Just the facts

gloStream provides integrated medical software solutions to a wide range of physician practices and specialties. We deliver our solutions through our nationwide network of certified technology partners. This strategy allows you to work together with an integrator to tailor the best total solution to meet the unique requirements of your practice. Support is also delivered locally so your practice workflow is optimized and never interrupted.

gloStream products help you and your staff become more efficient and productive. Built on the Microsoft® platform, gloStream solutions feature an easy-to-learn and understand user interface, single-click access to patient data, and superb voice recognition technology.

About gloStream

gloStream's mission and vision are simple. We focus on developing easy-to-use healthcare information technology solutions to improve the efficiency of healthcare delivery and the quality of patient care. We thrive on straightforward communication and fast decision making. Because of our organizational structure, we can quickly adapt to changing market conditions by deploying funds and human resources when and where they are needed most. In this way, gloStream swiftly and seamlessly adapts to meet fast-evolving industry needs.

Open and flexible

We further our mission by exclusively creating and supporting the very best healthcare information technology solutions on the market. gloStream electronic medical record and practice management solutions are easy-to-use applications built on an open and standard framework for easily integrating third-party applications and devices.

Through gloStream OPHIT™, the Open Platform for Healthcare Information Technology, gloStream forms alliances with best-of-breed industry solutions. OPHIT allows either HL7 integration or direct integration with the open gloEMR™ platform to provide a single dashboard interface to practice management, e-prescribing, medical monitoring devices, imaging, and PACS systems. OPHIT helps us improve our products with new features and functionality and the latest technology to enhance patient care.

gloStream believes in the long-term vision of making patient healthcare information highly accessible and available. That is why we are committed to participating in the development of standards for portability and interoperability by our active involvement in HIMSS, EHRA, MSHUG, CCHIT, HL7, ASTM, and other industry standards-setting groups.

Background

gloStream got its start when two software developers with a gift for translating ideas into easy-to-use technology met online. They later began developing an EMR application that would become gloEMR, the company's flagship EMR product.

In 2006, technology veteran Mike Sappington joined gloStream as CEO, and has been developing and implementing the company's business strategies and overseeing day-to-day operations ever since. Many doctors in different specialty practices work closely with gloStream's software research and development team to ensure the company's products meet patient, clinical, and administrative practice needs.

gloEMR™ and gloPM™: The latest generation of medical software

gloStream has responded to the need for streamlined medical software by leveraging the latest technology available to create gloEMR and gloPM, our flagship products.

Our product development team studied the way doctors' offices operate. They then applied their creativity and technical proficiency to develop applications that are easy for doctors and staff to understand. Built on the Microsoft® platform, gloEMR and gloPM couple dynamic templates with advanced voice recognition technology so you can shape electronic documents to the way you practice medicine. These highly customizable applications provide single-click access to the full range of patient data. They also feature robust clinical decision making tools and convert dictation, in real time, into precise and accurate exam notes. Full billing, scheduling, and reporting modules come standard.

During a patient encounter, you can pull all patient data into an exam note directly from a clinical database—with a single click. Each exam note displays a patient's complete history, including medications, labs, orders, and other vital information. With its intuitive text-editing capabilities, you can easily configure and adjust our templates and information so that each record correlates specifically to an individual patient.

gloEMR and gloPM are valuable and popular technology for medical practices because the software is easy to implement and use. The applications easily scale to handle more patients and physician partners as your practice grows. You continuously benefit with new features and functionality as gloStream works to meet the evolving requirements of doctors seeking to efficiently and effectively deliver enhanced patient care.
