increased weakness also noted. Temp increased to 102.9 on 1/4/2021 at 2220. Transferred from SNF to ER for evaluation.
COVID19 VACCINE (COVID19)	Hospitalized	921641-1	Administered first dose of COVID19 vaccine at 1:29pm on 1/4/21. At approximately 11:00pm resident exhibited acute respiratory decompensation with very limited air entry and hypoxemia. Patient received Benadryl, steroids, epinephrine, and Duoneb without improvement. Resident was referred to the emergency room and found to be COVID positive. No fever or rash were reported.
COVID19 VACCINE (COVID19)	Hospitalized	921786-1	tremors resident sent hospital facility.
COVID19 VACCINE (COVID19)	Hospitalized	921796-1	Started out vague. Started with headache at the base of her head and then it felt like a web that covered her entire head. By 10:00 she did not feel good. Went to sleep instantly. Slept for about an hour. Began to have nausea. Sunday headache got worse. Started ringing, buzzing sound in her head. Took Zofran because of nausea. Sunday night chest discomfort. Monday had horrible chest pain, headache was horrible, then vomiting. went to ER, doctor felt it was a reaction to the vaccine. was give medicine for nausea and Decadron for the reaction. Gave fluids for dehydration. Got medicine for headache. Keep taking Zofran for nausea. Still has headache. Has appointment with pcp in the morning.
COVID19 VACCINE (COVID19)	Hospitalized	921829-1	"Received COVID-19 Moderna vaccine on 12/28. Developed nausea, vomiting, diarrhea, fever, and hypoxia at facility the day follow vaccine administration (12/29). He was sent to the hospital on 12/29 and admitted for post vaccine fever where he had a chest x-ray that showed infiltrates but WBC count was normal and fever resolved upon admission to hospital. Provider documented ""expected reaction to vaccination in a patient with previous COVID exposure"". He returned to the facility on 12/30."
COVID19 VACCINE (COVID19)	Hospitalized	921920-1	Within 10 minutes of receiving the vaccine patient began to look sleepy and started to gasp for breath. She called for help and slouched over in a chair and was moved to lay on the floor. Her feet were elevated and 911 was called. Epinephrine was given, patient responded by being able to gasp for breath and her face returned to a more natural state. Within 5 min she began to struggle to breath and epi was given again. Some improvement did occur. EMS arrived and she was taken to the hospital.
COVID19 VACCINE (COVID19)	Hospitalized	921989-1	Anaphylactic reaction (swelling and redness of face and torso, shortness of breath, constriction of airway and dizziness)
COVID19 VACCINE (COVID19)	Hospitalized	922118-1	After three days, couldn't sleep the whole night. The next day, went to work, came home felt jittery. Close to midnight bp 200/90. Took Clonidine 0.1 and went to ER, bp 180/90. waited for almost two hours bp came down to 141/80. Today, bp is back to normal. Took sleeping medication Zzzquil to go to sleep.
COVID19 VACCINE (COVID19)	Hospitalized	922177-1	Aseptic meningitis, prolonged fever for more than a week, headache, elevated transaminase (ALT is 124). Lumbar tap showed elevated WBC of 23, 76% polys and 24% mononuclear, 25 RBC. Glucose and protein are normal. CSF PCR viral panel is negative. Patient was initially given Acyclovir and was stopped when HSV and VZV PCR were negative. He was given vancomycin IV for Gram positive bacteremia which was later stopped because it was deemed a contaminant.
COVID19 VACCINE (COVID19)	Hospitalized	922218-1	3 Days after the covid vaccine. I Started to have these symptoms around 1am: fever, chills, body aches, cold sweats. I took ibuprofen fell asleep. Around 330am. Woke up with dizziness, headache, chills. Took tylenol. Fell asleep body was extremely cold esp hands and feet. Woke up around 7am. Still had severe body aches and was extremely dizzy, headache worsening. Took ibuprofen. Woke up around noon. Extremely dizzy with chills and body aches headache still severe. Took tylenol. I was not getting better. went to hospital . It was found I had extremely high wbc and had extremely low blood pressure. Diagnosed as septic shock.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	922299-1	I was instructed to stay for 30min as i have been anaphylactic to cipro in past. at 30min was told i could leave. while driving home on rt 91 my cheekbones became numb. then slowly a few min later my cheeks became numb. a few min later my lips became numb. as i was driving off exit to rt 5 in longmeadow i developed a lump in my throat. i turned around at top of exit and went back to highway to go to ER. this was approx 1645-1650. i went to ER arrived approx 1655. i was shaking. my bp and pulse were elevated. no tingling or swelling in my face. nurse checked my pupils and my smile and were wnl. no history of bells palsy. i received iv fluids, solucortef 125mg ivp, pepcid 20mg ivp, and benedryl 25mg ivp approx 1840pm. approx 45 min after solucortef numbness better but not gone. it started to come back a little more before discharge, which i let md know. she discharged me with scripts for epi-pen, prednisone, and OTC pepcid and benedryl. follow up with my pcp's office in am 12/24 at 10am with his NP. total time with facial numbness/lip numbness 29 hours.
COVID19 VACCINE (COVID19)	Hospitalized	922673-1	I woke up with tingling in my right hand and arm, my right side, and down my right leg. I went to the ER at Hospital, and was confirmed to have had a stroke in my left thalamus.
COVID19 VACCINE (COVID19)	Hospitalized	922767-1	Patient woke on 1/3/2021 weak having uncontroled bowels and off and on confusion.
COVID19 VACCINE (COVID19)	Hospitalized	922990-1	The patient received the vaccine indicated above. Immediately following vaccination the patient states that they began feeling lightheaded and dizzy.
COVID19 VACCINE (COVID19)	Hospitalized	923000-1	Severe right lower quadrant pain, anorexia over 12 hours. Went to the emergency department. Lab results showed elevated WBC and CT scan showed acute appendicitis. Admitted for urgent surgery: laparoscopic appendectomy. Was hospitalized from 12/26/20-12/28/20.
COVID19 VACCINE (COVID19)	Hospitalized	923459-1	patient was noted to be flushed by residential home staff on 12/30/2020, approximately 2.5hrs after vaccination, fever present at that time. Prior to COVID19 vaccine administration, this patient did have exposure and was close contact with a known case of COVID19 in a residential care employee. Patient was taken to hospital for evaluation of febrile status, had positive COVID19 test at that time, and reported hypotension per residential care staff.
COVID19 VACCINE (COVID19)	Hospitalized	923510-1	PATIENT SPOUSE REPORTS THAT PATIENT RECEIVED VACCINE ON 1/4/2021 AND ON 1/5/2021 PATIENT'S ARM BEGAN TO TURN RED AND SWELL AT THE INJECTION SITE. THE SWELLING AND REDNESS BEGAN TO GO DOWN HIS ARM AND HE BROKE OUT INTO A RASH. PATIENT THEN BECAME SHORT OF BREATH. EMS WAS CALLED AND PATIENT WAS TRANSPORTED TO HOSPITAL, WHERE HE WAS TREATED FOR ANAPHYLACTIC SHOCK TO THE COVID MODERNA VACCINE.
COVID19 VACCINE (COVID19)	Hospitalized	923540-1	Anaphylaxis Narrative: 12/22 received COVID-19 vaccine at 1209 and developed SOB at 12:15. Took her own albuterol inhaler without relief. Transported to ED. PE: red hands with swelling, throat and lip swelling with difficulty swallowing. Later developed headache and dizziness then tachypnea and stridor. Meds given - See section 5 PLUS epinephrine IM and infusion @ 0.05 mcg/kg/min, Alb and ipratropium negs, racemic epi nebs. Admitted to the hospital on 12/22 and still hospitalized at the time of this report on 12/23. She remains on an epinephrine drip and was given methylprednisolone 125 mg IV x 2. No previous history of anaphylaxis. History of Reye's syndrome as a child when given aspirin.
COVID19 VACCINE (COVID19)	Hospitalized	923554-1	Agitation, Sedation, Anaphylaxis, Rash & HYPotension
COVID19 VACCINE (COVID19)	Hospitalized	923766-1	Went to the ER on the 31st, my face swelled and chest was covered in hives. Lips swelled. I would get nauseated and I felt like there was acid in my stomach. I also had a headache. I have been taking Zyrtec, Benadryl as needed.
COVID19 VACCINE (COVID19)	Hospitalized	923822-1	The day after the vaccine I had fatigue and body aches. Then on 12-23 fevers of 101.4, chills, body aches, diarrhea, vomiting, productive cough, and profuse sweating. Jan 1st I was in the shower and was dizzy with a headache. Loss of consciousness almost happened and that is when i got out of the shower and laid down. Went to the ED and was diagnosed with bilateral pneumonia
COVID19 VACCINE (COVID19)	Hospitalized	923892-1	I did let the nurse know right after I got the vaccine It did feel like a huge water balloon was sitting on my arm and very heavy at the site. I went to the waiting area and the last 5 minutes and I started feeling weird, kind of getting dizzy and my heart started racing really fast. Am I can tell I was getting really hot and my face was flushed and my heart was racing and my hands started shaking, trembling almost like I couldn't control it. I've never experienced something like this. The part that really scared me was my heart racing like it was going to come out of my chest. They called a code, put me in a wheel chair and took me to the ER (where I work). They took my blood pressure which was really high, they did EKG, blood work and urine test. They kept me there for about five hours, while watching me. And the last weird thing that happened at one point I felt like liquid was running thru my body and my feet were really cold for several hours, It felt like someone was pouring liquid over me. I kept asking the nurse if this is normal and no one knew what to tell me. After everything started slowing back down and it had been a couple hours and the next day i felt like I had a slight head ache and felt out of it, kind of like I had a hangover and of course my arm was really sore. The Doctor in the ER did advise me not to get the second dose as it will be worse than the first one.
COVID19 VACCINE (COVID19)	Hospitalized	923901-1	LEFT SIDED CHEST PAIN, SHORTNESS OF BREATH, FELT WARM AND FLUSHED
COVID19 VACCINE (COVID19)	Hospitalized	923935-1	I got my shot on the 19th and that evening it was like a light switch and I was so tired I went to sleep at 730pm I had severe chills and fever and had to go to bed. The next day I still wasn't feeling well and I was called in to get covid tested and I went to the ER on the 21st and took a rapid covid test that was positive. I was stable and had good oxygenation and was discharged. I have fever nausea vomiting I also had problems with O2 stat i was in the 80s and realized I was having respiratory failure so I was admitted on the 27th and I've been here ever since. I had kinetic storm and infusions my O2 stats were bad and I was sent to the covid unit and put on high flow oxygen and negative for a PE, I'm still on the covid unit but I feel much better today
COVID19 VACCINE (COVID19)	Hospitalized	924029-1	after 20-30 minutes my throat started to get tight, I could not swallow properly, I felt dizzy & my heart was beating fast.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	924050-1	anaphylaxis, dyspnea
COVID19 VACCINE (COVID19)	Hospitalized	924173-1	I started having intermittent chest pain moderate in intensity and palpitations.
COVID19 VACCINE (COVID19)	Hospitalized	924188-1	Migraines, right side of face swollen, nausea, tingling
COVID19 VACCINE (COVID19)	Hospitalized	924201-1	Patient tolerated the vaccine well with no apparent side effects. Ten days later awoke 12:30 AM with severe chest and upper back pain, presented to Med Center where he was found to have an Acute Coronary Syndrome. Transferred to Medical Center where he underwent successful PCI with two drug eluting stents for a 99% mid-LAD stenosis
COVID19 VACCINE (COVID19)	Hospitalized	924208-1	Shortness of breath, fever, fatigue
COVID19 VACCINE (COVID19)	Hospitalized	924297-1	At around 11:40am resident was observed to be unresponsive. resident noted with pulse and respiration. Not in any distress. lung sounds clear. Vital Signs BP162/82 P86 R18 T97.1 O2 Sat 96%, fingerstick is 133mg/dl .Resident received COVID 19 vaccine at 11:25am. O2 via 2l NC initiated. Nurse Stat call, 911 initiated, MD at Bedside. Resident awake and responsive. EMT responded and resident left with EMT to be transferred to hospital, remains awake and not in any respiratory distress.
COVID19 VACCINE (COVID19)	Hospitalized	924335-1	On the second day I took something for the pain around injection site. The third day started exp nausea and I went back to work on Sat/Sun. I received a call on Monday from my employer that a patient I was taking care of tested positive Covid 19. I went to t to ER to get a Covid swab, blood work , and D dimer was elevated, Chest X-ray(dense area on my left lung). I was admitted and hospitalized for 6 days on Oxygen(4 liters). Since the discharge I'm still on Oxygen but the room air is still fine for now waiting for my appt.
COVID19 VACCINE (COVID19)	Hospitalized	924410-1	Adult failure to thrive; Chronic hypoxemic respiratory failure; Generalized weakness
COVID19 VACCINE (COVID19)	Hospitalized	924524-1	PATIENT REPORTING ITCHING AT 30 MINUTES POST INJECTION. AT 1.5 HOURS POST INJECTION PATIENT REPORTED ITCHY THROAT AND NUMBESS OF LEFT SIDE OF FACE. AT THAT TIME ADVISED TO GO TO EMERGENCY ROOM. NEXT DAY WHEN I FOLLOWED UP WITH PATIENT, SHE REPORTED HER AIRWAY STARTED TO CLOSE AND SHE RECEIVED EPINEPHRINE, AFTER 5 HOURS HER STARTED TO CLOSE AGAIN AND RECEIVED ANOTHER DOSE OF EPINEPHERINE, WAS RELEASED FROM HOSPITAL ROUGHLY 15-16 HOURS AFTER GOING TO ER.
COVID19 VACCINE (COVID19)	Hospitalized	924539-1	At 10:12 am, Client c/o of sore throat, tightness in throat that relieve quickly, nausea, dry heaves, flushed, light headed and dizziness. Called for EMT. They arrive at 10:25 am and transported her to the local hospital for observation. 01/06/21-Treatment in hospital blood draw, medications given Zofran, Decadron, Benadryl, and Pepcid, and IV fluids. Discharged home at 1244.
COVID19 VACCINE (COVID19)	Hospitalized	924658-1	Severe Hypotension, Redness, Warmth and sensitivity all over skin surfaces, lack of responsiveness, low oxygen saturation.
COVID19 VACCINE (COVID19)	Hospitalized	924722-1	Severe shortness of breath, administered inhaler, hydralazine with no improvement. Dr. notified. Sent to ER
COVID19 VACCINE (COVID19)	Hospitalized	924820-1	COUGH, RIGORS, NAUSEA, VOMITING, URINARY URGENCY/FREQUENCY, DYSURIA - FOUND TO HAVE LLL PNEUMONIA, CONCERNING FOR POSSIBLE CYRPTOGENIC ORGANIZING PNEUMONIA
COVID19 VACCINE (COVID19)	Hospitalized	924822-1	PATIENT DEVELOPED PROGRESSIVE NEW DYSPNEA, DIFFERENT FROM HER BASELINE. SHE HAS BEEN HOSPITALIZED TWICE FOR PERSISTENT DYSPNEA AND CENTRALIZED CHEST PAIN, WHICH HAS OTHERWISE HAD NEGATIVE WORK UP.
COVID19 VACCINE (COVID19)	Hospitalized	924835-1	103.5 Fever that wouldn't come down with Tylenol, chills, sharp headache, tachycardia, site pain, dizziness, body aches, nausea All symptoms started 11 hours after first dose of vaccine (3AM), went to hospital 15 hours after symptoms started and was treated for 9 hours until all symptoms abruptly stopped
COVID19 VACCINE (COVID19)	Hospitalized	924928-1	anaphylaxis; This is a spontaneous report from a contactable other healthcare professional (patient). A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient's medical history and concomitant medications were not reported. Pfizer covid vaccine caused anaphylaxis on 30Dec2020 and landed patient in hospital. Patient was an anesthesiologist and had high IgG to thyroid with hashimotos. Patient thought he/she had IgG/neutrophil mediated anaphylaxis (not the typical IgE) as absolute neutrophil count elevated but everything else normal in labs. Had tachycardia into 140-150s and mild facial and throat edema. Still having sudden bouts of elevated heart rate in the morning of 31Dec2020. Heart tests all normal. Outcome of event elevated heart rate was not recovered, and outcome of other events was unknown. Information on the Lot/Batch number has been requested.; Sender's Comments: A possible contributory role of the suspect products cannot be excluded for the reported events based on the known safety profile and temporal association. Case will be reevaluated based on follow-up information
COVID19 VACCINE (COVID19)	Hospitalized	925078-1	12/29/2020 2 hr after vaccination patient became hypotensive, decreased oxygen levels was transferred to Hospital currently inpatient at hospital - admitted for cardiac arrest
COVID19 VACCINE (COVID19)	Hospitalized	925254-1	I woke the next morning with flu like symptoms my arm was hurting, I was feelin tired and really couldn't get out of bed. As the day progressed I got chills, started running a fever, It went up to 104 and my heart rate went up and down from 120-165 so I went to the ER. They gave me fluids and ran a whole bunch of test, tested me for Covid and Sepsis and everything came back normal and negative for Covid. They monitored my heart rate and once it started getting back to normal, they ended up letting me go home, I was there from 8pm to about 3am. After that I felt tired and felt like when I had Covid back in November. I started feeling better about Sunday, still a little tired but felt more back to normal. My heart rate is still getting back to normal so my Dr is following me on that.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	925752-1	acute pericarditis; This is a spontaneous report from the contactable physicians. A 50-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number and expiration date were not reported), intramuscular in the left arm on 23Dec2020 at a single dose for COVID-19 immunization. The patient's medical history was not reported. There were no concomitant medications. The patient previously took recombinant zoster vaccine intramuscular in the left deltoid and diphtheria vaccine toxoid;pertussis vaccine acellular 3-component;tetanus vaccine toxoid (BOOSTRIX) intramuscular in the right deltoid; both on 11Dec2020; and diphtheria vaccine toxoid;pertussis vaccine acellular 5-component;tetanus vaccine toxoid (ADACEL) intramuscular in the right deltoid on 17Nov2010; all for immunization. The patient experienced acute pericarditis on 27Dec2020. The patient was admitted for acute pericarditis from 27Dec2020 to 28Dec2020. The cardiology team thinks the event was due to the vaccination. They were treating the patient with ibuprofen and colchicine. The reporter wants guidance on whether or not this patient should get the second dose of the vaccine. Outcome of the event was recovering. Information on lot number/batch number was requested.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the event pericarditis cannot be excluded. The information available in this report is limited. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	925756-1	Right sided facial & top lip Numbness & recurring pain; Right sided facial & top lip Numbness & recurring pain; Right sided facial & top lip Numbness & recurring pain; This is a spontaneous report from a contactable consumer reporting for herself. A 66-year-old female patient (not pregnant at the time of vaccination) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EK9231), via unspecified route of administration on 29Dec2020 13:30 on left arm at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered in Hospital. Medical history included Hypertension, Reflux and low back pain. Concomitant medications included ibuprofen, dicycloverine hydrochloride (BENTYL), Valsartan and omeprazole. The patient previously took codeine, Bactrim, Zyrtec and experienced allergies. The patient experienced Right sided facial and top lip Numbness, recurring pain on 31Dec2020 16:00. All events resulted in emergency room visit and Hospitalization on 31Dec2020 for 1 day. The patient underwent lab tests and procedures, which included Cat scan, MRI, ultrasound of heart and labs on unspecified dates, Nasal Swab/Covid 19 test on 01Jan2021 with negative result. The outcome of the events were not resolved.
COVID19 VACCINE (COVID19)	Hospitalized	925777-1	Felt sharp pain under jaw, then facial numbness. Then quickly developed facial swelling, left eye swelling and tongue swelling. Then felt like throat closing up within 7 minutes of receiving vaccine. Received vaccine in the clinic, was transported to Emergency Room. In ER received Epinephrine, steroids, Benadryl and Pepcid.
COVID19 VACCINE (COVID19)	Hospitalized	925925-1	1 day after the vaccine he had a low grade fever... 1 week later he had a seizure and then multiple ones in the ER...
COVID19 VACCINE (COVID19)	Hospitalized	926042-1	Developed shortness of breath, swelling of tongue, persistent cough within 5 minutes of vaccination. Was treated with EpiPen and kept in ER for observation overnight. Symptoms resolved.
COVID19 VACCINE (COVID19)	Hospitalized	926221-1	Patient contacted provider 12/26 with following symptoms: Dry cough, diarrhea, fatigue for 7 days. Covid test ordered and positive. presented to ED on 12/31 and admitted into hospital. Still inpatient as of 1/7/2021.
COVID19 VACCINE (COVID19)	Hospitalized	926230-1	Patient experienced an episode of SVT and then sinus tachycardia for approximately 6 hours after injection
COVID19 VACCINE (COVID19)	Hospitalized	926433-1	Hemorrhagic Stroke. Began with vision difficulty in the morning. Then I noticed she had left sided neglect. Went to ER. Treated with Andresxa (to counteract Elaquis). In SICU for 2 nights then telemetry unit for 3 nights. Currently in Rehab.
COVID19 VACCINE (COVID19)	Hospitalized	926454-1	"Following vaccination the patient had progressively worsening abdominal pain over the next 24 hours. Presented to the ER and was initially thought to have appendicitis. However, it was then discovered during surgery that the appendix was surgically absent. The surgeon did not that the patient did have a ""Round, infarcted ligamentous tissue was wrapped around ascending colon. ""
COVID19 VACCINE (COVID19)	Hospitalized	926462-1	Patient developed hypoxia on 1/4/2021 and did not respond to maximal treatment and passed way on 1/5/2021
COVID19 VACCINE (COVID19)	Hospitalized	926568-1	patient declined 12/30/2020 and was transferred to hospital where he did not respond to treatment and passed away 1/4/2020
COVID19 VACCINE (COVID19)	Hospitalized	926703-1	Guillain Barre syndrome/AIDP event. Paresthesia and nerve pain developed in bilateral legs 4 hours after shot and progressed slowly for 4 days in intensity and area involved. Symptoms progressed distally to superior. On the 5th day symptoms progressed rapidly and involved bilateral legs up to the groin, left arm up to lateral shoulder, and right hand. I went to the hospital and was admitted to start IVIG treatment for Guillain Barre Syndrome/AIDP.
COVID19 VACCINE (COVID19)	Hospitalized	926755-1	Vaccine Candidate received vaccine approxat 2:30pm, was monitored for 15 min no complications at the time, went home. Around 5:30pm while walking into her home she became unresponsive, was assisted in a sitting position, became incoherent, mumbling and started to convulse to the right side of her r upper extremity. Foaming at the mouth and stopped breathing, CPR was initiated for 1-2 min, EMS arrived was transported to Medical Center. She was admitted and is currently hospitalized. MD reports this event is highly unlikely related to the vaccine given her medical history but suggested to report being its a new vaccine. Current status: stable.
COVID19 VACCINE (COVID19)	Hospitalized	926778-1	Person had a fever of 102.4, pulse rate of 118, he was non-responsive with edema of the right calf & ankle this morning when he was assessed.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	926787-1	Resident had the COVID vaccine 12/30/2020. 12/31/20, resident has been in bed all shift. Staff became concerned when resident was not easily aroused. Resident displayed signs of tremors, twitching, confusion, in and out of consciousness, low O2 sats, elevated pulse and fever, fatigue and weakness. Writer called NP. NP stated this is most likely a reaction d/t the COVID vaccine. She gave orders for Benadryl 25mg IM x1 now and Tylenol 1000 mg now. NP also stated resident will not be getting the second dose of vaccine. Will continue to monitor and update NP if worsening symptoms. After receiving Benadryl and Tylenol at 145pm, resident began to appear as though she was feeling better and was talking to talk, fever had gone down. Tonight resident is not easily aroused, lethargic, continues to have tremors and twitches, almost appearing as convulsions. When asked if she knows where she is or what day it is, resident can properly answer. Resident denies SOB but staff has noted loud squeals while breathing. NP was updated and gave new orders to give Benadryl 25 mg IM x1 if needed and Ok to send resident to ED. Resident currently refuses to go to the hospital. Will continue to monitor. BP 152/112, P 116, T 99.1, O2 87-91. Resident's O2 at 1205am was 80% on 3LPM. Resident unable to be aroused from sleep by writer. NAR called to assist. NAR could not arouse resident. Writer and NAR attempted to reposition resident and resident's breathing became more labored. Resident turned back to previous position and writer called on call MD at approx. 1220am. MD returned call approx. 1235am with orders to send resident to ED. 911 called and ambulance arrived about 1245am. History of present condition given to EMTs and they stated resident would be going to Hospital. Writer has attempted to contact Hospital ED x3 but have been unable to get through. An EMT did just call to clarify when vaccine was given, what symptoms have been present and when they started. She said she has everything she should need and she will let Hospital ED staff know to call if they need anything else. Writer will again attempt to contact them though. Resident's temp was 97.5 and BG 128. When EMTs arrived they got an O2 reading of 60%. Resident did open her eyes a couple times during transfer from bed to stretcher and while stretcher was going outside but no responses from resident were made.
COVID19 VACCINE (COVID19)	Hospitalized	927006-1	Diffuse polyarthropathy starting the day after vaccination and continuing for 7+ days. Currently treating with abx for concern of possible cellulitis, and prednisone 60mg for polyarthropathy. Currently admitted.
COVID19 VACCINE (COVID19)	Hospitalized	927065-1	woke up with fever and sore throat on 22nd; went to job and got tested and tested positive; on the 23rd developed right upper lobe pneumonia; on 27th was hospitalized with three lobe pneumonia; On 22nd received got zpack - azithromycin and sudafed; received at hospital doxycyclen IV ; ivermectin and went home with them, as well. Hospital
COVID19 VACCINE (COVID19)	Hospitalized	927096-1	Day 2 (12/29/20): Fever (<100 degrees), Mild muscle aches, Fatigue Day 3 (12/30/20): Fatigue, Muscle aches Day 4 (12/31/20): Alternating chills and profuse sweating starting at 8am, Full body flushing, Grand Mal Seizure at 4:30pm
COVID19 VACCINE (COVID19)	Hospitalized	927260-1	No adverse effects noted after vaccination. Patient with cardiac history was found unresponsive at 16:45 on 1/6/21. Abnormal breathing patterns, eyes partially closed SPO2 was 41%, pulseless with no cardiac sounds upon auscultation. CPR and pulse was regained and patient was breathing. Patient sent to Hospital ER were she remained in an unstable condition had multiple cardiac arrest and severe bradycardia and in the end the hospital was unable to bring her back.
COVID19 VACCINE (COVID19)	Hospitalized	927519-1	Anaphylactic reaction; hives in the first 10 minutes of the vaccine; This is a spontaneous report from a contactable Other Health Professional (Physician Assistant). A 29-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 29Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter stated that she is treating a patient in ICU that got the COVID-19 vaccine on 29Dec2020. The patient developed hives in the first 10 minutes of the vaccine and had an anaphylactic reaction 1 hour later. Seriousness of events was reported to be hospitalization. Outcome of the events was unknown. The reporter also mentioned that it was not a mild reaction and patient was still in the ICU, 48 hours later. Information about lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reaction and hives cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	927571-1	tested positive for Covid test; tested positive for Covid test; difficulty breathing; chills; fluctuating fever; nausea; weakness; weakness/extreme fatigue; loss of taste and smell; loss of taste and smell; muscle pain; cough; sore throat; nasal drip; dizziness; fast heartbeat; injection site pain; anxiety; crying; This is a spontaneous report from a contactable healthcare professional. This 21-year-old female patient reported for herself that she received BNT162B2 1st dose on 31Dec2020 10:00 AM intramuscular at left arm for COVID-19 immunisation. Medical history included known allergies: Penicillin and Covid-19. Concomitant therapy included BC as reported. The patient experienced difficulty breathing, chills, fluctuating fever, nausea, dizziness, weakness, fast heartbeat, tiredness, loss of taste and smell, muscle pain, injection site pain, anxiety, cough, sore throat, nasal drip, crying, extreme fatigue, Etc on 31Dec2020 at 06:00 PM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency. The patient was hospitalized for 1 day and received treatment included blood thinner rivaroxaban (XARELTO) and had 2 weeks quarantine. The patient had Covid prior to vaccination and tested positive for Covid test post vaccination on 01Jan2021. The outcome of the events was not resolved. Information on Lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the suspected LOE, SARS-CoV-2 test positive and the other reported events due to temporal relationship. Of note, it is reported that the patient had history of COVID 19 infection prior to the vaccination. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	927830-1	Abdominal pain, chills, n/v, dark urine, elevated LFT's, Bilirubin in urine. Patient currently admitted to hospital

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	927938-1	Received Moderna vaccine on 12/29/2020. 12/30/2020 fever of 100.4 Tylenol given and monitored and fever went down. 12/31/2020 Chest x-ray completed and sent to the hospital and admitted with pneumonia. 1/3/2021 reported by the hospital that Covid-19 results were positive. He had had Covid-19 positive results back on 11/4/2020 prior to vaccine.
COVID19 VACCINE (COVID19)	Hospitalized	927981-1	"Pt experiencing and c/o left nasal burning, left upper lip tingling progressing to numbness with slight swelling noted, scattered patchy hives to upper front chest, sharp HA above right eye, denies SOB, no acute respiratory distress noted or reported, slurring of words shortly after onset of other symptoms. Pt repeating ""something ain't right"". Pt received Moderna COVID vaccine at 4:35pm with no reactions or side effect noted within the post 15 and 30 minutes. EMS notified at 5:49pm. MD notified and ordered Benadryl 50mg IM (given at 5:53pm), EpiPen and DepoMedrol 40mg IM if needed. No respiratory distress noted, pt denies SOB. EMS arrived and transported pt to ER."
COVID19 VACCINE (COVID19)	Hospitalized	927983-1	Developed SOB and fatigue 1 day after vaccine, went to urgent care and tested positive for COVID at urgent care. Returned to our ED after going to urgent care again on 1/7/21, had o2 sat of 84% on room air, improved to 98 on 3 liters. Was transferred to another facility for admission.
COVID19 VACCINE (COVID19)	Hospitalized	928062-1	vomiting later on 01/05/21. Lethargy and hypoxia in pm of 01/06/21. Hypotension am of 01/07/21. Hospitalized, intubated, cardiac arrest, died 01/07/21.
COVID19 VACCINE (COVID19)	Hospitalized	928291-1	symptoms:chest and stomach pain Has markedly elevated liver function tests that were normal 2 weeks prior to immunization Is being admitted the hospital to monitor liver function test.
COVID19 VACCINE (COVID19)	Hospitalized	928333-1	Fever, coughing, drowsiness, generalized weakness. Was found to be hypercalcemic (corrected calcium 14) and admitted 1/2-4. No prior history of hypercalcemia.
COVID19 VACCINE (COVID19)	Hospitalized	928378-1	Congestion Shortness of breath Tachycardia Transferred out 911. Per hospital, patient had a myocardial infarction, is unresponsive, and on hospice services.
COVID19 VACCINE (COVID19)	Hospitalized	928461-1	Anaphylactic reaction, Severe edema and raised red rash entire body, Severe itching ,Soft tissue edema of throat. Swelling of, eyes, lips, face. Multiple trips to ER, treated with steroids, Benadryl, prevacid. , CURRENTLY IN ICU ON EPINEPHRINE DRIP, STEROIDS, MULTIPLE MEDS
COVID19 VACCINE (COVID19)	Hospitalized	928558-1	Patient c/o fatigue and cough on 1.4.2021 and was encouraged to be tested for COVID. We were notified that the patient was hospitalized on 1.7.2021 with COVID symptoms and positive test results. She is currently on a ventilator and dialysis.
COVID19 VACCINE (COVID19)	Hospitalized	928662-1	On December 25th I had mild chest pain and then on January 1st, 2021 I had severe chest pain that persisted and on January 3rd I was admitted into the hospital. My Ddimer was elevated and my Troponin levels were elevated. An angiogram was performed and Dr. injected nitro into my arteries because they were constricted from Coronary Spasms.
COVID19 VACCINE (COVID19)	Hospitalized	928754-1	Sxs started 3-5 minutes post vax. Dizziness, hypotension, throat fullness, CODE called, given IM Epi at vax site. Taken to ED from vax site. Started on epi drip. Admitted to SHC.
COVID19 VACCINE (COVID19)	Hospitalized	928757-1	Nausea/ dizzy, Syncope 12 hours later.
COVID19 VACCINE (COVID19)	Hospitalized	928772-1	Patient felt warm with palpitations 5 minutes after vaccine administered. was monitored for 30 mins & then returned to work. on 12/30/2020 patient was at work in Presurgical testing dept & experienced near syncope, dizziness & elevated BP. reported to ED & was admitted to telemetry unit.
COVID19 VACCINE (COVID19)	Hospitalized	928777-1	Dr. called this morning and reported that an employee that works in billing had her vaccine on Wednesday and developed an anaphylactic reaction to Moderna. This was 24 hours later with rash, SVT heart rate above 140, low grade fever, redness at site. Admitted and treated with steroids and Benadryl.
COVID19 VACCINE (COVID19)	Hospitalized	928792-1	Came to ER on 12/20/20 with chills, heart palpitations, body aches and increased SOB. Had ST elevation on EKG in ER, taken to Cath Lab- no intervention done. D/C home 12/22/20. Previous Hx of COVID per patient
COVID19 VACCINE (COVID19)	Hospitalized	928871-1	Patient received first dose of Pfizer COVID-19 vaccine on December 26. On the next day, December 27, patient started having pressure in her head and sinuses, weakness. Then she developed nonproductive cough and progressive shortness of breath. She was seen at urgent care and tested positive for COVID-19 on December 29. She had low oxygen saturation on home oximeter and severe shortness of breath. Patient's husband is also ill with COVID-19 at home. Patient was sent to the ED and admitted to the hospital.
COVID19 VACCINE (COVID19)	Hospitalized	929074-1	About 15 minutes after receiving the vaccine she felt palpitations. She was monitored for another 15 minutes and while she was walking to her car she started noticing sore throat associated with inability to talk, unable to swallow secretions, and swelling the lips. Patient presented to the emergency room where she received EpiPen dose. Received diphenhydramine, famotidine, and prednisone. Lip swelling and sore throat began improving in ED.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	929118-1	a left sided nystagmus; urgent MRI showing multiple brain lesions consistent with Acute disseminated encephalomyelitis; Patient developed paresthesias on entire right side of body / The paresthesias continued, not progressing; a brief headache; episode of dizziness / developed severe dizziness; This is a spontaneous report from a contactable physician (patient). A 34-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730) intramuscularly at right arm on 21Dec2020 07:00 at single dose for COVID-19 immunization. Medical history included known allergies to sulfa meds. The patient's concomitant medications included multivitamins [vitamins nos] within 2 weeks of vaccination. Patient developed paresthesias on entire right side of body after a brief headache and episode of dizziness, all since 29Dec2020 15: 00. The paresthesias continued, not progressing, but patient was advised to obtain an MRI Brain and C spine as an outpatient. On 02Jan2021, the patient developed severe dizziness and a left sided nystagmus. She went to the ER and underwent urgent MRI showing multiple brain lesions consistent with acute disseminated encephalomyelitis. Lumbar puncture (LP) was performed, awaiting final results. Patient was admitted and was receiving IV steroids (solumedrol). Duration of hospitalization was 5 days since Dec2020. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient underwent lab tests and procedures, which included Nasal Swab and Rapid covid swab, both on 02Jan2020 with result of negative. The outcome of the events was recovering.; Sender's Comments: Based on temporal association and lack of other provided etiology, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported acute disseminated encephalomyelitis, paraesthesia, headache, dizziness and nystagmus. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	929184-1	difficulty breathing/swallowing; difficulty breathing/swallowing; Hives/hives all over including in her mouth; This is a spontaneous report from a contactable consumer (spouse). A 46-year-old female patient (wife) received BNT162B2 (Pfizer-Biontech Covid-19 Vaccine, lot number: EH9899) via unspecified route of administration at arm right on 29Dec2020 at single dose for Covid-19 vaccine. Medical history included ongoing anxiety diagnosed 22 years ago. Concomitant medications were not none. Patient received the vaccine and was one big hive (01Jan2021). She went to the ER on sat and will have to go back. Caller is asking where she should go. patient went through the VAERS report 3 times. She did not have any sides effects. patient is a frontline worker. On 29Dec2020 she got the Covid vaccine. On Sat 02Jan2021 she went the ER with hives all over including in her mouth, stated she had difficulty breathing/swallowing, was given medication to take home and discharged. She was readmitted yesterday 05Jan2020 with worsening symptoms and needed to be given a prednisone nebulizer. they had two ER visits. No Investigation Assessment. patient was not recovered from the event hives/hives all over including in her mouth, the final outcome of other events was unknown.
COVID19 VACCINE (COVID19)	Hospitalized	929391-1	1/6/21 Pt received vaccine and complained of difficulty swallowing and rapid heart rate. Pt received methylprednisolone 125mg IVP, diphenhydramine 25mg IVP, & famotidine 20mg IVP. Pt reported improvement and was discharged. Sent home on diphenhydramine and oral prednisone. 1/7/21 Pt unable to swallow her own secretions and experienced eyelid swelling. Pt vomitted. Pt received epinephrine and Benadryl X 1 dose each. Pt then transported to hospital via ambulance. Reason for admission - acute respiratory failure secondary to anaphylactic reaction. Decision was made to emergently intubate the patient for airway protection despite aggressive intervention. Pt successfully extubated 1/8/21. Plan to discharge home and start Medrol Dose Pack 1/9/21.
COVID19 VACCINE (COVID19)	Hospitalized	929610-1	C/o shortness of breath routine oxygen increased cannula changed to mask oxygen sats at 88%
COVID19 VACCINE (COVID19)	Hospitalized	929683-1	Labored breathing with oxygen running at 4l/min, muscle weakness
COVID19 VACCINE (COVID19)	Hospitalized	929689-1	Fever to 103.7F, respiratory rate 36. Was transferred from facility to hospital. Since then has been found to have gram-negative rod bacteremia, although urinalysis was negative, urine culture pending. Patient has since defervesced after receiving 1 dose of cefepime. Overall the most likely cause of fever seems to be urosepsis w/ bacteremia, pending confirmation with urine & blood cultures.
COVID19 VACCINE (COVID19)	Hospitalized	930005-1	initial; swelling of tongue, tingling and numbness in legs, syncope. later; HA
COVID19 VACCINE (COVID19)	Hospitalized	930010-1	Resident displayed with confusion/shaking at 1400, condition worsens at time went. Resident unable to state where he is, knows his name. can tell you he does not feel right. Temp 97.3, p 88, O2 91%, Bp 214/116 Transferred to ED with fever, temp of 103, and shortness of breath, admitted to ICU Positive COVID-19 test at hospital. Diagnoses include acute COVID-19 pneumonia and hypoxia. PO had confusion, fatigue, weakness, hypoxia, increased BP
COVID19 VACCINE (COVID19)	Hospitalized	930109-1	She began with an earache and dizziness. Pain got so severe that she could no longer take it. Went to the doctor which she was put on pain medications. Went to ER on 1/6 and on 1/7 went to her PCP. Still in severe pain.
COVID19 VACCINE (COVID19)	Hospitalized	930142-1	Patient experiencing Chest pain and elevated troponin. Patient taken to the cath lab and treated for suspected stress induced cardiomyopathy.
COVID19 VACCINE (COVID19)	Hospitalized	930153-1	ITP Plt 2
COVID19 VACCINE (COVID19)	Hospitalized	930235-1	Hospital on 1/2 - then again on 1/5, transferred and admitted to hospital, discharged 1/6 Abnormal reflex/weakness back pain paresthesia and weakness of legs abdominal pain evaluation for possible GBS post covid 19 vaccine

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	930297-1	29-year-old previously healthy female presenting today with difficulty sleeping, sore throat, and nausea after receiving the second Pfizer COVID-19 vaccine around 10 AM. Patient says that after her first dose of the vaccine she had mild sore throat and hoarse voice that resolved spontaneously. She had her vaccine around 10, several hours later before coming to the emergency department between 2--230 she had the sudden onset of difficulty speaking with associated sore throat and nausea. She has had dry heaving but no large amounts of vomiting. She has not had stridor, wheezing, shortness of breath, syncope, or the development of a rash or hives. She has not had a reaction to her prior vaccines she does not have any other allergies in general. She has otherwise been well recently without infectious symptoms including fevers, chills, cough, and has not been exposed to Covid to her knowledge. Medications administered in ED included diphenhydramine 50 mg IV once, dexamethasone 10 mg IV once, famotidine 40 mg IV once, ondansetron 4 mg IV once. Had brief episode of shaking and R arm rigidity in the ED. Patient denies LOC during the episode, did not have a post ictal state, no tongue biting or episodes of incontinence. Given single event without LOC, less concern about episode being a seizure. Patient has had no further episodes of shaking since admission. CT brain was wnl, no FNDs noted on exam.
COVID19 VACCINE (COVID19)	Hospitalized	930348-1	I am breastfeeding. My daughter had seizure like episodes starting on Saturday 1/2, Sunday 1/3, Monday, 1/4 and 2 times on Tuesday 1/5.
COVID19 VACCINE (COVID19)	Hospitalized	930476-1	Acute allergic reaction Tongue swelling Facial swelling Throat swelling Rash on throat and chest Redness in throat Diaphoresis Momentary loss of consciousness
COVID19 VACCINE (COVID19)	Hospitalized	930484-1	Altered Mental Status began the middle of the night of 01/06/21 and 01/07/21 with worsening overall status-definitive symptoms unknown to this reporter, this person was admitted to the local hospital at approximately 1800 01/07/2021. This reporter was not told the admitting diagnosis or any defining symptoms, only that the person was admitted.
COVID19 VACCINE (COVID19)	Hospitalized	930508-1	Initial itching at injection site, observed and returned to work. Came back ~30-40 minutes later with itchiness in throat and hives to arm. Given Benadryl PO and observed for extended period of time. Symptoms not resolving. Patient transferred to Emergency Department for further care. At that point observed to have full body rash, SOB. Given Epi while in ED. Developed tachycardia, hypotension. Treatment continued.
COVID19 VACCINE (COVID19)	Hospitalized	930518-1	After about 15 min: hr went to over 170bpm , flushed sensation, brain fog, was driving at the time and my brain wouldn't figure out how to call 911 , eventually I figured it out but it took extreme mental effort. Paramedics came and my pulse was From 100 - 170 changing rapidly, bp 150-175/x changing rapidly, symptoms would come and go about 8 times on way to hospital. In ER same thing then about 2 hrs go by and then all started again. Pulse remained at 90- 100bpm at least until 2am. (My resting hr is between 40 and 50, my normal bp is usually sub 120/80) I later realized my hands were swollen, mostly on my left side. Lingering symptoms include brain fog, tiredness, and headache. Maybe an exasperating issue was I had low potassium levels likely making symptoms worse - I worked out heavily early in the morning, probably had low intake of potassium that day and day before, and maybe slightly dehydrated from my workout - I do Functional lifting, run, and other types of exercise regularly.
COVID19 VACCINE (COVID19)	Hospitalized	930611-1	Developed hypercapnic respiratory failure, CHF exacerbation - readmitted to Hospital. In ICU with BIPAP
COVID19 VACCINE (COVID19)	Hospitalized	930669-1	patient begin to feel bad that night was admitted into hospital sometime in the next couple of days for dehydration, patient discharged home and then readmitted to hospital for positive covid testing after feeling very ill.
COVID19 VACCINE (COVID19)	Hospitalized	930889-1	I had a myocardial infarction on December 27, 2020. I had received my first vaccination for COVID-19 on December 22, 2020. Not sure if these are related but I felt I should report it.
COVID19 VACCINE (COVID19)	Hospitalized	930894-1	Low grade Fever, headache needing admission Intracranial hemorrhage with hypertension Medical management for hypertensive emergency Received surgical evacuation admitted in Intensive care,
COVID19 VACCINE (COVID19)	Hospitalized	930895-1	1/4/21: Headache, Dizziness & Fatigue 1/7/21: Left Sided Facial Droop
COVID19 VACCINE (COVID19)	Hospitalized	930916-1	Patient is a 32 yo G2P1001 with EDD 5/2/2021 by 7w US. She had the first dose of the Pfizer Covid 19 vaccination on 12/17/2020 at the Health Clinic and the second dose on 1/7/2021 at 1115 am. She began having abdominal pain and vaginal bleeding at 315 sm on 1/8/2021 progressing to a previable (22w2d) preterm birth at 739pm on 1/8/2021.
COVID19 VACCINE (COVID19)	Hospitalized	931224-1	Pt experienced extreme fatigue and sleepiness the day following her second vaccination for Covid 19 and was found by her family after collapsing on 1/6/21 at 05:30. Upon arousal, she experienced headache, vomiting, weakness, difficulty speaking and difficulty walking with lower extremity weakness. She was taken to urgent care and subsequently admitted for evaluation at hospital and found to have a normal chemistry, blood count, normal lumbar puncture and normal imaging of her neck and brain. Discharge summary notes 3/5 strength and hyporeflexia throughout. Pt had televisit consult with psychiatry and neurology. She is subsequently to be discharged to a Facility without explanation for her sudden onset of progressive lower extremity and vocal weakness. She is noted to have a history of shellfish allergy. She experienced mild symptoms after the first vaccination, but no neurologic or vascular symptoms at that time.
COVID19 VACCINE (COVID19)	Hospitalized	931286-1	I am a physician and I got dose 2 at 1:30pm on Jan 4. Next afternoon, Jan 5, I got severe myalgias, fever up to 100, severe fatigue, went home after work and slept til the next morning, went to work, took ibuprofen, and the myalgias improved and felt better. But around 3 pm, Jan 6, I got mild vertigo. By about 7pm Jan 6, I noticed my L ear didn't hear well. I changed the battery in my hearing aide and cleaned it but It made no difference. I woke up on Jan 7 with severe vertigo and hearing loss. I did Epley's maneuvers with no effect. I have had similar episodes. I went to work, but gave up when I could not hear patients talking to me. I went to the Emergency Dept and got admitted. I was too unsteady on my feet. Audiogram showed profound hearing loss both ears and almost complete loss of discrimination in R ear. I was put on high dose steroids. Also having tinnitus (mostly whooshing sound of my own pulse). MRI negative. Blood work negative. Some mild improvement now, after 1 dose steroids.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	931399-1	Fever up to 102.9, chills, headache, hypertension, tachycardia, dyspnea.
COVID19 VACCINE (COVID19)	Hospitalized	931417-1	"Myocardial Infarction: patient began to complain of severe chest pain 3 hours after the vaccine was given .. Vaccine NDC # 59267-1000-1. 0.3 ml given by RN. Patient called his PCP: ""... I had very bad chest and shoulder pains, neck pains and slight fever from 9 pm until early this morning (Jan 8). My blood pressure was 155/95 mmHg. Should I see you today? Still feel sore all upper body. Above message received at 0720 am (Jan 8) and the patient was called back at 0757 am (Jan 8): patient was told that many of the side effects above were related to the vaccine but the chest pain was worrisome and the provider requested the patient go to the emergency room. Patient understood the importance to seek medical attention..... Emergency Room notes: seen by MD on Jan 9. Note at 0749: patient complained of chest pain on/off since received COVID vaccine on Jan 7. Pain was substernal and radiated to the left shoulder, assoc with some SOB. EKG obtained and revealed ST segment elevation and a ""cardiac alert"" was called."
COVID19 VACCINE (COVID19)	Hospitalized	931432-1	At around 11:45pm tingling started in my left eyebrow. I thought there was something in my eyebrow and after time of wiping it a few times I went to look into the mirror and realized that nothing was there. about an hour later I got a drink and a snack to eat and I realized I had a numb sensation in the left corner of my lip. As a nurse I went though the signs of a stroke with 2 other nurses I called. Everything was normal other than that sensation. Thinking I was just overly tired I went to bed. When I woke up the next day I felt okay until I went to drink some coffee and the numb sensation in my corner lip was still there. Now I was concerned and called employee health and was instructed to go to the ER to rule out a stroke. I followed employee health's instructions and went to the ER. I was diagnosed with facial paresthesia and discharged with instructions to come back if symptoms got worse. Symptoms persisted all day and around 7 I called my mom on video chat to show a visual facial twitch on the left side of my face. right after I got off the phone with her the left side of my face drooped and my fiance immediately drove me to the closest ER. I was seen immediately and they decided to admit me. The did labs and head CT. They admitted me to labor and delivery because there were no other rooms. The next day I was seen by a neurologist and many doctors.
COVID19 VACCINE (COVID19)	Hospitalized	931484-1	Patient was unresponsive in her room during the night, had gotten the vaccine this morning, 911 called. Had right arm pain and loss of consciousness. EMS got 180/104 BP and blood glucose was 122. Was transported to hospital. Returned to the facility the next day with no complications, was just fatigued.
COVID19 VACCINE (COVID19)	Hospitalized	931507-1	8 hours after vaccine I experienced stomach pain and nausea. I then became very ill and extremely weak. I was laying on floor. Very difficult to talk and very dizzy. Unable to walk. Called 911 and went to ER. Had chest pressure and cardia work up was done. Dx wi ST elevation.
COVID19 VACCINE (COVID19)	Hospitalized	931558-1	7 day after site itching, hot swelling. Unsure if related 9 day after suffered CVA and have hyper coagulation
COVID19 VACCINE (COVID19)	Hospitalized	931658-1	after receiving vaccine patient immediately felt warm, dizzy and started dry heaving. we dosed Zofran 4mg, gave one dose epi-pen, and 50mg Benadryl. patient still complained of chest pain and was dry heaving. she was then transported by ems to the hospital at 4pm.
COVID19 VACCINE (COVID19)	Hospitalized	931662-1	Received vaccine 12/19/2020 at hospital around lunch time. Severe abd pain started 10 hours after vaccine administration with vomiting. I went to emergency room next morning Emergency appendectomy 12/20/2020. Had bleeding after surgery. Second surgery 12/21/2020
COVID19 VACCINE (COVID19)	Hospitalized	932059-1	"Dizziness started within 30 minutes after injection on 01/08/21 and felt ""off"". On 01/09/21 approx. 0800 Patient began feeling body aches, fevers, injection site pain, increased dizziness, and nausea. At approximately 1pm patient began vomiting and having diarrhea. Symptoms worsened over the next couple hours to where patient was unable to walk without stumbling. Wife witnessed patient becoming very pale and almost pass out at approx. 5:30pm. Patient states he feels like he's in slow motion. Patient is unable to maintain balance when walking and reports increasing fatigue and weakness."
COVID19 VACCINE (COVID19)	Hospitalized	932091-1	Started severe belly pain and went to Emergency room and diagnosed with mesenteric vein thrombosis after the CT scan of the abdomen, treated with heparin drip, antibiotic and discharged with anticoagulant pills(Eliquis). I am not sure that it is because of the vaccine my doctors are also not sure about it, but I am sure that I am a healthy person without any health issues . I am working as registered nurse, our unit is for covid-19 patient's since march 2020 and I had covid -19 on August month and recovered after 3 weeks.
COVID19 VACCINE (COVID19)	Hospitalized	932145-1	Patient came into the emergency department on 1/8/21 with an acute ischemic stroke with complete occlusion of her left MCA. She had acute and complete flaccid paresis of her right face, arm, and leg, complete aphasia, and neglect of the right side of her body. NIHSS of 27. Onset of deficit was between 6:30pm-7:10pm. She received her 1st COVID-19 vaccine dose that morning at 10:31am.
COVID19 VACCINE (COVID19)	Hospitalized	932366-1	The patient presented with left eye peripheral visual loss, left upper and lower extremity and facial numbness sensation and weakness. This started 1 hour after receiving COVID-19 vaccine at her place of employment. Pt was brought to CRMC via EMS.
COVID19 VACCINE (COVID19)	Hospitalized	932372-1	Patient received the Moderna Vaccine 1/2/21 at his VA Clinic. He received the vaccine that morning and by the evening he was not feeling well. He developed cough, weakness and fever and now is unable to ambulate. He has since been hospitalized and has tested positive for COVID-19.
COVID19 VACCINE (COVID19)	Hospitalized	932480-1	pt received Moderna vaccine. next day he had high fevers up to 103, confusion. admitted to hospital. infectious work up negative. improved off antibiotics.
COVID19 VACCINE (COVID19)	Hospitalized	932515-1	Resident appeared to be jaundice with yellow skin and eyes. Resident also complained of not feeling well. Urine was dark yellow. Resident short of breath. Resident was admitted to hospital and diagnosed with post-covid pneumonia.
COVID19 VACCINE (COVID19)	Hospitalized	932623-1	Acute ischemic stroke, basilar occlusion
COVID19 VACCINE (COVID19)	Hospitalized	932668-1	SOB

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	932696-1	Nausea/vomiting and diarrhea loss of appetite tachicardia sent to er for hydration.
COVID19 VACCINE (COVID19)	Hospitalized	932801-1	Two days following the first COVID vaccination he developed epigastric pain and was evaluated in the ER and was admitted for gallbladder surgery. He has a 6 year history of gallbladder disease but was not experiencing symptoms until after the COVID vaccination.
COVID19 VACCINE (COVID19)	Hospitalized	932915-1	Severe thrombocytopenia (plts 3k/uL), oral mucosal bleeding, bruising
COVID19 VACCINE (COVID19)	Hospitalized	933025-1	Sudden, severe worst headache of her life, coupled with onset of oral herpetic lesions and inflammation to unrelated body part (belly button piercing) occurred one week after vaccination received. She presented to ED 12/28 noted to have hypokalemia and head CT showed mild occipital encephalitis, admitted overnight for obs subsequent brain MRI was normal. She was seen in my clinic 2 days later (1/4/21) and was started on 3 day course of Decadron, topical acyclovir for herpetic lesion. As she is a nurse, I kept her off work until resolution of symptoms. Seen again on 1/8/21, headache resolved. She did discuss CT and MRI results with neurologist. He was not convinced this was vaccine related. She is having 2nd dose of vaccine on 1/11/21.
COVID19 VACCINE (COVID19)	Hospitalized	933299-1	encephalitis; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE) , via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient was allergic to UTI(urinary tract infection) infection medication (i.e. sulfamethoxazole, trimethoprim etc.). Concomitant medications were not reported. The patient got encephalitis and was put in the ICU(intensive care unit) after getting vaccinated, led to hospitalization. Outcome of event was unknown. Information about lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Hospitalized	933369-1	Anaphylactic reaction
COVID19 VACCINE (COVID19)	Hospitalized	933739-1	"Staff member checked on her at 3am and patient stated that she felt like she couldn't breathe. 911 was called and taken to the hospital. While in the ambulance, patient coded. Patient was given CPR and ""brought back"". Once at the hospital, patient was placed on a ventilator and efforts were made to contact the guardian for end of life decisions. Two EEGs were given to determine that patient had no brain activity. Guardian, made the decision to end all life saving measures. Patient was taken off the ventilator on 1/9/2021 and passed away at 1:30am on 1/10/2021. The initial indication from the ICU doctor was the patient had a mucus plug that she couldn't clear."
COVID19 VACCINE (COVID19)	Hospitalized	933751-1	Approx 5 minutes after vaccine was given, patient stated he was not feeling well, asked for water and stated he was having trouble breathing. Was then assisted to clinic treatment room, vitals were taken: 08:45 B/P 171/110, HR 84, R 28 O2 97. EMS was activated. At 0900 158/94 HR 84 R 24 O2 97. Patient then voice he was having tightness in his throat. Epi Pen 0.3mg administered at 0900. At 0904 EMS arrived and patient taken to the nearest hospital.
COVID19 VACCINE (COVID19)	Hospitalized	933755-1	Numbness and tingling bil upper extremities, seizure, temporary paralysis R arm. Started day after vaccine given, was observed overnight in hospital.
COVID19 VACCINE (COVID19)	Hospitalized	933792-1	"Manager was notified that the employee had suffered a stroke-like ""serious medical event"" hours after the end of her shift, while at home."
COVID19 VACCINE (COVID19)	Hospitalized	933805-1	Patient had vaccine in Left arm. That same night patient had temp of 100.1 and the right neck at base of head to shoulder began to hurt patient was unable to swallow without pain in the next few days. Patient went to ER and was hospitalized for 2 days treated with IV steroids and 2 antibiotics (clindamycin and acyclovir). Patients symptoms resolved and patient was discharged without additional issues. The admitting physician was unable to identify the cause of these symptoms, but the vaccine could not be ruled out.
COVID19 VACCINE (COVID19)	Hospitalized	933913-1	Upon assessment resident noted to have increased respirations, lungs CTA. Resident c/o increased fatigue and muscle aches. VS 202/180, 118, 22, 97.1, 96%.
COVID19 VACCINE (COVID19)	Hospitalized	933935-1	Sever thrombocytopenia (platelet count 2,000) 8 days following Moderna COVID vaccine. Clinically suspicious for ITP.
COVID19 VACCINE (COVID19)	Hospitalized	933950-1	Received vaccine on 1/5, began having swelling in bilateral hands and lower extremities on 1/7, along with fatigue. On 1/8 she reports new swelling started in her face (eyes and cheeks). Swelling has not improved today and fatigue has worsened.
COVID19 VACCINE (COVID19)	Hospitalized	933965-1	Found on floor by CNA at 6 am. On assessment by charge nurse, VS: 99.6-94-16 212/105 manual. Noted increased confusion. Temp. 99.6 FBS 114. Resident had been provided tylenol just prior in shift for general discomfort (sore muscles) and low grade temp. On call for Dr notified of all and received order to send to ER.
COVID19 VACCINE (COVID19)	Hospitalized	934094-1	Approximately 15 minutes after receiving the vaccine, client started c/o itching to face and lips. Transported to triage area. Where she started c/o burning lips also. vital signs monitored, Benadryl 50mg po given. In a few minutes she reported chest tightness, labored breathing. 1:44pm Epinephrine was given IM. client was on O2 increased to 15 Liters. She admits to decreased chest tightness and itching of face improving. She was taken by ambulance to hospital, where she was admitted overnight for observation. She was given Benadryl and epi X2 more time, once in ambulance and once at the hospital. She denies any problems since then. She did say that approx 3 weeks ago she was a contact to a case of covi
COVID19 VACCINE (COVID19)	Hospitalized	934099-1	Patient is a 41 y.o. female who presented to the ED with complaints of a reaction after she took the COVID vaccine. Patient is an RN here and had earlier received COVID-19 vaccination (Moderna) around 0130 this afternoon. Soon after she experienced rash which was burning and itchy on her arms thighs and back. She reported to Occ health and was directed to the ED. While in the ED she experienced throat tightness and nausea. She had one episode of diarrhea. No tongue, lip swelling, SOB or difficulty swallowing. Denies any chest pain, palpitations, pre-syncope/syncope. No vomiting abdominal pain. H/o of allergy to fish mix and dust mite.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	934156-1	01/06/21 at 6 pm, body aches, and chills 01/07/21 at 12am T102.2, SPO2 62% on room air. Was sent to ER and returned. 01/08/21 at SPO@ less than 60% on room air, non responsive to verbal tactile stimuli. Responsive to sternal rub only. Was sent to ER and admitted to ICU.
COVID19 VACCINE (COVID19)	Hospitalized	934383-1	Approximately 10 minutes after receiving the vaccine she started experiencing numbness and inability to move all 4 extremities. No difficulty breathing or swallowing. Benedryl 25 mg was administered with no relief. EMS was called, she was transported to the ED and admitted to the hospital for evaluation. She was given Ativan 0.5 mg IV with some mild improvement in symptoms. She has had gradual improvement in her symptoms, now able to move her arms normally. She has persistent weakness and discomfort in both lower extremities and is unable to ambulate without assistance.
COVID19 VACCINE (COVID19)	Hospitalized	934407-1	1/8/2021 tachycardia Pulse 140, Fever T99.4 then 100.2 Lethargy, Somewhat Altered Mental status
COVID19 VACCINE (COVID19)	Hospitalized	934475-1	"Her voice became raspy, she could hardly talk, she could barely talk; her hand and whole arm swelled up; her hand and whole arm swelled up; Trouble breathing; This is a spontaneous report from a contactable healthcare professional (patient). A 57-year-old female patient received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BioNTech) (lot# EK9231, exp date Apr2021), via an unspecified route of administration in the right arm, on 29Dec2020, at single dose, for COVID-19 immunization and diphenhydramine hydrochloride (BENADRYL), via an unspecified route of administration, at unknown posology, on 29Dec2020 (20 minutes prior to taking bnt162b2), for anaphylactic reaction. Medical history included ongoing thyroid disorder. Concomitant medications included apixaban (ELIQUIS), diltiazem (unknown trade name), losartan (unknown manufacturer), rosuvastatin calcium (CRESTOR), levothyroxine (unknown trade name), ongoing levothyroxine sodium (SYNTHROID) for thyroid disorder and metformin (unknown trade name). Previously the patient received unspecified influenza vaccine (reported as flu shot) for immunisation, on unspecified date, and experienced anaphylactic reaction treated with Benadryl. On 29Dec2020, an hour after getting the vaccine, the patient experienced her voice became raspy, she could hardly talk, she could barely talk with outcome of unknown, her hand and whole arm swelled up with outcome of unknown, trouble breathing with outcome of unknown. The reporter stated that her voice and everything reacted and made her go to the emergency room on 29Dec2020. She reported that had adverse effect more than normal. The event ""Her voice became raspy, she could hardly talk, she could barely talk"" caused patient's hospitalization on unknown date. The action taken as a result of the events with diphenhydramine hydrochloride was post-therapy. Therapeutic measures were taken at the emergency room as a result of the events and included treatment with Topcid and Benadryl every 6 hours, 2x 40 mg of steroid. The information on the lot/batch number has been requested. Follow-up (02Jan2021): New information received from the same contactable healthcare professional reporting for herself includes: patient's details, medical history, events updated, vaccine lot# and exp date, concomitant, seriousness of event ""Her voice became raspy, she could hardly talk, she could barely talk"" added as hospitalization, historical vaccine, suspect Benadryl details, therapeutic measures updated.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation between vaccination and onset of events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Hospitalized	934676-1	Chills Hip pain
COVID19 VACCINE (COVID19)	Hospitalized	934749-1	38-year-old female who is healthcare worker and received first dose of COVID vaccine (Pfizer). Immediately after receiving the vaccine, patient developed lightheadedness, flushing, hives, wheezing and throat swelling. Patient was treated in an emergency department with epinephrine, gradually improved and was able to be sent home with an EpiPen, prednisone, hydroxyzine, and famotidine. The next day, patient again developed shortness of breath and her husband administered the EpiPen. EMS arrived and gave another dose of IM epinephrine and IV diphenhydramine. On arrival to the emergency department, the patient was altered, diaphoretic, tachypneic, tachycardic, and stridulous. Patient was given multiple doses of IM epinephrine and started on epinephrine drip. Stridor continued and was unresponsive to nebulized albuterol. Patient was then intubated and placed on mechanical ventilation. Other treatments included solumedrol, pepcid, magnesium sulfate, nebulized epinephrine, and IV fluids. admitted to the intensive care unit, weaned off epinephrine drip, and extubated the next day. Patient was monitored on hospital floor for one additional day and was then discharged with no residual symptoms.
COVID19 VACCINE (COVID19)	Hospitalized	934869-1	Patient had a rash prior to COVID vaccine. Prednisone 10mg started on 1/5/21 (only one dose administered) 1/6/21, 1am - Rash worsened with increase redness, warmth and extending of body surface, Temp 100.4, 1/6/21, 1:20am Benadryl 25mg administered, (Keflex was ordered at this time, however never administered). 1/6/21, 3am rash improved, temp 99.1 1/6/21, 6:50am Right facial droop and right sided weakness, sent to ER 1/6/21 transferred to hospital, continues to be hospitalized 1/11/2021
COVID19 VACCINE (COVID19)	Hospitalized	934889-1	HPI narrative: Patient was fine until 2 days ago. Patient does have chronic dementia but got Covid vaccine 11:00 2 days ago and that night seem to be confused and not able to walk since then. Patient poor appetite since yesterday. Patient had diarrhea 3 x 2 days ago. No vomiting no fever no cough does not appear to be short of breath. Patient also with left hip pain for few days with no injury.All history obtained from caretaker at bedside.
COVID19 VACCINE (COVID19)	Hospitalized	934901-1	SEVERE ABDOMINAL PAIN

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	934906-1	<p>"experienced symptoms of TIA; Severe aphasia; blurred vision; confusion; short term memory loss; elevated blood pressure; This is a spontaneous report from a contactable Other-HCP(Patient). A 57-year-old female patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at right arm, on 22Dec2020 08:15 at single dose for COVID-19 immunization. The patient was not pregnant. Medical history included herpes simplex on lips, post menopause, elevated cholesterol w/lifestyle changes. Known allergies reported as no. Concomitant medication included varicella zoster vaccine rge (cho) (SHINGRIX) for immunization. On 04Jan2021 08:30, the patient experienced symptoms of transient ischaemic attack(TIA), severe aphasia, blurred vision, confusion, short term memory loss, elevated blood pressure. The patient admitted to (Hospital name) (still here, hospitalization days reported as 2). Symptoms resolved except very mild aphasia. The patient had very few risk factors for TIA but did have family history of cardiovascular(CV) disease at young age, low density lipoprotein(LDL) was 192. The patient did not have diabetes, HTN, or known heart disease. She did not have severe anxiety. She did not smoke or use any substances. She walked about five miles 4x a week. Weigh reported as 157. Events reported as serious due to hospitalization. The patient had no Covid prior vaccination. Covid(nasal swab) was tested post vaccination on 04Jan2021, Covid test result was Negative. The event resulted in emergency room/department or urgent care. Treatment received for the adverse event included clopidogrel bisulfate(PLAVIX), acetylsalicylic acid (ASPIRIN), statin; potassium, CT, MRI, ""telemet"". The outcome of the events was recovering. Information on the lot/batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported symptoms of transient ischaemic attack(TIA), severe aphasia, blurred vision, confusion, short term memory loss, elevated blood pressure and the administration of BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, Agency, as appropriate."</p>
COVID19 VACCINE (COVID19)	Hospitalized	934912-1	<p>DVT; have pain in same site where DVT is; This is a spontaneous report from a contactable consumer. A 28-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK9291), via an unspecified route of administration in left deltoid on 24Dec2020 10:00 at first single dose for COVID-19 immunization. Medical history was none. There were no concomitant medications. Caller was calling to report a possible adverse reaction to the Pfizer Covid-19 vaccine. The patient was currently at hospital, she was admitted for deep vein thrombosis (DVT) of left iliac vein, the patient had no past history as to why this would happen, that she is only 28 years old. Received the vaccine on 24Dec2020, the following day she did have pain in same site where DVT was. Took ibuprofen for the pain. The patient was admitted yesterday 04Jan2020 for the DVT, they were currently treating her with Lovenox injections and prescribing dose for discharge is Eliquis. CT scans and three shots of Lovenox for it, doing a doppler of bilateral legs and echocardiogram (echo) of her heart to make sure there is nothing else. The AEs require a visit to emergency room. The patient was asking if she can still get the 2nd dose based off the adverse event she experienced. Outcome of DVT was not recovered, of pain was unknown.</p>
COVID19 VACCINE (COVID19)	Hospitalized	934922-1	<p>Followed by neurological symptoms staring day 4; parasthesias of both upper extremity; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; Flu like symptoms first 3 days; This is a spontaneous report from a contactable physician (patient). A 39-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ek5730) at left arm, via an unspecified route of administration on 16Dec2020 at single dose for covid-19 immunisation. Medical history included hypertension, diabetes, migraines, Eosinophilic granulomatosis with polyangiitis (EGPA) remission. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient did not have any allergies to medications, food, or other products. The patient's concomitant medications were not reported. On 21Dec2020, the patient experienced flu like symptoms first 3 days. Followed by neurological symptoms staring day 4, parasthesias of both upper extremity with progression to muscle weakness of all four extremities. Leading to 2 ER visits and hospital admission. Evaluation by internal medicine, neurology and rheumatology. Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop. The events resulted in Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, Hospitalization, Disability or permanent damage. The treatment for events included High dose steroid. Covid test included Nasal Swab: negative on 19Dec2020. The outcome of events was not recovered.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events influenza like illness, neurological symptom, paraesthesia, muscular weakness and peroneal nerve palsy cannot be excluded. The information available in this report is limited. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	934951-1	<p>Acute demyelinating encephalomyelitis; Slurring his speech; Stroke; This is a spontaneous report from a contactable physician. A 35-year-old male patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in deltoid (unknown if right or left) on 17Dec2020 at 30 ug, single for 'Preventative'. Medical history included hypertension. There were no concomitant medications.(Physician) He is calling about the Pfizer Covid 19 vaccine. States what is going on with the patient may be associated as a side effect. The patient got the vaccine two to three weeks ago, he clarifies the patient received the vaccine on 17Dec2020 and the patient ended up acutely developing (states it is a presumptive diagnosis) Acute demyelinating encephalomyelitis, states it looks like a radiologic diagnosis. The patient is an employee at hospital. When querying seriousness states it is medically significant but could be disabling but he thinks the patient will recover. Reporter seriousness for acute demyelinating encephalomyelitis: Medically significant, Hospitalization. Patient was hospitalized on Sunday and he is still admitted at this time. Dates when patient was in hospital for acute demyelinating encephalomyelitis was from 03Jan2021 to ongoing. Caller thinks the patient was flown to (Place) yesterday. The patient's mother asked the caller if the caller thought the acute demyelinating encephalomyelitis was from the vaccine and the caller responded that he did not think it was from the vaccine. He confirms the patient is still admitted in the hospital and the patient's attending neurologist is doctor. The caller heard about the patient from doctor. When querying covid vaccine dose, the caller states the standard dose is 30 mcg. This was clarified and documented as provided. The patient has not received his second dose yet. He asks if the patient should receive the second dose. He asks a general question if a pregnant patient can be given the Pfizer covid vaccine. He heard the patient had a stroke then the CFO tried to talk to him and the patient was slurring his speech. Caller spoke to the patient's mother this morning and caller told the mother that he would try to find out what is going on with the patient. He asked that the patient get an HIV test even though he does not think the patient is at risk. Vaccination facility type was Hospital. Vaccine administered at military facility was No. None additional vaccines administered on same date of the PFIZER suspect. AE acute demyelinating encephalomyelitis require a visit to Emergency Room, not visit to physician office. Prior Vaccinations (within 4 weeks) was none. He has heard of acute demyelinating encephalomyelitis being associated with vaccines in the past and states that it is rare and usually in kids. States he saw patients that may have had acute demyelinating encephalomyelitis back in the 80s and 90s. Therapeutic measures were taken as a result of acute demyelinating encephalomyelitis (Patient will get steroids tonight pending the review of the x-ray). The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported stroke with speech slurred, and the presumptive diagnosis of acute demyelinating encephalomyelitis (looks like a radiologic diagnosis by the reporting physician), was most likely an intercurrent disease, and unlikely causally related to the first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE). The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	934961-1	<p>"Swollen lymph nodes; blood pressure was 90/50; Chills; body aches; Fatigue; Joint pain; Bone pain; Headache; Swelling, pain, redness and soreness at the injection site; Swelling, pain, redness and soreness at the injection site; Swelling, pain, redness and soreness at the injection site; Tachycardia / heart rate was 144-152; painful to breath and she was grunting; also said that the injection site itched a little bit. ; Fever; First dose on 17Dec2020, second does on 04Jan2021; This is a spontaneous report from a contactable nurse reporting for herself. A 35-year-old female patient received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number was unknown) intramuscularly on 17Dec2020 at 0.3ml, and the second single dose (lot number EJ1685) intramuscularly on 04Jan2021 07:45 at 0.3ml, for COVID-19 prophylaxis. Medical history included ongoing diabetes. Her diabetes was diagnosed about 6 months ago (reported on 06Jan2021) and was well controlled. Her glucose was at 140 at the ER (emergency room) even after drinking a drink that had sugar in it. The patient's concomitant medications were not reported. The patient received the second dose on 04Jan2021 at 07:45 and experienced a severe reaction hours after she received it, and she ended up having to go the ER and that they were baffled about what happened. She reported her symptoms were: fatigue, joint pain mainly in her knees, bone pain that did not feel like muscle pain, headache, swollen lymph nodes in the left axilla, and swelling, redness, pain, and soreness in the left arm at the injection site and also said that the injection site itched a little bit. Her symptoms started about 9-10 at night on 04Jan2021. She said that she felt like with the second dose she noticed the soreness and pain and redness at injection site after about 2 hours after receiving the second dose, which was sooner than with the first injection. The fever started with the chills and body aches. The chills and body aches started at 22:00 on 04Jan2021. She took acetaminophen and melatonin to try and sleep it off. Fever was after that at around midnight 04Jan2021 and she was burning in fever and her temperature was 104. She stated she started taking layers off and got out from under her covers. She had a sweater on when she took her temperature and her axillary temperature was 105. She said that she got into a hot shower because that was the only thing that provided comfort to her chills. She had not had any chills in about the last 12 hours though (as reported on 06Jan2021). She said that the body aches were so severe that she just sat in her bed and cried. She had tachycardia and she was grunting in pain. She was rotating ibuprofen and acetaminophen and then her fever was not as high. She stated that if her fever came back it was lower each time, and if she did not take the medications though, the bone pain was excruciating. She said that with the bone pain it was like no-one can hold her hand or hug her. Fatigue started at around midnight 04Jan2021. Her headache was at midnight. She felt like she had a headband on and was radiating down the back of her neck. She noticed the lymph nodes were swollen after she went to the ER at around 07:00-08:00 05Jan2021. She was walking with pillow under her arm, and if she moved or lifted her arm it hurt. She went to the ER at 01:00 05Jan2021. Her blood pressure was 90/50, her heart rate was 144-152 at rest, temperature was 102.8, O2 saturation was 95-96. She said that it was painful to breath and she was grunting, but did not have any breathing issues. The nurse thought she was septic and notified the doctor. The nurse and the doctor did not think it was the vaccine and thought that she was COVID-19 positive. But after they tested her, she was negative for flu and COVID and they were baffled. They were unclear on what happened and did not think it was from the vaccine. They bolused her 1 liter of Normal Saline and gave her a dose of Fentanyl that minimally helped with the bone pain. She was also given 30mg of ketorolac (TORADOL) IV (intravenous) and that significantly improved her pain. She was there a total of 3 hours. She was admitted to the back area of the ER. She said that they drew labs and everything was within normal limits. Her CRP (C-reactive protein) was 30 and her lactate was at 1.5. She said that they told her that she was most likely having an immune response to the vaccine. Her heart rate and blood pressure came to a more normal range and everything returned to baseline. Her heart rate was 109. She was told to rotate paracetamol (TYLENOL) and ibuprofen for at least the next 24 hours and hydrate. The events fever, chills, fatigue, joint pain, bone pain, headache, swollen lymph nodes, and swelling, pain, redness and soreness at the injection site were serious due to hospitalization from 05Jan2021 to 05Jan2021. The patient was recovering from fever, chills, joint pain, headache, heart rate and blood pressure, not recovered from fatigue, bone pain, swollen lymph nodes and swelling, pain, redness and soreness at the injection site. The event swollen lymph nodes worsened. The outcome of ""injection site itched a little bit"" was unknown. The reporter considered the events fever, chills, fatigue, joint pain, bone pain, headache, swollen lymph nodes, and swelling, pain, redness and soreness at the injection site were all related to the vaccine; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events pyrexia, chills, fatigue, pain, arthralgia, bone pain, headache, lymphadenopathy, vaccination site erythema, vaccination site swelling, vaccination site pain, blood pressure decreased, tachycardia, grunting and vaccination site pruritus cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate."</p>
COVID19 VACCINE (COVID19)	Hospitalized	934963-1	<p>Death; This is a spontaneous report from a contactable Physician. An elderly male patient received BNT162B2 (COVID vaccine), via an unspecified route of administration on an unspecified date in Dec2020 at single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced death in Jan2021. It was unknown if an autopsy was performed. It was unknown if any treatment was received for the event. It was unknown if the patient was diagnosed with COVID prior vaccination or if the patient had been tested for COVID post vaccination. Seriousness criteria for the event was reported as death and hospitalization. Pfizer is a marketing authorization holder of [COVID vaccine] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [COVID vaccine] has submitted the same report to the regulatory authorities. Information about lot/batch number has been requested.; Sender's Comments: Current information is very limited for full assessment. Further information such medical history, concomitant medications, concurrent illness and event term details especially death cause and autopsy results are needed for meaningful evaluation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.; Reported Cause(s) of Death: Death</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	934990-1	26-year-old lady came in after she noticed she had bruises on her left hand after a CPR procedure at hospital. Patient was apparently in well health, she had received COVID-19 mRNA vaccine on January 7 at 3 PM, she has taken 2 pills with ibuprofen and tylenol for pain in right deltoid following vaccination. She was doing the CPR at 1:00 this afternoon, and she noticed that her left dorsum had some bruises. She took day off and went home and noticed that she also had bruises in both medial thighs, above the knee and some bruises in scalp. Patient presented to the Emergency Room 1/9/2021 ~6PM and platelet count was found to be $2 \times 10^3 / \mu L$. Patient required transfusion of 7 units of platelets, steroids, and IVIG.
COVID19 VACCINE (COVID19)	Hospitalized	935266-1	"Patient presents with abdominal pain that started in the middle of the night. Had first COVID vaccine the previous day. Patient states the pain is intermittent ""comes and goes"" ""cramping"" ""pressure and bloating"" feeling. Patient states her normal bowel movements are 12 times per day. The last time she went was this morning. She is concerned about an ""obstruction"" Patient states she has ""some nausea"" She states she has ate and drank normally today. Patient has a history of ulcerative colitis and a complete colectomy with a ileal rectal pouch. She has had abdominal pain since this morning which is crampy, associated with nausea and recurrent vomiting. She normally has 6-12 bowel movements a day, but none since this morning. She does feel her abdomen is distended as well. The last time she had anything like this was when she developed pouchitis last spring, but that was much less painful than this. Her appendix is gone, but she believes she still has her gallbladder."
COVID19 VACCINE (COVID19)	Hospitalized	935310-1	Went into the ED for bilateral hand and feet tingling. Worked up for possible Guillain Barre.
COVID19 VACCINE (COVID19)	Hospitalized	935338-1	"Patient reported stroke-like symptoms as he was driving to work: started ""feeling funny"" with dizziness; progressed to feeling weakness in left side of face with facial drooping; tingling in left hand progressed to numbness and weakness in left arm and leg; difficulty coordinating motor movement in right arm; difficulty/diminished speech ""tongue felt fat."" Symptoms resolved within appx 1+ hour from onset. Per patient, he was given an injection at the hospital (unsure for what?) and was discharged with a prescription for chlorthalidone 25mg daily, blood pressure was elevated."
COVID19 VACCINE (COVID19)	Hospitalized	935350-1	Patient was found unresponsive at home with SpO2 20% 1/2/2021
COVID19 VACCINE (COVID19)	Hospitalized	935452-1	1/6/21 8pm started with Nausea, vomiting, diarrhea and fever. 1/7/21 started having intermittent chest pain in the morning. Then in the evening it became constant. Went to ER that evening due to chest pain. EKG showed t wave abnormality. 1st Trop was negative went from 0.08 to 2.3 Had 2 Echo's done and they were normal. Platelets were 85. Was discharged without chest pain. Troponin on discharge was 0.67 and platelets 61. Was admitted due to Chest pain and troponin. Attending provider diagnosed as myocarditis and thrombocytopenia R/T vaccine.
COVID19 VACCINE (COVID19)	Hospitalized	935569-1	Pfizer COVID-19 Vaccine A couple hours after the vaccination the patient experienced pain in the vaccine arm, headache, and feeling ache. Day 1 post vaccination patient experienced sore arm, headache, low grade fever, feeling ache, and GI symptoms with diarrhea. Day 2 post vaccination patient experienced sore arm, Migraine, and diarrhea. Day 3 post vaccine patient woke up with chest pain that radiated into her left arm and some weakness. Patient's blood sugar was >500 and was admitted to hospital for DKA.
COVID19 VACCINE (COVID19)	Hospitalized	935780-1	Extremely tired went to bed at 8:30. At 11:00, tossed and turned until 12:16 a.m. Did not think she could stand up. Walked in the bathroom had pain in stomach, was very hot and freezing at the same time, was shaking. Head hurt was hurting so bad. Tried standing up from toilet, was passed out. Eye, half of face is bruised and swollen, eye shut for two days. More than forty minutes passed before she could call her husband. Does not remember anything because she was passed out. Husband came in and grabbed her, to get her back into bed. she could not stand. Went to ER at Hospital. Had CT scan, blood work, EKG, chest xray. Was still kind of out of it but was able to communicate with nurses. Face is still black and blue. Last night got up at 4:00 a.m. something was wrong with her throat. Felt like a walnut was in her throat. Went to doctor this morning. They said it was a reaction from the shot. Got an EpiPen, prednisone. Call them in 2 days to let them know how she's doing and also wear a heart monitor because they do not know how to take care of her, Has had vision blurriness in both eyes. Has not felt well at all.
COVID19 VACCINE (COVID19)	Hospitalized	935849-1	Noted left lymph nodes left neck. On January 7, 10 days post injection had acute appendicitis requiring emergency appendectomy.
COVID19 VACCINE (COVID19)	Hospitalized	935984-1	About 15 minutes after vaccine, hr 155, fever 102, covered in hives, sick to her stomach and a pounding headache. Has had headache since then and been extremely fatigue.
COVID19 VACCINE (COVID19)	Hospitalized	936151-1	One week after administration, I had sudden onset inability to move left arm. I was transported to ER immediately. Treated, scanned with CT of brain, MRI of brain, c-spine and brachioplexus. In hospital for 2 days and no answers. Still no answers to left arm paresthesia and proprioceptor deficits. Spreading into left leg and mild systemic symptoms. I have been to the ER, seen by primary physician, Physiatrist and Neurology and Occupational Therapy. I am scheduled for many more appointments and trying to find an answer.
COVID19 VACCINE (COVID19)	Hospitalized	936715-1	Approx 10-15 post vaccine, employee said she felt lightheaded and like her heart was racing. Within 10 minutes she said she felt difficulty breathing, She then vomited. The observation nurse at the clinic administered Epi Pen and called a Code. The employee was transported to the Emergency Dep't and then to intensive care. She was placed on an Epi drip.
COVID19 VACCINE (COVID19)	Hospitalized	936891-1	Increased weakness leading to a fall and fever of 101.3
COVID19 VACCINE (COVID19)	Hospitalized	936993-1	Patient began experiencing fevers, body aches, back pain, fatigue, chills the night she received the vaccine. Symptoms progressed for the following four days when she was ultimately seen in PCP office. Laboratory evaluation demonstrated atypical pneumonia and elevated WBC count. Patient was diagnosed with Acute Myeloid Leukemia via bone marrow biopsy and is receiving treatment at the hospital.
COVID19 VACCINE (COVID19)	Hospitalized	937030-1	LEFT FACIAL AND TONGUE NUMBNESS - WORK UP CVA NEG Narrative: Developed left facial and tongue numbness 4 hours after vaccine - went to ER and admitted for 2 days, negative workup for CVA or other acute etiology. Symptoms resolved prior to discharge from hospital

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	937089-1	Within 24 hrs, developed headaches, burning sensation down spine and neck. fullness in head intensified next day. balance was off, numbness and tingling throughout body. Went to ER. Diagnosed Paresthesia
COVID19 VACCINE (COVID19)	Hospitalized	937343-1	Within approximately 30 minutes after vaccine (Thursday), patient presented with red rash to upper chest, severe headache, dizziness and nausea. Was treated with Benadryl and Tylenol per anesthesia onsite. Symptoms remained throughout the day with minimal improvement. The following morning (Friday) only headache remained. patient began having abdominal pain, and was admitted to hospital the next day (Saturday). It is now Tuesday and patient is still hospitalized. Unclear if this entire event is vaccine related.
COVID19 VACCINE (COVID19)	Hospitalized	937474-1	Pt experienced the following morning: fever (100 F) chills, malaise, nausea, and numbness in hands at 0624 and 0836. Pt went to hospital at 1000, tx with IV fluids.
COVID19 VACCINE (COVID19)	Hospitalized	937480-1	"In the early morning of Monday, January 11th the patient developed a significant headache with neck pain. She also reported parathesia and tingling in bilateral upper extremities with weakness of the right upper extremity. She reported feeling very anxious and ""wound up"". Patient presented to the Emergency Department 3 hours later. CT of the head/brain, EKG, CBC,CMP, Magnesium and Cardiac profile were performed with no significant findings. Ativan 0.5mg was administered orally. Patient was admitted to the facility for observation. Symptoms gradually resolved with no additional treatment."
COVID19 VACCINE (COVID19)	Hospitalized	937579-1	On 12/31/2020, at approximately 00:15, pt developed a fever of 102.9 F and tachycardia with rate of 120. He was treated with acetaminophen. Later in the morning, he complained of nausea, generalized muscle aches, intermittent increase in confusion. At approximately 14:00, he had a fall out of bed and at that time noted to be short of breath, tachypneic. He was taken via ambulance to Emergency Department. From there he was transferred to Hospital for admission with acute respiratory distress, suspected sepsis with lactic acid 7.4 and Bilateral Pulmonary Emboli. He was started on heparin and broad spectrum antibiotics and transitioned to ELIQUIS on 1/3/2021. Infectious etiology of sepsis was unclear. He continued broad spectrum antibiotics with clinical improvement. Abdominal CT scan was obtained due to intermittent nausea, vomiting, abdominal pain, loose stools. His heart rhythm flipped to Atrial Fibrillation with RVR on 1/2 and his rate improved with titration of metoprolol. He was also treated with prednisone for suspected underlying undiagnosed COPD. It is noted in his hospital summary that PEs presumed provoked in the setting of his recent COVID 19 infection. He was discharged from the hospital on 1/8/2021 and readmitted to the Veterans Home. He has been stable.
COVID19 VACCINE (COVID19)	Hospitalized	937582-1	Received Moderna vaccine on 1/5. Had a single episode of vomiting approximately 1 hour after vaccine. Hx of Asthma, started to develop SOB approximately 2 days later. She reached out to PCP and used inhaler with little relief. SOB worsened and she was admitted to the hospital on 1/8/21. Eval was negative for COVID (3 tests completed), flu and pneumonia. She has elevated WBCs and was given steroids and supplemental oxygen. She is improving but remains inpatient.
COVID19 VACCINE (COVID19)	Hospitalized	937932-1	Patient presented with myalgias, fevers, and chest pain on 1/10/21 and was found to have diffuse ST elevation and elevation troponin. He was evaluated by cardiology and diagnosed with acute myopericarditis. He was treated with NSAIDs and colchicine. He improved with this treatment and was discharged on 1/12/21 with ibuprofen and colchicine and outpatient cardiology follow up.
COVID19 VACCINE (COVID19)	Hospitalized	938059-1	severe ITP; This is a spontaneous report from a contactable physician. A 22-years-old male patient received his first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Dec2020 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient developed severe ITP (Idiopathic thrombocytopenic purpura) on 20Dec2020, 3 days after first dose of the vaccine on 17Dec2020. He was hospitalized for 3 days and now the patient was healthy with a normal platelet count on an unspecified date. The physician wanted to know if this patient can get the second dose. The outcome of the event was recovered on an unspecified date. Information on the lot/batch number has been requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported ITP cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	938067-1	she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive; she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive; she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive; she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive; This is a spontaneous report from a contactable nurse. A 95-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), Lot# EH9899 Expiration on 06Jan2021 at 15:00 at SINGLE DOSE at deltoid for COVID-19 immunization. The patient received first dose of the same vaccine BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), Lot# EH9899 Expiration date : 31Mar20221, on 16Dec2020. Medical history included : cardiac failure congestive, hypertension, cardiac murmur .There were no concomitant medications. The patient previously took cymbalta , vasotec and zocor and experienced drug hypersensitivity. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine.This nurse,worker at a skilled nursing facility, reported that this patient with a history of heart failure, received her second dose of the Pfizer-BioNTech Covid-19 vaccine yesterday, 06Jan2021, at 3pm. At 7am on 07Jan2021 she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive. Patient was stable prior to vaccination, but will now be transferred to hospice care. The nurse added the patient had the second COVID vaccine on 06Jan2021 yesterday and has now been transport to hospital due to a drastic decline after the shot. It was explained that this morning around 7 am she was transferred to the hospital. She was experiencing tachycardia, shortness of breath, and congestion. The events started this morning around 6-6:30am. The patient was admitted to the hospital. The shot was given at the facility. She received it at 3pm on 06Jan2021, First dose was on 16Dec2020.The caller relays she didn't know how aggressive the hospital will be for the patient. She was a full code when left and now a DNR and is unresponsive. The patient will be going on hospice care. The causality was reported as related. The outcome of the events was not recovered.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported tachycardia, shortness of breath, congestion, unresponsive, and the administration of the COVID 19 vaccine, BNT162B2, based on the reasonable temporal association. The patient's pre-existing medical condition of cardiac failure congestive, hypertension, cardiac murmur are confounding factors. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	938091-1	"Hypokalemia; Hypomagnesemia; Hypocalcemia; Hemoglobin dropped little bit; Tetany; Muscle cramps; This is a spontaneous report from a contactable healthcare professional, a physician assistant. A 50-year-old female patient received the first dose of the BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: UNKNOWN), via an unspecified route of administration on 18Dec2020 (at the age of 50-years-old) as a single dose for COVID-19 immunization. Medical history included tachycardia, tension headache, and glucose tolerance impaired. Concomitant medications included rosuvastatin calcium (CRESTOR), gabapentin (MANUFACTURER UNKNOWN), and metoprolol (MANUFACTURER UNKNOWN). On 18Dec2020, the patient experienced hypokalemia, hypomagnesemia, hypocalcemia, tetany, muscle cramps, and hemoglobin dropped little bit. The clinical course was as follows: The patient received the vaccine and about 30 minutes later she started to ""feel bad"". She went to the urgent care and about an hour after they took her to the emergency room (also reported as hospital). She had a complete blood count, complete metabolic panel, and magnesium level done on the 18th, 21th, 23rd, 26th, 28th, 30th of Dec2020 and then again on 04Jan2021. On 18Dec2020, her initial lab test showed potassium: 2.6, hemoglobin: 10.2, magnesium: 1.2, and calcium: 5.7. The physician assistant reported that a potassium of 2.6 was critically low and a hemoglobin was 10.2 was about normal for the patient. She received oral medications of potassium 20 mEq twice a day and calcium and magnesium supplements once a day. On 04Jan2021, lab data showed: potassium: 4.2, magnesium: 2.1, calcium: 9.5 and hemoglobin: 14.5. Per the reporting physician assistant, the above levels went back to normal but stated she had to be supplemented to get back to that point. The clinical outcomes of the hypokalemia, hypomagnesemia, hypocalcemia, and hemoglobin dropped little bit were recovered on 04Jan2021; while that of the tetany and muscle cramps, were unknown. The physician assistant assessed the events as related to the suspect vaccine. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Hospitalized	938104-1	COVID-19 positive and admitted to hospital 6 days post-vaccination
COVID19 VACCINE (COVID19)	Hospitalized	938109-1	Received first dose Moderna COVID vaccine on 12/28/2020; on that same day 12/28 he noticed a dry cough; on 1/1/2021 he reported fever, chills, body aches, Headache, sinus congestion. On 1/1/2021 he tested positive for COVID-19, he reported being with a family member on Christmas who had COVID symptoms. On 1/11/2021 he required hospitalization for COVID-19 pneumonia
COVID19 VACCINE (COVID19)	Hospitalized	938118-1	on 1/8/2021 17:30 patient taken to ER, cerebellar hemorrhage, stroke, aneurysm

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	938126-1	Following the first COVID vaccine dose on Dec/18/2020, I had headaches that started on the third day and ended on the tenth day. The headaches were usually light, unilateral, and alternating from one side to the other. I was usually functional except on the fourth and seventh days where the headaches were moderate to severe, and I took naps to help with the headaches for those two days. I have never had an issue with headaches before, and these symptoms were a new experience for me. I did not take any medications as treatment for the headaches. Following the second COVID vaccine dose on January/7/2021, I felt fatigue and generalized muscle aches within six to twelve hours, and these symptoms lasted for two days. On January/10/2021, when I woke up that morning I again felt light, unilateral, and alternating headaches. In addition, I noticed that I was unable to move the left side of my face. I felt moderate tingling sensations associated with the distribution of the paralysis. When I looked in the mirror, I could quite noticeably see asymmetry in my face. I immediately went to the emergency department at the hospital where my primary care doctor is located. I was kept in the hospital into the next day for observation. After evaluation by a neurology team and an MRI, I was provided with the diagnosis of Bells Palsy. I have never previously been diagnosed with Bells Palsy, and I have never previously had a hospital stay before. The doctors prescribed medications which I am currently taking. As of today January/12/2021, the symptoms have had some improvement, but the symptoms still continue.
COVID19 VACCINE (COVID19)	Hospitalized	938235-1	Beginning at 6:30 am on 1/8, two days following vaccination, the individual was driving to work and began to experience nausea while at a traffic light. He pulled over and threw up. Once he got to work he vomited again. He drove to another facility for work and then threw up 3 or 4 more times. He began experiencing hot flashes at this time. He went to the hospital and was seen in the emergency room. He threw up several more times in the ER and stated that his heart was racing and that he had diarrhea. The emergency room gave him medications for the nausea and he stayed there for 2 or 3 hours. He began to feel better and was discharged to home.
COVID19 VACCINE (COVID19)	Hospitalized	938256-1	Immediately developed intense burning that progressed over the next 30 minutes and continued to burn for 3 days. The next day progressive extreme fatigue last 4 days. felt like it was going to pass out. full on body pain, dizzy and lightheaded. need assistance to get to the walk, intense headache.
COVID19 VACCINE (COVID19)	Hospitalized	938258-1	Very large, reddened, tender area at injection site (like the size of an angry red egg), and fever of 103.2.
COVID19 VACCINE (COVID19)	Hospitalized	938361-1	Patient presented on the morning of 1/10/2021 with swollen lips and hives. Vaccination took place on Wednesday January 6th, 2021.
COVID19 VACCINE (COVID19)	Hospitalized	938397-1	Patient had mild bilateral knee and hip pain 1 month ago, then she received her 1st dose of COVID vaccine on 12/14/20. Her joint pain worsened then on 1/4/21 she received her 2nd dose of COVID vaccine on 1/4/21 and then her pain increased in spread up to her shoulders. She was seen at immediate care on 1/11/21 because her joint pain had worsened throughout and her shoulder pain was making it difficult to raise her arms above the level of her shoulders. Her pain was made worse w/ movement.
COVID19 VACCINE (COVID19)	Hospitalized	938425-1	Woke up on 1/6/2021 with hot flashes, palpitations, dizziness and heart racing. Went to urgent care and they did an EKG which showed A-Fib, so I was sent to the ER and from there, I was transferred to an ICU at a different facility. I stayed until 1/8/2021. No cause was found and no history of A-Fib or family history.
COVID19 VACCINE (COVID19)	Hospitalized	938446-1	"Fever (103-104 oF) and 4"x1" red, swelling area around site of injection. Pt states she received an IV."
COVID19 VACCINE (COVID19)	Hospitalized	938482-1	Acute approximate respiratory failure secondary to acute COPD
COVID19 VACCINE (COVID19)	Hospitalized	938524-1	first day after shot, nausea, body aches, 2nd day Sunday headache, Monday 5 am woke up itching, then 9 am hives everywhere, trouble breathing, anaphylaxis, went to ER, got epi X 2, solumedrol, benadryl, pepcid, then still with hives, tachycardia, dyspnea, iv fluids were infusing and epi drip started, went to ICU
COVID19 VACCINE (COVID19)	Hospitalized	938576-1	Back pain, bilateral PE and DVT
COVID19 VACCINE (COVID19)	Hospitalized	938712-1	"Patient states that she received her second vaccination and in the hours after she had flu-like symptoms. Then over the next few days, she started to notice tingling and a "prickly" sensation in various areas. This progressed to symmetric BLE weakness which started in her feet and had reached to just above her knees bilaterally time and she arrived. The weakness had progressed to her hips. She also noticed weakness in her arms and they are easily fatigued. She is able to walk but it takes much effort."
COVID19 VACCINE (COVID19)	Hospitalized	938808-1	coughing, flushing, cyanosis, diaphoresis
COVID19 VACCINE (COVID19)	Hospitalized	938958-1	Immediately after she felt faint, heart rate 121, felt faint again bp 62/33. Was taken to the ER, within a half hour, she fully recovered. Vitals went back to normal.
COVID19 VACCINE (COVID19)	Hospitalized	939006-1	Severely dizzy, left hand totally numb but painful, cold to touch. Felt better before she got to ER.
COVID19 VACCINE (COVID19)	Hospitalized	939087-1	Attempting to confirm which COVID 19 vaccine was given (Moderna or Pfizer). They did not send the record when they sent the patient to General ER the next am. Did not answer the phone.
COVID19 VACCINE (COVID19)	Hospitalized	939564-1	On 1/5/2020, I, the patient woke up at 3:30 with sharp boring epigastric pain. Progressed to include nausea. On evaluation in the ED was diagnosed with acute pancreatitis. Prior hx includes 2 episodes with hospitalization for gallstone pancreatitis in 2016. Subsequently had laparoscopic cholecystectomy in 2016. Last alcoholic beverage prior to 2020 ED presentation was 3 weeks prior. No tobacco or drug use.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	939629-1	The patient presented to hospital on 1/6/2021 with a primary complaint of Fatigue (pt had covid vaccine yesterday. Now displaying increased weakness, blood in urine, increased confusion and urinated on herself today. Fever of 101.9) 79-year-old female presents to the emergency room with fatigue. The patient states yesterday she had the Moderna COVID-19 The patient states today she had a temperature 101.8; prior to arrival. Her son noted that she was having episodes of urinary frequency and also that she was profoundly weak and fatigued. They denied falling or hitting her head. The patient also states she been having nausea vomiting with diarrhea.
COVID19 VACCINE (COVID19)	Hospitalized	939654-1	Vaccine was given on 12/23/20 on 01/07.21 went to get a routine physical and received an emergency call that my pallet blood count was around 10K instead of 150k. Was instructed to go to the ER asap. However didn't received the message until the next morning at 6:30am. Was checked into the E.R. , given steroids, pallets, hemogoblin. Stayed overnight in the hospital was able to leaved the next day around 1pm with pallets at 47k.
COVID19 VACCINE (COVID19)	Hospitalized	940067-1	Systemic: Fever-Severe, Systemic: hypotension, dyspnea-Severe; symptoms lasted 1 day
COVID19 VACCINE (COVID19)	Hospitalized	940351-1	Patient day after vaccination had fever, chills, headache and malaise but recovered the next day. starting four days after vaccination started to have left neck swelling . Of note day prior vaccination had left wisdom teeth removal and maxillary root canal. 1 week after vaccination and 8 days after oral procedures worsening left neck swelling, trouble swallowing's and change voice found resulting left neck 3x2cm necrotic neck abscess and significant neck inflammation. Patient was seen by ENT and started on IV Unysan and admitted for airway monitoring due to swelling with improvement over next 48 hours.
COVID19 VACCINE (COVID19)	Hospitalized	940367-1	12/23/2020-RECEIVED VACCINE AT 9:52 AM. REPORTS NOT FEELING WELL IN THE AFTERNOON, LIGHTEADED AND DIZZY, THROBBING HEADACHE. CRAMPING/ACHING IN BACK OF CALVES. 12/24/2020 CONTINUED WITH DIZZINESS, THROBBING HEADACHE, BLOOD PRESSURE ELEVATED, CHEST PRESSURE 8:00 PM REPORTED FEELING THAT SHE WAS GOING TO DIE, WENT TO LAKE CITY MEDICAL CENTER- BLOOD PRESSURE ON ARRIVAL 184/101 HR. 117. GIVEN NITRO AND MEDICATIONS. ADMITTED, DISCHARGED 48 HOURS LATER ON 12/26/2020. DISCHARGED ON BLOOD PRESSURE MEDICATION 12/27/2020-LESS THAN 24 HOURS AFTER BEING DISCHARGED SHE WAS READMITTED TO MEDICAL CENTER WITH SAME SYMPTOMS. 36 HOURS AFTER ADMISSION, TRANSFERRED TO MEDICAL CENTER. FOR CARDIC WORKUP AND HIGHER LEVEL OF CARE.
COVID19 VACCINE (COVID19)	Hospitalized	940438-1	Had Covid Vaccine AM of 1.8.2021. Woke up with Nausea, Vomiting X 4, Chills the following AM. Presented to ED. Found to be hypotensive during ER. Nausea Vomiting resolved. Tx with fluid replacement and dismissed home instructed to monitor BP. B/P dropped again at home returned and admitted to hospital.
COVID19 VACCINE (COVID19)	Hospitalized	940470-1	Site: Pain at Injection Site-Medium, Systemic: Generalized Body Aches -Severe, Systemic: Headache-Severe, Systemic: Severe drop in blood pressure, pulse, and o-sat-Severe
COVID19 VACCINE (COVID19)	Hospitalized	940519-1	Patient reported symptoms started ~15 mins s/p dose. Symptoms reported LUE and LLE numbness/tingling, and notable tachycardia
COVID19 VACCINE (COVID19)	Hospitalized	940651-1	I was being monitored for 15 mins since I was allergic to tree nuts stayed 20 mins. I started feeling dizzy and exp nausea lasted 20 sec. After about 12 hrs later I woke up had difficult swallowing felt like something in my throat. I went to ER received a dose pack, Benadryl and steroid injection.
COVID19 VACCINE (COVID19)	Hospitalized	940708-1	Jan 1st, patient had a seizure after breakfast. Temperature was 98.5 Pulse 95. B.P. 160/70 Two hours later another seizure at the home, with emesis, Sent to hospital at 2pm. Focal Status elepticus. Seizure activity along with continuous persistent activity with emesis throughout the 12 hour time in the ED. Seizure during the CT scan.
COVID19 VACCINE (COVID19)	Hospitalized	940792-1	high blood pressure within 15 min post vaccination. BP 180/94/BP rose to 202/110; This is a spontaneous report from a contactable nurse. An adult female (age:18-64 Years) patient (pregnant: No) received first dose of BNT162B2 (Pfizer), intramuscularly in left arm on 05Jan2021 10:30 at single dose for COVID-19 immunization. The patient's medical history was not reported. The patient was received other concomitant drugs. The patient experienced high blood pressure within 15 min post vaccination. BP (blood pressure) 180/94 rose to 202/110 on 05Jan2021 10:45. The event resulted in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The events were reported as non-serious. Recipient experienced high blood pressure within 15 min post vaccination. Went to hospital where her pressure was 202/110, vaccine given on 05Jan2021 at 10:30 am, by 10:45 am BP was 180/94, recipient refused hospitalization. Sister took her home but made her go to the hospital where her BP rose to 202/110. IV (intravenous) steroids given. The outcome of event was resolved in Jan2021. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The medications the patient received within 2 weeks of vaccination: Protein drink. Unknown whether was the patient diagnosed with COVID-19 prior to vaccination. Unknown whether the patient been tested for COVID-19 Since the vaccination. Unknown allergies to medications, food, or other products. Information on the lot/batch number has been requested.; Sender's Comments: Based on temporal association, a possible contributory role of BNT162B2 cannot be excluded for reported event hypertension. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	940819-1	dizzy; itchy throat; coughing; swollen throat; This is a spontaneous report from a contactable pharmacist. A 21-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL0142, NDC number: 59267-1000-1; Expiry Date: Mar2021), via an unspecified route of administration on 07Jan2021 11:20 at 0.3 mL, single at left arm for vaccination. Medical history included Cushing's disease (recovering), bipolar disorder from an unknown date and unknown if ongoing. Concomitant medication included lamotrigine (LAMICTAL) for bipolar disorder. On 07Jan2021, looked like after receiving the vaccine about 30 minutes later patient was standing and felt like dizzy. About 15 or 20 more minutes, or 45-50 minutes after received injection, she felt like itchy throat, then itchy throat triggered coughing, then she felt like swollen throat. For the treatment on scene patient was administered 50mg of diphenhydramine hydrochloride (BENADRYL) and when she complained of swollen throat was administered epinephrine (EPI-PEN) 0.3mg injection to right thigh. Then they called EMS who transported her to the hospital where she was admitted to the hospital. Outcome of events was unknown. This report was considered as serious per caused/prolonged hospitalization. Causality: Cannot jump to that conclusion.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events dizziness, throat irritation, cough and pharyngeal swelling cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Hospitalized	940956-1	Patient admitted for a fib; This is a spontaneous report from a contactable consumer. A female patient in her 70s received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection) lot number was unknown, via an unspecified route of administration on 05Jan2021 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that the patient received vaccine on Tuesday, 05Jan2021. On Thursday, 07Jan2021, patient did not feel good-pulse and blood pressure. It was mentioned that the patient admitted for a fib. Two days after receiving Pfizer-BioNTech Covid 19 vaccine, the woman patient in her 70s was admitted for a fib. Information about lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Hospitalized	940990-1	Vaccine administered at 08:16--08:25 patient c/o feeling unwell and dizzy 87, 143/84, 18, 100%; 08:28: Pt c/o dizzy & chest tightness, appeared pale, monitoring; 08:34: Pt c/o increased chest tightness 130, 144/81, 22, 100% monitoring 08:36: Epinephrine .3mg given IM to R thigh, pt. reported flushing, pounding heart, 911 called; 08:40: Pt flushed.
COVID19 VACCINE (COVID19)	Hospitalized	941217-1	My right leg from the knee down was purple and they thought I have a blood clot; My right leg from the knee down was purple and they thought I have a blood clot; This is a spontaneous report from a non-contactable consumer (patient). A patient of unspecified age and gender received bnt162b2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. Three days after vaccination the patient felt very sick and he/she was so bad that he/she thought he/she might die with outcome of recovered after one week. The patient reported also that on unknown date his/her right leg from the knee down was purple and they thought he/she have a blood clot, due to which the patient was hospitalized for 14 days. The patient ended in the hospital because his/her right leg from the knee down was purple and they thought he/she have a blood clot but they did an ultrasound that was not the case but they put he/she on antibiotic. The patient was still taking them but his/her leg has got better. No follow-up attempts are possible. Information about lot/batch number cannot be obtained. No further information is expected.
COVID19 VACCINE (COVID19)	Hospitalized	941246-1	Covid symptoms began 2-3 days after shot. Presented to ER day 11 day after positive with extreme dyspnea O2 Sat at 88% Chest xray opacities throughout the bilateral hemithoraces would suggest multifocal infiltrate Admitted on high flow oxygen reduced to 6 liters currently D-dimer is >35.20
COVID19 VACCINE (COVID19)	Hospitalized	941408-1	Pt was accompanied by daughter, who drove pt to clinic. Pt was correctly identified, screened, given vaccine, monitored for appropriate time. Pt left clinic as passenger of vehicle and was being driven by daughter. Pt started complaining of Shortness of breath and not feeling right.. Daughter brought pt to local emergency room, Pt was later transferred to higher care hospital. Information regarding symptoms and further medical care was relayed to clinic by family member.
COVID19 VACCINE (COVID19)	Hospitalized	941476-1	Patient received vaccine in afternoon of 12/28. She works in ER as housekeeper 7pm-7am. The day she received the vaccine she became ill with fever chills and nausea and left work at 2am. On 12/31 she developed hemianopia. She went to ER and they did CT scan. She was told it was complex migraine. She left and came Home. On 1/1/21 her vision was back to normal. On 1/3 she suffered bilateral cerebellum ischemic stroke. She is currently in medical center. In Trauma.
COVID19 VACCINE (COVID19)	Hospitalized	941499-1	Patient experienced a syncopal episode post vaccination, accompanied by feeling hot and tachycardic. Prior to the syncope, she reported hyperventilating. She remained unresponsive for about 10 minutes and was brought to the ED. There she became responsive, and reported chest pain and had sinus tachycardia episodes. She also had lower extremity weakness. This has improved per the latest neurology notes. She also had a negative EEG. Unsure if this is an allergic reaction or if the syncope was due to hyperventilation. Patient is currently on day 3 of hospitalization.
COVID19 VACCINE (COVID19)	Hospitalized	941503-1	Systemic: Headache, Systemic: Eyes dilated and difficulty remembering information; symptoms lasted 2 days
COVID19 VACCINE (COVID19)	Hospitalized	941633-1	The morning following COVID-19 vaccination, patient's right shoulder had swelling, generalized weakness and myalgia. Hospitalized for 2 days, received intravenous fluids and bedrest, and acetaminophen. He was prostrate for 2 days.
COVID19 VACCINE (COVID19)	Hospitalized	941641-1	numbness to forearm then to lower leg that then took on a dermatomal pattern, brain fog w word finding issues that progressively worsened, LLE weakness. ct brain neg. COVID19 VACCINE (COVID19)	Hospitalized	941740-1	Presented to MD'S office on 01/05/2021 with cough, HA, fever 101.9, chills, and fatigue. Returned on 01/07/2021 with no improvement. Returned on 01/11/2021 with fatigue, elevated temp 101.2, SOB, O2 Sat at 90%, Rocephin 1G IM administered, CXR revealed pneumonia. MD received call from patients husband stating worsening O2 Sat levels at 81-82%. Was transferred to hospital and admitted with pneumonia..

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Hospitalized	941937-1	"Patient received vaccine at 0939. 30 minute wait period related to history of previous anaphylactic reaction. 10:05 patient walked from observation area to vaccinator and reported that her ""chest was burning"" and ""feels like it is getting tighter to breathe. Pt had change in voice. Patient moved to chair and started on oxygen 1.5 L/m per nasal cannula. MD came to room to assess patient. ED arrived and checked patient B/P. Patient transferred by cart to ED."
COVID19 VACCINE (COVID19)	Hospitalized	941992-1	Patient began having cramping of her upper extremities and subsequent swelling of her face and neck and also shortness of breath, chest pressure and flushed appearance. She denies any tongue or throat swelling. She is also complaining of bilateral arm pain. The initial reaction treatment was started in the conference room and then the patient was transferred to the emergency room. She continued to have arm and chest pain in the emergency room. She had muscle tension/rigidity in the upper extremity which caused significant pain. She also developed a nonspecific rash on the chest and abdomen that persisted for through out he hospital stay. Treatment was started with epinephrine 0.5 mg IM x2 and diphenhydramine 50 mg IM x1, prior to transfer to emergency room. In the emergency room treatment was dexamethasone 10mg IV x 1, famotidine 20mg IV x1, Ketorolac 30mg IV x 1, lorazepam, 1mg IV x 2, morphine 4mg IV x 2, 1000ml Saline Solution. As an inpatient the treatment included scheduled acetaminophen 500mg TID, as need morphine for pain after treatment with fentanyl, scheduled diphenhydramine 25mg IV q8 and compazine 5mg IV for nausea, cyclobenzapine 10mg as need for muscle spasms, dexamethasone as a scheduled dose started at 4 mg BID and tapered to 2 mg BID, Naproxen 500mg BID and Norco 7.5/325 as need for pain. with famotidine 20mg BID .
COVID19 VACCINE (COVID19)	Hospitalized	942030-1	Pt reported chest tightness and throat tightness following vaccination. Time course following vaccination unknown.
COVID19 VACCINE (COVID19)	Hospitalized	942240-1	New onset altered mental status after fall. Per son, she was found in bed, unresponsive at around 12:15 AM on 1/10 by her husband. Brought to the emergency room and admitted, Began treatment for UTI w/ CTX. Discharged 1/11/21 with f/u appointments
COVID19 VACCINE (COVID19)	Hospitalized	942381-1	I had a headache at the top of my head, and a tingling sensation down my left leg from my buttocks to my calf. The tingling lasted until the next morning then went away. On 1/3/2021 I experienced a strong headache followed by facial numbness and tingling. This lasted for an hour or so and slowly subsided. The headache lingered for 3 days.
COVID19 VACCINE (COVID19)	Hospitalized	943266-1	Initial pain in back of head and extreme headache. Some vomiting. At emergency, went into coma and was intubated. Hole drilled in skull to relieve pressure. MRI taken. Lot of bleeding in brain - aneurism lead to death approximately 14 hours after initial symptoms.
COVID19 VACCINE (COVID19)	Hospitalized	944595-1	Cardiac arrest within 1 hour Patient had the second vaccine approximately 2 pm on Tuesday Jan 12th He works at the extended care community and was in good health that morning with no complaints. He waited 10-15 minutes at the vaccine admin site and then told them he felt fine and was ready to get back to work. He then was found unresponsive at 3 pm within an hour of the 2nd vaccine. EMS called immediately worked on him 30 minutes in field then 30 minutes at ER was able to put him on life support yet deemed Brain dead 1-14-21 and pronounced dead an hour or so later
COVID19 VACCINE (COVID19)	Hospitalized	946225-1	At approximately 10:30pm on 1/14/2021, resident was noted to have a rash on her face, hands, arms, and chest. VS:100.2, 113, 20,108/59, 84% room air. applied nasal cannula at 4-L, telephoned Physician orders 6mg Decadron one time order, a second set of Vitals , reads 99.3, 110, 20, 106/60, 90% on 4-L N/C. On coming shift advised. At approximately 2:00am on 1/15/2021, resident congested and coughing. BP 151/70, pulse 124, temp 98.1 forehead, resp 20 and pulse oc 79% on 3L. At approximately 2:30am PRN cough syrup and breathing tx. Resident's condition began to worsen with breathing tx. This LPN updated at 0248 doctor on resident's condition. Doctor gave permission for resident to go to hospital. At 4:19am the Er called to say resident passed away.
COVID19 VACCINE (COVID19)	Hospitalized	946293-1	51 year old M with h/o O2 dependent COPD, Severe pulmonary fibrosis became increasingly hypoxic around 1800hours 1/7/2021. He was transported to hospital for acute on chronic hypoxia respiratory failure. On 1/12/2021 he decompensated further, and after discussing with family and palliative care, He was changed to comfort care. He expired on 1/12/2021@2325 at medical center.
COVID19 VACCINE (COVID19)	Existing Hospitalization Prolonged	904093-1	Tingly sensations all over body on and off, like crawling feeling for 12 plus hours. No shortness of breathe noted or blisters/break outs.
COVID19 VACCINE (COVID19)	Existing Hospitalization Prolonged	904459-1	12/18/2020 morning I started to have runny nose, achy 'like coming down with a cold'. Late evening and early morning 12/19/2020 tender lymphnodes, same side of vaccination. As of 12/20/2020 barely palpable anymore. Temperature was normal. I took ibuprofen and tylenol; 12/18-12/19. Congested, nasal drip ' 48 hours of feeling worn down and achy'. Flu shot in October 2020
COVID19 VACCINE (COVID19)	Existing Hospitalization Prolonged	919743-1	Cough began approx 5 min post vaccine, then pt experienced flushing of neck, chest tightness and SOB. Placed on O2 mask at 8L/min, given 1 dose of Epi and transferred to ED
COVID19 VACCINE (COVID19)	Existing Hospitalization Prolonged	930777-1	Patient presented to the emergency department with sensory loss and loss of reflexes, evaluated by neurology and diagnosed with Guillain- Barre Syndrome thought to be secondary to the Pfizer Covid Vaccine
COVID19 VACCINE (COVID19)	Existing Hospitalization Prolonged	937053-1	Reported feeling faint and nauseated during observation period. Placed on cart in trendelenberg
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	903401-1	None stated.
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	906276-1	Seen in ED - mild symptoms of feeling like his throat is swelling and he has shortness of breath. Physical exam was normal. Vital signs normal. EKG with sinus tachycardia at 106. Given PO benadryl and prednisone. Observed in the ED for a couple hours without further worsening of his symptoms. Impression/plan: possible reaction to Covid vaccination. Improved. D/C home
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	906277-1	Vaccine was given in the ED because the employee had a history of allergic reaction to shellfish. She reported feeling like her throat was closing up and she was having shortness of breath soon after receiving the Covid vaccination. By the time the physician evaluated her she reported her symptoms had resolved. She was observed in the ED for an hour with no return of any symptoms. No medication or other treatment was required.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	906341-1	employee self-administered epipen prior to going to ED (community)
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	906342-1	Employee received vaccine in hospital. Waited through 15 minutes observation period and went back to his shift. There he felt some throat irritation and lip tingling. Manager took him to the ER where they evaluated him - vital signs stable, no shortness of breath, no rash - and gave him benadryl and prednisone and he was able to return to his shift and complete his entire shift.
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	906365-1	Was taken to Emergency Department within the same hospital facility where vaccine was administered. No other side effects other than those mentioned above: scalp itchiness and erythema to right knuckle.
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	906996-1	Left arm NumbNess going from the forearm to the side of his Neck. Chills and slight HA. No fever Noted.
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907277-1	Flush, throat itchiness, red Tx Benadryl IV, EpiPen 1mg IM, Solu-medrol
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907354-1	Patient was vaccinated and within just a few minutes of vaccine administration began to feel throat tightening, difficulty getting air, tachycardia, and dry mouth. Admitted to a past history of anaphylaxis with shell fish and endorses similar symptoms. Employee was treated with an epi pen and taken to the emergency room for additional monitoring and treatment as needed Treatment dug:
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907388-1	Acute change in systolic BP < 90 mmHg or > 200 mmHg and numbness
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907390-1	64y/o FEMALE presents to the ED for evaluation of facial itching after COVID vaccine in left arm. The patient states shortly after the vaccine (about 10 minutes) her nose and mouth started itching. She was given PO Pepcid and IM Benadryl PTA in ED. She denies any associated SOB, nausea vomiting wheezes or near syncope. Denies fever/chills, n/v/d or other complaints at this time. IMPRESSION/PROBLEM LIST:-----1. Adverse Reaction to Vaccine for COVID
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907391-1	37y/o FEMALE doctor was brought to the ER via gurney from the vaccination area after getting Covid 19 vaccination, patient felt SOB, buffy eye and become pale, she took immediately Claritin and Pepcid, patient was brought to the ER. she denied light headedness. Swelling of lips or the tongue. IMPRESSION -----Adverse reaction to the Covid 19 Vaccination-Resolved
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907395-1	44 y/o MALE doctor with no hx of allergic reaction with previous vaccination was brought to the ER from the vaccination area, patient stated he become tachycardic, dizzy and nauseated 10 min after the vaccination shot was given. Patient denied rash, SOB, wheezing or Swelling of the face and the tongue. Benadryl & Zofran given 1. Adverse Reaction to Vaccination-resolved
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907574-1	Approximately one hour after receiving the vaccine, as the patient was driving home he began experiencing throat tightness and tongue swelling. Once home, they call 911 and administered 0.3 epi (had previous severe allergy to lidocaine). EMS then administered iv benadryl and an albuterol treatment. The patient was reported to go unresponsive en route and received bag and mask ventilation very briefly as well as additional 125g solumedrol and another IM epi injection. On arrival he was reported to be stable, talking, tolerating secretions, without significant complaints. He was observed in the ER for several hours without any symptoms nor objective findings to support anaphylaxis (tongue and airway normal, no wheeze, no rash). He was anxious in the ER and the treating physician wrote that he felt it may likely have been anxiety and not anaphylaxis based on their evaluation.
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	907576-1	96hrs later still feel disoriented
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	908463-1	None stated.
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	908497-1	None stated.
COVID19 VACCINE (COVID19)	Emergency Room / Office Visit **	908581-1	None stated.
COVID19 VACCINE (COVID19)	Emergency Room *	902464-1	within 15 minutes progressive light-headedness leading to near-syncope and diaphoresis. After 20 minutes symptoms subsided.
COVID19 VACCINE (COVID19)	Emergency Room *	902491-1	Within a few minutes of receiving the COVID 19 vaccination, patient developed lightheadedness, shortness of breath, headache, and some nausea. She did get some redness to her neck and upper chest. No recent illness. Had elevated BPs ranged from 158/103 to 207/126 . HR ranged from 82-106. O2 sats always > 96%. Temp 37.1 C. Received Tylenol 1000 mg PO, Dexamethasone 10 mg IV, diphenhydramine 50 mg IV, famotidine 20 mg IV, ketorolac 30 mg IV, ondansetron 4 mg IV, and 1 L NS. Patient prescribed EpiPen and prednisone and discharged.
COVID19 VACCINE (COVID19)	Emergency Room *	902492-1	About 25 minutes after receiving vaccine complained of dizziness and being hot and nauseated. No difficulty breathing. No chest pain. B/P was 130/90 and was monitored. It went down to 124/80 after he started feeling better. He was wearing sweater over shirt and it was warm in building. Took sweater off. Cool wet cloth applied to back of neck. States he had only had a donut and cup of hot chocolate before receiving vaccine. Sprite and peanut butter crackers given. Became nauseated after eating peanut butter crackers Blood pressure monitored. He laid on exam table for about 15 minutes. He felt better. Stood up and walked to conference room for another 15 minutes. Stated he felt much better and was ready to leave. Coworker drove him back. Received email from him letting us know he had made it back and they had stopped and eaten pizza on the way. Received text from coworker that he was dizzy and seeing spots and that his blood pressure had been 120/80 and then spiked to 160/100. Coworkers taking him to ER at Hospital for evaluation.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	902557-1	1750- IM injection of R Deltoid. She was sitting, and felt short of breath without wheeze or tightness in the chest or throat. She stood up, and then felt tunneling. Assisted to chair and floor. Pulse weak, skin flushed, sweating on torso. Face and Neck remained flushed and red. She refused epi at first. So we gave her benedryll 25 mg po with apple juice. She said she just had a big meal 30 min prior, but we checked her blood sugar- it was 85. 10 min after the first SOB feeling, it returned. BP was recorded as 160/100.
COVID19 VACCINE (COVID19)	Emergency Room *	902665-1	"Pt. became lightheaded, and clammy. noted heart rate to be 51, oxygen saturation 100%. after sitting for a few minutes, she felt better, but then became dizzy and had some chest tightness and bilateral hand tingling. Pt. noted to have respiratory rate 22-26 with deep breath, but other vital signs were stable. (Blood pressures 108-138/70's to 80's) Heart rate remained stable in the 70-90's range, lungs remained clear to auscultation through out. No rash or swelling noted anywhere. No itching, no throat tightness. Pt. repeatedly stated ""I think I am having a panic attack"". Due to the continued complaint of chest tightness, pt. sent to the emergency department for evaluation."
COVID19 VACCINE (COVID19)	Emergency Room *	902745-1	PAIN AND EDEMA AT SITE OF INJECTION LEFT ARM WITH DECREASED RANGE OF MOTION LEFT ARM RIB CAGE PAIN ON INSPIRATION MUSCLE PAIN RIGHT AND LEFT THIGHS, WORSENING UPON AMBULATION MUSCLE PAIN AND TINGLING RIGHT UPPER EXTREMITY AND BACK
COVID19 VACCINE (COVID19)	Emergency Room *	902746-1	Following first dose, patient became hypotensive, pale, and diaphoretic. Denies syncope. Patient went to nearby emergency department at Hospital. Was monitored for several hours and was discharged in stable condition.
COVID19 VACCINE (COVID19)	Emergency Room *	902758-1	"@ ~5 min felt cotton mouth. Got up to ask if he could go early. Then at 10 min post injection, felt eyes feeling weird and he felt ""high"". As in lightheaded. @ 10 min, skin surrounding the eyes are puffy. Given 25 mf benedryl. No immediate SOB or wheeze. No lip or mouth or throat swelling. Taken to ED. Given IM epi 1:1000 0.3ml. Pepcid and more benedryll PO."
COVID19 VACCINE (COVID19)	Emergency Room *	902766-1	Vaccinator Nurse noted upon vaccination there was bleeding from site and immediate bruising. Extended post vaccination monitoring to 30 minutes and asked patient to not leave before being reevaluated. Visual monitoring in post vaccination space by this RN. á Upon reassessment @ 1352 pt stated she felt the need to use her inhaler and chest tightness. Pt denies SOB and able to transfer independently to wheelchair. Pt began to cough and was immediately transferred to ED per FNP. á á Upon ED arrival, pt was transferred to back hall 9, report given to RN and assessed by physician. Vital signs 98% on RA, t- 98.2, HR 78.
COVID19 VACCINE (COVID19)	Emergency Room *	902768-1	Nausea, tremors, and decrease in HR. Patient taken to ED. No epinephrine injection administered.
COVID19 VACCINE (COVID19)	Emergency Room *	902770-1	Patient started to develop maculopapular rash and itching starting ~15 minutes after the vaccine administration. The patient did not report shortness of breath or other respiratory symptoms. The patient was given IV diphenhydramine 50 mg, famotidine 20 mg IV, and methylprednisolone 125 mg IV. The patient's symptoms resolved and was sent home with a Medrol dose pack and antihistamine.
COVID19 VACCINE (COVID19)	Emergency Room *	902784-1	Pt presents to the ED for c/o L anterior chest wall pain after receiving covid19 vaccination today around 1030. Pt reports she received the first dose in the L bicep. Pt reports after she received that shot she started having L anterior chest wall pain. Pt states she doesn't have any chest tightness but does have stabbing pain to the L anterior chest wall. Pt denies any difficulty breathing or hives or any allergic reaction. Pt was hooked up to cardiac/spO2 and BP monitoring equipment. Medication: Ibuprofen Route: PO Dose:800 mg Patient tolerated medication well; no adverse reaction noted. Medication: Tylenol Route: PO Dose:975 mg Patient tolerated medication well; no adverse reaction noted.
COVID19 VACCINE (COVID19)	Emergency Room *	902791-1	"":1039: Responded to notification of potential adverse reaction after receiving COVID-19 vaccination. Pt had been escorted from observation area to emergency area with PA with c/o tightness in throat. On my arrival, pt was eupneic, p/w/d, ambulatory, NAD. á Vitals @ 1039: P72, 100% pulse ox on RA Vitals @ 1056: P72, 98% pulse ox on RA, 112/78 seated. á Administered 25mg diphenhydramine po per PA @ 1050, pt swallowed with water. á Called 911 for EMS response @ 1103 per instruction from provider. á Vitals @ 1103: 98% pulse ox on RA, P74, denies shortness of breath or pain. á Off phone with EMS @ 1108, en route. á EMS on site @ 1115, report given to medic. á Pt left with EMS en route to ED @ 1116. á Report called to ED Charge Nurse @ 1121. Patient presented to vaccination clinic. Patient received her vaccination at approximately 1021. Patient reports symptoms onset at approximately 1038 with tightness of the throat and difficulty swallowing. She described it as a swelling of the throat sensation. She states she had a sensation moving from her head to her toes as in a ""wave """. Patient denied shortness of breath, chest pain denies nausea. Patient denies hives or rashes or pruritis. á á Patient was assessed and moved to the emergency area. á Her symptoms continued with some improvement. At this point time 25 mg of Benadryl was administered orally. Approximately 10 to 15 minutes after administration the patient developed numbness tingling around the upper lip, the right upper extremity. She denied shortness of breath or chest pain. She denied increasing severity of the throat sensations. á Pertinent past medical history: Reactions bee stings currently carries EpiPen. á She is not had any previous reactions to vaccinations. á á Allergic reaction. á The patient symptoms seem to continue with the numbness tingling around the lips after administration of the Benadryl. Hand tingling of the right upper extremity also continued although it was decreasing. á Her symptoms of the tightness of the throat remain the same. She did not develop shortness of breath or chest tightness or pain. á At this time I feel be prudent to evacuate the patient to higher level care. á Patient was evacuated at 11:16 by ambulance service. á á "
COVID19 VACCINE (COVID19)	Emergency Room *	902794-1	""Pfizer-BioNTech COVID-19 Vaccine EUA"": Acute onset of tongue swelling, throat tightness, and diffuse erythema approximately 5 minutes after receiving COVID-19 vaccine. Patient transferred to emergency department. Patient treated with Epinephrine 0.3 mg IM X1 dose, Dexamethasone 10 mg IV x1 dose, Diphenhydramine 25 mg IV x1 dose. Patient discharged same day with resolution of symptoms."
COVID19 VACCINE (COVID19)	Emergency Room *	902799-1	Patient was feeling nauseated in the morning prior to coming to work and prior to receiving vaccine. He had a banana thinking he would feel better. He then received the vaccine and felt progressively worse experiencing diarrhea, weakness, and malaise.
COVID19 VACCINE (COVID19)	Emergency Room *	902810-1	Patient complained of feeling dizzy, anxious, shortness of breath. Did have some pain with injection. Did have mask on while waiting standard 15 minutes.
COVID19 VACCINE (COVID19)	Emergency Room *	902811-1	Associate received vaccine at 12:15 pm and was monitored for 15 minutes. After 15 minutes, associate went to check out table. While at check out table, associate fell to ground and was experiencing seizure like activity. Supportive treatment was administered and associate was transferred to ED.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	902815-1	Feeling flush and wheezing when walking.
COVID19 VACCINE (COVID19)	Emergency Room *	902836-1	Patient received covid-19 vaccine. 20+ minutes later patient states she began feeling flushed and nauseous. Patient states she look at her injection site, and it was hot and red. Local reaction approx. 2 inches x 2 inches. Dr. ordered 25 mg oral Benadryl. Vitals stable at 1840 133/88, 66 for pulse and regular, SPO2 99% on room air, respirations 20. Patient continued having complaints of light headedness and nausea. 1850 119/79, 74, 99% RA. Dr. states patient may depart from clinic if able to sit up and walk out, patient given instructions go to ED in symptoms progress. 1857 120/82, 70, 99.4. Patient's face becomes flushed and hot on left side, patient states she is shaky, and does not feel well at all. 1905 patient transferred to ED on 2L O2 for further evaluation and workup. Narrative ER Medical decision making narrative: Accu-Chek was obtained noting a glucose to be at 80. She received IV fluids as well as Solu-Medrol Benadryl and IV Pepcid. She also received IV Tylenol as she developed a headache while in the emergency department. Headache resolved and she was able to ambulate without assistance. Requested to go home states she felt much improved near normal. Clinical Impression: Adverse reaction to drug Patient Education: Anaphylaxis (ED)
COVID19 VACCINE (COVID19)	Emergency Room *	902837-1	Patient feeling very anxious before and after vaccination. Described having difficulty swallowing water shortly (~15 min) post vaccination. Patient was tearful but breathing normally. Walked under her own power from the pharmacy down to the Emergency Room for anxiety over anaphylaxis. Given dose of Vistaril in ER.
COVID19 VACCINE (COVID19)	Emergency Room *	902894-1	"Allergic reaction with facial swelling, eye tearing, ""itchy"" throat"
COVID19 VACCINE (COVID19)	Emergency Room *	902895-1	Systemic rash, dry cough (causing cough); 650mg Tylenol every 6; 50mg Benadryl to start then 25 mg every 6, Pepcid 20mg every 12 hours; rash is slowly resolving; throat still very dry with dry cough
COVID19 VACCINE (COVID19)	Emergency Room *	902925-1	02:45 PM walking , dizzy, rapid heart rate, mild chest pain. Directed to ER in hospital, CT Chest -- normal, EKG -- normal, Lab test-- normal. Xray Chest results -- basilar atelectasis, Hyperinflation of lungs. Blood pressure 171/109. No treatment given in ER -- f/u with PCP 12/18/20. 08:00PM nausea, headache, vomit 1x. 10:00PM fever 104.00; Tylenol extra strength dose. 12/17/20 6:00am temp 99.00, Tylenol dose extra strength; body aches, fatigue, mild headache.
COVID19 VACCINE (COVID19)	Emergency Room *	902931-1	"After receiving the injection the patient stated ""my throat feels funny, similar to how it has felt in the past when I have had a reaction."" Pt. transferred from the vaccine clinic location to ED."
COVID19 VACCINE (COVID19)	Emergency Room *	902944-1	shortly after patient received vaccine became flushed, bottom lip went numb, vitals were in normal limits. 911 was called emergency staff came and patient went to ER to be monitored.
COVID19 VACCINE (COVID19)	Emergency Room *	902949-1	"While waiting the 15 minute after vaccination the Patient noticed a ""tingling"" feeling in throat about 5 minutes after vaccine was given. Time: 0930 - Oxygen Saturation was 98% Pulse Rate 100. Patient stated that the feeling went away and then came back. Time: 0938 - Again vital signs were taken BP 156/88 Oxygen Saturation 100% Pulse Rate 83. Time: 0942 - 50 mg of Benadryl PO were given with water at this time. Patient was taken to ER for evaluation."
COVID19 VACCINE (COVID19)	Emergency Room *	902995-1	pt developed chills, nausea and vomiting. Reports > 10 episodes of vomiting total. Went to lunch and continued to have chills and vomiting. Also developed chest pain - described as burning and heaviness. Denies any shortness of breath. CT negative for any changes. Chest X ray normal.
COVID19 VACCINE (COVID19)	Emergency Room *	903002-1	Patient received the vaccine. During the 15 minute observation period she developed chest heaviness, arm tingling, and throat tingling. BP elevated at 169/79. The patient was sent to the ED and evaluated. Diagnosed with more anxiety type symptoms. Discharge from ED stable.
COVID19 VACCINE (COVID19)	Emergency Room *	903004-1	17 minutes after vaccine, suddenly had a , crushing squeezing chest pain, very severe lasted 45 seconds. after 45 seconds continue to have moderate chest pain, light headiness, diaphoretic, very hot. NO fever, elevated BP. Mild to moderate chest and light headiness for about 3-4 hours and it self solved.
COVID19 VACCINE (COVID19)	Emergency Room *	903009-1	Patient complained of vision disturbance confusion dizziness, chills, clammy, no trouble breathing. Nausea, Patient stated she did not have any breakfast. gave patient diphenhydramine 25 mg and EMS arrived to take her to the hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	903010-1	After receiving vaccine patient started complain of vision disturbance, confusion, nurses started he was slow to respond. Nurses also documented that he was acting the same way the day before due to UTI. No SOB . no signs of allergic reaction
COVID19 VACCINE (COVID19)	Emergency Room *	903014-1	Patient reported to CNA that they felt like they soiled their pants. CNA confirmed that patient did not soil himself and transferred patient to the restroom. While the patient was on the toilet attempting to have a bowel movement the CNA reported patient had 10 seconds of tonic clonic behavior and then went unresponsive and then back to tonic clonic behavior. This happened 3 times prior to getting patient put back into his bed. Patient went unconscious after last episode while on bed for a more extended period of time while a STAT page was called. Physical Therapist and Aid sternal rubbed him and he had gasp and woke up. Prior to and immediately following the episode his vitals were within normal limits. Neuro exam was unremarkable after patient came to. When he woke up he knew his name, date, and day of the week. He was only confused to where he was. Patient was agreeable to be transported out. EMS was called and transported the patient to Hospital. Patient displayed no seizure activity or neurological deficits in ER. Patient had a CT scan, which came back normal. Virals remained within normal limits and laboratory values were noncontributory. He was diagnosed with a UTI due to the presence of hematuria associated with a syncopal episode. Patient had a Foley catheter upon admission to the nursing home. Patient was administered Ceftriaxone at the hospital and discharged back to Nursing Home on Omnicef the same day. Patient is back at nursing home facility and has not displayed any additional signs of seizure. He is stable and Foley catheter has been removed. Facility spoke to wife who reported that patient did not have a seizure history.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903016-1	Approximately 11 minutes after receiving the vaccine, the patient complained of shortness of breath, tingling in arms and hands, numbness and tingling in legs and feet, and was observably shaking, with no complaints of swelling in throat or other signs of anaphylaxis. Patient was brought to ER in same facility via stretcher and was examined by staff there. ER report states the patient presented with shortness of breath and what appeared to be a panic attack, with fast breathing, slight flushing, and shaking. Per ER report, the patient was treated for an acute anaphylactic reaction, with clear lungs and given an EpiPen shot in the right thigh. IV was initiated and given a fluid bolus, solu medrol, famotidine, and lorazepam. Labs and a chest x-ray done and reviewed. After treatment, patient found to be stable and was discharged home at 4:42 pm with orders for famotidine, albuterol inhaler, and epinephrine pen.
COVID19 VACCINE (COVID19)	Emergency Room *	903024-1	Headache, right retroocular pain, exacerbation of rosacea Tx. acetaminophen Duration: 3 hours
COVID19 VACCINE (COVID19)	Emergency Room *	903030-1	~30 minutes after vaccination, patient reported lightheadedness, difficulty swallowing, SOB, feeling flushed, pallor, bilateral arm tingling, brief chest pain and tremors. Symptoms lasted approximately 30 minutes and then resolved. Benadryl given after resolution of acute symptoms. Reported a metallic taste in her mouth immediately after receiving the COVID vaccine (dose #1). Had uneventful 15 minute recovery period immediately after vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	903047-1	Employee states that there was confusion at the time of vaccine injection, and that she was possibly given a second injection right after the first. approximately 45 minutes later she experienced headache and dizziness and had an observed syncopal episode. She was taken to the ER, evaluated for MI. Was found to be stable and was discharged.
COVID19 VACCINE (COVID19)	Emergency Room *	903112-1	Patient felt flushed, heart racing. Had irregular rhythm. Transported to Emergency Department. Treated with epinephrine. EKG performed, having pre-ventricular contractions. Checked in to ED for further evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	903123-1	About 5 minutes after the vaccine developed chest tightness, increased work of breathing, palpitations and severe dizziness. Transferred to the ED where i received oxygen, IV benadryl, IV fluids and monitoring. Released after about 4 hours and continue to take benadryl 50 mg PO q 4 hours. Also developed red facial rash (unknown time) Pain at injection site began the morning after the injection.
COVID19 VACCINE (COVID19)	Emergency Room *	903132-1	40 year female received Pfizer-BioNTech COVID-19 Vaccine today Patient reported prior h/o severe allergic reaction to influenza vaccine with eggs preservative. She has received flu vaccine w/o egg w/o problem. Due to her prior history of severe allergic reaction/ anaphylaxis to another vaccine, in this case flu vaccine with eggs, we should proceed with caution. She was told we could defer vaccination until more information becomes available. She opted to proceed with receiving Pfizer-BioNTech COVID-19 Vaccine and be observed for 30 minute observation period. Patient developed throat tightening approximately 20 minutes after vaccination. She received EpiPen within 1 minute of symptoms and was sent to ER immediately in wheelchair by nursing staff. Patient was evaluated in ED and was hemodynamically stable. She was given IV benadryl and was stable throughout observation
COVID19 VACCINE (COVID19)	Emergency Room *	903134-1	At 24 minutes after vaccination, pt experienced chest tightness, shortness of breath, cough, flushing, and rash on chest and neck.
COVID19 VACCINE (COVID19)	Emergency Room *	903143-1	Employee had tingling sensation in Right upper extremity, and heaviness in bilateral lower extremities 5 minutes after receiving vaccine. These symptoms resolved approximately 2 hours after they began
COVID19 VACCINE (COVID19)	Emergency Room *	903155-1	At 11:15am, patient received first dose of SARS-CoV-2 vaccine. At 12:00pm, patient began to develop a rash and had mild edema noted in the uvula. She did not have difficulty breathing/swallowing/speaking. She was given prednisone 50mg x 1 and diphenhydramine 50mg x 1 in the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	903161-1	Sensation of swelling around the mouth and throat felt funny
COVID19 VACCINE (COVID19)	Emergency Room *	903167-1	Began to feel weak, felt as though going to faint, became cool and clammy, BP 100/70 P 46, O2 Sat 100% on room air, no loss of consciousness. Taken to ED - noted patient did not eat prior to getting the vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	903175-1	sudden onset of rinorhea 5 minutes after receiving vaccine. then itching near ears, 5 minutes later had diffuse itching a rash, was sent to ED. There was evaluated for mild shortness of breath and hives on wrists. Did NOT et epi but did get benedryl and steroids, discharge home
COVID19 VACCINE (COVID19)	Emergency Room *	903192-1	Paresthesias of lateral tongue and throat, subjective swelling of tongue and throat, subjective shortness of breath
COVID19 VACCINE (COVID19)	Emergency Room *	903210-1	Patient reported feeling fine for the first 15 minutes after the vaccination was given then reported itching of her face excluding her forehead. Patient was given 25mg IM diphenhydramine. Pulse ox was taken and read within normal limits. Within 5-10 minutes after the diphenhydramine was given patient reported itching involving her arms, facial flushing but no shortness of breath. An extra dose of 25mg IM diphenhydramine was given and an IM EpiPen.
COVID19 VACCINE (COVID19)	Emergency Room *	903211-1	Facial swelling, slurred speech, taste in mouth (medicine like), heart palpitations, rash to chest and face.
COVID19 VACCINE (COVID19)	Emergency Room *	903217-1	COVID vaccine administered to patient. She began to have lightheadedness and dizziness. She disclosed she had not yet eaten for the day, except for a glass of milk. Writer brought her to an exam table and had her lay down. After 5-10 minutes, she was given a banana and two small apple juice boxes. She then laid back down. After another 5 minutes, she complained of headache and slight phlegm development in her throat. Dr. was called to evaluate- after an assessment, she asked for a BP. Writer completed the vitals and found her BP was 113/77. 5 more minutes passed. Dr. advised that since her situation was not improving and headache and phlegm appeared to be getting worse, patient should receive epi and go to the hospital. Writer administered 0.3mg/0.3mL of epi and drove patient to the Emergency Department of Hospital. She was there for about two hours before being discharged. Symptoms largely resolved by the evening.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903218-1	Patient reports chest heaviness, muscle aches, loss of energy. No fever or chills noted.
COVID19 VACCINE (COVID19)	Emergency Room *	903228-1	Patient experiences palpitations, dizziness, and hypertension within 10 minutes of receiving the vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	903240-1	"1658 Patient reports feeling lightheaded after receiving COVID vaccine. VS obtained, BP & HR are elevated. 1700 PA called 1702 PA arrived Patient remains lightheaded with some palpitations but denies any trouble breathing. 1711 VS are improving 1716 Patient states she starts feeling better but then gets a new wave of lightheadedness with ""fogginess"". Monitoring continued. 1741 Patient starting to feel ""extra lightheaded"" 1742 Benadryl given per PA 1748 Patient verbalized a headache 1818 Medic called because BP & HR have not improved after 1 hour of monitoring. 1825 Medic team transported patient to the ER"
COVID19 VACCINE (COVID19)	Emergency Room *	903242-1	PAIN AND REDNESS ON INJECTION SITE.
COVID19 VACCINE (COVID19)	Emergency Room *	903243-1	Patient developed hives, facial swelling, throat swelling/itching, and nausea approximately 13min after vaccination while in observation. Patient immediately taken to Emergency Department where epinephrine was given IM in the left thigh followed by 125mg IV solumedrol, 50mg IV benadryl, 1000mL NS, and 20mg IV famotidine. Hemodynamically stable throughout ED course.
COVID19 VACCINE (COVID19)	Emergency Room *	903249-1	End of monitoring period, when staff asked how he was feeling he said he was having palpitations. Nursing checked his HR and associates HR was 100-120BPM. But denied chest pain and SOB.
COVID19 VACCINE (COVID19)	Emergency Room *	903256-1	After vaccination in the medical office building adjacent to the hospital, the hospital employee felt palpitations (within 30 minutes of shot). Employee went to the ED at the hospital and was evaluated by medical personnel. Employee was SOB but did not have difficulty breathing. No other untoward reactions were observed. All other ROS was unremarkable. Sinus tachycardia of 140bpm observed in the ED, repeated ECG was sinus tachycardia of 119bpm, no other abnormalities. IVF, 50mg IV diphenhydramine, 40mg IV famotidine, and 125mg IV methylprednisolone given. Symptoms of palpitations and SOB resolved. Discharged with instruction to return to the ED if any symptoms returned.
COVID19 VACCINE (COVID19)	Emergency Room *	903260-1	Approximately 10 minutes after vaccine administration, patient reported wheezing and coughing. Patient received epinephrine IM, IV Benadryl, IV solumedrol and racemic epinephrine SVN. Patient never developed a rash, hypotension, swelling of the lips, mouth or tongue, other GI side effects . Per ER attending and admitting physician, this reaction seems to be a clear exacerbation of the patient's tracheomalacia. The patient was more responsive to racemic epi SVN as opposed to IM epi. Patient admits that psychological stress may have been a component of her symptoms. The admitting physician does not consider this to be an anaphylactic reaction to the vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	903280-1	Patient reported she was pregnant at time of screening. Patient confirmed that her and her OB/GYN discussed the COVID19 vaccine and determined it was the right decision for her to receive the vaccine. Upon receipt of the vaccine, she stated she was feeling flushed, nauseated and felt she was going to pass out. The vaccine clinic team took her to the ED for evaluation and monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	903281-1	Palpitations, shortness of breath, lump in throat
COVID19 VACCINE (COVID19)	Emergency Room *	903283-1	6 minutes after receiving the vaccine I became lightheaded. I was the worst for about 1-2 hours after the vaccine but then symptoms improved some. 11 hours later I am still mildly lightheaded.
COVID19 VACCINE (COVID19)	Emergency Room *	903289-1	Warm flushing feeling within about 10-15 seconds of injection, as well as metallic taste in mouth. Repeated on an off for the next hour. Taken to ED of hospital. Noted right arm mild rash distal to injection site and on chest, mild to moderate nausea.. IV Bendadryl 50mg given, IV Solumedrol 125mg, IV Pepcid, IV Zofran. Discharged home with PO prednisone x 4 days. PO Pepcid and Benadryl PRN
COVID19 VACCINE (COVID19)	Emergency Room *	903318-1	10:00 am received vaccine @ medical center right side of mouth felt strange on the way home. 13:00 pm right side of mouth continued to feel strange. Looked in mirror and noticed uneven smile, right side of mouth drooping. 13:35 pm messaged my primary care MD. And called Nurse triage. 14:00 pm Nurse triage advised me to go the emergency room ASAP. 15:00 pm @ Emergency room. Stroke code called, labs, CT, MRI completed. Diagnosis Bell's palsy. Went home with steroid and anti-viral. Symptoms are improving.
COVID19 VACCINE (COVID19)	Emergency Room *	903321-1	tachycardia, HR up to 130s 1 hour after vaccination. Tachycardia while sitting down. Lightheadedness. Tachycardia improved but still100-118 while at rest for hours
COVID19 VACCINE (COVID19)	Emergency Room *	903322-1	SOB, tingling
COVID19 VACCINE (COVID19)	Emergency Room *	903324-1	40 min after injection my throat and tongue started to feel weird and tight, pharmacy at my work hospital gave me 25 mg Benadryl and 650mg Tylenol. At about 1 hr 45 min after injection my throat got to the point of so swollen and itchy I couldn't swallow. I went to nearest emergency room hospital they administered decadron orally, Pepcid P.O., and Toradol via IM.
COVID19 VACCINE (COVID19)	Emergency Room *	903327-1	Patient reported that she started to feel unwell immediately after the vaccine with some nausea. She presented to the Emergency Department where she was treated by myself approximately 17 hours vaccine administration. She was having vomiting, diarrhea, diffuse rash, and throat discomfort. She was successfully treated for anaphylaxis and was able to discharge to home.
COVID19 VACCINE (COVID19)	Emergency Room *	903332-1	Seizure approximately 24 hours after vaccination

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903334-1	Immediately after administration felt a strange sensation on nostrils and mouth that dissipated after the initial 15 minutes. Then I started with mild itching in the next arm and neck. About 30 minutes after administration my eyelids became swollen. No shortness of breath or tachycardia. I received Benadryl and solumedrol at ER. Stay at the ED for about 2 hours and left home. After that I felt strange for a while and could not sleep at all. The next morning everything was fine except for mild left arm side of injection pain.
COVID19 VACCINE (COVID19)	Emergency Room *	903337-1	COMPLAINS OF NUMBNESS TO TIP OF LIP WITHIN MINUTES OF ADMINISTRATION. DENIES HISTORY OF ANAPHYLAXIS. TRANSFERRED IMMEDIATELY TO HOSPITAL ED
COVID19 VACCINE (COVID19)	Emergency Room *	903338-1	5-10 minutes after vaccination, vasovagal syncope: pallor, diaphoresis, dizziness, tunnel vision, nausea, weakness, tingling in arms/legs, BP 103/69
COVID19 VACCINE (COVID19)	Emergency Room *	903342-1	Event happened outside of the ER at a clinic and not witnessed by any hospital staff. Patient reported dizziness, shortness of breath, headache, chest pain, sore throat, hoarse voice and tightening in the throat and chest minutes after vaccine administration. Treated with IM epi on scene by EMS. In the ED about 30-45 minutes after event, given IV normal saline, solumedrol, benadryl, and famotidine. Given PO potassium after labs for mild hypokalemia. She was monitored for about 4-5 hours total in the ED with complete resolve of symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	903358-1	She became diaphoretic, her throat felt dry and as if it was beginning to close. Rapid response was called and she was transported to the ER. She was tachycardic, experienced chest tightness, and shortness of breath.
COVID19 VACCINE (COVID19)	Emergency Room *	903374-1	Monitored 30 minutes in clinic, woke up at 930pm itchy hands/arms, then spread. No respiratory issues, but called to ED. Spread to thighs, and back of legs rash. 10:30 ED medicated with IV Solumedrol, Pepcid and Benadryl. Sent home with Prednisone, Pepcid and taper. Dr. spoke with this am and plan to pre-medicate prior to 2nd dose, but does approve. Monitor another 30 minutes. Rash resolved minimal on forearms.
COVID19 VACCINE (COVID19)	Emergency Room *	903375-1	pruritis of upper extremities. Erythema of bilateral palms and dorsal wrists
COVID19 VACCINE (COVID19)	Emergency Room *	903382-1	About 5-10 minutes the vaccine I began to get tingling and a itchiness in the back of my throat, notified personnel and vitals were checked and stable. The tingling and numbing sensation went away and came back and benedryl was given. The symptoms came in waves of about every 2-3 minutes so I was transported to ER and somumedrol was given was monitor for 1-1.5 hrs and the numbness and tingling sensation continued for about an 1-2 hours and finally subsided and was released to go home
COVID19 VACCINE (COVID19)	Emergency Room *	903400-1	"5 minutes after the Pfizer Covid-19 vaccine administration, the patient developed flushing, hives, felt warm and eventually short of breath. She started to wheeze and was wheeled into ER c/o "I can't breathe while holding throat and thrashing with facial flushness noted. PT took 2 Benadryls and had several Epi shots. She was then discharged from the ER and later on that day, started to feel short of breath again. In the ED today she was audibly gasping for air, however had no wheezing, had a normal saturation and a normal blood pressure. She had taken another dose of her EpiPen IM and diphenhydramine 50 mg by mouth prior to coming. She was then admitted to the hospital for further observation. While on the floor, she started to feel short of breath again (about 9 am on 12/18/2020), which required an RRT. Patient received another dose of diphenhydramine IV, methylprednisolone 125 mg IV and several doses of IM epinephrine. She also required oxygen. She was then transferred to an ICU for further care."
COVID19 VACCINE (COVID19)	Emergency Room *	903407-1	Patient with a h/o syncope to vaccines, felt light headed and laid down on floor roughly 3-5 minutes after vaccination in the observation area. Patient pale, pulse regular in mid-60's, A&O x3, conversant. Medical assistance team called, bp 94/60, lightheaded after attempt at standing for 90 seconds. Transported to ED for observation.
COVID19 VACCINE (COVID19)	Emergency Room *	903409-1	Initial symptoms started in less than 5 minutes were tingling in the lips and tongue. Thickness feeling to the tongue. Progressed to hoarseness to voice that worsened. Received 50mg Benadryl chewable tablets. Symptoms continued to worsen. Epi pen injection in left thigh. 5 minutes later still no improvement and another Epi pen injection in right thigh. Monitored for 5 to 10 min and no improvement and was taken to the ER. In the ED, received IV fluids, IV Benadryl, IV Decadron and IV Pepcid. Monitored for 3 1/2 to 4 hour and discharged home with 3 days of Prednisone 60 mg and Benadryl po every 6 hours as long as allergic like symptoms persisted. 12/18 morning still with lip tingling and Asthma like symptoms. Voice is still in and out of hoarseness
COVID19 VACCINE (COVID19)	Emergency Room *	903413-1	On 12/16/2020, approximately two hours after administration of Pfizer BioNTech Covid-19 vaccine, patient developed SOB and chest pain. Patient reported to ED where she was given fluids, diphenhydramine, ipratropium/albuterol nebulizer treatment, magnesium, famotidine, and epinephrine. Of note, patient has anaphylactic reaction to corticosteroids. On 12/17/2020, around 3:00 pm the patient reports to the ED at a different facility (one closer to her home) with difficulty breathing and sensation of her airway closing. Patient again was given epinephrine, fluids, ipratropium/albuterol nebulizer, diphenhydramine, famotidine, and was also given a dose of lorazepam. The patient now has stated that she had an anaphylactic reaction to a prior flu vaccine, however this was not listed as an allergy prior to administration of the Pfizer BioNTech Covid-19 Vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	903415-1	Patient experienced mild allergic reaction starting at 4:19pm. The ER staff came to tend to the patient. The patient reported dizziness and weakness. Her vitals are as follows: BP 142/80, O2-99% on room air, Pulse-98, Resp Rate-18, Temp-97.3F. The patient was taken to the ER and received Benadryl 50mg IV and an EpiPen. The patient's pain was 0/10. The patient was reported stable at 4:27pm.
COVID19 VACCINE (COVID19)	Emergency Room *	903418-1	Employee presented to the Emergency Department for dizziness. Patient received COVID-19 vaccination today. About an hour and half later he started experiencing dizziness and lightheadedness. Patient was normotensive with regular heart rate at the time. Patient reports when he would get up to go patient room he would start to feel unsteady. Patient has history of orthostatic hypotension intermittently in the past. Patient reports he had some tingling to his bilateral hands.
COVID19 VACCINE (COVID19)	Emergency Room *	903420-1	NAUSEA AND VOMITING
COVID19 VACCINE (COVID19)	Emergency Room *	903422-1	Approximately 10 minutes s/p vaccination, employee became sweaty, c/o tingly hands, low BP, c/o nausea. Medical assistance team called, patient transported to ED.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903425-1	1 hour after administration of vaccine 0.3ml the staff member began to have a systemic blotching on skin and dry, severe cough.
COVID19 VACCINE (COVID19)	Emergency Room *	903429-1	Pfizer-BioNTech COVID-19 Vaccine EUA Pin and needle feeling throughout body with flushing and hives. Mouth and throat felt tight with numbness sensation in mouth. Voice became very raspy and breathing felt somewhat difficult. Tachycardiac and Hypertensive Reported to the ED, received 50 mg IV Benadryl, 125mg Solu-medrol and 40 mg Pepcid, symptoms began to subside after about 5-10 minutes. Had report throat tightness at approximately 1700 and self medicated with Benadryl 2 times throughout the evening.
COVID19 VACCINE (COVID19)	Emergency Room *	903436-1	Itchy throat and back of tongue, received IM epi, pt complaints unchanged <5 min after epi inj, received diphenhydramine, famotidine, prednisone (1 hr later), patient comfortable, throat symptoms improving (2.5 hrs later)
COVID19 VACCINE (COVID19)	Emergency Room *	903440-1	She received her covid vaccine around 1700. She had a reaction that we monitored in the observation room for approximately 40 minutes. She was not feeling better so we took her to the ED for monitoring. She was discharged from the ED after an hour and a half. No intervention was needed. Her symptoms were feeling flushed/ anxious/ shaky, injection arm felt hot (was cool to the touch), HR was 117, BP was 143/96, which is high for her. We are recommending she reach out to her PCP prior to scheduling her second dose.
COVID19 VACCINE (COVID19)	Emergency Room *	903460-1	Eye redness, pain, swollen Face swelling Bilateral arms and hands swelling Rash SOB
COVID19 VACCINE (COVID19)	Emergency Room *	903469-1	Initial within 10 minutes, redness and burning pain at site. Ice was applied and this went away, then about 25 minutes, itchy throat, trouble swallowing, mild confusion. Oral benadryl 50mg and solumedrol IM. Once again this dissipated after 30 minutes. 3 hours later, trouble swallowing, felt as if something was in my throat, redness and flushing all over.fluid bolus, epinephrine I'm, iv benadryl, pepcid oral, and claritin oral, fluid bolus. 12 hours after getting the vaccine blurry vision, ringing ears, headache, benadryl, steroid, claritin all oral
COVID19 VACCINE (COVID19)	Emergency Room *	903470-1	"lightheaded; ""funny feeling"" in throat; systolic BP in the 80's; given famotidine and loratadine @ 12/16 (2 hrs later); pressure and heart rate improved greatly (3.5 hrs later)"
COVID19 VACCINE (COVID19)	Emergency Room *	903473-1	ITCHING AND REDNESS ON INJECTION SITE, NEXT DAY GENERALIZED ITCHING. DIARRHEA.
COVID19 VACCINE (COVID19)	Emergency Room *	903495-1	Right arm soreness, mild swelling, subjective fever, chills, bodyaches, headaches, loose stools x 2, 6 hours of duration, Treatment Tylenol
COVID19 VACCINE (COVID19)	Emergency Room *	903504-1	The patient began to feel itchy throughout the body, particularly both arms and the back. This happened 30 minutes after injecting her with the COVID-19 vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	903506-1	(1145) Left eyelid swelling 15 minutes after vaccination. (1155) b/l superior periorbital edema and erythema, b/l ear erythema and burning, and b/l hand tingling. (1200) Oral Benadryl 25 mg was given. (1230) symptoms improved and I was able to leave. While riding in the car on the way home started to have chills w/ goosebumps and nausea in short waves. Took an nap b/c my chills worsened and slept until 1630. Work up b/c of worsening chills, shivering, chest tightness, nausea, b/l hand numbness and tingling, right foot burning and stinging, and constant throat clearing b/c throat felt thick. Called the nurse on-call number provided in vaccine packet and was transferred to virtual care and report was given. Medical team advised me to go to the ED. (1900) Arrived at ED and temp was 101 and the chills, numbness, foot burning, and chest heaviness were worse and my eyes were burning and heavy. I was given oral Pepcid and an IV was started. After an IVP of Benadryl and Solu-Medrol I experienced severe burning starting in my head, neck, chest, and stomach. Then it felt like my veins were on fire all the way to my fingers and toes. This was followed by strong nausea w/o vomiting. I was then given IVP of Zofran and Ativan and NS drip. (1940-2020) Chills, burning around eyes, and vertigo continued other symptoms were improving .(2020) Provider returned and reported that labs were normal and I was probably having a reaction to the vaccine. (2035) Discharged from ED. Experienced chills, hand and foot numbness and tingling after discharge but was able to go to sleep.
COVID19 VACCINE (COVID19)	Emergency Room *	903507-1	Became hot and felt itching minutes after receiving vaccine. No swelling of lip or tongue or throat. No rash. No shortness of breath. ER doctor on site evaluated and determined this was not likely to be an allergic reaction.
COVID19 VACCINE (COVID19)	Emergency Room *	903514-1	Vaccine recipient was administered the vaccine at 11:30 am and then around 1:30 pm started to feel dizzy with hives and itching to his arms. The vaccine recipient was sent to the emergency department for further evaluation. There was an erythematous macular/papular rash on bilateral arms. He was administered diphenhydramine 12.5 mg IV, famotidine 20 mg IV, and methylprednisolone 125 mg IV. After reexamining, the patient felt much better, no dizziness, no itching, and no rash. He was discharge to home at 4:57 pm same day.
COVID19 VACCINE (COVID19)	Emergency Room *	903522-1	After injecting vaccine the patient began to feel heavy tongue, dizziness and nausea. Vital signs: BP:205/161 mmHg, R:21, 97% oxygen saturation
COVID19 VACCINE (COVID19)	Emergency Room *	903528-1	about 12 minutes after receiving the vaccine had a sudden onset of sharp headache while seated. When she stood up became lightheaded and dizzy and nauseous. She also had elevated Blood pressure p to 168/108. After 35 minutes her positional symptoms persisted with BP still elevated 159/102. No respiratory or skin symptoms. She was transported to the ED and had a head Ct which was normal, discharged with pain medications.
COVID19 VACCINE (COVID19)	Emergency Room *	903530-1	Additional to the symptoms previously reported I woke up with headache and thighs feeling heavy. Those are the remaining symptoms, the previous ones reported have subsided
COVID19 VACCINE (COVID19)	Emergency Room *	903532-1	on 12/16 i was given the vaccine at noon and finished my day as usual, I had a beer before bed and fell asleep at 9pm, at about 1am on 12/17/2020 I woke up with severe chest pain like something was crushing me, like a car being crush it felt like. I went to the ER at 3am and I was told I had a severe reaction to the vaccine. I had a weird taste in my mouth, cough, watery eyes, pain in all limbs, jaw pain and neck pain. I am going to get tested today 12/18/2020 for covid

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903533-1	"Pt was ambulating through hospital cafeteria at approx 13:50 when she developed sudden difficulty walking, gait ataxia witnessed by nursing staff. States, ""It felt like the floor was rolling and I couldn't stay balanced."" Pt diaphoretic, hypertensive. No other focal deficits. On arrival to ED, pt continues to have gait ataxia, but no ataxia on NIHSS assessment. Denies headache. Received COVID vaccine at approx 1 pm today."
COVID19 VACCINE (COVID19)	Emergency Room *	903537-1	Metallic taste, chest pain, coughing or throat clearing, bilateral arm numbness
COVID19 VACCINE (COVID19)	Emergency Room *	903568-1	Patient stated that within 3-4 hours of receiving the covid-19 vaccine he began to lose his sense of taste and smell. Patient presented to ER (12-17) with his arm was hurting, headache, weakness, back hurting, and blood pressure was up. B/P was 204/112; pulse 84; resp 19; temp 102.4; Covid-19 test- negative. He had no sob or cough. Meds given: Tylenol tabs 650mg x1, Toradol 30mg iv x 1; NS 0.9% 1000ml iv, Tusssionex 5ml x1; Lopressor 50mg po x1, Patient released at 10:23am
COVID19 VACCINE (COVID19)	Emergency Room *	903569-1	within 5 min, pt reported feeling dizzy and lightheaded. No loss of consciousness. Pt also reports having eaten M and Ms as only food today. Pt happened to have a pulse ox on self (is an RT). SaO2 96% on room air, pulse 94. Pt given some trail mix and water and began to feel better. Upon standing pt reported not feeling well again and returned to seated. Pt then began with jerky muscular movements of upper extremities and stuttered speech. Pt states that this is how her PNES presents. No loss of mentation or consciousness. EMT team called for transfer to ER. Pt alert and oriented on transfer
COVID19 VACCINE (COVID19)	Emergency Room *	903588-1	Employee waited for 15 minutes after injection in the Department, 40 minutes after the employee left she called employee health and was instructed to return to the hospital ED if she was able. Dr. and the ED physician evaluated her. She had peri-oral numbness, and some cheek numbness, no motor deficits. SBP was 200 in ED. Single dose of Catapres and then improved B/P. D/C to home. 12/17/2020 - AM mild chin numbness - everything else resolved. B/P remained stable 12/18/2020 - resolved
COVID19 VACCINE (COVID19)	Emergency Room *	903592-1	Not all or limited to: anaphylactic reaction: Feeling lump in throat, tongue feeling funny with numbness, feeling of hard to swallow, throat tightness, shortness of breath, tachycardia, tachypnea, pressure, tingling, and numbness from head to toe, dizziness/lightheartedness, cough, voice changes.
COVID19 VACCINE (COVID19)	Emergency Room *	903596-1	1208- Flushed/warm, scratchy throat. lethargy, decreasing oxygen saturation, placed on 4L NC, EMS called 1211- Diphenhydramine 50mg, Solumedrol 125mg, Epi pen injector adult 1231- EMS arrived, patient transferred to ER on 4L NC, SP02 94%
COVID19 VACCINE (COVID19)	Emergency Room *	903604-1	Hives, scratchy throat but no swelling or change in phonation
COVID19 VACCINE (COVID19)	Emergency Room *	903605-1	Headache and increased HR followed by dizziness (room spinning), and throat tightening. Evaluation in vaccination clinic revealed tachycardia and elevated BP. Brought to ER to monitor throat tightening. Upon trip to ER (roughly one minute), experienced nausea. Experienced chest pain after being admitted to ER, roughly 20 minutes after vaccination. Chest tightness and throat swelling lasted for roughly about 30 minutes. All symptoms subsided with the exception of the headache about an hour after injection. Discharged from ER and went back to work. Headache continued into the afternoon, along with general weakness.
COVID19 VACCINE (COVID19)	Emergency Room *	903610-1	Tightness in throat, throat swelling, tachycardia. Treated with epinephrine IM x 1, benadryl, famotidine, methylprednisolone,
COVID19 VACCINE (COVID19)	Emergency Room *	903615-1	"Patient initially felt dizzy which resolved after a couple of minutes. Patient stated she felt better, just ""tired"". She went to her locker, felt dizzy and went to Nursing office at 10:57 pm via wheelchair."
COVID19 VACCINE (COVID19)	Emergency Room *	903628-1	Patient c/o dizziness immediately after receiving the vaccine. She walked from the vaccine station to the waiting area and alerted staff that she felt dizzy. No SOB, no rash, no throat tightness. She had a similar episode in October. Recently increased Lisinopril dose. She was laid down on a stretcher. Vitals were stable. Glucose=105. Transported to ER for further work-up. Dizziness resolved prior to transport.
COVID19 VACCINE (COVID19)	Emergency Room *	903630-1	lightheaded,dizzy,increased heart rate, increased blood pressure
COVID19 VACCINE (COVID19)	Emergency Room *	903631-1	lightheaded,dizzy,increased heart rate, increased blood pressure
COVID19 VACCINE (COVID19)	Emergency Room *	903633-1	Patient developed hives on lower back to the side and left leg. 25mg of benadryl tablet was given in ER and later a dose of 500mg tylenol was given by patient herself at home. The next day patient reported woke up with joints stiffness all over whole body . Hives has been diminished by day 2.
COVID19 VACCINE (COVID19)	Emergency Room *	903635-1	"Shortly after vaccine felt dizzy; nurse gave me water and a granola bar to eat. Employee took a bite or two and then felt dizzy. Employee sat down and blood pressure taken 170/ 80 and then 10 minutes later B/P 200/90. Nurse manager came and recommended employee go to ER for assessment. Blood sugar was checked and employee states ""they were not low""
COVID19 VACCINE (COVID19)	Emergency Room *	903661-1	Vaccine injection went fine it did not hurt at all, but I sat down for observation and within 2 minutes I felt mildly dizzy and then brief chest pressure and a wave of nausea. The chest pressure went away quickly but I was more flush than usual, about 15 min in my eyes felt watery and itchy. Went to ER to be observed, EKG came out fine. 118/72 HR 68 . Everything was fine. No meds prescribed, just observation, stayed about 90 min in observation by the time I left I was just mildly nauseated. By the time I arrived home, 2 hours later all symptoms were resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	903662-1	"at 12:55 pm ""enormous hot flash"", became diaphoretic, chest tightness, immediate need to have BM, ""uneasy"" feeling. Waited 40 minutes, then went to ED. No meds given. 1 Liter IV fluids given. VS monitored and within ""normal"" range. Cardiac enzymes and other labs drawn and within normal range. Released to self after 2 hours. Returned to work next morning."
COVID19 VACCINE (COVID19)	Emergency Room *	903668-1	Fever 101, Headache, body aches, increased heart rate 140-160, chest pain.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903682-1	"Within 2 minutes after injection, patient started to feel very hot and with increased heart rate. Pt states that she feels ""tingly"" and is tearful. Pt denies difficulty breathing. Patient then started to have a red blotchy rash on her neck and chest. No redness at injection site. Pt brought to Emergency room for evaluation/observation. Pt able to talk in full sentences. Pt states that she has a history of anxiety and has gone into SVT because of anxiety in the past. Pt received steroids in ER."
COVID19 VACCINE (COVID19)	Emergency Room *	903683-1	After the shot I felt dizzy, sweating profusely, felt throat tightness, my heart was racing. They gave me an epinephrine shot in the leg and I was sent to the ER at Hospital. By the time I got to the ER m symptoms were gone. They did monitor me, put me on oxygen and hooked me up and around 2:45 I got up to use the restroom and they did not have to hook me up anymore. I took the day off because after the Benadryl and epinephrine I just feel groggy for about 24 hrs.
COVID19 VACCINE (COVID19)	Emergency Room *	903686-1	"Patient reported being nervous about getting her vaccine. Denied any current medical issues on her pre-vaccination questionnaire. During her observation period. Patient stated that she felt her ""throat was closing"". Pt assisted supine. Epinephrine and Benadryl given IM. Emergency protocol implemented. Dr. present. No hives, wheezing, or swelling noted. After treatment pt stated she is getting worked up for WPW syndrome. VS stable. Pt transferred to ED for monitoring 1040."
COVID19 VACCINE (COVID19)	Emergency Room *	903702-1	I felt a little bit dizzy and tasted like saline in my mouth. I kept feeling dizzy, like I had a brain fog and felt lightheaded and nauseous, I started having tunnelling vision, my BP as high, I got confused and nauseous, had headache and was sent to ER to be observed. Had fever last night and still feel weird and still have headaches, treating it with tylenol. Took the day off from work since symptoms did not subside.
COVID19 VACCINE (COVID19)	Emergency Room *	903706-1	Pt with h/o of multiple environmental allergies plus latex. Received vaccine at 1115am and reported itching eyes and itching ears at 1129am. She was escorted via wheelchair to the ED for f/u treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	903713-1	Patient reported feeling hot shortly after receiving her vaccine with an itchy arm. We provided an ice pack and laid her down on a stretcher. Patient became slightly erratic and we proceeded to wheel her down to ER. ER summary below. ED Course: Patient's pertinent past medical, social, family medical history were reviewed from both the nursing notes and the electronic medical record. This is a 27-year-old female with a past medical history as above presenting with a chief complaint of concern for urticarial rash in anaphylaxis following a COVID-19 vaccination. I did speak with Occupational Health who stated that this patient is well-known to the hospital, stating specifically that she becomes very anxious with vaccinations/needles and breaks out in hives on previous injections. This information was given to his after her initial presentation. Patient had already been removed provided epinephrine given concern of possible anaphylactic reaction given her area, diaphoresis, pruritus and diffuse urticaria. I was called into the room multiple times as patient continued to ask to be discharged. I did have multiple conversations with her in regards to need for continued monitoring given possibility of anaphylactic reaction. She feels that this was due to her anxiety and states that she is completely asymptomatic and at her baseline at this time. She once again is asking to leave. I did discuss my recommendation for continued monitoring as well as the risks of leaving without continued monitoring. The patient is able to choose, communicate and make choices clearly and understandably. The patient is able to understand risks, benefits and alternatives of therapy explained by myself. The patient can make a logical and rational decisions according to my assessment. The choice made by the patient is consistent with the patient's values and is consistent with character and decision capacity in the patient's past, according to friends and family present. There is no impending medical risk to this patient to warrant my holding the patient against their will. Patient will be discharged in stable condition at this time with strict return precautions and instructions for close outpatient follow-up. She was provided EpiPen given possibility of anaphylactic reaction in the future.
COVID19 VACCINE (COVID19)	Emergency Room *	903717-1	Vomiting, lightheadedness, floating feeling, nausea, tachycardia within 15 minutes of vaccination
COVID19 VACCINE (COVID19)	Emergency Room *	903718-1	Vomiting, lightheadedness, floating feeling, nausea, tachycardia within 15 minutes of vaccination
COVID19 VACCINE (COVID19)	Emergency Room *	903720-1	Dizziness, Rapid Heart Rate
COVID19 VACCINE (COVID19)	Emergency Room *	903725-1	Nausea, vomiting x 3, and hyperglycemia (BG: 350s) 30 to 60 minutes following 0.3 mL IM injection of Pfizer-BioNTech COVID-19 vaccine in the left deltoid.
COVID19 VACCINE (COVID19)	Emergency Room *	903729-1	severe flushing and complaint of hot ears. tachycardia on monitor
COVID19 VACCINE (COVID19)	Emergency Room *	903730-1	Flushing, hot flashes, elevated heart rate and high BP (never have a problem with that), Evaluated at the ER and received Benadryl immediately. After coming home (discharged around 1:30), felt fatigued and started with a mild headache. Also joint pain in my hips and my knees. Woke up this morning pretty fatigued and with headache feeling better this afternoon. Still have a mild headache.
COVID19 VACCINE (COVID19)	Emergency Room *	903736-1	"Pt was being observed in hospital for reactions per Dr orders due to Pt's history. Pt reported ""itchy"" feeling at 9:50am. At 10:20am Pt reported generalized ""itching provider notified at 10:34. 11:05am Pt received Benadryl at this time Pt had itchy watery eyes and generalized itching. 11:50 Pt sleepy but ""itching better"" dr notified and Pt returned to Assisted Living."
COVID19 VACCINE (COVID19)	Emergency Room *	903739-1	Tongue and throat swelling about 30 minutes after receiving vaccine. Took Claritin about 15 minutes after onset of symptoms. Symptoms mostly subsided about 1 hour after taking Claritin. Slight throat swelling and difficulty swallowing until a dose of Benadryl was taken the following day.
COVID19 VACCINE (COVID19)	Emergency Room *	903753-1	She felt a little warm in the chest and stomach area. She felt her heart was racing. She didn't have shortness of breath or difficulty swallowing. She felt it was the same reaction as when she had her TDap vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	903754-1	She felt a little warm in the chest and stomach area. She felt her heart was racing. She didn't have shortness of breath or difficulty swallowing. She felt it was the same reaction as when she had her TDap vaccine

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903756-1	diffuse itching immediately after injection
COVID19 VACCINE (COVID19)	Emergency Room *	903757-1	Dizziness, numbness and tingling bilateral legs and arms, developed after 5 minutes of vaccination. Vaccine at approx 1:00 PM, 1:05 dizziness, 1:07 numbness and tingling legs, spreading to arms. Denied SOB, chest pain.
COVID19 VACCINE (COVID19)	Emergency Room *	903758-1	Itchy all over body.
COVID19 VACCINE (COVID19)	Emergency Room *	903760-1	Body pruritus, generalized, diarrhea Treatment: Benadryl 50mg Solumedrol 125mg Pepcid 20 mg
COVID19 VACCINE (COVID19)	Emergency Room *	903763-1	Throat tightening and patient started to tremble 30 minutes after vaccination. Also became tachycardic. Patient was treated with methylprednisolone 80 mg IV x 1, famotidine 20 mg IV x 1, and diphenhydramine 50 mg IV x 1.
COVID19 VACCINE (COVID19)	Emergency Room *	903766-1	Angioedema
COVID19 VACCINE (COVID19)	Emergency Room *	903767-1	nausea, headache, rash, hot all over
COVID19 VACCINE (COVID19)	Emergency Room *	903769-1	5 minutes after receiving vaccine I felt like I was going to pass out. They took me to the ER. Heart rate went up to 160 at one point. Was given steroids, Benadryl, and Pepcid and that helped. This helped and then heart rate went up again. Tremors and BP was up.
COVID19 VACCINE (COVID19)	Emergency Room *	903773-1	Rash and tingling lips approximately 40 minutes after Pfizer-BioNTech COVID-19 vaccine 0.3 mL injected IM into the left deltoid. Presented to ED to report symptoms. Symptoms mild enough that patient did not want to have any interventions. She just wanted to report them for tracking purposes. Instructed to return in symptoms worsen or if new symptoms develop. Patient did not return, so assuming no new or worsening symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	903774-1	Rash and tingling lips approximately 40 minutes after Pfizer-BioNTech COVID-19 vaccine 0.3 mL injected IM into the left deltoid. Presented to ED to report symptoms. Symptoms mild enough that patient did not want to have any interventions. She just wanted to report them for tracking purposes. Instructed to return in symptoms worsen or if new symptoms develop. Patient did not return, so assuming no new or worsening symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	903775-1	I initially had to sit down for about 15 min and felt my mouth dry, my tongue was kind of tingling, not swollen. I was checked for anaphylactic shock. I felt like an adrenaline shock, and felt my heart racing, my BP was high - stayed in the ER for an hour for observation. I felt the same kind of sensation when I had COVID in July. This morning, had chills early in the morning around 1AM but it is all gone now.
COVID19 VACCINE (COVID19)	Emergency Room *	903777-1	Chest tightness, sob, tachycardia Treatment: Benadryl 50mg Solumedrol 125mg
COVID19 VACCINE (COVID19)	Emergency Room *	903779-1	Patient reported numbness and tingling on the tongue 5 minutes after receiving the COVID-19 vaccine, she has a history of anaphylactic reaction to sulfa, epi pen administered at 13:50pm. Took by ambulance to emergency room at 14:10pm today
COVID19 VACCINE (COVID19)	Emergency Room *	903782-1	Vaccine recipient reported bilateral hand tingling (paresthesia) in fingers shortly after vaccination. Vaccine recipient was sent to the ED for further evaluation. She reported to be also feeling anxious. She was alert and oriented to person, place, time, and situation. No focal neurological deficit. After re-evaluation, her condition was improved/stable and was subsequently discharged to home the same day. Followed up with the vaccine recipient the same day. They are resting comfortably at home and reported that symptoms have resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	903788-1	Individual started to feel light headed, tongue felt numb, felt hot. Skin had some light-red blotches around collar-bone.
COVID19 VACCINE (COVID19)	Emergency Room *	903790-1	Pt complained of dizziness. Headache pain 7/10. flushing and fatigue. BP was 207/120. Pt sat down in treatment, She took 650 of APAP. She eventually had to lay down. Eventually she seemed fine but was recommended to go to the ER. Pt went to ER, got a ketorolac shot, and BP was down to 130/100.
COVID19 VACCINE (COVID19)	Emergency Room *	903815-1	Dizziness, nausea, dry mouth; felt hot; later developed chest tightness sour taste in mouth; rapid heart rate; tingling on same arm vaccinated (L arm) some numbness in same arm L arm; felt shaky for 15 min; Blood pressure elevated
COVID19 VACCINE (COVID19)	Emergency Room *	903819-1	tachycardia, flushing, severe hives on arm received vaccine, dizziness, palpitations
COVID19 VACCINE (COVID19)	Emergency Room *	903822-1	metallic taste, sob, joint pain, cephalaea tx: solumedrol 125mg Benadryl 50mg
COVID19 VACCINE (COVID19)	Emergency Room *	903824-1	developed itching, nausea, light headedness - required transfer to the ED for observation
COVID19 VACCINE (COVID19)	Emergency Room *	903828-1	Patient developed shortness of breath, cough, chest tightness, and tachycardia
COVID19 VACCINE (COVID19)	Emergency Room *	903832-1	Patient received injection at 14:05 at 14:12 he reported not feeling well. Patient was diaphoretic, clammy, pale, described the inability to see, had difficulty following commands. Patient transferred to gurney with max assist and transferred to E.R. Patient symptoms resolving during transport. Left patient in E. R. care at 14:15.
COVID19 VACCINE (COVID19)	Emergency Room *	903841-1	Moderate left arm pain throughout the whole arm, feeling cold in the arm. The patient has normal pulses, normal motor and sensory function.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903850-1	metallic taste, could not swallow
COVID19 VACCINE (COVID19)	Emergency Room *	903852-1	65-year-old female received COVID-19 vaccine at the Urgent Care Center. She waited around 15 minutes after the vaccine and had no reaction. About 10 minutes later while in her car she noted a numb feeling of her tongue and that the tongue felt swollen but was not necessarily swollen. She subsequently felt that her lips were tingling and had swollen feeling. She returned to the facility and was given an EpiPen shot at around 10:15 AM. Patient was transferred to ED via ambulance. Gradually the symptoms resolved and was discharged from the ED in stable condition
COVID19 VACCINE (COVID19)	Emergency Room *	903855-1	Patient experienced redness, itching at the injection site with tingling through fingertips within about 10 minutes of receiving injection.
COVID19 VACCINE (COVID19)	Emergency Room *	903856-1	"t 3am she woke up and noticed some facial tingling on the ride side that felt like ""pins and needles"" - she reports like ""when you get a numbing shot at the dentist"". She also had some right arm and right leg tingling. She reports the leg tingling as ""normal"" as she has a hx of sciatica. She she woke up for the day then this morning the tingling in her arm/leg had resolved. She had coffee and cinnamon roll then started to clean the hou also had inner eye lid with itchiness. She began to have mild chest tightness so she took her inhaler - Albuterol and she took Claritin."
COVID19 VACCINE (COVID19)	Emergency Room *	903858-1	c/o chills, nausea, hypertensive (170/100), flushing of face, redness and blotching of chest and neck
COVID19 VACCINE (COVID19)	Emergency Room *	903859-1	Dizziness sense of throat swelling
COVID19 VACCINE (COVID19)	Emergency Room *	903864-1	carpopedal spasm of both hands immediately following receipt of vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	903865-1	Vasovagal response
COVID19 VACCINE (COVID19)	Emergency Room *	903866-1	"Patient recieved first dose of covid-19 Vaccination on 12/18/20 at 11:49 am. Went into observing area and at 11:54 felt hot flush that moved upwards from chest to top of head. Vital signs taken 98.9, p117, bp 172/95, 100% oxygenation per pulse ox. Repeated blood pressures 128/84. Patient states that she is always in 90's systolically and 60's diastolically. The whole time patient stated that she had a ""cold"" feeling throughout the chest area. Pulse fluctuated from high 80's to low 100's, Patient stated she also had a "" lump in her throat"". Decision was made to transport her to the ED via Wheelchair where she was assessed and dx of Adverse reaction to the covid vaccine. EKG, CBC, BMP, Troponin 1 with high sensitivity done as well as a chest Xray. All tests within normal range and patient discharged home with orders to follow up with primary care physician as soon as possible."
COVID19 VACCINE (COVID19)	Emergency Room *	903868-1	About 5 minutes after receiving the vaccine, recipient reported tightness in the arm he received the vaccine. Five minutes later reported feeling light headed and tightness in his throat. Blood pressure taken--142/80 with 102 pulse. Reports no difficulty with breathing. Respirations easy and nonlabored. SaO2 99%. After reporting to healthcare provider, instructed to give Benadryl and call 911. Vital signs @ 3:30pm 139/81 with 79 pulse, temp 97.6 SaO2 100% Paramedics arrived at 3:35pm Recipient refused transport. Agreed to be escorted to ER via shuttle. Arrived at ER @ 3:53pm
COVID19 VACCINE (COVID19)	Emergency Room *	903870-1	The patient received the vaccine and reported shortness of breath, pallor and feeling that her throat was closing. Patient was given 25mg PO Benadryl and brought to the ED. On arrival patient continued to report feeling tightness in throat but states that she is breathing well.
COVID19 VACCINE (COVID19)	Emergency Room *	903876-1	Within half hour of receiving COVID vaccine, patient developed headache, then began feeling lightheaded and began pale. Attempted to lay down, upon standing felt lightheaded and noted some numbness around her lips, arms, and legs. Symptoms include faintness, near syncope, and numbness. After about 10-15 minutes of not feeling well, patient was escorted to the Emergency Room. Patient received fluids and was discharged home. Patient reports at 5pm that she continues to have slight headache and arm soreness with no further near syncopal episodes.
COVID19 VACCINE (COVID19)	Emergency Room *	903877-1	Itching
COVID19 VACCINE (COVID19)	Emergency Room *	903880-1	Hives
COVID19 VACCINE (COVID19)	Emergency Room *	903881-1	Following her vaccination during the post-observation period of 15 minutes, she began to be dizzy, short of breath, and right-sided chest pressure. Also c/o headache. BP 156/102, pulse 76, O2 Sat 99%. She was evaluated by Dr. and determined to transfer to the ED
COVID19 VACCINE (COVID19)	Emergency Room *	903886-1	Patient presented with hives to upper extremities approximately 2 hours after receiving the vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	903889-1	Approximately 10 minutes after receiving vaccine, patient felt light headed. Patient drank juice and felt better. Approximately 20 minutes after vaccine administration, patient began to complain of tongue tingling. Patient received Benadryl 50 mg IVP. Rash developed on her chest. Patient given Solumedrol 125 mg IVP, Famotidine 20 mg IVP and NS wide open. Epi pen 0.3 mg IM was administered and patient became tachycardic. At that point, patient was transferred to the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	903890-1	pt with n/v diaphoresis and hypertensive with SBP 180's
COVID19 VACCINE (COVID19)	Emergency Room *	903892-1	Light headed, Itchy Chest, Chest tightness, Heart racing, Throat tightness, Tingling legs

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903894-1	diaphoresis, rigors, chest pain, slight sob.
COVID19 VACCINE (COVID19)	Emergency Room *	903896-1	Was walking to car when she felt her throat become stratchy, sore, and a lump in it. She came back in to be evaluated. Was escorted to ED for further evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	903902-1	Very vague, did not feel well, felt concerned enough to come to emergency department
COVID19 VACCINE (COVID19)	Emergency Room *	903907-1	Slight non-itchy rash noted after vaccine administration. Rash well demarcated, nontender approx 4x4 cm, no desquamation. No other sx's, no respiratory sx's.
COVID19 VACCINE (COVID19)	Emergency Room *	903909-1	Patient c/o throat tightness 16:02 T 98.2 BP 145/95 99% room air HR 76 16:08 BP 145/96 HR 73 99 % room air Patient was given Epinephrine 0.3 IM in left deltoid. Patient AAo x3, talking. Transported to ER for closer observation.
COVID19 VACCINE (COVID19)	Emergency Room *	903910-1	pt had c/itchiness at the injection site quick onset of HA Diaphoretic numbness upper and lower lips dry throat Monitored vitals vitals stable fluid provided Sx continued advised assessment at the ER pt agreed pt escorted to the ER denied SOB or chest pain
COVID19 VACCINE (COVID19)	Emergency Room *	903916-1	Individual started complaining of an itch in her throat and felt some degree of lymph node swelling on the right side. Collective symptoms include: anxiety, flushing, short term paresthesia, right sided facial swelling, difficulty swallowing, right sided facial droop, medicinal taste. some slurring. Individual was taken to the ed in house, triaged, treated and released. Reporter is not privileged to details of treatment, but aware of release within hours of being seen.
COVID19 VACCINE (COVID19)	Emergency Room *	903922-1	Patient complaint of rash,hives,difficulty breathing and swallowing, wheezing, throat tightness, hoarseness, itching and feeling light headed less than 10 minutes after receiving the vaccine. Patient received Benadryl 50mg IVP, Pepcid 20mg IVP, 0.3mg epi IM. EMS arrived and transported patient to ED. In ED, patient received second dose of 0.3mg epi IM. Patient monitored in ED for approximately 4 hours. Epi drip started and plan to admit patient for observation.
COVID19 VACCINE (COVID19)	Emergency Room *	903923-1	Patient complained of chest tightness, L hand tingling and throat tightening less than 10 minutes after receiving the vaccine. Patient received Benadryl 25 mg IM and NS IVF. EMS transport to ED. In ED, Solumedrol 125 mg IVP and Famotidine 20 mg IVP. Patient monitored in ED for approximately 4 hours. Discharged home on Prednisone.
COVID19 VACCINE (COVID19)	Emergency Room *	903925-1	5 minutes after shot administered, became very hot and flushed. Felt tingle in throat. Turned bright red. Sent to ER. Throat tingle subsided after about 30 min. No anaphylaxis. Given Zyrtec for slight itchiness
COVID19 VACCINE (COVID19)	Emergency Room *	903927-1	Described numbness to left side of face, inside of mouth and leg and arm. Arm and leg numbness quickly dissipated but left facial numbness continued.
COVID19 VACCINE (COVID19)	Emergency Room *	903931-1	Presented with periumbilical pain to emergency department (patient works at Medical Center). Admitted to hospital for small bowel obstruction. Labs were consistent with dehydration (Hct 55, Cr 1.25), as well as CRP 1.10. A CT Abd/Pelvis identified proximal dilation and fecalization of small bowel, with a transition point in the left lower quadrant. Distal to the transition point, the small bowel appears thick, with hyperenhancement and inflammation progressing into the cecum. General Surgery was consulted and patient admitted to hospital for management of this small bowel obstruction.
COVID19 VACCINE (COVID19)	Emergency Room *	903936-1	Lightheadedness, nausea, dry heaves and lump in throat
COVID19 VACCINE (COVID19)	Emergency Room *	903939-1	"Patient stated she waited the full 20 minutes downstairs without any reactions, however started feeling itchy and swollen shortly after, which prompted her to come up to the caregiver health office. An RN visually assessed patient and patient was not SOB and able to speak in full sentences. Patient states she felt as if she was ""about to have a panic attack"" because of a possible reaction. The RN prompted the patient to go down to the ED if she felt she was having a reaction to the covid vaccination. Patient checked into Medical Center Emergency Department"
COVID19 VACCINE (COVID19)	Emergency Room *	903941-1	21 hours post injection patient feeling body aches, arm soreness at injection, headache, and short of breath with exertion
COVID19 VACCINE (COVID19)	Emergency Room *	903954-1	Pt started tonight with hives on the back of his neck. When talking to patient, he states he developed one on his arm that was spreading quickly. Encouraged to take benadryl and seek medical attention.
COVID19 VACCINE (COVID19)	Emergency Room *	903956-1	anxiety, palpitations, and HTN
COVID19 VACCINE (COVID19)	Emergency Room *	903960-1	The day of vaccination, this employee did not experience symptoms. She woke up on 12/18/2020 with paresthesia to R side of face, that became progressively worse, and is now on the entire R side of her body. This employees face has a slight droop and asymmetric smile on the R side.
COVID19 VACCINE (COVID19)	Emergency Room *	903961-1	Within 5 minutes of receipt of vaccine, reddened ears and reddened blotches on chest appeared. No worsening after 10-15 minutes, but after 20 minutes appeared to worsen, and transport to ED via wheelchair initiated. Pt treated in ED with epinephrine, solumedrol, Benadryl, famotidine and 1 liter of 0.9% Normal Saline IV on arrival time to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	903967-1	Following COVID19 vaccine employee returned to work and began to feel dizzy/lightheaded/shakey. Went to ED for further eval.
COVID19 VACCINE (COVID19)	Emergency Room *	903968-1	tachycardic, site edema, shortness of breath, dizzy, and felt like her throat was getting tight. She got one dose of epi and 50mg of oral benadryl

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	903977-1	Had numbness and tingling in the upper extremities ,associated w/dizziness .
COVID19 VACCINE (COVID19)	Emergency Room *	903982-1	"Symptoms of generalized purities ,and rash on skin and taken OTC Cetrizine. 11:20 Escalating symptoms of abdominal pain w/vomiting ,tachycardia ,mouth dryness and >BP was given Epi. 0.3 injection. 11:27 am Benadryl 50mg orally. 11:30 Transported to local ER via paramedic. """"
COVID19 VACCINE (COVID19)	Emergency Room *	903984-1	Throat closing sensation, lightheadedness
COVID19 VACCINE (COVID19)	Emergency Room *	903986-1	flushing, nausea, vomiting, diarrhea, chest tightness. Gradually improving over subsequent 30min. Treated in ED with 1 liter IV fluid, ondansetron 4mg, acetaminophen 1000mg.
COVID19 VACCINE (COVID19)	Emergency Room *	903989-1	Perioral numbness and anxiousness starting 11 minutes after administration and terminating approximately 1 hour later soon after presenting to the emergency department.
COVID19 VACCINE (COVID19)	Emergency Room *	903990-1	The individual developed a quarter size welt immediately after receiving the vaccine. Within the first 5-10 minutes post vaccination, the individual was complaining of pain at the injection site going down her arm, red streaks were visible from the injection site, and she did develop some difficulty breathing, which may have been related to the situation and the mask she was wearing.
COVID19 VACCINE (COVID19)	Emergency Room *	903991-1	unexplainable taste in mouth and burning in her nose.
COVID19 VACCINE (COVID19)	Emergency Room *	903992-1	4hrs after receiving the vaccine. Right arm was swelling, red rash/flushing skin present on arm, neck, abd, and chest. Delayed cap refill on right hand with cold extremities, pallor and purple dusky discoloration. Treatment was 50mg prednisone PO, Benadryl 50mg PO around 1630 At 1700 checked in as a patient to ED and clocked out as staff. Severe chills and muscle ache present no fever. Received 1L NS, IV Pepcid, IV Benadryl 50mg. Unsure of time d/t feeling fatigued Observed in ED till 1920, chills and redness resolved. Left with only localized swelling and slight redness to site. Was instructed to take several more days of prednisone.
COVID19 VACCINE (COVID19)	Emergency Room *	903993-1	noted scratchy throat and lip tingling and feeling puffy- though no signs of edema
COVID19 VACCINE (COVID19)	Emergency Room *	903998-1	received 1526, returned 1708 with hives on chest, short of breath, itchy head to toe. phone consult with physician, taken to ED for care
COVID19 VACCINE (COVID19)	Emergency Room *	904003-1	"The employee received 1st Covid Vaccine today at 1804 1834: Patient complained of a ""severe headache and suddenly not feeling well"". She told staff she hadn't eaten recently and was given crackers and 120ml of orange juice. 1845: Patient was assisted from the chair to a wheel chair and moved her to a cot in the back of the conference center. Her vital signs were stable at T-96.9F-HR-87 RR-20 BP: 145/78. She was responsive to questions, but had trouble opening her eyes. She did complain of feeling very cold and blankets were placed on the patient. 1905: Vitals remain stable. Patient was only responsive with direction. She was flushed in the face for a short duration, 3-5 minutes. She denied shortness of breath or trouble breathing. Notified patient's husband she was going to be transferred by EMT to Hospital for further evaluation. 2300-Spoke to patient and husband. Patient was discharged home in stable"
COVID19 VACCINE (COVID19)	Emergency Room *	904008-1	"I noticed my body temperature becoming warm approximately 1 1/2 hours after receiving the vaccines. I then noticed at 2/12 hours, I had a red, blotchy rash on my chest, neck, back, arms and abdomen. It was not itchy, I was warm and red. I did feel a slight fullness in my throat, but I was not short of breath. For treatment, I was given 50 mg of oral benadryl immediately. I was admitted to the emergency department and given 10 mg of IV decadron and pepcid (I don't know the dose). The redness dissipated at 1 hour after the decadron. And I felt ""normal"" without any side effects approximately 3 hours after the decadron."
COVID19 VACCINE (COVID19)	Emergency Room *	904018-1	Injection site IMMEDIATELY felt hot, felt flushed from chest up to face, felt throat tightness, got tachypneic, tachycardic and lightheaded/weak. Throat tightness diminished after less than 30 seconds. I was immediately attended to. Was hypertensive 160/110's, pulse 140's, SPO2 100%. Less than five minutes later I developed uncontrollable generalized intermittent rigors. I was given IM Benadryl at that time. I was transferred to ED approximately 10min after initial reaction. Throat tightness came back again while in ED, EpiPen administered. PO Famotidine and 1L IV fluids given. Rigors diminished but lasted approximately two hours. I was observed in ED for four hours, felt well, VSS, was discharged home. Once home approximately six hrs post inoculation I developed more intense throat tightness, radiating to right jaw, no difficulty breathing. It resolved on its own in less than five minutes. Developed a mild headache the next day.
COVID19 VACCINE (COVID19)	Emergency Room *	904019-1	dizziness, low blood pressure, tingling in legs, light headed shaky
COVID19 VACCINE (COVID19)	Emergency Room *	904025-1	12/18/2020 Patient developed a rash on forehead, burning sensation in the back of throat, and chest heaviness. Patient stated that she had similar reaction to a previous vaccine that she received. Patient was reluctant to go to the ED and refused to ride in wheelchair, but was walked assisted by staff. ED RN reported patient was feeling better approximately 1 hour after injection. FROM ED REPORT 12/18/2020 Had a vaccine about 10 minutes later she states she felt a little warm. A little tingly. Had some blotchiness to her forehead and chest. She reports that she also had some similar symptoms after receiving vaccines. These were short-lived. She presents now for evaluation. She denies any chest pain abdominal pain. No trouble breathing. Pulse ox on arrival is 100%. No abdominal pain Patient does have some papules to the forehead. She states this is chronic. It is little red. Cheeks are little red. I see no urticaria on inspection
COVID19 VACCINE (COVID19)	Emergency Room *	904026-1	left side chest pain, warm feeling on the inside, dizziness, feeling that she couldn't stand up without getting lightheaded, nausea. Gave patient a bottle of water and a chocolate bar. Sent to ED FROM ED NOTE: She states about 10 minutes after the injection she felt a warm feeling. A bit of nausea. She had a little chest tightness. She describes this as similar to IV contrast studies. This is resolving. She denies trouble breathing. Did have a little chest tightness on this persist. On the monitor patient has pulse ox of 100%. Respiratory rate of 18.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904027-1	Within 30 minutes - Skin flush to hands and forearms. Denied shortness of breath or problem with swallowing. Declined Epinephrine. Monitored for 45 minutes then she was escorted back to work within the building. 15-25 minutes later stated she was having trouble swallowing and was jittery. She walked herself to the Emergency room for triage.
COVID19 VACCINE (COVID19)	Emergency Room *	904033-1	lightheadedness, elevated BP, hives, wheezing, hot flashes, pressure on chest
COVID19 VACCINE (COVID19)	Emergency Room *	904041-1	lol swelling , shortness of breath
COVID19 VACCINE (COVID19)	Emergency Room *	904050-1	10/17/2020 after the injection on Thursday I had a sore body, sore throat ringing ears joint pain, my self esteem was very low, my boss sent me home because my voice sounded so rough, I checked my temp around 100 and 101 and I took Panadol and it went down to 99. Fri I woke up with sore throat every time I take a breath I have chest pain sore body ringing in ears, chills and I went to the ER Friday 12/18/2020 they gave me some anti inflammatory injection and I went back home that day, they gave me a medical order to take a covid test today 12/19/2020. ER Dr gave me good results on tests.I have a headache and sore my body feels heavy but other than that I'm trying to avoid contact and staying at home until the results come through
COVID19 VACCINE (COVID19)	Emergency Room *	904052-1	nausea, elevated blood pressure, syncopal episode x3, ?? seizure
COVID19 VACCINE (COVID19)	Emergency Room *	904060-1	Patient reported feeling faint and nauseous. Placed on monitor, oxygen saturation was normal. Rapid Response Team called. Patient reported feeling that tongue was swollen. RRT escorted patient to Emergency Room.
COVID19 VACCINE (COVID19)	Emergency Room *	904062-1	The evening of 12/17/2020 pain started in the left deltoid. Over night the muscles in the left arm contracted and would no release, a hematoma developed, and constant pain was through the entire left arm. The morning of 12/18/2020 the muscle contractions and hematoma were still present and tachycardia and fatigue developed. Highest heart rate at that time was 147 with a blood pressure of 148/82. Was a pt. in the ED and received benadryl, dexamethasone, and pepcid. Swelling and muscle contraction subsided and heart rate was stable in the 100's. Later in the evening tachycardia and fatigue started again with the highest heart rate being 210 (when resolved nearly immediately with rest). Heart rate was 110-130 until I went to bed. Heart rate waking up this AM was 110bpm. Injection sight is slightly painful.
COVID19 VACCINE (COVID19)	Emergency Room *	904066-1	I had fever 101.5 body ache chills malaise and fatigue they were all moderate, I could not work and that lasted 24 hours post vaccine and continued to 48 hours and got better and after 48 hours I just had a headache, fever and chills improved I just had a worse headache and I did a virtual urgent care visit on 12/18/2020 and didn't prescribe anything. I refused to take any medication. 12/19/2020 right now I have a moderate headache . I don't have fever anymore and can function.
COVID19 VACCINE (COVID19)	Emergency Room *	904067-1	Patient experienced tachycardia and diaphoretic. His heart rate was in the 170s. He was taken to the hospital emergency room. He had an EKG - results normal. Lab work was performed - basic metabolic panel and CBC. All results normal. Symptoms resolved - he was discharged. No further treatment needed.
COVID19 VACCINE (COVID19)	Emergency Room *	904074-1	Patient had tingling sensation to her right arm and right arm heaviness and dizziness that started approximately 1-2 minutes after receiving vaccine. She was also dizzy so sent to ER. She was given juice and monitored in the ER. Sensations come and go in different areas of the right arm. The lightheadedness resolved after a couple of hours in the ER. She was told to rest, increase fluid intake, alternate Tylenol & Motrin every 4-6 hours as needed for pain control and follow up with her PCP in 1 day.
COVID19 VACCINE (COVID19)	Emergency Room *	904079-1	Patient received dose one of the Pfizer vaccine at 1150am and around 1230 begun to feel tingling in the right of her face/cheek. She then noticed significant swelling of the left cheek and bottom lip. She was taken to the emergency department and received steroids, benadryl, and fluids. She was observed for a few hours and then discharged. She was feeling well the same day.
COVID19 VACCINE (COVID19)	Emergency Room *	904084-1	Chest pain, dizziness, headache. Received fluid and pain meds via IV at Hospital ER. Not admitted.
COVID19 VACCINE (COVID19)	Emergency Room *	904097-1	Tingling/numbness of lips, tongue and Area surrounding mouth 15 minutes after injection. Swelling of right upper lip Confirmed in car mirror at 20 minutes. Returned to employee clinic and was evaluated by MD, escorted to ER. Was giving Benadryl and 2 hours later was given prednisone 40mg. Was sent home with 3 day course of prednisone and was told to take Benadryl before bed and prn.
COVID19 VACCINE (COVID19)	Emergency Room *	904098-1	Burning in eyes, excessive, bloodshot eyes
COVID19 VACCINE (COVID19)	Emergency Room *	904100-1	Pt received COVID-19 vaccine and approximately 4 minutes later patient began to feel flushed, racing heart, and faint. On exam, pt was slightly tachycardic with flushing to the face and anterior chest. Symptoms relieved after IV Benadryl. Symptoms improved after Benadryl with a resolution of racing heartbeat and flushing. Patient was then monitored for 2 hrs without recurrent in symptoms. Pt discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	904105-1	Patient is a CCU nurse who received the COVID19 Pfizer vaccine on 12/17/20. The following day she reported to work and that afternoon at 3:50pm had nausea, vomited x1, pale, tachy. Fellow coworkers provided basic care and then transported patient to ED when symptoms persisted. Patient evaluated in ED and later sent home.
COVID19 VACCINE (COVID19)	Emergency Room *	904111-1	Patient received vaccine 07:52 am at 08:11 am he reported hand tingling, we noticed some swelling to left hand. BP 143/94 sat 99% P-81, patient initially declined going to ER, administered Benadryl 25 mg by mouth per protocol at 08:21 am, repeat BP 08:23 139/96 P-84, sat 98%, 08:42 BP 141/97, P-92, sat 99%, 0843 noticed rash left forearm (not sure if there before) noticed after removing watch, patient agreed to Emergency Room check in, while waiting for ER check in patient had increased swelling, spread to forearm, notified ER intake nurse and transferred care to Emergency Room
COVID19 VACCINE (COVID19)	Emergency Room *	904112-1	patient felt hot, sensation of tingling in her throat, sensation of heart racing, heart rate was 130. Rapid response called, patient received epi pen injection and IM Benadryl, sent to ED For evaluation with subsequent discharge home.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904117-1	Patient received covid vaccination number one; about one minute post vaccination, patient became very light headed. Upon taking vitals, patient tachycardic at 145 bpm; patient's neck turned red and splotchy; after about 60 seconds, the redness and splotchiness went away; patients blood pressure went up to 170's/90's and heart rate remained in the 130's sustained. Patient was given cold rag and water with no improvement; she was transported to the ED upon request
COVID19 VACCINE (COVID19)	Emergency Room *	904121-1	Patient felt sensation of being hot and heart racing, heart rate was 80 and pulse ox was 99%, denies resp symptoms, patient requested to go to ED to be evaluated, was seen in ED, observed, and discharged home
COVID19 VACCINE (COVID19)	Emergency Room *	904128-1	The vaccine was administered on the following date: 12/18/20áand at approximately the following time: 1pm á She reports that she didn't feel great after vaccine but thought just normal post-vaccine symptoms. She felt itchy and wheezing that evening. She took benadryl and felt better. á She woke up the next morning and her face was flushed and she felt palpitations. Went to work and checked her vitals, tachycardic to 120s-130s. About 11am felt lightheaded and was taken down to ER. HR was 150s. Has history of bee sting allergy and this felt like that. No Epinephrine but was given 25mg IV bendaryl and IV fluids (1L NS). Took another 75mg of benadryl last night and Allegra this morning feels fine. á From ED visit note: Vitals at triage BP 106/73, HR 95, RR 18, O2 100% EKG HR 104. Vitals with HR 77-95 No labs, COVID negative á The symptoms began the following morning after administration of the vaccine.á The symptoms were: tachycardia, lightheadedness, flushing, itching, wheezing The treatment of the reaction was:áá o Antihistamines:áIV and PO benadryl á Other medications taken on day of reaction:ááTylenol
COVID19 VACCINE (COVID19)	Emergency Room *	904135-1	Began experiencing numbness/tingling in right hand and arm approximately 20-25 minutes after receiving vaccine. Nurse and pharmacist went to monitor more closely. Began to feel flushed, lightheaded, sweating. SpO2 99. Dr ordered 25mg diphenhydramine po. Placed in wheel chair and taken to ER for further observation.
COVID19 VACCINE (COVID19)	Emergency Room *	904141-1	Tingling of lips and throat. Received treatment with dexamethasone, benadryl
COVID19 VACCINE (COVID19)	Emergency Room *	904149-1	Patient reports she received at 1330 than was working and had a sudden onset of chest pain and became diaphoretic and skin appeared red/blotchy
COVID19 VACCINE (COVID19)	Emergency Room *	904156-1	Pt reported scratchy throat, itchy lips, slight rash on chest approx. 10 min post vaccination. 25mg of Benadryl given PO. Transported to ER for continued observation.
COVID19 VACCINE (COVID19)	Emergency Room *	904159-1	"Nurse injected the vaccine as she removed needle the employee started to feel weak and short of breath. The employee repeated said ""I am weak"" and ""I can't breath."" A rapid response was called, checked her oxygen level (94%). Due to employee stating she could not breath the team gave her a dose of epinephrine and started oxygen. Her oxygen saturation increased to 98%. They took a blood pressure - 150/88. EMS arrived and took her to local hospital for observation."
COVID19 VACCINE (COVID19)	Emergency Room *	904161-1	"stated she felt ""hot, dizzy, tingling to face"" HR 84, BP 129/84, O2 Sat 97% RA, temp 100.4. Taken to ER for observation."
COVID19 VACCINE (COVID19)	Emergency Room *	904162-1	I received my vaccine at 1615 down in our hospitals clinic, I work as a floor nurse, I returned back to my unit to resume work, I walked in to talk to my charge nurse and felt completely fine within a minute or to (approximately 15 minutes since the vaccine was given) my legs felt like very weak, they became tingly and extremely heavy, my face and chest felt warm and I had to sit down to drink water. The nurses working with me that day took my vital signs, my blood pressure was 157/101, heart rate 80-90s and temp was 97.5F. I notified the pharmacist working on our floor about my symptoms and he directed me toward the infection control line, the pharmacist on the phone directed me to go to the emergency department. When I was admitted to the emergency department via wheelchair, the pharmacist met me there along with the Emergency medicine MD, a neurological exam was done and general assessment. While I was in the ER my heart was monitored, my CBC with diff, Mag and BMP was monitored all of which were normal. I was given a 1L bolus of IV LR through an IV in my left antecubital. Gradually the tingling wore off over a few hours in my legs bilaterally however they still felt very heavy. I was admitted from approximately 1645 until approximately 1900 and returned home.
COVID19 VACCINE (COVID19)	Emergency Room *	904166-1	Flushing, rash, dizziness, lightheadedness, slightly elevated BP and heart rate
COVID19 VACCINE (COVID19)	Emergency Room *	904171-1	Tingling injection side arm and face rash
COVID19 VACCINE (COVID19)	Emergency Room *	904175-1	Patient presents after a near syncopal episode. Was at work when she felt dizzy, nauseous and flushed. Felt like she was going to pass out. Patient appears pale and uncomfortable, but nontoxic. She is tachycardic but blood pressure stable. Has a faint erythematous rash on her neck. Give IV Benadryl, IV solu-Medrol and IV fluid in Emergency Department. Basic labs were obtained and are unremarkable.
COVID19 VACCINE (COVID19)	Emergency Room *	904176-1	Redness; Hives; elevated HR and BP
COVID19 VACCINE (COVID19)	Emergency Room *	904177-1	Minutes after the vaccine, developed perioral numbness, tingling, mild difficulty swallowing. Complained of SOB and had marked diaphoresis. BP dropped to 87/50. Maintained sats 100%RA, lungs were clear. Has a hx of a vagal response after blood donation
COVID19 VACCINE (COVID19)	Emergency Room *	904182-1	performed 30 min observation, left to go back to work, said he felt like his heart was racing and looked at his smart watch and HR was 168. Upon arriving back at clinic, denies dyspnea or resp concerns. Reports feeling hot, anxious, heart racing, pt was sweating. HR 152 BP 150/100, Pulse ox 99%. Patient taken to ED to be evaluated.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904191-1	Lightheaded, heart racing in initial monitoring station, placed supine, transported to triage via wheelchair. Initial pulse ox 98%, HR 76 at 1250, denied SOB, tingling, no rash. Pulse ox 98%, HR 91 at 1256, no SOB, tingling improved. At 1300, c/o lightheaded, fuzzy vision, shaky, some chest tightness, some throat tightness, increased saliva. Diphenhydramine 50 mg IM administered 1304. Pulse ox 98%, HR 92 at 1318. Solid food intake 1322. Continued lightheaded, bilateral arm tingling, still shaky, but less cold at 1327. Self-reported weight 130. 1339, throat tightness not resolved, no difficulty swallowing or breathing, pulmonary auscultation no stridor., continued body tingling, c/o throat tightness, Pulse ox 99, HR 96. 1343, continuous monitoring to Pulse ox 90%, HR 110. Medical director updated 1347, decision to move to ER and transport initiated 1352.
COVID19 VACCINE (COVID19)	Emergency Room *	904194-1	7 minutes after her vaccine she complained of tongue numbness which progressed to swelling. No wheezing, no rash, no nausea no vomiting. She was transferred to the ED for further management
COVID19 VACCINE (COVID19)	Emergency Room *	904199-1	Scratchy throat, lip swelling and numbness
COVID19 VACCINE (COVID19)	Emergency Room *	904209-1	Within 10 minutes of receiving vaccine patient reported arm feeling tingly and numb which progressed to a squeezing feeling. Slight shortness of breath.
COVID19 VACCINE (COVID19)	Emergency Room *	904210-1	Anaphylaxis within 15 minutes of administration
COVID19 VACCINE (COVID19)	Emergency Room *	904214-1	I got the vaccine at 0750 in the morning and was fine right after getting it, my arm was a little sore no big deal, then by 0900 both arms were sore and my neck, by 1100 I had aching and chills, but I powered through because those are common symptoms by 1300 I had a headache, by 1500 I had some abdominal cramping, by 1600 some dizziness and nausea, 1730 diarrhea, 1830 more diarrhea and 1850 hives all over my chest. By 1900 my tongue felt heavy and tingly So I walked down to the ER. When I got to the ER I felt like I was going to pass out. By 2040 I was admitted to the ER and given Benadryl, Prednisone, Pepcid, and Zofran. I was Held for observation until 0300.
COVID19 VACCINE (COVID19)	Emergency Room *	904221-1	Employee developed rash at site on left deltoid, that spread across upper chest. No SOB, Chest Tightness or Itching. Transported to ED on-site.
COVID19 VACCINE (COVID19)	Emergency Room *	904231-1	About 3 min post vaccination I experienced a transient sensation of warmth in my chest followed approx in a minute by tachycardia and a slight tightening sensation at the base of my throat which was transient - may 15-30 seconds. It recurred in a few min and I began to feel little lightheaded . With a 3rd episode of tachycardia only I felt more lightheaded and was taken to the ED in a wheelchair. My extremities felt cool with each episode as well.
COVID19 VACCINE (COVID19)	Emergency Room *	904234-1	Rach, tachycardia, palpitations, shortness of breath shortly after receiving vaccine - given epi, solumedrol, Benadryl. persistent symptoms the following day.
COVID19 VACCINE (COVID19)	Emergency Room *	904237-1	Approximately 45min after the injection, I started feeling dizziness, palpitations and racing heartbeat. Another 15min after that there was red hives that broke out on my upper chest but no where else on my body.
COVID19 VACCINE (COVID19)	Emergency Room *	904245-1	I felt fine other than a sore arm but then Friday morning I woke up coughing and i had a 100F fever and about an hour later it was 100.6F. I had chills, shivering, headache, took tylenol, fever was down to 100F. Went to the local UC and had a COVID 19 test and was negative (rapid test). Today I woke up, no fever, a headache in the morning, but now it is gone, no fever at all today.
COVID19 VACCINE (COVID19)	Emergency Room *	904246-1	"Patient reported feeling sensation of ""warmth"" around 5 minutes post immunization. á Patient was escorted to waiting area and sat in seat within range of nurse site line. á RN later sat with patient 5 minutes later as she continued to have feeling of ""warmth"" / flushing. Patient given water and moved closer to nurse area. á Patient then shortly after c/o light headedness and now feeling cool. Remains alert / oriented. á BP: 142/80 HR: 127 RR: 20 SPO2: 100% á ICC called. Medic and Dr arrived for patient handoff. RN escorted patient to ICC with Medic and MD following. á Patient to finish visit in ICC for final dispo."
COVID19 VACCINE (COVID19)	Emergency Room *	904248-1	Throat closing, feeling faint, fast heart rate. Was taken to er, was given epinephrine as well as steroids. Kept me on er for awhile to watch me.
COVID19 VACCINE (COVID19)	Emergency Room *	904253-1	20 minutes after receiving vaccination, tingling tongue. 'first sign for shellfish reaction', noticed tongue swelling. took 2 benadryl @130. at 1:45 took Albuterol, got to hospital / ER at approximately 2pm. Elevated BP, HR increase, lungs tight and 'barely diminished'. Epi @ 4:25 Albuterol @ 4:35 Prednisone @454 IV pepcid @5pm Tongue was still swollen but improved, lungs stable. Discharged at 6:10. Continued Benadryl and med pack. F/up appt w/ Allergist the following week;
COVID19 VACCINE (COVID19)	Emergency Room *	904260-1	12 minutes after injection, I felt flushed and dizzy. They hooked me up to a vital sign monitor which showed my heart increasing to 133 bpm, SaO2 98%. A manual blood pressure check was 168/110. My heart felt like it was pounding, I was hot and sweating. After 10 minutes or so, I felt increasingly dizzy and my vision started fading. VS still showed tachycardia and hypertension. It became difficult to swallow and my tongue was feeling fat. A Rapid Response Team was alerted, they started and IV, and took me to the Emergency Department. I became very cold and shaky. My hands and feet became a little mottled. They gave me 50 mg IV benedryl, 20 mg IV pepcid, a dose of solumedrol, and IM epinephrine 0.3mg, and 1 Liter of fluid. My symptoms resolved and I was discharged home a couple hours later.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904263-1	Within 5-10 minutes after vaccine given, patient started feeling tingling of the hands and fingers. Shortly after, she felt the need to clear her throat because she felt like there was a furball in her throat. She drank some water, which didn't help. She then started feeling hot and became flush. She then felt her inner ear and tongue swelling. Shortly later, she felt chest pain and felt like she couldn't breathe. She was given IV Benadryl 50mg, IV dexamethasone 4mg, and IV Pepcid 20mg without symptom resolution. Epipen was administered by vaccine clinic staff, and the patient felt a little better. Her shortness of breath continued and her chest felt heavy as she was transported to the ED. She also complained of blurred vision, which could have been due to Epipen administration. In the ED, the patient still felt that her throat was tightening up. She was given IV Pepcid 20mg, IV Benadryl 25mg, IV SoluMedrol 125mg, racepinephrine & albuterol nebulizer. By 2150, she felt better. By 2257, she did not have any more tingling in hands or weakness and she stated she felt she was back to normal. Patient discharged home in stable condition at 2336.
COVID19 VACCINE (COVID19)	Emergency Room *	904270-1	Employee has history of allergies and was being monitored for 30 minutes. About 10 minutes the vaccine injections she began to feel faint. She was sitting at time and slide to floor and was unresponsive. The team begin checking vital signs and gave her a dose of epinephrine. A rapid response team and EMS was called. The rapid response team checked vitals: BP 100/60, HR 90, O2 99%, Glucose level-77. An IV was started and bolus of normal saline 500 ml given along with 50 mg of benadryl. Vitals checked: HR 108, BP-106/60, O2 93%-it was reported she was cold and shivering-hands were cold. Employee was calm, alert, and oriented.
COVID19 VACCINE (COVID19)	Emergency Room *	904271-1	12/17/2020, 15 minutes after vaccination started to experience tingling on forehead and radiated on left side of face, nauseas, light headed, HR increased, 'funny on tongue', 'felt like going to faint'. The BP was 149/109. The medical crew tried to calm down. BP would not come down. Placed in gurney, administered oxygen, given a 'benadryl and some sort of shot' to slow down the reaction. Given rest of the day off. 'I slept for a few hours' and after 4 hours, my chest started to tighten, radiated to back 'tightness', felt like heartburn. I didn't sleep that whole night, had to keep sitting with the tightness in the chest. By morning I was better, I went to work, took inhaler (flovent and albuterol). Headache at work, took Tylenol. At 12, I went to each lunch and felt there was a lot of mucous in throat / acid reflux feeling ; 'felt full in throat'. I went in a coughing spell, 'bubbly mucous'. I couldn't talk, drank water, sat in car until I had to go back to work. I couldn't breathe when I walked back into work. At approximately 2:15 they rushed me to urgent care, 25 childrens benadryl, administered oxygen and omeprezole for reflux. I stayed with the oxygen till 4:45; BP 140/98 and slowly came back down. 'At same time, co worker was experiencing same thing that just had had vaccination'. My asthma 'kicked in', white blood count was elevated to 17. Work in urgent care and where i was rushed to. flu shot 2 months prior TB skin test one month prior; negative
COVID19 VACCINE (COVID19)	Emergency Room *	904276-1	10 minutes after vaccination felt lightheaded and dizzy, pulse 64 resp 18 - given water and put feet up. 15 minutes later better but still woozy - pulse 80 resp 20. 15 minutes later walked around pulse 72 resp 18 20 minutes later - still feeling dizzy wishes to go to ER - transported via wheelchair.
COVID19 VACCINE (COVID19)	Emergency Room *	904278-1	Tingling of tongue, tickle in throat Benadryl 50 mg IM given Patient taken to ED
COVID19 VACCINE (COVID19)	Emergency Room *	904279-1	Patient began reporting a feeling of light-headedness 5-10 minutes after injection. Also reported nausea and feeling clammy, as well as numbness and tingling of both her arms. She laid on the ground in reverse trendelenberg position with some improvement in symptoms, but upon sitting upright, symptoms returned. Patient was transported to the ED for 1 L NS IV bolus with improvement of symptoms and discharge.
COVID19 VACCINE (COVID19)	Emergency Room *	904315-1	Patient felt throat was scratchy, then became flushed and slightly itchy. A rapid response was called and patient was brought immediately to ED by RN. Patient stabilized without any treatment within 10 minutes. Blood glucose found to be 44, given glucose and improved. Cetirizine 10mg was administered for itching, patient instructed to restart OTC antihistamines and see PCP the next day
COVID19 VACCINE (COVID19)	Emergency Room *	904329-1	Vaccination given at 12:50 12:54?started feeling lightheaded. Sitting in chair in observation waiting area. RN present in observation area. 12:55? feeling not right. Water given. Feeling nauseated. 1302?unable to hear BP via manual cuff in chair times 2 Lowered to floor and feet elevated 1305 ?88/54, 60 HR still nauseated and lightheaded. 1309?911 called 13:10?felt she was improving. Nausea better. 104/66, 68 13:12?110/68 HR 68 13:15?felling better. Sat up on floor. 98/50, 88 13:18?EMS arrived. BS 98. BP 112/72 Refused to go to ER by ambulance. Medics left. 13:25? RN and RN assisted patient to wheelchair. After talking with patient she did agree to going to ER to be seen by physician. Wheeled to ER and care assumed by ER team. Patient never lost consciousness and never had change in mentation. She always maintained conversation and orientation. She states didn't feel sick enough to go to ER. Patient was discharged from ER to home.
COVID19 VACCINE (COVID19)	Emergency Room *	904331-1	28 hrs after vaccine, woke up with tinnitus R ear, partial hearing loss R ear - went to Urgent care - Dr diagnosed with right sensorineural hearing loss with left side unrestricted hearing - prescribed prednisone 60mg a day x10days. Audiology test to be scheduled next week.
COVID19 VACCINE (COVID19)	Emergency Room *	904334-1	Angioedema, hives, tachycardia, shortness of breath
COVID19 VACCINE (COVID19)	Emergency Room *	904337-1	Immediately (no delay) after injection, tingling in arm followed by flushing of face and subjective SOB, no wheezing noted, face and anterior chest with uniform erythema, no hives. Epinephrine administered immediately by vaccinating nurse. No further development of symptoms. Developed some palpitations and chest discomfort - normal EKG. Discharge home after 6 hour observation, no recurrence of symptoms.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904343-1	I was monitored for 15 minutes and felt completely fine and left the location. On my way home approximately 25 minutes after my vaccination I felt a tingling and numbness in the back of my throat. I decided to call the center and let them know how I was feeling. They suggested I return. During the 10 minute ride back the tingling and numbness had progressed to the back of my tongue. Once I arrived there they continued to monitor me and my symptoms remained stable with numbness in my throat and back of my tongue. I was not having any difficulty breathing and felt otherwise fine. There was a concern that the symptoms would progress and they initiated EMS. I was taken via ambulance to Hospital where they continued to monitor me and check my airway.. In route to the hospital I was hypertensive with a BP of approx 190/100. I did not ask what my heart rate was. I was surprised my blood pressure was so high. They said it was probably because I was nervous however I was not feeling nervous because I knew since I could breathe I really was fine, and sending me to the hospital was simply out of an abundance of caution as this vaccine is new. Upon my arrival they took my blood pressure again and it was 140s/80s I believe with a heart rate of 106. My O2 sat we're in the upper 90?s throughout the situation. My blood pressure tends to be in the 110s/70s with a heart rate in the upper 60s to mid 70s. So it was surprising to me that I was hypertensive and tachycardic despite not feeling like my heart was racing or that my blood pressure was high. I felt completely fine other than the numbness in the back of my throat and tongue. Since the symptoms remained stable and there wasn't really anything for anybody to do they did release me. Between 6:30 and 7 PM I noticed the tongue numbness was subsiding. By 8 PM my throat felt completely back to normal.
COVID19 VACCINE (COVID19)	Emergency Room *	904353-1	Coughing, chest tightness, decreased saturation, itching forehead and back, rash on upper back
COVID19 VACCINE (COVID19)	Emergency Room *	904355-1	Patient received vaccine at 0845 and left after the specified 15 minute waiting period. At 0940, the patient returned to the vaccine clinic stating that he was short of breath and his throat felt tighter than before. Arm examined and no hives or redness present, patient denied itching and hives. Patient denied that throat tightness was getting worse. PharmD and RN present and took vital signs and called house manager. Verified NKDA and then administered 25mg of PO diphenhydramine. Pt then transported via wheelchair for further workup.
COVID19 VACCINE (COVID19)	Emergency Room *	904356-1	Patient received COVID 19 vaccine at 1636 12/19/2020. Patient returned to clinic at 1733 complaint of throat closed and hard to clear. Patient had declined observation period and returned to work. Vitals 131/79, HR 90, 97.7 F, 98%, RR30. Complaint of dyspnea and palpations and occasional chest pain. Patient states history of asthma and hypertension.
COVID19 VACCINE (COVID19)	Emergency Room *	904358-1	Patient complained of tingling lips and tachycardia. BP 159/90 HR 105. RRT called. Patient transported to Emergency Department.
COVID19 VACCINE (COVID19)	Emergency Room *	904359-1	Within 5 minutes, started feeling very tired and dizzy, leaned head back trying to relax. Approximately 15 minutes after vaccine had seizure lasting up to 15 seconds possibly. Brought to floor carefully. Then had small second seizure (about 5 seconds in duration). Difficulty Breathing immediately. Then extreme trouble breathing/stopped breathing , given 0.3 mg EpiPen in right thigh, gasped and began breathing again. Checked pulse (80 b/pm) then waited about 3 minutes and EMTs arrived. BP was 140/90 ish. Both higher but not terribly high.
COVID19 VACCINE (COVID19)	Emergency Room *	904364-1	I am an employee of Medical Center. I went to Hospital for my vaccine since it was only 5 minutes away from my house. At 5:00 PM I received the vaccine. 10 minutes after I noticed my throat felt tight and as if it was closing. This felt similar to the reaction I felt when I had morphine in Jan 2020 (that I am allergic to). I notified the nurses and they watched me for 10 minutes. It then stayed the same. They brought me back to their tent area and gave me 50 mg of benadryl. I immediately felt relief. However, maybe 3-5 minutes after the throat closing sensation came back. They then had to take me to the ER. I was then put on fluids, steroids, pepcid, and ativan. I was released after they watched me for a couple hours.
COVID19 VACCINE (COVID19)	Emergency Room *	904365-1	sore throat
COVID19 VACCINE (COVID19)	Emergency Room *	904373-1	"Patient screened prior to vaccination for previous history of allergic reaction to other vaccine or injectable medication. Patient confirmed past history of ""numbness of lips and tongue"" secondary to iodinated contrast media. Patient was counseled and instructed to wait 30 minute observation period following vaccination. Following the injection, within 15 minutes the patient reported feeling flushed and heart was racing and felt that their throat was closing. Patient was triaged in the vaccine observation area with HR in 120's and BP of 182/60. Upon evaluation by the hospital's rapid response team she was administered 12.5 mg IM diphenhydramine and transferred to our ED for further evaluation. Upon evaluation by ED provider no additional treatments were administered and her symptoms abated. She was discharged home in stable condition without any further complications as those noted above."
COVID19 VACCINE (COVID19)	Emergency Room *	904377-1	"28 minutes after PT. received vaccine she told RN on duty she felt funny""heart fluttery"" , light headed, dizzy B/P 190/110 HR 70-80,98-99% RA per facility RN. 0932 182/105, HR 60-70, 99% RA per RN 0945 Continue to monitor 180/95, HR 60-72, 99%RA blood glucose 90(PT ate breakfast) RN @ bedside chair 0954 119/91, 99% RA , 60-73 HR feels better but has headache 10:00 ambulance called10:08 208/96, 68-76 HR 99.24% 10:13 Ambulance arrives,report given 40 Medic 10:20 210/112 per EMS monitor HR80 100% RA 10:28 Loaded onto stretcher left with EMS"
COVID19 VACCINE (COVID19)	Emergency Room *	904379-1	On 12/18/20 @ 2:58 PM, the patient experienced a really bad headache directly after received the vaccine. Her heart rate elevated 135 with heart palpation. Her BP was 178/92. She was very dizziness, short of breath, her had a hives all over her chest.
COVID19 VACCINE (COVID19)	Emergency Room *	904381-1	Approximately softball sized rash developed on LUQ and with additional around left flank area approximately 2 hours after injection. The redness/rashes went away spontaneously after another 2 hours. During that time, a little discomfort in left side of throat, but no change in lung sounds, uvula or any other respiratory concerns. Later in the day (approximately 4-6 hours), baseball sized redness presented on triceps bilaterally and splotchy redness on lumbar area (about 2-3 areas). Redness/rash is still present on both triceps the next day 22 hours after injection.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904386-1	Patient had vaccine at 1330 on 12/20. At around 1815 she began experiencing heart palpitations. She presented to the ED and she was found to have a heart rate in the 130s. EKG showed junctional tachycardia. She was given 6mg of adenosine and an EKG was repeated and showed sinus tachycardia. Eventually her heart rate decreased to the 70s-90s. She was noted to have a potassium of 3.4 which was repleted. She was admitted overnight for observation. In the morning her potassium was normal and she remained in sinus rhythm. She was discharged later that afternoon.
COVID19 VACCINE (COVID19)	Emergency Room *	904390-1	Patient became lightheaded. Felt palpitations. No shortness of breath.
COVID19 VACCINE (COVID19)	Emergency Room *	904395-1	The patient experience tightness of her chest. She was hook up to be monitored. Her BP was 185/91. Her heart rate was 122. Her O2 level was 100. The nurse notice swelling at the area of the site with mild erythema (redness).
COVID19 VACCINE (COVID19)	Emergency Room *	904398-1	Anaphylaxis type reaction, stridor, treated with O2, epi pen, moved to hospitals ED
COVID19 VACCINE (COVID19)	Emergency Room *	904401-1	Immediately after the vaccination my arm got super sore. On, 12/17 at 10am while at work I developed a 99.1 fever, chills and severe body aches all over called Employee Health and management and was given a COVID test which was neg and was sent home. I took 600 mg motrin and around 8pm that night I began to feel better. I previously had symptomatic COVID in July.
COVID19 VACCINE (COVID19)	Emergency Room *	904404-1	Patient states my lip feels like it is swelling, patient lower lip with swelling noted. Patient assisted to Emergency Dept via W/C O2 sat 99%, B/P 150/88, HR 99
COVID19 VACCINE (COVID19)	Emergency Room *	904411-1	Patient became very flushed and ee stated she was not feeling well. BP: 156/96-176-96 HR: 80-98. Patient states this was not normal bp. continued to monitor pt and noted to have reddened rash on face. Patient to ED for further evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	904412-1	9:50 am patient states she does not feel right, feels funny, leaning over in chair, denies SOB no CP c/o of heart racing, NKA RN and RN summoned to help. Patient laid down on floor. BP 192/103 P-112 PO 100%. Eyes noted to be pink, denies itchiness. RN called 911, advised not to give Benadryl. 9:55am BP 178/99 P-119 PO 100% patient continue to feel heart racing but no SOB, chest or throat tightness. 10am BP 177/100 P-114 PO 100% continues to be A&O x3 no resp. distress 10:03 EMS arrived and took her to the ER. Patient states her 15 min observation time was up at 10:05am. RN
COVID19 VACCINE (COVID19)	Emergency Room *	904418-1	Initially started as numbness of the lips, then progressed to angioedema (swelling of the lips) with face itchiness. Then progressed to throat tightening and swelling feeling, consistent with anaphylaxis.
COVID19 VACCINE (COVID19)	Emergency Room *	904422-1	Injection given 07:58 am, at 08:12 Patient described feeling dizzy, was diaphoretic V/S at 0812 178/99 Temp 97.0, 0813- 182/101 P-112, O2 Sat 98% on room air Respirations within normal limits, alert oriented, patient described feeling a little shortness of breath able to speak in full sentences, transferred to gurney and taken to Emergency Room, skin pale. While waiting for intake patient stated shortness of breath was feeling a little better, repeated BP 0827- 146/94 care transferred to Emergency Room
COVID19 VACCINE (COVID19)	Emergency Room *	904424-1	Patient stated he didn't feel well after receiving vaccine. Patient stated his throat felt funny, BP 186/94, HR: 117, o2 99%. Patient went to ED for further evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	904430-1	12/19 1000 developed chills, 1230-body aches, nausea, and headache, fever 101.5 (self reported), 1300 fever increased to 102 (self reported), fever then increased to 106 (self reported). Pt reported dizziness. Visited ER. Fever 100.8 on arrival. Patient reports taking PO advil, tylenol, and benadryl. Used ice packs at home to decrease fever. TX in ER with IVF, tylenol, and zofran. D/c from ER. OHN f/u 12/20-patient feeling better, resting at home, denies fever.
COVID19 VACCINE (COVID19)	Emergency Room *	904433-1	Patient complained of tachycardia. Dr. examined the patient who stated he had a regular rhythm. After one minute of sitting, he felt better. After sitting for another 5 minutes the patient stated he was feeling tachycardia again. Denied any dizziness or lightheadedness. Dr called down to the ED. Patient escorted down to ED where they did an EKG and discharged him.
COVID19 VACCINE (COVID19)	Emergency Room *	904438-1	15 minutes after injection. Tachycardia, Diaphoresis, mildly hypertensive, facial flushing, waxing and waning symptoms
COVID19 VACCINE (COVID19)	Emergency Room *	904444-1	Received 1st dose of Pfizer vaccine on Left Arm at 1630 on 12/18/20. Within 8 minutes of receiving vaccine, tongue experienced numbness and tingling. At 9 minutes post administration, symptoms intensified. And at 10 minutes post administration throat was scratchy was a tickle. At 12 minutes post administration notified Pharmacy and Employee Health Workers. By approximately 1650, health care professional administered Benadryl 50 mg IM to Right Arm. Observed. Symptoms decreased but then intensified to include numbness and tingling in lips. Transferred to Emergency Department for observation. Received decadron 10 mg IM to Right Arm at 1915 due to symptoms not resolving. Discharged from ED with prednisone course. Discharge diagnosis Angioedema. Symptoms decreased approximately 6 hours post administration of vaccine. On 12/19/20 at approximately 1425, experienced tightness of throat, with numbness and tingling of tongue and lips. Took over the counter Benadryl 50 mg p.o. at 1440. By 1520, symptoms intensified with hoarseness in voice with coughing spells. Returned to Emergency Department for observation. Noted to have rash on chest in ED. Received Pepcid 20 mg in ED. Discharged with instructions to take Benadryl 50 mg p.o. every 6 hours, famotidine 20 mg p.o twice daily, continue taking prednisone, and received prescription for epinephrine auto injector. Emergency room physician wrote to return to work on 12/22/2020 with follow up with Employee Health on 12/21/2020.
COVID19 VACCINE (COVID19)	Emergency Room *	904450-1	Swollen lymph node on right side of neck the morning after receiving the vaccine. Telehealth appt with PCM who prescribed 800mg ibuprofen. Took 200mg motrin for swelling because i have not had the chance to pick up prescription. The following day, swollen lymph node continued and broke out in hives approx at 1300. Went to emergency room and was given an oral steroid (dekadone?). Prescribed prednisone, claritin, and Benadryl. Have taken 1 claritin a day. Hives have disappeared within 5 hrs of oral steroid. Swollen lymph node persists and has enlarged. Painful and swollen past the jaw line. Will return to ER today for pain and continued swelling as directed by ER.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904463-1	Received vaccine, waited 15 min. Walked to car. side of face went numb, dry mouth. Patient walked back to vaccinate location. Pulse 115, O2 Sat. 96.
COVID19 VACCINE (COVID19)	Emergency Room *	904475-1	Felt flush and throat started to get scratchy and started to get tighter and was having difficulty swallowing about 4 minutes after vaccination. Continued to get more flush and laid down. Rapid response was called and taken to the emergency room.
COVID19 VACCINE (COVID19)	Emergency Room *	904485-1	Sensation of tightening in throat and sensation of difficulty swallowing. No rash. No dyspnea. No stridor/wheezing. Vital signs unremarkable. Suspect globus sensation. Plan observation until resolution or progression to anaphylaxis.
COVID19 VACCINE (COVID19)	Emergency Room *	904488-1	12/17/2020; 1158 am had injection. at 2pm, noticed trunk itching around waist, abdomen, back. No visible rash. mild soreness and redness to injection site on left deltoid. 530/6pm developed SOB, rash is now visible, non raised, very itchy trunk. Took 10 mg Zyrtec. Went to ER nausea, vomiting, moderate to severe abdominal pain, flared angina and chest pain with the shortness of breath. ER; DR. CONTINUED WITH BENADRYL 50MG 4-6 HOURS, DUE TO ONGOING ITCHING. FAMOTIDINE 20 MG 2X/DAILY Had flu shot between 09-10/2020
COVID19 VACCINE (COVID19)	Emergency Room *	904489-1	Sudden onset of fainting sensation . Followed by dizziness moderate shortness of breath lightheaded ness panic tingling in hands feet top of head headache distress.
COVID19 VACCINE (COVID19)	Emergency Room *	904495-1	Patient with symptoms of severe myalgias, low back spasms, fevers, chills, headache, SOB since Saturday. Treatment included intravenous fluids, Tylenol, magnesium repletion, frequent reassessments, infectious disease consultation in the Emergency room.
COVID19 VACCINE (COVID19)	Emergency Room *	904497-1	Numbness in face and tongue, feeling of tongue swelling and touching the back of my throat, difficulty swallowing with need for more effort and more swallows. These symptoms started about 45 minutes after the injection and got worse. I went to the urgent care and received Benadryl, Pepcid, and an IM Solu-medrol. The PA said he did not see any edema and I had a patent airway so they monitored me and sent me home with an epi pen in case symptoms worsened. Symptoms started improved approximately 2-3 hours after receiving the medications and the epi pen was not needed.
COVID19 VACCINE (COVID19)	Emergency Room *	904500-1	12/16/2020 7:20am After the injection few later I felt my chest started to hurt gradually increased the pain and started to have palpitations it lasted hour and thrity. Vital Sigh the time of the event BP 138/80, HR 78, RR 24, Sat 99%. I was sent to ER they blood samples, EKG, Chest X-ray and monitor my heart rate.; all was normal. The same day I was discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	904502-1	Within 10 minutes of receiving vaccine, I experienced shortness of breath, irritation in my throat, felt flushed and was dizzy. I was immediately transported to the emergency room where I received benadryl and was monitored.
COVID19 VACCINE (COVID19)	Emergency Room *	904504-1	Throat closure (angioedema/anaphylaxis) requiring ambulance transport to Hospital emergency room and stay IV infusion of Benedryl, solumedrol, and Pepcid with excellent results. Observed twelve hours, then discharged.
COVID19 VACCINE (COVID19)	Emergency Room *	904506-1	Approx. 10 minutes after vaccine administered I became suddenly tachycardic while sitting in a chair. Heart rate up to 140. I started to feel some chest heaviness with some difficulty breathing. Felt like my heart was galloping. Was transported to ER and monitored for 2 hours. I was orthostatic with talking, and walking. Heart rate to 135 walking to the bathroom despite having had a liter of IV fluid given. I was discharged home with instructions to follow-up with my doctor. I have an underlying problem with exercise intolerance with elevated heart rates. It seems that the elevated heart rate made my symptoms worse. Otherwise I have just a mild headache and mild fatigue. No previous adverse reactions to vaccines.
COVID19 VACCINE (COVID19)	Emergency Room *	904516-1	Pt stated she felt dizzy/lightheaded while on her phone nearing the end of her observation period. She got up to leave stating she thought she just needed fresh air and promptly returned to the observation area with dizziness and palpitations. This was 45 minutes roughly post vaccine administration. B/P and heart rate were elevated. Pt began feeling short of breath and a rapid response was initiated.
COVID19 VACCINE (COVID19)	Emergency Room *	904519-1	Elevated blood pressure Dizziness and heaviness in legs Went to Er to be monitored and sleep Lasted about 6 hours
COVID19 VACCINE (COVID19)	Emergency Room *	904534-1	About two to three minutes after the Covid vaccine was administered in the vaccine clinic at my hospital where I work, I began to experience pre-syncope symptoms (mostly light-headedness and nausea). I stood up to get help and walked to the back of the auditorium where they were observing us for 15 minutes post-vaccine, and due to standing and walking, I became much more dizzy and lightheaded and then sat down on the floor and was eased to a lying-down position on the floor by a nurse as I briefly lost consciousness. I regained consciousness very quickly (maybe 10-20 seconds, but I'm not sure) and was taken care of by a set of nurses who noted me to be hypotensive and pale, with I think a bit of a lower heart rate, though I'm not sure what my vitals were exactly. They had me then stand to do orthostatic vitals and I was orthostatic. I was too dizzy to remain standing and felt very nauseas so I was taken to the ED (in the hospital where I work) to be observed. I had a normal EKG, blood glucose, and urine sample there. After having some juice and lying down, I felt better but was very cold and had some chills. After a little over an hour, they released me from the ED and it seems to have all been an episode of vaso-vagal syncope. I've had vaso-vagal responses before, but not in response to a vaccine since I was about 13, so I was surprised by how quick and severe the vaso vagal response was. Later in the day, I felt better but was fatigued and had a headache. I also had a lot of pain at the injection site. The day after the vaccine I felt tired and had a headache, and for part of the day a mild sore throat. Now two days after the vaccine, I feel much better, and the arm pain is more mild.
COVID19 VACCINE (COVID19)	Emergency Room *	904535-1	About 5 minutes after the injection I felt lightheaded/ presyncopal lasting about 5 seconds. I had several more episodes of the same symptoms over the next hour. My vitals were checked after the first episode and my pulse was 130 with blood pressure 179/99 and oxygen sat was in the high 90's. I was taken on a gurney to the ER. I was told my blood pressure and pulse improved a few minutes after the initial episode and I was observed for 2 hours with resolution of my symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	904540-1	Pt was found lying on cement at base of steps. Recovery RNcalled outside to the back. Patient was alert & oriented. Stated that he fell and landed on the cement walkway. Complained of left foot pain and said he heard a crack when he fell. 911 was called per patient's request. Was able to talk inside with assistance and Vitals obtained (stable). Noted swelling in posterior back of ankle, pain with palpitation. Ice was applied. 911 arrived and taken to hospital

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904544-1	received COVID-19 vaccine on 12/19 at approx 1750. At 1804 pt c/o headache, racing heart, itching, and shakiness. Vaccine Commander called rapid response team (RRT). Upon arrival of RRT pt c/o increasing sx. Pt escorted via wheelchair to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	904546-1	Approximately 10 minutes after the vaccine was administered, reported starting to feel light headed, sweaty and nauseous. Then reported throat was feeling tight and RN on site reported hearing change in breathing. RN administered EpiPen and called 911. EMS responded and transported to ED. ED record shows resolved symptoms. No rash, edema, difficulty breathing. In ED was monitored and discharged. Received no medications or additional treatment in ED.
COVID19 VACCINE (COVID19)	Emergency Room *	904549-1	Patient developed flushing, diaphoresis, tachycardia approximately 7 minutes after injection into L deltoid, while waiting under observation. The symptoms resolved spontaneously after approximately 3-5 minutes. Patient was then observed for 45 more minutes and felt fine the entire time. Upon leaving to have her spouse pick her up, patient developed symptoms again while walking out of the building. Patient was then taken to the emergency department for further monitoring. Telemetry and further observations for 4 hours revealed no further abnormalities and the patient was discharged home with no more issues.
COVID19 VACCINE (COVID19)	Emergency Room *	904553-1	Within a few minutes of taking the vaccine, my lower lip began swelling. I was moved to the emergency department of Hospital and monitored and treated for four hours. Then I was released. At around 1:30 p.m. I felt my skin singling and started having difficulty breathing. Since I was no longer at my work (Hospital) I went to the closest hospital. This reaction was much worse. My husband drove. My heart rate increased. I was released at around 6:30 pm
COVID19 VACCINE (COVID19)	Emergency Room *	904555-1	I had no reaction following the vaccination. The next day I had very mild soreness at the injection site. The next morning (about 36 hours after the vaccination) I woke up with fatigue and a sore throat. I had breakfast and about 10 minutes later I vomited everything (projectile vomiting, no nausea or abdominal pain). An hour later I had episode of severe watery diarrhea (just one episode). Felt very weak so I decided to sit down, stumbled to a chair, and then proceeded to have a syncopal episode with about 4 minutes of seizure like activity (witnessed, I don't remember that part). Decided to go to the ER, where I had labs, EKG, CXR, head CT scan, MRI and EEG. I was admitted for 24 hour observation, all the tests were normal.
COVID19 VACCINE (COVID19)	Emergency Room *	904558-1	Patient was sitting in a chair approximately 20 minutes after vaccine administration when she became pale and quiet. Monitor asked if she was ok, and she said she was itchy on her face and that her feet were really hot and hives were noted on her cheeks and forehead at 1803. She was moved to a bed with help from other staff and the rapid response team was called. Her blood pressure was noted to be 155/101, HR-115, O2 sat 99% on RA at 1807. 50 mg IM diphenhydramine administered to L arm by RN. Patient transported to ED for further evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	904562-1	Generalized Rash all over upper torso with feeling itchy. Apparent to RN at approximately 15 minutes post vaccination. Patient (Health Care worker/employee) did not seem aware until it was brought to his attention. 15mg Benadryl administered and sent to Emergency Department for observation. No further symptoms occurred and patient dismissed.
COVID19 VACCINE (COVID19)	Emergency Room *	904569-1	My symptoms started 30 minutes after the injection. My throat and tongue started to get very itchy and scratchy. I had to keep clearing my throat. My throat felt thick with secretions.
COVID19 VACCINE (COVID19)	Emergency Room *	904580-1	Pfizer-BioNTech COVID-19 Vaccine EUA Chest pain starting evening after vaccination and continued through 12/19/20. The chest pain is described as dull/heavy and continued to get worse so was advised to go to the ER. I went to the ER at 7pm on 12/19/20 and had 2 EKGs and blood drawn. It is 12/20/20 today and I still have constant mild chest pain with times that it feels moderate.
COVID19 VACCINE (COVID19)	Emergency Room *	904581-1	Developed Hives about 30 minutes after getting the COVID vaccine. Was given vaccine at 815 am, arms had a burning feeling and hives started to develop. Was also feeling very anxious and hyperventilating. I had no swelling or shortness of breath. Went back to vaccine clinic immediately and there they administered EPINEPHRINE at 846 am. Started to calm down around at 849 am. Burning feeling in arms started to go away and hives started to disappear. Was then taken to the ED department to be monitored. Because I have had a recurrent hives after EPINEPHRINE, I was given Benedry IV, Solu-Medrol IV, and Pepcid IV. I was also sent home with a prescription for Prednisone as well as an Epi-pen. I am feeling much better now. Hives have not come back, yet. Fingers crossed they don't!
COVID19 VACCINE (COVID19)	Emergency Room *	904604-1	shakiness, tachycardia, breathing feels tight - went to emergency dept
COVID19 VACCINE (COVID19)	Emergency Room *	904605-1	syncope following vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	904607-1	rash across chest. numbness tingling across arm (injected arm). Bendadryl & solumedrol given, returned to ed the next day with tightness in throat & trouble swallowing - Benadryl & solumedrol given - improvement
COVID19 VACCINE (COVID19)	Emergency Room *	904632-1	felt hot, lightheaded, nausea
COVID19 VACCINE (COVID19)	Emergency Room *	904643-1	Hives and Throat Swelling - treated with epinephrine and steroid
COVID19 VACCINE (COVID19)	Emergency Room *	904698-1	"Within 15 minutes, patient experienced itchy, tight throat ""felt like a tickle in throat"". Airway remained patent. No rash/hives."
COVID19 VACCINE (COVID19)	Emergency Room *	904709-1	Left eye puffiness, left eye paresthesia Tx benadryl, solumedrol, head ct scan
COVID19 VACCINE (COVID19)	Emergency Room *	904719-1	Day 1: palpitations, dizziness Day 2: headache, redness, swelling, itching on vaccination site; GI disturbance Day 3: vaccination arm had paresthesia, heaviness, almost stroke-like symptoms; the symptoms started suddenly ** treated in the ER; IV steroids- for possible allergic reaction; tpa- for the stroke-like signs; halfway through the tpa, I felt an improvement with the arm

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	904818-1	Within 10 minutes after the injection my left shoulder began to itch was super red and hot. I notified them and per policy I was transported to the ER and was given IM 50mg benedryl, 40mg oral prednisone and I was monitored for another 1.5hr. 1/2 after the benedryl I still had the redness and flush in the neck and chin area the chest area redness had cleared up. I was released with a prescription of benedryl for 4 days to take every 8hrs for the symptoms. I continued with the benedryl for the next day and the symptoms subsided a little so I stopped taking the benedryl and I continued to take the prednisone.
COVID19 VACCINE (COVID19)	Emergency Room *	904821-1	So I got up from the chair to go to the other room to be on the 15 min observation. I started feeling a little weird within a minute. A sharp shooting numbness in my jaw and my head felt a little dizzy, and a burst of heat in my spine. I felt off and sat down and took my BP and my BP was 185/80. Within a couple of minutes I was at the walk in clinic where they monitored me for a couple of hours. The jaw experience went away but I still felt a little shaky. I also had a numbness/tingling in the face and jaw. They gave me a Benadryl injection and it did not resolve. They gave me prednisone it felt a little better (about 30min) afterwards. They checked my airways and it was ok. I had elevated BP but within a couple of hours it was ok. They discharged me since I felt ok and a friend drove me home. Symptoms were better next day but in the afternoon I felt the numbness again on my lips. They decided to prescribe me medro and I started taking it since Friday evening. I still feel a little head ache and like I am a little sick. The headache is still lingering. Left side of my face since yesterday I have a stiff neck. It is like a pain in my face.
COVID19 VACCINE (COVID19)	Emergency Room *	904840-1	Became unable to swallow and mouth got dry. Was given Epinephrine, Benadryl and Famotidine. The symptoms subsided within 2.5 hours.
COVID19 VACCINE (COVID19)	Emergency Room *	904841-1	light headedness, claminess, parasthesias of the hands and feet, worked night shift and day shift. no treatment
COVID19 VACCINE (COVID19)	Emergency Room *	904855-1	About 8min after the vaccine I got a severe headache on the top of my head and was at a 10/10 and dropped to a 7/10 after a few moments and finally went away on its on. I was very flushed and hot. I was laid down and given ice pack. Started feeling a littler better but experienced riggers and was transported to the ER where I was given benedryl, fluids and was monitored for a few hours. I was released but for the next 2 days after I was super tired and laid around and slept for 2 days. Today I am at work but I feel very tired and fatigued
COVID19 VACCINE (COVID19)	Emergency Room *	904859-1	Rash shortness of breath
COVID19 VACCINE (COVID19)	Emergency Room *	904861-1	Pfizer-BioNTech COVID-19 EUA After receiving the vaccine, during observation period (about 10 minutes after the dose administered), patient became tachycardic and nauseous. Patient was brought over the the ER at 7:05 am with non-intractable vomiting with nausea. Ondansetron inj 4mg IVP x1 given at 7:40am, at 7:45am P 135/95; P 105 ; R 20; WBC 16.2 Patient felt better, tolerating PO, asymptomatic and discharged home at 8:34am
COVID19 VACCINE (COVID19)	Emergency Room *	904886-1	"I was ok for first 15-20 mins post vaccine and was sitting in chair and calling family and friends When I stood up I felt 'funny'" - kind of hard to describe I walked around and mostly felt ok but not hundred % but didn't feel dizzy but didn't feel 100% myself either I checked my radial pulse and it felt normal and there was no BP machine there to have a check done I left hoping to feel 100% soon I walked to my car in the parking lot and started driving home Around 200 yards from the hospital I felt weird warm rush like feeling through my whole body Knowing that anaphylaxis can occur at this stage I panicked and turned car around and went directly to ER to be checked out My BP was not low and I was observed for short duration and discharged home then- vitals were taken almost half an hour post vaccine Further records can be sought from ER as they should have reported this as well I also had arm pain/malaise and low grade temp of 100.5 at home for 24 hrs that resolved subsequently The initial symptoms within first half an hour made me file this report"
COVID19 VACCINE (COVID19)	Emergency Room *	904887-1	Felt dizzy
COVID19 VACCINE (COVID19)	Emergency Room *	904978-1	Patient/Employee became dizzy 15 min after covid vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	904986-1	I felt extremely hot, headache and dizziness - pressure on left temple and top pf head - next day had diarrhea.
COVID19 VACCINE (COVID19)	Emergency Room *	904987-1	Throat and chest tightness following vaccination- went to ER and received epinephrine, solu-medrol, benadryl, famotidine, and EKG due to tachycardia.
COVID19 VACCINE (COVID19)	Emergency Room *	905008-1	Patient complained of light headedness, stated right arm cool, and bad taste in mouth. BP 123/80 initially. Pt stood up and became light headed BP 154/90 HR 76 SPO2 98%. RRT called. Pt transported to Emergency Department.
COVID19 VACCINE (COVID19)	Emergency Room *	905017-1	Employee began experiencing tingling in roof of her mouth, watery eyes and itchy throat. She was taken to ED for further evaluation and treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	905018-1	Runny nose, congestion, loss of smell for 36 hours
COVID19 VACCINE (COVID19)	Emergency Room *	905027-1	1505 right eye heaviness, BP: 114/61, O2 saturation: 100%, HR:74, pt sent to ED
COVID19 VACCINE (COVID19)	Emergency Room *	905032-1	Employee reported itching to roof of her mouth and numbness to right side of her throat. She also had elevated HR of 113. She was taken to ED for further evaluation and treatment.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	905056-1	"Pt received the COVID Pfizer vaccine at 1324 and at 1335 pt c/o feeling anxious and flushed. Pt VS: 143/94 91 18 99% AA. Pt admitted she had not eaten before coming in for vaccine. Pt put in recliner chair and taking water and rice crispy treat without difficulty and symptoms resolved. Pt kept for continued monitoring. 1350 pt c/o of ""not feeling right"" and that she was going to pass out. Pt layed back in lab chair; O2 at 2L per NC applied. B/p 140/100 HR 127 02 sat 100% pt pale, cool and shivering; pt c/o she didn't feel right. Benadryl 50mg IM given at 1351 and 911 called. Pt had no hives, No itching lungs clear, HR 103 and O2 sat remained at 100%. Continued to monitor pt: VS 1400 140/90 103 18 100% on 2L/NC. Pt reports no NKA, Meds: Esterace VAg Supp started 4 days ago Levothyroid 75mcg po daily Pt has never had reaction to medication or vaccines in past. Pt still c/o feeling week but better--held off on Epi since EMS had arrived 1400. Pt transferred to ER in stable condition. 1405: ER called and report given."
COVID19 VACCINE (COVID19)	Emergency Room *	905117-1	left sided non positional chest pain. seen in ER . Was treated with Toradol and resolved. Negative work up in emergency room. for cardiogenic or pulmonary causes.
COVID19 VACCINE (COVID19)	Emergency Room *	905131-1	Sudden onset of intense rush of heat through body, intense increase in heart rate and inability to swallow, trembling and shaking. Employee was in car, returned to hospital ER. ER administered fluids, and diphenhydramine.
COVID19 VACCINE (COVID19)	Emergency Room *	905133-1	anaphylaxis
COVID19 VACCINE (COVID19)	Emergency Room *	905141-1	throat and face swelling, headache rate 10/10, nausea, vomiting and diaphoretic-Was seen in the emergency room and was given Toradol, Benedryl, Pepcid
COVID19 VACCINE (COVID19)	Emergency Room *	905144-1	1712 tongue tingling, O2: 100% 1725 complain lip tingling, transferred to ED
COVID19 VACCINE (COVID19)	Emergency Room *	905153-1	Pt sitting in observation area. c/o L arm whole arm aches and pinky finger feels numb on outside. does have feeling, can move fingers equally, blood flow to finger with blanch test slightly slower. no redness/swelling noted on arm. no bleeding under bandaid. not improving. no s/sx distress. (dizzy, SOB,) directed to ED (where pt works) for assessment at 0810. Pt will complete workers comp form.
COVID19 VACCINE (COVID19)	Emergency Room *	905162-1	Palpitations - patient stated he may have anxiety attacks when getting shots. Patient sent to ER for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	905170-1	sx: itching treatment: Benadryl, pepcid & solumedrol.
COVID19 VACCINE (COVID19)	Emergency Room *	905183-1	12/21@11:50-Caller stated that he had vaccine at 9am and had a seizure about 4am the next morning. Patient also had slight head. Caller stated that he is feeling better no medications were given .Caller had Cat scan and EEG. Caller has follow up 12/22.
COVID19 VACCINE (COVID19)	Emergency Room *	905185-1	"COVID vaccine was administered by local health department in hospital setting. Approximately 10 minutes after receiving the vaccine, the patient reports feeling ""weird,"" short of breath, heart racing, dry mouth, & anxious."
COVID19 VACCINE (COVID19)	Emergency Room *	905191-1	Do no suspect that vaccine caused patient condition and resulting inpatient admission. Suspect patient had COVID-19 at time of vaccination, but had not developed symptoms yet. Here is timeline: Patient went to ED on 12-18-2020 at 22:51 with complaint for fever and shortness of breath. Patient ended up testing positive for COVID-19, 12-19-2020 00:09, but was not symptomatic at time of vaccine. As of 12/21/2020 12:04 pm, patient is still inpatient and on comfort care/hospice.
COVID19 VACCINE (COVID19)	Emergency Room *	905240-1	Light head, oral & generalized itching feeling flushed 25mg Benadryl PO - Resolved Sx
COVID19 VACCINE (COVID19)	Emergency Room *	905250-1	Hives Pharyngeal Irritation Improve with IM Epinephrine
COVID19 VACCINE (COVID19)	Emergency Room *	905295-1	On 12/18/20 the next day at ~0830 he experienced SOB, heart palpitations, and fever. He was taken to the local hospital via ambulance. He was tested for Covid-10 at hospital. Unknown result. Discharged from hospital around 1545.
COVID19 VACCINE (COVID19)	Emergency Room *	905296-1	Pfizer-BioNtech COVID-19 Vaccine EUA: Pt brought up after rapid response to COVID vaccine. Pt c/o throat itching, back itching, hot, and flushed. Denies diff swallowing at this time. Upon arrival to ED, AOx4. NAD. Flushed/WD. GCS 15. Ambulates independently with steady gait upon arrival. Pt. has documented allergies to Latex, ciprofloxacin and Amoxicillin-pot Calvulanate.
COVID19 VACCINE (COVID19)	Emergency Room *	905300-1	39-year-old female with history of ADHD, anxiety, melanoma presents with palpitations. Patient received a Covid vaccine today and started having palpitations, lightheadedness, shortness of breath and feeling flushed a few minutes afterwards. Rapid response called and patient taken to ED for assessment. Patient denies facial or oral swelling, rash. patient denies any recent fever, nausea, vomiting, cough, diarrhea. Denies chest pain, abdominal pain. Last menstrual period end of November. Has allergies to Bactrim and clarithromycin. Presentation concerning for possible vaccine reaction, no anaphylaxis. EKG and labs within normal limits. Patient was rehydrated in the ED. Patient was discharged home on same day (12/20/2020). Pt alert and oriented x 4. Pt ambulated out of ED with a steady gait in no apparent distress.
COVID19 VACCINE (COVID19)	Emergency Room *	905302-1	39-year-old female with history of ADHD, anxiety, melanoma presents with palpitations. Patient received a Covid vaccine today and started having palpitations, lightheadedness, shortness of breath and feeling flushed a few minutes afterwards. Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	905306-1	Caller stated @ 10:15 am and about 5pm that afternoon nausea, itching and welts on the face and burning the ears. Caller took 50mg Benadryl. Once at hospital she received Decadron injection 4mg. Caller slept for two hours and symptoms had dissipated.
COVID19 VACCINE (COVID19)	Emergency Room *	905309-1	Muscular pain, general malaise Treatment: Famotidine, Acetaminophen
COVID19 VACCINE (COVID19)	Emergency Room *	905320-1	severe abdominal pain experience 2 days post vaccination of dose 1 of 2. Diagnoses with early acute appendicitis on Friday December 18th and had a laproscopic appendectomy on Saturday December 19th.
COVID19 VACCINE (COVID19)	Emergency Room *	905321-1	Had dose #1 at 1620 and started feeling itchy on her head and face about 1700. Face red. No difficulty breathing. Given 25 mg benadryl po. Observed and improved. Returned to clinical unit as a patient care tech about 1745. At about 2200 she started having swelling in her face and lower lip and tingling in tongue and left upper and lower lip. Taken to ED in our Facility. Given benadryl 25 mg, famotidine 20mg, and prednisone 60 mg all PO x 1. No difficulty breathing, or swallowing, no wheezings or angioedema of mouth or throat. Sxs improved. diagnosed with allergic reaction. given instructions when to return. Given instructions for Benadryl and famotidine otc use. given script for prednisone 40mg x 5 doses. DC at 12/19 /20 at 0144 to home. 12/21/20 1000 this rn called patient at home. She is doing much better with redness in her face and itching in her back and face. No swelling or rash. Last had benadryl last night. has been taking multiple times a day for the itching. had famotidine x 1 on 12/19. She has not filled the script for prednisone. I told her if she could tolerate itchiness tomorrow w/o use of benadryl she could work her 1600-2400 shift. I will discuss her taking covid vaccine #2 with Medical Director for Employee Health, Dr.
COVID19 VACCINE (COVID19)	Emergency Room *	905323-1	Approximately 10-15 minutes after receiving COVID-19 vaccine, patient reported itching, tingly feeling, face appeared more flushed. Seemed anxious due to history of allergic reactions and reported slight shortness of breath. Treated with diphenhydramine 50 mg po and epinephrine 0.5 mg IM and transported to Emergency Department. Observed in that area and released a few hours later as symptoms resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	905337-1	Lip swelling within 24 hrs
COVID19 VACCINE (COVID19)	Emergency Room *	905339-1	Shortness of breath, tachycardia
COVID19 VACCINE (COVID19)	Emergency Room *	905342-1	Patient had sudden onset of tachycardia - heart rate 120s - 140s. Felt lightheaded.
COVID19 VACCINE (COVID19)	Emergency Room *	905345-1	Patient received Pfizer COVID 19 vaccine last Thursday 12/17. Admitted today (12/21) with bleeding and low platelet count - working up for ITP, TTP. Given recency of vaccination and no known contributory allergy or medical history, physician thought potentially associated with vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	905437-1	Employee reported redness and swelling to Right Wrist. She also noted itching to left neck/back area. Employee was taken to ED for further evaluation and treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	905462-1	The reaction to the shot was that she had alcohol taste, nausea, wrenching, and a rapid response team was called and she was taken to the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	905486-1	Hypertension (220/110) and shortness of breath after Pfizer-BioNTech COVID-19 0.3 IM injection in the right deltoid. Presented to ED within 6 minutes of injection for evaluation. Symptoms resolved within 10 minutes in the ED except BP remained in 160s/90s. Blood glucose, CMP, and ECG normal. No medications given. Patient asked to leave following resolution of symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	905488-1	general malaise and abdominal discomfort after vaccine, three days later started with facial rash and fever Treatment: Famotidine, Benadryl
COVID19 VACCINE (COVID19)	Emergency Room *	905501-1	flushing, felt dizzy. given Benadryl 50mg and resolved in 15 minutes
COVID19 VACCINE (COVID19)	Emergency Room *	905503-1	During the 15-minute observation period the patient became flushed and began complaining of a headache. She then went unconscious and had tonic-like activity for approximately 2 minutes. The patient subsequently stopped the seizure-like activity and woke up but was confused and was acting in a postictal fashion. She was evaluated emergently upon arrival in the ED and noted to have an altered mental status. Physician noted that this does not appear to be an allergic or anaphylactic reaction. There was no evidence of rash and lung sounds were clear with no wheezing. Subsequent CT showed a diffuse subarachnoid hemorrhage and patient was transferred to the Medical Center for further treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	905510-1	tingling in throat, rapid heart rate, flushing
COVID19 VACCINE (COVID19)	Emergency Room *	905516-1	General malaise, nausea, chills, headache
COVID19 VACCINE (COVID19)	Emergency Room *	905544-1	Pt expressed feeling tachycardic, jittery, shaky, site edema, shortness of breath and dizziness. Pt received epipen 0.3 mg IM injection x1 dose and benadryl PO, responded favorably and transported to ED for follow up care.
COVID19 VACCINE (COVID19)	Emergency Room *	905554-1	Tongue felt thick, tingling in extremities, shortness of breath. Given 50mg Benadryl, 20 mg famotidine
COVID19 VACCINE (COVID19)	Emergency Room *	905560-1	The vaccine was administered at 1130 without immediate complication. At approx 1800 the pt began to develop symptoms of general malaise. At approx 2200 the pt developed a fever and chills. Initial oral temperature was 101.3 The pt has continued to have a fever and general malaise since the injection, now for almost 5 days.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	905561-1	Tightness in back of throat. Received 50 mg Benadryl.
COVID19 VACCINE (COVID19)	Emergency Room *	905563-1	Employee complained of feeling lightheaded. She reported blotchy spots on neck and chest; tingling to back of throat. Employee was taken to ED for further evaluation and treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	905564-1	Patient began experiencing bilateral leg weakness, chills, shortness of breath, and headache
COVID19 VACCINE (COVID19)	Emergency Room *	905565-1	Edema in left side of face, hand, knee, and shoulder.
COVID19 VACCINE (COVID19)	Emergency Room *	905574-1	After 15 minutes of monitoring post injection, I developed itching to left shoulder with diffue hives to shoulder and chest
COVID19 VACCINE (COVID19)	Emergency Room *	905578-1	"Chest and back pain, and then ""limbs went numb"". Couldn't lift glass of water. All limbs were weak and shaky."
COVID19 VACCINE (COVID19)	Emergency Room *	905592-1	Started with slight headache and sore arm, felt tired and diarrhea about 5 hours past vaccination - 3 bowel movements within 1 hour. That night around 1:30AM (next morning) I felt a little itchy all over with a throat irritation and I took some Benadryl. Just itchininess and sore throat, no fever. Had pretty bad fatigue on the 17th and had nasal congestion, cough, chills, sneezing. I worked on the 17th but felt terrible throughout the day. Got home and I could not eat anything , could not hold anything on my stomach. On the 18th at night woke up with sweats, no fever, dry cough, nausea. Chest discomfort (minor chest pain - was sure was not cardiac, could be acid reflux). Woke up with nausea and irritation and intermittently felt fatigued and would feel better, throughout the day. Also felt back pains on the 18. That same evening I felt a little better and then on the 19th I had some shortness of breath. I then decided to go to the UC on Saturday the 19th and got a COVID test. Sore throat was gone but still feel back pain and nausea. Around 11PM on the 19th I got itchy again in my arms and chest. Also got chest pains and took a Pepcid and Benadryl. On the 20th I am feeling a little better, still have a cough and some stomach upset and headache (in the AM). About 1:30PM diarrhea came back again. Had it 2X and low back pain and abdominal pain and also chills. There was a time I could not take care of my kids I just had to stay in bed (19 and 20th - I spent in bed most of the day). My heart rate has been good. The evening of the 20th I felt a little bit better and able to eat a little bit easier. This morning felling a little better. Had diarrhea this morning and a headache that I can't get rid of. Took Tylenol but it has not helped. Also low back pain.
COVID19 VACCINE (COVID19)	Emergency Room *	905602-1	Leg pain, back pain, chills, fever, headache. Unable to walk or stand still for more than a minute. Unable to sit upright back pain travels to mid back.
COVID19 VACCINE (COVID19)	Emergency Room *	905615-1	"0650-Within 5 min of vaccination: Lightheadedness, dizziness, ""floaty"" feeling, cleared after sitting 15 more minutes. 0900-Returned to clinic, after vaccination : recurrence of lightheadedness, sudden onset of HA 6/10 (no migraine aura), nausea and 2 episodes of watery stool, diaphoresis. No rash, no Shortness of breath, no difficulty swallowing, no throat swelling. 1000- taken to ED for continued monitoring: given Zofran 4mg SL, Benadryl 25 mg PO, Pepcid 10 mg PO, Tylenol 975 mg PO , ibuprofen 600 mg PO. DC'd from ED at 1335 with Zofran for continued nausea. Other symptoms resolved."
COVID19 VACCINE (COVID19)	Emergency Room *	905624-1	c/o problems swallowing despite drinking water. Sat pt in chair, VS taken and monitored. Epinephrine IM given when pt c/o problems swallowing worsening. 9-1-1 called and responded but pt declined escort to ED because he stated he was feeling better after Epi so instead I and patient transport escorted pt to ED via wheelchair.
COVID19 VACCINE (COVID19)	Emergency Room *	905627-1	Vaccine recipient reported experiencing numbness, tingling of the arm after receiving the COVID-19 vaccine. Vaccine recipient thinks that the vaccinator most likely hit a nerve when administering the vaccine. The vaccine recipient went to the emergency department for further evaluation. The vaccine recipient was monitored, felt better, and was discharged to home subsequently the same day. On Monday, I called the vaccine recipient to follow-up and they report that they no longer have the numbness or tingling.
COVID19 VACCINE (COVID19)	Emergency Room *	905637-1	Patient became dizzy, vital signs -10:32 am 162/101, P-96, sat 98% on room air, hot clammy, blurry vision, heart palpitations, repeat vitals 1036- 171/102 P-85 sat 98% on room air, transferred to Emergency Room 10:43 am
COVID19 VACCINE (COVID19)	Emergency Room *	905641-1	Thursday night at around 11pm I lost control of my right arm. Friday I spent the day in Urgent Care doing CT scans and MRI scans of my brain and body and also did some blood work. All test came back negative. It is now Monday the 21st and the mobility in my right arm is extremely limited and I am slowly regaining the use of my right arm.
COVID19 VACCINE (COVID19)	Emergency Room *	905644-1	""felt like throat scratching""
COVID19 VACCINE (COVID19)	Emergency Room *	905645-1	One hour post vaccination my top lip felt tight. On inspection my buccal mucosa of my top and bottom lips were swollen greater on the top lip. My soft palate felt numb as well as my tongue from the tip to middle. My nose was also slightly swollen. 24 hours later the I have a slight swelling of areas mentioned with the exception of my nose. I was instructed to take Benadryl on the day of the event 25mg x 2 doses. the day after 12/21 I was given Claritin 10mg x 1 dose and Famotidine 20mg x 1 dose by mouth.
COVID19 VACCINE (COVID19)	Emergency Room *	905649-1	The evening of 12/16 my headache begin at the next day fever of 103 stayed for 7 hrs took administered Tylenol exp chills, body aches, and rash on face around the eye spread to right side of nose, side went to hand area lasted from 12/17 to 12/21. The headache started effecting my neck contacted my PCP on 12/19. I went to ER on 12/19 ran tests CT scan check for clots negative, lumbar puncture and chest X-ray was fine and dint exp respiratory problems. I missed 3 days of from work 12/9 to 12/21.
COVID19 VACCINE (COVID19)	Emergency Room *	905652-1	Patient had swelling of tongue 45-60 minutes after vaccination. Received PO benadryl. Had eyelid and facial swelling requiring IV Solu-medrol. Monitored for short period of time in emergency department and released. No further symptoms.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	905669-1	She experienced nausea.
COVID19 VACCINE (COVID19)	Emergency Room *	905671-1	After receiving dose of COVID 19 vaccine patient reports the following: rash to both arms, right neck. Heart rate increased to 102. Reports slight shortness of breath. ER visit- administered Benadryl/Solumedrol IM
COVID19 VACCINE (COVID19)	Emergency Room *	905674-1	Patient pre-medicated with diphenhydramine due to infusion-type reactions in past. Patient with hoarse voice, itchiness to upper back, arms, and face, hives on bilateral arms. Per health system protocol (patient is health system employee) Patient administered diphenhydramine, famotidine, methylprednisolone succinate, epinephrine. All symptoms resolved by 1440.
COVID19 VACCINE (COVID19)	Emergency Room *	905675-1	18 minutes post vaccine dose 1, Pfizer COVID vaccine, development of globus sensation without airway compromise or stridor. Frequent throat clearing and swallowing. Followed by diaphoresis, loss of vision, extreme neuropathic tingling over entire head non painful. Bradycardic event to heart rate 35 recorded by Apple watch. Loss of consciousness with pupil dilation. Weak pulses but no loss of pulse. Heart rate recovered quickly. Blood pressure after initiation of iv fluids was normal in upright position once loss of consciousness subsided. Continued globus sensation. 30 minutes after initial event, again developed clammy hands, head tingling and worsening globus sensation but again no stridor or airway compromise. Given PO Benadryl 25 mg which did resolve globus sensation in next 30 minutes. Monitored for one hour post event with no subsequent symptoms other than fatigue.
COVID19 VACCINE (COVID19)	Emergency Room *	905680-1	Next day between 3 -6 AM - swelling of left eyelid followed by swelling and paresthesias of lips, followed by severe paresthesias of the left side of the face mostly lower half associated with a heavy sensation. Emergency treatment with 150 mg solumedrol and 50 mg benadryl. Symptoms persisted on and off for 3 days requiring benadryl 50 mg and claritin round the clock. On the second day post-vaccine headache, mouth blister (1), and diarrhea. Today (4 days post) very tired and fatigued.
COVID19 VACCINE (COVID19)	Emergency Room *	905683-1	Pt received Covid vaccine and afterward developed hives on chest and arms
COVID19 VACCINE (COVID19)	Emergency Room *	905694-1	Gradual onset of very mild rash and symptoms gradual improved with IM administration of diphenhydramine 50 mg and oral famotidine 20 mg. The physician was questioning if the mild rash was from where the patient was scratching secondary to anxiety vs allergic reaction. Patient was monitored for improvements.
COVID19 VACCINE (COVID19)	Emergency Room *	905702-1	Anxious, tachycardiac and hypertensive.
COVID19 VACCINE (COVID19)	Emergency Room *	905706-1	mild fever; chest pressure; dizziness; This is a spontaneous report from a contactable consumer. A 29-year-old female patient received dose number 1 of BNT162B2 (solution for injection, lot number Eh9899/expiration date unknown) via an unspecified route of administration on her right arm on 16Dec2020 at a single dose for immunisation. Medical history included penicillin allergy and allergies to gluten. Concomitant medications were not reported. The patient experienced chest pressure and dizziness that later turned into a mild fever on 16Dec2020; all of which prompted visit to the emergency room/department or urgent care. The patient received Tylenol for the events. The patient did not receive any other vaccines within 4 weeks prior to the COVID-19 vaccine. She was not diagnosed with COVID-19 prior vaccination and was not tested for COVID-19 since vaccination. The outcome of the event was recovering.
COVID19 VACCINE (COVID19)	Emergency Room *	905738-1	Right hand felt cold at first but that sensation has subsided; Within less than 10 minutes I had a warm tingling feeling; heaviness in my legs which still continues over an hour later; Dry mouth; This is a spontaneous report from a contactable consumer reporting for herself. This 44-year-old female patient received on 17Dec2020 10:00 first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot EK5730) at single dose in the right arm for immunization. Medical history included reflux. No allergies to medications, food, or other products. Concomitant medications included omeprazole (PRILOSEC). On 17Dec2020, within less than 10 minutes, the patient had a warm tingling feeling, heaviness in her legs which still continued over an hour later. Right hand felt cold at first, but that sensation has subsided. Also had a dry mouth about 15-20 minutes after the vaccine. All symptoms subsided after 2 1/2 hours. Patient went to emergency room. Final outcome was recovered on 17Dec2020.
COVID19 VACCINE (COVID19)	Emergency Room *	905746-1	Immediately after receiving the dose of vaccine, rash, tickle in throat taken to ED treated with Benadryl on 12/20 developed swollen lips taken to ED treated with epinephrine, steroids, Pepcid discharged from ED 12/21/20 symptoms resolved
COVID19 VACCINE (COVID19)	Emergency Room *	905754-1	Patient got dizzy immediately and wanted to sit down, he also stated he was short of breath. His blood pressure was 160/111 and pulse 107. Rechecked shortly after that blood pressure check and it went to 176/115 and pulse 138. Patient stated he was feeling well and requested to go to ED, staff called 911.
COVID19 VACCINE (COVID19)	Emergency Room *	905764-1	This is a CCU nurse who received vaccine on 12/18/20 and later that day while at work developed nausea, vomited x1, became tachy and pale. Coworkers provided basic care. Patient went to ED at approx. 4p that day and was later discharged.
COVID19 VACCINE (COVID19)	Emergency Room *	905775-1	Nausea, lightheaded, some throat swelling, difficult to swallow. Transported to ED. No respiratory distress. Stable
COVID19 VACCINE (COVID19)	Emergency Room *	905781-1	headache; dizziness; nausea; This is a spontaneous report from a contactable other health professional. A 56-year-old female patient received bnt162b2 (BNT162B2), via an unspecified route of administration on an unspecified date at single dose for immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced headache, dizziness and nausea on an unspecified date with outcome of not recovered. The patient received the vaccine in the emergency department. The reporter stated that the symptoms began immediately after getting the vaccine and are persisting. Information about batch/lot number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	905786-1	5 days after vaccination on 12/20, patient developed a mild, erythematous rash on left hand (dorsal) and forearm. The character of symptoms is redness, no pain, no itching, and no swelling. Radiating symptom(s): spreading proximally. The degree of symptoms is minimal.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	905787-1	Initial arm pain, then nausea and dizziness while at work 2 hours after administration. Presented to the emergency department at the same facility where he works as instructed per occupational health. Symptoms were almost fully resolved 3 hours after receiving the vaccine, after a dose of ondansetron. Patient discharged and instructed to follow up with primary MD.
COVID19 VACCINE (COVID19)	Emergency Room *	905814-1	Patient developed hives 30 minutes after receiving injection. Received Benadryl and seen in ER for evaluation. No further issues reported.
COVID19 VACCINE (COVID19)	Emergency Room *	905826-1	sent to the emergency room for body rashes and hives.; sent to the emergency room for body rashes and hives.; This is a spontaneous report from a contactable pharmacist. This pharmacist reported similar events for 4 patients. This is a third of four reports. A patient of an unspecified age and gender received BNT162B2(Solution for injection) via an unspecified route of administration on an unspecified date at single dose for immunization. The medical history included allergies to bee stings. The patient's concomitant medications were not reported. The patient sent to the emergency room for body rashes and hives. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020502532 same reporter, drug, event different patient
COVID19 VACCINE (COVID19)	Emergency Room *	905841-1	Flushing Hives Nausea Heartburn Throat itching and swelling Hot flash Blood pressure and pulse spiked All of this happened within 5 minutes of administration. Patient was given benedryl and Pepcid and sent to the Emergency Room.
COVID19 VACCINE (COVID19)	Emergency Room *	905843-1	"PATIENT REPORTS RECEIVING VACCINATION AT APPROXIMATELY 830AM. SHE WAS BUSY THROUGHOUT THE DAY BUT ONCE SHE RETURNED TO HER OFFICE AROUND 120 PM, SHE STARTED TO NOTICE HER ARM IN WHICH SHE RECEIVED HER VACCINE WAS PAINFUL AND SHE WAS UNABLE TO ""LIFT IT UP"". SHE ALSO NOTICED HER TONGUE BEGAN TO FEEL ""WIERD AND TINGLY"". SHE THEN REALIZED HER TONGUE WAS PUSHED UP AGAINST HER TEETH AND COULD SEE A VISIBLE TOOTH MARK ON HER TONGUE. SHE ALSO REPORTS THAT HER BRAIN FELT ""FOGGY"" DURING THIS TIME"". ADDITIONALLY, SHE REPORTS THAT ONSENT OF ALL HER SYMPTOMS PRESENTED PROGRESSIVELY. SHE RECIEVED IM BENADRYL ONSITE PRIOR TO TRANSFER TO THE EMERGENCY ROOM FOR EVALUATION. AT THE EMERGENCY ROOM SHE WAS GIVEN THREE MEDICATIONS, SHE RECALLS ONE WAS A STERIOD AND BELIEVES ATLEAST ONE WAS AN ANTIHISTAMINE. HOWEVER, SHE IS NOT COMPELTELY CERTAIN WHAT THE OTHER MEDICATIONS WERE. SHE REPORTED IMPROVEMENT OF SYMPTOMS WITH MEDICATION. SHE WAS PRESCRIBED BENADRYL AND A MEDROL DOSE PAK AT TIME OF DISCHARGE. SHE WAS NOT ADMITTED TO THE HOSPITAL."
COVID19 VACCINE (COVID19)	Emergency Room *	905844-1	headache, dizziness, hypertension, subjective mild shortness of breath, BP 160/100 Taken to the ER for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	905849-1	Staff reported numbness, tingling and heat all the way down her left arm. She was sent to ER for further evaluation and monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	905850-1	Staff reported numbness, tingling and heat all the way down her left arm. She was sent to ER for further evaluation and monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	905852-1	"Patient woke up 3 am next morning and felt like she couldn't move limbs hardly at all and ""felt like a boulder sitting on my chest"". She also felt nauseous, dizzy and a headache. By 5 am the ""heaviness"" of her limbs and her chest and throat felt so heavy patient was scared and was transported to ED by her husband. ED physician didn't think it was an anaphylactic reaction, but just thought it was an extreme adverse reaction. EKG, labs including Cardiac enzymes, and chest xray were all normal. Given IV benadryl, IV zofran, Aspirin, tylenol and norflex. during ED visit. Discharged from ED 10:30 am. Took Benadryl and Solumedrol dose pack once home. by Saturday patient felt 95% better, but as of this report, still says arms still feel heavy and she is fatigued. Went back to work today."
COVID19 VACCINE (COVID19)	Emergency Room *	905864-1	Tingling in the back of throat with possible decreased ability to breathe and swallow. She was given oral Benadryl, 2 doses of IM Epi. Reaction improved. She was sent to the ER to be evaluated. Received IV Decadron. Clinically improved. Discharged home on Decadron, Zyrtec and Pepcid as well as an Epi pen. Discussed to follow up with primary care physician.
COVID19 VACCINE (COVID19)	Emergency Room *	905867-1	She c/o of numbness and tingling on left side of entire body. 98.8, 92,142/84, o2 sat 99, rr 16. denied other compliant. emergency response team called. taken to ED
COVID19 VACCINE (COVID19)	Emergency Room *	905871-1	Metallic taste in her mouth Itchiness to site, then progressed to whole body and back pain Arm pain
COVID19 VACCINE (COVID19)	Emergency Room *	905875-1	Right arm weakness; heavy chest. Given Orange juice due to low blood sugar, transported to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	905876-1	Hives, rash, and tingling to lips 14 minutes post injection
COVID19 VACCINE (COVID19)	Emergency Room *	905881-1	palpitations, shortness of breath, warmth in throat
COVID19 VACCINE (COVID19)	Emergency Room *	905883-1	45 minutes after receiving injection I got generalized large hives all over my body, my chest started to feel tight, and under my chin up to my bottom lip felt numb and tingly. Took 50mg Benadryl, Zyrtec, and Pepcid, symptoms subsided. Went to ER for follow up and they prescribed me 18 days of tapering prednisone and an epi pen, advised me to not get 2nd dose.
COVID19 VACCINE (COVID19)	Emergency Room *	905884-1	12/18/2020 ABOUT 5 MINUTES AFTER VACCINATION, STARTED TO FEEL DIZZINESS. 'IT WAS VERY WEIRD. LIKE I WAS MOVING. I MADE IT TO THE OTHER CHAIR'. I FELT MY LEGS GO NUMB, TINGLING IN ARMS AND LEGS. STAFF CALLED NURSE OVER. TOLD ME TO LIE DOWN ON THE FLOOR, STARTED TO CRY, 'DONT LIKE HOW MY FEET FEEL NUMB'. TOOK ME TO THE ER. TOLD MIGHT BE A 'NASAL VASOVAGAL REACTION'. DIDN'T LOSE CONSCIOUSNESS. BUT THE TINGLING IS STILL GOING ON .

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	905886-1	About 10 minutes after the injection I started feeling dizzy and hot. Then the headache started with pain moving up my head. Throat became dry. Started feeling nauseous. RN's started to check my vitals. Temperature was at 99.4. O2 was at 99%. Blood pressure was 135-92. Symptoms were not getting better and I started feeling worse. RN (House Supervisor) encouraged going to the ER. Was checked into ER where they gave me Benadryl, Tylenol, Zofran & steroids. Symptoms stayed about the same. Received second dose of Benadryl. Started to feel a little better about 30 minutes after. Spent about 3 hours total in ER. We home to sleep for about 7.5 hours. Woke up the next morning feeling very fatigued with a terrible headache. Continued to dose with Benadryl and Tylenol as needed.
COVID19 VACCINE (COVID19)	Emergency Room *	905894-1	felt nausea, lightheaded and dizzy. developed itching and redness on chest. 25mg benedryl IM administered. Called emergency response. Patient taken to ED. Reports in ED not remembering the events.
COVID19 VACCINE (COVID19)	Emergency Room *	905896-1	Patient observed for over an hour due to symptom development including complaints of pressure in head, diaphoretic, swelling and increase muscle tone/rigidity in her left arm, tongue feeling thick. Brought to ED for care after an hour of observation. In the ED, left arm rigidity/spasm worsened. Here is the physician note: Patient's headache is improved. She has no neurological deficits or subjective complaints or objective exam consistent with a recurrent CVA. She has no evidence of significant anaphylaxis related to the immunization. May be a recurrence of her underlying medical problems that she has been seen by neurology for something similar. Possible unmasking of this is related to the Covid vaccine is difficult to determine. We will have her work individually with our pharmacy, infectious disease team to determine whether she is a candidate for a second vaccination. She would like to return home right now her CT labs are otherwise unremarkable I think this is reasonable. Return precautions for more significant etiologies were discussed at length. Received lorazepam 0.5 mg IV x1, diphenhydramine 25 mg IV x1, and methylprednisolone 60 mg IV x1.
COVID19 VACCINE (COVID19)	Emergency Room *	905905-1	Dizziness, Vertigo, Tachycardia, nausea, numbness and tingling of both arms
COVID19 VACCINE (COVID19)	Emergency Room *	905916-1	"within 5-10 mins of receiving vaccine she started to feel light headed and jittery and ""floaty"" - she says she feels like, ""I am not here, right now"" - there are no hives - no swollen lips or tongue - pt denies SOB. pt was sent to ED at 8:18 AM for further evaluation. no significant findings and patient was discharged at 10:22 AM"
COVID19 VACCINE (COVID19)	Emergency Room *	905917-1	10 minutes after receiving the vaccine the patient began to vomit, stated her throat felt scratchy, face became flushed. patient taken to the ER
COVID19 VACCINE (COVID19)	Emergency Room *	905918-1	tingling in arm & chest directly after vaccine given. Tightness in throat and a little feeling of short of breath. Went to emergency dept and received bendaryl & solumedrol - symptoms resolved except arm tingling.
COVID19 VACCINE (COVID19)	Emergency Room *	905919-1	Pt arrived for her COVID vaccination. Dose received and during monitoring period she reported throat tightness and difficulty swallowing. VS WNL with BP 130/88, HR 90, O2 sats 98% on room air. Pt ambulatory and escorted by staff to ED for further monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	905929-1	Received the vaccine Wednesday evening, after work. Waited the recommended 15 minutes, then went home and went to bed. Woke up Thursday feeling fatigued and had injection site pain, no other side effects or fever. Thursday evening, I developed body aches and a low-grade fever. I took Tylenol and went to bed. Friday, when I woke up around 1pm, I noticed a small rash behind my left knee. I took Benadryl and ended up falling back asleep. When I woke up Friday evening, I had the rash, and hives, and red/white splotches all over my legs. I took Benadryl and consulted my doctor. The rash continued to spread to my arms, and stomach. The rash itched and burned. I went to the ER Friday night for it. Before they gave me medication, I started coughing, couldn't breathe for a minute, and got lightheaded. They gave a steroid, Pepcid, Benadryl, and fluids. They observed me for several hours. I felt better then was discharged. They told to continue to take Benadryl or Zyrtec for a couple days. 5 days later, the rash/hives are still red, itchy and present, especially when Benadryl wears off.
COVID19 VACCINE (COVID19)	Emergency Room *	905937-1	"PT WITH KNOWN H/O SEVERE ALLERGIC REACTION - APPROXIMATELY 15 MINUTES AFTER INJECTION, BEGAN TO COUGH AND EXPERIENCE ITCHY THROAT. SHE REPORTED THAT THIS IS WHAT HAS HAPPENED WITH OTHER ALLERGIC REACTIONS. SHE REQUESTED ORAL DIPHENHYDRAMINE HOWEVER SYMPTOMS WORSEMED QUICKLY - DETERMINATION WAS MADE TO ADMINISTER EPINEPHRINE. SHE WAS GIVEN A DOSE OF 0.3 MG EPINEPHINE IM AT 1402. PT QUICKLY BEGAN TO FEEL BETTER. SHE WAS GIVEN ORAL BENADRYL 100 MG (PER HER REQUEST - SHE SAYS THIS IS HOW MUCH SHE TAKES EVERY TIME SHE HAS AN ALLERGIC REACTION). DOSE GIVEN AT 1410. SHE DID HAVE COMPLETE RESOLUTION OF HER SYMPTOMS. SHE WAS KEPT IN THE CLINIC FOR OBSERVATION. AT 1430, PT AGAIN BEGAN EXPERIENCING SYMPTOMS AGAIN, SHE WAS COUGHING AND HAD ITCHY THROAT. SHE WAS IMMEDIATELY TAKEN TO THE ED. SHE HAD COUGH, RUNNY NOSE, RASH ON FORARMS ONLY - NOT PRESENT ON CHEST OR BACK OR FACE. AN IV WAS PLACED BY ULTRASOUND IN HER LEFT AC. AT 1438, EPI 0.3 MG IM GIVEN 1440 - FAMOTIDINE 20 MG IV GIVEN 1441 - METHYLPREDNISOLONE 125 MG IV GIVEN 1442 - FAMOTIDINE 20 MG IV GIVEN 1443 - DIPHENHYDRAMINE 50 MG IV 1444 - VITALS - 136/94, HR - 92, OXYGEN SAT - 96% ON RA 1445 - PT C/O HEADACHE, STILL COUGHING, RASH PERSISTS 1450 - IPRATROPIUM / ALBUTEROL + RACEMIC EPI GIVEN 1453 - STILL CONTINUOUS DRY COUGH, RASH BETTER 1455 - BREATHING TREATMENT COMPLETE - COUGH MUCH BETTER 1457 - HEIGHT - 63"" WEIGHT - 87.7 KG, 97.4 TEMP, HR - 77, OXYGEN SAT 96% 1504 - PT REPORTS FEELING MUCH BETTER, NO COUGH, NO RASH, LUNGS CTA BIL, NSR - HR - 75, 127/89, 96% ON RA 1610 - PT DOING WELL - PLANNING TO BE DISCHARGED - WITH RX FOR EPI PEN AND PREDNISONE 50 MG DAILY X 3 1616 - SYMPTOMS RETURNED, CONTINUOUS COUGH RETURNED, RASH PRESENT ON ARM, OXYGEN SAT 93%, 146/102, HR - 91, RUNNY NOSE 1619 - IPRATROPIUM / ALBUTEROL + RACEMIC EPI GIVEN - LUNGS DIMINISHED IN BASES WITH STRIDOR HIGHER UP NEW IV PLACED IN LEFT HAND 1620 - 151/91, OXYGEN SAT 99% ON RA, HR - 86"
COVID19 VACCINE (COVID19)	Emergency Room *	905950-1	Burning pain in site, starting to get numb down my arm, pain on side of breast going down to rib, chest pain in the middle ..
COVID19 VACCINE (COVID19)	Emergency Room *	905960-1	Sustained HR 130's for 20 minutes, no chest pain, no SOB, taken to ED for evaluation.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	905962-1	approximately 30 minutes after receiving the vaccine, patient reported development of symptoms including increased HR, chest tightness and mild shortness of breath. She presented to the ED and was evaluated. She was given diphenhydramine 25 mg IV x 1 1629, famotidine 40 mg iv x 1 @ 1630, methylprednisolone 125 mg iv x 1 at 1629. patient was observed for 90 minutes. She was without further symptoms, VSS and she was discharge to home in stable condition at 1800
COVID19 VACCINE (COVID19)	Emergency Room *	905964-1	After administration, employee stated feeling dizzy; place head btw knees; continued feeling dizzy; place employee lying on floor on side and attempted to give OJ - blood sugar 80; no LOC; called rapid response; vitals and EKG WNL; transported to ED via gurney; seen by ED MD; D/C home.
COVID19 VACCINE (COVID19)	Emergency Room *	905965-1	Patient received Pfizer COVID-19 vaccine on 12/21/20 at 15:24. Approximately 10-12 minutes later she reported having chest tightness, became pale, diaphoretic, short of breath, and looked unwell. She also had a feeling that the her throat was closing. She was given EpiPen 0.3 mg Inj. She had a reaction to Benadryl IV in the past, so we refrained from giving her an IM injection of benadryl. She did not feel like she could swallow so we did not give her benadryl. After EpiPen Injection, she immediately looked better and was taken to the ER for further workup and observation. Of note, she mentioned an unspecified allergic reaction in the past. In the ED she was given pepcid IV,, solumedrol IV, and a bolus of saline.
COVID19 VACCINE (COVID19)	Emergency Room *	905971-1	COVID Vaccine administered 12/21/20 @ 15:16 and about 15 minutes later, pt reported feeling tachycardic. She felt short of breath and had a tingling sensation on her tongue. 25 mg of benadryl PO was given to her at 15:30. She continued to feel SOB and her voice sounded much more compromised so an additional 25 mg of benadryl PO was given and she was taken to the ED for observation. In the ed she was given prednisone and pepcid.
COVID19 VACCINE (COVID19)	Emergency Room *	905972-1	Shortly after receiving vaccine she began to have a scratchy throat with some mild increase work of breathing. No distress. Transported to ED for further evaluation and discharged to home approx. 2 hrs later.
COVID19 VACCINE (COVID19)	Emergency Room *	905973-1	Shoulder joint pain. Both sides but more on my right side. Had same pain sensation my back, right side. A few seconds. Right elbow pain sensation. Left calf pain sensation. few seconds. Wave of dizziness and feeling weakness. Experienced it 3x. Had a sensation of little itchiness similar to my radish allergic reaction. Drop and spike of blood pressure Some swelling of eyelids. Lasted for 30 min. Pain in between left knuckles Left shoulder back pain lasts few seconds Left upper shoulder warm sensation a 2-3 minutes, Consistent warm slight burning pulsing pain sensation Right forearm warm burning sensation no pain. Pain in right hip, lasted few seconds. Sudden fatigue feeling suddenly extremely drained
COVID19 VACCINE (COVID19)	Emergency Room *	905984-1	flushed face, facial swelling, lips and tongue swelling, elevated HR, elevated BP , light headedness, after vaccine I waited for 20 min with no symptoms, once I left the facility I immediately felt symptoms of face flushing and swelling and elevated heart rate . I immediately turned around and went to the ER,
COVID19 VACCINE (COVID19)	Emergency Room *	905990-1	Approximately 45 minutes after the injection, I felt a gradual tightening of my chest. I took about 6 puffs of my Albuterol inhaler over the next 45 minutes and still got no relief. The pharmacist took me back down to the clinic where I was told to then go to the ER. My blood pressure was 204/133 and my pulse was 136. The doctor determined that I was having a severe allergic reaction to the vaccine. I was given an epinephrine injection, 10mg of Decadron and 50mg of Benedryl. I was monitored for between 3 and 4 hours in the ER before I was discharged. The doctor told me that I should not receive the second dose of the vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	905992-1	Began with pinkish neck and chest approximately 15 minutes post vaccine administration. Within 10 minutes of further observation, more reddened splotches noted on chest, and c/o tightness in chest. Taken to ED via wheelchair immediately. Treated with Benadryl, solumedrol and famotidine. Pt discharged to home within 2 hours.
COVID19 VACCINE (COVID19)	Emergency Room *	905993-1	"The patient was in her normal state of good health prior to the vaccination. Almost immediately after receiving the vaccination, she began having a headache, then got an urticarial rash. She then felt a "lump in [her] throat." She was coughing uncontrollably. She was brought immediately to the Emergency Department where I assessed her with my resident. She had signs of a Type I Hypersensitivity Reaction including a hoarse voice, globus feeling and diffuse urticaria. She was treated at the vaccination site in the hospital with Benadryl 50 mg PO prior to ED evaluation and she self-administered Ibuprofen 400 mg. She did not have stridor or airway swelling. She was able to speak in full sentences. She was NOT treated with epinephrine, as she was in stable respiratory condition and improved with Benadryl (as previously administered at the vaccination clinic, Pepcid IV and Solumedrol IV. My concern over this reaction is that the patient has NO PRIOR HISTORY OF ANY ALLERGIES AT ALL. I have read and seen in the media reports of anaphylaxis with a history of allergies, however, this is the first case I have heard of regarding an anaphylactoid reaction in a patient with no prior history."
COVID19 VACCINE (COVID19)	Emergency Room *	905996-1	~1 h 15 min after receiving experienced flushing, dizziness, near-fainting, arrhythmia, progressed rapidly to a rapid heart rate, elevated BP, hives, cool extremities, diaphoretic treatment: NS 1 liter, Benadryl 50 mg IV, Solumedrol 125 mg/ml discharged after 6 h with Rx for Epi Pen experienced dizziness/near-fainting episodes off/on for 3 days, slight headache, chest tightness, green/bloody nasal discharge for 2 days
COVID19 VACCINE (COVID19)	Emergency Room *	905999-1	Employed as a nurse at this hospital. Around 8 PM she received her COVID-19 vaccine. She waited the 15 minutes she was required to wait and then walked to her car. She reports that as she walked to her car she had a pain in her left shoulder which was short-lived but followed by numbness and tingling of her left arm and the left side of her face going up the back of her head. Symptoms started around 8:20pm. She reported back to the clinic to report the symptoms--she lives alone and wanted to be assessed before going home. In the clinic, she was assessed by myself. Employee noted that she had not eaten. She ate in the clinic and had something to drink. While in the clinic over the next 10-15 minutes, she noted that she had some numbness and tingling in her feet and calves bilaterally. No leg pain or swelling. Around 9pm, the clinic was closing and she could no longer be monitored under observation. She opted to go to the ER for observation. Per ER note-- She denies any headache. She denies any left-sided weakness. Patient is right-handed. She also reports some mild chest heaviness that lasted for about 20 minutes and then resolved. No shortness of breath. No dizziness, syncope or presyncope. No nausea or vomiting. No rash. No visual or speech changes. No ataxia. Patient continues to have the left-sided numbness and tingling but states that it is less intense than it was. She denies any other complaints. Follow up this AM-- Pt is only fatigued and has some muscle soreness where she had the vaccination. All of her symptoms have resolved and she is not having any further sx's of chest tightness or numbness

COVID19 VACCINE (COVID19)	Emergency Room *	906000-1	pt was given the vaccination for COVID on friday the 18th (2 days ago) had moderate aches and diarrhea yesterday and began to have rash on Saturday . Pt is a nurse where there has been a large number of children with gastroenteritis. Pt with h/o immune reaction (? Stills disease) where she breaks out in a urticarial rash ,previously only with illnesses in the past Now pt has a rash. However Pt states this rash feels different to her normal one and she has never had a reaction like this to vaccine before. The rash began similarly to how it usually starts on upper ext and then spreads to trunk now she has swelling around eyes and rash is getting worse. benadryl ineffective pt also has swelling around her eyes and overall with irritation which she has not experienced before. pt was sent to the Emergency department for full evaluation concern for sjs type reaction with
COVID19 VACCINE (COVID19)	Emergency Room *	906001-1	Right after the injection I became acutely lightheaded. I tried to wait it out and it improved somewhat but not all the way. I then started to drive home after the 15 min. observation period. About 5 min into my drive home, I developed trouble swallowing/throat tightness and worsened lightheadedness. I called 911 who stayed on the phone with me as I drove back to the hospital. It started to improve rather soon and was resolved within 30 min later.
COVID19 VACCINE (COVID19)	Emergency Room *	906002-1	2 min post injection developed tingling around site, and then urticaria on left upper arm. Then diffuse flushing diffusely and headache. HR=130's, normal BP. Difficulty swallowing during EMS transport. Received EPI sc, Pepcid IV, and Benadryl 50mg IV PTA. HR+140 on arrival post Epi 6 hour obs. NS 1L D/c home with precautions, epilepsy pen rx, and allergist follow-up
COVID19 VACCINE (COVID19)	Emergency Room *	906005-1	Vaccine recipient became nauseas and light headed approximately 30 minutes after vaccine. Recipient also had started menses which was very heavy, also she said she saw the needle and she shouldn't have looked.
COVID19 VACCINE (COVID19)	Emergency Room *	906006-1	Within 3 minutes of receiving the vaccine, I felt a fluid like sensation trickle down my right bicep. I think proceeded to feel tachycardia, dizziness, lightheaded, and was hypertensive. My chest appearance was red and blotchy as well as my face. I was monitored in the ED for 2 hours. My vitals stabilized and the redness dissipated. I continued to feel a bit anxious and a headache. I was told to go home, take Benadryl as needed, and to follow up with an allergist.
COVID19 VACCINE (COVID19)	Emergency Room *	906007-1	About 10 minutes after the injection I felt something in my throat like when I have a sore throat. I was checked by the nurse and she said my pulse is beating a little faster. My breathing was fine. I was brought to ER and my blood pressure was elevated than usual. About almost an hour after the vaccine my forehead started itching and but I was given benadryl so my hives didn't continue to develop..
COVID19 VACCINE (COVID19)	Emergency Room *	906009-1	Full vial of 0.3ml concentrated vaccine administered undiluted with normal saline.
COVID19 VACCINE (COVID19)	Emergency Room *	906026-1	around 1730 Patient was given vaccine and d/t allergy history was brought in the 15 minute observation. Patient stated that she was feeling dizzy and throat feeling funny also the same way when gets the flu shot. Patient was kept in observation while being monitored and Code Blue Team arrived d/t the possibility of an anaphylactic reaction.
COVID19 VACCINE (COVID19)	Emergency Room *	906030-1	Around 0800 the patient got her vaccination. During the registration process, she was seen by An Employee (Pharmacy) and associate stated that she never had any allergic reactions in the past and filled in both forms that she does not have any allergic reactions to either the vaccine components, food, and medication. She was then escorted to the Observation room for 15 minutes where she felt dizzy at first. The observation nurse and pharmacy was also present at site. After a few minutes, associate complained of more dizziness, some tightening of the jaw but was still able to speak and swallow. Associate was then given Benadryl around 0804 and connected to the vitals machine for continuous monitoring. Around 0806 patient was feeling worst and Observation RN took her vitals and her HR went down to the 30's associate was given epinephrine and hence the CODE BLUE was called on 0807. During the CODE BLUE, ED was notified, and a gurney was sent to the Observation Room. Patient was then transported to ED for further evaluation and observation.
COVID19 VACCINE (COVID19)	Emergency Room *	906031-1	35yo female urgent care physician in normal State of Health when while seeing patients I got lightheaded. Sat down, drank water, ate sugar cookie for about 10/15 minutes but symptoms persisted. Tried to keep working, but found myself just thinking about how I am going to pass out. No LOC. Evaluates by colleague. Received 2L of IVs (Cr wnl) with transient improvement in symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	906038-1	Pt noted tightness/swelling around eyes along with itching/burning sensation at same. Then developed itchy erythematous rash starting right shoulder (near where injection was done) and spreading to back. Benadryl 50mg IM given. Was sent to ER for continued monitoring; she did well without further treatment (other than 500mL of saline IV) and was released in good condition. She did not have lightheadedness, lip/tongue/throat swelling, SOB, GI symptoms, or hypotension.
COVID19 VACCINE (COVID19)	Emergency Room *	906041-1	Employee, 1st Pfizer COVID19 vaccine today. ~6min s/p shot, he felt a little itchy just @injection site, then got anxious & felt woozy, sweaty. Wearing big mask and a face shield, seemed anxious. Walked independently to go lay down. No syncope. BP up to 140/90, HR 90, RR 20, breathing fine, no itchy throat/swelling/hives. Improved w laying down. To ER out of an abundance of caution-- vitals nL, nL exam, still itchy at shot site. Got 1L NS IV, 25mg PO Benadryl for itchiness- likely anxiety > severe allergy
COVID19 VACCINE (COVID19)	Emergency Room *	906045-1	30 minutes after receiving the vaccine, I (the patient) felt tingling in my lips, nose, and feet. I then developed a non-itchy, macular rash on my chest and back, associated with flushing. No fevers, chest pain, shortness of breath, nausea, vomiting, or diarrhea, I was taken to the emergency department, where I had normal vital signs. I was given Benadryl 25 mg PO with complete resolution of rash and tingling sensation within one hour.
COVID19 VACCINE (COVID19)	Emergency Room *	906047-1	Urticaria to arms started on the eve of December 20, 2020, took benadryl and applied triamcinolone ointment to rash, woke up and found more rash all over the body took benadryl again, after an hour of taking the benadryl, my face started to itch, that;s when I went to the ED where they gave me, a steroid IV , Benadryl IV and Pepcid IV.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906056-1	"Patient notes that she received the COVID vaccine around 1800 today. After receiving the vaccine she notes she had developed a headache. She was otherwise doing fine until around 2000-2100 when she noticed her left arm become numb with paresthesias from her left bicep to her hand with whole arm localization. She felt her hands and wrists were puffy at this time and somewhat swollen. She reports feeling ""floaty""/Dizzy at this time, and at least once had to sit down due to this. She started feeling her heart race and some associated SOB, this has since resolved. She notes that she had two loose stools around this time as well. This progressed to develop into right numbness/paresthesias from her mid right forearm down to her hands. As the evening progressed she developed itchiness of her bilateral arms and torso. She notes that she has had a waxing/waning reddish rash on her arms that has been pruritic. She has since developed intermittent nausea, and still endorses feeling some ""skipped beats."" While in the ED from Triage to repeat evaluations her lips began having progressive swelling. She had been given Benadryl 50mg, Zofran 4mg, 1L IVF. Given ongoing tachycardia and lip swelling she was given Prednisone 40mg and Epinephrine for allergic reaction and concern for anaphylaxis."
COVID19 VACCINE (COVID19)	Emergency Room *	906064-1	Rapid heart beat, difficulty breathing, itching, rash, clamminess, cold sweats, nausea
COVID19 VACCINE (COVID19)	Emergency Room *	906076-1	About 1-2 hours after receiving the vaccine, I began to have tongue Hb and throat swelling?mild to moderate. About 3-4 hours later, I had one episode of diarrhea, followed by chills and palpitations. I took Benadryl and Zantac around 8P. When I woke up in the morning, I still had tongue and throat swelling (no trouble breathing), so went to the ER and was treated for an allergic reaction with IV Benadryl, Solumedrol, and Pepsid.
COVID19 VACCINE (COVID19)	Emergency Room *	906078-1	"Patient developed sudden onset of headache with hypertension (BP 205/112), tachycardia (HR 137), redness and hives around 10 minutes after receiving the Pfizer covid vaccine (time 1600). She described ""feeling a wave of heat climbing from her feet up to her face"". 911 called and patient was transported to ER at around 1630. Upon arrival her BP trended down to 129/89 with HR of 78. She did not report difficulty breathing, and she did not receive additional medications while in ER. She was monitored for around 2 hours and discharged at 1847."
COVID19 VACCINE (COVID19)	Emergency Room *	906116-1	light headedness; shortness of breath; headache; some nausea; get some redness to her neck and upper chest; Had elevated BPs; This is a spontaneous report from a contactable pharmacist. A 41-year-old female patient (non-pregnant) received first dose of bnt162b2 (Pfizer-BioNTech COVID-19 Vaccine, Batch/lot number: EH9899), intramuscularly on right arm on 15Dec2020 at 13:30 at single dose for immunization. The COVID-19 vaccine was administered in hospital. Medical history included arrhythmia - right bundle branch block, GERD (Gastroesophageal reflux disease), spinal headache, allergy to gabapentin, adhesive, duloxetine hydrochloride (CYMBALTA). The patient wears contact lenses. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medication within 2 weeks of vaccination included hydrocodone bitartrate, paracetamol (HYDROCODONE/ACETAMINOPHEN, 5-325 mg), omeprazole, meloxicam, docusate sodium, sennoside a+b (SENNALAX AND DOCUSATE SODIUM). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Within a few minutes of receiving the shot on 15Dec2020, the patient developed lightheadedness, shortness of breath, headache, and some nausea and was taken to the ED (emergency department). She did get some redness to her neck and upper chest, had elevated blood pressure. O2 saturation was fine. The patient received treatment for the events which included acetaminophen (TYLENOL), dexamethasone, diphenhydramine, famotidine, ketorolac, ondansetron, and 1 L normal saline in ED. The patient was prescribed adrenalin autoinjector (EPIPEN) and prednisone and discharged home. Since the vaccination, the patient hadn't been tested for COVID-19. Outcome of reactions was resolved in Dec2020.; Sender's Comments: Based on the close temporal relationship and the description of the events lightheadedness, shortness of breath, headache, nausea, erythema and high blood pressure, there is a reasonable possibility that the events are related to BNT162b2 vaccine. The case will be reassessed upon receipt of follow up information.
COVID19 VACCINE (COVID19)	Emergency Room *	906123-1	waves of flushing through out her body; severe dry mouth; nausea; elevated heart rate into 120s; panic attack; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in 2020 (at 0810 her time) at single dose for immunization. The patient's medical history and concomitant medications were not reported. The reporter is a Certified Nursing Assistant (CNA) who received the Covid 19 vaccine at 0810 her time. Five minutes after receiving the vaccine (2020) she reported having three episodes of the following symptoms: waves of flushing through out her body, severe dry mouth, nausea and elevated heart rate into 120s. She denied any shortness of breath, swelling or anaphylaxis. She was treated in the Emergency Room (ER) with fluids and lorazepam (ATIVAN) and sent home. She contacted her doctor who advised she was probably having a panic attack and was told her to take lorazepam. She reported sleeping when she got home but experienced the elevated heart rate and flushing again after waking. She spoke to her doctor a second time and was told to return to the ER to be treated for the elevated heart rate. She did not go to the ER because she took more lorazepam and the HR declined into the 90's. She stated her doctor was prescribing a beta blocker for her but advised to go to the ER if her heart rate goes over 100 again. She would like to report and Adverse Event. The outcome of the events was unknown. Information regarding lot/batch has been requested.; Sender's Comments: Based on the information available as reported at this point, a possible contributory role of the suspect products cannot be excluded for the reported event flushing, dry mouth, heart rate increased, nausea and panic attack due to temporal association.
COVID19 VACCINE (COVID19)	Emergency Room *	906126-1	Feeling of going to pass out; PVC's; PVC's; Shaking feeling internally from neck down to ankles; Sweating; palpitations; This is a spontaneous report from a contactable consumer (patient herself). A 60-year-old female patient received bnt162b2 (lot number: FK5730), via an unspecified route of administration at site of right arm at 10:15 on 17Dec2020 at single dose for immunisation. Medical history included Chronic migraine. Occasional PAC/PVC's. Concomitant medication included clonidine (strength: 0.02 mg). Within about 5 minutes of receiving the vaccine, the patient experienced shaking feeling internally from neck down to ankles, sweating, feeling of going to pass out. Some palpitations and PVC's. Shaking Symptoms lasted approx 4 hours. The patient visited emergency due to events. No treatment received for events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of events was recovered on 17Dec2020.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906131-1	Headache; Dizziness; Nausea; This is a spontaneous report from a contactable other health professional. A 56-year-old female patient received bnt162b2 (BNT162B2) via intramuscular in right arm on 17Dec2020 at single dose for vaccination. There were no medical history or concomitant medications. The patient experienced headache, dizziness, nausea all on 17Dec2020. The reporter described that immediately after patient was administered the COVID-19 vaccine injection she was handed the paperwork, stood up and had sudden onset headache, dizziness and nausea. As of time of the report the headache had subsided slightly but came and went in waves. The dizziness and nausea remain persistent. She reported the seriousness criteria as probably medically significant or somewhere between not serious and medically significant. Patient was currently under observation in the ED (emergency department), but had not been admitted to the hospital. The patient had been in the ED for over 30 minutes at time of report, so patient did not believe that these events are vagal. The reporter called to report these events and to ask for recommendations on how to respond to these events relative to this product. The reporter verified that there had been no relevant testing, imaging, lab work or investigations done at this time. The outcome of the event headache was recovering while for all other events was not recovered. Information on the Lot/Batch Number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, headache, dizziness and nausea, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	906157-1	"Employee reported ""tongue thickness"" and dry mouth. Employee was taken to ED for evaluation and treatment."
COVID19 VACCINE (COVID19)	Emergency Room *	906161-1	Nausea and Vomiting
COVID19 VACCINE (COVID19)	Emergency Room *	906178-1	Employee reported headache, flushing, and a sweaty feeling. He was taken to ED for evaluation and treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	906226-1	10 minutes after initial vaccine was given patient experienced numbness and tingling to tongue, lips, and fingers. No shortness of breath or respiratory distress noted
COVID19 VACCINE (COVID19)	Emergency Room *	906228-1	fever/chill, extreme fatigue, body aches, headache, near syncope, nausea
COVID19 VACCINE (COVID19)	Emergency Room *	906232-1	12/18/2020 5 MINUTES AFTER INJECTION, FELT HOT. TEMP KEPT GOING UP. TEMP WOULD NOT GO DOWN. STAFF PUT COLD PACKS ON ME. ITCHING STARTED BUT NO RASH VISIBLE ON ARMS AND BACK. DR. STATED TIME TO TX TO ER. THE HEAD HAD INCREASED EVEN MORE. COULDN'T BREATHE DEEPLY, 'AIR STOPPED', COULDN'T SPEAK PROPERLY. PREDNISONE, ANXIETY AND BENADRYL ADMINISTERED. MONITORED O2 STATES, MONITOR HEART. AT HOME BODY STARTED TO ACHE, NOT MEDICINE TYPE PERSON. HELD OFF TILL 1AM, TOOK 2 TYLENOL 500MG. BY 3 AM ABLE TO SLEEP. HEAT SENSATION WAS STILL THERE. BY 12/20/2020, INJECTION SITE SORE, LUMP. I WAS TIRED. BY 12/21/2020 THE SITE WAS SORE, I RUBBED WITH ALCOHOL. COVID19 VACCINE (COVID19)	Emergency Room *	906238-1	12/19/2020 Received vaccine 12/20/2020 around 2am woke up with strong body aches, pain at injection site, chills, and fever 100.9. Continued with extreme fatigue, headache, body aches and high fever throughout the day. 12/21/2020 fever gone, arm still sore and headache returned mid day.
COVID19 VACCINE (COVID19)	Emergency Room *	906258-1	Fever, chills, rashes, CP, fatigue, diarrhea, congestion, pain at injection site and numbness to left arm
COVID19 VACCINE (COVID19)	Emergency Room *	906272-1	19 y/o fully immunized female with history of anxiety presents for dizziness and nausea x 2 hours. Received COVID vaccine at 14:30. At 16:30 went from sitting to standing, felt dizzy and nauseous. No syncope. No palpitations. Similar reaction to influenza vaccine. No intervention required to previous vaccination. No history of anaphylaxis. BP 125/88, pulse 88, RR 18, O2 95%, temp 37.3.
COVID19 VACCINE (COVID19)	Emergency Room *	906282-1	Given the vaccine at 712 pm on 12/20/20. At approximately 715 pm, she began to clear her throat and then became unable to speak, followed by audible wheezes and short, shallow breaths. At 1923, Epinephrine was administered. At 1928, she was able to speak again and was transported to the ED. The patient reports after arrival to the ER, the symptoms returned. She was given PO Benadryl, followed by IV Benadryl, and then a 2nd dose of Epinephrine. She was admitted to the ICU for observation.
COVID19 VACCINE (COVID19)	Emergency Room *	906297-1	I woke up the next morning with a little puffiness in my face, my eyes and my cheeks
COVID19 VACCINE (COVID19)	Emergency Room *	906299-1	Ten minutes after received the vaccine, patient felt lightheaded, weak, diaphoretic, dizzy, nauseous, and experiencing palpitations. At that time BP 112/78 mmHg, pulse Ox 99%, HR 102. Patient was transferred to the Emergency Department for monitoring. Patient was discharged without any further sequelae.
COVID19 VACCINE (COVID19)	Emergency Room *	906300-1	First night local pain (1/10) only. At 45 hours post vaccine, few palpitations. At 49 hours, a few more. At 53 hours, multiple continuing palpitations without letup so went to ER Friday night 12/18. Many PVCs, some bigeminy. This is also now only 5 hours after my BID dosing of carvedilol 25mg. Cardiac and metabolic workup negative -- all normal. Went home after 4 hours. Mild chills at times but never fever. Amount of ectopy and annoying symptoms declined during following day. My internist placed me on additional propranolol beta-blockade to add to carvedilol. Still required some extra propranolol day 5 post-vaccine but otherwise felt basically normal.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906301-1	hives on neck and chest 20mins after the injection. The hives burned no itching
COVID19 VACCINE (COVID19)	Emergency Room *	906310-1	Hives at day 2 treated with OTC medication like benadryl. Day 4 reported shortness of breath and patient being seen in the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	906312-1	dizziness, light headedness, severe nausea, rash/hives over chest and back and forearms, severe chills/shivering
COVID19 VACCINE (COVID19)	Emergency Room *	906315-1	At 35min post vaccine patient noted with redness to the chest, neck and going up to face and bilateral ears. Ears were swollen. Patient transferred to the Emergency Department where she was noticed to have swollen lips
COVID19 VACCINE (COVID19)	Emergency Room *	906318-1	57-year-old female history of hypertension, hyperlipidemia, type 2 diabetes, COPD, subsegmental PE is not on anticoagulation, multiple cardiac stents presenting with greater than 12 hrs of worsening left-sided chest pressure, headache and shortness of breath. Patient takes a daily aspirin and had no improvement of symptoms with her at-home nitroglycerin. Here afebrile, HTN, remaining vitals wnl. Non-toxic, in moderate distress 2/2 to pain. EKG with minimal ST depressions in leads II and III. Will plan for CXR and labs. Pt given zofran and morphine for pain control. Will give additional aspirin for total 324 mg in last 24 hrs. On re-evaluation, pt with mild improvement in pain. Troponin elevated at 0.18, remaining labs wnl. At this time concerned for NSTEMI, pt treated with 1 mg/kg of lovenox and MOD consulted for admission. MOD evaluated pt and cardiology was consulted. Given concerning PMHx and current hx of chest pain with findings consistent with NSTEMI, cardiology at recommended likely transfer for cardiac cath. Will pend repeat troponin and EKG for dispo decision.
COVID19 VACCINE (COVID19)	Emergency Room *	906321-1	Woke up in the middle of the night on 12/20 and noticed that the left side of tongue felt like he had bit it. He woke up again on 12/21 at 1:10 AM with a swollen tongue. He also had left sided unilateral edema. NKDA or significant past medical history. No past allergic reactions. Went to the ED and was treated with benadryl and a methylprednisone. Sent home with additional medications in case condition worsened again.
COVID19 VACCINE (COVID19)	Emergency Room *	906322-1	Employee reports itching and tingling to right arm that traveled to elbow, employee reported sensation was 'easing up' 5 minutes after it started. She also reported itching to flank area, no rash was noted. Employee was taken to ED for evaluation and treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	906324-1	Increased heart rate, increased blood pressure, cold/clammy feeling, urticaria (neck), swelling in neck and chest. At vaccine clinic area, Benadryl 50mg IM given. Rapid response called via overhead page. Patient taken to ER from vaccine clinic. In ED, given famotidine 20mg IV, methylprednisolone 125mg IV.
COVID19 VACCINE (COVID19)	Emergency Room *	906325-1	Tongue tingling, throat tightness @0520 Chest heaviness, lips numb @0525 Voice hoarseness @ 0530 IV Benadryl given approx 0550 PO prednisone given approx 1000 Left side of face still numb after 24 hours
COVID19 VACCINE (COVID19)	Emergency Room *	906328-1	12/17/2020 INJECTION. 12 HOURS LATER, NAUSEA W/ TACCYCARDIA, PROXIMAL. HEARTRATE 150. WENT TO ER. HAD TESTS DONE. NO HISTORY OF ANXIETY; HAD PRETTY ANXIETY. LASTED ABOUT 45 MINUTES. ATIVAN PRESCRIBED BY ER DOCTOR. DIAPHORETIC. I AM WORKING BUT STILL DIAPHORETIC AND STILL FEEL A LITTLE FATIGUED. DON'T KNOW IF RELATED TO VACCINE.
COVID19 VACCINE (COVID19)	Emergency Room *	906338-1	swelling to uvula seen in Emergency department observed for 4 hours in Tele unit sent home on 12/21/2020
COVID19 VACCINE (COVID19)	Emergency Room *	906374-1	My arm was not that sore or anything but Friday morning when I woke up my throat was really really sore and I felt congested. My nasal mucus was green and I was also coughing up some green phlegm. I went to the walk in clinic because I had to go to work and wanted to make sure I was well enough.

COVID19 VACCINE (COVID19)	Emergency Room *	906388-1	Itchiness in throat and edema at the mouth.
COVID19 VACCINE (COVID19)	Emergency Room *	906397-1	Shortness of breath, chest tightness. Treated with epipen, benadryl, pepcid, solumedrol in ED. Symptoms resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	906403-1	chest pain, across bottom of rib cage, pain with deep breathing, Motrin did not help
COVID19 VACCINE (COVID19)	Emergency Room *	906417-1	"12/21/2020 4:30PM itching throat, clearing of throat, lump in throat, coughing, very dry throat, coughing sensation to remove ""something"" in throat, fat tongue/throat feeling, throat feeling as if closing, coughing fit --- pt transferred to ER. Panic attack, unable to breath feeling --medications via IV -- Benadryl (flushed), Pepcid and steroid for inflammation) administered. Heart monitored while receiving treatment. Discharged at 08:00 PM with prescription for Benadryl and steroid Prednisone."
COVID19 VACCINE (COVID19)	Emergency Room *	906421-1	Developed numbness in legs and back of neck. Swelling on left side of face. Given Benadryl 50 mg PO and sent to emergency room.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906427-1	20 mins after receiving vaccination experienced lightheadedness, palpitations, and faintness; was assessed (BP, HR, RR) which were elevated; rested, water, and started to feel better; 20 mins later had another wave of lightheadedness and my vitals increase again which was more intense than the first time; put me on O2 and sent me down to the ER where they monitored me on telemetry, general blood work, EKG, and assess me for swelling, rash and further reaction; BP got to 134/100 but other than that no outstanding numbers; 15 mins after arriving at ER they gave me benedryl and a steroid per IV and IV fluids; right after they gave me that had another wave of lightheadedness which didn't last a long as the others; symptoms seem to subside and then the let me go home; had no further issues that night other than insomnia; Next day had shortness of breath on exertion but was able to go about my day and just ease up is I was tired; at 6pm that night I started having redness, hotness from the injection sight and the redness (like flushing, not rash) spread from my left arm across my chest to my right arm, and up to my face; felt over heated like I was having a hot flash and my left ear (side I received the vaccine) start to ring; took a dose of benedryl per the bottle instructions and it seemed to calm down; today (day 2) I woke up feeling somewhat ok but as the day is progressing my head feels floating and having trouble concentrating, my upper body from my chest up feels tingly, heavy and weak like I just worked out my muscles and my had are really cold esp on my right hand; my vaccine site is still very warm;
COVID19 VACCINE (COVID19)	Emergency Room *	906428-1	"Patient states that she received the vaccination at 10:24 AM. Patient states approximately 2 minutes after that she felt pain and swelling and erythema in her left arm at the injection site. Patient states she felt like she had a somewhat of a ""apple in her throat"". Patient states that her left arm was tingly. Patient states that she has a headache in the bitemporal area. She states that she has a history of headaches. Patient states that she has no visual changes. Patient states that it started after the immunization. Patient states 5 minutes before I came into the room she vomited and now feels tremendously better. She is talking in a complete sentences. Patient is somewhat tachycardic on initial Patient states that she received the vaccination at 10:24 AM. Patient states approximately 2 minutes after that she felt pain and swelling and erythema in her left arm at the injection site. Patient states she felt like she had a somewhat of a ""apple in her throat"". Patient states that her left arm was tingly. Patient states that she has a headache in the bitemporal area. She states that she has a history of headaches. Patient states that she has no visual changes. Patient states that it started after the immunization. Patient states 5 minutes before I came into the room she vomited and now feels tremendously better. She is talking in a complete sentences. Patient is somewhat tachycardic on initial presentation. Patient presents via BR RT for evaluation. Patient has a host of allergies.Patient is anxious upon presentation. Patient does have a history of anxiety. No other travel or trauma. Patient states that her pain is severe. States that she has some pressure in the bitemporal portion of her head and her left arm injection site. Otherwise nonradiating. No other known aggravating, triggering or alleviating factors. Patient dates its concurrent with the injection time. Otherwise nonradiating. BP 180/100 at 1045, O2 sat 98%, ECG sinus tachycardia Repeat Vital Signs BP 133/82 Pulse 82 Temp 36.9 ;C (98.4 ;F) (Oral) Resp 16 Ht 1.702 m (5' 7""") Wt 197 lb 1.5 oz (89.4 kg) SpO2 98% BMI 30.87 kg/m; Constitutional: Well developed; well nourished; in no apparent distress; non-toxic appearance HEAD: Atraumatic. Mental status appears normal at time of exam. Patient upon presentation is anxious. Patient did vomit x1. Patient was talking in complete sentences upon my evaluation. Patient feels that she has some discomfort to her injection site with a headache. They feel no warmth or erythema. Patient was given Tylenol for the headache which did improve. Also received ondansetron, diphenhydramine, famotidine, methylprednisolone, NS 1000mL. Patient was monitored for an extended period of time and has had no return of symptoms. I am uncertain whether this is a true allergic reaction since the symptoms started approximately 2 minutes from the time of the injection. Patient does have a history of anxiety and this may have played a role within the symptomatology. At this time patient feels much better. Patient be dismissed we will send the patient home with a prednisone taper. She can take oral Benadryl and Pepcid. Follow-up with her family doctor next couple days not feeling better. Patient is dismissed. Patient returned to ED on 10/22/20 0100. Presents to ED complaining of numbness and tingling all the way from her head to her left toe on the left side. Has taken Benadryl 3 times today. She states that she woke up this evening with her heart racing. She still has a little bit of a headache. No fevers. He was nauseous. Again she says the whole left side of her body is tingling. All other systems negative/without deficit. HR 124, BP 168/107. Repeat Vital Signs: BP 129/77 Pulse 99 Temp 37.2 ;C (98.9 ;F) (Temporal) Resp 20 Wt 206 lb 2.1 oz (93.5 kg) SpO2 100% BMI 32.28 kg/m; EKG showed a sinus rhythm without acute ST changes. She is anemic but she has a history of that and her hemoglobin is not significantly lower than usual. Sed rate is little bit elevated but her C-reactive protein is normal. Her glucose slightly elevated at 173 but the rest of her labs are normal. CT and CTA of her head and neck were normal. I do not know at this time if this is a reaction we will have her continue the prednisone taper she was started on earlier as well as Benadryl and have her follow-up with her primary care physician."
COVID19 VACCINE (COVID19)	Emergency Room *	906433-1	Developed numbness and burning to left arm. Had tingling on left side of face. Given Benadryl 25 mg PO and sent to emergency room.
COVID19 VACCINE (COVID19)	Emergency Room *	906434-1	30 minutes post vaccination, pt started feeling flushed and itchy (mostly in the anterior neck, Rside of face and R ear). Positive pruitis and flushing, vital signs taken, within normal limits for pt
COVID19 VACCINE (COVID19)	Emergency Room *	906438-1	Contracted associate received vaccine on 12/18/2020 at 1000. Within 1/2 hour began to feel very hot and extremely tired. She left and had to rest in the lobby before she could drive home. She finally drove home and all weekend was short of breath, hot (not sure if she had a fever), fatigued. She went to the ED this morning (12/21/20) had a Rapid COVID test that was neg and is now waiting for PCR test results. She has been instructed to quarantine for 20 days. She has lupus and a history of kidney transplant in 2004.
COVID19 VACCINE (COVID19)	Emergency Room *	906445-1	7 hours after vaccination onset of fever, lethargy, headache, dizziness. 1 Liter Normal Saline

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906456-1	Right after given the covid vaccine. When I stood up to go to another desk, I sat down and my throat started to feel funny, and my tougue started to swell and I had a hard time swallowing. I informed the nurses that I have a problem. I was taken to the emergency room right away. I was treated with an epi injection and it did not relieve my reaction. They then gave me another injection, then later my throat started to swell again, and I was given another dose of an epi injection. I was release at 7pm after observation. Last night, I had another delayed reaction, I took a benadryl, and a zertec, and prednisone and the symptoms went away. This morning, I am fine. Today, it feels a little tight, but it's not bad.
COVID19 VACCINE (COVID19)	Emergency Room *	906482-1	0843 vaccine administered. 0855 patient reported a rapid heart rate (112 beats per minute) and tremors. No airway complications.
COVID19 VACCINE (COVID19)	Emergency Room *	906485-1	Approximately 10 minutes after vaccination c/o feeling shaky, she then stated her neck itched and she exhibited generalized urticaria. Was given .5ml Epinephrine IM at 1000. Stated she was having thickened feeling in her throat, had high blood pressure on 191/126 and was nauseated. Was given 1ml of Benadryl IM. Ambulance called at 0958 and transported to hospital at 1008.
COVID19 VACCINE (COVID19)	Emergency Room *	906491-1	ITCHY, HARD TO BREATH,HEADACH I WAS GIVEN EPIPEN RUCHE TO ED FOR FUTHER TREATMENT
COVID19 VACCINE (COVID19)	Emergency Room *	906495-1	11 minutes into the vaccination, patient noted to have tongue and mouth tingling and heart racing. No noted tongue/lip/throat swelling, dyspnea, n/v, abdominal pain, rash, near-syncope. Started to improve after 30 seconds.. H/o tachycardia secondary to salmon, no prior anaphylaxis or use of epinephrine in the past. Sent to ED for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	906496-1	Developed tachycardia, tremors, hypertension, rash. Given diphenhydramine and fluid bolus in ED and discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	906504-1	Vaccinated at 9:00am through employee health. Within 5 minutes of vaccine administration, developed palpitations and flushing. These persisted and worsened and I was transported to the ED. During transport I developed chest tightness and throat tightness. On arrival to ED, HR 125, BP 150/97. Observed for 2 hours, given normal saline but no medications. Over time, palpitations and flushing subsided first. Then chest tightness persisted for about 2 hours. Was discharged from ED within 2 hours. Throat tightness persisted for approximately 8 hours total and gradually resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	906507-1	"Nurse who had worked the shift and had drank an "" energy drink"" prior to vaccine. she felt palpitations and and elevation of blood pressure. No itching hives or angioedema. No dyspnea. Pt observed and discharged home without any therapy"
COVID19 VACCINE (COVID19)	Emergency Room *	906509-1	Next morning, patient had a rash and swelling on forehead and back of hands. She took a benadryl and went to the emergency room.
COVID19 VACCINE (COVID19)	Emergency Room *	906511-1	Patient became Lightheaded, dizzy @ 11:24 am BP 155/92, Sat 100% on room air, P-100, repeat BP 11:25 141/94 Sat 99% P-98, 11:28 154/91 sat 100%, P-99, patient described having palpitations, transferred to ER via gurney for increased BP, light headed, dizzy palpitations
COVID19 VACCINE (COVID19)	Emergency Room *	906514-1	Patient was administered the Covid19 vaccine. She was advised to wait 30 minutes post vaccination. While the patient was waiting, she reported having an itchy throat, throat tightness, then a hoarse voice and a cough developed. This happened at about 20 minutes after she received the vaccine. The patient was assessed by the nursing and provider staff. She received an adult epi pen injection and EMS was called. Patient was taken to the ER by EMS. She reports she received two more epi injections, benadryl, and Solu Medrol. She was stabilized. Patient was discharged from the ED after several hours. She then reports a second episode of throat tightening and worsening cough at 12:30 am and was taken by ambulance to the ICU and admitted. She is still in the hospital at this time 12/22/2020.
COVID19 VACCINE (COVID19)	Emergency Room *	906525-1	17 minutes after vaccination, had itching all over body, inside mouth; noted itching palate and tongue, hot flashes and given famotidine and diphenhydramine and sent to ED for evaluation. in ED: given diphenhydramine 25mg PO one time felt abdominal discomfort and radiating up to the chest and given GI cocktail with temporary improvement. also mild nausea given ondansetron x2; also NS IVF given for 2L Discharged with ondansetron and prednisone 40mg PO daily for 5 days.
COVID19 VACCINE (COVID19)	Emergency Room *	906531-1	Initially employee experienced flushing, palpitations, nausea. ER- developed hives on arms TX:Prednison 60mg po given at 11:53am Benadryl 50mg po given at 11:52am Observed for 2 hours with symptom resolution. Discharged with oral steroids.
COVID19 VACCINE (COVID19)	Emergency Room *	906533-1	Chills, fever over 100, body aches, tiredness, fatigue, injection site pain, feeling unwell, nausea
COVID19 VACCINE (COVID19)	Emergency Room *	906537-1	She went to the Emergency department 12/20 and received a high dose of Benadryl. She reported tachycardia all day yesterday in the 130's and was itchy all over. Subsequently she developed a rash.
COVID19 VACCINE (COVID19)	Emergency Room *	906541-1	From patient interview: The patient stated feeling dizzy with lightheadedness and seeing spots. She felt like she was going to pass out. She was transported to our emergency department for examination. When I spoke with her she was resting and felt she had returned to baseline. From medical record:Patient Stated Complaint SYNCOPÉ, Narrative of Presenting Problem Patient is a 35-year-old female with history of vasovagal episodes during her prior pregnancy was in the hospital getting a Covid vaccination and became weak dizzy and sweaty and had a syncopal episode while in a chair. Patient did not hit her head. Upon evaluation patient is awake alert lying supine with no complaints. Patient states she has been suffering with Covid related anxiety and depression.
COVID19 VACCINE (COVID19)	Emergency Room *	906544-1	Hypertensive to 190/80; shaking; chills; after 30 minutes, BP reduced 159/80; sent to ER; monitored; sent home; resolved, per follow-up call following day.
COVID19 VACCINE (COVID19)	Emergency Room *	906550-1	Upon initial injection (0940)pt reported some lightheadedness, pt sat for aprox 20 min and then stated feeling better. She returned to her clinic to work and at 1030, reported return of s/s with increased severity. She was brought back to vaccination area an evaluated by MD, given 50mg of po liquid Benadryl and then taken to ED via WC. VS: 155/77, 105, 18, 96% on room air.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906552-1	12/16/2020 2:30 AFTER VACCINATION, STARTED TO FEEL INCREASE HR. STARTED TO FEEL WOZZY, UNABLE TO FOCUS. CHECKED VITALS IN ICU; HR 116. WENT TO ER, TRIAGE BP WAS 163/101; HR 115. GIVEN LITER SALINE, DREW LABS. BP AND HR CAME DOWN. TOLD TO REST COUPLE DAYS. WAS CONCERNED AS HX OF STROKE. F/UP WITH CARDIOLOGIST 'DOESN'T THINK THE SECOND VACCINE WOULD BE HARMFUL' BUT 'I JUST DON'T KNOW'. FAMILY HAS HX OF HEART DISEASE. I KNOW ANXIETY BUT NEVER HAD HR DO 'WHAT IT DID'. DON'T FEEL LIKE IT WAS ANXIETY. I KNOW MY BODY. I HAD TAKEN CARE OF COVID PATIENTS THE WEEK BEFORE. I DON'T KNOW WHAT TO THINK. TRYING TO LOOK AT ALL FACTORS. 12/17/2020 HEADACHE; FOLLOWING DAY I WAS FINE
COVID19 VACCINE (COVID19)	Emergency Room *	906556-1	After receiving the vaccine earlier, patient had difficulty swallowing for 3 minutes and also dizziness-- > went to ED for evaluation. Symptoms resolved after rooming in ED. ED physician DX with possible allergic reaction and he was given diphenhydramine 50mg PO x1 and prednisone 40mg PO x1 in ED-- > discharged home with PRN diphenhydramine, cetirizine 10mg daily and epi pen PRN.
COVID19 VACCINE (COVID19)	Emergency Room *	906557-1	Developed headache, tachycardia and urticaria 12 minutes post immunization. Transfer to ER for care. Had NS 100 ml. bolus, Benadryl 25 mg IV, Solumedrol 125 mg IV, Pepcid 20 mg IV, Tylenol 1 Gm PO. Symptoms resolved. Discharged home from ER same day with Rx for Benadryl and Pepcid.
COVID19 VACCINE (COVID19)	Emergency Room *	906560-1	Rash on arms
COVID19 VACCINE (COVID19)	Emergency Room *	906569-1	Diaphoretic and tachycardic within 5 minutes of receiving vaccine. Rate up to 151 with BP 146/82. Rate would go down after 5 minutes sitting quietly and then return to 150. Back down and then 15 min later, up. gave 25 mg of po benadryl at 11:30 am. This continued and 911 called. Paramedics assessed. Patient brought to ed for additional monitoring and assessment in private car. D/C'd at 2:30pm with no other interventions.
COVID19 VACCINE (COVID19)	Emergency Room *	906570-1	Severe headache and limb numbness ~ 30 minutes after vaccination Sent to emergency department - no treatment needed
COVID19 VACCINE (COVID19)	Emergency Room *	906577-1	Employee was being monitored post Covid19 vaccine, approximately 10 minutes after receiving vaccine she complained of feeling dizzy and light headed and then became unresponsive. 911 was called and employee was taken to ER
COVID19 VACCINE (COVID19)	Emergency Room *	906592-1	Upper left arm/shoulder pain. Also reported 36 hours of low grade fever and body aches after injection Left arm at deltoid felt somewhat warm to touch, very mild erythema, tender to palpation. Pt sent to Urgent care for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	906594-1	"15 minutes after vaccination, started to have SOB, numbness on legs and extremities-- > sent to ED for evaluation. She c/o funny feeling in her mouth and tingling in her arms and legs after vaccination. She felt short of breath initially, but not at ED. No rash. No swelling that she is aware of. She just doesn't feel right. States she feels ""jittery"" and shaky. Received 2 L NS and epi 0.3mg IM x1 and diphenhydramine 25mg IV x-- > symptoms improved. Observed for 4 more hrs in ED. Discharged home on Epi pen."
COVID19 VACCINE (COVID19)	Emergency Room *	906595-1	Dizziness; hypertensive to 109/80; nausea, sweating, sent to ED for monitoring; follow up call next day: symptoms resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	906602-1	Patient states 20 minutes after receiving the injection she began having a scratchy throat and began having shortness of breath. She also developed some itching to the site. She presented to the Emergency Department and noted to have hoarseness but no severe dyspnea. Patient was given steroids and Benadryl. Her symptoms did not worsen and she was discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	906609-1	"Severe Headache (""Felt like someone hit me with a bat in the head""; water/tylenol given; sent to ED - given Toradol; later: chills; resolved per follow-up call prior day."
COVID19 VACCINE (COVID19)	Emergency Room *	906622-1	tingling to the tip of the tongue and further back to the middle of tongue, oral tingling (upper lip and then into the lower lip); mild swelling to the tip of the tongue; This is a spontaneous report from a contactable nurse. A 51-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in the left deltoid on 17Dec2020 11:15 at a single dose for COVID-19 immunization. Medical history included palpitations multiple premature ventricular contractions (PVC)s from 11Jan2020 to an unknown date. The patient's concomitant medications were not reported. Patient denied any history of previous adverse reactions to vaccines. The patient previously took dexamethasone (DECADRON) and experienced tingling of lips and tongue and sulfamethoxazole trimethoprim (BACTRIM) and experienced allergies and acute kidney injury. The patient experienced tingling to the tip of the tongue and further back to the middle of tongue, oral tingling (upper lip and then into the lower lip) and mild swelling to the tip of the tongue on 17Dec2020 11:15. During the 15-minute waiting period after the injection, the patient began to experience oral tingling (upper lip and then into the lower lip). It then progressed to the tongue and she reported tingling to the tip of the tongue and further back to the middle of tongue. She thought there might be some mild swelling to the tip of the tongue. She denied rash, hives, welts, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, lightheadedness, dizziness, facial swelling and lip swelling. The patient went to the emergency room/department or urgent care. The patient received diphenhydramine hydrochloride (BENADRYL) as treatment for the events. The outcome of the events was recovered in Dec2020.
COVID19 VACCINE (COVID19)	Emergency Room *	906625-1	Within just over half an hour of receiving it my lungs and throat started burning. Shortly after that my upper lip started to swell. Over night my lip swelled more and my face became itchy.
COVID19 VACCINE (COVID19)	Emergency Room *	906629-1	Client started to feel faint about 10 minutes after she had the vaccine administered. She informed the nurse. Her blood pressure was 100/62 hr 58. She sat for a few minutes and then vomited. She had become very diaphoretic. Her bp was 146/100 and hr was 96. She was responsive and she refused a shot of Benadryl. We called for an ambulance. We continued to monitor her bp and hr. Her husband arrived. She left with her husband. Her last bp was 136/100 hr was 70 ab she was not longer diaphoretic. He husband took her to the ER. I spoke to patient today at (9:10 am. The ER doctor told her she had a vasovagal incident. He told her she can get the second dose if she is in a supine position with monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	906643-1	Patient c/o lightheadedness, dizziness & nausea about 4 hour after receiving vaccine.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906657-1	Tingling mouth; This is a spontaneous report from a contactable physician. A patient of unspecified age and gender received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration in Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced tingling mouth in Dec2020. The event happened during the observation period after the vaccine was administered. The reporter thinks that the patient just panicked and overreacted and doesn't think they had a reaction. The patient did go to the emergency room (ER) and was discharged the same day. The outcome of tingling mouth was unknown. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.
COVID19 VACCINE (COVID19)	Emergency Room *	906676-1	diaphoresis; rigors; chest pain; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine, lot number: elo140), via an unspecified route of administration at right arm on 18Dec2020 09:45 AM at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient has known allergies to flu vaccine. On 18Dec2020 at 10:15 AM, the patient experienced adverse events of diaphoresis, rigors, and slight chest pain. The adverse events resulted in emergency room/department or urgent care. It was unknown if treatment was received due to adverse events. The outcome of the events was unknown. The events were considered non-serious.
COVID19 VACCINE (COVID19)	Emergency Room *	906684-1	sensation in throat/a menthol cough drop stuck in the throat; flushed; diaphoretic; burning into my chest; some random hives; This is a spontaneous report from a contactable consumer (patient herself). A 38-year-old female patient received first dose of bnt162b2 (lot number: EL0140), via an unspecified route of administration at site of left arm at 11:30 on 19Dec2020 at single dose for COVID-19 immunization. Medical history included Oral Allergy Syndrome, ADHD (attention deficit hyperactivity disorder), multiple food allergies, and allergies: PCN, Ceclor and Lovenox multiple. Concomitant medication included cetirizine hydrochloride (ZYRTEC), montelukast sodium (SINGULAIR), diphenhydramine hydrochloride (BENADRYL) and amphetamine aspartate, amphetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL). Within minutes after vaccination, the patient became flushed and diaphoretic followed by a sensation in her throat, it felt that she had a menthol cough drop stuck in the throat and the burning into her chest. Once the medics administered IV Benadryl, the sensation in her throat went away. She was in the emergency room for about 3 hours and had some random hives throughout the rest of the evening. She had anaphylaxis previously to avocado and to an allergy shot. This was definitely nothing close to anaphylaxis. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was recovered in Dec2020.
COVID19 VACCINE (COVID19)	Emergency Room *	906719-1	Patient recieved dose one of the Pfizer Covid 19 Vaccine. Within ten minutes scratchy throat started. Patient was monitored for 30 minutes and throat irritation became worse. Transferred to urgent care for follow up. Received a dose of diphenhyramine, symptoms lessened, and was able to leave urgent care for home.
COVID19 VACCINE (COVID19)	Emergency Room *	906721-1	Patient developed dizziness shortly after receiving Pfizer Covid-19 vaccine on 12/21/2020. Patient was brought to the Emergency Department. SBP initially in 70's, rapidly improved to 90's without intervention. Patient denied SOB. No e/o angioedema on exam. SBP improved to 110's after 500cc of NS.
COVID19 VACCINE (COVID19)	Emergency Room *	906738-1	12/21/2020- 1 called with increased BP 12 hours after vaccination. Was seen by MD and went to ER. Med for BP increased and modified until stable.
COVID19 VACCINE (COVID19)	Emergency Room *	906741-1	Approximately 20 minutes following COVID-19 vaccination the patient suddenly developed hives, itching - Hives around face and upper chest. Throat was red and slightly swollen. Was brought to the Emergency Department within out hospital for assessment and medical care. Acute treatment included methylprednisolone 125 mg IV x 1 dose, diphenhydramine 50 mg IV x 1 dose, epinephrine 0.3 mg IM x 1 dose, and famotidine 20 mg IV x 1 dose. The patient felt better following this treatment Upon reassessment oropharyngeal swelling had improved, the patient no longer had hives and the throat appeared clear. The patient stated he no longer feels itchy but does feel a little short of breath. Lungs were clear with pulse oximetry 97%.
COVID19 VACCINE (COVID19)	Emergency Room *	906759-1	Day 1-4 large raised bright red injection site warm to touch Day 3 Bright red raised rash all over face and scalp, going down neck
COVID19 VACCINE (COVID19)	Emergency Room *	906768-1	Severe abdominal cramping, diarrhea, rectal bleeding. Went to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	906769-1	After I got the shot I could feel it going into my system (histamine). I had myalgia on my right shoulder and up into my neck, those I felt first. I felt like a histamine release. It is like I felt a drug being released in my body, a strange feel. Made me feel woozy. Not a major reaction, no airway constrictions, just felt uneasy. As I was walking to my vehicle to leave the hospital my arms started feeling tingly so I decided to walk to the ER and get checked. Vitals were taken and a shot of Benadryl - 50mg, sat around until it kicked in about 30/40 min and it made the symptoms subside. Next morning I felt fine , arm was sore from the injection but that was all.
COVID19 VACCINE (COVID19)	Emergency Room *	906775-1	Chills at 5-10 min after vaccination, with voice change and SOB 15-20 min after vaccination concerning for anaphylaxis. Epi given im x1. given immediately at voice change and immediately taken to ED.and currently receiving care
COVID19 VACCINE (COVID19)	Emergency Room *	906776-1	Patient reports 5 minutes after getting covid vaccine she became flushed, heart was pounding and felt dizzy. Patient denies hx of allergic reactions.

Denies swelling. No difficulty swallowing, maintaining airway independently. Headache. In E.D., patient received NS 1000 ml at 2000 ml/hr at 19:34, Diphenhydramine 25 mg IV x1 at 19:36, Methylprednisolone 125 mg IV at 19:38, Ketorolac 30 mg IV at 19:41, Famotidine 20 mg IV at 19:42. Forty minutes post injection, all symptoms gone. Discharged from E.D. at 20:52 with prescription for prednisone 50 mg po daily x4 days, diphenhydramine 25 mg po q6h prn, and famotidine 20 mg po nightly prn."
COVID19 VACCINE (COVID19)	Emergency Room *	906827-1	45 minutes after vaccination felt faint, palpitations, nausea and tremor in hands followed by syncope, after awoke had ongoing muscle spasm/tremor in legs. Taken to ED and labs, IVF, CXR. Observed x 90 minutes and discharged- returned to work as scrub tech in OR. Left early, no further issues that day. Next am on arising had <30 seconds of postural imbalance which resolved spontaneously and no other symptoms since.
COVID19 VACCINE (COVID19)	Emergency Room *	906828-1	COMPLAINT OF REDNESS TO FACE
COVID19 VACCINE (COVID19)	Emergency Room *	906829-1	COMPLAINT OF REDNESS TO FACE
COVID19 VACCINE (COVID19)	Emergency Room *	906832-1	About 3 hours after vaccination, she began having hives and itching all over body. No difficulty breathing etc. She went to ER that noted reaction to vaccine. She was Administered Benadryl 50mg PO X1 and Prednisone 60mg . She also received one dose of Pepcid 20mg PO. No signs of distress noted in ER.
COVID19 VACCINE (COVID19)	Emergency Room *	906835-1	bilateral rash/itching on ear lobes, rash/itching/swelling suborbital region, diffuse rash on forehead. bump on right side cervical region.
COVID19 VACCINE (COVID19)	Emergency Room *	906842-1	Gave me shot did not feel anything. Probably 2-3 minutes later, it started to feel flush and chest tightening, and heart started racing. I did sit down, because they were monitoring us. Had my Apple watch on and heart was going up and down. They kept me monitored for about 30-45 minutes before I was hooked up to BP pressure machine. First reading was 180/110. At that point, they asked if I wanted to go to ER. I went to ER and they did an EKG which was normal. Heart rate came down with Benadryl. I was still feeling little tight in chest. Blood pressure 167/97 upon discharge. Sent home instructed to take Benadryl. At home was relaxing, few hours later, heart rate spiked again and stayed for 15-20 minutes. Took Benadryl and heart rate came down. Did not take BP at home. Next day one other time where heart rate spiked again.
COVID19 VACCINE (COVID19)	Emergency Room *	906860-1	Dizziness for 48+ hours. Feeling of hypersensitive skin to touch
COVID19 VACCINE (COVID19)	Emergency Room *	906876-1	Started with Rash/Hives on Neck and upper chest and shoulder. Inside of nose rash and mouth itchiness. Progressed to arms and palms of hands. Started to get stomach upset. mouth got warm and throat warm. Breathing was OK but started to get tougher. Went to the ED Given Benadryl Pepcid and solumedrol Gave you prednisone 50mg for home 3 tablets once a day and OTC pepcid
COVID19 VACCINE (COVID19)	Emergency Room *	906887-1	Pfizer-BioNTech COVID-19 Vaccine EUA: Systemic: Anaphylaxis, Fainting
COVID19 VACCINE (COVID19)	Emergency Room *	906900-1	Pt received vaccine on 12/17/20 and started experiencing side effects such a dizziness, body aches, nausea and vomiting, and body weakness shortly after. The symptoms got progressively worse as the days went by and pt came to the ED on Tuesday, 12/22/20, since symptoms were not improving and acetaminophen and ibuprofen did not help.
COVID19 VACCINE (COVID19)	Emergency Room *	906902-1	Chest pain, shortness of breath, tongue numbness and tingling
COVID19 VACCINE (COVID19)	Emergency Room *	906906-1	"Patient received COVID-19 vaccine at 330pm. Approximately 15-20 minutes later the patient felt well, was released. At around 4:00pm patient then developed ""tongue fullness"" and felt flushed. She returned to vaccine clinic. No reported rash, voice changes, wheezing, shortness of breath at the time she presented back to the vaccine clinic. 153-173 sbp, HR 60; Doctor on call advised to give Benadryl 50mg IM and send to the ER for evaluation and monitoring for 4 hours. Benadryl was given to patient at around 4:15pm. Patient was taken to ED around 4:30pm. Patient requested early discharge from ED as she stated she "" Feels normal now. Requesting DC as she is a nurse and feels better and wants to be with her family."" Per ED note: patient discharged with antihistamines and epipen."
COVID19 VACCINE (COVID19)	Emergency Room *	906910-1	HPI: 56 y.o. male with no pmhx c/o generalized bruising for 2 days, noticed small blood tinged spots generalized. Gradual onset, severe on severity, no alleviating or aggravating factors. Patient denies fevers, chills, N/V/D, abdominal pain. In ER: Platelet <1. Platelet transfusion in ER. Admitted for Thrombocytopenia/ITP

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	906912-1	About 5 min after I got the vaccine I was on observation and I started getting a rapid, pounding, heartbeat, they waited about 5 min and it started getting faster and stronger, so they called paramedics to take me to the ER. It seemed it could be a severe reaction, I had fast rate for several hours and also broke up in hives while I was at the ER. They did a cardiac workup and noticed I had change on my heartrate according to the EKG they had previously done.
COVID19 VACCINE (COVID19)	Emergency Room *	906926-1	"At 10:30 pm felt sudden loss of feeling in right hand- unable to use right arm. ""Felt numbness on top of forearm-feels like muscles are no longer working."" Went to urgent care on 12/18/2020 (another clinic)- arrived at 0845."
COVID19 VACCINE (COVID19)	Emergency Room *	906927-1	After 24 hours felt tired, achy, arm hurt my head hurt for 48 hrs little longer. Upon waking up on Sat felt same symptoms. Due to patient exposure I contacted Covid hotline for that hospital employees. Then I was informed to go get tested ER for Covid results negative. I had to miss work on 12/21 due to taking Acetaminophen being a hospital criteria couldn't work while taking that medication.
COVID19 VACCINE (COVID19)	Emergency Room *	906928-1	Patient with a reported history of anaphylaxis to several things and carries her own EpiPen. She was brought to monitoring room at 1835 With complaints of cough and at that time had taken two puffs of albuterol inhaler. Patient also reports some medicating with 50 mg of Benadryl two hours prior to vaccine. O2 sats were 99% heart rate 69 and lungs CTA. At 1845 patient self dosed another 2puffs of albuterol. At 1845 HR 130 and sats 98%. At 1850, BP 173/139 HR 127. Patient continued to develop a progressive cough and SOB. Consulted Dr. by phone. We dosed with Zyrtec 10 mg po and assisted pt with administration of her own epi-pen. Followed up with ED next day. Pt had been escorted there from vaccine clinic after epi-pen administration and progressive SOB. ED reported pt remained hemodynamically stable and A&O x 4. Treatment consisted of Benadryl 50 mg IV, Pepcid 20mg,IV, solumedrol 125 mg IV, fluids 1L, and racemic epi. Discharged home after 3 hours.
COVID19 VACCINE (COVID19)	Emergency Room *	906929-1	15 mins after the vaccine I had a bad headache and very dizzy blood pressure 168/109 very hypertensive Possibly stroke after vaccine (No stroke) Took ibuprofen Had Tylenol before the vaccine 12/22/2020 slight high blood pressure still
COVID19 VACCINE (COVID19)	Emergency Room *	906931-1	Pt experienced headache and dizziness immediately after injection. Approximately 30 mins later the patient began experiencing chest tightness. The patient received 50mg Benadryl and was transferred to the emergency department within about 20 mins.
COVID19 VACCINE (COVID19)	Emergency Room *	906939-1	Speech difficulty and bilateral lower extremity tingling and numbness after COVID-19 vaccine administration. Symptoms improved at ED with IV Hydration
COVID19 VACCINE (COVID19)	Emergency Room *	906944-1	Reports within 15 min of covid vaccine she had facial pressure, throat tightening, headache, light headed, increase in BP-179/123
COVID19 VACCINE (COVID19)	Emergency Room *	906953-1	Pfizer-BioNTech COVID-19 Vaccine EUA Within 5-10 minutes of vaccine, burning and tingling sensation started in chest, moving into throat, tongue, mouth, nose, and ears. Flushing sensation and red ears. Increased heart rate, resolved after a few minutes. Was treated in the ER and released from hospital. EKG and vitals were checked, no labs drawn. Occasional burning and tingling sensation but resolves within a few minutes, mainly in chest and tongue. Occasional symptoms ceased in about 3 hours.
COVID19 VACCINE (COVID19)	Emergency Room *	906955-1	Reports after covid vaccination while she was driving home she experienced swelling of the tongue, dry mouth, legs twitching, and diarrhea. Went to ER for treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	906956-1	Patient started with tingling in hands/lip approximately 10 minutes after administration. Tingling in hands/lips worsened and pt started to c/o tongue swelling. Epi and IM benadryl were administered and a rapid response was initiated.
COVID19 VACCINE (COVID19)	Emergency Room *	906970-1	Pt developed throat tightening, shortness of breath, hives on the anterior chest after receiving COVID-19 Pfizer vaccine. She received vaccine around 9:15 AM and symptoms began at 9:28 AM. Received epi pen by vaccination station staff. Reported to ED. Observed for 3 hours with no further adverse effects. Treated with steroids, Pepcid, Benadryl. Discharged home with epi pen, medrol dosepak, and allergy/immunology follow up.
COVID19 VACCINE (COVID19)	Emergency Room *	906981-1	0850 Client came in to receive COVID-19 Vaccine sent to observation for 30 minutes due to allergic to latex. At 0855 client started itching and breaking out in hives, complaining of shortness of breath and scratchy throat. Nurse escorted client to ER, where client received IV fluids, Benadryl, Solumedrol, Pepcid.
COVID19 VACCINE (COVID19)	Emergency Room *	906982-1	anaphylactic--started with mild itching, progressed to throat tightness--patient was given IV Benadryl, Pepcid, Solu-Cortef, Epi-pen x 2, oxygen
COVID19 VACCINE (COVID19)	Emergency Room *	906983-1	I was at the observation area and all of a sudden I started rapidly coughing and my throat felt itchy. I notified the nurse and she started observed me. The back of my tongue started feeling weird. She then hit me with an epi-pen as a precaution. Because of that I was moved to the ER for observation for 2 hours to make sure everything was ok. After the epi-pen all symptoms went away. Before I left they drew labs to check if I was having an allergic reaction. And the results came next day and it was 0.
COVID19 VACCINE (COVID19)	Emergency Room *	906988-1	PT WAS OBSERVED IN HOLDING AREA LEANING FORWARD IN HER CHAIR ABOUT 7 MINUTES AFTER RECEIVING THE VACCINE. RN ASSESSED AND NOTED: AUDIBLE WHEEZE, RESP 40/MIN, LIP SWELLING AND PT COMPLAINED OF NAUSEA. PT WAS ESCORTED TO ER IN WHEELCHAIR ACCOMPANIED BY 2 RN'S (2 MINUTE WALK) ONE HOUR LATER - AS REPORTED BY DR (ER) WORKING DIAGNOSIS - ANAPHYLAXIS / STATUS ASTHMATICUS MEDS RECEIVED: SOLUMEDROL 125, DIPHENHYDRAMINE 50MG, FAMOTIDINE 20MG --ALL IV EPINEPHERINE 0.3MG IM X1 FOLLOWED BY 0.3MG IV X 1 FOLLOWED BY 0.1MG IV X1 PT IS RECEIVING O2 - AND PROGRESSING TO BIPAP
COVID19 VACCINE (COVID19)	Emergency Room *	907007-1	I got very sweaty and hot feeling, nauseated and light headed, my BP and O2 were stable but got a little tachycardia, it passed after I laid down for a couple of minutes but once I stood up again the symptoms returned. That is why they sent me to the ER. Also had tingling in both hands. I recovered in about 2 hours (I had covid in early november)
COVID19 VACCINE (COVID19)	Emergency Room *	907010-1	Developed itching to lips and left arm 10 mins after injection. Benadryl 25mg oral given. Symptoms progressed to tongue and mouth itchiness. Pt transferred to ED for further eval and care. IV NS famotidine and methylprednisolone given. Discharged home.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907011-1	1406, Monitored pt 1:1. She reported feeling fine for the first 15 minutes then reported itching involving her face but not forehead. Gave 25 mg IM diphenhydramine. pulse ox Reading was wnl. Within 5-10 min after diphenhydramine pt reported itching involving her arms, facial flushing but no shortness of breath. extra 25mg diphenhydramine IM given and Epinephrine IM administered. medical director notified. Dr. came and assessed and monitored patient. Symptoms resolved while on site. Pt escorted by medical colleagues to workplace ER where she agreed to stay for further monitoring. Dr followed up with pt later in the evening and she was doing. Patient updated progress December 20, 2020. I have had continued symptoms since Thursday though initially I felt that they were just typical post-reaction type symptoms. Thursday night I just had some itching and occasional hives. Friday I woke with a terrible headache and could not lift my left arm above by head due to pain but figured that these were vaccine effects. I had intermittent hives and itching that I was able to suppress by taking Allegra, Zyrtec and Claritin (each once) throughout the day. I was also taking Pepcid at night. Saturday, I tried to decrease my antihistamines to just Allegra BID, Pepcid once and Benadryl just last night. I woke with hives and worse itching again. I also appeared to have what looked like eczema on my hands that was new. So I took Pepcid and Allegra prior to going into my shift this morning. I took Zyrtec around 9 am as I had not yet had any improvement in my hives or itching. My co-attending noted that I was progressively becoming more flushed and around 11 am I started to experience an odd sensation in my throat with a persistent cough. My vitals were normal (HR 75, sat 98%, BP 113/78), so I talked the other attending out of more epinephrine and she prescribed me dexamethasone 16mg. I took the dex plus a Claritin at noon today and by 2 pm, had resolution of all of these symptoms. I also noted that my chest felt significantly less tight and retrospectively think I have been experiencing chest tightness and pressure since Friday but hadn't realized it because it occurred gradually. As of December 21, 2020, patient was to start prednisone 40 mg daily x 5 days.
COVID19 VACCINE (COVID19)	Emergency Room *	907014-1	Visible hives twice, and stinging eyes.
COVID19 VACCINE (COVID19)	Emergency Room *	907016-1	"Patient complained of ""racing heart beat, dizziness"" BP noted 141/92 P104 oxygen 99 repeat temp 97.6 BP 145/89 P96 repeat BP 145/95 Pulse 104 taken to ER for further evaluation and treatment. Temperature rose to 101 while in ER. Patient reports symptoms resolved approximately 1 1/2 hours after injection ""feels fine"" now Discharged home steady gait."
COVID19 VACCINE (COVID19)	Emergency Room *	907019-1	"Pt returned to her work area. At 1314 - Team member was taken to the ED. She reported feeling like her tongue was swelling, she attempted to eat chips and felt like her throat was sore and needed to be cleared. Pt had a syncopal episode and c/o chest pressure, and difficulty swallowing (able to control secretions). Hives were noted to her face, neck & chest upon arrival to teh ED. At that time - pt reported feeling like her tongue started swelling 15 minutes after the vaccination. Pt was confused and ""extremely"" anxious. VS: 209/102, HR 125, RR 30 SaO2 96% r/a 1321 -diphenhydramine 25mg IV, pepcid 40mg IV and IV NS started VS: 159/105, HR 118, RR 31, SaO2 100% r/a 1322 - epinephrine 0.3mg SQ, Solumedrol 125mg IV 1332 - Zofran 4mg IV 1351 - Ativan 1mg IV 1359 - 128/91, HR 100, RR 22, SaO2 99% 1411 - pt calm- redness improved. still c/o of feeling something in her throat. 1441 - Calm, asking for a drink - tolerated well. BP 110/72, HR 82, RR 18, SaO2 98% 1635 - d/c orders written."
COVID19 VACCINE (COVID19)	Emergency Room *	907022-1	Anaphylaxis/Angioedema Patient was given EpiPen 0.3 mg IM; Methylprednisolone 125 mg once; Diphenhydramine 25 mg IV push once; Famotidine 20 mg IV push once; Dexamethasone 10 mg IV push once Patient was intubated and put on propofol and midazolam drips for sedation
COVID19 VACCINE (COVID19)	Emergency Room *	907036-1	Shakes(chills)/ Tachycardia/altered mental status/sent to the hospital for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	907037-1	After injection had L arm pain, the following day (12/17) pain continued . 12/18 onset of fever max temp 38, chills, fatigue, muscle pain and nausea. Treated with Tylenol for symptom relief. Symptoms continue and worsened 12/19 and 12/20. 12/20 underwent video clinician visit for symptoms and inability to return to work for continued symptoms 4 days after vaccination, last day of fever. 12/21 covid and flu swab negative symptoms all continued fatigue very evident going to and from swab exam. 12/22 morning near syncope while getting ready for day, tachycardia, underwent ED eval was given fluids and labs drawn and discharged home with improvement in tachycardia and lightheaded/dizziness with fluids, another covid swab was negative along with negative RVP. Continued to have fatigue 12/22 evening.
COVID19 VACCINE (COVID19)	Emergency Room *	907042-1	Received vaccine around 10:40 am, by 10:50 started to feel dizzy, eyes felt full, dry, tingly, swollen, voice became raspy and throat itched. Received 25 mg Benadryl PO at around 10:55. Face, arms, chest and abdomen developed a fine red itchy rash, tongue swollen and itchy, lips tingling, wheezing, blood pressure elevated, pulse thready given 25 mg PO Benadryl, taken to the Emergency Room, symptoms persisted, stomach hurt became nauseated, received IV solumedrol, Pepcid, IV fluids, nebulized albuterol. Sent home once stable after 3 hours, with instruction to take Benadryl every 4-6 hours fir the next 2 days, albuterol as needed, and prednisone for the next 5 days.
COVID19 VACCINE (COVID19)	Emergency Room *	907043-1	Swelling left deltoid and left neck followed by feeling of throat closing. began 14 min after administration; Code Assist called and taken downstairs to ED; received epinephrine, Solumedrol, Benedryl. Prescribed prednisone and Pepcid 40 mg bid .
COVID19 VACCINE (COVID19)	Emergency Room *	907044-1	Pfizer-BioNTech COVID-19 Vaccine EUA within 5-30 minutes: dizziness, weakness, palpitations, chest tightness, injection site pain, left arm numbness and weakness, headache, nape pain, drop in BP, high BP, left shoulder and elbow joint feeling like to be detached. Sent to Hospital ER, was given Zofran and Ativan
COVID19 VACCINE (COVID19)	Emergency Room *	907045-1	During 15 observation period I developed tachycardia rate in the 140's. Hypertension 180/100. Rapid response was called and sent to ER. I also became flushed, chest rash, chills low grade temp 99.4. I was given a 500cc bolus of Normal saline. Benadryl 25mg IVP and my morning dose of carvedilol 6.25mg. On discharge Bp was 102/ 74, Hr 76.
COVID19 VACCINE (COVID19)	Emergency Room *	907047-1	Pt hx of DM Type I, HTN, reported pruritic urticarial rash 5AM 12/21/2020 inner wrists, anterior distal LE bil. Resolved aprox 30 mins later. Urticaria recurred mid day 12/21/2020, pt treated with Benadryl 25mg PO, resolved. Urticaria returned evening of 12/21/2020 wrists, axilla, nape of neck. Pt treated with Benadryl 25mg PO, resolved. Urticaria returned 5AM AM 12/22/2020 similar distribution as evening of 12/21/2020. No air way or facial involvement. Pt treated with Benadryl 25mg PO, urticaria resolved. Sought medical eval 12/22/2020 around 10AM: no sx nor urticaria present. 1:30PM 12/22/2020 after eating lunch pt called to report recurrence of urticaria now involving face, lips tingling, itchy back. Administered 50mg Benadryl IM, observed, urticaria/pruritis resolved x 45 mins. Urticarial sx and lip tingling returned in 2 hours, pt transferred to ED for treatment with epinephrine, steroids, observation.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907050-1	Chest pressure and headache followed by generalized itchiness and hives. Progressed to facial swelling and airway swelling. Treated with EpiPen x1 IM, 50 mg diphenhydramine PO, 20 mg famotidine, and 10 mg dexamethasone. Immediate reaction improved. Itchiness and intermittent hives continued. The headache continued along with other common/expected side effects of vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	907051-1	On 12/16 about 10pm I began having arm pains and took tylenol. 12/17 woke up feeling exhausted with severe body aches, headache and a 101 temp. I went to work but had to leave because I just wasn't feeling good. On 12/18 I went back to work but could not perform so I had to leave again and was still experiencing the severe body aches and headaches but no fever. I was suppose to work on both 12/19 and 12/20 but had to call in. On 12/19 still same symptoms with no fever but around 5pm I began to have palpitations and heart racing which caused me to go to the ER. I was given fluid and labs was done and monitored for a few hours and was released after the fluid was given. On 12/20 felt pretty good still tired and exhausted feeling and on 12/21 I felt good but later that evening I noticed my forearms began to feel stiff, tingly and heavy. My hands began to feel stiff and is very sore. Continue to feel very tired with body aches and continued to take tylenol. This morning I felt ok but after fixing breakfast the symptoms came back and they feel like the same symptoms I had when I had the vasculitis in 2009-2010 and that concerned me so I discussed it with a Neurologist and Immunologist who I will reach out to after the holidays to schedule an appointment. I have an appointment scheduled with my PCP for additional labs on tomorrow 12/23 and I have not been able to work since getting the vaccine. My hands feels clumsy and I am constantly dropping things since yesterday
COVID19 VACCINE (COVID19)	Emergency Room *	907052-1	"Pt with dizziness and chest pain that started about 10 minutes after getting the Moderna Covid19 vaccine. No shortness of breath, no rash, no fever, no swelling, no weakness. Feels pain in center of chest and on L side. Pt also has been having stress with work. Pain started in the R side of the chest and migrated to the L side. It improved with Nitro and Aspirin but pt states he still feels, ""fussy."" He has no symptoms of allergic reaction or anaphylaxis. Pt has no known hx of cardiac dz, nonmoker, nondrinker. His Mom has a cardiac murmur but no other known history of heart disease."
COVID19 VACCINE (COVID19)	Emergency Room *	907059-1	Tingling in head, headache, mouth, itching

COVID19 VACCINE (COVID19)	Emergency Room *	907075-1	Patient experienced bronchospasm with coughing and tongue itching approximately 10 minutes after the injection.
COVID19 VACCINE (COVID19)	Emergency Room *	907076-1	1126 states felt funny VS 86/63 HR 79 100 RA taken to cot to monitor/evaluate denies any pain or discomfort only just weak and funny, requested drink of water and leaned back on bed 90 degree angle noticed she was not focusing 1130 VS 78/45 58 100 RA taken to ER via WC due to Hypotension. 1830 LM for her to call me on her cell for follow up
COVID19 VACCINE (COVID19)	Emergency Room *	907078-1	After 5 minutes of the vaccine, I felt lightheaded, pulse got weak, tongue tingly and slightly swelling. The ER doctor at the vaccination site administered an epi-pen and I got sent to the ER via rapid response, received 15 liters of oxygen for 1 hours, rapid shallow breaths respiration in the 30'. 2 hours later received decadron orally then observed for 1 more hour. Symptoms resolved and went home. The following day, I woke up with a massive headache and lightheadedness.
COVID19 VACCINE (COVID19)	Emergency Room *	907080-1	"Per patient, she had received the COVID vaccine at her workplace and developed 30-40 minutes later symptoms of throat tightness, chest tightness and difficulty swallowing and was given at her workplace in the ED oral Benadryl, oral Decadron and IM epi. About an hour and a half later she developed symptoms of recurrent throat tightness and was given another dose of IM Epi and was then transferred to this hospital for further evaluation as per the patient ""all of her symptoms are pretty much ""unchanged"""". She was observed for many hours in the ED without evidence of recurrent symptoms and was later discharged with a 3 day prescription of prednisone and prn diphenhydramine for itching."
COVID19 VACCINE (COVID19)	Emergency Room *	907082-1	Warmth tingling on tongue and Lip 15 mins after vaccine Accelerate heart rate 120-130 7 hours after vaccine accelerated heartrate 120 10 pm 5am 12/19/2020 Heartrate of 100 12 Noon 12/19/2020 Heartrate of 100 12/20/2020 10 am Accelerate heart rate of 100 12/20/2020 5 pm Accelerate of heartrate of 100 oral Benadryl 25mg in the ER
COVID19 VACCINE (COVID19)	Emergency Room *	907084-1	"began to have a ""foggy head"" feeling and then started to feel chest pressure - was NOT short of breath"

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907101-1	patient felt slightly nauseated at 10 minutes after injection, then developed slight sweating; BP 160/81; 83 at 5:45 and then 158/87 with HR 82 at 5: 52 pm. Her lungs were clear, she was speaking in full sentences and was denying any chest pressure, her usual sense of asthma exacerbation. At 6:05 it was 164/83 with HR 79 and patient developed a dry cough; we decided to have her wait just a bit longer, then cough worsened, so at 6:25, decision was made to have patient seen in ER for further assessment, and en route in wheelchair to ER the dry cough became persistent, spasmodic and patient was unable to speak. Epi-Pen was injected in right mid thigh, and patient transported to ED urgent eval. She noted immediate palpitations, and slight improvement of breathing, was able to speak in four word sentences. On arrival to the ED, patient was administered Duonebs, Albuterol neb, IV Benedryl, IV Solumedrol; CXR was obtained, with results pending. Patient was sent to observation for ongoing monitoring and assessment of breathing. at 6:30 PM in the ER, she
COVID19 VACCINE (COVID19)	Emergency Room *	907109-1	approximately at 3:32pm felt heart racing, then 2-3 minutes later tongue tingling, few minutes later felt a lump on throat. 25mg benadryl taken, hoarse voice and anxious, then another 25mg benadryl taken. I was then taken to ER for observation. I was given pepcid and prednisone in ER. Continued to feel lump in throat but no shortness of breath or difficulty breathing. Felt calmer and normal heart rate. Discharged approximately at 5:30 pm
COVID19 VACCINE (COVID19)	Emergency Room *	907116-1	Tachycardia, hypertension, flushing and tingling around mouth within minutes after injection. Lasted about an hour
COVID19 VACCINE (COVID19)	Emergency Room *	907118-1	Dizzy, heart palpitations. Was taken to the ED for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	907123-1	acute onset parasthesias in left arm and bilateral lower extremity weakness within 15min of injection. Unable to stand without assist. no radicular symptoms
COVID19 VACCINE (COVID19)	Emergency Room *	907124-1	13:40 dizziness/vertigo feeling. 14:25 nausea, headache, dizziness. Went to Emergency room in our hospital to get checked out. My blood pressure was severely elevated, felt unwell, headache increased in intensity, nausea worsened & dizziness.
COVID19 VACCINE (COVID19)	Emergency Room *	907131-1	About 10-15 minutes after receiving vaccine patient reported that her heart began to race and throat began to swell.
COVID19 VACCINE (COVID19)	Emergency Room *	907160-1	(I'm a physician who received the vaccine at my medical clinic). 5 minutes after receiving the vaccine, I felt very dizzy and faint. We checked my BP (which is usually 120/70; I do not have hypertension), and it was 190/120, HR 120-130 bpm. We rechecked it several times and it stayed there. After 5 minutes, I suddenly felt better and my BP had dropped to 140/70, HR 70. I felt exhausted. No other problems. They watched me for 30 minutes and I felt fine. I had my husband drive me home. As we were driving home (now one hour after the vaccine), I realized that my throat was closing up. I was breathing fine but I realized I was having an anaphylactic reaction from the vaccine. I have never had any allergic reactions before to vaccines, etc. He drove me back to the emergency room of my hospital, where they diagnosed me with an allergic reaction/anaphylaxis to the vaccine. They gave me emergently IV solumedrol (steroids), pepcid, and benadryl, which fortunately worked immediately. They observed me for several hours and I was fine. They sent me home. The next morning, I felt exhausted and my throat was hoarse and sore, but that went away several hours later. It was a terrifying, terrible experience. I thought I was going to die. I had to pay \$1000 out of pocket for the ER deductible.
COVID19 VACCINE (COVID19)	Emergency Room *	907173-1	Anaphylaxis reaction with hives, stridor/airway edema, wheezing
COVID19 VACCINE (COVID19)	Emergency Room *	907177-1	developed swelling of tongue; dyspnea; skin rash; This is a spontaneous report from a non-contactable consumer. A 35-year-old male patient received BNT162B2, via an unspecified route of administration on an unspecified date in 2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. This is a call from CDC this morning regarding a new case, the patient was administered vaccine and developed swelling of tongue, dyspnea, skin rash on an unspecified date in 2020, then treated with dexamethasone, diphenhydramine hydrochloride (BENADRYL), via intramuscular (IM) epinephrine in emergency room (ER). The outcome of events was unknown. She will alert him each time there is a report of severe hypersensitivity for his awareness. Further, the CDC is in the process of appointing a contact who will be able to meet with us regularly on this topic. Their conversation was amicable and demonstrated a willingness to work closely with us as we navigate the issue of hypersensitivity. No follow-up attempts are possible; Information about lot/batch number cannot be obtained.; Sender's Comments: The reported information is limited. Based on the temporal relationship and the description of the events, swelling of tongue, dyspnea, skin rash, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	907180-1	itchy throat; itchy throat/back of the tongue reaction; This is a spontaneous report from a contactable physician. This physician reported similar events for two patients. This is the first report. A female patient of an unspecified age (reported as 50, unit unknown) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not provided), via an unspecified route of administration on 17Dec2020 22:00 at a single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced itchy throat/back of the tongue reaction. No rash, then they gave her epi 10, ED (emergency department) doctor assessed for 2 hours. No evidence of tongue swelling, hemodynamics was normal. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship and the description of the events, itchy throat/tongue reaction there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.; Linked Report(s) : US-PFIZER INC-2020500303 Same reporter, product, and event, different patient

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907182-1	Patient developed bilateral lower extremity numbness and tingling, as well as weakness that resolved after several hours of observation in the Emergency Department. It is highly likely that the response may have been in part related to anxiety. After several hours of observation the patient had return of motor strength and was able to discharge. She continued to have paresthesia that was improving at time of discharge.
COVID19 VACCINE (COVID19)	Emergency Room *	907184-1	Swollen hands; dizzy; This is a spontaneous report from a contactable nurse. A 38-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), intramuscularly in the left arm, on 17Dec2020 at 14:00 (at the age of 38-years-old) at a single dose for COVID-19 immunization. Medical history included non-ongoing COVID-19 (previous well recovered from COVID-19 months earlier) from 2020 to an unspecified date. The patient was not pregnant at the time of vaccination. The patient's concomitant medications were not reported. It was unknown whether the patient received other vaccines within four weeks prior to vaccination or other medications within two weeks of vaccination. The patient experienced swollen hands and dizzy on 17Dec2020 at 15:00. The events resulted in emergency room/department or urgent care visit. Therapeutic measures were taken as a result of the events, which included cetirizine hydrochloride (MANUFACTURER UNKNOWN) and monitoring. The clinical outcome of swollen hands and dizzy was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible; information about lot/batch number cannot be obtained.
COVID19 VACCINE (COVID19)	Emergency Room *	907185-1	40 minutes later, I became flushed, hot, sweaty and clammy and tachycardic along with a syncope episode. Nausea came after, and only treatment was fluids. This episode happened after discharge around 9:45pm and then returned to the hospital for the same course of action.
COVID19 VACCINE (COVID19)	Emergency Room *	907187-1	Possible allergic reaction - paresthesias of L tongue and throat; Possible allergic reaction - paresthesias of L tongue and throat; Sensation of tongue and throat swelling; Sensation of tongue and throat swelling; This is a spontaneous report from a contactable Health Care Professional. A 48 years old non-pregnant female patient received BNT162B2 (Pfizer-Biontech covid-19 vaccine) on 17Dec2020 at 15:15, at single dose, for COVID-19 immunisation. The vaccine was administered at hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Relevant medical history included food and drug allergy. The patient received concomitant medications (unspecified, received within 2 weeks of vaccination). Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has not been tested for COVID-19. On 17Dec2020 at 15:15, the patient experienced possible allergic reaction - paresthesias of L tongue and throat, with sensation of tongue and throat swelling. No anaphylaxis. No abnormal physical exam findings. Emergency Room Visit required and the patient received the following treatment: diphenhydramine hydrochloride (BENADRYL), prednisone, and loratadine (CLARITIN). Clinical outcome of the adverse events was unknown at time of this report. The case was assessed as non-serious. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	907190-1	Pfizer-BioNTech COVID-19 Vaccine Swollen & inflamed (right) eye, right (axilla) tenderness, & fatigue.
COVID19 VACCINE (COVID19)	Emergency Room *	907191-1	Tachycardia, body aches, chills, headache.
COVID19 VACCINE (COVID19)	Emergency Room *	907197-1	my eyes were painful; my eyes were itchy; Eyes swelling; my face were swelling; A little short of breath; Hands are still swollen, my arms are slightly swollen and so is my eyes; Dry rash on hand almost looks like dry eczema rash or psoriasis like it looks like it's a dry patchy rash; Severe headache almost like a migraine; I started to feel little bit, a little off; This is a spontaneous report from a contactable nurse, the patient. A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EJ1685), intramuscular in the left arm on 16Dec2020 (at the age of 49-years-old) as a single dose for COVID-19 immunization. Medical history included hypertension and hot flashes. Concomitant medications included clonidine (MANUFACTURER UNKNOWN) taken for hot flashes, fish oil (MANUFACTURER UNKNOWN) for an unknown indication, omeprazole (MANUFACTURER UNKNOWN) for an unknown indication, spironolactone (MANUFACTURER UNKNOWN) as a diuretic, and multivitamin (MANUFACTURER UNKNOWN) for an unknown indication; all from unknown dates and unknown if ongoing. On 16Dec2020, the patient experienced eyes were painful and itchy, eyes and face were swelling, a little short of breath, hands swollen, arms slightly swollen, dry rash on hand almost looks like dry eczema rash or psoriasis like it was a dry patchy rash, severe headache almost like a migraine, and felt a little bit off. The clinical course was as follows: the patient received the vaccine on 16Dec2020 and waited 15 minutes and did not have any reaction. She went back to work. As she proceeded to work her shift, she started to feel little bit, a little off. She couldn't really describe it but thought it may have been psychological because she was just really watching heavily for any type of symptoms. She had worked an hour over her shift and it usually took her about 40 minutes to get home. When she got home around 21:00, her eyes were painful and itchy and when she looked in the mirror her eyes and face were swelling. Then, she became a little short of breath not to a point where she thought she needed oxygen, just a little short of breath. She called the hospital where she worked and talked to the manager and then they advised her to go the emergency room. At the emergency room, she received intravenous fluid, diphenhydramine hydrochloride (BENADRYL), famotidine (PEPCID), and dexamethasone (DECADRON) for treatment. She also took cetirizine (ZYRTEC), prednisone (MANUFACTURER UNKNOWN) and triamcinolone cream for the dry patchy rash. The patient stated that she had lab work done earlier in Dec2020 (before the vaccination) and everything was normal. The clinical outcomes of the itchy eyes, eye swelling, hands swelling, and arms slightly swollen were not recovered and ongoing; while that of the little short of breath, dry patchy rash, headache, and feeling a little off, were unknown. The outcome of the eye pain was recovered on an unknown date in Dec2020; while that of the face swelling was recovering.; Sender's Comments: Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907205-1	"Tingling throat; This is a spontaneous report from a contactable physician. This physician reported the same event for two patients. This is the first of two reports. A patient of unspecified age and gender received the first dose of the bnt162b2 (BNT162B2; also reported as COVID-19 vaccine; unknown lot number, NDC number and expiration date), via an unspecified route of administration on an unspecified date at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was also reported that it was unknown if other products were received or if an investigation assessment was performed. On 16Dec2020, the patient experienced: tingling throat (non-serious). The physician called regarding the COVID-19 vaccine since they had two events that happened on 16Dec2020; however, the physician stated she needed to ask a question before speaking with Pfizer's Drug Safety Unit (DSU) and reporting the events. The physician stated that two patients reported tingling in their throats during the observation period after the vaccine was administered. The physician thought ""they just panicked and overreacted "" and she did not think they had a reaction. The patients did go the ER (emergency room) and were discharged the same day. The physician wanted to be able to give the second dose. The physician wanted to ask about the side effects of the vaccine. The outcome of the event was unknown. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up. ; Sender's Comments: Linked Report(s) : US-PFIZER INC-2020504906 same reporter/drug/event, different patient"
COVID19 VACCINE (COVID19)	Emergency Room *	907241-1	I didnt notice but evidently my eyes changed because the CNO looked at me and asked if I was ok. Im not sure of what they looked like to make her cue in on I wasnt feeling well but she came over and began to monitor me at that time. I felt light and fluffy and when I got up to get juice I felt like I was dissociated from my body, my movements were awkward, I was severely weak and was not steady on my feet. I felt as if my mind was moving but my body couldnt keep up. I was very laggy and felt as if I was intoxicated. The head of the ER made me drink alot of cold water about 24oz of water and 4 oz of juice which then caused me to get super cold and shivery. Vitals were stable the whole time but my BP shot up to 170/90 a few moments after the water. I was transferred to a monitoring room where I was covered with alot of blankets and allowed to lay down until I warmed up until my BP lowered and I was released. My arm didnt begin to hurt until about 6-8 hours after and I have a red mark and the top layer of skin just do not want to heal. I am still today having to put bandages on the spot because its red and the skin on top keeps coming off. I had joint pain and aches into the next day after causing me to take an Aleve gelcap for the pain. Nausea here and there also.
COVID19 VACCINE (COVID19)	Emergency Room *	907242-1	Sore/Itchy throat - 25mg Benadryl IM. Relief 8 minutes post Benadryl
COVID19 VACCINE (COVID19)	Emergency Room *	907243-1	"Patient received Pfizer -BioNTech COVID-19 vaccine in the clinic. At check out, patient reported 'heart racing, dizziness, and feeling flushed'" ED Proceed Out called. Patient evaluated by ED team. Patient transported to ED for further monitoring. In ED, patient complained of mild throat tightness which was resolved by Benadryl. patient was monitored for 4 hours and was discharged home on benadryl"
COVID19 VACCINE (COVID19)	Emergency Room *	907254-1	Approx 10 min after receiving vaccine- patient developed rash and hives on neck and chest with complaints of itchiness on R arm at vaccine site. Also developed redness to right ear. no respiratory difficulties noted. Patient transported to ED for further evaluation and treatment
COVID19 VACCINE (COVID19)	Emergency Room *	907256-1	*Describe the adverse event(s), treatment, and outcome(s), if any: (symptoms, signs, time course, etc.) S: 35 yo F who received Pfizer vaccine at 16:47 w/acute onset of left sided facial swelling and difficulty swallowing. Within five minutes of being administered vaccination, pt reported pain at the injection site radiating up to her jaw followed by left sided facial swelling. She started reported palpitations and subsequently reported a ball in her throat O: Pulse was in the 60's, BP of 128/72, pulse of 88-97 satting at 99% on RA. General: young female, anxious. HEENT: NC, AT, mild left sided cheek swelling, OP clear, MMM. Neck: Supple, left sided tender cervical LN. Lungs: CTAB. CV: tachycardic rate, regular rhythm. Extremities: Hands are clenched and cold. Neuro: Alert & oriented. A/P: Anaphylaxis -Given left facial swelling, 25 mg Benadryl PO administered. pt tolerated well. -17:22-Throat swelling reported. EPI #1 administered right thigh. -17:32-EPI #2 administered. Throat felt better at 17:35. 17:36-FD EMS arrived. BP 194/126. -17:38-EPI #3 administered right thigh. HR 135, BP 154/105. -17:43-EPI #4 administered left thigh. -17:46 pt transported to ER via EMS.
COVID19 VACCINE (COVID19)	Emergency Room *	907259-1	Severe itching, irritation, took oral Benadryl, proceeded to nearest Emergency Room
COVID19 VACCINE (COVID19)	Emergency Room *	907283-1	Patient with hx of SVT stood up after receiving COVID-19 vaccine and did not feel well - sat back down. put pulse ox on and HR was 180. Pt vagaled twice, HR sitting in the 90s - brought to ED for evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	907288-1	About 30-40 minutes after patient received COVID-19 vaccine, she felt that she was having difficulty swallowing. Denied respiratory distress. Some swelling felt in middle of throat. No fever, chills, pain, shortness of breath or wheezing.
COVID19 VACCINE (COVID19)	Emergency Room *	907289-1	facial swelling, numbness in face, red patches on neck and face.
COVID19 VACCINE (COVID19)	Emergency Room *	907294-1	dizziness, chest tightness, light headedness, SOB
COVID19 VACCINE (COVID19)	Emergency Room *	907295-1	Lightheaded, dizziness, flushed face, sweating
COVID19 VACCINE (COVID19)	Emergency Room *	907301-1	About 5 min after receiving the vaccine, I got dizzy, 15 min after I stumbled after I tried to stand up. I have not had breakfast so they thought could be low blood sugar, and gave me some trail mix with m&ms and water. About 40 min after that I stated jerking and then they called the MERT team (emergency) and was transferred to the ER. My speech was delayed. They gave me clonapin and it stopped maybe between 20-30 min later. I believe it was all caused my my PNES. Somehow the vax triggered it, it has been in control for over 2 years. After that I was just fatigued for 24 hrs later. Now I am fine
COVID19 VACCINE (COVID19)	Emergency Room *	907309-1	Patient descrived a metallic taste in her mouth 10 minutes after getting the COVID19 Vaccine. Soon after, she described the posterior left side of her tongue was feeling numb. No itching of throat, no swelling of lip or tongue. No respiratory or GI sympoms. No urticaria or pruritis. She was treated with loratadine 10 mg and famotidine 20 mg orally. She was observed for 2 hours with no progression or additional symptoms. She was discharged to home.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907321-1	First day I was in PPE I started to get really hot , trouble breathing , feeling flu like symptoms Second day . was extremely hot, trouble breathing again , Tiredness , chills, headaches ,
COVID19 VACCINE (COVID19)	Emergency Room *	907323-1	Patient was given covid vaccine, and within 3 minutes, began to develop tachycardia. Patient was placed in chair to be assessed, vital signs done. HR was 160 to begin, dropping to 140, and 117 when being transported to ED for evaluation. Patient stated that she felt like her chest was on fire, and heart was going to beat out of chest. Rapid Response Team called, and team responded, bringing patient to ED for closer evaluation. From the ER MD: 39 year old female patient who was a rapid response after receiving her Covid vaccination. She began to have palpitations and was tachycardic. She appeared to be very tremulous and anxious. She has no known history of allergic reactions. She denies recent illnesses including fevers and chills. Patient felt short of breath. She had an O2 sat of 100% on room air. Lorazepam 1mg po x1 dose ordered and was administered.
COVID19 VACCINE (COVID19)	Emergency Room *	907324-1	Patient felt like back of tongue swelling and itchy ~ 15 min after administration Patient received 12.5 mg Benadryl, 125 mg soul-Medrol in ED Sent home with an epi pen and steroids x 4 days
COVID19 VACCINE (COVID19)	Emergency Room *	907327-1	2-3 MINS after vaccINE Administered SHE BEGAN TO EXPERIENCE SHORTNESS OF BREATH FEELING OF A FUZZY TONGUE & DIFFICULTY SWalloWING. SHE WAS SEEN IN ED WHERE SHE GOT Benadryl & DECADRON
COVID19 VACCINE (COVID19)	Emergency Room *	907328-1	Patient c/o feeling dizzy + lightheaded 10 minutes after receiving vaccine. Treated in ER
COVID19 VACCINE (COVID19)	Emergency Room *	907329-1	Employee presented to COVID Clinic for Moderna COVID 19 vaccination 1st dose. Given to right arm. Left clinic after waiting 15 minute observation time. She returned to work and returned about 45 minutes reporting she was having difficulty taking deep breaths, numbness to bilateral extremities, abdominal discomfort and lightheaded, NO rash or hives noted. VSS stable A&O, Within a few minutes employee started vomiting, shaking, and C/O of severe abdominal discomfort, Epinephrine injection 0.5mg given to left arm. Employee transported to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	907330-1	Employee presented to COVID Clinic for Moderna COVID 19 vaccination 1st dose. Given to left arm. Left clinic prior to completing 15 minute observation time and told an MA in waiting area that she felt ill ot her stomach and having trouble taking deep breaths. Employee found in nearby Bathroom sitting on the floor, she had vomited, reported she was lightheaded, couldn't breath, shaking, abdominal discomfort sweating, attempted to move employee to wheelchair, did respond well to transfer to Wheelchair, She reported symptoms worsening: HA, abdominal pain and developed blotchy skin, hyperventilating, and dizzy. CODE Blue called, patient given Epinephrine injection 0.5mg patient sent to ER
COVID19 VACCINE (COVID19)	Emergency Room *	907331-1	Employee presented for COVID 19 vaccination: Survey reviewed, no history of Anaphylaxis reaction Moderna 1st dose given today to Left arm. She immediately developed Numbness to her body, chest tightness, and abdominal discomfort. Remained Alert and oriented, voiced concerned she felt like she was going to pass out. She developed blotchy skin to chest and neck area within minutes of injection. Patient sat in a wheelchair. Vital taken: BP 140/98 Pulse 123, given water to drink, tolerated well. She quickly reported she continued with above stated ymptoms, and continued with nausea, blotchy skin, heart racing and weakness. She was given 0.3mg of Epinephrine IM to right arm and taken to the ED
COVID19 VACCINE (COVID19)	Emergency Room *	907333-1	tingling in throat, swelling of tongue Became very anxious upper lip swelling
COVID19 VACCINE (COVID19)	Emergency Room *	907340-1	Development of flushing, hives, throat and tongue swelling, difficulty breathing, all developed within 30 min of administration, and resolved after admin of epinephrine and IM Benadryl.
COVID19 VACCINE (COVID19)	Emergency Room *	907352-1	lightheadedness & dizziness soon after receiving vaccine - went to ED for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	907370-1	I woke up at 2AM with a funny sensation in my esophagus, it felt tight and hot, the trouble breathing woke me up, I had chills, shaking, but no fever, extreme muscle weakness, I could barely walk steps. My main issue was the trouble breathing. Went to the ER and pulse/ox was 96/97 so it was good my oxy saturation was really good. They just observed me for some hours and by 5AM and I discharged and on Saturday I woke up ok but felt weak. I still feel some muscle weakness.
COVID19 VACCINE (COVID19)	Emergency Room *	907374-1	12 minutes after injection developed acute onset tachycardia with HR increase from 64 to 160s (monitored on apple watch), dizziness, flushing, tachypnea. No rash, no wheezing. BP 140s-150s/90s (baseline 110s/70s). HR improved to 100s-120s in ~30 minutes and remained elevated with symptomatic orthostatics for several hours. Monitored on telemetry for ~2 hours. EKG sinus tachycardia. Given 1L NS bolus, no further treatment required. HR 80s-90s upon discharge from ER ~4.5 hours after injection
COVID19 VACCINE (COVID19)	Emergency Room *	907378-1	Vaccine administered at 0800. 5-10 minutes later, patient reported tightness in throat and shortness of breath. Patient became dizzy, nauseous, diaphoretic, reclined back and elevated feet. Patient was taken to emergency department for further treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	907380-1	Chest tightness and arm heaviness starting from the left arm to the right arm, with a burning sensation in the chest. Brought to the ER.
COVID19 VACCINE (COVID19)	Emergency Room *	907381-1	Received vaccine aprox 0745 am 12/22/2020, aprox 09:00pm 12/22/2020 while at work onset tachycardia at rest 140's-150s, , chills, flushing, and light headiness. Employee continued to work through her 12 hr shift, she advised tachycardia persisted throughout the night 140s. She reported taking Tylenol at 3am, and chills resolved. She reported to Employee Health at 0730am 12/23/2020, vitals HR 142, BP 103/72 (she advised that was her normal BP), resp 14, Temp 97.2. She denies chest pain, shortness of breath, weakness, headache, cold symptoms, n/v/d. Advised the chills, flushing and light headiness had resolved, but the tachycardia continues. Employee denies any medical history, takes no daily meds, reports recovered from COVID early November. Discussed with Employee the need to seek higher level of care, she was escorted to the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	907421-1	Dizziness, Flush, Shortness of Breath

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907427-1	COVID vaccine admin 1645 around 1715 sudden onset heart palpitations feels like heart racing, employee heart rate was noted to be 170s, employee was escorted to the ED. 12/23/2020 1030 spoke with Employee she advised d/c from ED last pm, this am resting heart rate 90s, but 140's-150's with ambulation. Denies chest pain, shortness of breath, palpitations, cold symptoms, n/v/d. Has reported moderate fatigue this am.
COVID19 VACCINE (COVID19)	Emergency Room *	907437-1	Patient began with hives and itching all over. Patient given 50mg IM Benadryl Patient watched for 40 minutes. All sx improved.
COVID19 VACCINE (COVID19)	Emergency Room *	907438-1	Dizziness, nausea, vomiting. Elevated BP. Shortness of breath. Headache. Went to ER, improved with solumedrol.
COVID19 VACCINE (COVID19)	Emergency Room *	907440-1	I received the vaccine and the sat to wait the 15 minutes of observation. Within 5 minutes of receiving the vaccine I started to feel flushed and felt my heart rate increasing . They took my vitals and my heart rate increased to 175. I was taken to the Emergency room. Given IV fluids, IV benadryl, and monitored. My heart rate came down but continues to stat at 90-100s at rest. Almost 24 hours in now and I am very weak with no energy. I still get dizzy intermittently and my heart rate increases easily.
COVID19 VACCINE (COVID19)	Emergency Room *	907444-1	Tongue tingling and throat swelling
COVID19 VACCINE (COVID19)	Emergency Room *	907447-1	12pm started feeling fatigue and sickness throughout body. 3pm nausea. 6pm body aches and chills. Slept horribly like I was getting the flu. Up at 4:30am to go to work. Still fatigue, nausea, chills and some little bit of upper back pain, between shoulder blades. Went home early today from work.
COVID19 VACCINE (COVID19)	Emergency Room *	907456-1	c/o dizziness, HA, nausea, went to ED on 12/18 for tx, will f/u with rheumatologist on 12/21
COVID19 VACCINE (COVID19)	Emergency Room *	907469-1	Sensation of palpitations. Then, she felt warm and flushed.
COVID19 VACCINE (COVID19)	Emergency Room *	907473-1	Associate complained of headache and that she didnt feel well. Associate noted to have a swollen tongue and rapid response was called. Associate was taken to ED. HR 80. BP 100/70
COVID19 VACCINE (COVID19)	Emergency Room *	907476-1	c/o throat tightness, neck hot and tight about 8 minutes after injection. Gave EpiPen at 17:10 and taken by wheelchair to our ER. Employee states she was monitored and given 1 liter of IV fluids and benadryl. States she was discharged home about 3 hours later. Felt exhausted 12/22/20. Today feeling better. Planning to see primary MD 12/24/20 for follow up.
COVID19 VACCINE (COVID19)	Emergency Room *	907478-1	Seizure (Grand mal)
COVID19 VACCINE (COVID19)	Emergency Room *	907492-1	Vaccine recipient received COVID-19 Vaccine on 12/22/20 and 3 minutes after felt that they were going to pass out and developed dizziness and headache. Vaccine recipient was administered ketorolac 15 mg IV, acetaminophen 650 mg, IV fluids in the emergency department. Patient felt better and was subsequently discharged to home. During a follow-up phone call on 12/23, vaccine recipient reported that their symptoms have resolved and they were able to return to work.
COVID19 VACCINE (COVID19)	Emergency Room *	907494-1	Patient summoned nurse over while waiting 10 minutes post-vaccination. Stated felt heart racing and like she was alternating getting hot/cold however skin was warm, pink and dry on palpation. Radial pulse 140 bpm. SpO2 100%. Stated she had a history of anxiety; nurse reassured and distracted her which helped symptoms initially but then symptom of heart racing returned accompanied by dry mouth and numbness of upper lip. Was transported in wheelchair to ED by RN. Discharged from ED after 2 hour observation diagnosed as suspected anxiety attack; was instructed to follow-up with PCP and Employee Health regarding receipt of 2nd dose.
COVID19 VACCINE (COVID19)	Emergency Room *	907501-1	Patient presents palpitations
COVID19 VACCINE (COVID19)	Emergency Room *	907503-1	Employee complained of lightheadedness/dizziness after vaccination which was at 9:15am
COVID19 VACCINE (COVID19)	Emergency Room *	907509-1	Rash, generalized weakness
COVID19 VACCINE (COVID19)	Emergency Room *	907513-1	"Patient pre-medicated with diphenhydramine, albuterol, Claritin, and singulair. After roughly 10 minutes after administration the patient reported tingling in her lips and ""felt like she needed to use her inhaler"". Our administration station is in our front lobby, when the patient reported her side effect she was taken to the Emergency department for observation. The patient was hooked up to the monitor and a set of vitals were taken. On arrival she was tachy in the 100's with a BP of 140-90. On the repeat vitals in 15 minutes she was within normal limits. The patient was treated with Diphenhydramine 12.5 mg PO and Albuterol 2 puffs via spacer. The patient was observed for ~3 hours, the patient had mild angioedema and a numb tongue/lips. After resolution symptoms the patient was discharged from ED."
COVID19 VACCINE (COVID19)	Emergency Room *	907520-1	Nexk to my head feel really hot, nauseous, dizziness, high blood pressure, shaking feel Hot and cold
COVID19 VACCINE (COVID19)	Emergency Room *	907524-1	Reports had joint pain & shoulder pain, shortness of breath, pale-instructed to go to ED for medical treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	907526-1	Per Vaccine recipient approximately 4-4 1/2 hours after receiving vaccine she noticed facial swelling in and around nose, to neck area, to R elbow and a petechial rash near R elbow. She immediately took Benadryl and Pepcid and then went to ER for further evaluation, where she was given a dose of Zyrtec and 5 day course of Prednisone. She left ER with no further complication.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907528-1	History to allergic to IVP dye, after the covid vaccine and said felt itchy in face. Patient given dexamethasone 10 mg diphenhydramine 50mg ,epinephrine 0.5 mg and lactated ringers. Patient issue resolved and will be discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	907582-1	I received the vaccine at 1:40 PM in my left arm. They had me wait 15 minutes for observation. 15 minutes later, I left feeling fine. I went back to work. Around 2:15 I started getting chills. I ignored it thinking that I was psyching myself into it thinking about the shot. But then the nausea began. I was at work and started feeling horrible. I started cramping in my stomach. I was alone at work, and then I started throwing up. It started at 3:40. I left work at 4:30 with the most body wracking chills and went to the emergency room. I was violently heaving at this point and they rushed me into a room where I received an IV drip of fluids and anti nausea medication. It wasn't until after the medication was administered that I felt better. I would say this was around 5 pm. They sent me home with an anti nausea medication. I was released to go home around 730-8 PM. I felt so much better after the medication was administered.
COVID19 VACCINE (COVID19)	Emergency Room *	907584-1	"Patient reported a metallic taste on vaccine administration, after ~ 10 mins reported a tongue tingling. The patient was escorted to the emergency department for observation. Patient was slightly hypertensive 140's/90's which is not normal for her. Some of this could be attributed from the ""white coat effect"". The patient had no visible angioedema, just a mild rash on her trunk/upper torso/chest. The patient was treated with 50mg PO diphenhydramine and 40mg of Famotidine. The patient's symptoms resolved within 30 minutes of medications administered. Patient was discharged after ~ 2 hours in the ED."
COVID19 VACCINE (COVID19)	Emergency Room *	907587-1	Acute onset nausea and abnormal throat sensation shortly after receiving COVID vaccine. Hemodynamically stable in ED, saturating well on RA, did receive Epi .3 mg IM for concern of throat sensation, tolerated well.
COVID19 VACCINE (COVID19)	Emergency Room *	907589-1	Patient received Covid vaccine while sitting without issue. Within minutes of receipt of the vaccine he had a vagal reaction (fell off his chair). Initial eval was notable for supine position, pale face, HR in 30's, clammy skin, small lac to L forehead (not actively bleeding). Pt was alert and oriented initially then was noted to slow his speech/had decreased responsiveness <1 minute. He was then alert and able to answer all questions. Denies any past medical history, not on any meds, NKDA, no hx of reaction to vaccines. He denies any itching, rash, swelling, difficulty breathing/SOB/Wheezing, or GI sx. Exam remained unchanged with no objective signs of allergic reaction. His color improved as well and he reported feeling better, was able to sit up. He reports eating minimal breakfast this morning. Has a history vasaovagal reactions with blood draws. Decision made to call EMS for transfer for additional observation. EMS arrived at 1115 and transported patient to ER for observation.
COVID19 VACCINE (COVID19)	Emergency Room *	907610-1	Nausea, dizziness, states body feels like jelly, shaky. No vision changes or shortness of breath. Given oral Benadryl and oral Pepcid and discharged in stable condition after 2 hours.
COVID19 VACCINE (COVID19)	Emergency Room *	907613-1	The patient received the vaccine at about 1500, did wait 15 minutes for observation, and left around 1515 with no reported complaints. At around 1535 while driving home patient started having difficulty swallowing and contacted hospital advice nurse who referred the patient to the emergency department.
COVID19 VACCINE (COVID19)	Emergency Room *	907628-1	Employee received vaccine, stayed 15 minutes and left ?. came back within 5-10 minutes c/o throat tightness and difficulty breathing
COVID19 VACCINE (COVID19)	Emergency Room *	907637-1	Employee received vaccine, within 10minutes, c/o of weakness, dizziness, shaking.... no complaints of Shortness of breath or tightness... refused to receive any additional treatment. Continued monitoring for another 2 hours, no additional symptoms, then developed numbness and tingling around mouth and trouble swallowing.... sent to ER.
COVID19 VACCINE (COVID19)	Emergency Room *	907649-1	sent to the emergency room for body rashes and hives.; sent to the emergency room for body rashes and hives.; This is a spontaneous report from a contactable pharmacist. This pharmacist reported similar events for 4 patients. This is the 1st of four reports. Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907681-1	Lightheadedness; This is a spontaneous report from a contactable pharmacist. A 52-year-old male patient started to receive bnt162b2 (BNT162B2, lot number EJ1685), intramuscular from 19Dec2020 10:45 to 19Dec2020 10:45 at a single dose for an unspecified indication. Medical history included hypertension. The patient's concomitant medications were not reported. The patient experienced lightheadedness on 19Dec2020 11:00 and took ondansetron. The outcome of the event was recovered on 19Dec2020.
COVID19 VACCINE (COVID19)	Emergency Room *	907703-1	scratchy throat, stiff neck ,
COVID19 VACCINE (COVID19)	Emergency Room *	907705-1	Within 2 minutes of injection, I became tachycardic; shaky; a bit dizzy; This is a spontaneous report from a contactable consumer (patient). A 49-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 18Dec2020 07:15 AM at right arm, at SINGLE DOSE for covid-19 immunization. Medical history included anxiety and depression, allergies to IV dye, Bee stings. Concomitant medication included famotidine (PEPCID), diphenhydramine hydrochloride (BENADRYL), ergocalciferol (VIT D), acetylsalicylic acid (BABY ASPIRIN). The patient previously took levofloxacin (LEVAQUIN) and experienced allergy, ceftriaxone sodium (ROCEPHIN) and experienced allergy. The patient was not pregnant at the time of vaccination. Within 2 minutes of injection, the patient became tachycardic, shaky and a bit dizzy from 18Dec2020 07:15AM. These events resulted in Emergency room/department. No treatment was received for these events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The action taken in response to the events for bnt162b2 was not applicable. The outcome of the events was recovered in Dec2020. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect.
COVID19 VACCINE (COVID19)	Emergency Room *	907706-1	flushed 15 min post inj. tickle in throat then tongue tingling and raspy voice 20 min post inj.
COVID19 VACCINE (COVID19)	Emergency Room *	907708-1	employee received vaccine at 1525 1535 noted lightheadedness & shaky feeling. Hx of vasovagal responses to injections & blood draws. Denies SOB, difficulty swallowing, nausea (+) hand/fingers tingling - VS- tachycardia to 120, O2 sat 97% became syncopal to ED
COVID19 VACCINE (COVID19)	Emergency Room *	907738-1	Approximately 35 minutes after patient received the vaccine, she noted redness around her chest and neck, goin up to her face and both ears. Ears were swollen. She was transferred to the ED for evaluation, where it was noted that she had redness of her throat and chest with slight swelling of her lips. In the ED, she was given prednisone 40mg PO and famotidine 40mg PO. She was observed and discharged after ~90 minutes.
COVID19 VACCINE (COVID19)	Emergency Room *	907753-1	Severe dizziness and nausea 3 days after vaccine with fatigue for approximately 24 hours
COVID19 VACCINE (COVID19)	Emergency Room *	907756-1	I was tachycardic and hypertensive.
COVID19 VACCINE (COVID19)	Emergency Room *	907761-1	at 7 minutes after vaccine administered, reported feeling shaky and lips tingly, anxiety. Did not immediately notify monitoring staff thinking she was anxious, by 10 minutes after started to experience some coughs and felt voice changed, Epinephrine administered via EpiPen at 13 minutes post vaccination with immediate relief. No visible hives or swelling.
COVID19 VACCINE (COVID19)	Emergency Room *	907766-1	Starting the evening of the 5th day after receiving the vaccine I noticed a sore, irritated throat. By the 7th day it was a more severe sore throat, runny nose, violent sneezes and the beginning of a deep painful cough. No fevers have been noted to date, with the highest oral temperature of 98.6F on the 7th day. I called the employee hotline, had a virtual visit with a Dr and took the drive up COVID test around 11:00 am on 12/23/20. I am in self quarantine currently awaiting results of the COVID test.
COVID19 VACCINE (COVID19)	Emergency Room *	907771-1	After 15 min patient had tingling in her left arm all the way down to her hand, then started to travel to left side of face. 5 min later tingling started to travel to her left leg. Pulse ox- 96% HR 57. 1251- ED lead RN was then contacted to evaluate patient in the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	907781-1	Patient waited the mandatory 15 minutes and felt fine. Left for a few minutes and then came back in to the vaccine clinic with symptoms of lips tingling and possible her tongue swelling. She was given 50mg of PO Benadryl (Diphenhydramine) and was taken to the emergency department. Patient was monitored for 4 hours in the emergency department with no additional symptoms noted. Spoke with patient this morning, was still having some tingling of the lips but was being controlled with Benadryl. No problems breathing or swallowing
COVID19 VACCINE (COVID19)	Emergency Room *	907801-1	Vaccine recipient developed mild nausea, acid reflux, and stomach pain 10 minutes after vaccine administration. Vaccine recipient then developed nasal congestion and cough at 19 minutes, and then shortness of breath at 21 minutes. The vaccine recipient was then sent to the emergency department. While in the emergency department it was determined that the vaccine recipient had an allergic reaction. When vaccine recipient had shortness of breath the oxygen saturation went to 89-90%. The vaccine recipient received albuterol, diphenhydramine, famotidine, methylprednisolone, and fluids. During re-examination, the vaccine recipient's condition improved and stable. Vitals were within normal limits. 89-90. They were discharged to home. At follow-up phone call on 12/23/2020, the vaccine recipient reported that they felt much better but was still experiencing voice hoarseness.
COVID19 VACCINE (COVID19)	Emergency Room *	907802-1	15 minutes after getting the vaccine, she developed a pruritic rash over her neck, chest, and precordium. Also became tachycardic up to 130-140 (may be attributed to anxiety of having a rapid response called). She reported feeling a lump in her throat but no facial swelling or angioedema, no lymphadenopathy. Was treated with diphenhydramine 50 mg IV, famotidine 20 mg IV, and methylprednisolone 125 mg IV. After 1 hour of observation and ongoing feeling of lump in her throat with new mouth tingling, was also given 0.15 mg epi IM. Was observed with resolution over 8 hours, and discharged to home with instructions to continue treatment with oral prednisone, famotidine, and cetirizine over the subsequent few days.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907806-1	Patient presented for COVID-19 vaccine (Pfizer-Sars-COV2-vac), pt received the vaccine and then 15 minutes later started feeling some lumpiness in her throat, watery eyes, and ear fullness. Pt denied feeling any itchiness, difficulty breathing, lip swelling, or throat swelling. Pt received two doses of oral diphenhydramine 25 mg each without improvement in symptoms. Patient was observed for 1 hour and 20 minutes. After consulting with Dr., it was recommended to have the patient go to the emergency room for more observation. The patient was then escorted to the ER by one of the volunteering staff. In ED, reported throat tightness without SOB or difficulty swallowing. Also reports feeling sense of ingestion/gas bubble in chest. Had COVID, dx'd 12/1/20, recovered fully. States that sensation in chest was also felt during her COVID illness and seemed to be brought back by vaccine this afternoon approximately 90min pta, Observation for additional 90min in ED. with possible mild improvement, no progression/worsening. Discharged home
COVID19 VACCINE (COVID19)	Emergency Room *	907814-1	Several minutes after the injection, my right little finger was tingling. ~0815 I was driving home and lost function in my right little finger. The left side of my jaw felt tight, the left side of my tongue felt thick, and my vision was blurry in both eyes. I also noticed that my heart was out of rhythm and beating rapidly. I had a near syncopal episode. I began having mid-sternal chest pressure. I drove to my home - took 50mg of liquid Benadryl and had someone drive me to the ER. Symptoms started to resolve within 20 minutes of taking Benadryl. I was seen at Medical Center.
COVID19 VACCINE (COVID19)	Emergency Room *	907816-1	I had a cough , hives and a fever of 101
COVID19 VACCINE (COVID19)	Emergency Room *	907818-1	Within 15 minutes after the vaccine patient started to have tachycardia, dizziness, and light headedness with syncope episode. She was taken to the ER where she improved . No further syncope episodes and released.
COVID19 VACCINE (COVID19)	Emergency Room *	907834-1	Felt some palpitations, racing heart, scratchy throat, dizziness, a little shortness of breath. Alerted the professionals observing and was monitored. Starting feeling a little better, then got a second wave of above symptoms again. I felt tingly all over and my lips felt tingly. They ended up taking me to ER. I started to also feel nauseous. They ended up giving me 1L of fluid, 25mg of diphenhydramine, 125mg of solumedrol, and 20mg of Pepcid. Monitored me for a few hours and then discharged me home. I was instructed to take another 50mg of diphenhydramine before bed, which I did. I ended up missing work the rest of my shift since I was in ER, then missed work the next day.
COVID19 VACCINE (COVID19)	Emergency Room *	907836-1	About 15 minutes I started to get hives, skin reaction and felt chest pressure, I let Dr. know I wasn't feeling well, administered Epinephrine with own EpiPen, noticeable hives and redness across neck and upper chest. Transported to the ED. 2nd dose of Epinephrine at 1:20pm for throat swelling and bronchospasm.
COVID19 VACCINE (COVID19)	Emergency Room *	907847-1	lightheaded, dizzy, nausea, vomiting, tingling in the hands and face, diaphoretic, tachycardia
COVID19 VACCINE (COVID19)	Emergency Room *	907867-1	feeling off, shaky, swollen hand and arm on injection side. slight slurred speech
COVID19 VACCINE (COVID19)	Emergency Room *	907877-1	No side effects until 1PM on the 18th, hot flashes with dizziness and nausea, then I started feeling like I was going to pass out and then felt like the blood was rushing through my head. Also head headache. I received a shot of Zofran 4mg. 30 min later I was able to sit up and 10 min later I was able to stand without being dizzy. Still having waves of nausea. Body aches and flu like symptoms on Saturday. Right now only the nausea. Monday I was fine, but today it started the nausea and dizziness. No intervention needed today.
COVID19 VACCINE (COVID19)	Emergency Room *	907878-1	Patient received COVID vaccine at approximately 9AM this morning. Stayed 15 minutes after injection for monitoring, felt fine and returned to department. Employee returned at approximately 11:45AM with possible symptoms of reaction. Admitted to a headache that started approximately an hour after injection. Symptoms now include heaviness of arm, chest, feeling emotional, light headed. Vitals taken at 11:48 BP 150/86, P 79, R16 Pox 97. Oral Benadryl 25mg administered PO 11:50AM. EKG run. Patients symptoms progressed to include difficulty breathing and swallowing. Epi pen adult 0.3mg administered IM Left thigh at 12:13PM. Vitals checked at 12:13PM BP 188/90, pulse 97, pulse ox97. Called for emergency response for transport to ER. Pt remained stable until transport by EMS to ER. Employee health informed of patient transport. ER informed of patient transport.
COVID19 VACCINE (COVID19)	Emergency Room *	907883-1	general warmth and dry throat
COVID19 VACCINE (COVID19)	Emergency Room *	907887-1	Patient complained of a rush of feeling hot, symptoms progressed to feeling light-headed and dizzy. Skin was warm and dry. Experienced hypertension which got worse when told her blood pressure was high. Patient was transferred to the ED for further observation.
COVID19 VACCINE (COVID19)	Emergency Room *	907888-1	10 minutes after receiving the injection I was experiencing dizziness and lightheadedness. As I was moved to a new location I was still experiencing aforementioned symptoms in addition to feeling hot and nauseous and I vomitted. I was moved to the ER for further evaluation. I was given a COVID test, an EKG and my vitals were monitored. I was discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	907889-1	Nausea and dizziness within 5 minutes of administration, continued for 2 hours, transferred by private to ED for continued monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	907896-1	"About 12 minutes after receiving covid vaccine, pt felt like she had a lump in her throat. No difficulty breathing or swallowing. No facial swelling. Pt was evaluated by PA from urgent care. Pt was transferred to urgent care for antihistamine administration. Vitals remained stable. 12/23/20 @ 1212: Note copied from UC Visit: Diagnosis Allergic reaction (ICD10-CM T78.40XA, Working, Medical). Summary: 0916 ""Lump is still there but much smaller"" Still no sign of intraoral swelling 0925 Patient reports symptoms have almost resolved completely, comfortable going home. Instructed to take Zyrtec tonight before work and for the next couple of days and to go to hospital for SOB, worsening sensation of lump in throat. Patient verbalized understanding and is in agreement with treatment plan. Opportunity for questions was given, all questions answered.. Pharmacy: diphenhydrAMINE (Benadryl) AMB (Order): 25 mg, IM, InOffice."
COVID19 VACCINE (COVID19)	Emergency Room *	907901-1	tachycardia, dizzy, dry mouth

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	907907-1	Right sided jaw pain started 12/22/20 in the AM progressed through the evening. When I woke I had numbness and weakness on the right side of my tongue which I quickly realized included the lower portion of my right face. An ER trip and a CT scan confirmed it was Bells Palsy. The upper portion of my face has is now included in the weakness and paralysis.
COVID19 VACCINE (COVID19)	Emergency Room *	907911-1	Patient with past medical history significant for thyroid cancer was given Pfizer COVID-19 vaccine at approximately 1430 at our facility. After receiving vaccine patient felt flushed, face hot, felt something squeezing neck (similar to tight collar). 25 mg PO diphenhydramine given X 1. Patient having shivering on and off. Felt swelling progress up into back of throat. Had to clear throat and swallow harder. At 1511 patient was checked into the emergency department at our hospital. At 1527 famotidine 20 mg IV once given. BP was found to be 232/100. Amlodipine 5 mg IV once given at 1909. Labetalol 10 mg IV once given at 1812, labetalol 20 mg IV once given at 2034, clonidine 0.1 mg PO once given at 2127. Patient sent home at approximately midnight. Diagnosed with possible anaphylaxis and hypertensive urgency (no history of HTN).
COVID19 VACCINE (COVID19)	Emergency Room *	907914-1	Patient complained of a rush of feeling hot. Patient was laid supine, VS monitored. Patient was transferred to the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	907915-1	Right after patient was given vaccine injection he started to feel lightheaded and woozy. He had just worked the night shift and hadn't eaten anything. No prior illness reported. Patient brought to emergency department to be evaluated. Received 500ml of fluids and symptoms resolved and he went home. Diagnosis of near syncope.
COVID19 VACCINE (COVID19)	Emergency Room *	907919-1	Diffuse hives started ~ 12 hours post vaccine, progressively worsened to involve entire body, and required solumedrol & antihistamines at an Urgent Care visit
COVID19 VACCINE (COVID19)	Emergency Room *	907922-1	Patient reports shortness of breath and persistent cough.
COVID19 VACCINE (COVID19)	Emergency Room *	907924-1	45-60 minutes post vaccination, patient experienced right eye twitching continuous for a few hours, then intermittent x 24 hrs; now resolved 12 hours post vaccination, patient experienced right ear/jaw numbness that lasted up to 36hrs 36 hrs post vaccination, the numbness is spreading to the right cheek no affect in muscle function, just numb pt seen at urgent care facility 12/23 @~0830 and prednisone initiated
COVID19 VACCINE (COVID19)	Emergency Room *	907926-1	Lightheadedness, tingling extremities and dizziness
COVID19 VACCINE (COVID19)	Emergency Room *	907932-1	Lip and tongue tingling
COVID19 VACCINE (COVID19)	Emergency Room *	907943-1	1 hr post administration patient developed urticaria, pruritus
COVID19 VACCINE (COVID19)	Emergency Room *	907973-1	11am on the 20th I noticed pain on my back torso and it came around to the left of my abdomen and was told it was textbook shingles rash and was prescribed valacyclovir 1gram 3x daily for one week, the pain is now mild and I can treat it with tylenol and I've only had to take it once, the rash is still there but it's not spreading I started the medication at 3pm after seeing the dr
COVID19 VACCINE (COVID19)	Emergency Room *	907991-1	Severe vertigo, nausea and vomiting, and weakness presented to emergency department after 8 episodes of vomiting over 12 hours with no relief
COVID19 VACCINE (COVID19)	Emergency Room *	907996-1	Felt sick , sedated , as if she was going to pass out.
COVID19 VACCINE (COVID19)	Emergency Room *	907999-1	10 minutes after receiving the vaccine, I became tachycardic. Heart rate was in the 150s. I believe the rest of my vital signs were normally initially, but about 10 minutes after the tachycardia started, my BP was 170/110. I remained tachycardic so was sent to the ER. I continued to have waxing and waning tachycardia during my ED stay. Per MD, EKG, BMP, CBC were all normal. I did not receive any medications. After about 3 hours of monitoring, my heart rate was under 100 at rest so was discharged home. For the next 24 hours, with minimal exertion (talking, walking on flat surface) my heart rate would elevated into the 110-120s. 48 hours after vaccine, my heart rate returned to normal. I will be following up with cardiology 12/28/2020
COVID19 VACCINE (COVID19)	Emergency Room *	908002-1	Shortly following vaccination, developed redness, skin rash, itchiness, dizziness and anxiety. Was given diphenhydramine 25mg with no relief and began worsening - walked over the Emergency Department in same building and treated there with the following: Solu-Medrol 125 mg IV Push, Diphenhydramine 50mg IV Push, and Prednisone 40 mg by mouth. Symptoms began to improve within about an hour and was given a prescription for Prednisone 20 mg Po X 3 days.
COVID19 VACCINE (COVID19)	Emergency Room *	908003-1	ANAPHYLACTIC REACTION, SOB, CHEST PRESSURE, TIGHTNESS IN THROAT, TACHYCARDIA
COVID19 VACCINE (COVID19)	Emergency Room *	908026-1	Received the COVID vaccine, after the 30 min observation time she left the area and returned about an hour after her administration with complains of Shortness of breath, tightness in chest, elevated BP, Flushing and rash on upper extremities and neck.
COVID19 VACCINE (COVID19)	Emergency Room *	908027-1	Received the COVID vaccine, after the 30 min observation time she left the area and returned about an hour after her administration with complains of Shortness of breath, tightness in chest, elevated BP, Flushing and rash on upper extremities and neck.
COVID19 VACCINE (COVID19)	Emergency Room *	908029-1	An 1 h and 20 mins after vaccine was given, driving home and felt some difficulty swallowing. Was able to drink water no difficulty but unable to do swallow without the aid of water. No SOB, some tachycardia. Went to closest ED.
COVID19 VACCINE (COVID19)	Emergency Room *	908033-1	I had dyspnea and palpitations started about 5 minutes after vaccination, lasted about 2 minutes. I had similar another episode after about 9-10 minutes after vaccination which is less severe compare to first one. I was sent to ER after second episode for close monitoring. No event on tele monitor in ER.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	908035-1	Patient presented to ED 1 day after administration of COVID-19 vaccine. She had rigors and chills the day before and day of ED presentation. Denies having a fever prior to ED presentation but did note general body aches and nausea. Patient also had 1 episode of vomiting on 12/22. Patient's vital signs were BP 145/109, HR 75, RR 20, O2 sat 96, temp 98.7F. Receive IV bolus of NaCl 0.9% 1,000 mL in ED in addition to ketorolac 15 mg, and ondansetron 4 mg. Patient was discharged home from the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	908039-1	Calling in to report itching and rash after Pfizer COVID vaccination. she received a vaccination on December 18th and started having symptoms that same day. She contacted the emergency room where she received the vaccine and they told her to take Benadryl. Since that time the itching and rash has progressed and now she is having some difficulty swallowing. No difficulty breathing or speaking.
COVID19 VACCINE (COVID19)	Emergency Room *	908043-1	mild chest tightness, cough, feeling anxious and lightheaded minutes after receiving the shot pt received: Benadryl 25 mg iv push Solumedrol125mg iv push Normal saline 1000ml IVpb
COVID19 VACCINE (COVID19)	Emergency Room *	908044-1	"PT WAS ADMINISTERED MODERNA VACCINE AT HD ON 12/23 AROUND 1540. PT HAS EXTENSIVE HISTORY OF ALLERGIC REACTIONS (HEP A VACCINE AND TREE NUTS). PT ALSO COVID + ON 12/8/20 . HX REVIEWED WITH HD RN PRIOR TO ADMINISTERING. PT WAS ADVISED TO WAIT 30 MIN IN WAITING ROOM. EMS STAFF ON SITE FOR CLINIC. PT STARTED COMPLAINING OF ""ITCHY MOUTH"" AROUND 1620 AT WHICH POINT EMS ATTEMPTED TO ESCORT PT TO PERSONAL VEHICLE TO DRIVE HER TO LOCAL ED. PT MADE IT TO THE THE VEHICLE BUT DEVELOPED INCREASED RESPIRATORY DISTRESS AND AIRWAY RESTRICTION. AMBULANCE WAS CALLED. EMS ADMISNTERED .3ML EPI AT 1631 AND APPLIED 8L O2 VIA MASK. ABUMBULACE ARRIVED AT 1636. PT TAKEN TO LOCAL ED VIA AMBULANCE"
COVID19 VACCINE (COVID19)	Emergency Room *	908054-1	"The evening after she received the vaccine, she had a HA and stomach distress. She reports waking up frequently due to sweating. On 12/22/20, her symptoms continued and got a bit worse - including soreness at the injection site with continued stomach distress and HA. She took ibuprofen 400 mg PO TID. Was unable to eat food, only drank Sprite. During the early morning hours of 12/23, was unable to sleep due to severe pain in right upper arm. She felt a ""pulling sensation"" and felt an enlarged lymph node under her arm. It was very ""tight"" - she was able to come to work - sent to the ED for evaluation - found to have BP slightly above her normal range, mild tachycardia. Was released and told to continue symptomatic treatment and to call or come in if symptoms worsened."
COVID19 VACCINE (COVID19)	Emergency Room *	908060-1	10 minutes after vaccination received, pt complained of fullness feeling in throat and itchy ears and head. Epi given, pt transferred to ED, rec'd another epi and IV fluids. Discharged after a few hours.
COVID19 VACCINE (COVID19)	Emergency Room *	908061-1	Patient flushed red and felt nauseated within 60 seconds of administration. Complained of difficulty breathing, became blotchy and began crying. Called 911. Paramedic on site for his own vaccine assisted. Airway sounded restricted. Administered 0.3 mg Epinephrine (Epi Pen). Color improved. Blotchy patches improved. EMS arrived. Breathing became more labored. They took her to we assume was regional hospital
COVID19 VACCINE (COVID19)	Emergency Room *	908062-1	Age: 43 years 12/23/2020 12:21 Chief Complaint: ALLERGIC REACTION History of Presenting Illness: This 43 yo female presents from specialty clinic for an allergic reaction. Patient has just received the Moderna Sars-Cov2 vaccine. She has had covid in the past, and her Igg tested outpatient was positive at 5.2 (per patient). She had received the vaccine at 11, and says that she usually has a reaction to vaccinations and drugs. She began having some rash around the neck and felt like her throat was closing. She was brought to the emergency room.
COVID19 VACCINE (COVID19)	Emergency Room *	908066-1	Pt was vaccinated at Conference room COVID19, with PfizerBionTech vaccine, Lot# EK 9231, at 1258 hours, while waiting in monitoring area, complained of rash and facial flush at 1305 hrs, initially given PO Benadryl by APP's at 50 mg for the rash and seen by me at 1306 hrs and got vitals. BP 160/110, HR 120 -130, SpO2 was 100% on room air, not complaining of shortness of breath, no stridor noted, tachycardia noted with regular rate and full bounding pulse, no wheezing noted bilateral lung fields, initiated early response call for eICU staff, also initiated potential call for inhouse and 911 call as back. At 1315 hours she had mild chest discomfort, tightness and felt dryness of throat. Rash not significantly visible on chest, facial flush present, decided to go ahead and gave epinephrine 0.3 mg IM to right deltoid as she was a unitard Stat suit. She was put on continuous monitoring, had response from eICU (Tele-ICU) team and Dr., SBP still noted to be elevated to 160's and DBP 110, Pulse still around 130, additionally IV access was secured, given IV Solumedrol 125 mg and IV Pepcid 20 mg. She felt somewhat better, still felt very anxious, with chest tightness, EMS on site by 1340 hrs and moved to ED by 1400 hrs, was with patient all through and transitioned to ED care To Dr. When last discussed her condition, was still stable noted at 1745 hrs in discussion with ED RN, with still persistently elevated BP and heart rate. No clear cut evidence for typical anaphylactic reaction. Treatment and observation still ongoing in ED.
COVID19 VACCINE (COVID19)	Emergency Room *	908068-1	chest tightness, throat closing in, sent to Emergency room
COVID19 VACCINE (COVID19)	Emergency Room *	908069-1	developed dizziness, palpitations, shaky, headache
COVID19 VACCINE (COVID19)	Emergency Room *	908071-1	hand shaking, chills, rash, nausea, lightheadedness ? reports hard to take a deep breath, given diphenhydramine 50 mg PO x 1 @ 10:15 in clinic and an additional 25 mg PO x 1 @ 10:30 in the clinic. Symptoms persisted - pt anxious - taken to ED for evaluation. After 10-15 minutes in ED, her symptoms subsided ? she only had mild tingling in the left hand along with two red spots on the back of her neck. Given prednisone 50 mg PO x 1 in ED. observed in ED for 2 hours ? pt feels much better ? pt felt comfortable going home ? told to continue to take Benadryl and prednisone for next 3 days. Instructions given to return to ED for any worsening of symptoms. Rx with Prednisone 50 mg daily x 3
COVID19 VACCINE (COVID19)	Emergency Room *	908079-1	Pruritus - Benadryl given at COVID vaccine area. Relieved. Symptoms advanced after the caregiver went back to work. Called vaccine provider. Went to ED. Received Solu-medrol and Epinephrine. Released in stable condition
COVID19 VACCINE (COVID19)	Emergency Room *	908084-1	Benadryl given at COVID vaccine area. To ED received Ativan, Decadron, Pepcid, Benadryl, and 2L NS.

COVID19 VACCINE (COVID19)	Emergency Room *	908097-1	Right side of body (leg foot hand arm cheek neck torso ear, etc.) experienced tingling sensations, numbness, some burning sensations, mostly cold feeling, weakness (like moving through water) sensations have lessened in two days, but minor sensations and weakness persist. Monday (12/21/2020) visited the E.R. for exam and testing. E.R. doctor reported current testing normal. 12/23/2020 visited normal MD to go over results from previous testing and get checkup.
COVID19 VACCINE (COVID19)	Emergency Room *	908098-1	Diagnosed with UTI Sat 12/19/2020 at Urgent Care Monday 12/21/2020 returned to urgent care for fever, flank pain, no relief from urinary symptoms, later went to Hospital for treatment Today 12/23/2020 have severe body pain, extreme fatigue, still having urinary symptoms; unable to do daily activities such as grooming and dressing without assistance
COVID19 VACCINE (COVID19)	Emergency Room *	908101-1	Patient stated that he had blurred vision. He was taken to the Emergency Dept at the Hospital where his vital signs were monitored to include blood pressure, pulse and oxygen. After 1 to 1.5 hours of observation, patient stated that he was no longer experiencing any symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	908109-1	Difficulty breathing, no oral swelling, stridor, altered mental status. Bag valve mask ventilate. IM epi. Initial care by MD and nurse. 911 ACLS called, transported to ER.
COVID19 VACCINE (COVID19)	Emergency Room *	908112-1	swelling of tongue, lips, throat
COVID19 VACCINE (COVID19)	Emergency Room *	908125-1	30 mins after vaccination Felt rapid heart rate, tingling in lips, initial BP 100/60
COVID19 VACCINE (COVID19)	Emergency Room *	908126-1	Patient felt warm and had some tightness in her chest which subsided and changed to intermittent sharp pain at sternum. Physician's who had just received vaccine asked for her to be sent to the ER.
COVID19 VACCINE (COVID19)	Emergency Room *	908127-1	Severe whole body myalgia and weakness with inability to stand or walk without significant pain and weakness. Unable to work or do ADL. Doctors not sure what to do. Have seen pcp and ER with still severe pain and weakness over three days
COVID19 VACCINE (COVID19)	Emergency Room *	908132-1	"About 10 min after receiving the vaccination, the patient described feeling of throat closing, coughing. Patient given IM epi with initial improvement in symptoms. No rash. On arrival to ED, no stridor, no oropharyngeal swelling, speaking normally in full sentences, clear lungs. Subsequently, patient complained of nausea, but resolved after Benadryl. Patient had recurrent "funny feeling" in throat about 3 hours into observation and had difficulty swallowing liquids, but had normal speaking voice normal oropharynx. Currently pending ENT evaluation."
COVID19 VACCINE (COVID19)	Emergency Room *	908135-1	Employee reported reaction of hives approx 2 hours and 12 minutes after getting the covid vaccine. She was administered epipen and was sent to the ED. The ED observed her and then discharged her.
COVID19 VACCINE (COVID19)	Emergency Room *	908144-1	hot all over her face, followed by itchiness on her face, tongue and throat. denies any shortness of breath or chest pain. She denies any difficulty speaking or swallowing
COVID19 VACCINE (COVID19)	Emergency Room *	908148-1	rash, vomiting, nausea, hives, migraines, tremors, facial swelling
COVID19 VACCINE (COVID19)	Emergency Room *	908150-1	"Pfizer-BioNTech COVID 19 VACCINE EUA- within 2 minutes felt tingling on the tongue and then tingling around the mouth. Within five minutes, itching of the face that spread to scalp and neck. Continued to increase itching during the 15 minute observation time. Sensation of heart in my "throat" upper chest. Slightly light headed. Nausea 15- 20 minutes after receiving injection. Headache. Given 50 mg Benadryl IM that resolved symptoms of itching within 5-10 mins. Observed in ER x 1 additional hour. BP 149/90 approx. HR 88, estimated from .memory."
COVID19 VACCINE (COVID19)	Emergency Room *	908156-1	"She exhibited no symptoms immediately after the shot and began driving home at approximately 6:30 pm. As she was driving home, she gradually developed perioral numbness with the sensation of a "gummy" throat and bilateral eye "warmth and numbness", "
COVID19 VACCINE (COVID19)	Emergency Room *	908157-1	Initially started with nausea around min 5, shortly after then itching on arms. Around min 15 ?lump? sensation in throat. Around min 20 swelling of tongue, worsening feeling in throat, wheezing, itching around mouth. Sent to ER, received IM Epi, IV: Steroids, Benadryl, Zofran, Pepcid, Albuterol inhaler.
COVID19 VACCINE (COVID19)	Emergency Room *	908163-1	sat 12/19/20, approx 2000, started to feel hot, burning, and itchy. went to emergency room 12/20/20 at 1200pm, was taking Benadryl since onset of symptoms, given peptid, loratadine, and have continued these medication as directed, called PMD, given hydroxyzine 12/21/20 due to severe itching and burning feeling, and currently taking as directed,
COVID19 VACCINE (COVID19)	Emergency Room *	908177-1	Patient reported numbness on left side of tongue, being lightheaded, rash under chin and excessive secretions in the throat within 15 minutes of covid-19 vaccine administration. Vital signs were stable, O2 was 98% and BG was 225. Patient reported not taking his DM and BP medication prior to vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	908186-1	My jaw felt numb. I was lightheaded, and a felt nauseated
COVID19 VACCINE (COVID19)	Emergency Room *	908189-1	"Pt states night of vaccine on 12/22 she felt dizziness and "incoherent". This resolved by 12/23 and today is experiencing headache "10" on 0-10 pain scale, fatigue. Advised Urgent Care or ER and pt has declined."
COVID19 VACCINE (COVID19)	Emergency Room *	908207-1	Patient experienced an anaphylactoid reaction within 20 mins of receiving the vaccine. Patient is a physician and attempted to self treat with diphenhydramine. After a short time of seemingly no resolution patient presented to the Emergency Department. Patient was examined. Elevated BP was noted (192/100), flushing, difficulty swallowing, and strange sensation of mouth and tongue were also present. An ECG was preformed and sinus tachycardia was observed at 105bpm. Patient received IM epinephrine and PO dexamethasone. Symptoms resolved. Patient was observed for 3-4 more hours.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	908212-1	Edit: about an hour after my vaccine I began itching on my neck and got a scratchy throat. Then felt blisters in my mouth and felt a tingly feeling on my face. I had swelling in my eyes, jaw, lips, nose and tongue. And hives on my neck and chest. I went to my local ER and was given IV PEPCID, benedryl and a steroid. Swelling came down significantly and I was discharged home after about 2 hours with a steroid dose pack, Claritin and Pepcid. I now have a strong migraine.
COVID19 VACCINE (COVID19)	Emergency Room *	908221-1	Hives, joint pain, elevated B/P, elevated HR, flushed upper body and tingling
COVID19 VACCINE (COVID19)	Emergency Room *	908223-1	Warm and dizzy with hypotension; feet up and juice given; transported to ED; improved with rest
COVID19 VACCINE (COVID19)	Emergency Room *	908224-1	Throat felt tight and sticky, difficulty swallowing, anxious, tingling from waist up
COVID19 VACCINE (COVID19)	Emergency Room *	908227-1	The patient is a 57 year old female who presents to the ED with an allergic reaction. Patient received her COVID vaccine this morning at a vaccine POD at 0708, 5 minutes after receiving the injection she began to feel short of breath, with dry cough and felt tightness in her throat. Patient used her inhaler at that time and then her symptoms improved. Of note patient also took a Benadryl prior to receiving the vaccine because she has a history of allergies (reports allergy to codeine). She was evaluated by people at Covid vaccine site and cleared. She went to work at the clinic where she works as a tech but continued to have tightness in her throat, so a doctor at the facility told her to take another Benadryl. Patient states that an hour after taking the second dose of Benadryl she began to feel drowsy and nauseous. She had a sip of coffee and try to eat something but then became tremulous and vomited. She was given epinephrine at work and transferred here for further work-up and management. On arrival patient reports that she feels back to baseline. She denies at any time having any rash, pruritus, or angioedema.
COVID19 VACCINE (COVID19)	Emergency Room *	908263-1	"started to feel a warmth in her chest and abdomen; She felt like her heart was racing; Developed chest pain; This is a spontaneous report from a contactable other HCP (healthcare professional). A 45-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot #: EJ1685), intramuscularly in the left arm on 18Dec2020 at 15:30 (at the age of 45-years-old) as a single dose for COVID-19 vaccination. Medical history included known allergies to apple, cantaloupe, peach, avocado and IV contrast dye; all from unspecified dates. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included ongoing famotidine and salbutamol (ALBUTEROL HFA) as needed (PRN); both for unknown indications from unknown dates. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously received hydromorphone (DILAUDID) and triamcinolone acetonide (KENALOG); both from unknown dates to unknown dates for unknown indications and experienced allergy. The patient also previously received diphtheria vaccine toxoid/pertussis vaccine acellular/tetanus vaccine toxoid (Tdap) vaccine on an unknown date for immunization and experienced allergy. On 18Dec2020 at 15:45, the patient started to feel a warmth in her chest and abdomen, she felt like her heart was racing, and developed chest pain. It was reported that ""patient started to feel a warmth in her chest and abdomen. She felt like her heart was racing. Developed chest pain. No shortness of breath or difficulty swallowing"". It was unknown whether the patient received any treatment for the events. It was reported that the adverse events resulted in emergency room/department or urgent care visit. It was also reported that the events were non-serious and did not cause or prolong hospitalization. The clinical outcomes of the events started to feel a warmth in her chest and abdomen, she felt like her heart was racing and developed chest pain were all unknown. It was unknown whether the patient had been tested for COVID-19 since the vaccination."
COVID19 VACCINE (COVID19)	Emergency Room *	908277-1	flush; fast heartbeat (120bpm); rash; nausea; dizzy, lightheaded; feeling unwell; This is a spontaneous report from a contactable consumer (patient). A 25-year-old female patient (pregnant: no) received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date unknown) via an unspecified route of administration at arm left on 19Dec2020 11:45 at single dose for covid-19 immunization. The patient medical history was not reported. Concomitant medication included celecoxib (CELEXA), ethinylestradiol and etonogestrel (NUVARING) received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient previously took cefalexin(KEFLEX) and cefdinir(OMNICEF) and experienced allergies. The patient experienced flush, fast heartbeat (120bpm), rash, nausea, dizzy, lightheaded, feeling unwell on 19Dec2020 12:00 PM, the events resulted in emergency room/department or urgent care. Treatment of Benadryl received for the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovered in Dec2020. Information on the lot/Batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	908288-1	had 1 episode of shortness of breath; tachycardia; dizziness / light headedness; This is a spontaneous report from a contactable consumer reporting for herself. This 29-year-old female patient (non-pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 19Dec2020 at 15:30, at single dose, for COVID-19 immunization. No other vaccine was given within 4 weeks prior to the COVID vaccine. Medical history was not reported. The patient was not diagnosed with COVID before vaccination. Concomitant medications included vitamin C and sambucus nigra fruit (ELDERBERRY) and unspecified multivitamin and immune support. On 19Dec2020 at 23:30 the patient experienced one episode of shortness of breath, tachycardia, dizziness. Lasted for about 20 minutes and totally resolved within 1.5 hours. Continuing to have light headedness 24 hours after. Emergency room/department or urgent care required. No treatment was given. COVID was tested post vaccination on 20Dec2020 via nasal swab (rapid test), with negative result. The events were resolving. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	908342-1	Seizure witness by wife who is a physician. Bit tongue. No history of seizure or other neurologic disease.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	908346-1	Received Covid 19 vaccine on left deltoid via IM. I felt warm in my left deltoid immediately after the injection. While I was sitting in the recovery area I started feeling palpitations and Shortness of breath. I actually felt I was going into cardiac arrest. Personnel started assessing me and upon checking my vital signs my SBP was in 150?s-160?s and DBP was in 100?s range. Normally my BP ranges in 110?s. I also started feeling numbness on my left arm. My bilateral lower extremities were also numb, tingling, burning and very weak. I was not able to stand up and bear weight. I then was taken to the ED where blood work was done and ATIVAN Po was given. I was then discharged at 2325. The next morning, I felt my legs are still heavy and sore. They are still very heavy and sore while I am writing this and I feel like they will buckle when I walk.
COVID19 VACCINE (COVID19)	Emergency Room *	908347-1	lip swelling, eye lid swelling began approximately 36 hours after vaccination. Patient presented to ED and was treated with benadryl, protonix and prednisone. Plan to discharge home with the same
COVID19 VACCINE (COVID19)	Emergency Room *	908354-1	On day of vaccine, had migraines, took Excedrin yesterday for HA, Nausea started yesterday afternoon. Today feeling tired, chest tight, SOB.
COVID19 VACCINE (COVID19)	Emergency Room *	908383-1	The patient had a fever of 101.8 with increasing body aches. She was advised to go to the emergency room and her fever was 104 at the time of arrival. The patient received IV fluids and was discharged after being monitored.
COVID19 VACCINE (COVID19)	Emergency Room *	908390-1	fever 101.1F mild headache body aches flu like symptoms
COVID19 VACCINE (COVID19)	Emergency Room *	908398-1	Nausea, Lightheaded, sweating, dizziness, increased blood pressure, left ear pain and left tonsils felt swollen, felt ?off?
COVID19 VACCINE (COVID19)	Emergency Room *	908400-1	STARTED SOB AND DRY COUGH AND RASH WITHIN 15 MINUTES OF VACCINE
COVID19 VACCINE (COVID19)	Emergency Room *	908401-1	Vaccine administered at 0730. Pt went home and went to bed. Woke up at 0930 with shaking, chills and feeling like she was going to pass out. Evaluated in ER and noted to have sinus tachycardia in 140-160's. Given 5mg IV Lopressor which took heart rate down to 110's. Admitted to hospital 12/23/2020.
COVID19 VACCINE (COVID19)	Emergency Room *	908406-1	Employee developed face/neck flushing, pruritis, and shortness of breath following receipt of COVID-19 vaccine.á There was no swelling of the lips, tongue, or throat.á She was moved to the ED for additional monitoring (not registered).á She was monitored for an additional hour in the ED.á Her flushing decreased and SOB improved.á She was released from the ED with no intervention needed.á The patient had a history of allergic reactions to multiple injectable meds and vaccines in the past.
COVID19 VACCINE (COVID19)	Emergency Room *	908410-1	Some Nausea, Headache, facial itching
COVID19 VACCINE (COVID19)	Emergency Room *	908412-1	Lightheaded, Dizziness, Tachypnea, Tachycardia, Diaphoresis
COVID19 VACCINE (COVID19)	Emergency Room *	908419-1	Patient felt flushed and hot and felt a sudden headache start. Escorted to a bed to lay down. Ice packs applied to forehead and neck. BP 137/87, pulse 92, RR 20, temp 98.2. Rapid Response team called. Patient drank apple juice. When asked about a hx of reactions, patient stated she had a hx of reactions to T-dap, Hepatitis, A, and flu. She stated her reactions usually occur 2 hours after the vaccines and has a high fever of 103.0F with chills. She stated she had pre-medicated with 1 gram of Tylenol prior to coming to the COVID vaccination clinic. Repeat vital signs BP 138/89, pulse 94, RR 22. No improvement on how she felt and was transported to the ED via wheelchair.
COVID19 VACCINE (COVID19)	Emergency Room *	908428-1	Patient said she felt burning hot inside and her throat had a tickle. Shortly after that, she said she felt nauseous. She was taken to the emergency department for further evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	908431-1	I premedicated prior to injection with benadryl 50mg po and otc pepcid. Approx 25 minutes post injection felt some very mild chest pressure that slowly developed to moderate pain scale 4 over a period of approx 2 hours then returned to a mild pressure once again, all left sided and no radiation of pain noted. At approx 430pm the pressure began to increase again and became painful at approx a 5 on the pain scale, it was then I developed diaphoresis,dizziness and severe nausea/vomitting., Bright green bile appearing vomitus. Went to ED where I was given IV,Zofran 4mg x 2 doses,Reglan 10mg IV and contiued go vomit violently. Recd prescriptions for antiemetic and dc home to ride out the vomitting.
COVID19 VACCINE (COVID19)	Emergency Room *	908457-1	patient felt tremulous and lightheaded after receiving the vaccine. patient had worked the overnight shift immediately prior to receiving the vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	908464-1	Patient received the COVID-19 vaccine. Patient described feeling dizzy and light headed. Patient placed on floor. Syncopal event / vaso-vagal. No signs of anaphylaxis or allergy, but epipen 0.3mg was administered. antibiotic IV line placed for access if needed. Patient taken to ED for observation. Returned to duties within 1 hour of the event.
COVID19 VACCINE (COVID19)	Emergency Room *	908465-1	Slight numbness in L cheek and inner L lip, symptoms worsened on the way home, seen in the ED (6:23PM), MRI completed, diagnosed with Bell's Palsy, discharged home (10PM)
COVID19 VACCINE (COVID19)	Emergency Room *	908468-1	Caller stated after vaccine about 45minutes she began having pain in the neck down into her right arm with hives. Next day she had fever, shortness of breathe and extreme pain in injection site. Caller is not getting second vaccine due to bad reaction. Vaers report was completed successfully online.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	908471-1	I was very tired at 18:30 after receiving the vaccine at 14:29. I went to bed at 18:30 that night awoke at 3 am for work and was still very tired and body aches. I was driving to work and notice that I was having a delayed reaction to such things as I was looking at Christmas lights and had to remind myself I was driving. The drive to work otherwise I do not remember. I felt as if I was just not processing things around me correctly. At work the symptoms were intermittent. The thought process or lack of continued. I began to have stomach pain felt like diarrhea coming on however I never had it. Then nauseated and thought I was going to throw up and felt like I was going to pass out. The passing out feeling continued until I had my coworker call a rapid because I knew my blood pressure was dropping and my hear rate became slow and I was passing out. I was then taken to the emergency room to where I continued to experience orthostatic blood pressure changes and bradycardia and hypotension. I was given fluids and potassium IV and was feeling slightly better. I went home and slept for the next 18 hours. When I did briefly awaken through the evening I had an elevated temperature 102, chills and an extreme headache and body aches. Today I awoke at 6 am and still sluggish with a slight headache and absolutely no appetite.
COVID19 VACCINE (COVID19)	Emergency Room *	908473-1	dizziness, nausea, heart racing
COVID19 VACCINE (COVID19)	Emergency Room *	908475-1	Systemic: facial and tongue swelling and tingling-Medium
COVID19 VACCINE (COVID19)	Emergency Room *	908483-1	"After employee took a hot shower 5 hours after receiving the vaccine, she experienced sensation of lump in throat and facial flushing. COVID19 VACCINE (COVID19)	Emergency Room *	908550-1	Patient was driving back to work. Became tachycardic during the drive and pulled over to a local pharmacy. She self administered 50mg of diphenhydramine and took her blood pressure at the pharmacy. The BP was found to be elevated. EMS picked the patient up and transported her to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	908556-1	As employee entered observation area noted slight headache then complained of SOB VS BP 150/90 states took medication in am O2 Sat 99-100% HR-74 RR-24 lung sounds clear reported lightheadedness, confusion sent to ED via wheelchair
COVID19 VACCINE (COVID19)	Emergency Room *	908558-1	received vaccine at 9:30 am noted frontal headache @ 9:40am VS 124/76 HR 75 O2 Sat 95% Denied SOB, difficulty swallowing, numbness tingling given acetaminophen 650 mg 9:50 am given ibuprofen 600mg @ 10:22am VS BP 137/90 HR 71, O2 Sat 97%, feeling dizziness nausea, transported to ED
COVID19 VACCINE (COVID19)	Emergency Room *	908592-1	The COVID vaccine was given at 2046. At approx. 2050 patient complained of tingling to her left leg and a headache. Her vitals were obtained at 2050. They are as follows; B/P 146/86, HR 111, Spo2 98 on RA. She denied any SOB, chest pain or discomfort, no difficulty swallowing. She was able to ambulate to the wheelchair without any issues. I called house supervisor at 2049. He came up to asses her and she was transported to the ED by 2 MA's and a nurse. She was transported via wheelchair on the monitor. She did not require supplemental O2

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	908609-1	Patient was in the 15 minute post-observation window and was scheduling his appt for second dose. Patient noted that he has a fear of needles and mentioned that he was feeling light-headed and experiencing tunnel vision.. He subsequently became diaphoretic and syncopal. He spontaneously recovered and was helped back into the chair. Did not fall to ground or hit his head. A SWAT was called. During SWAT evaluation, patient was given cool compress for neck and mentioned that this has happened before with injections. Subsequently had another syncopal episode and witnessed clonic seizure of roughly 25 seconds in duration. Patient again spontaneously recovered and was brought to the ED. the patient was unable to recall the events and has no history of seizure activity. Patient was given crackers and juice in ED and monitored for approximately 3 hours. Patient was discharged to home.
COVID19 VACCINE (COVID19)	Emergency Room *	908621-1	within minutes after receiving vaccination employee felt lightheadedness,, clammy, nauseated and vomited x 1. slowly resolved, went back to work and totally did not resolve so sent employee to ED to be evaluated.
COVID19 VACCINE (COVID19)	Emergency Room *	908625-1	Pt received vaccination and immediately afterwards syncoped. Pt recalls receiving the inoculation and becoming acutely lightheaded before losing consciousness. No preceding SOB or palpitations noted.
COVID19 VACCINE (COVID19)	Emergency Room *	908633-1	flush on legs and arms, transient throat tingles that resolved. Arms heavy
COVID19 VACCINE (COVID19)	Emergency Room *	908637-1	Feels like lump in back of throat, given Epi at clinic without resolution. No shortness of breath or pain
COVID19 VACCINE (COVID19)	Emergency Room *	908648-1	feel flushed, warm all over, itchy, and an urticarial rash appeared on her upper chest and arms.. given diphenhydramine 50mg IM x1, methylprednisolone 125mg, famotidine 20mg. felt better and all symptoms improved except for pruritis by 1715 on 12/23. discharged home from emergency room
COVID19 VACCINE (COVID19)	Emergency Room *	908653-1	I received the injection at 08:15 arm after hung around upon me getting ready to go elevated heart rate and pulse started to race. Then I stayed there lips started to tingle after 10 mins heart rate came down. I went back to work 1 1/2 hrs tongue was till numb and tingling. I went back to facility where I first received my vaccine. I was told to go to the ED checked blood pressure and I was offered Benadryl I declined. I dint miss any days of work.
COVID19 VACCINE (COVID19)	Emergency Room *	908654-1	About 10 minutes after receiving vaccine, patient reported feeling hot and not well. Patient had not eaten breakfast prior to appointment. Patient's oxygen sat was 100% but heart rate initially 42 (normal range 55-65) and blood pressure 90/60 (normal for him). Patient was diaphoretic and was given crackers and juice. Patient's symptoms continue to progress with heart rate down as low as 34. Due to progression of symptoms, patient was taken to the ER.
COVID19 VACCINE (COVID19)	Emergency Room *	908666-1	Patient states she was receiving her COVID vaccination today, 12/23/20, in the left arm. About 5 minutes after the vaccine was administered, patient felt left arm pain that radiated into the left shoulder. About 10 minutes after the arm/shoulder pain began, she had left anterior chest tightness. She had her blood pressure taken, which was 109/104. She states the 104 diastolic is high for her.
COVID19 VACCINE (COVID19)	Emergency Room *	908672-1	I had severe abdominal pain that changed at a day and a half to mild abdominal pain.
COVID19 VACCINE (COVID19)	Emergency Room *	908675-1	"Pt received vaccine at 1210. At 1220 said her throat was feeling a little scratchy. She stated that it just felt like she ""needed to clear her throat"". NP was called to assist, evaluated and epinephrine 0.3ml IM was given. Benadryl 50mg and Zantac 40 mg was also given po. Pt was monitored, 9-1-1 was called and arrived in 10 minutes. Pt was sitting up, stating that it just ""feels like my throat is thick"". After EMS arrived and assessed pt, she began to ease her anxiety and stated she was feeling less tightness and felt better. Pt was observed, VSS. She denied going to the hospital stating she was feeling better so called for a ride home. EMS left and within 10 minutes she began to feel a tightening sensation in her upper chest, not in her throat this time. She said she felt the tightness again and the back of her throat was scratchy. NP evaluated, Epi 0.3ml IM was given again and 9-1-1 was called again. Upon arrival her vitals were stable, although tachycardic running 100-120 after the epi, but her breathing was not labored or difficult. EMS loaded pt and took to hospital for evaluation where she was monitored, received IV steroids for edema in the back of throat and uvula."
COVID19 VACCINE (COVID19)	Emergency Room *	908687-1	Patient became hot, nauseous, and blotchy five minutes after vaccine administered (09430). Clinic nurses and a physician in the clinic area responded immediately: history, comfort, pulse, BP, comfortable/safe position in chair. Approximately 8-9 minutes later (0938-9), patient asked that her personally-owned Epinephrine Auto-Injector (EpiPen) be administered, as she was unable to do so. Her symptoms were worsening and she had developed a lump in her throat. At 0940 a clinic nurse (RN) administered the EpiPen in the patient's right anterolateral thigh. Symptoms improved. 911 was called. Paramedics arrived quickly, and transported patient to Hospital Emergency Department, less than one minute away.
COVID19 VACCINE (COVID19)	Emergency Room *	908690-1	dizziness and warm feeling in chest immediately upon receiving shot
COVID19 VACCINE (COVID19)	Emergency Room *	908693-1	Had a wiered sensation in her head during the injection. 10 min after receiving the COVID vaccine she reported not feeling well ranf had a burning sensation throughout her body. Heart sounds: No murmur. Pulmonary: Effort: Pulmonary effort is normal. Breath sounds: Normal breath sounds. Abdominal: General: Bowel sounds are normal. There is no distension. Palpations: Abdomen is soft. Tenderness: There is no abdominal tenderness. Musculoskeletal: Right lower leg: No edema. Left lower leg: No edema. Lymphadenopathy: Cervical: No cervical adenopathy. Skin: Findings: No rash. Neurological: Mental Status: She is alert. Cranial Nerves: Cranial nerve deficit (left facial droop, dysarthria) present. Comments: Patient's speech seems a bit slurred to me. Absence of ocular movements towards left noted as well as upward movements. Tongue is midline. Patient is unable to shrug the left shoulder or lift the left arm off the bed. Grip strength is 4 out of 5 on the left. Left leg strength is 3 out of 5. Extremity strength on right arm and leg is 5 out of 5. After consultation with a neurologist, the patient is being transferred from the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	908923-1	Patient was very anxious about getting her vaccination. After a couple minutes of receiving the vaccine, the patient went to stand up from the chair she was vaccinated in and became light headed. She then put her head on the table and began shaking. She was safely lowered to the floor and placed on her back. 911 was called and paramedics arrived within 10 minutes. The patient was lucid and responsive, but breathing quickly and shaking. She was taken to the hospital by paramedics and discharged shortly after arriving.
COVID19 VACCINE (COVID19)	Emergency Room *	908926-1	Went to sleep at 8am. Woke up at 1am with unilateral angioedema. Presented to ER, given 125 mg methylprednisolone, 20 mg famotidine, and 25 extra mg of diphenhydramine (in additional to 50 mg I had already taken). Observed in ER. Swelling decreased. I was not admitted because I'm a doctor. Symptoms resolved 10 hours later.
COVID19 VACCINE (COVID19)	Emergency Room *	908928-1	Approximately 9 hours post injection, patient developed chills, fever, cough with phelgm production which then progressed into uncontrollable cough. Patient went to ER, treated with albuterol inhaler and released without restrictions. Pt using inhaler but symptoms decreased at this time.
COVID19 VACCINE (COVID19)	Emergency Room *	908929-1	"About 10 minutes after injection, c/o tachycardia and became diaphoretic and stated she felt ""weird"" Taken to ER for eval/tx."
COVID19 VACCINE (COVID19)	Emergency Room *	908932-1	1-2 minutes after injection a whole body flush developed along with heart palpitations, tingly throat and tongue, and a rash across the chest and neck.
COVID19 VACCINE (COVID19)	Emergency Room *	908942-1	Felt a rush in my arm 5 minutes after. Then one hour following the injection I started getting dizzy and vertigo. Driving home I felt like something was very wrong like impending doom. My heart started racing almost pounding out of my chest. I was extremely dizzy and almost fainted. Flushed feeling and tightness in my chest followed. Flushed feeling felt all day. Also had a rash on my neck and chest.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	908943-1	Received vaccine before shift. Within 10-15 mins bilateral back of the tongue numbness and tingling. Walked to ER (my department) and asked charge nurse for Zyrtec. Advised to stay and be monitored, opted not to be checked in to ER. BP 146/105, 126-120 BP, abnormally high. Experienced red lips, itchy hands and feet, 'frog in throat' feeling. Convinced to check into ER. Swollen uvula, tonsils, lips red/swollen, stridorous breathing. Checked in to ER, given IV Benadryl, fluid, prednisone, and Pepcid. Hands and feet were mottled. Confirmed anaphylactic reaction. Became nauseous, given Zofran. Given Epi in left shoulder. Stayed for 4 hours for continued monitoring. Symptoms started to subside. Also given inhaled albuterol. Discharged w/ Benadryl, Pepcid, prednisone 5 days course, and prescription for Epi.
COVID19 VACCINE (COVID19)	Emergency Room *	908946-1	32 y.o pregnant female (8weeks) receive covid 19 vaccine in left deltoid at 6:45 pm. Around 7:10 pm patient developed tingling/pins/needles feeling and decreased motor coordination of left arm. Tingling/pins/needles sensation progressed to left eye lid, mouth, face, neck, throat, left lower leg and right hand. Pt was monitored in ER for an hour and sensation gradually dissipated
COVID19 VACCINE (COVID19)	Emergency Room *	908948-1	"Patient received vaccine at 1005 and approx. 20 minutes later reports ""tickle"" in throat feeling the urge to clear throat. and ""tingling"" of lips. Benadryl 50g given by mouth per standing order. Monitored for additional 30 min. 30 min after administration of benadry Patient reported no change to symptoms. Patient was escorted to ER to be seen."
COVID19 VACCINE (COVID19)	Emergency Room *	908954-1	12/24@5:00pm EST-Caller stated that on Sunday 48hrs after vaccine he was chills, lost of taste and smell, fatigue with fever. Nose and throat dryness with chest pain. Today caller has been spitting up dark green mucus with red streaks. Caller is taking doxycycline for strep. Caller keeps having elevated temps of 102.0 and chills. Dry cough has been persistent since 12/23/20. Vaers report completed over the phone.
COVID19 VACCINE (COVID19)	Emergency Room *	908959-1	Observed for 15 minutes after vaccine. About 30 minutes later in my car, felt sharp shooting pains in left neck. About 8 hours after receiving first dose, started coughing up blood, bright red, with streaks and clots. No cough, fever. Seen in ER with chest xray and ct scan with contrast. No resolve. On second day after receiving vaccine? Continue to experience bright red sputum. No resolve.
COVID19 VACCINE (COVID19)	Emergency Room *	908961-1	Developed Bell's Palsy symptoms on the left side of my face almost exactly 24 hours after vaccine administered
COVID19 VACCINE (COVID19)	Emergency Room *	908967-1	ABOUT 5 MINUTES AFTER THE VACCINE, THE PERSON EXPERIENCED LIGHTHEADEDNESS AND NAUSEA AND VOMITING
COVID19 VACCINE (COVID19)	Emergency Room *	908969-1	Starting that night 12/19/20 at approx 8pm I became nauseous with a 100.8f fever. I felt achy for the 2 days with the fever subsided. On Monday 12/21/20 I was at work (Firefighter) when I started to have palpitations. I was able to obtain a 12 lead EKG right away which showed a ventricular rhythm lasting for approx 5 min. After that I was having multiple PVC's / Ventricular beats. I was taken to Hospital where I was admitted. Over night the rhythm subsided, all my labs were good with other test's being done. I was discharged home. I have not had any other episodes since Monday. I was cleared by our Occ Health Doc who suggested I fill this out.
COVID19 VACCINE (COVID19)	Emergency Room *	908972-1	Patient (RN who works at hospital) complained of jaw tightness about 15 minutes after the vaccination. Diphenhydramine 50mg IM x 1 was administered. Patient then developed a rash across her chest and stated that she was not feeling well. EpiPen x 1 IM was given at 11:17 and Code Blue was called per hospital policy. Patient's vitals were BP 175/99, HR 129, Oxygen 100%. Patient was alert and oriented but anxious. Patient was sent to ER at around 11:20 for observation
COVID19 VACCINE (COVID19)	Emergency Room *	908991-1	nausea, vomiting, lightheadedness, chills, diaphoretic
COVID19 VACCINE (COVID19)	Emergency Room *	908992-1	Severe under arm pain on second, third and fourth day, enlarged lymph nodes.. Redness and swelling of shoulder on second day, Severe itching at injection site on third and fourth day, fever on third day. Urgent care thought it is expected symptoms for some.
COVID19 VACCINE (COVID19)	Emergency Room *	908995-1	On 12/20, I woke up to swollen eyes, ears, and face. I had itchy, red patches and welts on my legs and forearms, and a burning red rash across my forehead that circled my face and went around my chin. I went to the ER, where I was given benedryl, a steroid, and pepcid. I was sent home with a prescription for the same. On 12/21, I woke up with the same rash as described from the day before. I continued my prescriptions. On 12/22, I woke with with the rash only on my legs. I continued with my prescriptions. On 12/23, I went to an immediate care facility where I asked for a COVID test. My rapid test was resulted as positive. I never had any of the listed COVID 19 symptoms. I continued my prescriptions. On 12/24, I woke up with no rash, no COVID 19 symptoms, and I continued with my prescriptions.
COVID19 VACCINE (COVID19)	Emergency Room *	908998-1	I started feeling palpitation after 2 minutes then was placed in the observation room. Vital sign showed heart rate of 145 with normal blood pressure and oxygen. Then after few more minutes I started feeling numbness and tingling in the mouth and started feeling dizzy and had cold sweats. Heart rate was 130s and BP was undetectable and my skin was severely pale. I administered my EpiPen and rapid response team arrived after few minutes. I felt better 5-6 min after infection of the epiPen but was still feeling dizzy and mildly short if breath. I was transferred to emergency room when I was treated with IV steroid, benadryl , pepcid and IVF. I was observed for 4 hours and was discharged with improvement in symptoms .
COVID19 VACCINE (COVID19)	Emergency Room *	909001-1	Patient complained about difficulty swallowing, and tongue swelling about 12 minutes after receiving vaccine. 50mg Benadryl given and EMS called. Patient transferred to Hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	909028-1	12/22/20 at 1800 I noted angioedema in my face and itchy/sore gums. I went to two different urgent cares I did not receive any care at due to lack of physician at one and lack of epi at another. After being refused at the second urgent care my throat and chest started to feel tight. I then went to the ER for further evaluation. I received a dose of epinephrine IM and prednisone 125 mg IV at 1930. I was observed for 4 hours then discharged. I returned to the ER 30 minutes later because my throat started to feel tight again. I received a second dose of epinephrine at 2358 and noted some improvement. I was discharged at 0600 on Dec 23rd. I returned to the ER Dec 24 at due to my throat feeling tight and burning sensation in my chest. I got CXR, and troponin that were WNL. I was observed for 4 hours and discharged at 0900. ER physician felt that the sensation in my throat and chest could be related to the reaction from the 22nd.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909029-1	About 20 minutes after vaccination, patient reported generalized itching and hand swelling (left). Patient had red spots on her face and complained they were itchy. EMS personnel were on-site and MD administered 50mg oral diphenhydramine and 100mg oral prednisone. BP: 130/90, P: 92, R: 16 with no obvious signs of distress. Lungs were clear to auscultation and patient was sitting on her own and able to hold a conversation. Ambulance was called and arrived about 10 minutes after reaction started. IV with Normal Saline was started and patient was given 25mg IV diphenhydramine. Patient was taken via ambulance to a nearby hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	909038-1	Hypertensive and had tongue and throat swelling. Epi was administered per protocol and transported to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	909042-1	waiting in observation on a 30 minute wait time, reports change in voice, gravelly sensation in throat, clammy hands, not feeling right reports similar reaction to contrast dye, no SOB no audible wheezing
COVID19 VACCINE (COVID19)	Emergency Room *	909044-1	Dizziness, orthostatic hypotension, migraine, nausea
COVID19 VACCINE (COVID19)	Emergency Room *	909049-1	Fever, body aches
COVID19 VACCINE (COVID19)	Emergency Room *	909054-1	immediately after injection, facial flushing, then continuous waves of flushing and chills through body, from abdomen to toes, lightheadedness, cold hands and feet. This occurred for several hours and did not worsen nor did this improve. Tongue felt numb, and mouth was dry. Tongue felt swollen, however, the tongue size was normal. No rash, no fever and no shaking. Blood pressure, Oxygen saturation were normal. No breathing difficulties. I was observed in the ER and administered iv Benadryl 25 mg and pepcid, and iv fluids. I woke up a few hours later. I still had the rushes of chills, numb tongue, and cold hands and feet. I was discharged to home. I still have the rushes of flushing and chills that flows through my body.
COVID19 VACCINE (COVID19)	Emergency Room *	909061-1	Reported sensation of tongue swelling during post-vaccination observation at 10 minutes. Epinephrine was refused and she was taken to ED for observation where she was given oral dose of Benadryl and Pepcid. Discharged with instructions to return PRN and follow up with PCP. Elevated BP noted.
COVID19 VACCINE (COVID19)	Emergency Room *	909068-1	Patient received Pfizer vaccination in Administration clinic. While in post vaccination observation, patient complained of feeling warm, lightheaded. At that time, patient reported she failed to inform nurse of current penicillin allergy. Proceed out called. Took vital signs at 15:05, 130/83, HR 83, O2 sat 99%. Repeat vital signs 15:24 BP 125/83, HR 83, O2 sat 97%. Patient transferred to ED for further monitoring. In the ED, patient was monitored for few hours where the light headiness has subsided. patient was discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	909072-1	1756 Pt c/o itchy throat. Vitals taken. 1758 Team alert called. 1759 c/o tingling in fingers . c/o shortness of breath and not feeling well. MD arrived.
COVID19 VACCINE (COVID19)	Emergency Room *	909079-1	within a few minutes I became overly warm and feeling dizzy, my blood pressure went up to 189/80 and my pulse elevated to 99. My normal levels are usually 120/70 and pulse 54-60. I had acute anxious feeling and overall body shaking. I was taken down to the ED by stretcher, I received the vaccine in the hospital setting, I stayed in the ED for 3 hours and was discharged home. I felt fatigued and weak for 24 hours after.
COVID19 VACCINE (COVID19)	Emergency Room *	909084-1	I received my shot at 1347 and within 5-10 minutes after receiving the shot I got a hot flush feeling through my body. My heart then began to race and I became dizzy. I started to get a tickle feeling in my throat. Soon after my lips and tongue felt numb. My tongue had the feeling of having been burned by hot soup. I also had red splotches over my entire body (not a rash but redness). When I alerted the vaccination staff that I thought I was having a reaction they all seemed shocked. They didn't really know what to do and asked me what I wanted to do. I, myself, was having a hard time making choices since I was in a bit of a panic. They wanted to give me oral Benadryl but since I was having the reaction in my throat and mouth one of the nurses suggested IM Benadryl. They gave me that shot around 1405. They watched me for about an hour and I still had the numbness in my lips and tongue and the red splotches over my entire body. (During this entire time no one took my BP or pulse). I had 2 work friends (RNs) come to check on me. It was only then that one of them took my pulse. I was still had tachycardia. Since my symptoms were not fully resolving they sent me to the ER where I got solumedrol and Pepcid. They sent me home still having slight numbness in my lips and tongue.
COVID19 VACCINE (COVID19)	Emergency Room *	909102-1	Pfizer-BioNtech COVID 19 Vaccine EUA: Developed throat itching, mild throat swelling, flushing, and mid upper back pain about 24 hours after the vaccine was given
COVID19 VACCINE (COVID19)	Emergency Room *	909103-1	Individual presented to outside hospital after receiving first dose of the Moderna COVID-19 vaccine 2 days prior at Hospital. Individual presented with possible SIRVA from injection. Patient had a stat neuro consult due to being unable to move her arm (same arm that received the vaccine).
COVID19 VACCINE (COVID19)	Emergency Room *	909104-1	Fevers 101F to 102F, severe rigors, diffuse myalgia, headaches leading to Emergency Dept visit at Hospital Rideout on 12/24/2020
COVID19 VACCINE (COVID19)	Emergency Room *	909117-1	Supraventricular tachycardia--needing to be seen in ER twice before controlled
COVID19 VACCINE (COVID19)	Emergency Room *	909130-1	Acute NSTEMI with symptom onset 4 days after vaccination
COVID19 VACCINE (COVID19)	Emergency Room *	909132-1	Moderna Covid -19 vaccine EUA
COVID19 VACCINE (COVID19)	Emergency Room *	909146-1	listed before

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909147-1	Approximately 2 minutes after injection, felt flushed and tingly. This subsided, but developed a cough. Felt fine enough to leave the vaccination area after being monitored for 15 minutes. Cough continued, and developed a scratchy throat that eventually led to swelling of the throat at approximately 30-35 mins post administration. Sought care in the ED, where I was tachycardic and hypertensive. Received IV Benadryl, steroids, and IV fluids. Discharged home, but symptoms returned around 2pm. Sought care in a different ED, where I remained hypertensive and tachycardic. Received additional IV fluids, IV Benadryl and steroids. Eventually was treated with IM epinephrine after my heart rate was decreased to about 100bpm with IV metoprolol.
COVID19 VACCINE (COVID19)	Emergency Room *	909151-1	36 hours after vaccine, sudden onset tachycardia, shortness of breath, dizziness on the verge of passing out, called covid hotline, sent to ER due to resting heart rate of 130-150. Lasted approximately 9 hours, was going to be kept for observation in ED. Resting HR came down to 90 and sent home, following day unable to perform normal activities and unable to work for two days as of now
COVID19 VACCINE (COVID19)	Emergency Room *	909157-1	Tingling og tongue and itchy eyes at 10min post admin Swelling/redness and flushing of head 20mins post admin Shortness of breath at 20mins Whole body hives and itching at 40min pot admin Swelling under the jaw and tightness/burning in chest at 40min After treatment in er...symptoms resolved after 5hrs. 14hrs later, symptoms reoccurred, with increasing severity. Went back to the ER for treatment. Again symptoms resolved after 5hrs. Now on 25mg benadryl 4x/day, 40mg prednisone 1x/day, zertec 20mg 1x/day and 20mg famotidine 1x/day for the next 4 days. Still being treated.
COVID19 VACCINE (COVID19)	Emergency Room *	909165-1	At the time of the injection sharp pain across my back , then at about 5 mins after feelings of light headedness, progressing pain across my back, trouble feeling like I could get enough air in with breathing and dizziness and I tried to get to the floor to sit or lay down but passed out. Then the next event I recall was a sharp pain in my thigh(apparently administered Eli pen) . I regained consciousness and was gasping andI was told I had been given a shot of epi.
COVID19 VACCINE (COVID19)	Emergency Room *	909173-1	Immediately after receiving the vaccine tongue felt fuzzy/a little swollen. Also lightheaded, dizzy, eyes not focusing very well. After 10-15 minutes, eyes focusing better but still lightheaded. ~1 hour later noted swelling of uvula, posterior palatal arches, tongue, neck, face, lips, intermittent wheezing. In addition the next day headache and rash started. Now day 9 with continued intermittent severe swelling, wheezing, rash and headache and some level of oral and facial swelling every day as noted above. Muscle aches started on day 8. Consulted with angioedema specialist; he felt was allergic reaction due to onset of symptoms. Had telemedicine visit with NP on 12/23/20. Had to go to Emergency Department on 12/25/20 for severe uvula, posterior palatal arch, face, lip, neck swelling unresponsive to oral Benadryl and oral steroids.
COVID19 VACCINE (COVID19)	Emergency Room *	909180-1	C8 distribution numbness directly after inject. 4th and 5th digits of hand on injection side felt like tight rubber bands at base of digits, improved with benadryl and dexamethasone). C8 sx followed by 35 min later abrupt onset central facial numbness (felt as if I had received dental block, and lip swelling Mild but noticeable (upper lip more than lower), per ED attending also some blotchy red areas, not hives on the neck same side as injection. No shortness of breath or swallowing difficulties. Bp higher than base line and slightly tachycardia compared to baseline. Treated with benadryl and dexamethasone . Facial symptoms lasted over night took additional 10 mg of prednisone, with improvement over the course of the day.
COVID19 VACCINE (COVID19)	Emergency Room *	909193-1	Within 10 minutes lips were tingling and small hives on roof of mouth (1635). After 30 minute evaluation I left since I thought it might be anxiety or Placebo. Took 2 Benadryl. At 1830 decided I needed to go to the ER since symptoms were worsening. Tongue swelling, hives on roof of mouth getting larger in size and increasing surface area, larger hives on inside of mouth, lips noticeably swelling to those who didn't know me, lips tingling, face itchy and discolored, getting harder to breathe to the point of being painful to swallow and talk. In the ER they have me a epinephrine shot in my left thigh and a intravenous dose of steroids in right arm. Observed for roughly 2-2.5 hours then sent home. Have a Rx for prednisone (3 20mg tablets for next 5 days) and instructions to contact allergist/ immunologist within 10 days. To date (12/25) symptoms are: still swollen lips although not as large, itchy face/ neck, sores on inside of mouth, throat still sore but can safely talk and eat without problems.
COVID19 VACCINE (COVID19)	Emergency Room *	909202-1	"WITHIN 5-10 MINUTES OF GETTING THE VACCINE. I STARTED FEELING LIGHTHEADED WHILE SITTING ON A CHAIR. I FELT LIKE I NEEDED TO LIE DOWN AND PUT MY FEET UP BECAUSE I FELT LIKE MY BP IS GOING UP. I TOLD SOMEBODY AND A NURSE CAME WITH A CRASH CART. I TOLD THE NURSE IF SHE COULD CHECK MY BP BECAUSE I COULD FEEL IT GETTING HIGH (I CAN TELL IF MY BP IS HIGH BECAUSE I TAKE BP MEDS FOR MY HTN.) I TRIED TO TAKE A DEP BREATH TO CALM MYSELF. NEXT THING I KNEW, A NASAL CANNULA WAS PLACED ON MY NARES. I FELT TACHYCARDIC, AND STARTED TO FEEL PALPITATIONS CREEPING UP MY NECK AND CHEST. THEY DID AN EKG AND FS BLOOD SUGAR ON ME. I HEARD SOMEBODY SAID, 'HER BP IS 200!'" "THE DOCTORS AND NURSES WERE STARING AT ME TO ASSES ME FOR ANAPHYLACTIC REACTIONS. I SAID ""I DONT THINK IT'S ANAPHYLACTIC REACTIONS"". A DOCTOR TOLD ME THAT THEY ARE BRINGING ME TO THE ED FOR FURTHER OBSERVATION. ON THE SECOND DAY POST-VACCINATION, I FELT SO TIRED, FEVERISH AND IT'S LIKE I HAD A HANGOVER."
COVID19 VACCINE (COVID19)	Emergency Room *	909207-1	Feeling that something was wrong, headache, racing heart beat, short of breath, dizziness, weakness, inability to stand, hot then cold, shaking, chills,
COVID19 VACCINE (COVID19)	Emergency Room *	909213-1	First and second night rigors, full body cramps. At 30 hrs ageusia following an exercise run with severe knee pain. Dry mouth starting at 48 hours. Chills continue 3 days later. No resp symptoms. Afebrile. Going on 4 days and symptoms continue
COVID19 VACCINE (COVID19)	Emergency Room *	909215-1	Itching, urticarial rash, mild shortness of breath, headache, mild nausea.
COVID19 VACCINE (COVID19)	Emergency Room *	909220-1	low grade fever 99.3, fatigue, achiness, headache, congestion
COVID19 VACCINE (COVID19)	Emergency Room *	909223-1	Developed large hives on face, returned back to clinic. They gave me two doses of 25g Benadryl liquid. Vitals were taken. BP was 170-180/1-teens, pulse between 100-120. Was observed and hypertensive emergency remained, was then sent by ambulance to ED. Treatment given there was liquid Decadron.
COVID19 VACCINE (COVID19)	Emergency Room *	909243-1	Patient had a syncopal episode after receiving her first dose of the COVID-19 vaccine.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909244-1	lLeft arm was warm then whole body got warm. Heart Racing Broke out in hives
COVID19 VACCINE (COVID19)	Emergency Room *	909273-1	Right side of face felt hot and slightly numb. Continued to persist for several hours. Appeared slightly puffy on right side. Muscles on right side of face felt stiff when moving them. Symptoms seemed to resolve but the next morning but returned around 1pm on 12/25. Additionally I noticed slight drooping in my face on the right side of my face.
COVID19 VACCINE (COVID19)	Emergency Room *	909278-1	Rapid onset of hoarseness, throat tingling and tightness
COVID19 VACCINE (COVID19)	Emergency Room *	909292-1	Headache, nausea, dizziness, dehydration, weakness, shaking
COVID19 VACCINE (COVID19)	Emergency Room *	909296-1	15 seconds after administration I felt tingling in my mouth and felt warmth come over my body from my feet to my head. I then experienced a sudden increase in heart rate. I was tachycardia to the 140s and BP 140/90s (high for me). This lasted for about 1 hour then resolved. The same event occurred 3 additional times, resolving in between episodes with a heart rate in the low 100s.. I was taken to my workplace Emergency Department. The entire even lasted over 4 hours.
COVID19 VACCINE (COVID19)	Emergency Room *	909304-1	12/18 afternoon: asthma attack. This was the same as previous asthma attacks and occurred after my normal triggers (exercise in cold air). Symptoms resolved completely with albuterol. I was coughing continuously and strenuously for about 10 min before using albuterol. 12/18 evening: low-grade fever (100.1 F, baseline is <98) with chills. Also with altered mental status/delirium, which is typical for me while febrile. There was also nausea. 12/19: fever decreased to 99.2 F with normal mental status. New general malaise, worsened nausea. Single episode of vomiting, large volume of bile with some blood (streaks of fresh blood, larger volume of coffee grounds emesis mixed with bile). After vomiting I noted tachycardia to 130s--140s but this is a typical finding for me post-vomiting. 12/20: No further vomiting. Subsequent 2 bowel movements with moderate melena, since resolved. Fatigue and cold extremities, improving.
COVID19 VACCINE (COVID19)	Emergency Room *	909314-1	Initially very mild tingling to nose and lips. Then in ED, BP 170s/110s. Then about 1 hour and 10-15 minutes later had rash start to pop up on random areas of my face. Then next morning with sore throat and rash around the next about 21-22 hours after the vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	909321-1	C/O of tachycardia, dizziness 20 minutes post vaccine, placed on monitor. HR 80-100, B/P 157/102, SaO2 100%. Progressed to SOB & HR 174 @ 25min post vaccination. Epi auto injector 0.3mg IM x1 given, called emergency response. Patient awake, alert, oriented x3. Verbalized improvement in SOB after epinephrine, taken to ED via wheelchair.
COVID19 VACCINE (COVID19)	Emergency Room *	909337-1	Lip soreness 12/23 around 6p. Mild Lip swelling 0900pm and took 1000mg of acetaminophen. Severe lip swelling mainly on the left side at 0400am. Took Benadryl and 1000mg of Tylenol. Swelling went down slightly. Went to ED 12/24 around 1130AM with low grade fever of 100 F arm soreness and continued lip swelling. 12/24 at 0900p fever of 101, fatigue, aches, and lip still swollen, but less than AM-took 1000mg of Tylenol and Benadryl. 12/25 at 0500AM 102.2 fever, body aches, severe headache, night sweats, and other side of lip swollen took Benadryl and 1000mg of Tylenol. At 6 AM fever went down to 101.2. 1200pm fever of 100.5, severe head ache, muscle and joint aches, lips mildly swollen-took 100mg more of Tylenol. 6pm 101 fever, headache, and lips itchy/swollen. Benadryl taken and 1000mg of Tylenol. 1200AM fever of 100 and headache, lips sensitive-1000mg of Tylenol and Benadryl. 12/26 at 0930 AM fever broke with temp of 98.6, mild headache, lips sensitive, but minimal swelling.
COVID19 VACCINE (COVID19)	Emergency Room *	909341-1	10 minutes after dose experienced tachycardia, dizziness shortness of breath, and flushing. It lasted about 30 minutes.
COVID19 VACCINE (COVID19)	Emergency Room *	909355-1	"several minutes after vaccination, complained of shortness of breath. Nurse used standing order protocol to administer epi 0.3 mg into right deltoid. Patient reports feeling a little better BEFORE the epi, but reported feeling ""strange"". Charge nurse notified the emergency department, an ED nurse advised coming for workup in the ED (which is right down the hallway). Patient walked to ED. Appeared pale. Patient discharged from the ED with a prescription for zyrtec."
COVID19 VACCINE (COVID19)	Emergency Room *	909364-1	fever 101.8, body aches , chills, back pain , cough, shortness of breath , loss of taste and smell, sore throat
COVID19 VACCINE (COVID19)	Emergency Room *	909366-1	Tachycardia, elevated blood pressure, tightness in throat
COVID19 VACCINE (COVID19)	Emergency Room *	909374-1	"Minutes after getting the vaccine dizziness, flushing, and racing heart present. I was taken to a back room, laid flat, cool washcloth, vitals taken. Rash began to develop on chest and spread across the body. No itchiness, but a mild burning sensation accompanying rash. Throat was hot and scratchy. Within 10 minutes taken down to the ER. Rash came and went in waves and would appear on different parts of body. Each wave had increased heartrate, dizziness, flushing, rash, burning. Was given 50mg benedryl at 10:45, oral 10mg dexamethasone, and 1L bolus of saline solution. Was monitored in ED for 4 hours. Last reaction ""wave"" experienced around 1pm. Discharged around 2pm. No reaction since discharge."
COVID19 VACCINE (COVID19)	Emergency Room *	909375-1	Received Moderna Vaccine at 11:36, waited 30 minutes per Dr. recommendation. Left hospital, starting driving home and felt lips tingling and bilateral sides of tongue feeling thick and words sounding thick. Return to the Vaccine clinic at the hospital in 5 mins . Escorted to the emergency dept. BP 203/95, HR 80s, O2 Sats 94% room air.
COVID19 VACCINE (COVID19)	Emergency Room *	909379-1	near syncope, hypotension, nausea/vomiting, tachycardia (120-150) within 5 minutes of administration. did not resolve and worsened within 1 hour. Pt went to ER for workups. Received IV benadryl without improvement. Admitted to hospital overnight for continuous cardiac monitoring. Improved overnight and discharged in the afternoon 12/24/20.
COVID19 VACCINE (COVID19)	Emergency Room *	909388-1	Patient developed rash/hive 1 hours after receiving the vaccine. Patient self medicated with a dose of Benadryl when the hives started. Send to ER and was observed for 2 hours. Hives resolved in 24 hours with no further treatment.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909389-1	Employee consulted with PCP regarding taking covid vaccine with a know allergy to flu vaccine preservative. PCP recommended taking covid vaccine and pre-medicating with Benadryl 50 mg 30 minutes prior to the injection. The employee followed those instructions. Thirty minutes after covid vaccine administration, employee started to lose her voice and developed some wheezing. Employee was taken to ED where she received a dose of epi and solumedrol. The employee was observed in the ED for 2 hours and symptoms were resolved at the time of discharge.
COVID19 VACCINE (COVID19)	Emergency Room *	909400-1	Fever, chills, sweating, shivers, myalgias, fatigue, headache, not feeling well in general.
COVID19 VACCINE (COVID19)	Emergency Room *	909401-1	Felt as though her throat was closing and fatigue. She was talking the entire time but kept clearing her throat.
COVID19 VACCINE (COVID19)	Emergency Room *	909419-1	57 hours after vaccine, I woke up with stomach cramps, diarrhea, chills/sweats feeling awful and soon after had a sudden syncopal event while walking back from the bathroom. I recovered, laid in bed and then within 15-20 minutes had diarrhea again so went to the bathroom and had another syncopal episode on the toilet (both witnessed by my husband) with diarrhea during this episode. I then went to the ER and was treated with 3L IV fluids for hypotension, IV zofran and bentyl. I left the ER within about 3 hours. still have been fatigued but was up most of that night. my body all hurts but I fell into my bedframe face first during the first syncope so would relate that to those symptoms/injuries.
COVID19 VACCINE (COVID19)	Emergency Room *	909425-1	Severe vomiting and diarrhea to where had to go to ER due to dehydration, lasted 4 days. Body aches, fever, muscle aches
COVID19 VACCINE (COVID19)	Emergency Room *	909433-1	Pt began feeling flushed, tremulous, c/o weird sensation in throat. developed rash. Had near syncope. 1-2hrs of symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	909439-1	lightheadness/weakness
COVID19 VACCINE (COVID19)	Emergency Room *	909455-1	Fever 102.8 Myalgia Chili?s Muscle spasm Severe headche
COVID19 VACCINE (COVID19)	Emergency Room *	909457-1	Day 1/2 - Headache, Pain at injection site/slight arm sweeping, tiredness Day 2 - nausea, tiredness, dizziness, shortness of breath, feeling hot/flushed, fainted (led to a 911 call / ED visit)
COVID19 VACCINE (COVID19)	Emergency Room *	909464-1	Within minutes of inoculation, site area became extremely itchy. I brought this to the attention of the medics in the 15-minute observation room, and they immediately took me to an exam room where I was attentively cared for by several nurses, medics, and healthcare staff. I was given liquid Benedryl as my arm began to rash around the site. Within about five minutes of being in the exam room, my tongue began to feel like it was swelling in the back of my mouth, it soon began to feel swollen through the whole tongue, and it became increasingly difficult to swallow. Upon notifying the nurse nearby, I was immediately given an EpiPen injection. I do not know what may vitals were as everything happened very quickly, but I was told that my face, neck, and chest became rashy quickly, but subsided after several minutes from the EpiPen, at which time I was given more liquid Benadryl. Once stable, I was taken to the emergency room for monitoring for two hours. I felt better quite quickly after arriving in the emergency room, but the itching persisted through the evening. After 15 hours of sleep, I awoke to only a sore arm and thigh from each injection site.
COVID19 VACCINE (COVID19)	Emergency Room *	909467-1	throat swelling, itchy eyes, flushed skin and a headache
COVID19 VACCINE (COVID19)	Emergency Room *	909485-1	Dizziness, diaphoretic, wheezing, cough, hoarse voice, tingling to my throat and headache. Sent to emergency room, received medication. Decadron IV, Benadryl IV and Pepcid. I was monitored in ER. Eventually was discharged home with medications.
COVID19 VACCINE (COVID19)	Emergency Room *	909489-1	Fever, nausea, dizziness, muscle pain, joint pain, headaches, vomiting
COVID19 VACCINE (COVID19)	Emergency Room *	909490-1	The patient developed palpitations, lightheadedness and nausea and came to the ED and was found to have sinus tachycardia. Unclear if it is a vaccine reaction or due to anxiety or severe iron deficiency anemia.
COVID19 VACCINE (COVID19)	Emergency Room *	909495-1	reddened rash with hives Benadryl to ED
COVID19 VACCINE (COVID19)	Emergency Room *	909500-1	Employee states had vaccine on 12/20 and was monitored in Emergency Department for approx. 4.5 hrs r/t which started with metallic taste, then within 10 minutes lips/throat/tongue tingles, full feeling in throat followed by heaviness in chest with self-resolving (only IV fluids administered in the ER). Employee states took 50 mg of Benadryl when she went home after the ER. Employee endorse body/headache post vaccine on 12/21. Patient is unsure to take second dose and seeking advice, has already contacted her PCP.
COVID19 VACCINE (COVID19)	Emergency Room *	909510-1	Patient received Moderna COVID-19 vaccine IM in the Administration clinic. During the observation period, patient reported feeling flushed, warm, sweaty, with lip tingling. Vital signs 138/95, HR98, O2 Sat 98%. Proceed out call. Patient transported via wheelchair to ED for further monitoring. In ED, monitored with resolution of tingling of the lips, cheeks still with slight flushing to them. No sob or abd pain or tongue/lip swelling, no worsening rash. Encouraged followup with working well clinic. Patient was discharged home 4 hours later.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909515-1	Patient began reporting of a tingling sensation in right arm approximately 15 minutes after vaccine administration in the right arm. Patient denied shortness of breath, chest pain, palpitations. Patient encouraged to wait in observation room for another 10-15 minutes with enhanced monitoring by MAs and RNs, patient agreed and complied to plan. Patient reported continuation of tingling sensation in right arm with noticeable tingling sensation beginning in left arm and lips as well. Vital signs taken on patient at 1300: BP: 165/84, HR 78, O2 100% on RA. Proceed out called, team arrived and transported patient to ED for further evaluation. In ED, patient was observed for few hours, and was discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	909523-1	Passed out twice - at 5pm on 12/26 & 8:30am on 12/27
COVID19 VACCINE (COVID19)	Emergency Room *	909526-1	Woke up with whole-body muscle aches, chills, and a slight cough. Feeling tired, weak, and fatigued. Headache.
COVID19 VACCINE (COVID19)	Emergency Room *	909527-1	Severe rash. Treated at ER with prednisone and recommended Benadryl.
COVID19 VACCINE (COVID19)	Emergency Room *	909541-1	severe headache and fatigue from 3 days after the shot continuing; the illness has not stopped and is now 8 days after the shot
COVID19 VACCINE (COVID19)	Emergency Room *	909563-1	Chest pain followed by Syncope approximately 5 minutes after injection.
COVID19 VACCINE (COVID19)	Emergency Room *	909566-1	Face became red with hives and swollen., sweating and clammy, chest tight and tachycardia. Went to emergency room. Given Benadryl. Occurred about 8 hours after vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	909578-1	Vaccine administered at 823am; at 0831, patient reported feeling warm and that her throat felt like it was swelling. 0834 pt placed on VSS monitor; 911 called; 0843 Pt was given epi pen 0845/0850 VS repeated; 0851 ambulance arrived and pt taken to ED
COVID19 VACCINE (COVID19)	Emergency Room *	909582-1	Vaccine administered at 0924; 30 minute observation due to past history of allergic reaction to tetanus vaccine; 0948, pt notified RN of tickle in the back of her throat; 0951 VS taken and WNL, remained with tickle in throat. 1016 pt reports having muscle cramps on back of neck, radiating to shoulders; VSS 1026 pt reported new onset chest pain; pt agreed that symptoms were progressing and epi pen was administered at 1031, 911 called. 1034, pt reported improvement; 1036, 911 arrived and pt transferred to ED
COVID19 VACCINE (COVID19)	Emergency Room *	909593-1	Sudden onset of numbness and tingling in Left arm at 11pm (arm that received injection). Arm appeared to be mottled as well.
COVID19 VACCINE (COVID19)	Emergency Room *	909599-1	1120 informed staff was feeling lightheaded and dizzy- VS checked BP 83/63 58 100 RA reck at 1130 78/45 52 taken to ER via WC for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	909601-1	c/o dizziness not feeling right very anxious scratchy throat taken to ER via wheel chair
COVID19 VACCINE (COVID19)	Emergency Room *	909606-1	did fine at time of vaccination and left after the 15 minute time period and went back to her desk and after 10-15 minutes in registration states started feeling funny dizzy starting to get a HA met her and manager in the hallway instructed to go to ER. Taken to ER via wheelchair for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	909610-1	c/o came back in after being discharged 10- 15 minutes and stated she was dizziness, scratchy throat, heart racing taken to ER via wheelchair for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	909611-1	periorbital edema, flushing, itching
COVID19 VACCINE (COVID19)	Emergency Room *	909614-1	Fever, muscle aches, hypertension, rapid heart heart
COVID19 VACCINE (COVID19)	Emergency Room *	909616-1	"Received vaccine at 0930... was checked on and feeling well ?. at 0950, she raised her hand and stated she was having tachycardia, ""not feeling right"" and c/o numbness and tingling in legs. METs team called and pulse was 130 and was taken to ER here at MC via wheelchair."
COVID19 VACCINE (COVID19)	Emergency Room *	909640-1	Rapid heartbeat, SVT
COVID19 VACCINE (COVID19)	Emergency Room *	909658-1	Intractable vomiting (12 episodes in 24 hours) with dizziness, throat swelling, chills, headache. Took Zofran/benadryl with mild relief. Went to ED on 12/26/2020 and had IV fluids and Zofran. Improved and discharged. Symptoms slowly resolving with no longer vomiting and no dizziness.
COVID19 VACCINE (COVID19)	Emergency Room *	909665-1	Rash
COVID19 VACCINE (COVID19)	Emergency Room *	909666-1	Rash
COVID19 VACCINE (COVID19)	Emergency Room *	909673-1	Fever on/off up to 101. Tylenol makes temp go down to 98-99. Chills, sharp pain in face, chest pain, muscle pain, joint pain, hx of covid in June, aching, headache, chest feels hot, HR up to 140

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909680-1	Patient reported she had been feeling anxious about receiving the vaccine all day due to its newness. About 10 minutes after receiving the vaccination she reported an elevated heart rate per her watch. Her hands were shaking mildly. She denied chest pain, shortness of breath and/or dizziness. Palpated radial pulse was 130s-140's. BP was 150's/70's. She was taken to hospital emergency room; she declined any medications. Through use of meditation techniques and calming practices, her heart rate lowered to 90's, then returned to 120's then lowered again to normal heart rate.
COVID19 VACCINE (COVID19)	Emergency Room *	909682-1	My tongue & roof of my mouth was feeling numbness & I felt off. I told nurse I was leaving and she said no get reevaluated. An doctor checked my symptoms and vital signs were elevated. He gave me an Benadryl IM. Send me to ER and had me on observation for a couple of hours. My symptoms subsided and my vitals returned to normal. I went back to work.
COVID19 VACCINE (COVID19)	Emergency Room *	909691-1	Shortness of breath, chest pain, itching, near syncope, blood pressure spike
COVID19 VACCINE (COVID19)	Emergency Room *	909697-1	""Moderna COVID-19 Vaccine"" Developed rapid pulse and flat red rash across chest immediately after vaccination. Within 8 minutes developed metallic taste in mouth. Reported tongue swelling and throat tightness. Taken to Emergency Department after onset of symptoms. Symptoms resolved within 1 hours of vaccine and patient was at baseline with in 2 hours. Patient was discharged home from Emergency Department."
COVID19 VACCINE (COVID19)	Emergency Room *	909698-1	""Moderna COVID-19 Vaccine EUA"" Developed rapid pulse and flat red rash across chest immediately after vaccination. Within 8 minutes developed metallic taste in mouth. Reported tongue swelling and throat tightness. Taken to Emergency Department after onset of symptoms. Symptoms resolved within 1 hours of vaccine and patient was at baseline with in 2 hours. Patient was discharged home from Emergency Department."
COVID19 VACCINE (COVID19)	Emergency Room *	909707-1	12/24/2020- morning- noticed pain in R deltoid at site of injection (expected) and also L ankle pain not associated with any type of trauma and with no hx of injury to ankle in past. Also noticed mild aching pain to R knee (which has had extensive surgical repair several times) 12/24/2020- by midday, limping noted due to pain in L ankle, negative for swelling, bruising, or decreased range of motion 12/24/2020- 8pm- moderate to severe pain to L ankle, still no swelling or bruising. 12/25/2020- midday- still noticeable limp, however pain was moderate and tolerable all day 12/26/2020- increased pain in L ankle as day progressed, still no bruising, decreased ROM or swelling 12/27/2020- woke at 3 am due to pain, elevated L leg. Swelling noted in lateral aspect of ankle by 7am, decreased ROM and point tenderness had developed around lateral and anterior ankle joint. Took 2 Aleve for pain. Went to walk-in orthopaedic clinic when they opened at 9am for assessment,
COVID19 VACCINE (COVID19)	Emergency Room *	909709-1	Moderna COVID-19 Vaccine EUA dizziness room spinning had trouble standing, light headed, vomiting drinking water made it worse for a short time, shakiness, head ache the lights in the er room made this worse.
COVID19 VACCINE (COVID19)	Emergency Room *	909720-1	12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.
COVID19 VACCINE (COVID19)	Emergency Room *	909736-1	Swelling of lower lip 5 hours after injection. Resolved slowly over 9 hours after taking Allegra. Developed 2 hour episode of atrial fibrillation 11 hours after vaccination that lasted 2 hours and was treated with PO Diltiazem and Xarelto.
COVID19 VACCINE (COVID19)	Emergency Room *	909742-1	"Pt was vaccinated at approximately 1135, exact time on consent form for vaccination. Pt was visitng with another pt outside the lobby for about 15-20 min. then came iinto building stating that she had ""chest tightness"" pt was calm and able to describe sesation. No distress. Pt was instructed to sit in chair and vital signs obtained, 2 sent obtained immediately after. Pt still awake and alert able to verbalize needs. Manual blood pressure taken. Dr called by Pharmacist. Pt was anxious and was verbally calmed by RN. 2 RN's and pharmacist at pt side. Pt c/o of dizziness, respirations elevated but able to maintian airway. Pt heart rate elevated. Dr arrived and assesed pt. After stabilization and meds administered, pt taken to urgent care for further monitoring and evaluation. Pt declined EMS transport to ER."
COVID19 VACCINE (COVID19)	Emergency Room *	909770-1	Chills, shivering, migraine , body aches, painful tinnitus, fever, elevated resting HR of 90 (normal is 46), bounding heart beat, tightness in chest, elevated resting BP 150/80 (normal 124/72) 600mg ibuprofen & 500mg acetametaphine made me comfortable to get about an hour and half worth of sleep. Went to ED for elevated HR, BP and chest pain. ED took EKG and monitored vitals. ED discharged with 975mg acetametaphine and 800mg ibuprofen with 24hrs quarters. I was able to get about 3 hours of sleep.
COVID19 VACCINE (COVID19)	Emergency Room *	909775-1	Received the vaccine at 1038a. 1045 developed minor tongue tingling. Called the RN she gave me 25mg Benadryl. By this time whole tongue became tingly and the roof of my mouth started to feel numb. A minute later throat started to feel full and it became hard to swallow. This feeling of it being hard to swallow, came with a painful headache and some chest pain. Once in ER, was given more Benadryl, Epi, Lorazepam, and Protnox. The feeling in my throat and the difficulty swallowing slightly improved 25min after the oral Benadryl. It took about a little over an hour from the onset of symptoms to start to feel they were resolving.
COVID19 VACCINE (COVID19)	Emergency Room *	909778-1	8:27 Hives, itching all over chest and on tongue, tongue swelling, slight difficulty swallowing. 8:30 epi administered/ benedryl 8:32 pseudo seizures begin off and on till the 27th
COVID19 VACCINE (COVID19)	Emergency Room *	909783-1	flushing , rash to face and chest. small bumps on the lips and tip of tongue. Improving symptoms with claritin and benadryl taken by the patient prior to arrival to the ER.
COVID19 VACCINE (COVID19)	Emergency Room *	909791-1	syncope, anxiety, nausea, vomiting, diarrhea, perceived tongue swelling although no visible swelling
COVID19 VACCINE (COVID19)	Emergency Room *	909799-1	Moderna COVID-19 Vaccine EUA Excessive shoulder pain with limits on range of motion. Has diminished in the past 36 hours but pain still persists and range of motion is not back to normal. Only took Tylenol, aleve, and albuterol.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909803-1	12:30 pm injection given to left arm, after 10 minutes of waiting a sudden warm sensation began from left arm traveling across chest to right arm, up my neck and inside throat to my face and head. I found this sensation to be strange and describe the feeling similar to receiving contrast for CT scan and when administered you can feel the warm sensation as it travels through out your body. My vision became a bit blurry I tried to remain calm and asked others in the room if they experience similar symptoms in which no one had. I stood up and walked across the room to get some water. I had an unsettling feeling and coached myself to remain calm. I drank 2 cups of cold water and sat down. After about 5 minutes the hot flush went away. I decided to stay longer than the 15 minute observation time that I was told to do. After 30 minutes from injection I felt okay to leave.
COVID19 VACCINE (COVID19)	Emergency Room *	909807-1	Within 30 minutes of vaccination, there was tongue numbness and tingling in addition to chest tightness. After 5 hours there was also upper lip numbness and tingling. Benadryl 50mg po was given in Emergency department of Hospital (where patient is a resident physician) and patient took another 25mg po Benadryl before bedtime. Tongue numbness improved by next morning, however upper lip numbness persisted. There was also upper lip swelling the next morning after vaccine, which was noticed when patient woke up (~ 16 hours after vaccination). This was treated with 20 mg cetirizine in AM and 10mg cetirizine at night by patient. Swelling persisted into the following day ~ 48 hours post vaccination before resolving. Patient's initial chest tightness resolved within the few hours of observation in ED.
COVID19 VACCINE (COVID19)	Emergency Room *	909820-1	Vaccinated on 12/23/2020 at 1 PM. Moderate pain and tenderness on injection site. One white pustule on left tonsil. Tender lymph nodes. Moderate generalized body aches. Mild headache, mild fever. Went to urgent care Negative for mono and strep. Got script for erythromycin if symptoms persist.
COVID19 VACCINE (COVID19)	Emergency Room *	909821-1	Developed cough, fever, body aches, and chest pain
COVID19 VACCINE (COVID19)	Emergency Room *	909887-1	nausea/vomiting, elevated heart rate and cough
COVID19 VACCINE (COVID19)	Emergency Room *	909888-1	Patient received COVID 19 vaccination and developed elevated heart rate. It is less likely that this was a reaction to the vaccine given no complaints of nausea, vomiting, itchiness, shortness of breath, abdominal or epigastric pain, wheezing which are typical signs of a reaction. Most likely this was an anxiety event.
COVID19 VACCINE (COVID19)	Emergency Room *	909892-1	pt with history of anaphylaxis to latex and fruit, presents to ED with urticarial skin reaction with itching, throat itching, cough, lightheadedness soon after receiving Covid vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	909895-1	within minutes of being vaccinated, developed feelings of swollen lymph nodes, fullness and stiffness in her neck. She has redness across her upper chest. She has experienced side effects similar to this from other vaccines she's received in the past. She was observed in the ED but no medications were administered. Her symptoms improved and she was discharged with a prescription for an EpiPen and an appointment to follow up with an allergist.
COVID19 VACCINE (COVID19)	Emergency Room *	909898-1	Within 10 minutes of receiving the Pfizer COVID vaccine, she complained of chest tightness, feeling flushed, mild headache, and paresthesias in her hands and mouth. Symptoms lasted approximately 10 minutes and resolved spontaneously. No treatment was administered. The patient was observed and discharged to home with no additional treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	909925-1	12/25/2020 08:00AM patient awoke with left eye twitching, mouth drawn to left side. Neck severely aching from right earlobe to the back of neck, severe headache. Unable to close left eye. ER visit 12/26/2020 in the morning - discharge diagnosis, Bell's palsy. Prescription Valacyclovir hcl 1 gram tablet, Butalbital, Acetaminophen, Caffeine Oral tablet 50-325-40mg , solution eye drops , Azithromycin cream
COVID19 VACCINE (COVID19)	Emergency Room *	909933-1	who presents with complaint of rash , itching minutes after COVID vaccine. Also notes nausea and fatigue. Pt notes no throat swelling , pain , voice change , shortness of breath , abdominal pain , vd or other concerns. Pt has known allergy to flu vaccine and other medications as noted
COVID19 VACCINE (COVID19)	Emergency Room *	909936-1	Two hours after the injection my tongue started swelling and pain increased throughout the day to the point where I could not eat. The next morning (Dec. 23rd) I had painful white lesions under and on the sides of my tongue. This worsened over the next day and I was seen at an urgent care clinic who took culture swabs for lab test. (eventually negative for oral herpes). Pain and lesions continued to worsen and I was admitted to the ER on December 26th. Breathing, heart rate, and blood work all normal. Diagnosed with Herpangina/Coxsackie Virus.
COVID19 VACCINE (COVID19)	Emergency Room *	909945-1	Experienced nausea, dizziness, felt hot and face flushed, and felt like he was going to pass out 15 minutes after receiving vaccine. Patient assessed in the emergency department and found to be stable but has complaints of nausea and dizziness with headache. Received IV fluids, meclizine, and prochlorperazine. Discharged from emergency department at 1454 after tolerating fluids and foods by mouth without difficulty, no recurrence of symptoms, vital signs remaining stable, and stating he feels like he is back to his baseline status.
COVID19 VACCINE (COVID19)	Emergency Room *	909946-1	pt received a COVID vaccine of moderna and within 15 minutes pt c/o throat feeling itchy and tight down low. Also, c/o of tingling in fingers and toes. Pt noticeably shaking. Pt has a hx of fainting with needles. Pt become more anxious and requested and ambulance to be called. Color was flushed. B/P 169/99 P146 SPO2 99%. For pts comfort gave O2 at 2L/min via NC. Pt remained alert and oriented and talking. EMT administered Benadryl 50mg IM. Ambulance escorted pt to ER where only observation was done. F/U with pt about 2 hours later. Pt states she believes she panicked and was doing fine right now. No other issues.
COVID19 VACCINE (COVID19)	Emergency Room *	909947-1	first start with sore arm and neck-then started hurting in chest- now have blisters on lip and throwing up
COVID19 VACCINE (COVID19)	Emergency Room *	909952-1	"approx. one hour after receiving vaccine pt started having throat tightness, nausea, lips tingling, SOB and ""feeling weird"". States has had anaphylaxis in the past from nuts and uses an EPI pen. States she used her pen but did not get relief so went to ER where she received IV benadryl, tagment and steroids. EKG was abnormal. States no problems at injection site. F/U with patient approx. 7 hours after incident and pt states she is doing fine and not having any issues now."
COVID19 VACCINE (COVID19)	Emergency Room *	909962-1	Patient reports shortness of breath and persistent cough.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	909978-1	When I woke up at 0800AM, noticed with rashes on my back about 25%. I took Loratadine but not relieved. Went to ER at 05:00PM and they give Benadryl IV. Prednisone 60 mg tab & Pepcid 20 mg tab. After 2 Hours rashes resolved. Noticed with rashes also on both legs and adomen when I was in the ER.
COVID19 VACCINE (COVID19)	Emergency Room *	909988-1	Anaphylaxis - epi pen X 2, transported to the ED for evaluation and further treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	909989-1	Dizzy, nauseous, headache, body aches, fatigue, black tary stools., diaphoretic, near syncope
COVID19 VACCINE (COVID19)	Emergency Room *	909993-1	Face Started itching, Throat felt weird, rash started appearing on both arms
COVID19 VACCINE (COVID19)	Emergency Room *	909995-1	Aching in right arm, then pruritus, then swelling. Went to ED immediately since she was at work when reaction began. In ED was given prednisone, Pepcid, Benadryl.
COVID19 VACCINE (COVID19)	Emergency Room *	909998-1	Vaccine received at 3:29 pm on 12/26/2020. By 4:00 pm she had complaints of a headache, dizziness alog with nausea and vomiting. S/S without resolution or decrease. Sent to Emergency Department for evaluation at 5:35 pm. She was administered the follwing @ 5:39 Sodium Chloris IV, 6:18 pm 1,000 mg IV tylenol, ketorolac 30 mg IV push and Ondansetron 4 mg IV. She was discharged no longer nauseated and headache decreased from a 4 to a 2. discharged in stable condition. on 12/27/2020 she stated she had fatigue, nausea and vomiting, diarrhea and a temp os 102.0. 12/28/2020 N/V, diarrhea and fever resolved. C/o's joint pain and body aches.
COVID19 VACCINE (COVID19)	Emergency Room *	910003-1	10 min-heart palpitations 20 min-heart palpitations, could not catch breath, angst/panicky sensation, all intermittent 1 hour- akathisia, heart palpitations/panicky sensation, all intermittent, resolved with benadryl 24 hours- heart palpitations/panicky sensation, intermittent
COVID19 VACCINE (COVID19)	Emergency Room *	910030-1	Throat swelling/closing feeling, outcome is anxiety, will take hydroxyzine. Feeling of throat swelling, throat closing
COVID19 VACCINE (COVID19)	Emergency Room *	910046-1	During injection immediately felt itching at injection site. Over 3--45 minutes, itching spread up the deltoid to the left upper chest towards the mid chest. No airway involvement. Went to the ER and received prednisone, Pepcid, Benadryl. Discharged to home with prescription prednisone, Benadryl, and Pepcid, and Epi-Pen.
COVID19 VACCINE (COVID19)	Emergency Room *	910058-1	Vasovagal like reaction after a light 1 mile walk. Lost consciousness.
COVID19 VACCINE (COVID19)	Emergency Room *	910062-1	Diaphoresis, syncope, and hypotension.
COVID19 VACCINE (COVID19)	Emergency Room *	910064-1	Patient had mild wheezing 15 minutes after vaccine injection.
COVID19 VACCINE (COVID19)	Emergency Room *	910065-1	Moderna COVID 19 Vaccination administered IM L deltoid. Client stayed 30 minutes for observation. Left and approximately 15 minutes later experienced numbness in tongue and neck area-felt like throat was constricting. Drove self back to clinic with epi and benadryl administered IM and oxygen placed at 8l. Blood pressure 170/98, HR 108. States felt better but after approximately 15 minutes became flushed and felt like it was returning. Left with practicing MD & NP to go to ER.
COVID19 VACCINE (COVID19)	Emergency Room *	910067-1	12/22/2020 Chills, body aches, fever 103.00 fever -- overnight fever unable to break 104.7 fever with Tylenol and Ibuprofen. Morning no change in temperature 104.7 no change -- ER Clinic Visit, XRAY-results: pneumonia , Covid test - positive; medications prescribed : 5day Z-pack
COVID19 VACCINE (COVID19)	Emergency Room *	910072-1	Around midnight on day of vaccine, 12/23/20, patient experienced pain at the injection site, which lasted about 20 hrs. Patient also had a severe headache, which he says has abated as of today, 12/28/20. Patient starting having the following problems around midnight on 12/23/20 and is still experiencing them: fever (99+), occasional chills, difficulty in breathing, restless sleep, coughing, burning sensation in nose and sinuses.
COVID19 VACCINE (COVID19)	Emergency Room *	910073-1	12/20/2020 WITHIN MINUTES, I STARTED TO FEEL PINS AND NEEDLES. RADIATED LEFT TO RIGHT SIDE OF ARMS, AND THEN UP TO HEAD. NUMBNESS AND TINGLING. SEVERE PROFOUND WEAKNESS, DIZZINESS AND ORIENTATION. VISION FELT 'FAR AWAY'. HR INCREASED, HX SVT. 3 MINUTES BP WAS 'OK' BUT I BELIEVE IT BOTTOMED OUT. HR WAS 150. STRETCHER, TX TO ER. BLURRY, 'STAY WITH US'. ALERT, AWAKE, VERY IN AND OUT OF FOCUS. FEEL LIKE 'PTSD' FROM THIS EXPERIENCE. 'WHOLE BODY WAS BUZZING'. IV STEROIDS, IV BENADARYL, IV FLUIDS, IV ATTIVAN (NO EPI AS NO DIFFICULTY BREATHING) STILL FEELING 'DAZED' *FLU SHOT REACTION 2013 - BRONCHOSPASM, MILD. 2014 - BRONCHOSPASM, RINGING IN EARS, INCREASED HR, DRY HACKING COUGH, USED NEBULIZER AND TOOK BENADRYL. LASTED 4 HOURS. ALLERGIST APPT 2020 - ADMINISTERED FLU SHOT UNDER GUIDANCE; SCRATCH TEST; BROKEN UP INTO 2 DOSES. INFORMED NOT ALLERGIC TO FLU SHOW 'GOOD TO GET COVID SHOT'. *STILL HAVE TINGLING IN LEFT THUMB
COVID19 VACCINE (COVID19)	Emergency Room *	910076-1	Within 8 minutes of receiving the COVID-19 vaccine, patient developed feeling of throat feeling itchy, tongue tingling, and progressed to throat tightness and difficulty speaking and squeaky voice within 15 minutes of receiving the COVID-19 vaccine. 911 was called with request for the facility's Rapid Response Team (RRT) to assist. While awaiting RRT arrival, patient was administered Epinephrine 0.3 mg IM via EpiPen, first dose within 18 minutes of onset of adverse symptoms, with short-lived improvement of symptoms. The Rapid Response Team arrived on the scene and when the same symptoms started to return, about 7 minutes after the first dose of Epinephrine, a second dose of Epinephrine was administered IM. Patient's symptoms responded positively to the second dose of Epi and patient was transported to the Emergency Department by the Rapid Response Team for observation and further evaluation/treatment as needed.
COVID19 VACCINE (COVID19)	Emergency Room *	910088-1	possible anaphylaxis - throat itching, flushing, felt unwell

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910094-1	"Employee presented to COVID 19 vaccination clinic and received 1st dose of COVID 19 @ 13:48. Patient proceeded to wait in the waiting area 15 minutes and was about to leave to return to work when the contracted employee reported she developed a cough and flushed face. VSS @ 2:04 BP 172/105 HR 111, she was A&O, Employee was moved to stretcher, given water to drink unable to drink, she stated ""it feels funny"", VSS retaken BP 151/97, HR 91. She continues with intermittent non productive cough and C/O she was unable to clear throat and felt throat tightness. Within minutes, her face flushed, coughing worsened, difficulty swallowing, and she became diaphoretic. Solumedrol 125 mg IM Given to right arm. Patient reported she felt heaviness throughout her body, and was unable to move her Left arm as easy as before, with bilateral numbness to tingling to upper extremities and decrease strength to left arm. Patient crying out, stated she felt as if she could not breath, no hives present, no angioedema. Anxious, crying out that she felt ""heavyness on her chest"". VSS 2:19 158/108 HR 78. This writer attempted to call ED RN several times through operator: NO answer to each call. I left personal message with Unit secretary of COVID 19 reaction and needed to speak with RC or ED MD. I attempted to call ED MD, no answer. Epinephrine 0.5mg IM given to right deltoid at 14:20 patient was taken to ED triage area, patient taken to room. Report given to RN and ED MD."
COVID19 VACCINE (COVID19)	Emergency Room *	910123-1	"21 y.o. female who arrived by from on-campus presented to the emergency department for Nausea, face/tongue/distal extremity numbness 5 minutes after receiving Covid vaccine. Patient states that the symptoms are intermittent and ""come in waves."" She states that she was simply sitting in a chair doing nothing on the symptoms started. She does not feel like her tongue is swollen, she has no difficulty with breathing, no new rashes, and her nausea is not persistent. She has no history of anaphylaxis. She has no history of food or other allergies, and has never used an EpiPen. She does not typically have symptoms after receiving injections and is a phlebotomist and does not have fear of needles. Patient's symptoms resolved within 1 hour of her stay. She felt well, had no difficulty with breathing, did not notice any development of rashes, abdominal pain, nausea. She states that her heart rate is typically 80s/90s when she checks it. á After her fluids are complete, and she is observed for 4 hours, patient has no symptoms, and feels safe to go home."
COVID19 VACCINE (COVID19)	Emergency Room *	910124-1	I felt very dizzy afterward
COVID19 VACCINE (COVID19)	Emergency Room *	910125-1	During 15 minute monitoring time, patient developed throat irritation and tachycardia.
COVID19 VACCINE (COVID19)	Emergency Room *	910129-1	Numbness in fingers Severe pain throughout whole arm Unable to lift arm
COVID19 VACCINE (COVID19)	Emergency Room *	910133-1	Noted tongue starting to swell on 12/24 at 1030. Started on left side, then progressed to right side. No SOB, difficulty swallowing or breathing, but staff noted difficulty understanding her speech. Presented to ED at 1300. 50mg Benadryl given IV on 12/24 at 1328 and 125mg solumedrol given IV at 1327. Pt reported improvement in tongue swelling at 1630.
COVID19 VACCINE (COVID19)	Emergency Room *	910135-1	12/26/2020 2:00PM ears itching, hives - left wrist to elbow -- Urgent Care Visit -- Solumedrol shot received and Benadryl advised to take. Hives cleared on skin 12/26/2020
COVID19 VACCINE (COVID19)	Emergency Room *	910149-1	On 12/24/2020 started with slight headache and a sore throat. On 12/24/2020 tiredness and slight sore throat. At 15:30 on 12/24/2020 she noticed tenderness in right groin. By 1730 she had chills. On 12/26/2020 at 0230 she had throbbing in her right groin and 2030 she had cellulitis in the right groin.
COVID19 VACCINE (COVID19)	Emergency Room *	910154-1	Itchy and bottom lip felt swollen. Went to the ED.
COVID19 VACCINE (COVID19)	Emergency Room *	910158-1	Patient began felling flush and hot. Throat itching. She was given 50 mg of diphenhydramine. She does carry an Epi-pen due to bee stings. She did not want to take the Epi-pen initially. we watched for about 10 more minutes. Voice was beginning to get raspy, and she reported increased feeling of swelling in vocal chords. We took patient to the ED triage area and she administered her Epi -pen. She was registered in the ED and was placed in a room for observation/monitoring. She was given an additional 25 mg of IV diphenhydramine and also 125mg of Solu-Medrol. Following this regimen, the patient began feeling much better. She was monitored for an additional 2 hours. I stayed with the patient while in ED and she recovered from the reaction with no additional sequelae.
COVID19 VACCINE (COVID19)	Emergency Room *	910170-1	Tingling of tongue, shortness of breath, swollen lip. The patient was observed in the Emergency Department for about an hour and discharged home without further treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	910171-1	blood pressure issues and tightness of throat
COVID19 VACCINE (COVID19)	Emergency Room *	910172-1	recipient complained of feeling lightheaded and thought she would pass out. gotten a snack and drink and then laid down on stretcher. vital signs stable but then symptoms did not improve and began to complain of numbness and tingling in her left arm. transferred to the ED
COVID19 VACCINE (COVID19)	Emergency Room *	910194-1	Began to have facial flushing and hives about 5 minutes after the injection, followed by itchy throat, hoarse voice, abdominal cramping, joint pain.
COVID19 VACCINE (COVID19)	Emergency Room *	910203-1	REDNESS SWELLING HEAT TO THE RIGHT DELTOID, STILL SPREADING. PT EXPERIENCED CHILLS, FATIGUE, PAIN SWELLING TO EXTREMITY AND NAUSEA.
COVID19 VACCINE (COVID19)	Emergency Room *	910206-1	30 minutes after vaccine administered, pt had irregular heart beat (felt like it was going to come out of his chest through his neck). Lightheadedness, and terrible headache. Skin of chest and stomach were red. Pt received treatment in the ER, received IV benadryl, IV steroids, and anti-nausea medicine, and IV fluids. Pt was cold and shaking, couldn't stay warm. 4 days later, patient is still cold and fatigued.
COVID19 VACCINE (COVID19)	Emergency Room *	910210-1	shoulder pain day of vax, itching, swelling, warm at injection site, redness. ER on 12/26 stated that vaccination may have been injected incorrectly, possibly lower than should have. ER gave Benadryl to pt.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910216-1	21 y.o. female normally healthy who arrived by to the emergency department for Post COVID-19 vaccination reaction. Patient states approximate 5 minutes after the vaccine, she started to feel lightheaded and nauseated. She does notice the sensation of throat irritation, but denies any shortness of breath or difficulty breathing. Denies any tongue/lip/airway swelling, abdominal pain, new rash/pruritus, diarrhea, emesis, fever/chills, chest pain. She has no history of anaphylaxis or use of EpiPen. No significant allergic reactions in the past Initial reevaluation approximately 30 minutes after arrival, patient status unchanged. She still felt lightheaded and nauseated with a sore throat. No new rashes, shortness of breath, difficulty breathing. Her voice was normal, and did not report any new GI symptoms. Heart rate was 109 with one half fluids given thus far. á On reevaluation 2 and 3 hours after arrival, patient's heart rate normalized into the 60s?70s, she was asymptomatic. She was slightly fatigued from the Benadryl. She felt safe to go home. Follow-up call a few days later and patient was doing fine with no symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	910223-1	Tachycardia started the morning of 12/28/20 and was distressing enough to lead to calling 911 and then visiting the emergency department. Emergency department work up was negative. No previous history of tachycardia prior to this episode.
COVID19 VACCINE (COVID19)	Emergency Room *	910225-1	Began experiencing dizziness on 12/26/2020 at around 10:30 am. Dizziness was initially off/on for the remainder of the day. By 12/27/2020, I began experiencing dizziness and feeling ?swimmy headed? with no periods of relief (even when sitting still or laying down).
COVID19 VACCINE (COVID19)	Emergency Room *	910237-1	23 y.o. male who arrived by to the emergency department for suspected allergic reaction. Patient received his Covid vaccine 3 hours prior to ED arrival. Initially he was asymptomatic however, as the morning progressed, he developed a redness around the injection site. He then noticed a rash all over his face, that was mildly itchy in nature and felt warm. He denies any associated wheezing, shortness of breath, facial swelling, throat swelling, severe abdominal pain, vomiting, lightheadedness, dizziness, or syncope. He has not taken anything for his symptoms, and they continue to worsen. He has no prior history of allergic reaction to vaccines or other known allergies in the past. He states this is mildly itchy in nature. Patient was given 50 mg of p.o. Benadryl and Pepcid for symptomatic control. He was observed in the ED for 2 hours without any progression of his symptoms, no associated facial swelling, wheezing, shortness of breath, abdominal pain, vomiting, or hypotension to suggest anaphylactic reaction. He was discharged home in stable condition
COVID19 VACCINE (COVID19)	Emergency Room *	910239-1	The entire reaction was over in an hour started at 115pm 12/19/2020 I had pain in upper back and shoulder, within 5 mins it started hurting my left arm and traveled down to my wrist and then went into my left thigh and I had this sharp headache for 3 mins and then it all went away and I have not had any symptoms since. That day I went to the ER and they kept me for 2 hours for observation and I went back to my work, The only reason I sought care was because I was already in a hospital, I was taken by wheelchair, blood pressure was fine
COVID19 VACCINE (COVID19)	Emergency Room *	910250-1	"26 y.o. female who arrived presented to the emergency department for concern of an allergic reaction. Patient reports being at the COVID-19 clinic just prior to arrival receiving her first dose of the vaccine. However, after walking a few minutes later she began to experience an abnormal sensation in the back of her throat, describing it as ""spicy"" accompanied by a general wave of feeling ""hot and heavy"" with some tingling in her fingers and toes. Patient currently states that overall her symptoms are improving with only a continued feeling of ""hot and heaviness."" Denies a history of allergic reactions to vaccinations or medications, besides a possible allergic reaction to Penicillin when she was younger. Denies shortness of breath, nausea, emesis, or any other complaints at this time. Denies a history of GERD, stating that she has not eaten anything today. Patient is otherwise healthy with no use of daily medications. Patient was observed for one hour while here in the ED with no residual symptoms. Patient feels comfortable going home and will return for worsening symptoms. Agrees to follow up with her PCP. Vital signs are stable at time of discharge."
COVID19 VACCINE (COVID19)	Emergency Room *	910251-1	41-year-old male who presents to the ED today with a complaint of weakness in his bilateral arms and legs. He states he fell slightly weak yesterday but this morning when he woke up around 6 AM he was not able to get out of bed because he was so weak. He states he feels like he has no muscle strength in his arms and legs. He denies any fever. He denies any cough or shortness of breath. He denies any chest pain or abdominal pain. He denies any nausea, vomiting or diarrhea. He denies any numbness in his extremities. He denies any neck or back pain. He did receive the first Covid vaccination on December 17.
COVID19 VACCINE (COVID19)	Emergency Room *	910263-1	FLUSHING, HIVES, FACIAL NUMBNESS ON THE LEFT SIDE
COVID19 VACCINE (COVID19)	Emergency Room *	910299-1	experienced a strong medicine-like smell; a rush of warmth throughout my body; felt that my hands were swelling and slightly itchy but they did not appear to be swollen; felt that my hands were swelling and slightly itchy but they did not appear to be swollen; panicked; felt that my throat was tight but I didn't feel short of breath; My BP was elevated at 140s/80s; tachycardic; This is a spontaneous report from a contactable nurse (patient). A 42-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EH9899), intramuscularly at the right arm on 18Dec2020 at 13:00 (1 pm) at single dose for COVID-19 immunization. The patient was not diagnosed with COVID-19 prior to vaccination and since the vaccination, the patient has not been tested for COVID-19. The patient was not pregnant at the time of vaccination. The patient's medical history included asthma r/t environmental allergies, anxiety, and known allergies to PCN, Sulfa, grass, trees, ragweed, weeds, mold, dust mites, cat and dog. Concomitant medication included cetirizine hydrochloride (ZYRTEC), venlafaxine hydrochloride (VENLAFAXINE XR), colecalciferol (VITAMIN D), ibuprofen, and montelukast sodium (SINGULAIR). The patient received the vaccine on 18Dec2020 at approximately 1 pm (13:00) and 5 minutes later (18Dec2020 at 13:05), she experienced a strong medicine-like smell and a rush of warmth throughout her body. She then felt that her hands were swelling and slightly itchy but they did not appear to be swollen. She was panicked and felt that her throat was tight but she didn't feel short of breath. Her BP was elevated at 140s/80s and she was tachycardic. She gave herself an epinephrine injection and about 10 minutes later the occupational health nurse gave her 25 mg Benadryl at her request. The adverse events results in Emergency room/department or urgent care. The clinical outcome of the events was recovered on an unspecified date.; Sender's Comments: Based on the close temporal relationship, the association between the reported events with BNT162b2 can not be fully excluded. The history of asthma, allergies, and anxiety may have been contributory. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910302-1	diagnosed with Bell's palsy; This is a spontaneous report from a contactable nurse (patient). A 33-year-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EK5730, expiration date: Mar2021), via an unspecified route of administration in left arm on 19Dec2020 10:00 at single dose for COVID-19 immunization. No other vaccine administered in four weeks. Medical history included drug sulfa allergy. Concomitant medication included cetirizine, cetirizine hydrochloride (ZYRTEC) from 18Dec2020, and multivitamin from 18Dec2020. No Covid prior vaccination. No Covid tested post vaccination. About 40 min after the vaccine (19Dec2020 10:40) the patient developed left facial/ left tongue tingling/ numbness. By 20:30 at night (19Dec2020 20:30), the patient had a left sided facial droop as well, the patient was diagnosed with Bell's palsy. 20:30 (19Dec2020), she had facial asymmetry. She looked in the mirror and noticed her smile was not symmetrical. She then checked into the Emergency Room and the ER doctors diagnosed her with Bell's palsy. She was not admitted to the hospital. Steroids were given for treatment. The patient was still experiencing. Intermittent tingling but tingling was not constant. Smile was not normal yet. The outcome of event was not recovered.; Sender's Comments: Based on the close temporal relationship, the association between the event Bell's palsy with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910307-1	bilateral periorbital swelling; Myalgia; Fever; This is a spontaneous report from a contactable physician. A 49-year-old male patient received BNT162B2, via an unspecified route of administration on an unspecified date as single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced bilateral periorbital swelling, myalgia and fever on an unspecified date, which were medically significant. Description was as followed: patient went to the emergency department. The vaccines was given on a Wednesday afternoon, and patient presented with bilateral periorbital swelling this morning, myalgias, and fever. Therapeutic measures were taken as a result of swelling, myalgia and fever; the only treatment given was diphenhydramine (BENADRYL) orally. The batch/lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, periorbital swelling, myalgia and fever, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910308-1	Diaphoresis; palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor.; palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor.; This is a spontaneous report from a contactable physician. A 56-year-old male patient received the first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at 09:00 at single dose for covid-19 immunization. Medical history included hypertension, episode of SVT (supraventricular tachycardia) in the past. There were no concomitant medications. The patient experienced diaphoresis, and palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor on 18Dec2020. The events were reported as serious per medically significant. Event details: the patient received the vaccine 18Dec2020 at 09:00AM. About 40 minutes later the patient returned to hospital where he worked, where he received the vaccine, with diaphoresis, palpitations of 180-150 beats per minute, and SVT supraventricular tachycardia on the heart monitor. Reporter stated this was temporally related. Patient was given Adenosine 6mg IV with no response; then 12mg Adenosine with no response. Then the patient spontaneously converted 10 minutes after the last dose of adenosine to 75 beats per minute and sinus rhythm, in one beat. The reporter was an emergency room (ER) physician and the patient was the ER right now. The patient was stable at time of reporting and expected to be discharged. The reporter did order a Troponin and cardiac workup. Troponin result was less than 6 which was normal. With regard to the Adenosine that didn't work reporter stated those vials usually went into a container and after consulting with another coworker stated the Adenosine vial had been discarded at this time and he was unable to provide NDC, lot or expiration date. The outcome of the events was resolved on 18Dec2020. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship and the description of the events, diaphoresis, palpitations and SVT, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910314-1	had a syncopal event and hit her face when falling; had a syncopal event and hit her face when falling; hit her face; This is a spontaneous report from a contactable consumer via Pfizer sales representative. A 41-year-old female patient received BNT162B2 (Pfizer product) , via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunization. The patient medical history was none. The patient's concomitant medications were not reported. The patient had COVID vaccine administration yesterday (18Dec2020). She went to bed that night and woke up in the middle of the night to use the bathroom. She had a syncopal event and hit her face when falling. She required a trip to the urgent care and stitches. She was a healthy female with no underlying conditions. Event took place after use of product. Therapeutic measures were taken as a result of hit her face. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910315-1	"Anaphylactic Reaction; felt like something was in throat; felt tingling on both hands and fingers; voice started to change; face turning red to white to purple; everything in mouth as tongue felt like it was growing; having chest pain radiating to left scalpel, and jaw; couldn't think of the words to say as it was hard to breath; chills; heart rate is racing; This is a spontaneous report from a non-contactable nurse via internet source via Pfizer Sales Representative. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899) via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. Medical history included had a lot of food allergies. The patient's concomitant medications were not reported. The nurse told that her manager (patient) had an anaphylactic reaction shortly after receiving Pfizer's COVID-19 BNT162b2 vaccine on 18Dec20. Patient stated via Social Media indicated that she received the Covid-19 vaccine right after work. Easy breezy didn't feel a thing. She was asked to wait for 15 minutes, 5-10 minutes of waiting, she felt like something was in throat, so she kept clearing it. Patient felt tingling on both hands and fingers. Her voice started to change. She informed the ER team there, the ER nurse described her face turning red to white to purple. ER nurse started an IV right on patient's right AC, gave her a shot of Benadryl, steroids and the epi pen right through pants. Patient felt everything in mouth as tongue felt like it was growing, but she can breath. Patient was route to the ED via wheelchair, everything started to look hazy, she was having chest pain radiating to left scalpel, and jaw. Patient couldn't think of the words to say as it was hard to breath. When got to the ED they gave her another dose of Benadryl, solumedrol, decadeon, HHN tx with epi and that worked. Patient felt her throat opening up and started talking but then came the chills. It took almost 3 hours to clear the symptoms, even though her heart rate is racing (prob due to the meds), she opted to go home. The outcome of ""heart racing"" was not recovered, of other events were recovered on 18Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reactions with tongue swelling/voice alteration/hard breath/tingling/something in throat/skin discoloration, chill and chest pain cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	910316-1	TTP; This is a spontaneous report from a non-contactable pharmacist. A 22-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 17Dec2020 as a single dose for COVID-19 immunization. The patient did not have any known relevant medical history. The patient had no allergies to medications, food or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's concomitant medications were not reported. It was unknown if the patient received any other vaccines within four weeks prior to the vaccination. On 21Dec2020, the patient experienced thrombotic thrombocytopenic purpura (TTP); which was serious for hospitalization. The clinical course was as follows: The patient went to the emergency room/urgent care and was admitted in the early morning of 21Dec2020 due to TTP. Work-up was ongoing with no known results. On 21Dec2020, the patient also had a COVID-19 test which was negative. The patient was treated with unspecified corticosteroids and platelets. The clinical outcome of the TTP was unknown. The reporter assessed that it was unknown if the TTP was related to the vaccination. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: Current limited information does not allow a full medically meaningful assessment, especially lack of medical history, concomitant medications, concurrent illness and diagnostic workups such as coagulation test, Combs test, bacterial/virologic/immunological biomarkers to identify the etiology. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910337-1	vaccine at 11:30 am on 12/18/20 and after 15 mins she felt the room started to spin, dizzy and tunnel vision. nausea and dry heaves also 2-3 mins after. persistent dizziness. pruritic rash and was taken to the ER by wheel chair. About an hour after the vaccine, she felt something in the back of her throat, speech ok, able to swallow. No sob. She was treated with benadryl, pepcid, zofran and fluid. She felt very hot and shaking. In the ER, she noticed that the rash had progressed to her back. Notes chest redness, back with erythematous, raised pruritic bumps on back and arm (smaller size of dime) Within 4 hours of treatment, she had improved. That night at 2am she had a rash -not as pruritic. She took more benadryl. No rash after. No new meds, no ns aids. She has never had any medical problems or rashes before. Her symptoms are concerning for anaphylaxis but it is reassuring that her vitals were ok and that she did not progress and improved with benadryl and pepcid - advised to not get 2nd vaccine dose - will plan on skin testing her in the future
COVID19 VACCINE (COVID19)	Emergency Room *	910340-1	Around lunch time I felt inside my body a stinging sensation shooting down my body. 5-10 min it got worse and I felt my heart racing. I noticed I started getting a rash, it started on my chest, bottom and legs, I went to the ER where they recommended me a shot of Benadryl and a Pepcid. It took 3- 4 days for the rash to go away and 2 days for the itchiness to go away. It also broke out on my face a day later in the morning.
COVID19 VACCINE (COVID19)	Emergency Room *	910341-1	Approx. 3-5 minutes after receiving vaccine became lightheaded with blurry vision, tongue became thick and numb. About 10 minutes after vaccine pain in right arm and burning down my throat. My hands and arms became numb and tingly and were heavy to move. Symptoms got better with IV Benadryl and Solu-Medrol. Approximate 4 hours after vaccine developed vomiting and diarrhea.
COVID19 VACCINE (COVID19)	Emergency Room *	910342-1	numbness & tingling in tongue & throat after vaccine administration. Immediately taken to the ED, Benadryl & steroid given.
COVID19 VACCINE (COVID19)	Emergency Room *	910349-1	Nursing Notes: about an hour after COVID injection, severe vertigo, vomiting, severe headache, left arm completely numb, pt states she is sitting in her car in the parking lot of her apt, but not able to get out and walk bc the dizziness is too much. RN recommended ER disposition. Pt is going to take an Uber
COVID19 VACCINE (COVID19)	Emergency Room *	910351-1	Patient tested positive for Covid-19 on 12/25/2020
COVID19 VACCINE (COVID19)	Emergency Room *	910361-1	Patient developed Covid 19 following vaccination.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910364-1	pt co fatigue over the weekend and then developed chest pressure and hypoxia per pt on 12/28/20
COVID19 VACCINE (COVID19)	Emergency Room *	910368-1	"patient became nauseated and began dry heaving. C/o ""tickle in back of throat"" with repetitive throat clearing. Mild periorbital swelling noted Given Zofran, Pepcid, Benadryl, epi-pen x 1, IV initiated EMS took patient to emergency department for further evaluation"
COVID19 VACCINE (COVID19)	Emergency Room *	910370-1	34 year old female who reports localized redness and itching within 5 mins after injection. Patient denied any shortness of breath, GI symptoms or rash. VSS. Patient received 50mg of Benadryl. Approx 5 min later patient developed throat tightness. Patient was promptly administered EPI. Patient developed urticarial like lesions. Patient reported improvement in throat tightness but continued to complain of itching at injection site. An additional 50mg of Benadryl was administered. Patient reported improvement of itching approx 5-10 min later. Patient VSS stable throughout but developed tachycardia.
COVID19 VACCINE (COVID19)	Emergency Room *	910372-1	Patient developed wheezing, c/o difficulty breathing. Denies tongue swelling, no visible rash. Treated with albuterol nebulizer and transported to hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	910376-1	Headache, body aches, joint pains and low grade fever with feeling warm and fatigue x 36 hours. Headache with severe cervical/thoracic spine/neck pain, fatigue, fogginess has persisted x 10 days. Associated nausea when pain is severe. Sometimes headache is improved; but it usually worsens in the evenings.
COVID19 VACCINE (COVID19)	Emergency Room *	910381-1	33 y.o. female who arrived by on-campus presented to the emergency department for onset of dizziness and a splotchy red rash after receiving the COVID-19 vaccine today. Patient states after onset of her symptoms she further sat down for approximately 15 minutes, but when she went back up to work she was further prompted to come down to the ED for evaluation. Denies wheezing, nausea, or abdominal pain. Denies a history of allergies. Patient tested positive for COVID-19 at the end of this past September. No prior immunization reactions Patient was given PO Benadryl and observed for one hour while here in the ED with no residual symptoms. Patient feels comfortable going home and will return for worsening symptoms. Will discharge patient with a prescription for Prednisone to use if symptoms return
COVID19 VACCINE (COVID19)	Emergency Room *	910386-1	Hives to bilateral arms and chest
COVID19 VACCINE (COVID19)	Emergency Room *	910391-1	5 days after I received the vaccine, I came down with severe abdominal pain, I went to the emergency department and was diagnosed with Acute Pancreatitis without a cause. I do not drink alcohol, and my gall bladder is working well, no gall stones noted to cause pancreatitis.
COVID19 VACCINE (COVID19)	Emergency Room *	910403-1	tachycardia
COVID19 VACCINE (COVID19)	Emergency Room *	910406-1	Patient had Hoarsness in her throat and felt like she could not breathe. Was given Benadryl, Prednisone and Pepcid.
COVID19 VACCINE (COVID19)	Emergency Room *	910408-1	Patient presents to the ED with complaints of an allergic reaction that started approximately 5 minutes after receiving the COVID-19 vaccine. Patient states that she started to experience throat swelling, tingling on her nose and lips, as well as feeling a little dizzy. Patient denies any trouble breathing but states that she has slight chest pain on inspiration. Denies any other symptoms, denies any significant medical history, has not ever had a reaction to a vaccine before.
COVID19 VACCINE (COVID19)	Emergency Room *	910519-1	I had an elevated BP 218/116, shivering, sweating, light headed and had nausea.
COVID19 VACCINE (COVID19)	Emergency Room *	910532-1	Employee has history of anaphylaxis and was in the 30 min observation. C/O dizziness. Sits on gurney at 45 degree angles. No sob, chest pain or hives. VS obtained and employee hypertensive. Under observation of RN. Able to sip on water, but continues to have HTN and dizziness. Taken to the ED for further evaluation of symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	910538-1	Pt had Covid vaccine. 5 minutes after vaccine complained of tachycardia. HR initially to palpation was in the 220s. Pt assisted supine. Code Blue called per protocol. Dr. to room. Pts BPs were 160/80, 144/90, 140/84, and 138/80. HR 140, 134, and 123 bpm. O2 sat the whole time was 100% on RA. Pt c/o nausea and dizziness. Assisted to stretcher and brought to ER for evaluation. Pt state she had a previous history of Covid and anxiety but this experience felt different to her then her previous panic attacks. No rash, wheezing, oral swelling, pruitis.
COVID19 VACCINE (COVID19)	Emergency Room *	910540-1	Reporting on behalf of staff member. She received covid vaccine on 12/24. The following day, she experienced extreme weakness/fatigue, migraine, low grade fever, body aches, and tachycardia. She went to the ER, they gave her IV fluids, pain meds and tylenol with no relief. She was monitored for awhile and then sent home to rest and recover. 3 days later (12/27) she says she feels significantly better, but still a little tired.
COVID19 VACCINE (COVID19)	Emergency Room *	910553-1	35 y.o. female who arrived by to the emergency department for Allergic reaction. Patient got the shot at approximately 8:10 AM and subsequently developed tingling in the back of her throat and felt like she had some swelling. She alerted staff who brought her here for further evaluation. She currently denies any trouble swallowing, voice changes, tongue, lip swelling, rash, abdominal pain, nausea, vomiting, diarrhea. Able to speak in full sentences without difficulty, not in respiratory distress. She is also able to drink water in the emergency department without difficulty. Will dose with Benadryl and observe. Patient was observed for over 2 hours in the emergency department with event of her symptoms. Doubt anaphylactic reaction at this time as she had no other symptomatic involvement. Patient safe for discharge home at this time.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910554-1	"patient received the vaccination and within a few minutes she developed sore throat, wheezing; patient received the vaccination and within a few minutes she developed sore throat, wheezing; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 18Dec2020 at 08:30 at single dose for COVID-19 immunisation. Relevant medical history and concomitant medications were not reported. On 18Dec2020 at 08:30, the patient experienced sore throat and wheezing; within a few minutes she developed sore throat, wheezing. Facility where the COVID-19 vaccine was administered was workplace clinic. The adverse events resulted in Emergency room/department visit or urgent care. The patient received ""RT"" treatments. It was unknown if prior to vaccination the patient was diagnosed with COVID-19 and it was unknown if she was tested for COVID-19 since the vaccination. The outcome of the events was unknown. Information on the lot/batch number has been requested."
COVID19 VACCINE (COVID19)	Emergency Room *	910560-1	nausea; dizziness; Progressed to tachycardia; heart rate from 60-120; This is a spontaneous report from a contactable consumer. A 37-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration at left arm on 18Dec2020 at 07:45, single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient, approximately 15 minutes after shot, experienced mild nausea and dizziness. Progressed to tachycardia, heart rate from 60-120. Felt it racing and pounding. Went to emergency room for evaluation. The patient underwent lab tests and procedures which included heart rate: 60-120. Therapeutic measures were taken as a result of the events and included electrocardiogram (EKG) and telemetry monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	910562-1	Right neck pain radiates from shoulder blade to occiput.; Tightness of chest and fluttering in chest that made me cough persistently; Tightness of chest and fluttering in chest that made me cough persistently; BP elevated 150/90; I had EKG report read occasional PVC.; This is a spontaneous report from a contactable nurse reporting for herself. A 45-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in the left arm on 18Dec2020 10:15 at single dose for covid-19 immunisation at hospital. Medical history included asthma, eczema, allergies to PCN (penicillin), whey, glutamate, gluten, sulfites. Concomitant medication included isosorbide mononitrate (FLO). On 18Dec2020 at 10:45 the patient experienced right neck pain radiates from shoulder blade to occiput. Tightness of chest and fluttering in chest that made her cough persistently. BP elevated 150/90, no prior history of hypertension. In ED for check-up, the patient had EKG report read occasional PVC. Labs all within normal limits and symptoms and BP better within 1.5 hours so discharged to home. The patient was not treated for the events. Prior to vaccination the patient was not diagnosed with COVID-19 and has not been tested for COVID-19. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	910563-1	numberless shoulder/extends numbness left leg weak when stood(felt numb)/numbness; This is a spontaneous report from a contactable consumer. A 49-year-old female patient (not pregnant) received bnt162b2 (BNT162B2, also reported as Pfizer-BioNTech COVID-19), via an unspecified route of administration on 18Dec2020 13:15, single dose (dose number 1) in left arm, for immunization. Medical history included allergies to food, perfumes, fragrance, smoke and residual odor. Other medical history includes asthma, OSA (obstructive sleep apnea), borderline DM, anxiety and depression. The patient previously took VICODIN and had drug hypersensitivity. She had no other vaccines in four weeks but had other medications (unspecified) in two weeks. The patient reported that on 18Dec2020 at 13:30 she experienced left arm lateral numberless shoulder- last 3 finger, extended numb to pointer finger, extends numbness shoulder up left neck to lips midpoint the complete lips extended to right side of face and neck and then to right temporal, ear and down to clavicle; left leg weak when stood(felt numb). She developed asthma exacerbation by 0900 and started to resolve in ER. About 0018 numbness now in lips, around lips, tongue, and starting down neck. Treatment for the event were Epinephrine IM, Benadryl, Dexamethasone, ab. She also had CXR (chest x-ray), no results reported. The outcome of events was recovered with Sequel. Information on the lot/batch number has been requested.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910580-1	<p>Started to have a cough wheezing high respiratory distress again; anaphylaxis; Shortness of breath; Hives; she had red rash on her chest that progressed to her face; Swelling of tongue; Angioedema; Stroke; This is a spontaneous report from a contactable physician. A 55-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; lot number EK5730), intramuscular into the left deltoid on 17Dec2020, at 11:as single doses for covid-19 immunization and epinephrine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for a cough wheezing high respiratory distress again, , diphenhydramine hydrochloride (BENADRYL), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, dexamethasone sodium succinate (DECADRON), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication, famotidine (MANUFACTURER UNKNOWN), via an unspecified route of administration from an unspecified date at an unspecified dose for an unspecified indication. Medical history included asthma, hyperlipidemia, hypothyroidism and allergies in the past to food, corn and dye (reported as she's had allergies in the past to food, corn and dye), all since unspecified dates. Concomitant medication included levothyroxine (MANUFACTURER UNKNOWN) and montelukast sodium (SINGULAIR). The patient experienced the following events with outcomes: patient started to have a cough wheezing high respiratory distress again involving hospitalization on 17Dec2020, at 23:20 with outcome of unknown; hives involving hospitalization on 17Dec2020 with outcome of unknown; shortness of breath involving hospitalization on 17Dec2020 with outcome of unknown; anaphylaxis involving hospitalization on 17Dec2020 with outcome of unknown; stroke that was medically significant in Dec2020 with outcome of unknown; angioedema that was medically significant in Dec2020 with outcome of unknown; swelling of tongue in Dec2020 with outcome of unknown; on 17Dec2020, she had red rash on her chest that progressed to her face with outcome of unknown. Therapeutic measures were taken as a result of started to have a cough wheezing high respiratory distress again, shortness of breath, anaphylaxis, stroke, angioedema, swelling of tongue and she had red rash on her chest that progressed to her face. Details were as follows: The physician reported that the patient was in the ICU, and admitted for anaphylaxis reaction to BNT162B2. Relating to causality, the physician said yes as the patient had allergic reaction in the past and showed protracted anaphylaxis. Patient had an unspecified rabies vaccine in the past, for which she had respiratory distress afterwards. The physician guessed some skin redness but no she didn't have any there is no need for intervention or anything like that didn't have the details exactly but she said that she had a response to it, it didn't seem like anaphylaxis reaction; she was pre-medicated prior to the vaccine, which was elaborated as got 4 of Decadron and 25 of Benadryl. She didn't have anything to eat other than cereal what she had before with no reaction. She immediately after the vaccine (Covid vaccine) was administered, she said that she had red rash on her chest that progressed to her face. She started to experience shortness of breath and then respiratory distress. She gave herself EpiPen and then she was given steroids, famotidine and epinephrine in the hospital in the emergency department. The patient was sent home with the Benadryl and instructed to take two sips. At 11:20 that day, at night patient started to have a cough wheezing high respiratory distress again. She gave herself a dose of Epinephrine from her Epi and once she got more Epinephrine, Famotidine steroid, Benadryl and then she was admitted had another episode of stroke and then rash and it progressed to angioedema and tongue swelling. She got intramuscular steroids and was currently on an epinephrine drip. Patient was hospitalized in the surgical intensive care unit. The outcome of the events were unknown. Reaction assessment per the reporter for anaphylaxis reaction to the BNT162B2, noted that patient showed protracted anaphylaxis; the method of assessment: Global Introspection reported a drug result of related. Pfizer is a marketing authorization holder of epinephrine in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of epinephrine has submitted the same report to the regulatory authorities.; Sender's Comments: There is a reasonable possibility that the events respiratory distress, anaphylactic reaction, angioedema, dyspnea, and urticaria, were related to BNT162b2 based on known drug safety profile and temporal relationship. The association between stroke and BNT162b2 can not be completely excluded based on the limited information. There is a reasonable possibility that the events stroke, anaphylaxis, angioedema, dyspnea, and urticaria, were related to epinephrine use based on known drug safety profile and temporal relationship. The association between the event respiratory distress with epinephrine use can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Emergency Room *	910582-1	<p>High blood pressure; heart rate in the 100's/High heart rate; light headed and dizzy; This is a spontaneous report from a non-contactable nurse(patient). This female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose via an unknown route on Dec2020 (reported as on Thursday) for Covid-19 immunization. Medical history and concomitant drug were not provided. Patient received the vaccine on Thursday and within 15 to 20 minutes, she got light headed and dizzy with high blood pressure with a heart rate in the 100's. She went to the ER and was sent home, but her blood pressure continues to be high. Her primary care physician wanted to start her on some blood pressure medication due to continuous high blood pressure. The reporter was asking if high blood pressure and high heart rate had been reported as an adverse event for the Covid vaccine. Outcome of High blood pressure was not resolved. Outcome of the other events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: A causal association between BNT 162B2 and the events blood pressure increased, dizziness, and heart rate increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910587-1	I received my first dose of Moderna vaccine at around 9:45 am on Dec 24 and I was fine for like 4 hrs after receiving it, until I started feeling similarly to the way I felt when I tested positive for Covid and had it at the beginning of November (feverish, headache, body ache, stuffy mucusless nose, fatigue, hangover sensation like nauseated and weird, etc...) Things got a little bit worse when all of a sudden I started feeling feverish and my heart started beating so fast I could hear it myself. I had to stop doing what I was doing and called (my insurance/MCD) because I was getting anxious and started hyperventilating, which did not allow me to breathe normal. They told me to take Tylenol which I did and little by little my fever started decreasing; it must have been almost 100 F at that moment. Then once again like 5 hrs after I had taken Tylenol I started getting fever again and this time I got extremely cold also and I was shaking so much and felt so weak I had to lay down and call once again; they told me to have someone take me to their urgent care center and I went there and they retested me for Covid but it was negative this time. Since I had taken Tylenol (2nd time same day, 6 hrs apart) just before I left, my fever was not that high when I showed up there. They told me studies have showed some people experience similar symptoms but when they get the 2nd not the 1st dose; however, they thought it could happen too. I had fever nonstop for almost 48 hrs; it was so high (101.7- highest reached). The rest of the time?at night when I was trying to sleep, obviously I could not take my temperature, I was half awake, half sleep hallucinating, shaking, cold, then hot and sweating a lot and speaking non sense in my sleep (according to my spouse)- this happened both nights. On Dec 26 I woke up feeling not great but definitely better but had a little headache and still felt somewhat nauseated. My last dose of Tylenol I took at 8 pm on Dec 25. I have been feeling better for the past two days but I still feel a little bit tired and not back to my normal self.
COVID19 VACCINE (COVID19)	Emergency Room *	910591-1	Vomit; Coughing; Felt like Throat was itchy; This is a spontaneous report from a Non-contactable Nurse. A 41-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899) intramuscular on Left arm on 21Dec2020 16:30 at single dose for COVID-19 immunization. Medical history included allergies to medications, food, or other products. There were no concomitant medications. The patient did not receive any other medications within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 21Dec2020, 10 minutes after the vaccine the patient began to vomit, felt like throat was itchy, and began coughing. Events resulted that she was taken to the ER (Emergency room). She received Epinephrine, Dexamethasone as treatment for events. Events outcome was recovered on 21Dec2020. No follow-up attempts are possible. No further information is expected.; Sender's Comments: A causal association between BNT162B2 and the reported events vomiting, cough, and itchy throat cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910595-1	broke out in hives on face and hoarseness, tightness in throat; broke out in hives on face and hoarseness, tightness in throat; broke out in hives on face and hoarseness, tightness in throat; throat pain, coughing; This is a spontaneous report from a contactable Other HCP. This Other HCP reported for self that the 57-year-old female patient received fist dose of bnt162b2 (BNT162B2, Brand Pfizer), via unknown route of administration in Left arm on 21Dec2020 12:00 PM at single dose for covid-19 immunisation. Medical history included Known allergies to medications, food, or other products: Azithromycin Flushing, Spinach-anaphylaxis, mild allergic reactions to the Ocrevus, azure and Seasonal allergies, Multiple Sclerosis, Irritable bowel syndrome (IBS-C), post herpactic neuralgia. Concomitant medications included other medications the patient received within 2 weeks of vaccination baclophen, clozapine (KLOPIN), ocrelizumab (OCREVUS), sertraline, cetirizine hydrochloride (ZYRTEC [CETIRIZINE HYDROCHLORIDE]), mo. She is not pregnant at the time of vaccination. Facility type vaccine was Hospital. No other vaccine in four weeks. The patient experienced within 15 to twenty minutes of vaccine, broke out in hives on face and hoarseness, tightness in throat then sent to ED where hives continued to form on back the arms, throat pain, coughing, hoarseness increased from 21Dec2020 12:15 AM. AE resulted in: [Emergency room/department or urgent care]. Outcome of the events was unknown. Treatment received included Epinephrine, solumedrol, Benadryl IV. No covid prior vaccination. Covid tested post vaccination. Covid test post vaccination: covid test type post vaccination was Other, covid test name post vaccination was Nasopharyngeal Sofia2 SARS Antigen on 21Dec2020 with result of Negative. Facility where the most recent COVID-19 vaccine was administered was Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, has the patient been tested for COVID-19. Test Name was Nasopharyngeal Sofia2 SARS Antigen. Vaccine Facility information available. Information on the lot/batch number has been requested.; Sender's Comments: Based on the close temporal relationship, the association between the reported events with BNT162b2 can not be completely excluded. Medical history of known allergies may have predisposed patient to react this way. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910596-1	I elevated heart rate to 159, I was hot, flush, sweating, elevated BP 154/94 which is high for me. I stayed 15 more minutes and everything was back to normal. The next morning I had a headache. By noon, I had vomiting. I went for a COVID 19 test.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910602-1	"pancreatitis; acute lower abdominal pain; This is a spontaneous report from a contactable pharmacist. A 46-year-old non-pregnant female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), intramuscularly on 18Dec2020 at 08:00 (as reported) at 46-years-old at a single dose for COVID-19 immunisation. The patient medical history was not reported. The patient had no known drug allergy (NKDA). Concomitant medications included acetaminophen (MANUFACTURER UNKNOWN), propranolol (MANUFACTURER UNKNOWN), sertraline hcl (MANUFACTURER UNKNOWN), sertraline hydrochloride (ZOLOFT); all taken for an unspecified indication from an unspecified date to an unspecified date (which were received within two weeks of vaccination). On 18Dec2020 at 17:00, the patient experienced pancreatitis and acute lower abdominal pain; which required hospitalization and were assessed as medically significant. The patient was hospitalized for pancreatitis and acute lower abdominal pain for 3 days on unspecified dates. The clinical course was reported as follows: The patient received the vaccine "" at some point in the AM on 18Dec2020 (as reported)."" That evening, the patient presented to the emergency department (ED) with acute lower abdominal pain. The patient was diagnosed with pancreatitis and was admitted overnight. It was unknown if the patient received any other vaccines within four weeks prior to the COVID vaccine. Prior to the vaccination, it was unknown if the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Therapeutic measures were taken as a result of pancreatitis and acute lower abdominal pain. The clinical outcome of the events was recovering.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment. Other than a temporal association, there is no evidence or argument to suggest a causal relationship between BNT162B2 and the events pancreatitis and acute lower abdominal pain. The events are likely due to an underlying medical condition. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	910605-1	She gained some weight and she thinks she was told she was 84 or 86 kg at the clinic. She weighs about 175 pounds; An EKG was done and she was told she had a prolonged qt interval; Her blood pressure went really high to 177/110; This is a spontaneous report from a contactable consumer. This consumer [patient] reported that the 48-year-old female patient received bnt162b2 (BNT162B2, Batch/lot number: EK5730), via intramuscular injection in left upper arm on 19Dec2020 07:30 am at single dose for covid-19 immunisation (Preventative). Medical history and concomitant medications were none. She got the Pfizer Biontech covid vaccine on the 19Dec. She was sent over to ER from the (clinic name) since her blood pressure went really high to 177/110 on 19Dec2020. Her blood pressure stayed around 170/100 and then she would rest for 10-15 minutes, the ER kept her there till her blood pressure went to about 144 or 150 and then she went home. She confirmed she was not admitted. She was told to go back to the ER if her blood pressure went up. An EKG was done and she was told she had a prolonged qt interval on 19Dec2020. She has not had an EKG since and was told to follow up with her doctor. Treatment: declines any, they just monitored her. When querying weight, states she knows she gained some weight and she thinks she was told she was 84 or 86 kg at the clinic. She weighs about 175 pounds. Reports she had some blood work done at the ER and it came back normal. She does not have any health conditions. She has an allergy to Cipro and fexofenadine. Vaccination Facility Type was Hospital. No Vaccine Administered at Facility. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available was none. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. AE(s) required a visit to Emergency Room. No Physician Office. Prior Vaccinations (within 4 weeks) was none. AE(s) following prior vaccinations was None. The outcome of the events was unknown.
COVID19 VACCINE (COVID19)	Emergency Room *	910609-1	The patient experienced diffuse rash on the upper extremities as well as a scratchy throat 16 hours after vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	910616-1	Approximately 4 hours after vaccine, noted hives/welts on arms, took cetirizine. Went to bed. ~8pm (4 hours later) was very itchy, swollen, discolored face, face felt cold/body hot. No difficulty breathing. Lips purplish, arms swollen. Went to ED. Given benadryl, 2 other pills, watched for 30 minutes. No epinephrine. Hives improved, released, had headache. Next day improved, but still mild headache and groggy. Hives gone completely 48 hours. Mild headache persists. No prior experience like this.
COVID19 VACCINE (COVID19)	Emergency Room *	910621-1	itching; tingly feeling; face appeared more flushed; slight shortness of breath; This is a spontaneous report from a contactable pharmacist. A 63-years-old female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EK5730), intramuscularly in right arm on 18Dec2020 14:30 at single dose for Covid-19 immunisation. Medical history included allergic reactions (allergies to medications, food, or other products: Yes, numerous). No other vaccines administered in four weeks. Other medications in two weeks was numerous. Approximately 10-15 minutes after receiving COVID-19 vaccine (18Dec2020 14:45), patient reported itching, tingly feeling, face appeared more flushed. Seemed anxious due to history of allergic reactions and reported slight shortness of breath. Treated with diphenhydramine 50 mg PO and epinephrine 0.5 mg IM and transported to Emergency Department. Observed in that area and released a few hours later as symptoms resolved. The outcome of events was recovered on 18Dec2020.; Sender's Comments: A causal association between BNT162B2 and the events pruritus, paraesthesia, flushing, and dyspnea cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910628-1	blood pressure shot up to 205/112/blood pressure went down to 136/75; head hurt; couldn't hear that well; pulse 137; a heat wave go through her body up to her head; red rash and hives; red rash and hives; This is a spontaneous report from a contactable other healthcare professional (Patient). A 62-year-old female patient (not pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number and expiration date not provided), via an unspecified route of administration on 21Dec2020 16:00 at single dose for COVID-19 immunization, vaccine location provided as Left arm. Medical history included Penicillin allergy. The patient's concomitant medications were not reported. After about 10 minutes receiving the vaccine on 21Dec2020 16:15, the patient felt a heat wave go through her body up to her head, couldn't hear that well and head hurt. Her blood pressure shot up to 205/112, pulse 137, red rash and hives. The patient was transported via paramedics to the Emergency Room for observation. Her blood pressure went down to 136/75. No treatment was received for all the event. The outcome of the events was recovered on 21Dec2020. Information on the Lot/Batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the event blood pressure increased cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910630-1	the individual has had seizures that have lasted appr 3 days; anaphylactic reaction; This is a spontaneous report from a contactable pharmacist. A 19-year-old male patient received BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number and expiry date unknown), via an unspecified route of administration on 19Dec2020 at single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the vaccine on 19Dec2020. 12-15 mins after receiving the vaccine, the individual has had seizures that have lasted approximately 3 days, has had multiple seizures since then. The patient was taken to the Emergency department, given epipen (Epi pen), was without symptoms for 24 hours at some point, during the 3 day time period and as of 22Dec2020, the patient was continuing to have seizures. The patient started having issues again on 21Dec2020 and 22Dec2020 (yesterday and today). He had more issues with seizures last night on 21Dec2020 and had seizures this morning. The individual also had an anaphylactic reaction in Dec2020 but didn't not elaborate on this. The reporter was wondering if he can get information that this has happened before and wanted information on reversing the situation because the doctors need help. Outcome of the event seizures was not recovered, of other event was unknown. Information on the Batch/Lot number has been requested.; Sender's Comments: A causal association between BNT162B2 and the events seizures and anaphylactic reaction cannot be excluded based on compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910635-1	New diagnosis of diabetes 5 days after receiving vaccine with no past medical of DM and no family history.; This is a spontaneous report from a contactable Nurse (patient). A 31-year-old female non-pregnant patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EJ1685), via an unspecified route of administration on 18Dec2020 14:00 at arm left at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included asthma and hypertension. The patient had no known drug allergies. Concomitant medication included cetirizine, budesonide, formoterol fumarate (SYMBICORT), escitalopram oxalate (LEXAPRO), montelukast andomalizumab (XOLAIR). No other vaccine in four weeks prior to the COVID vaccine. The patient experienced new diagnosis of diabetes 5 days after receiving vaccine with no past medical of diabetes mellitus and no family history. The event result in doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. Adverse event start date was 19Dec2020 06:00 AM. Treatment received included fluid bolus, computerized tomogram (CT) scan and labs. The patient underwent lab tests and procedures which included computerized tomogram and laboratory test with unknown results on Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event was recovered with lasting effects.; Sender's Comments: The reported diabetes was unlikely causally related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), considering the latency of the onset of the event. A possibility that the vaccination unmarked subject's diabetes cannot be completely excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	910639-1	Bell's palsy/facial paralysis; This is a spontaneous report from a contactable other Health Professional (patient). A 28-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/ batch number: 33121, brand: EJ1685), via an unspecified route of administration at left arm on 18Dec2020 09:30 at single dose for covid-19 immunization at hospital. Medical history included anxiety, depression, diagnosed COVID-19 prior vaccination. No known allergies. Concomitant medication included fluoxetine hydrochloride (PROZAC) in two weeks. No other vaccine in four weeks. The patient experienced bell's palsy/facial paralysis on 21Dec2020 19:00 with outcome of not recovered. The seriousness was reported as no. The adverse event result in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The treatment received for the adverse event was reported as unknown.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported event of Bell's palsy due to temporal relationship. However, the reported event may possibly represent intercurrent medical condition in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910645-1	"spotchy rash that started on both of her arms; she was not ok, and she felt weird, and stated something feels wrong; she felt dizziness and like she needed to pass out; she felt dizziness and like she needed to pass out; her knees buckled and she lost her balance; her knees buckled and she lost her balance; hyperventilating and couldn't slow her breathing from fear; hyperventilating and couldn't slow her breathing from fear; This is a spontaneous report from a contactable nurse (patient). A 30-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot no: EK5730, via an unspecified route of administration in right arm on 21Dec2020 16:30 at a single dose for COVID-19 immunization. Medical history included bilateral mastectomy, total hysterectomy, breast cancer gene 2 (brca 2), ankylosing spondylitis (AS), allergies to penicillins and latex. The patient was not pregnant at the time of report. Concomitant medications included isotretinoin, estrogens conjugated (PREMARIN), cetirizine hydrochloride (ZYRTEC), meloxicam. The patient previously took ciprofloxacin and experienced allergies. On 21Dec2020 at 16:45, the patient reported that she showed a nurse a spotchy rash that started on both of her arms. At that time, she also stated she was not ok, and she felt weird, and stated something feels wrong. Then she said that she felt dizziness and like she needed to pass out. The nurse asked if she could still breathe and she said ""I think so."" They asked her to stand then when she did her knees buckled and she lost her balance and was dizzy and more fell back into the chair she was sitting in. Then they just lift her onto the gurney. On the way to the emergency department, she began hyperventilating and couldn't slow her breathing from fear. Upon arrival she was asked for her name and birthdate and she slowly was able to say it. She was told she was given epinephrine, 2 rounds she thinks for her hives that had showed and her respiration was in the 39-49 range. Then they gave her methylprednisone (reported as ""methypedison""), famotidine (PEPSID), and steroids, and lorazepam (ATIVAN) to calm her breathing as well as IV fluids. Then she was able to breathe 20-35 rpm. The patient was not diagnosed with COVID-19 prior to vaccination and has not been tested for COVID-19 since the vaccination. The events were reported as non-serious. The patient recovered from the events.; Sender's Comments: The patient had medical history included allergies to penicillins and latex., and to ciprofloxacin. The reported events were probably related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship. Patient's drug allergy history and nervousness may have played to contribution role to the clinical manifestations. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	910649-1	"low grade fever; Her blood pressure was high/ still really high/ blood pressure was up; headache; Fifteen to twenty minutes after she received the vaccine she became light headed and dizzy/ light headedness and dizziness; This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received BNT162B2 (Lot#: EK5730) via an unspecified route of administration on 17Dec2020 afternoon at single dose in the left arm for COVID-19 immunization. Caller was unable to confirm the manufacturer of the vaccine that she received. It is not written on the card, and she didn't see the vial. The patient medical history was not reported. Concomitant medications included oral contraception pill, but the name was unknown. Fifteen to twenty minutes after she received the vaccine on 17Dec2020 she became light headed and dizzy. She had to catch her breath. She couldn't shake it off. The light headedness and dizziness lasted at that intensity for 10 minutes, but it never went away. They encouraged her to be admitted in the emergency room (ER). She would say that the seriousness of being light headed and dizzy was disabling. Caller didn't remember the exact numbers for her blood pressure. It was 160's over 105. Her heart rate was in the low 100's, around 105. She stayed at the first monitoring station in the vaccine area for 2 hours. They were taking her blood pressure every five minutes. She was given diphenhydramine hydrochloride (BENADRYL) there and lots of water. After 3 hours and she was not improving they called a ""code medic"" that got the medical director and nursing supervisor to come. They encouraged her to go to the ER for continual monitoring. She stayed in the ER for 4 hours and was given meds to help with the blood pressure. She was discharged from the ER home. She was nervous because of all this stemming from the vaccine. She had a low grade fever on 18Dec2020 (Friday) night. Caller stated her work had already reported her reaction. Occupational safety and the medical director are aware. Caller does not have reference number to provide. On 18Dec2020 (Friday) she was not overly concerned because it was the next day. Her blood pressure was high and her heart rate was in the 100's. They monitored her for a couple of hours and she was given a diphenhydramine hydrochloride (BENADRYL). She went to the emergency room (ER) for a few more hours and received additional treatment. They sent her home to be monitored at home. She has been taking her blood pressure every day since and it had not come down. It was still really high. She called her primary care doctor. He was wanting her to start blood pressure medication. She was concerned about starting it with the assumption that it was related to the vaccine. She would like to know the right thing to do. It seems safe to take the medicine, but it was unknown that whether it was going to mask the blood pressure and something else be going on. On 18Dec2020 she still had a headache and didn't feel well, but she thought she needed to give it some time. She had been anticipating not to feel well on 18Dec2020 (Friday). On 19Dec2020 she felt better considering she didn't have a headache. On 19Dec2020 (Saturday) her blood pressure was 138/90 and she felt good. Then on 20Dec2020 she had the bad headache and her blood pressure was up. On 20Dec2020 (Sunday) she had a bad headache and her blood pressure was 156/100. She came to work today and her blood pressure had been high all day. She still had a headache and the light headedness continued. The outcome of the event low grade fever was unknown, of other remain events was not recovered.; Sender's Comments: A causal association between BNT162B2 and the event dizziness cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

COVID19 VACCINE (COVID19)	Emergency Room *	910671-1	Patient had throat tightness and trouble swallowing within 7 minutes of injection. 30 minutes after developed tachycardia and hives. Received prednisone and Benadryl IV symptoms resolved. Patient is 16 weeks pregnant at this time
COVID19 VACCINE (COVID19)	Emergency Room *	910673-1	possible serum sickness 7 days after vaccine: Hand itching, angioedema to lips and face, swelling to hands and genitals, urticaria to chest, inner elbows, groin, genitals, extremities, flushing to face
COVID19 VACCINE (COVID19)	Emergency Room *	910674-1	Itchy throat, gulping to swallow, red eyes, flushed and diaphoresis
COVID19 VACCINE (COVID19)	Emergency Room *	910688-1	I went to ER exp redness around the right eyebrow, rash, cheek was swollen. I was placed on Steriods and Benadryl finished the treatment on 12/26. The rash kind of came and went cheeks was swollen and I felt jittery. I started to feel better on 12/27 and placed a call to my PCP to make sure receiving the second vaccine. My PCP is reaching out to a allergist and contacted Phizer about concerns of the second vaccine. I haven't be able to wear makeup due to my fair skin complexion and don't wont to irritate the rash on my face. I have missed 2 days of work
COVID19 VACCINE (COVID19)	Emergency Room *	910692-1	Moderna COVID-19 vaccine EUA Developed throat, cough and throat clearing during observation period. Refused epinephrine. Code assist called and person was taken to ED where received Solumedrol, famotidine, Pepcid, and Benadryl; continued to refuse epinephrine in ED. Symptoms resolved and discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	910695-1	tingling in the back of the throat. Pt was flushed and sweaty. Pt vitals were 179/107, pulse 112.
COVID19 VACCINE (COVID19)	Emergency Room *	910696-1	Day 1-2: malaise, fatigue, muscle aches, chills, sweats, began ibuprofen Day 3 (12/24) sudden onset of severe L sided chest wall pain, lasting for several hours, other symptoms continued requiring ibuprofen. Day 4: moderate L chest wall pain, Day 5: In the AM pain was reduced, but at about noon after a 17 minute exercise program, pain was severe associated with SOB, went to ER and found to have a L pleural effusion, no pneumonia, no PE on CT angio. Due to lack of clear causative process: began augmentin, azithromycin, prednisone, aspirin and Tylenol... Day 6: Much improved, but still L chect pain with deep breathing coughing and recurrent hiccups. Day 7: a little worse in AM until prednisone 40 mg, aspirin 162 mg and 1000mg Tylenol
COVID19 VACCINE (COVID19)	Emergency Room *	910698-1	Palpitations, racing heart rate, lightheadedness
COVID19 VACCINE (COVID19)	Emergency Room *	910699-1	On 12/22/2020 we had 1 patient who had a severe allergic reaction to covid 19. after she was administered covid 19 vaccine at about 11 am she went in to the observation area for 15 minutes. while there under the observation of the facility staff members she reported to them that she was having some difficulty breathing and her lower throat was closing up. the staff member came over to the administration area to ask me to bring the epi-pen because they have someone with anaphylactic allergy reaction. I ran over there with a box of epi-pen and patient stated she is having difficulty breathing and her throat is swelling up and I noticed her lips were turning blue. at that time I administered the epi-pen and asked the facility members to call 911. which the facility members did promptly. I kept her under observation with the 2nd pen ready just in case it was needed. the EMS showed up within 15 minutes and took over from there and transported her to the hospital. The staff members at the facility also called the patients doctor to inform him of the allergic reaction. I followed up with patient on 12/23/2020 at 4.37 pm. and at that time she was doing fine. she informed me that all of her symptoms of the allergic reaction have gone away and all she has is some cough and some shortness of breath. she had been discharged by the hospital and is on some steroids and under her physicians care. I talked to employee at store as he is the one charged with recording this incident and he has informed me that he talked to the facility administrator and facility administrator informed him that both patients have recovered completely and were back to work today on 12/23/2020
COVID19 VACCINE (COVID19)	Emergency Room *	910705-1	Started having chest pain and shortness of breath approx. 10 hours after injection. Symptoms kept Worsening. Taken to the ER. Cardiac workup performed. It was negative. Diagnosed with Pleurisy.
COVID19 VACCINE (COVID19)	Emergency Room *	910713-1	12/21 SITTING IN CHAIR, FELT TINGLING IN EAR, 'FEELING FAINT'. MOVED TO CHAIR AGAINST THE WALL, TOLD MEDICAL STAFF. FAINTED, SWEATING PROFUSELY, 'WANTED TO GO TO SLEEP'. MONITORED HR, BP. VOMITED. BP WAS STILL ELEVATED 136/100. 'FELT BETTER' AFTER VOMITING, COLOR CAME BACK, 'CAME TO'. ER: BASAL EVENT ABOUT TO DISCHARGE, TINGLING CAME BACK. NOTHING ON MONITOR INDICATED ANY PROBLEMS. EVENTUALLY DISCHARGED AS SYMPTOMS DECREASED. DIAGNOSED; SYNCOPE
COVID19 VACCINE (COVID19)	Emergency Room *	910718-1	Warm, tingling & numbness 10 minutes post injection. Monitoring indicated elevated HR & BP. Team member released after 50 minutes. TM was driving to her clinic and developed left side numbness to her cheek, upper arm and lower left back areas. Supervisor completed incident report and had team member go to urgent care and then went to ER. TM drove herself. ER provider Dr. contacted EH and informed us that TM did not have anaphylaxis and has no known allergies. She also drew CBC, Mag, Urine pregnancy & performed a CT scan w/o contrast to rule out kidney stone. No significant findings were noted.
COVID19 VACCINE (COVID19)	Emergency Room *	910722-1	"Early morning hours 0100 of 12/19/2020, awoke with SOB/dizziness/polyuria/anxious/Heart palpitations/Tachycardia (no tx/went back to bed thought I was just anxious) Afternoon of 12/19/2020 Fatigue/dizziness/HA (Motrin) Early morning hours 0130 of 12/22/2020 awoke with SOB/dizziness/Polyuria /anxious/Heart palpitations/Tachycardia 120-130/felt something wasn't (right) (went to Hospital ER, cardiac workup, multiple PVC's some couplets, tachycardia. Given a liter of fluids) Told it was a Large Catecholamine release related to my immune response to the vaccine, Told Heart was ""irritated""

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910736-1	Moderna Inj given: 0830 Pt complaining of difficulty swallowing: 0839 Epi-Pen given: 0840 Pt sx: Original complaint of difficulty swallowing. Upon assessment, glands were noted to be swollen and red. Pt was given Epi-Pen. Pt had notable peri-orbital edema and his face was flushed. Upon assessment of vital signs pt was noted to be tachycardiac with an elevated blood pressure. No adventitious lung sounds. When pt was loaded onto EMT gurney, his BIL LE were noted to be edematous. 0845 0849 0853 0856 T: 96.9 97.5 97.5 97.9 P: 110 95 77 78 R: 24 20 20 20 BP: 151/92 169/80 137/86 137/95 O2: 99% 99% 99% 97% Ambulance arrived at 0856. Pt transported via ambulance to Hospital for assessment and treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	910750-1	Patient was found slumped over in wheelchair, drooling and unable to respond/follow simple instructions; sent to ED for evaluation. CT scans and MRI NEGATIVE for new/recent stroke; resident slurred speech likely due to hypertensive urgency
COVID19 VACCINE (COVID19)	Emergency Room *	910759-1	Employee received vaccine dose and within 10 minutes developed facial flushing, felt slightly SOB, felt lip tightness, felt like voice was hoarse, with mild lip swelling noted-- reports history of nut allergies/ATBs-- no known history of allergic reaction to a vaccine previously. Employee was brought to ED and received benadryl, epinephrine, decadron, IV fluids in ED and was discharged home.
COVID19 VACCINE (COVID19)	Emergency Room *	910769-1	Broke out in welts and hives all over body for 4 days.
COVID19 VACCINE (COVID19)	Emergency Room *	910776-1	"The employee stated that he started feeling weird. Lips tingling, flushed face, feeling ""fuzzy"" headed, dry mouth, unsteady when standing. BP 130/94 pulse 60 ; at 12:20 Lips numb again and feeling fuzzy; Took to the ER In the ER, patient presented with lip numbness, diaphoresis, leg weakness. Patient states that symptoms were alleviated by sitting down but that the lip numbness returned, Administered- Solu-Medrol 125mg ivp once; Pepcid 20mg ivpb once ,Benadryl 25mg ivp once Discharged from ER at 13:52 with symptoms improved"
COVID19 VACCINE (COVID19)	Emergency Room *	910780-1	"Pt received Moderna COVID-19 vaccine at 1023. Approximately 6 hours later, she began to develop ""hives"" which were primarily around her jaw and hairline on the right side. Pt also reports swelling around her eyes. Pt took Benadryl at home with no relief of symptoms. Pt presented to local Urgent Care, they directed her to the Emergency Department. Pt arrived in ED at approximately 8PM. The Pt received 10mg IM dexamethasone, 25mg IM diphenhydramine, and 20 mg PO famotidine. Pt reports resolution of symptoms after medication administration."
COVID19 VACCINE (COVID19)	Emergency Room *	910781-1	I got the vaccine on Thurs and worked the following day. On Sat morning I felt sick with fever, clammy and tired went to get tested results positive. I dint think this was a reaction to the vaccine. I have missed week of work.
COVID19 VACCINE (COVID19)	Emergency Room *	910782-1	Hives. Given benadryl. Taken to ED
COVID19 VACCINE (COVID19)	Emergency Room *	910786-1	At the 36 hour I was in severe joint pain with profound myalgia, and fatigue. The pain was an 8 to 9/10 and would have caused me to seek emergency medical care if I were not a physician capable of treating myself. I laid in bed writhing in horrible pain and after analgesics did fall asleep. The next day these pains continued as I had to work and had difficulty walking and maintaining professionalism. The pain continued through Saturday at which time I took a tapering dose of steroids and it seems to finally be letting up. I will not seek the booster injection for covid 19.
COVID19 VACCINE (COVID19)	Emergency Room *	910791-1	11:33 Patient arrived to the observation area with nurse at side. Nurse observed upper body twitching and stated that patient voided in the chair. Patient looks dazed and pale and requests to lie down. Patient placed on stretcher with head down and feet up. Initials vitals taken. HR 38. Call was placed to EMS. Patient states that she felt anxious while waiting and has a history of panic attacks. At 11:40 Patient appearance has improved. 2nd set of vitals taken show improvement. Patient states that she feels better and placed a call to her daughter. Awaiting EMS arrival. 11:45 Patient transported via EMS to ED for further treatment and follow up. 15:00 Follow up call placed to ED. Patient stable and may be admitted for further observation
COVID19 VACCINE (COVID19)	Emergency Room *	910794-1	I started with a mild headache with chills body aches and fever of 100 degrees, rash and hives and chest pains. Into the next day I had a sever headache, chest pains and BP 176/126 that caused my cardiologist to add two additional meds to try and get me out of the hypertensive episode.
COVID19 VACCINE (COVID19)	Emergency Room *	910811-1	"Patient with a history of severe anaphylaxis was observed for 30 minutes post vaccine. Right at the 30 minute mark, patient started to look pale, started with frequent throat clearing followed by sense of shortness of breath and chest tightness. 2:37p: No wheezing, good air movement, breathing was not labored, no cyanosis, no noted lip or tongue edema, able to speak. BP 160/54. P 98, O2 sat 98%. Severity of symptoms per patients = 8/10 ""tightness"" at time of medical evaluation/medical provider response. 2:38p 911 called, 2:39p epipen, benadryl 50mg oral, and solumedrol 125mg IM administered (patient tolerated well, able to swallow) 2:42p patient reports symptoms improved to ~4/10 severity O2 sat 98%, P97 2:46p , O2 96%, P 99, BP 148/52 2:48p patient reports symptoms still at ~4/10 severity/stopped improving, O2 sat 95%, p 85; discussed option of doing 2nd epipen 2:54p EMS arrived prior to administration of second epipen. Patient transported to Emergency Department for further evaluation for possible anaphylaxis"
COVID19 VACCINE (COVID19)	Emergency Room *	910812-1	Pt. Administered vaccine at 1355 at 1358 she complained of throat warmth, anxiety and feeling flushed. Pt. offered Benadryl 50mg, refused but agreed to 25mg. VS's at 1358, HR 84, resp.'s 16, BP148/102. at 1410 146/102, HR 76, resp. 16 1415 states feeling worse, can feel it in throat, to ER via wheel chair.
COVID19 VACCINE (COVID19)	Emergency Room *	910813-1	about 10 mins after the vaccine I had hot flashes started in my feet and went through my whole body , dull headache. It didn't last but a few seconds. the headache lasted a couple hours. I went to the ER for further monitoring and checked blood pressure and vitals for two hours and released me.
COVID19 VACCINE (COVID19)	Emergency Room *	910822-1	SNEEZING, STUFFY NOSE, LIP SWELLING, TINGLING MOUTH, THROAT CLOSING, UVULA SWOLLEN 1. Allergic reaction (Allergy, unspecified, initial encounter) . Pt. received Moderna COVID vaccine the morning of 12/22/20 and developed angioedema reaction the afternoon of 12/23 Vaccine is only new medication reported by pt. - denies any new products, foods, etc History of hives with spironolactone 2.5 months ago; taking HCTZ now - unknown if reaction is related to this med rather than vaccine? Due to severity of her reaction and uncertainty if all attributable to vaccine versus some other culprit I would recommend Epi pen at time of discharge Has received IM epinephrine, racemic epi neb, Solu-Medrol, Benadryl, Pepcid in the ED Continue with Benadryl 25mg IV q6h, Pepcid 20mg IV q12h, and Solu-Medrol 40mg IV q6h 2. Angioedema (Angioneurotic edema, initial encounter) . Arrived to the ED with R. side lip, tongue, and uvula and oral cavity edema Airway patent, room air O2 sats WNL - monitor throughout the night for any worsening of angioedema or airway involvement Treatment as above

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910828-1	Approximately 30 min after injection pt reported burning in her throat, numbness and swelling of her tongue. At no time did she report shortness of breath. Vital signs were acquired , pt stayed in our vaccine clinic for approximately an hour without improvement and was then taken to our ER to be further evaluated
COVID19 VACCINE (COVID19)	Emergency Room *	910839-1	Foreign body sensation in throat. Symptoms resolved and patient was discharged from ED after Benadryl and oral steroids
COVID19 VACCINE (COVID19)	Emergency Room *	910844-1	"Headache, lightheaded, nausea, dizziness, muscle aches, malaise, and chest ""squeezing"" prior to syncopal episodes x 3. This occurred in OR where she works. ""I don't know when I passed out."" Rapid Response called s/p sternal rub by MD not effective. Taken to ED via stretcher. In ED, had EKG, IV fluids, Benadryl, and Phenergan. Regained consciousness on arrival to ED. Cleared to return to work on 12/24 by MD in ED. Will follow up with PCP."
COVID19 VACCINE (COVID19)	Emergency Room *	910849-1	Patient described feeling light headed, nauseated, dizzy. She developed hypertension and HA over time frame of 5 minutes after vaccine to 1 hour and 30 minutes after vaccine up to a BP of 201/115. Range of BP was 163/94 up to 201/115 with HR 76-89, Patient was alert, oriented, able to move all extremities, transfer to chair and respond appropriately. Major complaint was feeling dizzy and nauseated with feeling of HA emerging.
COVID19 VACCINE (COVID19)	Emergency Room *	910850-1	the night of the 18th my right eye was bothering me so I was itching it in my sleep, when I woke up on the 19th my eye was red and I thought I had injured it in the night and it bothered me all day but I didn't get it checked, I went to urgent care the 20th because I noticed there were vesicles on my right eye. they gave me eye drops and diagnosed me with HSV keratitis, Valtrex was also prescribed trifluridine. I feel almost completely recovered
COVID19 VACCINE (COVID19)	Emergency Room *	910865-1	Injection at 1109. At 1135 c/o of itchiness of hands and forearms. No other complaints. Benadryl 25 mg given orally. Improved--returned to workplace. At 1250 c/o of worsening symptoms. Tonsils mildly swollen and mildly erythematous. No significant swelling fo tongue and no difficulty swallowing. No redness of skin and no rash noted. Heart rate 118. B/P 118/78 Respirations 18. Oxygen Saturation 100% on room air. I made the decision to send her to the local hospital ER at 1305 as a precaution. At 1408 in ER she received Benadryl and Epinephrine. At 1428 she received solumedrol and Pepcid. Being observed in ER for 4 more hours.
COVID19 VACCINE (COVID19)	Emergency Room *	910867-1	Patient reported numbness and tingling in lips and fingers on right hand at 5 minutes post vaccination. She was taken to the Emergency Room by Employee Health Nurse (walked) where tingling/numbness in lips had resolved upon arrival to ER and was decreasing in hand. She had full resolution after 1.5 hours. She was observed for 2 hours, no interventions, symptoms resolved, and then she returned to work.
COVID19 VACCINE (COVID19)	Emergency Room *	910877-1	Five hours after mild arm soreness, mild chills and day two I was lightheaded
COVID19 VACCINE (COVID19)	Emergency Room *	910887-1	reports rash on back of R hand that started on 12/23 and spread to L hand, face, breast area by 12/26, went to urgent care on 12/26, dx with hives, placed on prednisone, advised to f/u with PCP to document.
COVID19 VACCINE (COVID19)	Emergency Room *	910898-1	42 year old female who works as a pharmacy tech developed diffuse pruritus and throat tightness, nausea during her wait time. She was given EPIPEN and transferred into the treatment area. She was given 50mg benadryl x2 followed by an additional EPIPEN. Patient reported throat tightness resolution but persistent pruritus and nausea. She was transferred to ED in stable condition with plans to follow up in Allergy.
COVID19 VACCINE (COVID19)	Emergency Room *	910902-1	"December 23, 2020, at approximately, 1645 patient noted right eye numbness that tingled into right cheek. At 1730, looked in the mirror and noted no movement in muscles on right side of face. Could raise right eyebrow, but right eyebrow and below numbness and no movement. Patient spoke with physician at Public Health Department and it was recommended patient go to Primary Care to see provider NP. Then at approximately, 1920 went to the local Emergency Department and was seen by Dr. in the ER department. Dr. consulted with on call neurologist. Patient states she was diagnosed with Bells Palsy and given oral steroids (""three pills), then started a Medrol Dose Pak the next morning. As of today, December 28, 2020 patient reports ""Face and eye area feel normal. My mouth is not drooping. I have at least 50% of my movement back."" Patient continues to take Medrol Dose Pak. On day 4 of Medrol Dose Pak has 3 more days. Emergency Department recommended patient follow up with pcp in 5-7 days."
COVID19 VACCINE (COVID19)	Emergency Room *	910909-1	Patient did not eat prior to vaccination. Felt anxious about vaccine. Felt weak and lightheaded. Patient was brought to ER for monitoring and assessment. Was released back to work without treatment required after a few hours.
COVID19 VACCINE (COVID19)	Emergency Room *	910911-1	I am a nurse and I received the Pfizer vaccine on 12/26 at 1030am. I do have a history of food and outdoor allergies. I once got hives on my back from the flu shot, but since have been fine with it if I take Benadryl before it. About an hour after the vaccine, I felt itchy on my upper half of my body. I took a Benadryl without relief. I had a 100.1 fever that afternoon so I took another Benadryl and ibuprofen. It broke my fever, but the itching continued. I also had a couple of hives and a red blotchy rash over my body. I took a hydroxyzine and was able to sleep that night. The next morning I once again felt flushed and itchy. I worked and came home to the same rash, almost mottled looking all over my body. I took a Benadryl and ibuprofen and woke up early this morning itching again. As I was driving into work today (Monday), I noticed my heart fluttering and having palpitations. This continued throughout the morning. My skin rash is still red like I have a bad sunburn all over and is itchy with some red spots. I went to the ER to get checked out. My ekg was normal. They advised me that this is an allergic reaction to the vaccine and to continue 50mg Benadryl q6h for a couple more days and to see a PCP for follow up if it's not better. I never had respiratory issues or swelling. I will continue to monitor symptoms and reaction.
COVID19 VACCINE (COVID19)	Emergency Room *	910912-1	"Patient received Moderna COVID-19 vaccine and within 5 minutes patient complained of fast heart rate and feeling ""not right"". Patient blood pressure at time 156/88 with heart rate 114. Patient given cool rag and then complained of tingling to her arm and hands and numbness to tongue. Patient was taken to Medical Center Emergency Room and given Epinephrine 0.3 mg per Auto-injector. Patient was then given Solumedrol 125 mg and Bendaryl 25 mg slow IVP. Patient observed in the ER and didn't experience any rash or swelling of lips and/or tongue."
COVID19 VACCINE (COVID19)	Emergency Room *	910915-1	Immediately after the vaccine administration had elevated heart rate, dizziness, difficulty breathing. Given a 2 doses of albuterol to help with breathing and transported to ER. Nearly 5 hours after visit, manageable but still difficulty breathing.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910918-1	39 y.o. firefighter, healthy without significant past medical history. He has a hx with cashew allergy in the past (required Epi pen use). He felt light headed, flushing sensation, and mild itchiness on the arm. His light headed felt worse and laid on ground. He remained alert and without apparent distress. There was no respiratory or cardiac complains. Vital signs were normal, O2 sat 100% on RA, BP 119/77, pulse 65, EKG NSR. Paramedics and his colleagues were present and assisted. Benadryl 50 mg IM once was given around 1300 pm. An IV 18 G was placed by paramedics to his right AC and NS tko. Patient left via ambulance.
COVID19 VACCINE (COVID19)	Emergency Room *	910924-1	Patient is a 60yoF who is presenting to ED on 12/28/20 complaining of decreased sensation and itching on left side of face as well as darkening of peripheral vision on the left side. She received her initial COVID vaccine today at 11am, first began noticing symptoms at 1230 and took 2 benadryl around 1pm. In addition, she is reporting some light headedness. She states that her face feels swollen, but knows that it is not. Itching improved after benadryl but face continues to feel numb on left side.
COVID19 VACCINE (COVID19)	Emergency Room *	910927-1	Vaccine administered 10 am 12/26/20. Post vaccine experienced headache, sore arm and fatigue. Approximately 6 hours post injection developed a hot feeling like she was sunburned, pruritis and then a pepper rash/hives started to develop inferior to injection site on right arm, spreading to left arm, chest and neck. Went to ER and treated with IV steroids, diphenhydramine, and hydroxyzine. Discharged on a 5 day course of Famotidine, Hydroxyzine Pamoate, and Prednisone with PRN Diphenhydramine.
COVID19 VACCINE (COVID19)	Emergency Room *	910929-1	nasuea, emesis, throat irritation, hot/cold flashes. The individual was transported to the emergency department for further observation and if necessary treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	910931-1	Approximately 5 minutes post vaccine administration, pt reported shortness of breath and chest tightness. Vital signs remained stable BP 100/65, O2 sat 97%, HR 80-100, respirations easy and unlabored. Pt also experienced nausea without vomiting, and possible tightness in the throat, and numbness in the left arm. No swelling, no redness, no rash. EMS was called, EKG showed NSR, pt was transported to the hospital via EMS
COVID19 VACCINE (COVID19)	Emergency Room *	910933-1	My left are fell asleep and numb, decreased motor functions and then the tingling sensation moved to my left eye, lips and whole face, left lower leg and right hand. It progressed for an hour or two and then went away. Employee health sent me to the ED for observation. I am due 08/01/2021.
COVID19 VACCINE (COVID19)	Emergency Room *	910938-1	Within 2 minutes, Severe allergic reaction, with diffuse erythematous rash, throat tightening, chest discomfort, nausea, and BP240/120. (Normal BP 124/74). Had premedicated with 50 po benedryl. Required 50 mg IM benedryl, ambulance ride to the ER, 125 mg of IV solumedrol.
COVID19 VACCINE (COVID19)	Emergency Room *	910943-1	Patient reports 2 minute episodes of numbness to hands and feet occurring every 5 minutes s/p receiving COVID-19 vaccine. She further reports associated heart pounding and difficulty breathing General ROS: (-) chills, fever, (-) unusual fatigue or weight loss ENT ROS: (-) nasal discharge, (-) cough, (-) sore throat Respiratory ROS: (+) shortness of breath CV ROS: (-) chest pain, (+) heart pounding Gastrointestinal ROS: (-) abdominal pain Genito-Urinary ROS: (-) dysuria Musculoskeletal ROS: (-) joint/bone pain Neurological ROS: (-) headache, (+) numbness to hands and feet Dermatological ROS: (-) rash Psychiatric ROS: (-) SI/HI, (-) psych hx Patient improved her symptoms, discharged home
COVID19 VACCINE (COVID19)	Emergency Room *	910959-1	33 y.o. female with no significant past medical history except for obesity who has been working as a nurse in the emergency room department in our hospital and today he received COVID-19 vaccine and 30 minutes later patient started having increased saliva, cold hands and feet, left-sided pressure-like headache and some numbness in his legs at the same time he suddenly started talking only in first language and lost his ability to speak in second language. He understand second language but replying first language stating that he is talking in second language. On exam he was alert oriented confused by people not understanding his second language stating that his numbness and cold feeling in the hands and feet have improved. Initially patient received 10 mg of Decadron for possible allergic reaction he had a head CT scan that was negative and his labs were remarkable only for hypokalemia. Patient had no prior history of any neurological symptoms he was advised admission to the hospital for observation. Patient symptoms resolved next day, he is alert oriented able to communicate in second language he had a head MRI and head neck MRA that came back negative and had an EEG that showed no seizure activities. Patient was seen in neurology consultation who felt that patient most likely had an episode of migraine headache. Patient is going to be discharged home and to have a follow-up with his primary care physician next week.
COVID19 VACCINE (COVID19)	Emergency Room *	910960-1	Throat itching and tongue swelling
COVID19 VACCINE (COVID19)	Emergency Room *	910961-1	Pt c/o itching at site of injection and back. Denied SOB. Hives, redness at site. Diphenhydramine 25mg po given at vaccination site. Transferred by EMT to ER. At ER, patient given Prednisone 60mg, additional diphenhydramine 25mg and famotidine 40mg. Recommended she take Prednisone x 2 days and diphenhydramine x 24hrs. Patient was discharged to home within one hour.
COVID19 VACCINE (COVID19)	Emergency Room *	910970-1	Swelling of the lips
COVID19 VACCINE (COVID19)	Emergency Room *	910973-1	Started with very bad cramps which lead to diarrhea, that lasted about 1 hour. Then my SI joint started hurting so bad I couldn't stand it and went to ER. They gave me a shot of Torridol and a prescription for Naproxen. I was also nauseous, lethargic, chills, ringing in my ears, headache. I believe my SI joint started hurting due to having arthritis in the joint. The Naproxen escalated all the above. My arm also very sore, but that I could deal with. Feeling a bet better by 12/28/2020. Going to try and get into doctors on 12/.
COVID19 VACCINE (COVID19)	Emergency Room *	910976-1	She began to experience body wide tingling, headache and nausea. She did not have lightheadedness, chest pain, shortness of breath, pain at the injection site, rash or wheezing. She went to urgent care in the facility to be evaluated. Patient was placed on a monitor and observed. Vital signs remained stable. She never developed rash. For her nausea she was given Zofran 4 mg as a disintegrating tablet which was helpful. She received 650 mg of Tylenol for her headache pain. Observation continued during which time she was entirely stable. She requested to go home.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	910993-1	I received the vaccine around 7:55 am in my left arm. I waited around the appropriate time then drove home. No problems until 12:30 or so. I was resting in my bed and immediate felt my heart start to race. I checked it with my pulse oximeter and my rate had shot up to 148. I got up and tried some maneuvers to try to get it down. It then went up to 152. I told my husband to call EMS. I also contact my co-worker. She is a physician and she agreed with taking some benadryl. I took 25 mgs of benadryl. EMS arrived about 10 minutes later. they monitor my blood pressure and heart rate. it did come down but remained around 100. I then went to ER by car for evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	910994-1	Patient developed intense itching 10 minutes following the administration of the COVID 19 vaccination while waiting in the post vaccination recovery area. Emergency personnel present, PO Benadryl and EpiPen administered. Patient sent to ER via ambulance for observation.
COVID19 VACCINE (COVID19)	Emergency Room *	910995-1	shortness of breath, diaphoretic, heart racing
COVID19 VACCINE (COVID19)	Emergency Room *	910998-1	Vasovagal syncope episode occurred right after receiving the Pfizer COVID-19 vaccine injection, patient became pallor, not diaphoretic, no c/o CP nor SOB, patient felt dizzy, HR in the 50's, BP 78/50, glucose = 91, pt given water and OJ. After fluids pulse was stronger, bounding in the 60's, color improved, patient was still feeling faint, taken to cardiac intervention area to lay down, patient refused to go to ER, RRT paged and came to pod - escorted patient to lay down. Of note the patient only had 1 egg for breakfast. Patient continued to be pale, starting shaking and was escorted to the ED for IV fluids and monitoring.
COVID19 VACCINE (COVID19)	Emergency Room *	911001-1	Later in the evening once home, the Eee took Benadryl for initial rash presentation on L arms (vaccination site). Took tylenol next AM for chills, body aches. hives spread to chest. Took more tylenol for itchy, burning sensation. On 12/24 Thursday she noticed new SOB, 101.7F, hives all over the body, Went to a local ED and got solumedrol, famotidine, benadryl, tylenol, IVF. DC'ed from ED on prednisone, benadryl. Had h/o COVID 4/2020.
COVID19 VACCINE (COVID19)	Emergency Room *	911010-1	Patient developed a red rash on left arm starting at injection site and moving down arm towards wrist/hand. Patient stated her palms felt clammy and numb. Patient expressed feelings of anxiety.
COVID19 VACCINE (COVID19)	Emergency Room *	911017-1	Immediately felt warmth and tingling to Left Deltoid at injection site, then started to feel itching and feeling of swelling to throat and mouth. Denies any SOB. No obvious hives. Treated with Solumedrol 125 mg IV, Benadryl 25 mg IV, Pepcid20 mg IV. Given Rx for Benadryl 25 mg PO every 6 hour PRN.
COVID19 VACCINE (COVID19)	Emergency Room *	911020-1	100-101F fever and chills started on 12/27 @ 945pm 100-103.0F fever, nausea, vomiting, chills and diarrhea on 12/28 @0900am 103.5F on 12/28 @ 0640pm. Advil and Tylenol have been taken
COVID19 VACCINE (COVID19)	Emergency Room *	911027-1	Patient began to feel nausea after several minutes and then approx. 25 minutes after vaccine patient began to cough. Patient was transported to ER department on same location as clinic to be monitored by ER.
COVID19 VACCINE (COVID19)	Emergency Room *	911028-1	Became dizzy, warm, tachycardic. Lost consciousness (fainted?), quickly regained consciousness and was taken to the Emergency Department. Before transfer, Benadryl IM 25mg administered.
COVID19 VACCINE (COVID19)	Emergency Room *	911031-1	After injection felt immediately tingling to bilat arms, face, swelling to face and tongue, Itchy feeling to chest, feeling of palpitations and general unease. HR was 120 BPM, scattered hives over chest. No appreciable airway swelling. Treated with Epinephrine 0.3 mg IM, Solumedrol 125 mg IV, Benadryl 25 mg IV, Pepcid 20 mg IV, Ativan 0.5 mg IV. Rx given for Benadryl 25 mg every 6 hr. PRN
COVID19 VACCINE (COVID19)	Emergency Room *	911035-1	"Approximately 7 hours after receiving the vaccine patient who is a L&D Nurse return to work in her area. She describes that after finishing with a C-section she felt burning in both of her eyes (she thought this feels like an allergic reaction, but I am not sweating and haven't rubbed my eyes). She went to the restroom to get a cloth to wash her eyes; afterwards she reports her vision went totally black in both eyes. She reports feeling frustrated that no one came to help and some panic in trying to figure out how to get out of the restroom. She did make it out of the bathroom. Her Staff reports she postured and turned arms inward, head going to one side and passed out. They also report ~ 10 minutes of incoherent conversation and stating ""I got the vaccine, maybe I was given the wrong thing and now I'm blind"". Upon waking, patient vision fully restored and patient does not remember incoherent conversation. Differential diagnosis- TIA vs. CVA > seizure disorder>>> complex migraine"
COVID19 VACCINE (COVID19)	Emergency Room *	911039-1	"Pt received Moderna COVID on 12/28/2020 without event. She returned 45 minutes later complaining of chest tightness and ""feeling weird"". A code A was called and she was triaged by anesthesia. No angioedema noted. She was moved to nurse stat bay and 911 was called."
COVID19 VACCINE (COVID19)	Emergency Room *	911048-1	"PATIENT BEGAN WITH AN ITCHY THROAT AT 15 MINUTES AFTER VACCINE ADMINISTRATION AND LATER DEVELOPED AN ""UNUSUAL SENSATION"" TO THE BACK OF THE THROAT. EPINEPHRINE 0.3MG ADMINISTERED. IV NORMAL SALINE STARTED. DIPHENHYDRAMINE 25MG IV GIVEN. PATIENT'S SYMPTOMS RESOLVED. TRANSFERRED TO ER FOR FURTHER EVALUATION. CONTACTED ER AND WAS INFOMRED PATEINT DISCHARGED WITH NO COMPLICATIONS."
COVID19 VACCINE (COVID19)	Emergency Room *	911049-1	Dizziness, lower left abdominal pain, flushed, heart palpitations. Lasted so long I had to be seen in the ED. New onset of bigeminy. 5 days later I am still having dizzy, feel foggy in my head, overall don?t feel my self.
COVID19 VACCINE (COVID19)	Emergency Room *	911050-1	SHORTNESS OF BREATH, TROUBLE BREATHING, CATATONIC STATE, POTENTIAL SEIZURE
COVID19 VACCINE (COVID19)	Emergency Room *	911054-1	She received vaccine and was sitting waiting for 15 minutes. After 10 minutes she came over and expressed that she felt dizzy and was about to pass out. We took her over to bed where she was extremely nauseous and dry heaving repeatedly. She was also extremely flushed and hot but no temperature and no problems breathing. Blood pressure was elevated when ems came. We called 911 and had a Dr. who was at clinic check on her. Ems came after about 10 minutes and took her to hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	911056-1	Worsening, swelling, redness with warmth and itch around injection area and a few inches below

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	911080-1	Anxiety, headache, nausea, sweating approximately 15 minutes after injection. Observed 1 hour emergency room then discharged.
COVID19 VACCINE (COVID19)	Emergency Room *	911085-1	Vaccination was given at 8:25 and she began itching at 8:32. Itching that progressed from bilateral arms to trunk, bilateral legs and back. She felt wheezes starting. Given 50 mg. Benadryl po at 8:35. Symptoms were getting worse and RN gave Methprednisolone 125 mg. IM at 8:45. Albuterol Inhaler 2 puffs was given at 8:50. At 9:00 patient C/O upper lip tingling. Visual swelling observed. She was transported to ED by WC. ED administered Pepcid po and observed her for an hour. She was then discharged.
COVID19 VACCINE (COVID19)	Emergency Room *	911087-1	Onset of tongue numbness a few hours after vaccination, which was gone the next day. Vaccinated on 12/16 - 10 days later on 12/26/20 tongue numbness recurred & he developed (R) facial droop - seen in ER on 12/17 had normal head CT, negative work up for stroke. Seen in clinic on 12/28 - diagnosed with Bells palsy, started on Valacyclovir. Patient will hold PrEP x7 days (precautionary), no sexual activity during that time.
COVID19 VACCINE (COVID19)	Emergency Room *	911091-1	Pain at site with Fever (temp. 101 degrees F). Patient was sent to the local hospital ER and returned to the facility with a diagnosis of Fever post vaccination. Tylenol was given and patient received IV HEP saline at the ER.
COVID19 VACCINE (COVID19)	Emergency Room *	911097-1	MD Notes in ED Patient is a 35yo female who presents with complaint of allergic reaction. This AM around 0945 received COVID vaccine. Some pain to injection site throughout the day. Today around 1700 started to note dizziness and hives throughout her body. Hives are itchy. Associated with nasal congestion and sore throat. Patient felt difficulty swallowing zyrtec/pepcid. No drooling. Patient without fevers/chills, no recent illness. Denies prior allergies to immunizations. Denies food allergies. No new medications. Another part of the record states she had hives 30 minutes after the vaccine and self-medicated with Zyrtec and Pepcid without relief. Treated in the ED with Epi 0.3 IM Solumedrol 125 mg IV Pepcid 20 mg IV Benadryl 50 mg IV IV fluids Arrived in ED 1836 / Discharged home at 2015
COVID19 VACCINE (COVID19)	Emergency Room *	911108-1	received COVID vaccine, dose 1, Pfizer, approximately 1600. During observation, became light headed, hot, tingling in hands and feet, with onset of nausea shortly after. given ice packs and encouraged to remain in observation another 15 minutes. denied SOB, itching, no apparent hives or swelling. At approx 1700, symptoms had not resolved, was taken to ED for evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	911115-1	Left Shoulder pain that started as ?oh I slept funny? to not going away with ice/heat or rest. Worsening in severity daily and spreading towards base of skull and eventually into clavicle. The pain became excruciating and I was unable to turn my head at all to the left. So bad I had to use my hands to lift my head up. I eventually went to the ED on 12/27/20. And overnight the pain became so unbearable and functionality so limited I couldn't go to work or take care of my toddler. I returned the to ED on 12/28/20. Was advised to file adverse event and contact my employee health and safety department. I was initially examined in the ER the first time with a neck spasm. Sent home with an RX which didn't work. At all. When I returned to the ER th next day, the physician felt my entire neck, shoulder and clavicle an noted swelling and prominent spasm. He diagnosed with a trapezius strain and a vaccine reaction. Gave me an RX for Valium which seems to help take the edge off.
COVID19 VACCINE (COVID19)	Emergency Room *	911118-1	Itchy throat, tongue, Numb Lips, Flush, Redness and hives
COVID19 VACCINE (COVID19)	Emergency Room *	911122-1	low BP/low HR and went to the ER for evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	911151-1	"Increased blood pressure; Rapid heart rate; Chills(shaking); Chills(shaking); Chest and neck tightness; Chest and neck tightness; Teeth tingling; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5730), via an unspecified route of administration on 19Dec2020 12:30 at single dose on left arm for COVID-19 immunization. Medical history included known allergies: Latex. Concomitant medications received within received within 2 weeks of vaccination included acetylsalicylic acid, caffeine, paracetamol (EXCEDRIN [ACETYLSALICYLIC ACID; CAFFEINE; PARACETAMOL]); ibuprofen. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 19Dec2020 13:00 (01:00 PM), the patient experienced rapid heart rate, Increased blood pressure, Chills (shaking), Chest and neck tightness, Teeth tingling. The adverse events result in Emergency room/department or urgent care. The patient received ER monitoring, EKG (reported as ""AE treatment"" for the adverse events. The events were non-serious. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was recovering."
COVID19 VACCINE (COVID19)	Emergency Room *	911173-1	1.5 hours after the vaccine, one eye vision was down to light perception only. The event lasted 15 minutes and resolved completely. ER eval and Ophthalmology eval did not find a cause for the event.; This is a spontaneous report from a contactable physician. A 66-year-old male patient received bnt162b2 (reported as COVID 19, Covid vaccine, lot/batch number and expiry date were not provided), via an unspecified route of administration from 17Dec2020 12:30 at single dose for covid-19 immunisation. Medical history included gout, abnormal glucose, hyperlipidemia, hypertension. Prior to vaccination, the patient was not diagnosed with COVID-19. No Known allergies. Concomitant medications the patient received within 2 weeks of vaccination included atorvastatin, prednisone, lisinopril, allopurinol, famotidine (PEPCID). The patient experienced 1.5 hours after the vaccine, one eye vision was down to light perception only. The event lasted 15 minutes and resolved completely. ER eval and Ophthalmology eval did not find a cause for the event. CT and labs done. Event onset date was on 17Dec2020 14:00. The patient not received any other vaccines within 4 weeks prior to the COVID vaccine. Since the vaccination, the patient has not been tested for COVID-19. No treatment received for the adverse event. Case was non-serious. Facility where the most recent COVID-19 vaccine was administered at Hospital. The adverse event result in the following: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of event was recovered on 17Dec2020 14:15. Information on the Batch/Lot number has been requested.

COVID19 VACCINE (COVID19)	Emergency Room *	911183-1	allergic reaction; dizzy/lightheaded; blood pressure and heart rate skyrocketed; blood pressure and heart rate skyrocketed; fever; sweats; This is a spontaneous report from a contactable consumer reporting for him/herself. A patient of unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation. The patient medical history and concomitant medications were not reported. On unknown date the patient experienced a mild allergic reaction with unknown outcome. About an hour after getting the shot the patient got dizzy, lightheaded, and her blood pressure and heart rate skyrocketed. She was given 50mg of diphenhydramine hydrochloride (BENADRYL) in the ED and still felt bad. On unspecified date the patient had a fever and sweats but the day after she was feeling good. The patient wanted to know if she could get the second dose. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	911191-1	Dazed look with nausea; Dazed look with nausea; dry heaving; she looked green; This is a spontaneous report from a contactable consumer. A 61-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot Number: EH9899), intramuscular in the left arm on 18Dec2020 07:00 at single dose for covid-19 immunisation. The patient was not pregnant at time of vaccination. Medical history included some metals cause rash, ongoing rheumatoid arthritis and ongoing hypertension. The patient's concomitant medications were not reported. On 18Dec2020 at 08:00 the patient experienced dazed look with nausea and dry heaving; staff standing near her said she looked green. The patient Went to ER at the hospital; EKG done and result normal; seen by ER MD given ondansetron (ZOFTRAN); Cleared to return to work same day. The patient recovered from the adverse events.
COVID19 VACCINE (COVID19)	Emergency Room *	911196-1	Dizziness; nausea; dry mouth; felt hot; chest tightness; sour taste in mouth; rapid heart rate; tingling on same arm vaccinated (L arm); some numbness in same arm left arm; felt shaky; Blood pressure elevated; This is a spontaneous report from a contactable healthcare professional. A 39-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in the left arm on 17Dec2020 02:25 at a single dose for COVID-19 immunization. The patient had no significant medical history and no concomitant medications. Other illnesses at the time of vaccination and up to one month prior was none. The patient had no allergies to medications, food or other products. On 17Dec2020 02:32, the patient experienced dizziness, nausea, dry mouth, felt hot, chest tightness, sour taste in mouth, rapid heart rate, tingling on same arm vaccinated (L arm), some numbness in same arm left arm, felt shaky and blood pressure elevated. The patient was taken to emergency department and oxygen was provided. The patient underwent lab tests and procedures on 17Dec2020 which included blood pressure measurement: elevated and heart rate: rapid. Therapeutic measures were taken as a result of the events as aforementioned. The patient was observed and discharged to home after 40 min. The outcome of the events was recovered on 17Dec2020.
COVID19 VACCINE (COVID19)	Emergency Room *	911214-1	experienced itchy and tight throat that felt like a tickle in throat; experienced itchy and tight throat that felt like a tickle in throat; This is a spontaneous report from a contactable nurse. A 46-year-old non-pregnant female patient received 1st dose of bnt162b2 (brand = Pfizer, lot number: EJ1685), intramuscular in the left arm on 20Dec2020 09:00 at a single dose for COVID-19 immunization at the hospital. Medical history included atrial septal defect repair in 2011 to an unknown date. The patient has no known allergies. Concomitant medications included hydrocodone bitartrate, paracetamol (VICODIN) and diclofenac. The patient experienced itchy and tight throat that felt like a tickle in throat on 20Dec2020 09:00. Airway remained patent and no rash/hives. The AEs resulted in a visit to emergency room/department or urgent care. Outcome of the events was recovered in Dec2020. No treatment was given for the events. It was unknown if patient had COVID prior to vaccination. The patient was not tested for COVID post vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	911234-1	purple discoloration to her right arm and right fingers; chills; redness across her chest and stomach; cap refill was sluggish; This is a spontaneous report from a contactable nurse. A 37-year-old female patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 vaccine, lot# EJ1685), via intramuscular on 18Dec2020 11:00 in right arm at single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The most recent COVID-19 vaccine was administered in hospital. Prior to vaccination, the patient was not diagnosed with COVID-19. Employee reported purple discoloration to her right arm and right fingers. She reported her cap refill was sluggish. She stated she had chills and redness across her chest and stomach on 18Dec2020 at 16:00. The events result in Emergency room/department or urgent care. The patient received the treatment for the events. Outcome of events were unknown.
COVID19 VACCINE (COVID19)	Emergency Room *	911240-1	tingling on roof of mouth, watery eyes, and itchy throat; tingling on roof of mouth, watery eyes, and itchy throat; tingling on roof of mouth, watery eyes, and itchy throat; This is a spontaneous report from a contactable nurse. A 34-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EJ1685), intramuscular in the left arm at hospital on 18Dec2020 09:00 at single dose for COVID-19 immunization. The patient medical history and concomitant medications were not reported. On 18Dec2020 at 09:15 the patient experienced tingling on roof of mouth, watery eyes, and itchy throat with outcome of unknown. The events required emergency room visit and the patient received treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	911254-1	redness and swelling to right wrist; redness and swelling to right wrist; Itching to left side neck and back.; This is a spontaneous report from a contactable nurse. A 25-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EJ1685, first dose via intramuscular in left arm on 21Dec2020 09:30 at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient experienced redness and swelling to right wrist and itching to left side neck and back on 21Dec2020 09:45. The facility where the most recent COVID-19 vaccine was administered was in the hospital. The events resulted in emergency room or department or urgent care. The case was reported as non serious by the reporter, and did not result in death, not life threatening, did not cause prolonged hospitalization, not disabling or incapacitating and no congenital anomaly or birth defect. The outcome of the events was unknown.
COVID19 VACCINE (COVID19)	Emergency Room *	911259-1	feeling light headed; blotchy spots on neck and chest; tingling to the back of the throat; This is a spontaneous report from a contactable nurse. A 42-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685) intramuscular on left arm on 21Dec2020 10:15 AM, single dose for COVID-19 immunization at 42-year-old. Medical history and concomitant medication were not reported. On 21Dec2020 10:30 AM, the patient was reported feeling light-headed, blotchy spots on neck and chest, and tingling to the back of the throat. Emergency room/department or urgent care visited. Action taken for BNT162B2 was not applicable. Outcome of the events was unknown. It was reported as non-serious.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	911270-1	flushed; warm face and ears; This is a spontaneous report from a non-contactable other health care professional. A 57-year-old female patient received bnt162b2 (BNT162B2; lot number: HE9899), intramuscular on arm (reported as left arm) dose number 1 on 17Dec2020, SINGLE DOSE for COVID-19 immunization. Medical history included mild history of anxiety, and panic attack. She has medication to treat this at home if needed. The patient's concomitant medications were not reported. She was given the Pfizer vaccination in the right deltoid muscle (pending clarification). During her 15 minute waiting period after the injection, the patient began to experience flushed, warm face and ears. She denied rash, difficulty breathing, difficulty swallowing, wheezing, throat tightness, lightheadedness, lip swelling and tongue swelling. This APP was notified of patient reaction and she was then assessed in the emergency bay area. (Name withheld) was observed x 35 minutes after receiving vaccination. All symptoms resolved within 20 minutes. No treatment was required. The outcome of the events was recovered. No follow-up attempts are possible. No further information is expected.
COVID19 VACCINE (COVID19)	Emergency Room *	911271-1	feeling nauseated, hot; feeling nauseated, hot; headache; difficulty breathing; itchy all over the body, with redness and blotchiness in the face, neck and arms; itchy all over the body, with redness and blotchiness in the face, neck and arms; Blood pressure elevated along with heart rate.; Blood pressure elevated along with heart rate.; This is a spontaneous report from a contactable other healthcare professional (HCP), who is also the patient. This 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 19Dec2020 at single dose for COVID-19 immunisation. Vaccination facility type was hospital. Relevant medical history included polycystic ovaries, gastroesophageal reflux disease, Hashimoto's disease and allergy to sulfa, penicillin, latex and hornets. Concomitant medications included thyroid (ARMOUR THYROID), omeprazole and vitamin D3. On 19Dec2020 at 12:15, 10 minutes after the injection, the patient started feeling nauseated, hot and developed a headache. A couple of minutes after that, she started experiencing difficulty breathing and itchy all over the body, with redness and blotchiness in the face, neck and arms and blood pressure elevated along with heart rate. The events resulted in emergency room/department visit or urgent care. Corrective treatments taken as a result of the events included methylprednisolone sodium succinate (Solu-medrol), diphenhydramine hydrochloride (BENADRYL) and famotidine along with intravenous (IV) fluids. The patient recovered with sequel from the events on an unspecified date. The information on the lot/ batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	911291-1	Employee reported thickness of tongue and dry mouth.; Employee reported thickness of tongue and dry mouth.; This is a spontaneous report from a contactable nurse. A 55-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), Batch/lot number: EJ1685, intramuscular in the right arm on 21Dec2020 12:30 at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The employee reported thickness of tongue and dry mouth on 21Dec2020 12:30. The events resulted in emergency room/department or urgent care. The outcome of the events was unknown.
COVID19 VACCINE (COVID19)	Emergency Room *	911292-1	hypoglycemia; dizziness; This is a spontaneous report from a non-contactable Other HCP. A 33-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number HE9899, intramuscularly in the left arm on unspecified date at single dose for COVID-19 immunization. Patient medical history and concomitant medications were not reported. The patient previously took spironolactone and experienced drug allergy. During her 15-minute waiting period after the vaccination, the patient began to experience feelings of hypoglycemia. She checked her blood glucose with her own monitor and had 77 at 11:04. She chewed 1 glucose tab that she had in her purse. She noted some difficulty with swallowing it and notified clinic staff. The patient also experienced dizziness and was escorted by clinic staff to the emergency bay. This provider was notified of patient reaction and she was then assessed in the emergency bay area. She denied difficulty breathing and chest pain, history of adverse reactions with prior vaccinations or allergies to medications with the exception of spironolactone. Patient had already been given a bottle of water by clinic staff and reported that the glucose tablet went down easier following the water. She took a second glucose tab sometime before 11:13. The event was assessed as non-serious. Outcome of the events hypoglycemia and dizziness was unknown. No follow-up attempts are possible. No further information is expected.
COVID19 VACCINE (COVID19)	Emergency Room *	911293-1	thin red line on back of neck/redness at her right eyebrow and in the midline of her forehead/reddened area above eyebrow along with puffiness, redness on nose, cheeks and left hand; Rash; dot markings on her left hand and redness which is where she received vaccine in her left arm; dot markings on her left hand and redness which is where she received vaccine in her left arm; reddened area above eyebrow along with puffiness, redness on nose, cheeks; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, via intramuscular in left deltoid on 19Dec2020 10:30 at single dose for COVID-19 immunization. Medical history included hypertension diagnosed when she was 47, hypothyroidism diagnosed 20 years ago and allergic to penicillin and sulfur; all ongoing. Concomitant medication included ongoing metoprolol succinate for hypertension. The patient received her first dose of vaccine on Friday 19Dec2020 at her job. Stated that she woke up Saturday with redness at her right eyebrow and in the midline of her forehead between her eyebrows and nose. Stated that she had dot markings on her left hand and redness which is where she received vaccine in her left arm. Stated that she had went to ER and was put on Prednisone 60mg for 5 days and Benadryl 50mg prn. Stated that a few people said few different things. Stated that she is allergic to penicillin and sulfur. No further details provided. The patient wanted to know if sulfur is in the vaccine to know if in three weeks should she take the second vaccine. On 19Dec2020, states she had a rash when she woke up. The patient had reddened area above eyebrow along with puffiness, redness on nose, cheeks and left hand. The patient went to the emergency department and an HCP saw a thin red line on back of neck. The patient was prescribed prednisone and benadryl and now symptoms have resolved. The patient was asking about more information regarding this type of reaction. The outcome of the event rash was recovered on unspecified date and the remaining events was recovered on 20Dec2020. The events were reported as non serious.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	911380-1	"Cold sensation down her right arm; Began ""seeing stars""; Metallic taste in her mouth; This is a spontaneous report from a contactable pharmacist. A 40-year-old female patient received the first dose of bnt162b2 (Pfizer Biontech COVID 19 vaccine), Lot number: EJ1685, intramuscular at the right arm on 21Dec2020 09:00 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. On 21Dec2020 09:00, the patient experienced cold sensation down her right arm, began ""seeing stars"", followed by a metallic taste in her mouth. The patient was not hospitalized for the events but required emergency room/department or urgent care visit. The patient did not receive any treatment for the events. The events were reported as non-serious. The vaccine was administered in a workplace clinic. It was unknown if the patient has received any other vaccines within 4 weeks prior to the COVID vaccine. Prior to the vaccination the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was unknown."
COVID19 VACCINE (COVID19)	Emergency Room *	911396-1	""sweaty feeling""; Developed headache; flushing after injection; redness; This is a spontaneous report from a contactable nurse. A 24-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=EJ1685), intramuscularly on left arm at 12:00 PM on 21Dec2020 at single dose for COVID-19 immunization. Medical history included exercise-induced asthma. The patient's concomitant medications were not reported. The patient experienced headache, redness and flushing after injection, also reported ""sweaty feeling"" at 12:15 PM on 21Dec2020. Ae resulted in: Emergency room/department or urgent care. All events were reported as non-serious. The outcome of events was unknown."
COVID19 VACCINE (COVID19)	Emergency Room *	911415-1	dizziness/lightheadedness; severe nausea; rash/hives on chest and back and forearms; rash/hives on chest and back and forearms; severe chills/shivering; This is a spontaneous report from a contactable nurse (patient). A 28-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on 18Dec2020 11:30 AM at Left arm, at SINGLE DOSE for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. The patient experienced dizziness, lightheadedness, severe nausea, rash/hives on chest and back and forearms, severe chills/shivering on 18Dec2020 11:45 AM. The patient received treatment fluids, pepcid, Benadryl for these events. There events resulted in: Emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered in Dec2020. No seriousness criteria: no Results in death, no Life threatening, no Caused/prolonged hospitalization, no Disabling/Incapacitating, no Congenital anomaly/birth defect. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	911457-1	COVID-19 confirmed by positive COVID-19 test; COVID-19 confirmed by positive COVID-19 test; This is a spontaneous report from a contactable other health professional (reported for himself). A 30-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 17Dec2020 10:00 at single dose on left arm for COVID-19 immunization. Medical history known allergies: PCN (Penicillin). The patient's concomitant medications were not reported. The most recent COVID-19 vaccine was administered at Hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has been tested for COVID-19 via Nasal Swab and the test name was PCR with the result of positive on 22Dec2020 (12:00). This wasn't really an adverse event but the reporter thought it may be useful for studies taking place. On 22Dec2020 12:00 PM, the patient was diagnosed with COVID-19 5 days after vaccination and was currently self-isolating. The adverse event result in Emergency room/department or urgent care. No treatment was received for the adverse events. The events were considered as non-serious by the reporter. The outcome of the events was recovering.; Sender's Comments: Based on the current available information and the consistency with the known safety profile of the suspect product BNT162B2, a possible contributory role of the suspect product to the development of Drug ineffective and COVID-19 cannot be excluded.
COVID19 VACCINE (COVID19)	Emergency Room *	911540-1	Right lower quadrant pain; back of throat tight and full and moved to tongue; fullness in ears; some itching and fullness on the right side near the back of her tongue; This is a spontaneous report from a contactable nurse (patient). A 50 years old female patient (weight 81.65 kg and height 173 cm) received BNT162B2 (Pfizer-Biontech covid-19 vaccine, Lot. EL1284) on 22Dec2020, at single dose, for COVID-19 immunisation. Relevant medical history and concomitant medications were none. It was reported that she had no allergies to anything. On 22Dec2020, the patient experienced a sharp pain in her lower right quadrant of her abdomen, then her ears started getting full, then the back of her throat started getting tight and full and moved to her tongue. It was also reported that she started feeling some itching and fullness on the right side near the back of her tongue. Her airway was intact. Nurse clarified that her reaction last night after the vaccination all happened within 12 minutes of receiving the shot. She went to the emergency room for observation and was treated with epi and Benedryl. She went home after a couple of hours. Clinical outcome of the events was recovering at time of this report. The adverse event, right lower quadrant pain, was assessed as serious (medically significant).; Sender's Comments: By close temporal relationship ('within 12 minutes of receiving the shot') and absence of factors which may provide an alternative cause, the company cannot exclude a contributory role of the BNT162B2 administration in the development of the serious event reported as 'sharp pain in her lower right quadrant of her abdomen'. The impacts of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	911543-1	Started feeling unwell Monday night and sick by Tuesday night. Extreme fatigue Tuesday AM, nausea & fatigue & headache. By Tuesday night, very sore throat and extreme fatigue. Wednesday very congested, sore throat, swollen and painful lymph nodes. Went to urgent care & swabbed for COVID and strep. Both negative (tests were rapid and PCR). Since Wednesday continuing through today 12-28-20 - congestion, sore throat, coughm, swollen painful lymph nodes, some GI issues, headache, and fatigue. Return to PCP on 12-29-20
COVID19 VACCINE (COVID19)	Emergency Room *	911549-1	1 hour after vaccination, itchy eyes, swollen lip, tickle/scratchy throat. Went to ED. Took 25mg benadryl. Observed x 5 hours. Symptoms improved.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	911574-1	Patient experienced a syncopal episode after receiving the COVID-19 vaccine. Patient transferred to the emergency department. Upon arrival to the emergency department, patient was awake and alert with GCS of 15. Patient did state she felt a little dizzy. Patient denied any nausea, vomiting, or abdominal pain. Patient received IV fluids. Patient was reassessed and stated she felt significantly improved. Patient discharged at 1300 on 12/23/2020.
COVID19 VACCINE (COVID19)	Emergency Room *	911581-1	Patient reported flushing in the face, tingling on the left side down the left arm and then began to break out into hives on their chest. The individual also had a rapid heart rate and needed a wheel chair due to feeling slightly faint.
COVID19 VACCINE (COVID19)	Emergency Room *	911594-1	Pt c/o mottling of palms, tingle in arm; pt became hypertensive with headache within 15 minutes of vaccine; symptoms resolved and pt dc from ED
COVID19 VACCINE (COVID19)	Emergency Room *	911603-1	Around 2pm, developed itchy, blotchy, red rash on left elbow, spreading to neck and face, lips began to tingle, went to ED, ED provide PO Benadryl, discharged home, symptoms resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	911613-1	Patient stated she felt tingling/scratchiness in throat. BP 96/65, Pulse 71 , Pulse Ox 99%. Shortly afterwards, patient stated that her throat was feeling a little more swollen but that she did not want to go to convenient care. Patient stated she was fine and she didn't want convenient care doctor to come see her. Patient was talking and no dyspnea noted throughout. Kept for 30 minutes to monitor. At end of 30 minutes, patient started to itch and wanted to go to convenient care. Went to convenient care, received methylprednisolone 125 mg IM x 1 and diphenhydramine 50 mg PO x 1. Stayed for 20 minutes and reported relief from treatment. Discharged to home.
COVID19 VACCINE (COVID19)	Emergency Room *	911622-1	throat tightness
COVID19 VACCINE (COVID19)	Emergency Room *	911629-1	Pt received injection in left arm. Pt had no initial pain. Approximately 5 minutes after injection became flushed, started seeing spots, felt like he may black out, felt numbness and tingling in the left arm that radiated up into the left side of the face and jaw.
COVID19 VACCINE (COVID19)	Emergency Room *	911634-1	Employee reported feeling shortness of breath and chest discomfort. Employee was taken to ED for evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	911636-1	I received my vaccine on 12/22 around noon. I woke up at 4am this morning 12/25 with tingling in my lips and tongue, in addition to the left side of my face being swollen. Not entirely sure what these side effects are from exactly but thought it best to report my experiences I was hospitalized on 12/25 to 12/26 because my reaction did get worse. I was experiencing numbness on the left side of my body and swelling, numbness, and redness on the left side of my face as well. The hospital didn't really give any explanations but I'm only now have mild swelling and numbness on the left side of my face. Everything else has resolved at this point in time.
COVID19 VACCINE (COVID19)	Emergency Room *	911643-1	Became diaphoretic a few minutes after receiving the vaccine. Said his throat was 'scratchy' and was dizzy when he stood up. Sent to ED for evaluation. Discharged from ED without incident.
COVID19 VACCINE (COVID19)	Emergency Room *	911648-1	body hives
COVID19 VACCINE (COVID19)	Emergency Room *	911650-1	Left upper additional pain and left shoulder pain. Palpable mass under left anterior ribs. Tiredness.
COVID19 VACCINE (COVID19)	Emergency Room *	911653-1	58 y/o female with history of severe seafood allergy presented to ED on 12/24 at 933am with hoarseness, sensation of throat closing. Stated received Covid vaccine at 0730 this morning. Patient took claritin and prednisone prior to vaccine and 20 minutes prior to arrival to ED took benadryl. Symptoms have improved since arrival to ED. Presenting with symptoms of difficulty swallowing. No difficulty breathing, no itching, no rash, no swelling and no wheezing. One dose of Prednisone 40mg tablet given orally at 0955am. Patient monitored and then discharged to home at 1027am with prescription for Prednisone 20 mg by mouth daily for 4 days and to follow-up with primary physician.
COVID19 VACCINE (COVID19)	Emergency Room *	911733-1	Itching, redness, rash, difficulty breathing
COVID19 VACCINE (COVID19)	Emergency Room *	911777-1	During first few minutes after the vaccination, the client began to cough repeatedly. She stated that her throat was tingling and she was noted to be diaphoretic, with Shortness of breath, an increased heart rate and hives. Epinephrine 0.3 mg IM given to client. Client responded with less diaphoresis and cough subsided. However, noted in 5 more minutes that the symptoms progressed. (As we were in a hospital area administering the vaccine), a rapid response team was activated and she was sent to the ER for further evaluation monitoring and treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	911829-1	Resident found unresponsive in her room. Note from earlier: Resident appears to be weak today. Resident ate a few bites of dinner before refusing the tray. Writer encouraged fluids. Vitals 123/72 80HR BS 166. Will log for Doctor and continue to monitor. Was sent out 911.
COVID19 VACCINE (COVID19)	Emergency Room *	911943-1	Adverse reaction post Covid vaccine. Waited for 20 min post vaccine. Experienced S/S Heart palpitations, shortness of breath, tingling in extremities, diaphoretic after leaving clinic observation. Drove back to hospital, escorted by pre surgical testing hospital staff and taken by wheelchair to ED.
COVID19 VACCINE (COVID19)	Emergency Room *	911965-1	within 2 minutes after receiving vaccine I became flush, tightness in base of my throat and chest and heart starting racing faster and faster. A few nurses came over and saw my fit bit heart rate going higher (max 136 BPM) my fingertips started to get numb. They quickly injected me with .05 epinephrine. They brought me up to the emergency room and put me on a heart monitor. The racing heart subsided after approx. 7 min then started again. It happened 3 times in the emergency room. They ran a few EKG's to try to catch the tachycardia episodes. They started an IV and ran fluids. After 2 hours the symptoms stopped and they released me from the hospital.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	911998-1	Anaphylaxis requiring epinephrine
COVID19 VACCINE (COVID19)	Emergency Room *	912018-1	Anaphylaxis requiring epinephrine
COVID19 VACCINE (COVID19)	Emergency Room *	912054-1	Severe heartburn; abdominal pain; Agita; swelling; chest tightness; generalized redness; itching; sore throat; severe weakness; fatigue; headache; muscle pain; nausea; malaise/feeling unwell; increased temp but not febrile; This is a spontaneous report from a contactable nurse, the patient. A 63-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular in the left arm on 18Dec2020 at 14:15 (at the age of 63-years-old) as a single dose for COVID-19 immunization. Medical history included chronic pain, hypertension, diabetes, depression, and broken vertebra. The patient was allergic to many antibiotics and benzodiazepines which caused dystonia. The patient also had an allergy to all anti-emetics except ondansetron (ZOFTRAN) in the form of dystonia. Prior to the vaccination, the patient was not diagnosed with COVID-19. Ongoing concomitant medications included diclofenac (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, esomeprazole magnesium (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, fentanyl (MANUFACTURER UNKNOWN) for a broken vertebra from an unknown date, gabapentin (MANUFACTURER UNKNOWN) from 2019 for an unknown indication, misoprostol (MANUFACTURER UNKNOWN) from an unknown date for an unknown indication, oxycodone hydrochloride/paracetamol (PERCOCET) from an unknown date for an unknown indication, and fentanyl (FENTANYL PATCH) from an unknown date for an unknown indication. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020 at 14:30, the patient experienced generalized redness, itching, swelling, and chest tightness; which required her to go the emergency room for 6 hours and was treated with epinephrine (MANUFACTURER UNKNOWN), diphenhydramine hydrochloride (BENADRYL), and fluids. On an unknown date in Dec2020 (reported as later), the patient had sore throat, severe weakness, fatigue, headache, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile. On 22Dec2020, the patient had severe heartburn, abdominal pain, and agita. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of generalized redness, itching, swelling, chest tightness, sore throat, severe weakness, fatigue, muscle pain, nausea, malaise/feeling unwell, and increased temperature but not febrile were recovering; while that of the headache, severe heartburn, abdominal pain, and agita were not recovered. The events were reported as non-serious and assessed as possibly related to the vaccine. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The patient was allergic to many antibiotics and benzodiazepines and had an allergy to all anti-emetics except ondansetron (ZOFTRAN) in the form of dystonia. Based on information available, the reported chest tightness and swelling together with generalized redness and itching were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	912059-1	Hypotensive (diastolic 43, systolic 103); neurological tingling -upper spine/between shoulder blades; felt crummy; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in left arm on 21Dec2020 15:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced hypotensive (diastolic 43,systolic 103), neurological tingling - upper spine/between shoulder blades and generally felt crummy on 21Dec2020 at 15:45 (also reported as occurred within 5 minutes of shot). The patient underwent lab tests and procedures which included blood pressure measurement: 103/43 on 21Dec2020. Event resulted in emergency room and physician's room visit. Treatment received intravenous (IV) fluid replacement, lab tests (unspecified), 6 hour observation. The outcome of events was unknown. Information on the lot/batch number has been requested.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	912063-1	hypertensive emergency; felt like the swelling was progressing into the back of her throat; swallowed harder; she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt; she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt; shivering on and off; This is a spontaneous report from a contactable pharmacist. This pharmacist reported similar events for two patients. This is the first of two reports. A 67-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EH9899), intramuscularly in an unspecified arm on 21Dec2020 14:30 at 0.3 mL single for COVID-19 immunization. Medical history included sulfa allergy. The patient's concomitant medications were not reported. There were no prior vaccinations within 4 weeks prior to the first administration of the suspect vaccine. The patient did not have a history of reactions to any other vaccines. On 21Dec2020, the patient experienced hypertensive emergency, which was reported as being medically significant. On 21Dec2020, the patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder. Clinical details were reported as follows: the patient received the vaccine on 21Dec2020 at 14:30 and fairly quickly the patient started saying she felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt. She was given 25mg of diphenhydramine hydrochloride (BENADRYL), orally. The patient was shivering on and off and patient said she felt like the swelling was progressing into the back of her throat. She was having to clear her throat and swallow harder. She was taken to the emergency department around 15:11 and given intravenous (IV) famotidine (PEPCID) 20mg at 15:27. The patient did not have issues oxygenating. It was noticed that the patient's blood pressure was 232/100 on 21Dec2020 and they started treating her for the hypertensive emergency with amlodipine (MANUFACTURER UNKNOWN) 5mg orally, one time of IV labetalol (MANUFACTURER UNKNOWN), 10mg , IV labetalol (MANUFACTURER UNKNOWN) 20mg once, Clonidine (MANUFACTURER UNKNOWN) 0.1mg, orally. The patient was sent home around midnight and was not admitted to the hospital. The outcome of hypertensive emergency was recovering and of patient also felt like she was hot in her face and felt like something was squeezing her neck like a tight collar on her shirt, shivering on and off, felt like the swelling was progressing into the back of her throat and she swallowed harder was unknown. When querying causality, the reporter stated this patient did not have a history of hypertension, so she thinks it is suspicious.; Sender's Comments: The 67-year-old female patient had sulfa allergy medical history. Throat swelling and hypertensive emergency were possibly related to the BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), considering temporal relationship and clinical course. This case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate..Linked Report(s) : US-PFIZER INC-2020510772 Same reporter/different patient/similar events
COVID19 VACCINE (COVID19)	Emergency Room *	912068-1	heart racing/her heart beat was 140 BPM; felt flush, hot; tired; soreness at the injection site; This is a spontaneous report from a contactable consumer. An adult female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on 22Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient received the vaccine and with 10 minutes felt flush, hot, and her heart racing on 22Dec2020. At one point she looked at her watch and her heart beat was 140 BPM. She was sent immediately to the ER (emergency room). Since then she was tired and had soreness at the injection site. She would have to see an allergist before getting the 2nd shot. The outcome of the events was recovered on unspecified date in Dec2020. Information about batch/lot number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	912137-1	Was given the vaccine and about 5 minutes later started having swelling and my eyes and face. It was watched for a few minutes and was assessed by EMS and taken to the emergency department. I was given epinephrine, Benadryl, Solu-Medrol, Pepcid, IV fluids, DuoNeb and observed overnight. I was given multiple rounds of Benadryl, steroids, Pepcid, DuoNeb
COVID19 VACCINE (COVID19)	Emergency Room *	912271-1	Subject received vaccination Wednesday Dec 16th in the afternoon. He became symptomatic (shortness of breath, low grade fever) the next day. Went to the Emergency room on Saturday Dec. 26th, 2020 due to shortness of breath, had an O2 Sat of 60%, and was hospitalized in the ICU at another hospital (due to bed unavailability).
COVID19 VACCINE (COVID19)	Emergency Room *	912574-1	Rushed to ER. Has now been tubed and put into the ICU and has had full-cardiac arrest less than 24 hours after receiving the vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	912602-1	Hospitalized 12/29, has now been tubed and put into the ICU
COVID19 VACCINE (COVID19)	Emergency Room *	912669-1	Chest pain, short of breath. Morphine, sublingual Nitro, IV Nitro drip & Heparin drip
COVID19 VACCINE (COVID19)	Emergency Room *	912766-1	Client was vaccinated approx 10:00am at the Health Dept. Client left after 15min without incident. Client went to report to work and began feeling nauseated, dizzy, and feeling as if was going to faint. Client returned to Health Department approx 12:30. Client was diaphoretic, HR was 140bpm, and BP was 178/120. Client was given 50mg/20mL of diphenhydramine PO and EMS was called and client taken to local ER. Client remained A+Ox3 at time of EMS transport. Spoke with client evening of 12/28/2020. He reports he was transferred to another facility and was told was in a-fib. He reports that he is feeling much better but heart still fluttering. Spoke with client afternoon of 12/29/2020. He reports that he is being discharged in a few hours and is being sent home on metoprolol and a baby ASA. He reports they had been working on getting his BP down. He reports that he is feeling better and is going to be scheduled for a heart cath outpatient. He reports that he was initially in a-fib, then a-flutter, and then arrhythmia. He reports that he has been seen by Dr. a Cardiologist, while hospitalized.
COVID19 VACCINE (COVID19)	Emergency Room *	912785-1	Monitored x 15 min per guidelines. Began to experience SOB and throat swelling, after which pt presented to the ED for tx, dx acute hypertensive urgency with severe hypertension.
COVID19 VACCINE (COVID19)	Emergency Room *	912826-1	Itching, cough. Given benadryl 50mg and epinephrine 0.3 in vaccine clinic, and taken to ED for further tx.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	912834-1	With five minutes of vaccine Increased heart rate shot up to 198 bpm. Regular resting heart rate for me is in the 50s. Left pupil dilated completely, right people constricted to pin size. Extremities went numb and ice cold. Went to emergency room Per request of EMTs at vaccination center. Was given high-dose Benadryl and Saline IV. Heart rate return to normal and all other symptoms disappeared after treatment.
COVID19 VACCINE (COVID19)	Emergency Room *	912883-1	Difficulty catching my breath, stiff joints in legs
COVID19 VACCINE (COVID19)	Emergency Room *	912930-1	"Patient was monitored for >15 minutes after vaccination. Patient told a nurse that her knees felt weak. Patient then fainted and was laying on the floor when i arrived. Patient reported she felt like she was ""floating"" and she did not want to ""fall"". She was also nausea and wanted to vomit and did not end up vomiting anything up. Patient fainted several more times. Her BP was around 143/80 and unsure about the pulse. Patient then become unresponsive for 20-30 seconds."
COVID19 VACCINE (COVID19)	Emergency Room *	912957-1	Received vaccine at 13 15. At 1351 c/o mild chest pain. 1353 c/o throat fullness and anxiety; 1354 bp 148/81 HR 99 O2 sat 100% c/o difficulty swallowing, SOB and itching. Rapid response called. Benadryl 50 mg IVP given at 1355. 1356 Solumedrol 125mg given IV; 1357 Epinephrine given; 1358 Pepcid 20 mg given. 1400 Normal saline 250 mg IV; 1415 transported by ambulance to local ER. In waiting area in local ER no attention. Came back to Hospital and admitted to observation
COVID19 VACCINE (COVID19)	Emergency Room *	912970-1	Next day after the vaccination, the patient(staff member) came back to the vaccination clinic and stated that she felt numbness and tingling along the smile lines of her face and around her lips. She was monitored for about 40 minutes then she reported difficulty of swallowing. At first reported symptom of swallowing difficulty she as administered diphenhydramine 50 mg oral liquid by mouth. After about 30 minutes of continued monitoring, epinephrine 0.3 mg IM was administered. At the same time 911 emergency response was called and the patient was transferred to the acute care hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	913061-1	10 MINUTES FOLLOWING VACCINE - SOB, COUGH, TIGHTNESS IN CHEST, THROAT SWELLING, DIFFICULTY SWALLOWING, LIGHT HEADEDNESS, AND ELEVATED HEART RATE. ORAL AND IM BENADRYL ADMINISTERED, 2 DOSE OF EPINEPHRINE, 2 NEB TREATMENTS, O2 PLACED. 911 CALLED AND TRANSPORTED TO EMERGENCY FOR FURTHER TREATMENT AND MONITORING. AT HOSPITAL IV STEROID ADMINISTERED. SYMPTOMS SUBSIDED WITH SECOND DOSE OF EPINEPHRINE, HOWEVER RETURNED 3 HOURS LATER AND ANOTHER DOSE OF BENADRYL ADMINISTERED. ELEVATED HEART RATE CONTINUED AND IV FLUIDS ADMINISTERED TO ATTEMPT IN BRINGING DOWN HEART RATE. IV FLUIDS WERE NOT EFFECTIVE. HEART RATE (118-120) REMAINED ELEVATED INTO THE OVERNIGHT HOURS AND SUBSIDED AROUND 1:30A ON 12/29/2020. CONTINUED HEADACHE, NAUSEA ONSET, FATIGUE, DIFFICULTY SWALLOWING AND COUGH ON 12/29/2020.
COVID19 VACCINE (COVID19)	Emergency Room *	913227-1	Had shot at 7:45am and around 3:45pm started having severe itching in mouth , ears and skin. Took oral zyrtec without relief. Was scratching myself raw and bleeding. Went to ER and got solumedrol 125 and 25mg IV Benadryl. Next day had wheezing and rash on chest. Went on prednisone oral taper and albuterol.
COVID19 VACCINE (COVID19)	Emergency Room *	913233-1	10:30 AM After receiving the COVID-19 vaccine, the patient experienced an anaphylaxis reaction that included, throat closing and tongue swelling sensation, itchiness, and hives on her bilateral arms and legs. Patient received 65 mg of Benadryl IV, 125 mg SoluMedrol IV, two doses of 0.3 epinephrine IM, 1 mg of Ativan, and 4 mg of Zofran, then taken to the ED for further monitoring. Patient was on 2L NC for comfort, sats in mid 90s off oxygen, and monitored the patient for a few hours. Patient discharged to home with stable vital signs off oxygen and a steady gait.
COVID19 VACCINE (COVID19)	Emergency Room *	913238-1	Pt. developed tachycardia, hypertension and felt weak with decreased verbal responsiveness, alert but lethargic. She complained of dry throat, took a sip of water then began persistent coughing and wretching also C/O itching of her throat. She denied difficulty breathing, there were no cutaneous signs of edema, tongue enlargement, etc.
COVID19 VACCINE (COVID19)	Emergency Room *	913239-1	Pt. began to feel weak with palpitations about 8-10 minutes after vaccination, her pulse was extremely fast, she then began to complain of lower mid-esophageal burning
COVID19 VACCINE (COVID19)	Emergency Room *	913469-1	Shortness of breath Hives, Fever, chills joint pains. I was Tx in the ER with Pepcid IV Solumedrol IV, Benadryl IV ,Tylenol and IV fluids. I was discharged on prednisone , Benadryl and Tylenol.
COVID19 VACCINE (COVID19)	Emergency Room *	913560-1	Approximately 15 minutes after IM injection, patient developed chest tightness. Patient was taken to the Emergency Department for treatment. Was given sublingual nitroglycerin and subsequently admitted to the hospital for observation. Patient discharged home the following morning in good condition.
COVID19 VACCINE (COVID19)	Emergency Room *	913764-1	About 3 am after the injection I woke up with severe chest pains and headache and went to the ER. I was admitted for 2 days and was released with a prescription of Isosorb Monoer, Metoprolol, aspirin which is used as a blood thinner. The diagnosis and prognosis was severe migranes and cardioartery disease.
COVID19 VACCINE (COVID19)	Emergency Room *	913854-1	anxiety, tachycardia, flushing, diaphoresis, HTN, SOB
COVID19 VACCINE (COVID19)	Emergency Room *	913866-1	Patient administered Pfizer-BioNtech vaccine, dose #1 in series at 810AM, without notable concerns for 10 minutes. At 10 minutes post vaccination, patient developed itching and some blotching, throat becoming scratchy. No known allergies to components listed in vaccine, though does have a listed allergy to contrast dye, does not carry an epi-pen. Patient was walked to urgent/emergency care in the clinic, where she was seen immediately. Patient was given diphenhydramine 25 mg IV, pantoprazole 40 mg IV, with mild uticaria continuing. Patient notes she feels her 'back is on fire'. Patient was then given methylprednisolone 125 mg IV. At this time, no SOB is noted, uticaria is still present. 0930 patient reports swelling in throat and respiratory difficulties at this time with visible edema in the neck. 0.3 mg Epinephrine given at 0935, epinephrine drip and racemic epinephrine neb given. 1006 Patient on epinephrine drip 2.5 mics/hour. Patient transferred to Medical Center ICU, where she remains at the time of this report.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	913912-1	BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg; intermittent chest pains; severe nausea; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; mild progressive headache; body aches; chills; fatigue; fever of 100 degree F; This is a spontaneous report from a contactable Other Health Professional (patient). A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: unknown, intramuscular in the left arm, first dose on 18Dec2020 12:30 at a single dose for immunisation. Medical history included ongoing gestational hypertension in 2016 that never recovered, with controlled hypertension, asthma/COPD, and seasonal/animal allergies. Concomitant medication included sertraline hydrochloride (ZOLOFT) and losartan. The patient is not pregnant. The patient previously took and had allergies to erythromycin and nitrous oxide. It was reported that within 20-30 minutes of receiving covid vaccine on 18Dec2020, the patient developed mild progressive headache, body aches, chills, fatigue, fever of 100 degree F. At approximately 8:00 p.m. same day of vaccination, she developed rash and hives on left side of arm where injection site was, as well as left side of her face. Immediately following this, she had intermittent chest pains in which she took a BENADRYL 25 mg with some relief. Next day (19Dec2020), progressive headache persisted to a severe headache, severe nausea, persistent chest pains and a BP of 176/126mmhg. Reported to a place for evaluation with persistent severe hypertension and severe headache treated by toradol, compazine, and Benadryl. She was released from the ER with improved blood pressures and reduced headache. The following day Sunday Dec2020, progressive and severe headache occurred with continued severe elevation of BP of 178/130mmHg. Current treatment of losartan 50 mg was increased to 100 mg to attempt control. She was then placed on chlorthalidone/amlodipine. The events resulted in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of the events mild progressive headache, body aches, chills, fatigue, fever of 100 degree F, rash and hives on left side of arm where injection site was, as well as left side of face, intermittent chest pains, severe nausea, and BP of 176/126mmhg /persistent severe hypertension/continued severe elevation of BP of 178/130mmHg was not recovered (reported as symptoms persist). The patient was not diagnosed with Covid 19 prior to vaccination and she had not been tested since vaccination. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the hypertension aggravated is possibly related to bnt162b2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	913947-1	Patient had dizziness when she got down to the emergency department.; transient ischemia attack (TIA); Hypertensive emergency; This is a spontaneous report from a contactable pharmacist reporting for two patients. This is the second of two reports. A 53-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number: EH9899), intramuscular at 0.3 mL, single in the arm on 23Dec2020 for Covid-19 immunisation. Medical history included hypertension, allergies to sulfa, morphine and cipro. There were no concomitant medications. The patient experienced hypertensive emergency on 23Dec2020 with outcome of unknown, patient was getting her blood pressure checked and the patient was in the 170s systolic on an unspecified date with outcome of unknown, patient had dizziness when she got down to the emergency department on an unspecified date with outcome of unknown. The events were described as follows: Patient was getting her blood pressure checked and the patient was in the 170s systolic. She was taken down to the emergency department. She had a blood pressure of 191/105 in the emergency department. Patient had dizziness when she got down to the emergency department. She does not have further details to provide since the patient is being worked up right now to see if she experienced a transient ischemia attack (TIA). Patient has a history of hypertension. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine.; Sender's Comments: While the patient is a known hypertensive and events may be intercurrent events, the causal relationship between BNT162B2 and the events hypertensive emergency, dizziness and transient ischaemic attack cannot be completely excluded due to temporal association. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.,Linked Report(s) : US-PFIZER INC-2020510735 Same reporter/different patient/similar events
COVID19 VACCINE (COVID19)	Emergency Room *	914103-1	10 minutes after receiving vaccination, a significant increase in HR was noted, along with a tingling sensation through out body. Also, scratchy throat was noted. Alert by patient made to staff at vaccination site. Sweating noted and shortness of breath at that time. Epi pen given via L thigh IM. PIV started and benadryl and solumedrol given. Relief of symptoms noted very shortly after Epi administration. Taken to ER for 4 hour observation. Sent home after 4 hours and given prednisone to be taken at home, 50mg daily for 4 days. No further adverse symptoms noted.
COVID19 VACCINE (COVID19)	Emergency Room *	914139-1	Facial numbness radiating down left side of neck to left arm, elbow and chest. Went to ED, admitted for observation overnight.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	914179-1	lips were tingly and swollen; lips were tingly and swollen; fatigued; allergic reaction; passed out; breathing fast; her brain felt like a rock, like she was there but not there; head was so heavy,wouldn't open her eyes; her throat started to tighten up; chest pain; nauseous; headache; felt a little lightheaded, a little wobbly; palpitations; sweaty; This is a spontaneous report from a contactable consumer (patient) via Pfizer Sponsored Program. A 48-year-old female patient (no pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via an unspecified route of administration on 22Dec2020 on left shoulder at single dose for COVID-19 immunization. The patient's medical history included pernicious anemia and She had problems with B12 and Vitamin D like 10 years ago, she had none in her body, everyone said she was deficient and this year with her new primary care, they sent her to do some antibody tests, and found out she has pernicious anemia, allergy to MRI and CT contrast. MRI and CT contrast NDC, lot, expiry unknown. Her CT contrast allergy happened when she was 9 and 12 years old. It turns out to be her dad has an allergy the same way, his airways close. Whenever she needs a CT, they do without contrast, if she does need, they prep and give her Benadryl and keep an eye on her. This only happened once, that she needed with contrast, and with prep she was ok. With the MRI, this happened 4 or more years ago, maybe like 5 years ago. She needed an MRI, they said she would be fine, they injected contrast, she felt pretty hot, then she doesn't know, 20 minutes into it, she couldn't handle her gown, she looked at her chest, her whole chest was red like a burn. They gave her the IV Benadryl, she guesses, and it went away, now she knows, she doesn't know if her dad is allergic to MRI dye, but she knows she got the allergy from him for the CT contrast. The concomitant drugs was not reported. The patient was taken to ER with a severe allergic reaction. She had an allergic reaction on 22Dec2020: she passed out, said her brain felt like a rock, like she was there but not there, she then received an Epi Pen shot, when she got to the ER, her throat started to tighten up, lips were tingly and swollen, she was breathing fast, she had chest pain, she scaled it from a scale of 1-10, as about a 3 to 4 for chest pain, she felt nauseous, sweaty, and had a headache. She went to bed last night, and woke up, feeling better but a little fatigued on 23Dec2020. She is wondering if she should take the second dose, and wants to be in the clinical trial for this type of reaction. She needs transfer to Regulatory Authority. Caller confirmed details. Caller states she works in a hospital, and all this happened at the hospital, and her doctor was not involved. Outcome of allergic reaction: asks what does lasting effects mean? Right now she has a little fatigue and headache, but she knows they are regular symptoms she can have with the vaccine, are those lasting effects? She was discharged from the ER to home. She mentioned to the nurse she has, she went to get the shot, she told the registration nurse, she said she has a severe allergic reaction to CT contrast, her airway closes and she has a severe reaction to MRI contrast, her skin burns, it turns red and feels like a horrible burn, she cannot handle anything to contact her skin, it burns, and she mentioned that to the nurse, she said, instead of staying 15 minutes, said to stay 30 minutes there to observe just in case. She got the vaccine, and 10 minutes after the vaccine, she felt a little lightheaded, a little wobbly, but she didn't think much, it was mild, and on the mark at 30 minutes, the nurse asked her to stand, and that is when she started feeling, like her head was so heavy, the only way to describe, was like her brain was like a rock, she had to lay down, and when they laid her down, she wasn't there, she was there but wasn't, and they didn't wait at all to give her the Epi Pen, she had a feeling of heaviness that got worse, she wouldn't open her eyes, she was able to answer questions, but it was not her there, it was weird, then she didn't have. she breathed fast, had palpitations, chest pain, so they called a Rapid Response team, they were keeping an eye on her breathing, which was super fast, and they rushed her to the ED, and the doctor did what they were doing, giving her IV of whatever medication, and she was also very nauseous, then at one point in the ED, she started feeling, like imagine if fists were on throat, pushing her throat, a little bit, and she tried to tell to the ED doctor, but guessed she was calling everyone to give her things, and didn't catch it, but it didn't last long, at the same time, she started to feel her lips tingly, so she thinks that, because they gave the Epi Pen so quickly, they wasted no time, she didn't have the airways closing like she does when she gets the CT contrast, they were quick. NDC/lot/expiry: She reads from the card they gave her: states first dose COVID-19 EH9899, states it doesn't specify lot, but she can find that out, they just gave her a vaccine record card. Epi Pen: NDC, lot, expiry unknown, states everything happened so quickly, she didn't think to get this information before calling, but she can get it. There at the hospital, she went to see the occupational health doctor, and based on guidelines from the CDC, he read supposedly she cannot get the second dose, but the doctor said because it is so new, and she has to wait the 3 weeks she guesses, things can change, and she wanted to be proactive. The outcome of the events, allergic reaction, passed out, throat started to tighten up, lips were tingly and swollen, chest pain, nauseous, headache, lightheaded, palpitations, sweaty was recovering. The outcome of other events was unknown.
COVID19 VACCINE (COVID19)	Emergency Room *	914309-1	Within 3 minutes of vaccination patient became fully flushed head and neck, with rapid heart rate (112), and feeling like her airways were tightening.. Nurse immediately called for response, administered EpiPen, when response arrived applied oxygen and transported to ED. Solumedrol 125 mg, Bendadryl 25 mg, and Famotidine 20 mg, she responded well and was released home with Rx Prednisone 40 mg x 3 days. Only residual effect was a dry/sore throat.
COVID19 VACCINE (COVID19)	Emergency Room *	914392-1	12/30 9:30 am developed angioedema. Swelling of face, lips, tight throat. Also had bright red rash over body trunk and arms. Both palms were red, hot and painful.
COVID19 VACCINE (COVID19)	Emergency Room *	914473-1	Weakness, fatigue, decreased appetite, upper extremity shaking, sternal red blotchy rash, decreased mental status, non-verbal, decreased level of conscious, mottling, left side facial droop, hypertensive, fever, unable to follow commands
COVID19 VACCINE (COVID19)	Emergency Room *	914479-1	Left sided weakness, fatigue for 3 days post immunization. Patient was seen by health care provider on 12/30/2020. Provider transferred patient to Hospital ER for further evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	914517-1	I developed severe abdominal pain and was diagnosed with colitis. I was seen in ER. I have no idea if the vaccine called this.
COVID19 VACCINE (COVID19)	Emergency Room *	914596-1	Anaphalaxis reaction, stridor an unable to breathe. Happened in 30 seconds
COVID19 VACCINE (COVID19)	Emergency Room *	914730-1	Near syncopal episode approximately 2.5 hours after vaccination. Sudden onset of dizziness, nausea, and diaphoresis. Was admitted to ED and observed overnight. Full cardiac work up was done and shown to be within normal limits. I have no pre-existing conditions and considered to be a healthy adult.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	914798-1	On Dec. 20, 2020 around 11:30 PM, 2 days after patient received her COVID-19 vaccination, she was found on the bathroom floor, obtunded, very pale, diaphoretic, nauseous, and complaining of severe chest pain. Paramedics was called and patient was transported to the nearest emergency room. According to paramedics, on the way to the ER while patient was in the ambulance, she was noted with a sudden drop in heart rate about 19 beats/minute and have to be given Atropine IV Push, oxygen and was connected to transcutaneous pacing which improves her heart rate. In the ER patient continued to have chest pain and she was given Morphine, Oxygen, Nitroglycerine and Aspirin. IM had an EKG which showed Sinus Bradycardia with a Right Bundle Branch Block. She had serial ekgs, a chest x-ray, laboratory testing which included Troponin. Her first Troponin level came back elevated prompting her hospital admission to Telemetry. Her next 2 Troponin level improved and return to normal range and her chest pain has resolved.. She underwent a Stress Test which came back negative. Patient was admitted for a total of 20 hours in the Telemetry unit with Cardiology consultation before being discharged home last . She was re-evaluated by the cardiologist yesterday which diagnosed her a chest pain of unknown origin.
COVID19 VACCINE (COVID19)	Emergency Room *	914821-1	Rash, Itching and swelling of left arm. Progressed to tachycardia in the 150's, hypertension 200/114. Tingling of lips, dizziness
COVID19 VACCINE (COVID19)	Emergency Room *	914849-1	Approx 20 min after vaccination patient developed itching at the site and this progressed to include chest, neck. EMS evaluated patient who recommended transport and patient agreed. Benadryl offered by EMS and IV started. Pt with concurrent treatment for valley fever noted. ED administered medications - famotidine 20mg iv, methylprednisolone 125mg iv, NS 1000ml bolus. Prescribed prednisone 20mg po daily x 2 days.
COVID19 VACCINE (COVID19)	Emergency Room *	914931-1	Moderna COVID?19 Vaccine EUA - Metallic taste - Lump in her throat- felt like swelling - Nausea and then vomiting - Shaking and started to become unresponsive.
COVID19 VACCINE (COVID19)	Emergency Room *	915199-1	Itchy throat, red eyes after 30 minutes. EMS on site gave IV Benadryl, epi pen shot and took to ER for monitoring. Vitals were good so he was discharged.
COVID19 VACCINE (COVID19)	Emergency Room *	915212-1	Pt felt hot and short of breath . Pt recieved EPI in office and EMS was called . Pt was transported to the Hospital
COVID19 VACCINE (COVID19)	Emergency Room *	915405-1	Raised, hardened, hot bump on arm 24 hrs post injection with pain and swelling
COVID19 VACCINE (COVID19)	Emergency Room *	915464-1	10 minutes after receiving vaccine, patient reported numbness across upper lip which progressed to her tongue. Felt tingling and dryness of tongue and swelling. No difficulty breathing or swallowing, no chest pain, no wheezing, no rash, no itching. Taken to ED and given methylprednisolone 125mg IV, diphenhydramine 50mg IV, famotidine 20mg PO. Patient improved and monitored x 4 hours with resolution of symptoms. Prescribed prednisone 50mg po x 4 days.
COVID19 VACCINE (COVID19)	Emergency Room *	915478-1	erythema, tachycardia, tachypnea, headache, uncontrolled dystonic shaking
COVID19 VACCINE (COVID19)	Emergency Room *	915480-1	Developed sudden onset of shaking chills and fevers as high as 103.0. She has developed a small circular 5 x 5 area of erythema and firmness at the injection site of her left upper arm.
COVID19 VACCINE (COVID19)	Emergency Room *	915491-1	Dizziness, Hives on entire body
COVID19 VACCINE (COVID19)	Emergency Room *	915612-1	Received my vaccine on December 22nd, 2020 at around 830 Am. That afternoon, about 3 PM, I started to have a reaction. It started with tingling/numbness in my right hand which progressed up my arm into my elbow. About 10 minutes later, it then progressed into my right foot, and my left foot. About 10 minutes after that, I started to get flushed and a neck rash (diagnosed from Dr.). I took Benadryl and Ibuprofen 800mg PO every 6 hours for the next 24 hours. The numbness in my right foot and left foot along with the flushness went away a couple hours later. Although, the numbness in my right hand never went away. It came and went for the next 4 days until December 27th and 28th when it started getting worse. On December 28th evening, it got so bad that I was debating going to the emergency room around 1 am. The numbness and tingling was in my right hand and started shooting up my arm. The nerve pain around my wrist was unbearable. I finally fell asleep and the next morning, it was not nearly as bad, but was still there. The numbness and tingling moved from my right hand mainly to right hand, right foot, right leg, left foot and left hand today (12-30-2020).
COVID19 VACCINE (COVID19)	Emergency Room *	915682-1	Resident received vaccine per pharmacy at the facility at 5 pm. Approximately 6:45 resident found unresponsive and EMS contacted. Upon EMS arrival at facility, resident went into cardiac arrest, code initiated by EMS and transported to hospital. Resident expired at hospital at approximately 8 pm
COVID19 VACCINE (COVID19)	Emergency Room *	915690-1	Due Date unknown/6-7 wks pregnant -nausea -Body felt heavy -headache -in & out consciousness -Fatigue, severe -Heart Racing
COVID19 VACCINE (COVID19)	Emergency Room *	915765-1	Patient had an anaphylactic reaction to the vaccine the day after it was given and went to the nearest ER.
COVID19 VACCINE (COVID19)	Emergency Room *	915813-1	Patient stated he stopped his blood pressure medications 3 days prior to vaccination due to a previous reaction to losartan, a medication he was no longer taking. Patient took aspirin and a MVI on day of vaccination and drank lemon water. Patient developed tingling sensation in his mouth after eating dinner around 18:00. Patient stated he ate tacos with apple cider and noticed tingling after dinner. Patient stated he took two benadryl with no relief. His tongue continued to swell and he took two additional benadryl at 22:00. Once he developed difficulty swallowing he went to the emergency department. Patient presented to the ED with tongue swelling and difficulty swallowing. At 23:57 he was administered 0.3mg of epinephrine IM, diphenhydramine 25mg IV, famotidine 40mg IV, dexamethasone 10mg IV at 0114, methylprednisolone 60mg q6hrs started at 0417, diphenhydramine 25mg q6hrs IV started at 0416, albuterol 2.5mg via neb q6hrs started at 0710

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	915928-1	Started feeling a reaction immediately after the vaccine, felt blurred vision, dizziness, racing heartbeat, chest rash and face, itching all over, difficulty swallowing, tongue tingling and wheezing. Sent to ED. EPI and Benadryl. 1800 Went to see her in the ED, room 33. She has red rash to neck, shaky hands itching to neck and chest. ED Dr to discharge, she stated husband to pick her up and she will follow up with OH tomorrow. -----RN ED gave her Epinephrine 0.3 mg, Methylprednisolone 125mg, Diphenhydramine HCL 50 mg, Zofran 4mg, Lorazepam 1 mg, Hydroxyzine HCL 50 mg Sumatriptan 6mg , Discharge from ED at 1902 -----RN 12/29/2020 1715 called to check on patient. left voicemail for her to call OH. ????????.? 12/29/2020 1838 left voicemail for patient to call OH. ??????????????????????. 12/30/20 2030 spoke with her. Tuesday 12/29 3pm-4pm dizziness, confusion, sob. Wheezing. Ambulance called. Hospital admitted. Intubated for less than 24 hours. Breathing treatments, epi drip. Now just on steroids and walking around and feeling better. Still admitted at hospital. Hoping discharged tomorrow. -----RN
COVID19 VACCINE (COVID19)	Emergency Room *	916042-1	10 minutes after vaccine numbness and tingling in left foot, hand and left side of face. Spacing out feeling. Feel like i'm going to pass out.
COVID19 VACCINE (COVID19)	Emergency Room *	916090-1	EE has a history of anaphylaxis reaction to Latex. EE states she was intubated in Mexico over this in the past. Pfizer-BioNTech vaccine given, 20 minutes later EE c/o dizziness. EE places on cot and starting wheezing and being short of breath. Lungs sound tight and wheezy throughout. á 1052- Epi 0.3mg IM given in Right Deltoid 1053- Benadryl 50mg IM given in Left Deltoid á 1054- EE getting restless and starts feeling chest tightness. Epi 0.3mg IM given in Right Deltoid á Code Green Team arrived at 1054. á BP 197/126, HR 88, RR 44, blood sugar 109 á 1058- EE getting wheezing and short of breath again. Epi 0.3mg IM given in Right Deltoid and Benadryl 50mg IM given in Left Deltoid. á 1059- EE transferred to ED on stretcher, escorted by ICU RN and ICU MD. In ED- patient given solumedrol, epi, benadryl, phemodidine, ativan, zofran x 2 and ee sent home with medications as well.
COVID19 VACCINE (COVID19)	Emergency Room *	916247-1	Redness about 1 1/2 inches around injection site, edema to right arm, r side of neck, r breast, r shoulder, temp 99.3, increased blood pressure. Patient went to primary care physician. She was then sent to the ER. She was Covid (+) in July 2020
COVID19 VACCINE (COVID19)	Emergency Room *	916414-1	approximately 30 minutes after receiving vaccination i began to develop tongue and lip swelling as well as difficulty swallowing and breathing , i then proceeded immediately to the nearest er
COVID19 VACCINE (COVID19)	Emergency Room *	916497-1	Patient started having myalgia, chills, nausea on the next day of the vaccination. on 2nd day (12/29) patient had chest pressure which made her present to Hospital ED. She had troponin elevation to 1.14. Cardiac Catheterization was done which was negative. On Trans Thoracic Echocardiogram, patient was found to have hypokinesis of the mid and distal segment with some sparing of apex proving Takotsubo (stress induced) cardiomyopathy. Patient did not have any underlying emotional or physical stress going on in her life or family. Till now extensive infectious as well as inflammatory work up is done to rule out any secondary causes of cardiomyopathy which till date have remained negative. As a diagnosis of exclusion, her presentation seems to be COVID-19 vaccine induced Takotsubo Cardiomyopathy
COVID19 VACCINE (COVID19)	Emergency Room *	916508-1	Pt received 1st dose of Moderna vaccine in am at COVID vaccination clinic. On presentation to clinic he stated he was feeling well. Pt was brought to ER in pm with hypoxic, requiring 15L supplemental O2. Per pt's family, pt was not feeling well for the last couple of days but didn't think it was related to COVID. Abbott COVID + in ER. Possible vaccine reaction, though seems unlikely.
COVID19 VACCINE (COVID19)	Emergency Room *	916538-1	"15-20 mins after receiving the vaccine she reported she had difficulty swallowing and difficulty breathing and was ?shaking."" a PA wrote in her note that when she ran in to help, she found the patient to be tachypneic, diaphoretic, warm with some red blotchy patches on face, chest & neck. Able to speak easily c/o trouble breathing & sensation of throat swelling & extremities feeling abnormal. No stridor. No facial edema noted by that clinician. Administered epi-pen 0.3mg - IV started , Benadryl 50mg IVP and solumedrol 125mg IVP. Patient reports she subsequently arched her back and had rigidity of her arms/legs and tremors. Clinic PA reports that while she was there, pt was never hypotensive. Initially hypertensive after epi as expected with some favorable response after 10-15 min Staff there gave her IM epinephrine, IV Solu-Medrol and 50 mg IV Benadryl. EMS was contacted and transported to the emergency room. She arrived at the ER, was monitored for 2 hours, was started on pepcid and benadryl and discharged from the ER. She had a diffuse itchy rash. The following day she again developed recurrence of throat swelling. Went back to a different ER. Developed dyspnea immediately prior to arrival at ER. There was again given solumedrol and benadryl and pepcid and developed muscle rigidity and arched back for 10 minutes. Symptoms of SOB and dyspnea resolved with epinephrine. Was discharged from the ER with prednisone after being monitored for 5 hours. Is continuing to take prednisone and benadryl. Rash is still present but improving with scheduled benadryl. Has new redness at injection site today. Continues to feel some throat swelling but no tightness today. This information was gathered from talking with pt today for a phone appt and also from her medical chart regarding her vaccination visit and two ER visits."
COVID19 VACCINE (COVID19)	Emergency Room *	916710-1	Acute appendicitis, onset morning of 1/1/2021 (Reporting this because Pfizer covid vaccine had 3-4x higher risk of appendicitis, although data not reported for Moderna covid vaccine)
COVID19 VACCINE (COVID19)	Emergency Room *	916742-1	Within 15 minutes of receiving the vaccine I began to get very itchy and blotchy with a hoarse voice. The paramedic downstairs walked me up to the emergency room. I was treated with medications to help calm the itching and burning feeling. By 940 I went anaphylactic and had several doses of epinephrine to help calm this. I continued to have rashes and the feeling of my throat closing. I was transferred by ambulance to medical center in the ICU. I am still here and have had two toner anaphylactic episodes since. I have been on a epi drip, steroids, famotidine, Ativan and Benadryl. I also had a picc like placed.
COVID19 VACCINE (COVID19)	Emergency Room *	916746-1	Anaphylaxis. Immediately experienced shortness of breath, rapid heart rate, and rash. I am a Nurse Practitioner in the emergency department. Had went down to the temporary vaccine station to receive my vaccine, immediately returned to the ER and began to experience symptoms of anaphylaxis. Was immediately placed in a treatment room and received treatment by the ER physician, which included oxygen, intravenous Benadryl, Solumedrol, and Normal Saline. Was observed for several hours and then eventually sent home with prescription for Prednisone and Pepcid. I do have a allergy to shellfish, was never asked about my allergies and nothing on the paperwork I was given prior to the injection noted a concern for shellfish allergies.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	916790-1	Flushing, sweating, increased heart rate proceeded to feel difficulty swallowing and clearing my throat. I was taken to the ER. The symptoms progressed to feeling dizziness, difficulty speaking, and chest pressure with increased SBP/DBP. General nausea and feeling very unwell.
COVID19 VACCINE (COVID19)	Emergency Room *	916809-1	CAREGIVER RECEIVED FIRST VACCINE DOSE AND SOON AFTER BEGAN TO FEEL DIZZY AND HER EYES BEGAN TO TWITCH, FOLLOWED BY UNCONTROLLED SHAKING, WITH HIGH FEVER FOLLOWED BY SEVERE SHORTNESS OF BREATH AND GASPING, WITH TIGHTNESS AROUND THE CHEST. TRANSPORTED TO EMERGENCY DEPARTMENT. HAD MULTIPLE EPISODES OF ITEMS LISTED ABOVE WHILE IN ED, INCLUDING HEAVINESS IN HER LEGS AND TINGLING IN ARMS. SHE WAS DISCHARGED FROM ED AT 10:30PM BUT WAS READMITTED ON 12/24 TO ED FOLLOWING SIMILAR ISSUES. TO DATE SHE HAS HAD 5 RAPID RESPONSES IN HOSPITAL DUE TO REPEAT OF SIGNS/SYMPTOMS. CT AND PULMONOLOGY CONSULT SCHEDULED FOR 12/28/2020.
COVID19 VACCINE (COVID19)	Emergency Room *	916859-1	The vaccine was received at 1:12 PM, and I felt fairly fine, aside from injection site pain and some tingling in my left arm until I had sudden significant elevation of heart rate, with shortness of breath, and throat swelling/tightening at approximately 1:26PM. I cold compress was applied to my forehead and I was put in a reclining position & then received Epinephrine at 1:28PM. EMS (present onsite) arrived for transport at 1:31PM. 4L of oxygen was applied after O2 sat of 89% noted by EMS. Blood pressure was elevated to >200/100 initially by EMS. Symptoms improved quickly following epinephrine, with some residual feelings of very mild throat fullness, and I developed chills which improved over time. I was transported to emergency department where I was evaluated (symptoms mostly resolved at that time, but ED physician noted a little swelling remaining in my uvula), then IV Benadryl and Decadron were given. Later acetaminophen was also given for headache that developed during my ED stay. My vitals were monitored throughout and observation occurred until I was discharged at approximately 5:00PM, as symptoms had not recurred.
COVID19 VACCINE (COVID19)	Emergency Room *	917042-1	I received the vaccine at 6:30pm on 12/27. I worked at 7pm and took lunch at 2:00am. After lunch, I immediately felt sick to my stomach and threw up. I went home after my shift and went to bed. After 5 hours, I woke up and went to the couch to lay down while kids watched TV. Next, I woke to several people in my house. I had a seizure and my son had called 911. I was taken to emergency department. I was admitted and stayed 2 nights in the hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	917122-1	A little over an hour after receiving the vaccine I noticed a burning sensation in my sinuses. By 1:30am 1/1/2021 I awoke from my sleep terribly dizzy, shaking violently and experiencing a fever of 101.3 F. I took Advil and Tylenol and fell asleep about an hour later. I woke up with similar symptoms at approximately 8:30am on 1/1/2021 took an additional dose of Advil and Tylenol and slept till 12p. I woke up with a bad headache and coughing fits similar to when I had COVID back in March. I went to an urgent care who assessed me and ordered me to the ER. Medical center administered IV fluids, an inhaler, steroids, epinephrine and Benadryl and a few hours later my symptoms had subsided for the most part and a dose of IV antibiotics was administered. I am currently admitted for observation with likely discharge on 1/2/2021.
COVID19 VACCINE (COVID19)	Emergency Room *	917497-1	Vaccine given at 7:05am 12:00noon, 5 hours later, I started experiencing severe chest pain, jaw pain and shortness of breath in which EMS was called and I was taken to the hospital. Since then, I lost feeling in my hands and feet, numbness and tingling. I've improved however, during my recovery suffered with spinal pain, shortness of breath, very winded, muscle pain and loss of appetite to especially meat.
COVID19 VACCINE (COVID19)	Emergency Room *	917549-1	Soreness and weakness of left arm for more than 5 days. Intermittent headaches and runny nose
COVID19 VACCINE (COVID19)	Emergency Room *	917727-1	Patient with a history of thalassemia and Gilbert's disease, developed severe jaundice three days after vaccination. Had mild headache and sore arm but otherwise felt well. Had labs drawn - found to have highly elevated bilirubin (23) and LFTs in the 700s. Was admitted to the hospital and had CT showing cholelithiasis, cholecholelithiasis and minimal intrahepatic biliary ductal dilatation. Left hospital and was admitted to another facility where plan was for ERCP and cholecystectomy. Ultimately unclear if at all related to the vaccination - may be coincidental.
COVID19 VACCINE (COVID19)	Emergency Room *	917784-1	Pt had vaccination at city site. Waited 15 min after shot and was cleared to go. Reported to wife that he was very thirsty, so they stopped at a convenience store on the way home. While there, he felt worse and asked to go to the Emergency room. They chose Methodist to enter. Pt went to triage and while at triage, had syncopal episode, then full arrest. After short course of CPR and defib, he had ROSC. Was taken to cath lab for intervention (stents) and is now in ICU.
COVID19 VACCINE (COVID19)	Emergency Room *	917855-1	ON 1/1/21 THE DAY AFTER I RECEIVED THE VACCINE I WAS TAKING A NAP AND MY WATCH KEPT SENDING ME ALERTS. HOWEVER I DID NOT CHECK MY WATCH UNTIL 5:30 WHEN I WOKE UP AND I FELT LIKE I WAS HAVING HEART PALPITATIONS. I WENT TO THE EMERGENCY ROOM WHERE I WAS TREATED. I WAS TOLD THAT I WAS FEBRILE WITH A TEMPERATURE OF 102. I WAS GIVEN IV FLUIDS, CHEST X-RAY, EKG AND LAB WORK. I WAS RELEASED ON 1/2/21 AT APPROXIMATELY 0030 (MIDNIGHT).
COVID19 VACCINE (COVID19)	Emergency Room *	917882-1	"Patient is hospital employee who completed screening form for COVID-19 vaccine by answering ""no"" to all contraindication questions. Approx 10 minutes after receiving COVID-19 vaccine dose # 1, patient was still in vaccine clinic area and complained of dizziness, palpitations and flushing. I observed patient fanning herself with papers. She was escorted out of the immediate clinic room, and assessed by paramedics present as having an anaphylactic reaction. Epinephrine 0.3 mg IM and diphenhydramine 50 mg IV given in clinic, Rapid Response was called overhead and patient immediately transported down the hall to the Emergency Dept. In ED, pt was noted as having swollen tongue, large areas of erythema on face, arms and chest, shortness of breath, nausea, dizziness (per ED physician notes). Pt reported being hospitalized in ICU with COVID disease more than 3 months ago, including intubation (not treated at this hospital), and has been back at work since August 2020. ED physical exam noted bilateral wheezing and patient in acute distress. In ED, pt administered racemic epinephrine 2.25% 0.5 mL via neb, epinephrine 0.3 mg IM, diphenhydramine 50 mg IV, Solu-Medrol 125 mg IV, famotidine 20 mg IV and epinephrine 5 mg/250 mL IV drip (started at 0.118 mcg/kg/min). Acute symptoms reported to resolve in ED. COVID test was negative. ED physician discovered that pt had history of multiple medications, including previous anaphylactic reaction to radiocontrast dye requiring intubation (which was not disclosed on the vaccine screening form). Pt admitted to Telemetry floor for observation. Overnight course was unremarkable, and patient was discharged the following day with prescription for Prednisone taper and prescription for Epi-pen. Advised not to return for second dose of COVID vaccine. EMR updated to reflect possible anaphylactic reaction to Moderna COVID-19 vaccine."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	917955-1	25 minutes after receiving the injection, there was a sudden onset of facial swelling, hives, itching and airway constriction. I had already left the drive-thru vaccination clinic and was driving to the hospital emergency room where I work. I informed my colleagues of my symptoms and was treated for anaphylaxis with IV diphenhydramine and famotidine over several hours. I was given a prescription for a prednisone taper for the next 6 days.
COVID19 VACCINE (COVID19)	Emergency Room *	918051-1	At around 40 hours post vaccination, developed severe abdominal pain and went to an emergency room for evaluation on 1/1/21. Abdominal pain was eventually diagnosed as appendicitis requiring appendectomy on 1/2/21. Emergency room visit and hospital discharged patient early on 1/2/21. It was then determined that the on-call team covering mis-read the CT scan and acute appendicitis was found. Patient then went to Medical Center on 1/2/21 for appendectomy and was discharged later that night following operation.
COVID19 VACCINE (COVID19)	Emergency Room *	918062-1	15 min after the vaccine I was flushed and felt hot , ears felt hot as well. I had a macular rash on chest and arms. My throat felt itchy and they immediately gave me benedryl. I was tahycardic as well. When I got home from the ER that night I had to take more benedryl and then the next morning I was still itchy and my voice was hoarse so I took more xyzal and famotidine. The rash subsided and I continued taking xyzal twice a day , benedryl and famotidine for a week. After my vaccine the itching did not subside for about 48 hours and it was very difficult to control. I had to take max doses of antihistamines to control the hoarseness In my voice and itching
COVID19 VACCINE (COVID19)	Emergency Room *	918081-1	I received the shot around 0730 on 12/30/2020. Went home and got ready for work. Around 12am 12/31/2020 my arm started to radiate at the injection site and was very tense. I placed a heat pack on the right arm but the pain did not dissipate. My arm continued to be in pain for the rest of the night. Around 0240 I ate dinner, had water and still had some arm pain. Around 0345 my arm started to flare up and sent pain sensations throughout my body. My right arm was increasingly discomforting, I could barely move it. The sensations spread to my legs, numbing them and my throat had felt as if it were closing up. I got up to get the attention of the nurse and was able to flag her down. She said I was pale as a ghost. My vision was very blurry, I could not hear anything because my ears had filled up and everything was muffled. My head had begun to ring and I was on the brink of fainting when a chair was given to me. My eyes had become extremely sensitive to the light, I was given water and spoken to about what had happened leading up to the event. I was greeted by the paramedics who drew my blood, placed an IV and transferred me to the Acute Care portion of the Emergency Department. My vitals were 76/49, 80/50, 90/56, 100/60 before being brought to the ER. On 1/1/2021 My thighs have been sore/tense, my knees and ankles have been stiff and just feeling sickly. On 1/2/2021 much of the same symptoms are present. The soreness in the muscles isn't as prevalent, however joints still are stiff On 1/3/2021, congestion and runny nose are still present, stiffness in ankles and now shins are prevalent.
COVID19 VACCINE (COVID19)	Emergency Room *	918092-1	Patient is a 49 y.o. female with a PMHx of AAT deficiency, HPV infection, DVT, Vitamin D Deficiency, Hypercholesterolemia and Anxiety with complaints of acute left arm numbness that radiates into her left digits and chest tightness that began 12-13 min after receipt of the COVID-19 vaccine. She noted numbness radiation into the left side of the neck and the bilateral ears. She voices she has also developed chest tightness and wheezing. Evaluated in the emergency department treated with diphenhydramine 25mg, epinephrine 0.3mg and dexamethasone 10mg
COVID19 VACCINE (COVID19)	Emergency Room *	918094-1	"Pain and swelling in arm where injection was received. Lymph nodes in axilla and in neck were also swollen and painful. Eyes were described as ""glassy"" , Two medications prescribed Lidocaine Patch and Naproxen"
COVID19 VACCINE (COVID19)	Emergency Room *	918178-1	"Patient was anxious when arrived. After receiving the vaccine, felt light headed and revealed he has ""spells"" of anxiety similar to current experience. Became diaphoretic and needed to lie down."
COVID19 VACCINE (COVID19)	Emergency Room *	918179-1	itching, redness and swelling at injection sight. Took Benadryl on 12/31. Reappeared on 1/1, visited Er, got dexamethasone, Pepcid po and bendaryl
COVID19 VACCINE (COVID19)	Emergency Room *	918182-1	shortness of breath, hypotension, presumed anaphylaxis
COVID19 VACCINE (COVID19)	Emergency Room *	918200-1	Pfizer-BioNTech COVID-19 Vaccine EUA - Patient witnessed another patient with syncope prior to her injection. She was already anxious about receiving vaccination and this increased her anxiety, though she proceeded with immunization. Patient was in 15 min observation window in a chair and began to feel light-headed like she may pass out. A SWAT was called. With RN assistance, patient was lowered to the floor, with no loss of consciousness. Patient was pale and reported anxiety, racing /pounding heart, and felt hot with facial flushing. Patient was transferred to ED and was noted to be tachycardic (120s), but dropped to 80s. She noted that this episode felt different than her prior syncopal episodes associated with anemia. Patient was observed for 5 hours and discharged to home. Patient returned to ED roughly 2.5 hours later complaining of continued dizziness and unsteady gate. Patient was pale and anxious. Patient reported had not eaten/drank enough during her shift and received vaccine immediately post a stressful shift. Additionally, patient witnessed another patient have syncopal episode prior to her receiving her vaccine which made her anxious. Patient was given IV fluids and had electrolytes replacement. Patient additionally received diazepam. Patient was discharged at 2358 on 12/23. Patient returned to ED on 12/24 at 0239 complaining of near syncope and lightheadedness. Patient had tachycardia and self-reported palpitations. Received IV fluids and observation on telemetry with no rhythm disturbance. Patient discharged 1428 on 12/24. On 12/29, patient returned to ED at 0326 for continued dizziness, fatigue and near syncope. Was admitted for cardiac evaluation. Noted to have unprovoked tachycardia and was discharged with a Halter Monitor to evaluate cardiac symptoms. patient was discharged 12/31 at 1619
COVID19 VACCINE (COVID19)	Emergency Room *	918203-1	Pt developed urticaria on both arms 4 hours after COVID vaccine administration. Pt received dexamethasone 10mg IM for treatment and diphenhydramine PO 25 mg. Symptoms subsequently resolved.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	918211-1	"Pfizer-BioNTech COVID-19 Vaccine EUA - Patient with history of anaphylaxis requiring intubation to benzonatate. Patient answered ""no"" to questionnaire about allergic reactions prior to vaccination. 11 minutes after vaccination, patient reported tingling of lips and swelling of face. Developed hoarseness. SWAT was called and patient given benadryl and taken to ED (1055). Patient received steroids and H1/H2 blockers in addition to epinephrine. Patient brought to ICU for monitoring. Patient continued on therapy and was discharged 1/2 at 1113. Patient returned to ED on 1/3 at 1558 with macular papular rash on leg, chest and back with itching on eyelids and face. No respiratory involvement. Patient given benadryl and prednisone and discharged from ED at 2016."
COVID19 VACCINE (COVID19)	Emergency Room *	918218-1	Hives and facial swelling. Swelling within the ears. Migrain. Nausea.
COVID19 VACCINE (COVID19)	Emergency Room *	918228-1	* TESTED POSITIVE FOR COVID ANTIBODIES 06/2020 - 'STILL HAVE RESIDUAL COUGH' 12/21/2020 - VACCINATION 12/22/2020 9:30 WERE AT WORK; FELT SUPER FLUSHED, SOB, COULDN'T FOCUS, FELT FEVERISH, FELT NAUSEOUS. OCCUPATIONAL HEALTH REFERRED TO URGENT CARE; DR STATED 'NOT TYPICAL RESPONSE'; COVID TEST; NEGATIVE
COVID19 VACCINE (COVID19)	Emergency Room *	918229-1	12/26/20 started to experience covid -19 symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	918233-1	52 year old female received the Pfizer vaccine on 30 Dec 2020. Noticed a slight left sided facial droop as left lower lip numbness on 31 Dec 2020, which has become more pronounced over the past 2 days. She states she spoke to the nurse hotline right before speaking to me who told her to go to the ED (she was on her way). Denies any extremity weakness, numbness, HA or dizziness. No pain to face or ear. Speech clear on the phone. No recent illness or history of Bell's palsy. NKDA or any prior adverse reactions to immunizations.
COVID19 VACCINE (COVID19)	Emergency Room *	918235-1	"Patinet is a 37 y.o. female ER nurse who received her Covid vaccine just prior to arrival. While being observed at the vaccine site, she developed itching and a rash. She was brought down to the ER for evaluation. Mainly she is itchy all over. She notes a rash across her chest. But she has no cough shortness of breath wheezing. There is no problem swallowing there is no facial swelling. She does not have a history of anaphylaxis, or medication allergies. Review of Systems Constitutional: Negative for chills, diaphoresis and fever. HENT: Negative for congestion, trouble swallowing and voice change. Eyes: Negative for redness and itching. Respiratory: Negative for cough, shortness of breath, wheezing and stridor. Musculoskeletal: Negative for myalgias. Skin: Positive for rash. Pruritus Allergic/Immunologic: Negative for environmental allergies, food allergies and immunocompromised state. Neurological: Negative for headaches. 01/04/2021- Speaking with the patient she states noticed ""hives"" accross chest, right lower extremity, and left upper extremity."
COVID19 VACCINE (COVID19)	Emergency Room *	918246-1	Developed Tachycardia approximately 40 minutes post vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	918265-1	1/2/21 @ 1030: EE called to report she received the vaccine on 12/31/20 between 1030 and 1100. And then around 2330 on 12/31/20 she experienced facial swelling, arm swelling, headache, chills, and dizziness. EE stated she felt it was an allergic reaction to the vaccine and took Benadryl for the next 24 hours to help with the symptoms. EE reported she hasn't had anything since the initial 24 hours, but is concerned about taking the next vaccine. Encouraged EE to contact PCP regarding concern for taking next vaccine. After speaking with Administration, EE encouraged to report vaccine side effects to CDC via V-Safe (https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/vsafe.html).
COVID19 VACCINE (COVID19)	Emergency Room *	918267-1	"C/O of ""smokey vision"", outside in parking lot. Sat in car for about 10 minutes before coming into the building. A&O, ambulatory, denies dizziness, HA or lightheadedness. States feels SOB with exertion, ""heaviness in trachea"" increasing with inspiration. Hand off to EMTs. EKG performed, Sinus Tach 108 initially then NSR 80s-90s with occ MF PVCs, couplets. BP 162/94, O2SAT 100% RA, BS POC 208. Patient brought to ER by EMTs"
COVID19 VACCINE (COVID19)	Emergency Room *	918271-1	This patient is a 56 y.o. female presenting to the emergency department with a chief complaint of a possible reaction to the COVID vaccine onset 2 days ago. The patient states that she has had a fever, chills, adenopathy, and body aches since her vaccination. Her highest recorded temperature was 101F, and she has been taking Tylenol. She states that her biggest concern is the adenopathy under her right armpit which is painful to touch. She denies any masses. She saw her PCP on 12/24 and had blood work done, which showed an elevated white count of 17.
COVID19 VACCINE (COVID19)	Emergency Room *	918281-1	Noticed itching and slight rash on distal portion of extremities the evening of Dec. 30, rash became worse over next few days and became more inflamed/raised even with Benadryl taken as directed on box. I went to urgent care on Jan 1, 2021 and was started on Steroid taper of 60-40-20 each dose for 3 days. Improvement noted after 2nd steroid dose. No respiratory involvement with vaccine or rash episode
COVID19 VACCINE (COVID19)	Emergency Room *	918287-1	felt hot, prickly, right arm red. Later felt chest tightness
COVID19 VACCINE (COVID19)	Emergency Room *	918294-1	About 1 hour after receiving my first dose of the Moderna vaccine for COVID-19, I started feeling extreme pain in my left shoulder and arm, where the shot was administered. The pain continued to intensify throughout the day and night and was 10/10 on a pain scale. In addition, I began to lose my ability to lift my left arm or use it. It became so weak that I had to use my right hand/arm to pick up my left arm to move it. My left arm was 'hanging and drooping' and my left shoulder was very noticeably lower than my right shoulder. I called my primary care and employee health. My primary care doctor advised me to take advil and go to urgent care if the pain persisted and worsened. I could not sleep at all that evening of 12/29/20 because the pain was so intense and I had to keep picking my left arm up with my right arm to keep re-adjusting to try and get comfortable. The next morning I went to an orthopedic urgent care where I was diagnosed with nerve damage from the shot and prescribed Methylprednisolone 4mg dosepack. The doctor who saw me explained that he could not assess the extent of the damage at this time because my nerves were so agitated and inflamed. He scheduled a follow up visit with me for Thursday, January 7th and stated he will then proceed with an MRI and further investigation to assess the extent of the nerve damage. During the days that followed my immunization, I was unable to do anything with my left arm and was dependent on my husband to help me get dressed, showered, household chores, etc. It is unknown at this time whether this will be temporary or permanent damage and disability.

COVID19 VACCINE (COVID19)	Emergency Room *	918608-1	""Pfizer-BioNTech COVID-19 Vaccine"" 12/29 patient developed SOB, fever tmax 103 degrees F, diaphoretic, dry heaves all started approximately 16 hours after vaccination given. patient then transferred to Hospital for further treatment and observation. 12/30 seen at injection site- erythema, swelling, warmth and tenderness Discharged back to home on 1/1 with RX for cephalixin to treat cellulitis of injection site"
COVID19 VACCINE (COVID19)	Emergency Room *	918741-1	delirious; hypoxic; fever; ataxic; incontinent; confused; Chills; HA; anorexia/had no appetite; myalgias; extreme fatigue; slept all and had no appetite; This is a spontaneous report from a contactable physician. A 74-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 15Dec2020 16:00 at single dose for COVID-19 immunization. Medical history included diabetes mellitus (DM). The patient has no known allergies. The patient's concomitant medications were not reported. He was an ER doctor and the medical director of his hospital. The patient was asymptomatic when he got the vaccine on 15Dec2020. 3 hours after the vaccine he began to get chills, HA, anorexia, myalgias, and extreme fatigue. This worsened and he slept all and had no appetite. On 19Dec2020 he woke up delirious with a fever and was ataxic, hypoxic, incontinent, and confused. The patient was hospitalized due to the events on 15Dec2020. The events also caused prolonged hospitalization due to the events. The patient was not diagnosed with COVID prior to vaccination. The patient was tested for COVID via nasal swab post vaccination with unknown results. The patient did not receive any other vaccines within 4 weeks prior to COVID vaccine. The outcome of the events was not recovered. Therapeutic measures were taken as a result of the events as the patient required oxygen, plasma, and remdisivir. The batch/lot numbers for the vaccine, BNT162B2, were not provided and will be requested during follow up.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of reported serious events might not be excluded, considering the plausible temporal relationship. Fever, chills, headache, fatigue and muscle pain are the known adverse event profile of the suspect product. More information such as detailed underlying medical conditions and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918742-1	Allergic reaction; Diarrhea; Chills; Palpitation; Tongue and throat swelling; Tongue and throat swelling; This is a spontaneous report from a contactable other healthcare professional (patient). A 38-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ELO141), via an unspecified route of administration on 21Dec2020 at a single dose for covid-19 immunization. The patient's medical history included asthma and allergy. Concomitant medication included levosalbutamol hydrochloride (XOPENEX) for asthma and cetirizine hydrochloride (ZYRTEC) for allergy. About hour and a half to two hours after the vaccine, on 21Dec2020, the patient experienced had an allergic reaction with symptoms set of diarrhea, chills, palpitations, and tongue and throat swelling. The patient took diphenhydramine (BENADRYL) 25 mg as treatment. It helped some. She woke up this morning (22Dec2020) and still had the symptoms. So, she went to the emergency room. They gave her diphenhydramine 25 mg IV, methylprednisolone (SOLUMEDROL), and famotidine (PEPCID). The patient underwent lab tests and procedures which included blood count and chemistry and lab work which showed normal on 22Dec2020. Outcome of the events was unknown. The patient thinks that the product had causality to the events. Information on the lot/batch number has been requested.; Sender's Comments: The patient's medical history included asthma and allergy. Based on information available, the reported allergic reaction with symptoms set of diarrhea, chills, palpitations, and tongue and throat swelling was likely related to the use of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918745-1	General weakness requiring assistance to stand.; General weakness requiring assistance to stand; Rash on chest/neck; This is a spontaneous report from a contactable Pharmacist. A 33-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EK5730), intramuscularly on 22Dec2020 13:15 at single dose for covid-19 immunization. Vaccine location was right arm and it was the first dose. The facility type vaccine was hospital. None medical history. No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. There were no concomitant medications. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine nor received any other medications within 2 weeks of vaccination. The patient experienced rash on chest/neck. General weakness requiring assistance to stand on 22Dec2020 17:00 with outcome of recovered in Dec2020. The date report was first received from source was 23Dec2020. Patient received Fluid bolus, IV benadryl, IV steroid as treatment for the adverse events. The action taken in response to the events for BNT162B2 was not applicable. The events were reported as non-serious.; Sender's Comments: The reported events rash on chest/neck and general weakness requiring assistance to stand were likely related to the use of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	918747-1	<p>Flushing; she noticed that there was a ringing in her left ear; Experienced a weird heaviness on her upper chest and arms/ heavy legs and arms/really heavy arms and legs; experienced a weird heaviness on her upper chest and arms; really cold hands; felt really hot at the injection site/really hot sensation at injection site; lightheadedness/Light-headed; Palpitations; Feeling faint; shortness of breath; Her blood pressure went up to 134/100; paleness; went up to her face; felt tired/She was really tired and slept it off; This is a spontaneous report from a contactable nurse, who is also the patient. This 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number EK5730) intramuscular in the left deltoid on 20Dec2020 at single dose for COVID-19 immunisation. Relevant medical history included ongoing asthma (diagnosed as a teenager with sports asthma and uses an inhaler). There were no concomitant medications. The patient experienced lightheadedness/light-headed (medically significant) on 20Dec2020 with outcome of recovering, palpitations (medically significant) on 20Dec2020 with outcome of recovered on 20Dec2020, feeling faint (medically significant) on 20Dec2020 with outcome of recovered on 22Dec2020, flushing (medically significant) on 21Dec2020 with outcome of recovered on 22Dec2020, she noticed that there was a ringing in her left ear (medically significant) on 21Dec2020 with outcome of recovering, shortness of breath (medically significant) on 20Dec2020 with outcome of recovering, her blood pressure went up to 134/100 (non-serious) on 20Dec2020 with outcome of recovered on 20Dec2020, she experienced a weird heaviness on her upper chest and arms (non-serious) on 21Dec2020 with outcome of recovering, really cold hands (non-serious) on 21Dec2020 with outcome of not recovered, paleness (non-serious) in Dec2020 with outcome of unknown, felt really hot at the injection site/really hot sensation at injection site (non-serious) on 21Dec2020 with outcome of recovered on 23Dec2020, went up to her face (feeling hot) (non-serious) in Dec2020 with outcome of unknown, heavy legs and arms/really heavy arms and legs (non-serious) on 21Dec2020 with outcome of not recovered and felt tired/she was really tired and slept it off (non-serious) in Dec2020 with outcome of unknown. The patient specified that she experienced a moderate reaction after having the COVID-19 vaccine. She had the vaccine last Sunday morning 20Dec2020. She was told to wait 20 minutes before leaving. In the waiting area, she felt lightheaded, had palpitations and was feeling faint. After 20 minutes she started feeling better. Then she started to have more intense light headedness. She went to the ER and was given oxygen. Her blood pressure was 134/100 on 20Dec2020. She had an EKG on 20Dec2020 that was normal. They gave her steroids and Benadryl. She had another episode while being injected with the steroids. On Monday 21Dec2020, she experienced a weird heaviness of her upper chest and arm. She had really cold hands and flushing. On Monday night 21Dec2020 she went to work. She experienced a really hot sensation to the injection site that went to her neck and face. Her left ear was ringing. This lasted until Tuesday 22Dec2020. She took Benadryl again on Tuesday 22Dec2020. She had shortness of breath which started on 20Dec2020 and on 22Dec2020 she had shortness of breath that lasted until 11am. She had really heavy legs and arms and went back to the ER. She had a chest X-ray and D-dimer on 22Dec2020 that were normal per the ER. The night before the report, she had some of the same symptoms. She was really tired and slept it off. She didn't take anything. The morning of the report, she was feeling good and better. She still has heavy feeling on upper chest and arms. Caller clarifies that she did not have a heavy feeling in her legs. Her arms feel heavy if she holds her phone too long. She continues to have ringing in her ear. The flushing went up to her face. The patient specified that she developed sports asthma as a child and uses an inhaler. She gets short of breath if she overexerts herself. Additional laboratory investigations on 20Dec2020 included blood work with unknown results and Troponin which was normal. She was provided with a general steroid. She did not know the name of it. She was also given Benadryl and monitored on telemetry. She was given IV fluids again on 22Dec2020.; Sender's Comments: Based on the compatible temporal association and the known pattern of response, the Company considers the reported events are possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Emergency Room *	918754-1	<p>woke up with partial right sided facial paralysis/went to the ER to r/o a stroke and was confirmed to be Bell's Palsy/complete right sided facial paralysis; woke up with right sided jaw pain that lasted all day; This is a spontaneous report from a contactable Nurse reporting for herself. A 43-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number ek5730, via an unspecified route of administration on 18Dec2020 12:15 at Hospital at the Right arm at single dose for COVID-19 immunisation. Medical history included Allergies to Chemical Sunscreen from an unknown date. Concomitant medication included Daily Multivitamin which was received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient had no COVID prior vaccination. The patient did not have COVID tested post vaccination. The patient woke up with right sided jaw pain on 22Dec2020 07:00 AM that lasted all day. 23Dec2020 she woke up with partial right sided facial paralysis. The patient went to the ER (Emergency Room) to r/o (rule out) a stroke and was confirmed to be Bell's Palsy. 24Dec2020 she woke up with complete right sided facial paralysis. The events resulted in Emergency room. The patient underwent lab tests and procedures which included CT (computerised tomogram) scan: unknown results in Dec2020. Therapeutic measures were taken as a result of the events and included RX (prescription) medication, OTC (Over-the-counter) pain meds. The outcome of the events was not recovered.; Sender's Comments: Based on the time association, the possible contribution of suspect BNT162B2 to the event facial paralysis cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	918755-1	patient began to experience dizziness/shakiness.; patient began to experience dizziness/shakiness.; This is a spontaneous report from a non-contactable other hcp reporting for a patient. A 58-year-old female patient received first dose of BNT162B2 (Pfizer product, lot number: EH9899), intramuscular on 21Dec2020 16:00 at single dose on left arm for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. It was reported that during her 15 minute waiting period after the injection (21Dec2020 16:15), the patient began to experience dizziness/shakiness. This provider was notified of patient reaction and she was then transferred to the emergency bay via wheelchair where she was assessed. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, hypotension, dysrhythmia, chest pain and collapse. Treatment included no therapy, but did continue with vital checks at approximately 5 minute intervals. Patient discharge: stable to go home and follow up with PCP. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected; Sender's Comments: Based on the compatible time association, the dizziness and shakiness are possibly related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918758-1	Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; Small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection; This is a spontaneous report from a contactable physician (patient). A 61-years-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EH9899), intramuscularly on 21Dec2020 12:30 to at single dose on left arm for COVID-19 immunization in hospital. Medical history included crohn's disease. No known allergies. Concomitant medications within 2 weeks of vaccination included estradiol, progesterone, colestipol hydrochloride (COLESTID), ustekinumab (STELARA), cyanocobalamin (B12). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced small bowel obstruction with diffuse bowel and pelvic lymphadenopathy 36 hours after injection on 22Dec2020 22:00 with outcome of recovered in Dec2020. The adverse events resulted in emergency room/department or urgent care, hospitalization for 3 days. Therapeutic measures were taken as a result of event included inpatient observation, nothing by mouth (reported as NPO), intravenous fluids. No COVID prior vaccination, COVID test nasal swab was negative on 23Dec2020 post vaccination. It was not reported as serious.; Sender's Comments: There is not a reasonable possibility that reported events small bowel obstruction and lymphadenopathy are related to BNT162B2 vaccine. The patient had underlying Crohn's disease, which put patient at risk of developing the event. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918761-1	Cellulitis: below left elbow; Soft tissue swelling; This is a spontaneous report from a contactable nurse (patient). A 63-year-old female patient (62 years old at time of vaccination) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EH9899), intramuscular in left upper arm on 21Dec2020 13:00 at a single dose for COVID-19 immunization administered in the hospital. Medical history included ongoing hypertension and cervical cancer from 2015 and ongoing. The patient has been taking unspecified concomitant medication/s. The patient previously took amoxicillin and had allergies and nausea. On 24Dec2020 16:00, patient had cellulitis below left elbow and soft tissue swelling. On 25Dec2020, patient went to ER and X-ray was taken and patient was prescribed Keflex 500mg 3x day. Prior to vaccination, the patient was not diagnosed with COVID-19: Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovering.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of cellulitis. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918767-1	Severe rash; This is a spontaneous report from a contactable healthcare professional (patient). A 42-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EK5730 (pending clarification)), intramuscularly at the left arm on 21Dec2020 at 16:00 (04:00 PM) at single dose for COVID-19 immunization. The patient was vaccinated at a hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not pregnant at the time of vaccination. The patient's medical history included Diabetic, type 1, allergies to penicillin, and the patient diagnosed with COVID-19 prior to vaccination. The patient was not tested for COVID-19 since the vaccination. The patient previously took codeine and experienced allergies. The patient received other unspecified medications within 2 weeks of vaccination. The patient experienced severe rash on 23Dec2020 at 21:30 (09:30 PM). The adverse event resulted in emergency room/department or urgent care: the patient was treated at local ER with prednisone and benadryl. The event was reported as non-serious. The patient recovered from the severe rash on an unspecified date in Dec2020.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of severe rash. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918770-1	Difficulty breathing; This is a spontaneous report from a contactable pharmacist. A 54-year-old female patient received her first dose of intramuscular BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 22Dec2020 at 04:15 PM at single dose in left arm for COVID-19 immunisation at the age of 54-year-old. Lot number was ELO140. Medical history was unknown, concomitant medications were unspecified. Patient was not pregnant at the time of vaccination. On 22Dec2020 at 04:30 PM, the patient experienced difficulty in breathing, and she was hospitalized for one day. The patient was treated with EPI for the event. The patient was recovering from the event.; Sender's Comments: Based on the compatible temporal association, the Company considers the event difficulty in breathing is possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	918774-1	abdominal pain; nausea; high blood pressure; This is a spontaneous report from a contactable consumer. A 93-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0140), via an unspecified route of administration on 22Dec2020 at a single dose for COVID-19 immunization. Medical history included diabetic and irritable bowel. The patient's concomitant medications were not reported. The patient received the COVID vaccine and had abdominal pain, nausea and high blood pressure within 12 to 18 hours of vaccine received. The events lead to nursing home to emergency room and admitted to hospital. The patient was hospitalized due to events since 23Dec2020. Outcome of the events was recovering.
COVID19 VACCINE (COVID19)	Emergency Room *	918781-1	intermittent tingling in her right arm; lymph node swelling on the ride side of her neck; right sided Bell's Palsy to her face; This is a spontaneous report from a contactable physician. A 44-year-old female patient received single dose of BNT162B2 (Solution for injection, lot number: EJ1685, Expiry Date: Mar2021), via an unspecified route of administration on 18Dec2020 for immunization. The vaccine was given roughly around 4:30PM at the left arm. Vaccination Facility Type: Hospital. Vaccine was not administered at military facility. Medical history included underlying condition of Lymphoma. It was treated in 2017 and she has been off all medications since 2018. Patient had no relevant family medical history. There were no concomitant medications. The patient had no medications in over 2 years. The patient had no prior vaccinations (within 4 weeks). The patient had right sided Bell's Palsy on an unspecified date in Dec2020 (Either Sunday or Monday, so either the 20th or 21st) wherein she got pain in the right ear. She thought she had an ear infection. She treated herself with antibiotics. 7 days later, she noticed weakness. On day 8, which would have been 26Dec2020, she had complete paralysis. It was ongoing. It was stable, but hard to tell. Patient went to the ER on 26Dec2020 for facial droop. She went to Physician office at Urgent Care on 25Dec2020 thinking it was an ear infection. On 23Dec2020 she had lymph node swelling on right side of neck. that was probably after the ear and she didn't worry about it. She thought maybe it was an infection. It started between onset of ear pain and Bell's Palsy. On 26Dec2020, she had intermittent tingling in right arm. She noticed it on the same day as facial paralysis. She doesn't notice any weakness in the arm. Patient had recent blood work (results and date not reported). The patient considered the events as serious: medically significant. The outcome of lymph node swelling on the ride side of her neck was recovering (was also reported to be ongoing at the time of reporting), while the other events was not recovered. The physician considered the events related to the Pfizer product.; Sender's Comments: Based on the temporal relationship, the association between the events facial paralysis, tingling in right arm, and lymph node swelling on right side of her neck with BNT162b2 can not be fully excluded based on the limited information. The medical history of lymphoma might have been contributory to the lymph node swelling as well. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918786-1	tightness in throat and lump in throat/had a tightness and lump in her throat; tightness in throat and lump in throat/had a tightness and lump in her throat; allergic reaction like rash, tightness in throat, and lump in throat; allergic reaction like rash/red rash on her chest and rash was on her arms too; cheeks were flushed; This is a spontaneous report from a contactable nurse (patient). This nurse reported similar events for 3 patients. This is the first of 3 reports. A 23-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK9231, intramuscular in the right deltoid, first dose on 27Dec2020 14:15 at a single dose for covid-19 prevention. Medical history included ongoing asthma and reactive airway which she was diagnosed when she was like 5 years old (2002). Concomitant medication included albuterol [salbutamol] for asthma which started when she was 8 years old or so. The patient wanted to know if she can receive the second dose of covid vaccine after experiencing symptoms of allergic reaction like rash, tightness in throat, and lump in throat. She wanted to know the ingredients and specific proteins in the covid vaccine. The patient received the COVID Vaccine and she developed a reaction. On 27Dec2020, she had a red rash on her chest, and her cheeks were flushed, and the rash was on her arms too, and she had a tightness and lump in her throat, it was not painful to swallow but she could feel the pressure with swallowing. She stated that she did not experience shortness of breath, but regardless, she was seen in the ER and she was given IV SOLUMEDROL, and BENADRYL, and she was watched for 5 or 6 hours and then she was sent home with an Epi Pen, around the clock Benadryl, and prednisone. She asked the ER doctors if they thought it was okay for her to receive the second dose of the product, and they told her to contact employee health for that question. She mentioned that she contacted that employee health and was told to contact her primary care provide which she did. Her primary care doctor instructed the caller to call Pfizer and gather some more information regarding ingredients, as the she may have had the reaction to a particular protein filler. She was also wondering if this is a known reaction to the product. She received the vaccine on 27Dec2020 at 2:15 PM. She reported that the red rash on her chest and arms, and her cheeks being flushed, resolved yesterday after receiving IV BENADRYL. Had a tightness and lump in her throat which was still ongoing, and it was kind of off and on and when the she takes Benadryl it goes away. She reported that this one is medically significant because even though she did not have shortness of breath, it could have affected her airway. She confirmed that she received no other vaccines on the same day as the COVID vaccine. The outcome of the events 'had a tightness and lump in her throat', allergic reaction was not recovered (a s reported); while recovered on 27Dec2020 for allergic reaction like rash/red rash on her chest and rash was on her arms too and cheeks were flushed.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events throat tightness, sensation of foreign body, allergy to vaccine, rash erythematous and flushing cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate..Linked Report(s) : US-PFIZER INC-2020517134 different patient, same drug and same event;US-PFIZER INC-2020517133 different patient, same drug and same event.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	918788-1	High blood pressure 187/95; Heart rate at one time 210 bpm; chest pain; Shortness of breath; This is a spontaneous report from a contactable pharmacist (patient) reported for herself that a 45-years-old female patient received first dose of BNT162B2 (lot number: EH9899), via intramuscular in left arm on 22Dec2020 07:00 AM at single dose for COVID-19 immunization. The patient was not pregnant. No known allergies. No allergies to medications, food, or other products. No other vaccine was received within 4 weeks prior to the COVID vaccine. No other medications were received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior vaccination and patient was not tested for COVID-19 since the vaccination. There were no medical history or concomitant medications. The patient experienced high blood pressure 187/95, heart rate at one time 210 bpm, shortness of breath and chest pain on 23Dec2020 10:00 AM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency room/department or urgent care. Treatment was received for heart rate at one time 210 bpm which included lab works and medication given propranolol to decrease heart rate. The outcome of the event was recovering.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events hypertension, heart rate increased, chest pain and dyspnoea cannot be excluded. The information available in this report is limited and this case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918789-1	She had an immediate reaction of accelerated heart rate and elevated blood pressure; She has very slightly elevated heart enzymes.; She had an immediate reaction of accelerated heart rate and elevated blood pressure; She's very anxious and very anxious tonight being alone at the hospital.; This is a spontaneous report from a contactable consumer (patient's father). A 30-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient had an immediate reaction of accelerated heart rate and elevated blood pressure. She was monitored for an hour and it subsided. On unspecified date in Dec2020 at 1:00am in the morning she had racing heart rate and went to ER. She was still in hospital. Things were not entirely stabilized. She had very slightly elevated heart enzymes in Dec2020 with outcome of unknown. They keep her overnight for an echocardiogram in morning. The patient was very anxious being alone at the hospital. Caller questioned if this has been reported with the vaccine. Lot/Batch and Expiry date has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	918791-1	30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; 30 minutes after receiving vaccine, patient reported heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness; This is a spontaneous report from a contactable pharmacist. A 58-year-old non-pregnant female patient received first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number= EH9899), intramuscular on 19Dec2020 07:00 at SINGLE DOSE at Left arm for covid-19 immunization. Medical history included breast cancer female and allergies to shell fish and Latex. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. 30 minutes after receiving vaccine on 19Dec2020 07:30 am, patient reported 'heart racing, dizziness, flushing, burning pain in her chest, dizziness. tachycardia, nausea and throat tightness. Patient was taken to the ED where she received IV Benadryl and was observed for 4 hours. Patient was discharged home and symptoms subsided. The events resulted in emergency room/department or urgent care. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. Outcome of the events was recovered in Dec2020.; Sender's Comments: There is a plausible temporal relationship between immunization and onset of allergic reaction in a subject with a positive medical history for allergy to food (shellfish); causality cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918797-1	Heart rate high; Blood pressure high; bruise at the site of the vaccination; This is a spontaneous report from a contactable other health professional reporting for herself. A female patient of an unspecified age received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BioNTech), via an unspecified route of administration, on 22Dec2020, at single dose, for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. On 22Dec2020, 1-1.5 hours after vaccination, the patient experienced heart rate high with outcome of unknown , blood pressure high with outcome of unknown and bruise at the site of the vaccination with outcome of unknown. The patient underwent lab tests and procedures which included: blood pressure, high (22Dec2020); heart rate, high (22Dec2020). She returned to the emergency room (ER) of the hospital where she received the vaccine due to all the events. Therapeutic measures were taken as a result of heart rate high and blood pressure high and included treatment with a beta blocker. The patient was also prescribed with a blood pressure medicine from the ER physician. The events heart rate high and blood pressure high were considered medically significant. The information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible temporal association, the Company considers the events heart rate high and blood pressure high are possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	918839-1	Gallbladder removed, septic, 11mm axillary lymph node.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	919129-1	After the 15 min monitoring, I went back to work 15 min later. the left side of my face started tingling which went to a numbing feeling down the left side of my body affecting my neck, shoulder, arm, elbow and up the upper left torso. My face and neck was numb for about 48 hrs and the rest came back to sensation within 24 hrs. D/T the numbness I was admitted into the hospital for a 24hr observation.
COVID19 VACCINE (COVID19)	Emergency Room *	919154-1	Patients adverse reactions started day of vaccination with right arm pain up to right ear as well as complete tongue numbness. On 1-1-21 patient had increased Bell's Palsy symptoms including; inability to raise left eyebrow, inability to close left eye in its entirety, teeth being numb on left side, and numbness and tingling in left foot and left hand (from palm to fingers). ER physician prescribed on 1-1 Prednisone, Keflex and Valtrex. Patient went to ER again on 1-2-21 with lower extremity numbness on left side that is moving proximally toward her hip. Patient went home on 1-3-21 with an RX for Prednisone as well as Valtrex. Symptoms have improved but have not fully resolved at this time.
COVID19 VACCINE (COVID19)	Emergency Room *	919320-1	Right arm swelling very bad right after shot, next day woke up to get ready to work I started to get light headed, dizzy, sweating, felt like I was going to pass out. My husband then called 911. They took me to Hospital ,I stayed there for a couple hours then released. They told me to stay home and the next day I felt fine. I did a televisit with my Nephrologist (Kidney doctor) the following week.
COVID19 VACCINE (COVID19)	Emergency Room *	919436-1	Bell's palsy, right side of face is numb, with difficulty closing eyes, smiling, raising eyebrows, eating, drinking, swallowing.
COVID19 VACCINE (COVID19)	Emergency Room *	919444-1	12/21 had covid vaccine (dose 1). On evening of 12/29 had sudden onset of mild neck pain and significant weakness and numbness of left arm, weak hand grip, clumsiness in hand . Did not improve after trying to shake arm/move around , and took prednisone 40mg oral. Went to ER and had CT Cspine which did not show evidence of cervical pathology. Continued with corticosteroids, sought consultation with PMR and neurology specialists, and steroid dose increased to 60mg/day. Some improvement in strength , but still have diminished sensation and strength in left hand/arm. Unable to perform full job tasks as I am left hand dominant. Likely brachial neuritis / parsonage turner syndrome per both specialists seen. Continuing with corticosteroids at this time, pending bloodwork and OT evaluation
COVID19 VACCINE (COVID19)	Emergency Room *	919559-1	Pt experienced nausea, shortness of breath, chest tightness and anxiety and then lost consciousness. Vitals were obtained several times during the medical intervention. Respirations were within normal limits throughout, BP was 135/89 initially, then rose to 210/110, then declined to 180s/? prior to EMS assuming care. Heart rate was 47 initially, then rose to normal limits. Treated with epinephrine, Benadryl and ammonia smelling salts and transported by ambulance to hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	919584-1	Lightheadedness, throat tightness. Increasing chest tightness. History of atrial fibrillation and bilateral breast implants. Received two doses of epinephrine and one dose of diphenhydramine.
COVID19 VACCINE (COVID19)	Emergency Room *	919604-1	Presented to the ED after developing chest tightness, cough, lightheadedness, and throat closing sensation. She received the Moderna COVID-19 vaccine on the morning of presentation. Within 15 minutes of receiving the vaccine she developed pain and numbness, starting at the injection site traveling down the ulnar aspect of her arm, and nausea. Over the next several hours she continued to develop worsening nausea, chest tightness, cough, lightheadedness, and the sensation that her throat closing. She took PO Benadryl 25mg; however, her symptoms were not alleviated. She was subsequently evaluated in the ED. Received PO Benadryl 25mg, IV Benadryl 25mg, Epinephrine 0.3mg x 2, IV Famotidine 20mg, IV Solumedrol 125mg & 60mg, DuoNeb x 3, Racepinephrine x 1.
COVID19 VACCINE (COVID19)	Emergency Room *	919624-1	Around 10 or 11 pm, arm pain, chills, fatigue, headache, nausea, swollen lymph nodes, lightheadedness, fainted in tub. Next day, fatigue all day, couldn't talk, or eat. Went back to bed again. The following day hot flashes, weakness. went to ER. Felt like blood pressure was dropping, tingling in legs, difficulty lifting her head.
COVID19 VACCINE (COVID19)	Emergency Room *	919633-1	Presented to the ED with cc of left sided facial and LUE numbness and weakness x 1 days. Patient received her COVID-19 vaccination on 12/30/2020 around 1PM. Immediately after the injection in her left shoulder, she began to feel warmth and numbness in her left shoulder, arm, neck, face, and chest. She reports later experiencing nausea, palpitations, and left arm weakness. Her symptoms persisted, and her family noted a left sided facial droop which prompted her ED visit. In the ED, patient was noted to have some left sided facial droop and left arm and leg weakness. CT head and CTA showed no acute abnormalities. Tele-neurology was consulted who recommended admission to rule out acute stroke. Ultimately, work up was negative and symptoms resolved. Symptoms appear to be related to the vaccine.
COVID19 VACCINE (COVID19)	Emergency Room *	919743-1	Cough began approx 5 min post vaccine, then pt experienced flushing of neck, chest tightness and SOB. Placed on O2 mask at 8L/min, given 1 dose of Epi and transferred to ED
COVID19 VACCINE (COVID19)	Emergency Room *	919817-1	Fever, nausea, body aches
COVID19 VACCINE (COVID19)	Emergency Room *	919818-1	Received covid vaccine 1/2 at 2pm. Around 7pm that night, left arm pain and slight itching of whole body. did not think much of it. woke up once in middle of night at 4am with racing heart but went back to sleep. Around 9 am next morning started getting chills, initially mild then severe and developed severe myalgias; could not get out of bed or lift arms or limbs. having chest tightness and shortness of breath. pressing on chest wall hurts, hard to take deep breath. Temps of 99.5 most of morning. started taking tylenol total of 1 gram. 1 hour after tylenol shaking and rigors with sweating. had temp of 101 after tylenol. HR 110 at this time (my baseline is around 60s). O2 sat remained normal. Went to ER for testing for covid in case this was covid--test negative. Felt a little better morning of 1/4--no fever. tried to work 1/2 day; called out sick. lots of brain fog, fatigue mental slowing. still having intermittent chest tightness and sob; feel like i cannot expand my lungs. deep breath makes me cough. had few small red bumps on left antecubital fossa that resolved. i'm a physician, i'm concerned this was a severe reaction and was advised to report this.
COVID19 VACCINE (COVID19)	Emergency Room *	919827-1	Began experiencing nausea and general stomach pains the morning after receiving the vaccine. After one day of pain and discomfort I woke the following morning (~44hrs after receiving the vaccine) to extreme acute abdominal pain in the lower right abdomen. Went to Urgent Care facility and was diagnosed by CT scan as having acute appendicitis. An emergency appendectomy was scheduled and performed for later that evening. I stayed at the Hospital overnight on 12/24/2020 post operatively on IV antibiotics to recover from the appendectomy. Was discharged from the hospital on 12/25/2020 and have been recovering for about 10 days now with limited activity.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	919836-1	"10 minutes after receiving vaccination, patient reported rapid heart rate, fatigue, felt weak, hot, and palpitations. Patient reported tachycardia with heart rate 160-170's. Transient numbness to hands and perioral region. Presented to ED, was monitored with resolution of symptoms. On 1/4/21 patient presented to ED with tachycardia with HR up to 160s, Episode was severe, causing lightheadedness, ""throat squeezing"", with bilat UE paresthesias. Episode lasted 20 minutes. Patient evaluated in ED and discharged with outpatient follow up with cardiology and endocrinologist."
COVID19 VACCINE (COVID19)	Emergency Room *	920018-1	hypersensitivity reaction to COVID-19 Vaccine; throat pain that progressed to a little bit of tightness; ear pain; wheals develop on her back bilaterally; This is a spontaneous report from a contactable pharmacist. A female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1685 and Expiry date: 31Mar2021, strength: 0.3ml) (NDC number: 59267-1000-2) via Intramuscular on 21Dec2020 12:21PM at 0.3ml single dose for COVID-19 immunization. The patient's medical history and concomitant drug was reported as none. The patient experienced a hypersensitivity reaction to COVID-19 Vaccine late last night on 21Dec2020. Hypersensitivity reaction: Further described as patient developed throat pain that progressed to a little bit of tightness; some ear pain; and had wheals develop on her back bilaterally. She was transported to the emergency room on 21Dec2020 where she received treatment and was under observation. The outcome of events was unknown. Since whether outcome recovered completely, recovered with lasting effects or just improved is unknown. She was not admitted to the hospital; she was sent home from the emergency room after 2.5 hours. Caller reported seriousness criteria as medically significant because event required medical intervention. Causality was very likely. Patient at time of this report is scheduled to receive the second dose of vaccine; they have not determined if she will receive the second scheduled dose or change/stop dose in response to this event. First dose; scheduled to receive a second dose; have not determined if will be continuing with it.; Sender's Comments: Based on the compatible time association, the hypersensitivity reactions are reasonably related to suspect BNT162B2 administration.
COVID19 VACCINE (COVID19)	Emergency Room *	920157-1	meningitis; headache; fever; weakness; rash; This is a spontaneous report from a contactable consumer (patient). A male patient of an unspecified age received bnt162b2 (lot/batch number and expiration date not provided), via an unspecified route of administration, on 16Dec2020, at single dose, for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient received the Pfizer-BioNTech COVID-19 Vaccine on 16Dec2020, he experienced headache, fever, weakness and rash; went to the ER and after testing blood work and suspecting of meningitis. They did a spinal tap. Test came out negative for Flu and COVID; was told the rash could be due to a drug reaction and they attributed side effects to a generic bactrim, so he stopped taking all medications. If he continues to have issues the primary concern is whether he should get the second dose of the COVID-19 vaccine or not. The outcome of the events were unknown. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	920224-1	had a positive COVID test; had a positive COVID test; O2 Saturation of 80% / Hypoxia; shortness of breath; He has a CT scan which showed extensive infiltration in the lungs; muscle pain; chills; body aches; low grade fever; cough; This is a spontaneous report from a contactable physician (pulmonary medicine). This physician reported similar events for 2 patients. This is 1st of 2 reports. A 35-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 18Dec2020 at single dose for covid-19 immunization. There were no medical history and concomitant medications. Caller stated that his close friend who was ER physician (front line worker) and within 24 hours after receiving the COVID vaccine, developed COVID or symptoms of COVID. Patient received the COVID vaccine on 18Dec2020 and the same night patient started with a low grade fever, body aches, chills, muscle pain, shortness of breath, cough, O2 saturation of 80% (hypoxia) and was in the intensive care unit now. Patient swore this was related to the vaccine. This patient tested positive for COVID. He had a CT (computerised tomogram) scan which showed extensive infiltration in the lungs in Dec2020. Patient was admitted to the hospital on 24Dec2020 and then was moved to the ICU 2 days later, on 26Dec2020. Caller thought patient had a positive COVID test at another hospital. Caller did know that tested positive at the current hospital on 26Dec2020 which was done to confirm the previous positive test. Caller thought patient had his first positive COVID test either the same day or the next day after receiving the vaccine. Event of O2 Saturation of 80% / hypoxia was reported as hospitalization from 24Dec2020 and life threatening; infiltration in the lungs and shortness of breath caused hospitalization from 24Dec2020, muscle pain, chills and positive COVID test was reported as medically significant; and other events were reported as non-serious. Outcome of O2 saturation of 80% / hypoxia and shortness of breath was not recovered, outcome of cough was recovering; and outcome of other events were unknown. Information about lot/batch number has been requested. ; Sender's Comments: Based on the information currently available, a lack of efficacy with suspected vaccine BNT162B2 in this patient cannot be completely excluded.,Linked Report(s) : US-PFIZER INC-2020519020 same reporter/drug , different patient/AE.
COVID19 VACCINE (COVID19)	Emergency Room *	920628-1	6-7 hours after the vaccine she developed arm pain, fever and chills. About an hour later she started to have abdominal pain which worsened over the course of the day to excruciating. She went to the Emergency Room where a CT scan revealed a perforation of her sigmoid colon and had a resection of the area of the colon and a diverting colostomy surgery done the evening of 1/3/2021.
COVID19 VACCINE (COVID19)	Emergency Room *	920719-1	starting to feel lethargic and weak. Had menses with increased blessed. Called physician to have blood work done to see if I was experiencing anemia. Blood work complete on 12/31/2020. On 1/3/2021, I woke up with blood blisters all over the inside of my mouth and petechia on my trunk and bilateral upper and lower extremities. I called my primary physician to report the symptoms. He suggested to go to the ER if my symptoms worsened. Later that evening I started with a nose bleed and did go to the ER. Upon arrival to the ER, my platelet count was 9. I was admitted to the hospital and diagnosed with ITP.
COVID19 VACCINE (COVID19)	Emergency Room *	920726-1	12/31/20 around 11am Numbness in right hand and right cheek, 5 minutes later, slurred speech. Episode lasted approximately 10 minutes. Treated in ER. Labs, MRI, all normal 1/3/21 Swollen lymph node to left axilla 1/4/21 Rash to injection site
COVID19 VACCINE (COVID19)	Emergency Room *	920787-1	2 minutes after vaccine was administered, noticed swelling back of tongue, progressed to posterior 2/3 of tongue, tachycardia, elevated BP. Progressive angioedema involving larynx, cough, shortness of breath. No wheezing. Physical exam did do show any obvious swelling. O2 sat decreased to 80, 1st epinephrine IM administered, 50mg benadryl IV and Famotidine administered. some improvement in symptoms. In 30mins, reoccurrence of angioedema and second epinephrine vaccine administered. Monitored for 2 hours without reoccurrence of symptoms and discharged from ER.
COVID19 VACCINE (COVID19)	Emergency Room *	920879-1	Abdominal pain that proceeded to get worse into the next day. Connected with PCP, had labs drawn and ultrasound ordered. Ended up going to ER. Determined to have Appendicitis, needed and had appendectomy on 12/29/2020.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	920965-1	"tested positive for COVID-19; headache; cough; voice being hoarse; Drug ineffective; This is a spontaneous report from a Pfizer Sponsored Program Pfizer First Connect from a Contactable nurse reporting for herself. A 58-years-old female patient received bnt162b2 (BNT162B2; Lot # EK5730) vaccine , via an unspecified route of administration on 18Dec2020 10:30 at single dose for covid-19 immunisation . Medical history included hypertension from an unknown date and blood cholesterol increased. Concomitant medication included losartan (LOSARTAN), hctz (HCTZ), ezetimibe (ZETIA), famotidine (PEPCID). The patient started having a headache and cough on 25Dec2020 and these symptoms worsened on 26Dec2020 in addition to her voice being hoarse. On 26Dec2020 she went to get tested at an urgent center and tested positive for Covid-19. The outcome of the event was not recovered.; Sender's Comments: The association between the event ""tested positive for COVID-19, headache, cough, and dysphonia"" with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	920994-1	PATIENT VACCINATED AROUND 9AM. SHE REPORTS SHE FELT WARM/FLUSHING, FAINT AND STOMACH SPASMS WITHIN ABOUT 4-5 MINS. SHE FELT BETTER AND GOT UP TO WALK ABOUT 30 MINS LATER. SYMPTOMS WORSENER AFTER WALKING ~9:45AM: FAINT AGAIN, SEVERE RETCHING, BP196/140 TO 199/164, TROUBLE SWALLOWING, SOB, WHEEZING. AT 9:58AM, EPI PEN 0.3MG ADMINISTERED AND EMS ACTIVATED. SYMPTOMS REPORTED IMPROVED FOLLOWING EPI. EMS ARRIVED 10:05AM. PATIENT REPORTED RECEIVING 2 BAGS OF PEPCID, STEROIDS, AND ZOFRAN AT HOSPITAL. WAS RELEASED BETWEEN 11:30AM-12PM ON 1/4/21, BP 140/90 AND ACUTE SYMPTOMS RESOLVED. FOLLOW UP WITH PATIENT 1/5/21: NO PRIOR HX OF HTN, BP 120/60, NO SOB/ BREATHING DIFFICULTY. C/O SEVERE HEADACHE, LOW TEMP, FATIGUE, MUSCLE ACHES, SORE THROAT.
COVID19 VACCINE (COVID19)	Emergency Room *	921037-1	nauseous; weak; no appetite; numbness on the skin of my arms and legs; I was post Ictal for 2+ hours; seizures/having 2 non epileptic seizures; dizzy and lightheaded; This is a spontaneous report from a contactable nurse (patient). A 21-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE. Batch/lot number: EK5730), intramuscularly on 28Dec2020 07:45 AM at right arm, at single dose for covid-19 immunization. Medical history was none. There were no concomitant medications. The patient was not pregnant at the time of vaccination. The patient received vaccine around 7:45 AM. Within 2 minutes she felt extremely dizzy and lightheaded on 28Dec2020. She sat down and drank some Gatorade and took deep breaths. The feelings persisted 5 minutes later. She then woke up after having 2 non epileptic seizures while still in 15m waiting period, (This included posturing and color change) a rapid response was called and she was taken to the ER. She was post Ictal for 2+ hours. Dizzy and nauseous, weak and no appetite for the rest of the day. She had no history of epilepsy. She also have numbness on the skin of my arms and legs within 24 hours of the vaccine. Onset date of all events (except dizzy and lightheaded) was reported as 28Dec2020 08:00AM. Treatment fluids, Zofran was received for all events. All event resulted in emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered with sequel.; Sender's Comments: A possible contributory effect of suspect BNT162BW on reported seizures cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	921053-1	"Patient had SVT; flushing; hives; heart rate increased to 160's (had been 180's earlier in the day); This is a spontaneous report from a contactable pharmacist. A 46-year-old female patient received the first dose of BNT162B2 (lot number: EK5730), via intramuscular, on 28Dec2020 at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered was hospital. The patient was not pregnant at the time of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, it's unknown if the patient was tested for COVID-19. No other vaccines were received within 4 weeks prior to the COVID vaccine. The patient's medical history and concomitant medications were not reported. The patient had SVT, flushing, hives 20 min after receiving vaccine on 28Dec2020. Patient was taken to ED and evaluated. SVT resolved. Patient sent home on heart monitor. Later that night while in bed, heart rate increased to 160's (had been 180's earlier in the day) and patient was admitted to hospital. Patient is a NP. Treatment received for the adverse event included cold water to face, vagal massage. The outcome of the event""Patient had SVT"" was recovered on 28Dec2020 and of other events was recovering.; Sender's Comments: A causal association between BNT162B2 and the reported events supraventricular tachycardia, flushing, hives, heart rate increased cannot be excluded based on the compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	921087-1	Pt received COVID Vaccine at 1055, 1120 pt began coughing severely and could not stop, unable to speak. 1120 25mg Benadryl liquid given, Pepcid 20 mg given PO, cough worsening. 1122 second dose of Benadryl given, called for MD. Brought pt to Private room via wheelchair. Upon arrival, audible stridor noted. Epinephrine 0.3 mg IM given at 1126. IV started, placed patient on monitor and O2 via 1L NC. MD at bedside along with RT and pharmacy. 1134 Solumedrol 125 mg IV given, 1 puff of Ventolin given. Lungs clear. 1140 Coughing stopped, pt able to speak now. Vital signs: 1130 SPO2 99% Pulse 142 1135 99% pulse 106 BP 168/102 1140 sats 100% HR 93 BP 157/105 1145 sats 100% HR 97 BP 159/93 1200 sats 99% HR 103 155/97 114
COVID19 VACCINE (COVID19)	Emergency Room *	921090-1	Pt vaccinated on 12/23. PCP notified that SOB and fatigue getting worse on 1/4. Unable to keep pre-op Dental work planned prior to mitral valve surgery on 1/14/2021. PCP referred her to our ED where she was diagnosed with COVID-19 and transferred to facility, which is where her surgery was planned.
COVID19 VACCINE (COVID19)	Emergency Room *	921091-1	Pt received vaccination and left after 15 min. observation symptom free. He drove a short distance away from the clinical site when he felt profuse sweating and had syncope (seconds) crashing into curb. He was aroused from impact and was able to stop car. He then developed profuse nausea and sudden urge to defecate. He went to restroom. Given these events he returned to the clinical site in another vehicle. Upon arrival he denied chest pain, shortness of breath or ongoing nausea or abdominal pain. He reported his AM blood sugar was 72 and does not take insulin. No history of coronary disease or syncope. EMS was activated and assumed care.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	921171-1	RECEIVED VACCINE ON 12/22; ON 12/24, STARTED FEELING WEAK AND HAVING GI ISSUES WITH DIARRHEA. ON 12/27, STARTED HAVING SHORTNESS OF BREATH AND WHEEZING MORETHAN HER NORMAL WITH HER ASTHMA ILLNESS AND CAME TO ER. WAS TESTED AND FOUND TO BE COVID POSITIVE.
COVID19 VACCINE (COVID19)	Emergency Room *	921318-1	"Severe allergic reaction; BP of 170/104; felt like his whole body was on fire; chest tightness; HR elevated at 110bpm; Severe allergic reaction with symptoms that include/ rash all over his body including his throat, chest, and inner legs.; Right side of neck was swollen and sore; Right side of neck was swollen and sore; his neck was stiff to turn; he feels ""really weak and tired""; he feels ""really weak and tired""; This is a spontaneous report from a contactable other healthcare professional. A 46-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date unknown) via an unspecified route of administration, on 29Dec2020, at a single dose, for COVID-19. The patient's medical history and concomitant medications were not reported. Patient is a 46y/o male certified nursing assistant (CNA). He received his first dose of Pfizer-Biontech Covid19 vaccine, yesterday 29Dec2020. On an unspecified date in Dec2020, patient experienced severe allergic reaction with symptoms that include: felt like his whole body was on fire, chest tightness, BP of 170/104, HR elevated at 110 bpm, rash all over his body including his throat, chest, and inner legs. Right side of neck was swollen and sore. Both sides are swollen, today, and his neck was stiff to turn, he feels ""really weak and tired"". Patient was taken by ambulance to the emergency room. Patient then asked if he should get the second dose of the vaccine. Outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of severe allergic reaction with multiple symptoms cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	921557-1	Began experiencing increased temp of 101.4 on 1/4/2021 at 0701. Temp did not resolve with the use of Tylenol. HR increased to >100 and BP was decreasing below baseline. Increased weakness also noted. Temp increased to 102.9 on 1/4/2021 at 2220. Transferred from SNF to ER for evaluation.
COVID19 VACCINE (COVID19)	Emergency Room *	921572-1	Resident had body aches, a low O2 sat and had chills starting on 12/30/20. He had stated that they had slightly improved. On 1/1/21 he sustained a fall with a diagnosis of a displaced hip fracture. On 1/2/21 during the NOC shift his O2 sat dropped again. He later went unresponsive and passed away.
COVID19 VACCINE (COVID19)	Emergency Room *	921641-1	Administered first dose of COVID19 vaccine at 1:29pm on 1/4/21. At approximately 11:00pm resident exhibited acute respiratory decompensation with very limited air entry and hypoxemia. Patient received Benadryl, steroids, epinephrine, and Duoneb without improvement. Resident was referred to the emergency room and found to be COVID positive. No fever or rash were reported.
COVID19 VACCINE (COVID19)	Emergency Room *	921796-1	Started out vague. Started with headache at the base of her head and then it felt like a web that covered her entire head. By 10:00 she did not feel good. Went to sleep instantly. Slept for about an hour. Began to have nausea. Sunday headache got worse. Started ringing , buzzing sound in her head. Took Zofran because of nausea. Sunday night chest discomfort. Monday had horrible chest pain, headache was horrible, then vomiting. went to ER, doctor felt it was a reaction to the vaccine. was give medicine for nausea and Decadron for the reaction. Gave fluids for dehydration. Got medicine for headache. Keep taking Zofran for nausea. Still has headache. Has appointment with pcp in the morning.
COVID19 VACCINE (COVID19)	Emergency Room *	921920-1	Within 10 minutes of receiving the vaccine patient began to look sleepy and started to gasp for breath. She called for help and slouched over in a chair and was moved to lay on the floor. Her feet were elevated and 911 was called. Epinephrine was given, patient responded by being able to gasp for breath and her face returned to a more natural state. Within 5 min she began to struggle to breath and epi was given again. Some improvement did occur. EMS arrived and she was taken to the hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	921950-1	Bell?s palsy
COVID19 VACCINE (COVID19)	Emergency Room *	921989-1	Anaphylactic reaction (swelling and redness of face and torso, shortness of breath, constriction of airway and dizziness)
COVID19 VACCINE (COVID19)	Emergency Room *	922015-1	Pt describes falling with onset of weakness below the hip level about 6 inches above the patella with missing clonus reflex. The pt cannot squat down with associated observable loss of strength, pt is not able to stand up. The pt has fallen 7 times since symptom onset around lunchtime between 1200 and 1300. Pt denies LOC.
COVID19 VACCINE (COVID19)	Emergency Room *	922118-1	After three days, couldn't sleep the whole night. The next day, went to work, came home felt jittery. Close to midnight bp 200/90. Took Clonidine 0.1 and went to ER, bp 180/90. waited for almost two hours bp came down to 141/80. Today, bp is back to normal. Took sleeping medication Zzzquil to go to sleep.
COVID19 VACCINE (COVID19)	Emergency Room *	922206-1	Arm weakness increased each day by post vaccine day 4 arm weak and unable to raise arm, conduct ADLs, painful interrupting sleep. Unable to initiate movement in arm. Use other arm to help move arm. Went to ED on post vaccine day 4. Wbc 12. Crp 4. CT no abscess. Mri on 1/4 shows bursitis. DX SIRVA. Bursa aspirated. Pending cultures. PO MEDROL DOSEPAK.
COVID19 VACCINE (COVID19)	Emergency Room *	922218-1	3 Days after the covid vaccine. I Started to have these symptoms around 1am: fever, chills, body aches, cold sweats. I took ibuprofen fell asleep. Around 330am. Woke up with dizziness, headache, chills. Took tylenol. Fell asleep body was extremely cold esp hands and feet. Woke up around 7am. Still had severe body aches and was extremely dizzy, headache worsening. Took ibuprofen. Woke up around noon. Extremely dizzy with chills and body aches headache still severe. Took tylenol. I was not getting better. went to hospital . It was found I had extremely high wbc and had extremely low blood pressure. Diagnosed as septic shock.
COVID19 VACCINE (COVID19)	Emergency Room *	922289-1	I suffered a miscarriage on 12/31/2020. I was at 5 weeks gestation. This was my first pregnancy. I had uterine bleeding and abdominal cramps on 12/31/2020 and underwent evaluation by my Obstetrician and was diagnosed with a miscarriage after ultrasound.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	922299-1	I was instructed to stay for 30min as i have been anaphylatic to cipro in past. at 30min was told i could leave. while driving home on rt 91 my cheekbones became numb. then slowly a few min later my cheeks became numb. a few min later my lips became numb. as i was driving off exit to rt 5 in longmeadow i developed a lump in my throat. i turned around at top of exit and went back to highway to go to ER. this was approx 1645-1650. i went to ER arrived approx 1655. i was shaking. my bp and pulse were elevated. no tingling or swelling in my face. nurse checked my pupils and my smile and were wnl. no history of bells palsy. i received iv fluids, solucortef 125mg ivp, pepcid 20mg ivp, and benedryl 25mg ivp approx 1840pm. approx 45 min after solucortef numbness better but not gone. it started to come back a little more before discharge, which i let md know. she discharged me with scripts for epi-pen, prednisone, and OTC pepcid and benedryl. follow up with my pcp's office in am 12/24 at 10am with his NP. total time with facial numbness/lip numbness 29 hours.
COVID19 VACCINE (COVID19)	Emergency Room *	922673-1	I woke up with tingling in my right hand and arm, my right side, and down my right leg. I went to the ER at Hospital, and was confirmed to have had a stroke in my left thalamus.
COVID19 VACCINE (COVID19)	Emergency Room *	922990-1	The patient received the vaccine indicated above. Immediately following vaccination the patient states that they began feeling lightheaded and dizzy.
COVID19 VACCINE (COVID19)	Emergency Room *	923000-1	Severe right lower quadrant pain, anorexia over 12 hours. Went to the emergency department. Lab results showed elevated WBC and CT scan showed acute appendicitis. Admitted for urgent surgery: laparoscopic appendectomy. Was hospitalized from 12/26/20-12/28/20.
COVID19 VACCINE (COVID19)	Emergency Room *	923015-1	Rapid heart rate, shakiness, headache, rash, scratchy throat, raspy voice, dizziness, extreme weakness
COVID19 VACCINE (COVID19)	Emergency Room *	923329-1	palpitations; Shortness of breath; Heart rate was 160s; This is a spontaneous report from a contactable Physician. This 29-Year-old female physician reported that she received 1st dose of BNT162B2 on 30Dec2020 08:30 AM at right arm for COVID-19 immunisation. Medical history included allergies: Citrus and cinnamon-perioral contact dermatitis. Concomitant therapy included birth control- Mylan. The patient reported within 5 mins of vaccine administration, she experienced palpitations and shortness of breath. Heart rate was 160s on 30Dec2020. No rash or fever. Event onset time was reported as 30Dec2020 8:30. She needed to be taken to the emergency room. Treatment was received as Steroids epinephrine Benadryl. The outcome of the event was recovering. The events were reported as non-serious. Lot/Batch and Expiration date has been requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	923346-1	dizzy; fever; elevated blood pressure; flushed feeling day of vaccine. The next day she continued to feel flushed; This is a spontaneous report from a contactable pharmacist. This pharmacist reported for a 60-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via intramuscular route on 29Dec2020 15:00 at single dose for COVID-19 immunization. Medical history included COVID-19, hypertension and depression. Concomitant medications included vitamins received within 2 weeks of vaccination. The patient previously took duloxetine and experienced allergies. Facility that the most recent COVID-19 vaccine was administered in Workplace clinic. Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient hasn't been tested for COVID-19. On 29Dec2020, the patient was dizzy, had fever, elevated blood pressure, and flushed feeling day of vaccine. The next day she continued to feel flushed that moved through her face and down her neck. It felt like she was on fire. The adverse events resulted in the following: Emergency room/department or urgent care. Outcome of the event feel flushed was recovered on 30Dec2020, outcome of other events was recovered in Dec2020. Treatment received for the adverse events included IV fluids, prednisone, diphenhydramine hydrochloride (BENADRYL). Events were reported as non-serious. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the events dizzy, fever, elevated blood pressure and flushed feeling cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	923354-1	acute pericarditis; This is a spontaneous report from a contactable physician. A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot/batch number not reported), via an unspecified route of administration on 23Dec2020 at a single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown if other vaccines were given in four weeks and unknown if patient had Covid prior vaccination. The patient experienced acute pericarditis on 24Dec2020. Clinical course as follows: Doctor colleagues at the institution admitted (at Emergency room/department or urgent care) and treated a patient with acute pericarditis who received his first dose of Pfizer SARS-CoV-2 EUA vaccine on 23Dec2020. The physician (reporter) considered the event as non-serious. The outcome of the event was recovering. Information about batch/lot number has been requested.; Sender's Comments: The causal relationship between BNT162B2 and the event acute pericarditis cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	923406-1	anaphylaxis; throat swelling; This is a spontaneous report from a contactable physician. A 50-year-old female patient (non-pregnant) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 29Dec2020 at single dose for COVID-19 immunization. Medical history included hypertension, lipids (as reported) and asthma. The patient was known allergies: codeine, iodine, shellfish, latex, and cefatrizine propyleneglycolate (CEFTIN). Prior to vaccination, the patient was diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The most recent COVID-19 vaccine was administered in hospital. The patient experienced anaphylaxis and throat swelling on 22Dec2020 with outcome of recovered in Dec2020. The events were reported as non-serious. The events resulted in Emergency room/department or urgent care. Treatment of epinephrine, steroids, antihistamines, observation was received for the events. Information on lot/batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis and throat swelling cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The underlying predisposing condition of allergies to multiple materials may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	923422-1	Having trouble clearing my throat, felt like it was closing up; Having trouble clearing my throat, felt like it was closing up; Uncontrollable rigors; High heart rate; Numb lips and hands; Nausea; Shortness of breath, difficulty catching my breath; This is a spontaneous report from a contactable healthcare professional (reporting for herself). A 38-year-old female received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number EJ1685, expiry date 30Dec2020) intramuscular (Arm Left), on 30Dec2020 09:15, single dose, for COVID-19 immunization. Relevant medical history included bariatric surgery, had anterior vaginal repair and bladder sling, had gall bladder removed, and had tonsils removed. It was reported that the patient cannot take NSAIDS, patient was not allergic to them. No allergies to food or other products. Concomitant medications included rizatriptan and paracetamol (TYLENOL). On 30Dec2020, within about 10 minutes of the injection of the vaccine, the patient had trouble clearing her throat, felt like it was closing up, had uncontrollable rigors, high heart rate, numb lips and hands, and nausea. The patient was discharged from the ED, went home and took a nap. Later that evening, the patient began to have a rapid heart rate again, began to had shortness of breath, difficulty catching her breath, and was admitted to the ED again and given more IV medications. Therapeutic measures given in response to the event included administration of IV medications, epinephrine injection and breathing treatment. Prior to the COVID vaccine, the patient did not receive any other vaccines within 4 weeks, was not tested or diagnosed with COVID-19. Facility where the most recent COVID-19 vaccine was administered was in the workplace clinic. Outcome of the events was recovering at the time of the report.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events oropharyngeal discomfort, throat tightness, chills, heart rate increased, hypoaesthesia oral, hypoaesthesia, nausea and dyspnoea cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	923510-1	PATIENT SPOUSE REPORTS THAT PATIENT RECEIVED VACCINE ON 1/4/2021 AND ON 1/5/2021 PATIENT'S ARM BEGAN TO TURN RED AND SWELL AT THE INJECTION SITE. THE SWELLING AND REDNESS BEGAN TO GO DOWN HIS ARM AND HE BROKE OUT INTO A RASH. PATIENT THEN BECAME SHORT OF BREATH. EMS WAS CALLED AND PATIENT WAS TRANSPORTED TO HOSPITAL, WHERE HE WAS TREATED FOR ANAPHYLACTIC SHOCK TO THE COVID MODERNA VACCINE.
COVID19 VACCINE (COVID19)	Emergency Room *	923540-1	Anaphylaxis Narrative: 12/22 received COVID-19 vaccine at 1209 and developed SOB at 12:15. Took her own albuterol inhaler without relief. Transported to ED. PE: red hands with swelling, throat and lip swelling with difficulty swallowing. Later developed headache and dizziness then tachypnea and stridor. Meds given - See section 5 PLUS epinephrine IM and infusion @ 0.05 mcg/kg/min, Alb and ipratropium negs, racemic epi nebs. Admitted to the hospital on 12/22 and still hospitalized at the time of this report on 12/23. She remains on an epinephrine drip and was given methylprednisolone 125 mg IV x 2. No previous history of anaphylaxis. History of Reye's syndrome as a child when given aspirin.
COVID19 VACCINE (COVID19)	Emergency Room *	923554-1	Agitation, Sedation, Anaphylaxis, Rash & HYPOtension
COVID19 VACCINE (COVID19)	Emergency Room *	923572-1	anaphylaxis; ALOC/decreased level of consciousness; This is a spontaneous report from a contactable Pharmacist (patient). a 40-year-old female patient (no pregnant) received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EL0140) via intramuscular at Left arm on 23Dec2020 at single dose for COVID-19 immunization. The patient's medical history included known allergies to egg, seafood, azithromycin, orange and seasonal allergies. The concomitant was reported as cetirizine hydrochloride (ALLERTEC) and PRN 1371. The patient with no known past medical history brought in by CODE Team to RUH ED with concern for ALOC after getting the COVID vaccination 30-40 minutes PTA. Patient was a nurse and experienced decreased level of consciousness following her COVID vaccination. Patient reports h/o anaphylaxis. She was given epinephrine PTA. Denies SOB, oral swelling, CP. Blood glucose (BGL) within normal limits. Patient denies any other complaints or symptoms at this time. Adverse event start date: 23Dec2020. Treatment was unknown for decreased level of consciousness. The outcome of the events was recovered in Dec2020.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis /decreased level of consciousness cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The underlying predisposing condition of allergies to multiple materials may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	923766-1	Went to the ER on the 31st, my face swelled and chest was covered in hives. Lips swelled. I would get nauseated and I felt like there was acid in my stomach. I also had a headache. I have been taking Zyrtec, Benadryl as needed.
COVID19 VACCINE (COVID19)	Emergency Room *	923822-1	The day after the vaccine I had fatigue and body aches. Then on 12-23 fevers of 101.4, chills, body aches, diarrhea, vomiting, productive cough, and profuse sweating. Jan 1st I was in the shower and was dizzy with a headache. Loss of consciousness almost happened and that is when i got out of the shower and laid down. Went to the ED and was diagnosed with bilateral pneumonia
COVID19 VACCINE (COVID19)	Emergency Room *	923892-1	I did let the nurse know right after I got the vaccine It did feel like a huge water balloon was sitting on my arm and very heavy at the site. I went to the waiting area and the last 5 minutes and I started feeling weird, kind of getting dizzy and my heart started racing really fast. Am I can tell I was getting really hot and my face was flushed and my heart was racing and my hands started shaking, trembling almost like I couldn't control it. I've never experienced something like this. The part that really scared me was my heart racing like it was going to come out of my chest. They called a code, put me in a wheel chair and took me to the ER (where I work). They took my blood pressure which was really high, they did EKG, blood work and urine test. They kept me there for about five hours, while watching me. And the last weird thing that happened at one point I felt like liquid was running thru my body and my feet were really cold for several hours, It felt like someone was pouring liquid over me. I kept asking the nurse if this is normal and no one knew what to tell me. After everything started slowing back down and it had been a couple hours and the next day i felt like I had a slight head ache and felt out of it, kind of like I had a hangover and of course my arm was really sore. The Doctor in the ER did advise me not to get the second dose as it will be worse than the first one.
COVID19 VACCINE (COVID19)	Emergency Room *	924029-1	after 20-30 minutes my throat started to get tight, I could not swallow properly, I felt dizzy & my heart was beating fast.
COVID19 VACCINE (COVID19)	Emergency Room *	924050-1	anaphylaxis, dyspnea
COVID19 VACCINE (COVID19)	Emergency Room *	924188-1	Migraines, right side of face swollen, nausea, tingling
COVID19 VACCINE (COVID19)	Emergency Room *	924201-1	Patient tolerated the vaccine well with no apparent side effects. Ten days later awoke 12:30 AM with severe chest and upper back pain, presented to Med Center where he was found to have an Acute Coronary Syndrome. Transferred to Medical Center where he underwent successful PCI with two drug eluting stents for a 99% mid-LAD stenosis
COVID19 VACCINE (COVID19)	Emergency Room *	924464-1	coughing up blood, significant hemoptysis -- > cardiac arrest. started day after vaccine but likely related to ongoing progression of lung cancer
COVID19 VACCINE (COVID19)	Emergency Room *	924524-1	PATIENT REPORTING ITCHING AT 30 MINUTES POST INJECTION. AT 1.5 HOURS POST INJECTION PATIENT REPORTED ITCHY THROAT AND NUMBESS OF LEFT SIDE OF FACE. AT THAT TIME ADVISED TO GO TO EMERGENCY ROOM. NEXT DAY WHEN I FOLLOWED UP WITH PATIENT, SHE REPORTED HER AIRWAY STARTED TO CLOSE AND SHE RECEIVED EPINEPHRINE, AFTER 5 HOURS HER STARTED TO CLOSE AGAIN AND RECEIVED ANOTHER DOSE OF EPINEPHERINE, WAS RELEASED FROM HOSPITAL ROUGHLY 15-16 HOURS AFTER GOING TO ER.
COVID19 VACCINE (COVID19)	Emergency Room *	924658-1	Severe Hypotension, Redness, Warmth and sensitivity all over skin surfaces, lack of responsiveness, low oxygen saturation.
COVID19 VACCINE (COVID19)	Emergency Room *	924722-1	Severe shortness of breath, administered inhaler, hydralazine with no improvement. Dr. notified. Sent to ER
COVID19 VACCINE (COVID19)	Emergency Room *	924835-1	103.5 Fever that wouldn't come down with Tylenol, chills, sharp headache, tachycardia, site pain, dizziness, body aches, nausea All symptoms started 11 hours after first dose of vaccine (3AM), went to hospital 15 hours after symptoms started and was treated for 9 hours until all symptoms abruptly stopped
COVID19 VACCINE (COVID19)	Emergency Room *	924885-1	2days after my 1st Covid vaccine I broke out into a rash with hives requiring me to go to the ER; 2days after my 1st Covid vaccine I broke out into a rash with hives requiring me to go to the ER; This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: EH9899, expiry date was not provided) solution for injection, via an unspecified route of administration on left arm on 17Dec2020 08:00 at a single dose for Covid-19 immunization. Medical history included eczema, chronic kidney disease, thyroid disease. Patient had known allergies. The patient was not pregnant. Concomitant medications included apixaban (ELIQUIS), allopurinol (ALLOPURINOL), levothyroxine (LEVOTHYROXINE), iron (IRON), magnesium (MAGNESIUM). The patient reported that 2 days after her 1st Covid vaccine, she broke out into a rash with hives requiring her to go to the ER on 19Dec2020 12:00. She also visited a physician. She was treated with steroids, Atarax, and Epi shot. The events were reported as non-serious. Outcome of the events was not recovered. No follow-up activities are needed. No further information is expected.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of urticaria and rash due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	924894-1	allergic reaction; This is a spontaneous report from a contactable other healthcare professional reported for herself. A 45-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK 5730, expiry date unknown) via unspecified route of administration at left arm on 30Dec2020 08:30 at single dose for Covid-19 immunization in a hospital facility. The patient was not diagnosed with Covid-19 prior vaccination. Medical history was none. Concomitant medications was not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 30Dec2020 at 08:45, the patient experienced allergic reaction which resulted to patient visiting doctor or other healthcare professional office/clinic and emergency room/department or urgent care visit. The patient received treatment of epinephrine, decadron and Benadryl due to the event. The patient was not Covid tested post vaccination. The outcome of the event allergic reaction was recovering at this time of the report. The reporter considered the event non-serious; did not result in death, was not life threatening, did not cause/prolong hospitalization, was not disabling/incapacitating, and no congenital anomaly/birth defect.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Allergic reaction cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925154-1	Deceased
COVID19 VACCINE (COVID19)	Emergency Room *	925254-1	I woke the next morning with flu like symptoms my arm was hurting, I was feelin tired and really couldn't get out of bed. As the day progressed I got chills, started running a fever, It went up to 104 and my heart rate went up and down from 120-165 so I went to the ER. They gave me fluids and ran a whole bunch of test, tested me for Covid and Sepsis and everything came back normal and negative for Covid. They monitored my heart rate and once it started getting back to normal, they ended up letting me go home, I was there from 8pm to about 3am. After that I felt tired and felt like when I had Covid back in November. I started feeling better about Sunday, still a little tired but felt more back to normal. My heart rate is still getting back to normal so my Dr is following me on that.
COVID19 VACCINE (COVID19)	Emergency Room *	925632-1	"worry; frustration; regrets/wishing she would have never taken it; phlegm; can't talk; taking her voice, she felt like she was losing her voice; scary/"scaring" her; coughing/cough; difficult for her to catch her breath/lost her breath, couldn't catch her breath/couldn't breath; allergic reaction to the vaccine; This is a spontaneous report from a contactable consumer (patient). A 61-year-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL1284, expiry date 30Apr2021) intramuscular on 29Dec2020 09:16 at 0.3 mL, single for Covid-19 immunization in a hospital. Medical history included diabetic, allergy reactions, blood pressure (abnormal), cholesterol (abnormal); all ongoing, and reaction to dust. Concomitant medications included ongoing amlodipine;hydrochlorothiazide;valsartan for blood pressure, ongoing potassium for unspecified indication, BP pills (unspecified) and has cholesterol medications. The patient informed that yesterday (29Dec2020), she got the COVID vaccine shot at work, received it at 9:16 am and was monitored for 30 minutes post administration. The patient went to work and was holding the babies. The patient worked in transport in the NICU at a hospital. Few hours after the injection, while working in the NICU, she experienced coughing to the point where it was difficult for her to catch her breath. The patient started coughing so bad, she had no control. She mentioned trying to drink water and continued coughing more. The patient lost her breath, couldn't catch her breath, she had to call for the charge nurse (manager), as she couldn't breath and they took her to the ER and consulted at the ER of her facility. The patient informed that she kept coughing and couldn't catch her breath. They made her drink water. The patient has allergies, so she always has an epi pen with her. The patient felt like she had an allergic reaction to the vaccine. The doctor there explained that her symptoms were not related the Covid-19 vaccine she received earlier. The patient specified that the last time she had a similar reaction was at work and was due to dust. The patient explained that she was perfectly fine before receiving the vaccine, laughing, and so what can her symptoms be related to, if it was not the vaccine. The patient was coughing all night, can't get rid of the cough. She has called her doctor. The nurse said just to watch herself for now. The patient informed that she was supposed to go back to work tomorrow and she was afraid to go around the babies. The patient informed that today (30Dec2020), she gargled apple cider vinegar and salt water, and phlegm came out. The patient continued saying that she has still been coughing, can't talk and that it was scary. The patient informed that she was taking her voice, she felt like she was losing her voice. It was ""scaring"" her. She was unsure if it was the Pfizer vaccine. The patient attempted to reach her HCP and that she cannot be seeing at her clinic due to her cough. The patient mentioned that she won't have access to a respiratory clinic until Tuesday. The patient expressed her concerned about returning to work with babies and asked if she should return to work tomorrow. The patient pursued verbalizing her worry and frustration. The patient asked if she can decide not to get the second dose. The patient voiced her regrets on receiving the first dose of the COVID-19 vaccine. She stated wishing she would have never taken it and that all who have an EpiPen should not receive it. The outcome of the event cough was not recovered, Dyspnoea, Allergy to vaccine, Productive cough, Speech disorder, Aphonia, Nervousness, Anxiety, Frustration tolerance, Depressed mood was unknown."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	925635-1	throat swelling; Initially had headache; dizziness; irritability; Throat tingling; difficulty swallowing; This is a spontaneous report from a contactable other healthcare professional (HCP) (patient). A 49-year-old female patient received a single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot#: EJ1685) as the first dose via an unspecified route of administration in the left arm on 29Dec2020 06:00 for COVID-19 immunization. Medical history included fibromyalgia, asthma, prediabetes, and carpal tunnel syndrome. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. There were not any other medications the patient received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination. The patient had no previous allergies to vaccines. The patient allergies to medications which included: doxycycline, medroxyprogesterone acetate (DEPO-PROVERA), metoclopramide (REGLAN), gluten. The patient initially had headache, dizziness and irritability, throat tingling, throat swelling, and difficulty swallowing started around 12 hours after injection, event onset date reported as 29Dec2020 18:00. The events resulted in emergency room/ department or urgent care. The events were reported as non-serious by HCP. Treatment received for the events included diphenhydramine and hydroxyzine embonate (HYDROXYZINE PAMOATE). The outcome of the events was recovering.; Sender's Comments: The reported pharyngeal swelling together with other symptoms was likely related to the single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) due to temporal relationship. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925637-1	jaw tightening; muscle spasms; entire face and around her mouth went numb; entire face and around her mouth went numb; heart palpitations; I had hives on my chest; a wave of heat rush up her back; This is a spontaneous report from a contactable nurse (patient). A 46-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration in left arm on 22Dec2020 10:30 at first single dose for COVID-19 immunization. Medical history included ectopic pregnancy, hay fever. Concomitant medication received within 2 weeks included: loratadine, calcitriol (vitamin D), olly womens multivitamin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No known allergies. About 15 minutes after the vaccine the patient experienced jaw tightening and muscle spasms. The patient was given oral Benadryl 50 mg. About 5 minutes after taking the Benadryl, her entire face and around her mouth went numb. The patient began having heart palpitations and felt a wave of heat rush up her back. She had hives on her chest. The patient received 1 dose of epinephrine from an Epi-Pen and transported to the emergency room for further treatment. Adverse event start date: 22Dec2020 11:00 AM. Events were considered as non-serious. Events resulted in: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. Treatment received for the adverse event included: Benadryl, Epinephrine, Solumedrol, Pepcid. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. Test Name: SARS-CoV-2 by PCR (Nasal Swab) on 30Dec2020: Negative. Outcome of the events was not recovered.; Sender's Comments: The temporal relationship is suggestive of an acute anaphylactic reaction. Based on the temporal relationship and the known pattern of response, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925638-1	"Joint pain; loss of balance; increased drowsiness; Headaches induced by allergies; Limited neck mobility/lessened neck pain but still limited mobility; Scalp tenderness and sensitivity; Significant migraines/debilitating migraines (light & noise sensitivity, covers whole head, pulsating, sharp pain, loss of balance, increased drowsiness); Sharp pains in neck/Neck pain; Sharp pains in neck, ear, head pain (similar to an ear infection pain); head pain/sharp pains in lower head/covers whole head, pulsating, sharp pain/Increase in headaches but no longer centralized to back of head/ headaches induced by allergies; Nausea; Neck stiffness; This is a spontaneous report from a contactable Other Health Professional (patient). A 29-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Solution for injection, lot number was unknown, via an unspecified route of administration in the right arm on 22Dec2020 07:30 at a single dose for COVID-19 immunization. Medical history was none. There were no concomitant medications. The patient was not pregnant. The patient had not receive any other vaccines within 4 weeks prior to the COVID vaccine. It was reported that the patient received vaccine in Tuesday (22Dec2020). The following Sunday (27Dec2020) at 12:00, she had nausea and neck stiffness. On Monday (28Dec2020), she had sharp pains in neck, ear, head pain (similar to an ear infection pain), and nausea. She used telemed appt and got antibiotics (unspecified). On Tuesday (29Dec2020), she had significant migraines, limited neck mobility, sharp pains in neck and lower head, scalp tenderness and sensitivity which felt like whiplash when she moved her head w/ her head feeling ""swimmy"". She tried to see urgent care but was to go to ER. On Wednesday (30Dec2020), there was lessened neck pain but still limited mobility, increased in headaches but no longer centralized to back of head. She went to ER and they said that she had headaches induced by allergies. She mentioned that she never had migraines or allergies in her life. They also reported no ear infection. She did complete CT Scan with no concerning results on 30Dec2020. On Thursday (31Dec2020) & Friday, she no longer has neck pain but with continued nausea, joint pain, debilitating migraines (light & noise sensitivity, covers whole head, pulsating, sharp pain, loss of balance, increased drowsiness). The events were reported as non-serious. The treatment received for the adverse events included fluids, pain & nausea meds. The patient was not diagnosed with Covid prior to vaccination. She was tested for covid post vaccination on 30Dec2020 through a nasal swab with negative result. The outcome of the events neck stiffness, ear pain, scalp tenderness and sensitivity, and 'Headaches induced by allergies' was unknown; while neck pain was recovered on 31Dec2020. The outcome of the events 'significant migraines/debilitating migraines', nausea, limited neck mobility, head pain/Headache, joint pain, loss of balance, and increased drowsiness was not recovered. Information on the lot/batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the event migraine cannot be excluded based on a compatible temporal relation between vaccination and onset of event. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	925640-1	DVT left calf; This is a spontaneous report from a contactable Physician (patient). A 60-year-old male patient started to receive the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Intramuscular on 20Dec2020 08:00 at single dose on right arm for COVID-19 immunization. Medical history included Gastric reflux. The patient had no known allergies. The patient had no covid prior vaccination. The patient had no covid tested post vaccination. Concomitant medications included omeprazole (PRILOSEC) and ergocalciferol (VIT D). The patient had not received other vaccine in four weeks. The patient experienced deep vein thrombosis (DVT) left calf on 27Dec2020 09:00 which resulted emergency room visit. Treatment received for the event included Xarelto. The outcome of the event was not resolved. Information on the lot/batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925642-1	Mild difficulty with thought/speech/concentration; strong wave of burning sensation growing inside the body; Lightheadedness; Blood pressure went up; Heart rate went up; Hands freezing; Mild difficulty with thought/speech/concentration; Weakness; Mildly shaky; Anxiety; Feeling that may pass out; This is a spontaneous report from a contactable other healthcare professional (HCP) (patient). A 61-year-old female patient received 1 dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1686) via unspecified route on left arm single dose for COVID-19 immunization on 02Jan2021, 02:30 PM, at 61-year-old. Medical history: allergies to sulfa, paclitaxel (TAXOL); breast cancer in 2003 and 2007. Prior to vaccination, the patient did not be diagnosed with COVID-19. Concomitant medication in two weeks included: escitalopram oxalate (LEXAPRO, strength: 10m); omeprazole; multivitamin; ibuprofen. About 5 minutes after the vaccine (02Jan2021, 02:35 PM), the patient had a strong wave of burning sensation growing inside the body, lightheadedness, blood pressure went up, heart rate went up, hands freezing, mild difficulty with thought/speech/concentration, weakness, mildly shaky, anxiety, feeling that may pass out. Emergency room/department or urgent care visited. Treatment received for the adverse event included: heart rate H20 and BP monitor, water, observation. Since the vaccination, the patient did not have been tested for COVID-19. Action taken for BNT162B2 was not applicable. Outcome of the events was resolving. It was reported as non-serious per the reporter.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Mental impairment cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925645-1	Patient was poorly responsive to her inhalers that she used for asthma; Persistent shortness of breath and chest tightness starting within a few days after vaccine; Persistent shortness of breath and chest tightness starting within a few days after vaccine; This is a spontaneous report from a contactable physician (patient). A 40-year-old male patient received the first single dose of BNT162B2 (Solution for injection, lot number: EK5730, exp date not reported), via an unspecified route of administration (vaccine location: left arm) on 18Dec2020 04:15 for COVID-19 immunization. Medical history included allergy induced asthma, allergies to cats and dust, and occasional seasonal allergies. Concomitant medication included other vaccine/s received within 4 weeks prior to the COVID vaccine: first dose of diphtheria vaccine toxoid, pertussis vaccine acellular 3-component, tetanus vaccine toxoid (BOOSTRIX, GlaxoSmithKline) administered as single dose via unspecified route of administration (vaccine location: left arm) on 08Dec2020. There were no other medications the patient received within 2 weeks of vaccination. The patient experienced persistent shortness of breath and chest tightness starting within a few days after vaccine (24Dec2020). Patient was poorly responsive to her inhalers that she used for asthma (onset date not reported). She rarely needed the, used about once or twice a year). It was constant, but with periods of improvement followed regression. Will likely seek medical evaluation as it's been over a week now and rather concerning. The patient did not consider the events shortness of breath and chest tightness as serious. Treatment for the adverse events shortness of breath and chest tightness included fluticasone propionate, almeterol (ADVAIR), albuterol, and unspecified anti-allergy medications. Patient did not have covid prior vaccination. Patient was tested for COVID post vaccination wherein patient tested negative for COVID via Covid test rapid on 30Dec2020. The adverse event resulted in doctor or other healthcare professional office/clinic visit and emergency room/department or urgent care. The outcome of shortness of breath and chest tightness was not recovered and unknown for the other event.; Sender's Comments: Based on the time association, the possible contribution of BNT162B2 to the events shortness of breath, chest tightness and asthma aggravated cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925649-1	It sounds like to be an allergic reaction; She passed out; Tachycardia; Nausea; Lightheadedness; This is a spontaneous report from a non-contactable physician. A 32-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) in Dec2020 at single dose to be vaccinated for her protection. Medical history was none. The patient's concomitant medications were not reported. Patient took the Pfizer COVID-19 vaccine and next day she had a very serious reaction. She did not know that if it was due to the vaccine. But she had tachycardia requiring her to go to the emergency room and she passed out and she had nausea and lightheadedness as well. It sounds like to be an allergic reaction. Given the seriousness of tachycardia and passing out as well as the lightheadedness and nausea it sounds too severe just to be a mild immune response. So, it was sort of rare immune response or it was unrelated it was unknown at this time. Outcome of event was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: Based on the compatible time association, the contribution of suspect BNT162B2 to the events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	925743-1	anaphylactic reaction; neuropathy in fingers, toes, roof of mouth/lips; This is a spontaneous report from a contactable nurse (patient). This 48-year-old female patient (not pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot#: EL0140) at single dose on left arm on 30Dec2020 at 09:00 for COVID-19 immunization. Medical history included asthma (controlled); hypertension diagnosis 1 year ago; allergies to medications, food and environmental. Concomitant medications in two weeks included antihypertensives - amlodipine and losartan. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. On 30Dec2020 at 9:15 AM, the patient experienced anaphylactic reaction within 10 minutes of administration, neuropathy in fingers, toes, roof of mouth/lips. Neuropathy continued to date. The adverse events resulted in emergency room/department or urgent care. The patient received treatment Epinephrine IM (intramuscular) and IV (intravenous) steroids. The outcome of events was recovering.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of anaphylactic reaction and neuropathy peripheral due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including serum tryptase and nerve conduction studies, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925745-1	numbness and weakness in left arm; numbness and weakness in left arm; had a brachial plexus pathology; her grip and fine motor are affected in her left arm/she could not do her job; This is a spontaneous report from a contactable physician (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EH9899), via an unspecified route of administration in right arm on 21Dec2020 at single dose for Covid-19 immunisation. Medical history included ongoing birth control. No other medical history. Concomitant drug included other medication she took for birth control. On 29Dec2020, the patient experienced numbness and weakness in left arm, had a brachial plexus pathology, went to the emergency department on 30Dec2020 and was seen by one of the facility doctors and stated this doctor had her on steroids for treatment. She got the vaccine in her right arm, stated her grip and fine motor are affected in her left arm. States this was disabling since she could not do her job. She was following up with neurology on Monday (unspecified), that she had a CT scan of her neck and it was normal. Only other medication she was taking was for birth control, but she did not feel like it was relevant. The outcome of events numbness and weakness in left arm was recovering, while outcome of other events was unknown. This case was reported as serious, seriousness criteria was disabling.; Sender's Comments: Based on the information currently provided, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	925753-1	Fainting; Red Palms; blotching; sweating profusely; heart palpitations; Chest pain; Elevated BP; This is a spontaneous report from a contactable consumer (patient). A 46-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 28Dec2020 09:15 at single dose on left arm (Lot number: ek9231) for COVID-19 immunisation. Medical history included asthma, bronchitis, mitral valve regurgitation, herpes, depression, ADHD. COVID prior vaccination: Yes. Known allergies: tramadol, milk products. No other vaccine in four weeks. Concomitant medication included amfetamine aspartate, amfetamine sulfate, dexamfetamine saccharate, dexamfetamine sulfate (ADDERALL), bupropion, and, losartan/hydrochlorothiazide. The patient experienced red palms/blotching, sweating profusely, heart palpitations, chest pain and fainting, elevated BP, all on 28Dec2020 09:15. All these events required Emergency room visit. Therapeutic measures were taken as a result of the events included 50 mg of Benadryl, 60 mg of Prednisone, omeprazol. No COVID tested post vaccination. Outcome of events was recovered with sequelae.
COVID19 VACCINE (COVID19)	Emergency Room *	925755-1	feeling close to loss of consciousness; intense chest pressure/tightness; shortness of breath; chills while driving home; This is a spontaneous report from a contactable healthcare professional (patient). A 50-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot number: EL0142), via an unspecified route of administration in the left arm, on 02Jan2021 at 11:30 (at the age of 50-years-old) as a single dose for COVID-19 immunization. The patient's medical history was not reported. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications, taken within two weeks of vaccination, included ibuprofen (MANUFACTURER UNKNOWN). The patient previously took amoxicillin (MANUFACTURER UNKNOWN) and experienced allergy. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced feeling close to loss of consciousness, intense chest pressure/tightness, shortness of breath, and chills while driving home on 02Jan2021 at 12:00. The patient did not receive any treatment for the events. The clinical outcome of feeling close to loss of consciousness, intense chest pressure/tightness, shortness of breath, and chills while driving home was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of feeling close to loss of consciousness, intense chest pressure/tightness, shortness of breath cannot be excluded, considering the plausible temporal relationship. The underlying predisposing condition of penicillin allergy may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	925756-1	Right sided facial & top lip Numbness & recurring pain; Right sided facial & top lip Numbness & recurring pain; Right sided facial & top lip Numbness & recurring pain; This is a spontaneous report from a contactable consumer reporting for herself. A 66-year-old female patient (not pregnant at the time of vaccination) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EK9231), via unspecified route of administration on 29Dec2020 13:30 on left arm at single dose for COVID-19 immunization. Facility where the most recent COVID-19 vaccine was administered in Hospital. Medical history included Hypertension, Reflux and low back pain. Concomitant medications included ibuprofen, dicycloverine hydrochloride (BENTYL), Valsartan and omeprazole. The patient previously took codeine, Bactrim, Zyrtec and experienced allergies. The patient experienced Right sided facial and top lip Numbness, recurring pain on 31Dec2020 16:00. All events resulted in emergency room visit and Hospitalization on 31Dec2020 for 1 day. The patient underwent lab tests and procedures, which included Cat scan, MRI, ultrasound of heart and labs on unspecified dates, Nasal Swab/Covid 19 test on 01Jan2021 with negative result. The outcome of the events were not resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	925758-1	experienced eye puffiness; light headed ness; scratchy throat; This is a spontaneous report from a non-contactable consumer via Pfizer Sales Representative. A male patient (Health care worker) of an unspecified age and gender received BNT162B2(Pfizer BioNTech COVID-19 vaccine) via an unspecified route of administration in Dec2020 at single dose for COVID-19 immunization. The medical history and concomitant medications were not reported. The patient experienced eye puffiness, light headed ness and scratchy throat 10 minutes after vaccination in Dec2020. Reaction was not considered anaphylaxis. Patient received epinephrine, Pepcid and Benadryl in the ED, felt completely back to normal within an hour and was released. Event took place after use of product. The outcome of events was recovered in Dec2020. No follow-up attempts are possible; information about batch number cannot be obtained.
COVID19 VACCINE (COVID19)	Emergency Room *	925777-1	Felt sharp pain under jaw, then facial numbness. Then quickly developed facial swelling, left eye swelling and tongue swelling. Then felt like throat closing up within 7 minutes of receiving vaccine. Received vaccine in the clinic, was transported to Emergency Room. In ER received Epinephrine, steroids, Benadryl and Pepcid.
COVID19 VACCINE (COVID19)	Emergency Room *	925925-1	1 day after the vaccine he had a low grade fever... 1 week later he had a seizure and then multiple ones in the ER...
COVID19 VACCINE (COVID19)	Emergency Room *	926042-1	Developed shortness of breath, swelling of tongue, persistent cough within 5 minutes of vaccination. Was treated with EpiPen and kept in ER for observation overnight. Symptoms resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	926433-1	Hemorrhagic Stroke. Began with vision difficulty in the morning. Then I noticed she had left sided neglect. Went to ER. Treated with Andresxa (to counteract Elaquis). In SICU for 2 nights then telemetry unit for 3 nights. Currently in Rehab.
COVID19 VACCINE (COVID19)	Emergency Room *	926703-1	Guillain Barre syndrome/AIDP event. Paresthesia and nerve pain developed in bilateral legs 4 hours after shot and progressed slowly for 4 days in intensity and area involved. Symptoms progressed distally to superior. On the 5th day symptoms progressed rapidly and involved bilateral legs up to the groin, left arm up to lateral shoulder, and right hand. I went to the hospital and was admitted to start IVIG treatment for Guillain Barre Syndrome/AIDP.
COVID19 VACCINE (COVID19)	Emergency Room *	927006-1	Diffuse polyarthropathy starting the day after vaccination and continuing for 7+ days. Currently treating with abx for concern of possible cellulitis, and prednisone 60mg for polyarthropathy. Currently admitted.
COVID19 VACCINE (COVID19)	Emergency Room *	927065-1	woke up with fever and sore throat on 22nd; went to job and got tested and tested positive; on the 23rd developed right upper lobe pneumonia; on 27th was hospitalized with three lobe pneumonia; On 22nd received got zpack - azithromycin and sudafed; received at hospital doxycyclen IV ; ivermectin and went home with them, as well. Hospital
COVID19 VACCINE (COVID19)	Emergency Room *	927223-1	Nausea, hives, anaphylactic shock, throat swelling, hypotension, headache, dizziness, weakness . The symptoms returned at 1:25pm the best day as well. I've now had two anaphylactic reactions
COVID19 VACCINE (COVID19)	Emergency Room *	927415-1	4 days later after the vaccine my left eye turned really red with crust and mucus coming out. I went to walk in clinic and was being treated for pink eye. I was started on an antibiotic eye drop. A day later my right eye started to have the same problem. I scheduled an appt with a eye specialist where he examined both eyes and said I had a major infection. I was started on steroid eye drops which I am still taking but seems my eyes are not getting better. I have a follow up with another specialist next week for further testing. I have been out of work due to this matter.
COVID19 VACCINE (COVID19)	Emergency Room *	927571-1	tested positive for Covid test; tested positive for Covid test; difficulty breathing; chills; fluctuating fever; nausea; weakness; weakness/extreme fatigue; loss of taste and smell; loss of taste and smell; muscle pain; cough; sore throat; nasal drip; dizziness; fast heartbeat; injection site pain; anxiety; crying; This is a spontaneous report from a contactable healthcare professional. This 21-year-old female patient reported for herself that she received BNT162B2 1st dose on 31Dec2020 10:00 AM intramuscular at left arm for COVID-19 immunisation. Medical history included known allergies: Penicillin and Covid-19. Concomitant therapy included BC as reported. The patient experienced difficulty breathing, chills, fluctuating fever, nausea, dizziness, weakness, fast heartbeat, tiredness, loss of taste and smell, muscle pain, injection site pain, anxiety, cough, sore throat, nasal drip, crying, extreme fatigue, Etc on 31Dec2020 at 06:00 PM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency. The patient was hospitalized for 1 day and received treatment included blood thinner rivaroxaban (XARELTO) and had 2 weeks quarantine. The patient had Covid prior to vaccination and tested positive for Covid test post vaccination on 01Jan2021. The outcome of the events was not resolved. Information on Lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the suspected LOE, SARS-CoV-2 test positive and the other reported events due to temporal relationship. Of note, it is reported that the patient had history of COVID 19 infection prior to the vaccination. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	927648-1	Tested Positive for COVID-19/nausea, occasional dry cough, neck and lower back soreness, and sore throat; Tested Positive for COVID-19/nausea, occasional dry cough, neck and lower back soreness, and sore throat; Weakness/generalized weakness; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received first dose of BNT162b2 (Pfizer, Lot number: 5730), via an unspecified route of administration at right arm at 22Dec2020 21:00 at single dose for covid-19 immunization. Medical history included Mayonaise allergies. The patient's concomitant medications were not reported. The patient previously took codeine and experienced allergies. At 31Dec2020 06:00, the patient experienced Weakness, nausea, occasional dry cough, generalized weakness, neck and lower back soreness, and sore throat which has now dissipated. Tested Positive for COVID-19 on 02Jan2021 (also reported as 01Jan2021, pending clarification). The covid test type post vaccination was Nasal Swab, Covid test name post vaccination was COVID-19 PCR ROCHE c6800(NTX), RNA SARS CoV2 TGT1, PAN SARS RNA TGT2. No treatment received for events. The events result in Emergency room/department or urgent care. The patient was not pregnant. The outcome of the events were nor recovered.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Drug ineffective and COVID-19 cannot be totally excluded. The case will be reassessed if additional information becomes available.
COVID19 VACCINE (COVID19)	Emergency Room *	927662-1	Anaphylactic reaction; This is a spontaneous report from a contactable nurse. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on deltoid (unknown which) on 31Dec2020 at 0.3 mL, single for COVID-19 immunization. There were no medical history and concomitant medications. The patient experienced anaphylactic reaction on 31Dec2020. The event required emergency room visit for observation and treatment.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylactic reaction cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	927680-1	Allergic reaction; Hives on back; Flushed; Chills; Swollen tongue; Burning tongue; This is a spontaneous report from a contactable consumer (patient). This 47-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 29Dec2020 07:00 at single dose on left arm for COVID-19 vaccination. There were no medical history and concomitant medications. The patient previously took flu shot. Vaccination Facility Type was hospital. Patient did not receive any other vaccines at time COVID-19 vaccine given and no vaccines given 4 weeks prior. Patient got the Pfizer COVID-19 vaccine on 29Dec2020 and had an allergic reaction to it. Had hives on her back, was flushed, had chills, and swollen tongue on 29Dec2020. There was swelling on either side of tongue not in the center. Swelling seemed to bounce around sides of tongue. Patient mentioned she also had burning sensation of tongue first on 29Dec2020 and then the swelling was after that. Adverse events hives, flushed, chills, burning sensation of tongue and swelling of tongue required a visit to emergency room. Patient was seen in the emergency room and given diphenhydramine hydrochloride (BENADRYL) and an Epi-pen to take home. This all happened after receiving the vaccine on 29Dec2020. Patient wasn't getting any better/feeling better and went back to the emergency room on 30Dec2020. Patient was treated with dexamethasone and told her to take diphenhydramine hydrochloride every 4 hours, her last dose was at 2pm 31Dec2020. Patient said all events still persisting, but there maybe a little more swelling of the tongue, but not much. Patient had had a flu shot before, but never had anything to happen like this. Outcome of allergic reaction, hives, flushed, chills and burning tongue was not recovered, outcome of swollen tongue was unknown. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Emergency Room *	927830-1	Abdominal pain, chills, n/v, dark urine, elevated LFT's, Bilirubin in urine. Patient currently admitted to hospital
COVID19 VACCINE (COVID19)	Emergency Room *	927981-1	"Pt experiencing and c/o left nasal burning, left upper lip tingling progressing to numbness with slight swelling noted, scattered patchy hives to upper front chest, sharp HA above right eye, denies SOB, no acute respiratory distress noted or reported, slurring of words shortly after onset of other symptoms. Pt repeating ""something ain't right"". Pt received Moderna COVID vaccine at 4:35pm with no reactions or side effect noted within the post 15 and 30 minutes. EMS notified at 5:49pm. MD notified and ordered Benadryl 50mg IM (given at 5:53pm), EpiPen and DepoMedrol 40mg IM if needed. No respiratory distress noted, pt denies SOB. EMS arrived and transported pt to ER."
COVID19 VACCINE (COVID19)	Emergency Room *	927983-1	Developed SOB and fatigue 1 day after vaccine, went to urgent care and tested positive for COVID at urgent care. Returned to our ED after going to urgent care again on 1/7/21, had o2 sat of 84% on room air, improved to 98 on 3 liters. Was transferred to another facility for admission.
COVID19 VACCINE (COVID19)	Emergency Room *	928062-1	vomiting later on 01/05/21. Lethargy and hypoxia in pm of 01/06/21. Hypotension am of 01/07/21. Hospitalized, intubated, cardiac arrest, died 01/07/21.
COVID19 VACCINE (COVID19)	Emergency Room *	928209-1	Swollen lips/tongue, shortness of breath, cough, hives, nausea, headache Epi shot, Benadryl, Pepcid, prednisone
COVID19 VACCINE (COVID19)	Emergency Room *	928240-1	Less than 5 minutes after vaccine, nose drained, weird taste in mouth, tingle in nose and on tongue. Throat and tongue swelled, couldn't speak. Dizzy and slurring speech. Was taken to ambulance outside, BP was 191/101. Given beta blockade. Confused and dizzy for next 2 hours in ER. Evaluated for stroke and given a 12-lead ECG. Given benedryl and prednisone. Felt better after 3 1/2 hours. Continued steroids for 5 days and had to take benedryl every 4 hours for 3 days or swelling/itching/bad taste in mouth would return. Sore arm on day 3.
COVID19 VACCINE (COVID19)	Emergency Room *	928291-1	symptoms:chest and stomach pain Has markedly elevated liver function tests that were normal 2 weeks prior to immunization Is being admitted the hospital to monitor liver function test.
COVID19 VACCINE (COVID19)	Emergency Room *	928333-1	Fever, coughing, drowsiness, generalized weakness. Was found to be hypercalcemic (corrected calcium 14) and admitted 1/2-4. No prior history of hypercalcemia.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	928378-1	Congestion Shortness of breath Tachycardia Transferred out 911. Per hospital, patient had a myocardial infarction, is unresponsive, and on hospice services.
COVID19 VACCINE (COVID19)	Emergency Room *	928662-1	On December 25th I had mild chest pain and then on January 1st, 2021 I had severe chest pain that persisted and on January 3rd I was admitted into the hospital. My Ddimer was elevated and my Troponin levels were elevated. An angiogram was performed and Dr. injected nitro into my arteries because they were constricted from Coronary Spasms.
COVID19 VACCINE (COVID19)	Emergency Room *	928754-1	Sxs started 3-5 minutes post vax. Dizziness, hypotension, throat fullness, CODE called, given IM Epi at vax site. Taken to ED from vax site. Started on epi drip. Admitted to SHC.
COVID19 VACCINE (COVID19)	Emergency Room *	928757-1	Nausea/ dizzy, Syncope 12 hours later.
COVID19 VACCINE (COVID19)	Emergency Room *	928772-1	Patient felt warm with palpitations 5 minutes after vaccine administered. was monitored for 30 mins & then returned to work. on 12/30/2020 patient was at work in Presurgical testing dept & experienced near syncope, dizziness & elevated BP. reported to ED & was admitted to telemetry unit.
COVID19 VACCINE (COVID19)	Emergency Room *	929058-1	Around 10:30pm I felt like my throat was closing and I was choking; Around 10:30pm I felt like my throat was closing and I was choking; I had chest pain, chest tightness; I had chest pain, chest tightness; Very SOB at rest; Throughout the day I was cough and my face started flushing so I tool Benadryl/severe facial flushing; On 23Dec I got nerve blocks for my migraines.; Throughout the day I was cough and my face started flushing so I tool Benadryl.; This is a spontaneous report from a contactable nurse who reported for herself. A 36-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot: EK5730) dose number 1, via an unspecified route of administration on 19Dec2020 11:30 at single dose for COVID-19 immunization. Medical history included von willebrand's disease, narcolepsy with cataplexy, IIH (Idiopathic intracranial hypertension), HTN (hypertension), GERD (gastrooesophageal reflux disease), migraines. Patient also had known allergies: PCN (penicillin), shellfish, IV contrast, cefdinir and bees. On 23Dec2020, patient got nerve blocks for her migraines. Throughout the day patient was cough and her face started flushing so she tooled diphenhydramine hydrochloride (BENADRYL). Around 22:30, patient felt like her throat was closing and she was choking. She had chest pain, chest tightness. EMS (emergency medical services) was called and patient was brought to the hospital. On 25Dec2020, patient felt like her throat was closing, like someone was sitting on her chest and chest tightness still with chest pain. Very SOB (shortness of breath) at rest. Patient went to the ER (emergency room) and received IV dexamethasone (DECADRON) and diphenhydramine hydrochloride. On 26Dec2020, patient had the same symptoms but with severe facial flushing and patient went back to the ER and was given IV dexamethasone. Patient was sent home on a maximum amount of medications. I had seen her primary care, ENT (ear nose throat centre), Allergy, ID (infectious disease), and pulmonology. Her CT (computerised tomogram) of chest on 25Dec2020 was negative along with her COVID test. Patient SOB on rest and exertion still. Onset date of the adverse events was reported as 23Dec2020, 22:30. Patient received treatment for the events included multiple medications and high dose prednisone. Lab data on 25Dec2020 included CT of chest: negative, influenza type A/B combo: negative, Covid 19: negative and nasal swab: negative. Action taken in response to the events for bnt162b2 was not applicable. Outcome of the events was not resolved.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events due to temporal relationship. The clinical presentation of the events is suggestive of possible allergic reactions. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	929066-1	diarrhea; headache; lower back pain; Fatigue; arrhythmia; Tachycardia; High Blood pressure; Redness on chest; Chest tightness; Lightheaded; possible tongue swelling; possible tongue swelling (felt heavy after vaccine); dry mouth; sore throat; This is a spontaneous report from a contactable nurse (patient) who reported for herself that a 31-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) via an unspecified route of administration, on 20Dec2020 14:15 at left arm/arm right (pending clarification), single dose for COVID-19 immunization. Medical history included factor II, history of melanoma. She has no known allergies. She was not pregnant at the time of the vaccination. Concomitant medications included bupropion hydrochloride (WELLBUTRIN), ibuprofen (MOTRIN), multivitamin. Nurse reported administering COVID-19 vaccine at hospital, experiencing tachycardia, high blood pressure, redness on chest, chest tightness, lightheaded, possible tongue swelling (felt heavy after vaccine), arrhythmia, dry mouth, sore throat (after leaving emergency department) at 14:30 on 20Dec2020; After one day, she experienced diarrhea, headache, lower back pain and fatigue since 21Dec2020. Fatigue lasting for several days. Adverse events resulted in emergency room/department or urgent care (pending clarification). Nurse received intravenous diphenhydramine hydrochloride (BENADRYL) and fluids as treatments. Nurse assessed the events as non-serious. Nurse also reported that, prior to vaccination, she was not diagnosed with COVID-19; since the vaccination, she has not been tested for COVID-19. She did not receive other vaccine in four weeks. Outcome of fatigue was not recovered, outcome of the rest of the events was recovered.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the tachycardia, high blood pressure, arrhythmia and the other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG at baseline and during subject drug therapy, echocardiogram, cardiac enzymes, electrolytes, chemistry panel and serum toxicology screen, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	929067-1	"Chills; Soreness at the injection site; generalized body aches/Body aches; Shortness of breath; Asthma attack; Difficulty sleeping; Light headed and dizzy; Nausea; high BP 140's; HR 110's to 120's; Nasal congestion; Swelling of the face; Sore throat; This is a spontaneous report from a contactable nurse. A 42-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK5730, expiration date not reported), intramuscular on the right arm on 31Dec2020 at 10:15 AM, at a single dose for Covid-19 immunization. Medical history included asthma, allergy, hypothyroidism, and some fish allergy. There were no concomitant medications (no other vaccine in four weeks and no other medications in two weeks). Patient previously took ibuprofen and experienced allergy. The patient is not pregnant. On 31Dec2020, after ten-15 minutes (10:30 AM) of receiving the vaccine, she was light headed and dizzy with some nausea. Monitored in the emergency room (ER) with high BP 140's and heart rate (HR) 110s to 120s. After an hour of saline bolus, she was better but she got nasal congestion and swelling of the face with sore throat. On 01Jan2021, after 24 hours, she got some soreness at the injection site with generalized body aches. Also she got some shortness of breath which lead to her asthma attack and difficulty sleeping. On 02Jan2021, after 48hours, she was feeling still light headed with some sore throat, chills, body aches and severe headache which lead her to go to the ER and got herself tested for flu, covid and strep, which came back all negative but her signs and symptoms (s/sx)still after discharge was getting worst especially the headache and generalized body aches. As well as congestion and sore throat. The patient had given ""IvF"" for the events. The patient was not diagnosed with Covid prior to vaccination and was not Covid tested post vaccination. The outcome of the events was not recovered. The reporter assessed the events as non-serious.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation between vaccination and onset of events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	929070-1	becoming incoherent and talking nonsense; This is a spontaneous report from a contactable physician (patient). A female patient of an unspecified age received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), via an unspecified route of administration on 23Dec2020 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. Physician calling about whether or not she should receive the second dose of vaccine. She received dose on 23Dec2020. On 26Dec2020 she started experiencing several side effects including becoming incoherent and talking nonsense. Her daughter who is an EMT suggested that she go to the ER. While in the ER she received TPA but it was later decided she did not have a stroke. Her EKG, bloodwork and other testing came back negative. She otherwise healthy and has no comorbidities. She already spoke with agency. She has also already spoken with an infectious disease doctor and her neurologist. The outcome of the event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the event incoherent is conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to agencies, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	929118-1	a left sided nystagmus; urgent MRI showing multiple brain lesions consistent with Acute disseminated encephalomyelitis; Patient developed paresthesias on entire right side of body / The paresthesias continued, not progressing; a brief headache; episode of dizziness / developed severe dizziness; This is a spontaneous report from a contactable physician (patient). A 34-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730) intramuscularly at right arm on 21Dec2020 07:00 at single dose for COVID-19 immunization. Medical history included known allergies to sulfa meds. The patient's concomitant medications included multivitamins [vitamins nos] within 2 weeks of vaccination. Patient developed paresthesias on entire right side of body after a brief headache and episode of dizziness, all since 29Dec2020 15: 00. The paresthesias continued, not progressing, but patient was advised to obtain an MRI Brain and C spine as an outpatient. On 02Jan2021, the patient developed severe dizziness and a left sided nystagmus. She went to the ER and underwent urgent MRI showing multiple brain lesions consistent with acute disseminated encephalomyelitis. Lumbar puncture (LP) was performed, awaiting final results. Patient was admitted and was receiving IV steroids (solumedrol). Duration of hospitalization was 5 days since Dec2020. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient underwent lab tests and procedures, which included Nasal Swab and Rapid covid swab, both on 02Jan2020 with result of negative. The outcome of the events was recovering.; Sender's Comments: Based on temporal association and lack of other provided etiology, a possible contributory role of suspect BNT162B2 vaccine cannot be excluded for reported acute disseminated encephalomyelitis, paraesthesia, headache, dizziness and nystagmus. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	929132-1	Patient fainted in the ICU setting.; dizziness; hypotension; This is a spontaneous report from a contactable Other HCP. A 25-year-old male patient received BNT162B2 (Lot number: eh9899) via an unspecified route of administration on 24Dec2020 13:00 at single dose for covid-19 immunisation. The patient did not have any known allergies or medical history. Prior to vaccination, the patient was not diagnosed with COVID-19. There were no concomitant medications. On 24Dec2020, patient experienced dizziness and hypotension. Patient's blood pressure (BP) was 50/30 and heart rate (HR) 45. Patient fainted in the intensive care unit (ICU) setting. This happened during work hours while treating a patient. Patient was treated in the emergency department (ED). The adverse events resulted in emergency room/department or urgent care. It was unknown if treatment was received for the adverse event. Since the vaccination, the patient has not been tested for COVID-19. The outcome of events was recovered.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	929139-1	"Itching and redness over whole body/I turned all red and was itching all over my body by about 10:30- 10:45 am/I still have mild itching; Itching and redness over whole body/I turned all red and was itching all over my body by about 10:30- 10:45 am/I still have mild itching; Elevated heart rate and blood pressure; Elevated heart rate and blood pressure; Had an allergic reaction; This is a spontaneous report from a contactable nurse (patient). A 43-year-old female patient received the first dose of bnt162b2 (BNT162B2) lot no: EK9231, via an unspecified route of administration in left arm on 30Dec2020 09:00 at a single dose for COVID-19 immunization. Medical history HTN and exercise-induced asthma, both from an unspecified date and unknown if ongoing. The patient was not pregnant at the time of vaccination. The patient had no covid prior to vaccination and was not covid tested post vaccination. Concomitant medication included colecalciferol (VITAMIN D), montelukast sodium (SINGULAIR), and biotin. No other vaccines were administered in four weeks. Known allergies include tapendalol (NUCYNTA) and trimethoprim/sulfamethoxazole (BACTRIM). On 30Dec2020 09:30, the patient experienced itching and redness over whole body, elevated heart rate, and blood pressure. The patient was given IV diphenhydramine (BENADRYL) 50 mg, IV famotidine (PEPCID), IV methylprednisolone (SOLU MEDROL), ""flu"" as treatment for AEs. The patient further clarified that she received the COVID 19 vaccine on 30Dec2020 at 9:00 and she had an allergic reaction. She turned all red and was itching all over her body by about 10:30- 10:45 am and was at the ER by about 11am. She started on prednisone 40mg for 3 days and diphenhydramine every 6 hours, as needed on 30Dec2020. On Sunday (03Jan2021), she was still severely itching and turning red so prednisone was continued for an additional 3 days and was switched to cetirizine (ZYRTEC) because she can't function on diphenhydramine. Cetirizine was not helping so she had to take diphenhydramine yesterday morning (04Jan2021). Last night (04Jan2021), she was ok without any diphenhydramine but this morning (05Jan2021), she still have mild itching, and no redness. The redness comes and goes; it is on the face, chest, arms, legs. When it first started, it was whole body redness. Then it moved to different areas on different days; she don't have a rash or hives, just redness. She had a 4 inch band of redness on both arms one day. The events were reported as non-serious. The patient had not recovered from the events.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of allergic reactions cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The underlying predisposing condition of drug allergies to multiple materials may put the patient at high risk of allergic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate"
COVID19 VACCINE (COVID19)	Emergency Room *	929162-1	Cp initially that resolved in seconds. Then severe muscle aches, fatigue, temp 1 week,excruciating joint pain continues now. Malaise.
COVID19 VACCINE (COVID19)	Emergency Room *	929166-1	full body rash; heart palpitations; reaction to drug excipient; This is a spontaneous report from a contactable nurse, the patient. A female patient of an unspecified age received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: UNKNOWN), via an unspecified route of administration on 26Dec2020 as a single dose for COVID-19 immunization. Medical history included several outdoor allergies, but no known food allergies. The patient's concomitant medications were not reported. On 28Dec2020, the patient experienced full body rash and heart palpitations. The clinical course was as follows: the patient developed a full body rash and heart palpitations on 28Dec2020 and went to the emergency room. The patient had a full work-up which included electrocardiogram, troponin levels, and electrolytes, and all were normal. She was instructed to take diphenhydramine hydrochloride (BENADRYL). She thought it may have been due to the polyethylene glycol; however, she did mention that she previously took macrogol 3350 (MIRALAX) on unknown dates for an unknown indication and was fine. The clinical outcomes of the full body rash, heart palpitations, and reaction to polyethylene glycol, were unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported full body rash and the administration of the suspect, BNT162B2, based on the reasonable temporal association. While the possibility of allergic to polyethylene glycol (drug excipient) might have provided alternative explanations. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	929173-1	Went to ER left side of face sagging. They did MRI it showed he had stroke. happened before 4pm that same day as vaccine. Happened between 2-4 pm; Went to ER left side of face sagging. They did MRI it showed he had stroke. happened before 4pm that same day as vaccine. Happened between 2-4 pm; This is a spontaneous report from a contactable consumer (patient). A 78-year-old male patient receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK5730), on 31Dec2020 11:00 AM via unknown route of administration at single dose for COVID-19 immunization. Medical history included high blood pressure, but went up and down and had to readjust. His BP was high and not sure how long it was that way. Concomitant medications included unspecified blood pressure medications. There were no known allergies. Patient went to ER left side of face sagging. They did MRI it showed he had stroke. It Happened before 4pm that same day as vaccine on 31Dec2020 02:00 PM. And it Happened between 2-4 pm. Patient received treatment. Patient had ER test blood, cat scan, MRI. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient did not have been tested for COVID-19. The outcome of the events was recovering. This case was assessed non-serious by reporter. And the events did not result in death, Life threatening, Caused/prolonged hospitalization, Disabling/Incapacitating, Congenital anomaly/birth defect.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	929175-1	occipital neuralgia; left-side Bells Palsy; bilateral headache; This is a spontaneous report from a contactable physician (patient). A 65-year-old male patient received BNT162b2 (Lot/batch number and Expiration date were not provided), via an unspecified route of administration at right deltoid on 21Dec2020 19:00 at single dose for covid-19 immunization. The patient's medical history included low high density lipoprotein (HDL). There were no concomitant medications. The patient previously took influenza vaccine (longer than 4 weeks ago, and he did not have any reaction), pravastatin for low HDL. Reported 2 days ago (02Jan2021) he developed a bilateral headache. He stated he was asymptomatic until then. He said he now has Bells Palsy on 02Jan2021, clarified he has left-side Bells Palsy. He said it is unknown to him if the bilateral headache and Bells Palsy are related to taking the COVID-19 Vaccine. He stated he started wearing a N95 mask for the past 2 weeks. He said the N95 mask is very tight on the back of his head. He said he believes he is experiencing occipital neuralgia caused by wearing the N95 mask. He said studies show that the N95 mask can cause Bells Palsy, and the N95 mask maybe a confounding factor. He stated he doesn't have any further information on the N95 mask he was using. Initially he had a severe headache and administered to himself a sphenopalatine block of Lidocaine 1% in his nose. He stated being an ER doctor, he knows how to administer the sphenopalatine block to a patient. He went to the ER on 03Jan2021 to make sure he did not have a tumor or a stroke. He said the hospital performed a CT of his head, a MRA, labs, and a COVID-19 test (clarified as a PCR COVID-19 test) with a full viral count. He said all the tests were negative. His wife noticed his Bells Palsy yesterday, 03Jan2021. He said he thinks the Bells Palsy started the night before on 02Jan2021. He said he noticed on the night of 02Jan2021 when he was brushing his teeth, he hit a tooth on that side (clarified as left side) of his mouth with his tooth brush. He hasn't started taking steroids yet, but will be starting steroids real soon. He clarified his doctor prescribed a Medrol dose pack and Valtrex for the Bells Palsy. He stated he has not started the Medrol dose pack and Valtrex. He is ordering Lidocaine 1% viscous for himself, so he can do an internal sphenopalatine block on himself. He does not know if the bilateral headache and Bells Palsy were caused by taking the COVID-19 Vaccine. The events required Emergency Room visit. The outcome of the event Bell's palsy was not recovered, Headache was recovering, Occipital neuralgia was unknown. Information on the Lot/Batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162b2 and the onset of Bell's palsy/Headache might not be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	929178-1	I was having trouble clearing my throat, felt like it was closing up; high heart rate/rapid heart rate again; uncontrollable rigors; numb lips and hands; numb lips and hands; nausea; shortness of breath, difficulty catching my breath; This is a spontaneous report from a contactable Other Health Professional (patient). A 38-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EJ1685, intramuscular in the left arm, on 30Dec2020 09:15 at a single dose for COVID-19 immunization. Medical history included bariatric surgery, had anterior vaginal repair and bladder sling, had her gall bladder and tonsils removed. Concomitant medication included rizatriptan and paracetamol (TYLENOL). The patient had no known allergies but mentioned that she cannot take the NSAIDs eventhough she was not allergic to them. She had no allergies to food or to other products. It was reported that within about 10 minutes of the injection of the vaccine, she had trouble clearing her throat, felt like it was closing up, had uncontrollable rigors, high heart rate, numb lips and hands, and nausea on 30Dec2020 at 09:30 AM. She was discharged from the ED (emergency department), went home and took a nap. Later that evening, she began to have a rapid heart rate again, began to had shortness of breath, difficulty catching her breath and she was admitted to the emergency department again and given more IV medications. The onset of the events was reported to be 30Dec2020 at 09:30 AM with outcome of recovering. As a result of the events, the patient visited that Emergency room/department or urgent care. Treatment received with IV medications (unspecified), breathing treatment, and epinephrine injection. The patient had no covid prior vaccination. She had not had Covid test post vaccination.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events throat tightness, heart rate increased, chills, hypoaesthesia oral, hypoaesthesia, nausea and dyspnoea cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	929182-1	Fainting; This is a spontaneous report from a non-contactable consumer (patient). This consumer reported similar events for 02 patient. This is the 1st of 2 reports. A female patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 23Dec2020 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient experienced fainting on 31Dec2020. The patient went to the emergency department in regards to fainting and was told the fainting couldn't be related to the COVID-19 Vaccine. Then she heard about someone else fainting. Outcome of the event was unknown. No follow-up attempts are possible, information about lot/batch cannot be obtained. No further information is expected; Sender's Comments: Linked Report(s) : US-PFIZER INC-2021006463 same reporter/drug/event, different patient
COVID19 VACCINE (COVID19)	Emergency Room *	929184-1	difficulty breathing/swallowing; difficulty breathing/swallowing; Hives/hives all over including in her mouth; This is a spontaneous report from a contactable consumer (spouse). A 46-year-old female patient (wife) received BNT162B2 (Pfizer-Biontech Covid-19 Vaccine, lot number: EH9899) via unspecified route of administration at arm right on 29Dec2020 at single dose for Covid-19 vaccine. Medical history included ongoing anxiety diagnosed 22 years ago. Concomitant medications were not none. Patient received the vaccine and was one big hive (01Jan2021). She went to the ER on sat and will have to go back. Caller is asking where she should go. patient went through the VAERS report 3 times. She did not have any sides effects. patient is a frontline worker. On 29Dec2020 she got the Covid vaccine. On Sat 02Jan2021 she went the ER with hives all over including in her mouth, stated she had difficulty breathing/swallowing, was given medication to take home and discharged. She was readmitted yesterday 05Jan2020 with worsening symptoms and needed to be given a prednisone nebulizer. they had two ER visits. No Investigation Assessment. patient was not recovered from the event hives/hives all over including in her mouth, the final outcome of other events was unknown.
COVID19 VACCINE (COVID19)	Emergency Room *	929418-1	Swelling of lips & tongue, tightening of throat. Quivering of arms & legs. Tightening of chest. Dizziness lightheaded.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	929427-1	tested positive for COVID-19; tested positive for COVID-19; Headache; feeling unwell; muscle pain; This is a spontaneous report from a contactable nurse reporting on himself. A 61-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) (lot number/expiration date: not provided), via an unspecified route of administration, on 28Dec2020 at 08:15 AM (at the age of 61 years old) as a single dose in the left arm for COVID-19 vaccination. Relevant medical history and concomitant medication were not provided. The patient did not have any known allergies to medications, food, or other products. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 01Jan2021, the patient experienced mild side effects consisting of headache with feeling unwell and muscle pain. The patient reported this happened on 01Jan2021, and 02Jan2021 and on 03Jan2021 and later, the patient did not experience any side effect. Since the vaccination, the patient was tested for COVID-19 on 02Jan2021 with a Nasal Swab Rapid Test and tested positive for COVID-19. The adverse events resulted in Emergency room/department or urgent care visit. The patient did not receive any treatment for these events. The outcome of the events headache with feeling unwell and muscle pain and tested positive for COVID-19 was recovering. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	929494-1	covid 19 test result came up positive; covid 19 test result came up positive; severe left arm pain; This is a spontaneous report from a contactable unspecified Healthcare professional reporting for himself. This 52-year-old male patient received on 20Dec2020 02:30 PM first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EK5730) at single dose intramuscular in the left arm for COVID-19 immunization. No allergies to medications, food, or other products. Medical history was not reported. Prior to vaccination, the patient was not diagnosed with COVID 19. Concomitant medications (all started on an unknown date and received within 2 weeks of vaccination) included buspirone hydrochloride (BUSPIRON), atorvastatin (manufacturer unknown) and acetylsalicylic acid (BABY ASPIRIN). On 21Dec2020, 10 hours after getting vaccine the patient had body aches, cold and severe left arm pain. 4 days after getting vaccine again the patient had cold, body aches and sore throat for couple of days. On 28Dec2020, covid 19 test (nasal swab) result came up positive. The patient went to Emergency room. Outcome was recovered on an unknown date. It was unknown if a treatment was performed.; Sender's Comments: The association between the event lack of effect (COVID 19 nasal swab test result came up positive) with BNT162b2 can not be fully excluded.
COVID19 VACCINE (COVID19)	Emergency Room *	929526-1	Anaphylactic reaction 6 days post vaccine 24Dec2020; I had severe chest tightness; SOB; throat soreness; hoarse voice; mouth swelling; This is a spontaneous report from a contactable physician, the patient. A 34-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EL0140), via an unspecified route of administration in the left arm on 18Dec2020 at 15:30 (at the age of 34-years-old) as a single dose for COVID-19 immunization. Medical history included severe dust mite allergy (based on skin test). Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included cetirizine hydrochloride (MANUFACTURER UNKNOWN), hydrocodone bitartrate/paracetamol (NORCO), ibuprofen (MANUFACTURER UNKNOWN), and ondansetron (ZOFTRAN); all for unspecified indications from unknown dates and unknown if ongoing. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 24Dec2020 at 10:00, 6 days post vaccination, the patient experienced anaphylactic reaction, severe chest tightness, shortness of breath, throat soreness, hoarse voice, and mouth swelling; all reported as life threatening. The events led to an emergency room visit and she was given epinephrine (EPI-PEN), methylprednisolone (SOLUMEDROL), and diphenhydramine hydrochloride (BENADRYL) as treatment. The patient stated that she developed the reactions 45 minutes after she took premedications for a dilatation and curettage procedure. The premedications included ibuprofen, hydrocodone bitartrate/paracetamol, ondansetron. She stated she had taken these medications several times before and this was the first time she had this reaction. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of the anaphylactic reaction, severe chest tightness, shortness of breath, throat soreness, hoarse voice, and mouth swelling were recovered on unknown dates.; Sender's Comments: Anaphylactic reactions presented as chest tightness, shortness of breath, throat soreness, hoarse voice, and mouth swelling, developed 45 minutes after premedications including included ibuprofen, hydrocodone bitartrate/paracetamol, ondansetron for a dilatation and curettage procedure and 6 days post vaccination with BNT162B2, the event therefore is most likely attributed to these premedications unrelated to the vaccine use. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	930005-1	initial; swelling of tongue, tingling and numbness in legs, syncope. later; HA
COVID19 VACCINE (COVID19)	Emergency Room *	930079-1	Swelling of throat and tongue, anaphylaxis, hives, redness, swelling
COVID19 VACCINE (COVID19)	Emergency Room *	930109-1	She began with an earache and dizziness. Pain got so severe that she could no longer take it. Went to the doctor which she was put on pain medications. Went to ER on 1/6 and on 1/7 went to her PCP. Still in severe pain.
COVID19 VACCINE (COVID19)	Emergency Room *	930235-1	Hospital on 1/2 - then again on 1/5, transferred and admitted to hospital, discharged 1/6 Abnormal reflex/weakness back pain paresthesia and weakness of legs abdominal pain evaluation for possible GBS post covid 19 vaccine

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	930297-1	29-year-old previously healthy female presenting today with difficulty sleeping, sore throat, and nausea after receiving the second Pfizer COVID-19 vaccine around 10 AM. Patient says that after her first dose of the vaccine she had mild sore throat and hoarse voice that resolved spontaneously. She had her vaccine around 10, several hours later before coming to the emergency department between 2--230 she had the sudden onset of difficulty speaking with associated sore throat and nausea. She has had dry heaving but no large amounts of vomiting. She has not had stridor, wheezing, shortness of breath, syncope, or the development of a rash or hives. She has not had a reaction to her prior vaccines she does not have any other allergies in general. She has otherwise been well recently without infectious symptoms including fevers, chills, cough, and has not been exposed to Covid to her knowledge. Medications administered in ED included diphenhydramine 50 mg IV once, dexamethasone 10 mg IV once, famotidine 40 mg IV once, ondansetron 4 mg IV once. Had brief episode of shaking and R arm rigidity in the ED. Patient denies LOC during the episode, did not have a post ictal state, no tongue biting or episodes of incontinence. Given single event without LOC, less concern about episode being a seizure. Patient has had no further episodes of shaking since admission. CT brain was wnl, no FNDs noted on exam.
COVID19 VACCINE (COVID19)	Emergency Room *	930476-1	Acute allergic reaction Tongue swelling Facial swelling Throat swelling Rash on throat and chest Redness in throat Diaphoresis Momentary loss of consciousness
COVID19 VACCINE (COVID19)	Emergency Room *	930508-1	Initial itching at injection site, observed and returned to work. Came back ~30-40 minutes later with itchiness in throat and hives to arm. Given Benadryl PO and observed for extended period of time. Symptoms not resolving. Patient transferred to Emergency Department for further care. At that point observed to have full body rash, SOB. Given Epi while in ED. Developed tachycardia, hypotension. Treatment continued.
COVID19 VACCINE (COVID19)	Emergency Room *	930518-1	After about 15 min: hr went to over 170bpm , flushed sensation, brain fog, was driving at the time and my brain wouldn't figure out how to call 911 , eventually I figured it out but it took extreme mental effort. Paramedics came and my pulse was From 100 - 170 changing rapidly, bp 150-175/x changing rapidly, symptoms would come and go about 8 times on way to hospital. In ER same thing then about 2 hrs go by and then all started again. Pulse remained at 90- 100bpm at least until 2am. (My resting hr is between 40 and 50, my normal bp is usually sub 120/80) I later realized my hands were swollen, mostly on my left side. Lingering symptoms include brain fog, tiredness, and headache. Maybe an exasperating issue was I had low potassium levels likely making symptoms worse - I worked out heavily early in the morning, probably had low intake of potassium that day and day before, and maybe slightly dehydrated from my workout - I do Functional lifting, run, and other types of exercise regularly.
COVID19 VACCINE (COVID19)	Emergency Room *	930777-1	Patient presented to the emergency department with sensory loss and loss of reflexes, evaluated by neurology and diagnosed with Guillain- Barre Syndrome thought to be secondary to the Pfizer Covid Vaccine
COVID19 VACCINE (COVID19)	Emergency Room *	931224-1	Pt experienced extreme fatigue and sleepiness the day following her second vaccination for Covid 19 and was found by her family after collapsing on 1/6/21 at 05:30. Upon arousal, she experienced headache, vomiting, weakness, difficulty speaking and difficulty walking with lower extremity weakness. She was taken to urgent care and subsequently admitted for evaluation at hospital and found to have a normal chemistry, blood count, normal lumbar puncture and normal imaging of her neck and brain. Discharge summary notes 3/5 strength and hyporeflexia throughout. Pt had televisit consult with psychiatry and neurology. She is subsequently to be discharged to a Facility without explanation for her sudden onset of progressive lower extremity and vocal weakness. She is noted to have a history of shellfish allergy. She experienced mild symptoms after the first vaccination, but no neurologic or vascular symptoms at that time.
COVID19 VACCINE (COVID19)	Emergency Room *	931399-1	Fever up to 102.9, chills, headache, hypertension, tachycardia, dyspnea.
COVID19 VACCINE (COVID19)	Emergency Room *	931432-1	At around 11:45pm tingling started in my left eyebrow. I thought there was something in my eyebrow and after time of wiping it a few times I went to look into the mirror and realized that nothing was there. about an hour later I got a drink and a snack to eat and I realized I had a numb sensation in the left corner of my lip. As a nurse I went though the signs of a stroke with 2 other nurses I called. Everything was normal other than that sensation. Thinking I was just overly tired I went to bed. When I woke up the next day I felt okay until I went to drink some coffee and the numb sensation in my corner lip was still there. Now I was concerned and called employee health and was instructed to go to the ER to rule out a stroke. I followed employee health's instructions and went to the ER. I was diagnosed with facial paresthesia and discharged with instructions to come back if symptoms got worse. Symptoms persisted all day and around 7 I called my mom on video chat to show a visual facial twitch on the left side of my face. right after I got off the phone with her the left side of my face drooped and my fiance immediately drove me to the closest ER. I was seen immediately and they decided to admit me. The did labs and head CT. They admitted me to labor and delivery because there were no other rooms. The next day I was seen by a neurologist and many doctors.
COVID19 VACCINE (COVID19)	Emergency Room *	931507-1	8 hours after vaccine I experienced stomach pain and nausea. I then became very ill and extremely weak. I was laying on floor. Very difficult to talk and very dizzy. Unable to walk. Called 911 and went to ER. Had chest pressure and cardia work up was done. Dx wi ST elevation.
COVID19 VACCINE (COVID19)	Emergency Room *	931558-1	7 day after site itching, hot swelling. Unsure if related 9 day after suffered CVA and have hyper coagulation
COVID19 VACCINE (COVID19)	Emergency Room *	931662-1	Received vaccine 12/19/2020 at hospital around lunch time. Severe abd pain started 10 hours after vaccine administration with vomiting. I went to emergency room next morning Emergency appendectomy 12/20/2020. Had bleeding after surgery. Second surgery 12/21/2020
COVID19 VACCINE (COVID19)	Emergency Room *	931772-1	Anaphylaxis

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	931774-1	After the vaccine was administered I walked away maybe 50' and I started to feel dizzy I felt light headed and as if I was drunk my legs feel real weak they took me outside so I could catch some fridge fresh air and they set me down on a chair I was very dizzy my legs and my knees felt like I couldn't stand up and they were very weak I kept seeing a the rails double vision and I started to have a tightness in the back of my neck I felt they warrant come over my head and my forehead got very very cold And then I felt as if I was gonna blackout and pass out and I was gasping for air and suddenly my tongue went into a spasm and it went to the top of my the roof of my Roof of my mouth and I couldn't breathe and I was able to send a message for someone to come and help me as I was sitting there by myself they rushed over by now looking at my text message it was for 02 which was within 15 minutes of the vaccine when I had my 1st episode and then minutes after that 3 more came with the same oh unable to swallow I lost the ability to swallow and my tongue fell like I had no control it was just automatically stuck to the roof of my mouth.. Upon the arrival of Ems I was told there was no treatment and there was nothing they could do told me to wait 24 to 48 hours in the symptoms should subside it's been over 72 hours in the symptoms are still occurring. I continue to feel dizzy light headed and now have high blood pressure which was not present before visit ER prescriptions for steroids with issued, I Told to go home and rest. Followed up with family doctor in the morning and was told it was not an allergic anaphylactic reaction probably more so neurologically ransom blood tests waiting for results continue to have loss of control over tounge spasms unable to eat Accompanied by fatigue dizziness and high blood pressure
COVID19 VACCINE (COVID19)	Emergency Room *	931851-1	I am currently breastfeeding my 5-month-old son. I received my first vaccine on 12/28/2020 and directly breastfed within 4 hours of receiving the vaccine. Two days after my vaccine my son was at daycare and had two large diarrhea blowouts and two large emeses followed by a 1-minute episode where he was limp with entire body cyanosis and in-and-out of consciousness. He also had a maculopapular rash on his torso. EMS was called. He was observed in the emergency department for a few hours then recovered well without intervention and did not require hospitalization. EKG was normal. He has continued to be well and back to baseline since the event.
COVID19 VACCINE (COVID19)	Emergency Room *	932059-1	"Dizziness started within 30 minutes after injection on 01/08/21 and felt ""off"". On 01/09/21 approx. 0800 Patient began feeling body aches, fevers, injection site pain, increased dizziness, and nausea. At approximately 1pm patient began vomiting and having diarrhea. Symptoms worsened over the next couple hours to where patient was unable to walk without stumbling. Wife witnessed patient becoming very pale and almost pass out at approx. 5:30pm. Patient states he feels like he's in slow motion. Patient is unable to maintain balance when walking and reports increasing fatigue and weakness."
COVID19 VACCINE (COVID19)	Emergency Room *	932366-1	The patient presented with left eye peripheral visual loss, left upper and lower extremity and facial numbness sensation and weakness. This started 1 hour after receiving COVID-19 vaccine at her place of employment. Pt was brought to CRMC via EMS.
COVID19 VACCINE (COVID19)	Emergency Room *	932372-1	Patient received the Moderna Vaccine 1/2/21 at his VA Clinic. He received the vaccine that morning and by the evening he was not feeling well. He developed cough, weakness and fever and now is unable to ambulate. He has since been hospitalized and has tested positive for COVID-19.
COVID19 VACCINE (COVID19)	Emergency Room *	932383-1	Nausea/Vomiting History of vasovagal episodes; c/o warm feeling and nausea without vomiting. Recovered Narrative: 10 minutes after vaccine admin. c/o/ warmth and nausea. Triageed by the ER nurse and observed for 45 minutes. Discharged in stable condition 133/84, 104, 18
COVID19 VACCINE (COVID19)	Emergency Room *	932515-1	Resident appeared to be jaundice with yellow skin and eyes. Resident also complained of not feeling well. Urine was dark yellow. Resident short of breath. Resident was admitted to hospital and diagnosed with post-covid pneumonia.
COVID19 VACCINE (COVID19)	Emergency Room *	932614-1	Throat closing Pruritic throat and tongue Tingling lips and tongue Throat clearing Hoarse voice
COVID19 VACCINE (COVID19)	Emergency Room *	932623-1	Acute ischemic stroke, basilar occlusion
COVID19 VACCINE (COVID19)	Emergency Room *	932668-1	SOB
COVID19 VACCINE (COVID19)	Emergency Room *	932696-1	Nausea/vomiting and diarrhea loss of appetite tachicardia sent to er for hydration.
COVID19 VACCINE (COVID19)	Emergency Room *	932702-1	I immediately felt dizzy, and there was ringing in my ears, I felt faint. I also felt shakey. I have had these symptoms for 12 days, unchanged. I cannot work because of these symptoms. I have been to urgent care and have had lab work and an EKG
COVID19 VACCINE (COVID19)	Emergency Room *	932801-1	Two days following the first COVID vaccination he developed epigastric pain and was evaluated in the ER and was admitted for gallbladder surgery. He has a 6 year history of gallbladder disease but was not experiencing symptoms until after the COVID vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	932915-1	Severe thrombocytopenia (plts 3k/uL), oral mucosal bleeding, bruising
COVID19 VACCINE (COVID19)	Emergency Room *	933025-1	Sudden, severe worst headache of her life, coupled with onset of oral herpetic lesions and inflammation to unrelated body part (belly button piercing) occurred one week after vaccination received. She presented to ED 12/28 noted to have hypokalemia and head CT showed mild occipital encephalitis, admitted overnight for obs subsequent brain MRI was normal. She was seen in my clinic 2 days later (1/4/21) and was started on 3 day course of Decadron, topical acyclovir for herpetic lesion. As she is a nurse, I kept her off work until resolution of symptoms. Seen again on 1/8/21, headache resolved. She did discuss CT and MRI results with neurologist. He was not convinced this was vaccine related. She is having 2nd dose of vaccine on 1/11/21.
COVID19 VACCINE (COVID19)	Emergency Room *	933142-1	Pain at site of injection, eyes, throat, face swelling. Unclear thinking, hoarse speech, headache, hives, swelling. Intervention taken immediately. Ongoing 11 days: SOB, headaches, nose bleeds, coughing, blood sugars triple, hair falling out, major swelling, dizziness.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	933265-1	generalized itchiness; woke up with headache; feeling fatigued; anaphylactic reaction; right arm started going numb; right arm was tingling; A spontaneous report was received from a 26-year-old, female consumer who received Moderna's COVID-19 vaccine and experienced anaphylactic reaction, right arm numbness and tingling, headache, fatigue, and generalized itchiness. The patient's medical history was not provided. No relevant concomitant medications were reported. On 23 Dec 2020 prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Lot number: OU520A/011520A) intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 23 Dec 2020, within minutes of receiving the vaccine, the patient experienced an anaphylactic reaction and was rushed to the emergency room (ER). When transported to the ER she began to experience throat swelling, redness of arms and chest, trouble breathing with lower chest pain shooting into lungs, and numbness with tingling in her right arm. Treatment for the event included epinephrine, steroids, and diphenhydramine. She was released from the ER on 23 Dec 2020. On 24 Dec 2020 patient awoke with a headache, fatigue, and generalized itchiness. Treatment for the event included ibuprofen and diphenhydramine. Action taken with the second dose of mRNA-1273 in response to the event was not reported. The outcome for the events, anaphylactic reaction, right arm numbness and tingling, were reported as resolved on 23 December 2020. The events of headache, fatigue, and generalized itchiness were considered resolving.; Reporter's Comments: This case concerns a 26-year-old female patient who received their first of two planned doses of mRNA-1273 (Lot OU520A/011520A), and who experienced the unlisted events of anaphylactic reaction, right arm numbness and tingling, and generalized itchiness, and the listed events of headache and fatigue. The events were considered to be possibly related to the vaccine due to the temporal relationship with onset on the day of vaccination.
COVID19 VACCINE (COVID19)	Emergency Room *	933277-1	developed UTI very quickly; Puffy face and eyes; Puffy face and eyes; Burning inside digestive tract; Diarrhea; Dehydrated; arm pain; Headache; At bedtime neck stiffness began and worsened; This is a spontaneous report from a contactable healthcare professional. A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL3246/expiration date unknown), dose number 1, via an unspecified route of administration on 02Jan2021 10:30 at a single dose on the left arm for COVID-19 immunization. The patient had no relevant medical history. Concomitant medications included alprazolam (XANAX). The patient experienced arm pain and headache 4 hours post injection requiring Excedrin. At bedtime, neck stiffness began and worsened. She was treated with lidocaine patches and Aleve. She developed diarrhea 33 hours post injection. She went ER because she was dehydrated. She developed UTI very quickly by hour 35 post injection. She had puffy face and eyes, and burning inside her digestive tract. She was treated with Benedryl at home for allergic reaction, Toradol for pain, IV fluids for dehydration and Keflex for infection. The patient was not diagnosed with COVID-19 prior vaccination and was not tested for COVID-19 since vaccination. The outcome of the events was recovering.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Dehydration cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	933369-1	Anaphylactic reaction
COVID19 VACCINE (COVID19)	Emergency Room *	933739-1	"Staff member checked on her at 3am and patient stated that she felt like she couldn't breathe. 911 was called and taken to the hospital. While in the ambulance, patient coded. Patient was given CPR and ""brought back"". Once at the hospital, patient was placed on a ventilator and efforts were made to contact the guardian for end of life decisions. Two EEGs were given to determine that patient had no brain activity. Guardian, made the decision to end all life saving measures. Patient was taken off the ventilator on 1/9/2021 and passed away at 1:30am on 1/10/2021. The initial indication from the ICU doctor was the patient had a mucus plug that she couldn't clear."
COVID19 VACCINE (COVID19)	Emergency Room *	933755-1	Numbness and tingling bil upper extremities, seizure, temporary paralysis R arm. Started day after vaccine given, was observed overnight in hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	934407-1	1/8/2021 tachycardia Pulse 140, Fever T99.4 then 100.2 Lethargy, Somewhat Altered Mental status

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	934475-1	"Her voice became raspy, she could hardly talk, she could barely talk; her hand and whole arm swelled up; her hand and whole arm swelled up; Trouble breathing; This is a spontaneous report from a contactable healthcare professional (patient). A 57-year-old female patient received the 1st dose of bnt162b2 (BNT162B2, Manufacturer Pfizer-BioNTech) (lot# EK9231, exp date Apr2021), via an unspecified route of administration in the right arm, on 29Dec2020, at single dose, for COVID-19 immunization and diphenhydramine hydrochloride (BENADRYL), via an unspecified route of administration, at unknown posology, on 29Dec2020 (20 minutes prior to taking bnt162b2), for anaphylactic reaction. Medical history included ongoing thyroid disorder. Concomitant medications included apixaban (ELIQUIS), diltiazem (unknown trade name), losartan (unknown manufacturer), rosuvastatin calcium (CRESTOR), levothyroxine (unknown trade name), ongoing levothyroxine sodium (SYNTHROID) for thyroid disorder and metformin (unknown trade name). Previously the patient received unspecified influenza vaccine (reported as flu shot) for immunisation, on unspecified date, and experienced anaphylactic reaction treated with Benadryl. On 29Dec2020, an hour after getting the vaccine, the patient experienced her voice became raspy, she could hardly talk, she could barely talk with outcome of unknown, her hand and whole arm swelled up with outcome of unknown, trouble breathing with outcome of unknown. The reporter stated that her voice and everything reacted and made her go to the emergency room on 29Dec2020. She reported that had adverse effect more than normal. The event ""Her voice became raspy, she could hardly talk, she could barely talk"" caused patient's hospitalization on unknown date. The action taken as a result of the events with diphenhydramine hydrochloride was post-therapy. Therapeutic measures were taken at the emergency room as a result of the events and included treatment with Topcid and Benadryl every 6 hours, 2x 40 mg of steroid. The information on the lot/batch number has been requested. Follow-up (02Jan2021): New information received from the same contactable healthcare professional reporting for herself includes: patient's details, medical history, events updated, vaccine lot# and exp date, concomitant, seriousness of event ""Her voice became raspy, she could hardly talk, she could barely talk"" added as hospitalization, historical vaccine, suspect Benadryl details, therapeutic measures updated.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation between vaccination and onset of events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	934676-1	Chills Hip pain
COVID19 VACCINE (COVID19)	Emergency Room *	934869-1	Patient had a rash prior to COVID vaccine. Prednisone 10mg started on 1/5/21 (only one dose administered) 1/6/21, 1am - Rash worsened with increase redness, warmth and extending of body surface, Temp 100.4, 1/6/21, 1:20am Benadryl 25mg administered, (Keflex was ordered at this time, however never administered). 1/6/21, 3am rash improved, temp 99.1 1/6/21, 6:50am Right facial droop and right sided weakness, sent to ER 1/6/21 transferred to hospital, continues to be hospitalized 1/11/2021
COVID19 VACCINE (COVID19)	Emergency Room *	934877-1	Patient expressed: Pain in the left side of the face and migraine on 25Dec2020, and came to emergency room where apparently they diagnosed facial paralysis; Patient expressed: Pain in the left side of the face and migraine on 25Dec2020, and came to emergency room where apparently they diagnosed facial paralysis; This is a spontaneous report from a contactable nurse. A 42-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number EK5730) intramuscular, on 17Dec2020 04:15, single dose arm left for COVID-19 immunization. Relevant medical history included hypothyroidism, hypertension, hyperlipidemia, obesity, and penicillin allergy. Concomitant medications included levothyroxine sodium (SYNTHROID), butalbital, caffeine, paracetamol (FIORICET 50-40- 325mg), dexamethasone 4mg Inj., diclofenac (VOLTAREN 1% Gel), Magnesium, valsartan (VASOFLEX) (pending confirmation), cyanocobalamin (VITAMIN B12), losartan potassium. The patient was not pregnant and did not received any vaccine in four weeks. The patient previously took cephalosporin and experienced allergy. On 24Dec2020, the patient experienced pain left side of the face and migraine, and came to emergency room where apparently they diagnosed facial paralysis. The events resulted in emergency room visit/ urgent care where the patient was administered dexamethasone 4mg Inj, Medrol dose pack, Vit B12 500mcg, and Fioricet 50-325-40. Facility where the most recent COVID-19 vaccine was administered was in the doctor's office/urgent care. It was unknown if the patient was diagnosed with COVID-19 prior or since the vaccination. The events were assessed by the nurse as non-serious. Outcome of the events was recovering at the time of the report.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation between vaccination and onset of events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	934889-1	HPI narrative: Patient was fine until 2 days ago. Patient does have chronic dementia but got Covid vaccine 11:00 2 days ago and that night seem to be confused and not able to walk since then. Patient poor appetite since yesterday. Patient had diarrhea 3 x 2 days ago. No vomiting no fever no cough does not appear to be short of breath. Patient also with left hip pain for few days with no injury.All history obtained from caretaker at bedside.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	934891-1	Started as a red raised rash under my arms and my waistline; rash turned to hot to touch; raised red large hives all over my body including my face/head; numbness to my hands/feet/chest area; the SOB started; This is a spontaneous report from a contactable nurse, the patient. A 53-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EU9231), via an unspecified route of administration in the left arm on 30Dec2020 at 08:30 as a single dose for COVID-19 immunization. Medical history included hypothyroidism and chronic low back pain. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medications included levothyroxine (MANUFACTURER UNKNOWN), baclofen (MANUFACTURER UNKNOWN), and etodolac (MANUFACTURER UNKNOWN). The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient previously took miconazole nitrate (MONISTAT) on unknown dates for an unknown indication and experienced drug allergy. On 31Dec2020 at 10:00, the patient started with a red raised rash under her arms and waistline and as the day progressed the rash turned hot to touch with raised red large hives all over her body including her face/head. By 23:00 on 31Dec2020, the patient had already taken 3 doses of diphenhydramine (BENADRYL) which was not effective. Then, later on 31Dec2020, shortness of breath started with numbness in the hands/feet/chest area. Her daughter took her to the emergency room. She was started on intravenous diphenhydramine, dexamethasone, and famotidine (PEPCID). The medications took time to work but they did resolve her shortness of breath and the hives subsided to mild redness. She was sent home and given the following medications to take: diphenhydramine 50 mg every 4 hours, methylprednisolone (MEDROL DOSE PAK), cetirizine (ZYRTEC) daily, and famotidine (PEPCID) daily. Since the vaccination, the patient had not been tested for COVID-19. The clinical outcomes of the red rash, rash was hot to touch, shortness of breath, and numbness, were reported as recovered with lasting effects; while that of the hives was recovering as they still flared up if she did not take the medications every 4 hours. The reporter assessed all the events as non-serious.; Sender's Comments: The reported shortness of breath together with red rash was probably related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE together with rash was probably related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), due to temporal relationship and clinical course. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory authorities, Ethics committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	934893-1	Rectal bleeding; Stomach ache; Diarrhea; sick; This is a spontaneous report from a contactable consumer (patient) from a Pfizer sponsored program Pfizer First Connect. A 41-year-old female patient received the first dose of the bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EK5730 and Expiration Date: 31Mar2021), via an unspecified route of administration in the right arm on 20Dec2020 at a single dose for COVID-19 immunization. The patient's medical history was reported as none. There were no concomitant medications. On 01Jan2021, the patient experienced: rectal bleeding, stomachache, diarrhea, sick; all assessed as medically significant. The clinical course was reported as follows: The patient received the first dose of the COVID-19 vaccine on 20Dec2020; as she was at high risk due to working with COVID patients in the hospital. The patient became sick on 01Jan2021. The patient experienced a stomach-ache, diarrhea, and rectal bleeding. When these events occurred, the patient went to the emergency room (ER). A doctor there prescribed the patient the antibiotics metronidazole 500 mg and cefdinir 300 mg. The patient was also scheduled to follow up with a gastrointestinal (GI) doctor. The patient called asking if she should get the second dose since she was taking antibiotics. The patient was scheduled for the second dose on 08Jan2020. The patient reported she had improved. The symptoms, at the time of the report, were not that bad. Therapeutic measures were taken as a result of rectal bleeding, stomachache, diarrhea, and sick. The clinical outcome of the events was recovering.
COVID19 VACCINE (COVID19)	Emergency Room *	934895-1	Numbness lips,mouth; Was feeling bad; leg numbness/numbness in head, face; pain in head; increased BP; blood pressure was up and down; This is a spontaneous report from a contactable consumer (patient). A 55-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL0140) via an unspecified route of administration in left arm on 29Dec2020 6 am at single dose for covid-19 immunisation. Co-suspected drug amoxicillin;clavulanic acid (AUGMENTIN, Batch/lot number: KN4291, Expiry Date: Mar2022) by mouth from Dec2020 to 28Dec2020 at 875mg, 1 tablet twice daily for pain or infection; MOXIFLOXACIN HYDROCHLORIDE (AVELOX, strength:400mg) by mouth from 29Dec2020 and ongoing at 400mg, 1 tablet once daily for infection; fluconazole (DIFLUCAN, strength:200mg) orally (by mouth) from unknown date and ongoing at 200mg, 1 tablet once daily for Infection.The patient's medical history was reported as ongoing high blood pressure, ongoing pains in her fingers and toes and they thought she had an infection from 02Dec2020, white count went down on 09Dec2020, ongoing pain was up and down. No other vaccines given at that time and none given 4 weeks prior. Had a Flu shot back in Oct2020, but no problems. None diagnosed allergies and family medical history relevant to adverse event. The concomitant medications included unspecified blood pressure medication by mouth daily for high blood pressure. She had also started 2 antibiotics around the same time that she received the vaccine. No further details provided Was on antibiotics at the time she was given the Pfizer COVID-19 vaccine. Patient experienced increased BP/ high blood pressure, pain in head, and leg numbness; all started 2 days (on 31Dec2020) after receiving the vaccine and persisted for 48 hours. First her blood pressure was up and they had to get it stable and had numbness in her head, face, and mouth for 48 hours. Her blood pressure was up and down and she has history of blood pressure and takes medicine. Was taken off work for a few hours and went to the emergency department on Fri night about 2am. Her blood pressure was 170/92 on 01Jan2021. Not sure if this was related to the vaccine, but the numbness in her head started from her upper neck to face to the right side of her check and she also had leg numbness. Wanting to know if this was related because she was worried about getting the second dose. Had a hard time for 48 hours. Weight was between 150-155 pounds. Stated everything improved after 48 hours. Her lip was also just a little bit numb, but it is feeling better. Patient was feeling bad from 01Jan2021, all Fri and Sat and much better by Sun. Events of increased BP/ blood pressure up and down, leg numbness, numbness in lips, head, face, mouth with emergency room visiting. Wanted to know if she should have the second dose. The action taken in response to Augmentin was permanently discontinued on 28Dec2020, for Avelox and Diflucan was dose not changed. The outcome of events was recovering.
COVID19 VACCINE (COVID19)	Emergency Room *	934901-1	SEVERE ABDOMINAL PAIN

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	934903-1	Sudden and rapid onset of generalized urticaria accompanied by dyspnea; sudden and rapid onset of generalized urticaria accompanied by dyspnea; This is a spontaneous report from a contactable nurse (patient). A 34-year-old female patient (non-pregnant) received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), intramuscular on 30Dec2020 11:00 at single dose at right arm for covid-19 immunization. Medical history included Grave's dse, psoriasis, bronchial asthma. Concomitant medication in two weeks included propranolol, methimazole, fluticasone furoate, vilanterol trifrenatate (BREQ ELLIPTA), colecalciferol (VITAMIN D). Patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient previously took adalimumab and experienced drug allergies. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, patient has not been tested for COVID-19. 9hrs post-vaccine, patient developed sudden and rapid onset of generalized urticaria accompanied by dyspnea on 30Dec2020 20:00 with outcome of recovered with sequelae. Adverse events resulted in emergency room/department or urgent care. Patient received intramuscular epinephrine, intravenous solumedrol & benadryl, and oral prednisone x5 for events. This report is considered as non-serious.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events urticaria and dyspnoea cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	934906-1	"experienced symptoms of TIA; Severe aphasia; blurred vision; confusion; short term memory loss; elevated blood pressure; This is a spontaneous report from a contactable Other-HCP(Patient). A 57-year-old female patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at right arm, on 22Dec2020 08:15 at single dose for COVID-19 immunization. The patient was not pregnant. Medical history included herpes simplex on lips, post menopause, elevated cholesterol w/lifestyle changes. Known allergies reported as no. Concomitant medication included varicella zoster vaccine rge (cho) (SHINGRIX) for immunization. On 04Jan2021 08:30, the patient experienced symptoms of transient ischaemic attack(TIA), severe aphasia, blurred vision, confusion, short term memory loss, elevated blood pressure. The patient admitted to (Hospital name) (still here, hospitalization days reported as 2). Symptoms resolved except very mild aphasia. The patient had very few risk factors for TIA but did have family history of cardiovascular(CV) disease at young age, low density lipoprotein(LDL) was 192. The patient did not have diabetes, HTN, or known heart disease. She did not have severe anxiety. She did not smoke or use any substances. She walked about five miles 4x a week. Weight reported as 157. Events reported as serious due to hospitalization. The patient had no Covid prior vaccination. Covid(nasal swab) was tested post vaccination on 04Jan2021, Covid test result was Negative. The event resulted in emergency room/department or urgent care. Treatment received for the adverse event included clopidogrel bisulfate(PLAVIX), acetylsalicylic acid (ASPIRIN), statin; potassium, CT, MRI, ""telemet"". The outcome of the events was recovering. Information on the lot/batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported symptoms of transient ischaemic attack(TIA), severe aphasia, blurred vision, confusion, short term memory loss, elevated blood pressure and the administration of BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, Agency, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	934907-1	"two skin procedures performed in his surgeons office the day before- one on his nose and one on his arm; nose was still slightly bleeding; This is a spontaneous report from a contactable consumer(patient). áA 72-year-old male patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 30Dec2020 at single dose for COVID-19 immunization. Medical history included phlebotomy in Sep2020 because his blood was ""too thick"" and he had no history of a clotting problem until the time of the report. The patient's concomitant medications were not reported. He reported having two skin procedures performed in his surgeons office the day before- one on his nose and one on his arm. The surgeon nicked a vein on his arm and it began bleeding again last night. The arm was addressed in the emergency department(ED) and was fine at time of the report. His nose was still slightly bleeding. This morning his blood was drawn for a CT scan and it took a little while to get the bleeding to stop. He had a ""phlebotomy"" in Sep2020 because his blood was ""too thick"" and he had no history of a clotting problem until the time of the report. The patient asked if the Covid vaccine act as an anticoagulant. He had not spoken to this HCP yet. He was not on a blood thinner. The reporter considered that the event was non-serious. The outcome of the event arm bleeding/bleeding was recovered, of event ""nose was still slightly bleeding"" was not recovered. á Information about lot/batch number has been requested."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	934910-1	<p>chest pressure; tightness /pressure in throat; Face red; BP 186/90; within 2 min. of injection had near syncope that would come in waves every 2-3 minutes; Headache; rapid HR; Chills; mild cough; Dizziness; fatigue; This is a spontaneous report from a non-contactable health care professional nurse, the patient. A 53-years-old non-pregnant female patient (nurse) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), in the right arm on 28DEC2020 08:15 as a single dose, for COVID-19 vaccination. Facility where the most recent COVID-19 vaccine was administered was a Hospital. Medical history included asthma and gastroesophageal reflux disease from an unknown date and unknown if ongoing. Known allergies include Tape, Walnuts, and Cat hair. Concomitant medication received within 2 weeks of vaccination included acyclovir [aciclovir] (ACYCLOVIR [ACICLOVIR]), ferrous gluconate, herbal nos, vitamins nos (FLORADIX), lansoprazole (PREVACID), cholecalciferol (VITAMIN D [COLECALCIFEROL]). No other vaccines were given within 4 weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. On 28DEC2020 08:15 within 2 min. of injection had near syncope that would come in waves every 2-3 minutes, face red, chest pressure, tightness /pressure in throat, headache, BP 186/90, rapid HR. The patient Spent 1 hour in ER. Later in day 28Dec2020, continued to have dizziness, chest pressure, chills, headache, fatigue. This continued for 4 days and had mild cough. The adverse events resulted in an emergency room (ER) visit. and Physician Office Visit. Treatment included Xyzal which relieved majority of symptoms. Laboratory test and procedures on 28Dec2020 include Electrocardiogram (EKG) with normal results, Blood Pressure Measurement 186/90 and Heart Rate Rapid. Treatment was given for chest tightness, throat tightness and red face and No treatment was given for chills, cough, dizziness, fatigue, headache, heart rate increase, blood pressure high and near syncope. The clinical outcome of near syncope that would come in waves every 2-3 minutes, face red, chest pressure, tightness /pressure in throat, headache, BP 186/90, rapid HR, dizziness, chest pressure, chills, headache, fatigue, mild cough was recovered. No follow-up attempts are possible. No further information is expected.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported face red, chest pressure, tightness /pressure in throat, blood pressure increased (BP 186/90), near syncope and the administration of BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.</p>
COVID19 VACCINE (COVID19)	Emergency Room *	934912-1	<p>DVT; have pain in same site where DVT is; This is a spontaneous report from a contactable consumer. A 28-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EK9291), via an unspecified route of administration in left deltoid on 24Dec2020 10:00 at first single dose for COVID-19 immunization. Medical history was none. There were no concomitant medications. Caller was calling to report a possible adverse reaction to the Pfizer Covid-19 vaccine. The patient was currently at hospital, she was admitted for deep vein thrombosis (DVT) of left iliac vein, the patient had no past history as to why this would happen, that she is only 28 years old. Received the vaccine on 24Dec2020, the following day she did have pain in same site where DVT was. Took ibuprofen for the pain. The patient was admitted yesterday 04Jan2020 for the DVT, they were currently treating her with Lovenox injections and prescribing dose for discharge is Eliquis. CT scans and three shots of Lovenox for it, doing a doppler of bilateral legs and echocardiogram (echo) of her heart to make sure there is nothing else. The AEs require a visit to emergency room. The patient was asking if she can still get the 2nd dose based off the adverse event she experienced. Outcome of DVT was not recovered, of pain was unknown.</p>
COVID19 VACCINE (COVID19)	Emergency Room *	934920-1	<p>one of those biopsies was bleeding pretty heavy/looked at the incision/The one on his nose is still dripping blood and its coming up on 24 hours now; This is a spontaneous report from a contactable consumer (patient). A 72-year-old male patient received his first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Batch/lot number: E70124), Intramuscular in arm on 30Dec2020 at single dose for COVID-19 vaccination. Medical history included ongoing blood pressure high and he had been treated for that for a number of years, diabetes from 2009 and ongoing, COPD (chronic obstructive pulmonary disease) issues from 2020 and ongoing and his issues began within the last year, ongoing kidney failure and this started occurring within the last 2 or 3 years, had a urostomy done, had bladder cancer and he had had phlebotomy performed around 3-4 months ago in 2020 and he knew his blood was thick at the time. There were no concomitant medications. The patient received the first vaccine on Wednesday, 30Dec2020. He had noticed something. He had a couple of things happen that basically involved a couple of skin biopsies. He had some lab work drawn for a CT scan, and he didn't clot right away on 05Jan2021. Last night 04Jan2021, he went to the emergency room because one of those biopsies was bleeding pretty heavy. He wanted to know if there is any known connection with the COVID vaccine and anti-clogging. He was going to follow up with the surgeon that did the biopsies. He stated its weird. He had had phlebotomy performed around 3-4 months ago in 2020 and he knew his blood was thick at the time. There had been 2 or 3 incidents where he was not clogging up. He clarified they were skin cancer biopsies, which was something diagnosed prior to receiving the vaccine. It was a follow-up because they didn't get it all the first time and they had to go back in. His skin biopsies were done yesterday, 04Jan2021. He verified when he went to the emergency room last night 04Jan2021 he was not admitted into the hospital. It was outpatient and they looked at the incision and put a little clotting tape (or whatever it is) on him and wrapped it up. He hadn't been bleeding. He knew the doctor nicked a vein. There were 2 biopsies done- one was on his nose. The one on his nose was still dripping blood and its coming up on 24 hours now. The blood drawn for the CT scan was drawn early this morning 05Jan2021 around 7:30 AM. The outcome of the event was not resolved.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	934922-1	<p>Followed by neurological symptoms starting day 4; paresthesias of both upper extremity; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; Flu like symptoms first 3 days; This is a spontaneous report from a contactable physician (patient). A 39-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ek5730) at left arm, via an unspecified route of administration on 16Dec2020 at single dose for covid-19 immunisation. Medical history included hypertension, diabetes, migraines, Eosinophilic granulomatosis with polyangiitis (EGPA) remission. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient did not have any allergies to medications, food, or other products. The patient's concomitant medications were not reported. On 21Dec2020, the patient experienced flu like symptoms first 3 days. Followed by neurological symptoms starting day 4, paresthesias of both upper extremity with progression to muscle weakness of all four extremities. Leading to 2 ER visits and hospital admission. Evaluation by internal medicine, neurology and rheumatology. Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop. The events resulted in Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, Hospitalization, Disability or permanent damage. The treatment for events included High dose steroid. Covid test included Nasal Swab: negative on 19Dec2020. The outcome of events was not recovered.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events influenza like illness, neurological symptom, paraesthesia, muscular weakness and peroneal nerve palsy cannot be excluded. The information available in this report is limited. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Emergency Room *	934929-1	<p>rash; All over rash with some itching; This is a spontaneous report from a contactable Nurse reported for self. This 34-year-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 05Jan 2021 12:50 on right arm at single dose (Lot # EK4176, Expiration Date: Mar2021) for covid-19 immunisation. Medical history was not provided. Concomitant medications were none. Past drug history included the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 15Dec2020 16:00 at age of 34 year old at single dose (Lot # EH9899) for covid-19 immunisation. About 30 minutes after being administered (05Jan2021 13:20) that second dose she developed all over rash with some itching. She took Benadryl and Pepcid in response. Today the all over rash with some itching came back at the same persistent level. She wants to know what kind of timeframe she can expect with the continued allergic reaction of all over rash with some itching. She was made to check into the emergency room for observation, but did not have any testing/lab work/investigations done and was not admitted to the hospital. Outcome of the events was not recovered. Reporter seriousness for All over rash with some itching was Medically significant. Drug result was related.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Rash and Itching cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Emergency Room *	934950-1	<p>She is having an allergic reaction; Itching was reported as worsened/Swelling was reported as worsened/loss of appetite was reported as worsened; From the time she got the vaccine to now, she has lost 20 lbs; shake/shaking; swelling in the lips, throat, and eye lids; swelling in the lips, throat, and eye lids; swelling in the lips, throat, and eye lids; She has been sick since Wednesday; itching all over from head to toe; loss of appetite; This is a spontaneous report from a contactable consumer (patient). A 59-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at left arm on 30Dec2020 at single dose for COVID-19 immunization. Medical history included hypertension and allergic to ace inhibitors. There were no concomitant medications. Patient was calling about the Covid Vaccine. She was having an allergic reaction. She did not know what to do to stop it. She went to the ER yesterday (04Jan2021). She had been sick since Wednesday (30Dec2020), she was itching all over from head to toe since 30Dec2020, she got a prescription for Prednisone, she took 2 doses yesterday, 1 dose today, and would take another this evening. She took Benadryl, an hour ago and had an episode, and so she had to jump in the shower and let the cold water run to stop itching, the itching did not stop but it has minimized. She put Benadryl gel and she was still itching, she had taken enough Benadryl. Patient asked what is the best way and if she needed an IV of something, she went to ER on Sunday, she was not seen by doctor, it was a nurse practitioner, she didn't do anything but just listen to her and she only looked at ankles to check for swelling. Patient stated that she had been drinking water and urinating, she had no appetite and lost 20 lbs. Patient confirmed that she got her first dose of the Covid vaccine on 30Dec2020 at 1 o'clock, the itching started the same day at 5 o'clock, the itching was from head to toe. She experienced swelling in the lips, throat, and eye lids, which started 02Jan2021. She began losing her appetite on 30Dec2020. From the time she got the vaccine to now (05Jan2021), she has lost 20 lbs. An hour ago (05Jan2020) she had an episode, which made her shake, and she did not have the shakes before, this was the first date she started shaking. Itching was reported as worsened/Swelling was reported as worsened/loss of appetite was reported as worsened. Her 2nd dose was scheduled in 21 Days. However, she may not get the second dose, patient stated that she could not get through this no more. She had no positive test for Covid prior to vaccine. She had no antibody test prior to the vaccine. She had not any issues with vaccines in the past. Patient stated that if she was still feeling this way, she would go to a different hospital. When she went to the ER, she was not hospitalized, they sent her back home the same day. Patient would like to know if there was anything that can remove the vaccine from the body. The outcome of the events itching all over from head to toe, loss of appetite, swelling in the lips, throat, and eye lids was not recovered, of the other events was unknown. Information about lot/batch number has been requested.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
<p>COVID19 VACCINE (COVID19)</p>	<p>Emergency Room *</p>	<p>934951-1</p>	<p>Acute demyelinating encephalomyelitis; Slurring his speech; Stroke; This is a spontaneous report from a contactable physician. A 35-year-old male patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in deltoid (unknown if right or left) on 17Dec2020 at 30 ug, single for 'Preventative'. Medical history included hypertension. There were no concomitant medications.(Physician) He is calling about the Pfizer Covid 19 vaccine. States what is going on with the patient may be associated as a side effect. The patient got the vaccine two to three weeks ago, he clarifies the patient received the vaccine on 17Dec2020 and the patient ended up acutely developing (states it is a presumptive diagnosis) Acute demyelinating encephalomyelitis, states it looks like a radiologic diagnosis. The patient is an employee at hospital. When querying seriousness states it is medically significant but could be disabling but he thinks the patient will recover. Reporter seriousness for acute demyelinating encephalomyelitis: Medically significant, Hospitalization. Patient was hospitalized on Sunday and he is still admitted at this time. Dates when patient was in hospital for acute demyelinating encephalomyelitis was from 03Jan2021 to ongoing. Caller thinks the patient was flown to (Place) yesterday. The patient's mother asked the caller if the caller thought the acute demyelinating encephalomyelitis was from the vaccine and the caller responded that he did not think it was from the vaccine. He confirms the patient is still admitted in the hospital and the patient's attending neurologist is doctor. The caller heard about the patient from doctor. When querying covid vaccine dose, the caller states the standard dose is 30 mcg. This was clarified and documented as provided. The patient has not received his second dose yet. He asks if the patient should receive the second dose. He asks a general question if a pregnant patient can be given the Pfizer covid vaccine. He heard the patient had a stroke then the CFO tried to talk to him and the patient was slurring his speech. Caller spoke to the patient's mother this morning and caller told the mother that he would try to find out what is going on with the patient. He asked that the patient get an HIV test even though he does not think the patient is at risk. Vaccination facility type was Hospital. Vaccine administered at military facility was No. None additional vaccines administered on same date of the PFIZER suspect. AE acute demyelinating encephalomyelitis require a visit to Emergency Room, not visit to physician office. Prior Vaccinations (within 4 weeks) was none. He has heard of acute demyelinating encephalomyelitis being associated with vaccines in the past and states that it is rare and usually in kids. States he saw patients that may have had acute demyelinating encephalomyelitis back in the 80s and 90s. Therapeutic measures were taken as a result of acute demyelinating encephalomyelitis (Patient will get steroids tonight pending the review of the x-ray). The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The reported stroke with speech slurred, and the presumptive diagnosis of acute demyelinating encephalomyelitis (looks like a radiologic diagnosis by the reporting physician), was most likely an intercurrent disease, and unlikely causally related to the first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE). The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	934961-1	<p>"Swollen lymph nodes; blood pressure was 90/50; Chills; body aches; Fatigue; Joint pain; Bone pain; Headache; Swelling, pain, redness and soreness at the injection site; Swelling, pain, redness and soreness at the injection site; Swelling, pain, redness and soreness at the injection site; Tachycardia / heart rate was 144-152; painful to breath and she was grunting; also said that the injection site itched a little bit. ; Fever; First dose on 17Dec2020, second does on 04Jan2021; This is a spontaneous report from a contactable nurse reporting for herself. A 35-year-old female patient received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number was unknown) intramuscularly on 17Dec2020 at 0.3ml, and the second single dose (lot number EJ1685) intramuscularly on 04Jan2021 07:45 at 0.3ml, for COVID-19 prophylaxis. Medical history included ongoing diabetes. Her diabetes was diagnosed about 6 months ago (reported on 06Jan2021) and was well controlled. Her glucose was at 140 at the ER (emergency room) even after drinking a drink that had sugar in it. The patient's concomitant medications were not reported. The patient received the second dose on 04Jan2021 at 07:45 and experienced a severe reaction hours after she received it, and she ended up having to go the ER and that they were baffled about what happened. She reported her symptoms were: fatigue, joint pain mainly in her knees, bone pain that did not feel like muscle pain, headache, swollen lymph nodes in the left axilla, and swelling, redness, pain, and soreness in the left arm at the injection site and also said that the injection site itched a little bit. Her symptoms started about 9-10 at night on 04Jan2021. She said that she felt like with the second dose she noticed the soreness and pain and redness at injection site after about 2 hours after receiving the second dose, which was sooner than with the first injection. The fever started with the chills and body aches. The chills and body aches started at 22:00 on 04Jan2021. She took acetaminophen and melatonin to try and sleep it off. Fever was after that at around midnight 04Jan2021 and she was burning in fever and her temperature was 104. She stated she started taking layers off and got out from under her covers. She had a sweater on when she took her temperature and her axillary temperature was 105. She said that she got into a hot shower because that was the only thing that provided comfort to her chills. She had not had any chills in about the last 12 hours though (as reported on 06Jan2021). She said that the body aches were so severe that she just sat in her bed and cried. She had tachycardia and she was grunting in pain. She was rotating ibuprofen and acetaminophen and then her fever was not as high. She stated that if her fever came back it was lower each time, and if she did not take the medications though, the bone pain was excruciating. She said that with the bone pain it was like no-one can hold her hand or hug her. Fatigue started at around midnight 04Jan2021. Her headache was at midnight. She felt like she had a headband on and was radiating down the back of her neck. She noticed the lymph nodes were swollen after she went to the ER at around 07:00-08:00 05Jan2021. She was walking with pillow under her arm, and if she moved or lifted her arm it hurt. She went to the ER at 01:00 05Jan2021. Her blood pressure was 90/50, her heart rate was 144-152 at rest, temperature was 102.8, O2 saturation was 95-96. She said that it was painful to breath and she was grunting, but did not have any breathing issues. The nurse thought she was septic and notified the doctor. The nurse and the doctor did not think it was the vaccine and thought that she was COVID-19 positive. But after they tested her, she was negative for flu and COVID and they were baffled. They were unclear on what happened and did not think it was from the vaccine. They bolused her 1 liter of Normal Saline and gave her a dose of Fentanyl that minimally helped with the bone pain. She was also given 30mg of ketorolac (TORADOL) IV (intravenous) and that significantly improved her pain. She was there a total of 3 hours. She was admitted to the back area of the ER. She said that they drew labs and everything was within normal limits. Her CRP (C-reactive protein) was 30 and her lactate was at 1.5. She said that they told her that she was most likely having an immune response to the vaccine. Her heart rate and blood pressure came to a more normal range and everything returned to baseline. Her heart rate was 109. She was told to rotate paracetamol (TYLENOL) and ibuprofen for at least the next 24 hours and hydrate. The events fever, chills, fatigue, joint pain, bone pain, headache, swollen lymph nodes, and swelling, pain, redness and soreness at the injection site were serious due to hospitalization from 05Jan2021 to 05Jan2021. The patient was recovering from fever, chills, joint pain, headache, heart rate and blood pressure, not recovered from fatigue, bone pain, swollen lymph nodes and swelling, pain, redness and soreness at the injection site. The event swollen lymph nodes worsened. The outcome of ""injection site itched a little bit"" was unknown. The reporter considered the events fever, chills, fatigue, joint pain, bone pain, headache, swollen lymph nodes, and swelling, pain, redness and soreness at the injection site were all related to the vaccine; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events pyrexia, chills, fatigue, pain, arthralgia, bone pain, headache, lymphadenopathy, vaccination site erythema, vaccination site swelling, vaccination site pain, blood pressure decreased, tachycardia, grunting and vaccination site pruritus cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate."</p>
COVID19 VACCINE (COVID19)	Emergency Room *	934965-1	<p>"The lip starting ripping and the face started itching; The lip starting ripping and the face started itching; It started spreading from the ear to the neck, it started itching bad and getting hive in that area; having trouble in breathing because it was swelling up; having trouble in breathing because it was swelling up; The lip was swelled to red and then it started to going up the jaw; The lip was swelled to red and then it started to going up the jaw; This is a spontaneous report from a contactable consumer (patient). A 64-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot#: EJ1686, expiration date: Mar2021) via an unspecified route of administration on the arm right in Dec2020 at single dose for COVID-19 immunisation. Medical history included ongoing blood pressure high. Concomitant medication included lisinopril taken for blood pressure high. The patient had the BNT162B2 on Thursday morning (Dec2020) and Thursday evening the patient had a reaction to that, the lip was swelled to red and then it started to going up the jaw. So the next day it was in the jaw and in the lip and then the lip starting ripping and the face started itching and that's didn't go away and then yesterday it started spreading from the ear to the neck, it started itching bad and getting hive in that area. The patient went to the emergency room, consumer stated that she had nurse practitioner that called her on a steroid (treatment). The consumer stated, ""the thing she called her also in an Epi Pen in case she has started having trouble in breathing because it was swelling up. The patient didn't have to end up using that but she just has to use in case she has"". Treatment was received for the events. The outcome of the events was unknown."</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	934969-1	Acute appendicitis; Severe acute abdominal pain; Chills; Fever; This is a spontaneous report from a contactable Nurse (patient). A 42-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (expiration date Mar2021, incomplete lot number L0140, not sure the first letter it is C or E), via an unspecified route of administration on 23Dec2020 at single dose for covid-19 immunization. None medical history. Concomitant medication included escitalopram oxalate (LEXAPRO). The patient experienced a little bit chills and fever she felt coming exactly on the 26th but she expected that and that was all fine but patient ended up in (Incomplete sentence). She went to work on 30th December and had some onset of severe acute abdominal pain and she ended up in an emergency appendectomy by 6 O'clock that evening. So she had an acute appendicitis and she did some research and it says that she can be listed in to the severe complications that the number in the vaccinated group was double back to the procedural group. The 26th it resided and patient felt better until the 30th when she have acute severe abdominal pain onset. She left work went for emergency room and she was in surgery within four hours. The outcome of events chills and fever was recovering, the other events was unknown. Because of the research that is on the website patient cannot help and think that it is related. Patient believed the relatedness of drug to events was related. Information about lot/batch number has been requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate
COVID19 VACCINE (COVID19)	Emergency Room *	935090-1	SOB, Sleeplessness,
COVID19 VACCINE (COVID19)	Emergency Room *	935180-1	Scratchy throat, dizziness and eventually feeling like her throat is closing in
COVID19 VACCINE (COVID19)	Emergency Room *	935266-1	"Patient presents with abdominal pain that started in the middle of the night. Had first COVID vaccine the previous day. Patient states the pain is intermittent ""comes and goes"" ""cramping"" ""pressure and bloating"" feeling. Patient states her normal bowel movements are 12 times per day. The last time she went was this morning. She is concerned about an ""obstruction"" Patient states she has ""some nausea"" She states she has ate and drank normally today. Patient has a history of ulcerative colitis and a complete colectomy with a ileal rectal pouch. She has had abdominal pain since this morning which is crampy, associated with nausea and recurrent vomiting. She normally has 6-12 bowel movements a day, but none since this morning. She does feel her abdomen is distended as well. The last time she had anything like this was when she developed pouchitis last spring, but that was much less painful than this. Her appendix is gone, but she believes she still has her gallbladder."
COVID19 VACCINE (COVID19)	Emergency Room *	935338-1	"Patient reported stroke-like symptoms as he was driving to work: started ""feeling funny"" with dizziness; progressed to feeling weakness in left side of face with facial drooping; tingling in left hand progressed to numbness and weakness in left arm and leg; difficulty coordinating motor movement in right arm; difficulty/diminished speech ""tongue felt fat."" Symptoms resolved within appx 1+ hour from onset. Per patient, he was given an injection at the hospital (unsure for what?) and was discharged with a prescription for chlorthalidone 25mg daily, blood pressure was elevated."
COVID19 VACCINE (COVID19)	Emergency Room *	935350-1	Patient was found unresponsive at home with SpO2 20% 1/2/2021
COVID19 VACCINE (COVID19)	Emergency Room *	935478-1	right after vaccine was given i got a head to toe hot flush. i thought it was just anxiety. within 2 minutes i had explosive diarrhea, felt dizzy. looked in the mirror and saw my neck and chest covered in red rash and hives. felt hot flush again. dr came in noticed hives all over both my arms as well. felt sob and if someone was holding my neck with their hand. given benadryl and epi taken to local er.
COVID19 VACCINE (COVID19)	Emergency Room *	935552-1	In the first 2 days (probably a couple of hours after the shot) I felt achiness, and it got worse body pains, joint pains and fatigue. Almost a week after I started getting sick, aches, sore throat, headache and fever (101.5F) that is when I went to the ED and it lasted about 2 days and then it went away. At the ED they did COVID and strep tests both negative. This was with my first dose and my second one the same thing happened.
COVID19 VACCINE (COVID19)	Emergency Room *	935780-1	Extremely tired went to bed at 8:30. At 11:00, tossed and turned until 12:16 a.m. Did not think she could stand up. Walked in the bathroom had pain in stomach, was very hot and freezing at the same time, was shaking. Head hurt was hurting so bad. Tried standing up from toilet, was passed out. Eye, half of face is bruised and swollen, eye shut for two days. More than forty minutes passed before she could call her husband. Does not remember anything because she was passed out. Husband came in and grabbed her, to get her back into bed. she could not stand. Went to ER at Hospital. Had CT scan, blood work, EKG, chest xray. Was still kind of out of it but was able to communicate with nurses. Face is still black and blue. Last night got up at 4:00 a.m. something was wrong with her throat. Felt like a walnut was in her throat. Went to doctor this morning. They said it was a reaction from the shot. Got an EpiPen, prednisone. Call them in 2 days to let them know how she's doing and also wear a heart monitor because they do not know how to take care of her, Has had vision blurriness in both eyes. Has not felt well at all.
COVID19 VACCINE (COVID19)	Emergency Room *	935939-1	Metallic taste in the back of throat between 15-20 minutes post vaccination, noticeable swallowing and throat irritation at 20-25 minutes post vaccination, tongue and lip numbness and throat tightness at 25-30 minutes, dry hacking cough at 30 minutes. Treated in the ED approximately 1 hour post vaccination, at time of arrival in respiratory distress with subcostal retractions, coughing, speaking 1-2 word sentences, with tachycardia and tachypnea. Treated with IM epinephrine, IV solumedrol and IV Benadryl and IV Benadryl with marked improvement in symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	935984-1	About 15 minutes after vaccine, hr 155, fever 102, covered in hives, sick to her stomach and a pounding headache. Has had headache since then and been extremely fatigue.
COVID19 VACCINE (COVID19)	Emergency Room *	936011-1	Anaphylaxis within 5 minutes of dose given. Tachycardia 130-140s, hot body temperature, trouble swallowing, lightheaded/dizzy, ekg changes, feeling like I was going to pass out even when in bed. IV fluids, benedryl, solumedrol, famotadine and IM epi given.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	936026-1	Trouble swallowing, tingling around the mouth within 5 minutes of vaccine administration. IV started with 25mg Benadryl within 5 minutes of symptom onset. Transfer to ER at 1430. Symptoms unresolved, hr - 120, bp 140/100, O2 sats 100, resp: 21 Additional 25mg Benadryl, 125mg solumedrol, 1ml Ativan given IV at 1435. Symptoms began to resolve, patient discharged at 1600 to home with instructions to return if needed. Patient returned to ER Sunday January 10 at 1300 complaining of throat tightness. Patient was seen by doctor, no acute distress and airway issues seen. Patient elected to stay for 50mg benadryl and 40mg prednisone PO. Patient was discharged to home with script for 40mg prednisone q day for 3 days. Patient feels any remaining allergic symptoms have resolved.
COVID19 VACCINE (COVID19)	Emergency Room *	936151-1	One week after administration, I had sudden onset inability to move left arm. I was transported to ER immediately. Treated, scanned with CT of brain, MRI of brain, c-spine and brachioplexus. In hospital for 2 days and no answers. Still no answers to left arm paresthesia and proprioceptor deficits. Spreading into left leg and mild systemic symptoms. I have been to the ER, seen by primary physician, Physiatrist and Neurology and Occupational Therapy. I am scheduled for many more appointments and trying to find and answer.
COVID19 VACCINE (COVID19)	Emergency Room *	936217-1	Patient complained of itching starting on her legs, which went upwards; Redness on her arms, neck, face; Redness on her arms, neck, face; Itching up to her scalp; Dry cough; Rash; This is a spontaneous report from a contactable nurse (patient). A 44-year-old non-pregnant female patient received the first dose of BNT162B2 (Pfizer-Biontech Covid-19 Vaccine) at single dose, in the left arm, on 26Dec2020, at 09:00 AM, for COVID-19 immunisation. COVID-19 vaccine was administered at hospital. The patient had not received any other vaccines within 4 weeks prior to the BNT162B2 vaccine. Relevant medical history included asthma, hypertension, hypothyroidism, penicillin allergy, food allergy (melon and pineapple) and latex allergy. Concomitant medications, received within 2 weeks of vaccination, included omalizumab (XOLAIR), levothyroxine sodium (LEVOXYL), levocetirizine dihydrochloride (XYZAL), losartan and formoterol fumarate, mometasone furoate (DULERA). After covid vaccination, the patient was advised to stay 30 minutes for observation. On 26Dec2020 at 09:15, less than 15 minutes later, the patient complained of itching starting on her legs, which went upwards. The patient took 25 mg oral diphenhydramine hydrochloride (BENADRYL). She noted to have redness on her arms, neck, face, itching up to her scalp. By then she started to have a dry cough, removed her mask, nurse who was with her called for a rapid response team. Patient's epi pen was used, they then started IV and pushed emergency meds and transported to ED. Emergency room/department or urgent care was required. Another dose of epinephrine IM and additional meds were given. Placed on oxygen via non-rebreather with albuterol. Epinephrine drip started. Stabilized after 3 hours, stayed in observation for 12 hours then discharged to home. Around the clock 50 mg diphenhydramine hydrochloride (BENADRYL) at home x 2 days, then levocetirizine (ZYXAL) thrice daily x 7 days to control itching and redness/rash. Other treatment included steroids, pepcid. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient has been tested for COVID-19 (PCR, Nasal Swab) on 26Dec2020 and the result was negative. Clinical outcome of the adverse events was recovering at time of this report. Information on the lot/batch number has been requested.; Sender's Comments: Based on a close temporal association, a causal relationship between reported events and BNT162B2 vaccine cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	936266-1	received the vaccine on December 17th and tested positive for Covid on December 27th/COVID PCR (polymerase chain reaction) test: positive on 28Dec2020; received the vaccine on December 17th and tested positive for Covid on December 27th/COVID PCR (polymerase chain reaction) test: positive on 28Dec2020; This is a spontaneous report from a Pfizer sponsored program Pfizer First Connect. A contactable nurse (patient) reported that a 65-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), via an unspecified route of administration on 17Dec2020 11:00 in left deltoid at single dose for covid-19 immunization. Medical history included thyroid cancer from an unknown date and unknown if ongoing, bilateral thyroidectomy in 2014. Family Medical History: Father died of lung cancer. Mother died of cardiac arrest in 1972. Concomitant medication included levothyroxine sodium (SYNTHROID) for bilateral thyroidectomy. The patient received the vaccine on 17Dec2020 and tested positive for covid on 27Dec2020. The adverse events resulted in emergency room visit. The patient underwent lab tests and procedures which included tested positive for COVID on 27Dec2020, COVID PCR (polymerase chain reaction) test: positive on 28Dec2020. Vaccination facility type was hospital. No additional vaccines administered on same date of Pfizer suspect. Received COVID Vaccine on 17Dec2020. Tested positive for COVID in emergency room on 27Dec2020. Tested positive on a COVID PCR test on 28Dec2020. Prior vaccinations within 4 weeks was none. Caller received the first dose of the COVID Vaccine. Tested positive for COVID on 27Dec2020. Is about to get the second dose of COVID Vaccine and would like to know if she should proceed or wait. Since quarantine, she has had no fever. Is slightly short of breath and has a headache. Works in COVID units in a hospital. Wants to make sure she can receive the second dose. Stated she had no adverse reaction to the COVID Vaccine unless an adverse reaction can occur two weeks after. Is attributing the shortness of breath and headache to testing positive for COVID. Shortness of breath and headache only occurred after testing positive for COVID. Reason she went to the hospital is because she lost her sense of smell. She got tested and was positive for COVID. Lost sense of smell, went to Emergency Room, and notified doctor of positive test the following day, 28Dec2020. Clarified she just went to the emergency department to get tested for COVID and then went home. Was called with positive results in an hour. Caller wanted to know when she should proceed with getting her second dose of Covid vaccine. She is supposed to receive her second dose tomorrow. She thought she was going to take second dose when I completely recovered. Caller asked if she waited until the 13th to receive second dose of Covid vaccine, would it be effective. She would feel more comfortable doing that. The outcome of events was unknown.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported COVID-19 based on the known safety profile. However the short duration of 9 days since the vaccine first dose is given it is unlikely patient would have fully developed immunity.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	936379-1	chest tightness; palpitations; elevated heart rate; fatigue; This is a spontaneous report from a contactable Other HCP. A 37-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 31Dec2020 at single dose for covid-19 immunisation. Medical history included Dermatographia. The patient is allergic to Penicillin, lactose, Cephalosporins and Beepen-VK. There were no concomitant medications. Seventy two hours after the vaccine was given the patient had an elevated heart rate, chest tightness and fatigue. Are this consistent with the vaccine. She does not have a history of elevated heart rate or palpitations. She checked her heart rate with her Apple watch and sent in a strip to the doctor. The doctor is concerned and is asking if this is related. She went to the ER to make sure she was ok but was not admitted. Outcome of event heart rate increased as recovered on 05Jan2021, of fatigue was not recovered, of others was recovering. Information about Lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of elevated heart rate, chest tightness, palpitations and fatigue due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including 12-lead EKG, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	936392-1	Angioedema; Tongue numb observer notified about 10 minutes after vaccine, then tongue and Lower lips numb; tachycardia with throat tightness; tachycardia with throat tightness.; This is a spontaneous report from a contactable nurse (patient). The 37-years-old female patient received first dose of bnt162b2 (BNT162B2, Lot number: EK9231), unknown on 05Jan2021 07:45 at SINGLE DOSE on left arm for COVID-19 immunisation. The patient is not pregnant. No covid tested post vaccination. Medical history included Idiopathic angioedema, HTN, PCOS, Allergies to medications, food, or other products: Latex, penicillin, coconut. Upon vaccination, the patient was diagnosed with COVID-19. Concomitant medication included spironolactone (ALDACTONE), fexofenadine hydrochloride (ALLEGRA), hydrochlorothiazide, amlodipine besilate (NORVASC). The patient did not take other vaccine in four weeks. The patient experienced Angioedema event occurred approximately 18 hrs later with repeat of treatment in ER on 06Jan2021, tongue numb observer notified about 10 minutes after vaccine, then tongue and lower lips numb on 05Jan2021 08:00, taken to ER became tachycardia with throat tightness on 05Jan2021 08:00. EPIPEN administered, benadryl and prednisone (steroids), and famotidine administered along with a saline bolus. The outcome of the events was recovered. No follow-up attempts are needed.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the angioedema and other reported events due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including complement levels, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	936417-1	Left Bell's palsy/left side of face, inability to raise left eyebrow; numbness and paresthesia of tongue; numbness and paresthesia of tongue; pain in left upper arm between elbow and shoulder; tachycardia; elevated blood pressure; This is a spontaneous report from a contactable physician. A 35-year-old female patient (not pregnant at the time of vaccination) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), intramuscular at arm left on 31Dec2020 at single dose for covid-19 immunization. The vaccine was administered at other (as reported). Medical history included asthma (Allergy induced asthma). Concomitant medication within 2 weeks of vaccination included cetirizine hydrochloride (ZYRTEC) from Dec2020 at 10mg daily. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 31Dec2020, the patient experienced Left Bell's palsy, numbness and paresthesia of tongue, left side of face, inability to raise left eyebrow, pain in left upper arm between elbow and shoulder, tachycardia, elevated blood pressure. The adverse events result in emergency room/department or urgent care. The patient received treatment for the adverse events which included Prednisone 20mg daily, Valacyclovir 1000mg twice a day. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of events was not recovered.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the Bell's palsy and other reported events due to temporal relationship. However, the Bell's palsy may possibly represent a concurrent medical condition. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including viral serologies, and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	936612-1	anaphylaxis; throat tightening; throat tightening/tingling; throat tightening/tingling/soreness; dry wheezy cough a little dizziness; dizziness; tachycardia; Itching; chills; numb R foot; Low grade temp; h/a today; This is a spontaneous report from a contactable Nurse (patient). A 51-years-old female patient (no pregnant) started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number el3248), via an unspecified route of administration on 06Jan2021 11:00 at the first single dose at left arm for covid-19 immunisation. Medical history included supraventricular tachycardia, adrenal insufficiency, hypothyroidism, attention deficit hyperactivity disorder, hypermobility syndrome, developmental hip. Concomitant medication included hydrocortisone, trazodone, levothyroxine sodium (LEVOTHROID), bupropion hydrochloride (WELLBUTRIN). The patient previously took erythromycin, morphine and experienced drug hypersensitivity. The patient experienced anaphylaxis, throat tightening/tingling/soreness, dry wheezy cough a little dizziness and tachycardia. Itching, numb R foot, Low grade temp and chills and headache on 06Jan2021 11:15. Seriousness criteria reported as life threatening. Taken to ER had IV benadryl, solumedrol, pepcid for anaphylaxis. Placed on O2 and given albuterol nebulizer. Had IV fluid bolus. Now on benadryl and 5 days of prednisone. The patient felt completely fine prior to vaccine. The patient underwent lab tests and procedures which included sars-cov-2 test: negative on 06Jan2021. The outcome of events was recovering. No other vaccine in four weeks; No covid prior vaccination.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis presented as throat tightening/tingling/soreness, dry wheezy cough a little dizziness and tachycardia. Itching, numb R foot, Low grade temp and chills and headache cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The underlying predisposing condition of drug allergies may put the patient at high risk of anaphylactic reactions. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	936666-1	Anaphylactic reaction; Flushed; Diaphoretic; redness and rash; hives on chest; Tachycardia; shortness of breath; Chest tightness; Dizziness; Headache; This is a spontaneous report from a contactable nurse, the patient. A 47-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EL1283), via an unspecified route of administration on 08Jan2021 at 08:49 (at the age of 47-years-old) as a single dose for COVID-19 immunization. There were no known medical history or concomitant medications. The patient previously received the first dose of BNT162B2 on 18Dec2020 (Lot Number: EK5730) for COVID-19 immunization and experienced nausea, headache, and fatigue. On 08Jan2021, about 5-10 minutes after the second dose, the patient experienced anaphylactic reaction, flushed, diaphoretic, redness and rash, hives on chest, tachycardia, shortness of breath, and chest tightness, reported as life-threatening. She reported that these events occurred within less than 10 minutes of receiving the vaccine. She went to the emergency room and was treated with methylprednisolone (SOLUMEDROL), diphenhydramine hydrochloride (BENADRYL), famotidine (PEPCID), and epinephrine (MANUFACTURER UNKNOWN). She was sent home and prescribed methylprednisolone and epinephrine (EPI-PEN). Later on 08Jan2021, she experienced dizziness and headache, which were consistent. She stated she would most likely take ibuprofen (MOTRIN) as treatment (not specified if taken). The clinical outcomes of the flushed, diaphoretic, redness and rash, hives on chest, tachycardia, shortness of breath, and chest tightness were recovered on 08Jan2021; while the outcomes of the dizziness and headache were not recovered and that of the anaphylaxis was reported as recovering.; Sender's Comments: The reported information is limited. Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	936715-1	Approx 10-15 post vaccine, employee said she felt lightheaded and like her heart was racing. Within 10 minutes she said she felt difficulty breathing, She then vomited. The observation nurse at the clinic administered Epi Pen and called a Code. The employee was transported to the Emergency Dep't and then to intensive care. She was placed on an Epi drip.
COVID19 VACCINE (COVID19)	Emergency Room *	936738-1	loss of consciousness Narrative: Patient received COVID-19 vaccine dose #1 on 1/6/21 w/o complications. Per 1/6/21- 1/9/21 nursing notes, patient did not experience any injection site reactions, denied pain or tenderness at injection site, no dizziness, no n/v, remained afebrile. Around 1/9/21 @1810, patient became acutely nonresponsive after being helped to the edge of bed. Per nurses, he was previously awake/alert, talking and asymptomatic. Patient is DNR/DNI but facility rapid response emergency team called d/t patient's sudden change of condition. Emergency team helped patient into lying position. Per 1/9/21 ICU emergency team note, patient appeared comfortable w/ no palpable radial pulse and had minimal shallow agonal breathing. Pulse ox 94%, HR in 60s per machine. BP unmeasurably low by BP cuffx3. Resident passed at 18:20 pm.
COVID19 VACCINE (COVID19)	Emergency Room *	936993-1	Patient began experiencing fevers, body aches, back pain, fatigue, chills the night she received the vaccine. Symptoms progressed for the following four days when she was ultimately seen in PCP office. Laboratory evaluation demonstrated atypical pneumonia and elevated WBC count. Patient was diagnosed with Acute Myeloid Leukemia via bone marrow biopsy and is receiving treatment at the hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	937053-1	Reported feeling faint and nauseated during observation period. Placed on cart in trendelenberg
COVID19 VACCINE (COVID19)	Emergency Room *	937089-1	Within 24 hrs, developed headaches, burning sensation down spine and neck. fullness in head intensified next day. balance was off, numbness and tingling throughout body. Went to ER. Diagnosed Paresthesia
COVID19 VACCINE (COVID19)	Emergency Room *	937480-1	"In the early morning of Monday, January 11th the patient developed a significant headache with neck pain. She also reported parathesia and tingling in bilateral upper extremities with weakness of the right upper extremity. She reported feeling very anxious and ""wound up"". Patient presented to the Emergency Department 3 hours later. CT of the head/brain, EKG, CBC,CMP, Magnesium and Cardiac profile were performed with no significant findings. Ativan 0.5mg was administered orally. Patient was admitted to the facility for observation. Symptoms gradually resolved with no additional treatment."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	937579-1	On 12/31/2020, at approximately 00:15, pt developed a fever of 102.9 F and tachycardia with rate of 120. He was treated with acetaminophen. Later in the morning, he complained of nausea, generalized muscle aches, intermittent increase in confusion. At approximately 14:00, he had a fall out of bed and at that time noted to be short of breath, tachypneic. He was taken via ambulance to Emergency Department. From there he was transferred to Hospital for admission with acute respiratory distress, suspected sepsis with lactic acid 7.4 and Bilateral Pulmonary Emboli. He was started on heparin and broad spectrum antibiotics and transitioned to ELIQUIS on 1/3/2021. Infectious etiology of sepsis was unclear. He continued broad spectrum antibiotics with clinical improvement. Abdominal CT scan was obtained due to intermittent nausea, vomiting, abdominal pain, loose stools. His heart rhythm flipped to Atrial Fibrillation with RVR on 1/2 and his rate improved with titration of metoprolol. He was also treated with prednisone for suspected underlying undiagnosed COPD. It is noted in his hospital summary that PEs presumed provoked in the setting of his recent COVID 19 infection. He was discharged from the hospital on 1/8/2021 and readmitted to the Veterans Home. He has been stable.
COVID19 VACCINE (COVID19)	Emergency Room *	937773-1	Patient was sent to the ED due to significant hematuria. He was afebrile.
COVID19 VACCINE (COVID19)	Emergency Room *	938049-1	Rash on neck; gall bladder attack; This is a spontaneous report from a contactable nurse (patient). A 34-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK5730), via an unspecified route of administration at the left arm on 18Dec2020 10:30 at a single dose for COVID-19 immunization in the hospital, and morphine sulfate (manufacturer unknown), via an unspecified route of administration from an unspecified date at unspecified dose and frequency for an unspecified indication. Medical history included S/P rouxen-y gastric bypass, sleep apnea, cholelithiasis, HSV-2, obesity, and Hashimoto hypothyroid disease. The patient was not pregnant at the time of vaccination. Concomitant medications included ursodiol, valacyclovir, levothyroxine sodium (LEVOTH) and vitamins. The patient previously took morphine and experienced allergies. The patient did not receive any other vaccine within 4 weeks prior to the vaccine. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient experienced Rash on neck, morphine reaction and May or may not be related - gall bladder attack on 18Dec2020 14:30. The events resulted in Doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. The patient was administered with NS bolus, diphenhydramine (BENADRYL) and also morphine in response to the events. Since the vaccination, the patient had been tested for COVID-19 via Nasal Swab/COVID-19 rapid ABBT which was negative on 18Dec2020. The action taken in response to the events for morphine sulfate was unknown. The outcome of the events was recovered with sequel. The patient assessed the events as non-serious. Pfizer is a marketing authorization holder of morphine sulfate in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of morphine sulfate has submitted the same report to the regulatory authorities.; Sender's Comments: The information currently provided is too limited to make a meaningful medical assessment hence, the events are conservatively assessed as related to the suspect drug BNT162B2 until further information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	938051-1	blood pressure increased and her pulse; blood pressure increased and her pulse; Chest pain; Numb fingers and later numb face; Mind fog; This is a spontaneous report from a contactable other HCP. This 37-year-old female other HCP (patient) reported that she received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: 1685), via intramuscular at left arm on 02Jan2021 08:15 AM at single dose for COVID-19 immunization. Facility type of vaccine was pharmacy or drug store. Medical history included panic disorder (last attack 2 years prior) and known allergies: latex, Iodine dye. Concomitant medications were not reported. No other vaccine in four weeks. No covid prior vaccination. No covid tested post vaccination. On 02Jan2021 08:15 AM, within a few minutes while still under observation at pharmacy, her blood pressure increased and her pulse. Numb fingers and later numb face. Chest pain presented. She went to ER (emergency room) 3hours later with ongoing symptoms that never resolved until 6 or 7 that evening while still in ER waiting room. Mind fog (02Jan2021 08:15 AM) was currently ongoing. The treatment for events included lorazepam (ADIVAN), diphenhydramine (BENADRYL), ibuprofen. Outcome of event mind fog was not recovered, and the rest of events was recovered/resolved with sequel.; Sender's Comments: Based on the compatible temporal association, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	938057-1	Dizziness; palpitations; resting tachycardia that persisted for 3 days; muscles aches; Chills; Restlessness; feeling unwell; arm pain; This is a spontaneous report from a contactable physician reported for herself. This 37-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: Ek5730) via intramuscular on 23Dec2020 09:30 AM on left arm at single dose for COVID-19 immunisation. Medical history included chronic kidney disease, HTN (hypertension), persistent proteinuria. No known allergies. Concomitant medication included losartan. The patient did not have other vaccine in four weeks and did not diagnosed with COVID-19 prior to vaccination. The patient was not pregnant at the time of vaccination. On 24Dec2020, the patient experienced dizziness, palpitations, resting tachycardia that persisted for 3 days, muscles aches, chills, restlessness, feeling unwell and arm pain, and resulted in Emergency room/department or urgent care. Treatment included paracetamol (TYLENOL). The patient had COVID tested on 28Dec2020 post vaccination, covid test type post vaccination=Nasal Swab, covid test name post vaccination=PCR, covid test result=Negative. Outcome of events was recovered.; Sender's Comments: The reported events dizziness, palpitations, resting tachycardia that persisted for 3 days, muscles aches, chills, restlessness, feeling unwell and arm pain, were likely related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) due to temporal relationship and clinical course. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	938066-1	Severe respiratory distress; This is a spontaneous report from a contactable pharmacist. A 51-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), Lot# lot number: EL1284, intramuscular at right arm on 07Jan2021 12:00 PM, at SINGLE DOSE for COVID-19 immunization. No known allergy, no other medical history. No COVID prior vaccination. Facility where the most recent COVID-19 vaccine was administered was Nursing Home/Senior Living Facility. No any other vaccines within 4 weeks prior to the COVID vaccine. No Concomitant medications (received within 2 weeks of vaccination). On 07Jan2021 the patient experienced Severe respiratory distress that resulted in Emergency room/department or urgent care. It was unknown if treatment was received for the event. The patient had not been tested for COVID post vaccination. The outcome of the event was unknown.; Sender's Comments: A possible causal relationship between Severe respiratory distress and BNT162B2 cannot be completely ruled out considering the temporal relationship. However, more information would allow for a full medically meaningful assessment, especially medical history, concomitant medications, concurrent illness and event details. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	938067-1	she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive; she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive; she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive; This is a spontaneous report from a contactable nurse. A 95-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), Lot# EH9899 Expiration on 06Jan2021 at 15:00 at SINGLE DOSE at deltoid for COVID-19 immunization. The patient received first dose of the same vaccine BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), Lot# EH9899 Expiration date: 31Mar2022, on 16Dec2020. Medical history included: cardiac failure congestive, hypertension, cardiac murmur. There were no concomitant medications. The patient previously took cymbalta, vasotec and zocor and experienced drug hypersensitivity. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. This nurse, worker at a skilled nursing facility, reported that this patient with a history of heart failure, received her second dose of the Pfizer-BioNTech Covid-19 vaccine yesterday, 06Jan2021, at 3pm. At 7am on 07Jan2021 she was transferred to the hospital with tachycardia, congestion, shortness of breath, and is now unresponsive. Patient was stable prior to vaccination, but will now be transferred to hospice care. The nurse added the patient had the second COVID vaccine on 06Jan2021 yesterday and has now been transported to hospital due to a drastic decline after the shot. It was explained that this morning around 7 am she was transferred to the hospital. She was experiencing tachycardia, shortness of breath, and congestion. The events started this morning around 6-6:30am. The patient was admitted to the hospital. The shot was given at the facility. She received it at 3pm on 06Jan2021, First dose was on 16Dec2020. The caller relays she didn't know how aggressive the hospital will be for the patient. She was a full code when left and now a DNR and is unresponsive. The patient will be going on hospice care. The causality was reported as related. The outcome of the events was not recovered.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported tachycardia, shortness of breath, congestion, unresponsive, and the administration of the COVID 19 vaccine, BNT162B2, based on the reasonable temporal association. The patient's pre-existing medical condition of cardiac failure congestive, hypertension, cardiac murmur are confounding factors. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	938068-1	patient developed acute onset of right-sided facial palsy and pain; patient developed acute onset of right-sided facial palsy and pain; Brain MRI done showing T2 hyperintensity in the brainstem and basal ganglia, suspicious for inflammation; This is a spontaneous report from a contactable physician. A 46-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), on 18Dec2020 at SINGLE DOSE for COVID-19 immunization. Medical history included psoriasis. No COVID prior vaccination. It was unknown if the patient received any other vaccines within 4 weeks prior to the COVID vaccine. No known allergies. Concomitant medications (received within 2 weeks of vaccination) included fluoxetine. Days following vaccination, on 23Dec2020, the patient developed acute onset of right-sided facial palsy and pain. Brain MRI done showing T2 hyperintensity in the brainstem and basal ganglia, suspicious for inflammation. Work-up is ongoing. AE Resulted in: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, Disability or permanent damage]. It was unknown if the event was treated. The event was assessed as serious for Disabling/Incapacitating. The patient had been tested for COVID post vaccination (covid test result-Negative). The outcome of the events were not recovered. Information about lot/batch number has been requested.; Sender's Comments: A possible causal relationship between acute onset of right-sided facial palsy and pain with MRI findings suspicious for brain inflammation and BNT162B2 cannot be completely ruled out considering the temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	938091-1	"Hypokalemia; Hypomagnesemia; Hypocalcemia; Hemoglobin dropped little bit; Tetany; Muscle cramps; This is a spontaneous report from a contactable healthcare professional, a physician assistant. A 50-year-old female patient received the first dose of the BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: UNKNOWN), via an unspecified route of administration on 18Dec2020 (at the age of 50-years-old) as a single dose for COVID-19 immunization. Medical history included tachycardia, tension headache, and glucose tolerance impaired. Concomitant medications included rosuvastatin calcium (CRESTOR), gabapentin (MANUFACTURER UNKNOWN), and metoprolol (MANUFACTURER UNKNOWN). On 18Dec2020, the patient experienced hypokalemia, hypomagnesemia, hypocalcemia, tetany, muscle cramps, and hemoglobin dropped little bit. The clinical course was as follows: The patient received the vaccine and about 30 minutes later she started to ""feel bad"". She went to the urgent care and about an hour after they took her to the emergency room (also reported as hospital). She had a complete blood count, complete metabolic panel, and magnesium level done on the 18th, 21th, 23rd, 26th, 28th, 30th of Dec2020 and then again on 04Jan2021. On 18Dec2020, her initial lab test showed potassium: 2.6, hemoglobin: 10.2, magnesium: 1.2, and calcium: 5.7. The physician assistant reported that a potassium of 2.6 was critically low and a hemoglobin was 10.2 was about normal for the patient. She received oral medications of potassium 20 mEq twice a day and calcium and magnesium supplements once a day. On 04Jan2021, lab data showed: potassium: 4.2, magnesium: 2.1, calcium: 9.5 and hemoglobin: 14.5. Per the reporting physician assistant, the above levels went back to normal but stated she had to be supplemented to get back to that point. The clinical outcomes of the hypokalemia, hypomagnesemia, hypocalcemia, and hemoglobin dropped little bit were recovered on 04Jan2021; while that of the tetany and muscle cramps, were unknown. The physician assistant assessed the events as related to the suspect vaccine. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	938095-1	"Got very hot and clammy but at the same time had the goosebumps; Got very hot and clammy but at the same time had the goosebumps; Got very hot and clammy but at the same time had the goosebumps; My whole body was as if I was sun burnt; My heart started to race; This is a spontaneous report from a contactable consumer (patient). A 45-year-old female patient received BNT162B2, (Pfizer COVID Vaccine, lot number: EK9231, expiry date: Apr2021) intramuscular on an unspecified date at single dose on right arm for COVID-19 immunisation. Medical history included migraine from an unknown date and unknown if ongoing. Concomitant medication included nortriptyline for migraine, botulinum toxin type a (BOTOX) for migraine and birth control medication. The patient stated that, ""I was wondering if this was a reaction to the vaccination I had today. So I ended up 3 hours after I received the vaccine, I got very hot and clammy but at the same time had the goosebumps and then my whole body was as if I was sun burnt and my heart started to race. And then my whole body was red as if I had a sunburn. Actually I went to the ER today and they just did lab work because of the way I was feeling. All they gave me in the emergency room is IV fluids."" Therapeutic measures taken as a result of the events included IV fluids. The outcome of the events was unknown."
COVID19 VACCINE (COVID19)	Emergency Room *	938118-1	on 1/8/2021 17:30 patient taken to ER, cerebellar hemorrhage, stroke, aneurysm
COVID19 VACCINE (COVID19)	Emergency Room *	938126-1	Following the first COVID vaccine dose on Dec/18/2020, I had headaches that started on the third day and ended on the tenth day. The headaches were usually light, unilateral, and alternating from one side to the other. I was usually functional except on the fourth and seventh days where the headaches were moderate to severe, and I took naps to help with the headaches for those two days. I have never had an issue with headaches before, and these symptoms were a new experience for me. I did not take any medications as treatment for the headaches. Following the second COVID vaccine dose on January/7/2021, I felt fatigue and generalized muscle aches within six to twelve hours, and these symptoms lasted for two days. On January/10/2021, when I woke up that morning I again felt light, unilateral, and alternating headaches. In addition, I noticed that I was unable to move the left side of my face. I felt moderate tingling sensations associated with the distribution of the paralysis. When I looked in the mirror, I could quite noticeably see asymmetry in my face. I immediately went to the emergency department at the hospital where my primary care doctor is located. I was kept in the hospital into the next day for observation. After evaluation by a neurology team and an MRI, I was provided with the diagnosis of Bells Palsy. I have never previously been diagnosed with Bells Palsy, and I have never previously had a hospital stay before. The doctors prescribed medications which I am currently taking. As of today January/12/2021, the symptoms have had some improvement, but the symptoms still continue.
COVID19 VACCINE (COVID19)	Emergency Room *	938235-1	Beginning at 6:30 am on 1/8, two days following vaccination, the individual was driving to work and began to experience nausea while at a traffic light. He pulled over and threw up. Once he got to work he vomited again. He drove to another facility for work and then threw up 3 or 4 more times. He began experiencing hot flashes at this time. He went to the hospital and was seen in the emergency room. He threw up several more times in the ER and stated that his heart was racing and that he had diarrhea. The emergency room gave him medications for the nausea and he stayed there for 2 or 3 hours. He began to feel better and was discharged to home.
COVID19 VACCINE (COVID19)	Emergency Room *	938310-1	Sudden hearing loss right ear accompanied by tinnitus
COVID19 VACCINE (COVID19)	Emergency Room *	938332-1	Sudden hearing loss right arm accompanied by tinnitus
COVID19 VACCINE (COVID19)	Emergency Room *	938425-1	Woke up on 1/6/2021 with hot flashes, palpitations, dizziness and heart racing. Went to urgent care and they did an EKG which showed A-Fib, so I was sent to the ER and from there, I was transferred to an ICU at a different facility . I stayed until 1/8/2021. No cause was found and no history of A-Fib or family history.
COVID19 VACCINE (COVID19)	Emergency Room *	938443-1	immediate tingling of lips, followed by fullness of posterior oropharynx, hoarseness and pruritus

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	938576-1	Back pain, bilateral PE and DVT
COVID19 VACCINE (COVID19)	Emergency Room *	938820-1	Within 3 minutes of receiving vaccine felt flush and throat swelling, responded to Epi Pen and Benadryl p.o. EMS took him to ED where he remained several hours receiving 1 liter NS 125 mg solumedrol IV, discharge with 4 days of prednisone 40 mg daily and a prescription for an Epi Pen. As of 1.12 he is totally okay with no after effects.
COVID19 VACCINE (COVID19)	Emergency Room *	938868-1	-0715 vaccine administered. -0735 started to feel dizzy/off and right side of tongue felt like it was mildly swelling and itchy. -0735 asked to have blood pressure taken as know when I am having anaphylaxis my blood pressure escalates. -0740 took blood pressure and it was 141/86 in right arm. Normal is 110s/60s-70s. No anxiety feelings. -0740 throat started to have increased mucous production. Had the tickle and tightness in throat. Asked and received 25mg Benadryl with cup of water. -0742 started clearing throat frequently and slight cough. Knew it was anaphylaxis and told the team I need to go to the ER. Asked for additional 25mg Benadryl. Also took 20mg Famotidine and 2 puffs Albuterol inhaler--this is my prescribed anaphylaxis routine. Had Epi pens on standby. -0743 put on O2 saturation monitor and watched O2 drop into 90-92 range. Asked for epi pen on standby as I know when I need to start it. Didn't want to take that when I knew I was about to get it in the ER and knowing self hadn't progressed that far. Felt chest tightness and shortness of breath. Voice started becoming hoarse. -0800 EMS arrived (delay as team didn't know if they were supposed to call 911 or a Code--they chose EMS even though in hospital). Then staff at COVID vaccine clinic kept emphasizing need to go in ambulance while EMS and self fought to go through hospital (much quicker route). Finally cleared to go through hospital to ER. To get some air via breathing in had to sit up leaning forward. Voice completely hoarse by this time. -About 0817 arrived to ER bay. At this time, frequently coughing and cough started to sound stridorous. Difficulty getting breaths in. Had chest pain near heart. Greeted by MD, 2 RNS, and technician. -0819 received IM epinephrine. Attached to 5 lead EKG monitoring and O2 monitoring. Blood pressure done again. Higher than previous. -About 0821 had working IV (previous two attempts failed as veins were constricting). Given IV Solumedrol. Started bolus of 1L Normal Saline. -Not sure how long after by cough subsided, increased mucous production subsided, as well as hoarseness decreased. -Held for observation for 2hours (would be longer if not resolved). - Discharged around 1015. At this time, hoarseness almost all gone. Minimal throat clearing. Cough resolved. -Prescribed epi pen inhalers (mine expired) and Prednisone. Prednisone is PRN for mild breathing difficulties if it starts again tomorrow 1/13/21. -At 1400 took 50mg Benadryl and 20mg Famotidine as previously prescribed for anaphylaxis maintenance. Will continue this as previously prescribed every 6hours until symptoms stay resolved. -Made follow up appointment with Primary Care Physician per protocol
COVID19 VACCINE (COVID19)	Emergency Room *	938958-1	Immediately after she felt faint, heart rate 121, felt faint again bp 62/33. Was taken to the ER, within a half hour, she fully recovered. Vitals went back to normal.
COVID19 VACCINE (COVID19)	Emergency Room *	939006-1	Severely dizzy, left hand totally numb but painful, cold to touch. Felt better before she got to ER.
COVID19 VACCINE (COVID19)	Emergency Room *	939190-1	Started to feel lightheaded, weak, faint like I was going to pass out, heart rate increased, confusion, trouble speaking, brought to the ED, throat started to swell and started having thick spit and clearing my throat excessively. Diagnosed as anaphylaxis.
COVID19 VACCINE (COVID19)	Emergency Room *	939194-1	within 1 hr post-vaccine on 1/7 I had a mild headache that resolved with Tylenol. At about 12 hours post-vaccine I developed nausea, fever (100.4) and chills and secondary to this had poor sleep. The next day I took scheduled alternating Tylenol & ibuprofen during the day and then overnight 1 episode of chills that woke me up. no events Saturday or Sunday. Then Monday 1/11 in the early morning I started to develop a rash on my b/l elbow and right foot 3rd toe. I applied mometasone topical cream to these locations. while at work the rash extended down both forearms then by 5pm it was on both hips and extending along both legs. I applied Benadryl cream to the most irritated sites and took PO Benadryl 50mg at bedtime and again at 1am when the itching woke me up. I repeated Benadryl 25mg at 8am. The rash seems to be getting better on the arms but then by noon I had a new breakout on my neck and face. I took Benadryl 50mg at 1pm. The rash continued to have a rapid progression over the next hour and resulted in angioedema with my throat swelling, lips puffed and numb and eye swelling. I was injected with an epi pen and sent to the ED where I received PO prednisone, famotidine, and Benadryl. The face/neck rash then greatly improved and I was sent home on prednisone 40mg daily for 3 days.
COVID19 VACCINE (COVID19)	Emergency Room *	939492-1	Positive COVID-19 rapid test; Positive COVID-19 rapid test; Positive COVID-19 rapid test; Patient got sick; 2 weeks of on and off fever and unproductive cough; Patient got sick; 2 weeks of on and off fever and unproductive cough; Lost sense of taste and smell; Lost sense of taste and smell; sore throat; This is a spontaneous report from a contactable nurse (patient). A 50-year-old male patient received the 1st dose of bnt162b2 (BNT162B2), via an unspecified route of administration, on 16Dec2020, at single dose, for COVID-19 immunisation. Medical history and concomitant medications were none. On 17Dec2020 patient got sick; 2 weeks of on and off fever and unproductive cough. In Dec2020 the patient also experienced lost sense of taste and smell. On 20Dec2020 the patient underwent COVID-19 rapid POC test and was found positive. The events required emergency room visit. Therapeutic measures were taken as a result of the events and included treatment with Tylenol 650 every 4 hours. The events recovered on unspecified date except unproductive cough and sore throat that were recovering. The information on the lot/batch number has been requested.; Sender's Comments: The association between the event lack of effect (COVID-19 rapid POC test) with BNT162b2 can not be completely excluded.
COVID19 VACCINE (COVID19)	Emergency Room *	939564-1	On 1/5/2020, I, the patient woke up at 3:30 with sharp boring epigastric pain. Progressed to include nausea. On evaluation in the ED was diagnosed with acute pancreatitis. Prior hx includes 2 episodes with hospitalization for gallstone pancreatitis in 2016. Subsequently had laparoscopic cholecystectomy in 2016. Last alcoholic beverage prior to 2020 ED presentation was 3 weeks prior. No tobacco or drug use.
COVID19 VACCINE (COVID19)	Emergency Room *	939654-1	Vaccine was given on 12/23/20 on 01/07.21 went to get a routine physical and received an emergency call that my pallet blood count was around 10K instead of 150k. Was instructed to go to the ER asap. However didn't received the message until the next morning at 6:30am. Was checked into the E.R. , given steroids, pallets, hemoglobin. Stayed overnight in the hospital was able to leaved the next day around 1pm with pallets at 47k.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	939914-1	2230 feeling of unease, body aches, site arm tingling, general mild aches 0220 awoke from sleep choking, having difficulty breathing, felt very SOB, worse with exertion or trying to speak, great difficulty swallowing and speaking even in brief words. Took 50mg of Benadryl PO and went to the ED, about a 15 minute car ride. Had tingling and numbness of the tongue and back of throat by arrival but still able to breath with focus. Exertion of just walking into the ED greatly increased the SOB. Was triaged, Benadryl starting to help, was able to speak a little better, 3-4 words without too much SOB caused. Was walked to a room, SOB milder with that exertion. Seen by Dr. Given IV Sol-u-Medrol and 50mg Benadryl. Was observed on cardiac monitor/Q15VS for a few hours and discharged home around 5:30. Given Rx of Prednisone 20mg -3tabs x2 days, 2tabs x5 days all once a days and told to take 50mg of Benadryl Q4H for the next 24 hours at least and to return prn. I did need to stay on Benadryl, as the Sol-u-Medrol wore off some of the swelling in thr throat did return but not severe, Benadryl did help, along with taking my Asthmnex I already had. I also continued my normal HS antihistamines. I had SOB on exertion, progressively better from the 6th-10th with it mostly resolved to yesterday. Body aches have continued but also progressively better. Yeasterday1/12/21 the Rx of prednisone was completed and I did have some mild swelling /tingling in the throat/face/mouth return in the evening, took Benadryl 50mg again and inhaler used. I have an appointment today to seek further care at my primary doctor's office. Asthmmax used again this morning as well, only mild tightness in the throat currently with mild body aches this whole time.
COVID19 VACCINE (COVID19)	Emergency Room *	940367-1	12/23/2020-RECEIVED VACCINE AT 9:52 AM. REPORTS NOT FEELING WELL IN THE AFTERNOON, LIGHTHEADED AND DIZZY, THROBBING HEADACHE. CRAMPING/ACHING IN BACK OF CALVES. 12/24/2020 CONTINUED WITH DIZZINESS, THROBBING HEADACHE, BLOOD PRESSURE ELEVATED, CHEST PRESSURE 8:00 PM REPORTED FEELING THAT SHE WAS GOING TO DIE, WENT TO LAKE CITY MEDICAL CENTER- BLOOD PRESSURE ON ARRIVAL 184/101 HR. 117. GIVEN NITRO AND MEDICATIONS. ADMITTED, DISCHARGED 48 HOURS LATER ON 12/26/2020. DISCHARGED ON BLOOD PRESSURE MEDICATION 12/27/2020-LESS THAN 24 HOURS AFTER BEING DISCHARGED SHE WAS READMITTED TO MEDICAL CENTER WITH SAME SYMPTOMS. 36 HOURS AFTER ADMISSION, TRANSFERRED TO MEDICAL CENTER. FOR CARDIC WORKUP AND HIGHER LEVEL OF CARE.
COVID19 VACCINE (COVID19)	Emergency Room *	940392-1	Became dizzy, headache, felt like she was going to faint, rigors and a temperature of 101.5. Next morning she had upset stomach, feeling dizzy, thought she was going to faint and a headache.
COVID19 VACCINE (COVID19)	Emergency Room *	940438-1	Had Covid Vaccine AM of 1.8.2021. Woke up with Nausea, Vomiting X 4, Chills the following AM. Presented to ED. Found to be hypotensive during ER. Nausea Vomiting resolved. Tx with fluid replacement and dismissed home instructed to monitor BP. B/P dropped again at home returned and admitted to hospital.
COVID19 VACCINE (COVID19)	Emergency Room *	940519-1	Patient reported symptoms started ~15 mins s/p dose. Symptoms reported LUE and LLE numbness/tingling, and notable tachycardia
COVID19 VACCINE (COVID19)	Emergency Room *	940651-1	I was being monitored for 15 mins since I was allergic to tree nuts stayed 20 mins. I started feeling dizzy and exp nausea lasted 20 sec. After about 12 hrs later I woke up had difficult swallowing felt like something in my throat. I went to ER received a dose pack, Benadryl and steroid injection.
COVID19 VACCINE (COVID19)	Emergency Room *	940708-1	Jan 1st, patient had a seizure after breakfast. Temperature was 98.5 Pulse 95. B.P. 160/70 Two hours later another seizure at the home, with emesis, Sent to hospital at 2pm. Focal Status epilepticus. Seizure activity along with continuous persistent activity with emesis throughout the 12 hour time in the ED. Seizure during the CT scan.
COVID19 VACCINE (COVID19)	Emergency Room *	940791-1	severe stabbing-shooting lower back pain; severe stabbing-shooting lower back pain that radiated to both legs; Pricking, pins and needles sensations in the hands and feet; numbness; weakness to both legs but mostly the right leg; Coordination problems, unsteadiness; Coordination problems, unsteadiness; This is a spontaneous report from a contactable nurse (patient). A 39-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL0140), intramuscular on 20Dec2020 08:00 at single dose at left arm for covid-19 immunization. Medical history included hypertension from an unknown date and unknown if ongoing. The patient's concomitant medications in two weeks included multivitamins. Patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. No known allergies to medications, food, or other products. On 22Dec2020 at approximately 19:15, the patient experienced sudden onset of severe stabbing-shooting lower back pain that radiated to both legs. Pricking, pins and needles sensations in the hands and feet. Coordination problems, unsteadiness, numbness, and weakness to both legs but mostly the right leg. The patient underwent lab tests and procedures post-vaccination which included nasal swab for covid test: negative on 30Dec2020 (Antigen Test). Adverse events resulted in doctor or other healthcare professional office/clinic visit, emergency room/department or urgent care, disability or permanent damage. Patient received pain medication, steroid dose pack, MRI (pending), and physical therapy (pending) as treatment. Outcome of all events was not recovered.; Sender's Comments: Based on the compatible temporal association, a contributory role of vaccination with BNT162B2 in the onset of the events cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	940792-1	high blood pressure within 15 min post vaccination. BP 180/94/BP rose to 202/110; This is a spontaneous report from a contactable nurse. An adult female (age:18-64 Years) patient (pregnant: No) received first dose of BNT162B2 (Pfizer), intramuscularly in left arm on 05Jan2021 10:30 at single dose for COVID-19 immunization. The patient's medical history was not reported. The patient was received other concomitant drugs. The patient experienced high blood pressure within 15 min post vaccination. BP (blood pressure) 180/94 rose to 202/110 on 05Jan2021 10:45. The event resulted in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The events were reported as non-serious. Recipient experienced high blood pressure within 15 min post vaccination. Went to hospital where her pressure was 202/110, vaccine given on 05Jan2021 at 10:30 am, by 10:45 am BP was 180/94, recipient refused hospitalization. Sister took her home but made her go to the hospital where her BP rose to 202/110. IV (intravenous) steroids given. The outcome of event was resolved in Jan2021. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The medications the patient received within 2 weeks of vaccination: Protein drink. Unknown whether was the patient diagnosed with COVID-19 prior to vaccination. Unknown whether the patient been tested for COVID-19 Since the vaccination. Unknown allergies to medications, food, or other products. Information on the lot/batch number has been requested.; Sender's Comments: Based on temporal association, a possible contributory role of BNT162B2 cannot be excluded for reported event hypertension. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	940800-1	"dizzy; felt like I was going to pass out; shaky; ringing in ears; This is a spontaneous report from a contactable nurse (patient herself). A 63-year-old non-pregnant female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: unknown), via intramuscular route of administration on the left arm on 30Dec2020 17:00 at a single dose for COVID-19 immunization at hospital facility. The patient had no relevant medical history and no known allergies. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks, or any other medications within 2 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient reported ""almost immediately, dizzy, felt like I was going to pass out, shaky, and ringing in ears"" on 30Dec2020 17:00. Events were reported as non-serious but resulted in visit to the Emergency room/department or urgent care. Ondansetron (ZOFTRAN) was given as treatment for nausea and meclizine. The outcome of the events was not recovered. Since the vaccination, the patient had not been tested for COVID-19. Information on the lot/batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported ""dizzy, felt like I was going to pass out, shaky, and ringing in ears"" and the administration of COVID 19 vaccine, BNT162B2, based on the plausible temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate."
COVID19 VACCINE (COVID19)	Emergency Room *	940801-1	felt flushed; BP elevated 226/97; dull occipital headache/dull headache; This is a spontaneous report from a contactable other HCP (patient). A 64-year-old female patient received second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EL1284; expiration date not provided) via an unspecified route of administration (vaccination location: left arm) on 06Jan2021 09:30 at SINGLE DOSE for COVID-19 immunisation. Medical history was reported as 'none'. It was also reported that patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine, and prior to vaccination, the patient was not diagnosed with COVID. The patient has no allergies to medications, food, or other products (no known allergies). The patient's concomitant medications were not reported. The patient previously took bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EH9899; expiration date not provided), via an unspecified route of administration (vaccination location: left arm) on 18Dec2020 18:00 at SINGLE DOSE for COVID-19 immunisation. It was reported that patient received second dose of Pfizer Covid vaccine on 06Jan2021 at 09:30 am. One hour after the 2nd dose (10:30 am), patient experienced dull occipital headache. Patient took paracetamol (TYLENOL). At 10:45 am, patient felt flushed. The nurse took patient's vital signs and noted no fever, normal heart rate and respiratory rate. BP elevated 226/97 (reported at 10:30, no unit provided; normal BP: 130's/80's). At 12:45, patient was taken to ED. CT scan and lab work were reported as all normal. BP continues to be elevated. Amlodipine (NORVASC) 10 mg was given at 17:00. BP slowly came down. Twenty-four hours later, BP was normal at 137/72 (no unit provided). No additional medication taken. It was reported that patient continues to have dull headache. No arm soreness or other symptoms. It was also reported that since the vaccination, the patient has not been tested for COVID-19. Outcome of the events 'BP elevated 226/97' and 'felt flushed' was recovering, outcome of the event 'dull occipital headache/dull headache' was not recovered.; Sender's Comments: Based on the compatible temporal association and in absence of strong confounding factors, the Company considers the reported event blood pressure increased is possibly related to vaccination with BNT162B2. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	940866-1	"Patient was found ""acting abnormal"" on 1/9/2021 at 1215. VS HR 20-30's. EMS activated. EMS arrived and patient was found pulseless in PEA/ asystole, CPR and ACLS initiated and then transported to the MC. Unsuccessful resuscitation and expired on 1/09/2021 at 1348. Clinical impression Cardiopulmonary arrest."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Emergency Room *	940952-1	My b/p shot up as well 180/107; My heart started racing....noted at 133/I had strong heart palpitations; Feeling of lightheadedness; This is a spontaneous report from a contactable nurse reporting for herself. A 50-years-old female patient received the first dose of BNT162B2 Pfizer-BioNTech COVID-19 Vaccine, via an unspecified route of administration in the right arm on 29Dec2020 at 12:15 pm, at 50-years of age, at single dose for COVID-19 immunization. The patient received the vaccine in Hospital and didn't receive any other vaccine in the previous four weeks. Medical history included hypertension from an unknown date (controlled) and no known allergy. Concomitant medication included amlodipine besilate 10 mg (NORVASC). The patient reported that, on 29Dec2020, within 6 minutes after receiving the vaccine dose, her heart started racing, it was noted at 133, her blood pressure shot up as well to 180/107, she had strong heart palpitations with feeling of lightheadedness. Prior to the vaccine the patient was at work, feeling well and taking care of her patients. Emergency Room visit and Physician Office visit were required, moreover fluids and potassium were administered to the patient as a result of the events. She reported she spent 8 hours in the ER. The events were reported as non-serious but they were assessed as important medical events by the Company. At the time of the report the reported events were resolving. Information about Lot/Batch number has been requested.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Hypertensive crisis, Palpitations, and Lightheadedness cannot be excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Emergency Room *	941080-1	5 days after Moderna vaccine, developed severe abd pain, mid epigastrium. No Nausea or vomiting. No fever. Mild diarrhea. after 48 hrs with no improvement went to ED
COVID19 VACCINE (COVID19)	Emergency Room *	941408-1	Pt was accompanied by daughter, who drove pt to clinic. Pt was correctly identified, screened, given vaccine, monitored for appropriate time. Pt left clinic as passenger of vehicle and was being driven by daughter. Pt started complaining of Shortness of breath and not feeling right.. Daughter brought pt to local emergency room, Pt was later transferred to higher care hospital. Information regarding symptoms and further medical care was relayed to clinic by family member.
COVID19 VACCINE (COVID19)	Emergency Room *	941476-1	Patient received vaccine in afternoon of 12/28. She works in ER as housekeeper 7pm-7am. The day she received the vaccine she became ill with fever chills and nausea and left work at 2am. On 12/31 she developed hemianopia. She went to ER and they did CT scan. She was told it was complex migraine. She left and came Home. On 1/1/21 her vision was back to normal. On 1/3 she suffered bilateral cerebellum ischemic stroke. She is currently in medical center. In Trauma.
COVID19 VACCINE (COVID19)	Emergency Room *	941499-1	Patient experienced a syncopal episode post vaccination, accompanied by feeling hot and tachycardic. Prior to the syncope, she reported hyperventilating. She remained unresponsive for about 10 minutes and was brought to the ED. There she became responsive, and reported chest pain and had sinus tachycardia episodes. She also had lower extremity weakness. This has improved per the latest neurology notes. She also had a negative EEG. Unsure if this is an allergic reaction or if the syncope was due to hyperventilation. Patient is currently on day 3 of hospitalization.
COVID19 VACCINE (COVID19)	Emergency Room *	941522-1	I was short of breath and went to emergency room on 1/5/2021. I was diagnosed with bilateral pulmonary embolisms. I was Covid negative and had no other symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	941633-1	The morning following COVID-19 vaccination, patient's right shoulder had swelling, generalized weakness and myalgia. Hospitalized for 2 days, received intravenous fluids and bedrest, and acetaminophen. He was prostrate for 2 days.
COVID19 VACCINE (COVID19)	Emergency Room *	941937-1	"Patient received vaccine at 0939. 30 minute wait period related to history of previous anaphylactic reaction. 10:05 patient walked from observation area to vaccinator and reported that her ""chest was burning"" and ""feels like it is getting tighter to breathe. Pt had change in voice. Patient moved to chair and started on oxygen 1.5 L/m per nasal cannula. MD came to room to assess patient. ED arrived and checked patient B/P. Patient transferred by cart to ED."
COVID19 VACCINE (COVID19)	Emergency Room *	942381-1	I had a headache at the top of my head, and a tingling sensation down my left leg from my buttocks to my calf. The tingling lasted until the next morning then went away. On 1/3/2021 I experienced a strong headache followed by facial numbness and tingling. This lasted for an hour or so and slowly subsided. The headache lingered for 3 days.
COVID19 VACCINE (COVID19)	Emergency Room *	943266-1	Initial pain in back of head and extreme headache. Some vomiting. At emergency, went into coma and was intubated. Hole drilled in skull to relieve pressure. MRI taken. Lot of bleeding in brain - aneurism lead to death approximately 14 hours after initial symptoms.
COVID19 VACCINE (COVID19)	Emergency Room *	944595-1	Cardiac arrest within 1 hour Patient had the second vaccine approximately 2 pm on Tuesday Jan 12th He works at the extended care community and was in good health that morning with no complaints. He waited 10-15 minutes at the vaccine admin site and then told them he felt fine and was ready to get back to work. He then was found unresponsive at 3 pm within an hour of the 2nd vaccine. EMS called immediately worked on him 30 minutes in field then 30 minutes at ER was able to put him on life support yet deemed Brain dead 1-14-21 and pronounced dead an hour or so later
COVID19 VACCINE (COVID19)	Emergency Room *	944609-1	He died nine hours later.
COVID19 VACCINE (COVID19)	Office Visit *	902505-1	Patient felt facial flushing, pounding in chest, burning and hot ears and blood pressure went up. Tingly in right arm and chest and hands. Symptoms resolved, after a few minutes but then returned. Patient sat with nurse during this reaction.
COVID19 VACCINE (COVID19)	Office Visit *	902648-1	diffuse rash at anterior and right lateral neck associated with feeling of warmth
COVID19 VACCINE (COVID19)	Office Visit *	902650-1	Patient received shot and sat for 15 minutes, left and came back and reported she felt woozy. She felt dizzy. Patient stated she felt dizzy off and on while she was in clinic getting shot, patient left.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	902666-1	redness around the injection spot, fever chills, Stomach Ache, Body Ache, Short of breath (walking up stairs), Headaches no appetite, Dry heating .
COVID19 VACCINE (COVID19)	Office Visit *	902725-1	I experienced a sore arm and could not lift my arm.
COVID19 VACCINE (COVID19)	Office Visit *	902728-1	Swelling on arm. Placement lower than deltoid, 4 cm. treated with corticosteroids, antihistamines
COVID19 VACCINE (COVID19)	Office Visit *	902778-1	Swelling and numbness at injection side. Increased blood pressure 199/99. Immediate headache. Workplace clinic called hospital ER, clinic administered Benadryl. Symptoms resolved.
COVID19 VACCINE (COVID19)	Office Visit *	902792-1	1-2 minutes later patient felt nausea, palpitations, and lightheaded
COVID19 VACCINE (COVID19)	Office Visit *	902895-1	Systemic rash, dry cough (causing cough); 650mg Tylenol every 6; 50mg Benadryl to start then 25 mg every 6, Pepcid 20mg every 12 hours; rash is slowly resolving; throat still very dry with dry cough
COVID19 VACCINE (COVID19)	Office Visit *	902902-1	"Patient presented with feeling of ""headrush"" dizziness, tachycardia to 130's, itching to neck, visible hives to face and neck."
COVID19 VACCINE (COVID19)	Office Visit *	902903-1	Hives within 3 hours lasted 12 hours. Left Arm edema and erythema 24 hours
COVID19 VACCINE (COVID19)	Office Visit *	902939-1	Patient was given to co vid injection- developed numbness and tingling inside bicep- speech- slurred speech- tongue speech- tongue not swollen- feels like novican. Takes lisinopril, novolog jardiance, lansoprazole, and mirena.

COVID19 VACCINE (COVID19)	Office Visit *	903138-1	during the administration of vaccine patient developed a wheal at the site on injection. Pressure and message reduced the wheal.
COVID19 VACCINE (COVID19)	Office Visit *	903142-1	Pt showed for Covid Vasc #1, received the immunization in left deltoid. minutes later, felt numbness, in arm, the a lump in the throat. Denied SOB, or Dyspnea. Patient the stated weakness in the legs. Assisted to the restroom, x 1. no difficulty. after 30 minutes and no relief from symptoms, patient was wheelchair over to urgent care, and treated there. Patient was able to leave urgent care on her own, with no problems Patient transferred to urgent care for evaluation. Left from urgent care on her own
COVID19 VACCINE (COVID19)	Office Visit *	903149-1	1215 pm on 12/16/2020: pfizer covid vac in left arm Poor nights sleep with left arm pain at injection site 500am on 12/17/2020: stood up to get ready and immediately started to dizzy. Then immediately threw up and had darker green diarrhea. Once that finished I had the sweats and felt cold with a subjective fever until around 9 am with continued nausea. Symptoms resolved 11:40 AM.
COVID19 VACCINE (COVID19)	Office Visit *	903163-1	Pt underwent 15 minutes observation and felt fine during that time, while walking back to work on the way to work unit noticed tingling on the L side of her lower lip and a few inches back along jaw. It persisted so she returned to the vaccine clinic for evaluation. She was evaluated by a physician and had a normal cranial nerve and motor exam other than diminished sensation CN5- no change in appearance of lip. There was no other reaction at vaccination site or change in symptoms during a further 30 minute observation period. She was released back to work. Checkin after a few hours the tingling had improved.
COVID19 VACCINE (COVID19)	Office Visit *	903182-1	tingling in arm at the time of admin down into fingers which faded over 15 mins and then soreness in arm

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	903217-1	COVID vaccine administered to patient. She began to have lightheadedness and dizziness. She disclosed she had not yet eaten for the day, except for a glass of milk. Writer brought her to an exam table and had her lay down. After 5-10 minutes, she was given a banana and two small apple juice boxes. She then laid back down. After another 5 minutes, she complained of headache and slight phlegm development in her throat. Dr. was called to evaluate- after an assessment, she asked for a BP. Writer completed the vitals and found her BP was 113/77. 5 more minutes passed. Dr. advised that since her situation was not improving and headache and phlegm appeared to be getting worse, patient should receive epi and go to the hospital. Writer administered 0.3mg/0.3mL of epi and drove patient to the Emergency Department of Hospital. She was there for about two hours before being discharged. Symptoms largely resolved by the evening.
COVID19 VACCINE (COVID19)	Office Visit *	903229-1	Patient reports it started as a tingling, pain and burning in the elbow and travelled up the shoulder and up the chest and to the heart. Pain felt like a cardio thump . Grabbed the epi. Sitting forward. Talked Dr. Doctor stated to sit back and uncross legs. Initiated slow breathing. Pain subsided to a tolerable amount. Not short of breath but tachycardic. Still dizzy. Stayed an hour sitting position, after injection. Felt there was an irritating sensation around the heart. Left and walked back to clinic. 10 minutes after arriving to the clinic, dizziness, flushing , came back and irritation around the heart was still noticed but tolerable. 2 minutes after, voice started cracking and drank some water. Intensity of dizziness increased and overall symptoms also intensified. Returned to COVID immunization clinic 15 minutes later. Patient was moved to direct observation in a chair. Given oral benadryl. Instructed to stay and would evaluate if new interventions would be deemed necessary. Benadryl helped. Symptoms were relieved in 15 mins. Patient has been in the clinic under direct observation for about 3.5 hours.

COVID19 VACCINE (COVID19)	Office Visit *	903731-1	Tongue swelling, seen in ED and discharged. Works in hospital ICU and will continue to monitor during shift.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	903748-1	"5 Minutes after vaccine, patient said she started feeling really hot and nauseous. All vitals stable. No other symptoms at that time. 15 minutes later, she said she was feeling ""out of it"" and it was hard to re-call names, she had a metallic taste in her mouth. Attending doctor on duty came to assess patient, emergent care was not deemed necessary. Vitals remained stable. 30 minutes after vaccine, she said her joints were starting to get achy. Since we are a pediatric hospital, I told her she should be seen at a higher level of care facility, she refused. She was monitored for 2 hours, after that she was better. At 12:30, 2 hours after vaccine, she said she was felt much better and her mind was much clearer and her other symptoms were much better. At 3, she said all her symptoms were gone, she was just tired. She got into contact with her Lyme Disease Specialist and they said it sounded like an autoimmune reaction, but they would still like her to get the second dose in 21 days. I will remain in contact with patient to ensure she does not have other adverse effects."
COVID19 VACCINE (COVID19)	Office Visit *	903751-1	Fevers, Chills, dizzy body aches, pain and swelling at the injection site
COVID19 VACCINE (COVID19)	Office Visit *	903752-1	About 1.5 - 2 hours after receiving the vaccination I felt very dizzy and disoriented. This was around 11:00. Around 2:00 I was still feeling disoriented, so I went to report it to my doctor. They took my blood pressure, temperature, and observed me for 30 minutes. My nurse had reported that my BP was high. After 30 minutes they took my vitals again and my BP was still high. Today on 12/18 I got my blood pressure done at 10:30 AM and my nurse had reported that my BP was still fairly high. 144/88. They then took my BP manually and it was 138/82.

Water offered, transferred to room for isolation; drank 2 bottles of cold water; offered additional medical care; denied need; rested for 1 hr after vaccine; HR: 80s; O2: 100%. Spouse picked up for transfer home; referred to PCP for any additional needs.
COVID19 VACCINE (COVID19)	Office Visit *	903972-1	All over warm feeling Dizzy Generalized weakness/Tingling
COVID19 VACCINE (COVID19)	Office Visit *	903973-1	Rash on his back with welts, mild itchiness of the lips and mouth and no SOB.
COVID19 VACCINE (COVID19)	Office Visit *	903981-1	Patient experienced an itchy mouth after the administration of her COVID vaccine. She has a known allergy to melon and bleu cheese. She has never needed epi for these allergies. We gave her 50mg of Benadryl and she began to have resolution of symptoms at the 30 minute mark-10 minutes after her Benadryl was given, so not likely in er system yet. Her VS are stable, sats 99 on room air, BP 127/84, HR 84. Our pharmacist weighed in and felt she would be safe to be picked up by her husband so he could monitor her. Our MD concurred with this plan. As of writing this email, we are still monitoring and will continue to monitor for another 45 minutes to see the effects of the Benadryl. We will deliberate with the ED MD on call prior to her release.
COVID19 VACCINE (COVID19)	Office Visit *	903984-1	Throat closing sensation, lightheadedness
COVID19 VACCINE (COVID19)	Office Visit *	903993-1	noted scratchy throat and lip tingling and feeling puffy- though no signs of edema

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	904021-1	After initial 15 minutes dizzy, seeing stars, pale hypotensive, shaky
COVID19 VACCINE (COVID19)	Office Visit *	904031-1	The day I received the vaccine, 8 hour post inhection, I began to have numbness in both hands and it went up my arm on the injection site arm. Almost 24 hours after getting vaccine, I woke up the following morning around 4am to body aches, chills, low grade fever, nausea, numbness in both hands, neck stiffness, and excruciating pain in the arm I received the vaccine in (unable to lift arm). I began taking Tylenol, every 4 hours and zofran for nausea. The symptoms proceeded to get worse. At 3pm the same day I decided to go to the urgent care. I was febrile 101.2, tachycardia, hypertensive, I was tested for the flu- results came back negative.
COVID19 VACCINE (COVID19)	Office Visit *	904032-1	Chills fatigue muscle aches and severe pain in arm beginning five hours after vaccine.
COVID19 VACCINE (COVID19)	Office Visit *	904036-1	Patient had episode of hypotension First bp reading several minutes after vaccination was 82/46, second reading several minutes was 88/57, several minutes later was 93/62, next reading was 112/79 and resolved.
COVID19 VACCINE (COVID19)	Office Visit *	904041-1	lol swelling , shortness of breath
COVID19 VACCINE (COVID19)	Office Visit *	904054-1	PATIENT EXPERIENCED RED HOT SWOLLEN AT INJECTION SITE BP 1 WAS 154/93, 137/81, REMAINS RED AND SWOLLEN SATS AT 100%, RECEIVED 50 MG BENEDRYL PO GIVEN 0956 .
COVID19 VACCINE (COVID19)	Office Visit *	904057-1	Pt. received vaccine at employee vaccination clinic at 1pm on 12/18, and received phone call from patient at 6:20pm at the vaccination clinic on 12/18. Patient reported Redness on thighs, arms, chest, throat and face, no redness below her knee or on her trunk. Reported itching all over where there was redness. She described tingling and burning down her right arm (compared to nerve pain) and cold hands. Patient was on her way to store to pick up Benadryl, advised patient to take 50 mg of Benadryl and to report to the emergency room or call 911 if symptoms did not resolve or worsened to involve any difficulty breathing. Called patient on 12/19 at 8:30am to follow up. Patient reports worsening symptoms overnight including developing leg cramps in calves, restless legs, chills without a fever, and a scratchy throat. Patient called family friend (ER Physician)- patient was instructed to take 60mg of prednisone, 1 tab of zyrtec, 2 tablets of magnesium. She currently reports fatigue, scratchy throate and headache with other symptoms resolving around 10pm on 12/18. Instructed patient to call on call physician at PCP office for a predisone taper prescription.
COVID19 VACCINE (COVID19)	Office Visit *	904075-1	Tachycardia on 12/18 at 4:10am
COVID19 VACCINE (COVID19)	Office Visit *	904081-1	Rash in the back and buttock area/ patient was treated with Decadron 8 mg Intramuscularly
COVID19 VACCINE (COVID19)	Office Visit *	904085-1	Sore throat Headache Fatigue
COVID19 VACCINE (COVID19)	Office Visit *	904088-1	ITCHING AND HIVES ONSET 2 DAYS AFTER ADMINISTRATION OF VACCINE
COVID19 VACCINE (COVID19)	Office Visit *	904091-1	R arm felt numb and cold during vaccination; 30 min following vaccine pt had nausea and lightheadedness
COVID19 VACCINE (COVID19)	Office Visit *	904096-1	fever and rash at injection site
COVID19 VACCINE (COVID19)	Office Visit *	904108-1	Received vaccine on right arm. Tingling and numbness on left side of my body from my lip all the way down to my foot. Tingling and numbers started two hours after vaccine was administered. Tingling and numbness are still present.
COVID19 VACCINE (COVID19)	Office Visit *	904109-1	A Lymphoedema on the left side of the body, with 3mm eduration in the arm left, no erythema no suppuration o edema.
COVID19 VACCINE (COVID19)	Office Visit *	904131-1	At 1:10 pm, I felt warmth all over my body, face, my heart started racing up to 109 per minute. I felt dizzy soon after. The nurse observing checked my vital signs and found my blood pressure to be at 190/92. After 30 minutes, my face and ears felt really hot, my face was flushed, eyes were hot. My temperature was taken and it was 101.3. At around 6:30 pm, I developed mild headache and body aches. The next morning, my left arm was sore.
COVID19 VACCINE (COVID19)	Office Visit *	904145-1	Left sided facial tingling, achiness, and heaviness approximately 45 minutes after vaccination.
COVID19 VACCINE (COVID19)	Office Visit *	904146-1	Nausea, headache, ill feeling, rhinorrhea, chills, cough, loss taste
COVID19 VACCINE (COVID19)	Office Visit *	904148-1	Pt reported not feeling; tachycardia @ 110 approximately 20 mins after vaccine. sweaty, BP WNL 15L O2 given to pt along w/ 10 mg cetirizine and 25 mg diphenhydramine
COVID19 VACCINE (COVID19)	Office Visit *	904173-1	On day 3 after the vaccine, I had been experiencing sinus issues and toward the end of the day I experienced body aches, chills, sweating, shortness of breath, and tachy up to 175 last night when walking. It has been better today in the low 100s but still persistent with some shortness of breath, covid test pending.
COVID19 VACCINE (COVID19)	Office Visit *	904181-1	Associate states he started to have a fever this morning. Associate had a COVID swab performed at the COVID drive thru this morning and was told to call the hotline to report event.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	904188-1	reported eye vision changes, flashes of light, and a headache. Was treated in the emergency room.
COVID19 VACCINE (COVID19)	Office Visit *	904190-1	Approximately half hour after injection patient reports tingling in tongue, heavy chest, SOB, slight difficulty swallowing and flushing in face, at that time HR was 44, O2 sat 99%, and BP 138/80. 50mg of oral benadryl was given at that time. Patients symptoms continued and 911 was called and at 4:30 epinephrine was instructed to be given IM via epipen. Approximately 5 minutes later EMS arrived, evaluated the patient and no visible signs of allergic reaction were detected. Patients HR and BP were elevated from epinephrine. Myself and another pharmacist remained with patient until approximately 5:30 and at that time the patient was going home. I called her at 6pm that evening and again 11 AM the following morning and no other allergic symptoms were noted.
COVID19 VACCINE (COVID19)	Office Visit *	904199-1	Scratchy throat, lip swelling and numbness
COVID19 VACCINE (COVID19)	Office Visit *	904217-1	Within 30 minutes of receiving vaccine patient reported feeling light headed, hot and heart palpitations. BP increased to 158/110, Pulse 100. Patient was CRNA working in ICU environment and was monitored by other staff present. Signs and Symptoms resolved over the following hour.
COVID19 VACCINE (COVID19)	Office Visit *	904227-1	Within 30 minutes of vaccine patient's left pupil was dilated greater than right and reacted sluggishly to light with slight fuzzy vision. No other signs or symptoms. Pt to follow-up with Ophthalmologist next week.
COVID19 VACCINE (COVID19)	Office Visit *	904236-1	I received the vaccine at 0915, was observed until 0936 and felt fine. While driving home, around 0949, began to feel heart racing/beating fast. I then felt very shaky and proceeded to get off the highway exit as the symptoms continued to worsen My daughter called 911 at 0953 at my request. No throat swelling, respiratory issues, or mouth or lip swelling. No rashes noted. I then began to feel sweaty and then became a little dizzy and proceeded to lean my car seat back. My daughter called 911 again as they instructed her to call if any new symptoms began prior to ambulances arrival. Ambulance crew arrived, I ambulated myself to the ambulance, felt a little lightheaded while walking. The feeling of my heart racing had started to lessen but still not normal at this point. Pulse ox was 98% on RA, no respiratory distress at all. I'm not exactly sure of what my HR was as I couldn't see the monitor but I believe they said around 100, I'm normally in the 60's. Systolic BP's were 138, then 120's, then 101 prior to me leaving ambulance. Finger stick was 140. I was in the ambulance for about 15 minutes and was feeling much better the last 5 minutes or so of that. I declined need to go to ER, my daughter then drove. I then went to a store and while walking around at 1105, began to feel my heart racing again but not as intense. Had slight feeling of being shaky but nothing like previously. After that, I have felt fine for the rest of the day. I took 400mg Ibuprofen for a slight HA around 1130 but not unusual for me, especially since the events that occurred. I called the hospital where I was given the vaccine when I got home and informed one of the employee health MD's who requested I report this here.
COVID19 VACCINE (COVID19)	Office Visit *	904277-1	Within 1min after administration: Tachycardia, mental fog, dizziness Within 5min after administration: Tachycardia resolved, mental fog worsening, dizziness, muscle weakness Within 15min after administration: Nausea, dizziness, mental fog (feeling like an out of body experience), muscle weakness (feeling like my legs wouldn't support me). Two hours post- administration: Severe nausea and mental fog Six hours post-administration: Muscle aches and joint pain. Nausea and dizziness resolved. Soreness and muscle ache in arm with injection site. 12 hours post-administration: Diarrhea, increase in nausea, and vomiting. Dull headache. Tylenol taken. 22 hours: Fever (99.1F), chills, sweating 32 hours: Fever (99.9F), chills, sweating, muscle weakness, body aches, headache. Tylenol taken. 43 hours: Tested for COVID by nasal swab d/t recent exposure at place of employment and presence of S&S. Test pending. Fever 99.0F. Tylenol taken. Dull headache.
COVID19 VACCINE (COVID19)	Office Visit *	904291-1	Low grade fever of 99.9F, body aches, chills and diarrhea.
COVID19 VACCINE (COVID19)	Office Visit *	904305-1	Bilateral ears became hot, red, swollen, blistered, and painful approximately 1 hour and 20 minutes after vaccine was administered.
COVID19 VACCINE (COVID19)	Office Visit *	904331-1	28 hrs after vaccine, woke up with tinnitus R ear, partial hearing loss R ear - went to Urgent care - Dr diagnosed with right sensorineural hearing loss with left side unrestricted hearing - prescribed prednisone 60mg a day x10days. Audiology test to be scheduled next week.
COVID19 VACCINE (COVID19)	Office Visit *	904332-1	Puritic rash with multiple sites of itching all over patient's body. Lasted for about 30 minutes after onset of symptoms. Given 50mg Benadryl after initial onset of itching & 125mg of Solu-Medrol 10 minutes later.
COVID19 VACCINE (COVID19)	Office Visit *	904333-1	Reports sharp, frontal chest pain worse with deep breathe/movement. began 25-30 minutes after receiving Pfizer's COVID-19 vaccination. 11:20am Vts: BP 109/54, P83, Sat 98%on RA. Exam: Alert, in NAD. airway no swelling, wide open. talking and sitting comfortably. No dyspnea. Hrrt RRR no murmur. CTA c/l. Left sternal border around rib 5 tender point reproduces her pain. Laughing and talking. Repeat bp at 11:30 109/63, P 79. Respirations 12 and normal.
COVID19 VACCINE (COVID19)	Office Visit *	904335-1	Fever and myalgia. Temp 101.2 Left arm soreness to the point of unable to raise left arm
COVID19 VACCINE (COVID19)	Office Visit *	904364-1	I am an employee of Medical Center. I went to Hospital for my vaccine since it was only 5 minutes away from my house. At 5:00 PM I received the vaccine. 10 minutes after I noticed my throat felt tight and as if it was closing. This felt similar to the reaction I felt when I had morphine in Jan 2020 (that I am allergic to). I notified the nurses and they watched me for 10 minutes. It then stayed the same. They brought me back to their tent area and gave me 50 mg of benadryl. I immediately felt relief. However, maybe 3-5 minutes after the throat closing sensation came back. They then had to take me to the ER. I was then put on fluids, steroids, pepcid, and ativan. I was released after they watched me for a couple hours.
COVID19 VACCINE (COVID19)	Office Visit *	904427-1	12/18/2020 scrotal pain. Evening onset of rash 12/19/2020 Rash lower lumber, left butt cheek, scrotum and penis. Took picture and sent to Consult with infectious disease. Doctor deemed rash to be SHINGLES and prescribed Valtrex. By evening, rash had progressed all over and pain associated with shingles. 12/20/2020 Stable but rash is still prominent. Consult over tele

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	904441-1	Symptoms: light headedness persisting 3 days after administration, high BP occasionally
COVID19 VACCINE (COVID19)	Office Visit *	904444-1	Received 1st dose of Pfizer vaccine on Left Arm at 1630 on 12/18/20. Within 8 minutes of receiving vaccine, tongue experienced numbness and tingling. At 9 minutes post administration, symptoms intensified. And at 10 minutes post administration throat was scratchy was a tickle. At 12 minutes post administration notified Pharmacy and Employee Health Workers. By approximately 1650, health care professional administered Benadryl 50 mg IM to Right Arm. Observed. Symptoms decreased but then intensified to include numbness and tingling in lips. Transferred to Emergency Department for observation. Received decadron 10 mg IM to Right Arm at 1915 due to symptoms not resolving. Discharged from ED with prednisone course. Discharge diagnosis Angioedema. Symptoms decreased approximately 6 hours post administration of vaccine. On 12/19/20 at approximately 1425, experienced tightness of throat, with numbness and tingling of tongue and lips. Took over the counter Benadryl 50 mg p.o. at 1440. By 1520, symptoms intensified with hoarseness in voice with coughing spells. Returned to Emergency Department for observation. Noted to have rash on chest in ED. Received Pepcid 20 mg in ED. Discharged with instructions to take Benadryl 50 mg p.o. every 6 hours, famotidine 20 mg p.o twice daily, continue taking prednisone, and received prescription for epinephrine auto injector. Emergency room physician wrote to return to work on 12/22/2020 with follow up with Employee Health on 12/21/2020.
COVID19 VACCINE (COVID19)	Office Visit *	904449-1	Patient reported onset of slight headache immediately following vaccine injection. Resolved at time of dc after 30 min obs.
COVID19 VACCINE (COVID19)	Office Visit *	904450-1	Swollen lymph node on right side of neck the morning after receiving the vaccine. Telehealth appt with PCM who prescribed 800mg ibuprofen. Took 200mg motrin for swelling because i have not had the chance to pick up prescription. The following day, swollen lymph node continued and broke out in hives approx at 1300. Went to emergency room and was given an oral steroid (dekadone?). Prescribed prednisone, claritin, and Benadryl. Have taken 1 claritin a day. Hives have disappeared within 5 hrs of oral steroid. Swollen lymph node persists and has enlarged. Painful and swollen past the jaw line. Will return to ER today for pain and continued swelling as directed by ER.
COVID19 VACCINE (COVID19)	Office Visit *	904468-1	Painful, Tender and redness next to injection site (not directly on). Red mark approximately 2 inches in height and 1 1/2 inches wide
COVID19 VACCINE (COVID19)	Office Visit *	904481-1	Persistent headache which started night of vaccine, unrelieved with Tylenol, continues today (12/20). Fatigue which has gotten worse, to today where I struggled to function and had to call in for tonight's shift at the hospital.
COVID19 VACCINE (COVID19)	Office Visit *	904484-1	Chills, throwing up, runny nose
COVID19 VACCINE (COVID19)	Office Visit *	904485-1	Sensation of tightening in throat and sensation of difficulty swallowing. No rash. No dyspnea. No stridor/wheezing. Vital signs unremarkable. Suspect globus sensation. Plan observation until resolution or progression to anaphylaxis.
COVID19 VACCINE (COVID19)	Office Visit *	904503-1	3pm developed sore throat and rhinorrhea. Concerned that I was positive, left work and scheduled symptomatic test next day. Noted on home pulse ox that my heart rate was in 140s (otherwise vital signs were normal and I was afebrile). Symptoms got better and after pushing fluids I was able to get my heart rate under 100 by end of the day. 12/20 woke up heart rate 140s now down to 105 at time of reporting. Sore throat and rhinorrhea are getting better but tachycardia is concerning and I am worried I may have developed an arrhythmia as my Apple Watch consistently marks my rhythm as inconclusive
COVID19 VACCINE (COVID19)	Office Visit *	904529-1	Developed rash that itches on trunk, bilateral arms and bilateral legs 2 days after received Pfizer Covid vaccine #1.
COVID19 VACCINE (COVID19)	Office Visit *	904538-1	- 1121: Patient reported being light headed. Patient stated it might be because of the excitement of getting the vaccine. Patient has a history of hypertension, arthritis (remission). Patient has a history of Bell's palsy and takes medication for that. Patient stated normal B/P normally 130s/80s.
COVID19 VACCINE (COVID19)	Office Visit *	904543-1	"Immediately after the injection my right shoulder felt ""odd"" and seemed to be popping and clicking more than usual. I experienced severe pain of the shoulder joint about 4 hours after the injection. At this time I took 400 mg of ibuprofen and the pain was eased by about 50 percent after about an hour. The next day I went to work without any medication and could barely lift my arm without severe shoulder pain inside the joint. The muscle did not feel too bad. Mobility of the joint was possible but limited by pain. I mostly used my other arm to adjust the position of my right arm. After work that day I took 800 of ibuprofen and went home to bed. I felt better the next day but took another 600 mg of ibuprofen to get through the work day. Same for day 3. It is now approximately 80 hours since the injection and my shoulder joint is still fairly tender and stiff but improved. I fear possible SIRVA because the shot seems to have been delivered fairly high on my arm. I do have a history of rotator cuff issues with this shoulder but it was never as painful as it was on the day of the vaccine and the shoulder has been well for the last two years. I received the flu vaccine in the same arm a few months ago with no problems."
COVID19 VACCINE (COVID19)	Office Visit *	904583-1	I had tachycardia within the first 5 minutes of receiving the vaccine. Heart rate increased to 151
COVID19 VACCINE (COVID19)	Office Visit *	904624-1	Night sweats and fatigue on 12/19/20-Current
COVID19 VACCINE (COVID19)	Office Visit *	904642-1	Left axillary enlarged lymph node. The lymph node has increased in tenderness and size
COVID19 VACCINE (COVID19)	Office Visit *	904644-1	STRONG PERSISTENT HEADACHE GENERALIZED MYALGIA BACK PAIN UNQUANTIFIED FEVER WEAKNESS

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	904714-1	Employee woke up the next day with conjunctive hemorrhage of the left eye
COVID19 VACCINE (COVID19)	Office Visit *	904722-1	Ear pressure and swelling on same side as injection
COVID19 VACCINE (COVID19)	Office Visit *	904826-1	Fever 102.4, Headache, Joints, Muscle aches, lymph node swelling, generalized soreness at site anticipated symptoms but more severe lasting more than 48 hours. Taking Tylenol around the clock. Tylenol did not help at first but feeling somewhat better now. However, lymph nodes still swollen and hurting.
COVID19 VACCINE (COVID19)	Office Visit *	904837-1	HEADACHE INFRAORBITAL PAIN GENERALIZED PRURITUS
COVID19 VACCINE (COVID19)	Office Visit *	904848-1	Within 15 minutes of receiving the vaccine, patient began complaining of rapid heart rate. RN came over to monitor, and found HR @130 BPM. Rapid response/medical emergency was called. Refused further medical treatment. Stayed 5-10 mins longer than the 15 minutes recommended observation period, and felt better before leaving.
COVID19 VACCINE (COVID19)	Office Visit *	904854-1	Began complaining of dizziness shortly after getting hte vaccine. She did not eat anything since the day before. Gave juice and a granola bar. Shortly after finishing food, began complaining of her heart feeling fluttery, a medical emergency was called. She was evaluated and found to be tachycardic. Refused further medical treatment, then ate lunch, and returned to work. She was observed on site for an additional 30 minutes beyond the 15 minute observation period.
COVID19 VACCINE (COVID19)	Office Visit *	904857-1	Chills, Muscle pain, headache, joint pain, tiredness
COVID19 VACCINE (COVID19)	Office Visit *	904862-1	Patient began to complain of feeling dizzy. Was found to be anxious, flushed and tachycardia. Was asked to lay down. Medical emergency was called to respond. Patient refused further medical treatment. Continued monitoring for an additional 45 minutes after receiving the vaccine, and left in good condition.
COVID19 VACCINE (COVID19)	Office Visit *	904867-1	""Pfizer-Biontech Covid-19 Vomiting since Saturday."
COVID19 VACCINE (COVID19)	Office Visit *	904875-1	Complained of nausea, and feeling light headed. Turned very pale then got extremely flushed after. Complained of feeling warm and hot. Vision turned a little blotchy. Stayed for longer observation. Felt better when left vaccine clinic.
COVID19 VACCINE (COVID19)	Office Visit *	904881-1	"Staff member stated that she had an allergic reaction ""after the vaccine""...unsure of time frame and was still at work. She has a rash, hives and swelling around eyes....no immediate anaphylaxis. She verbally described her incident. Was treating with Benadryl (even though there was a stated allergy from 2013), then followed up with her family doctor, for steroid therapy on 12/18. She has not communicated with me further or have any absences from work at this time."
COVID19 VACCINE (COVID19)	Office Visit *	904974-1	12/15/2020 30 minutes after vaccination, started to taste a metallic taste; lasted 24 hours ;'like chewing on tin foil'. Pain at injection site 48 hours. 12 hours after vaccination, joints hurt, left hip is 'excruciating' . 72 hours later, joint paint dissolved. But the left hip, the pain is awful. Taking motrin, muscle relaxers, physically walking with a limp, cannot bend over, have assistance with sit or stand. Had COVID19 in 05/2020. Same hip pain when had COVID. Went away after 3 months. 'Hip pain now is 5x's worse than when had COVID'; debilitating; constant pain. appt with PCP 12/30/202; xrays, mri, etc. May go to the ER if worsens but Chief Officer Urgent care for COVID19 and cannot take the time away.
COVID19 VACCINE (COVID19)	Office Visit *	905003-1	Facial flushing, bright red and itchy splotches over the face, arms and chest. Had diarrhea for 24 hours. She took a Benadryl and got relief of symptoms.
COVID19 VACCINE (COVID19)	Office Visit *	905006-1	Headache, Fever, Chills, Loss of Smell, diminished taste, Nausea & Vomiting, Diarrhea
COVID19 VACCINE (COVID19)	Office Visit *	905119-1	pain and itchy over L cheekbone, HTN Solu-Medrol 125mg IVP, Benadryl 50mg IVP slowly, Lisinopril/HCTZ 10/12.5mg PO symptoms resolved in 2 hours of observation and management
COVID19 VACCINE (COVID19)	Office Visit *	905126-1	Itching. Was given Benadryl PO by Walk-in clinic. Observed for 4 hours. Sent home with family member.
COVID19 VACCINE (COVID19)	Office Visit *	905132-1	12/17/2020 VERY ORGANIZED. COVID19 VACCINE (COVID19)	Office Visit *	905675-1	18 minutes post vaccine dose 1, Pfizer COVID vaccine, development of globus sensation without airway compromise or stridor. Frequent throat clearing and swallowing. Followed by diaphoresis, loss of vision, extreme neuropathic tingling over entire head non painful. Bradycardic event to heart rate 35 recorded by Apple watch. Loss of consciousness with pupil dilation. Weak pulses but no loss of pulse. Heart rate recovered quickly. Blood pressure after initiation of iv fluids was normal in upright position once loss of consciousness subsided. Continued globus sensation. 30 minutes after initial event, again developed clammy hands, head tingling and worsening globus sensation but again no stridor or airway compromise. Given PO Benadryl 25 mg which did resolve globus sensation in next 30 minutes. Monitored for one hour post event with no subsequent symptoms other than fatigue.
COVID19 VACCINE (COVID19)	Office Visit *	905676-1	"Tingling in right arm where vaccine was given. Hot at the site in her ""R"" hand. Still tingling 45 minutes after. Following up with Telemedicine."
COVID19 VACCINE (COVID19)	Office Visit *	905680-1	Next day between 3 -6 AM - swelling of left eyelid followed by swelling and paresthesias of lips, followed by severe paresthesias of the left side of the face mostly lower half associated with a heavy sensation. Emergency treatment with 150 mg solumedrol and 50 mg benadryl. Symptoms persisted on and off for 3 days requiring benadryl 50 mg and claritin round the clock. On the second day post-vaccine headache, mouth blister (1), and diarrhea. Today (4 days post) very tired and fatigued.
COVID19 VACCINE (COVID19)	Office Visit *	905685-1	Employee experienced headache and dry heaving
COVID19 VACCINE (COVID19)	Office Visit *	905687-1	Patient complaint of itchiness, shortness of breath,tongue swelling, hyperventilating. Epipen was administered at 3:20pm

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	905689-1	Widespread Pain; diarrhea; fever; vomiting; This is a spontaneous report from a non-contactable other healthcare professional. An 85-year-old female (non-pregnant) patient received first dose bnt162b2, intramuscularly on right arm on 14Dec2020 at 14:00 at single dose for immunization. Medical history included High cholesterol (no cholesterol lowering medication) edema, dementia, and no known allergies. Prior to vaccination, the patient was not diagnosed with COVID-19. Concomitant medication included influenza vaccine (INFLUENZA) on 30Nov2020 for immunization within 4 weeks prior to the COVID vaccine, other medications the patient received within 2 weeks of vaccination included daily vitamin, diuretic, dementia medication, anti inflammatory. On 14Dec2020, the patient experienced widespread pain, diarrhea, fever, vomiting. The adverse event result in doctor or other healthcare professional office/clinic visit. No treatment was received for the events. Since the vaccination, the patient hadn't been tested for COVID-19. The outcome of the events was not resolved. No follow-up attempts are possible. Information about Lot/Batch could not be obtained. No further information is expected.
COVID19 VACCINE (COVID19)	Office Visit *	905717-1	Rash starting behind ears, moving to neck and trunk. Patient took a 2nd generation antihistamine (unsure which one) and this has helped with the itching. Rash is still present.
COVID19 VACCINE (COVID19)	Office Visit *	905731-1	tingling; warmth and coolness in ears, head and face radiates to arms, legs and back; painful teeth; nausea; extremely flushed; goosebumps; This is a spontaneous report from a contactable consumer (patient) and healthcare professional. A 35-year-old female patient received the first dose of bnt162b2 (BNT162B2; lot number: EH9899), via an unspecified route of administration on the left arm on 16Dec2020 18:30 at single dose for immunization. Medical history included eczema. Concomitant medication included vitamin D3, zinc, ascorbic acid (VITAMIN C). The patient previously took trimethoprim / sulfamethoxazole (BACTRIM) and cefaclor (CELOR) and experienced allergies. The patient experienced tingling, warmth and coolness in ears, head and face radiates to arms, legs and back, painful teeth, nausea and extremely flushed with goosebumps on 16Dec2020 18:45. Outcome of the event was not recovered. It was reported that patient had no prior COVID vaccination and did not test positive for COVID. Reporter considered that events non-serious. It was unknown if treatment was received for the adverse events.
COVID19 VACCINE (COVID19)	Office Visit *	905747-1	Complained of scratchy throat and feeling like throat was swelling.
COVID19 VACCINE (COVID19)	Office Visit *	905749-1	15 minutes after vaccination start experiencing nausea and vomiting
COVID19 VACCINE (COVID19)	Office Visit *	905752-1	Arrived to drive through as passenger in car. á He did let RN know before vaccine he has felt faint and has had syncopal episodes after injections or blood draws. Immediately after injection he had a loss of conciseness. Lasting approximately 1 min. Partner states this was a normal reaction. He then had a second episode lasting longer than first. Partner states this was not a normal reaction for him. He was not responding to voice or touch . After approx 1-2 mins he was alert and responsive to person, place and situation. RN stayed with Patient as he remained in car. á á 911 called to evaluate RN gave report and hand of to EMS. EMS evaluated and found pt stable.
COVID19 VACCINE (COVID19)	Office Visit *	905756-1	chills, body ache, sore throat, sever cough with chest pain
COVID19 VACCINE (COVID19)	Office Visit *	905758-1	FATIGUE , HEADACHE, I WOKE UP WITH A MIGRAINE . Mild headache for two days
COVID19 VACCINE (COVID19)	Office Visit *	905761-1	At one and a half hours after receiving her vaccine, developed tongue and throat swelling, went immediately to the ER. She was treated in the ER and was discharged to home with EPI pen. She still has the following symptoms headache, dizziness, lightheaded, fever 99.2. Difficulty concentration and talking. COVID19 VACCINE (COVID19)	Office Visit *	905921-1	Vaccine #1 12/19/2020. No immediate reaction. 12/20/2020 started to get burning around Left eye. 12/21/2020 started to get swelling and puffiness around both eyes, also started with cough and back pain. Feels like symptoms improving. Taking Benadryl.
COVID19 VACCINE (COVID19)	Office Visit *	905929-1	Received the vaccine Wednesday evening, after work. Waited the recommended 15 minutes, then went home and went to bed. Woke up Thursday feeling fatigued and had injection site pain, no other side effects or fever. Thursday evening, I developed body aches and a low-grade fever. I took Tylenol and went to bed. Friday, when I woke up around 1pm, I noticed a small rash behind my left knee. I took Benadryl and ended up falling back asleep. When I woke up Friday evening, I had the rash, and hives, and red/white splotches all over my legs. I took Benadryl and consulted my doctor. The rash continued to spread to my arms, and stomach. The rash itched and burned. I went to the ER Friday night for it. Before they gave me medication, I started coughing, couldn't breathe for a minute, and got lightheaded. They gave a steroid, Pepcid, Benadryl, and fluids. They observed me for several hours. I felt better then was discharged. They told to continue to take Benadryl or Zyrtec for a couple days. 5 days later, the rash/hives are still red, itchy and present, especially when Benadryl wears off.
COVID19 VACCINE (COVID19)	Office Visit *	905946-1	Approximately 30 minutes after vaccination developed intense pins and needles sensation to the left side of my face. I then developed a heavy, aching, tingling sensation to the left side of my face. I returned to the facility and was evaluated post vaccination. Symptoms persisted still 2 days later so I was evaluated by my PCP today and diagnosed with Bells Palsy. I was prescribed high dose steroids today.
COVID19 VACCINE (COVID19)	Office Visit *	905948-1	12/16-headache/abdominal pain 12/16 3am nausea/headache/dizziness 12/17 headache/dizziness 12/18 dizzy/diaphoretic 12/19 headache/dizziness/night sweats 12/20 headache that worsened at night, dizziness, night sweats 12/21 headache/dizzy-went to doctor -pulse thready EKG was performed (normal). Dr felt I was dehydrated and suggested drinking plenty of water and following up with him.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	905957-1	About 20 minutes after vaccination patient vomited several times and experienced increased blood pressure and heart rate. Physician assistant consulted and recommended to continue to monitor for patient improvement. Patient blood pressure and heart rate began to decrease.
COVID19 VACCINE (COVID19)	Office Visit *	905982-1	Reports dizziness, light headed, heaviness on top of head 10 minutes after injection. No SOB, chest discomfort, palpitation or weakness. AAOx3. VVS. States that she worked last night and did not eat breakfast yet, also ran two miles prior to getting vaccine. She was given fluids and was closely monitored. Symptoms mildly improved after about 30 minutes but continues to keep the heaviness. States that she is likely very sleepy and tired. No acute distress. COVID19 VACCINE (COVID19)	Office Visit *	906172-1	Caller stated on 12/18/20 and on 12/19/20 she had some arm pain and nasal drainage. Caller stated that she went to doctor on 12/21/20 and was diagnosed with Cellulitis and was prescribed steroids and cefalexin for 7 days x three times daily. Caller stated that physician does not recommend second injection. Vaers report completed over the phone.
COVID19 VACCINE (COVID19)	Office Visit *	906185-1	Na
COVID19 VACCINE (COVID19)	Office Visit *	906235-1	Immediately after receiving the vaccine, I felt tingling sensation in my extremities. I felt flushed, my chest became red, and I felt like my heart was racing. It generally lasted about a minute. Now, two hours later I am still feeling some tingling in my left arm.
COVID19 VACCINE (COVID19)	Office Visit *	906256-1	TIGHTENING OF THROAT, VERTIGO - 50MG IV BENADRYL
COVID19 VACCINE (COVID19)	Office Visit *	906280-1	"Chills, body ache, fatigue 100.9 fever - lasted 24 hrs Injection site very sore + approximately 48hrs after injection soreness moved toward armpit. Arm is warm, red, itches slightly almost entire upper arm (5" long x 2" wide) + still tender to touch on 12-21-20"
COVID19 VACCINE (COVID19)	Office Visit *	906314-1	20 minutes after receiving the vaccine this employee experienced nausea
COVID19 VACCINE (COVID19)	Office Visit *	906316-1	Bodyaches, headache and chills that started the next morning after the vaccine.
COVID19 VACCINE (COVID19)	Office Visit *	906320-1	Employee described being fatigued, dehydrated, and low grade fever
COVID19 VACCINE (COVID19)	Office Visit *	906325-1	Tongue tingling, throat tightness @0520 Chest heaviness, lips numb @0525 Voice hoarseness @ 0530 IV Benadryl given approx 0550 PO prednisone given approx 1000 Left side of face still numb after 24 hours
COVID19 VACCINE (COVID19)	Office Visit *	906326-1	Employee experienced nausea and headache

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	906335-1	fever, chills, headache, dizziness, lightheadedness, body aches
COVID19 VACCINE (COVID19)	Office Visit *	906380-1	12/16/2020 around 2300 body aches, followed by chills progressed to rigors, developed a migraine 6 to 8 hours after fatigue, insomnia, temp was 100.4. Those symptoms progressed and stayed stable for 24 hours until the next night and didn't resolve until the 18th and late that night I developed lymphadenopathy in left axilla, al nodes very swollen and large. That subsided since then. I took Tylenol and 10mg Rizatriptan for migraines and that resolved. **I was in a double blinded study for the AstraZeneca trial and am still unsure whether or not I received the placebo or the actual shot. Nov 30th
COVID19 VACCINE (COVID19)	Office Visit *	906385-1	Chest tightness and shortness of breath since 12/19/20
COVID19 VACCINE (COVID19)	Office Visit *	906408-1	Employee experiences nausea and injection site pain
COVID19 VACCINE (COVID19)	Office Visit *	906409-1	Hives on left leg above the knee (ventrolateral surface)
COVID19 VACCINE (COVID19)	Office Visit *	906414-1	Developed body aches and fatigue the day of the vaccine. Developed fever of 100 and high bp and p 12/22 (day after vaccine). BP 151/108, p 116. Referred to clinic for f/u.
COVID19 VACCINE (COVID19)	Office Visit *	906415-1	Developed body aches and fatigue the day of the vaccine. Developed fever of 100 and high bp and p 12/22 (day after vaccine). BP 151/108, p 116. Referred to clinic for f/u.
COVID19 VACCINE (COVID19)	Office Visit *	906418-1	Headache Fever- temp as high as 102.7
COVID19 VACCINE (COVID19)	Office Visit *	906422-1	Employee began to experience light headiness right after receiving the vaccine
COVID19 VACCINE (COVID19)	Office Visit *	906423-1	Headache ,whole body ache , back pain ,low grade temperature 99.2 since yesterday

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	906428-1	"Patient states that she received the vaccination at 10:24 AM. Patient states approximately 2 minutes after that she felt pain and swelling and erythema in her left arm at the injection site. Patient states she felt like she had a somewhat of a ""apple in her throat"". Patient states that her left arm was tingly. Patient states that she has a headache in the bitemporal area. She states that she has a history of headaches. Patient states that she has no visual changes. Patient states that it started after the immunization. Patient states 5 minutes before I came into the room she vomited and now feels tremendously better. She is talking in a complete sentences. Patient is somewhat tachycardic on initial Patient states that she received the vaccination at 10:24 AM. Patient states approximately 2 minutes after that she felt pain and swelling and erythema in her left arm at the injection site. Patient states she felt like she had a somewhat of a ""apple in her throat"". Patient states that her left arm was tingly. Patient states that she has a headache in the bitemporal area. She states that she has a history of headaches. Patient states that she has no visual changes. Patient states that it started after the immunization. Patient states 5 minutes before I came into the room she vomited and now feels tremendously better. She is talking in a complete sentences. Patient is somewhat tachycardic on initial presentation. Patient presents via BR RT for evaluation. Patient has a host of allergies.Patient is anxious upon presentation. Patient does have a history of anxiety. No other travel or trauma. Patient states that her pain is severe. States that she has some pressure in the bitemporal portion of her head and her left arm injection site. Otherwise nonradiating. No other known aggravating, triggering or alleviating factors. Patient dates its concurrent with the injection time. Otherwise nonradiating. BP 180/100 at 1045, O2 sat 98%, ECG sinus tachycardia Repeat Vital Signs BP 133/82 Pulse 82 Temp 36.9 ;C (98.4 ;F) (Oral) Resp 16 Ht 1.702 m (5' 7"") Wt 197 lb 1.5 oz (89.4 kg) SpO2 98% BMI 30.87 kg/m Constitutional: Well developed; well nourished; in no apparent distress; non-toxic appearance HEAD: Atraumatic. Normocephalic. Eyes: PERRL; EOM intact; conjunctiva and sclera normal to inspection. HENT: TM's normal; no rhinorrhea; normal pharynx with no erythema or exudates. Mucous membranes are moist. Uvula is midline. No hemotympanum or foreign body. NECK: Supple; non-tender; no cervical lymphadenopathy. Respiratory: No respiratory distress; normal breath sounds; breathing non-labored Cardiovascular: Normal rate; good peripheral perfusion. No murmurs or rubs CHEST: Nontender. There are no retractions. GI: Normal bowel sounds; non-distended; non-tender to palpation; no palpable organomegaly GU: Musculoskeletal: Extremities non-tender; normal range of motion; no edema; Normal distal pulses Back -Normal tone; no tenderness Integument: Well hydrated; no lesions; no significant rash or palpable nodes. Neurologic: Alert, appropriate; oriented to person; place and time. No focal deficits. Motor 5/5. Sensation intact in all 4 extremities. Psych: Mood and affect are anxious. Mental status appears normal at time of exam. Patient upon presentation is anxious. Patient did vomit x1. Patient was talking in complete sentences upon my evaluation. Patient feels that she has some discomfort to her injection site with a headache. They feel no warmth or erythema. Patient was given Tylenol for the headache which did improve. Also received ondansetron, diphenhydramine, famotidine, methylprednisolone, NS 1000mL. Patient was monitored for an extended period of time and has had no return of symptoms. I am uncertain whether this is a true allergic reaction since the symptoms started approximately 2 minutes from the time of the injection. Patient does have a history of anxiety and this may have played a role within the symptomatology. At this time patient feels much better. Patient be dismissed we will send the patient home with a prednisone taper. She can take oral Benadryl and Pepcid. Follow-up with her family doctor next couple days not feeling better. Patient is dismissed. Patient returned to ED on 10/22/20 0100. Presents to ED complaining of numbness and tingling all the way from her head to her left toe on the left side. Has taken Benadryl 3 times today. She states that she woke up this evening with her heart racing. She still has a little bit of a headache. No fevers. He was nauseous. Again she says the whole left side of her body is tingling. All other systems negative/without deficit. HR 124, BP 168/107. Repeat Vital Signs: BP 129/77 Pulse 99 Temp 37.2 ;C (98.9 ;F) (Temporal) Resp 20 Wt 206 lb 2.1 oz (93.5 kg) SpO2 100% BMI 32.28 kg/m EKG showed a sinus rhythm without acute ST changes. She is anemic but she has a history of that and her hemoglobin is not significantly lower than usual. Sed rate is little bit elevated but her C-reactive protein is normal. Her glucose slightly elevated at 173 but the rest of her labs are normal. CT and CTA of her head and neck were normal. I do not know at this time if this is a reaction we will have her continue the prednisone taper she was started on earlier as well as Benadryl and have her follow-up with her primary care physician."
COVID19 VACCINE (COVID19)	Office Visit *	906432-1	Lightheaded, dizzy, nauseous, and heart palpitations about 5 minutes after getting vaccine. Laid supine for 30 minutes with blood pressure continuously taken. BP 188/93
COVID19 VACCINE (COVID19)	Office Visit *	906436-1	Employee Experienced hotflashes
COVID19 VACCINE (COVID19)	Office Visit *	906439-1	Shoulder pain, arm pit pain, deep scapula pain with inability to move arm without significant pain starting on 12/20.

COVID19 VACCINE (COVID19)	Office Visit *	906588-1	12/18, 0905: metallic taste in mouth lasting all day 12/19: fatigue all day, 2200-nausea and low grade fever 12/20: fatigue lasting all day 12/21: woke up at 0400 with congestion and sore throat. Swollen lymph nodes and swollen glands over right clavicle. 12/22: congestion, drainage, sore throat, swollen glands/lymph nodes as described yesterday and fatigue
COVID19 VACCINE (COVID19)	Office Visit *	906596-1	Employee was being monitored post Covid19 vaccination. Approximately 10 minutes after vaccination employee had an allergic reaction and developed Hives all over her body and became itchy with hot flashes. Employee was given 50MG of Benadryl which was effective.
COVID19 VACCINE (COVID19)	Office Visit *	906610-1	Pfizer-BioNTech COVID-19 Vaccine EUA Headache, body aches and extreme fatigue started on 12/20/2020. I had a doctor appointment on 12/22/20 for a routine visit and I told my doctor about these symptoms that had occurred and he stated that I needed to be tested for COVID since these were symptoms. He also ordered blood work and I had blood drawn. I had informed him at the beginning of the visit of my recent COVID vaccine last week.
COVID19 VACCINE (COVID19)	Office Visit *	906639-1	Throat numbness; Lymph node swelling; Felt flush; This is a spontaneous report from a non-contactable consumer. A 28-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: EK5730), via an unspecified route of administration in the right arm, on 17Dec2020 at 15:15 (at the age of 28-years-old) at a single dose for COVID-19 immunization. The patient had no medical history or concomitant medications. The patient was not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient had no known allergies to medications, food, or other products. The patient did not receive any other vaccines within four weeks prior to the vaccination. The patient experienced throat numbness, lymph node swelling, and felt flush on 17Dec2020 at 15:15. The events were reported as non-serious. Therapeutic measures were taken as a result of the events, which included treatment with diphenhydramine hydrochloride (BENADRYL). The clinical outcome of throat numbness, lymph node swelling, and felt flush was recovering. It was also reported that since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information expected.
COVID19 VACCINE (COVID19)	Office Visit *	906717-1	Urticaria, tachycardia at 10 minutes post injection in left arm and neck Treated with oral cetirizine and montelukast. Resolved within 15 minutes of treatment. Discharged in good condition with PO diphenhydramine as needed.
COVID19 VACCINE (COVID19)	Office Visit *	906726-1	Dizziness, headache, nausea started 12/19/20. Vomited on 12/20/20. Came in on 12/21/20 to be seen by provider.
COVID19 VACCINE (COVID19)	Office Visit *	906730-1	1. Day 1- (same day) didn't feel anything until later that night, I felt a lump at site with a quarter size area around the direct shot red and sore. 2. Day 2- Sore arm, felt a bit restricted to move arm around, minor weakness, still red quarter size and lump at site. 3. Day 3- Arm same as day 2, but by the evening I was extremely tired. Joint pains, body aches, and random chills all severe. 4. Day 4- Arm issues gone but continued with the body aches, weakness, extremely tired, and chills. A bit cloudy, and a bit forgetful. 5. Day 5- Same as day 4, but worse. Completely unable to accomplish daily activities, had to call in to work, weakness at one point as bad as struggling to lift and open a water bottle. 6. Day 6- I am here, slightly better than the day before. Still severe joint pains, body aches, and body chills.
COVID19 VACCINE (COVID19)	Office Visit *	906736-1	Extreme swelling of lymph nodes on left side of body (specifically armpit) Fever Muscle Pain Swelling Headache Nausea Vomiting
COVID19 VACCINE (COVID19)	Office Visit *	906738-1	12/21/2020- 1 called with increased BP 12 hours after vaccination. Was seen by MD and went to ER. Med for BP increased and modified until stable.
COVID19 VACCINE (COVID19)	Office Visit *	906758-1	She was given the Pfizer vaccination in the left deltoid muscle. á During her 15 minute waiting period after the injection, the patient began to experience localized tingling at the injection site that radiated into her 4th and 5th digits and proximally along the sternomastoid muscle. She denied rash, hives, difficulty breathing, difficulty swallowing, wheezing, throat tightness, hoarseness, stridor, itching, dizziness, facial swelling, lip swelling and tongue swelling. á This provider was notified of patient reaction and she was then assessed in the emergency bay area. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension and chest pain. Patient was observed for approximately 30 minutes post injection with no evolution of sx. Injection site tingling that extended along the ulnar nerve distribution was improving at the time of discharge.
COVID19 VACCINE (COVID19)	Office Visit *	906764-1	Patient received the covid vaccine on Sunday12/20/2020. He found out that his roommate tested positive for covid on 12/20/2020 when he got home. He started to have dry cough on 12/20 evening. Had HAS but resolved 12/22. Still coughing. No fever/chills/bodyaches.
COVID19 VACCINE (COVID19)	Office Visit *	906778-1	Hypotension and syncope without tachycardia, 15 minutes after injection. Patient was repositioned supine, which caused her to regain consciousness. Give 1 liter NS over 2 hours and discharged in good condition.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	906780-1	"From the patient (a employee) ""So, I think I am having a reaction to the vaccine. I did call my PCP to check in and they also said to notify you. I felt fine until last night about 8 PM. Then I got body aches, headache, nausea, tachycardia, no fever. During the night I had to use my nebulizer 3 times to keep sat > 86. As I did some research through the night, some Covid patients were found to have positive Epstein Barr. That is what I had in September (EBV) that put me down for 3 months. So I am wondering if it caused a relapse of that. Hope not."
COVID19 VACCINE (COVID19)	Office Visit *	906785-1	Increased heart rate and blood pressure. Rash on anterior right side of neck. She laid down and was given water. Blood pressure and heart rate monitored. She was also reassured by friends that she was okay. The patient said she was anxious and that's why she had a reaction.
COVID19 VACCINE (COVID19)	Office Visit *	906787-1	12/21: woke up with full body aches, pressure in ears bilaterally. Took 200mg motrin, body aches resolved by early evening. 12/22: Right tonsil inflamed/irritated, painful to swallow. Ear pain bilaterally. Went to clinic, temp 99.1, some fluid in ears; strep and influenza tests came back negative. Given zyrtec, flonase, and tylenol for symptom management and advised to get a covid test when possible.
COVID19 VACCINE (COVID19)	Office Visit *	906812-1	Dizziness, Flushed, Light headed, Near Syncopal Episode.
COVID19 VACCINE (COVID19)	Office Visit *	906813-1	It started with a tingling in my tongue, my BP went super high and my face was all red and a headache afterwards. My BP went down about 25 min later. I was just monitored at the vaccination site, did not go to the ER.
COVID19 VACCINE (COVID19)	Office Visit *	906851-1	Patient was pale and nauseous with abdomen pain. patient stated this may have been from her mensural but cycle. Patient put to lye down and left with her guardian to go home and seek medical attention.
COVID19 VACCINE (COVID19)	Office Visit *	906867-1	Heart racing , 15 minutes after vaccine was administered, lasting for about 10-15 min. Itching and rash on chest and upper back about an hour after vaccination.
COVID19 VACCINE (COVID19)	Office Visit *	906877-1	Employee received COVID-19 vaccine on 1:45pm
COVID19 VACCINE (COVID19)	Office Visit *	906909-1	Few hours post-vax developed headache. Took Tylenol. Went to bed, no symptoms. Woke up with cough and experienced headache and fatigue throughout the day. Seen by NP at Employee Health, below tests performed. Symptoms persisted through 12/18. By 12/19 symptoms resolved.
COVID19 VACCINE (COVID19)	Office Visit *	906923-1	After the vaccine, patient said he felt hot. Later that day,he was starting to have muscle aches and then he noticed testicular and prostate swelling. He followed with his PCP and the PCP prescribed an antibiotic; however, patient did not recall the name of it. He is still being treated. He noticed an improvement. He started the antibiotic on 12/21/2020.
COVID19 VACCINE (COVID19)	Office Visit *	906926-1	"At 10:30 pm felt sudden loss of feeling in right hand- unable to use right arm. ""Felt numbness on top of forearm-feels like muscles are no longer working."" Went to urgent care on 12/18/2020 (another clinic)- arrived at 0845."
COVID19 VACCINE (COVID19)	Office Visit *	906929-1	15 mins after the vaccine I had a bad headache and very dizzy blood pressure 168/109 very hypertensive Possibly stoke after vaccine (No stoke) Took ibuprofen Had Tylenol before the vaccine 12/22/2020 slight high blood pressure still
COVID19 VACCINE (COVID19)	Office Visit *	906939-1	Speech difficulty and bilateral lower extremity tingling and numbness after COVID-19 vaccine administration. Symptoms improved at ED with IV Hydration
COVID19 VACCINE (COVID19)	Office Visit *	906942-1	Started feeling chills night of receiving vaccine, then dizzy 4 days later, with severe nausea. Still not feeling well, queasy, dizzy.
COVID19 VACCINE (COVID19)	Office Visit *	906953-1	Pfizer-BioNTech COVID-19 Vaccine EUA Within 5-10 minutes of vaccine, burning and tingling sensation started in chest, moving into throat, tongue, mouth, nose, and ears. Flushing sensation and red ears. Increased heart rate, resolved after a few minutes. Was treated in the ER and released from hospital. EKG and vitals were checked, no labs drawn. Occasional burning and tingling sensation but resolves within a few minutes, mainly in chest and tongue. Occasional symptoms ceased in about 3 hours.
COVID19 VACCINE (COVID19)	Office Visit *	906964-1	Approximately 15-30 minutes after receiving the vaccine the patient reported numbness on the left side of her face. Also reported intermittent tingling in fingertips of both hands and feet. Prescribed a medrol dose pack that evening and had taken one dose. By 0630 today (12/22) reported that the numbness was 95% improved.
COVID19 VACCINE (COVID19)	Office Visit *	906965-1	"A 36 year old FEMALE who received Covid 19 vaccine today at 1009, started c/o mild lightheaded and ""tingling throat"" at 1026 am, nurse notified this provider. NOTE: This is a late entry due to documented reaction was on paper and not available for documentation at the time of adverse reaction complaint. Oral hydration, patient stable, symptoms subsided at 1037. Employee discharged to work station."
COVID19 VACCINE (COVID19)	Office Visit *	906966-1	Employee reported to the employee health clinic 3 days after receiving the Pfizer COVID vaccine and had complaints of a 30mm indurated area on her right arm. She states she vomited once that night and had a headache. Took Tylenol and seemed to help. Encouraged employee to apply cold compress to arm and notify if symptoms of arm swelling get worse or any new symptoms of a reaction arise.
COVID19 VACCINE (COVID19)	Office Visit *	906970-1	Pt developed throat tightening, shortness of breath, hives on the anterior chest after receiving COVID-19 Pfizer vaccine. She received vaccine around 9:15 AM and symptoms began at 9:28 AM. Received epi pen by vaccination station staff. Reported to ED. Observed for 3 hours with no further adverse effects. Treated with steroids, Pepcid, Benadryl. Discharged home with epi pen, medrol dosepack, and allergy/immunology follow up.
COVID19 VACCINE (COVID19)	Office Visit *	906971-1	Pain and numbness in the left arm From the shoulder to the fingers. Cannot raise arm, nor leave it down. Relief with a sling. Also, to manage pain, she is taking Tylenol every four hours. By medical order she started diclofenac potassium 50 mg tablet.
COVID19 VACCINE (COVID19)	Office Visit *	906979-1	My throat was swollen and sore, a rash on face and neck, runny nose, lost voice, SOB

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	906990-1	Lymph nodes are swollen on the left side It sore and tender on the left side
COVID19 VACCINE (COVID19)	Office Visit *	906991-1	Patient reported becoming dizzy 12 minutes after receiving injection. Patient felt like she was going to faint. Patient was placed on floor with legs elevated and given a snack and a sugary drink. Felt better left facility and called in reporting when she got down to go inside her home she had a repeat episode of vertigo.
COVID19 VACCINE (COVID19)	Office Visit *	906995-1	Patient refers to itching and rash. Refused treatment. The event occurred approximately 35 minutes after administration of vaccine.
COVID19 VACCINE (COVID19)	Office Visit *	906999-1	mild swelling and tingeling sensation of the lips. No significant swelling.
COVID19 VACCINE (COVID19)	Office Visit *	907006-1	pt after receiving vaccine, felt tight chest, difficulty breathing. 25mg Benadryl po. pt hypertensive 160/100. pt remained hypertensive and with chest tightness and CP. EMS called. EKG done. EMS found no need to go to ER at this time. Pt remained in observation then d/c home with friend.
COVID19 VACCINE (COVID19)	Office Visit *	907011-1	1406, Monitored pt 1:1. She reported feeling fine for the first 15 minutes then reported itching involving her face but not forehead. Gave 25 mg IM diphenhydramine. pulse ox Reading was wnl. Within 5-10 min after diphenhydramine pt reported itching involving her arms, facial flushing but no shortness of breath. extra 25mg diphenhydramine IM given and Epinephrine IM administered. medical director notified. Dr. came and assessed and monitored patient. Symptoms resolved while on site. Pt escorted by medical colleagues to workplace ER where she agreed to stay for further monitoring. Dr followed up with pt later in the evening and she was doing. Patient updated progress December 20, 2020. I have had continued symptoms since Thursday though initially I felt that they were just typical post-reaction type symptoms. Thursday night I just had some itching and occasional hives. Friday I woke with a terrible headache and could not lift my left arm above by head due to pain but figured that these were vaccine effects. I had intermittent hives and itching that I was able to suppress by taking Allegra, Zyrtec and Claritin (each once) throughout the day. I was also taking Pepcid at night. Saturday, I tried to decrease my antihistamines to just Allegra BID, Pepcid once and Benadryl just last night. I woke with hives and worse itching again. I also appeared to have what looked like eczema on my hands that was new. So I took Pepcid and Allegra prior to going into my shift this morning. I took Zyrtec around 9 am as I had not yet had any improvement in my hives or itching. My co-attending noted that I was progressively becoming more flushed and around 11 am I started to experience an odd sensation in my throat with a persistent cough. My vitals were normal (HR 75, sat 98%, BP 113/78), so I talked the other attending out of more epinephrine and she prescribed me dexamethasone 16mg. I took the dex plus a Claritin at noon today and by 2 pm, had resolution of all of these symptoms. I also noted that my chest felt significantly less tight and retrospectively think I have been experiencing chest tightness and pressure since Friday but hadn't realized it because it occurred gradually. As of December 21, 2020, patient was to start prednisone 40 mg daily x 5 days.
COVID19 VACCINE (COVID19)	Office Visit *	907037-1	After injection had L arm pain, the following day (12/17) pain continued . 12/18 onset of fever max temp 38, chills, fatigue, muscle pain and nausea. Treated with Tylenol for symptom relief. Symptoms continue and worsened 12/19 and 12/20. 12/20 underwent video clinician visit for symptoms and inability to return to work for continued symptoms 4 days after vaccination, last day of fever. 12/21 covid and flu swab negative symptoms all continued fatigue very evident going to and from swab exam. 12/22 morning near syncope while getting ready for day, tachycardia, underwent ED eval was given fluids and labs drawn and discharged home with improvement in tachycardia and lightheaded/dizziness with fluids, another covid swab was negative along with negative RVP. Continued to have fatigue 12/22 evening.
COVID19 VACCINE (COVID19)	Office Visit *	907039-1	Fever 100.6 24 hours after vaccination , Headache chills and body aches, muscle ache .
COVID19 VACCINE (COVID19)	Office Visit *	907040-1	12-19 Received Vaccine @ 0930 12-20 Did not sleep well, woke up and was dizzy, nauseous; this has been constant.
COVID19 VACCINE (COVID19)	Office Visit *	907044-1	Pfizer-BioNTech COVID-19 Vaccine EUA within 5-30 minutes: dizziness, weakness, palpitations, chest tightness, injection site pain, left arm numbness and weakness, headache, nape pain, drop in BP, high BP, left shoulder and elbow joint feeling like to be detached. Sent to Hospital ER, was given Zofran and Ativan
COVID19 VACCINE (COVID19)	Office Visit *	907047-1	Pt hx of DM Type I, HTN, reported pruritic urticarial rash 5AM 12/21/2020 inner wrists, anterior distal LE bil. Resolved aprox 30 mins later. Urticaria recurred mid day 12/21/2020, pt treated with Benadryl 25mg PO, resolved. Urticaria returned evening of 12/21/2020 wrists, axilla, nape of neck. Pt treated with Benadryl 25mg PO, resolved. Urticaria returned 5AM AM 12/22/2020 similar distribution as evening of 12/21/2020. No air way or facial involvement. Pt treated with Benadryl 25mg PO, urticaria resolved. Sought medical eval 12/22/2020 around 10AM: no sx nor urticaria present. 1:30PM 12/22/2020 after eating lunch pt called to report recurrence of urticaria now involving face, lips tingling, itchy back. Administered 50mg Benadryl IM, observed, urticaria/pruritis resolved x 45 mins. Urticarial sx and lip tingling returned in 2 hours, pt transferred to ED for treatment with epinephrine, steroids, observation.
COVID19 VACCINE (COVID19)	Office Visit *	907050-1	Chest pressure and headache followed by generalized itchiness and hives. Progressed to facial swelling and airway swelling. Treated with EpiPen x1 IM, 50 mg diphenhydramine PO, 20 mg famotidine, and 10 mg dexamethasone. Immediate reaction improved. Itchiness and intermittent hives continued. The headache continued along with other common/expected side effects of vaccine.
COVID19 VACCINE (COVID19)	Office Visit *	907052-1	"Pt with dizziness and chest pain that started about 10 minutes after getting the Moderna Covid19 vaccine. No shortness of breath, no rash, no fever, no swelling, no weakness. Feels pain in center of chest and on L side. Pt also has been having stress with work. Pain started in the R side of the chest and migrated to the L side. It improved with Nitro and Aspirin but pt states he still feels, ""fussy."" He has no symptoms of allergic reaction or anaphylaxis. Pt has no known hx of cardiac dz, nonmoker, nondrinker. His Mom has a cardiac murmur but no other known history of heart disease."
COVID19 VACCINE (COVID19)	Office Visit *	907054-1	headache, injection site soreness, nausea (moderate), fatigue (moderate), body aches/chills (moderate), temp 99.4 deg, notified employee health, had a Covid test (came out Negative), sent home for the day.

COVID19 VACCINE (COVID19)	Office Visit *	907083-1	"Patient was vaccinated on 12/20/2020. Four hours later, she felt dizzy at work. Her BP was 92/68 (normal BP 110s), also c/o "hot flashes" (LMP 12/16/2020), and headaches. As the day went, she started to have sore throat, runny nose, dry cough, body aches, and neck pain. Her temp was 98.6. Denies SOB, swelling of the neck. No problem with wallowing. Still has dry cough, HAs, bodyaches, neck pain, and off and on dizziness. This is not normal for her. She is scheduled off from work on 12/21/20 and 12/22/20. Not well to return to work."
COVID19 VACCINE (COVID19)	Office Visit *	907088-1	Flushing 3 minutes post injection. Did not report at center because I attributed it to it being very hot in the injecting center. 30 minutes post vaccine I began to have body flushing starting in my chest spreading to my face through my torso, down arms, and legs. , dizziness, clammy hands, nausea 1 hr post vaccine with facial tingling, jaw constriction, and palpitations. Pulse was not elevated, but never had difficulty breathing, wheezing, swelling, or rash. Flushing continued, Benadryl taken 1.5 hours after vaccine with relief of symptoms. Symptoms returned around 7pm which was approximately 9 hours post vaccination. Benadryl taken again.
COVID19 VACCINE (COVID19)	Office Visit *	907099-1	Severe pain at injection site Left upper molar tooth broke off
COVID19 VACCINE (COVID19)	Office Visit *	907105-1	Developed a cellulitis in the abdomen around umbilical area that has pain,itching,redness around it , seek dr.attention and put on doxycycline
COVID19 VACCINE (COVID19)	Office Visit *	907108-1	itching and rash - no tongue swelling, sob or throat closing stable vitals treated with benadryl 25, solumedrol 125 and pecid 20 mg IV She had gradual improvement and resolution
COVID19 VACCINE (COVID19)	Office Visit *	907122-1	40 minutes after vaccination, developed hives, chest tightness, lip/cheek/tongue numbness/tingling, nausea Took Benadryl 50 mg and Pepcid 40 mg at 7:15pm. Continued with Zofran every 8 hours
COVID19 VACCINE (COVID19)	Office Visit *	907126-1	Within minutes of admin of Pfizer vaccine, developed dry mouth, peculiar sensation through extremities/trunk /abdomen (akin to being injected with contrast), elevated BP, tachycardia, flushing, lowerabdominal cramping. Symptoms lasted app 30 minutes. Eval by RNs at the vaccine site. Eval by MD at facility. Discharged after improvement in symptoms.
COVID19 VACCINE (COVID19)	Office Visit *	907135-1	Redness, swelling and tenderness at the injection site Rash appeared at the injection site after 8 hours of administration. Chills and low grade fever
COVID19 VACCINE (COVID19)	Office Visit *	907155-1	About 30 minutes after vaccination while driving home, tingling was noted in injection arm, traveling up the left arm into the left neck and around the lips. Tingling resolved but the next day tingling was noted to be diffuse, light and scattered through arms, hands, fingers, and legs equally and bilaterally. No dermatomal or distinct nerve distribution. Tingling worsened by sitting on legs, became dense tingling in the anterior shins upon standing, but then resolved a few minutes later to the more diffuse light tingling. No notable difference in strength (able to hike and cook). No notable numbness. No rashes, no shortness of breath, no changes in heart rate.
COVID19 VACCINE (COVID19)	Office Visit *	907162-1	Pfizer-BioNTech COVID-19 Vaccine EUA Hives/Rash on the right side of the body, Itching, Arm Pain (1 day after vaccine) Benadryl was taken and reduced the hives and itching

COVID19 VACCINE (COVID19)	Office Visit *	907398-1	Bumps on tongue
COVID19 VACCINE (COVID19)	Office Visit *	907410-1	"Medical History: severe anaphylactic shock requiring intubation related to rattlesnake bite August 2019. On September 2019, I went to the dentist and received septacaine, mouth and face swelled up immediately. Toxicologist said this was due to me still being in a ""cytokine storm."" 12/22/2020- I received my COVID-19 vaccine by Moderna. Within 5 minutes of me receiving the vaccine I first experienced tachycardia, felt my heart pounding, dizziness, and tunnel vision. Three hives, dime sized, appeared on my chest within 10 minutes of the vaccine. I felt difficulty swallowing (may have been anxiety related). The dizziness was intermittent for the next hour. I took 25 mg of Benadryl 15 minutes after the shot. My blood pressure was elevated for an hour, 170s/100 s, Osat maintained above 94%, and heart rate 80s-90s. My resting HR and BP are 100s/60 and HR 61. I also started to feel bloated and burping. An hour and a half after the shot, the symptoms resolved and I drove home"
COVID19 VACCINE (COVID19)	Office Visit *	907425-1	The patient was doing great. After 30 min later, the pt started to have numbness on the face. Felt like the face was completely numb. Came back to clinic and numbness started to go away. It would wax and wane. It started to improve. Now the patient is doing great. Other vitals fine. NO SOB, No intervention done. Pt released home.
COVID19 VACCINE (COVID19)	Office Visit *	907428-1	Loose stool on 12/20/20, post nasal drip 12/21/20, nasal and chest congestion, fever of 100.7 on 12/22/20.
COVID19 VACCINE (COVID19)	Office Visit *	907446-1	Diarrhea and stomach issues. They were resolved by 8pm. I took an Covid Test and it was negative
COVID19 VACCINE (COVID19)	Office Visit *	907456-1	c/o dizziness, HA, nausea, went to ED on 12/18 for tx, will f/u with rheumatologist on 12/21
COVID19 VACCINE (COVID19)	Office Visit *	907464-1	Systemic: Rash (other than injection site)-Mild, Systemic: Headache-Mild, Systemic: EpiPen was given by nurse. Her vitals were fine 140/82, Oxy 98%. 2 benadryls were also given. Pt will be pretreated before second dose
COVID19 VACCINE (COVID19)	Office Visit *	907468-1	Patient felt chilled and very tired. She started falling asleep while sitting upright. She also became acutely confused and could not identify what year it is, what her phone code was, etc. 911 was notified, but pt felt better about an hour later and did not go to the emergency department for evaluation.
COVID19 VACCINE (COVID19)	Office Visit *	907480-1	Patient reported that she developed tingling in her face on the same date of her vaccine. Was evaluated by provider on 12/22/2020 and Kenalog 40mg IM given as one time dose. Patient was contacted that same evening and reported that her symptoms had resolved.
COVID19 VACCINE (COVID19)	Office Visit *	907493-1	cough, sob, sweating, belly pain for 48 hours after vaccination, body soreness, advised to contact PCP.
COVID19 VACCINE (COVID19)	Office Visit *	907515-1	Injection at 12:46, Experienced Tingling on tip of tongue at 1303 took oral Benadryl 25 mg, reported symptoms at 1309- 161/93 sat 100% on room air, P-84, Repeat 1310 135/94 sat 98% P-81, 13:13 152/101 sat 99% P-87, 13:17 145/87 sat 99% P-86, 1330- 141/82 sat 99% P-89, reports tingling decreasing, 13:38 149/83 Sat 98% P-84 13:45 still having tingling transferred to Urgent Care

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	907581-1	Yesterday afternoon, she developed a loss of taste and smell. This morning around 0400, she awoke to a splitting headache. She took some Advil and tried to go back to sleep, hoping she could maybe come in to work today a little later. Around 1030 this morning, she began to have significant swelling to her face and eyes along with her skin becoming flushed. She has taken some Benadryl and been instructed to follow up with her PCP
COVID19 VACCINE (COVID19)	Office Visit *	907582-1	I received the vaccine at 1:40 PM in my left arm. They had me wait 15 minutes for observation. 15 minutes later, I left feeling fine. I went back to work. Around 2:15 I started getting chills. I ignored it thinking that I was psyching myself into it thinking about the shot. But then the nausea began. I was at work and started feeling horrible. I started cramping in my stomach. I was alone at work, and then I started throwing up. It started at 3:40. I left work at 4:30 with the most body wracking chills and went to the emergency room. I was violently heaving at this point and they rushed me into a room where I received an IV drip of fluids and anti nausea medication. It wasn't until after the medication was administered that I felt better. I would say this was around 5 pm. They sent me home with an anti nausea medication. I was released to go home around 730-8 PM. I felt so much better after the medication was administered.
COVID19 VACCINE (COVID19)	Office Visit *	907586-1	2 hours after the vaccine felt like she was hit by a bus. Had facial droopiness. Has Migraines with the same facial droopiness. Left eye blurred vision. Stroke like symptoms. Fatigue, weakness.
COVID19 VACCINE (COVID19)	Office Visit *	907593-1	Right arm pain
COVID19 VACCINE (COVID19)	Office Visit *	907611-1	Rash on face and neck, redness, itching, rash
COVID19 VACCINE (COVID19)	Office Visit *	907653-1	last night legs began burning like she had rubbed icy hot on them, extending down feet/the feeling was all over her body; This is a spontaneous report from a contactable nurse. A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular from 17Dec2020 09:30 at single dose for immunization (reported as COVID-19 vaccine). Medical history included vertigo and small whole in heart. Concomitant medication included acetylsalicylic acid (BABY ASPIRIN), ergocalciferol (VIT D), magnesium taurate, selenium and zinc. The patient previously took Kepra, Oxtellar and Sulfa which she had allergies. The patient experienced that last night (17Dec2020) her legs began burning like she had rubbed icy hot on them, extending down to her feet. Then woke at 2am and the feeling was all over her body. Awoke again at 6am and feeling was still there. She went to work, feeling was not confined to ankles and feet...icy hot although warm to touch. The patient underwent lab tests and procedures which included sars-cov-2 test: negative on 13Nov2020 and sars-cov-2 test: unknown results on Dec2020. Outcome of event was not recovered.
COVID19 VACCINE (COVID19)	Office Visit *	907736-1	"1245: Patient vitals taken, BP 169/122, HR107, O2 SAT 98%, Temp 98.4. Patient advised he no longer has the headache but still feels flushed . 1257: vitals taken again BP 167/122, HR 101, O2 SAT 98%. Patient also advised he was having GI upset (diarrhea). Dr. monitoring patient with this RN, aware of patient vitals, Allegra 80mg PO given at 1300 by CNO per protocol. 1315: BP 172/116, HR 108, O2SAT 98%. Dr. has advised patient to log BP's at home and that he may have underlying hypertension. Dr. has advised patient that he will be called for a follow-up appointment tomorrow with a physician. 1326: BP 174/104, HR 103, O2 sat 99%. Patient states he is now felling back to normal, denied headache and flushing at this time. Dr. had given the patient clearance to return to work at this time. Advised patient that if he starts to have any s/s again to go to Urgent Care or ER. RN will follow-up with Caregiver. 1537: Spoke to patient states he currently had a mild headache and is fatigued. States he left work an hour early and is going to go home and rest. 1547: Spoke with Dr., MD advised for Caregiver to be seen at Urgent Care today for follow-up. Patient states he feels ok to drive and will make his way to Urgent Care now. 1653: Patient called RN back, states he is feeling better and declines going to urgent care at this time. He advised his headache and fatigue is resolved, stating ""I only have mild soreness at injection site."" Patient states he will go to Urgent Care tomorrow for a follow-up. RN will follow-up with Caregiver tomorrow."
COVID19 VACCINE (COVID19)	Office Visit *	907766-1	Starting the evening of the 5th day after receiving the vaccine I noticed a sore, irritated throat. By the 7th day it was a more severe sore throat, runny nose, violent sneezes and the beginning of a deep painful cough. No fevers have been noted to date, with the highest oral temperature of 98.6F on the 7th day. I called the employee hotline, had a virtual visit with a Dr and took the drive up COVID test around 11:00 am on 12/23/20. I am in self quarantine currently awaiting results of the COVID test.
COVID19 VACCINE (COVID19)	Office Visit *	907781-1	Patient waited the mandatory 15 minutes and felt fine. Left for a few minutes and then came back in to the vaccine clinic with symptoms of lips tingling and possible her tongue swelling. She was given 50mg of PO Benadryl (Diphenhydramine) and was taken to the emergency department. Patient was monitored for 4 hours in the emergency department with no additional symptoms noted. Spoke with patient this morning, was still having some tingling of the lips but was being controlled with Benadryl. No problems breathing or swallowing
COVID19 VACCINE (COVID19)	Office Visit *	907784-1	ache all over, back pain, burning in thigh, numbness in foot
COVID19 VACCINE (COVID19)	Office Visit *	907798-1	Fever 101.0 f dry cough nasal congestion
COVID19 VACCINE (COVID19)	Office Visit *	907802-1	15 minutes after getting the vaccine, she developed a pruritic rash over her neck, chest, and precordium. Also became tachycardic up to 130-140 (may be attributed to anxiety of having a rapid response called). She reported feeling a lump in her throat but no facial swelling or angioedema, no lymphadenopathy. Was treated with diphenhydramine 50 mg IV, famotidine 20 mg IV, and methylprednisolone 125 mg IV. After 1 hour of observation and ongoing feeling of lump in her throat with new mouth tingling, was also given 0.15 mg epi IM. Was observed with resolution over 8 hours, and discharged to home with instructions to contue treatment with oral prednisone, famotidine, and cetirizine over the subsequent few days.
COVID19 VACCINE (COVID19)	Office Visit *	907809-1	NONE

COVID19 VACCINE (COVID19)	Office Visit *	908825-1	Complaints of warm sensation on her throat @ 10:15 am. VS bp 165/77, Pulse 136, O2 sat 99%. 10:30 BP 133/96, Pulse 121 O2 sat 100% Had sips of water and tolerated well 10:40 complaining of warm sensation to the left side of body. Send to ED for further evaluation accompanied by an RN
COVID19 VACCINE (COVID19)	Office Visit *	908830-1	nose bleed after injection
COVID19 VACCINE (COVID19)	Office Visit *	908836-1	Swollen lymph node
COVID19 VACCINE (COVID19)	Office Visit *	908843-1	"Pfizer-BioNTech Covid 19 Vaccine: Patient reports ""indescribable"" muscle pain beginning almost exactly 4 hours after vaccination which has persisted until time of this report (day 7). She notes minimal pain at injection site. Has had no fever, no nausea/vomiting/diarrhea. She states that her entire body hurts, including hair, teeth, toenails, and fingernails - she describes as throbbing pain. She also reports pain in back and thoracic muscles to the extent that she cannot bend down to put on shoes. She notes that the back pain was not initially present but started around day 5 (12/22/20). She describes this as muscle pain and does not have visceral pain. She reports some relief with acetaminophen and ibuprofen. She also describes alternating episodes of feeling ""freezing cold"" with shaking chills followed by profuse diaphoresis (describes sweat as pooling and dripping). Acetaminophen and ibuprofen have not relieved or lessened the episodes of chills and sweats."
COVID19 VACCINE (COVID19)	Office Visit *	908849-1	Headache, Body aches, nausea
COVID19 VACCINE (COVID19)	Office Visit *	908861-1	The morning after the vaccine I had a sore arm, severe headache, 120 HR and felt achy all over. I took tylenol and felt a little better. Sunday my eye irritation began in the right eye. The right eye was hurting, had a little drainage and was severely swollen. Conjunctivitis set up in the right eye and the right side of my head hurted really bad with the right eye area throbbing. Contacted my PCP who prescribed eye drops for me. My eye is still a little swollen and my head still feels really strange and still hurts a little on the right side. I have consulted with the NP and the PCP who is currently monitoring the situation
COVID19 VACCINE (COVID19)	Office Visit *	908869-1	12/18/2020: COVID19 vaccine received. 12/19/2020: Patient noticed petechiae/bruising on arms, legs and face. Worsened over next 48 hours. 12/21/2020: Patient had blood drawn (CMP, PT/INR, CBC) at lab. 12/22/2020: Labs resulted; CMP and PT/INR WNL (exceptions: SCr 1.24, TBil 1.7); CBC with platelet count of 1,000 resulting in patient admission to Hospital. At admission he received 80 mg of prednisone, 40 g of IV Ig and a unit of platelets. 12/23/2020: Continued hospitalization. Patient's platelets improved to 20,000 and he received another 35g of IV Ig. 12/24/2020: Patient discharged with platelets of 38,000.
COVID19 VACCINE (COVID19)	Office Visit *	908888-1	Approximately 20-25 minutes after the vaccine my lips and tip of my tongue started tingling, then approximately 20 minutes after that my nose and forehead started to feel numb. I was instructed to take Benadryl and come into be observed. The tingling sensation decreased a little after a few hours but continued throughout the night. The numbness of nose and forehead went away later that evening around 9. When I woke up the next morning the tingling sensation of my lips was gone but then returned later in the morning around 11. Breathing and airway were not impaired.
COVID19 VACCINE (COVID19)	Office Visit *	908894-1	44 y F referred to clinic after allergic response to COVID vaccine this afternoon. Pt received dose of covid vaccine at 1713. at 1723 pt c/o itching R wrist and neck. 3 small reddened areas noted. Vaccine hypersensitivity protocol initiated; RRT initiated. Allergic reaction to COVID vaccine-pruritic hives without angioedema-resolved with Benadryl
COVID19 VACCINE (COVID19)	Office Visit *	908901-1	Pfizer-BioNTech COVID-19 Vaccine Slight headache on the morning of 12/22/2020, and feeling exhausted. These two symptoms persisted during the day but did not get worse. In the early morning of 12/23/2020, the headache was worse, I had chills and my fever was 102.1. I was very dizzy at the time when getting up. I took Tylenol and ibuprofen, alternating, to help with the headache and fever. On 12/24/2020, I still have a slight fever of 100.4 but symptoms are getting better.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	908902-1	Pfizer-BioNTech COVID-19 Vaccine Slight headache on the morning of 12/22/2020, and feeling exhausted. These two symptoms persisted during the day but did not get worse. In the early morning of 12/23/2020, the headache was worse, I had chills and my fever was 102.1. I was very dizzy at the time when getting up. I took Tylenol and ibuprofen, alternating, to help with the headache and fever. On 12/24/2020, I still have a slight fever of 100.4 but symptoms are getting better.
COVID19 VACCINE (COVID19)	Office Visit *	908910-1	it really started on the 21st when I felt fatigue, wiped out ,runny nose, sore throat, and now I have a dry cough and I still feel it today 12/24/2020, I went to the dr on the 21st and they did not prescribe anything to me
COVID19 VACCINE (COVID19)	Office Visit *	908916-1	Headache and nausea after 15 mins of vaccine. Headache lasted all day, even with taken 1000mg of Tylenol. On 12/23/2020 around 7:30 PM my left arm was extremely sensitive and sore. I could not lay on the arm or touch it. Very hard. This morning when I woke, I had ability to move the arm slightly more than day before. Now my arm is hard and injection sight is red measuring 3 inches wide and 1 inch long. It hurts to touch the upper arm. I cannot stretch my arm all the way or rotate it as normal.
COVID19 VACCINE (COVID19)	Office Visit *	908917-1	Patient is a 47 y.o. female who arrived by Car presented to the emergency department for Stroke symptoms. Patient awoke at 6:15 this morning, some difficulty seeing out of the right eye and also was stumbling towards the left and to table. Concerned about things not being right so brought to the emergency department. Patient feels her speaking and swallowing are okay. She did drink a bit of coffee earlier. She denies headache or significant vision problems presently. Continues to not feel normal on her left side. No history of stroke and parents or siblings. She does give personal history of an occipital migraine many years ago at which time she did not have a headache but had some vision troubles. Physical Exam Vitals signs and nursing note reviewed. Constitutional: General: She is not in acute distress. Appearance: She is not ill-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Right Ear: Tympanic membrane normal. Left Ear: Tympanic membrane normal. Nose: Nose normal. Mouth/Throat: Mouth: Mucous membranes are moist. Pharynx: No oropharyngeal exudate or posterior oropharyngeal erythema. Eyes: Conjunctiva/sclera: Conjunctivae normal. Pupils: Pupils are equal, round, and reactive to light. Comments: Patient displays absence of left lateral movement Neck: Musculoskeletal: Normal range of motion. No muscular tenderness. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Heart sounds: No murmur. Pulmonary: Effort: Pulmonary effort is normal. Breath sounds: Normal breath sounds. Abdominal: General: Bowel sounds are normal. There is no distension. Palpations: Abdomen is soft. Tenderness: There is no abdominal tenderness. Musculoskeletal: Right lower leg: No edema. Left lower leg: No edema. Lymphadenopathy: Cervical: No cervical adenopathy. Skin: Findings: No rash. Neurological: Mental Status: She is alert. Cranial Nerves: Cranial nerve deficit (left facial droop, dysarthria) present. Comments: Patient's speech seems a bit slurred to me. Absence of ocular movements towards left noted as well as upward movements. Tongue is midline. Patient is unable to shrug the left shoulder or lift the left arm off the bed. Grip strength is 4 out of 5 on the left. Left leg strength is 3 out of 5. Extremity strength on right arm and leg is 5 out of 5. After consultation with a neurologist, the patient is being transferred from the ED.
COVID19 VACCINE (COVID19)	Office Visit *	908932-1	1-2 minutes after injection a whole body flush developed along with heart palpitations, tingly throat and tongue, and a rash across the chest and neck.
COVID19 VACCINE (COVID19)	Office Visit *	908934-1	Within 5 minutes of receiving the vaccine, patient experienced anxiety, shortness of breath, and body aches in her elbows, knees, and ankles. Vital signs were normal. No lip/tongue/throat swelling on exam. She was pale and diaphoretic. Symptoms resolved in 35 minutes with laying supine and applying cold cloth/compress to neck and upper chest. She developed a headache at 40 minutes, however it was mild and it did not cause her to stay for monitoring any further.
COVID19 VACCINE (COVID19)	Office Visit *	908969-1	Starting that night 12/19/20 at approx 8pm I became nauseous with a 100.8f fever. I felt achy for the 2 days with the fever subsided. On Monday 12/21/20 I was at work (Firefighter) when I started to have palpitations. I was able to obtain a 12 lead EKG right away which showed a ventricular rhythm lasting for approx 5 min. After that I was having multiple PVC's / Ventricular beats. I was taken to Hospital where I was admitted. Over night the rhythm subsided, all my labs were good with other test's being done. I was discharged home. I have not had any other episodes since Monday. I was cleared by our Occ Health Doc who suggested I fill this out.
COVID19 VACCINE (COVID19)	Office Visit *	908984-1	Hyperacusis
COVID19 VACCINE (COVID19)	Office Visit *	909017-1	Bell?s Palsy
COVID19 VACCINE (COVID19)	Office Visit *	909041-1	patient has had hot and cold feelings on her body, feels like her chest is heavy, denies short of breath or difficulty. fever, chills, fatigue, arm soreness.
COVID19 VACCINE (COVID19)	Office Visit *	909050-1	Begin to feel tingling and some numbness in left arm. Moved over into right also. About an hour after shot feeling chest tightness, winded with activity. Tingling stopped within an hour but tightness and breathing continued Did not feel bad enough to worry We but did not feel good for several days. Continue to have feelings of not being able to get deep breath. Have been in contact with my physician about issues. Have never been bothered with vaccines before but did not feel right pretty quick after this one.
COVID19 VACCINE (COVID19)	Office Visit *	909057-1	Saturday around 2pm I developed intense body aches, progressed to chills, nausea and severe headache by 8pm. Next day improved but still had myalgias. Had some mild pleurisy and congestion starting on Tuesday. This would only be in an and resolve by evening time.
COVID19 VACCINE (COVID19)	Office Visit *	909070-1	C/o stomach ache that started after vaccine. 24 hours. LLQ, dull, no radiation. movement exacerbates and deep breaths. Constant. Mild, reported as a 3-4/10 in severity at it's worst. Responds to tylenol. Denies changes in BM, bloody bowel movements, obstipation.
COVID19 VACCINE (COVID19)	Office Visit *	909117-1	Supraventricular tachycardia--needing to be seen in ER twice before controlled

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	909123-1	Began just as sudden sharp headache on 12/21/20 at 6:00 pm, noticed after shift after showering, left upper extremity was slightly red, and slightly tender to touch. Not unbearable. 12/22/20 noticed redness was continuing to spread and arm was beginning to ache, still not unbearable. On 12/23/20 during shift, the redness in my left upper arm had spread from elbow to below injection site, arm was increasingly aching as well as new noticeable left sided facial swelling from directly underneath the left eye throughout the cheek area. and slightly tender. This is when I checked into the urgent care and was examined. At first the mid-level reported she thought I had experienced vaccine induced bells palsy; however, after consulting with the MD, this was dismissed. Left upper extremity was diagnosed as cellulitis and treated with bactrim and informed to take zyrtec or benadryl for facial swelling. If symptoms worsened, visit nearest ER. Also informed to report symptoms to CDC for tracking. Today I have been treated with 2 full days of antibiotics and the redness and swelling has reduced. left sided facial swelling remains present.
COVID19 VACCINE (COVID19)	Office Visit *	909140-1	Pfizer-BioNTech COVID-19 Vaccine EUA On 12/19/20 around 11:15 PM, patient experienced ?pinching? pain in armpit of left arm (arm of injection). Pain persisted throughout night with accompanying generalized underarm swelling (fluctuate). On 12/20, NSAIDs were taken to relieve pain. 1 dose of Advil were taken on 12/21 and 12/22 to manage pain. On 12/22, pain level on 1?10 scale was 8-9 in the morning with increased swelling, warmth, and discomfort. At night, swelling was less than that of morning. On 12/23 pain level was 3. No NSAIDs were taken and patient visited doctor at 10 AM. Upon examination, doctor made diagnosis of a localized lymph node/inflammatory response, possibly Cellulitis and prescribed Keflex to be taken 2 times daily for 10 days. Pain has mostly subsided (level 1 or 2 when it occurs), swelling has gone down but not completely resolved. Left underarm continues to feel fluctuate following day 2 of antibiotic regimen. Possible axillary lymph node reaction suspected. Patient has also experienced persistent redness, swelling, mild pain and itchiness at injection site. Most of swelling and pain has subsided, itchiness remains.
COVID19 VACCINE (COVID19)	Office Visit *	909145-1	Extreme injection site pain day 1. Nausea the same night and following morning with vomiting. Massive headaches and extreme fatigue. Injection site pain got worse throughout the day and now I?m having several rounds of diarrhea.
COVID19 VACCINE (COVID19)	Office Visit *	909146-1	listed before
COVID19 VACCINE (COVID19)	Office Visit *	909165-1	At the time of the injection sharp pain across my back , then at about 5 mins after feelings of light headedness, progressing pain across my back, trouble feeling like I could get enough air in with breathing and dizziness and I tried to get to the floor to sit or lay down but passed out. Then the next event I recall was a sharp pain in my thigh(apparently administered Eli pen) . I regained consciousness and was gasping andI was told I had been given a shot of epi.
COVID19 VACCINE (COVID19)	Office Visit *	909173-1	Immediately after receiving the vaccine tongue felt fuzzy/a little swollen. Also lightheaded, dizzy, eyes not focusing very well. After 10-15 minutes, eyes focusing better but still lightheaded. ~1 hour later noted swelling of uvula, posterior palatal arches, tongue, neck, face, lips, intermittent wheezing. In addition the next day headache and rash started. Now day 9 with continued intermittent severe swelling, wheezing, rash and headache and some level of oral and facial swelling every day as noted above. Muscle aches started on day 8. Consulted with angioedema specialist; he felt was allergic reaction due to onset of symptoms. Had telemedicine visit with NP on 12/23/20. Had to go to Emergency Department on 12/25/20 for severe uvula, posterior palatal arch, face, lip, neck swelling unresponsive to oral Benadryl and oral steroids.
COVID19 VACCINE (COVID19)	Office Visit *	909179-1	Moderna COVID-19 Vaccine EUA Afternoon after receiving the vaccine on 12/22/20, developed arm pain at injection site, 'can't keep eyes open' fatigue and sore throat. 12/23/20 symptoms were continued arm pain, manageable fatigue, and worsening sore throat with new drainage and sinus pressure. 12/24/20 arm pain noted to be much improved as with fatigue & sorethroat- sinus issues worsening. 12/25/20 sinus issues continuing but less severe. No fever at any time during past 3 days.
COVID19 VACCINE (COVID19)	Office Visit *	909185-1	Severe swelling, erythema pain at at injection x for first 4 days Headache, first day. Day two fever, body aches started. Third day joint aches, cough, congestion, sore throat started and continue today.
COVID19 VACCINE (COVID19)	Office Visit *	909190-1	Paresthesias, gait disturbance, vision disturbance
COVID19 VACCINE (COVID19)	Office Visit *	909191-1	I am an RN and I received the Covid Vaccine on Friday, felt some expected fatigue and arm soreness on Saturday, but woke up Sunday for my shift with a dry throat and hoarse voice that progressive worsened that day. I got a Covid PCR swab Monday morning at 0900 and made an appointment to see my doctor that afternoon. At my appointment I had almost lost my voice, had some nasal drainage, slight sore throat, fatigue, and she felt I had decreased lunch sounds that warranted all abs and a chest X-ray. I was swabbed for strep, Flu A & B, and Covid antigen testing was done. All were negative. The CBC was mostly within normal limits. The chest X-ray show inflammatory process, a possible beginning pneumonia, and stranding. She prescribed a ZPak. I received a negative COVID PCR test result on Wednesday. I reported to my employee health nurse at my faculties where I work and received the vaccine and she asked me to fill out a VAERS report. Licensed provider note states ?December 21, 2020 To whom it may concern, This is a note to confirm that patient was seen in my office today for a doctors appointment. Patient was seen in office today, x-rays were taken, does as symptoms consistent with bilateral bronchitis, pre pneumonia right side of concern this started with the COVID vaccine. ?
COVID19 VACCINE (COVID19)	Office Visit *	909212-1	Began experiencing pain in left arm shortly after injection, approximately 12 noon. Pain continued to worsen throughout day. Unable to move arm without severe pain by 5 pm same day. Began taking liquid advil gels approx 9 pm on the same day. . Pain continued throughout night. At approximately 10 pm I called the VAERS toll-free number to report this problem. I left a message and have received no return call as of yet. I have been taking 400 mg liquid advil gels every 4 to 6 hours since. I placed a call to my primary physician on December 25th. I was told this was a common reaction and to take Ibuprofen for pain. I am writing this approx 2:30 am on Saturday December 26th and pain has not subsided.
COVID19 VACCINE (COVID19)	Office Visit *	909234-1	Dizziness. Lightheadedness. Fever (100.1)
COVID19 VACCINE (COVID19)	Office Visit *	909240-1	Sharp pain in left arm shortly after injection with ROM of shoulder. Pain progressively worse over the next 48 hours to 5/10 at rest and 8-9/10 with ROM. Unable to work as scheduled as a OT for patient safety reasons due to limitations of left arm use.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	909242-1	Woke up the morning of 12/24/20 and had Developed raised red rash with itching to right shoulder, chest and arm down to the hand. Rash only developed on The right side, did not move down to abdomen or legs at all. Also developed blister in the mouth only on the right side on the roof of the mouth. Took Benadryl and applied cortisone cream topically to rash. At this time 12/26 0800 most of the task has resolved only remaining in on the back of the right hand and wrist and the blisters in the mouth remain.
COVID19 VACCINE (COVID19)	Office Visit *	909264-1	12/26/2020 Generalized body urticaria/rash, itchy, Fever 100.9!, headache, GI s/s, Sore arm 12/25/2020 2pm-nighttime Fever 101.1! (continued throughout evening), GI s/s, fatigue , Sore arm/shoulder 12/24/2020 7pm Scalp Itch, Sore Arm
COVID19 VACCINE (COVID19)	Office Visit *	909272-1	LIGHTHEADEDNESS, HEART PALPITATIONS, SHORTNESS OF BREATH, FELT FAINT
COVID19 VACCINE (COVID19)	Office Visit *	909287-1	Really bad reflux all day two days later (I don't get reflux unless I am pregnant, and it's been close to 4 years). Then the next day I had a really bad pain in my chest which occurred every time I swallowed. Was told this was probably an ulcer (I've never had one of these before).
COVID19 VACCINE (COVID19)	Office Visit *	909300-1	Approximately 5 days later I began having symptoms which then developed into a shingles rash on the 7th day after receiving the vaccine. I wanted to report this to see if others had the same experience.
COVID19 VACCINE (COVID19)	Office Visit *	909304-1	12/18 afternoon: asthma attack. This was the same as previous asthma attacks and occurred after my normal triggers (exercise in cold air). Symptoms resolved completely with albuterol. I was coughing continuously and strenuously for about 10 min before using albuterol. 12/18 evening: low-grade fever (100.1 F, baseline is <98) with chills. Also with altered mental status/delirium, which is typical for me while febrile. There was also nausea. 12/19: fever decreased to 99.2 F with normal mental status. New general malaise, worsened nausea. Single episode of vomiting, large volume of bile with some blood (streaks of fresh blood, larger volume of coffee grounds emesis mixed with bile). After vomiting I noted tachycardia to 130s--140s but this is a typical finding for me post-vomiting. 12/20: No further vomiting. Subsequent 2 bowel movements with moderate melena, since resolved. Fatigue and cold extremities, improving.
COVID19 VACCINE (COVID19)	Office Visit *	909309-1	Full body hives beginning about 36 hours after vaccination. Angioedema in the hands, feet, and lips beginning about 48 hours after vaccination. Hives did not improve with Benadryl so doctor prescribed prednisone. No severe reaction such as anaphylaxis, but reaction was moderate enough to make daily life difficult.
COVID19 VACCINE (COVID19)	Office Visit *	909312-1	The day after I got my vaccine (a Thursday) my arm hurt really bad, and my body aches started as soon as I woke up, but were not severe. As the day progressed, the body aches got more severe and were accompanied by a headache and fever by around 7 PM. I literally felt like I was dying, and have never had body aches that bad before in my life. I laid on my couch and didn't move until 11 PM, with no appetite, and then went to bed. The day after that, when I woke up the body aches weren't as bad, and my temp was 98.8. Again, around 3 the body aches started getting worse, I was so tired I could barely function, couldn't eat without being nauseous, and laid in bed as still as possible until I could fall asleep. The Saturday following my vaccine, I woke up at 6 and my body hurt so bad it felt like I couldn't move, my head was so bad even the light from the shades felt like it was piercing me, and I still had no appetite. I stayed in bed until 10 until the body aches got a little better, and was able to go about my day almost as normal, just with my body feeling kind of like I slipped and fell on ice. On Sunday, I still had no appetite and was nauseous without even eating. My body still ached, but I was able to do things like the dishes and just hang out at home. My headache was still unbearable. I called the hotline number for my hospital that was given to me when I got my vaccine, and they scheduled a COVID nasal swab test at 1. I put on sunglasses to drive the 10 minutes to the clinic, got my test, and went home and went to bed. Since I had a COVID test ordered by my employer, I wasn't allowed to work until I got the results and HR cleared me. The results were negative, and I didn't get cleared by HR until Monday morning. When I contacted my supervisor, he wanted me to stay home anyway since the body aches (even though they were getting better), fatigue, headache and nausea were still there, regardless of a negative covid test. He was worried I had the flu. I made an appointment with my primary care doctor for 2:10 on Monday, and he told me it was just serum sickness. I went home and went to bed. My body aches and fatigue fully went away by Wednesday, and my headache still remains, on the following Saturday. I haven't had a headache in maybe 5 years.
COVID19 VACCINE (COVID19)	Office Visit *	909318-1	12/18/2020 I HAD A LOT OF BODY, MUSCLE AND JOINT PAIN. THIS LASTED ALL DAY 9:00 AM - 9PM. I WENT HOME AT 5 AND WENT TO SLEEP FOR 90 MINUTES. SYMPTOMS WERE MILD. I STARTED TO NOTICE L UNDER ARM PAIN, INTENSIFIED OVER THE WEEKEND. 12/21/2020 CONTACTED PCP; LYMPHNODES SWELLING. PAIN LASTED UNTIL 12/22/2020, LATER EVENING THRU 12/23/2020 12/25-/12/26 NO PAIN TELECHAT WITH PCP NOT VISIT; DR PRESCRIBED TYLENOL
COVID19 VACCINE (COVID19)	Office Visit *	909319-1	12/23/20 0850 Stinging/burning at injection site right arm; 2000 entire arm right burning and feeling of sunburn across chest down to liver then to left flank and entire back; 12/23 2300 generalized joint pain; 12/24/20 0830 101.3, 1030p 100.6; Friday 12/25/2020 1030am 100.1; 5pm 99.3; Vomited 830p;11pm 101.3 Saturday 12/26/2020 1pm 100.0
COVID19 VACCINE (COVID19)	Office Visit *	909325-1	12/23/20 0000AM constipated like symptoms started; 0200AM woke up to severe stomach discomfort with refluxing feelings with body chills; 0300AM had bouts (at least4) of violent vomiting with very thin, liquid greenish vomitus, vomiting lasted for about 20 minutes then followed by loose bowel movements consecutively (about 6 times) with very liquid, greenish stools; stomach discomfort somewhat subsided right after but body chills remain and joints and back started to ache. Noticed that exposure to cold air would trigger bowel movement. Was afebrile all this time until about 1100AM where it was recorded to be mildly febrile at 37.8, took some tylenol with gatorade after which mild fever seem to subside. For much of the day of 12/24/20, body aches continues with intermittent loose bowel (especially after eating or drinking anything)still averse to cold, took some tylenol again 6 hrs. later for the body aches mostly. 12/25/20 felt much better for most of the day then at 1100PM reflux symptoms and body aches started again but no vomiting this time, still afebrile. 12/26/20 at the time of this reporting, stomach still feels queasy and still having loose bowel and body aches. No other symptoms experienced except for the ones described above.
COVID19 VACCINE (COVID19)	Office Visit *	909333-1	"I have been experiencing overall of ""being unwell"" including intermittent palpitations, nausea, lower GI upset/cramping, dizziness, fatigue, chills, low grade temp of 99.5 F, right sided neck pain, and Headache. Treatments: Tylenol PRN, and PRN Zofran Outcome: ongoing"

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	909337-1	Lip soreness 12/23 around 6p. Mild Lip swelling 0900pm and took 1000mg of acetaminophen. Severe lip swelling mainly on the left side at 0400am. Took Benadryl and 1000mg of Tylenol. Swelling went down slightly. Went to ED 12/24 around 1130AM with low grade fever of 100 F arm soreness and continued lip swelling. 12/24 at 0900p fever of 101, fatigue, aches, and lip still swollen, but less then AM-took 1000mg of Tylenol and Benadryl. 12/25 at 0500AM 102.2 fever, body aches, sever headache, night sweats, and other side of lip swollen took Benadryl and 1000mg of Tylenol. At 6 AM fever went down to 101.2. 1200pm fever of 100.5, severe head ache, muscle and joint aches, lips mildly swollen-took 100mg more of Tylenol. 6pm 101 fever, headache, and lips itchy/swollen. Benadryl taken and 1000mg of Tylenol. 1200AM fever of 100 and headache, lips sensitive-1000mg of Tylenol and Benadryl. 12/26 at 0930 AM fever broke with temp of 98.6, mild headache, lips sensitive, but minimal swelling.
COVID19 VACCINE (COVID19)	Office Visit *	909340-1	Small amount of fluid leaked at needle hub.
COVID19 VACCINE (COVID19)	Office Visit *	909345-1	Light headed and dizzy, funny taste(metallic taste),pins/needles in tonsil area, nausea/vomiting
COVID19 VACCINE (COVID19)	Office Visit *	909346-1	Facial hives, ear ringing, happened around 1 hr and 30 min after vaccination
COVID19 VACCINE (COVID19)	Office Visit *	909350-1	Dizziness, syncope, nausea, feeling of going to faint.
COVID19 VACCINE (COVID19)	Office Visit *	909351-1	Pt stayed for 15 minute observation time and then went to the cafe to eat breakfast. Once she got in her car about 45 minutes after, she noticed her lips were swelling. Pt took 25 mg of Benadryl. She continued to have to take it q4h on day of vaccine. Over the next 2 days she started to cut back on the amount of Benadryl she was taking but lips were still swollen some. She saw her PCP on 12/21/2020 and was told to continue Benadryl as needed and to take Peppid 20 mg daily until better.
COVID19 VACCINE (COVID19)	Office Visit *	909405-1	Painful and red contralateral side (right) olecranon bursitis (Ulnar Bursitis)
COVID19 VACCINE (COVID19)	Office Visit *	909408-1	Patient asked for extra monitoring in the observation area due to Sulfa and other antibiotic allergies. Patient states tongue was swelling. No difficulty breathing, no airway obstruction. Assessed by on site provider, 25 mg po Benadryl liquid ordered and given without difficulty BP elevated to high of 151/95. 911 call placed. EMS on site. Patient refused transport to hospital and was picked up by her mom after signing AMA documents. Advised to not drive, not be alone and was being monitored by mom who was a physician. Patient states tongue swelling improving on discharge to mom. Last BP 140/90. Patient is obese.
COVID19 VACCINE (COVID19)	Office Visit *	909411-1	Second day on December 21 had moderate arm pain extending up neck to base of head. Dec 22 pain was gone but began to have continuous twitching of left eyelid, Dec 23 eye pain. Started prednisone dose pack on Dec 22. Eye twitching gradually improved and am currently having minimal symptoms
COVID19 VACCINE (COVID19)	Office Visit *	909423-1	Day of vaccination (Monday) and day after vaccination (Tuesday) experienced a sore, tender arm and mild fatigue. Wednesday morning woke up with tender, swollen lymph nodes and sore throat. Arm still sore as well at injection site. Thought sore throat may have been due to acid reflux so went to work at the hospital as usual. Thursday morning woke up with a worsening sore throat with difficulty swallowing, cough, nasal/sinus congestion, ear fullness, fatigue with dizziness, and nausea. Was unable to perform daily functions. Notified employee health at the hospital who advised a covid test and exclusion from work. A rapid strep test was also performed which was negative. Friday symptoms still present but slightly improved. Saturday morning received negative covid test result and approval to return to work if respiratory symptoms improved and under control. Today is Saturday afternoon, now returned to work (arrived late). Experiencing mild symptoms currently similar to the common cold.
COVID19 VACCINE (COVID19)	Office Visit *	909424-1	within 3 min of receiving the vaccine, I experienced flushing, racing heart, lightheadedness, dizziness, mentally fog, winded/ shortness of breath, and felt like an adrenaline rush. All that calmed down by 30 min. Then experienced nasal congestion for an hour. within 3 hours of vaccine, developed a headache and later that day it worsened and chills developed. The next day was just slight headache. The second day was sore arm and fatigue that lasted for 1 to 2 more days.
COVID19 VACCINE (COVID19)	Office Visit *	909425-1	Severe vomiting and diarrhea to where had to go to ER due to dehydration, lasted 4 days. Body aches, fever, muscle aches
COVID19 VACCINE (COVID19)	Office Visit *	909437-1	Transient pleuritic pain -- about 3 incidents lasting about 1/2 hour each, day following vaccination. Minor headache a few hours after vaccination. Mild abdominal discomfort off and on for a couple of days. Soreness in the arm at site of injection -- not unexpected. Resolved after three days.
COVID19 VACCINE (COVID19)	Office Visit *	909456-1	Today I am 36 weeks and 4 days pregnant, due on January 19, 2021. This is my first pregnancy, and going well so far. This is not a bad adverse event just something I noticed: I developed 2 ulcers in my mouth and one inside my vagina today. I had ulcers pop up in my mouth when I tested positive for COVID on May 1, 2020. Just interesting, not bad.
COVID19 VACCINE (COVID19)	Office Visit *	909466-1	Left side only , eyelid heaviness, feeling unable to lift eyelid that developed and has lasted since. Since then my eyelid sometimes droops and sometimes it appears normal but still feels heavy. All other facial movement has been symmetrical & without problems.
COVID19 VACCINE (COVID19)	Office Visit *	909479-1	12/17 Patient report sore throat, loss of smell, cough, muscle aches, loss of taste, shortness of breath and headache.
COVID19 VACCINE (COVID19)	Office Visit *	909480-1	Symptoms started after 2-3 mins of vaccine. Started having numbness, tingling on face, arms, legs, tachycardia up to 144 bpm, dizziness, palpitations, chest tightness. Lasted up to 1 hour. Observed in clinic and went home after 2.5 hrs. At home continued to have on and off palpitations for 2-3 hrs with heart rate increasing to 110 bpm.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	909482-1	12/23 report feeling lightheaded, anxious, body aches, fatigue, headaches, chills without fever, dry cough and nasal congestion
COVID19 VACCINE (COVID19)	Office Visit *	909488-1	Aching arm, loss of train of thought, deeper breathing, steady increase in heart rate with the occasional drop in heart rate.
COVID19 VACCINE (COVID19)	Office Visit *	909496-1	24 hrs- lymphadenopathy, submandibular, ear pain 36 hrs- primary outbreak of VZV- trigeminal n involvement- tingling/burning 48 hrs- rash and vesicles in trigeminal n distribution
COVID19 VACCINE (COVID19)	Office Visit *	909505-1	Moderna COVID-19 Vaccine. Received the vaccine at 8:30 AM 12/24. Morning of 12/25 I started to feel a slight sore throat and tender lymph nodes. By the early morning of 12/26 I was experiencing a moderate-severe headache, fatigue, swollen/red tonsils, swollen lymph nodes, congestion, sore throat, and trouble swallowing. Around 2:00 AM on 12/26 I took NSAIDS which only mildly helped. I went to an urgent care center at 9:30 AM on 12/26 where after my examination the CRNP ordered a strep test and COVID test. Strep test resulted positive, prescribed amoxicillin 875mg twice daily for 10 days, and prednisone 20mg twice daily for 2 days. As of now, 12/27, symptoms have significantly reduced. Awaiting COVID test results.
COVID19 VACCINE (COVID19)	Office Visit *	909540-1	Fever, chills, sore throat
COVID19 VACCINE (COVID19)	Office Visit *	909541-1	severe headache and fatigue from 3 days after the shot continuing; the illness has not stopped and is now 8 days after the shot
COVID19 VACCINE (COVID19)	Office Visit *	909550-1	shingles, nasociliary branch. started with burning in the inside of my left Nare, vesicular rash appeared which spread to the tip of my nose. I immediately (day 2 of rash) started valtrex 1gm TID. After 48 hours on valtrex no progression of rash. I have not had any visual symptoms (herpes ophthalmicus) yet and hopefully don't.
COVID19 VACCINE (COVID19)	Office Visit *	909556-1	Patient developed a feeling of warmth all over within a few seconds of receiving the IM injection. She had no other symptoms initially. Approximately 35 minutes after the vaccination, she had a brief (approximately 3 second) syncopal episode. No other symptoms developed.
COVID19 VACCINE (COVID19)	Office Visit *	909557-1	Approximately 15 hours after vaccination I awoke with severe pain of the left fourth toe, medial aspect of the proximal phalange. There was a 3 mm pustule on a 1 cm erythematous base. At the time I also had mild routine constitutional symptoms from the vaccine: fatigue, headache, vague malaise. I had no fever. The pustule progressed over the following 15-20 hours. I was prescribed doxycycline 100 mg po bid and the pustule was incised and drained. A wound culture was not sent, but the assumption was that S. aureus was the pathogen. Over the next four days, the lesion resolved without complication.
COVID19 VACCINE (COVID19)	Office Visit *	909575-1	Moderna COVID-19 Vaccine EUA. Swelling, redness, soreness, itching from the injection site to the elbow. Soreness began 10-11 hours after injection. The injection site-related symptoms have progressed. Had headache and chills followed by a low grade temperature within 24 hours of injection. No longer experiencing any symptoms besides those associated with the upper left arm. Will advise primary care physician of the issue today.
COVID19 VACCINE (COVID19)	Office Visit *	909588-1	Client reported rash on left side of neck and facial tingling/slight swelling about 4 hours after vaccine; HR 88, BP 130/90 RR 18. Assessed by Medical Director - urticaria most consistent with an allergic reaction. Patient offered Benadryl and encouraged to stay at clinic for observation, but chose to go home - explained risks and danger signs to be aware of that would require immediate visit to ED. Client took 25mg Benadryl at 5pm and MD spoke with her at 6pm - she indicated there was improvement with her rash after the initial dose.
COVID19 VACCINE (COVID19)	Office Visit *	909595-1	Nausea and vomiting
COVID19 VACCINE (COVID19)	Office Visit *	909597-1	"Besides from the low grade headache, i started to have chills, then fever for 5 days, joint pains and generalized body malaise, observed "" petechiae rash"" on my face"
COVID19 VACCINE (COVID19)	Office Visit *	909607-1	Received Pfizer COVID-19 vaccine without untoward effects on 12/18. Given her usual allergy shot by her allergist on 12/22 (she has been receiving these for several years; I was told this is a protein antigen in a glycerine suspension). Within 15 minutes, patient developed anaphylaxis: generalized erythema, swelling, pruritus and hypotension requiring epinephrine, and diphenhydramine. Patient recovered over several hours.
COVID19 VACCINE (COVID19)	Office Visit *	909629-1	"patient reports ""chest pain after 5 minutes of receiving the vaccine""; then in the past 6 days, body aches and intractable headache"
COVID19 VACCINE (COVID19)	Office Visit *	909632-1	approximately 1.5 hrs after my vaccine I started to feel lightheaded and flushed all over my body. My heart rate was 120's and my temperature was 100.2F. No difficulty breathing, SOB, chest pain or rash. I was checked into the clinic and monitored in the Nurse Treatment Center. I was placed on a bedside cardiac monitor, an EKG was done, labs drawn and IV fluids administered. I was there for approx 1 hr and discharged to home. Temp was 99.1 HR 100's.
COVID19 VACCINE (COVID19)	Office Visit *	909650-1	Dec 21- vaccine Dec22- soreness right arm Dec23- nothing Dec24, 4pm... I was cleaning up, getting everything tidy for Christmas Day. All of a sudden, I felt very nauseated and sick and just bad. I laid on the couch, and around 5, I noticed my left forearm getting swollen and splotchy. It continued to get more swollen, red and hot. I put an ice pack on my arm. It was very tender to touch or graze over. I realized then that I had a temp of 99.8. I had body aches, headache, was still nauseous, and I had diarrhea. Dec 25- felt terrible, fever, extreme fatigue, body aches, and arm still the same. Dec 26- get tested for Covid, only slight headache and little fever Dec 27-Covid test negative, arm still swollen, but not as red
COVID19 VACCINE (COVID19)	Office Visit *	909659-1	vaccine given 12/23. reported slight swelling and redness on 12/26. on 12/27, tenderness, redness, and warmth noted to the majority of the left upper arm along with slight swelling
COVID19 VACCINE (COVID19)	Office Visit *	909674-1	redness, tenderness, and warm to touch at injection site (apprx palm-size)

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	909682-1	My tongue & roof of my mouth was feeling numbness & I felt off. I told nurse I was leaving and she said no get reevaluated. An doctor checked my symptoms and vital signs were elevated. He gave me an Benadryl IM. Send me to ER and had me on observation for a couple of hours. My symptoms subsided and my vitals returned to normal. I went back to work.
COVID19 VACCINE (COVID19)	Office Visit *	909688-1	"Moderna COVID-19 Vaccine EUA Patient reported generalized pruritic rash upon waking up the morning of 12/27/20, also reports ""scratchy/itchy"" throat. Patient with stable vital signs, speaking in full sentences and hives over bilateral upper extremities and chest, examined at 815am. Patient given 20mg dexamethasone IM, zyrtec 10mg and sent home to take 50mg oral benadryl."
COVID19 VACCINE (COVID19)	Office Visit *	909689-1	Arm tingling and soreness first 30 minutes, then just sore. About 6 hours later, extreme chills and pain throughout body, sore joints, lightheaded, fever.
COVID19 VACCINE (COVID19)	Office Visit *	909703-1	Dizziness, Shaking and Nausea
COVID19 VACCINE (COVID19)	Office Visit *	909707-1	12/24/2020- morning- noticed pain in R deltoid at site of injection (expected) and also L ankle pain not associated with any type of trauma and with no hx of injury to ankle in past. Also noticed mild aching pain to R knee (which has had extensive surgical repair several times) 12/24/2020- by midday, limping noted due to pain in L ankle, negative for swelling, bruising, or decreased range of motion 12/24/2020- 8pm- moderate to severe pain to L ankle, still no swelling or bruising. 12/25/2020- midday- still noticeable limp, however pain was moderate and tolerable all day 12/26/2020- increased pain in L ankle as day progressed, still no bruising, decreased ROM or swelling 12/27/2020- woke at 3 am due to pain, elevated L leg. Swelling noted in lateral aspect of ankle by 7am, decreased ROM and point tenderness had developed around lateral and anterior ankle joint. Took 2 Aleve for pain. Went to walk-in orthopaedic clinic when they opened at 9am for assessment,
COVID19 VACCINE (COVID19)	Office Visit *	909708-1	Flushed, Headache, Hypertensive Event
COVID19 VACCINE (COVID19)	Office Visit *	909712-1	Painful fluid filled bumps in a linear formation discovered this morning 12/27/2020 at 9am. I received the COVID vaccine on 12/19/2020 at 10:15am
COVID19 VACCINE (COVID19)	Office Visit *	909713-1	Lips & Tongue became numb Tx with Steroids by PCP
COVID19 VACCINE (COVID19)	Office Visit *	909720-1	12/23- began to experience intermittent right lower quadrant pain in the morning, fever of 100.4 F in the evening which subsided with ibuprofen. 12/24- no fever noted but intermittent right lower quadrant pain continued, seen at the Health Clinic, sent to Hospital ER for CT scan, diagnosed with appendicitis, appendectomy performed.
COVID19 VACCINE (COVID19)	Office Visit *	909721-1	c/o dizziness and increased heart rate. Assessed by attending and hospital MD present. HR went from 138 to 80 beats per min in 3 minutes. Able to walk to reclining chair from straight back chair without incident.
COVID19 VACCINE (COVID19)	Office Visit *	909723-1	Sever Headache that progressed to a Migraine
COVID19 VACCINE (COVID19)	Office Visit *	909777-1	Horrible debilitating non stop migraine like headache for three days following 1st dose of vaccine starting 12 hours after dose. Extreme tiredness, muscle pain, nausea three days duration. All symptoms resolved 3 days after vaccine
COVID19 VACCINE (COVID19)	Office Visit *	909779-1	IM shot received at 0750. Went to sleep for the day since I work nights. I work up at noon with severe headache and numb bilateral hands. I took Tylenol 1000mg and went back to sleep. I woke up for work at 1630 feeling flushed. I took naproxen and went to work(in the ER). I developed a rash on my chest that evening. Over the next 3 days the rash progressively worsened across torso, back, and extremities. Since I received the vaccine on Christmas eve, employee health has not answered my calls or messages with the holiday. I also am scheduled to see PCP for this after the holiday weekend. I have been medicating with Zyrtec BID, Benadryl Q4hr, Pepcid BID, Tylenol TID since 12/24. I started a prednisone taper on 12/27.
COVID19 VACCINE (COVID19)	Office Visit *	909785-1	12/18: First hour after vaccine: increased heart rate, felt flush and jittery - like I had drank a lot of espresso. Not debilitating but unpleasant. Then mostly went away, felt drained 12/19: headache and nausea started along with fatigue. Nausea would come in waves 12/20: Fatigued, headache 12/21: Headache, Nausea, waves of feeling flush (never had fever) and increased Heart rate. Worked all day but felt lousy 12/22: Continued symptoms from day before - feeling drained especially after episode of nausea/increased HR. Worked all day 12/23: Heached, Nausea - stayed home from work because they wanted a covid test to rule out that I had not contracted. Slept on and off all day. Cough started PM 12/24: Just headache, no nausea but no appetite, low energy 12/25: started feeling normal. still no appetite.
COVID19 VACCINE (COVID19)	Office Visit *	909800-1	Enlarged left cervical lymph nodes. Two palpable nodes that are hard and tender. Measuring about 3 cm in diameter today.
COVID19 VACCINE (COVID19)	Office Visit *	909802-1	Blood pressure has been 145/80 p.60 since 12/24. I do not have high BP normal pressure for me 110/75 Extreme muscle strain experienced 48 hrs after vaccine given.
COVID19 VACCINE (COVID19)	Office Visit *	909822-1	Flushed skin, elevated HR, extreme feeling of internal heat, dizzy
COVID19 VACCINE (COVID19)	Office Visit *	909891-1	Woke with nausea/vomiting, chills, and dizziness
COVID19 VACCINE (COVID19)	Office Visit *	909908-1	Serum sickness syndrome, fever not greater than 101, severe muscle and body aches/pains, nasal congestion, extreme fatigue, cough, nausea, loss of appetite First vaccination in 55 years

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	909913-1	Local redness, swelling, left upper arm at injection site.
COVID19 VACCINE (COVID19)	Office Visit *	909917-1	Patient reports developing a mild headache post vaccination within 15minutes that progressed in severity with nausea, dizziness and fainting. Occupational Health is following up with patient and recommending comprehensive provider evaluation
COVID19 VACCINE (COVID19)	Office Visit *	909922-1	Vaccine recipient received the vaccine on 12/18/2020. On 12/19/2020 reported that the injection site had prominent redness and swelling. On 12/22/2020, the site was warm to the touch and the pain was mild, but bothersome. Over these 5 days the injection site became swollen with increased redness and pain. On 12/23/2020, the vaccine recipient reported that they were feeling better and has followed-up with occupational health with no further issues.
COVID19 VACCINE (COVID19)	Office Visit *	909924-1	Redness, swelling at vaccine site
COVID19 VACCINE (COVID19)	Office Visit *	909957-1	Headache, cough, Fever 99.9, wheezing, body aches, fatigue
COVID19 VACCINE (COVID19)	Office Visit *	909958-1	15 minutes after vaccine pt c/o mild SOB, no tongue swelling noted, rapid response team called
COVID19 VACCINE (COVID19)	Office Visit *	909963-1	About 10 days after the vaccine, I developed, over the course of 30 minutes, pain/pressure from my left distal forearm to my hand, with stiffness and vague weakness in the area. Over the next hour or so I noted swelling of the wrist; swelling and pain in the dorsal and radial aspects of the left wrist have persisted until the following day when I am submitting this report. I had done some activities with the wrist prior to the onset of symptoms (opened a difficult jar, sat on my hand to keep it warm while using the computer) but these didn't seem outside of my normal daily activities.
COVID19 VACCINE (COVID19)	Office Visit *	909978-1	When I woke up at 0800AM, noticed with rashes on my back about 25%. I took Loratadine but not relieved. Went to ER at 05:00PM and they give Benadryl IV. Prednisone 60 mg tab & Pepcid 20 mg tab. After 2 Hours rashes resolved. Noticed with rashes also on both legs and adomen when I was in the ER.
COVID19 VACCINE (COVID19)	Office Visit *	910008-1	Developed a rash on abdomen that was discovered at approximately 10 pm on 12/29/20, the day following the vaccination. Personal physician diagnosed it the following day as shingles and an anti-viral (valacyclovir) was prescribed. Last dose taken on 12/27/20. Rash is clearing.
COVID19 VACCINE (COVID19)	Office Visit *	910011-1	Patient experienced/reported nausea post administration, approximately two hours after. Patient had emesis x1, to where Zofran given by mouth, w/ patient reported relief.
COVID19 VACCINE (COVID19)	Office Visit *	910038-1	Dermatitis.
COVID19 VACCINE (COVID19)	Office Visit *	910042-1	Supraclavicular adenopathy
COVID19 VACCINE (COVID19)	Office Visit *	910045-1	The morning after the vaccine I woke up with a headache, took some Advil and it helped. On Monday I had the majority of other symptoms: chills, headache, nausea, mild abdominal discomfort, sore throat, congestion, muscle ache, joint pains. No fever.
COVID19 VACCINE (COVID19)	Office Visit *	910049-1	Immediately after vaccine my face started getting hot and itching. swelling to my face and neck area I took zyrtec for the adverse events
COVID19 VACCINE (COVID19)	Office Visit *	910068-1	Shortness of breath had a terrible asthma attack very congested in my lungs weezing
COVID19 VACCINE (COVID19)	Office Visit *	910069-1	Possible Bell's Palsy Rx of Prednisone 60mg Daily x7 days Valacyclovir 1000mg TID x7 days
COVID19 VACCINE (COVID19)	Office Visit *	910071-1	About 2 minutes I received the vaccine I felt my right upper lip swelling and tingling, then left start and migrated to my ear and down to my jawline. Difficult to swallow.
COVID19 VACCINE (COVID19)	Office Visit *	910081-1	Severe injection site pain. Went to UC. Followed up with PCP. Supportive measures recommended.
COVID19 VACCINE (COVID19)	Office Visit *	910084-1	Raised red rash to face, bilateral hands and forearms started approx 30 minutes post vaccination. Patient treated with PO Benedryl at home immediately following reaction. Applied hydrocortisone cream, but burned upon application, so she washed it off. Is now using topical diphenhydramine spray with good effect. Today, 12/28/2020, most of rash has dissipated; some reddened areas persist. Patient reports the rash affected areas feel much better. She will continue the topical spray and Tylenol prn.
COVID19 VACCINE (COVID19)	Office Visit *	910090-1	Around 2:00 am exp dull ache from arm to wrist ,tingling in fingers lasted all day. I called employee health was told to go to see PCP. The tingling went away after 3 days and the dull ache lasted 5 days. I was told to take Tylenol for dull ache. I dint have to miss any work.
COVID19 VACCINE (COVID19)	Office Visit *	910095-1	Upper lip swelling, associated with herpes labialis. Has history of occasional recurrent herpes labialis, though never with such swelling associated. Suspect possibly due to heightened immune response from recent vaccination. Patient did have slight right axillary swelling, likely lymphadenopathy, some time after vaccination, though this resolved.
COVID19 VACCINE (COVID19)	Office Visit *	910101-1	Felt like throat was swollen

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	910102-1	"C/o throat ""itchiness"" shortly after receiving vaccine - face also flushed. Received relief with Diphenhydramine 25 mg po"
COVID19 VACCINE (COVID19)	Office Visit *	910103-1	C/o shortness of breath + chest tightness a couple of hours after receiving vaccine

COVID19 VACCINE (COVID19)	Office Visit *	910107-1	12/21 PM developed headache & fatigue - improved after Tylenol
COVID19 VACCINE (COVID19)	Office Visit *	910108-1	12/22 Developed chills; 12/23 Chills, sore throat, body ache, headache by 12/24 only c/o headache
COVID19 VACCINE (COVID19)	Office Visit *	910109-1	Patient received COVID-19 vaccine at 3:02 pm - approx 26 minutes after vaccine administration patient became dizzy/lightheaded/nausea. B/P-140/102, 98% RA, 98 HR, R 20 even and unlabored. Patient brought to UC for Evaluation. During UC Evaluation vital signs remained stable. Patient drank water. Tylenol was given for headache - 1 gram Acetaminophen at 3:40 pm. Patient had improvement in symptoms ER precaution were discussed, patient verbalized understanding of treatment plan. Patient discharged home.
COVID19 VACCINE (COVID19)	Office Visit *	910120-1	facial flushing and dizziness experienced by the patient 10 minutes after administration.
COVID19 VACCINE (COVID19)	Office Visit *	910130-1	On 12/24/20 I received the vaccine at Pharmacy, later that night I woke up feeling very cold. My temperature for the first 2 days of 103.1, chills, body aches, veins in my eyes busted. The fever has continued, today 12/28/20, 100.8, I feel dizzy, tired. Due to the holiday, will be seeing my PCP today.
COVID19 VACCINE (COVID19)	Office Visit *	910136-1	Shortness of breath, dizziness, vomiting, increased BP.
COVID19 VACCINE (COVID19)	Office Visit *	910142-1	The patient experienced jaw tightness and tingling in the face. She felt better lying down. No treatment was given; she was observed for about an hour and went home. The patient did report having plastic surgery with facial fillers approximately 6 weeks ago.
COVID19 VACCINE (COVID19)	Office Visit *	910144-1	Patient developed fever, chills, body aches, ocular migraine and then developed cramping and abdominal pain. Symptoms lasted 3 days and then resolved completely.
COVID19 VACCINE (COVID19)	Office Visit *	910145-1	Right side of tongue was numb and swollen , could feel the right side of my tongue for a day 12/28/2020 5/10 Lost still today at a week post Received Benadryl incase of allergic reaction
COVID19 VACCINE (COVID19)	Office Visit *	910157-1	within 12 hours of the vaccine, developed and hives; 24 hour later wheezing - mild. took benedryl, Zyrtec, Pepcid - symptoms continued Sought care at Urgent Care - 12/27/2020 - was given an inhaler. Symptoms lasting at least 10 days
COVID19 VACCINE (COVID19)	Office Visit *	910160-1	arm stiffness, cough, dizziness, ringing in ears, muscle aches and spasms. Seeing Primary care for symptoms and dizziness has not improve and ringing in ears has worsen. Recommend from to get a MRI.
COVID19 VACCINE (COVID19)	Office Visit *	910173-1	Paramedic who administered shot gave it too high. I noticed this maybe 10 minutes after administration when I felt that the Band-Aid was high and a nurse practitioner I work with confirmed that it was too high by observing the puncture site. Pain started about 2-3 hours later, with restricted range of motion left shoulder joint
COVID19 VACCINE (COVID19)	Office Visit *	910176-1	"She got a Covid vaccine Pfizer at the Health Dept on Dec 18th in her L arm. Within 30 minutes, she felt tingling going down her L arm and in then she felt tingling on the L side of her face. Muscle aches, fatigue and chills lasted about 33 hours. On the 22th she had L leg weakness when she got out of bed, this lasted just a few seconds until she ""worked it out."" Later, she developed a sinus type headache. She developed muscle aches on 25-26th, she went to have a covid test that was negative. The L side of her face is tingly and her L jaw is sore--she describes it as feeling like she has had a novacaine injection for dental work since 4pm yesterday."
COVID19 VACCINE (COVID19)	Office Visit *	910182-1	15 minutes after vaccine, patient starting having itchiness and eye pain, looks like starting to develop hives. Benadryl 50mg IM given x 1 dose.
COVID19 VACCINE (COVID19)	Office Visit *	910194-1	Began to have facial flushing and hives about 5 minutes after the injection, followed by itchy throat, hoarse voice, abdominal cramping, joint pain.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	910197-1	immediately upon inj had bad taste in mouth and inside my mouth and lips felt filmy. from there broke out in itchy rash within minutes and my voice was crackly the pharmacist checked on me and had to wait a few extra minutes before leaving of note the APRN i work with was there getting her injection as well and advised on the benadryl. I have used benadryl and claritin since the injection to help with symptoms . after about an hour after the injection my lips were very red I never experienced SOB i did report to my PCP (MD) the next day and he said to continue as I was doing and to alert him if things worsened (also note I work at my PCP office) Employee from pharmacy called to check in on me on the 23rd and advised I report the event to you and questioned if I should take dose 2 and I told him i WOULD NOT be taking another dose. since the injection i have continued to have the under the skin itchy rash and inside mouth and lips felt irritated after and i have experienced several other persistent symptoms of ha on and off, blurry vision, facial swelling around eyes, nausea no vomiting ,decreased appetite ,fatigue ,upper gastric pain for a few days after, and felt weak in lower back, voice is crackly at times and the tip of my tongue will feel a burn\tingly feeling. AGAIN i have not had what i would call SOB I did let my PCP know today of the persistent symptoms and that I was reporting them over to you as the pharmacy directed. I did not have a formal office visit but my pcp did note the effects in my chart
COVID19 VACCINE (COVID19)	Office Visit *	910214-1	Patient received the Covid 19 vaccine on 12/23/2020. Twenty fours after vaccination she started to cough and wheeze (Hx of not well controlled Asthma, DM). Cough and wheezes relieve with nebulizer. No fever, chills, or HAs. Symptoms have improved significantly and are stable. She has reached out to her PCP and EH. Covid Testing is scheduled on 1/4/2021 but awaiting for a sooner appt at EH.
COVID19 VACCINE (COVID19)	Office Visit *	910215-1	24 hours after vaccine woke up with significant body aches. Then rash started on left forearm and wrist. Following day it spread to right arm and back.
COVID19 VACCINE (COVID19)	Office Visit *	910228-1	"Patient received the Covid 19 vaccine on 12/22/2020. Four days after vaccination (12/26/20) she started to notice that she ""loss her sense of smell ""while brushing her teeth. The toothpaste tasted ""weird"". All of the sudden, she lost her appetite. These symptoms persist today. Covid test scheduled on 12/28/2020 at Employee Health."
COVID19 VACCINE (COVID19)	Office Visit *	910230-1	12/24, I woke up with arm soreness and headache. 12/25, I had a headache, fatigue, arm pain radiating down to my elbow and into my right side. 12/26, I had all the above along with swelling under right axilla. 12/27, all of the above along with pain in right ribs, swelling worse under right axilla, fever of 100.3 (up to 101.2), body aches, and joint pain. The symptoms all continued as 12/27 into 12/28.
COVID19 VACCINE (COVID19)	Office Visit *	910232-1	the day after receiving the vaccine the patient developed a fever TMax 101.7 and loss of taste, these later developed into congestion, general malaise, body aches. the pt sought out her PCP who is running covid and flu testing.
COVID19 VACCINE (COVID19)	Office Visit *	910235-1	Patient states about 20 minutes after vaccine she developed scratchy throat, itchy all over but no hives and dry cough.
COVID19 VACCINE (COVID19)	Office Visit *	910244-1	the patient developed symptoms 3 days later which included body aches, headache, cough, runny nose. pt is seeking her pcp for further testing/workup.
COVID19 VACCINE (COVID19)	Office Visit *	910249-1	patient developed general malaise, body aches, cough, and diarrhea, temperature 99-100 F. Sought out pcp for testing/workup.
COVID19 VACCINE (COVID19)	Office Visit *	910261-1	I am a nurse practitioner here at the facility. I received the vaccine on 12/18/2020 at noon. On Monday evening 12/21/2020 I developed floaters and flashes of light in my right eye. I awoke on 12/22/2020 with continued worsening symptoms. I went to my optometrist. I was diagnosed with Vitreous detachment of the right eye. The optometrist did not feel it was related to vaccine but our health nurse advised reporting.
COVID19 VACCINE (COVID19)	Office Visit *	910273-1	On 12/27/2020, I woke up with body aches and a headache around 0530. At 1230, I began experiencing severe stomach pain. I went into the bathroom and began sweating profusely. I had a bowel movement and started dry heaving. I then fell on the floor, and felt extremely weak. I did not bare down when having a bowel movement, I do not believe this was a vagal response. At this point I was still sweating profusely, my body hurt all over, I couldn't catch my breath, and I was incredibly weak. I crawled down the hall way to get my phone as I was home alone. My arms then began to tingle and my hands completely spasmed, I couldn't move them. My fingers locked completely straight but my palms closed. I activated Siri on my phone because I couldn't use my fingers, and had her call 911. I was having a very hard time catching my breath. By the time EMS arrived (about 20 minutes on the phone with 911), I had started feeling better. I had chills, and still felt out of it, but I was breathing better and my hands unlocked. My arms were still tingling. I let them check me out. My BP was normal, my O2 sat initially said 88% but was 98 by the time they left. EKG was normal. I didn't go to the hospital with them, I stayed home. I didn't move around much the rest of the day. I felt tired and had lack of appetite. Today on 12/28/20, I'm feeling better but I am still taking it slow, just in case.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	910292-1	Blood pressure rose 190/100; got headaches in 10 minutes and started getting heavy chest; got headaches in 10 minutes and started getting heavy chest; Throat started to get tight, voice changed; Throat started to get tight, voice changed; had heart palpitations; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; Fast heart beat, difficulty breathing, dizziness and weakness; This is a spontaneous report from a contactable healthcare professional. A 42-year-old female patient received first dose of bnt162b2 (Pfizer-BioNTech COVID-19 vaccine; lot EK5730), intramuscular on 17Dec2020 17:00 at single dose (left arm) for Covid-19 immunisation. Medical history included diabetic, high blood pressure and allergies to fruits such as canafoo, and peaches. Concomitant medications included amlodipine, loratadine, metformin, and ascorbic acid (VITAMIN C). On 17Dec2020 17:15, the patient experienced headaches in 10 minutes and started getting heavy chest, throat started to get tight, voice changed and injection was given; blood pressure rose to 190/100 and had heart palpitations, fast heartbeat, difficulty breathing, dizziness and weakness. The patient was given Epi injection and benadryl shot as therapy for the events. The vaccine was administered at the hospital. The patient did not receive any other vaccines within 4 weeks prior to the Covid vaccine. The patient visited a doctor or healthcare professional office/ clinic due to the event. The patient was not diagnosed with Covid-19 prior to vaccination and since the vaccination, the patient had not yet been tested for Covid-19. Outcome of events was recovering.; Sender's Comments: Based on the compatible time association, the reported events are possibly related to suspect bnt162b2 injection in this patient. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	910323-1	"Patient states that she waited her required 15min at the vaccine clinic. She felt no symptoms. One hour later however she felt tired so she took a nap. That night she felt cold and had to grab a blanket. Before bed she felt that the skin on her abdomen was feeling ""tingly."" The next morning she noticed a rash on the abdomen that is itchy. She already takes 25mg benadryl daily for allergies so she started taking it twice a day but that hasn't helped. She now notices the rash in the b/l groin, left thoracic back and left arm (upper and forearm). The rash is still present and itchy 5 days later so she came to my clinic today. I prescribed her a 6 day dose pack of methylprednisolone and to continue benadryl."
COVID19 VACCINE (COVID19)	Office Visit *	910332-1	Arthralgia, sore throat, dry cough, congestion, pain to back of head and neck, leg pain, lower back pain, fatigue, fever 100.7 on 12/23/20 12/26/20- developed chest pain neck pain left shoulder pain lightheaded and nausea at night-resolved next morning
COVID19 VACCINE (COVID19)	Office Visit *	910335-1	Patient received the Covid 19 vaccine on 12/24/2020. On 12/26/2020 she c/o new onset fatigue, bodyache, cough, headache, sore throat. The dry cough and sore throat are worsening. Denies fever or chills. Covid test scheduled on 12/28/2020 at Employee Health.
COVID19 VACCINE (COVID19)	Office Visit *	910338-1	Arm pain and Migraine .. Took Migraine medication and that's when I had an anaphylaxis reaction . I have an appointment to see a specialist to verify if the reaction was caused by the COVID vaccine or the medication I took that day
COVID19 VACCINE (COVID19)	Office Visit *	910345-1	Overall itchiness
COVID19 VACCINE (COVID19)	Office Visit *	910346-1	Pt. received Covid #1 at 8:20 a.m. , 10 minutes later, she experienced palpitations along with heart rate of 90-100. Other vital signs stable. O2 sat 100% , afebrile. This went on for 1 1/2 hours on and off of wellness then again with the episode. She also experienced diarrhea X2 within the 1 1/2 hour span. This adverse event seems to be a vasovagal reaction to the injection and not to the vaccine itself.
COVID19 VACCINE (COVID19)	Office Visit *	910348-1	Red raised area to arms and chest that resolved within ten minutes without treatment
COVID19 VACCINE (COVID19)	Office Visit *	910352-1	angioedema face and hands, rash, fever, chills, fatigue, started menstruation all started about 7 hours post vaccination.
COVID19 VACCINE (COVID19)	Office Visit *	910359-1	"12.22.20 @ 20:30 injection site pain, radiating pain to right elbow and neck, tingling in right 4th, & 5th finger 12.23.20 @ 05:45 awoke with headache, body aches and continued pain in right arm 12.23.20 @12:45 headache worsened, continued arm pain, fatigue 12.23.20 @ 14:30 elevated temperature 100.2 and chest palpitations and nausea 12.24.20 @ 10:53 ""killer headache, and body aches. No fever since yesterday night w/o taking reducer fever medications."" BP1 164/106 Individual took her BP again in the other arm: BP2 162/109 She stated she will take Tylenol, and rest for 30 minutes to take her BP again. She stated she will contact her PCP after this. 12.24.20 @ 12:03 BP 129/90 Individual stated she contacted her PCP and PCP is aware of this event."
COVID19 VACCINE (COVID19)	Office Visit *	910370-1	34 year old female who reports localized redness and itching within 5 mins after injection. Patient denied any shortness of breath, GI symptoms or rash. VSS. Patient received 50mg of Benadryl. Approx 5 min later patient developed throat tightness. Patient was promptly administered EPI. Patient developed urticarial like lesions. Patient reported improvement in throat tightness but continued to complain of itching at injection site. An additional 50mg of Benadryl was administered. Patient reported improvement of itching approx 5-10 min later. Patient VSS stable throughout but developed tachycardia.
COVID19 VACCINE (COVID19)	Office Visit *	910374-1	Injection site soreness starting on day of injection and has improved today. Headache, nausea and vomiting at least 6 times. Not pregnant but unsure if food poisoning
COVID19 VACCINE (COVID19)	Office Visit *	910376-1	Headache, body aches, joint pains and low grade fever with feeling warm and fatigue x 36 hours. Headache with severe cervical/thoracic spine/neck pain, fatigue, fogginess has persisted x 10 days. Associated nausea when pain is severe. Sometimes headache is improved; but it usually worsens in the evenings.
COVID19 VACCINE (COVID19)	Office Visit *	910380-1	Patient received the Covid 19 vaccine on 12/24/2020. On 12/27/2020 she c/o new onset fatigue, cough associated with slight itching of the throat and chills. Denies fever. Hx of allergic cough. Covid test scheduled on 12/28/2020 at Employee Health.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	910390-1	Same day after vaccine I started feeling tired. 2nd day i started having chills and muscle aches. Went to work and tried to work through it. Wednesday i worked 1/2 day. Thursday morning I started feeling light headed that afternoon I started getting hives on my legs. 12/24 I called internal med and spoke with Dr. He called in a rx for me a steroid. I took the 1st day and 1/2 of the 2nd and stopped because I started feeling nauseous and light headed but my hives started getting better(color change) He advised me to go to the ER but I started feeling better andf I told him i would follow up with Dr's office. if I wasn't getting better. I scheduled an appointment with Dr my PCP. I am still very weak and the back of my neck and shoulders are very tender. I still have hives on my legs but they are starting to clear.
COVID19 VACCINE (COVID19)	Office Visit *	910391-1	5 days after I received the vaccine, I came down with severe abdominal pain, I went to the emergency department and was diagnosed with Acute Pancreatitis without a cause. I do not drink alcohol, and my gall bladder is working well, no gall stones noted to cause pancreatitis.
COVID19 VACCINE (COVID19)	Office Visit *	910392-1	Shortness of breath, shallow breathing Fatigue Headache some body ache at first I went to the clinic, nothing prescribed but did take a Covid test which came out negative
COVID19 VACCINE (COVID19)	Office Visit *	910394-1	At 3:00 PM same say I started having arm pain 12:00 AM that night chills , back pain , muscle pain Next morning fever , I could Not stand up , eyes was burning , headache third day- Headache and arm pain

COVID19 VACCINE (COVID19)	Office Visit *	910534-1	Reports dizziness started evening of 12/24/20 and ongoing. Reports dizziness is much better today and feels it has almost resolved. Is following up with PCP today, 12/28/20 . no other symptoms reported.
COVID19 VACCINE (COVID19)	Office Visit *	910542-1	headaches, back pain, fatigue, nausea, foul taste in mouth
COVID19 VACCINE (COVID19)	Office Visit *	910547-1	I'm not sure this is entirely vaccine related, but I wanted you to be aware. I occasionally experience unexplained swelling of my lips. It has been investigated by an allergist, but the cause is unknown -- doesn't appear to be a food allergy (no trigger foods identified, and it has never appeared immediately after eating), and may not even be histamine related. It could be something immune-system related, and my experience this weekend might support that. I had normal, expected symptoms on Friday evening (chills, headache). Those resolved Saturday. Saturday night, my lower lip swelled dramatically. Swelling spread into the upper lip as well. I have seen this before, but this was one of the more severe instances I have experienced. Lips remained swollen overnight. When I woke up Sunday morning and went to the restroom, I became suddenly lightheaded and passed out. That's a symptom I have never experienced before. I consulted with my primary care doctor and took it very easy the rest of Sunday. He and I will follow up to further asses what happened. No further light-headedness on Sunday or today. Lips eventually resolved late in the afternoon. This is all about 72 hours after the vaccine, so I can't be sure it is related, but I do wonder if it is related to having my immune system revved up by the vaccine. I reported it on the CDC check-in app and my primary care physician is noting it on his side as well.
COVID19 VACCINE (COVID19)	Office Visit *	910550-1	Pfizer-BioNTech COVID-19 Vaccine EUA; Generalized Itchy rash with hives all over body not relieved by benadryl, zyrtec, claritin and pepcid.
COVID19 VACCINE (COVID19)	Office Visit *	910584-1	Rash and Hives
COVID19 VACCINE (COVID19)	Office Visit *	910598-1	10:30am - Received the Vaccine Shot 11:30am- Warmth throughout face, then right had went all tingly, then numb and swollen. The numbness crept up the arm to the elbow. Then the nose started to get tingly and numb followed by the lips and gums. 12:00pm - Started to not be able to speak a sentence. The words were coming out of my moth very jumbled even though in my mind I knew what I was trying to say. Still numb in right hand, and on right side of face. 12:10 pm- Could not see fully out of the right peripheral of my eye as well to the other symptoms of not being able to speak a full sentence. I was able to speak less words than I had about 10 min prior. Numbness in my hand went away at this time. 1:15pm- I was able to speak mostly full sentences again. I got a pounding headache on the front to left side of my head and felt fatigues. 1:40pm- Finally able to speak full sentences again, I could feel my hand and all the parts of my face. Felt weak, still had headache and felt nauseous and dizzy. 2:15pm- Took 1 advil, fell asleep 4:00pm- Woke up, felt weak, disoriented, still had a headache. 8:00pm- Only a small headache left and a sore arm
COVID19 VACCINE (COVID19)	Office Visit *	910611-1	severe back pain/ back aches; body aches; inflammatory reaction; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs). A contactable female nurse (patient) of unknown age reported that she received BNT162B2 (COVID VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient got the Covid vaccine on Thursday (date not specified). She was taking ibuprofen (MOTRIN) (later clarified as ibuprofen) for anti-inflammatory. She went to a doctor visit yesterday (18Dec2020), and then her doctor told her that because ibuprofen was an anti-inflammatory, she shouldn't be taking it during, right after the vaccine because of inflammatory reaction and so patient stopped taking it and switched over to paracetamol (TYLENOL), now she was in severe back pain/ back aches and body aches, but anyways she was just going to end up taking it if this took much longer. Outcome of the events was unknown. Information about lot/batch number has been requested.; Sender's Comments: From the information provided it is unclear which event is the intended subject of this spontaneous report and what is the reporter's perceived relationship to the vaccine. In addition, the lack of critical information (e.g. immunization date) makes a global medical assessment impossible. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	910623-1	Face swell, Heart rate 108, Blood pressure 133/87, pregnant 35 weeks
COVID19 VACCINE (COVID19)	Office Visit *	910627-1	late Friday had sneezing, mild coughing, scratching throat, mild body ache, headache. Still have same symptoms.
COVID19 VACCINE (COVID19)	Office Visit *	910629-1	Patient evaluated and monitored following vaccine. Developed nausea and lightheadedness approximately 20 minutes after dose given. Patient reports that she hadn't had anything to eat or much to drink in the hours leading up to vaccine as she and her husband were going to get lunch after the vaccination appointment. Patient has a history of syncope/presyncope after a blood draw in the past. Patient had no other stx other than very transient nausea and lightheadedness, which improved significantly in the hour that she was monitored. BP at time of discharge from clinic was 105/73; pulse 67
COVID19 VACCINE (COVID19)	Office Visit *	910634-1	A day after having the vaccine, I experienced eye soreness in my right eye. The next morning both my eyes were blood shot. I administered eye drops and went on about my day. Late that evening they were really red and watery and my vision was blurred. I went to the optometrist on Monday morning and was diagnosed with Primary iridocyclitis, bilateral. My iris had been attached to my lens from the inflammation, but had detached it self. I was put on steroid drops and made to keep my eyes dilated until my follow up appointment. Went to my follow up appointment today December 28, 2020. My eyes are looking better, but not back to normal yet. Advised to keep administering my steroids drops and only use the dilation drops every other day. I will follow up on Thursday.
COVID19 VACCINE (COVID19)	Office Visit *	910635-1	New diagnosis of diabetes 5 days after receiving vaccine with no past medical of DM and no family history.; This is a spontaneous report from a contactable Nurse (patient). A 31-year-old female non-pregnant patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number=EJ1685), via an unspecified route of administration on 18Dec2020 14:00 at arm left at single dose for covid-19 immunization. The COVID-19 vaccine was administered at Hospital. Medical history included asthma and hypertension. The patient had no known drug allergies. Concomitant medication included cetirizine, budesonide, formoterol fumarate (SYMBICORT), escitalopram oxalate (LEXAPRO), montelukast and omalizumab (XOLAIR). No other vaccine in four weeks prior to the COVID vaccine. The patient experienced new diagnosis of diabetes 5 days after receiving vaccine with no past medical of diabetes mellitus and no family history. The event result in doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. Adverse event start date was 19Dec2020 06:00 AM. Treatment received included fluid bolus, computerized tomogram (CT) scan and labs. The patient underwent lab tests and procedures which included computerized tomogram and laboratory test with unknown results on Dec2020. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the event was recovered with lasting effects.; Sender's Comments: The reported diabetes was unlikely causally related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), considering the latency of the onset of the event. A possibility that the vaccination unmarked subject's diabetes cannot be completely excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	910639-1	Bell's palsy/facial paralysis; This is a spontaneous report from a contactable other Health Professional (patient). A 28-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/ batch number: 33121, brand: EJ1685), via an unspecified route of administration at left arm on 18Dec2020 09:30 at single dose for covid-19 immunization at hospital. Medical history included anxiety, depression, diagnosed COVID-19 prior vaccination. No known allergies. Concomitant medication included fluoxetine hydrochloride (PROZAC) in two weeks. No other vaccine in four weeks. The patient experienced bell's palsy/facial paralysis on 21Dec2020 19:00 with outcome of not recovered. The seriousness was reported as no. The adverse event result in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The treatment received for the adverse event was reported as unknown.; Sender's Comments: Based on available information, a possible contributory role of the subject vaccine cannot be excluded for the reported event of Bell's palsy due to temporal relationship. However, the reported event may possibly represent intercurrent medical condition in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	910643-1	Developed fever and cough on 12/25/20, tested positive for Covid-19 on 12/26/20
COVID19 VACCINE (COVID19)	Office Visit *	910660-1	Arm pain and fever of 100.5 began same day as vaccination. Fever went away after several days, but return on 12/28 with fatigue.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	910667-1	On day of injection arm soreness, otherwise fine. Woke up at 6:00 am the next morning with my eyes ticking to the right and extremely dizzy. Couldn't walk down the hall without leaning on the wall. Dizziness persisted all day on the day after injection but got slightly better as the day went on. Using a pulse ox I checked my heart rate which was resting around 100 and when I walked down the hall and back it rose to 135 which is much higher than my normal resting around 85. The following day (12/28), dizziness is gone but heart rate is still higher than normal.
COVID19 VACCINE (COVID19)	Office Visit *	910675-1	12/24/2020 started mild cough, still coughing, sneezing, no fever.
COVID19 VACCINE (COVID19)	Office Visit *	910677-1	Shortness of breath, low oxygen level, cough, fatigue, nausea, vomiting, diarrhea, body aches, headache, chills

COVID19 VACCINE (COVID19)	Office Visit *	910935-1	Headache, fatigue, body aches, sore throat, ear pressure COVID 19 Swab-Neg.
COVID19 VACCINE (COVID19)	Office Visit *	910941-1	Pfizer-BioNTech COVID-19 Vaccine: One day after receiving vaccine patient awoke with myalgias, fatigue, fever (maximum temperature: 100 degrees Fahrenheit), headache, and rhinorrhea. Patient was evaluated via telehealth two days after vaccine administration and denied throat pain, chest pain, chest tightness, or wheezing. No difficulty swallowing or breathing. Patient was instructed to follow-up with a health care provider immediately for worsening, persistent, or concerning symptoms.
COVID19 VACCINE (COVID19)	Office Visit *	910962-1	I had the typical local reaction for the first 3 days following the injection: redness, soreness, swelling at injection site, occasional itchiness and occasional burning, warm to touch. It was resolved by the 4th day. Then on the 8th day, I felt a little itchy and itched the site gently. Three tiny hives appeared and became a moderate-sized red swollen area by the evening with mild pain and some burning. The 9th day it was very red, moderate-to-large sized, some burning, warm to touch. The 10th day, today, it doesn't look angry anymore, is no longer warm to touch, looks like it's resolving but still some swelling that feels like it goes around my upper arm. I had it checked by an NP today and she thinks it's all related to the injection being administered lower than my deltoid, instead went into the subcutaneous/fat area. So we will watch it but she doesn't think it's infected or any reason to not take the 2nd dose when it's time.
COVID19 VACCINE (COVID19)	Office Visit *	910973-1	Started with very bad cramps which lead to diarrhea, that lasted about 1 hour. Then my SI joint started hurting so bad I couldn't stand it and went to ER. They gave me a shot of Torridol and a prescription for Naproxen. I was also nauseous, lethargic, chills, ringing in my ears, headache . I believe my SI joint started hurting due to having arthritis in the joint. The Naproxen escalated all the above. My arm also very sore, but that I could deal with. Feeling a bet better by 12/28/2020. Going to try and get into doctors on 12/.
COVID19 VACCINE (COVID19)	Office Visit *	911013-1	Dizziness and Headache that took 25 min. to resolve.
COVID19 VACCINE (COVID19)	Office Visit *	911015-1	Pfizer-BioNTech COVID-19 Vaccine EUA
COVID19 VACCINE (COVID19)	Office Visit *	911023-1	Generalized body rash started ~24 hours later; still has 4 days later.

COVID19 VACCINE (COVID19)	Office Visit *	911096-1	I have had continued ongoing dizziness/vertigo after receiving the vaccine. It has now been a week since my vaccination and I am still feeling this. It it tolerable, but continues and is annoying.
COVID19 VACCINE (COVID19)	Office Visit *	911103-1	Complaints of gradual joint and bone pain
COVID19 VACCINE (COVID19)	Office Visit *	911105-1	I got the vaccine at 3:30 pm. My right arm where the shot was started to itch extremely bad around 4:30. Then around 4:50 my throat was swelling up and my ear felt congested. A few minutes later it was hard to breathe. I let my staff know (i work at urgent care) that i was not feeling so good from the vaccine. i was checked into the urgent care and i had hives and i was itching all over.
COVID19 VACCINE (COVID19)	Office Visit *	911113-1	Developed extremely sore arm at site of injection within first hour after vaccination; red rash developed (3 inch diameter) with localized swelling. Mild fatigue for first two days following vaccination. Beginning on Day 3 after vaccination, developed severe fatigue, muscle pain, back pain, joint pain, hot/cold chills, abdominal pain, nausea and diarrhea. Symptoms were severe for three days (Day 3-6 after vaccination) requiring bed rest and supportive care with OTC ibuprofen, benadryl and promethazine. Rash, swelling and muscle pain at injection site persisted through Day 5 following vaccination. Fatigue, muscle and joint pain persisted at moderate intensity through Day 8 following vaccination. Moderate nausea and abdominal pain persisted through Day 8 following vaccination. Still experiencing mild to moderate fatigue on Day 12 following vaccination.
COVID19 VACCINE (COVID19)	Office Visit *	911115-1	Left Shoulder pain that started as ?oh I slept funny? to not going away with ice/heat or rest. Worsening in severity daily and spreading towards base of skull and eventually into clavicle. The pain became excruciating and I was unable to turn my head at all to the left. So bad I had to use my hands to lift my head up. I eventually went to the ED on 12/27/20. And overnight the pain became so unbareable and functionality so limited I couldn?t go to work or take care of my toddler. I returned the to ED on 12/28/20. Was advised to file adverse event and contact my employee health and safety department. I was initially examined in the ER the first time with a neck spasm. Sent home with an RX which didn?t work. At all. When I returned to the ER th next day, the physician felt my entire neck, shoulder and clavicle an noted swelling and prominent spasm. He diagnosed with a trapezius strain and a vaccine reaction. Gave me an RX for Valium which seems to help take the edge off.
COVID19 VACCINE (COVID19)	Office Visit *	911122-1	low BP/low HR and went to the ER for evaluation
COVID19 VACCINE (COVID19)	Office Visit *	911173-1	1.5 hours after the vaccine, one eye vision was down to light perception only. The event lasted 15 minutes and resolved completely. ER eval and Ophthalmology eval did not find a cause for the event.; This is a spontaneous report from a contactable physician. Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	912059-1	Hypotensive (diastolic 43, systolic 103); neurological tingling -upper spine/between shoulder blades; felt crummy; This is a spontaneous report from a contactable consumer. A female patient of an unspecified age received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in left arm on 21Dec2020 15:45 at single dose for Covid-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient experienced hypotensive (diastolic 43,systolic 103), neurological tingling - upper spine/between shoulder blades and generally felt crummy on 21Dec2020 at 15:45 (also reported as occurred within 5 minutes of shot). The patient underwent lab tests and procedures which included blood pressure measurement: 103/43 on 21Dec2020. Event resulted in emergency room and physician's room visit. Treatment received intravenous (IV) fluid replacement, lab tests (unspecified), 6 hour observation. The outcome of events was unknown. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Office Visit *	912065-1	facial itching; throat swelling; lump in throat; hoarse voice; This is a spontaneous report from a contactable nurse. A 37-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: ELO140), via intramuscular on left arm on 23Dec2020 at 09:45 at single dose for COVID-19 immunization. The relevant medical history and concomitant medications were not reported. The patient experienced facial itching, throat swelling, lump in throat and hoarse voice, all at 11:30 on 23Dec2020. The most recent COVID-19 vaccine was administered at hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The events resulted in doctor or other healthcare professional office/clinic visit for the patient. The patient received IV benadryl and Epi pen as the treatment for the events. Prior to vaccination, the patient was unknown if diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered on an unspecified date in Dec2020.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events pruritus, pharyngeal swelling, sensation of foreign body and dysphonia cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	912137-1	Was given the vaccine and about 5 minutes later started having swelling and my eyes and face. It was watched for a few minutes and was assessed by EMS and taken to the emergency department. I was given epinephrine, Benadryl, Solu-Medrol, Pepcid, IV fluids, DuoNebs and observed overnight. I was given multiple rounds of Benadryl, steroids, Pepcid, DuoNebs
COVID19 VACCINE (COVID19)	Office Visit *	912511-1	Received vaccine at 1:30 pm yesterday, noted onset of symptoms at 8:45 pm. Numbness and tingling to mouth and bilateral upper and lower extremities, mild vision change, feeling of some swelling to bilateral eyelids. Also swelling to lips. She also did take zinc gluconate 50 mg last night and this morning. Has never taken zinc 50 mg, but has taken zinc as component of multivitamin/pre-natal vitamins. Patient was prescribed Pepcid 20 mg BID, Medrol 4 mg dose pack 21 pill taper until complete. Also given Benadryl 25 mg - 50 mg every 4 - 6 hours for allergy symptoms. And provided with an Epi-Pen for home.
COVID19 VACCINE (COVID19)	Office Visit *	912834-1	With five minutes of vaccine Increased heart rate shot up to 198 bpm. Regular resting heart rate for me is in the 50s. Left pupil dilated completely, right pupil constricted to pin size. Extremities went numb and ice cold. Went to emergency room Per request of EMTs at vaccination center. Was given high-dose Benadryl and Saline IV. Heart rate return to normal and all other symptoms disappeared after treatment.
COVID19 VACCINE (COVID19)	Office Visit *	912957-1	Received vaccine at 13 15. At 1351 c/o mild chest pain. 1353 c/o throat fullness and anxiety; 1354 bp 148/81 HR 99 O2 sat 100% c/o difficulty swallowing, SOB and itching. Rapid response called. Benadryl 50 mg IVP given at 1355. 1356 Solumedrol 125mg given IV; 1357 Epinephrine given; 1358 Pepcid 20 mg given. 1400 Normal saline 250 mg IV; 1415 transported by ambulance to local ER. In waiting area in local ER no attention. Came back to Hospital and admitted to observation
COVID19 VACCINE (COVID19)	Office Visit *	913221-1	I received my vaccine on 12/18/2020. The side effects I experienced were initially as expected. Mild headache, muscle pain at the injection site. However, the muscle issues have not subsided, and have actually gotten worse. Day 3 I began having a burning sensation in my underarm area radiating back towards my triceps. Muscle spasms continued to increase and spread to include deltoid, trapezius, and SCM muscles. Yesterday I developed a fever and began having a burning sensation down my triceps muscles and radiating into my forearm (radial side). No visible rash noted. Slight weakness in left arm.
COVID19 VACCINE (COVID19)	Office Visit *	913234-1	Unusually high level of fatigue / exhaustion. Feeling ?flush? Headache Feeling feverish but no actual fever. Has lasted So far from 12/24 to 12/29. Six days. A bit better day 6.
COVID19 VACCINE (COVID19)	Office Visit *	913250-1	Rig he arm sever pain at elbow. Swelled and painful right axilla lump nodes

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	913912-1	BP of 176/126mmhg/persistent severe hypertension/continued severe elevation of BP of 178/130mmHg; intermittent chest pains; severe nausea; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; rash and hives on left side of arm where injection site was, as well as left side of face; mild progressive headache; body aches; chills; fatigue; fever of 100 degree F; This is a spontaneous report from a contactable Other Health Professional (patient). A 29-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: unknown, intramuscular in the left arm, first dose on 18Dec2020 12:30 at a single dose for immunisation. Medical history included ongoing gestational hypertension in 2016 that never recovered, with controlled hypertension, asthma/COPD, and seasonal/animal allergies. Concomitant medication included sertraline hydrochloride (ZOLOFT) and losartan. The patient is not pregnant. The patient previously took and had allergies to erythromycin and nitrous oxide. It was reported that within 20-30 minutes of receiving covid vaccine on 18Dec2020, the patient developed mild progressive headache, body aches, chills, fatigue, fever of 100 degree F. At approximately 8:00 p.m. same day of vaccination, she developed rash and hives on left side of arm where injection site was, as well as left side of her face. Immediately following this, she had intermittent chest pains in which she took a BENADRYL 25 mg with some relief. Next day (19Dec2020), progressive headache persisted to a severe headache, severe nausea, persistent chest pains and a BP of 176/126mmhg. Reported to a place for evaluation with persistent severe hypertension and severe headache treated by toradol, compazine, and Benadryl. She was released from the ER with improved blood pressures and reduced headache. The following day Sunday Dec2020, progressive and severe headache occurred with continued severe elevation of BP of 178/130mmHg. Current treatment of losartan 50 mg was increased to 100 mg to attempt control. She was then placed on chlorthalidone/amlodipine. The events resulted in doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The outcome of the events mild progressive headache, body aches, chills, fatigue, fever of 100 degree F, rash and hives on left side of arm where injection site was, as well as left side of face, intermittent chest pains, severe nausea, and BP of 176/126mmhg /persistent severe hypertension/continued severe elevation of BP of 178/130mmHg was not recovered (reported as symptoms persist). The patient was not diagnosed with Covid 19 prior to vaccination and she had not been tested since vaccination. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the hypertension aggravated is possibly related to bnt162b2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	913914-1	blood pressure was super elevated, in the 190/110 range; It was getting close to stroke level; woke up and felt restlessness and agitation; Headache; felt really restless and anxious; felt really restless and anxious; was not able to sleep/ could not go back to sleep; This is a spontaneous report from a contactable consumer (patient). A 53-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EK5730, expiration date: Mar2021 intramuscularly in left deltoid from 17Dec2020 at single dose for COVID-19 immunization. Patient medical history included seasonal allergy. Concomitant medication included mometasone furoate (FLOXASE) via nasal from 2018 (about 2 years ago) and ongoing at 1 spray each nostril, 1x/day for seasonal allergy. The patient previously received flu shot, on Oct2020 (2 months ago) for immunization. Patient was a firefighter and reported that he received the vaccination in the afternoon of 17Dec2020. On that afternoon, he was on duty and felt really restless and anxious and was not able to sleep. He did not sleep at all that night. He maybe got like an hour or 2 on Friday after his shift. Friday night he had the same kind of deal and it continued on into Saturday. He did crash and burn (pending clarification) on Saturday night. On Sunday, he got up and felt normal again. A few hours later on Sunday, it started up again and then it went away. He said that after dinner Sunday evening it started up again, but he was able to get some sleep. He said that Yesterday, 21Dec2020, he was fine. He took off yesterday. This morning on 22Dec2020 at 0200 he woke up and felt restlessness and agitation and he could not go back to sleep. He said that he had a headache and his blood pressure was super elevated, in the 190/110 range on 22Dec2020. It was getting close to stroke level. He said that he thought about going to the ER, but did not experience any stroke or cardiac symptom's, although his blood pressure is still high, but not as high as it was. He has not gotten any sleep since then. He said that he has an appointment to see his physician this afternoon at 1300 22Dec2020. It was reported that all events require physician office visit. Got his flu shot like 2 months ago and nothing like this happened. He said that he heard with the second round there are supposed to be more symptoms like flu like symptoms with the Covid vaccine like fever, muscle aches. Outcome of the events was reported as unknown.
COVID19 VACCINE (COVID19)	Office Visit *	914479-1	Left sided weakness, fatigue for 3 days post immunization. Patient was seen by health care provider on 12/30/2020. Provider transferred patient to Hospital ER for further evaluation.
COVID19 VACCINE (COVID19)	Office Visit *	914798-1	On Dec. 20, 2020 around 11:30 PM, 2 days after patient received her COVID-19 vaccination, she was found on the bathroom floor, obtunded, very pale, diaphoretic, nauseous, and complaining of severe chest pain. Paramedics was called and patient was transported to the nearest emergency room. According to paramedics, on the way to the ER while patient was in the ambulance, she was noted with a sudden drop in heart rate about 19 beats/minute and have to be given Atropine IV Push, oxygen and was connected to transcutaneous pacing which improves her heart rate. In the ER patient continued to have chest pain and she was given Morphine, Oxygen, Nitroglycerine and Aspirin. IM had an EKG which showed Sinus Bradycardia with a Right Bundle Branch Block. She had serial ekg's, a chest x-ray, laboratory testing which included Troponin. Her first Troponin level came back elevated prompting her hospital admission to Telemetry. Her next 2 Troponin level improved and return to normal range and her chest pain has resolved.. She underwent a Stress Test which came back negative. Patient was admitted for a total of 20 hours in the Telemetry unit with Cardiology consultation before being discharged home last. She was re-evaluated by the cardiologist yesterday which diagnosed her a chest pain of unknown origin.
COVID19 VACCINE (COVID19)	Office Visit *	914821-1	Rash, Itching and swelling of left arm. Progressed to tachycardia in the 150's, hypertension 200/114. Tingling of lips, dizziness
COVID19 VACCINE (COVID19)	Office Visit *	915215-1	Dizziness, Equilibrium was off. This started within an hour of the vaccine and lasted 24 hours. Had to take the following day off of work. Also, burning in the chest (like heartburn) lasted 48 hours.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	915415-1	I have an autoimmune disease, psoriatic arthritic and osteoarthritis. This caused my flare up. My knees and ankles swelled to the size of grapefruits. I could not move legs for about 18 hours. From Friday to Sunday, I could not get out of bed. Monday night, I really started feeling better and was able to take care of my kids again on Tuesday. I went back to my normal shift on Wednesday. I was under the care of my PCP and Rheumatologist.
COVID19 VACCINE (COVID19)	Office Visit *	915612-1	Received my vaccine on December 22nd, 2020 at around 830 Am. That afternoon, about 3 PM, I started to have a reaction. It started with tingling/numbness in my right hand which progressed up my arm into my elbow. About 10 minutes later, it then progressed into my right foot, and my left foot. About 10 minutes after that, I started to get flushed and a neck rash (diagnosed from Dr.). I took Benadryl and Ibuprofen 800mg PO every 6 hours for the next 24 hours. The numbness in my right foot and left foot along with the flushness went away a couple hours later. Although, the numbness in my right hand never went away. It came and went for the next 4 days until December 27th and 28th when it started getting worse. On December 28th evening, it got so bad that I was debating going to the emergency room around 1 am. The numbness and tingling was in my right hand and started shooting up my arm. The nerve pain around my wrist was unbearable. I finally fell asleep and the next morning, it was not nearly as bad, but was still there. The numbness and tingling moved from my right hand mainly to right hand, right foot, right leg, left foot and left hand today (12-30-2020).
COVID19 VACCINE (COVID19)	Office Visit *	915690-1	Due Date unknown/6-7 wks pregnant -nausea -Body felt heavy -headache -in & out consciousness -Fatigue, severe -Heart Racing
COVID19 VACCINE (COVID19)	Office Visit *	916247-1	Redness about 1 1/2 inches around injection site, edema to right arm, r side of neck, r breast, r shoulder, temp 99.3, increased blood pressure. Patient went to primary care physician. She was then sent to the ER. She was Covid (+) in July 2020
COVID19 VACCINE (COVID19)	Office Visit *	916538-1	"15-20 mins after receiving the vaccine she reported she had difficulty swallowing and difficulty breathing and was ?shaking." a PA wrote in her note that when she ran in to help, she found the patient to be tachypneic, diaphoretic, warm with some red blotchy patches on face, chest & neck. Able to speak easily c/o trouble breathing & sensation of throat swelling & extremities feeling abnormal. No stridor. No facial edema noted by that clinician. Administered epi-pen 0.3mg - IV started , Benadryl 50mg IVP and solumedrol 125mg IVP. Patient reports she subsequently arched her back and had rigidity of her arms/legs and tremors. Clinic PA reports that while she was there, pt was never hypotensive. Initially hypertensive after epi as expected with some favorable response after 10-15 min Staff there gave her IM epinephrine, IV Solu-Medrol and 50 mg IV Benadryl. EMS was contacted and transported to the emergency room. She arrived at the ER, was monitored for 2 hours, was started on pepcid and benadryl and discharged from the ER. She had a diffuse itchy rash. The following day she again developed recurrence of throat swelling. Went back to a different ER. Developed dyspnea immediately prior to arrival at ER. There was again given solumedrol and benadryl and pepcid and developed muscle rigidity and arched back for 10 minutes. Symptoms of SOB and dyspnea resolved with epinephrine. Was discharged from the ER with prednisone after being monitored for 5 hours. Is continuing to take prednisone and benadryl. Rash is still present but improving with scheduled benadryl. Has new redness at injection site today. Continues to feel some throat swelling but no tightness today. This information was gathered from talking with pt today for a phone appt and also from her medical chart regarding her vaccination visit and two ER visits."
COVID19 VACCINE (COVID19)	Office Visit *	916742-1	Within 15 minutes of receiving the vaccine I began to get very itchy and blotchy with a hoarse voice. The paramedic downstairs walked me up to the emergency room. I was treated with medications to help calm the itching and burning feeling. By 940 I went anaphylactic and had several doses of epinephrine to help calm this. I continued to have rashes and the feeling of my throat closing. I was transferred by ambulance to medical center in the ICU. I am still here and have had two toner anaphylactic episodes since. I have been on a epi drip, steroids, famotidine, Ativan and Benadryl. I also had a picc like placed.
COVID19 VACCINE (COVID19)	Office Visit *	916772-1	Vaccine on 12/22/2020 and started feeling bad on 12/27/2020 and tested positive on 12/30/2020 for COVID 19 Was advised to fill this out by my PCP
COVID19 VACCINE (COVID19)	Office Visit *	917122-1	A little over ab hour after receiving the vaccine I noticed a burning sensation in my sinuses. By 130am 1/1/2021 I awoke from my sleep terribly dizzy, shaking violently and experiencing a fever of 101.3 F. I took advil and tylenol and fell asleep about an hour later. I woke up with similar symptoms at approximately 830am on 1/1/2021 took an additional dose of advil and tylenol and slept till 12p. I woke up with a bad headache and coughing fits similar to when I had covid back in March. I went to an urgent care who assessed me and ordered me to the ER. medical center administered IV fluids, an inhaler, steroids, epinephrine and benadryl and a few hours later my symptoms had subsided for the most part and a dose of IV antibiotics was administered. I am currently admitted for observation with likely discharge on 1/2/2021.
COVID19 VACCINE (COVID19)	Office Visit *	917549-1	Soreness and weakness of left arm for more than 5 days. Intermittent headaches and runny nose
COVID19 VACCINE (COVID19)	Office Visit *	917727-1	Patient with a history of thalassemia and Gilbert's disease, developed severe jaundice three days after vaccination. Had mild headache and sore arm but otherwise felt well. Had labs drawn - found to have highly elevated bilirubin (23) and LFTs in the 700s. Was admitted to the hospital and had CT showing Cholelithiasis, cholelithiasis and minimal intrahepatic biliary ductal dilatation. Left hospital and was admitted to another facility where plan was for ERCP and cholecystectomy. Ultimately unclear if at all related to the vaccination - may be coincidental.
COVID19 VACCINE (COVID19)	Office Visit *	917961-1	I suffer from lingering SOB with exertion after COVID infection. On the night of 12/31/2020 I began to feel more SOB than usual and was unable to correct my SOB with rescue inhaler. Became more SOB with exacerbated tachycardia and tachypnea, My family had to call 911 because I became aphasic and showing signs of possible stroke. I was taken to the ER and admitted for respiratory recovery and to rule out stroke. The stroke was ruled out and I recovered with IV prednisone therapy, twice daily and supplemental oxygen. Released after HR, BP, & respiratory effort returned to normal: 01/03/2021
COVID19 VACCINE (COVID19)	Office Visit *	918062-1	15 min after the vaccine I was flushed and felt hot , ears felt hot as well. I had a macular rash on chest and arms. My throat felt itchy and they immediately gave me benedryl. I was tahycardic as well. When I got home from the ER that night I had to take more benedryl and then the next morning I was still itchy and my voice was hoarse so I took more xyzal and famotidine. The rash subsided and I continued taking xyzal twice a day , benedryl and famotidine for a week. After my vaccine the itching did not subside for about 48 hours and it was very difficult to control. I had to take max doses of antihistamines to control the hoarseness In my voice and itching

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	918072-1	Swollen painful lymph node left clavicle
COVID19 VACCINE (COVID19)	Office Visit *	918080-1	Fatigue, headache, body aches, chills, localized rash
COVID19 VACCINE (COVID19)	Office Visit *	918081-1	I received the shot around 0730 on 12/30/2020. Went home and got ready for work. Around 12am 12/31/2020 my arm started to radiate at the injection site and was very tense. I placed a heat pack on the right arm but the pain did not dissipate. My arm continued to be in pain for the rest of the night. Around 0240 I ate dinner, had water and still had some arm pain. Around 0345 my arm started to flare up and sent pain sensations throughout my body. My right arm was increasingly discomforting, I could barely move it. The sensations spread to my legs, numbing them and my throat had felt as if it were closing up. I got up to get the attention of the nurse and was able to flag her down. She said I was pale as a ghost. My vision was very blurry, I could not hear anything because my ears had filled up and everything was muffled. My head had begun to ring and I was on the brink of fainting when a chair was given to me. My eyes had become extremely sensitive to the light, I was given water and spoken to about what had happened leading up to the event. I was greeted by the paramedics who drew my blood, placed an IV and transferred me to the Acute Care portion of the Emergency Department. My vitals were 76/49, 80/50, 90/56, 100/60 before being brought to the ER. On 1/1/2021 My thighs have been sore/tense, my knees and ankles have been stiff and just feeling sickly. On 1/2/2021 much of the same symptoms are present. The soreness in the muscles isn't as prevalent, however joints still are stiff On 1/3/2021, congestion and runny nose are still present, stiffness in ankles and now shins are prevalent.
COVID19 VACCINE (COVID19)	Office Visit *	918082-1	On 12-22-2020, approx. 2 days after vaccine, I noticed several non-tender lumps under my chin/adjacent to left jaw line ~ small gum drop size lumps seemed to congeal together over next 9 days into a single half-dollar sized lump - not completely round.
COVID19 VACCINE (COVID19)	Office Visit *	918090-1	Rash on sides started Thursday. Woke up Friday and rash is all over body itching red and hurts. Taken Benadryl, pepsid and hydrocortisone cream. Called tele doc they gave prednisone nothing is working getting worse
COVID19 VACCINE (COVID19)	Office Visit *	918175-1	Patient had swollen lymph nodes under his left arm 3 days after injection was administered. He stayed he had surgery to remove lymph nodes in June 2020.
COVID19 VACCINE (COVID19)	Office Visit *	918191-1	Thursday 12/29/20 : Started wheezing, I am using my nebulizer but the wheezing seems to be getting worse My throat also is swollen and red. Fatigue/sleeping a lot Headache
COVID19 VACCINE (COVID19)	Office Visit *	918193-1	Flue like symptoms but no fever.
COVID19 VACCINE (COVID19)	Office Visit *	918207-1	Flu like symptoms (fever, chills, aches, fatigue, headache); redness, swelling, warmth and firmness at injection site
COVID19 VACCINE (COVID19)	Office Visit *	918215-1	Increasing redness and itchiness, swelling, and discomfort at injection site on R arm, delayed response not present at time of injection, symptoms began 12/27/20 and gradually worsened since then, no improving. Tried Benadryl and cold compresses, as well as Tylenol.
COVID19 VACCINE (COVID19)	Office Visit *	918223-1	Woke up with a case a vertigo that lasted 30-45 minutes, Headache that lasted around 6 hours that same day
COVID19 VACCINE (COVID19)	Office Visit *	918229-1	12/26/20 started to experience covid -19 symptoms.
COVID19 VACCINE (COVID19)	Office Visit *	918238-1	Approx 25 min after injection I became dizzy and my HR went to the 130's, at around 30 min post injection my tongue started to swell
COVID19 VACCINE (COVID19)	Office Visit *	918241-1	Significant neck and upper back pain as soon as 1 hour post vaccine lasting until at least 24 hours - tylenol and heat/ice (no change) chills without fever overnight the night of - no treatment soreness in arm 1 hr post to up to its worst at 24 hours later when I could not abduct >90 degrees for 24 more hours
COVID19 VACCINE (COVID19)	Office Visit *	918243-1	Really bad headache first 3 days Horrible Chills still ongoing Disoriented and almost like hallucinations Most interesting randomly talking to himself. I mean like a full conversation with someone that isn't there. He also sometimes feels like when holding something he doesn't see it or feel it and drops it or vice versa ?.. thinks holding something and isn't Balance is off Shortness of breath No fever thank goodness and taste and smell are normal
COVID19 VACCINE (COVID19)	Office Visit *	918262-1	After receiving the vaccine, my arm was in a lot of pain. Then that night and the next day, it was extreme pain, I couldn't lay on it. Then about 3-4 days later, the color is blue and black. Then I started having cold symptoms. Like a head cold. On my left side, my arm and my leg is sore. In addition, my face broke out too. I did not go to the ER. I let Employee health examine my arm . No ER visit
COVID19 VACCINE (COVID19)	Office Visit *	918280-1	Asthma-like fatigue, cough due to fatigue, mild.
COVID19 VACCINE (COVID19)	Office Visit *	918284-1	Moderna vaccine received on 12/21 from my workplace. Rash (reddened skin not raised) appeared after vaccine was given (within 24hrs) the size of a quarter and was gone 3 days later. Now on 1/3 the rash (red bullseye not raised) came back the size of a baseball and is warm to the touch. Went to urgent care and physician called it a delayed adverse reaction to the moderna vaccine 1st dose
COVID19 VACCINE (COVID19)	Office Visit *	918288-1	Starting on Thursday, Dec. 31, patient began having shoulder and neck tightness. That night patient began having chills, and noticed redness at the vaccine sight and then the redness started streaking. Also complaints of itching at the vaccine sight. Started taking Tylenol for the two days following the vaccine, states feels like it is improving. Referred to PCP for evaluation. Has appt. Monday, January 4th

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	918293-1	receive vaccine on 12/24/2020 arm was red and sore few days. then on 1/1/2021 at injection site a rash developed and had HA, tired , weakness, chills. I continue to feel this way on 1/4/2021
COVID19 VACCINE (COVID19)	Office Visit *	918294-1	About 1 hour after receiving my first dose of the Moderna vaccine for COVID-19, I started feeling extreme pain in my left shoulder and arm, where the shot was administered. The pain continued to intensify throughout the day and night and was 10/10 on a pain scale. In addition, I began to lose my ability to lift my left arm or use it. It became so weak that I had to use my right hand/arm to pick up my left arm to move it. My left arm was 'hanging and drooping' and my left shoulder was very noticeably lower than my right shoulder. I called my primary care and employee health. My primary care doctor advised me to take advil and go to urgent care if the pain persisted and worsened. I could not sleep at all that evening of 12/29/20 because the pain was so intense and I had to keep picking my left arm up with my right arm to keep re-adjusting to try and get comfortable. The next morning I went to an orthopedic urgent care where I was diagnosed with nerve damage from the shot and prescribed Methylprednisolone 4mg dosepack. The doctor who saw me explained that he could not assess the extent of the damage at this time because my nerves were so agitated and inflamed. He scheduled a follow up visit with me for Thursday, January 7th and stated he will then proceed with an MRI and further investigation to assess the extent of the nerve damage. During the days that followed my immunization, I was unable to do anything with my left arm and was dependent on my husband to help me get dressed, showered, household chores, etc. It is unknown at this time whether this will be temporary or permanent damage and disability.
COVID19 VACCINE (COVID19)	Office Visit *	918298-1	Injection received at 0815. At 0900 I started getting diaphoretic, clammy, nauseas and my face was flushed. At 0930, I developed hives on my neck, chest and arms. I immediately went back to the vaccination site (I was still in the hospital at work) and was administered 25mg oral Benadryl and monitored for 30 minutes. The hives resolved, but I still felt unwell. At 1600 I noticed a swelling in my right upper thigh about the size of my hand. It was about 2 inches inferior to my inguinal crease and was the width of my thigh. It was mildly painful to the touch. My injection site was red, inflamed and itchy. I continued taking 25-50mg Benadryl Q4 and took 100 mg at night due to itchiness on my eyes, face, neck, chest and arms. This is still present, although less each day, as of Monday 1/4/21 morning. I have felt feverish but have not had a recorded fever. I took some Ibuprofen for the pain in my arm at the injection site. The redness, swelling and itchiness has decreased each day at the injection site, but is also still present as of Monday 1/4/21 morning. I still feel unwell and have continued diarrhea throughout the weekend.
COVID19 VACCINE (COVID19)	Office Visit *	918299-1	The day of the vaccine I had a initial diarrhea and headache, minimum pain on the site of the injection but at 2AM on the 22nd I woke up from my sleep with chills, and shaking even my teeth were clacking. Took Tylenol and it got better around 30 min later. Felt very fatigued and still nauseated almost threw up. By the end pf the day it resolved itself.
COVID19 VACCINE (COVID19)	Office Visit *	918306-1	EE received Covid-19 Moderna vaccine on 12/29/20 at 5:10 p.m. at Covid vaccination site. 12/30/20 at 3:00 a.m.EE had pain in left side, hip and leg waking EE up from sleep . Lesions times two, one on hip and one on posterior upper leg. MD insructed EE to double Vitamin C orally and to place Bacitracin on the two lesions, which at first appeared to contain bloody drainage. Lesions are now dry. VAERS document completed.
COVID19 VACCINE (COVID19)	Office Visit *	918307-1	fever 100.6, chills, headache
COVID19 VACCINE (COVID19)	Office Visit *	918753-1	Left sides shock like pains in head. Lasts 3-5 seconds and go away. It's a stabbing shock like pain. Started on Thursday 17Dec2020 at 7:45 pm; Left sides shock like pains in head. Lasts 3-5 seconds and go away. It's a stabbing shock like pain. Started on Thursday 17Dec2020 at 7:45 pm; This is a spontaneous report from a contactable nurse reported for herself. A 28-year-old female patient (no pregnant) received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly in left arm on 16Dec2020 14:00 at single dose for COVID-19 immunization. Medical history was none. The patient's concomitant medications were not reported. The patient experienced left sides shock like pains in head, lasted 3-5 seconds and went away. It's a stabbing shock like pain. The events started on Thursday 17Dec2020 at 19:45. It was unknown whether treatment was received for the events. The events resulted in doctor or other healthcare professional office/clinic visit. The events were reported as non-serious. The most recent COVID-19 vaccine was administered in hospital. The patient had not received any other vaccines within 4 weeks prior to the COVID-19 vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was not recovered. Information on the lot/batch number has been requested.; Sender's Comments: Based on the compatible time association, the event left sides shock like pains in head is possibly related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	918757-1	"Rapid onset numbness/tingling and weakness/in my right hand up the arm, right foot, and left foot; Rapid onset numbness/tingling and weakness/in my right hand up the arm, right foot, and left foot; weakness 8 hours after the vaccine in my right hand up the arm, right foot, and left foot; flushing; This is a spontaneous report from a contactable pharmacist. A 33-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EJ1685), intramuscular on the left arm on 22Dec2020 08:00 at single dose for COVID-19 immunisation. The patient had no medical history. The patient's concomitant medications were not reported. The patient stated that on 22Dec2020, ""rapid onset numbness/tingling and weakness 8 hours after the vaccine in my right hand up the arm, right foot, and left foot. I also had flushing that required 50mg of BENADRYL every 8 hours for 16 hours. The numbness and tingling has persisted since and I still have it today in my right hand and right foot. It comes and goes with no specific identifying factors. I was vaccinated in my left arm"" (events reported as AE-resulted-in: Doctor or other healthcare professional office/clinic visit, Disability or permanent damage). The outcome of the events was recovering.; Sender's Comments: Based on the compatible temporal association, there was a reasonable possibility that the vaccination with BNT162B2 played a contributory role in triggering the onset of the events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	918760-1	<p>Tachycardia; Intermittent palpitations; Low grade fever/fever; muscle aches; This is a spontaneous report from a contactable physician. A 27-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly in unknown arm on 17Dec2020 at single dose for routine mass immunizations (covid-19 immunization). The COVID-19 vaccine was administered at Hospital. Not a military facility. The patient's medical history was reported as none and concomitant medications was none (he was on no other medications). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced tachycardia, intermittent palpitations, low grade fever/fever all started somewhere in the morning of 18Dec2020 and muscle aches on 17Dec2020. Physician assessed tachycardia and intermittent palpitations as serious due to medically significant. Physician stated that one of his workers had the vaccine and proceeded to have tachycardia and low grade fever. He would like to know if patient should get the second dose. The patient had mostly tachycardia with some intermittent palpitations. Patient was seen in his office on 18Dec2020, and got the COVID vaccine on 17Dec2020. He also reported fever and muscle aches, although the fever was subjective and was not documented. Tachycardia improved and sent him to cardiology on 21Dec2020. It was not life threatening and they did an Electrocardiogram (EKG). His initial heart rate was 130. When he was seen again in their office on 21Dec2020, it was 93, which was baseline. It improved. He never got his temperature. The highest in office was 99.5 degrees Fahrenheit. He had some muscle aches. The physician just sent patient to cardiology because he was having intermittent tachycardia and intermittent palpitations. Two visits to physician office. He was seen on 18Dec2020 and again on 21Dec2020. Relevant tests: they did testing for tachycardia but not related specifically. They did thyroid and EKG in office and he did not know if test were back. EKG was ok. The Thyroid, Complete blood count (CBC) and lipid (all were on an unknown date in Dec2020) were not back and were just done to make sure there were no cardiac issues. The outcome of the events was recovering. The lot/batch number has been requested.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events tachycardia and palpitations cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Office Visit *	918772-1	<p>short of breath; Intense headache; tiredness; body aches; This is a spontaneous report from a contactable other healthcare professional (patient). A 47-year-old female patient (not pregnant) received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ELO124), via an unspecified route of administration on 23Dec2020 at 14:30 on Left arm at single dose for COVID-19 immunization in hospital. The patient medical history included Rheumatoid arthritis, lupus. No known allergy, no allergies to medications, food, or other products. Prior to vaccination, patient was not diagnosed with COVID-19. Concomitant medications included baricitinib (OLUMIANT), hydroxychloroquine, prednisone. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced Intense headache, tiredness, body aches, short of breath on 24Dec2020; events were resulted in: Doctor or other healthcare professional office/clinic visit. Since the vaccination, patient had been tested for COVID-19 on 27Dec2020: Nasal Swab, result was unknown. No treatment was received for the events. The outcome of the events was not recovered.</p>
COVID19 VACCINE (COVID19)	Office Visit *	918781-1	<p>intermittent tingling in her right arm; lymph node swelling on the ride side of her neck; right sided Bell's Palsy to her face; This is a spontaneous report from a contactable physician. A 44-year-old female patient received single dose of BNT162B2 (Solution for injection, lot number: EJ1685, Expiry Date: Mar2021), via an unspecified route of administration on 18Dec2020 for immunization. The vaccine was given roughly around 4:30PM at the left arm. Vaccination Facility Type: Hospital. Vaccine was not administered at military facility. Medical history included underlying condition of Lymphoma. It was treated in 2017 and she has been off all medications since 2018. Patient had no relevant family medical history. There were no concomitant medications. The patient had no medications in over 2 years. The patient had no prior vaccinations (within 4 weeks). The patient had right sided Bell's Palsy on an unspecified date in Dec2020 (Either Sunday or Monday, so either the 20th or 21st) wherein she got pain in the right ear. She thought she had an ear infection. She treated herself with antibiotics. 7 days later, she noticed weakness. On day 8, which would have been 26Dec2020, she had complete paralysis. It was ongoing. It was stable, but hard to tell. Patient went to the ER on 26Dec2020 for facial droop. She went to Physician office at Urgent Care on 25Dec2020 thinking it was an ear infection. On 23Dec2020 she had lymph node swelling on right side of neck. that was probably after the ear and she didn't worry about it. She thought maybe it was an infection. It started between onset of ear pain and Bell's Palsy. On 26Dec2020, she had intermittent tingling in right arm. She noticed it on the same day as facial paralysis. She doesn't notice any weakness in the arm. Patient had recent blood work (results and date not reported). The patient considered the events as serious: medically significant. The outcome of lymph node swelling on the ride side of her neck was recovering (was also reported to be ongoing at the time of reporting), while the other events was not recovered. The physician considered the events related to the Pfizer product.; Sender's Comments: Based on the temporal relationship, the association between the events facial paralysis, tingling in right arm, and lymph node swelling on right side of her neck with BNT162b2 can not be fully excluded based on the limited information. The medical history of lymphoma might have been contributory to the lymph node swelling as well. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	918788-1	High blood pressure 187/95; Heart rate at one time 210 bpm; chest pain; Shortness of breath; This is a spontaneous report from a contactable pharmacist (patient) reported for herself that a 45-years-old female patient received first dose of BNT162B2 (lot number: EH9899), via intramuscular in left arm on 22Dec2020 07:00 AM at single dose for COVID-19 immunization. The patient was not pregnant. No known allergies. No allergies to medications, food, or other products. No other vaccine was received within 4 weeks prior to the COVID vaccine. No other medications were received within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior vaccination and patient was not tested for COVID-19 since the vaccination. There were no medical history or concomitant medications. The patient experienced high blood pressure 187/95, heart rate at one time 210 bpm, shortness of breath and chest pain on 23Dec2020 10:00 AM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency room/department or urgent care. Treatment was received for heart rate at one time 210 bpm which included lab works and medication given propranolol to decrease heart rate. The outcome of the event was recovering.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events hypertension, heart rate increased, chest pain and dyspnoea cannot be excluded. The information available in this report is limited and this case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	918977-1	PCR test positive for COVID-19 but no signs of COVID-19; PCR test positive for COVID-19 but no signs of COVID-19; This is a spontaneous report from a contactable physician reporting for himself. A 70-year-old male patient received the 1st dose of bnt162b2 (BNT162B2), via an unspecified route of administration in arm left, on 17Dec2020 at 09:00 AM, at single dose, for Covid-19 immunisation. Medical history included hypertension, high cholesterol, benign prostatic hyperplasia, drug allergy and food allergy all from unknown date and unknown if ongoing. The patient had not been diagnosed with COVID-19 prior to vaccination. The patient received unknown medications within 2 weeks of vaccination. Historical vaccine included typhoid vaccine (unknown trade name) on unknown date and the patient experienced drug allergy. The day after vaccination with bnt162b2, on 18Dec2020 at 04:00 PM, the patient experienced PCR test positive for COVID-19 but no signs of COVID-19. The patient did not receive any treatment as a result of the event. The event resulted in doctor or other healthcare professional office/clinic visit. The patient underwent lab tests and procedures which included: COVID-19 PCR test positive (18Dec2020), nasal swab positive (18Dec2020). Outcome of the event was unknown. The information on the lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of COVID-19 PCR test positive and suspected lack of efficacy due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	918985-1	Approximately 4 days after vaccine I started experiencing sharp lower back and left hip pain. Also my left foot feels like pins and needles.
COVID19 VACCINE (COVID19)	Office Visit *	919022-1	Complete loss of vision in the left eye 12 hours after receiving second dose (Moderna mRNA-1273) while having a fever of 102 F for 6 hours. Loss of vision lasted for 1 minute. Loss of vision occurred while standing. Referral to primary care and ophthalmology specialist found normal eye exam and MRI of orbits but presence of tachycardia especially while standing (fluctuations between 60 beats at rest/laying down to 130 beats per minute standing). Postural tachycardia syndrome (POTS) is suspected. Currently pursuing cardiac workup with cardiologist and Covid POTS specialist. POTS specialist believes autoantibody development after vaccination could be suspected as recovering covid patients similarly present to clinic with POTS like symptoms.
COVID19 VACCINE (COVID19)	Office Visit *	919053-1	12/18 VACCINATION 12/19 WOKE UP, RINGING IN BOTH EARS. CALLED PCP, CONSULTED ENT ABNORMALITY - L INNER EAR; HIGH DOSE STEROIDS, 10 DAYS, 60 MG/DAY. WEEK 2; TINNITUS GOT WORSE. DR. PRIMARY CARE PHYSICIAN MEDICAL EXAM ON 1/6/2021 INJECTION OF STEROIDS.
COVID19 VACCINE (COVID19)	Office Visit *	919373-1	noticed twitching in L arm shortly after receiving vaccine, numbness , weakness and pain in arm and shoulder girdle, diagnosed with parsonage turner syndrome by neurologist, currently taking neurontin for pain as steroids not tolerated
COVID19 VACCINE (COVID19)	Office Visit *	919436-1	Bell's palsy, right side of face is numb, with difficulty closing eyes, smiling, raising eyebrows, eating, drinking, swallowing.
COVID19 VACCINE (COVID19)	Office Visit *	919444-1	12/21 had covid vaccine (dose 1). On evening of 12/29 had sudden onset of mild neck pain and significant weakness and numbness of left arm, weak hand grip, clumsiness in hand . Did not improve after trying to shake arm/move around , and took prednisone 40mg oral. Went to ER and had CT Cspine which did not show evidence of cervical pathology. Continued with corticosteroids, sought consultation with PMR and neurology specialists, and steroid dose increased to 60mg/day. Some improvement in strength , but still have diminished sensation and strength in left hand/arm. Unable to perform full job tasks as I am left hand dominant. Likely brachial neuritis / parsonage turner syndrome per both specialists seen. Continuing with corticosteroids at this time, pending bloodwork and OT evaluation
COVID19 VACCINE (COVID19)	Office Visit *	919808-1	within 20 of the injection I strted to salivate and feeling nauseated. returned to clinic and was monitor there. my blood pressure was noted to be low at 115/41. HR 74. reepat BP was 121/48 which is much lower than my usual BP. i was observed for about 1 hrs. the sx's did not go away but the BP improved a little to 130/64 standing. I went home develop injection site pain, fatigue, headache and the pesistent salivation did not go away. after 1 wk it decreased in frequency but still present today. I can not do my normal activity as this worsen the symptom. and my blood pressure has not normalized. still run in 110's/60's. the headaches and fatigue are becoming a burden.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	919818-1	Received covid vaccine 1/2 at 2pm. Around 7pm that night, left arm pain and slight itching of whole body. did not think much of it. woke up once in middle of night at 4am with racing heart but went back to sleep. Around 9 am next morning started getting chills, initially mild then severe and developed severe myalgias; could not get out of bed or lift arms or limbs. having chest tightness and shortness of breath. pressing on chest wall hurts, hard to take deep breath. Temps of 99.5 most of morning. started taking tylenol total of 1 gram. 1 hour after tylenol shaking and rigors with sweating. had temp of 101 after tylenol. HR 110 at this time (my baseline is around 60s). O2 sat remained normal. Went to ER for testing for covid in case this was covid--test negative. Felt a little better morning of 1/4--no fever. tried to work 1/2 day; called out sick. lots of brain fog, fatigue mental slowing. still having intermittent chest tightness and sob; feel like i cannot expand my lungs. deep breath makes me cough. had few small red bumps on left antecubital fossa that resolved. i'm a physician, i'm concerned this was a severe reaction and was advised to report this.
COVID19 VACCINE (COVID19)	Office Visit *	919821-1	I developed severe hives all over my body hours about 19 hours after the shot. Intense itching woke me up at 4:40am the day after receiving the vaccine. The reaction worsened for the next 3 days and began to settle/decrease at the end of the 3rd day. I also felt somewhat disoriented through the allergic reaction period, and on the day after the vaccine I felt slight pain on my chest. I did not experience shortness of breath or have trouble breathing at any point.
COVID19 VACCINE (COVID19)	Office Visit *	919909-1	Tested positive for covid; Tested positive for covid; This is a spontaneous report from a contactable nurse (patient). A 33-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899) intramuscularly at right arm on 18Dec2020 14:30 at single dose for COVID-19 immunization. Medical history included asthma. No allergies to medications, food, or other products. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient developed severe nasal burning sensation the first two days of injection along with severe headache that lasted for 4 days. He lost his sense of taste and smell (23Dec2020) 5 days after vaccine was administered, tested positive for Covid (23Dec2020 16:30) with use of ABBOTT rapid test which was performed at his employment. Pending Covid nasal swab fulgent which was obtained on 23Dec2020 and sent out to reference lab. Patient was just wondering if any of these symptoms and/or testing positive after administration was a rare side effect. The adverse event resulted in doctor or other healthcare professional office/clinic visit. No treatment received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19. The outcome of the events was not recovered.; Sender's Comments: Vaccine BNT162B2 provides protection to COVID-19 after at least 7 days have elapsed from the second dose (21 days post first injection). These conditions are not met in the present report. The reported symptoms are compatible with COVID-19 illness.
COVID19 VACCINE (COVID19)	Office Visit *	919917-1	had another COVID test with positive results on 23Dec; had another COVID test with positive results on 23Dec; This is a spontaneous report from a contactable consumer. A 43-year-old female patient received bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration on 18Dec2020 at a single dose for covid-19 vaccination. The vaccination was done in the hospital. The patient's medical history and concomitant medications were not reported. The patient was initially tested negative for covid-19 on 13Dec2020. The patient was not pregnant. The patient believed she may have been infected with COVID as early as 13Dec2020 based on symptoms but test results at that time came back negative. She had vaccine on 18Dec2020 and when symptoms hadn't resolved had another COVID test with positive results on 23Dec2020. The event resulted to a doctor or other healthcare professional office/clinic visit. There was not treatment for the event. The reporter considered the events as non-serious. The outcome of the event was recovering. Information about batch/lot number has been requested.
COVID19 VACCINE (COVID19)	Office Visit *	919982-1	Moderna COVID-19 Vaccine EUA Injection site redness, swelling, itching, discomfort the size of a fist 7 days after injection.
COVID19 VACCINE (COVID19)	Office Visit *	920130-1	Angioedema; This is a spontaneous report from a contactable Other Health Professional (patient). A 40-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EL1284, intramuscular in the right arm (also reported as right shoulder), first dose on 22Dec2020 00:30 at a single dose for Covid-19 immunization. The patient's relevant medical history included severe reaction to some animal dander and pollen, severe reactions to poison oak, possible drug induced reactions (unspecified) post C-section, mild rash with influenza vaccine this year (2020) (with no other hx of adverse reaction to a vaccine); had allergies to pollen, mold, some animals. The patient previously took influenza vaccine (split virion, inactivated) and experienced rash. The patient had no covid prior vaccination nor was she tested post vaccination. Adverse event reported was angioedema on 24Dec2020 with outcome of recovering. Systems started appearing on 23Dec2020 evening with slight rash and fluid collection under right eye. Developed more rash on 24Dec2020. In the evening to early morning of 25Dec2020, symptoms worsened significantly. Rapid swelling to face occurred. Swelling was concentrated around eyes and cheeks the most. Both right and left side of the face and neck were affected. However, the right side face had a more pronounced reaction. MD ordered oral prednisone and Benadryl as treatment plan. Also, ordered episode-pen for a worst case scenario. Symptoms have been improving under treatment but still persist some. The events were reported as non-serious. The adverse event start date was 24Dec2020 (as reported). The event resulted in doctor or other healthcare professional office/clinic visit.; Sender's Comments: There is a reasonable possibility that the event angioedema was related to BNT162b2 based on known drug safety profile and temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	920225-1	Anaphylactic reaction requiring two doses of Epinephren to control. Still having issues; other vaccine same date product received; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on right arm at 12:30 PM on 18Dec2020 at single dose for COVID-19 immunization, and first dose of other Pfizer vaccine same date product (other vaccine same date lot number: elt9899) on right deltoid on 18Dec2020 for unknown indication. Medical history reported as none. Concomitant medication included vitamin C and colecalciferol (VITAMIN D). The patient experienced anaphylactic reaction at 12:30 PM on 18Dec2020 requiring two doses of epinephren to control. still having issues, resulted in: Doctor or other healthcare professional office/clinic visit, Hospitalization in Dec2020. days hospitalization: 1. The patient received treatment: 2 doses of epinephrine, solumedrol, benadryl, IV and O2 for event anaphylactic reaction to vaccine. The outcome of anaphylactic reaction was not recovered. Lot/Batch and Expiration date has been requested.; Sender's Comments: The information available in this report is limited and anecdotal and does not allow a medically meaningful assessment of the case. There is a plausible temporal association between vaccines administration and onset of the reported event. It is unclear what is the nature of the vaccine co-administered with BNT162b2. Currently no information is available on the co-administration of the Pfizer-BioNTech COVID-19 Vaccine with other vaccines.
COVID19 VACCINE (COVID19)	Office Visit *	920628-1	6-7 hours after the vaccine she developed arm pain, fever and chills. About an hour later she started to have abdominal pain which worsened over the course of the day to excruciating. She went to the Emergency Room where a CT scan revealed a perforation of her sigmoid colon and had a resection of the area of the colon and a diverting colostomy surgery done the evening of 1/3/2021.
COVID19 VACCINE (COVID19)	Office Visit *	920879-1	Abdominal pain that proceeded to get worse into the next day. Connected with PCP, had labs drawn and ultrasound ordered. Ended up going to ER. Determined to have Appendicitis, needed and had appendectomy on 12/29/2020.
COVID19 VACCINE (COVID19)	Office Visit *	920961-1	result back w positive covid; positive COVID-19 test with symptoms; This is a spontaneous report from a contactable nurse reporting for herself. A 39-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration on 19Dec2020 11:00 (at age 39 years old) as a single dose (Dose 1) in the left arm for COVID-19 vaccination. The patient was not pregnant at the time of vaccination. The patient was not administered any other vaccine in the 4 weeks prior to COVID-19 vaccination. Medical history was none. There were no allergies to medication, food, or other products. The patient's concomitant medications were not reported; however the patient had not received any other medications in the last 2 weeks. The patient experienced a sore throat, voice loss on day 4, loss of smell on day 5, went to test, and the result came back with positive COVID. The events resulted in a Doctor's office visit. The patient was tested post vaccination on 22Dec2020 via NAAT-PCR (nasal swab), with a positive result. The patient had not been diagnosed with COVID-19 prior to vaccination. There was no treatment received for the event(s). The clinical outcome of the event positive COVID was unknown The event was reported as non-serious. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.; Sender's Comments: The association between the event drug ineffective (COVID-19 infection) with BNT162b2 can not be fully excluded.
COVID19 VACCINE (COVID19)	Office Visit *	920980-1	single hive on abdomen (itchy)/full body hives and itching; single hive on abdomen (itchy)/full body hives and itching; This is a spontaneous report from a contactable Physician. A 36-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL0140, expiry date unknown) intramuscular at left arm on 24Dec2020 at single dose for Covid-19 immunization in a hospital facility. Medical history included Anxiety, Hypertension, and GERD (gastroesophageal reflux disease). The patient was not diagnosed with Covid-19 prior to vaccination. Concomitant medications included diphtheria vaccine toxoid, pertussis vaccine acellular, tetanus vaccine toxoid (TDAP) on 08Dec2020 for immunization; bupropion hydrochloride (WELLBUTRIN), amlodipine, omeprazole; from unspecified date for unspecified indication. On 25Dec2020, the patient developed a single hive on abdomen (itchy), and on 26Dec2020 the patient developed full body hives and itching but spared the face and mucosal surfaces. The patient has no swelling, no respiratory symptoms. The patient has not been tested for Covid-19 since the vaccination. The patient received treatment of antihistamines (steroids if no improvement) on unspecified date. The hives responded to antihistamines temporarily. The outcome of the event single hive on abdomen (itchy)/full body hives and itching was not recovered. The reporter considered the events non-serious; did not result in death, was not life threatening, did not caused/prolonged hospitalization, was not disabling/incapacitating, not a congenital anomaly/birth defect.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event hives and itching due to temporal association.
COVID19 VACCINE (COVID19)	Office Visit *	920993-1	had loss of sense of smell and tested positive for the virus; had loss of sense of smell and tested positive for the virus; This is a spontaneous report from a contactable healthcare professional (patient). A 42-years-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date not reported), intramuscular on 17Dec2020 at a single dose on the left arm, for Covid-19 immunization. The patient has no medical history and no concomitant medications (no other vaccines in four weeks and no other medications in two weeks prior to vaccination). The patient has no known allergies to medications, food, or other products. The patient had loss of sense of smell, no other symptoms on 25Dec2020 and tested positive for the virus yesterday, on 27Dec2020. The patient has no Covid-19 prior to vaccination. The patient underwent Covid test (Nasal Swab) and result was positive on 27Dec2020. The patient did not receive any treatment for the event. Outcome of the event was unknown. The events were assessed as non-serious by the reporter. No follow-up attempts are possible, information about lot/batch number cannot be obtained.; Sender's Comments: A possible contributory role of BNT162B2 vaccine cannot be excluded for event based on available information.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	921037-1	nauseous; weak; no appetite; numbness on the skin of my arms and legs; I was post Ictal for 2+ hours; seizures/having 2 non epileptic seizures; dizzy and lightheaded; This is a spontaneous report from a contactable nurse (patient). A 21-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE. Batch/lot number: EK5730), intramuscularly on 28Dec2020 07:45 AM at right arm, at single dose for covid-19 immunization. Medical history was none. There were no concomitant medications. The patient was not pregnant at the time of vaccination. The patient received vaccine around 7:45 AM. Within 2 minutes she felt extremely dizzy and lightheaded on 28Dec2020. She sat down and drank some Gatorade and took deep breaths. The feelings persisted 5 minutes later. She then woke up after having 2 non epileptic seizures while still in 15m waiting period, (This included posturing and color change) a rapid response was called and she was taken to the ER. She was post Ictal for 2+ hours. Dizzy and nauseous, weak and no appetite for the rest of the day. She had no history of epilepsy. She also have numbness on the skin of my arms and legs within 24 hours of the vaccine. Onset date of all events (except dizzy and lightheaded) was reported as 28Dec2020 08:00AM. Treatment fluids, Zofran was received for all events. All event resulted in emergency room. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of the events was recovered with sequel.; Sender's Comments: A possible contributory effect of suspect BNT162BW on reported seizures cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	921090-1	Pt vaccinated on 12/23. PCP notified that SOB and fatigue getting worse on 1/4. Unable to keep pre-op Dental work planned prior to mitral valve surgery on 1/14/2021. PCP referred her to our ED where she was diagnosed with COVID-19 and transferred to facility, which is where her surgery was planned.
COVID19 VACCINE (COVID19)	Office Visit *	922015-1	Pt describes falling with onset of weakness below the hip level about 6 inches above the patella with missing clonus reflex. The pt cannot squat down with associated observable loss of strength, pt is not able to stand up. The pt has fallen 7 times since symptom onset around lunchtime between 1200 and 1300. Pt denies LOC.
COVID19 VACCINE (COVID19)	Office Visit *	922206-1	Arm weakness increased each day by post vaccine day 4 arm weak and unable to raise arm, conduct ADLs, painful interrupting sleep. Unable to initiate movement in arm. Use other arm to help move arm. Went to ED on post vaccine day 4. Wbc 12. Crp 4. CT no abscess. Mri on 1/4 shows bursitis. DX SIRVA. Bursa aspirated. Pending cultures. PO MEDROL DOSEPAK.
COVID19 VACCINE (COVID19)	Office Visit *	922264-1	Immediate warm rush to my head and body. Heart was beating out of my chest and difficultly breathing. Heart rate spiked to 150 (normal around 55). Hand, legs, and mouth started to go numb. Eventually settled down after about 1 hr. Have not felt normal since which has been 3 days.
COVID19 VACCINE (COVID19)	Office Visit *	922293-1	Significantly sore left shoulder (injection arm) with pain now radiating up into neck & downward around shoulder blade, severe headaches, nausea (no vomiting), sore throat, FATIGUE, chills/cold sweat, general body aches.
COVID19 VACCINE (COVID19)	Office Visit *	922294-1	Pt states that she developed a rash on her chest along with chest and back pain around 1012pm on 4Jan2021
COVID19 VACCINE (COVID19)	Office Visit *	922298-1	Nausea vomiting chills headache fever
COVID19 VACCINE (COVID19)	Office Visit *	922299-1	I was instructed to stay for 30min as i have been anaphylatic to cipro in past. at 30min was told i could leave. while driving home on rt 91 my cheekbones became numb. then slowly a few min later my cheeks became numb. a few min later my lips became numb. as i was driving off exit to rt 5 in longmeadow i developed a lump in my throat. i turned around at top of exit and went back to highway to go to ER. this was approx 1645-1650. i went to ER arrived approx 1655. i was shaking. my bp and pulse were elevated. no tingling or swelling in my face. nurse checked my pupils and my smile and were wnl. no history of bells palsy. i received iv fluids, solucortef 125mg ivp, pepcid 20mg ivp, and benedryl 25mg ivp approx 1840pm. approx 45 min after solucortef numbness better but not gone. it started to come back a little more before discharge, which i let md know. she discharged me with scripts for epi-pen, prednisone, and OTC pepcid and benedryl. follow up with my pcp's office in am 12/24 at 10am with his NP. total time with facial numbness/lip numbness 29 hours.
COVID19 VACCINE (COVID19)	Office Visit *	923015-1	Rapid heart rate, shakiness, headache, rash, scratchy throat, raspy voice, dizziness, extreme weakness
COVID19 VACCINE (COVID19)	Office Visit *	923347-1	"swelling/cellulitis in her left arm/redness, inflammation, swelling that looked like cellulitis to the arm/deltoid area; redness; to the arm/deltoid area; inflammation; to the arm/deltoid area; swelling/cellulitis in her left arm/swelling; to the arm/deltoid area; This is a spontaneous report from a contactable nurse reported for herself. A 28-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK5730, expiry date unknown) intramuscular at left deltoid on 16Dec2020 16:45 at single dose for Covid-19 immunization at a hospital facility and not in a military facility. Medical history included ongoing acne. Concomitant medications included ongoing spironolactone for acne. The patient did not receive any other vaccines the day or 4 weeks prior Covid-19 vaccine. The patient informed that after 8 days of getting Covid vaccine she has swelling/cellulitis in her left arm. The patient got the COVID-19 vaccine and had kind of a delayed reaction. She got the vaccine on 16Dec2020 16:45 pm at her workplace. The patient informed that she had no reaction right after the vaccine. On 24Dec2020, the patient experienced redness, inflammation, swelling that looked like cellulitis to the arm/deltoid area. The patient got antibiotics and it has improved. The reporter informed that the events required visit to physician office. The outcome of the events swelling/cellulitis in her left arm/redness, inflammation, swelling that looked like cellulitis to the arm/deltoid area was recovering. The patient was queried regarding seriousness of the events and the patient stated ""it could have potentially dangerous."" The patient wanted to know if she should get second dose of the vaccine.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events vaccination site cellulitis, vaccination site erythema, vaccination site inflammation and vaccination site swelling cannot be excluded."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	923354-1	acute pericarditis; This is a spontaneous report from a contactable physician. A male patient of an unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot/batch number not reported), via an unspecified route of administration on 23Dec2020 at a single dose for covid-19 immunization. The patient medical history and concomitant medications were not reported. It was unknown if other vaccines were given in four weeks and unknown if patient had Covid prior vaccination. The patient experienced acute pericarditis on 24Dec2020. Clinical course as follows: Doctor colleagues at the institution admitted (at Emergency room/department or urgent care) and treated a patient with acute pericarditis who received his first dose of Pfizer SARS-CoV-2 EUA vaccine on 23Dec2020. The physician (reporter) considered the event as non-serious. The outcome of the event was recovering. Information about batch/lot number has been requested.; Sender's Comments: The causal relationship between BNT162B2 and the event acute pericarditis cannot be excluded as the information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	923766-1	Went to the ER on the 31st, my face swelled and chest was covered in hives. Lips swelled. I would get nauseated and I felt like there was acid in my stomach. I also had a headache. I have been taking Zyrtec, Benadryl as needed.
COVID19 VACCINE (COVID19)	Office Visit *	924690-1	Three to four hours after vaccine had bruising, major loss of range of motion, severe sharp pain, elevated temp and chills due to reaction of injection site Treatment given 24 hrs later- strong antibiotics, anti inflammatory, exercise, and three days out of work Due to loss of function of left arm due to inflammation
COVID19 VACCINE (COVID19)	Office Visit *	924885-1	2days after my 1st Covid vaccine I broke out into a rash with hives requiring me to go to the ER; 2days after my 1st Covid vaccine I broke out into a rash with hives requiring me to go to the ER; This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot/batch number: EH9899, expiry date was not provided) solution for injection, via an unspecified route of administration on left arm on 17Dec2020 08:00 at a single dose for Covid-19 immunization. Medical history included eczema, chronic kidney disease, thyroid disease. Patient had known allergies. The patient was not pregnant. Concomitant medications included apixaban (ELIQUIS), allopurinol (ALLOPURINOL), levothyroxine (LEVOTHYROXINE), iron (IRON), magnesium (MAGNESIUM). The patient reported that 2 days after her 1st Covid vaccine, she broke out into a rash with hives requiring her to go to the ER on 19Dec2020 12:00. She also visited a physician. She was treated with steroids, Atarax, and Epi shot. The events were reported as non-serious. Outcome of the events was not recovered. No follow-up activities are needed. No further information is expected.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of urticaria and rash due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	924894-1	allergic reaction; This is a spontaneous report from a contactable other healthcare professional reported for herself. A 45-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EK 5730, expiry date unknown) via unspecified route of administration at left arm on 30Dec2020 08:30 at single dose for Covid-19 immunization in a hospital facility. The patient was not diagnosed with Covid-19 prior vaccination. Medical history was none. Concomitant medications was not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 30Dec2020 at 08:45, the patient experienced allergic reaction which resulted to patient visiting doctor or other healthcare professional office/clinic and emergency room/department or urgent care visit. The patient received treatment of epinephrine, decadron and Benadryl due to the event. The patient was not Covid tested post vaccination. The outcome of the event allergic reaction was recovering at this time of the report. The reporter considered the event non-serious; did not results in death, was not life threatening, did not cause/prolong hospitalization, was not disabling/incapacitating, and no congenital anomaly/birth defect.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Allergic reaction cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	924906-1	Contracted covid 19 virus after receiving first dose of vaccine; Contracted covid 19 virus after receiving first dose of vaccine; This is a spontaneous report from a contactable nurse. A 46-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number Eh9899), intramuscular in left arm on 17Dec2020 18:00 at a single dose for covid-19 vaccination. Vaccine was administered in the hospital. There were no relevant medical history. The patient had no known allergies. Concomitant medication included levothyroxine sodium (SYNTHROID). On 27Dec2020 20:00, the patient contracted covid 19 virus after receiving first dose of vaccine. The outcome of the event was recovering. The patient did not received any treatment. The event resulted in a doctor or other healthcare professional office/clinic visit. The patient did not have COVID prior to vaccination. The patient was tested for COVID post vaccination. The patient had nasal swab on 31Dec2020 and had a positive result.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	925219-1	Woke up Thursday am with hives on right lower abdomen and leg getting progressively worse throughout the day. By that afternoon had back pain in right back and continuing hives. Woke up Friday with numbness to right leg, hives, and back pain all on right side of body. Had numbness to foot, face but especially thigh, back and across upper buttocks. Saturday hives subsiding, numbness receding to face, upper thigh and foot only on right side of body. Sunday, back pain some improved, no hives or hives minimal, numbness persists upper thigh face and foot on right side of body. Monday, Tuesday and Wednesday the same. Woke up Thursday with shingles rash to upper thigh back, numbness to foot face and upper thigh persist only on right side of body. Damn!!!
COVID19 VACCINE (COVID19)	Office Visit *	925636-1	Moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection; Moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection; This is a spontaneous report from a contactable physician (patient). A 37-year-old female non-pregnant patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 22Dec2020 17:15 at single dose on her left arm for covid-19 immunization. Medical history included known allergies to penicillin. The patient had no other medical history. There were no concomitant medications. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and the patient was not received list of any other medications within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient experienced moderate to severe headache 24-48 hours post injection. Complete sensorineural hearing loss in left ear 1 week after injection on 23Dec2020. These events resulted in doctor or other healthcare professional office/clinic visit, disability or permanent damage. The patient had received prednisone to treat the events. The outcome of the events was not recovered.; Sender's Comments: A possible contribution role of first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) to the onset of sensorineural hearing loss in left ear and headache cannot be excluded due to temporal relationship. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	925637-1	jaw tightening; muscle spasms; entire face and around her mouth went numb; entire face and around her mouth went numb; heart palpitations; I had hives on my chest; a wave of heat rush up her back; This is a spontaneous report from a contactable nurse (patient). A 46-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration in left arm on 22Dec2020 10:30 at first single dose for COVID-19 immunization. Medical history included ectopic pregnancy, hay fever. Concomitant medication received within 2 weeks included: loratadine, colecalciferol (vitamin D), oily womens multivitamin. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No known allergies. About 15 minutes after the vaccine the patient experienced jaw tightening and muscle spasms. The patient was given oral Benadryl 50 mg. About 5 minutes after taking the Benadryl, her entire face and around her mouth went numb. The patient began having heart palpitations and felt a wave of heat rush up her back. She had hives on her chest. The patient received 1 dose of epinephrine from an Epi-Pen and transported to the emergency room for further treatment. Adverse event start date: 22Dec2020 11:00 AM. Events were considered as non-serious. Events resulted in: Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. Treatment received for the adverse event included: Benadryl, Epinephrine, Solumedrol, Pepcid. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. Test Name: SARS-CoV-2 by PCR (Nasal Swab) on 30Dec2020: Negative. Outcome of the events was not recovered.; Sender's Comments: The temporal relationship is suggestive of an acute anaphylactic reaction. Based on the temporal relationship and the known pattern of response, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	925645-1	Patient was poorly responsive to her inhalers that she used for asthma; Persistent shortness of breath and chest tightness starting within a few days after vaccine; Persistent shortness of breath and chest tightness starting within a few days after vaccine; This is a spontaneous report from a contactable physician (patient). A 40-year-old male patient received the first single dose of BNT162B2 (Solution for injection, lot number: EK5730, exp date not reported), via an unspecified route of administration (vaccine location: left arm) on 18Dec2020 04:15 for COVID-19 immunization. Medical history included allergy induced asthma, allergies to cats and dust, and occasional seasonal allergies. Concomitant medication included other vaccine/s received within 4 weeks prior to the COVID vaccine: first dose of diphtheria vaccine toxoid, pertussis vaccine acellular 3-component, tetanus vaccine toxoid (BOOSTRIX, GlaxoSmithKline) administered as single dose via unspecified route of administration (vaccine location: left arm) on 08Dec2020. There were no other medications the patient received within 2 weeks of vaccination. The patient experienced persistent shortness of breath and chest tightness starting within a few days after vaccine (24Dec2020). Patient was poorly responsive to her inhalers that she used for asthma (onset date not reported). She rarely needed the, used about once or twice a year). It was constant, but with periods of improvement followed regression. Will likely seek medical evaluation as it's been over a week now and rather concerning. The patient did not consider the events shortness of breath and chest tightness as serious. Treatment for the adverse events shortness of breath and chest tightness included fluticasone propionate, almeterol (ADV AIR), albuterol, and unspecified anti-allergy medications. Patient did not have covid prior vaccination. Patient was tested for COVID post vaccination wherein patient tested negative for COVID via Covid test rapid on 30Dec2020. The adverse event resulted in doctor or other healthcare professional office/clinic visit and emergency room/department or urgent care. The outcome of shortness of breath and chest tightness was not recovered and unknown for the other event.; Sender's Comments: Based on the time association, the possible contribution of BNT162B2 to the events shortness of breath, chest tightness and asthma aggravated cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	925757-1	hives on her legs; a slight rash on abdomen (started morning on the next day when she woke up) and it spread to her legs (leg rash started 2 days later in the morning); This is a spontaneous report from a contactable nurse (patient). A 58-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) intramuscularly at left arm on 29Dec2020 10:30 at single dose for COVID-19 Immunization. No medical history. No family medical history. There were no concomitant medications. Patient received first dose last Tuesday, 29Dec2020, at the hospital. The next day, she had a slight rash on abdomen (started morning on the next day when she woke up) and it spread to her legs (leg rash started 2 days later in the morning). It was a pretty severe case of hives on her legs now (31Dec2020). Spread to legs and now has hives on legs was reported as worsened. Physician's office visit involved. She had a question. Her doctor prescribed a dosing pack of prednisone to get rid of the hives and her question was, will it affect the effectiveness of the vaccine if she takes it, also, is it ok to get 2nd dose in 2 weeks. She confirmed she had not taken the prednisone yet. There was no prescriber. She received it because she is a healthcare worker. Patient asked if there is any recommendation on getting pre medicated with ex: Benadryl before getting the vaccine. No previous history of all previous immunization with the Pfizer vaccine considered as suspect. No additional vaccines administered on same date of the Pfizer suspect product. No medications prior vaccinations (within 4 weeks). No test done. This is a serious report. The slight rash on abdomen, spread to legs and now has hives on legs was considered medically significant per reporter. The outcome of the events was not recovered. Information about lot/batch number has been requested.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the events rash and urticaria cannot be excluded. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	926473-1	When vaccine was administered, seemed high on my arm. I had immediate soreness and shoulder discomfort, I was told this was normal. It continued to progress and I eventually had decreased ROM, weakness and sharp shooting pain in my shoulder. Working at OI, I consulted provider, xrays were obtained and I was evaluated. He strongly suggested an MRI be obtained as well. That was completed the same day as my evaluation on 12/31/2020 (1 week and 2 days after the vaccine was administered). The provider informed me that they have had patients with similar situations that were evaluated for frozen shoulder after having a vaccine d/t administration site and vaccine going into subacromial space. He does report that this was my case/situation, upon my exam, I had severe inflammation with this as well-he is now having me follow up for a surgical consultation for my shoulder to be repaired. Today's date is 1/7/2021, I have these same ongoing symptoms that have continued since day of administration, without diminishing in severity. He is unable to provide an injection d/t my upcoming second dose of the COVID vaccine this next week, 1/12/2021. He strongly suggests that my 2nd vaccine be administered elsewhere-advised NOT be administered in the same shoulder OR in opposite to cause these symptoms to flare. He advised in gluteus if possible to avoid any further issues if at all possible.
COVID19 VACCINE (COVID19)	Office Visit *	926703-1	Guillain Barre syndrome/AIDP event. Paresthesia and nerve pain developed in bilateral legs 4 hours after shot and progressed slowly for 4 days in intensity and area involved. Symptoms progressed distally to superior. On the 5th day symptoms progressed rapidly and involved bilateral legs up to the groin, left arm up to lateral shoulder, and right hand. I went to the hospital and was admitted to start IVIG treatment for Guillain Barre Syndrome/AIDP.
COVID19 VACCINE (COVID19)	Office Visit *	926909-1	Immediate pain and loss of range of movement of left shoulder. Physical examination today demonstrates a healing injection site which is fairly superior on the left shoulder, and abduction of the left shoulder which is limited secondary to pain. Patient's physician's impression is that he has a subdeltoid bursitis which was temporally associated to the COVID-19 vaccination. (SIRVA)
COVID19 VACCINE (COVID19)	Office Visit *	927415-1	4 days later after the vaccine my left eye turned really red with crust and mucus coming out. I went to walk in clinic and was being treated for pink eye. I was started on an antibiotic eye drop. A day later my right eye started to have the same problem. I scheduled an appt with a eye specialist where he examined both eyes and said I had a major infection. I was started on steroid eye drops which I am still taking but seems my eyes are not getting better. I have a follow up with another specialist next week for further testing. I have been out of work due to this matter.
COVID19 VACCINE (COVID19)	Office Visit *	927507-1	Contracted Covid; Contracted Covid; This is a spontaneous report from a contactable Other Health Professional (patient). A 59-year-old female patient received the first dose of BNT162b2 (Lot/batch number and Expiration date were not provided), via an unspecified route of administration at left arm on 21Dec2020 18:00 at single dose for COVID-19 immunization. Medical history included chronic obstructive pulmonary disease (COPD). The patient received the unspecified concomitant medications within 2 weeks of vaccination; patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was contracted COVID on 29Dec2020 20:00. The event resulted in Doctor or other healthcare professional office/clinic visit. Patient received the treatment Monochrome antibiotic for event. The patient received the COVID test post vaccination on 29Dec2020. The COVID test type post vaccination was Nasal Swab, COVID test name post vaccination was RNA, COVID test result was Positive. The patient was not COVID prior vaccination. The patient was not pregnant at the time of vaccination. The outcome of the events was not recovered. Information on the Lot/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the vaccination with BNT162B2 in this patient cannot be completely excluded.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	927527-1	I tested positive for COVID 9 days after receiving the vaccine; I tested positive for COVID 9 days after receiving the vaccine; Rhinorrhea; aches; fatigue; cough; This is a spontaneous report from a contactable physician. This physician reported similar events for two patients. This is the first of the two reports. A 68-years-old female patient (not pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date not reported), via an unspecified route of administration on the left arm on 21Dec2020 at 09:30 at a single dose for COVID-19 immunization. Medical history included hypertension. The patient had no known allergies. Concomitant medications included losartan (LOSARTAN), amlodipine (AMLODIPINE), and atorvastatin (ATORVASTATIN). On 28Dec2020, the patient had rhinorrhea, aches, fatigue, and cough. The patient had no COVID prior vaccination, and when tested post vaccination showed a positive result. It was reported that the patient was tested via nasal swab (PCR SARS) and showed positive for COVID on 30Dec2020, 9 days after receiving the vaccine. The patient had no other vaccines in four weeks. No treatment was administered for the events. The events had not resolved. Information on the lot/ batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the events drug ineffective and SARS-COV-2 test positive cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAS, Ethics Committees, and Investigators, as appropriate. Linked Report(s) : US-PFIZER INC-2021001246 Same reporter, same drug, similar events, different patients.
COVID19 VACCINE (COVID19)	Office Visit *	927571-1	tested positive for Covid test; tested positive for Covid test; difficulty breathing; chills; fluctuating fever; nausea; weakness; weakness/extreme fatigue; loss of taste and smell; loss of taste and smell; muscle pain; cough; sore throat; nasal drip; dizziness; fast heartbeat; injection site pain; anxiety; crying; This is a spontaneous report from a contactable healthcare professional. This 21-year-old female patient reported for herself that she received BNT162B2 1st dose on 31Dec2020 10:00 AM intramuscular at left arm for COVID-19 immunisation. Medical history included known allergies: Penicillin and Covid-19. Concomitant therapy included BC as reported. The patient experienced difficulty breathing, chills, fluctuating fever, nausea, dizziness, weakness, fast heartbeat, tiredness, loss of taste and smell, muscle pain, injection site pain, anxiety, cough, sore throat, nasal drip, crying, extreme fatigue, Etc on 31Dec2020 at 06:00 PM. The events resulted in doctor or other healthcare professional office/clinic visit, emergency. The patient was hospitalized for 1 day and received treatment included blood thinner rivaroxaban (XARELTO) and had 2 weeks quarantine. The patient had Covid prior to vaccination and tested positive for Covid test post vaccination on 01Jan2021. The outcome of the events was not resolved. Information on Lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the suspected LOE, SARS-CoV-2 test positive and the other reported events due to temporal relationship. Of note, it is reported that the patient had history of COVID 19 infection prior to the vaccination. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	927575-1	polyneuropathy; facet joint diagnosis/new left forefoot paresthesia; This is a spontaneous report from a contactable physician (patient). A 45-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot EJ1685) at the first dose in left arm on 17Dec2020 12:45 at single dose for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered at Doctor's office/urgent care. Medical history included ongoing back pain (thinking it was due to running/physical therapy overuse injury). No allergies to medications, food, or other products. There were no concomitant medications. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No any other medications the patient received within 2 weeks of vaccination. It was reported that 20Dec2020 morning: new left forefoot paresthesia. no weakness. Patient thought this might be due to the back pain he had been watching for 3 months, thinking it was due to running/physical therapy overuse injury. On 21Dec2020 sports medicine physician evaluation. numbness was gone, facet joint diagnosis, MRI lumbar ordered (still pending). On 24Dec2020 9 pm, paresthesia both hands and feet, no weakness nor other symptoms those continued and were slightly worse on 27Dec2020 morning, including face/teeth. no other symptoms; 27Dec2020 afternoon: internal medicine physician evaluation, working diagnosis polyneuropathy. Neurologist appointment will be 07Jan2021, 2 hours before 2nd shot was scheduled. The patient had been tested for COVID-19 test type post vaccination: negative on 22Dec2020. No treatment for event. Prior to vaccination, the patient was not diagnosed with COVID-19. Outcome of events was not resolved.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of polyneuropathy and facet joint diagnosis/new left forefoot paresthesia due to temporal relationship. However, the reported events may possibly represent intercurrent medical conditions in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including nerve conduction tests, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	927614-1	was diagnosis with COVID-19 through nasopharyngeal swab today, 02Jan2021; was diagnosis with COVID-19 through nasopharyngeal swab today, 02Jan2021; This is a spontaneous report from a contactable pharmacist (patient himself). A 34-year-old male patient received his first dose of bnt162b2 (BNT162B2 also reported as COVID 19 brand Pfizer, lot E11685, expiry date not reported), via an unspecified route of administration in his right arm on 23Dec2020 15:30 at single dose, for Covid-19 vaccination. The patient's medical history was not reported. Prior to vaccination the patient was not diagnosed with COVID-19. He did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Concomitant medication included bupropion. The patient informed that he was diagnosed with Covid-19 through nasopharyngeal swab (COVID-19 Nucleic Acid Amplification test) on 02Jan2021 01:00 and Influenza virus test was unknown results (02Jan2021). It was unknown if there was a treatment used. The outcome of event was not recovered.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported event of positive for corona virus infection for the lack of efficacy of the vaccine. However, based on the mechanism of action of the vaccine, it is unlikely the patient would have fully developed immunity for the vaccine to be effective, due to the number of days passed since the vaccine is given. Case will be reevaluated based on follow-up information
COVID19 VACCINE (COVID19)	Office Visit *	928318-1	headache, sore throat, runny nose, arm pain that migrated to the axilla and down the side of the body, joint pain (hands, wrist, feet, hips, knees, spine, neck), insomnia, general malaise, fatigue, and lower grade fever. Most symptoms lasted about 7 -10 days. However, it is now day 20 after the initial vaccine and I still have joint pain that has not gone away. esp in hands, wrists, and feet. When I sleep I still wake up with all my joints hurting it gets better as I start moving but the wrist, hands, and feet pain has not gone away. This pain will wake me in the night when I change positions. I called my doctor today to inquire if it is a good idea if I should take the second dose because the first dose made me so dibiliated. Awaiting for a response. I am due to take the second vaccine on 2/9/21.
COVID19 VACCINE (COVID19)	Office Visit *	928333-1	Fever, coughing, drowsiness, generalized weakness. Was found to be hypercalcemic (corrected calcium 14) and admitted 1/2-4. No prior history of hypercalcemia.
COVID19 VACCINE (COVID19)	Office Visit *	928861-1	Initial event was soreness at site which resolved on its own within a few days. 2 days after receiving vaccine, I began having an allergy reaction to the same brand N95 that I had been utilizing since the beginning of the pandemic. Symptoms are swollen cheeks and welts , sudden itchiness at the site of my mask placement. The reason for this report is a sudden onset of excruciating and debilitating pain throughout my body specifically pain of my right shoulder radiating down my sprightly arm. I have been receiving testing and treatment for ongoing neuropathy due to Longhailer syndrome, however This recent pain is so debilitating, I spend most of my time in bed. I have been experiencing chills then profuse sweating. I also so fatigued, I sleep much of the day. I have been having episodes of tachycardia with chest tightness which has increased since after having the vaccine. I also become short winded on exertion. I've been waking up in a panic and sweating.
COVID19 VACCINE (COVID19)	Office Visit *	929055-1	"neuropathy/ started acutely in feet bilaterally / persist intermittently in left extremities; One-time episode of upper extremity (UE) numbness; This is a spontaneous report from a contactable health care professional (patient). A 40-year-old female patient (not pregnant) received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot unknown) at single dose via an unknown route at left arm on 26Dec2020 for Covid-19 immunization. COVID-19 vaccine was administered in Pharmacy or Drug Store. Medical history was reported as ""none"". Patient had no COVID prior vaccination, further reported as patient was not diagnosed with COVID-19 prior to vaccination. No known medications, food, or other products allergies. Concomitant drugs (Other-medications-in-two weeks) included levocabastine hydrochloride (ZYRTEC), diphenhydramine hydrochloride (BENADRYL) as needed, ibuprofen (MOTRIN), and multivitamin. No other-vaccine-in-four weeks received. Patient experienced adverse-event of neuropathy, which started acutely in feet bilaterally and now (as of 02Jan2021) persist intermittently in left extremities (LEs). One-time episode of upper extremity (UE) numbness. No weakness. Patient inquired if 2nd dose should be held. Adverse-event-start-date was 26Dec2020. The adverse event result in doctor or other healthcare professional office/clinic visit. No treatment received. The event was reported as non-serious. Since the vaccination, patient had not been tested for COVID-19. Outcome of the event was not resolved. Information about lot/batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of peripheral neuropathy and upper extremity (UE) numbness due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including head CT/MRI and nerve conduction tests, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate."

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	929058-1	<p>Around 10:30pm I felt like my throat was closing and I was choking; Around 10:30pm I felt like my throat was closing and I was choking; I had chest pain, chest tightness; I had chest pain, chest tightness; Very SOB at rest; Throughout the day I was cough and my face started flushing so I took Benadryl/severe facial flushing; On 23Dec I got nerve blocks for my migraines.; Throughout the day I was cough and my face started flushing so I took Benadryl.; This is a spontaneous report from a contactable nurse who reported for herself. A 36-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot: EK5730) dose number 1, via an unspecified route of administration on 19Dec2020 11:30 at single dose for COVID-19 immunization. Medical history included von willebrand's disease, narcolepsy with cataplexy, IIH (Idiopathic intracranial hypertension), HTN (hypertension), GERD (gastroesophageal reflux disease), migraines. Patient also had known allergies: PCN (penicillin), shellfish, IV contrast, cefdinir and bees. On 23Dec2020, patient got nerve blocks for her migraines. Throughout the day patient was cough and her face started flushing so she took diphenhydramine hydrochloride (BENADRYL). Around 22:30, patient felt like her throat was closing and she was choking. She had chest pain, chest tightness. EMS (emergency medical services) was called and patient was brought to the hospital. On 25Dec2020, patient felt like her throat was closing, like someone was sitting on her chest and chest tightness still with chest pain. Very SOB (shortness of breath) at rest. Patient went to the ER (emergency room) and received IV dexamethasone (DECADRON) and diphenhydramine hydrochloride. On 26Dec2020, patient had the same symptoms but with severe facial flushing and patient went back to the ER and was given IV dexamethasone. Patient was sent home on a maximum amount of medications. I had seen her primary care, ENT (ear nose throat centre), Allergy, ID (infectious disease), and pulmonology. Her CT (computerised tomogram) of chest on 25Dec2020 was negative along with her COVID test. Patient SOB on rest and exertion still. Onset date of the adverse events was reported as 23Dec2020, 22:30. Patient received treatment for the events included multiple medications and high dose prednisone. Lab data on 25Dec2020 included CT of chest: negative, influenza type A/B combo: negative, Covid 19: negative and nasal swab: negative. Action taken in response to the events for bnt162b2 was not applicable. Outcome of the events was not resolved.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events due to temporal relationship. The clinical presentation of the events is suggestive of possible allergic reactions. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Office Visit *	929124-1	<p>drop in blood pressure resulting in fainting; drop in blood pressure resulting in fainting; Severe headache; fever; This is a spontaneous report from a contactable other healthcare professional (patient). A 26-year-old female patient (non-pregnant) received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EK9231), via an unspecified route of administration on 03Jan2021 at single dose at left arm for immunization. Medical history included allergies to Penicillins. The patient's concomitant medications within 2 weeks of vaccination included birth control pill, prenatal vitamin. Patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, patient was diagnosed with COVID-19. Since the vaccination, patient has not been tested for COVID-19. The patient experienced severe headache, fever, and drop in blood pressure resulting in fainting the morning following receiving the vaccine on 04Jan2021 with outcome of recovering. Patient didn't receive treatment for events. Adverse events resulted in doctor or other healthcare professional office/clinic visit. This report is considered non-serious. No follow-up attempts are possible. Information about Batch number cannot be obtained. No further information is expected.; Sender's Comments: Based on the close temporal relationship, the association between the event fainting with BNT162b2 can not be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	929157-1	blurriness on the right eye with consistent optic neuritis; read up on transverse myelitis that may be related to her condition; blurriness on the right eye with consistent optic neuritis; This is a spontaneous report from a contactable physician. This physician (patient) reported for self that the 31-year-old female patient received bnt162b2 (BNT162B2, PFIZER-BIONTECH COVID-19 VACCINE, lot: EK5730), via an unspecified route of administration on Deltoid, Left on 20Dec2020 13:00 at single dose for covid-19 immunisation. Medical history and concomitant medications were none. Reported she has a flu vaccine in Sep2020, and had no reaction to the flu vaccine. She clarified she has never had a reaction to a vaccination before. The patient received the vaccine last 20Dec2020 and has reported to have blurriness on the right eye with consistent optic neuritis since 24Dec2020. She has already consulted with an ophthalmologist who said her case was interesting and referred her to Pfizer. She is scheduled to have her second dose on 10Jan2021 and is asking if she should still take it. She also mentioned that she read up on transverse myelitis that may be related to her condition and is asking for any information we may have on this. Doctor reporting she is having a possible adverse event to the COVID-19 Vaccine. The patient clarified she received the COVID-19 Vaccine on Sunday, 20Dec2020 at approximately 1:00PM. Reported the COVID-19 Vaccine was administered at her employer. Doctor reported she is experiencing blurry vision in her right eye only, consistent with optic neuritis in Dec2020 (Medically significant). She said her right eye blurry vision gets worse after working out or showering. She said she has read some medical information that states some kind of autoimmune reaction, like transfer myelitis, may occur after receiving the COVID-19 Vaccine. The patient asked if she should get the second COVID-19 Vaccine, clarifying she is scheduled to receive her second dose on 10Jan2021. Clarified she started experiencing the right eye blurry vision on either 24Dec2020 or 25Dec2020. Treatment: Reported she saw an ophthalmologist, and the ophthalmologist said he didn't see anything concerning or not normal. She said the ophthalmologist referred her to see a neurologist, and to get a MRI of her head. She clarified her MRI appointment is on 19Jan2021. She clarified her ophthalmologist called her back 2 hours after she left her appointment. She said the ophthalmologist told her he found what she was experiencing to be interesting, as to when she received the COVID-19 Vaccine, and the start of her right eye blurry vision, and that he wanted her to get further evaluation. She said the ophthalmologist performed visual field testing, and took a fancy picture of her retina. No further details provided. Vaccination Facility Type was hospital. No Vaccine Administered at Military Facility. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available) was none. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. No AE(s) required a visit to Emergency Room but AE(s) required a visit to Physician Office. Prior Vaccinations (within 4 weeks) was none. Patient's Medical History (including any illness at time of vaccination) was none. Family Medical History Relevant to AE(s) was not provided. Relevant Tests included Visual field test, and picture of her retina. The outcome of the events was not recovered.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events optic neuritis, vision blurred and myelitis transverse cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	929162-1	Cp initially that resolved in seconds. Then severe muscle aches, fatigue, temp 1 week, excruciating joint pain continues now. Malaise.
COVID19 VACCINE (COVID19)	Office Visit *	929418-1	Swelling of lips & tongue, tightening of throat. Quivering of arms & legs. Tightening of chest. Dizziness lightheaded.
COVID19 VACCINE (COVID19)	Office Visit *	929475-1	received a covid positive diagnosis; received a covid positive diagnosis; This is a spontaneous report from a contactable nurse (patient). A 35-year-old non-pregnant female patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in the left arm on 21Dec2020 09:45 at a single dose for COVID-19 immunization at the hospital. The patient has no medical history. The patient has no known allergies. The patient's concomitant medications were not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine and did not receive other medications within 2 weeks of vaccination. The patient received a COVID positive diagnosis on 29Dec2020, 8 days later. The events led to a doctor or other healthcare professional office/clinic visit. The patient underwent COVID tests post vaccination on 29Dec2020 - Nasal Swab (NAA nasal swab) and Rapid COVID test, both showed positive test results. The patient was not diagnosed with COVID-19 prior to vaccination. Outcome of the events was recovering. No treatment was given for the events. The events were assessed as non-serious. Information on the lot/batch number has been requested.; Sender's Comments: The efficacy of a drug varies from patient to patient and can be affected by different factors; however, a contributory role of the suspect product BNT162B2 to the reported drug ineffective and COVID-19 cannot be ruled out.
COVID19 VACCINE (COVID19)	Office Visit *	929689-1	Fever to 103.7F, respiratory rate 36. Was transferred from facility to hospital. Since then has been found to have gram-negative rod bacteremia, although urinalysis was negative, urine culture pending. Patient has since defervesced after receiving 1 dose of cefepime. Overall the most likely cause of fever seems to be urosepsis w/ bacteremia, pending confirmation with urine & blood cultures.
COVID19 VACCINE (COVID19)	Office Visit *	930081-1	shoulder joint pain, injection was given in joint.... I am now on prednisone, physical therapy, if this doesn't help will need a MRI .
COVID19 VACCINE (COVID19)	Office Visit *	930518-1	After about 15 min: hr went to over 170bpm , flushed sensation, brain fog, was driving at the time and my brain wouldn't figure out how to call 911 , eventually I figured it out but it took extreme mental effort. Paramedics came and my pulse was From 100 - 170 changing rapidly, bp 150-175/x changing rapidly, symptoms would come and go about 8 times on way to hospital. In ER same thing then about 2 hrs go by and then all started again. Pulse remained at 90- 100bpm at least until 2am. (My resting hr is between 40 and 50, my normal bp is usually sub 120/80) I later realized my hands were swollen, mostly on my left side. Lingering symptoms include brain fog, tiredness, and headache. Maybe an exasperating issue was I had low potassium levels likely making symptoms worse - I worked out heavily early in the morning, probably had low intake of potassium that day and day before, and maybe slightly dehydrated from my workout - I do Functional lifting, run, and other types of exercise regularly.

COVID19 VACCINE (COVID19)	Office Visit *	930895-1	1/4/21: Headache, Dizziness & Fatigue 1/7/21: Left Sided Facial Droop
COVID19 VACCINE (COVID19)	Office Visit *	930897-1	Shortness of breath, cough, rash on face and neck, arthralgia
COVID19 VACCINE (COVID19)	Office Visit *	931558-1	7 day after site itching, hot swelling. Unsure if related 9 day after suffered CVA and have hyper coagulation
COVID19 VACCINE (COVID19)	Office Visit *	931567-1	sudden sensorineural hearing loss in the right ear, audiology and ENT assessment, currently being treated with steroid medication
COVID19 VACCINE (COVID19)	Office Visit *	931774-1	After the vaccine was administered I walked away maybe 50' and I started to feel dizzy I felt light headed and as if I was drunk my legs feel real weak they took me outside so I could catch some fridge fresh air and they set me down on a chair I was very dizzy my legs and my knees felt like I couldn't stand up and they were very weak I kept seeing a the rails double vision and I started to have a tightness in the back of my neck I felt they warrant come over my head and my forehead got very very cold And then I felt as I was gonna blackout and pass out and I was gasping for air and suddenly my tongue went into a spasm and it went to the top of my the roof of my Roof of my mouth and I couldn't breathe and I was able to send a message for someone to come and help me as I was sitting there by myself they rushed over by now looking at my text message it was for 02 which was within 15 minutes of the vaccine when I had my 1st episode and then minutes after that 3 more came with the same oh unable to swallow I lost the ability to swallow and my tongue fell like I had no control it was just automatically stuck to the roof of my mouth.. Upon the arrival of Ems I was told there was no treatment and there was nothing they could do told me to wait 24 to 48 hours in the symptoms should subside it's been over 72 hours in the symptoms are still occurring. I continue to feel dizzy light headed and now have high blood pressure which was not present before visit ER prescriptions for steroids with issued, I Told to go home and rest. Followed up with family doctor in the morning and was told it was not an allergic anaphylactic reaction probably more so neurologically ransom blood tests waiting for results continue to have loss of control over tounge spasms unable to eat Accompanied by fatigue dizziness and high blood pressure
COVID19 VACCINE (COVID19)	Office Visit *	932107-1	Pfizer-BioNTech COVID-19 Vaccine EUA Miscarriage - (date of vaccination 1/6/21, miscarriage symptoms (cramping) started 1/8/21, confirmed 1/10/21; estimated date of delivery 8/30/21)
COVID19 VACCINE (COVID19)	Office Visit *	932189-1	I was injected high on my shoulder, significantly higher than I've ever been injected in my life. I believe I have SIRVA. The pain has become so severe that I cannot use my left arm. The pain is intolerable. I take four Advil every six hours, ice my arm regularly, and keep my arm in a sling. The pain has gotten significantly worse with time (not better). I've never experienced pain like this from a vaccine in my life. No history of bursitis or shoulder injury. Again, the pain gets worse with time. I'm almost 48 hours post injection
COVID19 VACCINE (COVID19)	Office Visit *	932367-1	Facial (cheek) numbness and swelling with slight face droop Swelling continued on 1/7/2021 On 1/8/2021, lip swelling and numbness and tongue numbness By 1/9/2021 4pm, swelling and numbness resolved but chills and muscle aches began
COVID19 VACCINE (COVID19)	Office Visit *	932420-1	I am not sure if related on not. This event was 13 days after my COVID-19 1/2 immunization. Otherwise, I am a very healthy physician, normal BMI, I have also been tested 5-6 times negative for COVID. I do get exposed in my job, but wear proper PPE. Viral infection in FEB that was like COVID-19 sx, I did AB test as soon as it was available, and negative. ---The Event: Monday morning (1/4/21), after getting out of shower, I was talking to my husband (who is MD)and started having BROCA's aphasia sx (could not get words out coherently), then fell into bed and started right wrist and right foot posturing. This lasted 10 min. I have non-memory of it, but my MD husband witnessed it. After 10 minutes, I was back to normal, except shaky and some word finding difficulties. After 30 min, totally back to normal.
COVID19 VACCINE (COVID19)	Office Visit *	932915-1	Severe thrombocytopenia (plts 3k/uL), oral mucosal bleeding, bruising
COVID19 VACCINE (COVID19)	Office Visit *	933025-1	Sudden, severe worst headache of her life, coupled with onset of oral herpetic lesions and inflammation to unrelated body part (belly button piercing) occurred one week after vaccination received. She presented to ED 12/28 noted to have hypokalemia and head CT showed mild occipital encephalitis, admitted overnight for obs subsequent brain MRI was normal. She was seen in my clinic 2 days later (1/4/21) and was started on 3 day course of Decadron, topical acyclovir for herpetic lesion. As she is a nurse, I kept her off work until resolution of symptoms. Seen again on 1/8/21, headache resolved. She did discuss CT and MRI results with neurologist. He was not convinced this was vaccine related. She is having 2nd dose of vaccine on 1/11/21.
COVID19 VACCINE (COVID19)	Office Visit *	933101-1	Moderna vaccine dose #1 received in right shoulder on 12/31/20 at 2:15PM. Injection was uneventful other than sensation of pressure. I did notice at the time, but could not fully see, that the injection appeared to be much higher on the shoulder than normal. I immediately came home afterwards and relaxed. Approximately 2hrs later, I began experiencing extreme pain in my right shoulder. As the night progressed, the pain worsened to 10/10 with inability to move my arm. Later that night after requiring assistance to take off my shirt, I noticed that the bandaaid overlying the injection site was very high, immediately below and bordering the acromion process. This was concerning but I was hopeful the pain would go away over the next few days. I took tylenol that night. I woke up multiple times during the night because the pain was so severe. When I woke up, the pain and inability to move my arm were still present. I began taking 800mg ibuprofen and 1000mg tylenol alternating Q4 throughout the next few days. The pain and disability remained so severe that I required assistance performing ADLs for the next 4 days. On day four, with the pain not resolved and still severe despite consistent advil and tylenol use, I began having concern for shoulder injury related to vaccine administration. The next day I decided to seek an evaluation by an orthopedist. I am a physician and was unable to perform basic tasks and ADLs. I happened to have a few days off after the injection but would not have been able to work had I not. After an evaluation by the an orthopedic PA, I obtained an MRI of my right shoulder with results shown below - as I expected evidence of rotator cuff tendinopathy and subdeltoid bursitis consistent with SIRVA. As of now, I still have limited range of motion and shoulder pain on the right which has improved slightly but is far from resolved. I still have difficulty with certain ADLs including putting clothes on and off, lifting items, and tasks that require raising my right arm above my head. I am concerned with the possibility of long term and/or permanent damage after reviewing the literature. I am also concerned about how many other healthcare workers the person who gave me my vaccine may be injuring and/or causing permanent damage.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	933142-1	Pain at site of injection, eyes, throat, face swelling. Unclear thinking, hoarse speech, headache, hives, swelling. Intervention taken immediately. Ongoing 11 days: SOB, headaches, nose bleeds, coughing, blood sugars triple, hair falling out, major swelling, dizziness.
COVID19 VACCINE (COVID19)	Office Visit *	933283-1	Bell's Palsy; This is a spontaneous report from a contactable physician (patient). A 62-years-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on left arm on 19Dec2020 19:00 at single dose for COVID-19 immunisation. Known allergies: No. Other medical history: None. No other vaccine in four weeks. No other medications in two weeks. The patient experienced bell's palsy on 03Jan2021 21:00 and required visit to physician office. Covid test type post vaccination: Nasal Swab (PCR) on 29Dec202: Negative. Therapeutic measures were taken as a result of bell's palsy included Prednisone, Valtrex. Outcome of event was not recovered. Information on the lot/batch number has been requested.; Sender's Comments: Based on a compatible association, causality between event Bell's palsy and BNT162B2 vaccine cannot be completely excluded. The case will be reevaluated should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	934099-1	Patient is a 41 y.o. female who presented to the ED with complaints of a reaction after she took the COVID vaccine. Patient is an RN here and had earlier received COVID-19 vaccination (Moderna) around 0130 this afternoon. Soon after she experienced rash which was burning and itchy on her arms thighs and back. She reported to Occ health and was directed to the ED. While in the ED she experienced throat tightness and nausea. She had one episode of diarrhea. No tongue, lip swelling, SOB or difficulty swallowing. Denies any chest pain, palpitations, pre-syncope/syncope. No vomiting abdominal pain. H/o of allergy to fish mix and dust mite.
COVID19 VACCINE (COVID19)	Office Visit *	934901-1	SEVERE ABDOMINAL PAIN
COVID19 VACCINE (COVID19)	Office Visit *	934910-1	chest pressure; tightness /pressure in throat; Face red; BP 186/90; within 2 min. of injection had near syncope that would come in waves every 2-3 minutes; Headache; rapid HR; Chills; mild cough; Dizziness; fatigue; This is a spontaneous report from a non-contactable health care professional nurse, the patient. A 53-years-old non-pregnant female patient (nurse) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot Number: EJ1685), in the right arm on 28DEC2020 08:15 as a single dose, for COVID-19 vaccination. Facility where the most recent COVID-19 vaccine was administered was a Hospital. Medical history included asthma and gastroesophageal reflux disease from an unknown date and unknown if ongoing. Known allergies include Tape, Walnuts, and Cat hair. Concomitant medication received within 2 weeks of vaccination included acyclovir [aciclovir] (ACYCLOVIR [ACICLOVIR]), ferrous gluconate, herbal nos, vitamins nos (FLORADIX), lansoprazole (PREVACID), cholecalciferol (VITAMIN D [COLECALCIFEROL]). No other vaccines were given within 4 weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. On 28DEC2020 08:15 within 2 min. of injection had near syncope that would come in waves every 2-3 minutes, face red, chest pressure, tightness /pressure in throat, headache, BP 186/90, rapid HR. The patient Spent 1 hour in ER. Later in day 28Dec2020, continued to have dizziness, chest pressure, chills, headache, fatigue. This continued for 4 days and had mild cough. The adverse events resulted in an emergency room (ER) visit. and Physician Office Visit. Treatment included Xyzal which relieved majority of symptoms. Laboratory test and procedures on 28Dec2020 include Electrocardiogram (EKG) with normal results, Blood Pressure Measurement 186/90 and Heart Rate Rapid. Treatment was given for chest tightness, throat tightness and red face and No treatment was given for chills, cough, dizziness, fatigue, headache, heart rate increase, blood pressure high and near syncope. The clinical outcome of near syncope that would come in waves every 2-3 minutes, face red, chest pressure, tightness /pressure in throat, headache, BP 186/90, rapid HR, dizziness, chest pressure, chills, headache, fatigue, mild cough was recovered. No follow-up attempts are possible. No further information is expected.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported face red, chest pressure, tightness /pressure in throat, blood pressure increased (BP 186/90), near syncope and the administration of BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	934918-1	<p>2 week migraine; headache; flushed/Got flushed; persistent extreme dizziness; This is a spontaneous report from a contactable nurse (patient). A 37-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Batch/lot number: EK5730, Intramuscular at single dose on 17Dec2020 19:00 on right arm for precaution as front line health care worker. Medical history included Hemiplegic migraine. Her mother also had migraines. Concomitant medication included ranitidine hydrochloride (ZANTAC) and H1 and H2 blocker. The patient called to report AE of flushed, persistent extreme dizziness, and a headache that has evolved into a 2 week migraine. She has a history of hemiplegic migraines and was taking and h1 and h2 blocker when she received the vaccine. She was calling on guidance whether or not to receive the second vaccine. She was scheduled for second dose on Thursday, but wanted to speak with someone before she got it to see if it was OK. About 15 minutes after receiving the first dose, she got flushed and extremely dizzy. She had a mild headache when she woke up on 18Dec2020 06:00, which then developed into a severe migraine on 22Dec2020 08:00 that she has had for 2 weeks and dizziness continues. She received it at work and there was no prescriber. She called and left a message with Pfizer but has not heard back from anyone yet about this. She would say the flushed and dizziness would be medically serious because she had allergies and had medication on board. She takes daily allergy medication and Zantac and not sure she would not have had a worse reaction if she hadn't had that on board. She took it every night. She had an H1 and H2 blocker on board. Flushed has improved but the dizziness has stayed constant. She had been treated twice for headache and now they have put her on a Prednisone taper. She got it on her right arm so she could work her arm out. On 22Dec2020, she saw a Neurologist for the Migraine. They gave her Toradol 30 mg and Zofran 4mg injection in office. They were given IM. Then, she had another office visit for urgent care on 02Jan2021, and that was for the exacerbation of the migraine. They prescribed 1 liter of fluids and then another Toradol injection, Zofran injection and Decadron injection. The dose of the Toradol was 30 mg, Decadron was 6 mg, and Zofran was 4mg. These were given IV in urgent care. The patient had no prior vaccinations within 4 weeks. The outcome of flushed/Got flushed was resolving. The outcome of other events was not resolved.; Sender's Comments: Based on the compatible temporal association, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the events flushing, dizziness, headache and migraine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Office Visit *	934922-1	<p>Followed by neurological symptoms starting day 4; parasthesias of both upper extremity; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; progression to muscle weakness of all four extremities/Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop; Flu like symptoms first 3 days; This is a spontaneous report from a contactable physician (patient). A 39-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: ek5730) at left arm, via an unspecified route of administration on 16Dec2020 at single dose for covid-19 immunisation. Medical history included hypertension, diabetes, migraines, Eosinophilic granulomatosis with polyangiitis (EGPA) remission. Prior to vaccination, the patient was not diagnosed with COVID-19. The patient did not have any allergies to medications, food, or other products. The patient's concomitant medications were not reported. On 21Dec2020, the patient experienced flu like symptoms first 3 days. Followed by neurological symptoms starting day 4, parasthesias of both upper extremity with progression to muscle weakness of all four extremities. Leading to 2 ER visits and hospital admission. Evaluation by internal medicine, neurology and rheumatology. Currently with significant muscle weakness, Left hand weakness leading to dropping of objects and left foot drop. The events resulted in Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, Hospitalization, Disability or permanent damage. The treatment for events included High dose steroid. Covid test included Nasal Swab: negative on 19Dec2020. The outcome of events was not recovered.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events influenza like illness, neurological symptom, paraesthesia, muscular weakness and peroneal nerve palsy cannot be excluded. The information available in this report is limited. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Office Visit *	934927-1	<p>Auditory & visual hallucinations; Auditory & visual hallucinations; tachycardia; extreme panic; confusion; felt like skin was on fire/pulsating; felt like skin was on fire/pulsating; severe pain especially at knees/hips/base of head and neck; severe pain especially at knees/hips/base of head and neck; severe pain especially at knees/hips/base of head and neck; uncontrollable vomiting; bad chills and fever; bad chills and fever; insomnia; felt as if she had been given drugs; This is Spontaneous report from a contactable Other Healthcare Professional reported for herself. This 40-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number: EK9231), via an unspecified route of administration on 04Jan2021 14:30 at single dose on right arm for COVID-19 immunization. Medical history included COVID prior vaccination and latex allergy. There were no concomitant medications. No other vaccine in four weeks. The patient previously had allergic to diazepam (VALIUM), clonazepam (KLONOPIN), ondansetron (ZOFRAN) and lorazepam (ATIVAN). The patient experienced auditory & visual hallucinations, tachycardia, extreme panic, confusion, felt like skin was on fire/pulsating, severe pain especially at knees/hips/base of head and neck, uncontrollable vomiting, bad chills and fever, insomnia. She felt as if she had been given drugs. All of the events happened on 05Jan2021 01:30 and resulted in Doctor or other healthcare Recovering professional office/clinic visit. No treatment received for the events. No COVID tested post vaccination. The outcome of the events was recovering.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of events Auditory hallucinations and Visual hallucinations cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	934934-1	<p>I was in a low disease state of SLE, 2 days after injection i had a severe flare of lupus requiring steroids; This is a spontaneous report from a contactable other Hcp (patient). This 36-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EH9899), intramuscularly on 16Dec2020 13:30 at single dose in Arm left for COVID-19 immunisation. Facility where the most recent COVID-19 vaccine was administered was Hospital. Medical history included systemic lupus erythematosus (SLE) and in remission. No Pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient did not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Concomitant medication received within 2 weeks of vaccination included hydroxychloroquine, topiramate (TROKENDI), prucalopride succinate (MOTEGRITY). The patient was in a low disease state of SLE, 2 days after injection and had a severe flare of lupus requiring steroids on 18Dec2020. The adverse event result in Doctor or other healthcare professional office/clinic visit. Steroids received as treatment. The outcome was recovering. The events were assessed as non-serious; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Systemic lupus erythematosus syndrome aggravated cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>
COVID19 VACCINE (COVID19)	Office Visit *	934944-1	<p>The subject experienced acute pericarditis on 27Dec2020; Other vaccine same date vaccine date= 23Dec2020; This is a spontaneous report from a contactable consumer. A 50-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 23Dec2020 at single dose for covid-19 immunization. The facility type vaccine was hospital. None medical history. The patient's concomitant medications were not reported. Other vaccine same date vaccine date on 23Dec2020. The patient experienced acute pericarditis on 27dec2020 with outcome of recovered. The adverse event resulted in Doctor or other healthcare professional office/clinic visit. It's unknown if treatment was received for the adverse event. The event was reported as non-serious. Pfizer is a marketing authorization holder of [BNT162B2] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [BNT162B2] has submitted the same report to the regulatory authorities. Information on the lot/batch number has been requested.</p>
COVID19 VACCINE (COVID19)	Office Visit *	934946-1	<p>Joint pain /felt like it was worsening joint pain; just severe pain to where she couldn't walk; This is a spontaneous report from a contactable Other HCP. A 70-year-old female patient received BNT162B2(Lot Number: ET1685), via an unspecified route of administration at Deltoid Left on 23Dec2020 08:00 at the 70 years old at single dose for COVID-19 immunization. The medical history included rheumatoid arthritis. The concomitant medications were none. The patient received the shot on 23Dec2020 and experienced Joint pain afterward on 02Jan2021. The patient did have rheumatoid arthritis so there was that. The patient felt like it was worsening joint pain on 02Jan2021. She has had no fever, just severe pain to where she couldn't walk on 02Jan2021. The joint pain has gotten worse and it has gotten to where she is going to advise her not to take the second shot. The Reporter assessed the seriousness for the events was Disabling. The events did not require a visit to Emergency Room but required a Physician Office visit on 06Jan2021. The patient received a steroid injection on 06Jan2021. There was none History of all previous immunization with the Pfizer vaccine considered as suspect. There was none Additional Vaccines Administered on Same Date of the Pfizer Suspect. There was no Prior Vaccinations within 4 weeks. The patient underwent lab tests and procedures, which included x-rays on 06Jan2021: unknown results (they were awaiting the X-rays). The outcome of the events was not recovered. The information on the batch number has been requested.; Sender's Comments: Based on the available information the events worsening joint pain and walking difficulty are attributed to underlying Rheumatoid arthritis; however, based on a compatible temporal association, contributory role of BNT162B2 vaccine to events occurrence cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	934947-1	it was debilitating for her at work; It even hurts to move the right eye in one direction and hurts to speak, the pain was so bad.; pain in right leg and bottom sole of right foot; hurts to speak; numbness right upper side of lip; pins and needle feeling right upper quadrant of face; pain and dull aching right upper side of face; right hand numbness, wasn't able to feel anything; generalized headache; generalized muscle weakness and pain; generalized muscle weakness and pain; This is a spontaneous report from a contactable other hcp (patient). A 31-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 03Jan2021 at single dose in deltoid right for covid-19 immunization. There were no medical history or concomitant medications. The patient received the vaccine on 03Jan2021 and within 15 minutes had a generalized headache. Later that night she had generalized muscle weakness and pain, but really didn't think too much about it. The next day at work (04Jan2021), she had numbness on the right upper side of her lip and a pins and needle feeling in the right upper quadrant of the face. Had a lot of pain in the area as well on the right upper side of the face as well as a dull aching pain that lasted for hours. Later that day when using the computer and she was trying to reach for her mouse she noticed her right hand wasn't able to feel anything and that lasted about 20-25 minutes. Kept slapping the mouse with her hand, but could not feel anything, her hand went numb. Yesterday (05Jan2021), she had the same pins and needle feeling in the same area of the face and that dull achy feeling and it occurred for hours and it was very kind of debilitating for her at work. Later that night she had pain in her right leg and felt the same way, that very severe achiness, which was the pins and needles feeling up and down the leg and underneath the right foot. All these symptoms tend to be on her right side and it definitely lasted for hours. It started about 1 and didn't end until 6-7pm. It even hurts to move the right eye in one direction and hurts to speak, the pain was so bad. This morning (06Jan2021) she had to call out of work because at 3am the generalized headache, pain was unbearable. She was still experiencing the pain in right leg and bottom sole of right foot. She did not receive any vaccines the same day or 4 weeks prior. No problems with vaccines in past. She had made an appointment with a neurologist and will have a MRI done on Friday, 08Jan2021. No further details provided. All events required a visit to physician office. All events were reported as serious per medically significant. The outcome of all events was not resolved. The reporter considered all events were related to the vaccine. Information about Lot/Batch number has been requested.; Sender's Comments: Based on a compatible temporal relationship, causality between reported events and BNT162B2 vaccine cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	935849-1	Noted left lymph nodes left neck. On January 7, 10 days post injection had acute appendicitis requiring emergency appendectomy.
COVID19 VACCINE (COVID19)	Office Visit *	935939-1	Metallic taste in the back of throat between 15-20 minutes post vaccination, noticeable swallowing and throat irritation at 20-25 minutes post vaccination, tongue and lip numbness and throat tightness at 25-30 minutes, dry hacking cough at 30 minutes. Treated in the ED approximately 1 hour post vaccination, at time of arrival in respiratory distress with subcostal retractions, coughing, speaking 1-2 word sentences, with tachycardia and tachypnea. Treated with IM epinephrine, IV solumedrol and IV Benadryl and IV Benadryl with marked improvement in symptoms.
COVID19 VACCINE (COVID19)	Office Visit *	935978-1	Woke up 1/4/21 with right sided facial weakness consistent with Bell's Palsy. Started high dose Prednisone and Valtex. Received IVIG infusion on 1/6/21 and 1/7/21. Mild improvement 1/11/21.
COVID19 VACCINE (COVID19)	Office Visit *	936149-1	Herpatic infection left eye causing a herpatic dendrite
COVID19 VACCINE (COVID19)	Office Visit *	936151-1	One week after administration, I had sudden onset inability to move left arm. I was transported to ER immediately. Treated, scanned with CT of brain, MRI of brain, c-spine and brachioplexus. In hospital for 2 days and no answers. Still no answers to left arm paresthesia and proprioceptor deficits. Spreading into left leg and mild systemic symptoms. I have been to the ER, seen by primary physician, Physiatrist and Neurology and Occupational Therapy. I am scheduled for many more appointments and trying to find and answer.
COVID19 VACCINE (COVID19)	Office Visit *	936212-1	suspected COVID-19; suspected COVID-19; Fatigue; Body aches; Headache; chills; The initial case was missing the following minimum criteria: no adverse event. Upon receipt of follow-up information on 04Jan2021, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable healthcare professional, the patient, from a Pfizer sponsored program IBCC (Inbound Call Center for HCPs). A 32-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), intramuscular in the left deltoid on 15Dec2020 at 21:00 (at the age of 32-years-old) as a single dose for COVID-19 immunization. Medical history included ongoing hypertension from 2009 and COVID-19 from 10Jun2020 to an unknown date in 2020. Ongoing concomitant medications included fosinopril (MANUFACTURER UNKNOWN) taken for hypertension from 2017. The patient did not receive any other vaccines on the same day as the BNT162B2 vaccine. On 19Dec2020, shy of about 96 hours of getting the vaccine, the patient experienced fatigue, body aches, headache and chills. He did not have any fever. The patient stated that he recovered from the fatigue, body aches, headache and chills by 19Dec2020. The patient was fine from 19Dec2020 until 01Jan2021. On 28Dec2020, the patient had a COVID-19 PCR test that came back negative. On 01Jan2021, the patient suspected that he had COVID-19. He had a fever of 103.1 degrees Fahrenheit, body aches, chills like he was freezing to death, fatigue, diarrhea; however, he did not have nausea or loss of taste or smell. He had swollen lymph nodes, but no sore throat and his oxygen saturation was okay in Jan2021. He was also having chest pain but it was more like intercoastal pain. He stated that these current symptoms were significantly worse than the ones he had just after getting the vaccine and felt more like the symptoms he had when he had COVID-19 before on 10Jun2020 (positive IgG for COVID-19-tested in 2020). The patient had a COVID nasal swab (PCR) done at an urgent care (physician's office) on 02Jan2020 or 03Jan2020 and was awaiting the results. The clinical outcome of the suspected COVID-19 was not recovered.; Sender's Comments: A causal association between reported suspected COVID-19 cannot be excluded.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	936262-1	She did a rapid antigen test and was positive; She did a rapid antigen test and was positive; her arm hurt after vaccination; she lost taste; This is a spontaneous report from a contactable Consumer. An adult female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 04Jan2021 at single dose for COVID-19 immunization. The patient medical history was not reported. The patient's concomitant medications were not reported. Friend shared that the patient's arm hurt after vaccination and the following day she lost taste. She did a rapid antigen test and was positive. Adverse event start date was 04Jan2021. No treatment was received for the adverse event. AE resulted in doctor or other healthcare professional office/clinic visit. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. Test name: antigen (positive). Outcome of the events was not recovered. Information on the lot/batch number has been requested.
COVID19 VACCINE (COVID19)	Office Visit *	936279-1	he tested positive for COVID; he tested positive for COVID; This is a spontaneous report from a Pfizer-sponsored program IBCC (Inbound Call Center for HCPs) from a contactable physician (patient). A 73-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration on the right deltoid on 28Dec2020 09:30 at single dose for COVID-19 immunization. Medical history included diabetic (he is a diabetic, but he is not on medication for it) from Nov2018 and ongoing, hepatitis (not ongoing) (He had hepatitis virus for 15 to 20 years. It resolved 5 or 6 years ago. It corrected on it's own), supplement, hypertension and carcinoma of the lung. Everyone in his family has hypertension. His sister had carcinoma of the lung. There was no history of all previous immunization with the Pfizer vaccine considered as suspect. The patient did not have additional vaccines administered on same date of the Pfizer suspect. There were no prior vaccinations within 4 weeks. There were no adverse events following prior vaccinations. Concomitant medication included doxazosin mesilate (CARDURA), bisoprolol fumarate, hydrochlorothiazide (ZIAC), nystatin (STATIN) taken for lipids, colecalciferol (VITAMIN D) taken for supplement, fish oil, acetylsalicylic acid (BABY ASPIRIN), vitamin C [ascorbic acid]. The patient also received multivitamin. He has been on all concomitant medications for at least three to four years. The patient was scheduled for the next dose on 18Jan2021. On 05Jan2021 he tested positive for COVID. The event was reported as serious as medically significant. The patient was given the antibody infusion and steroid injection. It was outpatient. He was not admitted. Treatment was received for the events. The outcome of the events was unknown. Information on lot number/batch number has been requested.; Sender's Comments: Based on the information currently available, a lack of efficacy with the suspected vaccine BNT162B2 in this patient cannot be completely excluded. However individuals may not be protected until at least 7 days after their second dose of the vaccine.
COVID19 VACCINE (COVID19)	Office Visit *	936379-1	chest tightness; palpitations; elevated heart rate; fatigue; This is a spontaneous report from a contactable Other HCP. A 37-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 31Dec2020 at single dose for covid-19 immunisation. Medical history included Dermatographia. The patient is allergic to Penicillin, lactose, Cephalosporins and Beepen-VK. There were no concomitant medications. Seventy two hours after the vaccine was given the patient had an elevated heart rate, chest tightness and fatigue. Are this consistent with the vaccine. She does not have a history of elevated heart rate or palpitations. She checked her heart rate with her Apple watch and sent in a strip to the doctor. The doctor is concerned and is asking if this is related. She went to the ER to make sure she was ok but was not admitted. Outcome of event heart rate increased as recovered on 05Jan2021, of fatigue; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of elevated heart rate, chest tightness, palpitations and fatigue due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including 12-lead EKG, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	936397-1	crystals in her urine; muscle pain; joint pain; flu like symptoms/feeling like she has the flu; having no energy; feeling tired/Tiredness; kidney stone; pain in her back; did not feel good; This is a spontaneous report from a contactable consumer (patient). A 54-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot EL0140) intramuscular on 31Dec2020 16:00 at a single dose on left arm for Covid-19 prophylaxis. Medical history included rheumatoid arthritis. There were no concomitant medications. The patient wanted to know if she could receive the second dose of the COVID-19 vaccine if she presented the following side effects with the first shot: feeling tired/tiredness on 02Jan2021; having no energy on 03Jan2021; muscle pain, joint pain, and flu like symptoms/feeling like she has the flu, on 04Jan2021. She went to work on Monday and has taken the last couple of days off because she did not feel good on Jan2021. She did have rheumatoid arthritis, but it was different and has not been like this. She went to the doctor on Monday after she got off of work and thought at first maybe she had a UTI; treated herself with AZO, but had a urinalysis that was negative on an unspecified date. She was told some of the pain in her back might have been a kidney stone on Jan2021 because they found crystals in her urine on 04Jan2021, but she did not know about that. She noticed having no energy on Sunday. She wanted to know if it was recommended that she get the second vaccine since she was having side effects. The events required a visit to physician office and did not require a visit to Emergency Room. Prior vaccinations within 4 weeks was noted as none. Family medical history relevant to the events (AE) was noted as none. The outcome of the events of feeling tired/tiredness was not recovered; of having no energy, muscle pain, joint pain, flu like symptoms/feeling like she has the flu was recovering; of the rest of events was unknown.

Vaccine Type	Event Category	VAERS ID	Adverse Event Description
COVID19 VACCINE (COVID19)	Office Visit *	936419-1	Shortness of breath, stridor, migraine for 5 days and 10 days later cellulitis at injection site.; Shortness of breath, stridor, migraine for 5 days and 10 days later cellulitis at injection site.; Shortness of breath, stridor, migraine for 5 days and 10 days later cellulitis at injection site.; This is a spontaneous report from a contactable Nurse (patient). A 51-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EH9899), intramuscularly on 28Dec2020 14:30 at single dose for covid-19 immunization. Vaccine location was left arm and it was the first dose. The facility type vaccine was hospital. Medical history included migraine from an unknown date. Concomitant medication included erenumab aooe (AIMOVIG), estradiol, diphenhydramine hydrochloride (BENADRYL), trazodone hydrochloride (TRAZODON). No known allergies. Patient was not diagnosed with COVID-19 prior to vaccination nor tested for COVID-19 since the vaccination. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced shortness of breath, stridor, migraine for 5 days and 10 days later cellulitis at injection site on 28Dec2020 15:00. Patient received Antibiotics, steroids epi as treatment for the adverse events. The adverse events resulted in Doctor or other healthcare professional office/clinic visit. The outcome of event migraine was recovered in Jan2021, other events was recovered on an unknown date. The events were reported as non-serious.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of Vaccination site cellulitis, shortness of breath, stridor and migraine, due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
COVID19 VACCINE (COVID19)	Office Visit *	936738-1	loss of consciousness Narrative: Patient received COVID-19 vaccine dose #1 on 1/6/21 w/o complications. Per 1/6/21- 1/9/21 nursing notes, patient did not experience any injection site reactions, denied pain or tenderness at injection site, no dizziness, no n/v, remained afebrile. Around 1/9/21 @1810, patient became acutely nonresponsive after being helped to the edge of bed. Per nurses, he was previously awake/alert, talking and asymptomatic. Patient is DNR/DNI but facility rapid response emergency team called d/t patient's sudden change of condition. Emergency team helped patient into lying position. Per 1/9/21 ICU emergency team note, patient appeared comfortable w/ no palpable radial pulse and had minimal shallow agonal breathing. Pulse ox 94%, HR in 60s per machine. BP unmeasurably low by BP cuffx3. Resident passed at 18:20 pm.
COVID19 VACCINE (COVID19)	Office Visit *	936767-1	Approximately 1 - 2 hours after receiving I had numbness and soreness to my neck. A few days later started experiencing tingling, buzzing, weakness and heaviness to my right arm and leg. I reported this to my MS doctor who ordered an MRI of the brain and told me to report to you
COVID19 VACCINE (COVID19)	Office Visit *	936993-1	Patient began experiencing fevers, body aches, back pain, fatigue, chills the night she received the vaccine. Symptoms progressed for the following four days when she was ultimately seen in PCP office. Laboratory evaluation demonstrated atypical pneumonia and elevated WBC count. Patient was diagnosed with Acute Myeloid Leukemia via bone marrow biopsy and is receiving treatment at the hospital.
