The CHAIRMAN. You will admit that that wasn't discontinued on account of this zone-rate act which doesn't go into effect until July 1.

Mr. FARELLY. Not directly.

The CHAIRMAN. So you can discontinue a publication without attributing the zone postal rate as the cause?

Mr. FARELLY. If they had continued up to the present time the zone system would probably have ended it.

The CHAIRMAN. Every Week, did that merge into any other publication?

Mr. FARELLY. Not directly. I think they did indirectly transfer subscribers to Farm and Fireside, which they also publish.

The CHAIRMAN. Farm Journal, Good Housekeeping, Harper's Bazar.

Mr. FARELLY. Harper's Bazar has increased its price, announced, to 35 cents. Increased 10 cents in its price.

The CHAIRMAN. Don't you know that 10 cents will far more than take care of increased cost by virtue of the zone rate?

Mr. FARELLY. This announcement was since the increased-rate act was passed.

The CHAIRMAN. They have more than covered the increased cost on account of the zone rate act.

Mr. FARELLY. I still maintain the charges ought to be placed where they belong, on the advertisers.

The CHAIRMAN. Harper's Magazine?

Mr. FARELLY. Oh, no; it shouldn't.

The CHAIRMAN. Hearsts, House and Garden, Independent, Judge, Ladies' Home Journal, Ladies' World, Leslie's, Literary Digest, McCall's, McClure's, Metropolitan, Modern Priscilla, National Geographic, New England Homestead, Northwest Farmstead, Orange Farmer, The Outlook—The Outlook strikes me it will have a little harder time than those mentioned.

Mr. FARELLY. It depends on——

The CHAIRMAN (interposing). The People's Home Journal, Pictorial Review, Puck, Review of Reviews, Saturday Evening Post, Short Stories, St. Nicholas, System on the Farm, To-day's Housewife, Vanity Fair, Vogue, Woman's Home Companion, Woman's World, and the World's Work.

Mr. FARELLY. Very many of those live entirely on their advertising receipts.

The CHAIRMAN. And they will continue.

Mr. FARELLY. I see no reason why they shouldn't.

The CHAIRMAN. If they can live on their advertising why do they insist on putting the burden on their subscribers? Why not put the burden of this increased postal rate on the advertisers that constitute one two-thirds to four-fifths of their income. They ought to do that, shouldn't they?

Mr. FARELLY. The increased cost of production has been upheld by them until the zone rate was added to it.

The CHAIRMAN. Do you believe in the charge of these magazines this propaganda that the magazine published in Philadelphia or New York will cost the subscriber in Illinois or Denver more than would cost in Maryland or North Carolina, or a nearby State?

Mr. FARELLY. I think they would be compelled to do that.

The CHAIRMAN. Do you think that the Literary Digest will have a higher price for the man living in Pennsylvania and say \$3.50 or a \$4 price for a man living in Denver or Los Angeles?

Mr. FARELLY. Well, if he was living at a distance, for the same price as a man living nearby, he will get it at less profit to the publisher.

The CHAIRMAN. Is it your judgment that these papers and magazines will make a flat rate and will make that flat rate to its advertisers and subscribers to make it sufficient to cover the increased price of the service?

Mr. FARELLY. It is not the total cost of service, it is simply the manner of collecting it.

The CHAIRMAN. I haven't any settled conviction about it. I am asking you. I want to get the judgment of men that have studied it and you have.

Mr. FARELLY. There are so many questions to consider, cost of products; that is going up every day.

The CHAIRMAN. They have a right to go up on subscribers and advertisers. Nobody criticizes that. That is necessary; but what am I asking you is, do you believe that the magazines that I have mentioned and others will give, after July 1, when this zone rate provision goes into effect, different subscribers' prices to a subscriber in Pennsylvania and in New York and one in Colorado or Illinois or in California?

Mr. FARELLY. It strikes me if this zone system is insisted upon they will have to charge their cost to the mail system of that particular zone. If it goes to the rate of 8 cents a pound to the Pacific coast, they would lose money on their subscription.

The CHAIRMAN. Some magazines that you handle, periodicals, you ship some by express or freight and pay as much as 40 cents a hundred, don't you?

Mr. FARELLY. For a short distance.

The CHAIRMAN. And some you ship for as much as \$2 a hundred?

Mr. FARELLY. Yes.

The CHAIRMAN. Do you charge a different rate to your subscribers that section of the territory for which you must pay \$2 a hundred and you do to the subscribers in the territory where you only pay 8 cents? Have you been doing it?

Mr. FARELLY. We may have to do so after July 1.

The CHAIRMAN. I know, but have you done so, with this difference of 40 cents or \$2?

Mr. FARELLY. At the present time we are not sending it by mail at \$1.

The CHAIRMAN. I know, but you said you sent some of them at 40 cents a hundred and some at \$2.

Mr. FARELLY. Not \$2, against the Government plans. Never higher than \$1 a hundred.

The CHAIRMAN. You sent some at 40 cents a hundred—that is nearby.

Mr. FARELLY. Yes.

The CHAIRMAN. Then you sent some at \$1?

Mr. FARELLY. Yes.

The CHAIRMAN. Did you make any difference in price to your subscribers?

Mr. FARELLY. No, sir; we make that difference in profit.

The CHAIRMAN. Will there be that much difference from 40 cents a hundred to \$2 a hundred in any of the first, second, third, fourth, or fifth zone in any of these publications?

Mr. FARELLY. We are in consultation with every publication on whom this zone act will have any effect. We will have to charge a higher rate to the subscriber or they will have to give us a lower rate.

The CHAIRMAN. If you sell a magazine for 25 cents now, you sell for 25 cents all over the United States, and if you raise that to 30 cents you are going to sell for 30 cents all over the United States?

Mr. FARELLY. It is a little different. We sell Scribner's at 19 cents, which retails for 25 cents. We can't sell it for 19 cents in California unless the publisher sells it to us at a reduced rate, or we will suffer a loss.

The CHAIRMAN. This increased rate is going into effect July 1, not a half a month off. Have you seen any advertisement in any of these papers or magazines in which it says after July 1 the subscription price of this periodical or paper will be so much in New York or so much in this zone or still higher in another zone?

Mr. FARELLY. They haven't put it on that ground as yet.

The CHAIRMAN. If they were going to do that don't you think as business men they would start at it right now and let the subscribers know it?

Mr. FARELLY. They are increasing their rates and striking an average.

The CHAIRMAN. So then all this is stuff about sectionalizing the rate, isn't it, because they are going to charge a flat rate in New York and the same flat rate in California? As you say, they are going to strike an average, which I know they are going to do. Then all this stuff about sectionalizing magazine rates and all other rates is all stuff.

Mr. FARELLY. A vast amount of that shipped through this channel we will have to pay the expenses unless the publishers give us decreased rates.

The CHAIRMAN. No publisher so far as you know has advertised and said they are going to charge a higher rate for subscriptions in California than in Pennsylvania, have they?

Mr. FARELLY. I don't know of any such, not as yet.

The CHAIRMAN. And if they were going to do it it is about time for them to notify the public, as a business proposition.

Mr. FARELLY. I have been thinking and hoping you would change it.

The CHAIRMAN. They couldn't have very much hope. It was turned down by the Post Office Committee in the House, then the Senate Post Office Committee and the Finance Committee of the Senate, and it is just two weeks off before it goes into effect.

Mr. FARELLY. Can't my plea receive some attention, that they shall receive an equal revenue either through an increase in advertising rate or—

The CHAIRMAN. Since October 3, when the act was passed providing for this zone system, a great many publishers have increased their subscription.

Mr. FARELLY. I don't know, some few have.

The CHAIRMAN. A great many papers have increased their subscriptions, haven't they?

Mr. FARELLY. Some of them.

The CHAIRMAN. A great many of the papers in the cities have increased from 1 cent to 2 cents, haven't they?

Mr. FARELLY. Yes, sir.

The CHAIRMAN. Have any of the people in your country been called upon by the National Publishers Association of Publishers Advisory Association for a contribution to help carry on this propaganda against the zone system?

Mr. FARELLY. No; we have never been invited to meet them in any conference.

The CHAIRMAN. You don't belong to either of those associations?

Mr. FARELLY. No, sir; we do not.

Mr. SLOAN. You spoke about zone systems and provincialism in this literary educational matter. Are you aware that there is an organization known as the Academy of Arts and Letters, chartered by act of Congress?

Mr. FARELLY. I may have heard of it. I have no personal knowledge of it.

Mr. SLOAN. And do you know of the 50 members allowed in that organization that every one is in the Northeast one-sixteenth part of the United States where most of these publishers are?

Mr. FARELLY. I don't know of that.

Mr. SLOAN. Well, that is substantially a fact. I think we have as much provincialism for our literary publications as we could well get, in any circumstances right now. It is due to a large extent to the special privilege that publications have to send out stuff at a flat rate in the United States.

Mr. FARELLY. It has developed to an enormous extent. In view of the enormous extent that would follow if these rates are put into effect, it would be rather a misfortune if you should exact this law and let it go into effect on July 1 and six months later you should enact another revenue law—

Mr. STERLING. Suppose we don't change it now and let it go on five or six months. Would you be willing to assure us now you would not be back here then urging us not to change it?

Mr. FARELLY. I don't know what would happen.

The CHAIRMAN. I believe there is a great deal in what you said about a special agency like yours in handling this matter, in reference to advertising and reading matter. But I believe that the suggestion by Mr. Rainey is a good one and I hope you and the Post Office Department will be able to adjust the matter; it ought to be adjusted. If you can't do it we will consider some legislation so as to affect the administrative features of a case like yours.

(Thereupon, at 1.10 p. m., the committee took a recess until 2.45 p. m.)

---

AFTER RECESS.

The committee reassembled at the expiration of recess.

**STATEMENT OF MR. ED. C. LASATER, FALFURRIAS, TEX.,  
LIVE STOCK AND DAIRY PRODUCER.**

The CHAIRMAN. Mr. Lasater, give your full name, your address, and the business in which you are engaged.

Mr. LASATER. E. C. Lasater, Falfurrias, Tex.; I am a ranch man and farmer.

The CHAIRMAN. And do you appear for the live-stock industry?

Mr. LASATER. Not as an accredited representative of the live-stock interests before this committee. I will say this: I am a member of the American National Live Stock Association's Market Committee; that is a committee of seven delegated to represent the association in Washington; but we have not had either a market committee meeting or an executive committee meeting since this matter came up; so I am not an accredited delegate for this purpose.

Mr. Chairman, and gentlemen, one of the greatest fields to be exploited by the National Government for securing increased revenue is to create agencies for financing the producer to a parity of the rate charged to the speculative mercantile and manufacturing pursuits.

This would make a saving in cost of production of from 12 to 16 per cent, which the National Government could appropriate to itself without prejudice to present position of the producer and without adding additional burdens to the consumer.

To say that all industries should bear an equal rate of taxation from now would be unjust and not to the interest of the whole Nation. We have some industries that have shown enormous profits the past four years and others and basic ones that have barely maintained themselves.

I believe—and I think the great majority of farmers agree with me—that the National revenue should be raised by making the basis of taxation affect every man or woman that has an income above the efficiency line. That for which we work hardest to achieve is usually considered of the greater value. Citizenship should not be a thing that can be held without some degree of sacrifice. Every income that places its recipient above the efficiency line should be taxed proportionately with that of the millionaire. I do not believe it would be possible to confiscate capital without serious dislocation of all industrial life. I do believe that our Government can appropriate to itself

the net earnings from capital in any degree that may be found necessary to meet our National needs without any paralysis of industries, provided that this form of taxation is made just and applicable to the whole people as nearly as may be possible.

I think this class of taxation should be proportionate to the size of the net income and that it should be so arranged that after a given amount is reached—say \$50,000—only a reasonable commission for acting as agent for collecting revenue above this amount should be allowed.

In the case of a corporation, only a return of, say, 8 per cent should be allowed.

Now, gentlemen, addressing myself to the first proposition, that is in regard to the Government appropriating to itself the difference between the rate that is charged to the producers of the country to-day and the rate charged to the mercantile and the manufacturing industries, I would like to say this:

When you go into the cost of production on an 8 per cent basis—and the credit charge to the producing interests of the country according to the Government statistics, is something over 8 per cent—you will find that the proportion of the total cost of production—that the interest charge bears to the total cost of production a proportion of from 55 to 60 per cent.

Now, if the producers of the country commanded a rate of 6 per cent, we will say, which is at this time the rate charged to the mercantile and manufacturing interests, although they have advanced somewhat recently, that would make a saving of something like 12½ per cent in the cost of production. Without adding any additional burdens to the producers of the country; without lessening production, which is so essential, that charge could be appropriated by the National Government. Of course if this plan was adopted by the Government, you would find it necessary, and it is going to be necessary anyhow, for the National Government to take steps to assist in financing the producers.

Now, as pertinent to this statement, I would like to read you two letters which I have here.

The first is a letter from Mr. James Callan, president of the Texas Cattle Raisers' Association. I will say that that association has a membership of something over 4,000; it is one of the associations that go to form the American National Live Stock Association; it is one of the State associations. Representative Garner is familiar with both organizations. This letter is from Mr. Callan to myself. [Reading:]

FORT WORTH, TEX., May 25, 1918.

Mr. ED C. LASATER,  
Falfurrias, Tex.

DEAR FRIEND: I have been asked to go to Washington on so many occasions that I find it necessary to try to get the various subjects grouped and some unity of action. Therefore, I have set the date indicated by the inclosed letter and trust that you will be able to attend the meeting and assist in the discussion and solution of these matters. Please don't fail to come.

Yours, truly,

JAMES CALLAN.

Mr. Callan inclosed a copy of a letter that had been sent out by him as president of the Texas Cattle Raisers' Association to certain banking interests; it was sent to Mr. George S. Hovey, of Kansas City; Mr. M. A. Traylor, of Chicago; Mr. Wirt Wright, of St. Louis; and

Mr. Marion Sansom, of Fort Worth, Tex. All of those men are parties who are largely interested in financing the cattle interests; they are handling it for large loan companies. There are four companies which handle around \$100,000,000 of cattle paper. Mr. Callan's letter to those gentlemen was as follows:

FORT WORTH, TEX., May 25, 1918.

MR. GEO. S. HOVEY, *Kansas City, Mo.*  
 MR. M. A. TRAYLOR, *Chicago, Ill.*  
 MR. WIRT WRIGHT, *St. Louis, Mo.*  
 MR. MARION SANSOM, *Fort Worth, Tex.*

DEAR SIR: The matter of credits for cattlemen has become so serious that we think it advisable, on the suggestion of Mr. Hovey and other holders of cattle paper, that if possible you meet with our executive committee in the city of Fort Worth, Tex., on June 11, for the purpose of discussing the situation. It is hoped by that time that we will have rains in the range country sufficient to help the situation.

There is also need to discuss the labor problems and the cottonseed products question. We expect to have the attendance of parties interested and Mr. Peden, Federal Food Administrator for Texas, together with representatives of the Department of Agriculture.

Inasmuch as these several matters will likely need to be discussed with the officials at Washington, it is hoped that a committee may be appointed to go there and submit some definite suggestions, and while it would seem that this delay was too great, we believe it is the earliest at which we can hope to get the necessary attendance.

Very respectfully and truly,

JAMES CALLAN.

Now, gentlemen, you may raise 5,000,000 or 8,000,000 troops; you may equip them all with ammunition; but some military genius in the past has stated that an army moves on its belly; unless you provide the material to feed your troops your efforts will come to naught.

This Government has seen fit to create an agency to assist in the manufacture of all munitions necessary to carry on their war work. Many of these agencies were commanding, before the creation of the governmental agency, a much lower rate for credit than the producers of your foodstuffs. There has been no time in our history when the credit that the producers of the country were able to command has been higher or harder to get than now. The situation as it exists can not be allowed to continue, and if the producers are to perform that which is expected of them to feed ourselves and our allies.

I have a letter here from Mr. Tomlinson, the secretary of the American National Live Stock Association, to Senator Kendrick. If the committee will permit me, I will read it to you.

JUNE 14, 1918.

HON. JOHN B. KENDRICK,  
*United States Senate, Washington, D. C.*

DEAR SENATOR: My Washington office has sent me the following telegram from J. H. Nations, of El Paso, Tex.:

"The indications are that there will be a very unusual liquidation of cattle paper demanded by the banks through the cattle-paper brokers during this year. The result of which will be to enforce the marketing of large lots of mother cows, through the packers, and while that will produce a good supply of beef for this year yet it will further reduce the number of cows on the now much depleted ranges in the cattle-producing country and, to my mind, it will be like killing the hen that laid the golden egg. It seems to me that the cattlemen of the cattle-producing country ought to do something toward relieving this situation before it is too late. My judgment is that it would be disastrous to the meat supply of the United States in the future for the wholesale marketing of the cattle to take place during this fall season, brought about by the enforcement of collection of debts of the cattlemen whose only holdings are the cattle. I would advise that you look into this matter, and if it is decided that this view of the situation is correct, that the matter be taken up with Comptroller of Currency by the American National Live Stock Association."

Mr. Nations is a member of our executive committee and for a long while was president of the Panhandle and with the Western Stockmen's Association. He is well posted on live-stock conditions and the financial situation. From all sides I hear complaints of tightening of money market on live stock. I was out to the yards yesterday and commission men said it was very difficult to handle their loans. Unless cattle paper can be taken care of about as usual there will be a big liquidation this fall, lower prices and shortage next year. Can you not take this matter up with Federal Reserve Board and get their help? I am sure a word from you will go a long way towards solving this question. Let me know what to do, addressing me at my Denver office. I hope you can advise me definitely as to this so I will get your advice about the 25th or 26th.

Yours, very truly,

T. W. TOMLINSON.

Now, of course, I understand that this committee would like to be told ways and means to raise a billion of dollars of revenue. I do not think that you would give a welcome to anyone coming here asking for exceptions or exemptions from the taxation that you propose. But I believe one thing that should be borne in mind by this committee, and which is of great national interest, is that any legislation that is passed for the purpose of producing revenue should have in mind bringing the industries of the country in a condition to continue production.

As some of you gentlemen are well aware, the area of the United States that is practically known as the range country, that is, the country occupying the western part of the United States, the intermountain country, from the Canadian line to the Gulf of Mexico, has had several very unfavorable seasons; and that fact, together with the market conditions, has practically taken all the profits from live-stock production in that section for the past two years.

One of the reasons why I anticipate that the bankers are calling for the collection of the cattle paper of the country to-day is that, if that interest is to be held down, we will say, for the profit that you gentlemen decide upon for the general interests of the country that have been profitable since the commencement of the European war, there will be no chance for that industry to recoup itself, and they might just as well take what is coming to them now. And I can not believe that that can be to the national interest to force that situation upon the live-stock industry.

I do believe that it is a national interest, especially as it is up to the producer of this country, not only to feed ourselves, but to feed our allies, that some consideration should be given to the credit situation of the producer. I know of no better place to start than here.

I have heard the theory advanced several times that in the event that a given line of business is allowed to make too much money—excess profits—the Government will get it at the other end of the line, if it does not catch it here. A great many of us feel this way in regard to that: I feel that I have the right to buy my own proportion of Government bonds. I do not believe that any other agency should be allowed to handle the products I sell at an undue profit, and deny me that privilege; and I believe that is one of the sentiments that you will find is having its effect upon the mind of the country producer. Many of us do not feel as though we are allowed the privilege of sustaining the Government at this time, from the fact that the agencies that handle our products take more than their proportion of what the consumer pays.

Mr. GARNER. Mr. Lasater, would it interfere with your statement if I asked you a question at this point?

Mr. LASATER. I would appreciate it if you would question me.

Mr. GARNER. You speak about giving the live-stock industry a lower rate of credit, or a lower rate of interest, we will put it, if that term will suit you just as well—

Mr. LASATER. Yes; a lower rate of interest.

Mr. GARNER (continuing). A lower rate of interest for the producer than they are now getting; and in referring to the producer, you refer to the farmer and stock raiser, and not to the manufacturer?

Mr. LASATER. Yes; the farmer and stock raiser.

Mr. GARNER. Ordinarily the term "producer" would take in manufacturers and others, because they are producers in a sense. Your contention is that the live-stock man's and farmer's credit now is not as good as that of the different commercial enterprises and manufacturing enterprises, and you want some system whereby they can have the same rate of interest, as it were, on their capital necessary to do their business that the manufacturer and other business enterprises have. How could that be accomplished by taxation?

Mr. LASATER. No; you do not stop there; you can not stop there; but you can so regulate your tax—you take the live-stock interests of the West, in the semiarid country; you can practically limit the credit that can now be extended to them.

Mr. GARNER. Let us have a practical illustration. This is a taxing committee.

Mr. LASATER. Yes, sir.

Mr. GARNER. Suppose this committee should decide that they will allow 8 per cent profit on the capital invested and take 80 per cent of all profit in excess of 8 per cent. Would you give the farmer and the cattle producer a limit exceeding 8 per cent? Would you make any exception of them; and if so, what kind of exception?

Mr. LASATER. Well, in the situation which we are to-day, so far as the live-stock interests are concerned, I think it would be to the national interest to make that exception, because if you are going to start from where we are we practically have three years with no profit at all behind us; that is owing to weather conditions and market conditions.

Mr. GARNER. That particularly applies to the cattle industry, and not to the farming industry?

Mr. LASATER. No; not as a whole. But let me make this statement here, in which I think the facts will bear me out, and which I think some of you gentlemen know. I do not know of one of the producing countries of the world, as they are called, where the producing interests are paying a higher rate for credit than the manufacturing or mercantile interests. That is not the case with either France, Germany, Belgium, Austria, or Italy; but it is the case in this country.

Mr. GARNER. But you can not remedy that by a rate of taxation, can you?

Mr. LASATER. To some extent you can.

Mr. GARNER. Will you point out how that could be done?

Mr. LASATER. I will say this: As conditions are to-day—and I think one of the reasons why the various interests are probably making arrangements to cash in on cattle paper this coming summer and fall is the fear of just such a law as you speak of being passed. When it is passed, they say that there will be no cash for this industry to

recoup its losses for the last few years, so that they might just as well take the money while the taking is good.

I will say this: I feel like it is going to be necessary, in order to insure the food supply of this country, that some arrangement be made to finance food production on a reasonable basis by the National Government. Here is where I think you could force the producing interest to help raise this additional revenue. If you create the agencies—you have already created the Federal Farm Loan Board—there are about \$4,000,000,000 now out on farm mortgages. After December 31 last the Farm Loan Board had loaned about \$39,000,000 on farm mortgages. I understand now that they are loaning at the rate of about \$10,000,000 or \$12,000,000 per month, which would make something over \$100,000,000. As time goes on, that is going to have the effect of bringing down farm mortgage loans. I do not believe, however, that it will have the effect of meeting the emergency situation that we have with us during this war.

Now, if you created an agency for financing this cattle paper, and that agency should supply, at the same rates that we have been paying, say 8 per cent—6 per cent and 2 per cent, which you could call a tax, if you like—I think that would help to meet the situation. I have data here which would go to show—I will say that there is no exact data on the subject; I have tried in the agricultural, and all the data that I could get from the Farm Loan Board I have also obtained; and they frankly admit that there is no exact data so far as country loans are concerned. The farm mortgages amount, as I say, approximately to \$4,000,000,000, but on short-time credits there is no way of getting at a close approximation of the amount; but approximating the amount as best we can, you will find that that 2 per cent tax would produce anywhere from \$150,000,000 to \$180,000,000.

If that was done, you would add no additional burden to the producer, and he would be carrying no greater burden than he is carrying now. Nor would you add any additional burdens upon the consumers of the country. And it looks to me as if both of those are accomplishments very much to be desired.

Mr. GARNER. Indeed they are; but we are making up a bill now to get revenue, and your proposition, or your suggestion, is to create an independent agency of the Federal Government to assist in financing the cattle industry. Of course, that would be wholly aside from the question of obtaining revenue.

For instance, Congress passed what was known as the war finance corporation bill not long ago, in which we arranged for \$3,000,000,000 credit. Now, your suggestion is, in line with that bill, that some Federal legislation be had by which the cattle industry can borrow money on good cattle security at a low rate of interest.

I do not think we could do that in this bill. I can not see any possible way by which you could benefit the cattle industry as you suggest, in the matter of excess profits, except by giving it a higher exemption than is given to other businesses. That same identical idea has been suggested by the mining people and some others. You understand, of course, the difficulty in making exceptions in this bill.

Mr. LASATER. I certainly do.

Mr. CRISP. The public-service corporations are asking for them.

Mr. GARNER. Yes; the public-service corporations are asking for them. And I believe that if Congress undertook to specify a certain class of people and give them an advantage in taxation over other classes of people, we would have the various interests coming here in groups and saying, "We are entitled to the same consideration as these other people, and we want you to give us an exception also."

Mr. LASATER. But do you not think that you gentlemen are in a position to size up every proposition that is presented, from a national standpoint? I have but little sympathy with my own interest, or any other interest here pleading for an exemption for its own special benefit.

Mr. GARNER. I think you are right about that.

Mr. LASATER. But I do not believe this exemption would be local in its results at all or would inure any more to the benefit of the cattle interests, or, we will say, the producing interests; I would not limit it to the cattle industry. But I think one of the greatest problems of this country in the next few years will be to feed ourselves and our allies. Will you allow me to read to the committee something that Mr. Hoover has said that has a bearing on that situation?

At the time of the establishment of the Food Administration last summer, we were informed that we were confronted with a price level in feedstuffs for animals that had not been witnessed in the United States since the Civil War. Heavy exports to Europe of all character of feedstuffs during the previous 12 months had drained the country of its surplus production of feed supplies, and had also even exhausted our normal carry-over from one harvest to another. The consequence was that we entered upon the harvest of 1917 with a less supply of all kinds of feedstuffs than at any similar period in 15 years. In fact, had the harvest been a total failure, the human beings and the animals of the country would scarcely have survived for 60 days; a situation not only pregnant with speculation and high prices, but pregnant with danger to equalized production in any direction.

Of course Mr. Hoover was speaking of conditions last year; the situation is much more serious now than it was at this time last year. For years back it has been my job to supply feedstuffs for something like 15,000 or 20,000 cattle. We have gotten to a point, and this does not apply to my immediate locality alone, but to Colorado, New Mexico, Kansas, and a very large area in the Northwest up to the Dakotas; we got to a point last April where we had to have rain or let our cattle die. We could not get in feedstuffs from the outside. The year previous, when Mr. Hoover wrote this article, cottonseed products were bringing \$37.50 per ton. We paid this year as high as \$60 per ton; and they say that there was more protein in the cotton seed sold last year for \$37.50 than in that in this year sold for \$60. So that it does not take much stretch of the imagination to visualize people instead of cattle being in that situation. It is only in the last few years that that situation has applied to our country, where there was no place for the cattle to pasture, and no feed to ship in for them. I will say that pastures that we have been paying \$3 and \$4 for have commanded this year \$17 or \$18 a head, and none could be had at this time.

So that that is the food situation, with regard to the cattle industry. I do not know just how to tackle this proposition here before Congress, but it looks to me as if this is one committee that could deal with these facts. These are the facts, and it seems to me as if Congress could take a national view of the situation and take the proper steps to relieve it, either through this committee or some other committee.

I think the situation is such that, unless some action is taken, the country itself will be in a very serious situation. The individual farmer can not meet the situation; the States can not meet it in time to offset the threatened catastrophe.

Mr. GARNER. We agree with you that all the legislation possible should be had to encourage production on the farm and the range.

Mr. LASATER. Yes. Permit me to say this: I have heard our friends discussing cotton and suggesting a bale tax. It looks to me as if a tax of so much a bale on cotton would not be wise. I believe the man that has the money is the man that pays the tax. Cotton is subject to both drought and insect pests. And there might be communities where a tax of \$5 a bale would not be injurious; there might be other communities where such a tax would put them just as far below the line of efficiency.

Mr. GARNER. And it is the same way in the cattle business?

Mr. LASATER. It is the same in the cattle business. There is no business that has so many uncertainties connected with it as country products, either wheat or cotton or cattle; so it looks to me as if it would be a mistake to put a tax on production of a given amount, but it ought to be on net income, and a man who has that ought not to want to evade paying the tax.

Mr. GARNER. You favor, then, a very heavy income tax?

Mr. LASATER. I do.

Mr. GARNER. Starting as low as \$1,000 or \$2,000?

Mr. LASATER. I would consider whatever they estimate that the income is that a family needs to maintain itself, and start at that point, and increase the tax as the income increases.

Mr. GARNER. And after they reach an income of \$50,000, you would take practically all of the income, would you, allowing the man who had the income enough money to support his family, and giving the balance to the Government?

The CHAIRMAN. You do not want to apply it to the cattleman, do you?

Mr. LASATER. Yes, sir. Under that suggested arrangement I would frequently pay \$150,000 to \$200,000 tax, and there is nothing that would give me greater pleasure than paying that tax during this war.

Mr. GARNER. That is very patriotic of you. If I get your idea it is that in levying the excess-profits tax a certain exemption, we will say of 8 per cent, would be given to your business under this bill?

Mr. LASATER. Yes.

Mr. GARNER. Your idea is that the producers of the country should be put in a special classification; and the term "producers" as you would construe it would include the farmer and the cattleman?

Mr. LASATER. Those are the only ones it would apply to.

Mr. GARNER. And you would have a provision put in the bill whereby those producers would be given a greater exemption than the merchant and the manufacturer or the banker on his capital invested with regard to the excess-profits tax?

Mr. LASATER. Considering the situation as applied to the country as a whole, I think that would be justifiable from the national standpoint.

Mr. STERLING. May I ask you a question on that point? Would it require an 8 per cent exemption to farmers to accomplish that? The farmers in my section of the country are not making 8 per cent on their investment. Are they making 8 per cent in Texas?

Mr. LASATER. No, sir; for some years past we have not made 8 per cent.

Mr. STERLING. Then you will not have any excess-profits tax to pay at all as the bill now stands.

Mr. LASATER. I was not talking from an excess-profits standpoint; but my suggestion was to arrive at some given point, some given amount of income require to sustain industry, and start taxation from that point. I do not see any use discussing excess profits; excess profits are arrived at by figuring profits over a given period prior to the war; anything above that would be termed excess profits.

Mr. STERLING. The way that was fixed was, under the present law, to fix it somewhere between 7 per cent and 9 per cent.

Mr. GARNER. On capital invested.

Mr. STERLING. Yes. Do the farmers and cattle raisers of Texas make more than that on their investment?

Mr. LASATER. No, sir.

Mr. STERLING. Then you do not pay any excess-profits tax at all?

Mr. LASATER. No; from that standpoint we have no excess profits.

Mr. STERLING. Then it does not make much difference, so far as you are concerned, and I know it does not make much difference so far as the farmers in my section of the country are concerned, simply because they do not make the amount of the exemption.

Mr. LASATER. Yes; I understand.

Mr. STERLING. Now, such a provision would not help you any. Suppose we gave you 10 per cent, or 12 per cent, it would not do you any good, because you do not make what is exempted.

Mr. LASATER. Let me make this statement: Take the history of the semiarid country, the range country. In that country extremes follow each other, the bad years follow the good years; they come in cycles. Under the law of averages the good years come after the bad years. Now, it looks to me as if that section of country is the "best bet" that Uncle Sam has got, because we certainly have had several bad years behind us in the cattle business in that country. Now, there is a probability that if we can finance ourselves and keep the farms and ranches producing in that country, we will be able to make an excess profit, if you put the exemption at 8 per cent. I think that is one of the good bets you have to-day. Certainly, if you can judge the future by the past, that will be what will probably happen; we have some good years coming to us.

There is one other thing that I should like to mention here that does affect country production: I have heard you gentlemen discuss a tax on automobiles. Now, I am in no way interested in automobile manufacture or sale, but I do use automobiles, and I do think they largely affect the efficiency of the people as a whole; and it looks to me as if, when we have got to win this war by every man doing more than he has ever done before, it would be a mistake to limit in any way a man's efficiency; and of course if you lessen his ability or make it more expensive so that he is going to throw out of his organization the use of automobiles and attempt to use horse power, you would be lessening the efficiency of the directing minds of the country

that are engaged in agriculture—country production. I believe that would be a mistake. I thank you, gentlemen, very much for your attention.

The CHAIRMAN. Mr. Lasater, I do not think I quite understand the point you are trying to make; that is, what change in the present law you would have us make in order to accomplish what you desire.

Mr. GARNER. As I understand it, the main thing that was in Mr. Lasater's mind was to obtain some character of legislation that would enable the farmer and the stock raiser to get a rate of interest on the capital necessary to run their business in proportion to the rate that the merchant, the banker, and the manufacturer get.

The CHAIRMAN. What rate of interest do you have to pay the bank and loan companies now?

Mr. LASATER. From 8 to 10 per cent; the Government says that it averages a little less than 9 per cent, the country over.

The CHAIRMAN. How much is it in your State?

Mr. LASATER. In my State it is from 8 to 10.

The CHAIRMAN. Well, if I were a merchant in your State, and went to the bank to borrow money, how much would I have to pay?

Mr. LASATER. The wholesale merchant in the larger towns pays between 5 and 6 per cent.

The CHAIRMAN. What does the manufacturer pay?

Mr. LASATER. About the same rate.

The CHAIRMAN. And they charge you cattlemen from 8 to 10 per cent?

Mr. LASATER. Yes, sir; that is the usual rate.

The CHAIRMAN. Why is that? Do you not have as good security?

Mr. LASATER. We think so.

Mr. WHITE. Is there not some question of the security or protection to the lender of the money involved?

Mr. LASATER. Take it for a series of years, and I do not know of any paper that is better protected than cattle paper.

Mr. GARNER. Is not one reason for the difference in rate that the bank considers the account of the merchant and the manufacturer a little more important and desirable, because the cattleman has all his money in use; his account in the bank is not as permanent; he will sell his cattle; and for a short time he will leave a little money in the bank. Then he is out borrowing money again, and the result is that the bank looks upon the merchant and the manufacturer as better customers because they leave their money there, and therefore they get a better rate of interest?

Mr. LASATER. I think that would have something to do with it; yes.

The CHAIRMAN. Do you think that if the cattlemen should be allowed an exemption of 8 per cent on their cattle before the tax attaches it would be of any benefit to them?

Mr. LASATER. I do not think that exemption will assist the cattlemen in refinancing them.

The CHAIRMAN. Your trouble is not with regard to taxation; your trouble is in getting money.

Mr. LASATER. Yes; our trouble is in getting money.

The CHAIRMAN. Your trouble is to get the money to make those profits, so that there will be something for the Government to tax?

Mr. LASATER. Yes, sir; our trouble is to get the money. Now, let me make this statement, and I will not take any more of the time

of the committee: With regard to the rates of interest paid by the country producer and those paid by the manufacturing and mercantile industries, as I said, in the European countries, the farmer is on the same plane as to credit as the man who borrows thousands of dollars. Of course in France, Germany, Belgium, and Italy the farmer only has a small farm; as a rule the production is done in smaller units than in this country.

But there is a South American country, Chile, that in 1856 had great difficulty in financing farm production, and they created what they termed a bank of agriculture. I will not stop to describe it in detail; I will simply state the result; I will not attempt to analyze the bank at all. At that time country credits were commanding 8 per cent interest and up. In 1856 the Government undertook to supply the needs of the country producers at 8 per cent. They had to go to Europe for their money. To-day the agricultural industrial industry in Chile is doing business on a 5 per cent basis. The producers in this country, which has a banking wealth that no other country has, are still paying 8 and 9 per cent.

The CHAIRMAN. Has this distinction between manufacturing and commercial paper on the one hand and agricultural paper on the other always existed, or has it existed only since the war began?

Mr. LASATER. It has always existed.

Mr. MOORE. Could that not be regulated by State legislation?

Mr. LASATER. I suppose it is possible, but it is not likely that in this emergency the States will make any attempt to do it.

Mr. MOORE. They attempt to meddle in your affairs down in Texas, and it occurs to me that that whole matter would be in the hands of the State of Texas through its legislature. How is it possible that any State like Texas, which is supposed to be purely an agricultural State, a manufacturer can obtain an advantage in a bank over a farmer?

Mr. LASATER. I will not justify it at all.

Mr. MOORE. I say, how is it possible that it could be done under the laws of your State?

Mr. LASATER. I suppose, sir, that it is the custom of the country; the farmer has never been on a plane with a business man in this country as to a credit basis.

Mr. MOORE. Will you permit me to say that the members of your legislature are not all so alert as your Members of Congress? [Laughter.]

Mr. GARNER. Mr. Lasater, I want to say to you that your suggestions have had a good deal of the attention of Congress, not directly in the line you speak of, but the farm loan act is one of the provisions Congress has made for the farmers.

Mr. LASATER. Yes.

Mr. GARNER. Of course that character of legislation would be a banking proposition more than anything else. And I am sure that the Committee on Banking and Currency of the House would take great pleasure in giving you a hearing. We have one Member from Texas on that committee, Mr. Eagle; Mr. Glass is chairman of that committee.

So far as arranging for lower credits, or a lower rate of interest, or a better credit standard, as it were, for the agricultural interests, I am in fellow sympathy with you; but I do not see how we can arrange

it in a revenue bill, because we are not going to undertake to invade the province on the Committee on Banking and Currency in reporting our bill.

Mr. LASATER. Permit me to suggest this: Before you gentlemen devise a bill here that will affect the cattle interests in the West, will you go into the matter and see what the situation is? I do believe this is a matter of the greatest importance to the country at large. That is the great meat producing section of the country; that section of the country has more than one-fourth of the total cattle supply of the country.

I thank you gentlemen.

**STATEMENT OF MR. WILLIAM A. BRADY, NEW YORK CITY,  
PRESIDENT NATIONAL ASSOCIATION OF MOVING PICTURE  
ASSOCIATIONS.**

The CHAIRMAN. Mr. Brady, will you give your full name and address?

Mr. BRADY. William A. Brady, 316 Riverside Drive, New York City.

The CHAIRMAN. You are president of the National Association of Moving Picture Associations, are you?

Mr. BRADY. I am; and the association that I represent comprises every branch of the motion-picture industry. And as the motion-picture industry is rather a young industry, and many people have queer notions about it, it might be in order for me to explain what my association represents.

In the first place, we represent the producer, the man who takes the film; we represent the actor; we represent the director, who directs the motions of the actor in the film. Next, we represent the men who distribute the film after the film is made. Beyond that, we represent all the men who make the equipment necessary for the making of the film, for the original raw material of the film.

In fact, we represent probably 96 per cent of what is known as the motion picture industry of the United States.

At a meeting held yesterday in New York, we thought it was wise that all of the theatrical interests of the United States should present their case here this afternoon, so as not to bother you gentlemen any more than was necessary, and so as to put the case of all these entertainers, all of the theaters of the United States, in one whole.

And for that reason we have brought three men here: One who will talk to you about the admission ticket; one who will talk to you about the tax on the film, which we believe is manifestly unfair; and third, a gentleman representing the United Vaudeville Theaters of the United States, all of them, who will talk to you about another phase of the tax situation.

In a sort of a general résumé of the whole thing I will take a very few moments of your time.

Mr. MOORE. You do not represent the legitimate theaters, do you?

Mr. BRADY. I represent the legitimate interests also. The legitimate interests were also represented in this meeting yesterday; and I may state that I have been a legitimate manager for 30 years.

Mr. MOORE. Yes; I know you by reputation very well, Mr. Brady. Does this general aggregation include all the California companies?

Mr. BRADY. Yes, sir; it represents the Klaw & Erlanger interests, and it represents the Shubert interests, and therefore represents the entire legitimate interests of the United States.

Mr. MOORE. Then you are really speaking for 90 per cent of the profession?

Mr. BRADY. Practically. And we thought it necessary, especially as we have heard the noise around Washington during the last year—and I am sure the chairman of this committee will remember the fact that during the pendency of the last revenue bill the lobbies of Congress were crowded by gentlemen from all parts of the United States who had all sorts of ideas in regard to what taxation should be. As I say, we thought it necessary to appear here as a whole, as a unit, as an industry.

And I might say that we have been reading the newspapers recently. We read the remarks of a gentleman who appeared before this committee in the last 48 hours, who was honored by a column editorial in the New York Evening Mail last night. That gentleman—Mr. Emery—said, among other things:

If we would raise the price of those pictures to just double the amount of admission that the proprietor charges, instead of making the tax 10 per cent, make it 100 per cent, or double the admission, we would wipe out a lot of those pictures.

That will create a great reduction in the number of those who attend and will save a great deal of time of the people who are now patronizing these pictures, to the great detriment of their own interests and destruction of their morals and waste of their time.

With regard to the utterances of that gentleman, the New York Evening Mail says editorially:

We must all spend our evenings as Mr. Emery wants us to spend them. The father who used to spend his spare money drinking alone or with his boon companions, and who now takes his wife and children to the movies—he may now go back to his drink. It is nothing to Mr. Emery that the motion pictures represent the greatest contribution in history to the brightening of the lives of the masses.

I might go back a year and call your attention to the fact that the honored gentleman who now sits in the White House wrote a letter to me, as representing the motion-picture industry, in which he characterized the screen as the greatest medium in the world for conveying public information to the masses. A little later on he called upon the motion-picture industry to introduce into Italy, into France, into Russia, into Scandinavia, and into the Oriental countries, something that he could not do through the newspapers. I can quote him as saying that the screen speaks the universal language. I can say to you gentlemen that the screen reaches every portion of the world. That in the furthestmost water tank of the West, away down in Arizona, where you have to go through dust-covered deserts on a ramshackled old stage coach, and where you get far away where they have no newspapers, no country journals, you can go there and you will find the screen.

And therefore, standing here and representing the screen of the United States, I hope I will not bore you when I call your attention to the service that the screen has delivered to this country during the 12 months of the present war.

I call your attention to the fact that the "Four-Minute Men of America," and there are thousands of them, have had a public rostrum every night for 10 or 15 minutes, or as long as they wanted. I will call your attention to the compliment paid to the screen by

Secretary McAdoo in the first, second, and third liberty loans. I call your attention to the fact that in the third liberty loan Secretary McAdoo did not use the newspapers—he used the screen. I call your attention to the service rendered by the screen to the Red Cross.

And we do not stand here expecting to be exempted from anything. We do not want to do our bit—we want to do our chunk.

But we want just a square deal. We do not want to come in here, as we did six or eight months ago, and listen to one of your favored industries attack, as did the representative of that industry at the top of his voice, the chewing-gum and motion-picture industries. We have read in the newspapers about some crank that comes here and attacks this industry, knowing nothing whatever of what he is talking about. He talks about an industry that may teach the word of God some day. He talks about an industry that some day will put upon the screen the operations of your great industries, an industry by which your boys will be taught in the surgical schools, the dental schools, and all the schools that teach the great arts, and particularly the great operations of great doctors. The screen will teach those things. The day will come when every school in the world, and every classroom in the world, the kindergarten and the highest class in Harvard University, will teach by the screen.

Therefore we resent, as a respectable profession, as a respectable industry, which pays its taxes and works and frets and dies for its Government, that it should be criticised by cranks.

So, to come down to the meat of what I wish to say, I ask, and I do not object to being heckled either, as our friend from the newspaper association was heckled this morning. If any of you gentlemen desire to ask me any questions, I am willing to answer them.

So, in conclusion, if you do not want to ask me any questions, I would like to introduce to you Mr. P. A. Powers, who will next address you.

Mr. RAINEY. Are we taxing you too much, in your opinion?

Mr. BRADY. Shall I go into that question?

Mr. RAINEY. Yes; we want to know what you think about it. You have told us about the importance of the screen; we agree with you on that proposition. You have not told us why it should not be taxed.

Mr. BRADY. We want to be taxed.

Mr. RAINEY. Yes, that is what we want to know about.

Mr. BRADY. I am glad, Mr. Rainey, that you have called my attention to the fact that I had not spoken specifically on that. We ask that the admission tax should not be raised.

Mr. RAINEY. That is what we want to hear you discuss.

Mr. BRADY. Yes, I understand. In the excitement of the moment I forgot. You tax the admission 10 per cent. That means that if you go to a theater where the price of admission is \$2, you pay 20 cents war tax for each ticket; where the admission is \$1, you pay 10 cents tax for each ticket; where it is 10 cents, you pay 1 cent tax. I believe the 5-cent theaters are not taxed.

Mr. STERLING. The theaters where the general admission is 5 cents is not taxed at all, is it?

Mr. BRADY. No, sir; it is not.

Mr. STERLING. I am sure it was the intention of Congress to tax the 10-cent theater 1 cent on an admission ticket; but it seems to

be true that if that 10-cent theater sells tickets to children under 10 years, or under 5 years, or whatever the age is for 5 cents, the law seems to be construed so that that theater has to pay a 1-cent tax on each of those 5-cent tickets sold to children.

Mr. BRADY. No, not exactly; they construe it so that in any theater where the entire admission is 5 cents there is no tax.

Mr. STERLING. That is correct.

Mr. BRADY. But if the theater divides the prices, they have to pay the tax on the whole amount of tickets, including the 5-cent tickets as well as the 10-cent tickets.

Mr. STERLING. Do you think that is right?

Mr. BRADY. No; so far as we are concerned, we are willing that you should tax the 5-cent theater.

Mr. TREADWAY. You are willing that we should tax the 5-cent theaters?

Mr. BRADY. Yes.

Mr. STERLING. But it is not fair to tax the 5-cent tickets at the 10-cent theater, and not to tax the 5-cent ticket at the 5-cent theater.

Mr. BRADY. So far as we are concerned, we are willing that you should tax the 5-cent theater.

Mr. STERLING. So as to make it even?

Mr. BRADY. Yes, sir; to make it even. But as to the 10 per cent tax—you asked a question of Mr. Farrell this morning, and you cornered him by bringing out a list of publications and asking him individually which papers had lost money; and he could not answer you, except in the case of Every Week. But I can answer you, with regard to our industry. You tax us 10 per cent. It took us four months to partially recover from that tax, in the larger cities. In the smaller cities, and in some of the semilarge cities, they have not recovered from that.

Mr. TREADWAY. Just what do you mean by that, that it took them four months to recover?

Mr. BRADY. We figure that the business was hurt 25 per cent, save in exceptional cases. Of course, if you go to New York and take the larger motion picture theaters, like the Strand or the Rialto, or other large theaters where throngs pass the doors all the time, or a theater on State Street in Boston, or a large theater in San Francisco, or Dallas, Tex., it is true that those theaters have not been hurt so much.

But those theaters and others like them constitute a very small part of the motion picture business.

The CHAIRMAN. Well, take the month of May last, did not the attendance in motion picture theaters increase greatly over the attendance in the month of May, 1917?

Mr. BRADY. I am not acquainted with that fact.

The CHAIRMAN. Have you anybody present who is acquainted with that fact?

Mr. BRADY. I do not think we have.

The CHAIRMAN. I think there has been a large increase, and I think the Government books will show it. I know we are getting a larger tax return now.

Mr. BRADY. Yes; you are right as to that. I was just going to say that the amount derived from the tax on theaters was just twice

as much you gentlemen thought it would be, and for that reason we ask that they should not be raised.

The CHAIRMAN. Another reason for the smaller attendance last winter, is that this last winter was one of the coldest and most rigorous that we ever had.

Mr. BRADY. That was only in one month.

The CHAIRMAN. Was it not that factor that reduced the attendance considerably, and not the tax that was imposed?

Mr. BRADY. I will say that from about January 1 to January 20 the weather conditions were bad.

The CHAIRMAN. We had bad weather from January 1 to April 1, here in Washington.

Mr. BRADY. It was not that way in other large cities. And then you must remember that certain sections of the country did not suffer as much as the eastern section.

Mr. TREADWAY. Was not another reason for the small attendance last winter the fact that the Fuel Administration closed the motion theaters on certain days?

Mr. BRADY. Yes; but we made more money by being allowed two performances on days when the restriction did not apply. We were helped by that rule of the Fuel Administration, and not hurt. It helped us, because Monday naturally became a holiday and everybody went to the motion picture theaters, and we were allowed to close up on Tuesdays, instead of Mondays, as other businesses did.

The CHAIRMAN. Well, whatever caused the decreased attendance along the first of the year, whether it was the tax or the weather, you think you recovered from it, do you?

Mr. BRADY. Yes, sir. But if you do increase that tax, as we have heard rumors of, on \$2 seats, 10-cent seats, and \$6 seats—on everybody—we do believe that you are going to put a dent in us, and that you are going to reduce by an enormous amount the money that you are getting now in taxes.

The CHAIRMAN. What proportion of the 10-cent moving pictures shows increased their admission fees to 15 cents after this tax went into effect?

Mr. BRADY. A very small percentage, Mr. Chairman.

The CHAIRMAN. We do not know. There is no way to find out, except from you.

Mr. BRADY. We very much resented that, and we would be very glad if this committee would prevent that being done. We believe that nobody should be permitted in this country to put on a price which includes the tax. We think the tax should be plus the price, so that there would be no hanky-panky business about it.

Mr. MOORE. That is the way you do it now?

Mr. BRADY. No; a lot of gentlemen put it up to 15 cents, including the war tax. Such a man is taking advantage of the legislation in order to beat his neighbor, who has lived up to the letter of the law.

The CHAIRMAN. And to get an extra 3 cents.

Mr. BRADY. Right you are, and that, gentlemen, should be curbed.

Mr. TREADWAY. May I ask—I did not get quite clear your reason for the reduction of business—whether you actually had figures that your business had been reduced 25 per cent by the tax?

Mr. BRADY. That is the truth.

Mr. TREADWAY. For how long?

Mr. BRADY. Somewhere about 3 or 4 months and it gradually climbed back.

Mr. TREADWAY. The people gradually got accustomed to it?

Mr. BRADY. My business was to sit in the box office and study the people as they came in. When they came in to pay the 20 cents some would refuse to do it, but when they saw their neighbors doing it they gradually got into the habit of it, but if you raise the tax further, and if a man has got to pay 30 cents for a dollar ticket, as I read in the newspapers you are talking of raising it 15 per cent, he has got to pay 30 cents for a dollar ticket. You are going to get a lot of trouble and hurt us, and we ask, not for any exemption, though we have not charged for what we have done as other industries have done; our pictures are going to the front, our Mary Pickfords, our Chaplins, and our Fairbanks have toured the country from one end to the other, and we are devoting ourselves to the good of the country, and we ask, gentlemen, do not hurt us any more. Let us go along a few months—the President does not wish to make us a nonessential—but, if it is necessary, we will be patriotic and accept the proposition and stand anything, give 100 per cent from our earnings in this crisis, but at this time it is not necessary, and as we are doing good in a time like this you gentlemen do not want to hang crape on the Nation, and in my particular industry the pictures are amusing boys on battleships and in cantonments, I say that our little screens and our little pictures are a public necessity.

If you will allow me to go to the other proposition, we are the only industry in the United States that is taxed twice, and I am going to let Mr. Powers give you that because he is more expert than I am on this question. We pay a tax on admission and on our film you tax us at three-fourths of a cent for the film, that is the material used in production. I claim that that is not being done to any other industry in the United States.

Mr. MOORE. Before you go to that, the Treasury Department estimates that receipts for admissions for 1918, the current year, will be \$28,823,000, and it figures that we ought to collect from admissions in 1919, the year for which we are now legislating, \$54,800,000. That, of course, would double the tax on admissions.

Mr. GARNER. No, that it is not upon the theory of doubling the tax for admissions, but that there will be double the attendance under the present proposition.

Mr. MOORE. It would be double the amount.

Mr. GARNER. Double the number of gross receipts from attendance at the same rate.

Mr. MOORE. The Government figures that it wants to get \$54,000,000 in 1919; that it got \$28,000,000 in 1918.

Mr. BRADY. But the Government only participated for 3 months.

Mr. MOORE. They were figuring on the fiscal year ending June 30, 1918.

Mr. CRISP. These gentlemen are estimating what they expect to get, under the present law, what the present law will raise for the next year.

Mr. MOORE. If it is to double the taxes; it would mean that we would expect to get \$100,000,000.

Mr. BRADY. You would get one-half less because you would put most of them out of business.

Mr. MOORE. That was the point that I was bringing out. You are facing this problem of revenue just as we are. Mr. Brady, of course, you do not object to a man coming here any more than you object to pointing a moral and fully stating his side of the case. There have been one or two gentlemen who opposed moving pictures *per se*, and I don't wonder that you are offended at such, but I want you to know, as I want everybody else to know, that it has been the policy of the chairman of this committee to give a fair, square hearing to everybody and not to heckle anybody. He used a line of inquiry to ascertain facts that had not been developed by the witness. I mention that because we do not want to be unfair to anybody that appears and deny anybody a hearing, and I want to say for the chairman that up to the present time he has not denied anybody a hearing, and I understand it to be the policy of the committee to be perfectly fair to everybody. You are in a reasonable business that produces a substantial revenue, and from that business it has been said that twice as much will have to be developed for the next year with the problem we are facing.

I am glad that you quoted the President, I am taking some liberties with the chairman in doing this—because the President, who has told you these things about the value of moving pictures—and I heartily agree with it—has indicated that we have got to get this double taxation, and Secretary McAdoo has said that he has got to have that money. What I want to know is this, if we are compelled to put this double tax on the pictures next year, on the moving picture shows next year, whether the system that has already been divided in moving picture shows of making a charge plus the tax is satisfactory to the industry.

Mr. BRADY. Yes; but I earnestly beg, as the second oldest man in the theatrical or entertainment business in the United States—and if anybody could be called an expert I am, as I have been in every part of the entertainment business—

Mr. MOORE (interposing). Everybody recognizes that from East Lynne days down.

Mr. BRADY (continuing). I think as a patriot, a good Irish-American, I think that you would make a fatal mistake if you raised the taxes. Those words are given to you on my honor and according to my best knowledge. Instead of getting \$58,000,000, you would put 40 per cent of the theaters out of business.

Mr. MOORE. For one, I do not want to put out of business a single moving-picture show that is conducting itself properly to-day.

Mr. BRADY. I declare, Mr. Moore, that you will.

Mr. MOORE. You take a place like the Columbia Theater here in Washington, which charges 25 cents plus 3 cents. There isn't any doubt to any observer that that place has been doing an extraordinary business.

Mr. BRADY. Tax profits then.

Mr. MOORE. I want to be fair with you, that is a successful place.

Mr. BRADY. Yes, sir; I know what it makes.

Mr. MOORE. On the one hand I will admit that if you take a car here, when you can get a seat, in Washington, and will go to the outskirts you will find several places that have closed the doors and

the windows are barred and they have moved away because of no business. Now, I say that there are two cases in point, one of which sustains your contention. We do not want to put anybody out of business, and you contend that some places were put out of business by this law, because of the tax, but, on the other hand, some of the other places are doing more business.

Mr. BRADY. Take a concrete illustration, which you gave, the Columbia Theater. Now, doesn't the Columbia Theater, let us say that it makes \$75,000 a year, isn't the Columbia Theater, under the excess-profits tax, going to pay a large part of its earnings?

Mr. MOORE. Yes.

Mr. BRADY. Why put a tax on the thing that is going to queer the revenue, that is going to reduce that? Why not put it on the profits?

Mr. RAINEY. That is an argument applied to all taxes, why not put it on the profits, and in the last analysis that means a tax on profits, and nothing else. It applies to other businesses the same as this.

Mr. BRADY. But if what I say is true, that additional tax will destroy a large number of tax producers, and instead of having \$58,000,000 you may put 40 or 50 per cent out of business, because the general notion of the entertainment business at present is this, the expert notion, that if there are going to be any more liberty loans, and if we are going any further into this war—

Mr. MOORE (interposing). There will be.

Mr. BRADY. If the entertainment business is going to be put down—now the only entertainment business that keeps up in the summer time is baseball. Baseball and the circus are feeling the effect of this condition, and motion pictures will be the next to feel its effects. Secretary McAdoo has announced that the next loan will be 4½ per cent.

Mr. MOORE. Are you right about that?

Mr. BRADY. It has been announced.

Mr. GARNER. I think where you got that is that it was announced that temporary certificates would be 4½ per cent.

Mr. BRADY. Our wise financial columns last night so stated.

Mr. MOORE. I think the effect of that statement was that the temporary certificates would be 4½ per cent.

Mr. WHITE. Were you speaking of the higher-priced entertainments when you made the statement that there was a falling off of 25 per cent due to the tax, the screen business or all business?

Mr. BRADY. All of the business.

Mr. GARNER. How do you reconcile your statement, Mr. Brady, with the estimate of the Treasury Department? You ought to know, probably, more about it than they do, but we have to depend on their figures, and they say that for the year 1918 we will collect from this tax \$28,623,000.

Mr. BRADY. They only had a tax on us for three months for 1918. How can they figure that?

Mr. GARNER. These are the figures that they give, and they figure for the year at the same rate for 1919 we will get \$54,800,000, or nearly twice as much as we got under former conditions.

Mr. BRADY. That is an impossible calculation, because they knew nothing about our receipts until the 1st of November last year. It

is not based upon facts, notwithstanding it may have been made by the Treasury Department. The Treasury Department knew nothing of the theater business of the United States until November, last year, when the tax bill went into operation on the 1st of November of last year. For the first time of my life the Government was in touch with the receipts of the theaters of the Nation, and therefore that calculation is impossible, unless they base it upon the receipts for those three months.

Mr. RAINEY. Was the effect of the tax to cut down attendance?

Mr. BRADY. It was.

Mr. HULL. This estimate makes the receipt of admissions for the fiscal year 1918, which ends June 30, 1918, \$28,000,000 and for the full year \$54,000,000.

Mr. BRADY. Well, as I said before, in my opinion if you raise the tax on the admissions you will not get \$54,000,000.

The CHAIRMAN. What is your estimate of the tax paid by the moving picture shows and the amount collected from all these items?

Mr. BRADY. As the moving pictures have driven the legitimate theater out of about 65 per cent of the United States—where we used to play down in North Carolina, Raleigh and some of those towns, we do not send a company to Raleigh any more. We are wiped out in Raleigh, Dallas, and Fort Worth. Texas used to be one of the best legitimate places in the United States. We used to make thousands and thousands of dollars there. But the moving pictures have contributed most of the tax.

The CHAIRMAN. I should think more than nine-tenths of it.

Mr. BRADY. Yes; and the motion-picture tax keeps going everywhere.

Mr. RAINEY. If attendance keeps increasing the tax has not affected it, has it?

Mr. BRADY. Yes; it has.

Mr. RAINEY. Don't they pass it on, generally?

Mr. BRADY. The motion picture does not represent the high grade of intelligence. The motion picture is a melting pot. If you put an additional tax on it, your attendance will fall off.

Mr. GARNER. Do you admit that it is legitimate for us to tax the business for the greatest amount we can get?

Mr. BRADY. Yes, certainly; I think every business should be taxed to the limit in this emergency.

Mr. GARNER. Then, you are willing to admit that we are justified in levying the greatest tax that we can get?

Mr. BRADY. Certainly; you have as much right to take my money as my son. You can take the money and give me the son.

Mr. MOORE. One point that has not been passed upon—that is, the tax upon the consumer—the person who pays the admission. In most instances this is a tax on those who do not pay direct taxes like excess profits and income taxes, and this is about the only way many of them contribute to the revenue of the Government at all.

Mr. BRADY. Right, and I want to tell you one thing you did in that bill, whether you intended it or not, you taxed every deadhead. That was bully.

The CHAIRMAN. We intended to.

Mr. MOORE. We intended that.

Mr. GARNER. You are glad of it?

Mr. BRADY. I love to see the deadhead put out.

Mr. RAINEY. Since you mention that, I did that myself.

Mr. MOORE. The President was right and you are right, when you say that this country ought not to go into mourning because of the war. You speak of the boy going into the trenches and having amusements on the other side. Some amusement ought to be left here for the wives and children, even for the widows and orphans. I say that merely in passing.

Mr. BRADY. May I say one more thing, and I have communicated with any number of Senators and Representatives about it—you should put this in the next tax bill. It is impossible for us to pay the tax for a thousand soldiers as we have been doing every night in New York. You force these boys to pay a tax. In the next tax bill the uniform should not be taxed. My wife has conducted a series of entertainments in which all of the theaters have guaranteed to give a performance, and the uniforms are taxed. Take the Anzacs. While they were in New York the English Mission called up and asked me if we would not put them into theaters, 400 of them, and they were forced to pay a tax. That forces our boys to give 10, 15, or 20 cents, and I know in some instances the poor devils from Kentucky were not able to pay, and I met one one Sunday who did not know the way from Forty-seventh Street to Thirty-seventh Street, and he did not have the 20 cents to pay the tax, and I think they ought not be taxed.

Mr. RAINEY. I hope that can be done.

Mr. TREADWAY. In case there is an increase in the rate, will the 10-cent place or the \$2 place be worse affected by the increase?

Mr. BRADY. Well, he who can pay \$2 can pay \$2.60. The person who goes to a 10-cent theater, why the copper counts. In New York some people pay \$5 and \$6 to see the Ziegfield Follies. Those people can afford to pay taxes. The gentleman who occupies a box at the Metropolitan Opera House and pays \$5,000 or \$6,000 a year can afford to pay a tax.

Mr. HAWLEY. Would you favor a graduated tax?

Mr. BRADY. I would right up to the top price. I would tax the fellow who pays \$20 for the world's series, and I would tax him high and the fellow who pays \$50 for a prize-fight seat would also pay high.

Mr. TREADWAY. You are willing to be one of those?

Mr. BRADY. I get in free. I will introduce Mr. Powers.

#### STATEMENT OF MR. PATRICK A. POWERS, OF THE UNIVERSAL FILM CO.

Mr. POWERS. Mr. Chairman, I was down here last year when the Committee on Ways and Means were levying a tax on film. That is the footage tax, we call it. I had about 10 minutes with Mr. Kitchin and about half an hour with Mr. Rainey, but the schedules were made up, and I take it that when the schedules were made out, or when the schedule applying to the footage tax was made out the Committee on Ways and Means did not understand the modus operandi of the business.

I have been in the producing end of the business; that is, the making of the pictures, the putting of the pictures on the film, and the distribution of that film, and I am in no way connected with the

exhibition of the pictures. I simply produce and distribute to the theaters.

Now, there was a tax of one-fourth of a cent per foot placed on unexposed film before the producer purchases the film. There was a tax of one-half cent per foot placed on that same film after we got it and exposed the film to light. Now, in order to be able to get along with it, I thought I would bring you samples of the film, so as to give you an idea of the technical side of the motion-picture business. That is a blank film [indicating] without any emulsion on it, and that the film with the emulsion [indicating] and also the film with a picture on it [indicating].

This tax, I presume, was intended as a tax on motion pictures. There is no tax on the blank stock, that is the stock without any emulsion on it, but when the coating is put on that film there is a tax of one-fourth of a cent per foot placed on it.

Mr. GARNER. One-fourth of a cent per foot on which one?

Mr. POWERS. On the coated film, on this one [indicating]. It is purchased, and the man who puts this coating, when he puts this coating on and delivers it to us, there is one-fourth of a cent per foot. After we expose the film to light this one-half cent goes on.

Mr. MOORE. Before you go on, won't you explain the technique of this thing? You have given us the samples so that we will understand. Won't you explain what a moving picture film is positive, etc.?

Mr. POWERS. When a picture is made, it is just the same as when you go into a photograph gallery and have your picture taken. We stage the story in continuity form, and photograph it. It is a photographic process. We take the sensitized film.

Mr. MOORE. Which is the sensitized film?

Mr. POWERS. The opaque one. That is before sensitizing [indicating]. We expose it to the actors or the stage scene, or educational picture, whatever we are making, and we get a picture on the negative. Now, the negative only differs as to speed of the emulsion. There is no difference as to the film, except the difference as to speed, because the negative film has to have a more sensitive emulsion on there in order to take the impression of the scenes. That negative is developed. In the continuity of the story there is a lot of waste. For a 5,000 foot picture, a five-reel picture, that lasts in exhibition about an hour and a half, it requires about 45,000 feet of negative to photograph that picture, and some directors it may be will use 75,000 feet and will secure from that 5,000 feet of good negative for a picture.

Mr. MOORE. How long would that run in time?

Mr. POWERS. About an hour and a half. Now, all of the negative film that is used in the taking of a production is waste. It goes into the waste pan.

Mr. TREADWAY. About 9 feet for 1, if you actually use about 45,000 feet to secure 5,000 feet?

Mr. POWERS. Yes.

Mr. TREADWAY. About 1 foot out of 9?

Mr. POWERS. Yes, sir. Now, then we take that negative and we print our positive upon it. We also print up a sample of course of the negative of everything that is made, and from the negative we make a positive, and from this positive we sort out what we want

by projecting it on the screen. After we have the positive eliminated, we have the nucleus, the base of the story. We then cut down our negative to that, and then we have in the negative all that corresponds to the scenes in the positive, thereby getting a negative from which we can make a number of copies.

The CHAIRMAN. Which one of these is the negative?

Mr. POWERS. None of those, but the negative film is the same as the opaque before it is developed.

Mr. MOORE. Which one contains the story as it is thrown on the screen?

Mr. POWERS. The black one.

Mr. MOORE. This third one?

Mr. POWERS. Yes, sir.

Mr. MOORE. You say 45,000 feet or 75,000?

Mr. POWERS. Seventy-five thousand feet in many instances to take a 5,000-foot picture. Those 5,000-foot pictures run about an hour and a half.

Mr. MOORE. For purposes of illustration, I want to get the tax that is collected on a 5,000-foot picture.

Mr. POWERS. That 5-reel picture, or film, has been taxed, after calculating waste, about nine-tenths of a cent per foot. And there is one-fourth of a cent on the film before we get it.

Mr. STERLING. That would be on the 75,000 feet?

Mr. POWERS. On all of the negative film we pay one-fourth of a cent as it comes from the manufacturer of the raw stock. There is only one concern who makes it. On the raw stock one-fourth of a cent from the manufacturer of the film.

Mr. MOORE. Only one manufacturer?

Mr. POWERS. Yes, in this country, the Eastman Kodak Co. They simply add that one-fourth of a cent on the price and pass it on to us.

Mr. MOORE. And if the thought had been to tax the Eastman Kodak Co., which has a monopoly in the manufacture of these films, that purpose has been defeated by passing the tax along to the consumer of the film.

Mr. POWERS. To the user of it.

Mr. MOORE. From the manufacturer to the user?

Mr. POWERS. Yes, the user.

Mr. MOORE. We will call it the consumer. In giving a show which runs for an hour and a half, you would use up 45,000 feet of the film. How much is purchased from the Eastman Kodak Co.?

Mr. POWERS. On the negative stock when photographing the production we use possibly from 40,000 to 75,000 feet of negative stock for photographing the production. In other words, there sometimes is a scene that will require half a dozen pictures of the same scene in order to get the particular effect, or the director may not want to take the chance of getting his people together again, and they take a scene a half a dozen times.

Mr. MOORE. And all that time you are wasting film for which you have to pay taxes?

Mr. POWERS. Yes.

Mr. MOORE. So that all must be counted in before we get down to the 75,000 feet.

Mr. POWERS. The 5,000 feet.

Mr. MOORE. The 5,000 feet that goes to make the finished picture thrown on the screen?

Mr. POWERS. Yes, sir.

Mr. STERLING. And that 75,000 feet pays a tax of \$187.50 at one-fourth of a cent a foot.

Mr. POWERS. Yes, sir.

Mr. STERLING. How many times can one of those films be shown?

Mr. POWERS. We figure the average life of the film is about 50 or 55 days.

Mr. STERLING. That tax is only paid once?

Mr. SLOAN. How many times a day?

Mr. POWERS. Three or four times.

Mr. SLOAN. One hundred and fifty to two hundred times.

Mr. POWERS. Yes.

Mr. STERLING. That tax is paid once?

Mr. POWERS. Yes, sir.

Mr. STERLING. Then when it is produced and the waste is cut out there is one-half a cent on 5,000 feet?

Mr. POWERS. Yes, sir.

Mr. STERLING. That would be \$25. That would be \$212.50, then on an hour and a half picture.

Mr. POWERS. Yes, sir.

Mr. STERLING. You say that is good for about 50 days service, or 55 days?

Mr. POWERS. Yes, sir.

Mr. GARNER. How is it that the Eastman Kodak Co. has a monopoly in the manufacture of film?

Mr. POWERS. It has a monopoly due to the fact that they were the first in the business, and the laboratories have accustomed themselves to the use of the Eastman Kodak film—that is, the photographer, the man who puts the film into the tank, and he knows about what he is going to get on the film. It is a standard product and they do not like to change the material on which they photograph their acts. In other words you have a camera—we will say you have an Eastman Kodak—and you are accustomed to the use of the Eastman product in the camera.

Mr. GARNER. In other words, the good will of the business is the principal asset?

Mr. POWERS. Yes, sir.

Mr. GARNER. His reputation on his film is the principal assets?

Mr. POWERS. Yes; but of course he has profits, also, and is making considerable money on the films.

Mr. MOORE. Has the price of film advanced to the user?

Mr. POWERS. No, sir; only the one-fourth of a cent on the cost of the raw material; but the point I wish to make is that there is practically nine-tenths of a cent a foot that we pay in making the picture. The film is not a product which we make. We take that and place our picture on the film, in other words, to give it a simile, a shadow. We do not make the film, we expose it to the image, and the image goes on the film. Now, we are not taxed on the picture which we make. We are taxed on the container of the goods.

Take my own company, the Universal Film Co. We produce and publish weekly a great number of news articles, news reels, magazine reels, educational film, etc., from which there is a very small return. Educational films do not bring in anything; that is, in the way of profits. The news reels bring in a very small return. In fact, since

the war started, the returns on the news reels have been wiped out, and since this tax was put on, we have made no profits on the news reels. We figured, on the news reels, that the pictures do not cost very much. It is sent in from our correspondents, we assemble it together on this reel, and send it out. We rent it at a very low figure; as low a figure as we can rent it for during the life of the film. The life of a news reel is practically about 25 days, the limit to which it will last as news.

Mr. MOORE. These are pictures showing current topics?

Mr. POWERS. Yes, sir.

Mr. MOORE. Does the Government induce you to show those films?

Mr. POWERS. We have been cooperating with every department of the Government in the matter which we put on these news reels.

Mr. MOORE. Are you on cordial terms with the Government with respect to the news reels?

Mr. POWERS. Yes, sir.

Mr. MOORE. I observe many patriotic pictures thrown on the screen—these features, Washington scenes, pictures of the President, members of the Cabinet, flags, moving ships, etc. Do you do that voluntarily?

Mr. POWERS. We do that voluntarily; but it is all viséed by Mr. Creel.

Mr. MOORE. I was going to ask you about that, because an application was made for an appropriation by Mr. Creel's bureau, and I wanted to ask you whether you had been paid anything by the Government or by Mr. Creel's bureau for this service, or whether it was done at your own expense.

Mr. POWERS. Every patriotic picture we have issued since the war started, every propaganda picture, has been without charge to the Government; all free.

Mr. MOORE. Does Mr. Creel make any suggestions to you as to the kind of films that should be used?

Mr. POWERS. If we happen to make a picture of some Army activity—launching of a boat, or photographing of a man, photographing of an airplane, or making a flight in an airplane—we can not release that picture without the consent—we have not released any pictures of that kind without the consent—of Creel.

Mr. MOORE. He exercises a censorship over that picture?

Mr. POWERS. Yes, sir.

Mr. MOORE. To what extent does he pay the expenses that you go to in photographing and following up pictures of that kind?

Mr. POWERS. Mr. Creel does not pay any expenses to us for any work which we do. This work is all voluntary, at our own expense. Our men, our photographers, and our laboratories are at the disposal of Mr. Creel without any charge.

Mr. MOORE. You are entirely right about that; that that sort of work, that patriotic work that is thrown on the screen of a moving-picture show is approved by Mr. Creel as a representative of the Government, and is at no expense to the Government, but is at the expense of the film company?

Mr. POWERS. Correct.

Mr. TREADWAY. Isn't there a certain kind of work of that nature, pictures taken by the Quartermaster Department.

Mr. POWERS. Pictures taken by the Quartermaster Department, I do not understand what they are, but I know the Signal Corps, as I understand it, when the war started, called for photographers.

Mr. TREADWAY. I meant to say the Signal Corps.

Mr. POWERS. The Government sent over to France a number of photographers, and those men are photographing the movement of troops in France and sending them back to the Signal Corps. Mr. Creel has those pictures and we do not have access to those pictures.

Mr. MOORE. Take a show like Pershing's Crusaders, which is being exhibited under Government auspices, were those photographs taken by your concern, or under his auspices?

Mr. POWERS. Some of the contents of that picture were taken over in France, because I see Gen. Pershing was photographed with Secretary Baker, so those were taken in France, and sent over here to the Signal Corps, and I presume a copy sent to the Creel committee. Part of the picture was photographed in this country and was put on by the governor of Michigan. I think he was interested in the original pictures. The other part was the up to date part of it, Pershing's Crusaders at the front. They were the boys at the front, and were photographed by the Signal Corps photographers in France, and forwarded to this country and used by Mr. Creel.

Mr. MOORE. Is there any return to the company through the sale of these films?

Mr. POWERS. The returns on the sales of our news weekly has been practically wiped out.

Mr. MOORE. Has not been profitable?

Mr. POWERS. No; that is due to the fact that we have been releasing a great number of copies, wider propaganda and greater distribution with a quicker distribution of everything which the Government needed.

Mr. MOORE. And if you are doing that to stir up public interest in the war it certainly seems to be a highly patriotic movement. If the Government is bearing the expense of this in any way, and we are making appropriations to Mr. Creel, it is important that we should know it.

Mr. POWERS. The Government does not bear any expense of any propaganda pictures which the industry releases. We spend nine-tenths of a cent per foot on every foot of film that is released. In addition to this we have been furnishing films to cantonments, to the Navy, and to the various war departments, base hospitals, with practically no cost except shipping and handling. We have been doing this without any charge. We have eliminated our regular charges at cantonments and are furnishing them practically free at cantonments, except the cost of shipping and the handling of the film.

Mr. MOORE. The use of film in a cantonment is quite expensive, is it not?

Mr. POWERS. It is.

Mr. MOORE. A heavy demand for shows.

Mr. POWERS. Yes.

Mr. MOORE. And that you are doing without profit?

Mr. POWERS. No profit. We do not get the cost of the goods, because all we are charging is the physical handling of the pictures.

Mr. MOORE. Are you taxed on all those things?

Mr. POWERS. Yes, sir.

The CHAIRMAN. You get a return from the motion-picture men. For instance, you prepare one of these Creel pictures, then you sell that reel don't you, to moving-picture shows and get your money back that way?

Mr. POWERS. We get our returns from the rentals to the motion-picture theater only.

The CHAIRMAN. Really the spectators and visitors of moving-picture shows are paying for it finally.

Mr. POWERS. You are right, sir.

The CHAIRMAN. The Government, as I understand, from the Creel fund, or in any other way, does not pay you for your trouble.

Mr. POWERS. No, sir.

Mr. TREADWAY. How are the pictures taken by the Signal Corps actually put in the hands of theater producers?

Mr. POWERS. Heretofore the pictures taken by the Signal Corps were sent to this country and turned over to the Red Cross, or the returns from those pictures were turned over to the Red Cross. The news weeklies purchased these pictures when they were returned from France, and this money was turned over to the Red Cross.

Mr. TREADWAY. The money that the picture has paid?

Mr. POWERS. The money that the publisher of the news weekly paid in the motion-picture houses. The publishers of the news weeklies—there were probably 400 feet in 1,000 which would be war pictures—that picture was published with the Creel committee's approval, and they in turn turned the money, as I understand it, over to the Red Cross, or we paid the Red Cross direct, I am not sure which. I know we paid \$1 per foot for the negative, and we simply printed one print from which we could make a negative; that is, a duplicate negative.

Mr. TREADWAY. The Creel bureau established a price of \$1 per foot to the photographer?

Mr. POWERS. Yes, sir.

Mr. TREADWAY. And then he in turn charges the house?

Mr. POWERS. We in turn printed and made positives, say probably 150 prints, and distributed them all over the country; that is, our company would make 150 prints, another company 150, and another 100, and so on, probably three or four concerns in the business using news weeklies. All those concerns would take this film and pay for it, and release it all over the country. I think we have been doing that certainly. We have been deprived of the privilege of purchasing this film because the Creel committee has made a contract, and out of the entire industry they have selected one particular concern to make a contract with for the exclusive distribution of the war pictures, and the pictures of the boys at the front.

Mr. TREADWAY. Gives one concern a monopoly?

Mr. POWERS. Yes, sir.

Mr. TREADWAY. To supply the country?

Mr. POWERS. Yes, sir. Any concern that took that proposition ought to make a lot of money out of it by getting the monopoly. As we operated it, we hoped to sell and did sell at a very low figure. We did not make a very large amount of profit, but we got a wider distribution, got three or four times the distribution that one firm would get.

Mr. TREADWAY. I do not know that this has a direct bearing on the subject, Mr. Chairman, but I think the establishment of a picture monopoly is of interest. I brought out your reply to my question, and I am interested in what reason is given for the establishment of the monopoly.

Mr. POWERS. The reason as given was that the Committee on Public Information required primarily a large distribution of films, and also funds for the work of the committee.

Mr. TREADWAY. Did you say that that all goes to the Red Cross?

Mr. POWERS. Not since they have given the monopoly to one concern. Before they made this last arrangement, the cost of the film was turned over to the Red Cross.

Mr. TREADWAY. Is the concern that you represent prevented from procuring war pictures?

Mr. POWERS. We can not get a war picture except from the Creel committee.

Mr. TREADWAY. But they have in turn given it to one concern? That is if there are three or four distributors they give it to the rival concern?

Mr. POWERS. That points out the situation. I did not wish to make complaint.

Mr. MOORE. Mr. Treadway, did you get the name of the concern?

Mr. TREADWAY. I did not ask it.

Mr. POWERS. The Creel committee has made a contract with Pathe.

Mr. TREADWAY. Then pictures supplied by your concern would not show war pictures?

Mr. POWERS. Not war pictures of the boys at the front.

Mr. TREADWAY. That is what I am talking about.

Mr. POWERS. Neither can we show the French front nor the Italian front, because Mr. Creel has made another arrangement with the Italian representatives, and the Italian pictures and also with the British pictures, so that Mr. Creel controls these pictures also.

Mr. TREADWAY. What is the method under which this one concern secured this contract with Creel?

Mr. POWERS. I am at a loss to understand. They sent out a requisition for bids.

Mr. TREADWAY. Who did?

Mr. POWERS. The Creel committee.

Mr. TREADWAY. They asked for bids?

Mr. POWERS. Yes; competitive bids on the privilege of releasing these pictures.

Mr. TREADWAY. Your inference is that you were outbid?

Mr. POWERS. That is the only reason I can understand, because we offered to do the work at such a low nominal compensation that it was highly impossible—I did not know how anybody could be lower than we were. We had the distributing machinery all over the United States, Canada, and foreign countries to distribute anything required.

Mr. TREADWAY. Let me understand just this, and then I will stop. I understand that as a result of the Committee on Public Information, or Mr. Creel, selling the rights to the highest bidder for the distribution of war pictures taken at the front the result of that is that the Pathe Co. has a monopoly and that unless theaters buy of Pathe reels

the patrons of the theaters would not see war pictures taken at the front. Am I correct?

Mr. POWERS. Only pictures which we might be able to secure ourselves, but not official pictures.

Mr. TREADWAY. But you can not go over there and take pictures?

Mr. POWERS. We are not allowed to.

Mr. TREADWAY. The Signal Corps takes these pictures and Mr. Creel sells the right to produce?

Mr. POWERS. That is right.

Mr. TREADWAY. And the theaters that you show in—

Mr. POWERS (interposing). The theaters can show them if they buy them from Pathe.

Mr. TREADWAY. In other words, you are handicapped in supplying your patrons?

Mr. POWERS. Yes, sir.

Mr. TREADWAY. And how many concerns are similar to yours?

Mr. POWERS. There are three others.

Mr. TREADWAY. So that the Pathe has—

Mr. POWERS (interposing). The Pathe has a monopoly.

Mr. TREADWAY. And if the other concerns want them they must buy them?

Mr. POWERS. They can't buy them, possibly; no, sir.

Mr. SLOAN. Who is this Pathe Co.?

Mr. POWERS. Pathe is a French company; that is, I think the owners are in France.

Mr. SLOAN. No American connections?

Mr. POWERS. I do not know the officers, but I think Pathe is a Frenchman, and he comes here once in a while. Of course, he has a representative here. It may be an American corporation.

Mr. MOORE. Why is it called the Hearst-Pathe?

Mr. POWERS. Because Mr. Hearst finishes the negatives of the news pictures which they release.

Mr. MOORE. Do you know whether he is a part of the concern?

Mr. POWERS. I think he handles it on a percentage arrangement; a percentage of the profits.

Mr. MOORE. There is an understanding between Hearst and Pathe?

Mr. POWERS. They are partners in this weekly.

Mr. MOORE. And this is the concern that Mr. Creel has recognized as the agency through which these patriotic films shall be exposed to the public?

Mr. POWERS. That is as I understand it.

Mr. TREADWAY. Just one question further. Since this new arrangement has gone into effect, have you tried to buy the films from the Pathe Co.?

Mr. POWERS. We have tried to buy them and have tried to photograph them—get permission to do so.

Mr. TREADWAY. To make photographs from photographs?

Mr. POWERS. Of the actual scenes, even in this country. We are prohibited from even photographing any cantonment or any work in this country without permission of Mr. Creel.

Mr. TREADWAY. Under what disadvantage do you find yourself from procuring these films from the Pathe Co.?

Mr. POWERS. We are in the same position as a newspaper publication would be if it was prevented from printing war news.

Mr. TREADWAY. Is this a fair illustration? Suppose you were a member of the Associated Press, and the Associated Press is given certain information from the Committee on Public Information, but you as one of the persons being served by the Associated Press are prevented from using the material sent out by the Associated Press. Is that a fair comparison?

Mr. POWERS. That is the situation.

Mr. TREADWAY. That is the situation with you in regard to getting war photographs?

Mr. POWERS. Yes, sir.

Mr. SLOAN. What reason is assigned by Mr. Creel for this denial of the privilege to you?

Mr. POWERS. Because he has allotted to one concern the exclusive privilege of releasing these pictures on the arrangement he has made. I do not know what bid these people made, but I know they have secured the exclusive right to publish these pictures.

Mr. TREADWAY. Was any objection made to this bidding process by the other people?

Mr. POWERS. Yes, sir.

Mr. TREADWAY. You were all given the opportunity to bid and the highest bidder, you suppose, got the right? All the other concerns objected to completing bids?

Mr. POWERS. We have written letters protesting.

Mr. TREADWAY. Since?

Mr. POWERS. Before and after.

Mr. SLOAN. When did this monopoly start?

Mr. POWERS. I think it is about in operation now. Either last week or this week it was supposed to start. The Pathe-Hearst Co. is advertising now that it is ready to publish the news weekly of war news.

Mr. TREADWAY. I want to ask one other question about this bidding. Is the bid, as you understand it, based on the highest price you would pay for this reel; for instance, if that was a war picture, was it based on the lowest price at which you or the other concerns would distribute those pictures?

Mr. POWERS. As I understand the requirements which were noted on the bid, they embodied the number of prints which were to be distributed, which any one concern would distribute, and the price of the prints, the cost of the prints. Now, I do not know how they could have got a bid on that basis, because the mode of handling the business is very inconvenient, because I can release half the number of prints and reach the same number of people, and handle them with half the number of prints, but it would take a longer time. But whatever basis they had in mind it was a difficult matter for me to figure out, and I have been in the business 15 years, and know this business.

Mr. TREADWAY. You can not tell—

Mr. POWERS (interposing). I never knew the bid exactly.

Mr. TREADWAY. I understand from Mr. Brady that you represent 96 per cent of the people engaged in motion pictures.

Mr. POWERS. That is a business proposition that I did not anticipate discussing. It is one of our troubles.

Mr. TREADWAY. It is a matter in which there is not entire unanimity in this connection?

Mr. POWERS. That is a business competition, that we sometimes have to contend with. I intended to talk only on the question of taxation. I am willing to go into any phase of the business, but I do not want to get away from taxation.

Mr. MOORE. Being connected with Government taxation we are entitled to know about this.

Mr. POWERS. You are entitled to know anything in connection with the business end of it.

The news weekly, as I stated, is a picture which is of wide distribution. We are compelled to pay nine-tenths of a cent per foot tax on that, figuring waste. That means that we must sell it practically at cost. To take a picture that is exhibited to-day, *The Heart of the World*. On that picture they charge \$1.50 admission, down in Poli's Theater. I saw it advertised this morning. The film which that picture is on does not pay any more tax than our news weekly and educational pictures. The footage tax applies the same on the picture and the news weekly. There is no difference whatever. The idea, as I think now, that was in the minds of the Ways and Means Committee was to levy a tax on the picture not on the container of the picture, because there are no two pictures of the same value. The pictures have a different value, so you can not tax them by the foot because the value does not apply to the footage. You may take a picture of 500 feet, and it will be worth 10,000 feet of other pictures, as no doubt you have observed in the motion-picture theater many times when you saw pictures you would be glad to run out of the theater and not keep looking at them. In taxing the film you tax all pictures the same, *Heart of the World*, *Birth of the Nation*, regardless of the value of the picture when projected on the screen. We make different grades of pictures. We make pictures—for instance, we get a lot of money from pictures that have found favor. We made a picture recently which was a strong propaganda picture, the *Beast of Berlin*. That was profitable and made a lot of money for us. But that picture brings in higher prices on account of the timeliness of the picture.

Mr. MOORE. Do the theaters charging 5 cents admission pay as much for the film as these higher price theaters?

Mr. POWERS. No, sir.

Mr. MOORE. Then I misunderstood you.

Mr. POWERS. I am trying to bring out the fact that the picture that we put on the film, the tax on the man who charges 5 cents is just as high as on the man who charge \$1.50.

Mr. MOORE. That is what I understood you to say, that the *Heart of the World* pays just as much on its film and no more than the little show that charges 5 cents admission.

Mr. POWERS. Yes.

The CHAIRMAN. But you charge a great deal more to that moving-picture showman than to the 5-cent man.

Mr. POWERS. I admit it.

The CHAIRMAN. Just like in the case of sugar. A man who makes a high-priced candy pays the same for sugar as the one who makes old-fashioned lemon candy.

Mr. POWERS. We charge for the higher quality pictures and for the picture that brings in the greatest returns. We charge a higher price for the picture that brings in the greater amount of money than we

do for the small picture which brings no money, but the man who runs the picture show the 5-cent theater pays the same tax as the man who takes the better films.

The CHAIRMAN. In other words, when you add your tax that you have to pay, you just add to your cost, to your selling price?

Mr. POWERS. We have endeavored to pass that tax, which is not a percentage of the selling price. We have simply tried to pass that tax which we have been able to do in adding a certain amount of the tax on to the life of the film. We have worked on this proposition because it is truly impossible for us to pass that tax to the user of the film.

The CHAIRMAN. I want to get the practical workings of it.

Mr. POWERS. It is quite difficult.

The CHAIRMAN. We did not understand as thoroughly as you do when we wrote the tax, but I will tell you that other nations that have written this tax did not understand it better than we did. You buy this from the Eastman Kodak Co.?

Mr. POWERS. Yes, sir.

The CHAIRMAN. On that we tax the Eastman Kodak Co. one-fourth of a cent a foot?

Mr. POWERS. Yes, sir.

The CHAIRMAN. Now, when the Eastman Kodak Co. sells that to you, he is presumed, if he is a good business man—and I think he is—to pass this one-fourth of a cent to you.

Mr. POWERS. Yes, sir.

The CHAIRMAN. Now, then, you make up this [indicating]?

Mr. POWERS. Yes, sir.

The CHAIRMAN. And when you make up this and sell it to the moving picture show—

Mr. POWERS (interposing). We rent it, Mr. Chairman.

The CHAIRMAN (continuing). You are taxed on this one-half a cent?

Mr. POWERS. Yes, sir.

The CHAIRMAN. And in the price which you make to the Columbia moving picture man you add the cost of the raw material you bought from the Eastman Kodak Co., the tax of one-fourth of a cent and also the one-half cent that you pay a tax on, and make the Columbia man, for instance, pay all the tax, don't you? We intended for you to do that.

Mr. POWERS. We can not do that, as I will show you. There is three-fourths of a cent a foot tax, which is nine-tenths, figuring waste. We will call it a cent a foot, that is, \$10 per thousand feet. Now, the Columbia Theater down here runs 7,000 feet daily. If we were going to pass that tax to the Columbia Theater they would pay \$70 a day. We can't do that.

The CHAIRMAN. All right. Suppose your labor and other materials have gone up, haven't they—your costs of producing this?

Mr. POWERS. Salaries and everything have gone up.

The CHAIRMAN. And this tax which you have to pay is just as much a part of the cost as labor is.

Mr. POWERS. Yes, sir.

The CHAIRMAN. You put up your price to compensate for the increased cost of labor and materials.

Mr. POWERS. We have not been able to pass this tax on to the Columbia.

The CHAIRMAN. If your labor cost has increased 25 per cent, and it goes into the finished product that you sell, you have been able to do that, haven't you?

Mr. POWERS. The labor cost of the picture is in the picture, and all pictures have a different value.

The CHAIRMAN. I understand that.

Mr. POWERS. In the making of the picture all the labor goes into the making of the picture.

The CHAIRMAN. Here is my point. In fixing the selling price of your picture you try to cover all the elements of cost, and some little profit, don't you? All of us do that.

Mr. POWERS. We try to do that.

The CHAIRMAN. Now, were you in this business two or three years ago?

Mr. POWERS. I have been in it 15 years.

The CHAIRMAN. Have you sold a larger number of feet in the last 12 months than you did in the 12 preceding months?

Mr. POWERS. Before the tax went on we consumed about 1,500,000 feet of film a year, but after the tax went on we had to reduce that and we are using about 900,000 feet.

The CHAIRMAN. Take the month of May, 1917, and compare it with the month of May, 1918, in which month did you sell more feet?

Mr. POWERS. 1917. We had to curtail the use of the raw stock.

The CHAIRMAN. How about your competitors, did they use more?

Mr. POWERS. I am speaking of the whole industry; that is the entire amount that is released in the United States now as against a year ago.

The CHAIRMAN. So you think that the motion-picture show business, since the tax went into effect, is consuming a less number of feet?

Mr. POWERS. There is less film, less footage being used.

The CHAIRMAN. Less footage?

Mr. POWERS. Less footage being used.

The CHAIRMAN. Taking the same picture and showing it more times than ever?

Mr. POWERS. We try to make the work of one picture do the work of two before; that is, as far as the actual film is concerned.

The CHAIRMAN. Would you say that there has been a great increase in the attendance at moving-picture shows?

Mr. POWERS. There has not been an increase in attendance.

The CHAIRMAN. If they are prolonging the life of pictures 100 per cent and you gentlemen are falling off in an average of about 25 per cent—

Mr. POWERS (interposing). The life of the picture is based on the number of people who look at the picture, not on the physical condition of the film.

The CHAIRMAN. That is, the number of people who go to the show?

Mr. POWERS. That is, the people who look at the picture on the screen. It is not based on the life of the film. If a picture is still running good, we will print a new copy of it, or if the old film is worn out in service we will reprint and put out new copies.

The CHAIRMAN. Do you know anything about the experience in great Britain with moving-picture shows and the tax on films?

Mr. POWERS. I know that the tax on the base of the film which is taxed, in the minds of the Committee on Ways and Means when they levied this tax here, has practically put the British film business out of existence, so that all of the business of the world to-day, the British business, is in New York.

The CHAIRMAN. I think you are mistaken. I do not think Great Britain levied any tax on this at all, except a customs tax, because we were furnishing those films.

Mr. POWERS. As I understood it, they have a footage tax.

The CHAIRMAN. The tax of Great Britain on this when we wrote the bill—I do not suppose it has changed—was two-thirds of a cent a foot, over twice as great a tax as we have in this country. On those which were charged one-fourth of 1 cent, they charge 2 cents, four times as much, I understand. I made some inquiry some time ago at the department, and while they did not have definite information, they were of the opinion that the moving-picture business in Great Britain was still thriving. How does it thrive there with a tax of over two or two and one-half times higher than the tax you pay?

Mr. POWERS. I should say 75 per cent of the productions are made in this country.

The CHAIRMAN. Yes; but they are paying two or three times as much tax.

Mr. POWERS. In this country we stand the production cost. The cost of the machinery, and the actors, and the cost of the story that goes on the screen. When we get through with it in this country we send the negative to England, and it goes into England at a nominal expense. The British exhibitor has no negative expense against the picture, because they are using American goods. I should say 80 per cent of them are American productions. We have been able to do this, due to the fact that we have had no such tax in this country, and we were able to put more into our production; to put a better picture on the screen than the British manufacturer, and send them to England and sell them in competition with the British producer. Not the distributor, but the producer, and he can—

The CHAIRMAN. Now, would you sell the picture itself or the negative?

Mr. POWERS. I am speaking for my own company. We would send it to our London office; we would send the negative to our London office and have it printed there.

The CHAIRMAN. The negative, I understand, is the film from which you print off?

Mr. POWERS. Yes, sir.

The CHAIRMAN. As I understand it, when we wrote this act the negative charge was 10 cents a foot?

Mr. BRADY. May we have facts, Mr. Chairman, and not conjectures?

Mr. FRIEND. The chairman is right.

The CHAIRMAN. I know, because we have had that out. Our idea was to leave it as low as possible and get the amount we needed, and we were lower than Great Britain by 5 per cent. Five pence is right.

Mr. FRIEND. Five pence is right, on negatives.

The CHAIRMAN. That may account for the difference, that we sent them over there after we used them. I will say for your information, Mr. Brady, that the industry could stand more tax; not only that

industry, but other industries. I am certain that if the committee were convinced that it would destroy any industry it would not impose more tax. And we asked you gentlemen about this, and you answered very pertinently.

Mr. BRADY. May I answer this one thing that perhaps Mr. Powers may overlook. It costs \$20,000, \$30,000, \$40,000, \$50,000, \$60,000, or \$70,000 to make one picture. America is making pictures for the world. England buys her pictures by the thousands. The company I was president of sold its pictures in England that cost \$25,000 to \$50,000 to make, for \$4,000 apiece. Therefore England was driven out of the manufacture and can afford to pay any price.

Mr. CRISP. I understood you to say, Mr. Powers, in your opinion it was inequitable for a picture that was thrown on the screen for 5 and 10 cents to pay the same tax that a picture thrown on for an admission charging a dollar or \$1.50?

Mr. POWERS. That is the point; yes.

Mr. CRISP. Of course, you understand this committee is confronted with the practical problem of raising \$2 for every one we have now. The committee has no idea to make an inequitable bill. And you gentlemen are here to show where an injustice is being done. I would like to know if you have any practical suggestions to make whereby that injustice and inequality could be remedied?

Mr. POWERS. If I can bring to your mind, Mr. Crisp, the use that it is made for. The primary object of the picture is exhibition for profit. The means of making that picture and putting it on the screen is purely mechanical. We get the materials, we buy the story, and we hire the actor and we engage the director and he puts on the picture, and it may cost \$50,000 or \$150,000, depending on the lavishness of the production. That is the production expense, the film and all that is used goes into the production expense. Now, that picture is exhibited and that is what the picture is made for—exhibition for profit. The man who makes the picture may or may not make a profit on the picture. But if the picture is exhibited to the public some one has to buy it; some one has to pay to see it; that is where the consumption of the picture comes in. Not with the man who makes it, or stages it, or puts it on the film, put with the public who pays to see the picture. The man who is in the picture business may or may not make any money.

In fact, I venture to say that the production end of the business has lost money in the last year. I don't mean that every one in the business has lost, but the production of pictures has lost money; there has been more money spent on the production of pictures than has been taken back from the public. That is due to overproduction, and money going in which did not come back through the theaters from the public.

Mr. MOORE. Mr. Powers, getting back to the film, you spoke of the wastage in the production, or in the use of the film, in the early part of your address.

Mr. POWERS. Yes, sir.

Mr. MOORE. Is there any recovery, or salvage, on this film after it is sold?

Mr. POWERS. We sell that film, when it has been shown to our patrons, for about 12 cents a pound.

Mr. MOORE. After it has performed its function, is there anything that the Eastman Kodak Co. or anybody else could use.

Mr. POWERS. No; the Eastman Kodak Co. would not buy it; there is a little emulsion, or silver base, and they pay us 12 cents a pound for the scrap, and take the silver off the base.

Mr. MOORE. So that is worth something in the remanufacture of the picture, or of the picture?

Mr. POWERS. Not for the remanufacture of a film.

Mr. MOORE. Not for the film?

Mr. POWERS. No, sir, but the silver base; the film is worth nothing, but the emulsion, this [indicating to Mr. Moore on sample of film] that contains the silver.

Mr. MOORE. That is the only salvage there is?

Mr. POWERS. Yes, sir.

Mr. TREADWAY. May I for a moment return to the matter of bidding off the privilege of serving pictures to the country—the supply of films? There has been a hearing within a few days, as you know, before the Committee on Appropriations on the appropriations for the Committee on Public Information, of which Mr. Creel is chairman. There is a motion-picture division in the Committee on Public Information. I would like to call your attention to a few comments that appeared there in those hearings. Perhaps I need not bother you with reading this, but this was a statement of Mr. Creel's:

Now, we had a decision to make as to whether the Government was justified in giving those very profitable undertakings to private enterprise, or whether the Government had the right to receive moneys from those pictures to devote to the costs. Other governments have not given their pictures outright to private enterprise. Therefore we have evolved a plan by which they are to be commercial undertakings in the sense that we are to be reimbursed our cost, and I fully expect, as I explained in my estimates, that this division may be self-supporting before the end of the year.

Now, that plan that has been evolved, that has been referred to by Mr. Creel, is probably the one to which you referred that the privilege was bid off to a rival concern?

Mr. POWERS. Yes, sir.

Mr. TREADWAY. Then he speaks also of the scenario division.

Mr. POWERS. Yes, sir.

Mr. MOORE. That is Mr. Creel before the Appropriations Committee?

Mr. TREADWAY. Yes.

Mr. POWERS. Yes; I so understand.

Mr. TREADWAY. He says:

We have a scenario department, under the direction of Prof. George Baker, of Harvard University, which prepares scenarios for use in connection with this work. I think I am safe in saying that from now on there will be no resource of the screen that will not be at the country's demand.

Then, to return a little, he pointed out that the pictures were taken by the Signal Corps, and in order to secure the largest dissemination of this information to the public it was put in the hands of one concern. In other words, we are to understand from Mr. Creel's statement that by bidding off this privilege to this one concern the largest distribution will be reached and the news gotten to the public, rather than having all the concerns have the news?

Mr. POWERS. Let me ask you, do you think the news would be as widely disseminated in one newspaper as if it was in different newspapers?

Mr. TREADWAY. I would like to continue with this: Reference was made by you in answer to Mr. Moore's inquiry to one firm, Hearst's Pathe weekly film.

Mr. POWERS. They issue the Hearst Pathe News Weekly.

Mr. TREADWAY. Yes. Would you consider that this had any direct bearing on that? There are several things I might call attention to. The chairman, Mr. Sherley, asked Mr. Byior, who evidently is in charge of the film division under Mr. Creel:

The CHAIRMAN. Who is Mr. Hart, the director?

Mr. BYIOR. Mr. Hart is the man who was the advertising manager of the American Sunday Monthly Magazine and of Hearst's Magazine. He was getting, I think, \$10,000 a year, and he came for what you see there.

The CHAIRMAN. \$3,900?

Mr. BYIOR. Yes, sir; he has a wife and two children, and supports them from his salary, and I feel he has made a great sacrifice to do this work.

The CHAIRMAN. Mr. Smith, \$3,100, assistant manager of distribution. Who is he?

Mr. BYIOR. Mr. Smith has left since this statement was made up, having been called into the Army. He was manager of distribution and has been succeeded by Mr. Berst. Mr. Smith was one of the best known men in the moving-picture industry in relation to the problems of distribution, getting the widest possible showing of pictures.

Mr. CREEL. He has been drafted. Mr. Berst, who succeeds him, was at one time the president or general manager of the Hearst Pathe service.

Is there not a rather direct connection between the manner in which the pictures are now being distributed and as to who has the direction of the distribution contract?

Mr. POWERS. Mr. Berst also was a member of the Hearst Pathe service.

Mr. TREADWAY. So that the men who had the say about the monopoly, and who should have the monopoly, were formerly in the Hearst Pathe service, and now under the Creel bureau?

Mr. POWERS. Yes, sir.

Mr. TREADWAY. Is that correct?

Mr. POWERS. Yes, sir.

Mr. STERLING. Can you tell us how much revenue is derived from the moving-picture business in the United States?

Mr. POWERS. On the footage tax?

Mr. STERLING. Yes, on the footage tax.

Mr. POWERS. I think you will derive about \$4,000,000.

Mr. STERLING. How much did your company pay?

Mr. POWERS. We have paid to date \$40,000. I want to make a statement with reference to that. When the tax went into effect on the week of December 3, we were subject to a tax of \$10,000 a week, or \$11,000 a week—we were subject to a tax of \$11,000 a week in that week. We were making no such profit to start with. We couldn't pay any such tax. We were not making any such profit out of the business. We were doing at that time \$125,000 a week and we were not making \$1,000 a week profit; in fact, we have not declared a dividend in a year. This tax was three-fourths of a cent a foot, and when that tax went into effect on December 3 it meant that it was a tax on us of \$11,000 a week. You ask how did we adjust ourselves to it? We did it by a great deal of production. We put our work out on a rental. The rental on our productions will help us to pay the tax up to December 3. But there was no such profit. We had a great many films, and the result is we had to put out a great many pictures.

Mr. STERLING. And make them run longer?

Mr. POWERS. Make them work faster and harder.

Now, what I wanted to get to the minds of you gentlemen is that we had to use a large number of these weekly films. If it was on the receipts of the business it would be another matter; if it was on the receipts that this tax was levied, we might be able to adjust ourselves to it by adding to the rental price to the exhibitor. But the fact of the tax being levied on the film it runs 55 days in use and we couldn't levy it all on the first man, and when we come to distribute it to the exhibitors we must reckon the physical life of the film, and the amount which the last man who uses it should pay, and he should pay a smaller rental just as the first man who uses it has to pay a higher rental.

Mr. CRISP. What is your practical suggestion then? To repeal the footage tax and put a flat tax on the film?

Mr. POWERS. I say the primary purpose is the production for profit of a film, and the man who buys the amusement is the man who has something to spend. He is buying his amusement. The man who makes that picture may or may not make money. We hear a great deal of the pictures that make money, but we do not hear much of the pictures that do not make money. We hear, for instance, of the Birth of a Nation making \$3,000,000 profit a year, and he pays the same as the News Weekly which is distributed broadcast, and probably he don't pay as much in a year as the News Weekly pays in a year.

Mr. MOORE. Getting down to brass tacks, in line with Judge Crisp's suggestion, first, there is a tax on moving pictures now to which you object?

Mr. POWERS. Yes, sir.

Mr. MOORE. What would you substitute for that, in a few words, to raise the equivalent of that tax?

Mr. POWERS. From the same source?

Mr. MOORE. Yes; what would you levy or how would you levy a tax to raise the amount that you would lose by losing the film tax?

Mr. POWERS. I prefer a tax on the rental of our goods. You understand we have to pay practically for the film. If I were to frame the tax I would prefer to have the tax on the receipts.

Mr. MOORE. A tax on the receipts?

Mr. POWERS. Yes; on the rental value of the picture.

Mr. MOORE. Don't you actually sell them?

Mr. POWERS. No; we only rent them to the theater. We never sell them; we have no sale for our production.

Mr. MOORE. Would you prefer a percentage tax on the rentals?

Mr. POWERS. I prefer a percentage tax on the rentals, instead of the footage tax.

Mr. MOORE. Have you thought out what that percentage should be in order to make up for the present film footage tax?

Mr. POWERS. Yes, sir.

Mr. MOORE. What do you think it should be?

Mr. POWERS. As I figure it, now you are getting from the present footage tax about 3 per cent on all rentals. These figures are on the present rentals.

Mr. MOORE. Would it stand a 5 per cent rental tax if we had to increase the present rate?

Mr. POWERS. A business will have to stand any tax. Any tax you levy on a business will have to stand it. This tax is a production tax; it is a tax on a business. It is not a tax that the people who buy this commodity will pay, because you can't charge them the 3 per cent which you have to pay, and you can't pass on to the exhibitor the 3 per cent, and if you pass it to him he can not pass it on. The pictures should be made to pay the tax, and you can't pass the tax on to the box office. The box office is the place where all the tax that you are going to levy should be paid.

Mr. MOORE. I guess we would have to hold the box office as we do now, and Mr. Eastman will have to pay his excess-profits tax and an income tax.

Mr. POWERS. Yes; the same as any other manufacturer.

Mr. MOORE. And he pays the film tax now?

Mr. POWERS. Yes, sir.

Mr. MOORE. And you would like to be in a position to pass it on to the user of the film?

Mr. POWERS. If we could.

Mr. MOORE. And you would prefer to have a tax on rentals which you think now would be about 3 per cent, rather than a footage tax on the film?

Mr. POWERS. Yes, sir. You see, you take the automobile tax which you levied. It was levied on a percentage of the selling price of the automobile, not on the automobile. You did not levy the same tax on a Ford automobile as you levied on a Packard. There is a different tax. I will give you the example that the News Weekly is the Ford, and the Birth of a Nation is the Packard, and you place the same tax on both, as though they sold for the same price.

Mr. MOORE. Would the rental price of the film, assuming you had control of the Hearts of the World, would you rent it for a different price? In other words, would the rental value be the same to a house that charged a 10-cent admission as to a house that charged \$1 admission?

Mr. POWERS. When the Hearts of the World gets through with the higher-priced houses a great many people will see it at the 5-cent houses, and we will get a smaller rental value for it.

Mr. MOORE. Mr. Brady threw out a suggestion for a bill providing a graduated tax.

Mr. POWERS. Yes; on admissions.

Mr. MOORE. Suppose we put a graduated tax on the admissions to the Hearts of the World, what would be the tax paid by a house charging not more than 10 cents admission, and what should be the tax on a dollar admission?

Mr. POWERS. I don't think I get that clear.

Mr. MOORE. Well, I am running a 10-cent house here, and Poli is running a dollar house across the street.

Mr. POWERS. Yes.

Mr. MOORE. Poli gets the film from you, and if we fix the tax on a graduated scale for the admission, will Poli pay any more rental for his film than I do for mine, having a 10-cent admission?

Mr. POWERS. If you pay the same price for the rental of the picture, and you want to run it at the same time Poli is running it you will probably have to pay the same price, no matter what you charge for your admission.

Mr. MOORE. It looks then as if the 10-cent man would have to pay substantially the same as the dollar and one-half man.

Mr. POWERS. On the basis that he rents it at the same price, yes.

Mr. STERLING. Mr. Moore means a picture that the theater charges 10 cents for.

Mr. POWERS. No, sir.

Mr. STERLING. Is that your proposition, Mr. Moore?

Mr. MOORE. Yes.

Mr. TREADWAY. Now, take the Hearts of the World, if across the street there was another place running it at 10 cents, and a place over here running it for a dollar, whether or not the rental would be at the same price. I think the witness wants to convey the idea that the dollar house will get his rental and the 10 cent man will get his rental at about the same price; if the 10 cent man wanted to show the enterprise to run the picture as a rival to the dollar and one-half show he would have to pay practically the same rental to you?

Mr. POWERS. Yes; practically the same.

Mr. MARTIN. Would the film be damaged in the showing of it in the meantime?

Mr. POWERS. The damage would not amount to much.

Mr. DIXON. The rent would be just so much, any way?

Mr. POWERS. Yes; they can show it at the 10 cent houses.

Mr. TREADWAY. How close have you worked out this estimate, that you are now paying a 3 per cent tax?

Mr. POWERS. I have worked it out through Price, Waterhouse & Co., who do practically all the accounting for the moving-picture business. They have estimated that this tax will run about 3 per cent on our gross rentals.

Mr. RAINEY. If you can pass this on to the Eastman Co. you will have a good chance to get this into the next law.

Mr. POWERS. His statement showed that he made \$15,000,000 net last year, after paying all taxes.

Mr. RAINEY. You have made a very interesting statement, and we are glad to have had you before us.

Mr. BRADY. I think there is one thing that should be set right here. I was appointed by the President to cooperate with Mr. Creel in reference to this moving-picture matter. Mr. Creel sold that picture privilege to the highest bidders, and they are being distributed over the country, and are being circulated in such a way that a sure profit will come to the Government; that is, the pictures of Pershing's Crusaders. Other pictures have been made, propaganda pictures, Our Country at War, Putting up the Cantonments. I think this matter should be set right. I was appointed by the President to cooperate with Mr. Creel.

Mr. TREADWAY. There is no question that the pictures are being distributed by a monopoly?

Mr. BRADY. They were offered to all the moving-picture concerns in the country. As to whether that is the way to do it, I don't know.

The CHAIRMAN. Let me make a statement. Are Mr. Price and Mr. Hughes present? I see they are present, and we will not reach you gentlemen this evening, and when we adjourn we will adjourn until 10 o'clock to-morrow morning, and we will put you on at 10 o'clock to-morrow morning.

**STATEMENT BY MR. ARTHUR S. FRIEND, TREASURER OF  
THE FAMOUS PLAYERS LASKEY CORPORATION, 320 WEST  
EIGHTY-SEVENTH STREET, NEW YORK CITY.**

Mr. FRIEND. Mr. Chairman, before I speak of the tax matter, I should like to say a word about the Creel matter that Mr. Powers went into and tell you some things that Mr. Powers did not know, which I think justifies the monopolistic method of distribution which Mr. Creel and his committee have adopted. I understand that the British and Italian war pictures are privately controlled and distributed in the United States. The man who controls them and distributes them wanted and insisted on a deal with the American Distributing Co. that these pictures that he should distribute would give him the largest possible profit. The French war pictures are absolutely uncontrolled, and are open now to anybody who pays, I believe, \$1 a foot, and that goes to a French fund of some kind for charitable purposes or war purposes, and to-day these French pictures are not handled by any one distributor. Now, the American pictures, Mr. Creel's idea was that they should be distributed by any dealer who would exhibit them and give back the cost of them. But his thought was, I believe, that as the British pictures and the Italian pictures were monopolized, that the dealer should also have the privilege of adding to them the American pictures, as he could use the French pictures and the British and Italian pictures, because, obviously, the American pictures would be in very great demand. Therefore Mr. Creel had the choice of getting back nothing or of joining with the monopoly and letting the privilege of exhibiting the pictures to the highest bidder, and so I believe that was his idea. Mr. Creel is doing what the men in the motion-picture business did not want to see him do, but it seems he had little choice unless he should come back to Congress and get still more money.

Mr. TREADWAY. Do you mind stating who controls the British and Italian pictures?

Mr. FRIEND. They are controlled by a Capt. Banes, who has his headquarters in New York City, and he has made some arrangement with the Pathe Co.; the Pathe Co. gets the Banes pictures now exclusively. The French pictures are free in this country to whoever will pay the rental on the reels, and it seems that Mr. Creel had very little choice in the matter.

I want to say a word about the footage tax. As Mr. Powers has made clear to you, this is like taxing our container, it is like taxing the wrapping paper in which the packages are wrapped which you buy and take from the store. We are subject to a double tax, and we are the only industry that is subject to a double tax, because there is no consumer of our product. The picture, that is, the positive, is run or printed, and it will go down to A, B, C, and D, until there is no longer any demand for that picture; each exhibitor pays a certain rental price; that rental price is fixed according to the value of the picture, the setting of the picture, and the age of the picture. Obviously, we do not get as much for an old picture as we do for a new and popular one; you do not pay as much for a loaf of stale bread as you do for a loaf of fresh bread. The only person who is akin to the consumer is the man who pays when he goes in to see the picture, but in

addition he also pays this footage tax, because it was conceived to be a tax that could be passed on to the consumer.

Mr. MOORE. That is the reason I do not quite understand the argument that yours is the only business that is taxed twice. How do you make that out?

Mr. FRIEND. The ultimate consumer, assuming that he goes in to see the picture, that is, the man who goes in to look at the picture, he is the ultimate consumer as nearly as we can—

Mr. MOORE. The exhibitor passes the tax along, and he pays it?

Mr. FRIEND. Yes; he pays the tax. He pays the admission tax, and also the tax on the reel. It comes out that the exhibitor pays \$1.05 a day to the producer, and nobody has been hurt, but he can't pass that \$1.05 on.

Mr. MOORE. In order to be fair—I am very much interested in your argument—but might you not, with equal propriety, argue that an automobile manufacturer is taxed twice or three times; on the steel in his machine, on the leather in his machine, on the wood, and so on along the same line?

Mr. FRIEND. You could say that; yes, Mr. Moore, except that in each instance he pays the tax that the producer of the commodity which he uses in his product first pays; that is, he passes it on to him.

Mr. MOORE. It all comes back in the increased price of the car?

Mr. FRIEND. Exactly; it comes out of the ultimate consumer, and is paid by the people who buy the product.

Mr. MOORE. I do not want to break into your argument, but one of the other gentlemen made that statement too, and I did not understand you or Mr. Brady or Mr. Powers to say that there should not be some tax on the film in some form.

Mr. FRIEND. If I may be indulged, Mr. Chairman, of course, the simplest and fairest tax is an admission tax, because it is a small tax and it places the burden equally; but we are not trying to shift the tax finally altogether.

Mr. MOORE. If we should do that it would leave us with no recourse except a corporation tax if the concern was a corporation, or an excess-profits tax if it made an excess profit, which we understand some of the companies did not do, or an income tax, and that is where we would be left.

Mr. FRIEND. As a matter of fact, Mr. Moore, you would not be left, if the only desire is to do justice. I understand, of course, in our present predicament we can not always be so keen for justice.

Mr. MOORE. I tell you frankly now that if it was not for this war I would be for striking down this tax as soon as I could get a vote in Congress to do it. This is a question of getting the money; it is a cold-blooded tax proposition.

Mr. FRIEND. Still, no matter how cold-blooded we have to be, we must stop to think whether the form of the taxation is going to bring us in the cash that we so much need. The trouble is with the footage tax—

Mr. MOORE (interrupting). We do not want to destroy any business; we can not afford to destroy any business enterprise.

Mr. FRIEND. It would not destroy the business, I think. It was on the admission tax that I wanted to speak, although there is little Mr. Brady has left for me to say. I want to call attention to two or three things, however. It was my privilege to serve with Mr. Hoover

on the Food Administration last year—a year ago—and shortly after his administration was legalized we sent out slides to be exhibited in the motion-picture theaters, and at that time the number of motion-picture theaters in the United States was a few hundred over 17,000 and to-day it is a few hundred under 14,000.

Mr. STERLING. Do you ascribe that falling off in the number of theaters to the tax?

Mr. FRIEND. Not entirely.

Mr. STERLING. Let me ask you if it is not for this reason: I have an impression that those theaters that were closed were mostly in the outlying districts.

Mr. FRIEND. Very largely.

Mr. STERLING. Isn't it due to the fact that people go nearer to centers of the cities, or down town?

Mr. FRIEND. I think it is due to the fact that people want better entertainment in better places, and the better theaters are surviving and the poorer theaters are going out of business. At the same time the tax had some effect. We must realize that out of 14,000 motion-picture theaters in the United States a few are unimportant: there are some that could not house, for instance, the Hearts of the World. Many of these outlying theaters—neighborhood theaters, we call them—have been unable to compel their patrons to pay the tax. Thirty per cent of the motion-picture theaters have been compelled to absorb the tax themselves, and many of them could not do that, because their profit was not 20 per cent of the gross receipts, and it had to be 20 per cent of the gross receipts in order to meet this tax, and I wanted you gentlemen to know that fact when you come to consider amendments to this bill. The admissions tax as it exists to-day, I think, will result in a steadily increasing income to the Government, because the bigger and better theaters surviving will get a better patronage, and the business will net more in dollars and cents.

Mr. STERLING. What do you think of a tax like this: Repeal the tax on the film altogether and have an admission tax graduated on the amount paid for the admission, 1 cent on a 5-cent admission; 2 cents on a 10-cent admission; 3 cents on a 15-cent admission; and so on up, with 20 cents on a dollar admission?

Mr. FRIEND. Personally I think that would be a splendid thing. I think it would result in a great many more admissions.

Mr. BRADY. Do you mean, Mr. Friend, 20 cents on a dollar admission?

Mr. FRIEND. Oh, did you mean a 20 per cent graduated tax on the admissions?

Mr. STERLING. Yes; that is what I meant. It amounts to a 20 per cent tax on the admissions.

Mr. FRIEND. I did not understand that. I think you would have trouble and would be unable to maintain your averages when you got into the higher admissions. I think, starting with 1 cent on a 5-cent admission, and so on, it would work very well.

Mr. STERLING. I think you could maintain it in the higher prices better than in the lower.

Mr. FRIEND. I think you can in the very high prices, or in the very low, but in prices between 20 cents and \$1 I think we would stumble.

Mr. STERLING. I think that tax would hit the 5-cent theater harder than it would the higher priced theaters.

Mr. FRIEND. Of course, they could exempt children under 10 years; that is, children could be exempt from paying the tax, just as you exempt soldiers and sailors in uniform. I think children should be exempt now, for children to be compelled to pay a tax on a 5-cent ticket I think is obviously unjust. I think if we turned right about face and exempt children from the tax where they went in on a 5-cent admission and made adults pay that, that we would get a better result.

Mr. DIXON. What do you think of the tax on rentals?

Mr. FRIEND. I think it would break up some of the theaters. They would be unable to absorb that tax and pass it on to the public. And I am sure of this, that once you make the admission to the motion-picture theater prohibitive, you are going to do away with the most effective power we have in the country to-day, not only for entertainment, but for propaganda and education. I know I need not argue with you about that. The mere fact that the Government has seen fit to put a motion-picture at its posts and cantonments and training camps proves this. We do not want to hang crape on the nation just because we are licking the Germans, as Mr. Powers has said.

Mr. DIXON. You pay the present tax, instead of trying to pass it to the consumer?

Mr. FRIEND. At present the motion-picture theater owner pays it. It is passed to him and he pays it to the Government.

Mr. DIXON. You don't think they would be able to absorb a per cent tax on the rental?

Mr. FRIEND. The smaller exhibitor, the man who runs a picture late in life, might be able to absorb it, he gets it for about 15 cents a day as a rule. That is the way the footage tax is translated to make him pay; he pays 15 cents a day a reel. Of course he could absorb the percentage tax the same way, but when you get to the bigger man he can't absorb it, and I don't think he can pass it to the public without getting to the point where your motion pictures are going to be put out of business to such an extent that the motion pictures will not be as popular as now.

Mr. HAWLEY. You suggested a moment ago that the tax would be larger next year than this year. The Treasury estimate this year, as I understand it, is \$29,000,000; the Treasury estimate is for nine months.

Mr. FRIEND. The \$29,000,000 is based on the five months. I should be afraid to venture an opinion about that, because as I said before, the disposition of the people to go to the bigger and better theaters and pay a slightly increased price where they formerly paid 10 cents is going to increase the revenue to the Government.

Mr. HAWLEY. They will pay the higher price for amusement the same as they pay a higher price for clothes.

Mr. FRIEND. Up to a certain point. I think where a man can take his family and go to an entertainment for an evening for a dollar, he will go, but beyond that, I think he will think his entertainment is beyond his means.

I wanted you to know that the result of all we have gone through including our investigations of this tax, we have discovered a large reduction in the number of motion-picture theaters, a 30 per cent reduction, and that 30 per cent is made up of the small exhibitors, the

exhibitor who was unable to pass the tax on to the consumer, and the balance are now absorbing that expense and are paying the tax to the Government. I thank you.

**STATEMENT OF MAURICE GOODMAN, NEW YORK CITY,  
REPRESENTING THE VAUDEVILLE MANAGERS' PROTEC-  
TIVE ASSOCIATION.**

Mr. MOORE. That is a national association, is it?

Mr. GOODMAN. Yes. I am also its attorney and treasurer of the association.

That association comprises the leading vaudeville circuits of the country. The Keith's circuit in the Northeast, the Orpheum circuit in the West, and a large circuit throughout the South. It takes in practically all the leading vaudeville theaters. I do not know anything about the motion-picture industry, and all I want to call attention to is the position of the managers of the theaters—that is, the vaudeville theaters—with regard to the excess-profits tax, and while I am primarily talking about the managers, and for the managers' association, what I have to say has a bearing also on the legitimate or moving-picture theaters. There is a very pronounced conflict of opinion at the present time in the Treasury Department as to the application of these provisions of the excess-profits tax law in regard to nominal capital and invested capital, and it is very natural to understand how that conflict arises. It is due to a misunderstanding or difficulty in understanding the precise nature of the show business.

Now, soon after the passage of the excess-profits tax law this association wrote the Treasury Department, Commissioner Roper, suggesting that they should not be compelled to pay excess profits on their business and setting forth in detail the nature of its business. In other words, it was explained in detail that the vaudeville managers operate their theaters simply through a leasing of the theaters, not owning the ground on which their theaters stand in a great majority of cases, the theaters were held only on leases. Therefore, so far as the place to do business was concerned, it was an intangible asset; that the important thing in a vaudeville theater was a booking contract and an arrangement for the producing of the shows. Now, just what is the show business? The vaudeville managers do not produce anything; they contract with actors and sometimes with singers and others whose voices or whose performances are an attraction. The only necessity for a cash deposit or capital invested is for a small fund to pay for licenses and for advertising and for light and heat and other expenses incidental to the operation of the theater. The main or primary thing from which profits are derived in vaudeville theaters and in moving-picture theaters, so far as the manager and operator of the theater is concerned, is the service or personality and good will of the manager and his leasehold and his ability to use what he gets on his booking contract.

Now, in vaudeville we refer to booking franchises. Keith's, down here, has a booking franchise under or through or by which his theater procures the highest class bookings from the booking companies in New York. Some other theater in some other town has the same contract. Now, that contract is of more value now, but in the

capitalization of these companies some years ago, these companies were operated by one or two or three men; there was no occasion for much capitalization; they were not selling stock, and it was no matter whether they were capitalized at \$5,000 or \$500,000,000; in fact, it was to their interest to have a small capitalization in order to avoid State taxation. So the theaters were operated by a few men at a small capitalization—very small, I should say, the average being \$10,000. I know one of Keith's theaters that is capitalized at \$25,000. That is the one down here, although Mr. Keith originally paid Mr. Chase, I think, \$200,000 for this concession. Mr. Speer, the internal-revenue collector, suggested, in reply to our suggestion, that we should be taxed on a nominal capital, that in a case where the stock was the lease and where the capital was only nominal, and where the stock was practically only such as the incorporators put in, as they thought their booking contract and lease would be actually worth, that by reason of the service which we rendered and from which these profits were made, the tax should be and would be upon an 8 per cent basis. That was in the latter part of March, on the 30th day of March, 1918. That letter I am going to submit to you, gentlemen.

TREASURY DEPARTMENT,  
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,  
*Washington, March 30, 1918.*

VAUDEVILLE MANAGERS' PROTECTIVE ASSOCIATION,  
*Columbia Theater Building, New York, N. Y.*

SIRS: Receipt is acknowledged of your letter of March 6, 1918, in which you request, as the representative of 446 vaudeville theaters located in every part of the United States, to be advised whether the owners (individuals, partnerships, or corporations) of vaudeville theaters are subject to excess-profits tax under section 201 or 209 of the war revenue act approved October 3, 1917.

It appears from the information contained in your letter that such theaters are conducted under varying conditions, namely:

(1) Where the premises equipped for theatrical purposes are leased and the only expenditures are in connection with such lease, the employment of performers, stage hands, ticket takers, advertising matter, tickets, stationery, etc., most of which is paid for on a cash weekly basis out of the gross receipts, only a nominal invested capital being required to pay for the license fee, electric current, water rent, and other small items.

(2) Where a corporation organized to conduct a vaudeville theatrical business as above gives its total capital of, say, \$10,000 in equal proportions in payment of the lease and for a booking contract, respectively.

(3) Where the proprietor owns the land and building used in the conduct of the theater.

(4) Where the proprietor erects a building on leased ground for the purpose of operating a vaudeville theater.

Under the statement of facts contained in (1) the excess-profits tax would be imposed in accordance with section 209, war revenue act, approved October 3, 1917, the business being one principally engaged in rendering personal service in which the employment of capital is not necessary and the earnings of which are to be ascribed primarily to the activities of the owner; and the same rule would apply in the case of (2), the capital being entirely consumed and employed exclusively in providing accommodations and equipment necessary in the transaction of the business.

However, in determining whether or not the particular business is taxable under section 209, no weight will be given to the fact that it requires no, or only nominal, capital and is carried on by means of personal service, unless the principal owners are regularly engaged in the activities thereof.

With respect to (3) and (4), however, a different rule would apply, inasmuch as invested capital would necessarily be required in each instance. Therefore the excess-profits tax would be assessed in those cases in conformity with section 201 of the above-mentioned act.

It is deemed proper to add that the above is merely illustrative of the method to be followed in cases of this character. The application of the principle stated must be governed by the facts, and a definite ruling can only be rendered upon a detailed statement of the facts pertaining to each particular case.

Respectfully,

L. F. SPEER,  
*Deputy Commissioner.*

On the 18th day of May of this year, the Commissioner of Internal Revenue, Mr. Roper himself, writes us this letter and says:

TREASURY DEPARTMENT,  
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,  
*Washington, May 18, 1918.*

VAUDEVILLE MANAGERS' PROTECTIVE ASSOCIATION,  
*Columbia Theater Building, New York.*

SIRS: Reference is made to office letter addressed to you under date of March 30, 1918, in which it was held, in reply to your inquiry, that in a case where the premises equipped for theatrical purposes are leased and the only expenditures are in connection with such lease, the employment of performers, stage hands, ticket takers, advertising matter, tickets, stationery, etc., the excess profits tax would be imposed in accordance with section 209 of Title II of the act of October 3, 1917.

Upon further consideration of this matter, this office is of the opinion that the ruling stated in reply to the first and second inquiries of your letter dated March 6, 1918, was erroneous.

It is now held that the business of conducting and operating a theater, almost without exception, represents a business which should not be classed as one engaged principally in rendering personal service, in which the earnings are ascribed primarily to the activities of the owners.

It is also held that operating a theater represents a business that necessitates and customarily requires the use and employment of capital, whether the land and building is owned or leased, and the profits derived from its operation are due primarily to the use and employment of capital.

Hence in all cases involving the taxation of the profits of the business referred to, it is held that unless otherwise conclusively shown, the profits arising from the operation of vaudeville and moving-picture theaters in excess of the authorized deduction computed in accordance with the provisions of section 203 of the act are subject to excess profits tax to be computed at the graduate rates prescribed by section 201 of Title II, October 3, 1917.

Respectfully,

DANIEL C. ROPER, *Commissioner.*

The result of that is going to be that we are going to be taxed on a graduated basis; and I know of one case, and it is not an exceptional case, where \$10,000 was the issue of the capital stock for the lease. Now, that corporation is permitted in its statement an exemption of \$3,000; its capital was \$10,000, and therefore the tax which this corporation will have to pay will be on an entirely different basis than we understood from the first letter from the commissioner's office that we were to be taxed upon. Now, we contend that the business is of such a tangible nature that it creates nothing, it sells nothing but entertainment; it has no tangible thing from which entertainment is produced; that this business is in the same condition and ought to be treated in the same manner as a lawyer's business. Some lawyers, who have large suites of offices and employ as many as 75 or 100 clerks, have no tangible assets in their business. Now, the vaudeville business is the same. The investment, so far as anything tangible is concerned, is the little it pays in salaries and upkeep and heat and light, etc. Everything is on a strictly cash basis. Everything is paid up at the end of the week. Salaries are paid up, and all other expenses are paid up, and the accounts are balanced at the end of each week. Now, we wrote, in reply to the

last letter of the commissioner, and said just this. It is very short, and I think I will save time if I read it instead of trying to state it:

MAY 31, 1918.

HON. DANIEL C. ROPER,  
*Commissioner of Internal Revenue,*  
*Washington, D. C.*

DEAR SIR: We are in receipt of your letter of May 18, in which you state that after further consideration you are of the opinion that the ruling contained in your letter dated March 30, 1918, in reply to the first and second inquiries of our letter dated March 16, 1918, was erroneous.

Your letter gives no reasons for the reversal of judgment on the part of your office, nor does it point out any errors in the previous ruling contained in your letter of March 30, 1918.

May we call your attention to a striking misapprehension both of the facts and the law, as evidenced by your letter of May 18? You now hold that operating a theatre customarily requires the employment of "capital," whether the land or building is owned or leased, and that the profits derived from its operation are due primarily to the use and employment of "capital," but the law and your own regulations require the use and employment of "invested capital." Lawyers, doctors, accountants, and others engaged in similar professions require the use and employment of "capital." Every pursuit in the quest of profit requires "capital."

The second inquiry of our letter of March 16, 1918, referred to a corporation whose capital stock is \$10,000, half of which was paid for by the transfer of a lease of the theatre and the other half by a booking contract, with absolutely no cash or tangible capital of any kind invested in the business. In your letter of March 30, 1918, it was held that this corporation should be taxable under section 209; you now hold it taxable under section 201 of the graduated rates, on the theory that this corporation uses and employs "capital." You do not say it is invested capital, nor could you say so in view of article 47 of the War Excess Profits Tax Regulations, which provide that leaseholders when paid for by the corporation by the issuance of its own stock will not be regarded as tangible property. Certainly it will not be claimed that a booking contract is tangible property. If, therefore, this corporation began business without a dollar invested and only had a place to give a show and the booking means to procure the show, we still urge that it is conclusively shown that the profit is derived not from the use and employment of invested capital but from the use and employment of the activities of the owners, and we trust you will give further thought to this situation.

Very truly, yours,

VAUDEVILLE MANAGERS' PROTECTIVE ASSOCIATION,  
By PAT CASEY, *Manager.*

Now, in brief, this is the suggestion we make to remedy this situation.

Mr. MOORE. They held you under section 201?

Mr. GOODMAN. Yes; the said first section 209. Now, in the show business the amount of capital means nothing so far as the real profits are concerned, and the method of arriving at those profits. Give me Keith's Theater down here, or the Columbia Theater, and give me in addition to that \$1,000,000, and I can not make a 5-cent piece more. The capital invested means nothing, and therefore my suggestion is to eliminate in the consideration of the imposition of this tax any question of capital. Disregard capital because it makes no difference and a certain and definite profit can not be made from the amount of capital invested. You can not figure a profit of 5 or 10 or more per cent on the amount of capital invested. But fix some definite amount and fix and formulate this amount of tax upon a basis of reason. We have made so much money and let us pay so much tax, the same as the other fellow has to pay. I have a theater and have capitalized it at \$10,000, but in the operation of this law that means nothing because it is not invested capital in the ordinary sense. Another man has a leasehold that may cost him

considerably more than mine has cost me; his rent may be considerably higher; his obligations may be more and he may make less money or he may make more money out of his business than I make out of mine, but we ought to pay on the amount of business that we do. In the show business the amount of money received or made out of the business depends so much on the personality of the man who runs the business, his ability to advertise, and his ability to get attractive shows and so on. We have taken, and by that I mean the Keith's people have taken, some theaters that some other people have made failures of and we have made money. It is not the amount of money invested; it is the ability to produce new and unique attractions. That is also true of the motion-picture theater.

But if that suggestion does not sound fair then there ought to be a commission or committee or some board in cases of this kind, where the great bulk of the capital is intangible, who would fix a fair value upon the good will and leasehold; that should not be unequal but it should be fixed thoroughly on the tangible property and it should be taxable on a graduated rate because we have no capital in the ordinary sense invested in the business and really our capital is nothing. If we are to be taxed on a graduated basis on the theory that we have invested capital, then there should be some measure to determine what that invested capital is.

Mr. MOORE. Let me ask you, if I understand you clearly, the revenue department has held that the interests you represent should be taxed under section 209?

Mr. GOODMAN. Yes; here is the letter of March 30, 1918.

Mr. MOORE. Which would have given them an exemption of \$6,000?

Mr. GOODMAN. An exemption of \$3,000.

Mr. MOORE. And they first held you under section 201?

Mr. GOODMAN. Yes, sir.

Mr. MOORE. And subsequent to that they wrote you the other letter you mentioned?

Mr. GOODMAN. Yes, sir.

Mr. MOORE. You say you recommend a graduated rate of taxation?

Mr. GOODMAN. Yes; if the first suggestion I made does not sound fair; of course, I prefer the first suggestion I made.

Mr. MOORE. Under the section 209 you would be taxed an excess-profits tax?

Mr. GOODMAN. Yes; on a graduated scale.

Mr. MOORE. Which means up to 60 per cent?

Mr. GOODMAN. Practically 60 per cent of all of our profit; not a part but practically all. As I have explained, our capital is so nominal and so small that when we are allowed the allowable deductions, figuring capital within the meaning of capital invested, we practically have no capital.

Mr. MOORE. Assuming that their ruling would hold and that 60 per cent, or whatever the graduated rate was, what is the practical suggestion you make?

Mr. GOODMAN. I make two suggestions. The first is that in this new law, so far as corporations of this character are concerned, that you eliminate from consideration entirely the amount of capital, for the simple reason that the profit does not depend upon the capital

and that you fix a tax—I do not care what it is, we don't care what the tax is, so long as it is the same as anybody else has to pay.

Mr. MOORE. Are not some of the theaters incorporated? Do they not start out on the basis of capital?

Mr. GOODMAN. In the majority of cases. In latter years there have been some few theatrical promotions, but few in comparison with what there were in former years.

Mr. MOORE. Is Keiths an incorporated institution?

Mr. GOODMAN. Yes; but they have only two stockholders, Mr. Keith and Mr. Albee.

Mr. MOORE. What is the capital?

Mr. GOODMAN. There are individual companies or corporations ranging from \$10,000 to \$25,000; there are separate companies; of course there is a parent or holding company.

Mr. MOORE. How many separate companies are there?

Mr. GOODMAN. About 22. The holding company is capitalized for \$100,000, and \$300 of it is cash paid in and \$99,700 is stock and good will.

Mr. MOORE. You do not count anything for good will?

Mr. GOODMAN. No; we have never capitalized our good will. Here is an institution that could not be bought to-day at a minimum of \$5,000,000.

Mr. MOORE. But so far as the capital is concerned, that is nominal?

Mr. GOODMAN. Yes; it is only \$300 cash paid in. The law expressly provides that the stock should not be considered.

Mr. MOORE. This concern, I do not know what you call it.

Mr. GOODMAN. B. F. Keith's Theater Co.

Mr. MOORE. Do they own any real estate?

Mr. GOODMAN. No, sir.

Mr. MOORE. Some theaters have been especially built for them, have they not?

Mr. GOODMAN. Yes; they are under great obligations in the payment of rent.

Mr. MOORE. That business is all done under a leasing system, is it?

Mr. GOODMAN. All done under a lease system; yes, sir.

Mr. MOORE. They do not actually own a piece of theater property?

Mr. GOODMAN. No, sir; they do not.

Mr. MOORE. I would like to have your other remedy for the situation of which you complain?

Mr. GOODMAN. It is the first remedy that I suggested, if I have made myself clear, that inasmuch as capital means nothing in arriving at profit, eliminate capital and fix a definite tax, whatever that tax may be, but fix it upon the amount that we and our neighbor in the same business will have to pay in proportion. The man who runs a business across the street from ours, if he is making \$25,000 and we are making \$50,000, let him pay half as much as we have to pay. The other suggested remedy is that a provision be made that if you want to fix the capital, provide for the determination of the value of these intangibles. Have a board or a commission, and let them decide the value. But there is a great objection to that, and that is this objection: It is so difficult to get a standard of comparison. Section 201 provides that the Secretary of the Treasury shall, in certain cases, fix the value of property for taxable purposes.

Now, in the show business you can not take one business as the standard for another, and the law provides that in the fixing of these values the Treasury Department shall take standard representative values. There are so many conditions that enter into what may be the value of a show business, as I have said before, the personality of the manager and then again the location of the house and the size of the house, and all those things must be taken into consideration; and the nature of the show that he puts on and all these things. My second objection deals with this: That it would be most difficult to establish any standard for comparison and I think the first suggestion I made will work out to the interest of the Government and will be a great deal more satisfactory to the show business, because we are not here to avoid any taxes or to get any exceptions or to dodge any issues. We are here to get the same deal that other industries get, but we are placed in a class with other industries when we are not doing business on any such basis as the other industries are doing.

Mr. MOORE. The only difference between this and other industries, so called, is, I assume, that entertainment would be classed as luxury in comparison with some other industry. The question is whether we can tax entertainment or the person who enjoys the entertainment and meet the requirements of the Government in revenue.

Mr. GOODMAN. I hope I have made myself clear, that we are willing to be taxed and want to be taxed, and the only objection we have to the tax is the present basis of that tax, because we say it is unequal and inequitable.

Mr. MOORE. I think we understand all of you gentlemen to be fair on the question of willingness to help raise the taxes, but you suggest a change in the system which is rather intricate and difficult in view of the rulings of the department. It would help us very much, Mr. Goodman, if you, being an attorney, as I understand you are—

Mr. GOODMAN (interposing). Yes.

Mr. MOORE. If you would put it in the form of an amendment what you think would be sufficient to raise the revenue that we are now raising and that would meet your suggestion and such changes as the committee might make to raise the revenue that is being raised now. Will you do that?

Mr. GOODMAN. I will be very glad to do that. I will adopt your suggestion and will prepare an amendment.

Mr. MOORE. You have studied this question with great care and why not prepare such an amendment as you deem proper and submit it to the stenographer for the record.

Mr. GOODMAN. I will do that.

Mr. DIXON. You paid on the basis of this letter from the commissioner?

Mr. GOODMAN. Yes; we received the bill and we paid on that basis, but there was a letter came to us; there was a string attached to it, that it was subject to a change in the ruling, and I assume in the course of a few weeks, unless there is a change in the ruling of the department we will get other bills. I might add that we are still trying to have them see it as we see it. Now, on the general proposition of tax and the question of raising tax generally, in regard to theaters, I just want to add a word. There is not anybody that is

to be patted on the back for buying liberty bonds or for subscribing to the Red Cross or to any of the other of the war activities; nobody that does that deserves a pat on the back, and I do not want to suggest that we are entitled to that. But you understand, in a general way, what Keith's theater has done.

Mr. MOORE. I think everybody understands what the theaters have done in connection with the liberty loans and the raising of the other funds for the war activities?

Mr. GOODMAN. These drives have a deterrent effect on the attendance on the theatres, not due to a lack of patriotism, but due to embarrassment. A man goes into a theater and he has purchased liberty bonds or subscribed to the Red Cross to the limit of his ability and he has borrowed money to do it, and he sits with his wife in the theater and does not subscribe, and John Jones sits with his wife and Jones subscribes and a young lady holds up a card and announces "John Jones, \$10,000," and the audience applauds, and when the other fellow goes out he says, "Mary, I think we will not go back again to the theaters until these drives are over." Nobody knows that he has probably subscribed \$50,000 already to liberty bonds and has had to borrow \$50,000 to put in his business, or for some other purpose.

Mr. MOORE. I think you are right about that; you are absolutely right about that.

Mr. GOODMAN. I have heard that myself, and I personally have been embarrassed while sitting in our own theaters. There is a certain embarrassment where we are going to go and sit, if these drives are going to be continued, and of course we are going to work and continue to work, if we do nothing else in the theatres but that. But the reason I mention that is in connection with the taxation; bear in mind these things are not helping our business any; we are not war profiteers. With a million young men away—more than a million of young men away—the element in the country that usually goes to the theaters, it makes a big difference in the attendance upon the theaters. I suppose that is urged by everybody, but it is particularly true of the theaters, the young fellows are not here to take their girls to the shows. Of course, this situation is not true of the Washington theaters, but do not judge the United States by Washington, because there has been a falling off in the show business in other cities of the country, and there have been a combination of causes. There is not a week that vaudeville managers do not furnish anywhere from 12 to 18 films to the various benefits of one kind or another. That is one phase of their war activities. They maintain a department of war activities. This is a part of our burden and nobody is complaining, but in fixing the tax we would like to have you bear it in mind.

(Thereupon the committee adjourned to meet Wednesday, June 19, 1918, at 10 o'clock a. m.)

WILLIS C. HAWLEY, Oregon.

ALLEN T. TREADWAY, Massachusetts.

JOHN E. WALKER, *Clerk.*

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Wednesday, June 19, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, O'Shaunessy, White, Moore, Green, Sloan, Longworth, Sterling, Martin, and Hawley.

## STATEMENT OF MR. A. C. DUSTIN OF CLEVELAND, OHIO.

Mr. DUSTIN. Mr. Chairman, I would like to hand to the secretary for the use of the committee a memorandum containing a draft on the question of depletion. I believe there was a gentleman who spoke some time last week before the committee on the question, but he did not have a draft covering the rights of lessees.

Mr. GARNER. What lessees do you refer to?

Mr. DUSTIN. Lessees of oil, gas, and ores.

## AMENDMENT OF THE INCOME-TAX LAW OF SEPTEMBER 8, 1916, WITH REGARD TO DEPLETION.

Deductions from gross income for depletion of mineral deposits (oil, gas, ores) is allowed to natural persons, citizens or residents of the United States by subdivisions "seventh" and "eighth" of section 5, as to nonresident aliens by subdivision "seventh" of section 6, and as to corporations by subdivision "second" of section 12.

The Treasury Department has ruled under the act of Congress of 1913 where depletion to the extent of 5 per cent was allowed and under the law of 1916 where full depletion was allowed that natural persons and corporations operating upon land owned in fee may take the depletion provided by the law, but that persons and corporations operating upon leases may take nothing for depletion. This inequity should be remedied and I beg leave to suggest an amendment to the language employed on the subject of depletion in the act of 1916, as follows:

Section 5: Combine subdivisions "seventh" and "eighth" of section 5 so that the new subdivision "seventh" will read as follows:

"Seventh. A reasonable allowance for the exhaustion, wear and tear of property arising out of its use or employment in the business or trade: (a) in the case of oil and gas wells such reasonable allowance shall be made for actual reduction in flow and production to be ascertained not by the flush flow but by the settled production or regular flow; (b) in the case of mines such reasonable allowance shall be made for depletion thereof not to exceed the market value in the mine of the product thereof which has been mined and sold during the year for which the return and computation are made, such reasonable allowance to be made in the case of both (a) and (b) under rules and regulations to be prescribed by the Secretary of the Treasury. The allowances for exhaustion and depletion herein provided for under (a) and (b) shall be made to all parties interested therein, including owners, lessors and lessees to the extent of the value of their respective rights or interests therein: *Provided*, That when such allowances shall equal the capital originally invested, or in case of acquisition prior to March first, and so forth."

(Here follow the draft of the original subdivision.)

Section 6. Subdivision seventh, covering nonresident aliens, should be the same as seventh section 5, as above, except that the words "within the United States" should be inserted and the words "purchase made" should be omitted, and the word "acquisition" substituted.

Section 12. Subdivision "second" to be amended to read as follows:

"Second. All losses actually sustained and charged off within the year and not compensated by insurance or otherwise, including a reasonable allowance for the exhaustion, wear, and tear of property arising out of its use or employment in the business or trade; (a) in the case of oil and gas wells such reasonable allowance for actual reduction in flow and production to be ascertained not by the flush flow but by the settled production or regular flow; (b) in the case of mines a reasonable allowance for depletion thereof not to exceed the market value in the mine of the product thereof which has been mined and sold during the year for which the return and computation are made, such reasonable allowance to be made in the case of both (a) and (b) under rules and regulations to be prescribed by the Secretary of the Treasury. The allowances herein provided for under (a) and (b) shall be made to all parties interested, including owners, lessors, and lessees to the extent of the value of their respective rights or interests: *Provided*, That when the allowance authorized in (a) and (b) shall equal the capital originally invested, or in case of acquisition prior to March first, nineteen hundred and thirteen, and so forth."

(Here follow the draft of the original subdivision second, sec. 12.)

In order to put lessees who acquired their leases prior to March 1, 1913, on an equality with the owners operating upon their own lands acquired prior to 1913, a new section should be written into the new law which will operate as a practical construction by Congress of the laws of 1913 and 1916. While the Treasury Department has ruled under these laws that lessees could not take depletion, as a matter of fact, in the majority of cases in the returns filed, the lessees have taken depletion so that the returns by them as already made would be in harmony with the construction mentioned.

The section in the form in which I would suggest it might read as follows:

"Sec. —. Lessees and other parties interested in oil, gas, mines, and other natural deposits are hereby declared to be entitled to the deductions provided for in the acts of Congress of October third, nineteen hundred and thirteen, and September eighth, nineteen hundred and sixteen, for and on account of the exhaustion or depletion thereof to the extent of their respective rights or interests therein."

**STATEMENT OF MR. WALTER C. HUGHES, EXECUTIVE SECRETARY NATIONAL CONFECTIONERS' ASSOCIATION, CHICAGO, ILL.**

Mr. HUGHES. Mr. Chairman and gentlemen of the committee, I wish to correct an impression that may have been formed in the minds of the committee on account of an inadvertent error that crept into the record in stating that I am an attorney. When your assignment clerk was getting a line on my pedigree, I may have inadvertently admitted I was an attorney, but I am not an attorney at the present time.

Mr. GARNER. You have reformed?

Mr. HUGHES. I have therefore prepared no brief, although I intend to be brief.

I appreciate the enormous task which the committee has undertaken in drafting this revenue bill. I am here in Washington as a volunteer member of the Food Administration, although I am not appearing before the committee in an official capacity as a member of the Food Administration but as secretary of the association to which I have referred. The confectionery industry, Mr. Chairman, is expressed in terms of sugar, and it is my purpose in appearing before the committee to bring certain facts to your attention—certain conditions that are affecting the industry and which will continue to affect the industry as long as the war lasts. When we think of the confectionery industry we think of sugar, and the average person thinks of confectionery as sugar, 100 per cent sugar.

You gentlemen are familiar with the situation that has been created on account of shipping conditions, and you are also familiar with the fact that the confectionery industry, the same as all other industries using sugar in the United States, is 51 per cent dependent upon the raw sugar that comes from Cuba, for that is the amount, practically speaking, we get from Cuba, so far as our total consumption is concerned.

There have been certain restrictions placed upon the confectionery industry since last October, when the Food Administration, because of the critical situation that had been created at that time and the acute shortage found it necessary to issue restrictions to the extent of 50 per cent in the amount that the industry could consume. A 50 per cent restriction on any industry is a mighty severe restriction, as you gentlemen well know.

On the 1st of January conditions appeared to be somewhat more favorable, and we therefore permitted the industry to have 80 per cent, which will continue until the 1st of July. However, recent developments, such as the submarine attacks on our Atlantic coast and the necessity of increasing the number of troops that must be sent to France and the supplies incident thereto which must be shipped to support our boys over there, made it necessary to withdraw from the raw-sugar trade certain ships that had been bringing up raw sugar from Cuba to the United States; and the submarines having sunk in the neighborhood of 26,000,000 pounds of sugar, in the opinion of the Food Administration, is a sufficient justification to place further restrictions not alone upon the confectionery industry, but a great many other industries that heretofore have always been classified as absolutely essential industries but which, because of the force of circumstances, it will be necessary for us to restrict nevertheless.

Mr. GARNER. Mr. Hughes, may I ask you a question without interfering with your argument?

Mr. HUGHES. Certainly.

Mr. GARNER. We have had up this whole problem of price fixing and restrictions, and there is a well-grounded opinion, or at least apparently a well-grounded opinion, that when it is necessary to fix the price in order to keep it from a run-away market, as some of them term it, or when it is necessary to restrict an industry in order to conserve the materials going into that industry, we might just as well do that by taxation and get some revenue into the Treasury. Suppose we had adopted a system of taxation on confections which had reduced it 25 or 50 per cent, we would have been getting a good deal of revenue and at the same time accomplishing the same thing the Food Administration has accomplished, according to your statement; or suppose, instead of the fixing of the price on some articles as Mr. Brookings and others are doing, we were to restrict the production of that particular article by taxation, we would then be doing two things—we would accomplish by taxation what you have accomplished and at the same time get a great deal of money into the Treasury.

Mr. HUGHES. In answer to that I would say that, of course, so far as the Food Administration is concerned, their restriction as to usage is because of a shortage of the product. In other words, there was, theoretically speaking, during the latter part of last year only 50 per

cent of the amount of sugar that could be used in the manufacture of confectionery as compared with the amount that was used during the corresponding months of the previous year.

Mr. GARNER. I have no criticism to make of the Food Administration.

Mr. HUGHES. I understand that.

Mr. GARNER. But I will say that looking over for a number of months many of their manifestoes with reference to what we should use now and use then, I find they are quite contradictory. For instance, I come from a stock-raising country, and one month they will say we must not eat any pork and the next month they will say that every cupboard is full of pork and that we must eat all the pork possible and save the beef. Now, I confess, the people in the country can not understand such a performance as that.

Mr. HUGHES. I appreciate the point you make, but as I stated before, the question of the Food Administration's attitude is merely one of taking a supply that is depleted and distributing it as equitably as possible, so far as the sugar proposition is concerned.

Mr. GARNER. You can make people economical by taxation. You can make them practice economy by taxing a thing to the point where it is hard for them to buy it.

Mr. HUGHES. Yes.

Mr. GARNER. Now, if we adopted a policy with reference to sugar and its products so that we would tax it to a point where it was difficult for the people to buy it, we would make the people economical so far as that product was concerned?

Mr. HUGHES. You would have to carry it to a point where they would not buy it or could not buy it.

Mr. GARNER. If we take confectionery and soft drinks, which are not essential, and tax them to a point where it is difficult for the people to buy them, we will force them to practice economy in reference to such things.

Mr. HUGHES. Yes; but at the same time you will admit that if you did that you would not get any revenue, because then you would throw the industry out.

Mr. GARNER. That brings us up to this question: Do you admit that your business is one that should be taxed during this war?

Mr. HUGHES. I am not here to protest against any action by the committee, and answering your question I should say that as to the question of whether the industry should be taxed or not ought to depend entirely upon the facts developed by your investigation.

Mr. GARNER. Suppose the committee should determine that your business is one that could very properly be taxed. Then the rate of taxation should be the rate that will get the largest amount of money into the Treasury?

Mr. HUGHES. Consistent with an equitable taxation, of course.

Mr. GARNER. In other words, whenever you select a business and say that that business is one the Government can afford to tax as a matter of public policy, then the only question is the rate that will yield the largest amount of money for the Treasury. Now, of course, as to what that rate ought to be you and I might disagree about.

Mr. HUGHES. Yes; I understand your position.

Mr. GARNER. And I am simply suggesting to you that if you admit and if the committee should determine that your business is

a proper business to tax, then it is a question for you to suggest the rate you think your business can stand and yield the largest amount of money to the Treasury.

Mr. HUGHES. That is absolutely correct. There is no doubt about that.

Mr. MARTIN. Mr. Hughes, while you are on the question of the scarcity of sugar, will you explain to the committee why that scarcity exists at this time?

Mr. HUGHES. There is probably—and I wish the committee to understand that I am speaking now not as an official of the Food Administration but simply in my capacity as Secretary of the Association—there is in all probability not a sufficient amount of sugar to take care of the fruits and vegetables during the canning season.

Mr. MARTIN. You mean in the United States?

Mr. HUGHES. In the United States. There is an enormous amount of sugar, as we all know, used by the housewives during the canning season, and the Food Administration has requested and in fact urged them to can as much as they possibly can. In other words, they want the fruits and vegetables preserved, and Mr. Hoover is very anxious that there should be a sufficient supply of sugar available for that purpose, and in order that there may be a sufficient supply, taking into consideration the fact that the stocks are short and for other reasons which I have mentioned, we are going to dam up, so to speak, the flow of sugar to certain industries in order that it may be sent around to the canning and preserving people.

Mr. MARTIN. Do you know how much sugar there is in Cuba at this time?

Mr. HUGHES. We estimate approximately 1,000,000 tons, which would be in the ports and on the plantations, but of course there again enters the situation as to the uncertainty of whether the Shipping Board is going to be able to arrange enough ships to bring up that sugar in sufficient quantities to take care of our daily requirements.

Mr. MARTIN. In other words, there is plenty of sugar in Cuba to take care of our necessities if we had the bottoms to get it over here.

Mr. HUGHES. It is a question of transportation entirely. If we had the ships there would be no difficulty at all so far as the sugar is concerned. It is there if we can get it, just the same as there is a large amount of sugar in Java, but it is a long ways over there and there is the submarine menace to be taken into consideration and all that sort of thing.

Mr. MARTIN. You made the statement a moment ago that we depended on Cuba for 51 per cent of our sugar supply?

Mr. HUGHES. Yes, sir.

Mr. MARTIN. Have you those figures at hand? They do not correspond exactly with my figures.

Mr. HUGHES. I am speaking only from memory, and I have the figures, of course, at the office, and I would be glad to submit them in a more substantial form for the consideration of the committee if they desire.

Mr. MARTIN. I wish you would, because they do not correspond with the figures I have on the subject.

Mr. HUGHES. I will be very glad to do that.

Mr. MOORE. We have been losing some sugar cargoes lately on the Atlantic coast, have we not?

Mr. HUGHES. About 26,000,000 pounds is the estimated amount that has been sunk; in other words, from 13,000 to 14,000 or possibly 15,000 tons, which, of course, at this critical time is a very great misfortune and one certainly to be deplored.

Not alone do we find this situation with reference to sugar which will affect the confectionery industry to this extent, that we must of necessity place very severe restrictions upon their usage, even perhaps to the extent of what we placed upon them last fall, which was 50 per cent—and I am not here before the committee to state positively as to what restrictions will be placed upon the industry because we do not positively know, but the conditions would justify as severe a restriction as was placed on the industry the latter part of last year, so that assuming, for example, that there might be a 50 or 60 per cent restriction placed upon the industry at the present time, you gentlemen can see at once what effect that would have upon the industry itself. Naturally, it means restricting the output of the various plants of the country to that extent and their overhead continuing practically the same as it was before, which means a very large increase in the cost of their product.

Not alone that, but the shipping situation has made it necessary for the Shipping Board to place embargoes, as you gentlemen know, upon the importation of nuts, upon which the confectioners largely depend to make up the difference in what they have been cut down as to sugar and what they had before, so we have cut out the importation of Chinese and Japanese nuts from the Orient and Brazil nuts from South America, coconuts being the only exception, and the only reason the coconuts are coming in is because the gas defense service requires coconut shells, and therefore the Shipping Board says, "All right; we will let them come in;" but the confectioner will be confronted with the difficulty that he will not have the sugar to work up the coconuts with.

Mr. MOORE. How does glucose enter into your calculations?

Mr. HUGHES. I will answer your question in this way: Glucose is used the same as any other raw material. It should be considered as a separate proposition and not as a sugar substitute. It is not used for that purpose. It is used the same as starch or any other raw material in combination with sugar in order to get certain consistencies in certain kinds of candies.

Mr. MOORE. If there is a shortage of sugar for use in the manufacture of confections, is not that very largely made up by the use of glucose?

Mr. HUGHES. I will answer your question in this way: Under normal conditions a confectioner will use a maximum amount of corn sirup or glucose, as you call it, because it is necessary for him to do that in order to make various kinds of candy. Now, furthermore, the Food Administration has requested all sirup manufacturers to increase their output of sirup, and has requested the public to consume sirup and molasses for the purpose of saving sugar. Therefore there is a very largely increased demand for sirups and molasses of all kinds for the public and for the Army and the Navy, so that the sirup manufacturers are giving preference to the domestic trade, and the confectioners find great difficulty now in even getting the

amount of corn sirup and glucose that it is necessary for them to have to work up according to their requirements. In other words, may I put it in this way: If the sugar restriction is 50 per cent, for example, you can not make up, by any means, the difference between 50 per cent and 100 per cent of your requirements by the use of corn sirup. You can use proportionately as much corn sirup to the extent of 50 per cent as if you had 100 per cent of sugar and use proportionately that much more corn sirup.

Mr. MOORE. The price of confectionery has gone up.

Mr. HUGHES. Yes, sir.

Mr. MOORE. Quite extensively.

Mr. HUGHES. Yes, sir.

Mr. MOORE. Candy that you could buy for 30 and 50 cents before the war is selling now at anywhere from .60 cents to \$1.10. I have seen them marked up in the retail stores. Since you are connected with both the confectionery trade and with the Food Administration, I would like to know whether that increase in price is justified in view of the fact that glucose is used to such a large extent in the manufacture of confectionery?

Mr. HUGHES. Yes, sir; it is for this reason: That not alone has everything increased in connection with the confectionery industry so far as prices are concerned—that is, in their packages, their raw materials and their labor, and everything else—but there has been a very large increase in the cost of their production, so that in some instances, according to the statistics that we compiled and prepared for submission to the Finance Committee of the Senate last year, we show there has been an increase of anywhere from 100 to 500 per cent in the various items that the confectioner uses. Of course, it must be kept in mind that the confectioner, so far as prices are concerned, would not be controlled entirely by the price of sugar and corn sirup.

Mr. MOORE. Has there been a scarcity of glucose?

Mr. HUGHES. Yes, sir.

Mr. MOORE. That is a corn product and not a sugar product?

Mr. HUGHES. Yes, sir. They are operating at the maximum of their capacity at the present time, but the demand exceeds the supply, and they are not able to fill their demand.

Mr. MOORE. Who are the principal glucose manufacturers?

Mr. HUGHES. There are half a dozen. The largest manufacturer of glucose is the Corn Products Co., with headquarters at New York; and there is the Clinton Sugar Co., at Clinton, Iowa.

Mr. MOORE. The Corn Products Co., is a subsidiary of the Standard Oil Co., is it not?

Mr. HUGHES. It is supposed to be, or it is supposed to be financed by the Standard Oil people.

Mr. MOORE. Is that the corporation that was involved in some litigation in New York sometime ago?

Mr. HUGHES. I believe so.

Mr. MOORE. For the dissolution of certain—

Mr. HUGHES (interposing). There was some action of that sort instituted against the company, but I am not familiar with the details of it. I could not qualify as a witness on that.

Mr. MOORE. Most of the glucose comes from the Corn Products Co.?

Mr. HUGHES. Yes, sir; that is, they have by far the larger percentage of the output as compared with other plants.

Mr. MOORE. Are we sending any glucose abroad now?

Mr. HUGHES. Recently that has been prohibited.

Mr. MOORE. Then, the United States is getting the benefit of the output of glucose from the Corn Products Co. and such other manufacturers of glucose as there are in the United States?

Mr. HUGHES. Yes, sir.

Mr. MOORE. There has been no restriction upon the use of glucose?

Mr. HUGHES. None whatever.

Mr. MOORE. There has been no restriction upon its use by the Food Administration?

Mr. HUGHES. No, sir.

Mr. MOORE. There has been an increased use of glucose in the manufacture of confectionery, and to that extent glucose makes up for the scarcity of sugar?

Mr. HUGHES. To a very small degree. In other words, there is one method which the confectioner can employ to increase his use of corn sirups: There are certain classes of goods in which there is a larger percentage of corn sirup than others.

For example, for lozenges they require 100 per cent of sugar, while for gum drops they require only 10 per cent, and if a manufacturer could manufacture all gum drops, he would increase his use of corn sirup proportionately, but he has the situation confronting him that certain departments of his factory are arranged to make certain classes of confectionery, and he is confronted with the question, not of making one class of goods in his factory, but of making different classes in different departments, so that the confectioners in working out their problems have increased their use of corn sirup only in certain departments. The point that I am trying to bring to the attention of the committee is that they can not possibly overcome any such restriction as that which has been imposed on them by the Food Administration.

Mr. MOORE. The purpose of my inquiry is in line with that of Mr. Garner, of Texas; that is, with a view to finding out where we can obtain additional revenue, and if we have overlooked anything it is your duty to advise us of it. If glucose is going into the market where sugar is going out, we might reach glucose. I believe you stated you were not an attorney.

Mr. HUGHES. I have been.

Mr. MOORE. You are a lawyer?

Mr. HUGHES. I used to be, but I am not practicing now.

Mr. GARNER. You have some knowledge of the law?

Mr. HUGHES. I have been an attorney.

Mr. MOORE. Do you live in Washington?

Mr. HUGHES. No, sir; in Chicago.

Mr. MOORE. Is that the headquarters of the National Confectioners' Association?

Mr. HUGHES. Yes, sir.

Mr. MOORE. Of which you are now the secretary?

Mr. HUGHES. Yes, sir.

Mr. MOORE. You are also associated at present, during the war, with the Food Administration under Mr. Hoover?

Mr. HUGHES. Yes, sir.

Mr. MOORE. What particular branch of the service are you in?

Mr. HUGHES. The work I have charge of in connection with the Food Administration is the sugar allotment to the manufacturers who have been restricted in their use of sugar. That includes confectioners, ice cream manufacturers, manufacturers of soft drinks, and all those classes of industries that are now restricted in the use of sugar. That includes, also, some of the products which are essential food products, such as sirups.

Mr. MOORE. Mr. Hoover has drawn around him experts in various lines of industry, and I assume you are an expert on the confectionery industry?

Mr. HUGHES. I do not know that I would qualify as an expert, but I have had practical experience.

Mr. MOORE. Therefore, I assume that you would not want to see any taxation imposed that would seriously interfere with the confectionery business.

Mr. HUGHES. No, sir; and I do not think that that would be the intention of the committee in framing the bill. I do not think it would be the intention of the committee in framing the bill to impose a serious handicap upon any industry.

Mr. MOORE. I think you are entirely right as to that, but I assume that you also agree with the fact that the Government needs extra revenue with which to operate the Food Administration and other agencies of the Government, and I assume that you will do the best you can, and so will Mr. Hoover, to give the committee information as to those places where we can obtain revenue from sources not now producing it.

Mr. HUGHES. Yes, sir.

Mr. MOORE. In view of the increased cost of confectionery to the consumer, what suggestion have you to make looking to affording the Government an opportunity to raise more revenue from that source?

Mr. HUGHES. As to the rate of taxation or the method?

Mr. MOORE. As I have said, the price has advanced——

Mr. HUGHES (interposing). As to the method of taxation and as to the rate of taxation, and as to the effect or result of any suggested rate of taxation upon that industry, I would prefer to leave that question to Mr. V. L. Price, who is chairman of the executive committee, and who is a practical manufacturer. He can give you better information than I can on that subject. My purpose in appearing before the committee is to give you general information that has come to my knowledge as a member of the Food Administration, and as to those difficulties that are confronting the industry at the present time.

Mr. MOORE. Since you are connected with the Government now, I thought that possibly you might be able to tell us how we could get more money out of this confectionery industry, for which you are a spokesman, because it is not now a question of reducing revenue, but a question of getting more revenue.

Mr. HUGHES. That is very true; but, as I said before, I would prefer not to express an opinion on that question. If I understand your question correctly as applying to the method and to the rate, after Mr. Price has made the statement that he will be glad to make, if you want to ask me any questions, I will be glad to answer them.

Mr. MOORE. I do not know whether Mr. Price, unless he is connected with the Government, would be as well qualified to answer the questions as you would be. You are aware of the fact that the Food Administration, or the Government, is furnishing ships to bring sugar to this country, in order that the manufacture of confectionery may continue, and in order that the wants of the people may be supplied. You are also aware of the fact that the Government is making certain restrictions upon the use of sugar, which necessarily adds to the price, and you have conceded in answer to one of my questions that the price of confectionery to the consumer has gone up.

Mr. HUGHES. Yes, sir.

Mr. MOORE. Now, if there is a difference in the general price of a box of candy of, say, 30 or 50 cents, or if there has been that much addition made to the price of a pound of candy, that is an indication to the lay mind that somebody is getting 50 cents more for a box of candy than he got prior to the war, and that being true, would not that be a proper source of taxation by the Government in order to get revenue to build ships to bring sugar to the ports?

Mr. HUGHES. Of course your question, in a sense, is a hypothetical question.

Mr. MOORE. I think it is an eminently practical one, because if I paid 40 cents for a box of candy two years ago and have to pay 80 cents for the same box of candy now, I know that I am paying somebody 40 cents more than I did formerly.

Mr. HUGHES. Yes, sir.

Mr. MOORE. If the manufacturer of confectionery is getting that extra 40 cents or if the Food Administration is getting it or if anybody else is getting it, it is a fair question whether the Government in time of war ought not to get some proportion of that extra 40 cents.

Mr. HUGHES. In other words, your position is that you must first find out who is getting that 40 cents, and if you find that the manufacturers are getting part of it, you would increase the taxes of the manufacturer proportionately. Naturally it would not be the judgment of the committee that the manufacturers should stand the burden to any greater extent.

Mr. MOORE. You must bear in mind that the manufacturers of confectionery are using glucose, as it is admitted, to a larger extent than before. He uses glucose as a substitute for sugar, and that helps him out. Now, the Corn Products Co. may be getting it. I do not know who is getting it, but somebody is getting that difference in the cost. I can concede what you say about the increased cost of labor, the increased cost of material, etc., but there is this vast difference between the cost then and the cost now. That being so, why should not the Government get something more out of it in order to make it aid in running the work of the Food Administration?

Mr. HUGHES. I understand your position exactly in that, but it seems to me that the committee should also take into consideration the greatly increased cost of the business, not only in the item of sugar but in cornstarch, flavors, nuts, and everything else that goes into candy. In other words, I hope to be able to convince the members of the committee that so far as this increase is concerned it is justifiable from the manufacturers' viewpoint.

Mr. GREEN. If we put a tax on candy, especially on high-priced candy, the manufacturer would add that tax to the price, would he not?

Mr. HUGHES. The manufacturer would, in all probability, add the tax to his price. There are certain facts which the committee would take into consideration of course, when they came to consider the method and the amount, because that amount accumulates as it passes from the manufacturer to the jobber, from the jobber to the retailer, and from the retailer to the consumer if they are going to maintain their average profit all the way along the line.

Mr. GREEN. Do you mean to say that we should be deterred from levying a tax on candy because some agencies along the line will unpatriotically not only add the tax, but a larger margin of profit also? If that were true, we would be estopped from levying a tax on anything.

Mr. HUGHES. Of course the consumer pays it anyhow.

Mr. GREEN. That is what I was coming to. Anybody who can afford to pay \$1 for a pound of candy can afford to pay the tax on it in the end.

Mr. HUGHES. In other words, so far as he is concerned, he can absorb the tax.

Mr. OLDFIELD. Are the candy people making more money now than usual?

Mr. HUGHES. The confectioners' profits during the year 1917 were on an average higher than they had been for several preceding years, and that was for various reasons. They have been able to get a larger business, as you might say, upon a higher plane, and to eliminate certain conditions in their plants. In other words, they have been able to market their products more intelligently, and therefore their profit has been greater, although I have no information as to what their profits would be.

Mr. OLDFIELD. When you go to a candy store here in Washington, you have to stand in line just as you do at the post office to get mail or at a theater to get tickets. I never saw anything like it. Sometimes you have to stand in line for an hour, perhaps, to get a pound of candy.

Mr. HUGHES. Yes, sir; but that is because the demand for candy is very large. As you know, you have to stand in line when you go down town to get lunch at a cafe. You must stand in line nowadays at the post office to buy postage stamps.

Mr. OLDFIELD. I think we should get an additional tax from the lunch people and hotel people, also. They are making more money because they are charging more and giving less food and service.

Mr. HUGHES. I have no doubt that is true in Washington.

Mr. GARNER. Is not that largely a result of your activities, or, at least, so far as the amount of food that they give you is concerned?

Mr. HUGHES. Do you mean the activities of the Food Administration?

Mr. GARNER. Yes. Don't you claim a good deal of credit for the fact that you have brought about economies in the use of food?

Mr. HUGHES. I suppose a part of it might be attributed to that, but I think it is largely due to the fact that they are getting higher prices for what they serve.

Mr. GARNER. Of course, they are taking all the market will bear. You do not pretend to be an expert, as I understand it, or to speak from the standpoint of an expert as to the method of raising taxes or as to the rate of taxes on confectionery, but you simply come to

tell us about the difficulties that the trade confronts by virtue of the action of the Food Administration, and about the higher prices of the different articles that go into the manufacture?

Mr. HUGHES. Yes, sir.

Mr. GARNER. Now, if this committee should take into consideration the activities of all of the different bureaus of the Government, either on the basis of what they may be doing now and on what they may do in the future, don't you think we would have great difficulty in making up a tax bill?

Mr. HUGHES. I imagine that even if you did not take into consideration those things that you have mentioned, you would have great difficulty anyhow.

Mr. GARNER. Take, for instance, the variations that may be brought about by the Food Administration. If the Ways and Means Committee of the House of Representatives should undertake to anticipate what the Food Administration may do next week or next month, I do not know where we would find a landing place.

Mr. HUGHES. That would be impossible, of course.

Mr. GARNER. Therefore, in the framing of a tax bill, we can not take into consideration the various methods that the different bureaus of the Government may adopt along these several lines, but we will have to levy taxes, or base our action in the levying of taxes upon the best information that we can get as to the circumstances and conditions that exist now. Then if the executive branches of the Government make a further interference with those conditions so as to increase prices, that will be a matter in their own hands. Now, you were speaking more for the confectionery people than anyone else. Have you any other business?

Mr. HUGHES. No, sir; I am the executive secretary of the National Confectioners' Association.

Mr. GARNER. That is the only business you have?

Mr. HUGHES. Yes, sir.

Mr. GARNER. You are down here connected with the Food Administration in order to give your attention practically to that subject, or to give whatever expert knowledge you have touching sugar and the sirups that go into the manufacture of various articles of confectionery?

Mr. HUGHES. Yes, sir.

Mr. GARNER. You have no suggestions to make as to the method or rate of taxation, and neither will you say that this is the character of industry that the Government could afford to tax for the purpose of getting revenue to run the war?

Mr. HUGHES. I would prefer to leave that for Mr. Price.

Mr. GARNER. As a matter of public policy, you ought to be able to express an opinion upon that.

Mr. HUGHES. I am willing to answer that question, but I want to add that appearing in my dual capacity, I want it understood that I am not answering as an official of the Food Administration. I want to make that point clear. As to the question of taxing the confectionery industry, as I said before, the confectionery industry and any other industry, for that matter, that can bear just and equitable taxation ought to be required to bear it, and the confectionery industry can not expect to escape the burden of the war any more than any other industry. Now, as to what is a fair tax and the method

of its imposition, that is something that the committee will have to determine.

Mr. GARNER. There are industries in this country that are essential, semiessential, and nonessential. For instance, I take it that the steel industry is an absolutely essential industry in this war. I do not believe you would put confectionery on the same plane or in the same class with steel.

Mr. HUGHES. No, sir.

Mr. GARNER. So confectionery must be a semiessential industry?

Mr. HUGHES. Yes, sir; or, as it has been referred to, it is a less-essential industry. That is simply comparative, and the proper term to use would be that comparative term, less essential.

Mr. GARNER. You would not pursue the policy of levying a tax for the purpose of getting revenue on the steel industry directly?

Mr. HUGHES. No, sir.

Mr. GARNER. Because it is essential in this war?

Mr. HUGHES. Yes, sir.

Mr. GARNER. What I was trying to get into your mind was the idea as to whether or not that is a less essential industry and one on which we might properly, as a public policy, levy a tax, and the next question is what the tax shall be.

Mr. HUGHES. That is the point exactly.

Mr. STERLING. I have not heard all you have said, but have you any judgment as to the best way to impose this tax on candies in case the committee does tax them?

Mr. HUGHES. As to the method?

Mr. STERLING. Yes.

Mr. HUGHES. Yes; but as I say, Mr. Price, who is to follow me, will talk on that phase of the matter. In our attempt to make the time as short as possible we decided that he would talk upon that phase of the situation.

Mr. STERLING. Then I will not insist upon your giving any opinion.

Mr. HUGHES. His opinion will be my opinion.

Mr. STERLING. All right.

Mr. HUGHES. He will merely express my opinion, and there is no need, in one sense of the word, in my telling you what Mr. Price will be likely to say, but his opinion will be my opinion.

Mr. HAWLEY. Any increased tax that has been placed on candy you have been able to shift to the consumer?

Mr. HUGHES. Yes; of course, there has been some cost that it has been necessary to absorb all along the line, by the manufacturer, the jobber, the wholesaler, and the retailer. But generally speaking it has been necessary to advance the price all along the line in order that the price will be maintained normally through the various parts, you might say, of the industry.

Mr. HAWLEY. Do the confectioners use saccharine in the manufacture of candy?

Mr. HUGHES. No; that is prohibited.

Mr. MARTIN. They use that in the manufacture of soda water and soft drinks, do they not?

Mr. HUGHES. The United States Department of Agriculture has issued a ruling prohibiting the use of saccharine in any kind of food products, and a great many of the States have prohibited its use in food products.

Mr. DICKINSON. You say there is plenty of sugar in Cuba and Java that can be brought into this country to meet the demands of the United States?

Mr. HUGHES. Yes, sir.

Mr. DICKINSON. Do you understand that there is enough sugar in Cuba, Java, and the other countries to meet all the demands of the world at large?

Mr. HUGHES. Yes, sir.

Mr. DICKINSON. Are you familiar with the different reasons that prevent the bringing of that sugar into this country?

Mr. HUGHES. There is just one word that answers your question and that is transportation.

Mr. DICKINSON. They have not a sufficient number of bottoms to bring sugar the short distance between Cuba and our ports.

Mr. HUGHES. No.

Mr. DICKINSON. Now, take Java. Do you know why sugar can not be brought from Java in foreign bottoms? For instance, in Japanese vessels? Are you familiar with any efforts being made to have Japanese bottoms bring sugar to this country?

Mr. HUGHES. No, sir. That would be a matter, of course, that the Shipping Board would be a great deal more competent to give you expert information upon than I am. I can give you just my own, what you might say, second-hand knowledge of the proposition, and that is that the boats are not available. If they were sent to Java the submarine menace is such that there would be no justification in attempting such thing as that. Of course, if it were a question of the transportation of troops and supplies, or something absolutely necessary, that would be a different matter.

Mr. DICKINSON. Have you any reason to believe that there are any interests in this country that do not desire the shipment of sugar at this time in large quantities into this country to meet the demands?

Mr. HUGHES. I do not think so. My personal opinion would be that that is not the case, and I know of no such condition of affairs.

Mr. MOORE. How about the importation of sugar on the Pacific coast? There is no submarine menace there, is there?

Mr. HUGHES. There it is a question, of course, of using those ships. They have taken off some of them and are using them for the purpose of bringing over rice, cocoa, cocoanut oil and those products which they consider to be absolutely essential. However, there have been no serious restrictions placed on the bringing in from the Philippines and the Hawaiian Islands of the amount of sugar that is over there.

Mr. MOORE. How do we get it from Hawaii now—through the canal?

Mr. HUGHES. No; we get it direct to the Pacific coast and then they bring it across.

Mr. MOORE. Are you having any trouble in transporting the sugar brought from the Hawaiian Islands and from the Philippines to the East?

Mr. HUGHES. No serious difficulty, except that to which I referred, the fact that they have classified all of these various products—

Mr. MOORE (interposing). How is your railroad transportation from the Pacific coast?

Mr. HUGHES. That is very much interfered with.

Mr. MOORE. It is interfered with?

Mr. HUGHES. Yes; the delays are very great. The fact is that a very large portion of that California-Hawaiian sugar does not find its way east of the Mississippi River but is consumed very largely west of the Mississippi River.

Mr. MOORE. Is the trade getting any perceptible relief from the Pacific coast at this time?

Mr. HUGHES. The conditions, so far as the distribution of it are concerned, are just about the same as we would have under normal conditions, compared with the amount we receive.

Mr. MOORE. How does that affect the general situation?

Mr. HUGHES. Let me put it this way: The situation that prevailed last fall, in November and December, was that the East was very short of sugar, and we were unable to transport, that is quickly, any of the sugar from the western coast due to transportation conditions, particularly in the wintertime, and therefore that sugar could not be brought from there to meet the situation here. It was brought here in considerable quantities, but not in sufficiently large quantities to cover the situation.

Mr. MOORE. Was the sugar that is said to have gone down as a result of the operation of submarines on the Atlantic coast Cuban sugar exclusively?

Mr. HUGHES. Yes, sir.

Mr. MOORE. And no Hawaiian sugar is coming through the canal?

Mr. HUGHES. Not that I know of; I am not positive as to that, but none that I know of.

Mr. MARTIN. The Hawaiian sugar is all refined in the San Francisco refineries, is it not?

Mr. HUGHES. Very largely, yes.

Mr. MARTIN. The output over there is only about 631,000 tons?

Mr. HUGHES. Something like that; yes, sir.

Mr. MARTIN. And the output of the Philippine Islands is about 79,000 tons; so that that is about enough to supply that section of the country?

Mr. HUGHES. Yes; that together with the beet sugar that they have in that section.

Mr. GREEN. The shortage of sugar seems to have been rather more acute in the Mississippi Basin; that is, in what is sometimes called the Central West. Is there any special reason for that?

Mr. HUGHES. That is due entirely to local conditions and they are largely transportation conditions. Last fall there was a time, for instance, when all through Kansas and Nebraska there was a very severe shortage, and that was due to the fact that the beet crop had been absorbed, and they could not get the cane crop from the East into that territory, because the East was in practically the same condition.

Mr. GREEN. Where did that crop go? It is not all used in the West?

Mr. HUGHES. No, although it is used very largely in the West. The beet crop normally seldom moves east of Pittsburgh and Buffalo.

Mr. GREEN. That is what I wanted to get at. They took that sugar out of that region, and left them without sugar, and supplied the East. I want to know why that was done?

Mr. HUGHES. The condition that prevailed last fall, I presume, could not be foreseen, and if it had been foreseen they no doubt would have held that crop back. This season, however, I presume they will hold there a sufficient supply of beet sugar to take care of the conditions in that territory, so that you will not have the acute sugar shortage that you had at that time.

Mr. GREEN. The point that I wanted to get at was whether your department had anything to do with saying where that crop should go and the territory to which it should be furnished.

Mr. HUGHES. You have reference to the distribution of it?

Mr. GREEN. Yes.

Mr. HUGHES. The Food Administration, through its beet-sugar distribution committee, which is located in Chicago, arranges for the distribution of all the beet sugar that is grown in that territory, as well as in Michigan, Ohio, and Wisconsin.

Mr. GREEN. It does not strike me that they made a very fair distribution of the sugar.

Mr. HUGHES. I presume they made as equitable a distribution as, in their judgment, they thought they could. But there was not enough beet sugar or cane sugar to go around.

Mr. GREEN. I live at Council Bluffs, on the big transcontinental lines that carry the sugar. Why should it have been carried right on through Council Bluffs, where there was a greater shortage of sugar than there was right here in Washington? For example, I know that people carried sugar from Washington in their grips in order that they might be able to get some white sugar.

Mr. HUGHES. Do you recall at what time that was?

Mr. GREEN. Last winter.

Mr. HUGHES. Well, that was due very largely to transportation conditions, but I can not understand why, if they were shipping sugar right through Council Bluffs, they did not distribute some of it there; but we all know that there were conditions which prevailed here and there that seemed, to say the least, paradoxical.

There is one more thing I would like to bring to the attention of the committee and then I will not worry you any longer, and that is this fuel situation. The confectionery industry and all other industries which have been placed in the classification of being the less essential industries, so far as their products are concerned, are going to be very seriously restricted in their fuel usage. That is absolutely necessary because of the enormous increase in the amount of fuel that is being used by the war industries. The priorities committee has classified certain industries on a preferential basis and those industries must have fuel whether anybody else gets it or not, and we all agree that they should have it.

Mr. GREEN. That is very important, of course, but the fact is that the Committee on Ways and Means has nothing to do with it.

Mr. HUGHES. The point I am making is this: I want you gentlemen of the committee to understand certain things affecting the confectionery industry at the present time which are vital to its existence, and I do not think it is the intention of the committee to place further burdens upon the industry to such an extent that it will have to go out of existence entirely. Understand, I am not saying what you are going to do, but I think there are certain conditions confronting the industry which you gentlemen should have placed before you,

although you may already have a great deal of knowledge about those conditions and I may be telling you something that you already know about.

Mr. GREEN. I know there is going to be a fuel shortage out in Iowa which will seriously restrict not only the manufacturers but also keep a good many people from heating their homes during this next winter.

Mr. HUGHES. The industries that I referred to, unfortunately, are in the class that have been referred to as the less essential industries, so far as winning the war is concerned. We are all as anxious to win the war as anybody, as far as that is concerned, but there are certain conditions which will confront us until the end of the war, and they will affect the industry very seriously so far as the industry as a whole is concerned. It is merely for the purpose of bringing these things to the attention of the committee that I appear here. In that connection I might cite the question of labor and the high wages that are being paid by these war industries. The labor in these candy factories can go out and get jobs in these various industries which are working on war materials at a great deal higher wages than are paid in the candy factories, and there is, in all probability, as you know, a very serious likelihood of the gradual elimination of these industries as the war progresses.

Mr. GREEN. Some people think that they ought to be eliminated.

Mr. HUGHES. That, of course, is a matter of opinion; but it shows the condition that faces the confectionery industry, and they are conditions which I am sure you gentlemen will take into consideration in framing new legislation.

I thank you gentlemen very kindly for your attention. I want to say this, whatever action you contemplate relative to the industry, that I can best illustrate my position by saying, as the Irishman said when he was about to be condemned by the court, "Judge, if you can not be aisy, be as aisy as you can."

I thank you very much.

#### STATEMENT OF MR. VINCENT L. PRICE, OF ST. LOUIS, MO.

Mr. PRICE. Mr. Chairman and gentlemen, first, I want to say to you that I am here after a conference with the executive committee of our association, a national association comprising about 500 manufacturers, all the principal manufacturers in the United States. We have been in existence as an organization since 1884. We started our organization for the purpose of having passed at that time by the various State legislatures what were known as pure-candy laws. In other words, there was a certain group of manufacturers who had an objection to the practices then existing in the industry. They could not by persuasion correct these practices, so that they started in and formed this organization for the purpose of having pure-candy laws passed in the States; so that really the first pure-food laws on the statute books of our States were the pure-candy laws, and unfortunately the prejudice which existed against the industry at that time extended for a considerable length of time.

Now, this executive committee, elected by this association in convention, has conferred here on various matters in connection with the industry and amongst them is this question of taxation. The things we tried to decide were these: Is there any reason why our industry

should not bear an additional tax to that which is now imposed? In other words, we are paying an income tax and an excess-profits tax. We decided that our industry should pay a tax in addition to that which is now being imposed. Then the question was: What is the best method? We took into consideration two things. One was the method by which the Government could impose the tax and have that method work out in such a way that the collection of the tax would be the least trouble to the Government or to the department of the Government collecting the tax. It is a rather complicated matter to impose an excise tax on confectionery and collect it unless it is done in a proper manner. In respect to the second question, as to the method, it has always been difficult, in coming before bodies to this kind, to get them to differentiate between the man who steps into the store and pays 80 cents a pound for candy and the manufacturers we represent who do not charge any such price for their candy, and whose prices range from 5 cents a pound up to 15 cents a pound. Those prices have been advanced in the last year on account of the conditions confronting the industry. But we want you to keep in mind that there is a difference between the two; that there is a difference between the store whose reputation and prestige entitles it to get \$1 a pound or \$1.25 a pound, or something of that kind—and there are always a lot of people who are willing to go in and pay for that prestige—and this large group of manufacturers who really represent the candy industry in the United States. If you impose a tax upon candy that is sold at \$1 a pound and impose the same tax on a manufacturer who sells his candy for a less price, which may be in excess of what he gets for his stuff, then he must go out of business.

We feel that the method of taxation should be to tax the sales of the manufacturers, and we mean by that that you should tax the sales of all manufacturers, not simply the manufacturer who sells to the wholesale trade, the manufacturer who sells to the retail trade, but the manufacturer who also sells to the consumer. We believe that is the best method, and we believe that for this reason: If you should impose a per-pound tax on the industry it would require records of production which, in the majority of cases, have not been kept, and which, in the majority of cases, will not be kept, and which, in the majority of cases, might be inaccurate, manipulated, or something of that kind. In other words, records of the pound production are very difficult things to maintain in our industry.

Mr. MOORE. There are a great many specialties in the manufacture of candy, such as are sold at newstands and railway stations. Do you speak for that class of manufacture?

Mr. PRICE. Yes, sir; I speak for all classes of manufacturers—manufacturers selling to the wholesale trade, but not for the retailers.

Mr. MOORE. Take the average newsstand which has on it a number of attractive novelties and confections of one kind or another which people buy to shove in their pockets and eat on the train. You find there a 5-cent package of chocolate marked up to 6 cents; a peanut package marked up from 5 to 6 cents; and a cocoanut bar marked up from 10 to 12 cents. Can you tell just why those extra cents were added to those standard-priced packages?

Mr. PRICE. Yes, sir.

Mr. MOORE. Will you give the reason?

Mr. PRICE. The reason is that those packages first are packed customarily throughout the industry, a certain number of packages to a carton; in other words, 24 to a carton. That is the custom. And sold at 5 cents per package by the retailer that would bring him \$1.20. Now, the increased cost to the manufacturer of those goods has necessitated an advance in his price; that increased cost due to the increased cost of raw materials, due to the increased cost of labor, due to the curtailment of production which has increased his overhead: those things entering into the cost of his goods has necessitated his advancing his price to the wholesaler.

Mr. MOORE. That is to say, to the jobber or wholesaler?

Mr. PRICE. The jobber or wholesaler; it is the same thing; and that man is required to advance his price to the retailer, and the amount that is left between what he would get at 5 cents per package and what the increased cost is to him makes it necessary for him to advance his price to the consumer in order to make his legitimate profit.

Mr. MOORE. Then the package that heretofore sold for 5 cents and which has moved up now to 6 cents does not pay the Government anything extra by reason of that additional cent?

Mr. PRICE. No; it does not, in any way that I know of.

Mr. MOORE. And that is all covered in along the line as between the manufacturer and the consumer and was not put on because of any war tax, but was due to the increased cost?

Mr. PRICE. That was due to things that have entered into the industries, increasing the cost.

Mr. MOORE. Does the manufacturer sell direct to such a newsstand as the one over here in the terminal, for instance?

Mr. PRICE. In some instances, yes.

Mr. MOORE. Do you mean to say his business is done with the agent at that stand? I am trying to get at the method of distribution.

Mr. PRICE. Of course, I do not know about that particular instance, but I do not think there is any question but what manufacturers do sell direct to news companies that supply stands of that kind. That is what I am trying to get at.

Mr. MOORE. Then the distributing agent of all that business at railroad stations is the Union News Co. or the American News Co.?

Mr. PRICE. In some instances, yes; and sometimes they are supplied by local wholesalers and jobbers.

Mr. MOORE. Then if the manufacturer wants to get his specialty on the market he gets it on the market through the American or the Union News Co.?

Mr. PRICE. Well, only in that particular instance, which is a very small percentage of the demand for candy. The demand that comes through those various sources which you mention is infinitesimal compared with the general distribution of the product.

Mr. MOORE. I call your attention to that because I think the average consumer who buys such a package and pays the extra cent has the same feeling with regard to that particular payment that he has on going into a moving picture show, that the extra cent goes to the Government; that it is a war tax, whereas in the matter of candy it is not a war tax but a tax that is absorbed by the trade.

Mr. PRICE. It is not a war tax, and I did not have in mind the particular instance you bring out, but I had in mind the general

conditions that prevail throughout the United States, and that that increase in price is due to these various conditions that have entered into the cost of the product.

Mr. MOORE. Mr. Price, speaking generally, has the candy and confectionery business generally increased or decreased during the last two years?

Mr. PRICE. It has decreased in pounds of production very materially.

Mr. MOORE. But as to financial returns?

Mr. PRICE. Well, I can not answer for this year. I think, generally speaking, the results during the year 1917 were better than the results during the prewar period, and that was due primarily to conditions of supply and demand.

Mr. MOORE. Is it not due partly also to the increase in price?

Mr. PRICE. Well, the increase in price is a natural result of the demand exceeding the supply.

Mr. MOORE. As one who is extremely anxious to keep the industries going and not to destroy any industry, I want to put to you the same question I put to Mr. Hughes a little while ago, and I would like you, as the chairman of the executive committee of the National Confectioners' Association, to consider it very seriously because it is well intended, but it is inevitable: Inasmuch as the financial returns of the business appear to have improved, notwithstanding that the per-pound production has fallen off, is there any way that the trade can stand any increased taxation without prejudicing its existence?

Mr. PRICE. First, I want to say that I referred to the financial returns of the industry during the year 1917, when the production had not decreased to the extent that it has since January 1, 1918. The curtailment of production has increased during that period. Now, of course, we have not any idea in mind that we shall not be taxed in addition to what we are now being taxed. We realize that the Government needs additional revenue. We fully appreciate the fact that our product will be taxed and what we want to do is to help the committee in any way we can to determine the best method of taxation, both with the idea of gaining the amount and also in the application of the tax. Now, I say that we should be taxed and the method we think is the application of a tax to the manufacturer's sales, the same way that you have done, for example, in connection with chewing gum.

Mr. MOORE. You would prefer a sales tax if there is any change?

Mr. PRICE. We prefer it.

Mr. MOORE. A tax on gross sales of the manufacturer?

Mr. PRICE. Yes; on gross sales of the manufacturer.

Mr. MOORE. You pay now a corporation tax where you are incorporated and you pay an income tax, generally, and where the excess-profits tax is applicable, you pay that, but there is no direct tax on the candy itself?

Mr. PRICE. No, sir.

Mr. MOORE. It could be traced in the box very readily, I assume, or be traced by the pound if the Government wanted to proceed against it.

Mr. PRICE. Well, I would like to say just this: There are a group of manufacturers who are naturally anxious in the payment of a tax

to have a method that would insure the payment of the tax generally throughout the industry. Now, there is fear on the part of a certain group of manufacturers that any method that was complicated or would allow for the hiding of records or anything of the kind would be a detriment to the man who would not do that sort of thing.

Mr. MOORE. I sympathize with you on that and I sympathize with the manufacturer who feels that way about it, but we do not want anybody to escape who ought to be held. Personally, I am very sorry that the taxes have to be levied at all, but the President started this thing. Our opinion generally was we would not need the extra taxes this year, but the President came to Congress and addressed it on this subject, and he was followed up by the Secretary of the Treasury, who told us the amount required would be \$8,000,000,000 in taxes, and the President stated the things from which the money should be raised, to wit, incomes, excess profits, and luxuries. Now, you come particularly within the latter class of luxuries, and I do not wonder that some of you may think the very existence of the business is involved. I do not want to see it go out of business, and we would not get any revenue if it did. Now, if you are to bear a part of this new, great burden by reason of your being in the business which the President himself classes as a luxury, how are we going to get more money out of the industry? If your remedy is a tax on gross sales, that is a suggestion. Some of us have been talking about the other method of putting a tax on the box or on the pound, and that, of course, is a consumption tax.

Mr. PRICE. Just as a matter of information, we discussed this question of the tax and the application of the tax so far as the manufacturer was concerned and the unanimous opinion of our committee was that any tax imposed should simply be added and passed on to the next man, who would pass it eventually to the retailer; in other words, without any accumulation of profit on that tax. Now the reason we came to that conclusion is this—and there is this factor in the situation, that if your tax is too large, whatever it may be, and of course I realize that facts are going to determine that in your mind, it would be such that it could not be passed on in that manner without disorganizing the general conditions throughout the industry and very seriously affecting consumption.

Mr. GARNER. I would like to ask—

Mr. MOORE (interposing). Now let us get at it in this way, and then I will yield to Mr. Garner. If there is a variance of 40 cents in a pound of candy, as between the before-the-war price and the present price, the inference is that somebody in the business is getting that 40 cents, counting in, of course, all your extra cost in the way of increased wages, etc. Now a tax on gross sales might mean that that 40 cents would go up to 50 cents or 60 cents, which would be passed on to the consumer in that larger sum. Which would be better for the consumer, to pay that extra 50-cent tax which would cover your increased taxes on gross sales or to have the person buying that candy pay a cent or 2 cents or 3 cents or 5 cents a pound on it and go away feeling that he had contributed something to the revenue of the Government?

Mr. PRICE. I can answer that question by saying that if it is a practical method, that the price per pound paid by the consumer would be by far the better for the industry.

Mr. MOORE. And would probably be better for the consumer?

Mr. PRICE. And probably better for the consumer. In other words, we want to avoid, whatever the tax is on sales of the manufacturer, allowing that to be passed on by adding profit to it and the accumulative effect of those profits as you go along, which will eventually reach the consumer, the consumer then having no knowledge, except by pure assumption, that this increased price is due to taxation. We would much prefer the consumer knowing exactly what he is paying per pound or per package for candy as a tax. That would be preferable.

Mr. GARNER. Mr. Price, you admit that your industry is one that the Government probably ought to tax under existing circumstances in order to get revenue into the Treasury?

Mr. PRICE. Yes, sir.

Mr. GARNER. Then it is only a question of the method and the rate to be levied?

Mr. PRICE. Yes, sir.

Mr. GARNER. They are the only two questions at issue? What would you say to levying a tax of 1 cent for each 5-cent package of confectionery or fraction thereof sold, to be paid by the consumer at the time he bought it? To illustrate: A man comes into a shop and says, "I want a pound of candy." The Government does not levy any tax on the manufacturer or anybody else, and the dealer says, "All right; here is a pound of candy for 80 cents. Now, you have got to give me on that 1 cent for each 5 cents' worth of candy sold, which would be 16 cents." The confectioner would have the stamp for sale and he would have the candy for sale, and when he sold the customer the 80-cent box of candy he would not have to figure on anything he had paid taxes for, because the customer would buy from him at the same time 16 cents' worth of stamps and give him 80 cents in cash and 16 cents in stamps. According to my viewpoint that would do two things: It would first let the consumer understand that he is paying a tax, and it would not permit some retailers or manufacturers to pursue the method that Mr. Moore has just outlined, of going up 100 per cent upon an article upon the pretense that they are putting that much into the Treasury of the United States. In other words, no manufacturer or retailer would have any excuse for charging a higher price for his candy on account of taxation, because he would not be paying it. Nobody would be paying it except the consumer, and he would know identically how much tax he was paying at the time he bought the article. What would you say about that method of taxation?

Mr. PRICE. If that method was worked out along practical lines—in other words, there are a good many complications entering into the question, all of which I think could be solved.

Mr. GARNER. Are not the complications entirely with the Treasury Department and not with your trade?

Mr. PRICE. Yes.

Mr. GARNER. Then, if the Treasury Department should tell this committee that that was a practical method of raising revenue and that they could administer that kind of law, you would have no objection to that kind of a statute?

Mr. PRICE. No. In other words, in the discussion of this matter in our committee we had in mind a method of taxation upon the

retailer in the sale to the consumer for the very reason we wanted the consumer to know what he was paying in taxes and prevent this accumulation of profit on the tax.

Mr. GARNER. Then, the method I have suggested is one which is in line with your thought?

Mr. PRICE. Only we concluded it would be so impracticable that it would not receive the favorable consideration of the committee.

Mr. GARNER. What would you say about that rate, one cent on each five cents' worth of candy sold?

Mr. PRICE. On the retail price of the retailer to the consumer?

Mr. GARNER. Yes.

Mr. PRICE. I think that would be very equitable, and I think it would bring you—

Mr. GARNER (interposing). Many millions of dollars?

Mr. PRICE. Yes; it would.

Mr. STERLING. That would be 20 per cent.

Mr. PRICE. I realize that. In other words, a package of goods that would sell to the consumer for 5 cents would sell for 6 cents. That is the way I am looking at it.

Mr. STERLING. Right on that point, is there not a great deal of candy sold in packages of less than 5 cents?

Mr. PRICE. Yes.

Mr. STERLING. What kind of tax would you put on that?

Mr. PRICE. As I stated in my answer, there are a good many complications entering into this question. In addition to the question of collection by the Revenue Department, there is also this question—and this is a thing I want you to keep in mind, and I am afraid you do not appreciate it—that candy in its great bulk as manufactured and sold in the United States is a food of the masses. It is consumed by the masses, and these people that you are constantly bringing up like Huyler, Maillard, and all of those high-priced people do not represent the great bulk of candy sold in the United States. The candy that is sold in the United States goes to the workingman and his children. It is their dessert. He spends his penny and his nickel for it, and according to statistics which we gathered about one year ago, the percentage of these high-grade candies to the total production of candy in the United States was about 15 per cent; in other words, they only represented 15 per cent—

Mr. WHITE (interposing). Do you know what percentage of your revenue arises from the sale of candy under 5 cents; that is, 1 penny and 2 pennies, etc.?

Mr. PRICE. I can not answer that question definitely, because I have no information, only I do know the general conditions prevailing in the industry. I do know the nature of the goods manufactured and sold and I also know what proportion they bear of the total business in a general way but not specifically. I do know that these so-called penny goods which are packed 100 pieces in a box and which sell to the consumer, the children, for 1 penny apiece, are very largely sold and very largely manufactured, and represent a very large proportion of the amount of candy sold; and next to that comes the candies that are sold for 5 cents, and then following that comes the general line of bulk candy which the manu-

facturer sells for anywhere from 8 cents to 9 cents or 10 or 11 or 15 cents a pound.

Mr. O'SHAUNESSY. Does the candy you have just described constitute the bulk of the candy sold?

Mr. PRICE. That is the bulk of the candy sold.

Mr. O'SHAUNESSY. And it is not in packages?

Mr. PRICE. No. When I refer to package goods I refer to the chocolates that come in 1-pound packages, etc.

Mr. O'SHAUNESSY. Is not there where the difficulty would come in, in reference to Mr. Garner's suggestion, the candy that would sell for less than 5 cents?

Mr. PRICE. No, sir; the difficulty would not come in there. The difficulty would come in connection with these so-called penny goods, as I refer to them, because they are sold for 1 cent each, and also in connection with the goods that are sold at a lower price. Now, if you go into certain markets, into the average retail drug store, or the average grocery store, the average bakery, and places where the children of the working people go to get their candy, you do not see any candy there at 40, 50, 60, 70, or 80 cents, or \$1 per pound. The people who sell the high-grade package goods do not sell to those people, because they have a different clientele that will take that class of goods, and there are only a few of them in the small towns throughout the country. Of course that condition prevails more largely in the East than in the West. That is where they call for those high-priced goods.

Mr. O'SHAUNESSY. Would it be practicable to put stamps upon the packages containing that quality of candy so that they would be open to the inspection of the official of the Internal-Revenue Department?

Mr. PRICE. No, sir; not if it required the opening of the packages.

Mr. O'SHAUNESSY. It would give rise to fraud, would it not? People might put stamps of their own on them, and evade the law in a thousand and one ways. Do you not think that is probable?

Mr. PRICE. That is one of the difficulties that would confront you; but the application of the tax to the package in any manner, as applied to the industry as a whole, would be very impracticable and rather dangerous.

Mr. O'SHAUNESSY. That is why you favor a gross-sales tax?

Mr. PRICE. We favor that because we think that it is more applicable to the great bulk of the production of candy.

Mr. O'SHAUNESSY. Could you raise as much money that way?

Mr. PRICE. I am not prepared to say that. We figure that a tax of 3 per cent on the sales of manufacturers would result in an income to the Government, according to the statistics which we have gathered, of about \$15,000,000, in addition to that which they are now securing.

Mr. GARNER. What is the rate you suggested?

Mr. PRICE. Three per cent.

Mr. STERLING. Why do you suggest 3 per cent on the manufacturers' sales, when you said in reply to Mr. Garner's question, as I understood you, that 20 per cent on the retail price would be equitable?

Mr. PRICE. I clearly stated that I had in mind the application of his idea, as he had put it, to 1-cent and 3-cent packages.

Mr. STERLING. Let us see about this question of taxing the retail price: When a person goes into a candy store to buy candy, he does not ask the clerk how much candy is worth and then say what quantity he wants, but a person in buying candy says, "I want a dime's worth of candy" or "25 cents' worth of candy." They do not know how much candy they put in the box, and when the clerk gives them a dime's worth of candy and charges 12 cents for it the customer is disappointed. The customer might sometimes be a child who would not have the additional money. Don't you think that great confusion would result if you should undertake to put a tax on the retail price of candy?

Mr. PRICE. Yes, sir. It was implied that we should not bother ourselves about that detail, but still we did bother ourselves with that detail.

Mr. STERLING. There are some classes of goods that are stamped with the retail price. Patent medicines, for instance, are stamped that way. For instance, when a person calls for a bottle of Scott's Emulsion, he first asks the price of it, if he does not know it, and the clerk says, "It is so much, including the amount of the tax, which is so much." In that case he knows what he has got to pay before he makes his purchase. Now, when you come to candy, that is an entirely different proposition. They will call for a dime's worth of candy, and the clerk will charge 12 cents; if they call for a quarter's worth of candy, the clerk may charge them 30 cents. I think that would cause a great deal of embarrassment.

Mr. PRICE. I think you are correct. Of course I did not consider this proposition at all. We considered two things. We considered the application of the tax to the retailer's sales to the consumer, and the application of the tax at the source of manufacture, and we concluded, for those reasons and several other reasons, that the application of the tax to the retailer's sales to the consumer would be a very complicated and uncertain thing, and that it would cause great difficulty on the part of the Government in the administration of the tax, because, as you know, candy is sold under all sorts of conditions. For instance, you will find people selling candy from pushcarts all over the country. It will also require a thorough investigation on our part into the question of the application of the tax. For that reason, we felt that the simplest and best method was the method which is applied now in connection with the chewing gum product.

Mr. LONGWORTH. What is the average difference between the manufacturer's price and the retail price?

Mr. PRICE. I could not answer that as to certain classes of retailers who sell goods on the basis of prestige, but, normally the jobber who resells the products makes from 20 to 25 per cent on the resale of his product, and that is on the manufacturer's cost. The retailer makes a profit of from 25 per cent to 33½ per cent on his resale based on the cost price of the jobber to him.

Mr. LONGWORTH. The retail price averages less than twice the manufacturer's price?

Mr. PRICE. Yes, sir.

Mr. LONGWORTH. Then, if you say that a 20 per cent tax on the retailer is a fair tax, why would not a tax of at least 10 per cent on the manufacturer be a fair tax?

Mr. PRICE. This is the reason why: If you impose a tax of 10 per cent on the manufacturer, the manufacturer must add that tax to his price to the wholesaler, and the wholesaler adds it to his price to the retailer, and there would have to be a readjustment of the retailer's price. That readjustment of the retailer's price would mean a complete readjustment of the industry or manufacturing confectionery.

Mr. LONGWORTH. You would add it to the price to the jobber right off?

Mr. PRICE. We would add it, because we could not afford to absorb it. We could not absorb a tax far in excess of the net profit.

Mr. LONGWORTH. Does anybody ever absorb this sort of tax? Has there ever been an instance where it was absorbed?

Mr. PRICE. Yes, sir.

Mr. LONGWORTH. Can you name one?

Mr. PRICE. Yes, sir; the chewing gum industry has absorbed it.

Mr. LONGWORTH. Did they not add anything to the price?

Mr. PRICE. Some of them did, but where the tax is very small, it is absorbed. Of course, where the tax is large we can not do it. Our idea is that the absorption of an excise tax means less profit and less excess profit taxes.

Mr. LONGWORTH. Now, you made the positive statement that you thought a 20 per cent tax on the retailer was fair.

Mr. PRICE. Yes, sir; but I want to correct myself on that. I had not in mind the application of the method I suggested for taxing the product. I said that if the candy sold for 5 cents, the retailer would sell it for 6 cents, or whatever the proportionate amount was on account of the taxes, or, in other words, he would make the price absorb the tax.

Mr. LONGWORTH. I understood you to say in answer to Mr. Garner's question, which was a specific question as to whether or not you believed a tax equivalent to 20 per cent on the retail price was a fair one—as I say, I understood you to say in answer to that question that it was eminently fair and would be a very wise tax.

Mr. PRICE. I said—

Mr. LONGWORTH (interposing). And you said it would raise millions of dollars?

Mr. PRICE. Yes, sir.

Mr. LONGWORTH. You say now that the retail price is not twice as much as the manufacturer's price. Now, under those circumstances, why would it not be absolutely just, from your point of view, to put a tax of at least 10 per cent on the manufacturers? If you put a tax of 20 per cent on the retailer, and if the retailer is not receiving as much as twice the manufacturer's price, on what possible theory would you not be able to justify a tax of 10 per cent on the manufacturer?

Mr. PRICE. I am not prepared to answer the question as to the application of the amount of tax at 20 per cent, taking it in that way. I was speaking more about the method. A tax of 20 per cent on the retailer's price to the consumer I think would be excessive. I think it would be an excessive tax because it would reach a class of products that go largely into the hands of children of the working classes.

Mr. STERLING. It would yield about four times as much revenue as the tax of 10 per cent on the manufacturer's price, would it not?

Does not the retailer pay almost twice as much as the manufacturer's price for his candy?

Mr. PRICE. Well, the accumulation of profit, as I say, would be in the neighborhood of 50 per cent over. I am talking about certain classes of retailers, but as to the general run of retail stores throughout the United States it would probably be in the neighborhood of 50 per cent or 60 per cent over the manufacturer's selling price; that is, the accumulation when it gets to the consumer.

Mr. LONGWORTH. If it is only 50 per cent more, it would justify a tax of about 15 per cent on the manufacturer's sales.

Mr. PRICE. As I say, the wholesalers are making in the neighborhood of about from 20 to 25 per cent. That is his profit on the resale of the goods to the retailer. Then, the retailer will make in addition to that in the resale of his goods from 25 per cent to 33½ per cent.

Mr. LONGWORTH. If you take the maximum in both cases, that would represent 58 per cent. Under those figures, you could justify a tax of 15 per cent on the manufacturer's sales.

Mr. STERLING. Based on what it would eventually cost the consumer, it would take a tax of about 35 per cent on the manufacturer's sales to equal a tax of 20 per cent on the retailer's price in the matter of revenue, and of course the ultimate consumer would have to pay it.

Mr. GARNER. In other words, on candy worth 80 cents a pound you would have to levy a tax of about 35 or 40 per cent on the manufacturer in order to get 16 cents into the Treasury, while under the system or method suggested of paying 1 cent on each 5-cent package, or 5 cents worth of candy, you would bring about \$200,000,000 a year into the Treasury. Now, a tax of this sort would in no way interfere with your business, nor with the jobber or anybody else, because the consumer would have to pay that tax and the Government would get out of that tax a larger percentage of revenue into the Treasury than by any other process. By the other method, as you say, you would add a percentage to the price to the jobber, the jobber would add a percentage to the price to the retailer, and by the time it got to the consumer the price would have gone up four or five times and the consumer would be paying four or five times as much taxes as the Treasury would get by the transaction. What we are trying to do now is to raise money and to have the money go as directly as possible into the Treasury. Now, a tax of 20 per cent on the consumer, or upon the man who buys it, as Mr. Sterling has suggested, would be equivalent to a tax of 35 or 40 per cent on the manufacturer.

Mr. PRICE. Of course, you must keep in mind this thing, and you do not seem to keep it in mind, and that is, that this 80-cent per pound candy that you speak about is not sold to the great bulk of people who consume candy. That price is never reached except in exceptional cases, but under the conditions existing you would find candy selling at 10 cents per pound and 20 cents per pound. I should say that now that is the prevailing price at which bulk candy is sold. Of course, candy must be considered in relation to the selling price, and according to what is in it. In other words, if you take an almond and coat it with chocolate it sells higher than sugar coated with

chocolate. The price would be in the neighborhood of 25 or 30 cents per pound.

Mr. GARNER. Now, Mr. Hughes here and the other people connected with the Food Administration are telling us every day that we must refrain from using sugar, and they are making orders or regulations limiting the retail stores in the amount of sugar that they can sell to a customer. I can not understand how that policy can be invoked by the executive branch of the Government and then have the legislative branch of the Government refrain from levying the highest possible rate or the rate that will get the greatest amount of revenue into the Treasury. If we levy a good big tax on the consumer of candy, 10 per cent or 20 per cent, that money would go into the Treasury, and it would tend to restrain him in the buying of candy.

Mr. PRICE. You referred awhile ago to your inability to take into consideration here all of the various rules and regulations of the Food Administration, and I sympathize with you on that. These requirements of the Food Administration naturally vary, and we are told at times to stimulate the production of certain things. For instance, just at present we are told to stimulate the production of coconut candy, because the Government needs the carbon from the coconut shells, and needs it badly. Therefore, we are encouraged to stimulate the production of coconut candy, and we are encouraged to stimulate the production of certain other things. Then, also in line with regulations, wherever we possibly can we are trying to substitute other things for sugar. Therefore, if you should impose a tax on us for the purpose of helping out the Food Administration, those differences in the requirements of the Food Administration would also apply and should be taken into consideration. My point of view is this, that you need greater revenue, and the question is what is the best means of getting it from our industries.

Mr. GARNER. The method I have suggested would give between \$150,000,000 and \$200,000,000, according to your calculations, while the method you suggest would give less than \$50,000,000 and would interfere with your business.

Mr. PRICE. The reason we preferred a tax on the retailer was that then there would be no danger of an accumulation of taxes and profits on the product from the manufacturer to the retailer, which is not right and which would be detrimental to the industry.

Mr. O'SHAUNESSY. I suppose if the tax were levied that way, to use a common word, somebody would get "soaked" in the successive taxes and profits.

Mr. PRICE. Yes, sir; that would be the case if that method prevailed.

Mr. O'SHAUNESSY. You think it would not be fair under that method.

Mr. PRICE. So far as the manufacturers are concerned, they are on record as being opposed to any such method. If the tax were imposed on them, it would simply be added.

Mr. LONGWORTH. Are you certain that the revenue taxes were absorbed by the chewing-gum manufacturers?

Mr. PRICE. I will say I am not certain, but I certainly recall something of that kind. I do not happen to come directly in touch with the purchasing part of the business, but I was under the impression that the tax had been absorbed.

Mr. LONGWORTH. They told us that it would be absorbed, and so did everybody else, but we have not found a case yet where a tax on sales was not paid by the ultimate consumer.

Mr. HAWLEY. They have absorbed the tax in this way, by reducing the amount in the package in proportion to the amount of the tax.

Mr. PRICE. Well, I really could not answer that question because I am not familiar with it; I am not prepared to speak for that industry. I was only assuming that they had billed their goods at a certain price and had not charged the tax in the invoice.

Mr. STERLING. Let me ask you in regard to Mr. Garner's suggestion that this will be a practical way of doing business. Suppose we should impose a tax of 10 or 20 per cent on the retail price, the retailer to stamp all of the packages he sells, and a customer should ask for a dime's worth of candy. Now, would it be practicable for the clerk to give him 8 cents worth of candy, put a stamp on the package, and say nothing about the tax? Would that be a practicable way of doing business?

Mr. PRICE. That might be practicable in some cases, but it would not be practical in other cases. In other words, if your goods were put up in packages or were wrapped, whereby it was necessary for the retailer to deliver to the consumer the package he had received from the manufacturer, of course, there would be no way of doing that, but if it were a case of a retailer putting into a package a certain amount of candy he might lessen the weight.

Mr. STERLING. Of course, it would be very irksome to compute the rate all the time if he undertook to simply discount the amount of candy.

Mr. PRICE. I think the practical application of a thing of that kind, and which would simplify the method to the retailer considerably, is to charge a certain price per pound or per package or per piece for his product. That would be, without any doubt, the better way.

Mr. STERLING. That could be done if the candy did not come in bulk. If it came in fixed packages, it would be a simple matter to just stamp the package; but where one goes in and asks for a certain amount of candy, a dime's worth or a half dollar's worth, I think it would be very embarrassing, both to the customer and the dealer, to handle it in that way.

Mr. PRICE. It would be troublesome, too. You mean by handling it that way to say that this candy is 30 cents a pound and then the war tax is 6 cents?

Mr. STERLING. Yes.

Mr. O'SHAUNESSY. How many of the manufacturers do you represent, 400?

Mr. PRICE. Five hundred, approximately.

Mr. O'SHAUNESSY. What percentage is that of the total?

Mr. PRICE. Of the total number of manufacturers?

Mr. O'SHAUNESSY. Yes.

Mr. PRICE. Well, I should say that on the basis of production, per pound production, it would represent probably four-fifths.

Mr. O'SHAUNESSY. In the other one-fifth are included these exclusive manufacturers of high-grade candies?

Mr. PRICE. Among those are included the manufacturers who sell to the consumer principally, and a few other small manufacturers.

Mr. O'SHAUNESSY. Have you the gross sales of the manufacturers you represent?

Mr. PRICE. Approximately \$350,000,000 per annum; those figures are based on the 1917 business.

Mr. O'SHAUNESSY. A year?

Mr. PRICE. Approximately that.

Mr. O'SHAUNESSY. What are the gross sales of the other manufacturers?

Mr. PRICE. Well, they would represent approximately gross sales of \$100,000,000; from \$100,000,000 to \$150,000,000 a year.

Mr. O'SHAUNESSY. That is the 15 per cent you spoke about?

Mr. PRICE. No.

Mr. O'SHAUNESSY. When you spoke of the 15 per cent, did you mean 15 per cent of the manufacturers?

Mr. PRICE. No; I meant that 15 per cent of the total production of candy in the United States is the high-grade candy, and that 85 per cent represents the lower-priced candies which are consumed by the masses.

Mr. O'SHAUNESSY. That is, 15 per cent of the candy manufactured. What is the percentage in money value?

Mr. PRICE. I spoke of production. Now, naturally, that 15 per cent production is out of proportion to the sales point of view, because that particular class will get a higher price for their products, so that a certain number of pounds production would represent a larger percentage.

Mr. O'SHAUNESSY. Have you any suggestion to make as to that particular line of manufacture?

Mr. PRICE. No; I have no suggestions to make, because I think it is impracticable to deal with this question except as a whole. But I do want to correct the impression that the great bulk of the candy produced in the United States is sold at such prices, because the fact is that the great bulk of candy produced in the United States is consumed by the masses.

Mr. O'SHAUNESSY. You say that the gross sales of the men you represent amounted to \$300,000,000 in the last year?

Mr. PRICE. To \$350,000,000.

Mr. O'SHAUNESSY. And what were the gross sales of the other manufacturers to whom you referred—\$150,000,000?

Mr. PRICE. Well, it will run over \$100,000,000.

Mr. O'SHAUNESSY. So that we would get \$15,000,000 under a 10 per cent tax?

Mr. PRICE. Yes; if you imposed a 10 per cent tax.

Mr. O'SHAUNESSY. About \$15,000,000.

Mr. PRICE. Yes, sir. That is information we gained from statistics that were gathered, but they may not be absolutely accurate.

Mr. MOORE. I want to give you a chance to emphasize that fact again, since you have suggested that the committee did not, perhaps, fully appreciate it. You said that all of these sales of high-priced candies, those that I was referring to in my questions to you, constituted only 15 per cent of the aggregate sales in the United States.

Mr. PRICE. I said production, not sales; I was referring to the pounds produced. That information was gathered by us from

statistics used in connection with a suit brought or a petition filed with the Interstate Commerce Commission on account of a classification of freight.

Mr. MOORE. By that I understood you to mean to say that if we should impose a tax per box that we would only reach about 15 per cent of the production.

Mr. PRICE. Well, yes; 15 per cent represents the high-priced package goods and also the bulk goods. As you know, you will step into a retail store and have a five-pound box of candy put up for you, and that will cost you as much as if you bought it in a box.

Mr. MOORE. Let us get at that, Mr. Price, in this way: If I go down to a certain store, which is quite popular in Washington, to buy candy that is sold on the reputation of a trade-mark, I have to fall in line, and the ladies who come in their automobiles have to step out and leave their chauffeurs waiting while they fall in line. They are perfectly willing to pay the advanced price from 40 or 50 cents, or whatever it was, to 60 or 70 cents, whatever it may be, and it seems to me that they ought, in all fairness, to be willing that a portion of that excess in price should go to the Government in revenue.

I understand that you do not dispute that proposition but that you do say that that kind of business is limited to about 15 per cent of the trade, so far as your statistics show. Now, if we imposed a tax per box how could we reach the other 85 per cent of the trade? Is not that particularly so in the case of gumdrops, which are sold in buckets, in the case of other specialties, and even down to a stick of candy? Are not those things sold in buckets or cartons of some kind or other that we might reach?

Mr. PRICE. They are sold in barrels, pails, boxes, tins, glasses, and various other kinds of packages.

Mr. MOORE. If such a tax as Mr. Garner has suggested goes down to the consumer in this way, could it not be made to reach everybody, by touching the retailer on the package received, even though he could not weigh it out on his scales.

Mr. PRICE. Well, the package received by the retailer, as you understand, varies. It is sometimes packed by count, as we call it, a certain number of pieces to a box, and sometimes packed by weight, and the various packages are 5-pound boxes, 10-pound pails, buckets, barrels, kegs, tins, and all varieties of packages are used; and those packages vary in weight and vary in count.

Mr. MOORE. Is it because of that varying condition that you think a tax of that kind would be impracticable?

Mr. PRICE. Yes; that is my idea, that a tax on the package would result in such terrific complications that its application would be impracticable.

Mr. MOORE. I put this thought up to you with regard to articles which are admitted to be luxuries. The masses, to whom you have referred, are large users of these articles, and some of them children. Now, the average child pays no tax, and ought not to pay a tax, of course, and many wage earners pay no direct tax. The purchaser of an eighty-cent or one dollar box of candy may perhaps be paying an income tax, an excess-profits tax and other taxes. In your judgment should we go down along the line and reach even the wage

earner, to whom these cheaper candies are sold, and let him feel that he is bearing a portion of the tax by having it added to the candy he buys, and which he knows, and which we all know, is a luxury?

Mr. PRICE. Well, I should say that his knowledge of it is not important, but I think he ought to bear some proportion of the tax, but it is according to your method of application.

Mr. STERLING. Can you give the committee some idea as to what percentage of the candy manufactured is penny and 2-penny candy.

Mr. PRICE. Well, I can say this, that approximate estimates have been made; we have no definite figures, but approximate estimates would show that all of the cheaper candies that are in this 85 per cent class that we speak of—that approximately from 50 to 60 per cent of those represent a resale to the consumer at a penny, 2 cents, or 5 cents; in other words, the great distribution is at the small resale price. Now, when you differentiate between that which sells for 5 cents and that which sells for a penny, you are dealing with the purchasing power, and you get to the purchasing power of an adult and the purchasing power of a child; the purchasing power of a child is one penny, and therefore a child will buy in penny lots, whereas an adult will buy in 5-cent lots, 5 and 10 cent lots, but principally 5-cent lots, so that the proportion of those goods that are sold at 1 penny would represent, I should say, probably one-half of the amount of the penny and 5-cent packages.

Mr. STERLING. You think it would?

Mr. PRICE. Yes, sir.

Mr. STERLING. If you imposed a stamp tax on the retail price it would not be practicable to put a stamp on a penny piece of candy, would it?

Mr. PRICE. You could not put it on; I do not see how you could do that.

Mr. DICKINSON. Are you associated in any capacity with the Food Administration or any other department of the Government?

Mr. PRICE. No; none whatsoever.

#### STATEMENT OF HON. LINDLEY H. HADLEY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON.

Mr. HADLEY. May I make this suggestion before I make my statement? Senator Jones of our State, the State of Washington, was here during the morning in connection with this statement. He was compelled to go and he asked that I inquire whether he might, if he desired, subsequently file a written statement in connection with the one I am about to make.

The CHAIRMAN. There will be no objection to that at all.

Mr. HADLEY. I will necessarily be very brief on account of other immediate engagements.

I noticed, in looking at the assignments for the hearing to-day, that it is indicated that I would ask to be heard in connection with the lumber industry. In a sense that is true, but it is somewhat misleading, because the point which I desire to submit is even broader than the lumber industry, or any other industry, and yet that industry is involved on account of the relation of a branch of the lumber industry, to which I will call present attention, to one feature

of the existing law. To be specific, I wish to call the attention of the committee to a suggested amendment in connection with subdivision a of section 500 of the revenue act of October 3, 1917. That section, or the portion to which I refer, reads as follows:

That from and after the 1st day of November, 1917, there shall be levied, assessed, collected, and paid (a) a tax equivalent of 3 per cent of the amount paid for the transportation by rail or water or by any form of mechanical motor power when in competition with carriers by rail or water of property by freight consigned from one point in the United States to another.

The amendment which I desire to suggest for the consideration of the committee does not relate to a repeal or abrogation of any tax, but rather to an extension of the provisions of existing law in order to remove a discrimination which, it appears, exists against producers and shippers in our own country.

My attention was first called to the matter by a letter addressed to me under date of December 18, 1917, by the secretary of the Shingle Branch of the West Coast Lumbermen's Association, of Seattle, Wash. That is a general lumber association in which various branches of the lumber industry are associated for the welfare of the business, but it is a letter from the shingle branch of the organization. In order to get at the point directly I desire to read this letter. It is understood that I may file such communications as I desire in connection with my statement without reading them all? I only have four or five such communications and I will not take the time to read them all.

The CHAIRMAN. Without objection, you may file those communications.

Mr. HADLEY. This letter reads:

As you are well aware, there now exists a 3 per cent freight tax on freight shipped from one point in the United States to another point in the United States.

This does not apply, however, to shingles shipped from British Columbia into the United States. Not only at the present time do the British Columbia manufacturers enjoy certain advantages of manufacturing cost, through the employment of oriental labor and of an absolute bar against the shipment of American-made shingles into Canada, because of the Canadian tariff, but now he (the British Columbia shingle manufacturer) by virtue of a United States measure, enjoys this 3 per cent freight charge over American shingle manufacturers.

This obviously is an unfair advantage, and certainly one which Congress did not foresee. British Columbia shingle manufacturers are advertising the fact that they are not subject to this 3 per cent freight tax to the retail trade, and there is no question but what it is giving them a lot of added business that otherwise would be filled by American shingle manufacturers.

Speaking in behalf of the shingle industry of Washington and Oregon, the shingle branch of the West Coast Lumbermen's Association earnestly requests that you use your best efforts in securing remedial legislation.

Perhaps it may not be feasible to propose a law placing a 3 per cent tax on foreign expense bills, but it would be entirely so to work for a 3 per cent or 5 per cent ad valorem tax or revenue act or a 5-cent or 10-cent per thousand tax against foreign shingles.

What the American mill wants is at least an "even break" for the business. What the United States Government wants is revenue, and so such a law as we propose is just in every sense and necessary and imperative to a healthy condition of the American shingle industry.

We would very much like to see one of the northwestern contingent of Senators or Representatives present such a remedial bill and all work for the passage of it at a very early date.

Kindly let me have your views on this matter.

I may say that I did introduce a bill and I will refer to it a little later.

Mr. GREEN. Does that apply to all kinds of lumber as well as shingles?

Mr. HADLEY. Yes, sir. I will refer to that later. I am now proposing to illustrate the operation of the act in a concrete case.

The CHAIRMAN. I understand your proposition is to have freight that emanates from a foreign country carry the same burden as freight originating and shipped in this country?

Mr. HADLEY. Exactly.

Mr. STERLING. That would apply to passengers, too, would it not?

Mr. HADLEY. Well, I am dealing now only with the proposition of freight.

Mr. STERLING. Of course, but I was just inquiring whether the same injustice did not exist as to passengers. Suppose a man should buy a ticket from Winnipeg to Chicago. He would not have to pay any tax, would he?

Mr. HADLEY. No.

Mr. STERLING. But if he should buy a ticket from Chicago to Winnipeg he would have to pay a tax, would he?

Mr. HADLEY. I have not examined the law in that respect, but that is my understanding.

Mr. MOORE. Have you considered the constitutional question—

Mr. HADLEY (interposing). May I continue my statement very briefly, and then I will answer questions? In connection with this letter there is a postscript. It reads as follows:

I am attaching hereto a portion of a circular issued by the Red Cedar Products (Ltd.), Vancouver, British Columbia, in which they hold forth as an inducement to buy British Columbia shingles the fact that they are not subject to the 3 per cent freight tax.

Here is the excerpt to which he refers:

#### DUTY OR WAR TAX.

At present the United States Government does not assess duty or war tax of 3 per cent on freight when shipments of any kind move from a foreign country into the United States, however, this tax may be assessed at any time, and if it is, why of course it is understood that it will be for the buyer's account. As long as this tax is not assessed the shingles we ship from Canada into the United States really sell from 3 cents to 5 cents per thousand less than they would be were the tax assessed; in other words, the 3 per cent freight tax would amount to from 3 cents to 5 cents per thousand. This is an advantage worthy of consideration and worth mentioning to your customers.

Mr. MOORE. Have you your bill there?

Mr. HADLEY. I will present it in a moment. I wish to file without taking the time to read it, an indorsement of the principle of applying in some way this tax to the shipments within American territory of freight originating without the territory.

The CHAIRMAN. I would like to say to Judge Sterling in this connection that we now tax passengers going from one point in the United States to a point in Canada or Mexico under the last revenue act, but we do not tax freight on account of this constitutional question.

Mr. STERLING. There would not be any constitutional question involved if we simply sought to tax it to the line.

The CHAIRMAN. No; and at first blush I think there is a great deal of merit in Mr. Hadley's proposition.

Mr. MOORE. I think Mr. Hadley intends to discuss that question.

Mr. HADLEY. The letter I now desire to file is from the Seattle Chamber of Commerce and Commercial Club, attaching a resolution adopted by the board of trustees of that organization and drawn by former Senator S. H. Piles, as chairman.

SEATTLE CHAMBER OF COMMERCE AND COMMERCIAL CLUB,  
Seattle, January 17, 1918.

HON. LINDLEY H. HADLEY,  
House of Representatives, Washington, D. C.

DEAR SIR: Herewith I have the honor to transmit recommendations from the national affairs committee of this organization urging the Members of Congress from the State of Washington to endeavor to bring about remedial legislation which will overcome the advantage now enjoyed by British Columbia shingle manufacturers in competition with American manufacturers because of the 3 per cent tax on bills of lading.

Yours, very truly,

G. C. CORBALEY, *Executive Secretary.*

JANUARY 9, 1918.

BOARD OF TRUSTEES,  
Chamber of Commerce and Commercial Club, Seattle, Wash.

GENTLEMEN: The executive committee of the national affairs bureau respectfully recommends that the Members of Congress from the State of Washington be urged to use their influence and best endeavors to secure remedial legislation which will overcome the disadvantage imposed on American shingle manufacturers in competition with Canadian manufacturers because of the 3 per cent tax on expense bills of lading for domestic shipments which do not apply on shipments originating in Canada.

This recommendation is offered as the result of the suggestion made by the shingle branch of the West Coast Lumbermen's Association, referred by the board of trustees to this committee at the meeting of the board Tuesday, January 8.

It appears that the British Columbia shingle manufacturers are advertising to the American buyers the advantage in price which they enjoy, amounting to 5 cents and more per thousand on shingles because of their exemption from this tax.

Remedial legislation should, in the judgment of your committee, take such form as our Members of Congress find practicable. It might be accomplished by equalization of tariff differences, if that seems feasible.

Respectfully submitted.

S. H. PILES, *Chairman.*

Approved and adopted by board of trustees, Seattle Chamber of Commerce and Commercial Club, January 15, 1918.

Mr. SLOAN. Would not an import tax meet all the requirements and serve the purpose a great deal better than the suggestion you are making?

Mr. HADLEY. Well, that is a matter for the committee's consideration. I desire to present that——

Mr. SLOAN (interposing). But I would like to have your view on that.

Mr. HADLEY. May I finish filing these letters, and then I will answer your question.

I would like to file a letter from the Bellingham Chamber of Commerce, addressed to me under date of February 9, 1918, on the same subject; a telegram from the Aberdeen Chamber of Commerce, of Aberdeen, Wash., and also a telegram from the Hoquiam Commercial Club, of Hoquiam, Wash., both of which last-named cities are situated in the district represented by Hon. Albert Johnson, the third district of Washington, the chamber of commerce and commercial club of Seattle being within the district represented by Hon. John F. Miller, both of whom are present in connection with this hearing.

CHAMBER OF COMMERCE OF BELLINGHAM  
*Bellingham, Wash., February 9, 1918.*

HON. LINDLEY H. HADLEY,  
*House of Representatives, Washington, D. C.*

MY DEAR SIR: Your attention has probably been called to the fact that shippers of shingles from British Columbia escaped the tax of 3 per cent on expense bills, which tax applies to all the shippers of shingles in the United States. This places an additional handicap on them of about 5 cents per thousand.

At a meeting of our board of trustees on February 6, I was directed to write you that our people had no desire to evade this tax, but that we hope you will use your best influence to secure a similar tax upon our competitors across the line.

Our board of trustees unanimously passed a motion requesting Congress to place a 3 per cent tax on all goods shipped in by rail from foreign countries, in the same manner as this tax is imposed upon American shippers.

Respectfully,

P. E. MAGRUDER,  
*Executive Secretary.*

ABERDEEN, WASH., *January 28, 1918.*

LINDLEY H. HADLEY,  
*House of Representatives, Washington, D. C.:*

Reference to war tax, 3 per cent on expense bills on shingles, no war tax imposed on shingles from British Columbia to United States. We ask for immediate remedial legislation to place this large industry in Washington and Oregon on equal basis with British Columbia, who now has great advantage.

ABERDEEN (WASH.) CHAMBER OF COMMERCE,  
 By W. L. MORRIS, *Secretary.*

HOQUIAM, WASH., *January 21, 1918.*

Congressman HADLEY, *Washington, D. C.:*

Reference to war tax, 3 per cent on expense bills on shingles, no war tax imposed on shingles from British Columbia to United States. We ask remedial legislation to place this industry in Washington and Oregon on equal basis with British Columbia, who now has great advantage.

HOQUIAM COMMERCIAL CLUB.

I would like to give one other illustration of the effect of the act before referring to the question just asked. In a letter which I received under date of April 8, 1918—I will not take the time to read it all—is presented the point that a shingle shipper in this country was able to ship by water 50 or 60 miles to Vancouver, British Columbia, and there load in cars and reship from Vancouver, British Columbia, back into the United States, and was able to meet the competition by reason of the fact that the 3 per cent freight tax did not apply. I do not need to elaborate the point, because it is set forth in the letter:

WEST COAST LUMBERMEN'S ASSOCIATION,  
*Seattle, Wash., April 8, 1918.*

HON. LINDLEY H. HADLEY,  
*House of Representatives, Washington, D. C.*

DEAR SIR: Reference to Senate bill No. 3480, and House bill No. 8717, the same being an amendment to the recent war-revenue act placing British Columbia shingle mills on a parity with American shingle mills, as regards the assessment of this 3 per cent freight tax.

It has come to my attention that the Burke Shingle Co., of Anacortes, Wash., has shipped a large scow load containing several million shingles to Vancouver, British Columbia, loading shingles into cars at that point for shipment into the United States over the Great Northern Railroad.

While the primary object of the Burke Shingle Co.'s shipping these shingles from Vancouver was due undoubtedly to the fact that cars were more available at that point than at Anacortes, where their mill is located, yet by virtue of the fact that these shingles escape the 3 per cent freight tax when loaded out from Vancouver, their towing charges and other charges incident to making shipment in this manner are to a large extent compensated for, and their mill has been able to keep running while otherwise they would have been forced to close down.

But it certainly is an injustice when a company located in the States can ship their shingles 60 or 70 miles by water, and avoid payment of a tax that his fellow miller who loads the shingles direct into cars at his plant must pay.

This little incident further emphasizes that there has not been equal distribution of cars even on the same line, because Anacortes, as you know, is located on the Great Northern, and these shingles were shipped via the Great Northern from Vancouver. However, I am making no complaint on this ground because I understand the new plan of Car Distributor J. C. Roth will eliminate this.

I will be glad to have you place this information before other members of the Oregon and Washington contingent at Congress in an endeavor to have these bills favorably reported on the floor.

Very respectfully,

J. S. WILLIAMS,  
*Secretary Shingle Branch.*

Now, I have suggested an amendment by a bill which I introduced on the 15th of January, 1918, which proposes to add to the language which I read in subdivision A, the following words: "or consigned from a point outside the United States to a point within the United States."

That is simply extending under the existing law the operation of the tax to those commodities which enter the United States, and, of course, could only be made to apply to them in so far as that portion of the haul is concerned which is within the United States.

Mr. SLOAN. It is taxed when it leaves the United States and taxed again at the reentry point?

Mr. HADLEY. Yes. I do not see anything difficult about that. The carrier at this time in shipping from points within the United States to another point within the United States must collect the tax or he is liable for it; as I understand it; and so at the point of entry he must apportion the tax and collect it or remain liable, and I see nothing difficult in his doing so, and it is a revenue producer.

In connection with that observation, I have here the April number of the West Coast Lumberman, a very reputable paper published at Seattle and Tacoma, which gives some idea of the extent of shipments from Canada to the United States on this one item of shingles. I will not read it, but I call attention to two points: For the eight months ending with February of this year, 1,198,125,000 shingles, valued at \$3,365,678, have been brought into the United States from Canada, as against 1,184,978,000, valued at \$2,576,790, during the same period last year. The figures are also given showing increased importations in February and the value per month. I note that the increased importations for the eight months ending with February amounted to something more than 12,000,000 shingles more than the previous corresponding period, and the value had increased something over \$100,000.

Of course, the method of applying an important duty at the port of entry would perhaps remove that discrimination better than any other way, and would be a very effective way of doing it, but I did not understand the committee was at present considering a general revision of the tariff. If it was doing so, we would perhaps be here

considering this question on broader and different lines; but in order to equalize the relation of the American shipper and producer with that of his foreign competitor in this country under an act, the policy of which has already been determined generally and is now existing, I have merely suggested that the committee undertake to extend the operation of the act to foreign commodities coming in competition with American commodities in this way. I think the amendment I have suggested will reach it, but whether it is the best method of reaching it I will not undertake to say. There may be other and better ways, although I think this would cover the point.

Mr. MOORE. In doing that, Mr. Hadley, I would like to ask you why the present tariff laws do not afford protection in this instance.

Mr. HADLEY. Shingles, the item I have been referring to, are upon the free list. There was a time when we had, I think, a duty of 50 cents per thousand. Subsequently it was reduced to 30 cents, and finally shingles were put on the free list. Reference has been made in the letter which I first read here to the difference in the cost of production in the two countries.

Mr. MOORE. Were they put on the free list under the bill which we have become to know generally throughout the country as the Underwood tariff bill?

Mr. HADLEY. That is my recollection.

Mr. SLOAN. I want to say when I asked you that question I did not know the committee had concluded to ignore something like \$3,000,000,000 of imports that were coming into this country annually and to favor so richly the foreigners as they have during the last few years. I did not know the committee had concluded to continue that disastrous and unwise policy.

Mr. HADLEY. I did not mean to imply that the committee had reached any conclusion as to what it might do in that regard, although taking the act as we have it before us and the proposed amendments so far as I have heard suggestions made, I did not know that it was intended to enter upon a general tariff revision. If the committee should do so, then the entire lumber schedule and the shingle schedule would be such that the committee might consider with interest to the country and certainly with benefit to the people of the districts to which I have referred. I do not care whether the committee considers this 3 per cent item on the basis of an added tax to equalize it, or whether it considers it on the basis of an import duty in order to equalize it. If it undertakes to do the latter and also to effect complete equalization in the case of imports, it will have many other considerations to take into account to which I have not made anything more than a passing reference, and of course I would not at this time undertake to discuss them because I have not the time nor the opportunity to do so.

Mr. STERLING. What is the freight rate on a car of lumber or shingles from, say, Aberdeen, Wash., to Chicago, approximately?

Mr. HADLEY. I will ask Representative Johnson, who is present and who lives near Aberdeen, to answer that question.

Mr. JOHNSON. The rate on shingles from the north Pacific coast to Missouri River points approximately is 70 cents per 100 pounds, and the rates have recently been subjected to a percentage increase under orders of the Director General of Railroads.

Mr. GREEN. Would it equalize these conditions if the outsider or the person shipping from Canada was compelled to pay a 3 per cent freight rate on the distance that the lumber travelled within the United States?

Mr. HADLEY. Well, I have taken it for granted that having no extraterritorial jurisdiction, we would be relegated to that remedy.

Mr. GREEN. Of course, we could not collect a tax on the Canadian rate.

Mr. HADLEY. And whether it would equalize it or not, it would to the extent of this freight item only.

Mr. STERLING. We could put a higher rate on lumber coming in from a foreign country from the boundary line to destination.

Mr. HADLEY. You would have a perfect right to do that on the same principle on which we apply an import duty for protective purposes. The cost of production, the cost of manufacture, and the cost of the original materials is much greater in the State of Washington than it is in British Columbia, and that would require the taking into account of the difference in cost of materials and also the difference in cost of labor in order to determine just what would be a fair rate of equalization even in the form of a tax. Of course, this suggestion is as broad as the act, and applies to all commodities, irrespective of the character of the commodities, that are similarly situated, and it might be well considered, it seems to me, by the committee, whether in consideration of all the shipments into this country which are transhipped from without the country through and across the country to points within it, it might not be a very great source of revenue; and while I present it from that standpoint, we also have the interest, in the State of which I have spoken, of removing this manifest discrimination which now exists between these competitors.

I do not desire to extend my statement on account of other engagements, and I wish to call attention to the fact that Representative Johnson and Representative Miller are both present, and the three of us represent all of the portion of the State of Washington within which the lumber and shingle industry flourishes.

The CHAIRMAN. The committee understands that Mr. Miller and Mr. Johnson and yourself are behind this proposition, and so far as I am concerned it strikes me as being very meritorious.

Mr. HADLEY. If they desire to make any statement or to file any statement, I would be glad if they might have that opportunity.

The CHAIRMAN. All right, sir.

Mr. MOORE. Have you read your amendment?

Mr. HADLEY. I have here the bill which I introduced, H. R. 8717.

Mr. MOORE. Will you please read it so it may go into the record?

Mr. HADLEY (reading):

A BILL To amend paragraph A, section five hundred, of an act entitled "An act to provide revenue to defray war expenses, and for other purposes," approved October third, nineteen hundred and seventeen

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraph A of section five hundred of an act entitled "An act to provide revenue to defray war expenses, and for other purposes," approved October third, nineteen hundred and seventeen, be amended by adding at the end thereof the words "or consigned from a point outside the United States to a point within the United States."*

Mr. MOORE. You think that would avoid the constitutional question?

Mr. HADLEY. I do not see that there is any constitutional question involved, if I may state it in that way, so far as the exercise of this authority is concerned.

Mr. MOORE. Of course, this would simply mean that as soon as the goods got into the United States they would be taxable?

Mr. HADLEY. Taxable for that portion of the haul within the United States.

**STATEMENT OF MR. BARNETT L. HOLLANDER, COUNSEL TO  
AMERICAN ART DEALERS' ASSOCIATION, NO. 44 WALL  
STREET, NEW YORK.**

Mr. HOLLANDER. Mr. Chairman and gentlemen, may I ask that the brief which I have tried to make short be printed in the record? I have tried to leave out all nonessentials. The American Art Association realizes that the cardinal point is the raising of revenue; so that our position, which at first blush may seem surprising, is reached from a very fair consideration of every issue involved at this unusual time. The American Art Dealers Association consists of the dealers in art of America, Europe, and wherever art is to be found. It is chartered, as a sort of board of trade, by the Supreme Court of New York, and has in its membership nearly all the art dealers of this country. We speak purely for them. We are not authorized to speak directly for the artists of America or for the museum, although both are vitally interested. They are allied in interest with us, and I think their interests and our interests are interwoven.

The proposition that we make is this, that since the President in addressing Congress on May 27 spoke of taxing luxuries, and since the Secretary of the Treasury in his letter, I think, to the chairman of this committee, spoke of laying heavy taxes on luxuries, the art world and the art dealers fear that under some general language, contrary to the intent, in every likelihood, of the committee, and certainly contrary to what we claim is the Government's policy as now established by the state of the law, the word luxuries might be so defined as to include works of art. We maintain, in the first place, that the definition as known to us and as given by the dictionaries does not place works of art in the same class with jewelry and perfumery. Congress, we claim, has, since the Payne-Aldrich bill of 1909 and in the Underwood bill, continued the policy which had been the policy of the country for upwards of 100 years, I think, with the exception of a short span, in 1890, or possibly in the eighties and nineties, of keeping works of art and antiquities on the free list, and we contend that any action taken here by the committee should be defined by that clause of the tariff act which places works of art on the free list. You will find the definition or classification in that clause of the tariff act.

Works of art have not paid any duty since 1909, and the Government, we claim, has recognized, through permitting the importation of works of art free, that they are educational. They endure for all time, and we must see to it that they continue for all time. The countries of Europe do not impose any tax of any kind in connection with the importation of works of art, nor do they tax works of art at this time for war purposes, although during the four years of the war they certainly have combed the field to find new methods of taxation

and new subjects of taxation. That is true of all the countries of Europe, with one single exception, and I will come to that in a moment. There is an export tax in Italy, and the purpose of that has been to keep their works of art in their own country. In both Italy and Spain, I think, all important works of art are listed so that the Government's permission must be obtained before any of those works of art can be exported. We all know to what extent, because we see a great deal about it in the papers, European countries have gone in the effort to have some legislative action taken to prevent their works of art from coming to this country. When I spoke about a single exception or instance of a country raising new taxes on works of art, I had in mind the recent law enacted in France, imposing a tax of 10 per cent on works of art, and I will for a moment refer to that. In March or April of this year, I think, they imposed a tax of 10 per cent on works of art.

Now, how did they do it, and it is important to consider that in connection with the general proposition before you? As I said, they imposed a tax of 10 per cent on works of art. That did not reach the commissions realized on the sale of works of art, but it was a direct tax simply on works of art and applied to the private collector. I have a copy of the law here, and it is very carefully drawn to reach the rich man, we will say, who is buying from a dealer in art there. Now, there have been two sales scheduled on works of art in France for May or June, and, as a result of that new tax, those large collections are not to be sold. The French Government thereby loses the tax that might be collected. The agitation on the subject has been very serious, and I have here an article from a French paper dated May 8 to the effect that the Paris Chamber of Commerce had advised that the tax be removed. The business dropped off to practically nothing. The tax simply defeats itself because of the fact that the rich man, or the buyer of these things, will not buy them apparently if there is to be a tax placed on something that is educational and for something that is only for a transitory period.

In America you have the Morgan collection, which Mr. Morgan acquired during the later years of his life, and it was passed on to the public at his death by his deed and by that of his son. The Altman collection is a very large collection and is quite equal to the Morgan collection. That was collected by Mr. Benjamin Altman, a New York merchant. That collection goes to the public, with a large endowment to the Metropolitan Museum. Then the John G. Johnson collection last year came to the city of Philadelphia. These art collections have been enjoyed by their owners during their lives, but very shortly after their deaths they have gone to the public, and that has been done by reason of this situation, or the way they have been regarded, and your encouragement should go out to them so that they may continue in that splendid policy. Now, we have seen pictures recently of the great efforts being made in Europe to preserve works of art from German attack. We have seen pictures of sand piles around cathedrals and monuments, and in some instances art treasures have been removed from museums even by the military to a safe distance behind the lines. I would like to quote briefly from a news item in the New York Evening Post of a few days ago, as follows:

MEASURES TO DEFEND PARIS—PREMIER CLEMENCEAU EXPLAINS OBJECT OF APPOINTMENT OF GEN. GUILLAUMAT.

\* \* \* \* \*  
 These defensive measures, Premier Clemenceau explained to a deputation of the Radical Party to-day, are of a precautionary nature, for the safeguarding of the capital. The Government, in this connection, has notified private art collectors that assistance will be accorded them in removing their treasures to places of safety.

Mr. MOORE. What does the annual business in works of art amount to?

Mr. HOLLANDER. We figure that it will be between ten and fifteen million dollars this year, but if any tax is placed on it, the psychological effect must be such that it will drop off, and that the excess profits and income taxes that have been paid from this business will be unbalanced so that the effect will be that the total taxes will be less than for this year.

Mr. MOORE. What percentage of that ten or fifteen million dollars goes outside to foreign artists or art dealers?

Mr. HOLLANDER. I do not mean that there is any such investment as ten or fifteen million dollars, but there is a turnover of ten or fifteen million dollars. At best, we figure that about two thirds comes from the other side.

Mr. MOORE. Ten or fifteen million dollars changes hands at the present time as between those who buy pictures and those who sell them?

Mr. HOLLANDER. No, sir; it is not pictures alone. We are speaking of works of art, including statuary, antiques, and art works of every description.

Mr. MOORE. And two-thirds of that is in foreign trade?

Mr. HOLLANDER. Yes, sir; about two-thirds.

Mr. MOORE. What tariff duty is there on works of art.

Mr. HOLLANDER. Absolutely none, and there has been none since 1783, with the exception of one or two short spans. When I get a little further, you will see that the jump came from \$3,000,000 of importations in 1897, when the duty was still on, up to \$21,000,000, I think, in the year following the enactment of the Payne-Aldrich bill, which took the duty off.

Mr. MOORE. I want to ask you a rather blunt question: We are engaged in this war, and it is a critical time. We need all the money we can get, and we are directed by the President and the Secretary of the Treasury at this time to raise \$8,000,000,000 of additional revenue. Now, is it wise at this time for us to send to Europe to buy art collections as much as two-thirds of the ordinary American turnover in that business?

Mr. HOLLANDER. I will say, as to that two-thirds, that a large part of that money is money expended by museums, and I do not know that we want to dictate to them. They are trustees for the public and their purchases, in any event, should come under a separate clause. But the answer to the point you make is that everything that comes in now, in the way of works of art, comes from one of three countries, France, England, or Italy. Therefore, that money goes to our allies, and we are lending them money ourselves.

Mr. MOORE. But bear in mind that we are turning over to that country money for a picture or piece of statuary that may be worth \$500,000. That \$500,000 might be very readily applied to the manufacture of munitions in this country during the war, and the

question is whether we had not better hold that money and defer the educational advantage which this picture or piece of statuary is going to bring to our country, and use the money for governmental purposes during the war?

Mr. HOLLANDER. That view of it has been discussed and that is where the selfish interests of the dealer would appear in the matter. That has been discussed by us, and it is believed that the injury done would more than offset any immediate good that could be obtained from such a course.

Mr. MOORE. You used as an illustration the sacrifice of Mr. Otto H. Kahn, who has decided not to buy any art works during the period of the war, but who prefers to make his investments, that might otherwise go into works of art, so that the money would go into Liberty bonds, and thus help the Government. Don't you think that in an emergency like that which now confronts this country, it might be wise for the Government to use for war purposes some of the money that might be spent by large purchasers of works of art?

Mr. HOLLANDER. There, again, we speak from the selfish standpoint. We say that we must live, that we have capital invested, that we occupy real estate, and that we have employees. That is a point that I want to make later. This business employs a class of labor that might at first blush seem to be a labor that might be employed at this time to a more useful purpose; but, in the very nature of things, this business is like no other, and we do not employ a class of labor that is adaptable to other purpose, or the average labor employed in this business is not adaptable.

Mr. MOORE. In the purchase of a picture or a piece of statuary you are benefiting the individual who works upon that picture or piece of statuary.

Mr. LONGWORTH. It very rarely happens that the man who produces a work of art gets a large amount for it. That money does not go to living artists.

Mr. MOORE. Then it goes for the benefit of those who manipulate the proceeds of his labor or of his art. I am merely raising the question of the wisdom of sending out of the country at this time large sums of money for the purchase of works of art when we are so greatly in need of every dollar that we can get for governmental purposes.

Mr. HOLLANDER. In the abstract that might be true at this time, but that policy might result in more harm than good, because that business is here, and it is an established business. The effect of that policy would be to stop buying, and you would then reduce the value of all art works in this country. In addition to that, when these rich men die if they own great works of art the Government benefits to a great extent. Taxes are getting higher all the time, and the Government receives large income and inheritance taxes from these wealthy people. It seems to me that in this matter we might very well take the experience of Europe, because, after all, we are young in the business. They have established certain policies in regard to this matter, and undoubtedly they are policies growing out of wisdom. Both England and France recently, during the war, have been making purchases of works of art at great cost out of the public treasury; and only last month, at the Degas sale, the French Government paid 360,000 francs for one of his pictures. They paid that

much for a picture by Degas, who had just died a short time before. Their artists receive Government subventions. Rodin, who died last year, was being paid by the Government. The artists over there draw Government pensions right along.

Mr. SLOAN. You have spoken about the art business, and all that, and I want to know how it would be effected by taxation. Is it not true that every business is in some form burdened by taxation, and will be burdened more by the taxation that we are facing in these revenue bills? In view of the acts of vandalism that are being committed by German troops in the destruction of fine works of art, and in view of the fact that a great deal of military defense is required for the protection of works of art, just why should the business involved in the transfer of these articles be exempt from taxation? Why should they be exempt, unless they are of prime utility in the conduct of the war?

Mr. HOLLANDER. I think the answer to that is, in the first place, that art is essential for the conduct of the war, which, after all, we will assume is largely mechanical. Art is something that we have about us all the time. It is in this room in the form of textiles, for instance. Certain textiles contain certain designs, and that must be continued.

Mr. SLOAN. A part of the expense in the providing of war machinery is required for the protection of works of art, and, that being true, why should not the business of transferring the various articles of the industry bear some of the burden of prosecuting the war?

Mr. HOLLANDER. Exactly, and we believe it should. We want to do that, and we are not here to quarrel with any tax that might be charged to us out of profits. Our business itself is a peculiar one, and, as I said before, it is like no other. It can not stand any direct tax.

Mr. MOORE. I did not misunderstand you, and I have no quarrel with art. I am anxious to encourage it, but we must protect art now with human life, and we must raise money to protect that human life. That is the problem that is before the committee.

Mr. O'SHAUNESSY. Would a tax on the sales of works of art to purchasers interfere with the business?

Mr. HOLLANDER. Yes, sir. We have had a number of meetings of the dealers in New York, and they were attended by 80 per cent of them. We have had meetings of the dealers, and that is their unanimous view. In addition to that, they have gone to firms like the old firm of M. Knoedler & Co., and firms of that character that have their customers who are buying these collections, to find out what their attitude would be. Their attitude seems to be that if a tax goes on they will either have to take down their signs or else wait until conditions change and cease buying.

Mr. O'SHAUNESSY. I asked that because you say that your purchases come from an exclusive class of the people, and I was wondering whether or not they would stop buying on account of the tax which would be levied to promote the war.

Mr. HOLLANDER. They would figure like Mr. Kahn that it would be better to put their money in another channel that would help in the war. That is why I spoke of the selfish consideration that is involved here. The effect on the museums is something to be considered. The Director of the Corcoran Art Gallery was in the room

a few minutes ago, and I asked him his opinion. His concern is directed to the American artist. The American artist must live, and, as you know, the artist is like no other person. He is not very readily adaptable. Their average age is about 53 years, and, of course, they are no longer adaptable. The younger artists are active in the service of the Government, doing camouflage work, poster work, and publicity work of various kinds for the United States Government.

Mr. SLOAN. If they can not serve, why not let them pay?

Mr. HOLLANDER. They hardly make a living as it is. Artists, as a rule, barely make a living. They have to pay the expenses of their studios, and there is very little that they can do. There has been a lot of what might be termed theatricalism about the art business. We hear of \$500,000 being paid for a work of art, but those transactions do not exist. They are greatly exaggerated, and the dealers themselves complain about that. You take the average American artist, and I know lots of them, and they have a very hard struggle. Mr. Coffin, who is a national academician, is present, and can tell you more about that. He has not an appointment here, but he has asked me to let him have a little of my time. So, as I say, there is very little to be gained from American art or American artists.

I have set down here some figures. If you will refer to page 16 of my brief you will see that I have given the figures of imports for the last 20 years. In the year 1899 the imports amounted to \$2,400,000, and in 1910 they had jumped to \$21,000,000, and in 1913 they reached \$52,800,000. That was the year in which Mr. Morgan brought over his great collection—when he took it out of the Kensington Museum and brought it over here. Then, with the coming of the war the imports amounted to \$35,000,000 in 1914, which was almost a normal year. In 1915 the imports dropped to \$18,400,000 and in 1916 the imports amounted to \$20,800,000. On page 18 of my brief I have some more recent figures—

Mr. MOORE (interposing). Will you state whether they are the import figures?

Mr. HOLLANDER. They are import figures, yes; and they are the only figures we can find.

Mr. MOORE. Is the art comprehended by those figures brought in by dealers or brought in by such men as Mr. Morgan?

Mr. HOLLANDER. That is everything that passed through your customhouse, because they are the customhouse figures.

Mr. MOORE. I want to find out whether they represent individual collections or whether they were brought in for commercial purposes.

Mr. HOLLANDER. I should say that about half of the imports were for private collectors and that the other half was for dealers. Turning to page 18 of my brief you will find that in 1916 and 1917, taking the recent months, December, January, February, and March—and the March figures are the last available—that the imports were, for December, 1916, \$2,604,000, and they dropped in 1917 to about half that. In January, 1917, the imports were \$3,605,000, and in January of this year, \$890,000; in February, 1917, \$2,437,000, and in February, 1918, \$770,000; in March, 1917, \$2,106,000, and in March, 1918, \$885,000. That shows that we are running about one-third of what we did last year.

Mr. HAWLEY. Is that altogether due to the falling off in purchases or the lack of transportation?

Mr. HOLLANDER. There is no lack of transportation from the other side. There are plenty of bottoms coming over, but we do not ship over any of these goods.

Mr. COLLIER. Your purchasers are pretty nearly all rich people, as a rule?

Mr. HOLLANDER. Yes, sir; that is true as to the greater portion of them.

Mr. COLLIER. They represent the greater portion of the purchasers and that is because they have a love for art and have the money. Now, do you think that a tax would stop these rich people from paying a few dollars more on a very expensive picture?

Mr. HOLLANDER. That is why we are here, because we think that is the fact, and that, as I said a moment ago, is the fact as they have gathered by talking amongst themselves.

Mr. COLLIER. I had to step out and did not hear all of your statement, I am sorry to say. Did you say anything about the character of your purchases, what part of your business is composed of small priced pictures, the cheaper pictures? Does that constitute a small proportion or a large proportion of your business?

Mr. HOLLANDER. One of the dealers is here, and he is, perhaps, the largest dealer; he is one of the committee sent down here, and, as I say, he is perhaps the largest dealer in the works of living American artists, and perhaps he can answer that after conferring with his committee.

Mr. MACBETH. I can answer that, I think. In our case it would be pictures—because we deal in nothing else—which sell at low prices throughout the trade, and they are practically, in every case, pictures by living American artists. Those pictures average with us, I should say, not more than \$800 and they are sold not to the wealthy class of collectors, but to the upper middle class, as you might call it.

Mr. COLLIER. What proportion of the business does that constitute, in a general way?

Mr. MACBETH. Of our business, or of the whole business?

Mr. COLLIER. You are speaking of the business generally, are you not?

Mr. MACBETH. Yes, sir. It is a very small percentage, I should say; certainly not more than one-fifth in money value.

Mr. COLLIER. Then about 75 per cent of the business you are representing here to-day is in the expensive pictures?

Mr. MACBETH. In our case, yes. In dealing with works of deceased artists, the prices would go up higher. I suppose that the total business throughout the whole United States, including sales by dealers and artists themselves, would not amount to more than a million dollars, and one million dollars would be a high figure for it.

Mr. COLLIER. You agree with Mr. Hollander that the purchases of the high-priced pictures have fallen off to a great extent?

Mr. MACBETH. Yes; we are finding that is already true.

Mr. COLLIER. I presume that is natural, because a great many people are now putting their money into liberty bonds and other things instead of putting it into these high-priced pictures, which always happens during such times as we now have before us.

Mr. HOLLANDER. At page 12 of my brief—

Mr. STERLING (interposing). Do you speak for the artists or for the dealers?

Mr. HOLLANDER. I speak entirely for the dealers and I was not authorized to speak for the artists. I think they are here to speak for themselves and for the museums, as both of those interests are closely allied.

Mr. STERLING. I think you stated a moment ago that the artists are having quite a struggle. I presume that is true.

Mr. HOLLANDER. Am I right in that, Mr. Coffin?

Mr. COFFIN. I think that is true; yes.

Mr. STERLING. If we had a protective tariff on importations of art would it help the American artists to any extent?

Mr. HOLLANDER. Well, that has been a subject which has been before this committee many times. You had a tariff on for about 15 years, and then took it off.

Mr. STERLING. Was it taken off at the request of the artists?

Mr. HOLLANDER. Oh, yes; it was taken off at the suggestion of the artists themselves.

Mr. COFFIN. I have appeared before the Committee on Ways and Means several times to ask for the removal of the duty on art. When Mr. McKinley was chairman of the Committee on Ways and Means it was taken off in the House, the duty having been 30 per cent; in conference the Senate insisted on a duty and they cut it in two and made it 15 per cent. Art was made free of duty in the bills which never became a law. At the time the Dingley bill was under consideration we were told it was no use to come to Washington, but in the last bill art was made free of duty and it has benefited the development of art in America and of American artists especially. All artists in America are opposed to any sort of a duty on the importation of works of art, because they feel it benefits them to have such works come in free.

Mr. HOLLANDER. Is that true as to the feeling of the competitive living artists?

Mr. COFFIN. Yes, sir. They do not feel that they are harmed by the free importation of works of art by European artists or the works of those artists who are dead.

Mr. HOLLANDER. I am going to be through in a moment. At page 19 of my brief I have set down some figures showing what has been the effect from the viewpoint of raising revenue by placing a duty on art. When you placed your duty on art you collected much less than was anticipated at the time. I am not going into those figures, but they are set down at page 19. The point we really make is this, that when you do this thing you cut down our earning power, and if you do that you cut down our income and you cut down the tax that we have been paying.

There is only one other matter to which I want to advert, and that is the peculiar nature of the business. You may think that this business ought to be legislated out of existence, that it is something that serves no immediate purpose, but in that connection I want to call your attention to the peculiar nature of the business. At page 20 of the brief I have set down some figures as to dealers in New York. We gathered statistics from fifty-odd dealers in New York and we found that the average number of employees they employed was seven.

Most of them have a packer and a bookkeeper or typist; the largest I do not think employs over 12. There are very few of them that

you would call adaptable men; they are of the student class; they are of the type of men who practically live in bookstores, and they are not very different from that type. They do not use very much. They do not use the banking facilities; in fact, the banks do not render any services to them at all, as they do to the usual business establishment. Their articles are not moved in the regular channels of trade, and, as I have said, they are not adaptable people at all. As to the real estate they occupy, they really need little more than office space for these things. Their galleries are used by the public, and the public goes to them and walks around them just as it does in the museums. While we are on that subject let me say that last year in New York the attendance at the public museum was over 1,000,000; in Chicago it runs nearly that, and in Boston about the same. The director of the Corcoran Art Gallery told me this morning that 160,000 people attended the Corcoran Gallery last year. If I am not wrong in my estimate, taking out the children and those who are too old to go, everybody in Washington went to the Corcoran Art Gallery once last year.

Mr. COLLIER. Right on that line, you say that of 50 dealers you selected in New York they had an average of seven employees, or a total of 350.

Mr. HOLLANDER. Yes, sir.

Mr. COLLIER. How many people do you roughly estimate are engaged in this business in the United States? Have you any figures on that?

Mr. HOLLANDER. I will ask the committee to correct me if I am wrong. I know something of the business, and I should assume that there were over 1,500 in this country engaged in the business; that is, outside of the artists themselves; I am talking about the mercantile end of it.

Mr. MACBETH. 1,500 is far too high.

Mr. HOLLANDER. I am told that is far too high by Mr. Macbeth, and I am also told that the number is not more than 800 or 900.

Mr. COLLIER. There is no way of estimating the number of artists?

Mr. HOLLANDER. No; everybody is an artist. Now, I will only advert briefly to the fact that you can not turn their premises into anything else. On page 20 of my brief I give the ages of those employees. I think that those under 21 are about a half dozen among all of those fifty-odd firms and about 20 average between 31 and 41 of these fifty-odd firms.

Mr. SLOAN. I did not get your statement correctly about these classifications, or else I did not understand you a little while ago. I understood you to say that the average age sometime ago was 53 years.

Mr. HOLLANDER. That related to a different class. I was then talking about the American artists, but I am now talking about the average age of those engaged in the business, and on page 20 of my brief I give some figures as to the average number of employees of 51 firms and the average ages.

Mr. SLOAN. They are not the ones you were speaking about a little while ago?

Mr. HOLLANDER. No; now, as to their real estate. They do employ real estate amounting to considerable in the aggregate, and it is nearly all in the city of New York. We know over in New York, and those on the committee from New York know, what is

happening to real estate in New York. I think it has been attributed to the fact that the subway systems have taken a great deal of the population out of the city, but the fact is that real estate in New York City, when sold at public auction, brings less than the assessed value. I have heard it stated that the New York Legislature is considering the proposition of declaring a moratorium in order to prevent collections under mortgages on real estate in New York, because of the present unsettled conditions, and due to the fact that the banks and trust companies are not willing to continue the loans beyond the due date.

There is only one other thing that I want to say, and that has reference to the curious nature of this business. There is no wholesaling in this business and there is no wholesaler, because each transaction is different. Many of the transactions are transactions between dealers. A dealer will know that another man has a picture, a piece of furniture, or a tapestry, and he thinks he can place it, or the reverse is true, and the man having such an article will go to a dealer that he thinks can place it for him. Now, those transactions are made on a very narrow basis, and 10, 15, or 20 per cent would be the maximum as between dealers. Now, those transactions will have to be taken care of, and they will not stand a tax to the same extent as will transactions between dealers and customers. Then there are purchases at auction and they make a curious complication. Then there are many transactions in which the dealer only acts as the purchaser on commission, and that is a 10 per cent commission. So I have adverted to those different classes, showing the difficulty in arriving at any system of taxation.

Mr. MOORE. Before you go, let me ask you this: If our tariff conditions were so changed that we derived a revenue from imported art works, would it not help to encourage American artists?

Mr. HOLLANDER. Mr. Coffin could speak with much more authority on that than I could, because he makes his livelihood at it. He has been appearing before this committee for, I suppose, 20 years, and he is secretary of the Association of Artists. He says unqualifiedly no, and that a duty would not help the artists in any degree. Am I right, about that, Mr. Coffin?

Mr. COFFIN. Yes.

Mr. LONGWORTH. I was a member of the committee which considered the Payne law. I was always very much in favor of admitting works of art free of duty. I heard Mr. Coffin's speech and I was convinced that it would do no harm to the artists, but, on the contrary, would be of benefit to them.

Mr. HOLLANDER. That seems to be the enlightened policy of the world.

Mr. MOORE. I respect Mr. Longworth's opinion and I know that his views on this subject are entitled to respect, but it has always occurred to me that when we admit foreign art free, and permit large sums of money to go abroad for the purchase of European art, generally at very excessive prices, that we were discrediting our own American artists.

Mr. HOLLANDER. That is not the view they take. They say that art is broader than that, and they take it on very large grounds, which seems to obtain in all countries.

Mr. MOORE. The American artist is the junior of the old master; there is no question about that, but the American artist apparently concedes, when he sanctions these high prices for foreign art, that he may not be in the same class with the foreign artist, and that I am inclined to resent, as a general proposition.

Mr. HOLLANDER. Mr. Macbeth, whose galleries are the largest sellers of American pictures, has just called me aside and says that since the tax has been removed on European art and upon all art coming in here, there has been an impetus to art collecting and to art education to such an extent that the sale of the work of American artists has vastly increased, and I think Mr. Coffin will bear that out.

**STATEMENT OF MR. WILLIAM A. COFFIN, N. A., CHAIRMAN  
OF THE AMERICAN ARTISTS' COMMITTEE OF ONE HUN-  
DRED, 58 WEST FIFTY-SEVENTH STREET, NEW YORK  
CITY.**

Mr. COFFIN. Mr. Chairman and gentlemen, I was asked to come here on behalf of the American artists, which, of course, means the living American artists, by the National Academy of Design, which is our principal professional art institution in the United States, and which was founded in 1826 by Morse, the inventor of the telegraph, and I am authorized to say on their behalf and on my own, as an individual artist, that we think it would be inadvisable, if it is proposed by your committee, to tax the artists when they make a sale of one of their works to a customer, even if it were a small amount; and presumably there would also then be a tax paid by the purchaser, which I suppose would be the same amount, so if it were 10 per cent that would make a tax of 20 per cent on each transaction. We feel that is true, because it would limit the sales and cause them to decrease very much, because, contrary to a generally held opinion, many of the works of American artists are not sold to rich people but to people of moderate means. I have sold pictures in recent years to two men in particular, who are collectors in a small way, and I have sold my pictures on the installment plan. They were fond of art and they wished to have these pictures in their homes, and that was money saved out. One was a prominent insurance agent in New York and the other was the head of an advertising agency. Now, that must be so all over the country.

Referring to this duty which was formerly imposed on the importation of works of art from foreign countries, it has been principally since that was abolished that the museums have been established in the cities within the States, I think, that most of the gentlemen of the Committee on Ways and Means represent. I do not mean the old-established museums like the one in Boston or the one in New York or even the Chicago Art Institute, nor the one in St. Louis, or Cincinnati, but at this time you have one in Toledo, Detroit, Memphis, Indianapolis, Dallas, Fort Worth, Omaha, and Portland, Oreg. In Savannah there is the Telfair Academy, and in New Orleans there is the Delgado Museum. American artists are deeply interested in those institutions, because a good many of our sales are made in connection with these museums for their permanent collections. So far as regards works of art by old masters and what you may call the more expensive productions, it is not fair, I think, to call them luxuries because they are bought by rich people, because

they have their educational value and the best of them eventually go to the museums, generally by bequests. That has been instanced in the case of the Morgan collection and notably the Altman collection, which cost Mr. Altman a great deal of money, and the same is true of some of the noted American artists.

Mr. MOORE. It is a question of the displacement of so much money in war times, Mr. Coffin.

Mr. COFFIN. Do not imagine for one moment that the artists are not patriotic. We are working as hard as we can, and some of us were in the war before war was declared by the United States, helping our confreres in France.

Mr. MOORE. Granting all that, I want to ask you if it is the position of the artists that they would be willing to bear a tax on their work when sold?

Mr. COFFIN. They are afraid it would discourage the customer, because we do not suppose you would tax the artist alone and not the purchaser.

Mr. MOORE. I understood you to say the matter had been talked over and the feeling amongst the artists was it would be better, if they had to be taxed, to tax their work when sold.

Mr. COFFIN. Pardon me, that is what they thought would be inadvisable, because it would restrict the sales. The sums involved are not large, and as I tried to point out, many of our patrons are not people of large means. They are not of the rich class.

Mr. MOORE. Do you know what George Gray Barnard got for the Lincoln statue which is now in controversy?

Mr. COFFIN. I do not know, sir; but I know some of the details. I know that statue is not going to London.

Mr. MOORE. You know it is not going?

Mr. COFFIN. It is not going to London, and the St. Gaudens statue, which it was originally intended to send there, is going. The money has been raised to pay for the replica and the complications which arose have been straightened out. The Barnard statue is on the docks at Brooklyn, and I believe by a ruling, if I am not speaking indiscreetly, of the Treasury Department or the proper department, can not be shipped now in war time, and very likely will remain there.

Mr. MOORE. To whom does that statue belong now?

Mr. COFFIN. I can not answer that because I do not know.

Mr. MOORE. Was it paid for by Charles P. Taft?

Mr. COFFIN. I believe Mr. Charles P. Taft of Cincinnati was the donor, I presume entirely. That is my understanding.

Mr. LONGWORTH. I think it is the fact that Mr. Taft bought the original statue and these are replicas of the original.

Mr. COFFIN. Yes; these are replicas.

Mr. LONGWORTH. The two or three which were contemplated to be sent abroad. The original statue is in Cincinnati and was bought by Mr. Charles P. Taft.

Mr. COFFIN. Yes; I know that.

Mr. LONGWORTH. And these are replicas of the original.

Mr. MOORE. I see.

Mr. COFFIN. But this committee that proposed to present a statue of Lincoln to Great Britain and to France, a large committee in the United States, chose the St. Gaudens statue at Chicago, but the Barnard statue was substituted for it. That is a matter of history

which has been looked into. The result quite recently is that the members of that committee—if this interests you I am very glad to give you the information—have been communicated with and the matter has been straightened out. The money has been raised to pay for the replica of the Lincoln Statue at Chicago by St. Gaudens, and arrangements have been made with Sir Alfred Mount, the director of works, or his successor, and I believe that when the proper time comes the St. Gaudens statue is to go to London as originally intended, but as to what money consideration passed I have not any information.

Mr. HAWLEY. In reference to the question of a sale tax, are the artists more able to pay a sale tax on their product than anybody else in the country?

Mr. COFFIN. I should say not, sir; because we are running in rather hard lines at the present moment. Many of us have turned to other things. I am fortunate enough to be able to make the greater part of my living by writing. The sales are not great.

Mr. STERLING. If we should put a tax on the sales by the artists, we certainly ought to put a tax on the sales made by the dealers, ought we not?

Mr. COFFIN. I should think so. I can not speak for the dealers, exactly, but I presume they are very patriotic people and want to bear their share of the burden.

Mr. MACBETH. Is it really the same thing, if I may interrupt.

Mr. STERLING. Would it not be better, if we should levy any tax at all—and I do not know that we will—to tax the sales of the dealers rather than the artists?

Mr. COFFIN. The living American artists?

Mr. STERLING. Yes.

Mr. COFFIN. I should think so.

Mr. MACBETH. In the case of living men it is the same thing.

Mr. COFFIN. When they sell American works.

Mr. HOLLANDER. The works of American artists are sold on commission largely by the galleries. It is not two transactions but one transaction, and if there is to be any tax there should be one tax from the original transaction into the private owner's hands. Sometimes these things are handled two or three times, but they are only parts of the same transaction. They cover up their clients because there is a great amount of secrecy involved. Their clients do not want their names known and they do not want the names of their clients known, and therefore all of these transactions are not always in the open and frequently they are on a very small basis of profit in between the various dealers until they get to the one dealer who sells it to the private collector and then the percentage of profit is substantial.

Mr. STERLING. We would not reach all works of art if we limited it in that way. If we just taxed the gross sales of dealers in art that would not reach all sales, because I have no doubt the artist himself sells some pictures to the final customer; does he not?

Mr. MACBETH. Yes, sir.

(The committee thereupon took a recess until 2.30 o'clock p. m.)

(The afternoon proceedings will be printed as No. 12.)

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Wednesday, June 19, 1918.*

AFTER RECESS.

The committee reassembled at the expiration of the recess.

## STATEMENT OF MR. JOHN QUINN, ATTORNEY AT LAW, NEW YORK CITY, REPRESENTING ASSOCIATION OF AMERICAN PAINTERS AND SCULPTORS AND THE SOCIETY OF INDEPENDENT ARTISTS.

The CHAIRMAN. Will you state your full name and address and whom you represent?

Mr. QUINN. My name is John Quinn; address, 31 Nassau Street, New York City; attorney at law.

I have not prepared any briefs, Mr. Chairman, and if any members of the committee want to ask questions I will be glad to answer them.

I appear, Mr. Chairman, on behalf of the Association of American Painters and Sculptors and the Society of Independent Artists. Those are two societies of artists. The Association of American Painters and Sculptors is a national association, incorporated under the laws of the State of New York; and the Society of Independent Artists was incorporated about two years ago and has 1,200 members. This society is composed of the poor and unknown artists.

Incidentally I may remark that I incorporated both of those organizations at my own expense, and that I am here at my own retainer and paid my own expenses here. I am not paid by anybody for appearing, and I do not speak on behalf of the art dealer; I speak on behalf of the living American artists. This is introductory.

I would like to state my view on the question as to whether art is a luxury or is not a luxury. I do not regard art as a luxury any more than I regard literature as a luxury, or music as a luxury, or poetry as a luxury. Some people do, but I do not, because, after all, the question, as I take it, is not how long we live, but what kind of lives we live; and the duty of the State, it seems to me, is to make itself a partner not merely in force and efficiency, but in art and in literature.

Therefore I am not apologizing for art. I do not regard artists as parasites or as necessary evils. They are not as necessary as physicians or surgeons; I will admit that. If I had to gas one profession—if the dreadful alternative was put up to me of abolishing physicians and surgeons or abolishing artists—of course, I would

abolish artists. . But, fortunately, we have not got to that dreadful alternative. No civilized community thinks of doing anything that will hinder or make more difficult, much less destroy, the pursuit of art. Art is not to be classed with jewelry, for example, or with perfumes. I am in favor of taxing those during the war, and even after the war.

It is not to be classed with automobiles; they are luxuries. I am told that there are 42,000 privately employed chauffeurs in the city of New York. If a way could be devised of discriminating between automobiles that are a necessity and those that are merely for pleasure, and if I were a member of this committee, I would vote in favor of a tax that would tax every one of those pleasure automobiles out of existence during the war and force those privately employed chauffeurs into some occupation that would be of use toward the carrying on of the war. They would make excellent mechanics in a munition factory or an aeroplane factory, or in other places.

I regard pleasure yachts as a luxury. During the war I would tax them. If a man wants to maintain a pleasure yacht I would put a tax upon it, and try to close them all out, and make their owners turn them over to the Government.

I do not regard art as a luxury, the way some people regard liquor as a luxury, or wine. I think it would be an insult to art if the national policy of the Government should be such as would put art on the same basis as whisky or other liquors, or even cigars.

Some kinds of dresses may be a luxury. Very expensive silk dresses, which are unnecessary, may be a luxury. You may want to tax the men who sell those dresses. We may come to that. I was told by the man from whom I buy my shirts that he was not certain that in six months he would be able to get linen out of which to make shirts. I do not want to place an unnecessary burden upon the ladies, but I am willing to admit that some kinds of dresses are a luxury and should be taxed. But that is not art.

And it has not been the policy of the Government to tax art as a luxury. Mr. Walker, the father of the idea of raising revenue by taxing luxuries, taxed luxuries, but he distinctly said that art was not a luxury, and he was in favor of free art. That has been good democratic doctrine to have free art. I had the pleasure of appearing before this committee, Mr. Chairman, when Mr. Underwood was chairman, and speaking in favor of taking the customs duty off of modern art.

In 1909 we took the small duty off of old art, because of its educational value. There was a nation-wide campaign made for that purpose. Our associations all over the country petitioned for it. The educators, the librarians, the art galleries, the art leagues, museums, and even the present President of the United States, who was then president of Princeton University, went on record in favor of the educational value of art and of the impolicy of trying to get revenue from art.

Congress then took the duty off of all except modern art, and I made in this room the argument at that time that modern art was the poor man's art; that it was the humble art; that the artists in this country wanted to get in the galleries the late development, as well as the old art, what I call "live art" as against "dead art;" and I said that Congress had taken the duty off of the rich man,

because only the rich man buys old masters, and had left the duty on the poor man's art, live art; and this committee took the duty off; and that has been the policy of the Government ever since. Your committee gave a very thorough hearing on the subject at that time. Of course, the previous action of this committee is not binding upon the committee now; but I alluded to that for the reason that a most exhaustive hearing was given to the matter at that time, and the whole country was stirred up about it.

Senator Stone led the discussion in the Senate. I had quite a long argument with him personally, he claiming that art was a luxury; and on what I may call the luxury argument he got the Senate to put back the duty on art. But in conference the Senate receded from its position, and the present law was the result.

I think it is an impolitic thing to try to raise revenue by taxing sales of art. I think, as has been said, that it will very largely discourage sales of art. It will not altogether. There are men who are keen enough collectors, who feel that they must fill out their collection, who will still buy. There is no question about that.

But art is a living thing; it is a growing thing; it is a continuous thing; and the stream of collectors has got to be replenished as collectors die out. Such a tax will discourage men from collecting. It will discourage men from beginning the formation of a collection of art. And that is a tender thing, collecting is.

One good painting will drive out of a room half a dozen bad ones: I remember the story of a man who had his room full of very inferior pictures. A friend of his gave him a very good one; but he said, "I do not care for that." His friend said, "Well, let it hang on the walls of your room a little while and see what you think about it in three months." At the end of three months his friend called on him again and said, "What about that picture I gave you." The man said, "That has driven everything else out of the room."

You do not want to discourage men who might become collectors; and with all respect to the gentleman who sat on the right of the Chairman this morning, it does not follow at all that if a man does not buy art, he will give the money to Uncle Sam, or buy Liberty bonds. I am a good enough patriot to believe that a man will do his duty, whether he buys pictures or not.

Mr. Moore said that he did not believe so many millions of dollars should go abroad for the payment for works of art; that the money should go for the prosecution of the war.

I think that there is a non sequitur there. It does not follow that if Mr. Frick, or somebody like him, does not buy a certain quantity of paintings, he will do more than he already has done toward lending the money to Uncle Sam or giving it to the Red Cross. I think there is a non sequitur there.

I do not see any reason why art should be singled out from any one of fifty kinds of business, and be taxed on its sales; it is the last thing that should be taxed. It will, in my judgment close up some of the dealers; it will not close them all up. It will seriously discourage the purchase of works of art. It will not come out of the dealers.

I will tell you how it will work, in my judgment. I will divide it into two classes. I will take the works of the old masters, the men that are dead and gone, and then take the works of living men.

The dealer will add that much to the price of his pictures; that is all. He may be able to chisel it out of the man who will sell it to him. I am now talking about the work of the old masters. The man who sells it will say, "Well, I want \$10,000 or \$12,000 for this picture." The dealer will say, "I have got to pay a tax on this sale. I can not pay you that much." That may possibly come out of the seller. I do not pity him especially; I am not arguing on his behalf.

But as to the living artist, he will get it both ways. The dealer will say to the living artist, who has a hard time to make a living as it is, "I can not pay you \$300 or \$400 for that picture, because I have to pay a tax on it. I pay you only \$200 or \$300 for it." Then the dealer will say to the person buying from him, "That is a \$1,000 picture; but I have got to pay a tax on it now, and therefore I must charge you more than I otherwise would for it."

That is just one illustration of what I think is the impolicy of taking this business and taxing it. It would be very much like saying, "This country pays so many million dollars a year for music"——

Mr. GARNER (interposing). You do not think that art is a business that should be taxed at all?

Mr. QUINN. I do not think so; no, sir.

Mr. GARNER. Do you pay any duty at the custom houses now?

Mr. QUINN. No, sir.

Mr. GARNER. There is no duty on art, is there?

Mr. QUINN. There is no duty on art.

Mr. GARNER. And there is no excise tax on it at the present time?

Mr. QUINN. No, sir.

Mr. GARNER. I think you talked it out of us when you appeared here before.

Mr. QUINN. I argued against a duty on it. That was modern art; and I am rather proud of having done so.

Mr. GARNER. You had such good luck the last time you appeared before the committee that you thought you would try it again?

Mr. QUINN. No; I am down here now, just as I was before, on behalf of living American artists. I am through with the dealers—and I am coming to them.

I ask this committee in all earnestness and sincerity, whatever they do as to sales of art not to tax the sales of art by living artists. That would not be fair. It would be almost indecent.

I know those men well, and I know what hard times they have. Some of them, as Mr. Coffin said here to the committee—he is an artist himself—have gone to the war; others are doing illustration work for the country. Mr. Gibson and others have tendered themselves to the Government as ready to be of service in any way they can. They are protecting the boys that go over in the ships. You go up to New York Harbor at any time and see the ships that are going across the ocean, and see how they are painted; and that is the work of our artists, who are making those ships invisible. An artist knows that if you have black and white crisscross in any way, it appears to be gray, the color of the ocean. And if you want to see art as the right-hand man of the god of war, the ships now going abroad will show it to you. In France, French artists, and even American artists, are engaged by the hundreds in what is popularly known as "camouflage," decorating trees and painting other things

as a protection against the enemy, protecting hospitals and everything else.

But I am basing my argument that no tax should be put upon sales of works by individual artists on the ground of humanity. Those men, to my knowledge, have a hard time to get along now, in these days of taxes, war loans, appeals from the Red Cross, etc. Of course, there are exceptions. Men are not buying works of art; some few are sticking to it and still buying them. But if you put a tax on buying the work of an artist, you are going to discourage that. And I think the world needs those men.

Of course, you can not discriminate; there are bad artists as well as good artists, just as there are bad doctors and good doctors.

But even in this war, even with the greatest battle in the world's history going on, we do not want this country to go on record as being in such a white panic that it is going to tax artists out of existence.

So that if you are going to adopt the policy of taxing sales of art by dealers there ought to be written into the law some such provision as this: "But sales by living artists of their own original work, whether in oil, mineral, or water colors, or statuary, shall not be subject to this tax."

Those men already pay two taxes, those of them whose income goes above the limit. They pay just as I do; I pay two taxes. I pay an income tax, and then when I get through figuring on my income tax, I pay an occupation tax. I pay twice the taxes that the man on the street who does nothing but spend his life in clubs pays.

Mr. GARNER. You are very lucky if you only pay two taxes. [Laughter.]

Mr. QUINN. I pay indirectly many more taxes, but I mean directly I pay two taxes. I think it is unfair. But the artist now pays two taxes. The artist pays his income tax and then pays his occupation tax. Then, if you impose this other tax upon him, you will have the individual artist paying three taxes, which I do not think is fair.

Mr. LONGWORTH. Here is one of the difficulties of the situation: I agree with you entirely that we ought not to put a tax on art, except in time of war, and then only as a last resort. But suppose we are forced, as we may possibly be, to put a great consumption tax on absolute necessities of life, or on near-necessities, like tea and coffee; could we justify putting a tax on tea and coffee, and not putting a tax on art?

Mr. QUINN. I think you could, because the income from that would be very large, and the income derived from the tax on art would be negligible, in my judgment.

Mr. GARNER. Suppose we adopted an excise tax on the right to own them?

Mr. QUINN. The right to own works of art?

Mr. GARNER. Yes.

Mr. QUINN. I would not object to that, if it was applied to everything. I do not see the difference between owning works of art and owning anything else.

Mr. GARNER. There is one difference; it is not everybody who owns art. and everybody probably owns something else. It is a

question of getting the revenue from the people who are most able to pay. You realize that principle of taxation, do you not?

Mr. QUINN. Yes; I do, provided there is equality.

Mr. GARNER. It has been suggested by some people that those who are owners of works of art are better able to pay a tax than somebody out in Oklahoma, for instance, who is the owner of 8 or 10 children and of practically nothing else. [Laughter.]

Mr. QUINN. Provided you have equality. Now, I think that the more you go into specific things like art, the more unfairness and inequality you breed. I am in favor of getting your revenue from something that is more universally applicable. I do not believe that anybody should grow rich as a result of this war. I believe the governmental expenses should primarily, therefore, be met out of the increased and excess profits. That is my doctrine.

If you think the artists are not paying enough, then reduce your minimum exemption of the income tax, or leave it as it is. But already, if they make enough income, they are paying an income tax. I think it is a wrong principle to pick out a particular class of business and say, "That is going to be taxed."

It is a historical growth, this consumption tax; certain things are not in favor. And then you take whisky and cigars and tobacco, and they are regarded as luxuries, and there is a sentiment in favor of taxing them. A few years ago it was munitions which were very unpopular. But when we got into the war the impolicy of a special munition tax was recognized.

And it seems to me that the philosophy of the thing is that the revenue should be raised in such a way that it will not bear too hard upon any particular class, or any particular business, and yet the Government will get the revenue.

The tax on tea and coffee is rather historical; I think it started during our Civil War; perhaps before that.

Mr. LONGWORTH. We have never taxed tea and coffee.

Mr. QUINN. I thought we had.

Mr. LONGWORTH. We may possibly have done so in the Civil War, but not since then.

Mr. QUINN. I think we did in the Civil War.

Mr. LONGWORTH. I mean in the last 50 years.

Mr. QUINN. No; I believe we have not. It has been agitated many times. I should hesitate to put a tax upon tea and coffee.

Mr. LONGWORTH. So should I.

Mr. QUINN. But the justification would be the amount of the tax. That is the difference between that and art.

Mr. GARNER. You do not oppose a tax on tobacco, do you?

Mr. QUINN. No; I certainly do not.

Mr. GARNER. I understood you to say that you did not think any particular kind of business ought to be taxed.

Mr. QUINN. No; before you came into the room I discriminated between art and other things, trying to point out that art was not a luxury, and I made the distinction between jewelry, diamonds, perfumes, yachts, and pleasure automobiles, and expensive dresses, etc., on the one hand, and art on the other. Tax those things, if you like, but art is a different thing.

I was going to say that you might as well tax teachers; it is just the same principle. You might as well get your statistician to com-

pile the statistics of the amounts paid to professors in colleges and librarians and say: "Here are a great many endowments; these colleges are kept up by rich men." Rich men give money to those colleges; there are very large sums paid to them. Harvard gets \$5,000,000 a year; Yale, \$4,000,000; Columbia University, \$3,500,000; Cornell University, very large sums. They are principally kept up by rich men. You might say, "Those are large salaries. Now, Mr. Walker, what is the total amount spent on colleges and libraries? It is \$140,000,000; let us tax that. Let us tax every professor so much."

That would be a monstrous thing. Why? Because it is a tax on civilization; a tax on culture. And art is just next after that.

Mr. GARNER. We had a gentleman here the other day who argued very well, I think, on behalf of the talking machines. He said that, outside of food and munitions, talking machines were the third thing essential to win the war.

And I have not found anybody who has come before this committee—except two men—who did not make an argument against imposing a tax on his business. We did have a gentleman here from Texas yesterday who favored levying a tax that would take all a man's income over \$50,000, and he said under such a law he would himself pay \$150,000 or \$200,000, and he was perfectly willing to do it. And then we had a gentleman from Missouri who said that he was willing that his industry should be taxed.

But it seems, from what we have been told by the gentlemen who have appeared before the committee, that all of these things are absolutely essential, either fundamentally or in connection with the war.

Mr. QUINN. No. I once saw Mr. Underwood, when he was chairman of this committee, point to a couple of hundred letters on his desk; and I asked him if he was going to read them all, and he said, "No; they all amount to the same thing—'tax the other fellow.'"

I am not urging the committee to "tax the other fellow." I have given my reasons quite disinterestedly here why I think sales of works of art to dealers should not be taxed. Let me express the difference between dealers and private artists. I am speaking only on behalf of private artists and sales by them.

Mr. GARNER. Let me state my view on the subject. I am very much opposed to taxing art, for two reasons. The first and most important reason is that you could not get anything out of it; by taxing art, you would get a nickel of revenue where you would get a dollar on some other business. You would not get any great amount of money from the tax.

Mr. QUINN. Yes, I think that is exactly the difference.

Now, there is a tax on art in France. That is an historical thing. In France, when art collections are sold at auction, there are experts who are paid by the Government, who authenticate those pictures. When a man buys a picture at the Hotel Drouet, or any other great auction place, he gets an authenticated picture. Before the war there was a tax of 10 per cent on those sales, 5 per cent of which went to the Government and 5 per cent to the expert who authenticated the picture. Then, there were two or three eminent experts, so that when a man buys a picture there he gets a government expert to guarantee the genuineness and authenticity of the picture. They have lately increased that tax by 10 per cent.

But that tax does not apply to the sales by individual artists. I am coming back to that.

I hope the committee will not impose a tax upon art generally; but if they do, I hope they will discriminate between sales by the dealers and sales by the artists personally.

Let me illustrate: The artist himself sells only his individual work. He does not make a corner in it; it is only his child that he is selling. The dealer may be collecting works of dead men. They collect the works of Reyburn, for example. Reyburn was a first-class Scotch painter. I remember when a picture by Reyburn could be bought for \$3,500 or \$4,000. The prices of Reyburn pictures certainly took a jump, until they got up to \$35,000 or \$40,000. Now, some dealers made that profit; I do not say American dealers, but some dealers made that profit. They just quietly gather in those things; then, when some essays are written about that painter, and books are published containing copies of his drawings, collectors say, "I must have a Reyburn." In those cases the poor artist does not make that money when the price of his works increases. The artist generally dies poor; he lives on the side of a hill, and is lucky if he can maintain his wife and children. He does not deal in the old masters—and the great prices are paid for the old masters; they are paid for the eminent names. I think, myself, that lots of men that buy the old masters get sold; I think they are buying "dead ones." I am not at all in sympathy with a lot of them, but that is where the big prices are paid.

The living artist, with rare exceptions, does not get big prices for his work; he gets \$300, or \$400, or \$500, or \$600. And if he sells two, or three, or four pictures a year he is very lucky. Then he has to wait until the dealer pays him; and the dealer will say to him, "I have not got the money from my customer yet; you will have to wait three or four months." It is a very hard road that the artist has to travel; so I hope you gentlemen will not break his back by putting a tax upon him.

I think I have covered the ground, Mr. Chairman; but if there are any questions the members of the committee desire to ask, I would be glad to answer them.

But first let me say this: I think it was said in answer to your question, Mr. Moore, about the percentage of the sales, that about one-fifth of the total sales were by living artists. I think that is a tremendous exaggeration. I venture to say that one-twentieth, in dollars, of the sales by the combined dealers of this country, would be of the work of living artists, and the rest would be of the so-called "old masters," each one of which would run into the thousands; men that have been dead 50 or 100 years.

Mr. MOORE. That is what I had in mind in asking the question to which you refer. I want to encourage the living artists; and I do not see that it would hurt anybody very much if we tax the artists who are dead, especially when foreign artists are competing with our own talent.

Mr. QUINN. I just want to make the point clear now. I am pleading here now for you not to impose a tax on sales by living American artists, of pictures made by the artist himself. I believe they should not be taxed.

Mr. MOORE. I think there is a misunderstanding as to Mr. Coffin's statement. I understood him to say that the artists had got together, and that they were in favor of a tax upon their sales. He subsequently corrected that.

Mr. QUINN. No; you misunderstood him. He is an artist, and I have read his brief, which is a very intelligent and interesting brief.

I just want to say that it has been said here that probably one-fifth of the sales of art works were works by living American artists. I should say that one-twentieth would be a high estimate. In other words, if the total sales were \$20,000,000, and \$1,000,000 a year went to living artists, they would fall dead.

Mr. MOORE. Will you let me give you an illustration of what I had in mind? During the last month I visited a show place in the United States where, perhaps, 100 specimens of Italian sculpture was strewn about the ground; some of them were not set up at all; some of them were out where the rain could get at them—

Mr. QUINN (interposing). Did they happen to be upon Manhattan Island?

Mr. MOORE. I will not mention any particular location.

Mr. QUINN. I know the place.

Mr. MOORE. I do not want the name of the owner to become public. But those works of statuary were gathered, some of them, from the Florentine Hills, and some of them, possibly, came from Spain. A question went through my mind then, as it has before, and since; Why could we not have used some of the vast sums of money that went into the purchase of that foreign statuary in the encouragement of art in the United States? Not that I do not want to give full credit to the ancient masters, who developed those particular figures. But the Florentine Hills were spoiled when those bits of statuary were taken away; and they may go to waste here; I do not know. But I would have liked to see some American sculptor encouraged to do that kind of work. I would have liked to stand by and applaud his ability to do it.

Mr. QUINN. All I can say about that is, that I hope the time will come when Americans will not have to go abroad to study art; I hope we will have enough here, in our museums and art schools. Heretofore, as you know, they have had to go abroad to study art; principally to France, the home of art. But that is rather a broad subject.

I am fond of saying that this war is for art. That is putting it in a shorthand phrase. It is really about the difference in civilization; it is the civilization of the civilized man; it is not a matter of language; it is the civilization of civilized man; the English and French, primarily, who want to live in a certain way, in the free enjoyment of certain ideals of life and liberty that has made those nations grow, as opposed to militarism, to the penitentiary discipline of the Germans—a nation of slaves. And, therefore, I sum up my feelings on it by saying that this war is fundamentally for art.

That is a long way from the taxation of artists in America, of course.

Mr. MOORE. I suppose we will need the artists to-day to preserve the history of this war in portraiture, just as we need men like Fredrick Remington to preserve the traditions of the West.

Mr. QUINN. Yes, I think so. Napoleon fostered art when he was fighting his greatest campaign. And our men over there, as well as the French and English artists by the score, are engaged to-day in camouflage and other work for the allies. An artist is not of an effeminate breed; he is just as much a man as anybody else.

Mr. MOORE. Anyone who has gone on the ships which go over to France knows that the artists are at work in helping to win this war.

Mr. QUINN. Yes. And I hope the committee, when they frame this bill, will exempt sales by living artists of their own works, whether in painting or sculpture.

Mr. MOORE. What do you think about deriving some revenue from imported art? Have you covered that subject?

The CHAIRMAN. I think he covered that subject when he was before the committee in 1913.

Mr. QUINN. Yes; I made that fight in 1913; and, of course, I am really opposed to it. The whole of America at that time took an interest in the matter, and all were in favor of taking the duty off. If you are going to have any tariff, I would put it on the old things, and let the new things come in free.

Mr. MOORE. An American paid \$500,000 for one picture which came over from England. That picture is in the United States now, and you are probably familiar with it. That \$500,000 has been displaced; it left the United States and is over on the other side. Would it not have encouraged American art a little if some of those men who have so much difficulty in selling their pictures for \$300, and who have to wait until the dealer is ready to pay them, if that man had used some of that \$500,000 in the United States buying American pictures by living artists?

Mr. QUINN. I think it would. Of course, that is rather a complex question. There is a good deal of snobbishness in buying those things; men buy names. It does not follow that the man who paid such a price for a picture had any appreciation of the worth of that picture.

Mr. MOORE. I think that is true; some of them will spend large sums of money for foreign art when they know nothing about it.

Mr. QUINN. It is a complex subject. The late John G. Johnson, a well known lawyer of Philadelphia, told me how Mr. Altman, a rich merchant of that city, generally paid more for his pictures than they were worth. Mr. Johnson used to go abroad himself and buy his own pictures; and he bought very closely, and did not pay extravagant prices. When I had to consult him, we would generally talk half an hour about law, and two or three hours about art. And he would tell me the exorbitant prices that Mr. Altman paid for what he bought. Mr. Altman could not go abroad himself, and so he had to buy from the dealers; and he would tell Mr. Johnson what he paid for his pictures, and Mr. Johnson would tell Mr. Altman what he paid for his; and they would find that Mr. Altman was paying entirely too much. And Mr. Altman would wring his hands and say, "But I must have it." He wanted to have his collection complete; he must have that work by that person. Mr. Johnson would say to him, "You are foolish to pay such prices." But Mr. Altman would say, "But I must have it."

Now, I would not call that snobbishness; it is a passion to make a complete collection; for a man to build a monument to himself in

that way, something like a tombstone. He wanted to leave a monument to himself; I would not call it quite as bad as a tombstone, but it was a little like that; he would regard his collection as a monument to himself.

I say that a man who buys old art is a mere consumer. A man who encourages a living artist, as I do in my own modest way, buying from the artist himself, encourages creation himself; he is not buying something that somebody else has passed on, and which is a mere object of purchase. He is a coproducer, a co-creator. If I go in and encourage an artist to paint a picture, and he knows that he will get \$300 from me when he paints it, I am encouraging him; and that is a more beneficent thing than buying the work of an old master just because it is rare and expensive. So you see you have touched a tender point with me, Mr. Moore.

Mr. MOORE. Yes; we are almost on the point of agreement.

Mr. QUINN. Certainly.

Mr. HOLLANDER. Mr. Chairman, may I make a correction with respect to the statement about one-fifth of the gross sales being the work of living American artists? I took the figures from Macbeth; and he gave the figures as being the amount derived from the sales, or the turnover of pictures; and one-fifth of the business would include works by all American artists.

Mr. QUINN. That does not do away with my statement that one-twentieth of the total sales would be an overestimate of the work of living American artists.

Gentlemen, I thank you.

The CHAIRMAN. We will now hear Mr. Thompson.

**STATEMENT OF MR. A. SCOTT THOMPSON, ATTORNEY AT LAW,  
MIAMI, OKLA., REPRESENTING ZINC ORE PRODUCERS OF  
MISSOURI, OKLAHOMA, AND KANSAS.**

Mr. THOMPSON. Mr. Chairman, my name is A. Scott Thompson, and I reside at Miami, Okla. My business is that of a lawyer.

I appear here in behalf of the zinc producers of Missouri, Oklahoma, and Kansas. That district is confined to three counties, one in each of those States. I appear here as a lawyer, not as a technical man, in the sense that I am an engineer or a geologist at all. I am not prepared to discuss market conditions, the why and wherefore, but simply thought it was a good opportunity to present to you, as nearly as possible, the actual conditions existing in that industry.

And I would appreciate it very much if this committee would bear with me briefly, as my statement will be short, and permit me to make the statement without interruption; and then if you have questions to ask, I will be glad to attempt to answer them.

I desire to address this committee briefly in behalf of the zinc-ore producers of Jasper County, Mo., Cherokee County, Kans., and Ottawa County, Okla.; Ottawa County, Okla., being the northeast corner county of the State, Cherokee County, Kans., being the southeast corner county of Kansas, across the State line from Oklahoma, and Jasper County, Mo., being the county adjoining east on the Missouri side. These three counties are producing nearly 50 per cent of all the zinc ore of the United States to day. The great bulk of this production is from my home county, Ottawa County, Okla.

This district, and I speak of the industry of the three counties named, is perhaps peculiar or different from other mining districts in that there are no very large individual operations. This large production of zinc ore is the result of the effort of many small operations of separate and distinct ownership. I am conservative in saying that in the district within Oklahoma known as the "Miami field" there are at least 300 separate and individually owned mining properties, and this all within a small area. It is safe to say that in the other two counties named at least 200 other properties are separately owned. Within the district we are not financially strong as individuals or as producers, but in the aggregate we have become an important factor in the zinc-ore producing industry. We are a community of a great number of small companies.

It is this district, made up of many small mines, that I represent to-day before your committee, a district famous because of the fact that none but American labor is employed, where no foreign labor of any kind is or ever has been known, and oftentimes referred to as one mining field that is 100 per cent American. The laborer, as a rule, is a native of the locality drawn to the mines because of the better wages and the opportunity to provide for his home and family. He is a family man and the camps are surrounded with neat and well-kept comfortable homes, in most instances owned by the wage earner.

I speak of this condition so that this committee may know that my district is made up of men, owners and employees, that are as intensely American as may be found anywhere and we assert, as loyal to their Government as any part of the United States to-day.

I call your attention to this fact or condition also because at this time I expect to show you that conditions are such in this district that no matter what your action be, no matter what the form of tax be, unless it be a tax on capital and we do not expect that, the Government can not and will not derive as much revenue from this industry for the year of 1918 as that collected for the year of 1917. We do not want our patriotism challenged when we suggest mere facts or conditions. We may not be able to present or suggest a remedy whereby more tax may be obtained by the Government. We can only be fair to you by laying the facts before you, trusting to the intelligence and fairness of this committee in working out a plan that will secure the needed revenue and at the same time do a minimum harm to an important American industry producing so largely of one of the important metals.

The greater activity and the bulk of the production of this district is in the Miami field in Oklahoma. The lands are owned in fee in 200-acre tracts by Quapaw Indians with the power to lease for 10 years for mining, but with alienation prohibited by Congress for a period of 21 years. The mining in this field is done by lessees and none by owners of the fee. The Indian leases for a royalty are from 5 to 10 per cent, that is, he receives that percentage of the receipts derived from gross sales of the minerals. The lessee then proceeds to prospect the land by drill and the character of the rock formation in which the ore is located is so changing that a great amount of systematic drilling is necessary calling for an outlay of considerable money of men of small means before the ore run can be sufficiently marked to justify further development by shaft sinking, driving of drifts, and building of mill or concentrating plants. The lessee usu-

ally in the first instance is a "wildcatter," as we term him, the prospector, in many instances associating with himself others with limited means able to prospect and find the ore, but not able to finance the development and the production. He then must sell his lease or find some one able to finance development and willing to pay an additional royalty on a sublease. The majority of our operations are on this plan.

In most operating mines the operator to-day is the second, third, and sometimes the fourth subtenant, each tenant receiving a small consideration in way of a royalty on gross production. This has arisen principally because the fact that the fee can not be bought or owned by the miner or operator. These leases do not permit cessation of work, nor do they permit the milling of the rock by mill on other ground. The result is a large number of small mills on limited tracts, the average mill serving not to exceed 15 or 20 acres. The ore is not found in a blanket formation as in some localities; it is not uniform in its extension over a tract, but is found in runs or veins varying in width, irregular in their course and changing in depth from the surface. I am not a mining man, have no technical knowledge of geological formations, and I use these expressions just as I find them as a lawyer having business with men engaged in mining.

These deposits when found are often rich, but because of irregularity, of course, varying widths and changing depths of these runs the productive life of the average mine is very uncertain and experience has taught us that it is of short duration. I refer here to the table that has been submitted with Mr. Chapman's testimony before the committee, showing that the average life of the 176 mines that have been completed in our district was two and three-fifths years.

I know nothing of mining in other districts, and want to emphasize that I am in no sense appearing for the mining industry as a whole. I speak for the large number of miners in the district named. I do know from observation in my business as an attorney for 15 years in this locality, that zinc mining in this district while profitable in many cases, is highly speculative and hazardous. Mining is admittedly different from any other business. The deposit must be sought and extracted from the earth, and the finding of a commercially productive mine is so rare that hundreds fail where one succeeds. This seeking and finding of ore in a mine requires a large expenditure for prospecting by drill and further development by shaft, drift, and mills, which expenditure is not always carried to capital account.

Nearly every mining venture with us is incorporated and the property exchanged for stock, the owners taking their proportionate share of the stock. The next venture will be separately incorporated for business convenience and in nearly every instance the ownership is different in whole or in part. The successful company is for this reason unable to take into account the losses sustained and expenditures incurred in the losing ventures. The corporation must return a tax on a profit on a venture while in fact this profit has many times been lost in other mines proving unsuccessful and no credit can be taken therefor under the present law. Miners are not accountants; they seek a prospect, expending time and money on it, and if it fails,

either in the prospecting period or later during its life, it is placed behind him and he proceeds to search for another, spurred on by the hope of some day locating a winning mine; and he may spend his lifetime and all his money in such endeavor.

Mr. GREEN. Let me see if I understand you correctly. In computing the tax you say that the Treasury Department figured the tax on the work for a year, and required you to separate the income for each mine, and that it can not take the business of the company as a whole, but must take each separate one, and if there is a profit on any, it will tax that profit?

Mr. THOMPSON. I do not think I said that; at least, I did not intend to say it. That is not the practice of the department. The thought I desired to express here was that our district is made up of small corporations. One venture will be incorporated, and it may be a failure.

Mr. GREEN. Yes, but we do not tax that man on that.

Mr. THOMPSON. I understand. The point I am raising is this: The same group of men might have four or five ventures which were losses, Mr. Green, and then they might incorporate a new venture, a new company, and make a successful project out of it. Now, they can not take into account their losses on the four losing ventures; they can not take that into account in figuring up their taxes upon the successful venture.

Mr. GREEN. That is very true; but the same thing applies to every other business. Do you think we could formulate a rule that would enable a man, if he belongs to a company that is highly successful, on the one hand, and then is interested in another in some other part of the country, that is losing money—do you think we could formulate a rule to have the losses in the losing company deducted in that way, or averaged between the two companies? There could not be any way of reaching that.

Mr. THOMPSON. No; I am not suggesting that. I am just suggesting the conditions. I do not believe there is any business in which men fail repeatedly, and then go ahead and continue in the same line of business, except among miners. The prospectors, as you know, spend a lifetime in prospecting the wildcat territory, with the hope of some day striking a mine. A prospector will spend all of his accumulations in doing that. I do not think that is true of any other business. I am not suggesting that he might take that into account in figuring his profits upon his successful venture. I am suggesting the condition; and it is peculiarly true of our district, because we are made up of small corporations, and we are confined to a small area, because of the fact that the land is in the hands of the Indians and can not be bought, but can only be leased in limited tracts.

Mr. HAWLEY. How do you differentiate between the fortunes of your business and the fortunes of the farmer, who, very many times, loses his crop by reason of the failure to produce on account of drought or unfavorable seasons?

Mr. THOMPSON. I do not think the average amount of failures among farmers is nearly so great as it is among miners. I do not think, if it was possible to obtain data upon the subject, that it would show the failures among farmers to be nearly so great as those among miners. And there are not the investments, there is not the outlay in farming that you have in mining.

Mr. HAWLEY. And farming does not pay as much profit as mining, does it?

Mr. THOMPSON. I am not sure about that. I know that the table we have furnished the committee shows that out of 176 ventures, where there was five million or six million dollars invested, there was an average profits of \$37 on each venture in that district.

Mr. HAWLEY. Suppose a farmer this year makes a large return on his farm, and next year, by reason of an unfavorable season, he sustains a loss. Would you credit him in the following year, in computing his taxes, as you desire to have done for the mining industry of the country?

Mr. THOMPSON. I do not want to be understood as suggesting that I am asking that such a rule be adopted. I stated what I did in response to a question by Mr. Green. I am not asking for that. I am simply stating the fact that that is the condition; I do not think it is possible to take the money expended and lost in the various losing ventures, and deduct them from the tax on the successful ventures, because as a rule they are different concerns; they are different corporate bodies.

Mr. HAWLEY. I thought a moment ago you were asking that if, for example, a miner sunk \$5,000,000 and got one producing mine out of the five that he developed, the total cost, taking the four losing mines and the fifth, the successful one, should all be considered. That could all be considered if it occurred in the same year, could it not?

Mr. THOMPSON. Yes; if it was by the same man, or the same corporation.

Mr. HAWLEY. Yes; of course if it was the same man or the same corporation.

Mr. THOMPSON. But I am offering this as a suggestion, that if a venture were made up of, possibly, half a dozen men and formed into a corporation, they will put their money into a mining venture, and they will fail 100 times where they will succeed once; and every venture is a separate and distinct corporate body, because some of the men will drop out, and they will take in new blood into the new enterprise. Now, as I say, that is one of the hazards of the business.

Mr. STERLING. Well, simply changing the stock of a corporation does not make a new corporate body; they are considered as one legal identity all the time.

Mr. THOMPSON. The mining business is such that after a mining corporation goes broke the stock is of very little, if any value. A new corporation is formed in an entirely new venture.

The point I make is, that the prospector is a man who spends his life in prospecting in virgin fields, spending great sums of money, and he may possibly make one strike in his lifetime. Now, this law would limit him in figuring his taxable profit to that one winning venture, although he has spent his life in discovering that venture.

Mr. STERLING. No; it limits him to the profits made that year, and allows him credit for all losses suffered that year.

Mr. THOMPSON. That is true—in that one venture.

Mr. STERLING. No, it is not that one venture; it is a dozen ventures; you put them all together in that year and take the net profit for all of them and deduct his losses on all of them.

Mr. THOMPSON. I understand that, where the ownership is in one individual or one corporate body. But I speak of the whole condition; that the mining business, from a taxing standpoint, is different from any other business, because of the short life of a mine in our district; because of the low percentage of winning, successful mines; and because of the fact that you can not charge the expenses of losing ventures—I mean of the district as a whole—against the few profitable mines. That is the point.

When a miner strikes a winning venture, under the present law no account can be had, no credit is allowed, for the capital invested and lost in a series of losing ventures extending over a period of years and in many cases a life time. He must account for the profit on the particular property although it has been found after many profitless years of effort. What is there in mining that causes one to endeavor, strive and fail many many times in order that he may succeed once? It is not true of other business. In other lines of endeavor usually one who fails once changes his line of work, but once a miner, always a miner. What is it? It is the hope that some day he may be the hundredth man and be the owner of a mine yielding large profits.

Take from the industry this hope of large returns and the industry will not extend further. The wildcatter or prospector will stop as the incentive to fail for years, many times with the expenditure of large sums of money, is taken from him. As we have seen the average productive life of mines in this district is two and one-half years. There are not to exceed 10 mines being operated now in my county that were operating in 1914. It is an industry highly speculative. About 10 per cent of the mines make under normal conditions big profits quickly, some break even. The rest fail to get their principal back and many are total losses. The only incentive for capital or the prospector is the one chance in ten of large and quick profits. This incentive or hope is removed by the existing tax law. Neither capital nor the prospector will face the odds of at least nine to one in favor of failure with the assurance that if successful the return shall be limited to 9 per cent on the capital invested in the successful mine. Money in our State may be loaned on first-class real estate mortgages for practically this same return and there is not the hazard incident to mining.

It may be that the average normal peace return on capital in this country was from 7 to 9 per cent, but such certainly is not true of the mining district. Because of the lack of uniformity of life in our mines, no average could be stated with any degree of accuracy, but we can agree that 9 per cent deduction as a return on capital as applied to mines in our district is not sufficient. The difficulty in applying tax principles to mines, as in other business, is in the fact that mining is so extremely speculative and hazardous and whereas the ordinary industrial business may have an investment in its business of \$100,000 it may receive a normal return on that investment and yet its capital invested remains intact. But the mining company investing the same amount in improvements, shafts, drifts, etc., sees its capital asset lessened or wasting each day. Its ore bodies become less in value, the shafts and drifts when the mine is exhausted are worthless and really the only asset left is the junk value of mill and machinery, recognized to be 10 per cent of its original cost. Recognizing this

peculiarity it seems impossible that you can draft a law applicable to mines as it is applied to the average industrial business. There should be some way of arriving at a just basis of tax on mines and I fail to see it in my district if capital invested is to be a factor. The capital required in our district is in the case of a successful mine seriously disproportionate to the required and expected returns. The capital bears no fair relation to needed returns.

This is true in case of sales of mining property. As stated our district is made up of a large number of individual properties. At one time I presume every mine was a prospect or wildcat proposition located by some one with small moneyed capital but large stock of courage. He exhausts the small means he has, uncovers a rich deposit, and can go no further. The prospect that actually cost him in dollars \$5,000 is now worth \$100,000. His taxable income or profit is \$95,000 if he sells, although this one successful venture is one among many expensive losing ventures.

Mr. STERLING. On that one point, if that is the value of the mine he would not be taxed upon that at all; he would not be taxed upon \$95,000.

Mr. THOMPSON. He would be if he sold it.

Mr. STERLING. Yes; of course if he sold it. But you say he stops when he discovers the metal; and then you say he is taxed upon the \$95,000 of metal that he has found in that mine.

Mr. THOMPSON. You misunderstood me. I said that when he found the ore, he had gone to the point where he needed financing in order to develop it; he could not go any further himself; and the next step would be for him to sell the mine, and if he did sell it his taxable profit would be \$95,000.

Mr. STERLING. Yes; if he sells.

Mr. THOMPSON. If he sells it; and he has nothing until he realizes on the mine in some way.

He can not afford to sell, as the existing law will take the major part of his earnings realized from this one sale. The result is that sales have practically stopped in our district and I may say wholly stopped where the vendor is advised of the application of this tax. This will eventually stop all prospecting. Transfers by which added capital and new blood are infused into the industry are very necessary.

This not only applies to the prospector, but the innocent purchaser of mining stock on the basis of present earning power and with no regard to capital invested or original cost. As an illustration I will give you a concrete case:

A bought 20 per cent of the stock of B corporation for \$80,000 in November, 1916. This was bought on the theory that the mine was worth \$400,000. The corporation had an investment of \$123,000. Early in 1917 the mine was sold for \$475,000 by the corporation. The profit figured is the difference between the investment and the sale price, to wit: \$352,000. That is the taxable profit. The existing law takes approximately \$200,000 in income and excess-profits taxes. Upon a distribution A will receive \$30,000 or \$50,000 less than he actually paid for his 20 per cent interest. If A had bought all of the stock at the same price, he would, after having paid the corporate tax found by closing the transaction, have suffered a loss of approximately \$250,000.

This example is very illustrative of our condition. Many or most mines are capitalized for actual moneys placed in the ground and improvement and no capital account is taken of ore bodies that subsequently may be uncovered and which gives the real value to the mine and stock and usually bears no fair relation to cost of actual improvements.

I am speaking here of the mines particularly of this district, made up of a great number of small mining companies, but in the aggregate producing 50 per cent, or close to 50 per cent, of the zinc ore of our country.

At the very least it seems that the mine owner should be allowed as earned surplus the discovered ore deposits.

There should be some plan whereby the sale of mining properties may be taxed on a different basis. In my judgment, a greater revenue will be returned to the Government from the increased production occasioned by the additional capital needed.

Briefly, I want to call your attention to the question of present profits in our district. The impression drawn by the press from Mr. Chapman's testimony is erroneous. And I would like very much to have the record show a letter from Mr. Chapman addressed to this committee explaining the wrong impression that was taken of his testimony.

Mr. DICKINSON. Mr. Chapman's testimony was afterwards corrected.

Mr. THOMPSON. It was corrected, but I understood he wanted to get a letter in the record; I do not know whether it was overlooked or not.

Mr. DICKINSON. Well, I just wanted to call your attention to the fact that it was corrected.

The CHAIRMAN. You can insert the letter to which you refer in the record if you so desire, although, as Mr. Dickinson says, that part of Mr. Chapman's testimony was corrected.

Mr. THOMPSON. The error crept into the record, to a certain extent, from the questioning of Mr. Longworth, in which Mr. Longworth, I think, was at all times speaking of the price of spelter or metal, and using the illustration that spelter had been as high as 25 cents per pound. I suppose that is true; but at no time in my experience in that country, and I know not since the war, has our product been over 6½ cents a pound; that is, the zinc ore, the ore from which the metal or spelter is produced; and that is particularly the thing that Mr. Chapman was discussing.

Mr. LONGWORTH. I asked Mr. Chapman specifically the question, at what price for spelter could these zinc mines be profitably run, and he said they made a handsome profit at 7 cents; and if they made a handsome profit at 7 cents a pound, what would they make at 25 cents? Of course, that would not last for a very long time. But for years the price of spelter was never over 5 cents—and that was during some of your very successful years. Now, I see in the newspapers that the price has mounted to 7.95 cents.

Mr. THOMPSON. That is true of spelter. But when spelter was worth 25 cents, the producer of ore got no part of that increase. We never did receive 6½ cents for our product. One hundred and thirty-five dollars per ton was the highest price paid for our product; and

even then that was for the very high-grade ore, which was produced by only a few of the mines.

Mr. LONGWORTH. Do you mean to say that when zinc was selling for 25 cents a pound you did not get any more than when it sold for 5 cents?

Mr. THOMPSON. No; I do not mean that. During the prewar period the average price of our product was \$44 per ton.

Mr. LONGWORTH. That was when zinc was worth 5 cents per pound?

Mr. THOMPSON. Somewhere along there. But in the last four or five years what spelter was quoted at and would bring upon the market has had very little to do with the price of our product. That is the price of the spelter or finished product; it is not the price of the ore that we produce; and I want to make the record plain and clear here, in view of the statement of one of the gentlemen this morning, that our product is like the illustration given of one product to which a considerable added cost is put on after it leaves the original producer and before it gets to the consumer.

Mr. LONGWORTH. Well, is the quality of your product invariable?

Mr. THOMPSON. No; of course, we have different grades of ore.

Mr. LONGWORTH. Of course you do, just as they do in copper, and everything else.

Mr. THOMPSON. Yes.

Mr. LONGWORTH. And you base your selling price on the price of the metal?

Mr. THOMPSON. Yes.

Mr. LONGWORTH. Certainly; that is all I ask, and those are the questions I am asking you now. You say that you get exactly the same price for a ton of your ore?

Mr. THOMPSON. Now, I tell you frankly this, and 100 per cent of our producers will tell you the same, that the producers in our community, in our district, are producing 50 per cent of the zinc in the United States, and they do not have a single word to say as to the fixing of the price for their product. The spelter buyer appears once a week and says he will give you so much, and it is based on 60 per cent ore. For instance, at the present time our ore is bringing \$45 a ton; no higher than it was during the prewar period.

Mr. LONGWORTH. All ore?

Mr. THOMPSON. It is the average ore; yes, sir. Now, I do not want to be misunderstood as to that. There is about 12½ or 15 per cent of the product of our camp, of our district, known as high-grade ore, and by agreement with the—

Mr. LONGWORTH (interposing). What is the zinc content?

Mr. THOMPSON. I do not know, Mr. Longworth. I am not technical enough to know.

Mr. LONGWORTH. What is the zinc content of your average ore?

Mr. THOMPSON. It is nearly 60 per cent.

Mr. LONGWORTH. About 60 per cent?

Mr. THOMPSON. Nearly 60 per cent. Now, I started to say that within the last 30 days the conditions have been so bad in our district that the spelter people, spelter buyers, or ore buyers, and our producers, in conjunction with the War Industries Board, have effected an agreement as to price on that 12½ or 15 per cent product, this high-grade ore, and they have agreed to take a very limited

weekly output, but that does not affect except a very small part of our output.

Mr. LONGWORTH. This price fixing is based upon the price of the metal, not upon the price of the ore. For instance, we have fixed the price of copper; various copper mines have more or less high-grade copper, and you can't say that there is an average price. One man has a higher grade ore than another, and it all depends on the price, and the price all depends on the price of copper in the market.

Mr. THOMPSON. That is true.

Mr. LONGWORTH. And that is the same way with you as with anybody else. Mr. Chapman told me that you made a handsome profit on your spelter by selling it at 7 cents a pound. Do you deny that?

Mr. THOMPSON. Spelter at the present price has no relation whatever to the price of our product.

Mr. LONGWORTH. You might just as well say that the price of copper has no relation to the price of copper ore.

Mr. THOMPSON. I do not know anything about that condition. There is a great surplus of zinc in this country to day.

Mr. GREEN. I think there is some misunderstanding here somewhere, or else your statement is very strange. Do you mean to say that the spelter people, those that make the spelter, do not take into consideration the price of the refined product when they buy your ore?

Mr. THOMPSON. I do not know, Mr. Green, what they take into consideration. I know this to be the situation that once a week they come to our district and they say they will pay \$45 a ton for 60 per cent ore.

Mr. GREEN. Let me put it in another way. Do you say they are not putting a fair price for your ore, for instance, that the smelter people do take a certain per cent of it, and won't make a reasonable allowance?

Mr. THOMPSON. There is no question about that. As a matter of fact I am not arguing against the smelter interests, because the smelter proposition is in a difficult situation at the present time.

Mr. LONGWORTH. Do you sell all of your product to the smelter?

Mr. THOMPSON. Nearly all of it is sold to the smelter people.

Mr. LONGWORTH. Doesn't the price of sulphuric acid have an effect on your product?

Mr. THOMPSON. We get no credit whatever for the sulphuric acid that our ores bear.

Mr. LONGWORTH. What you are saying now is that the price of spelter and the price of sulphuric acid, although those are the two things you sell, have no effect on the price of your product?

Mr. THOMPSON. It does not, unless the requirements—

Mr. LONGWORTH (interposing). You have an extraordinary condition.

Mr. THOMPSON (continuing). Unless the requirements of spelter buyers and the smelting industry need our product; and then they just simply come down and say to us what will be offered for our product. There is no variation between the various interests. We, as spelter producers, must sell for what they pay.

Mr. LONGWORTH. Why? Simply because there is an overproduction to-day?

Mr. THOMPSON. A great deal, to a certain extent.

Mr. LONGWORTH. Was there an overproduction when zinc was 25 cents?

Mr. THOMPSON. The zinc ore never was that price. The metal was.

Mr. LONGWORTH. I mean zinc. Was there an overproduction in the ore when zinc was 25 cents?

Mr. THOMPSON. When we got \$135 a ton we made a nice profit, but it never got to be 25 cents for our product.

Mr. LONGWORTH. Of course, you do not get 25 cents for your product, but your product raises when zinc raises and falls when zinc falls; isn't that true? Isn't the market price of spelter the same determining factor in what you market?

Mr. THOMPSON. It bears some relation to it.

Mr. LONGWORTH. Doesn't it bear all relation?

Mr. THOMPSON. No.

Mr. LONGWORTH. What else does?

Mr. THOMPSON. For instance, our product, spelter, is selling at 2½ cents. That is the very best price we can get for 60 per cent zinc spelter. I do not know what it is worth since the war.

Mr. LONGWORTH. Spelter is the distinct metal, isn't it, and the price of spelter is the same as the price of zinc? What you call zinc is spelter?

Mr. THOMPSON. Yes, sir.

Mr. LONGWORTH. Now, when zinc was selling at 15 cents a pound what was your ore selling for?

Mr. THOMPSON. I can not tell you, Mr. Longworth, what it was selling for at that time. We got \$135.

Mr. LONGWORTH. How high has zinc ore of 60 per cent zinc content sold in the last 2 years?

Mr. THOMPSON. I know of two or three mines that produced a product that brought \$137.50 per ton, but that was only for a very short time.

Mr. LONGWORTH. I am talking about zinc ore, the average of which, you say, has 60 per cent zinc content. You say the average content is 60 per cent?

Mr. THOMPSON. Yes.

Mr. LONGWORTH. How high has that sold in the last two years?

Mr. THOMPSON. I say \$137.50 was the highest price per ton and that was only, I think, not to exceed three months in our district.

Mr. LONGWORTH. You told me it was 60 per cent zinc.

Mr. THOMPSON. That which brought the high price.

Mr. LONGWORTH. What is your average?

Mr. THOMPSON. At this time?

Mr. LONGWORTH. Now.

Mr. THOMPSON. The price per ton?

Mr. LONGWORTH. Your average zinc content, which you told us three or four times was 60 per cent?

Mr. THOMPSON. Sixty per cent is the basis from which we figure. If it runs badly in a certain mine—

Mr. LONGWORTH (interposing). You get less and if it is above that you get more. Ore with 60 per cent zinc content sold at \$137.50?

Mr. THOMPSON. Yes.

Mr. LONGWORTH. What does it bring now?

Mr. THOMPSON. The same product?

Mr. LONGWORTH. Yes; that 60 per cent zinc.

Mr. THOMPSON. That would bring about \$45 per ton.

Mr. LONGWORTH. That is the same ore that sold for \$137.50?

Mr. THOMPSON. Yes, sir.

Mr. LONGWORTH. What did you get before the war—about 1910, or 1912, or 1913?

Mr. THOMPSON. \$44.

Mr. LONGWORTH. So that you made a profit at that?

Mr. THOMPSON. At \$44?

Mr. LONGWORTH. Yes.

Mr. THOMPSON. We did before the war; yes, sir. We are not now.

Mr. LONGWORTH. You mean to say you are selling at a loss?

Mr. THOMPSON. I mean to say that you can not produce at the present time, Mr. Longworth, in our district, from mines that you could produce at a profit before the war.

Mr. LONGWORTH. You say that the average ore in your district is 60 per cent metal—60 per cent zinc?

Mr. THOMPSON. No; I do not want that impression. I say the price is fixed upon 60 per cent ore. That is ore.

Mr. SLOAN. Sixty per cent is purely theoretical?

Mr. THOMPSON. Yes.

Mr. LONGWORTH. But your price is based on an average run of 60 per cent ore?

Mr. THOMPSON. That is based——

Mr. LONGWORTH (interposing). Anything that runs less you get less per ton, and anything more you get more per ton?

Mr. THOMPSON. Yes.

Mr. LONGWORTH. Now, that price is fixed in relation to the market price per ton?

Mr. THOMPSON. Not the market price of spelter.

Mr. LONGWORTH. Do you sell 60 per cent zinc ore at a loss?

Mr. THOMPSON. We do, Mr. Longworth, unless the recovery is extremely high.

Mr. LONGWORTH. What recovery?

Mr. THOMPSON. That is, the recovery of ore from rock. I will explain it to you this way.

Mr. LONGWORTH. You don't recover more from one ton of ore with the 60 per cent zinc content than you do from another ton of 60 per cent ore?

Mr. THOMPSON. I will explain it this way: From 100 tons of rock we may produce 3 tons of zinc ore. That is known as a 3 per cent mine—3 per cent of the rock handled. Where you recover 5 tons of the ore from the same rock, we have a 5 per cent recovery. Where you have a recovery of 7 tons out of 100 tons of rock, you have a 7 per cent recovery. Now, I have the tables to show you the cost.

Mr. LONGWORTH. We are getting away again. You are talking about rock. You sell the ore, not the rock.

Mr. THOMPSON. I understand that.

Mr. LONGWORTH. Now, I ask you the specific question: That 60 per cent zinc ore that you sell at \$45 a ton, does that represent a profit or a loss?

Mr. THOMPSON. At the present time?

Mr. LONGWORTH. Yes.

Mr. THOMPSON. That would depend, Mr. Longworth, on how much rock we had to handle in producing that ton of ore. In other words, the cost is based upon the handling of the rock. The cost of handling the 100 tons of rock is more than double over prewar costs. That becomes a factor.

Mr. LONGWORTH. The cost of handling the rock would depend on the size of the profit; but do you ever actually sell at a loss, zinc ore, 60 per cent zinc ore at a loss?

Mr. THOMPSON. You should not do it; no, sir.

Mr. LONGWORTH. Do they ever, does any sensible man ever sell at a loss?

Mr. THOMPSON. Yes; I know that is being done.

Mr. LONGWORTH. Would he have to pay any tax if he sold at a loss?

Mr. THOMPSON. Not on that particular sale.

Mr. LONGWORTH. Not on that particular business there.

Mr. THOMPSON. I know of a sale down there recently where the price of our product has been gradually going down and down, and we have to maintain our mills, and it has meant a loss; but they had to be continued.

Mr. LONGWORTH. The fact is this, is it not, that when 60 per cent zinc is selling at \$45 a ton there is a pretty good profit in it?

Mr. THOMPSON. At the present time?

Mr. LONGWORTH. Yes.

Mr. THOMPSON. Unless it is a very rich mine, there is loss in it, and I will show you the factors from which I make that statement in a few moments.

Mr. LONGWORTH. Then, you differ from Mr. Chapman, because he said it was a handsome profit.

Mr. THOMPSON. I would like to correct that, because he was speaking of the general industry.

Mr. LONGWORTH. And if there was a handsome profit in it at 7 cents, there would be a beautiful profit at 25 cents.

Mr. THOMPSON. I would be glad to furnish the actual cost, and show you the actual conditions there at the present time, and during the first two years of the war.

During the first two years of the war there was a tremendous shortage of spelter and the zinc mining and smelting industry was called upon to immediately fill the large reservoir of our allies. The demand was so great that the price of spelter advanced to as high as 20 cents per pound, as brought out by Mr. Longworth at the hearing, Mr. Chapman's testimony—that ought to be 25 cents—and in order to meet the demand the zinc business of the United States responded by investing millions of dollars in zinc smelting and mining projects without any surety that the investments would be amortized during the life of the war. Indeed, these investments in the aggregate have not and will not be amortized for many years to come, and the zinc-smelting capacity, because of lack of consumption of the metal, due to the enforced nonusage of galvanized products, is idle 60 per cent. Nearly every investment made during this period by private capital was a war measure with the entire risk assumed by the investor, who expected that the high prices which were absolutely justifiable would continue normally or would be continued by the Government so that the amortization would be possible during the life of the war.

The zinc industry has responded cheerfully to Government demands and the demands of our allies, and has and is producing the necessary zinc products for war purposes and for trade purposes, and has patriotically met every requirement by private initiative with a loss in the aggregate instead of a profit. Steps are being taken now, under advice of the War Industries Board, to prepare the zinc business for after the war trade relations, and active and large work is being carried on to develop many new uses of the metal, and it is necessary that in the framing of the new law that not only the original zinc capacity prior to the war be sustained, but that the tax shall be so arranged that it will not destroy the incentive for development both in mining and smelting of the new capacity which was so quickly and satisfactorily brought into service by the zinc industry in order to meet the demands put upon it by reason of war conditions, and so that this capacity may be available for the expansion of our export business after the war.

Our Government to-day is trying to devise some plan by which mining men may be induced to develop necessary rare minerals for war use. Some suggest a subsidy. The difficulty is in getting capital to incur the large initial cost with no substantial assurance of return of capital and profit.

Zinc in the early years of the war was a necessity for our allies and without any assurance the industry by making large investments and extensions met the demand and the great majority of these extensions so made find themselves ready for production with no profitable market.

Owing to the short life of this district, many producers this year are among the class that the high prices of 1916 and 1917 drew into the district and they have not shared in any war prices. But they have placed expensive improvements on their leases, such improvements that rapidly depreciate in value. They hold leases calling for continuous work and no present prospect for better prices. Such is the situation of the men for whom I speak.

The average sale price of our zinc product during prewar period was \$44 per ton, about the same as we are getting at the present time. The cost of producing that ton to-day is more than double that of prewar costs. This increase is made up of labor, supplies, etc.

I have here a statement which I desire to have inserted, a comparison of expense items in our district, using the prewar cost of daily wages of the different men employed in the mines, showing the price of that, and also the price for the entire year 1917, showing an increase in labor of 56 per cent. Also for the principal supplies that go into the mining business that show an increase, for instance, in powder 120 per cent, gas engines 100 per cent, coal 95 per cent, cast-iron roll shells 100 per cent, screens 250 per cent, and on down through the entire list, up to 250 per cent in some of these items.

(The statement is as follows:)

## Comparison of expense items, Miami district.

	1911-1913	1917	Percent- age of increase.
Superintendent..... per day ..	\$4.80	\$8.33½	
Jigman..... do ..	3.57	6.00	
Helper in jig room..... do ..	2.50	3.75	
Crusher-feeder..... do ..	2.50	3.65	
Screen man..... do ..	2.50	3.50	
Engineer..... do ..	3.00	4.50	
Blacksmith..... do ..	2.75	4.00	
Hoistorman..... do ..	2.50	4.00	
Ground boss..... do ..	3.57	5.00	
Driller..... do ..	2.50	4.00	
Sludge man..... do ..	2.50	4.00	
Fireman..... do ..	2.75	4.25	
Total..... do ..	37.94	59.48	56
Supplies:			
Powder..... per hundred weight..	9.75	21.50	120
Gas for engines..... per thousand cubic feet..	.12½	.25	100
Coal..... per ton ..	2.00	3.90	95
Cast-iron roll sholls..... per pound ..	.02½	.04½	100
Screens..... per square foot ..	.20	.70	250
Hoisting cable..... per foot ..	.08	.20	150
Sheet steel..... per pound ..	.02½	.05	100
Machinery repairs.....			50
Belting.....			20
Drill steel..... per pound ..	.07	.15	111

Mr. THOMPSON. I also have here a table of comparison of profits on ores mined, using the prewar period and we take the mining cost of rock per ton during the prewar period, \$1.20. At the present time, the cost of handling that same rock is \$2.42. The price of the ore—the average price of the ore—during the prewar period was \$44 per ton. At the present time the same ore is worth \$45 per ton. Now, take those figures as a basis, take the following example: Take a mine whose recovery is 3 per cent. That is, for every 100 ton of rock handled 3 tons of ore are produced, and the answer is as follows: The cost of handling 100 tons of rock during the prewar period would be \$120. That same product recovered 3 tons, which would be worth \$132, leaving a profit of \$12 on the 3 tons, or \$4 profit per ton.

Mr. HAWLEY. Let me inquire about the recovery. You mean that in every 100 tons of ore, of rock, that you take out of the mine, a large proportion of that is country rock that contains no ore, and a small proportion contains ore, and figuring your cost it is necessary to take into consideration the cost of removing that useless rock?

Mr. THOMPSON. We take the total cost of extracting that 3 per cent or 3 tons from the 100 tons of rock and placing it upon the market.

Mr. MOORE. Mr. Longworth asked you several times about the zinc content, and you said it was 60 per cent in some cases, averaged 60 per cent, and then you referred to the cutting of the rock, and mentioned 2 or 3 per cent. What do you mean by the 2 or 3 per cent?

Mr. THOMPSON. I do not think we ought to confuse those two matters. The price of the product is fixed upon the basis of 60 per cent of zinc.

Mr. MOORE. You have to get through the rock to get to the ore.

Mr. THOMPSON. The ore, Mr. Moore, is disseminated all through the rock, and has to be crushed in order to remove the rock.

Mr. MOORE. To a layman the impression might have gone out that 60 per cent of the rock ore would be zinc.

Mr. THOMPSON. That should not go out.

Mr. LONGWORTH. I did not understand it that way. Zinc ore is the same no matter how much rock is crushed with it. When you have the zinc ore you have the same thing, some high metal content and others low.

Mr. THOMPSON. The basis is 60 per cent metallic zinc, and, for instance, they will offer a price of \$45 for 60 per cent zinc, for 60 per cent metal. Now, I do not refer, Mr. Moore, to the products in the ground at all. That is the ore that is offered to the smelter. Sixty per cent of it is pure. Now, then, the 3 per cent is this that we get from every 100 tons of rock that is taken from the ground. From that rock 3 tons of ore are taken.

Mr. MOORE. And all the rest is waste.

Mr. THOMPSON. That is waste, absolutely.

Mr. MOORE. Sixty per cent comes out of the 3 per cent residuum?

Mr. THOMPSON. Yes. I have just given you a sample of the mine that produces 3 tons of ore from 100 tons of rock, and using the prewar selling price of the product and the cost of producing it, there was a profit of \$4 per ton to the mine that had produced 3 tons of ore from 100 tons of rock. At the present time in that same mine it would cost \$242 to handle that same rock, and you sell your product for \$135 and you have a net loss of \$107 on 3 tons of ore. In other words, the mined ore in our district which showed a profit of \$4 per ton in the prewar period, last year showed a loss of \$35.66.

Mr. LONGWORTH. You do not have any excess profits.

Mr. THOMPSON. Not at the present prices.

Mr. LONGWORTH. Why are you at all concerned with the excess profits tax on such an unprofitable business?

Mr. THOMPSON. We hope that our product will not stay where it is, and particularly urge it because of the fact that I think there ought to be some different method of taxing the profits of sales of mining property. In other words, as I suggest, the property can go just so far, the mining of certain mines, then it must be sold, and under this present tax, property is not being sold. There is an immense amount of capital that wants to come into our district that can not come in because they will not sell that property and stand the tax.

Mr. MOORE. Do you have any foreign competition?

Mr. THOMPSON. Oh, yes. I do not know what effect it has at the present time under abnormal conditions, but there is quite an importation from Mexico and Canada, and I think from Australia, and some from China.

Mr. DICKINSON. Not now, is there?

Mr. THOMPSON. I do not know what the condition is at the present time, but I understand that the Mexican importation has been shut out through some embargo.

The CHAIRMAN. Is there a practical zinc operator in the room?

Mr. THOMPSON. No, sir.

Mr. LONGWORTH. Let me see if I understand your last statement. You think it would be desirable that large investments of capital should come into the district, but that no one will sell because they can not stand the tax. Do you mean that rather than sell they would prefer to continue to operate at a loss?

Mr. THOMPSON. They are operating only so much as is necessary to preserve their property.

Mr. LONGWORTH. Now they won't sell, because they have to pay an excess-profits tax on the sale?

Mr. THOMPSON. Not the excess profits tax, but the income tax, and that taxes them peculiarly hard; and also the excess profits tax, because of the fact, as I have said all the time, that the man has possibly spent \$5,000 in bringing the piece of property up to the point where it needs to be developed. It is worth, we will say, \$100,000; really worth that in the market. He can not afford to sell that, because that represents his taxable profits of \$75,000. That investment, that venture, may represent 10 or 15 years' effort of his life. He has simply prospected a little and held it, and he is holding it and not producing. In my judgment if the matter could be handled so that sales could be made without taking 60 per cent of the profits of these men, more sales would be made.

Mr. LONGWORTH. You are assuming that he would have to pay an excess-profits tax, then, on an accumulation of 15 years?

Mr. THOMPSON. The prospector has spent years of his life in prospecting and finally will succeed. Now, then, he will not continue the industry, will not continue the expense thereof, will not continue if he is confined to 9 per cent return on a small capital in that one successful venture. As shown here in the testimony, the great per cent of the mines down there that have even reached the production stage wind up as failures.

Take classification B. Here we have a richer mine, one recovering 5 tons of ore from 100 tons of rock on a loss, as I have shown here, of \$3.40 per ton as compared to prewar prices.

Going a step further, let us take an exceptional mine, which produces 7 tons of ore from each 100 tons of rock, and you have a profit to-day of \$10 per ton, whereas prior to the war we had a profit of \$26 a ton; and I want to call your attention to the fact that in the entire Joplin district, if anyone here is familiar with it, there is not a mine that recovers 7 tons of zinc ore from 100 tons of rock. There are some few of those mines in the Miami district that are exceedingly rich, mines that are making practically a profit of \$10 a ton.

Mr. GREEN. You see, that statement does not enlighten us any, because we do not know how much it costs to get out the rock. Do you know how much you receive from the zinc content?

Mr. THOMPSON. I state this, Mr. Green; I have it here in dollars and cents.

Mr. GREEN. If you will file those tables, we can probably figure it out what it is that you would like to have the committee do.

(The statements are as follows:)

*Comparison of profits on ores mined.*

	Prewar period.	Present.
Mining cost of rock ton.....	70c.	\$2.42
Value ore averaged over period.....	44.00	45.00

## Comparison of profits on ores mined—Continued.

## EXAMPLE A.

Take a mine where recovery is 3 per cent—that is, for every 100 tons of rock handled 3 tons of ore are produced, the comparison follows:

	Prewar period.	Present.
Cost per 100 tons rock.....	\$120.00	\$242.00
3 tons ore recovered.....	132.00	135.00
Profit on 3 tons.....	12.00	107.00
Profit per ton.....	4.00	35.66

<sup>1</sup> Loss.

## EXAMPLE B.

A mine with 5 per cent recovery shows:

	Prewar period.	Present.
Cost per 100 tons rock.....	\$120.00	\$242.00
5 tons ore recovered.....	220.00	225.00
Profit.....	100.00	17.00
Profit per ton.....	20.00	3.40

<sup>1</sup> Loss.

## EXAMPLE C.

A mine with 7 per cent recovery shows:

	Prewar period.	Present.
Cost per 100 tons rock.....	\$120.00	\$242.00
7 tons ore recovered.....	308.00	315.00
Profit.....	188.00	73.00
Profit per ton.....	26.00+	10.00+

Mr. THOMPSON. No, I have no recommendation, Mr. Green. I came here simply to state the conditions, and I wanted to correct the impression that this committee got from Mr. Chapman's testimony. Mr. Chapman would have been glad to do it himself.

I would like to put into the record a statement showing that in Jasper County in the Joplin district 80 per cent of the mills to-day are closed down. Now, that is a very strong statement made in the face of the impression you got from Mr. Chapman's testimony. Eighty per cent of the mills operating a year ago are closed down.

Mr. LONGWORTH. In connection with that will you state the number of tons sold last year?

Mr. THOMPSON. In our district?

Mr. LONGWORTH. Yes. You say it is 50 per cent of the total production of the United States.

Mr. THOMPSON. I am told, Mr. Longworth, by the organization of zinc producers of my district that at the present time they are

producing 50 per cent of the zinc ore. I do not know anything about the tonnage.

Mr. LONGWORTH. What is the amount?

Mr. THOMPSON. I do not know what the tonnage is.

Mr. LONGWORTH. You do not know?

Mr. THOMPSON. No, sir.

Mr. LONGWORTH. Well, you just stated that there was being an overproduction, and you say that 80 per cent of the zinc mines are closed down, and the low price is due to overproduction.

Mr. THOMPSON. I want to be quoted correctly. I said that 80 per cent of the mines in Jasper County, Mo. For instance, here is a statement gotten out by—

Mr. SLOAN (interposing). Is that the county that Joplin is in?

Mr. THOMPSON. Yes, sir.

Mr. SLOAN. The large zinc county of Missouri, and the large zinc county of the United States?

Mr. THOMPSON. It is so understood among men who are not familiar with the new fields. The great production is from my county in Oklahoma at the present time.

Mr. DICKINSON. In that connection, I am very much interested in your statement. A great many people have gone from the Joplin district down into the Miami district, have they not, and begun mining down there?

Mr. THOMPSON. Yes, sir.

Mr. DICKINSON. I thought I understood you to use this expression: "According to the short life of this district." Now, if you used that expression and were referring to the Miami district, did you mean to convey the thought that this Miami district was now failing in production and losing in value as to the zinc-producing district, and that the mines were being worked out?

Mr. THOMPSON. I meant this, Mr. Dickinson, that especially in the Miami district where the field is made up of short-lived mines, as I explained earlier in my paper, while the production has greatly increased in the Miami field, it has been from new mines developed yearly. For instance, there are not to exceed 10 mines operating in my country to-day that were operating in 1914. They have all become exhausted.

Mr. DICKINSON. To get the thought, of course, we are all familiar with the Joplin district. Those mines down there were to a large extent long-lived mines comparatively. Are the Miami mines of the same general character, or are they short lived as compared to the mines in the Joplin district?

Mr. THOMPSON. They are entirely different formation. The Joplin district being a very hard formation, it costs a great deal more to mine it, and the formation, or the ore being more uniform over the district, and more disseminated through the rock. In the Miami field the ore is very rich where found, more free from the rock, and it does not require so much money to get down to the ore.

Mr. DICKINSON. Now an immense population has gone down in that Miami district in the last year or more.

Mr. THOMPSON. Yes, sir; there are at least 25,000 people in the Miami district, I mean the camps, that are immediately dependent on that district there.

Mr. DICKINSON. Are they staying there, or are they moving out as these mines fail?

Mr. THOMPSON. The mines in my district, in the Miami district, are not shutting down to the extent that they are in the Joplin district, because they can mine in my district at a lower price for their product than in the Joplin district, because the mining is cheaper. I have given here the prices that are applicable to the Miami district, that is the cost prices and the market prices.

Mr. DICKINSON. Would the quantum of that zinc production down there continue for quite a while yet in your judgment in the Miami section?

Mr. THOMPSON. Well, it will work out quickly, but, of course, the field is being extended on up into the Kansas field. There is a general trend of that ore, and they are developing it in the fields further on, and mines are being worked out. The average life is short.

Mr. DICKINSON. What do you mean by the average life?

Mr. THOMPSON. I mean the productive life. I do not mean that there is not a mine down there with a life of over two and one-half years. I mean the average life of producing mines.

Mr. DICKINSON. That is about two and one-half years?

Mr. THOMPSON. Two and three-fifths it figures.

Mr. WHITE. Do you claim that this 80 per cent cutting down was the result of the provisions of the act of 1917.

Mr. THOMPSON. I think not. It was the result of market conditions.

I have here a statement gotten out by the Southwest Missouri Mine Safety & Sanitation Association. That is an organization to look after the sanitary conditions of the mines, and this statement is made that the production of zinc ore has declined from 55,000 tons for the first 11 weeks in 1916 to 25,000 tons for a like period in 1918; from 58,000 tons in November and December, 1916, to 24,000 tons in November and December, 1917. This statement is with reference to conditions in Jasper County, Mo. The following statement, giving the names of operating companies in that county that were in operation in 1916, and their condition at the present time, when this was made about a month ago, shows that more than 80 per cent of them are shut down and some of them dismantled.

Mr. SLOAN. Are these which were shut down the dismantled operators moving down into the Miami district?

Mr. THOMPSON. I guess many of them; yes, sir.

Mr. SLOAN. Is this a temporary suspension of business with the intention of reopening, or the removal of activities to other fields?

Mr. THOMPSON. It has been the experience in this district that once a mine is abandoned it is not worth reopening because of the damage done by the influx of water.

Mr. SLOAN. Then this 80 per cent are practically dismantled or abandoned.

Mr. THOMPSON. Practically abandoned; yes, sir.

I want to say this, that I believe that anything that I have said here can well be verified by Members of Congress from this district from which I speak.

Mr. MOORE. Who represents that district?

Mr. THOMPSON. Mr. Decker, from Missouri, and Mr. Chandler, from the Oklahoma district, and Mr. Phil Campbell, from the Kansas district. There can be no question about those figures, and it is a condition that I regret very much that has to be presented; but I came here last December and met with about 100 representatives of mining and oil properties, and I know quite well the meeting we had with Senator Simmons, chairman of the Finance Committee, and after explaining our position he rather blamed us for not having appeared when the bill was being drafted, and said very frankly, after hearing from different representatives of the wasting industry, that he thought it possibly was advisable that some sort of treatment be made with reference to the wasting industry.

Mr. MOORE. Have you any practical suggestions?

Mr. THOMPSON. I have none at the present time.

Mr. MOORE. The burden of your argument, as I understand it, is that the industry is not doing as well under this tax system as you would like to have it do, and that it is in danger if the present tax law continues?

Mr. THOMPSON. I do not think there is any question about that.

Mr. MOORE. If we should increase the taxes, the effect, from your point of view, would be still more disastrous to the business.

Mr. THOMPSON. I do not think, Mr. Moore, that the increase will hurt the production of ore this year, because there will be no taxable profits in our district this year—that is, from operations. There may be from sales of property.

Mr. MOORE. Well, you have been here several times, and have been listening to the hearings, and you are in position to know what the situation is with respect to revenue?

Mr. THOMPSON. Yes, sir.

Mr. MOORE. Is there anything that you can say that would help us to relieve your situation and at the same time do what we are instructed to, which is to derive an increased revenue?

Mr. THOMPSON. I am sorry at the present time that I do not know of any practical way to solve the problem. The tax problem for this year in our district is not so important, because we will not have the taxable profits, unless it be from the sales of mining property.

Mr. MOORE. You do not object to the income tax as it stands now?

Mr. THOMPSON. No, sir.

Mr. MOORE. The excess-profits tax you do?

Mr. THOMPSON. Yes, because of the small capital required in our district on the successful mines is so seriously disproportionate to the immediate returns that any excess-profits tax based on the capital invested would not be satisfactory to that district.

Mr. MOORE. Could we meet the situation by imposing a tax on sales?

Mr. THOMPSON. That would only be an added expense which we can not pass on to the consumer.

Mr. MOORE. Then what is the remedy?

Mr. THOMPSON. I haven't any, Mr. Moore.

Mr. MOORE. Would it be—this is not the place to discuss it at this time I assume—but would the tariff meet your situation?

Mr. THOMPSON. Of course, we have thought in our district that our product should be protected, but I do not think that will help the

present situation sufficiently, because conditions are so abnormal. There is a great overproduction of zinc at the present time resulting from the increased demand for zinc. At least not more than a year ago mass meetings were held in our district, at which meetings letters were read from the different Government services requesting us to increase our production of zinc. The result is that we prepared for it, and the market has gone to pieces.

Mr. MOORE. And then, the system of accounting under the present legislation, you contend, is entirely unfavorable to you?

Mr. THOMPSON. Yes, unfavorable to mining.

Mr. MOORE. Is the Government taking your product now?

Mr. THOMPSON. No, I think not. The chief demand for our product is for galvanizing, and that has been taken off almost entirely because of the fact that the Government is taking almost all of the steel, a part of which goes into galvanized products.

Mr. MOORE. Are you familiar with the bill that was introduced by the Mines and Mining Committee some time ago to make an appropriation of \$50,000,000 to encourage prospecting?

Mr. THOMPSON. I have just seen the bill. I am not familiar with it.

Mr. MOORE. Would you be interested in it at all; would it interest your industry?

Mr. THOMPSON. They did not speak of our product; no, sir.

Mr. LONGWORTH. I understood you to say that the price of zinc ore was not covered by the price of spelter. I have a chart of the years 1914, 1915, and 1916, showing that the variations of spelter and of zinc ore were absolutely the same, that it depended only on the price of spelter, and I will show you the chart.

Mr. THOMPSON. I do not think that you and I disagree. You misunderstand me. I say this, that the price of spelter may be 25 cents, and spelter may go up 2 cents, for instance, when the price of our zinc product does not go up proportionately.

Mr. LONGWORTH. This chart was prepared by the Bureau of Spelter in the United States in 1916, Department of the Interior, under the United States Geological Survey, and it shows that the variation is precisely the same, that when spelter is low zinc is low, and when spelter is high zinc is high.

Mr. THOMPSON. I would be glad, with the permission of the chairman, to furnish to you and the committee the prices covering the period of four years for spelter and ore products.

Mr. LONGWORTH. Are these figures approximately correct?

Mr. THOMPSON. I will state that I am a practicing lawyer, and I do not know the market conditions, I do not know the prices for 1913, 1914, and 1915 except those I have submitted, but I will be glad to submit to you and verify them as to the exact prices of our products.

Mr. LONGWORTH. This chart is made up every month from the 1st of January, 1914, to the 31st of December, 1916. It gives the prices per ton of spelter at St. Louis, and the prices of 60 per cent zinc concentrates at Joplin, and the variation is exactly the same in every case. In other words, the price of spelter absolutely determines the price of zinc, and I ask you to examine it and say if you dispute it. There is the line showing the price of 60 per cent concentrates at Joplin, there is the chart showing the price of spelter at St. Louis. The variation lines are practically parallel. Coming to this point [indicating] that is the highest point that ore ever touched, and this

point [indicating] is the lowest point reached. The lines are parallel, showing that the prices of spelter absolutely govern the price of zinc. That is the question I asked you. That is the question I asked Mr. Chapman, and he agreed with me.

Mr. THOMPSON. I might call your attention here to this same chart, in June and July, 1916, the price of spelter has increased much more rapidly, as I understand this chart, than the price of ore. Now, here is an increase, a considerable increase in the price of spelter, and there isn't the same ratio.

Mr. LONGWORTH. Do you notice a place where spelter has gone up and ore has not gone up at the same time, this 60 per cent zinc ore at Joplin? You agree that the price of spelter fixes the price of zinc alone, because if that is true the Government is wrong.

Mr. THOMPSON. I agree to a certain extent to that. I do say this, that spelter may increase a certain number of cents a pound, and that we will not receive and do not receive in the Joplin district the same proportion.

Mr. LONGWORTH. You said you frequently did not get any. That chart is perfectly conclusive. That contains the prices of 60 per cent zinc ore.

Mr. SLOAN. Mr. Thompson, as I understand it, your principal concern is in the matter of excess profits, the fact being in the mining of zinc and the mining of coal or copper, or any of those minerals, that the capital invested is usually small, usually unsuccessful, though now and then it does succeed, it succeeds by chance, and then there is an enormous profit, and the tax as you view it looks like penalizing a special success, but not allowing them anything for the times when they were not successful. I have heard that statement made by miners of other products.

Mr. THOMPSON. That is true. It is true that the mining is so speculative and hazardous that it can not exist and will not be extended where it is limited to a 9 per cent production on the small capital required in the successful venture, and that is the only one that pays a tax.

Mr. SLOAN. Could you not suggest that a classification on these speculative industries be established by the committee to meet this particular situation? I am somewhat in sympathy with your suggestion, and I think this line of industries should receive a special classification by reason of the fact that men who enter into business are usually men of small capital and usually fail but sometimes win; and then in the few winnings if they would be penalized by taking all the winnings from them it would be discouraging to the industry, which is an important consideration right now. In my State, they have discovered now important mines of potash, important to this country, and the capitalization of the mines is usually small, but if rates, such as we have now, be applied to them it would be a distinct discrimination against these small operators, and I rather fancy from reports and discussions of the matter, that you have about the same situation, and are complaining about that, although you do not make that as emphatic as I thought you should have done.

Mr. THOMPSON. We have presented this matter at different times to the Treasury Department in the last six months, and to the advisory board as to the making of regulations, and I have felt that they are very much in sympathy with our position.

Mr. SLOAN. But they are not supposed to make this law, and we are asking you to appear before us, I presume, to give some suggestions so that we who have the power to say what the law shall be, and not the fellow who has the power to interpret it, shall be consulted and suggestions given as to what the law says, and what the law which is to be drafted shall say.

Mr. THOMPSON. I am aware of that fact. It is a very difficult problem I find. I have given it some thought to draft a law.

Mr. SLOAN. It is easier to find a way where you are using new language than to force a construction of the Treasury Department on its language where it is against you, wouldn't it be?

Mr. THOMPSON. We were impressed with this fact. We were asking for an amendment at that time of some kind to protect the wasting industries.

Mr. SLOAN. This is the body that is expected to give the amendment. It can't be expected to be gotten from the Treasury Department.

Mr. THOMPSON. We were told by our friends that we were expected to get a recommendation from the Treasury Department at that time. That was last winter.

Mr. DICKINSON. Don't you think that you and those associated with you should, for such an amendment as you have in your mind, prepare it to present to this committee so that they can have it before them when they write this bill, that part of it that tends to affect your interests down there?

Mr. THOMPSON. They may do it. There have been several attempts to do it.

Mr. FAIRCHILD. Let me suggest there are only a few ways in which this can be done. In the first place I don't think you would ask for an entire exemption from excess-profits tax.

Mr. THOMPSON. No, we don't ask that.

Mr. FAIRCHILD. The second, you might ask that the excess-profits tax be assessed under a different plan, either entirely or as applicable to companies that were in a certain classification in line with the suggestion of Mr. Sloan; that is, companies engaged in highly speculative business but which, nevertheless, are of importance and benefit to the country at large. Now, there is still another method. A larger exemption might be granted companies of your class if the classification was made, or different rates might be proposed with reference to such companies. The difficulty I imagine would come more in phrasing the definition which made the classification. If you can do something of that kind so as to make it clear, a plan that only companies which for the reason you have set aside in your argument, should be included and would present something that would be of assistance to the committee in case the committee thought it advisable to make a change in the present law, it would be appreciated.

Mr. THOMPSON. I am aware of that fact, and I would be glad to attempt to do it with some assistance.

The CHAIRMAN. The Webb City-Carterville Mining Co. includes the Joplin district?

Mr. THOMPSON. That is part of the Joplin district in Missouri.

The CHAIRMAN. Do you know who got up that circular.

Mr. THOMPSON. It was gotten up to the best of my knowledge by that Sanitary Association of Zinc Producers Co.

The CHAIRMAN. It is signed by Zinc Ore Committee, Southwest Missouri Mine Safety and Sanitation Association.

Mr. THOMPSON. It was not gotten up under my direction, but it was sent to me.

The CHAIRMAN. No; I don't think you had anything to do with it. Are any of these gentlemen that had anything to do with getting up this circular going to appear here before this committee?

Mr. THOMPSON. I don't think there will be any appearance here except through me.

The CHAIRMAN. Are any of the gentlemen who got up this circular present in the city.

Mr. THOMPSON. No.

The CHAIRMAN. You don't know whether they will?

Mr. THOMPSON. I don't know just now. I am quite sure no one from that city will come except myself.

The CHAIRMAN. They have sent this out to members of the committee and Members of Congress.

Mr. THOMPSON. I didn't know that it had been sent out.

The CHAIRMAN. I will read some part of it, not with special reference to anything you have said but just to give an illustration of the weight that should be given to such circulars as these by Members of Congress and the public.

Mr. THOMPSON. I will say this that I offer that in support of my statement that 80 per cent—

The CHAIRMAN. Here is what they do say, however:

Importations must be stopped. America can produce all the zinc ore it needs. An urgent appeal must be made to our Representatives from Missouri in the Senate and in Congress. Most of the zinc used in war munitions is made from the high-grade zinc ore of the Webb City-Carterville district. That production has already been lessened 75 per cent. With the cutting off of the production of this zinc and the closing of the mills also comes the cutting off in the production of lead. Surely, as a war measure, Congress should give this district immediate relief by the imposition of a tariff of 2 cents per pound upon the metallic content of ore. Such a bill, if passed, would raise the price of zinc ore \$10 a ton in a week's time. If the smelters knew they couldn't get the ore without paying the tariff, the price would go up immediately.

Every merchant, every banker, every business man, every miner, every property owner, is urged to write our Senators and Congressman what the situation is. We must have relief. There should be mass meetings of citizens in every town in the district and proper resolutions passed.

The measure of relief, a 1 and 2 cent tariff on metallic contents of ore, as you said and as we all know most of the ore we get from foreign countries comes from Mexico, some parts of it come from Canada, but most of it from Mexico. The facts are that Mexico at the time this thing was issued and sent out was importing into this country practically no zinc as compared to what it had been importing in 1916 and 1917 when your zinc was on a boom almost, your zinc ore, and now when there is no zinc coming in at all from Mexico there is an embargo on importation, and as you said zinc is still down—it hasn't gone up any \$10 a ton in the last two or three months.

Mr. THOMPSON. No; as I stated conditions in the zinc business are—

The CHAIRMAN (interposing). For instance, not only is there a falling off from Mexico, but it is everywhere. As I said most of comes from Mexico. In the last nine months—and a larger part of this came in in July, August, September, and October—in the last

nine months ending March) there was imported into this country only 66,000,000 pounds, but the preceding nine months, 1917, there were 157,000,000 pounds, in 1916, 163,000,000, and in March, 1918, there was only imported from Mexico 3,388,000 pounds while the preceding March was 13,000,000. And now practically none. I wanted to bring that out. I just want to go into the record the proper weight to be given to these circulars sent to Members of Congress urging immediate action on this, that, and the other.

Mr. SLOAN. What is the date of that, Mr. Chairman?

The CHAIRMAN. No date. You might say the date is now. I received one about April 9, and they are still being sent out.

Mr. SLOAN. You spoke something about there being an embargo on zinc from Mexico.

The CHAIRMAN. Yes, sir.

Mr. SLOAN. Some is coming in I see, 3,000,000 pounds you spoke of.

The CHAIRMAN. That was in March.

Mr. SLOAN. When was the embargo put on?

The CHAIRMAN. About 30 days ago and it hasn't gone up any \$10 a ton.

Mr. SLOAN. That may be understood by Mr. Thompson as a criticism—

The CHAIRMAN. Mr. Thompson couldn't understand that I am criticising his position. I asked him for what purpose he introduced it, and he said for the purpose of showing that mines were not being operated. We all admit that. I was referring to the measure of relief asked for.

Mr. THOMPSON. I am not here to urge a tariff—have no data. I am not prepared to sustain that statement.

Mr. DICKINSON. You don't contend that any protection under tariff would afford any protection under present conditions.

Mr. THOMPSON. I don't know. The conditions are so abnormal, I don't know what the effect of a tariff would be. It was thought important on the part of the Government officials to shut off importations from Mexico about 30 days ago.

Mr. MOORE. Did you ask to have this circular put in the record?

Mr. THOMPSON. I would like to have that part of it at least—

Mr. MOORE. The circular refers to the closing down of a number of plants and those removed or dismantled, and it is a story of calamities and disaster in the District.

Mr. THOMPSON. Yes, sir; that is true.

Mr. MOORE. Did you intend to put that into the record?

Mr. THOMPSON. That is what I offered it for, to show the true conditions.

Mr. MOORE. That is an appeal, as I understand it, to Congress for immediate action to remedy the situation.

Mr. THOMPSON. Yes, sir.

The circular offered by Mr. Thompson is as follows:

*To the business men, miners, and property owners of the Webb City-Carterville mining district:*

Why conceal the facts? A great misfortune, amounting to disaster, has overtaken the Webb City-Carterville mining district. It is time the entire citizenship was aroused to the situation. The business man, the merchant, the miner, and the property owner are equally concerned.

The Southwest Missouri Mine Safety and Sanitation Association has recently gathered information and facts that every man should know. It is time that we were

awakened to the situation. Out of the 87 mills that were in operation in the Webb City-Carterville district, including Oronogo, Prosperity, and Duenweg, only 18 are now in operation, or partial operation, with the probability that 5 more of them will be closed within the next week. Of these 69 mills, 30 of them have been dismantled and moved away, and others are now being offered for sale.

The production of zinc ore has declined from 75,000,000 pounds for the first 11 weeks in 1916 to 25,000,000 pounds for a like period in 1918: from 58,000,000 pounds in November and December, 1916, to 24,000,000 pounds in November and December, 1917. The bank deposits in Webb City alone have fallen off more than \$500,000.

Some of the business houses have been closed, and the business men of the district are making no money. The situation will become worse, because many of the miners working in the Oklahoma field are now still living in Webb City, because of cheaper rents.

That every citizen may have the information, a list has been prepared, showing the names of the mills that were in operation 12 months ago, which have now either been closed down or dismantled and moved away. The list is as follows:

Name of plant.	Operat- ing.	Closed down.	Mills moved or dismantled.

Statement showing the falling off in the production of zinc ore in the Webb City, Cartersville District, including Duenweg, Oronogo, and the Alba, Neck City, Purcell Camps, for the first 11 weeks in the years 1916, 1917, and 1918:

1916, production in pounds.....	75,036,983
1917, production in pounds.....	61,916,767
1918, production in pounds.....	25,028,020

Comparative statement showing the production of zinc ore in the Webb City, Cartersville District, including Duenweg, Oronogo, and the Alba, Neck City, Purcell Camps, for the months of November and December, 1916-1917:

1916, November and December—production in pounds.....	57,626,952
1917, November and December—production in pounds.....	24,563,820

#### VAST IMPORTATIONS RESPONSIBLE FOR THE ABOVE CONDITIONS.

There is a reason for the above condition. The disaster which has overtaken the district is directly traceable to the vast importations of zinc ore in the years 1915, 1916, and 1917. In 1915, the importations were 158,852 tons; in 1916, they were 385,964 tons; in 1917, 211,596 tons, or a total of 756,312 tons. Is it any wonder that our own ore remains unsold in the bin? Is it any wonder that with this vast amount of cheap ore coming in from China, Australia, Mexico, Italy, Spain, and a dozen other countries, that the price of zinc ore is now reduced to a point where it can no longer be profitably produced in this district? The Oklahoma field is also beginning to show the effect of this condition. It is coming upon them.

#### CONGRESS MUST REMEDY THE SITUATION.

This vast importation of 756,312 tons has flooded the market with surplus spelter and ore. Importations from all countries save Mexico and Canada are now practically shut off by reason of the fact that ships are used for other purposes, but after the war closes, or these ship bottoms are released, we will once more be overwhelmed.

Importations must be stopped. America can produce all the zinc ore it needs. An urgent appeal must be made to our Representatives from Missouri in the Senate and in Congress. Most of the zinc used in war munitions is made from the high-grade zinc ore of the Webb City-Cartersville district. That production has already been lessened 75 per cent. With the cutting off of the production of this zinc and the closing of the mills also comes the cutting off in the production of lead. Surely, as a war measure, Congress should give this district immediate relief by the imposition of a tariff of 2 cents per pound upon the metallic content of ore. Such a bill, if passed, would raise the price of zinc ore \$10 a ton in a week's time. If the smelters knew they couldn't get the ore without paying the tariff, the price would go up immediately.

Every merchant, every banker, every business man, every miner, every property owner, is urged to write our Senators and Congressmen what the situation is. We must have relief. There should be mass meetings of citizens in every town in the district and proper resolutions passed.

ZINC ORE COMMITTEE,  
SOUTHWEST MISSOURI MINE SAFETY  
AND SANITATION ASSOCIATION.

**STATEMENT OF MR. FRANK A. BLAIR, VICE PRESIDENT  
FOLEY & CO., OF CHICAGO, ILL., MANUFACTURERS OF  
PROPRIETARY MEDICINE, AND ALSO PRESIDENT OF THE  
NATIONAL ORGANIZATION.**

Mr. BLAIR. If the committee will allow me to, I will read my memorandum.

Mr. MOORE. Before you start, we had a Washington attorney before us the other day; did he represent your association?

Mr. BLAIR. Mr. Brokmeyer?

Mr. MOORE. Yes, sir.

Mr. BLAIR. No, sir; he represents the retailers. I represent the manufacturers of proprietary medicines. I would like for you to ask anything you think of, or anything that my remarks may suggest as I go along.

We appreciate the demands of the country for increased revenue. We know that the pending revenue bill will increase the taxes. We appear for the purpose of discussing the subject of inequalities in the present system, with the hope that we may aid the committee in arriving at some method of procuring greater revenue in a just and equitable way.

The President, in his message, pointed out that there are inequalities in the present revenue bill and, necessarily, if the rates shall be increased upon the present basis, such inequalities will be emphasized.

The manufacturers of medicines ask that they be required to bear the exact and identical burdens which are imposed upon other industries.

The principal instances under the present law in which inequalities appear particularly unfair, result from the definition of invested capital. Under this definition concerns engaged in similar businesses having identical amounts of investment, whether such investment represents a purchase or an increased value by reason of successful management and operation, are unequally taxed.

For example, a manufacturer began business many years ago. By reason of the excellence of his product, large investment in advertising, careful and conservative management and faithful attention to his business, he has built up a large and profitable concern.

His competitor, engaged in the same line of business, has acquired his property by direct purchase, paying therefor a sum of money equivalent only to its value and in an amount not in excess of the amount expended by the first individual in the building up of his business. The former is penalized by a tax ranging somewhere from 7 per cent to 9 per cent upon what is really the actual value of the capital invested in his trade-mark, brand, and good will. This is an unjust, unfair, and inequitable system of taxation.

If, therefore, the basis of determining the point at which taxes upon income are to be imposed is made the actual value of the prop-

erty rather than an artificial definition of invested capital, like taxes would be assessed upon all engaged in similar business.

We appreciate that if it be the purpose of the Congress to impose a tax upon unearned increment or upon values which have been developed irrespective of the amount of money actually originally invested in an enterprise, it would probably be within the power of Congress to impose such tax; but, as we are treating the subject of taxes imposed upon incomes, based upon the percentage of income to investment, the tax should be alike in all instances.

To quote from another, who has already appeared before your committee, "if the income is the same and if the credits or property which produces that income is the same, the tax ought to be the same." If, however, a tax is to be imposed upon values which have been developed, then that should be the subject of substantive legislation and all treated alike. But if you are imposing this tax upon incomes, then the tax should be fairly and equitably distributed.

Mr. MOORE. Do you mind at that point giving a concrete illustration showing the inequalities to which you refer? Take an A and B case.

Mr. BLAIR. The proprietary medicine business consists of three assets, tangible, the machinery, good will, etc., and the trade-mark, formula, and brand. We have had sales, a number of them. The ratio has been about 85 to 15 per cent—85 per cent constituting the good will, trade-mark, and brand; 15 per cent constituting what is called tangible assets in this bill. I will take A, who owns a business. I have in mind a definite business. It was sold for \$1,200,000. The actual tangible assets in that particular case were \$200,000. He has a competitor.

Mr. MOORE. The rest was good will.

Mr. BLAIR. It must have been good will; nothing else to exchange. The tangible assets were \$200,000 in cash. The sale was \$1,200,000, all paid cash the day of sale. The next is his competitor, who has been in business almost identically the same period of time, who has under this bill an exemption based upon \$200,000, which is practically his investment. The first one has an exemption of \$1,200,000, 9 per cent—

Mr. MOORE. How would that work out in payment of taxation?

Mr. BLAIR. I wouldn't take time to figure it out, but just the exemption of 9 per cent on a million dollars, one man has an exemption of 9 per cent on \$1,200,000 and the other on \$200,000, so that one man has an exemption on 9 per cent of \$1,200,000, or \$1,000,000 more than the other. In other words A, the man who has purchased his good will, might take his savings on taxes as his profits for the period of the war and conduct his business at an expense equal to B's and B, in order to keep up with him would not make any money.

Mr. MOORE. Your calculation is correct. That is interesting and illustrates.

Mr. BLAIR. That is an actual case. I know both persons very well.

The CHAIRMAN. They both made equally the same amount of profits? How much did your \$200,000 man make, the one only allowed a deduction of \$200,000?

Mr. BLAIR. How much profit did he make?

The CHAIRMAN. Yes.

Mr. BLAIR. I don't know that really, but I imagine that he made——

The CHAIRMAN. If we know that we could see if that injustice that you complain of is in this.

Mr. BLAIR. The face of the illustration shows that it is in it.

The CHAIRMAN. Let's see whether it is in it.

Mr. BLAIR. How can it be otherwise? He gets 9 per cent exemption.

The CHAIRMAN. They have got the same business, they make \$100,000 profit, that is 50 per cent for the man that has \$200,000, isn't it?

Mr. BLAIR. Yes, sir.

The CHAIRMAN. A little over 8½ per cent for the other man, capital invested?

Mr. BLAIR. Our profits are always over 9 per cent. We always went over the 9 per cent in the prewar period.

The CHAIRMAN. Let's get it as it is. The \$200,000 concern makes \$100,000 and the \$1,200,000 man makes \$100. The \$200,000 man has got 50 per cent on his capital invested while the \$1,200,000 man, having the same business, making the same profits, got 8 per cent, 8½ per cent on his investment, can better pay more taxes than the man who has got his money invested and gets only 8½ per cent?

Mr. BLAIR. Yes, but——

The CHAIRMAN. If you will give me or hunt it up and send to me the exact amount of profit each one of these concerns made, in the same competing business, I think I can clear your mind up on that proposition about the unfairness and injustice. Let me call your attention to another business. Your \$200,000 man's business is worth \$1,200,000, but he doesn't put it in as that. He put \$200,000 in it. There is \$1,000,000 clear profit he made, upon which he never paid the Government any tax, and under your contention he never will pay the Government a penny of income tax or excess-profits tax. He started out with the other concern \$1,000,000 profit to the good. He has only been out \$200,000 in money while the other concern is out \$1,200,000.

Mr. BLAIR. That is not the situation at all.

The CHAIRMAN. That is the situation as you gave it.

Mr. BLAIR. No, I said this man has allowed under this bill \$200,000 which were the tangible assets as defined by the bill; but he has the investment there just the same.

The CHAIRMAN. If he has an investment there just the same then, then he is bound to have made a million dollars profit off of his \$200,000 upon which he escapes taxation altogether. If your \$200,000 man is entitled to a deduction on a million two hundred thousand dollars, shouldn't he then give in a million dollars of excess profits, for excess-profits tax and income tax before you allow him a deduction on that million dollars?

Mr. BLAIR. Let's see where that million dollars came from?

Mr. MOORE. Pardon me, you stated two actual cases where payments have been made?

Mr. BLAIR. Yes, sir. Let's see where the million dollars came from. It didn't come out of a hole. Somebody put it there. What stockholder, what man that owns this business? Take my own firm.

The proprietor of our firm worked as a traveling salesman for a wholesale drug house during a long period of years. He put every dollar that he earned and could spare except his actual living into the promotion of his business, charging it to expenses.

Mr. MOORE. And since the income-tax law, he deducted it from his income? He didn't pay a cent tax on it?

Mr. BLAIR. This extended over a period of 53 years. We contend, and we can demonstrate it by our illustration, that out of the money expended for advertising purposes in a proprietary medicine business, about one-third is justly chargeable to expense. In other words, a man could continue his business on a two-thirds, but he doesn't do it. He spends three-thirds, one-third would be chargeable to constructive expense and two-thirds to—

The CHAIRMAN. I don't know how you keep your expenses. But you said—

Mr. BLAIR. We didn't have any income taxes in those days. The medicine business has been a business usually built up by an individual or a family.

The CHAIRMAN. A great many would say it is on account of the personal services of the owner.

Mr. BLAIR. I am coming to that.

The CHAIRMAN. If that be true of a corporation, for the personal services they allow the salary deduction so you get it on the \$1,200,000 on that.

Mr. BLAIR. I just explained in one case a man didn't have any salary at all for a period of nearly 10 years, but kept putting into the business all of the money he could earn outside and his sister and his brother and his wife conducted the business.

The CHAIRMAN. If they put in actual money, his salary gets it and charge it up to him, why wouldn't he be entitled to that as a surplus?

Mr. BLAIR. It has all gone in as expense. It never was paid in as stock. It is charged direct to expenses.

The CHAIRMAN. We are trying to get the facts in all of these matters. That is the reason we ask you to come. In a case like you put we want to see whether there is an injustice. We have got an income-tax law since 1913, that is, it relates back to March 1, 1913, and we have had it 1914, 1915, 1916, and last calendar year 1917. This same kind of expense which you say went to make up the value of this business, did you charge that off as expense?

Mr. BLAIR. We did.

The CHAIRMAN. And had your income tax deduction from that didn't you?

Mr. BLAIR. Yes; that is true.

The CHAIRMAN. So since we had an income tax you pursued the same method as far as charging it all in expense account as you did before we had an income tax?

Mr. BLAIR. Yes; that is true.

The CHAIRMAN. Now, do you know in giving these kind of cases where a concern has got fifty to one hundred thousand dollars of capital invested according to the definition of the act, and will make \$150,000 or \$200,000 or \$300,000?

Mr. BLAIR. No, I don't know that they made quite that much money. There may be some.

The CHAIRMAN. There are cases where it seems most of the income or a large part of it is made on account of the personal service of the owners of the corporation or partnership. Those cases, it strikes me, ought to have some attention by Congress. We don't know the remedy, and perhaps there are cases like you suggest here.

Mr. BLAIR. The cases which, as you suggest, where the entire profit has seem to come from personal service. We have such cases. I will cite a case. Three men—I didn't intent to address myself to this, but Mr. Kitchen has raised this. Three men came together. One had a formula; one was an expert advertising man. He had an advertising business and good credit. The other was a medicine man. Those three men put in \$1,000, equal parts, and started to market A's formula. They were uncertain just what this was going to do. They knew they had a good formula. You will see it in any magazine to-day. It is being advertised in every magazine. They went to one of the largest pharmaceutical houses and contracted with them to make this article. The article is made, shipped to them, reshipped to the customer, billed to the customer, paid for by the customer, and they pay the bill. There never has been but \$1,000 invested in that business. I contend that is a nominal capital, under section 309. Services are the principal thing in that business.

The CHAIRMAN. The important thing is a case of that kind, in which these three men are the stockholders, or if they are incorporated, they are also officers of the stockholding company, would be taken care of by salaries because a large part of that earning is on account of personal service.

Mr. BLAIR. They would have a right to charge salaries, but, as it happens, most of them do not.

The CHAIRMAN. I think even if they had not charged salaries on their books I think the Treasury Department would permit them to get a salary for the purpose of a deduction, if it could convince them, as I am pretty well convinced from what you say about the three gentlemen. I know cases of the kind myself.

Mr. BLAIR. As a matter of fact, confirming that the bills have been issued on that.

Mr. STERLING. How would you value the good will?

The CHAIRMAN. I don't think there is a practical way of valuing good will.

Mr. STERLING. In valuing it according to earning power you would not get any excess profits at all.

The CHAIRMAN. Perhaps in cases of the kind you have given and where the excess profits—if we raise the excess profits tax from 60 to 75 or 80 per cent—would take practically three-fourths or four-fifths of their income. They have such a small deduction.

Mr. BLAIR. Some of our people have taken 53½.

The CHAIRMAN. I know, at present. Suppose you had a provision so far as excess profits are concerned in certain cases, finding them as near as you can, or perhaps in all cases the excess profits tax shall in no case exceed 40 or 50 or 60 per cent, whatever we suggest. That would take care of a good many of the hardships by allowing the Treasury Department—does allow, understand, and of course will allow—a reasonable salary for the personal services of the stockholders or officers.

Mr. BLAIR. Salaries in our business are small, and they have usually been small for the reason I stated at first.

The CHAIRMAN. I understand they are not bound by the salaries fixed by the corporation. It may be that they are too high. It must just form a reasonable proportion to that part of the income that is earned by their services.

Mr. BLAIR. The regulations say they are governed by salaries governing in similar businesses. But salaries in our business are usually small because they are usually family corporations and they are never paid—

The CHAIRMAN. I am inclined to think that those extreme cases which you put and which exist can be taken care of by a salary proposition, and by a limit as I suggest.

Mr. BLAIR. Well, but Mr. Kitchen, we should take care of the stockholders who are not drawing salaries, shouldn't we?

The CHAIRMAN. Well, but that will, so far as the corporation tax is concerned, by the limit. But in the cases of these corporations as the cases you just gave, the three men—

Mr. BLAIR (interposing). Oh, yes.

The CHAIRMAN. Take one of these large sales advertising concerns. I know one that has a considerable income, but about \$100,000 capital. A large part of that income is made up by real activities of the stockholders in this class of corporation.

Mr. BLAIR. Yes.

The CHAIRMAN. While I don't know, I have understood that an advisory board on the excess-profits tax has recommended something of that kind in such cases.

Mr. BLAIR. I will answer your question, Mr. Sterling, now.

Mr. STERLING. Yes; if you please.

Mr. BLAIR. There are two large medicine corporations in the country who have not developed the medicine business, but who have bought businesses that were already built up. They have never bought a business that was not a large, going, prosperous concern. Either one of these two companies will come into my plant, or any other man's plant, and offer a price which will make it pay for itself in five or six years; in some instances five years and in some instances six years. The one of these companies will each time pay cash; the other will occasionally take some time and sometimes will give more. Now, that is the basis on which the large medicine businesses have done their business, and have changed hands in the past six years, on five to six times their earning value. They must first show that they are going concerns; that they are increasing in business; that their business is built up on good, clean advertising, and then that it will pay for itself in five or six years.

Mr. GREEN. There was some confusion, and I didn't hear what you said the business was.

Mr. BLAIR. Its earning capacity, so that it will pay for itself in five or six years.

Mr. GREEN. Pay out?

Mr. BLAIR. Yes; if they are going to pay \$1,000,000 for it, it must make around at least \$200,000, so that it will pay for itself in five years or in six years.

Mr. GREEN. Then this should be 16 to 20 per cent net?

Mr. BLAIR. Sixteen to twenty per cent. That varies a little. If you have been in the business you will find sometimes it is a little easier business.

Mr. GREEN. And you would take that basis?

Mr. BLAIR. I would.

Mr. GREEN. On invested capital?

Mr. BLAIR. In section 210, where the Secretary was authorized to compare like or similar businesses, that was the comparison he had to make, because all of the large businesses that have been sold have been sold on that basis.

Mr. STERLING. And you would allow a man who had not sold out, and a man who had made a profit in another concern and still kept his business—as an illustration, \$8,000—you would allow a deduction not of 9 per cent on \$200,000, but a 9 per cent deduction on a business which would pay for itself in five years?

Mr. BLAIR. I would say yes, Mr. Sterling; that is, if A has earned \$200,000 on \$1,000,000 investment, and he has actually invested \$1,000,000 in that. It is actually invested. B has a similar business going along for some years and he has earned a similar amount; he has a business worth \$1,000,000. But I must not let you make the statement that he has only \$1,000,000 invested. He has invested his time and effort, and he has actually more than that invested. No man has ever sold his business for the amount invested.

Mr. STERLING. Well, the illustration that you gave was that he had only \$200,000 invested.

Mr. BLAIR. \$200,000 invested under the exemptions allowed by this bill, the act of October 3, 1917.

Mr. STERLING. Well, what other money has he got invested?

Mr. BLAIR. He put all of his profits back into the business for a number of years. Perhaps he didn't even draw his living, but earned money outside and used it. It can't be shown that it was invested, because it was charged to expenses. There was nothing drawn out of our business by the family for a long period of years—I think 12 or 14 years before any money was drawn out of the business at all.

Mr. STERLING. Now, that doesn't apply to proprietary medicines alone.

Mr. BLAIR. No; that doesn't apply to proprietary medicines alone.

Mr. STERLING. A business that has \$80,000 in it and made \$52,000 last year, that wouldn't have a very big deduction?

Mr. BLAIR. Newspapers are an example of that. Their franchise is valuable and must involve a large expenditure of money. I know, because I have talked to them about it.

Mr. STERLING. What would you think about a proposition like this, if there was any invested capital in this concern: Give every concern an exemption of a flat bulk sum, say \$5,000, and then put a graduated tax on all over and above that?

Mr. BLAIR. On the increment, regardless of the investment?

Mr. STERLING. Regardless of the investment.

Mr. BLAIR. Yes; certainly.

Mr. STERLING. Do you think that would be fair?

Mr. BLAIR. Yes, sir.

Mr. STERLING. Now, you stated this case as being a man who has actually bought a business at \$1,200,000, to give him a \$5,000 exemption, it wouldn't amount to much in his case, but it would amount to

a great deal with the little concern that had \$50,000 or \$60,000 invested. A corporation that had \$100,000 invested and to give them a \$5,000 exemption would give them a 20 per cent exemption; give each that exemption, and then on the next \$25,000 put a 1 per cent tax, and on the next \$25,000 two per cent, and on the next \$25,000 three per cent, and so on; I don't know what the grade should be, or what the rate should be, but do you think that would be a just tax?

Mr. BLAIR. I don't like to digress; I know your time is limited—

Mr. STERLING. I am talking about income.

Mr. BLAIR. I know you are, but here is an inequality that these taxes always make. We will assume that here are two women, and one owns a cigar store and has in it an investment of \$10,000, and that cigar store made in 1917 \$5,000, and she has an exemption of \$5,000; she doesn't pay any tax. But her neighbor invests \$10,000 in the United Cigar Stores Co.—I haven't seen any statement of the United Cigar Stores Co.; they may go into the 60 per cent, and they may not; I don't know about that. But this last woman has her money in stock of the United Cigar Stores Co., and she will have all her exemption taken from her. I don't know, but I have always thought that the graduate tax or the surtax should be a tax on the enjoyable income, not on the corporation, because you do work a hardship on the small investor in the stock of a corporation because it happens to be a prosperous corporation and the investor bought a piece of that corporation, if you please.

Mr. MOORE. Your comparison would operate in favor of the large concern?

Mr. BLAIR. By that proposition you would encourage a business to make all the money he could, and then tax a man who makes money based on the amount he gets, and the more he got the more his tax would be, and the higher his rate would be.

Mr. MOORE. Mr. Sterling's questions were interesting in that if you had a correct answer for them it would eliminate all the circumlocution in the enforcement of this law, and the collection of this tax; it would bring us to the direct tax, and whether you could correct that by so grading a portion, and burdening the rich and poor alike is the question.

Mr. LONGWORTH. It isn't a graded tax at all, but simply a straight tax.

Mr. BLAIR. Yes; you get away from the excess-profits tax, and the excess-profits tax always brings you back to this business of defining capital.

Mr. SLOAN. Do you recommend the elimination of the excess-profits tax?

Mr. BLAIR. I have a hesitancy about recommending anything to this committee, but as a business man, and a man in charge of and trustee for some estate, I know that it works a great hardship on some stockholders—individual small stockholders in our company who are taxed out of all proportion to the money invested, although they have just the same amount invested.

Mr. HAWLEY. Will you state again that case of the widow who invested \$10,000 in the United Cigar Stores?

Mr. BLAIR. I want to state that I merely stated that as an illustration. Coming to my own business, the drug store—I will take a

drug store. A man invested \$10,000 in a drug store which is on the corner and I trade with him, and that man made last year \$5,000 and there was no tax on that.

Mr. HAWLEY. It wasn't that one I had in mind.

Mr. BLAIR. The next man, who had invested \$10,000 in a large corporation, and bought, if you please, a piece of a corporation, engaged in the same line of business and made a large profit, finds that his tax is 53½ per cent.

Mr. LONGWORTH. No; not the individual stockholder—the corporation.

Mr. BLAIR. Well, in the corporation. He has bought, if you please, a piece of the corporation.

Mr. LONGWORTH. He has got a very much larger return on the original investment than the other man.

Mr. BLAIR. No; I am assuming that the \$10,000 was—no, you are right. It would not be 53 per cent.

Mr. LONGWORTH. He would simply pay the normal income tax.

Mr. BLAIR. No; I beg your pardon, but I am assuming that the business made \$5,000 and there was no excess-profits tax or income tax, and she would pay no tax, but under this law, before she is paid anything, the corporation has to take out the income and excess-profits tax.

Mr. LONGWORTH. Yes; but she is getting a larger return?

Mr. BLAIR. No; she got \$5,000.

Mr. HAWLEY. How much do you figure the other woman, that had the \$10,000 in the corporation, has to be given as her dividend?

Mr. BLAIR. The corporation may be taxed up to 60 per cent, and taking out all the income and excess-profits tax, so that from her stock investment in the large corporation it will bring her 32 per cent.

Mr. LONGWORTH. Sixty-eight per cent.

Mr. BLAIR. She will be taxed 32 per cent.

Mr. LONGWORTH. She is going to get more than \$5,000.

Mr. BLAIR. Let me see how you figure. This business has a capital stock of \$1,000,000, and makes \$500,000 profit. That is on the same basis as a \$10,000 business making \$5,000 profit, isn't it?

Mr. LONGWORTH. You are speaking of the individual stockholder?

Mr. BLAIR. The stockholder, yes; the stockholder invested \$10,000 and made \$5,000.

Mr. LONGWORTH. And had no excess-profits tax?

Mr. HAWLEY. Had a \$5,000 exemption?

Mr. BLAIR. Yes; she had an exemption of \$5,000, and the business paid no taxes. She got the whole \$5,000. The next woman invested \$10,000 in a \$1,000,000 corporation and it made \$500,000, but paid income and excess-profits taxes before it began paying dividends. Had it not paid them it could pay her \$5,000. It had to pay a 32 per cent tax before it paid her anything.

Mr. SLOAN. It necessarily follows that in a business like that everything is taken care of for her; there is no particular responsibility like in this other business; no particular risk of her own. Why shouldn't a larger concern like that be burdened a little more than one which is more hazardous?

Mr. BLAIR. I think there is some virtue in that, but I don't think to that extent; I don't really think to that extent.

Mr. LONGWORTH. How do your companies come out on the war-profits tax? You would be hit worse.

Mr. BLAIR. Oh, no; I couldn't say, because we are not making the profits we did make. Our prewar profits were higher than they are now.

Mr. STERLING. In your illustration, why do you say she would get the full \$5,000?

Mr. BLAIR. There is an exemption.

Mr. STERLING. If she is a single woman she has an exemption of \$1,000.

Mr. BLAIR. I was assuming that she had some children; that she was the head of a family, and that she has an exemption of \$2,000. No; there is an exemption of \$6,000 on that. The man who does a business in a small store has an exemption of \$6,000; the man who conducts a small store and is individually in business has an exemption of \$6,000.

Mr. MOORE. Section 209?

Mr. BLAIR. No; section 209 is nominal capital.

Mr. STERLING. You said she would get it clear of all taxes?

Mr. BLAIR. I mean excess-profits taxes. I was talking about excess profits. No; section 209 is nominal capital.

I will continue with this if there is no objection. The manufacturers of proprietary medicines have expended large sums in advertising to give real value to their property; therefore it can not be said that the value of their property depends on something unearned. This value is not an unearned increment but represents actual money invested, although not within the definition of invested capital found in the present revenue bill.

The value of a proprietary medicine concern is largely represented by its trade-mark and good will.

Now, I know of a case where \$1,000,000 was offered for a business without anything except what could be carried in a grip; that meant the trade-mark, formulas, and good will.

This trade-mark and good will is property which has a real value, which passes by purchase, is transmissible under a general assignment for the benefit of creditors, and may be administered as a part of a decedent's estate. Why should it not be considered as well as any other class of property in determining the amount of invested capital?

Under the present revenue law not only is this value excluded in determining the deduction, but it is in the nature of a penalty imposed upon the manufacturer who is conservatively capitalized and who has built up his business, and places him in an unfair and inequitable position with respect to his competitor, who has purchased the property outright for its value.

We do not ask a decrease in the amount of taxes which have been imposed upon us. All we ask is that in the rewriting of the revenue bill the taxes shall be imposed upon an equal basis. That in determining the amount of excess profits which is to be taken by the Government by way of revenue, that all manufacturers shall be treated alike. Reference to the records of the Bureau of Internal Revenue will give you full and complete information as to the amount of our

earnings. If for the conduct of the war it is necessary to take our earnings, take from us as from others, and we will have no complaint. We ask only that you shall impose a tax upon us that is imposed upon other industries and that the tax imposed upon our industry shall fall with equal burden upon all engaged in the industry.

In this behalf your attention is called to the fact that the Congress, in the revenue law of 1917, realized that the hard and fast rules already laid down were apt to work inequalities and for that reason provided in section 210 a partial means of relief. The advisory committee appointed to assist the Treasury Department in the administration of the income and excess profits titles, so far as they were able, tried to grant relief to the owners of franchises and trademarks. It was pointed out by them, however, that they had gone as far as they could in the matter and they suggested that the only way in which proper relief could be obtained would be through amendments to the titles by Congress.

It has been stated that it would be extremely difficult to determine the actual value of capital invested. We respectfully suggest that to obtain this basis is not at all difficult. On September 8, 1916, an act of the Congress of the United States was approved which contained, among other things, a provision for the assessment of a tax equivalent to the fair value of its capital stock and in estimating the value of its capital stock the surplus and undivided profits should be included. Under the provisions of this act, the Bureau of Internal Revenue have devised a system of imposing taxes whereby the actual value of the property has been as nearly arrived at as can be. Where the capital stock has been of less value than its face the corporation has been billed for the real value.

They have said that the medicine business should be valued on 10 times the investment and have fixed our capital stock on that basis. If we made \$100,000 they said our business was worth \$1,000,000.

Mr. STERLING. I don't understand you.

Mr. BLAIR. Well, the capital stock tax of 50 cents on each \$1,000; it is on that basis.

Mr. STERLING. It should be valued at 10 times what it is earning?

Mr. BLAIR. Suppose I have a capital of \$1,000,000 and make \$100,000, I put in my capital stock tax for \$1,000,000. I will get a bill for that, and I will have to pay on that basis. I have to pay tax on 10 times what I earn.

Mr. STERLING. You will get that much more exemption.

Mr. BLAIR. No, I wish I could; but they have said that this tax is based on a sales value; this tax is based annually on 10 times the amount invested. We will be glad to pay any time the amount we have been assessed for capital stock. That very man whom I gave as an illustration a minute ago who had an investment under this bill of \$200,000 was assessed \$4,000,000 on that for his capital stock—something in the neighborhood of \$4,000,000 for his capital stock.

Mr. STERLING. Let me see; he wasn't assessed at all on his capital stock; there isn't any law in the United States that would assess him on his capital stock. Why don't you say what you mean? He was assessed on his income, if anything.

Mr. BLAIR. I beg your pardon; he was assessed on the capital stock. The Federal capital stock law, I think it is called.

Mr. SLOAN. On the corporation; not the man.

Mr. BLAIR. Well, I used the term "man"; I meant the firm or corporation. Section 401.

Mr. STERLING. Fifty cents on the \$1,000?

Mr. BLAIR. Fifty cents on the \$1,000.

Mr. STERLING. That is so small; we have paid no attention to that. Are you complaining of that?

Mr. BLAIR. Oh, no; but I am saying that the machinery is already in the Treasury Department for determining the value of it. Where the corporation has been conservatively capitalized, the corporation has been billed for the actual value irrespective of the outstanding capital issued and in determining this value they have taken into consideration the value of trade-marks and good will. So that the Treasury Department has already the machinery with which to arrive at the actual value of the capital of a corporation and if the definition of invested capital should be rewritten, we submit that it can be arrived at in the same manner as the actual value of capital stock is determined under the provisions of section 401 of the act of 1916.

But we, the manufacturers of proprietary medicines, are not asking that you shall set aside your present definition but are perfectly willing that you shall proceed upon the basis of capital invested irrespective of the actual value of the property, but we ask that in determining this actual investment you shall give credit to us for the amounts of money which we have expended for constructive purposes. I have made a careful survey of this matter and think I can state to you with a reasonable degree of accuracy that the money which is expended for advertising can be approximately divided into two classes, two-thirds of this money being expended for sales expense and one-third for constructive purposes. That is to say, that one-third of the money which has been expended for advertising goes directly into the value or cost of purchasing the value with as great a degree of certainty as money which would be expended upon a building which would be erected upon a vacant lot and, therefore, we respectfully ask that if the definition of invested capital shall remain there shall be such modifications that the manufacturers of trade-mark goods shall be permitted to include, under such rules and regulations as may be published for the enforcement of the act, that part of the money which has been permanently and constructively invested in trade-marks and to receive the benefit thereof in arriving at the basis for the computation of the amount of taxes to be imposed upon our income.

Mr. GREEN. Right there; does the department hold that the cost of advertising goes entirely into the sales expense and that they will not deduct it?

Mr. BLAIR. Yes; and we have so charged it all our life; we have always so charged it.

Mr. MOORE. That is a large part of your good will? Advertising is a large part of your good will?

Mr. BLAIR. You mean advertising creates good will; you have the formula, and you have the brand and trade-mark, and with your advertising you create the good will. The trade-mark and the formula is useless without the good will. You might have a satisfactory name because it is catchy and means something, but it means almost

nothing until you put the advertising upon it and create the good will.

Of course, the Secretary of the Treasury must be satisfied, just as under the present law the Secretary of the Treasury must be satisfied, by proper evidence of the amount of capital necessarily retained or used in the business for the purpose of determining the point at which 10 per cent will be imposed on undivided profits.

Permit me at this time to show you that the manufacturers of medicines are now paying and, under any system of taxation, will pay a larger revenue than any other group of manufacturers. Alcohol is a necessary and essential ingredient in all medicines, either for the purpose of extraction, solution, or preservation, and we are compelled to pay a direct tax upon alcohol, which at present is approximately ten times the cost of the ingredient itself. In addition to this we pay a gross sales tax.

Permit me to say right here, that it is now and always has been my view that a necessity such as medicine ought not to be made the subject of special taxation. That there exists in my judgment no real excuse for the imposition of a tax of that kind. The suggestion of the President was that luxuries bear the burden—our products are in no respect luxuries.

If it be the judgment of this committee that a tax of this character should be retained, I have to respectfully submit for your consideration the proposition that a larger revenue will be produced if this tax instead of being in the nature of a gross sales tax shall be collected by a tax assessed upon the sale of the products to the consumer, based on the retail price, and paid by the consumer.

If you substitute a 4 per cent tax at the time of the retail sale, the consumer to pay it at the time of the purchase, the revenues which the Government will obtain from the sale of these proprietary articles will be largely increased. The amount which the consumer pays will be only equal to the tax imposed and not a larger amount, which may result from the manufacturer passing it on to the jobber and the jobber to the retailer, and there will be less trade irritation.

We do not suggest a reduction of the excess-profits tax, but that they be laid in a more equitable manner.

While still adhering to my view that excise taxes should not be imposed upon medicines, we have indicated a substitute provision which will produce more revenue if the committee in its wisdom find it necessary to retain such taxes.

Mr. MOORE. There is a real practical suggestion. How would you put your suggestion into effect? By a stamp tax, or by collecting at the drug store?

Mr. BLAIR. Collecting at the drug store. And I call Mr. Longworth's attention to the fact that I have suggested a larger tax on the retailed goods than we have been paying; that is because a unit of sale must have a unit of tax if it is to be paid by the consumer at the time of the sale. Now, we can't collect in that way a 2 per cent tax on a 25-cent sale, but we can collect a 4-cent stamp or sale tax. I believe there are many reasons why it should be done. One of the principal reasons is that it will bring the tax closer to the people, and will be the means of distributing it more.

Mr. MOORE. What is the retail price of your commodity?

Mr. BLAIR. Usually 25 and 50 cents and \$1.

Mr. MOORE. It is pulmonary medicines?

Mr. BLAIR. It is Foley's Honey and Tar. It is not a pulmonary medicine, but a cough medicine; it is one of the oldest cough sirups in the country.

Mr. MOORE. And retails for 25 cents, and 50 cents, and \$1?

Mr. BLAIR. Yes, sir.

Mr. LONGWORTH. You sell direct to the retailer and to the jobber. If you sell to the jobber, you raise the price to the jobber.

Mr. BLAIR. We have not raised our price either to the jobber or to the retailer, as a matter of fact. And I have two chief competitors, and neither one of them have raised their price. The price to the consumer must in almost every instance be raised by the manufacturer, because it is a marked price. If the manufacturer makes it to sell for 25 cents, and 50 cents, and \$1, and marks it 25 cents, and 50 cents, and \$1, the consumer is not going to go into the drug store and pay the retailer 26 cents, or 54 cents, or \$1.20. He sees the price marked on there, and he is not going to pay more than that price, so if the price is to be raised it must in almost every instance be raised by the manufacturer.

Mr. MOORE. Suppose we levied a tax of 2 cents on a 25-cent bottle, and 4 cents on a 50-cent bottle, and 8 cents on a \$1 bottle, using that for illustrating purposes; would you collect that money by putting a stamp of 2 cents, and 4 cents, and 8 cents on the bottle?

Mr. BLAIR. I would sell the stamps to the dealer, the Government sell the stamps to the dealer, and when the dealer sells this article for 25 cents he will sell a 1-cent or 2-cent war-tax stamp, just as to-day the moving-picture man sells his tax, or collects the tax, and the other various taxes are collected.

Mr. MOORE. That would be the same as to say that a 25-cent bottle is 26 cents?

Mr. BLAIR. No; I think it should be said that it is 25 cents and 1 cent war tax, and in that way I think it would bring home the war to some people who do not know it yet.

Mr. MOORE. Like the moving-picture theater?

Mr. BLAIR. Yes; I think, also, it will reach some who have not yet paid any tax.

Mr. MOORE. You are at the head of the national association of proprietary medicine men, are you not?

Mr. BLAIR. Yes, sir.

Mr. MOORE. Have you made any calculations as to the returns that might be expected from levying a tax on the article in the manner indicated?

Mr. BLAIR. The last census we had gave our manufacturers price at \$172,000,000; the retail price if 50 per cent higher; that would be \$258,000,000.

Mr. MOORE. Now, divide that into units—

Mr. BLAIR (interrupting). No; we are imposing 4 per cent on my plant; so all we need to do is to take it in dollars.

Mr. MOORE. I didn't quite get your plan, because we have to double our revenue.

Mr. SLOAN. It is 4 per cent on any bottle?

Mr. BLAIR. It is 4 per cent on any sized bottle. Let me see [figuring]. That is too much money. That is \$10,320,000.

Mr. MOORE. That is the way you figure it out?

Mr. BLAIR. Now, gentlemen, let us not misunderstand each other; that was the last census; the business to-day is not that.

Mr. MOORE. Would the business warrant that?

Mr. BLAIR. Mr. Moore, it will reduce the business. Our business is already reduced and will be further reduced for many reasons; we have much higher costs, and our prices have not advanced.

Mr. MOORE. Have you any figures on what we could get out of the proprietary medicines?

Mr. BLAIR. I have tried to get them at the department, but they tell me that has not yet been segregated.

Mr. MOORE. Would it approach that figure you gave?

Mr. BLAIR. No; it can't be more than \$3,500,000; it is less than that.

Mr. MOORE. Your plan would double it.

Mr. BLAIR. I don't think it can be doubled, Mr. Moore.

Mr. MOORE. I want to ask you just what your position is with the national association of which you speak, and which you represent?

Mr. BLAIR. I am president of the association.

Mr. MOORE. And what is the real title of the association?

Mr. BLAIR. The Proprietary Association.

Mr. MOORE. That is the full title?

Mr. BLAIR. Yes, sir; it is a national association of the manufacturers of proprietary medicines, and we only number about 210 out of about 1,500 who are distributors, I call them, wholesale distributors of proprietary medicines; yet in volume we represent about 85 per cent, and perhaps more.

Mr. MOORE. I wanted the record fairly to show that you represent them.

Mr. BLAIR. Yes, sir.

Mr. MOORE. Have you conferred on this question?

Mr. BLAIR. Yes, sir; we have conferred on it. As I said in my paper and have said here before you, we do not feel that a tax on medicine is just the right thing. If, however, this committee feels that they must tax potatoes and meat and bread, then medicines must be taxed also. If they must tax flour, then I think the exigencies are such that they should tax medicines. But I want you to know that medicines are just as necessary as food. The missionary will go into a foreign country with his medicine sack, but he will depend on the country for the food. The medicine is often very much more necessary than food. When the country was new and the people had to depend on the roots and leaves and herbs, the first man to bring the medicines from one place to another was the man who knew how to make medicines from the roots and herbs, and the food was secured by the people by their own efforts. We feel, therefore, that a tax on medicines is not just the proper thing.

Mr. MOORE. You must not think that it is a matter of desire with us; but it is a matter of necessity.

Mr. BLAIR. I am not objecting to the taxation.

Mr. COLLIER. You suggest that we put a stamp on these medicines and you collect from the retailer and the retailer from the consumer?

Mr. BLAIR. No.

Mr. COLLIER. That is what I want to get.

Mr. BLAIR. The revenue man will sell to the retailer in drugs, and at the time you buy a bottle of Foley's Honey and Tar he puts a 1 cent war-tax stamp and the customer pays for it.

Mr. COLLIER. I understood you to say you would put it on?

Mr. BLAIR. No.

Mr. MOORE. Why put the retailer to that trouble?

Mr. BLAIR. I expect maybe I am getting into trouble with the retailer, but I can't help it; I judge you need the money.

Mr. SLOAN. Would this plan leave you any money?

Mr. BLAIR. I think not. Speaking for myself, we are paying it, but the industry generally is not.

Mr. SLOAN. The plan is to increase the tax, but pass it to the consumer.

Mr. BLAIR. It is going there, anyway. My method is to get the most money with the least irritation, and the consumer will pay a war tax and know he is paying a war tax and paying nothing else. You can't pass a tax without its being passed on, anyway.

Mr. SLOAN. This is a method that facilitates letting George pay it?

Mr. BLAIR. Yes, sir.

Mr. LONGWORTH. It is a consumption tax?

Mr. BLAIR. Yes, sir.

Mr. HAWLEY. During the Spanish-American War there was a stamp tax put on proprietary medicines?

Mr. BLAIR. Yes, sir.

Mr. HAWLEY. In the administration or operation of that law did you find any difficulty arising in the retail trade?

Mr. BLAIR. That was not a tax such as I have suggested. That was a tax that was mostly a manufacturer's tax. We put the stamps on.

Mr. HAWLEY. And it was not added to the price?

Mr. BLAIR. Yes; it was.

Mr. HAWLEY. It practically reached the same result?

Mr. BLAIR. Yes; it reached the same result.

Mr. HAWLEY. In the administration of that, so far as your business was concerned, did it create any difficulty?

Mr. BLAIR. It created this difficulty, it raised the price. I didn't understand your question. I understood you to mean, did the retailer object? At that time he did not object. But now you are wanting so much money that it must become a straight consumption tax. I have nothing more to say, unless some one wants to ask me some more questions.

Mr. RAINEY (presiding). If you want to add anything, just write it out and hand it in for the record.

Mr. BLAIR. Thank you.

**STATEMENT BY MR. JOSEPH J. KLEIN, A MEMBER OF THE FIRM OF KLEIN, HINDS & FINKE, CERTIFIED PUBLIC ACCOUNTANTS, 1182 BROADWAY, NEW YORK CITY.**

Mr. KLEIN. My name is Joseph J. Klein; I am a member of the firm of Klein, Hinds & Finke, certified public accountants. During the last year for a time I had the honor to act for a time as the tax editor of the New York Globe, and about two weeks ago the editor of the Globe did me the honor to ask me to appear before your committee

and say some things which I had in mind generally on the tax question. I accepted that retainer. The day after the Globe made the announcement that I would appear here, some other associations, not my clients, asked me to represent them here; there were many such requests. I took their requests under advisement, and two or three days ago I informed the Globe that I thought it best not to act under a retainer here but to appear as a private citizen, and it is as a private citizen that I appear here before you gentlemen; and I trust that some of my experiences may prove interesting and helpful to you, who are experts in this work.

I meant to speak of a number of things in the existing law, and make some suggestions about that. But as I have been listening here to-day I have discovered that the thing your committee seems to be most interested in is as to where you can raise the money necessary for the financing of this war, and I have a few proposals to make as to sources of revenue.

First of all, you know that telephone messages, when the price is above 50 cents, has a tax of 5 cents. I took the trouble to look up the statistics on telephone calls and I find that there are probably 20,000,000,000 calls sent every year. If you allow—and I am estimating now—but if you allow one-fourth of these calls to represent toll calls and unlimited service, you have 15,000,000,000 at 1 cent per call will raise \$150,000,000 without an undue burden upon the business community or private individual; that is up to the 10 cent calls, because the 15-cent calls are already taxed.

I notice in the law itself that all legal documents; that is a number of legal documents are subject to a tax. I find leases and contracts not enumerated in that list. So I suggest a flat tax of 10 cents on each such document. In the Civil War all legal documents not specifically taxed otherwise were taxed 10 cents. I can't estimate the amount collectible under such an arrangement.

Mr. SLOAN. Would you think to include in that estimate court filings?

Mr. KLEIN. I had in mind all court orders, but I consulted some attorney, and he told me that it would be difficult. I will leave that to the discretion of the attorneys on the committee; I am not an attorney myself.

Mr. SLOAN. I think it would be very difficult to work that out.

Mr. KLEIN. Perhaps so. I leave that to your discretion.

Now, here comes a radical one, if I may. I have estimated that in the City of New York alone there are 500,000 mercantile invoices written per day; that is, in Greater New York. If that is true, on a basis of 1 to 10 proposition—it would probably show 1 to 4, but on the basis of 1 to 10, by stamp taxing each commercial invoice—and I am not talking of the 5 and 10 cent purchases at the grocery store, or the neighborhood store, but invoices as it is commonly understood, I estimate that \$50,000,000 will be raised.

Mr. SLOAN. That means wholesale and jobbing?

Mr. KLEIN. Wholesale, jobbing, manufacturing, and retailing. Any certain lines where invoices are commercially made.

Mr. COLLIER. And that wouldn't mean where you go into the store and make your purchase and take it away?

Mr. KLEIN. I have it in mind that wherever a purchase was made up to a dollar. I think it would have to be limited. These are the

ordinary invoices, because in the neighborhood stores the giving of invoices is exceptional, and only for the purpose of checking up on the clerk, or something of that kind.

Mr. LONGWORTH. What did you say about the telephone calls?

Mr. KLEIN. Fifteen billion. The total number of calls 20,000,000,000. I will give you that estimate if you are interested in it. The statistical abstract for 1912 shows that for 1912 there was an estimate of 13,735,658,245 calls; and for 1907, five years prior thereto, 10,400,000,000, an increase of almost 4,000,000,000 in 5 years. I have assumed that the increase from 1912 to 1918, a period of 6 years, to be at the rate of 1,000,000,000 calls a year, a slightly greater increase than the period of from 1907 to 1912; that would give us 20,000,000,000 message in 1918. Assuming 25 per cent of them to represent messages already taxed, unlimited services messages which are hard to keep track of, I estimate 15,000,000,000 to represent the number of 5 and 10-cent limited calls, at 1 cent each, would give us \$150,000,000 in revenue.

Mr. STERLING. That doesn't mean the calls from one subscriber to another.

Mr. KLEIN. You can't estimate that.

Mr. STERLING. I don't know what you mean by the invoices you speak of.

Mr. KLEIN. When I buy a bill of goods, say at my bookstore, and have a statement sent; it is customary to give me a statement.

Mr. STERLING. A statement of each individual purchase?

Mr. KLEIN. Yes; that is exactly it, I have taken into consideration the time consumed in doing this work. The time consumed in stamping these invoices is negligible in comparison with the time it takes to write it and prepare it.

Mr. COLLIER. Don't you think in ordinary business they would quit using the invoices to avoid paying the tax?

Mr. KLEIN. I have in mind, of course, business requiring invoices, involving the process of charging to the account, and so on, and a daily footing, and so on.

Mr. MOORE. Your estimate of revenue from invoices is \$15,000,000 per annum in New York?

Mr. KLEIN. No; on the basis of the entire country I gave. I took a one to ten ratio, Mr. Moore.

Mr. MOORE. You said there were 500,000 issued in New York alone?

Mr. KLEIN. Five million. Did I say 500,000?

Mr. MOORE. Five hundred thousand.

Mr. KLEIN. Five million in New York per day.

Mr. MOORE. Your estimate for the country was that they would get \$15,000,000?

Mr. KLEIN. Yes, sir. Incidentally I have taken up some of these figures with a statistician in whose knowledge I have great confidence, but inasmuch as some of these estimates would not be fair I think it better not to spread his name on the record, but I will give it if you request it.

Now, I come to another source of taxation. Checks. Of course, even in our own brief period of the Spanish War the check was subject to a stamp tax of 2 cents. Proposal has been made here, if I judge correctly by the press, that checks be taxed on an amount

graduated according to the amount of the check. That would be a nuisance.

Mr. GREEN. That proposal was made on the floor of the House.

Mr. KLEIN. I meant to speak later on of whether the request for \$8,000,000,000 was justified or not. But I am assuming that it is correct and that you will levy that if you can.

Mr. MOORE. That amount has been asked for.

Mr. KLEIN. I know that has been asked for. But I have some figures regarding the expenses of the armies in this war, and I don't see how it is possible that it will be spent. But that is the basis, and we will assume that is the amount.

Mr. STERLING. How much would the checks produce?

Mr. KLEIN. I have the figures in front of me now. Here is first how I determined the number of checks. The 1916 clearings give \$241,400,000,000; of course many of these items will be large transfers and bank balances. Someone to-day in testifying I think quoted \$312,000,000,000 as representing the 1912 clearings. I don't know where he got them; I thought these were the latest.

Mr. SLOAN. That is the business of the entire country?

Mr. KLEIN. No; the clearings only. Every one understands, of course, that a number of checks never reach the clearing houses; the Corn Exchange National Bank, in New York, for instance, has its own branches—some twenty branches in New York, and it clears through its own branches.

Mr. SLOAN. Now, in estimating as to the checks that go through the clearing houses, as to the number and amount; some checks go through the country and never reach the clearing house?

Mr. KLEIN. I should say this, that most checks, except in the smaller communities, reach the clearing houses. Checks that might be called neighborhood checks would never reach the clearing houses. I am basing my estimate only on the checks that would go through the clearing houses. The actual proportion would be greater, but I have assumed an increase of only 10 per cent for 1917, so my figures are probably low, an increase of \$265,000,000,000, so we have in the neighborhood of \$289,000,000,000, at 2 cents per \$100 check. Now, the difficulty there, gentlemen, lies in finding the number of checks that are cleared. I have tried to estimate the number, and so when in the clearing house on my visits I have tried to estimate the number, but it is almost impossible to do. I have called up some banks I have access to and they can't estimate the number of checks they handle; they know that some days they send down 5,000 and some days 2,000 and some days 10,000. I have assumed the average check to be \$100. I believe that might be low, because some of them passing through the clearing houses in the large cities might reach \$1,000,000.

Mr. STERLING. It wouldn't make any difference what the size of the check is?

Mr. KLEIN. It would on the flat tax I am estimating under. I will give you the figures on both 2 cents and 3 cents per check. The estimate is from \$30,000,000 to \$45,000,000 per year for the checks that are cleared only. On a flat basis of 2 cents per \$100 the income I estimate should be \$70,000,000; that is a tax of 2 cents per \$100.

Mr. STERLING. One gentleman gave the clearing house transactions of last year as \$320,000,000,000.

Mr. KLEIN. That is what I had in mind. I estimated the 1917 and 1918 increases. I have the 1916 increases only; these are the latest I could get. I shouldn't be surprised if \$320,000,000,000 is nearer correct than the \$290,000,000,000 I am employing.

Mr. GREEN. Speaking of the tax imposed after the Spanish War; that brought in about \$9,000,000.

Mr. KLEIN. Professor Kenney, of one of the mid-Western universities, I believe of the Missouri University, or somewhere out there, estimated that 98 to 99 per cent of all business transactions are settled by check, and through the medium of checks, so that will give you some idea on the subject.

Mr. GREEN. This business has not only increased, but the checks have increased in size.

Mr. KLEIN. In my town some of the neighborhood banks are featuring in their advertising the opening of accounts for household accounts, and the payment of bills for household expenses by checks, and this has increased the checking business very much.

Mr. SLOAN. Have you thought that a tax on checks would encourage the payment of bills by currency, or otherwise than by check?

Mr. KLEIN. Yes; last night while I was waiting for the train I discussed that with the gentleman I had in mind before, and we couldn't see how in amounts over \$5 it would make any difference at all. In modern business a check returned has come to be regarded as a receipt; you give a man a check, and you want the check indorsed by him. I think you will find it will not play an appreciable part, except in the handling of household accounts, or household funds.

Mr. GREEN. Do you think checks under \$5 should be exempted?

Mr. KLEIN. I don't think it is necessary to exempt them; it will probably amount to an exemption in small amounts. You will find that the business will adjust itself to it, and will not object to stamping the checks.

I promised not to keep you more than 15 minutes. I meant this morning to tell you where the law is all wrong, but since sitting here to-day and listening to these statements and problems of the committee being discussed, I want to tell you how I think you can raise some revenue. I want to help you iron out some of these difficulties and troubles.

Mr. RAINEY. You are the only man who has given us these practical suggestions. We want to hear you.

Mr. KLEIN. Thank you. Now, here is where the constituents at home will kick, but the amount that can be raised in this way is so large, I think, that it will bear serious consideration. The amount involved is at least \$120,000,000. If you were to arrange—these are such small things individually, but they amount to so much. If you would raise the street car fare, and if you were to get a 6-cent car fare instead of 5, but to make sure that the extra cent, the increase, would go to the Government, it would mean \$120,000,000 on that basis.

Mr. COLLIER. We would be willing to pay more than that in this town if we could get a seat. You are from New York, where you don't have the troubles we have.

Mr. KLEIN. I suppose you will pay, too; because it goes to the Government. I have been in Washington here a good deal, as an assistant on the Council of National Defense, as one of the \$1 a year men, and I know the conditions here also.

Now, I have estimated that there will be one member of each family, and I assume here that the census proportion of five members per family is correct; therefore, there are 20,000,000 families in the United States, and I assume that there will be one ride per family per day, or 20,000,000 of rides per day, one way; that is, I mean there will be one ride going and one ride coming back, therefore there will be 40,000,000 rides per day, at 1 cent per ride it would amount to \$400,000 per day; assuming that there will be three days a week of that, and the balance of the time the car system is broken down, or something, and you will have an enormous sum, amounting to approximately \$120,000,000. I see some difficulties about the collection of this, but not so much in the larger towns as in the smaller ones, where the fares are for the 15 and 20 cent distances.

Mr. STERLING. Do you think that two fares per day for every family is a proper estimate?

Mr. KLEIN. Oh, yes; in New York it is more than twice that.

Mr. STERLING. Some families do not ride on a car in a year.

Mr. KLEIN. In New York we figured out that there were six rides a day, seven days a week; I am only taking three days a week for one member of the family.

Mr. STERLING. But so many families don't ride at all.

Mr. KLEIN. Yes, of course; but in the cities there are so many that ride so much. I think it will average up.

Mr. STERLING. In New York you can get the figures.

Mr. KLEIN. Yes; the calculation has been made that if the Interborough Co. in Greater New York were to be permitted to raise its rate 1 cent per fare the increase would be in the neighborhood of \$100,000,000 in revenue.

Mr. STERLING. In New York City?

Mr. KLEIN. In New York City. And it seems to me that a tax on the fare, though a small amount, will raise a large amount of revenue. And mind you, gentlemen, in all these tax impositions I have this thought in mind: Unfortunately when you assess a tax against the manufacturer, the trader, or the jobber he will pass it on to the consumer. The excess-profits tax was surprise legislation; you caught them unprepared for it. You can't avoid the transfer of the tax to the consumer, but I do object to it, and in this I think we sympathize. I object to having you create a partnership between yourself and business, so that on the imposition of the tax when it is paid by the consumer, a part of it goes to the Government and a part to the business; like so many manufacturers, who collect the tax and keep a part of it themselves and pay the balance to the Government. I can illustrate that by the cigarette business. The company collects and pays a part of what it collects to the Government, but it also keeps a large part for itself. The tax ought to all go to the Government.

Mr. GREEN. Do you think any Government ever succeeded in doing that?

Mr. KLEIN. No, sir; but with all due deference to you gentlemen here—I do not mean to be facetious at all—I think you have done very well; you have collected more than you expected to collect. And I think in the future, allowing for some leaks, the people will be with you. They realize that it is necessary.

Mr. MOORE. Mr. Klein, I didn't quite understand how you would impose this trolley car tax.

Mr. KLEIN. In two ways, Mr. Moore—

Mr. MOORE (interrupting). In your city the car fare is 5 cents?

Mr. KLEIN. Yes, sir.

Mr. MOORE. In my city it is 5 cents.

Mr. KLEIN. Yes, sir.

Mr. MOORE. Here it is six tickets for a quarter.

Mr. KLEIN. Yes, sir.

Mr. MOORE. In Cleveland it is 3 cents; most of the cities that have a 5-cent fare are now struggling for a raise for the benefit of the company.

Mr. KLEIN. Yes.

Mr. MOORE. We had a traction man before us the other day and we suggested this to him, and he thought that this was their preserve and the Government ought to keep off. If it was necessary to do that how would you impose the tax?

Mr. KLEIN. It makes it more difficult, the fact that the companies are hard pressed. I realize that the traction people have been up against it very badly. The impost of a cent in favor of the company would not be possible; to add a cent for the benefit of the Government would make it difficult, but in my opinion not impossible. I had in mind in connection with the elevated suburban system in my town an additional ticket would be sold. These penny tickets—as, for example, some of the entertainments around New York—one portion of the ticket is the ordinary ticket, the ordinary box-office receipt, and the detachment thereof represents the war tax. For example, at the race track, which ought not to be mentioned here, that is the procedure followed.

Mr. MOORE. We did impost a tax on railroad fares and Pullman fares; but there is no tax on trolley fares. There are a great number of riders. In Washington they issue these six tickets for a quarter, and it might be very difficult of administration.

Mr. KLEIN. I don't think so. For example, I had this thought, that for every fare collected or ticket sold collect an additional cent per fare, and after a while these tickets will become 6-cent tickets; that is, instead of six for a quarter they will be six for 30 cents, the company turning in to the Government monthly the amount collected, just as the theaters do now, they turn in the amount collected.

Mr. MOORE. Whatever the fare is, your would add 1 cent?

Mr. KLEIN. Yes, sir. Now, I come to the next topic, and here I was surprised at the possibilities involved. The tuition fees for private schools. I would not go to the technical schools or to the universities or colleges; but I would collect from 10 to 25 per cent on the tuition fees for other private schools. If a mother insists upon sending her child to a private school and paying tuition fees, if she insists upon paying \$500 in tuition fees when, in my opinion, she can get a better education in the public schools, the mother ought to pay to the Government from 25 to 50 per cent of the amount of that tuition.

Mr. HAWLEY. Would you place that upon the college and university also?

Mr. KLEIN. No, sir. For the private school you have more than a substitute; for the college and university you have not. I have an estimate here on the number of pupils in these private schools.

Mr. MOORE. What do you figure could be raised?

Mr. KLEIN. I did not venture to predict that, Mr. Moore. I will give you the number of pupils, the 1915 figures, for private schools: High schools and academies, 155,000; kindergartens, 80,000. I would hesitate about levying a tax there. Private business schools, 180,000. I would also hesitate about levying a tax there, because in many communities there is no opportunity to secure a commercial education in the public-school system.

Mr. GREEN. How many dollars?

Mr. KLEIN. I don't know how many dollars. Put it this way: 155,000 pupils in high schools and academies—

Mr. MOORE (interrupting). You would have to make that a head tax.

Mr. KLEIN. Possibly.

Mr. STERLING. I thought you would exempt high schools. You couldn't tax high schools.

Mr. KLEIN. I am speaking of private high schools. The high-school pupils in the public schools is away up in the millions.

I have two other suggestions. I know to the one especially there is a great deal of objection. The lawyers have been trying to expound it on constitutional grounds, and say it could not be done. In my own State we have judges on the supreme court bench, not many of them, but some, with salaries of \$17,500 a year. Why should they be exempt from paying a tax, unless there is some constitutional ground for it?

Mr. GREEN. They can only be taxed, if at all, under the last tax. I think when Mr. Hughes was governor of New York State he objected to the income-tax amendment allowing the taxing of such salaries on the ground that it permitted the Government to tax agents of the State.

Mr. KLEIN. I do not pose as a constitutional lawyer, and yet I have made some little study of it, and I don't think such an objection could apply to the municipal employees. There is no sovereign right of the State involved there, and all that sort of thing.

Mr. GREEN. I think it has been held that we can't tax municipal bonds; that may not be a parallel case.

Mr. KLEIN. May I venture to suggest that if these things can't be taxed in the general bill that they might be taxed as an emergency war tax, an emergency war measure?

Mr. GREEN. I might say that Mr. Crisp, a member of the committee, has a bill before the committee now to impose a tax on State officers, the same as on other officers. His idea was to put it in a separate bill and not endanger the whole law if it should be held unconstitutional.

Mr. KLEIN. May I not suggest that you put a provision in your bill that if one section is held to be unconstitutional, no other section shall be affected by it?

Here I come to a matter which I think is capable of taxation and which would yield large returns to the Government. Some of the largest employers in this country have called me in to consult with them on the filling out of Form 1099, the salaries paid to individuals in excess of \$800. That has caused a great deal of difficulty. Judging from the wage scale, which is a rapidly rising one, that it would earn much money if everyone, John Jones and Tom Smith, were each to contribute something to the war-tax fund. There is no way now of getting hold of that. I felt that by arranging for the

collection at the source of salaries and wages and income, on all incomes of \$20 a week would be a practicable method, and on all over that—that is something I am coming to in a moment—to suggest as a substitute for the excess-profits tax in toto. On a graduated scale of taxation, to avoid the endless complications involved, you would by collecting at the source do two things: First, you would now get the tax from an undoubtedly large number of individual taxpayers who now escape, due in some cases to ignorance and failure to report; and, secondly, you would do what was done by the former controller in my town—arranged to save the town several millions in interest. By arranging this you might avoid the necessity of issuing short-time certificates and the saving of interest; and I believe in taxation, as in other matters, that the saving of a dollar is equivalent to the raising of a dollar.

Mr. MOORE. Do you think these returns as now provided for would help to trace the income taxpayer who would otherwise escape?

Mr. KLEIN. Yes, sir; I do. The employer would be required to report for him.

Mr. MOORE. In other words, a man who ought to pay on an income and who gets away and makes no report can be readily traced by the employer's report?

Mr. KLEIN. But you might find that this would be almost impossible. John Jones owes me \$10, but I can't afford to trace him and collect it.

Mr. MOORE. Your thought is, then, that instead of this involved system of individual wage accounts we should levy a tax on the volume of wages paid?

Mr. KLEIN. That is substantially the thought I had in mind. I have a table here which I will distribute to the committee. I have arranged an alternative scale there, as you will see, on wages paid from \$20 to \$40 per week, and on increments of \$10 per week, in column 1, and on incomes from \$20 per week up on increments of \$20 per week, in column 2. I will leave that scale, with your permission.

Mr. RAINEY (presiding). It may be filed for the record.  
(The schedule referred to is as follows:)

EXHIBIT A.

*Table of weekly salary and wage tax levies.*

[Submitted by Dr. Joseph J. Klein, C. P. A., of Klein, Hinds & Finks, New York City.]

Column 1, on basis of:

- (a) Exemption, \$20 per week.
- (b) 5 per cent on \$21 to \$30 per week, inclusive.
- (c) 10 per cent on \$31 to \$40 per week, inclusive.
- (d) 15 per cent on \$41 to \$50 per week, inclusive.
- (e) 20 per cent on \$51 to \$60 per week, inclusive.
- (f) 33½ per cent on \$61 and upward per week, inclusive.  
(No levies on fractional parts of a dollar.)

Column 2, on basis of:

- (a) Exemption, \$20 per week.
- (b) 5 per cent on \$21 to \$40 per week, inclusive.
- (c) 7 per cent on \$41 to \$60 per week, inclusive.
- (d) 9 per cent on \$61 to \$80 per week, inclusive.
- (e) 11 per cent on \$81 to \$100 per week, inclusive.
- (f) And so on, by increments of 2 per cent on each \$20 group.  
(No levies on fractional parts of a dollar.)

Weekly earnings.	Amount subject to tax.	Column 1.	Column 2.	Weekly earnings.	Amount subject to tax.	Column 1.	Column 2.
		Tax at each level.	Tax at each level.			Tax at each level.	Tax at each level.

Mr. HAWLEY. You would collect this from the employer. Wouldn't it be unlawful for the employer to pay this tax?

Mr. KLEIN. I would make it on this ground, that after two or three weeks, the wage earner would insist upon the employer paying this tax. He would insist upon the payment of it by the employer. My claim here is not so much to democratize the tax but to give every man a feeling that directly he is contributing to the financing of the war. It gives the man who is earning \$1,000 a year the privilege of contributing week in and week out.

Mr. STERLING. Don't you think a tax on all business would be better than this?

Mr. KLEIN. In addition to this? This is more than is raised by our allies combined.

Mr. STERLING. A small tax on all business would raise more than that.

Mr. KLEIN. I have the figures on that. I have the figures here, if you will allow me; the figures on the number of wage earners, I find there are about seven and a quarter million salary earners and wage earners estimated in 1917. This is from the statistical abstract: That, on the assumption that one-half of them will be able to pay a tax on account of receiving less than \$20 a week, the amount raised from that source on an average of 50 cents a week, average earnings

of \$30 a week from half of the wage earners, would result in a net revenue of \$275,000,000 to \$300,000,000 a year.

Mr. HAWLEY. Your proposition is to tax these salaries and exempt each man \$1,000 each year?

Mr. KLEIN. It would amount to that. I had in mind one of the very important problems in connection with this small tax. One of the important problems is the accounting problem. I had in mind the issuing of stamps in accordance with the table, so that Tom Smith, who earns \$25, would receive \$24.75 in money and 25 cents in stamps. That is his receipt, and the employer turns in that amount to the Government and it is taken by Tom Smith at its face value.

I have made a study, or have tried to, at least, of the relationship between the excess-profits tax paid, among others, and the total volume of business. I am going to approach that problem, with your permission, from two angles. This excess-profits tax has caused more trouble, and incidentally more feeling among business men, and work among the accountants who engage in the work of accounting—it has caused more trouble to the business men than any other piece of legislation I have ever heard of. One would imagine, to judge from the remarks of those who have appeared before you, that aside from its unequal properties in spots and parts, that in general the levy was a heavy one. Now, I wager the prediction, and I base this on the study I made while with the Globe, that in the great majority of cases the excess-profits tax and the income tax is less than 1 per cent. In very few cases has it approached 2 per cent, and what statisticians call technically sports, when it is in excess of 2 per cent. It was a remarkable finding. Case after case shows it. This table which I submit is the ratio of the excess-profits tax to the corresponding gross income. For example, the gross income of \$390,000, tax eight-tenths of 1 per cent. And here in a number of cases you have zero. Five-tenths of 1 per cent, and many zeros.

Mr. MOORE. Where did you get these sample figures?

Mr. KLEIN. I should say half of them from our own files of our own clients, and the others were submitted to me by Globe readers, 99 per cent of them being kickers.

With your permission I will leave this table for the record.

(The table referred to is as follows:)

EXHIBIT B.

Table showing relationship between 1917 taxes and 1917 gross sales, etc., for organizations with invested capital.

SCHEDULE I.—A LIST OF 20 CORPORATIONS HAVING INVESTED CAPITAL, ARRANGED SO AS TO SHOW THE RELATIONSHIP OF 1917 TAXES TO 1917 GROSS INCOME—INITIAL CAPITAL.

Capital.	1917 net income.	1917 taxes.			1917 gross income from sales, etc.	Approximate ratio to gross income of—

730,000	235,000	28,200	27,500	55,700	2,650,000	1.0	1.0	2.1
22,500	28,000	13,340	420	13,760	160,000	8.3	.3	8.6
680,000	167,000	11,610	11,875	23,485	2,410,000	.5	.5	1.0

SCHEDULE III.—A LIST OF 5 SOLE PROPRIETORSHIPS HAVING INVESTED CAPITAL, ARRANGED SO AS TO SHOW THE RELATIONSHIP OF 1917 TAXES TO 1917 GROSS INCOME—AVERAGE 1917 CAPITAL.

[The "net income" is inclusive of salary allowance, and the "excess-profits tax" is inclusive of such tax on salary allowance.]

Capital.	1917 net income.	Excess profits.	Income.	Total.	1917 gross income from sales, etc.	Per cent.	Per cent.	Per cent.
2,000,000	\$64,800		\$7,780	\$7,780	\$240,000		3.3	.3
11,300	5,600		76	76	110,000			
370,000	136,100	\$16,620	22,200	38,820	1,240,000	1.3	1.8	3.1
1,100,000	92,300	1,520	13,820	15,340	1,870,000	.0	.7	.8
82,000	101,600	37,640	7,650	45,290	415,000	9.6	1.8	10.9

Mr. GREEN. I am not surprised at these figures.

Mr. KLEIN. I was. Then, the suggestion was made time after time before this committee on a matter which I thought was original with me, to propose a gross tax on sales in lieu of excess profits.

Mr. GREEN. That has been proposed many times here.

Mr. KLEIN. Yes. I say I thought it was original with me, but that simply shows that there is no monopoly on thought.

Mr. MOORE. I want to ask you what your conclusions are on the gross sales tax.

Mr. KLEIN. If on the average you are to assess a 2 per cent tax on gross sales, you would more than double the present excess profits tax.

Mr. STERLING. On all sales?

Mr. KLEIN. Yes, sir

Mr. STERLING. That would be many times as much.

Mr. KLEIN. Making due allowance for the curtailment which will come on account of people curtailing on luxuries and on the non-essential lines.

Mr. SLOAN. At the time of the Civil War they had a gross sales tax.

Mr. KLEIN. Yes. This excess profits tax is ingenious. There is nothing else like it.

May I submit just one additional table? I will not burden you with it. It shows the relationship between the net income and the total tax, and the ratio of the total tax to the net income, for 35 organizations; of them 20 are corporations, 10 are partnerships, and 5 are sole proprietorships. The object of this analysis was to determine to what extent the assertion made in individual cases that the excess profits tax was such a burden was correct, and the assertion that sole proprietorships suffered dreadfully in comparison. This is my table, and if I may I will submit it for the record.

(The table referred to is as follows:)

EXHIBIT C.

Ratio of total 1917 Federal tax to 1917 net income.

	Net income.	Total tax.	Ratio of total tax to net income.		Net income.	Total tax.	Ratio of total tax to net income.

Totals and averages.				1,340,476	270,430	20	

<sup>1</sup> Net loss.

Mr. GREEN. I am very much interested in that; that has been stated here time and again.

Mr. KLEIN. I find of the 20 corporations, two real estate corporations where the net income subject to tax was larger than the book net income, due to the prohibition against the deduction of all interest paid on bonded indebtedness, and so on.

Mr. MOORE. I would say the value of these tables would depend a great deal on the nature of the business of the organizations.

Mr. KLEIN. There is no question about that, but the reason I couldn't give you that—

Mr. MOORE (interrupting). I am not asking for the names. But take the excess-profits table, that is very interesting; if that included munitions plants the results would be entirely different.

Mr. KLEIN. It does not include a single munitions plant. And the reason I did not include a description of the kind or organization is this: In my own town I am well known in a measure as associated with certain organizations, and corporations, and so on, and if I indicated the nature of the business, it would be the same as revealing the business of a client.

Mr. MOORE. I don't ask you for them. I say the value of the table would depend on the character of the business.

Mr. KLEIN. Yes; that is true. You have one of the country's ablest analysts here in the tax department, Dr. Adams, of Wisconsin. I discussed one of the problems with him recently, and I have no doubt, of his own volition, and I am certain if it came as a request from this committee that a compilation of tables made by him would be available.

Mr. MOORE. Let me ask you, were the firms selected firms that were doing a normal business during the war?

Mr. KLEIN. Not all of them. Some were doing a trade line with large stocks of goods on hand which they were holding for higher prices, which higher prices actually prevailed later, and in the language of the street they "cashed in," of course.

Mr. MOORE. Before you close, I would like to ask you what the connection was you had here in Washington?

Mr. KLEIN. I represented on a number of occasions clients in connection with the consolidation of interests—

Mr. MOORE (interrupting). That had to do with your own business?

Mr. KLEIN. Yes, sir.

Mr. MOORE. I understood that you had been doing some Government work here?

Mr. KLEIN. Yes; for six months, precisely, from the first week in August until the middle of February, I was acting as an expert on the Council of National Defense. Mr. Julius Rosenwald was the man who selected me and under whom I worked.

Mr. MOORE. You came in through the Council of National Defense, under the management of Mr. Rosenwald?

Mr. KLEIN. Yes; advising principally on wool conservation. I spent two days a week here.

Mr. MOORE. You were here two days a week?

Mr. KLEIN. Yes; mostly on the conservation of wool. I have never collected, and never expect to collect, the amount of expenses involved.

Mr. MOORE. You have made a very interesting statement.

Mr. KLEIN. Thank you. I have been fortunate in this, that I have had opportunity to study these situations and come in contact

with the other side, so to speak, the people who are affected by your legislation, and if there is ever any service I can render in the way of working up some of these things for you, or in any other way than advising a reduction of the taxes, I will be glad.

Mr. RAINEY (presiding). We thank you. We have been advised of the value of your work. If there is anything further you want to submit you may write to the chairman.

Mr. KLEIN. I do not think there is anything further, except these tables which I have left here.

Mr. Chairman and gentlemen, I know that this has been a long and trying day for you and that you can not remain in session any longer. I did intend to point out certain inequalities in the 1917 act and to suggest certain remedies, especially relative to avoiding the unequal tax burden often pointed out with respect to corporations and partnerships, and the unfair distribution of the tax incident in a number of cases. I also meant to offer certain suggestions regarding needed publicity and expert advice before voting on any final draft of a revised tax law. Time, however, will not permit me to develop these topics for duties demand my attention to New York, so that I can not remain here until Friday. I shall try to send you further suggestions in writing, but I wish you to feel free to command my services in a volunteer capacity. I thank you for your patient and courteous hearing.

Mr. RAINEY (presiding). Miss Rankin has submitted a statement here; without objection we will put it in the record.

(The statement of Miss Rankin referred to is as follows:)

I am opposed to the zone system of postage for newspapers and magazines for the following reasons:

First. Because it strikes at the very roots of democracy—free speech. In these days of long distances and quick transportation speech means very largely the written word. Its wide dissemination depends on cheap printing and cheap postage. To increase the cost of postage at the proposed rate will mean death to many publications and the suspended subscription of others by thousands of individuals remote from the center of publication, New York—and a large part of the United States is far from New York. It will stop the free circulation of ideas just at a time when the freest possible circulation is most important.

Second. Because it will cut off the main source of education for people in remote towns and country districts, who depend on magazines and newspapers not only for general information but for special instruction on such subjects as farming, poultry raising, care of children, and a multitude of other matters vital to individual and community welfare. No small part of this education material is carried in the advertisements of the magazines.

Third. Such discrimination in matters as fundamentally American as free speech and education tends toward sectional feeling at a time when unity of thought and purpose is vital to the Nation. It is important for people to be able to read all sides of every question; for a feeling of national unity does not come from one-sided or inadequate information, but from a sense of freedom impartially secured and of opportunity equalized by a just Government.

Fourth. The principle involved in the repeal of this measure is more important than the specific injustice its operation would cause. It will be hard to convince people that their welfare is safe in the hands of a Federal Government when they feel themselves the victims of unjust sectional discrimination.

And so I am speaking not only for the people of my own State, who are among the most remote from the centers of publication, but for the democratic principle involved. Its violation in a matter so directly felt by all the people bears a menace of national disaster.

JEANNETTE RANKIN.

And thereupon the committee adjourned until Friday, June 21, 1918, at 10 o'clock a. m.)

ALLEN T. TREADWAY, Massachusetts.

JOHN E. WALKER, *Clerk*.

## REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Friday, June 21, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman), presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, O'Shaunessy, White, Moore, Green, Sloan, Longworth, Sterling, Martin, and Hawley.

### STATEMENT OF MR. OLANDUS WEST, VICE PRESIDENT OIL AND GAS PRODUCERS' ASSOCIATION OF WEST VIRGINIA, CLARKSBURG, W. VA.

The CHAIRMAN. Mr. West, will you give your name and address and the business in which you are engaged and whom you represent?

Mr. WEST. Olandus West, Clarksburg, W. Va., representing the Oil and Gas Producers' Association of West Virginia.

Mr. Chairman and gentlemen of the committee, we desire to thank you for extending the courtesy to our organization for this privilege. We assure you that we do not desire to ask any special privileges on behalf of our business other than in keeping with the hazards of the industry. While the business of producing oil and natural gas is one of the most important industries in connection with the winning of the war, yet we do not wish to hold that up as a plea for special profits. However, we do believe that the producers should be allowed adequate or normal profits in keeping with the hazard of the business, and that the business should be encouraged rather than discouraged, as it now is, to some extent at least, under the present excess-profits tax law.

I took the privilege the first of the week of addressing a letter to each member of this committee, and I would like to have the privilege of introducing a copy of that letter to appear upon the record.

(The letter referred to follows:)

CLARKSBURG, W. VA., *June 15, 1918.*

The honorable WAYS AND MEANS COMMITTEE,  
*House of Representatives, Washington, D. C.*

GENTLEMEN: In view of a hearing to be had before your honorable committee next Wednesday, this association has asked me to call your attention to the excess-profits tax law, which we feel imposes an unjust amount of tax upon the producer of oil and natural gas. Especially is this true with regard to the smaller and average corporations that are operating upon a legitimate capitalization basis.

*War profits.*—The term war profits is so loosely used in connection with taxation that we wish to suggest that the producers of crude oil and natural gas do not share in such profits, except in rare instances. This fact is readily recognized when we observe that the advance in price of crude oil (Pennsylvania grade) has only been 60 per cent above normal, while the advance in price of materials entering into its production has been from 100 per cent to 200 per cent with a shortage of material and labor as an additional handicap. The producer is also compelled to pay out large sums as delay

rentals on leaseholds which he is unable to drill on account of war conditions. Thus his war profits are turned into war losses. In other words he would be making more money if we were not at war.

*Nine per cent not a paying profit.*—An oil or gas property is of short life and irregular returns. It is said that on an average a gas well will produce 80 per cent of its entire output during its first year. We should say that oil wells will produce the first year, an average of at least 50 per cent of their entire life yield. Thus it is not unusual for a producer to have an abnormal profit one year, and a loss another year, and the short life of wells makes it ridiculous to consider from 7 per cent to 9 per cent as normal profits for the oil and gas producer. To pay excess-profits tax on returns above 9 per cent means paying tax on the return of capital, except in rare instances of large holdings where development may extend over a long period. An oil or gas company would not pay back investment on a 9 per cent earning. If an operator should desire to sell a producing property he would have to sell on about a 33 per cent earning basis, on an average.

*Twenty per cent normal.*—Certainly a business so hazardous and irregular should be allowed an earning of at least 20 per cent before paying an excess-profits tax. The Treasury Department gives an oil company 15 per cent before rating the stock at par, and this is not safe unless such company has extensive holdings capable of maintaining production for several years.

Who would think of drilling an oil property expecting only 9 per cent a year return. Yet that is what the excess-profits tax law considers adequate.

*Four thousand per cent of former income tax.*—To illustrate the effect of this law upon producers, we will cite an example of the workings of such law. A corporation with which we are familiar, in the year 1914, had a valuation of \$278,000 and paid an income tax on its earnings for that year of \$1,346. Had the present law been in force at that time the company would have been asked to pay on the same earnings an income tax of \$52,219.86 or approximately 4,000 per cent increase. When we consider the fact that the company had owned the oil rights for several years and was merely selling its property, you will realize that the tax is unreasonable, and could not be defended upon any basis of equity. The earnings of this corporation for the pre-war period was over 20 per cent which was not more than a safe rate, considering the hazard; yet it must pay excess profits tax on more than half its normal pre-war income. It is needless to add, however, that had such law been in force at that date and continued, said company would be producing very little oil to help meet the present needs. And it certainly seems to us poor business to allow such a law to remain in force to handicap the production of oil and natural gas, when the production of both is so vitally important to the prosecution of the war, and to meet the demands of business in general.

*Maximum production needed.*—At the present time with a threatened shortage of oil and a known shortage of coal, a maximum production of both oil and gas should be assured; and the Oil Administrator is urging it upon the producers, who are anxious to do their part. However, the business must be allowed an equitable or normal profit in keeping with its hazard and irregular returns, due to flush production and rapid decline of wells.

Yours, very truly,

OLANDUS WEST,  
Vice President Oil and Gas Producers'  
Association of West Virginia.

In regard to the excess-profits tax we feel in our section, which is a part of the Appalachian division as it is known in the oil divisions, that the producers of crude oil and natural gas are not receiving war profits except in rare instances, which are mainly from old production. The enormous advance in materials entering into the drilling of wells and the producing of oil and gas has been so great as to absorb all of the advance in the price of crude oil, leaving us less profit than we would have had had the conditions remained normal. In other words, in drilling new wells we are compelled to pay more than 100 per cent more than we formerly had to pay, while the advance in crude oil has only been 60 per cent, speaking of Pennsylvania grade crude.

In this connection we desire to emphasize the importance of increasing the production, and especially to point out the value of a

greater output of natural gas. You gentlemen fully realize the importance of maintaining a sufficient supply of oil to meet the needs of the country, and what a handicap a shortage would be; yet perhaps you do not realize so clearly what an important factor natural gas is under present conditions. A shortage of fuel and transportation facilities exists and threatens to become acute next winter to a greater extent, possibly, than it did last winter, and therefore the country needs the maximum output of both oil and gas. The natural gas produced in West Virginia in the year 1917 was equivalent to 11,000,000 tons of Pittsburgh coal or 238,000 carloads of 45 tons each. When you consider that this gas is delivered into the furnaces and under the boilers and into the homes without any railroad transportation, and with scarcely any labor in handling after it leaves the well, you will realize what a tremendous factor it is in solving the war problem. Every 28,000 cubic feet of natural gas is equivalent to a ton of Pittsburgh coal. The fuel supply of the Pittsburgh district, upon which the Government so much depends for war materials, can be protected easier and quicker, with less labor, by increasing the supply of gas, and thereby releasing coal for other districts. The same effect would result in other gas-producing districts.

Mr. DIXON. What is the extent of the territory you supply with natural gas from your fields?

Mr. WEST. I do not know that I catch your question.

Mr. DIXON. How far do you carry the gas? What cities get the benefit of your natural gas?

Mr. WEST. Pittsburgh, Cleveland, Toledo, and Columbus, I believe, and the various cities in that section.

Mr. GARNER. But you do not come here representing a specific territory. You come here representing the oil producers and the gas producers of the whole country and you are speaking for them?

Mr. WEST. Well, more especially for the Appalachian division, in West Virginia.

Mr. GARNER. I understand that; but the principle you are advocating would apply to the industries throughout the country?

Mr. WEST. Yes; to a certain extent, especially.

Therefore the gas producers should be encouraged, we think, to produce the maximum amount of gas and not be handicapped by laws which prevent them from getting fair returns for the risk which they must inevitably take, and which prevents adequate or further development to secure the maximum amount of production.

Mr. DIXON. Do those cities regulate the price of natural gas or do you fix the price yourselves?

Mr. WEST. The price of natural gas as a rule is controlled by public service commissions. However, I could not speak for all of those cities as to whether or not the franchises in some of them do not regulate the matter, but before the companies can advance the price of gas, in nearly all instances they have to submit the proposed increase to a public service body. However, I am speaking for the producers rather than the marketers either of oil or gas. I am only interested in a small way in one company that is marketing its gas to the consumers. As a rule, all the independent producers of both oil and gas in our section sell their product to the pipe lines which distribute it to the consumers.

Mr. GREEN. It is sold to the pipe lines, you say?

Mr. WEST. To the companies who own the pipe lines, yes; that is, with respect to natural gas. The oil is sold through a purchasing agency after it is delivered into the pipe lines of the companies, which are the carrying corporation.

Mr. GREEN. Now you are speaking with reference to oil or gas, or both?

Mr. WEST. Both.

Mr. GREEN. The oil that is carried through the pipe lines is generally sold to the owners of the pipe lines, you say?

Mr. WEST. Well, there is a distinction. In our section the Seep Purchasing Agency purchases all oil which is run into the Standard Co.'s lines. For instance, the Eureka Pipe Line Co. owns and operates the pipe lines which come to our wells and receive the oil, and they carry the oil until we sell it to the South Penn Oil Co. through the Seep Purchasing Agency.

Mr. WHITE. Mr. West, what does the average individual owner of a gas well get per thousand cubic feet of gas when they sell to the so-called big gas companies?

Mr. WEST. That would be rather difficult to answer as an average. I have sold gas as low as 3½ cents and am still selling a small amount at that figure under contract made several years ago.

Mr. WHITE. And that same gas is delivered in Cleveland at 25 or 28 cents?

Mr. WEST. Yes; that is about the price, I understand. However, I am selling gas under contracts recently made at 9 cents in the same field.

Mr. WHITE. At 9 cents as against 3½?

Mr. WEST. Yes.

Mr. WHITE. So there has been a rise in the price of gas to the producer?

Mr. WEST. Yes; there has been an increase in the price of gas.

We desire especially to call your attention to the hazard of the oil and gas operator. He is compelled to stake his money on a chance, knowing if he gets dry holes it is all lost. Naturally it follows he should have a greater margin of profit than those engaged in the average business where the hazard is not great. In view of this situation and the short period of profitable life of the wells, we would suggest:

First, that losses incurred in drilling dry holes may be deducted from future profits in subsequent years, if necessary.

Second, that a profit of 20 per cent be allowed as normal profit on a fair valuation before the excess profits tax is charged; this rate to obtain until the valuation or investment is returned, and thereafter not less than 10 per cent be allowed.

Mr. GARNER. If I get the gist of the argument of you gentlemen who represent the oil industry and the gas industry—and is the mining industry similar in nature, or have you any expert knowledge on the question of mining?

Mr. WEST. I have no direct, practical knowledge on mining other than on coal mining.

Mr. GARNER. Well, we have had a great many witnesses here, and their arguments all tend in the same direction with reference to gas and oil and the mining industries; that is to say, in view of the hazard of the enterprise and the quickness with which the discovery is

exhausted in oil, we will say, and certain minerals, the same principles of taxation should not apply to them that apply to an established business that goes on for a period of years. That kind of argument appeals to me and seems to me to have some basis; but the question is arriving at the proper method of treating each kind of business. For instance, you will find one kind of mineral business which runs on for 50 or 100 years, and then there is another mineral business that is exhausted in three or four years. How are we going to differentiate between the two and give each man a fair deal?

Mr. WEST. That is the argument we make, that each business or each class of business should be allowed a normal profit consistent with the hazards of that business.

Mr. GARNER. I want you to tell us how we can do that.

Mr. GREEN. Mr. Garner called your attention to the fact that in the same business of mining there was sometimes a great deal of risk and sometimes not. There are certain quartz mines working on a very low grade of ore, but they have very large deposits, and they run along with almost the same certainty—more so than the ordinary mercantile business—whereas there are other kinds of mines in which they may make a big profit one day and the next day the ore may be exhausted, or there may be other things which cause very high fluctuations in the business. Mr. Garner wanted to get at—at least I would like to get at, because I am really not authorized to speak for Mr. Garner—how you would arrange it in the same class of business.

Mr. WEST. The suggestion I have made here, I think, would be fair to the oil and gas business and to the Government as well, and the same suggestion might apply to some other mining enterprises; that is, I say we should be allowed—or I simply suggest—a 20 per cent return until the investment has been returned. I say 20 per cent because that is not too much, considering the average life of the wells, the profitable period of the wells—in fact, I think it is too low. I have made the statement in my letter that we believe at least 50 per cent of the oil that will be produced from an oil well on an average will be produced in the first year of that well's life, and one of the best-known gas authorities has stated that 80 per cent, if I remember correctly, of the gas that will be produced by a gas well, on an average, will be produced the first year of that well's life. You can readily see that if we undertake to operate on a 9 per cent basis, with a very high excess-profits tax, that when the well or the wells are producing their flush production the Government will take back a tax on a great deal more income than it is entitled to as proper income; in other words, it will be receiving a tax on the return of capital, or taxing the investment. On this basis of 20 per cent we have given five years as the average; I am satisfied that three years is more than an average for the life of wells, placing them on the same producing basis as of the first year. We may have an oil well that will produce oil for 5 years, 10 years, or 20 years, and in some rare instances longer than that, but they are the exception, and the production is so low after the first few years that it would be impossible, except in rare instances, to charge back the proper depreciation as an exemption from taxation in order to cover the first few years of flush production.

Mr. O'SHAUNESSY. Do you couple these two things together—this 20 per cent and the allowance for the expense of dry holes—or is that an alternative proposition?

Mr. WEST. No; that is separate. Here is the reason for the suggestion that the cost of dry holes should be permitted to be deducted from future profits, because under the present rulings of the tax department if an operator should lose \$25,000 in drilling dry holes in the calendar year 1917, in which he did not have sufficient profit against which to charge the cost of these dry holes, and he should have a profit of \$25,000 in the year 1918, he would have to pay a tax on the profit of 1918, without considering his loss of \$25,000 in the previous year.

Mr. O'SHAUNESSY. You desire, by the taxation method, to remove the speculative feature and to safeguard the investment?

Mr. WEST. Not completely so.

Mr. O'SHAUNESSY. But partially so?

Mr. WEST. Partially so; yes. In other words, when you start to drill a well, you must take capital to make an investment. If you secure a well you will have an investment, but if you secure a dry hole you have a loss. However, it costs you just as much to drill that dry hole as it would have cost you to drill a producing well, except that you can recover some of the materials.

Mr. O'SHAUNESSY. Do you not think it would be a very difficult thing to administer such a thing? How would you do it—by taking the affidavits of the owners?

Mr. WEST. Well, all corporations and individuals are required to make their reports. They are required to show their losses and their expenses and practically every item that enters into the conduct of the business.

Mr. O'SHAUNESSY. Let us presume that the ownership of a corporation changes. Would you apply the method you have suggested where the ownership of the corporation had changed and where the loss of the previous year was while the corporation was in the hands of some other people? It would be the same corporation in name, but it would possibly be a different ownership, and that being so would you look for the same reduction?

Mr. WEST. In keeping our books for depreciation we always keep each well separate, in order to keep a proper account against the drilling of each well, and each company should have such a record as would show just what has been charged against that well. When all the depreciation has been charged off against the cost of drilling that well, then the books should show that that well is clear and the balance of the income goes in as profit, with no further charges of depreciation deducted from it. I do not think it difficult to make a report covering these items. The only thing that would be necessary would be to carry all of the charges against the drilling of dry holes in such a way as to properly report them, and in order to get credit for them against future profits.

Mr. O'SHAUNESSY. How many dry holes are drilled, on an average, before you strike the real thing?

Mr. WEST. Well, I could not answer that. I heard the assistant to the oil administrator state a short time ago that 90 per cent, I believe, of the wildcat wells were dry. I think these are his figures. The percentage of dry holes in most any field will run from, I should say, 10 to 30.

Mr. GREEN. I do not believe I fully understand just what you desire. Do you ask that a larger allowance be made for depletion and depreciation, or do you want some allowance on account of previous expenditures? You mentioned the matter of dry holes that have been drilled. Do you want some allowance in that direction that is not now made, or just what is it you wish to be done?

Mr. WEST. We think that the expense of drilling dry holes should be deducted as a loss against profits, whether those dry holes are drilled in one calendar year or in another.

Mr. GREEN. Then you want the Treasury Department to go back of the calendar year in which the taxes are levied to the previous years and take out the expense of drilling dry holes, or at least make some allowance for it in the way of capital invested?

Mr. WEST. I would put it this way: Allow the drilling of wells to be carried in the investment account, the same as drilling producing wells.

Mr. GREEN. Then there we have it. You want the drilling of these dry holes carried in the investment account and included as a part of the capital invested?

Mr. WEST. That is the difficulty in using that term. It should be charged off along the same lines as charging off the cost of drilling a producing well. For instance, the department allows us six years' time in which to charge off the cost of drilling a well.

Mr. GREEN. How many years?

Mr. WEST. Six years; in the case of my corporation that is the ruling.

Mr. GREEN. I think that is proper. Do you object to that?

Mr. WEST. Well, it is all right so long as you have sufficient territory to maintain that ratio, but it is too long a period if you have your property drilled up, because you are liable not to have income sufficient to charge that off over that long a period. We accepted it in the case of our corporation because we thought we had enough wells and enough territory that we could go through on that basis, but it would be hard on individuals or corporations who had their property all drilled up.

Mr. GREEN. I do not know what the rest of the committee may think about it, but to me that would seem about as fair an arrangement, to apply generally, as they could make. Do you think that in its general application it does not work out well?

Mr. WEST. There would naturally be many cases where it would work a hardship. My rule would be, and one that I started to follow, to charge off depreciation on the cost of drilling a well in proportion to the size of that well and its declining ratio or rate. For instance, when we drill a good well we can very readily estimate whether that well is going to keep up its production over a reasonably fair length of time, or whether it will have to be abandoned at the end of, say, one year, two years, or three years. We have drilled several wells that we realized we would have to abandon within one or two years. Now, if you charge off depreciation on a six-year basis you are bound to lose on such abandoned well; in other words, you lose on every well that you abandon before the six-year period, and unless you have enough new wells coming in with flush production to cover those losses you will be the loser. As I say, that will be fair to those who have sufficient territory to maintain their production over a long period of years.

Mr. GREEN. The matter you are speaking of now is one of Treasury regulation and not of the statute itself. In making these Treasury regulations they must, to a certain extent, proceed the same way we do on the committee; we have to make some general regulations; we can not make one for every individual case; we must try to make a general regulation which will, as nearly as possible, fit all of the cases. It will probably not work out equitably in every case, but, in fact, there is no tax that works out with absolute equity, so far as that is concerned. Now, do you think there ought to be a shorter period?

Mr. WEST. I believe that the Revenue Department would be inclined to be fair in any special cases, and regulate the depreciation in drilling wells on a fair basis. I understand they have it within their power to do so.

Mr. GREEN. Yes; I think so. I think an allowance could be made to cover that particular matter.

Mr. WEST. I do not understand that that should be covered in the law.

Mr. GREEN. It is not a matter of statutory regulation, except in a very general way.

Mr. WEST. I think the department would concede any reasonable rules governing that depreciation. However, they have never, so far as I know, permitted more than 10 per cent depreciation on casing and pipe.

Mr. GREEN. That is a matter which would have to be taken up by some one more expert in matters relating to oil wells than I am, and one who would know what percentage ought to be allowed in such a case as that; some one on the committee who has more experience with wells than I have could tell better about that. Perhaps you can enlighten us somewhat on that point.

Mr. MOORE. Mr. West, you speak for the West Virginia oil and gas region particularly?

Mr. WEST. Well, our association is more especially in West Virginia, but we have in our membership men from Ohio and Pennsylvania.

Mr. MOORE. Could you confine your district within such limits as to say about what proportion of the wells go dry?

Mr. WEST. They all go dry finally.

Mr. MOORE. I mean, go dry to be affected in the manner that you have indicated, applying it solely to the revenue proposition.

Mr. WHITE. What proportion of the wells are dry wells—dry when you drill them?

Mr. WEST. You mean what proportion are nonproducing and what proportion are producing?

Mr. WHITE. Yes.

Mr. WEST. I think in West Virginia the proportion would be about 10 per cent—10 to 15 per cent—of the wells in producing fields are dry. This would not refer to wildcat wells.

Mr. MOORE. You are suggesting an allowance, as I understand it, for dry wells?

Mr. WEST. Yes, sir.

Mr. MOORE. By that I understand you to mean wells from which you honestly attempted to produce oil but which you found to be dry?

Mr. WEST. Yes, sir.

Mr. MOORE. Not wells that have produced and gone dry, but those that have been driven only to find nothing at the end of the well. That is what I understand you to mean.

Mr. WEST. That covers the case.

Mr. MOORE. What percentage of those do you find in a given district? What percentage of dry holes do you find in a given district?

Mr. WEST. I do not believe that we have statistics covering all of the districts. I believe that the reports would indicate that from 10 to 15 per cent of the wells being drilled now in our State are dry. In some districts over the country, I notice from the reports it is as high as 30 per cent, and possibly higher, but to give you the percentage of dry holes, including wildcat wells, which are drilled away in advance of production, I could not do.

Mr. GREEN. You do get an allowance now for the dry holes drilled during the taxable year, do you not?

Mr. WEST. Yes, sir.

Mr. GREEN. But you want to go beyond that.

Mr. MOORE. How far do you go ordinarily before you abandon a well as dry, or how deep do you go?

Mr. WEST. We usually drill through all the known producing sands in that field and sometimes below.

Mr. MOORE. Could you give us any idea of how much expense there would be on an average before you give up and abandon a well as a dry hole?

Mr. WEST. To drill a dry hole at this time would cost from \$5,000 to \$9,000, I should say. I mean that would be the loss, after recovering the material.

Mr. MOORE. Do you call that operation which turns out to be a fluke after drilling a dry hole?

Mr. WEST. Yes.

Mr. MOORE. Do you call it a dry well?

Mr. WEST. Yes.

Mr. MOORE. It is simply a fluke, and there never was any oil there?

Mr. WEST. Yes, sir.

Mr. MOORE. It is for that sum that you think an allowance should be made?

Mr. WEST. Yes, sir.

Mr. MOORE. It is for that cost or expense of a fluke for which you think allowance should be made?

Mr. WEST. Yes, sir.

Mr. MOORE. Is there not an allowance now made for that?

Mr. WEST. An allowance is made for it during that calendar year, but the hardship lies in the fact that if the producer has not sufficient income during that year to offset his loss, he gets no credit for the loss against his taxes.

Mr. WHITE. In other words, if the producer had an income of \$1,000 from some well, and in some other place drilled a dry hole that cost \$6,000, that would be a cost for which he should get an allowance?

Mr. WEST. Yes, sir.

Mr. GREEN. You would want him to carry over this loss to the next taxable year and get an allowance for it, or how do you propose to arrange that?

Mr. WEST. I should have it carried over into the next year as a charge or credit against his profit in the next year, or in the future years, until the profits of his business covered this loss.

Mr. MOORE. Has the oil business in West Virginia been fairly profitable during the last year? I mean both the oil and gas business?

Mr. WEST. From the independent producer's standpoint, I would say that it has not been as profitable as it should have been. In other words, the cost of material has been so high that it has handicapped our development.

Mr. MOORE. There has been quite a large demand, has there not?

Mr. WEST. There has been a very large demand for both oil and gas.

Mr. MOORE. And you have been supplying that, or you have been meeting that demand, have you not?

Mr. WEST. No, sir; we have not been meeting the full demand. There was an extensive shortage of gas during the last winter throughout the entire district supplied by gas from West Virginia.

Mr. WHITE. Was there more production during the three months from January 1 to April 1, 1918, than during the three months from January 1 to April 1, 1917? In other words, the production was greater in 1918, was it not?

Mr. WEST. The production was less in 1918, as I recall it, for those months. In other words, the production is dropping off. In regard to our own production, our production dropped about 30 per cent last year, and I figure that it will drop more than that this year unless we can bring in new wells. It does not look encouraging for drilling new wells under the present circumstances, and the present price of oil as compared with the price of material.

Mr. MOORE. Is there any hesitation to start new oil wells?

Mr. WEST. There is considerable hesitation.

Mr. MOORE. Are any new ones being started?

Mr. WEST. Oh, yes; there are new wells being started all the time, but, of course, they are in what we would call good locations. In oil fields at all times there are other locations that are not so good. They shade all the way down to a mere chance. Now, an operator can afford to drill in exceptionally good locations under most conditions, but he can not take chances where they are greater, or where the location is not good. In other words, an operator may have 20 locations that he would be afraid to drill on account of the enormous cost at the present time because his chances of getting good wells would be only small.

Mr. WHITE. What is the average production per well in West Virginia now?

Mr. WEST. The average production in the year 1916, I believe, was about 1.6 barrels. That is the latest average that I have in mind. I have seen the average for 1917, but I do not recall it.

Mr. CRISP. In answer to a question by Mr. Moore, you stated that the business of the independent oil producers in West Virginia was not as profitable as it should be. I would like to know what percentage of profit they do make, and what, in your opinion, is the percentage of profit that they ought to make? In other words, your answer that it was not as profitable as it ought to be left the committee entirely in the dark as to what profit they do make.

Mr. WEST. That is a question that can not be answered by myself, because some operators will be making, perhaps, a large percentage, while others may be losing. It is a game of chance. If you get a good well, you will make money even if your taxes are high, but if you get dry holes or poor wells, you will be losing money. The point I wish to make especially, is the fact that operators were not in condition to go ahead and do as much development work as they would have liked to do. In other words, they are compelled to carry their leaseholds at high rentals rather than test them out on account of the high cost of materials as compared with the price of crude oil.

Mr. MOORE. You sent a letter to the committee a few days ago, did you not?

Mr. WEST. Yes, sir.

Mr. MOORE. It was quite a comprehensive treatise on this question.

Mr. WEST. I have asked that a copy of it be filed in the record.

Mr. MOORE. I read that letter yesterday. Now, may I say this: You have been here for several days and are fairly familiar with the routine of the committee's work; you have heard some of the gentlemen who have appeared before us, and you are unquestionably familiar with the fact that our job is to raise money.

Mr. WEST. I appreciate that.

Mr. MOORE. For that reason we have got to inquire a little bit into the business relations of those who come before the committee with a view to being relieved from taxation. If the oil business is prosperous and can bear more taxation, I presume that is a question that concerns us more than any question of reducing taxation. Now, can you make any suggestions as to how we can get more money out of the business you represent without unduly interfering with its profits or operations? I know that that is a pretty hard question to put to a business man, but the President of the United States has declared that we must have \$24,000,000,000 next year to carry on the war, and the Secretary of the Treasury tells us that we must raise \$8,000,000,000 of it by taxation, and a large percentage of that certainly must come out of business. Now, how will we get it? I know it is a hard question and I hope you will think it over.

Mr. WEST. I realize your position, and if I may be excused on the side for suggesting it, I will say that I am afraid that if you raised more money than you are now raising out of the oil and gas producers you would handicap the producers very much. Personally, I should like to see more money raised by bond issues than by direct taxation upon business under these conditions. However, in that I am not speaking for the oil people.

Mr. MOORE. The President says he wants \$8,000,000 from bonds this year, and in all probability we will have to raise another \$8,000,000,000 that way early next year.

Mr. WEST. I realize that.

Mr. MOORE. And the public has been pretty well pressed already on the bond question, or on the liberty bond question. That being true, you will not blame the committee for asking this question.

Mr. WEST. I certainly do not.

Mr. MOORE. Especially the minority of the committee, although we are all working to do the best we can to help the President get this money.

Mr. WEST. I would say that the oil people are willing to pay their share of taxes for this war if it takes their last dollar, and we will try to meet any higher rate of taxation that you may impose, but what we do desire is that it be properly distributed, and not be in such a way as to take an excessive amount from individuals who are not in a position to stand it.

Mr. MOORE. We surely should not discourage business nor break it down if we can avoid it. Now, what policy would you suggest, or what recourse would you suggest, in view of the fact that we must raise \$2 to every \$1 now being raised by taxation? Would you place it on the user of the oil? You have heard a good deal of testimony here about the development of automobiles and the increasing number of automobiles. Would you pass it on in the per gallon price to the user of the oil or to the user of the gas?

Mr. WEST. I do not like to go on record on such short notice. I did not realize until yesterday evening that such questions were likely to be asked. I would not like to go on record as suggesting any specific method. You realize the position in which the producer is placed. He is unable to pass any part of this tax on to the ultimate consumer. He is obliged to sell his product at a price fixed by some one else, and to pay for the materials at a price fixed by some one else.

Mr. MOORE. Could you not help us a little bit by telling us who that somebody else is, so that we might possibly raise a little more revenue from that source? You sell your oil to whom?

Mr. WEST. We sell oil to the Seep Purchasing Agency which purchases it for one of the subsidiaries of the Standard Oil Co.

Mr. MOORE. The profit is fixed by those who buy the product from you?

Mr. WEST. Yes, sir; that is true.

Mr. MOORE. They refine it, pipe it, and sell it to the consumer?

Mr. WEST. Yes, sir.

Mr. MOORE. It might be that we could go along the line a little bit to those to whom you sell, and then follow it up by going after those to whom they sell. Have you any suggestions to make along that line?

Mr. WEST. As a rule, the purchasing agencies regulate the prices they pay for crude oil by the amount they get for it, and if you place it at the other end on the consumer, they may feel that they would be asking the consumer too much and that they must buy crude oil for a less price. That has been the argument heretofore made to us when we have suggested that we should have more money for our product. Now, how that plan would work out in effect, I do not know.

Mr. MOORE. Have you sought to get more money for your product recently? Your labor costs have been rising all the time. Have you sought to meet that by obtaining a higher price for your product?

Mr. WEST. Only indirectly. I filed a statement with the Federal Trade Commission about a year ago, when they asked us for a report on the cost of producing oil, in which I took the position that Pennsylvania crude oil should be selling for \$5 per barrel to be in keeping with the prices of other materials at that time. I have been informed that the oil administrator looks with disfavor upon any advance in the price of crude oil at this time.

Mr. WHITE. As a matter of fact, what price are you getting?

Mr. WEST. We are getting \$4 per barrel for Pennsylvania crude.

Mr. MOORE. If the Government should levy an additional tax, which it might be compelled to do owing to the requirements of the war bureaus, is it not very likely that that tax would express itself eventually in an increase in the price all along the line, and would you not be covered in that way?

Mr. WEST. I would frankly state that if this will increase the price of oil so we can stand it, we will make no objection to any higher rate of taxation, but we would suggest that the inequalities be ironed out of the law so that it will not bear too heavily in some instances.

Mr. MOORE. If you could get a higher rate for your crude oil, you would not object to a higher tax?

Mr. WEST. Certainly not.

Mr. MOORE. Then, probably the fires ought to be set burning under somebody else in order that the tax might be justified as against the producer.

Mr. GREEN. It is difficult for us to reduce taxes, as you know. If we cut them down at one place, in all probability we will have to increase them at another. Now, as Mr. Moore has intimated, when we make these reductions somewhere, we try to look elsewhere to get the same amount or more. Now, in your own business, what can we do that will iron out those inequalities that you speak of? Can you tell us?

Mr. WEST. I do not like to undertake to say what another man can do or should do, because I do not know enough about the other fellow's business to justify me in saying what he should do.

Mr. GREEN. Have you prepared any plan either with reference to the statutory provisions or the Treasury regulations which would iron out these inequalities that you refer to, that you can give us in writing or submit along with your brief?

Mr. WEST. I have three or four, and believe I have read two.

Mr. GREEN. You have expressed yourself so far in a very general way; more general than we could express the rule by statute and more general than the Treasury Department could express it by regulation. What we would like to have, if we can, would be the statutory provision or the Treasury regulation which you think ought to be adopted. Have you anything of that kind?

Mr. WEST. I think the suggestions I am reading off under 1, 2, 3, and 4 would properly come under that head:

3. Inasmuch as producers must carry leases on undeveloped territory on which they must pay rental and the expense of testing for development, we believe that provision should be made for the valuation of undeveloped leaseholds or productive lands after oil or gas has been discovered thereon. Such valuation to be reasonable, of course.

4. The valuation of oil and gas properties should be made without discrimination between leasehold ownership and ownership in fee, other than in proportion of interest represented, and the valuation of the property should be maintained by adequate depreciation and investment of income, so as to preserve the valuation of the property on as equitable a basis as a manufacturing enterprise, a railroad, or any other important business enterprise, so far as consistent considering the hazards of the business.

Mr. HAWLEY. What is your suggestion, Mr. West, that provision be made in the new bill to take care of cases like yours, or that the Treasury Department be given increased discretion for those purposes?

Mr. WEST. Either would be satisfactory.

**STATEMENT OF MR. GEORGE W. POUND, GENERAL COUNSEL,  
MUSIC INDUSTRIES, CHAMBER OF COMMERCE, 105 WEST  
FORTIETH STREET, NEW YORK CITY.**

The CHAIRMAN. Mr. Pound, give your full name, your business and whom you represent.

Mr. POUND. George W. Pound, general counsel, Music Industries Chamber of Commerce, 105 West Fortieth Street, New York City.

Mr. Chairman and gentlemen of the committee, I believe I will have to disappoint you in coming here and making no appeal whatsoever for any reduction in our tax under this bill. We have a full realization of your difficulties. We are anxious to do our part. We are not an industry which has profited by the war. We have been very seriously depressed by the war. Our whole thought and our whole endeavor at the present time is to preserve our factory organization, and our business relations to that time after the war when we believe we can go ahead to a larger business.

Prior to the war Germany had 90 per cent of the entire export business of the world in musical instruments. In chemicals and in musical instruments she has probably met her greatest industrial loss. We are offered to-day, if labor and material conditions do not prevent us, substantially 80 per cent of the export business of the world in musical instruments. That business, we believe, we can have after the war if we can save the skeleton of it now. The merchants of Australia and other countries, for instance, have entered into contracts that they will buy no musical instruments from Germany for a period of 10 years after the war.

Germany has now organized in our industry, with Government sanction and assistance, a corporation capitalized at \$13,000,000 for the purpose of regaining the export business in musical instruments after the war. England has a similar organization organized and at a similar capitalization. Even little Sweden has one of \$1,300,000. It is the desire of all these countries—and there are several industries in our line—to go after this export business the moment the war is over, feeling that they have lost their supremacy in that industry by war conditions.

We are making in this country, gentlemen, musical instruments which we never dreamed of making prior to the war. We believed we could not make them, most particularly in reference to band instruments. We are now making, for instance, more band instruments than the entire world put together, although that is not an element of the industry for which I speak, and they are better than has ever been produced in the world elsewhere.

With the saving of our factory organization we can get this business after the war without any question. Our business has been very seriously curtailed. We are running under a curtailment now of probably 45 per cent. Our great difficulty is labor. We can not compete with the prices paid by the war-product people. Our industry is a rather specialized industry. Our men are largely over the draft age. It is a trade that descends with pride from father to son. We are employing many women and many children. It is an interesting fact to say that it is estimated that 80 per cent of our tuners are blind men. There are two schools that educate blind men for our work. Piano tuning is peculiarly adapted to the man who

has been so unfortunate as to have been deprived of his sight. We are planning now to put into our factories so far as possible, in conjunction with the Government boards and bureaus, men who are crippled. Our is a work which they can easily do. It is not a work involving hard labor of any kind, but rather slow and painstaking labor.

The scale of wages abroad, of course, is very much less than the scale of wages that we have to pay even in peace times, and under ordinary conditions we have not been able to get largely into the market of the world; in fact, America never had over perhaps 10 per cent of any export business in musical instruments.

We are not competitive with the production of war products. In our entire industry this year we would not use, for instance, over 670 tons of steel or over 20,000 gross tons of iron, the waste which would lay around an ordinary steel mill. We do not use woods which are competitive with airplane and other Government war products.

Therefore the point I wish to emphasize, gentlemen, is that we desire merely to preserve our factory organization, to preserve our business existence to that day when the war is over, when we believe we can make America the greatest musical-instrument producing country in the world. The war has given us this opportunity. As I have said, we are doing things to-day that we never dreamed we could do, and if our industry can be preserved we can go out into the world's markets after the war and we believe we can conquer those markets.

As a whole the industry—I am speaking now very largely from the piano end of it, and for this purpose I will confine myself to that element of the industry—is not what is known as a profitable industry. The difficulty in our industry has been, unlike the automobile industry, for instance, which has had its existence and its expansion upon cash, our business has been upon credit. The curse of the musical instrument business in this country has always been its extensive and prolonged credits, running on an average 22 months. The business as a whole, therefore, has not been profitable, and we confidently look forward, perhaps, that this condition of stress and difficulty which we are now going through within this war will perhaps after all redound to the benefit of our industry after the war is over, if we can survive with the war.

It seems to me, gentlemen, if I may be pardoned the suggestion, that one of the great difficulties here is that certain elements of our Government do not cooperate with this committee in what really should be the final analysis of revenue. Conservation is a beautiful theory, but there can not be conservation without production. It seems to me that there should be here every effort to permit the industries of the country to produce. Production will make revenue, not conservation. Conservation is all well enough along certain lines, but conservation, carried as it is now being carried against business, is going to result not in conservation but in the silence of destruction, because business can not exist. It is only by production that your committee can get that which it seeks, and it is only by production that liberty bonds, thrift stamps, and such things, can be purchased. It does seem to me that the first thought of every element of this Government should be to encourage in every sense

production. There is no such thing as an essential or a nonessential. There are, to my mind, food products and war products, and then everything else. We must win this war and we must do everything to win it, but it is not necessary in order to win the war to entirely ruin and to unnecessarily cripple industry.

Now, gentlemen, my suggestion is, and I will anticipate the questions which I imagine will come, that we do not feel we have a right to come to you and ask for a reduction of this tax, and we do not. It has had careful thought along that line. We have organized our industry to meet the condition as it now is under this act. The present act taxes the automatic—if I might use this expression—or the mechanical mechanism of the piano instrument. No nation in the world as yet has taxed what is known as the straight piano, the ordinary upright piano. That has always been regarded as the music of the home; perhaps as the poor man's music and as something which should not be taxed. The present tax by an agreement between the industry and the Internal Revenue Department has been so adjusted that it is paid at the source by the actual makers. It has not in all cases been passed along in our industry. That is one of the elements of ethics which seems to have been entirely individual. Some of our factories have passed it and some have not, and at least in one instance it has been divided. We have organized our industry to meet this interpretation of the present law. We can get along in that way, although we expect a very serious depression this coming year. The condition of iron and steel and labor will make it a problem for us to exist. Upon whatever business we can do we are entirely and perfectly willing to pay the tax. Our principal worry and our principal problem, as I say, is to conserve our industry and preserve our factory organization to those days that will come after the war.

Mr. HULL. Mr. Pound, you spoke about impairing the productive capacity of the country. Do you refer simply to your industry or do you have some others in mind?

Mr. POUND. I have many industries in mind.

Mr. HULL. The productive powers of which are being impaired?

Mr. POUND. Yes, sir.

Mr. HULL. You think every kind of industry should run at full tilt, even though the labor and materials are needed in the munition and other war-producing factories?

Mr. POUND. No, sir; not at all.

Mr. HULL. To what extent, then, should they be curtailed?

Mr. POUND. For instance, take an industry like ours, which is not competitive with war production; there is no necessity for the curtailment of such an industry. Of course, every industry can not exist in its fullness, and I do not expect that. As I have said, our men are practically all over the draft age and those we have had that were not have gone. We use so little material, only 670 tons of steel in the entire industry for the entire year of 1918; that is such an infinitesimal element and so small that it can not enter into the problem. As one of the large steel manufacturers said to me the other day in discussing that matter, "Sir, that does not represent the waste that is laying around our mill properties."

Mr. HULL. You do not use any labor that could be used in the shipbuilding industries?

Mr. POUND. Not that I know of. Not to any extent that would be appreciable.

Mr. HULL. And is that the situation of all these other industries you think are being impaired?

Mr. POUND. No, sir; I can not speak for the others. I have not made a study of the others but I have made a study of our industry.

Mr. HULL. You do realize, though, do you not, that there is a scarcity of labor and material; at least, in a number of the vital war industries?

Mr. POUND. I think that is so, but I think very largely it is a question of failure of proper distribution, proper allocation. I know the steel industry feels that is true, and I know many of the other industries feel that way.

Mr. HULL. You do not think, then, that their proper development to meet the war necessities would be interfered with by every industry in the country, no matter what it produces, running along normally and making reasonable developments and expansions in its business?

Mr. POUND. No; I would not believe in any expansion of ordinary business at this time; and if you will pardon me right there, you take our factories, the moment this war opened I came here to Washington and tendered every factory, every piano factory in America, to the Government, all or any portion of them, every man, every foot of floor space, and the Government tells me that they have dozens more factories than they can use. The Signal Corps told me only the other day that they had four times the factory space they could possibly use. We were doing work for these airplane factories prior to the war and doing it satisfactorily and efficiently and far better, I will say, than it is being done now, and the moment this war came on these contracts were given, for instance, to these airplane men. Instead of continuing the work in our factories, solving and satisfying a labor problem, a feeding problem, a housing problem, and a transportation problem, and keeping labor at home and contented, they went to work and built great, immense factories, new ones, covering miles of territory, creating a housing problem, a feeding problem, a transportation problem, and a labor problem, and a great congestion. I say those things were wrong, gentlemen. We could have done every bit of this work, and in our industries alone to-day, gentlemen, we can do every bit of the airplane and wood product construction that you want in this country for your war purposes, and we will do it, and I beg the privilege of doing it.

Mr. HULL. Then your industry could transform itself?

Mr. POUND. Gladly.

Mr. HULL (continuing). Into the production of most vital and valuable war products?

Mr. POUND. We are making now in our factories airplane parts, army wagons, fuse cases, ammunition and powder cases, and such things, but they will only give us an insignificant amount of work to do. They tell us frankly that they have a hundred times as much factory space as they need.

Mr. HULL. You want to develop your regular business, though, rather than be encroached upon so much, do you not?

Mr. POUND. If we can be permitted to add enough to our regular business to preserve our industry to a date after the war we will do all of the Government work you will give us and very gladly.

Mr. HULL. I was not quite clear whether your factory was being impaired by a failure to get some of this war business or whether it was being impaired by some kind of a restriction on its normal and regular production.

Mr. POUND. I would say that we are impaired very seriously by labor conditions. Able-bodied and expert men do not stay in our factories at all; we have the older men, we have the women, we have the blind men, and we are going to have the cripples as soon as we can get them. Our impairment comes very largely from labor conditions.

Mr. GREEN. You say you have endeavored to get this work from the Government.

Mr. POUND. Yes, sir.

Mr. GREEN. And that it would have helped you to keep your factory organization together if you could have obtained it.

Mr. POUND. Yes, sir.

Mr. GREEN. What reason did they give you for not accepting your proposition?

Mr. POUND. They said they had more factory space than they needed.

Mr. GREEN. I thought you came down here to-day prepared to say that you had sufficient factory space for them.

Mr. POUND. I did.

Mr. GREEN. But they went ahead and built additional factory space.

Mr. POUND. Yes; they built new factories instead of giving the work to the factories already existing.

Mr. GREEN. Which department had that in charge?

Mr. POUND. The Signal Corps and various other departments, but the Signal Corps very especially, sir. I have had this matter up with Mr. Peek, who is very kindly disposed toward us, and such men as the Hon. P. P. Noyes, and he thoroughly appreciates our suggestion and believes in it, but the powers that be have permitted these great factories to be built, miles in length, and entirely disrupting all labor and business conditions wherever they exist, when right alongside we had factories already equipped with the most magnificent machinery in the world. Surely if we are able to build a Steinway piano can we not build a rough box to carry ammunition and fuses?

Mr. GREEN. You say you can build those things cheaper than these factories?

Mr. POUND. Yes, sir; and do it better, because we have better equipment.

Mr. GREEN. You can do it better and do it cheaper?

Mr. POUND. Yes, sir.

Mr. GREEN. And are ready to do it?

Mr. POUND. Yes, sir.

Mr. GREEN. I do not doubt it in the least. We have found that there has been a tendency on the part of some of these departments to see if they could not expand larger than another department, get more men in their employment, get a larger organization and get promotions. We would like, if we could, to stop this in some way, but we have not just seen the way to get at it. Perhaps one reason

is—and which I think is the reason—that Congress has abdicated too many of its powers.

Mr. O'SHAUNESSY. You said that you wanted to conserve your factory organization. What specific recommendation have you to make to the committee on that point?

Mr. POUND. If you will leave the language of this law as it is—

Mr. O'SHAUNESSY (interposing). You did not say that.

Mr. POUND. I beg your pardon, I though I did. We have organized our business along that line and that will the least disturb us, and we are going to have very much disturbance otherwise.

Mr. MOORE. Mr. Chairman, at this point may I insert in the record a letter from Congressman Small suggesting a tax on meal tickets? (Said letter follows:)

HOUSE OF REPRESENTATIVES,  
Washington, D. C., June 21, 1918.

HON. J. HAMPTON MOORE, *House of Representatives.*

DEAR MR. MOORE: I am addressing you as a member of the Committee on Ways and Means suggesting another source of revenue which may not have received consideration. I suggest a reasonable tax on meal tickets issued by hotels and restaurants above a certain minimum charge. I suggest exempting all checks for meals below, say, \$1 and placing a graduated tax on meal checks above that amount. For instance, a tax of 5 cents on checks above \$1 and less than \$1.25; 10 cents on checks above \$1.25 and less than \$1.50; a tax of 20 cents on checks more than \$1.50 and less than \$1.75; 30 cents on checks more than \$1.75 and less than \$2, and gradually increasing as the amount of meal check increases. This tax to be applied to each individual person and requiring meal checks to be made out separately for each individual. Such a tax would have at least two merits: It would raise revenue and would also discourage extravagance. This tax should be collected by the hotel or restaurant under regulations to be prescribed by the Treasury Department.

While the majority of hotels now serve meals on the European plan, a similar graduated tax might be placed upon rates for meals by the week and by the month above a certain sum, this sum to be fixed in accordance with the standard medium price for reasonable board.

Very sincerely,

JNO. H. SMALL.

#### STATEMENT OF MR. A. E. KENNEY, PARKERSBURG, W. Va.

Mr. KENNEY. Mr. Chairman and gentlemen of the committee, I was appointed at a meeting of the Oil and Gas Men's Association to present a few remarks to your committee. The Oil and Gas Men's Association is an organization composed mostly of independent producers in Pennsylvania, Ohio, and West Virginia, but more largely in West Virginia, with headquarters at Parkersburg, W. Va.

Mr. West covered the territory very completely as to our grievance; we do not like the term grievance, but we deem it our duty to appear here and make a statement in reference to our production and a possibility of the production being decreased by legislation that will transgress upon capital, upon investments, and call it profits.

The question asked by Mr. Moore was a very legitimate one and a very proper one, in my opinion. I do not hesitate to say that the oil men of this country desire to cooperate with the law-making department and with the executive department of the Government in raising more money. It is necessary to raise money; it is necessary to raise \$8,000,000,000 by taxation, and it must be raised from the country. But we do not desire you to do anything that will hamper a business that is as essential to the winning of the war as is the oil

business. The production of oil is almost as essential as men. The most important man to-day is the soldier and the next most important man is the producer.

Mr. West was asked whether he was producing as much oil as he had produced heretofore. He said that in his case he was producing 30 per cent less, but the average is 29 per cent less. We are producing 29 per cent less oil than we were a year ago. The business can not afford that and the country can not afford it. While Mr. West was modest in saying what we were receiving for our oil, I do not hesitate to say that in proportion to the expense of wildcatting, operating, and carrying leases, we ought to have \$8 a barrel for petroleum oil.

Four States, New York, Pennsylvania, Ohio, and West Virginia, are the only places in the known world where white-sand oil is produced, except, perhaps, a small part in California. The finest lubricating oil in the world and the finest quality of oil in the world is produced in those States. It is gradually, however, going down the toboggan, and some inducement must be offered to the operator to produce more, because the country demands and must have more. While we are getting \$4 a barrel for our oil the materials we use have greatly increased in price. I have some data which I received yesterday, but I believe the proportion is a great deal greater now. Boilers cost 248 per cent more than they did a year ago, while we are receiving 60 per cent more for our oil.

On last Saturday I had a gentleman from your city, I believe, Philadelphia, in Ritchie County, W. Va., and he put up the money to drill a well. We offered five contractors \$6,800 to give us a dry-hole proposition, so that we could pay them, put on our hats and walk away, they to furnish the material, and use the material for whatever they could get out of it. Within a mile of that place I paid \$2,800 a few years ago for a dry-hole proposition, within a mile of that territory. You can see what that is. If I told you it cost four times as much to-day to do hauling down there, you would think it was a ridiculous statement, but I tell it to you in this way: Teams charge \$8 a day that you could hire for \$4 a day a few years ago, and they tell you that they will only haul 5 joints of casing instead of 10. They say, "If you do not like it you will not get the hauling done." In going to Kings Knob they now take two days, where formerly they went in one day. The percentage there is 500 per cent, that being the increase. As I say, the increase in the cost of boilers is 248 per cent; rigs 30 per cent. That applies to steel rigs and there would not be that much of a change in regard to wood rigs. The increase in wire is 133 per cent; steel tanks, 173 per cent; casing, 127 per cent—but that is not iron casing; iron casing is the kind that should be used, because its life is longer, and the increase in iron casing is over 200 per cent—tubing and pipe, 125 per cent; bull rope, 118 per cent; the Reed gas engine, 118 per cent, and so on.

Mr. MOORE. Those are materials that you have to buy?

Mr. KENNEY. Yes; those are materials essential to the drilling of a well. While we have had an increase of 60 per cent, all of the materials which are necessary in the driving of a well have increased from 100 per cent up to 300 per cent. Then there is the question of labor. We are now paying drillers \$8 a day. We are compelled to take men from the farms who will go in as tool dressers and work as

tool dressers on one or two wells and then they call themselves drillers and we pay \$8 a day for that kind of labor.

Mr. HAWLEY. Taking into consideration the quantities you use of those materials and the prices you pay for such quantities, what is the average increase in the cost of the materials you use?

Mr. KENNEY. Well, I should say 150 per cent. I believe Mr. West said the increase was from 100 to 200 per cent and I believe he was very conservative in that estimate. Including in that the increased labor cost and the increased teaming cost, and so on, I estimate that the average increase is over 300 per cent. In making our estimate on that well for the gentleman from Philadelphia we estimated the hauling at \$600, while the hauling on the \$2,800 well was \$150.

Now, these are concrete illustrations and they apply throughout the whole State. I believe Mr. West was asked as to the percentage of dry holes, and his reply was about 30 per cent in the fields, but in our county we drill 23 wells before we find the first well. Before we can call it a field we drill 23 wells. So by taking all of the wildcat wells, and all wells in counties where there is no oil at all, dusters, as we call them, they will average 20 wells to one profitable well. Of course, when a field is discovered then the percentage is very much the other way.

You can not find an oil man anywhere who will say that he is going to cease producing oil. That would seem like a threat, or that he would attempt to delay the production of oil. The oil men will go on as far as they can and if they do cease it will be a matter of necessity.

This well that we wanted drilled, and for which we offered to pay \$6,800, was offered to five contractors, and but one out of the five said he could touch it, but he said, "I have agreed to drill two wells for the American Development Co. first," and that would put us into next winter. The country needs this oil, and we should be in a position to say, "We will give you a bonus of \$500 if you will start that well," but we can not do that. We can not raise the money. I have gone East many times to try to finance a proposition back home, and one of the first things they ask you is, "How soon can you drill a well?"

That is always the first question, and just now we are forced to say that we can not get any drilling done. You asked Mr. West whether some new wells were not being drilled now. There are some new wells being drilled and for this reason: If I have a lease of a few hundred acres and have some oil on it and some one comes along and offsets that well, the farmer and the law requires that I must also go ahead and offset that well, because I must not only find oil for myself but for the royalty owner, or else my neighbor will get it. So what we call protecting the lines must be done whether it is profitable or not; we must either protect the lines or surrender the lease. If we do not do that, the farmer will bring a suit for his property and the law would properly require us to drill it. So for that reason there is more or less drilling being done, and that must always be done or the production of oil will decrease.

Now, I know that people can not afford to wildcat at the present prices of oil.

Mr. MOORE. Is any assistance ever obtained from the Standard Oil Co., or any of its subsidiaries, in a case of that kind, or does the prospector always take the risk on his own account?

Mr. KENNEY. Absolutely on his own account. As men down in our country say when a partnership is entered into, "You must go ahead and do the drilling, and if the well is a good one I will share in the profits; but if there is a loss, you must stand that yourself."

Mr. MOORE. You can not protect your product beyond the price which the Standard Oil or any other purchasing company fixes?

Mr. KENNEY. That is true. Oil is the only product in the world that the man who owns it has nothing to say in reference to the price. Then, you must bear in mind the ultimate price after it has been manufactured—after it has been refined, and so on—the price then being from \$12 upward. You take Nujol, and a dozen different other kinds of oil which are made absolutely from petroleum oil, and those preparations sell for as much as \$300 a barrel, 75 cents a pint, or something like that.

Mr. MOORE. If the Government fixes the price, we can understand why you can not go beyond a certain limit, but sometimes the price fixing is done in the ordinary course of business.

Mr. KENNEY. Yes, sir. In that connection, Mr. Moore, I would like to submit a letter, which I will mail to the committee, that has reference to that. We are told that we must sell all of the oil we produce. Oil is not like other things, which can be held for a little time to see whether you can get what they fairly cost to produce. We must sell all of our oil, and we are told that we must not ask for a greater price, and that if we do the Oil Administrator will look on it with disfavor. We are told that by a letter from that department which is equivalent to saying, "If you are not good the Government will take over your proposition." As far as I am concerned, I would be glad if the Government would take it over, because if we can show that we are not receiving our proportionate part of the retail price of these products, then we ought not to be limited to a price which is not commensurate with the cost of producing them. But the fundamental thing is that the Government—this country and the world need more oil, and more of the white sand oil; they need more of the oil produced in this section of the country.

Mr. MOORE. Are not the people using more oil than ever before?

Mr. KENNEY. A great deal more. You see, oil was only discovered during our last war, the Civil War.

Mr. MOORE. I asked you that because you said there was a decrease in production.

Mr. KENNEY. The increased demand is more than 29 per cent. A year ago there were 2,194,000 barrels, or something like that, on hand, and the year previous to that there were three million and some odd thousand barrels on hand, and undoubtedly they carry 5,000,000 barrels on hand.

Mr. MOORE. But usually the producer does not stock up in that way?

Mr. KENNEY. No. The buyer or the purchaser does.

Mr. MOORE. The large controlling companies?

Mr. KENNEY. Yes, sir; the pipe line companies and subsidiaries of the Standard Oil Co.

Mr. MOORE. To what extent has the Government stepped in to control the volume of stored oil?

Mr. KENNEY. I do not know that the Government has done anything along that line. There should be some surplus, of course. I

do not know the exact figures, but the pipe lines take up a good many million barrels.

Mr. MOORE. As a matter of fact, the purchasing corporations do control the situation so far as production and distribution are concerned. Is not that about the fact?

Mr. KENNEY. Yes, sir; that is true.

Mr. MOORE. I am not finding fault with you or with anybody else in particular, and I would like for you to make money, but under the present conditions—

Mr. KENNEY (interposing). The main thing I want to impress upon you is that we are making less money than we were making two or three years ago.

Mr. MOORE. What suggestions have you to make as to increasing the revenue from oil?

Mr. KENNEY. I do not hesitate to go on record as saying that the people who use this product ought to pay for it, and if it goes on as a percentage on the product, a part of it would be paying a percentage on \$300 a barrel. You would raise more money and it would be borne by 100,000,000 people instead of by a few thousand people. It is not compulsory, because they buy it if they need it, but nobody is obliged to pay it. I realize that it is the duty of this committee to raise money, and you should do it. I am only trying to impress upon the committee that that is the quick and certain way. There are certain commodities that do not pay enough taxes, and I think oil is one of them. I think that it would be a pretty difficult thing to obtain legislation that would put a tax on oil in the hands of the consumer. Of course, a mother wants some other mother's child whipped besides her own, but I do not taken the position that the oil business ought not to be further called upon because we are in that business, but because the business will not stand it and produce oil. We would have to quit—not because we want to, but because we could not carry it on.

Mr. O'SHAUNESSY. You would be willing to stand additional taxes if you could pass them on?

Mr. KENNEY. Yes, sir.

Mr. O'SHAUNESSY. So you are throttled by a monopoly absolutely. That is about the size of it, is it not? They have got you.

Mr. KENNEY. Those are my sentiments.

I thank you kindly for your attention, and ask permission to file this statement for the record.

(The statement referred to is as follows:)

*To the Honorable Claude Kitchin, Chairman, and the Honorable Members of the Ways and Means Committee:*

The Oil and Gas Producers' Association of West Virginia is an organization composed of independent producers of oil and gas in Ohio, Pennsylvania, and West Virginia, its membership being made up largely of small producers.

The oil and gas producers do not ask any special exemptions or immunities. As a class their generosity is proverbial. Their liberality in responding to the Liberty Loan and various war funds induced most favorable comment. In the proposed tax legislation they only ask that due account be taken of the hazards and special conditions prevailing in the business which differentiate it from other lines. They fully recognize the fact that the principal business in which this country is engaged in the winning of the war and that everything else is subordinate and incidental. The business is of American birth and in this country continues 100 per cent American in its conduct. Nearly 100 per cent of those engaged in it as producers and employees are of native American birth. The best of feeling has always prevailed between employer

and employee, whose relations have been those of friendly business associates, the employee being given every encouragement to make a start in the business on his own account, the producer of to-day being the employee of yesterday, and labor troubles have been practically unknown until those arising recently in certain sections through malicious influence, and due largely to the necessity of replacing the usual loyal employees called to war with those of a different character. The business has contributed liberally to the war in men and money. The producers believe that patriotism should be exercised in proper proportion. They expect to pay their full share of taxes and taxes at a much greater rate, and only ask that the method of their imposition be equitable.

If the time shall unfortunately come when the people are called upon to give their all, the oil and gas producers will be ready with the last dollar as soon or sooner than the average, only asking that within a reasonable time after they have contributed all others shall have done likewise, and the nature of their business, with its hazards and reverses to be met and dealt with, has filled them with the spirit, energy, and enterprise which will make them among the strongest factors in rehabilitating the country. But it does not look as though our extremity will ever be so great that it will be necessary to kill the sheep, on the contrary there is every reason to believe that we will be able to subsist and "carry on," through utilizing the wool and that we will also succeed in increasing the flock. Maximum production is important, and petroleum and gas are among the most important products, and their production should be encouraged.

There have been no war profits in the oil and gas business. In 1913 Pennsylvania grade oil brought \$2.50 per barrel, and is now bringing \$4 per barrel, an advance of 60 per cent, while the cost of items entering into production have increased from 100 to 300 per cent. The prices of gas are fixed by franchises at the places of sale, and regulated by public-service commissions. Oil wells are being operated in the Eastern fields for as low as 8 or 10 gallons of oil per day. These wells in the aggregate are capable of producing a considerable quantity of oil, and their abandonment would result in a great economic loss, as there is no chance that there would ever be such a price as would justify redrilling such territory. With the scarcity and demand for material, such wells represent more value for their equipment than as producers, and there would naturally be a temptation to pull them out and abandon them, to which, by the way, the operators have shown no signs of succumbing.

The charges of profiteering in the oil-producing business would seem absurd to those who know the business. The oil producer has no control over the price of his product, and there has been no disposition on his part to unduly influence it. It is necessary for the producer to protect the lines of his leases by drilling wells to offset those on adjoining property, and produce all the oil that he can. If he don't get it, his neighbor will. Lately a report circulated that eastern producers were holding their oil in the pipe lines, without selling, to influence an advance in price, yet the last published report for the end of the month preceding the report as to the holding of oil showed that there were 2,924,671 barrels of Pennsylvania grade oil in storage, a large part of which would go to fill the tank bottoms and the pipe lines of the pipe-line companies, and thus not be available for immediate use, while on the same date last year there were 3,194,381 barrels of this oil in storage, indicating that more than all the oil produced during the year had been sold by the producers. It will be recognized that the quantity of oil on hand is not abnormal, when it is stated that at times during the past five years over 5,000,000 barrels of Pennsylvania grade oil has been held by the pipe lines. Very few, if any, producers are carrying any quantity of oil beyond recent production, and a large part of the oil held by the pipe-line companies may stand to the credit of the refining companies awaiting delivery. The eastern producers have no more storage on their leases than is required to gather the oil for the pipe lines. Reserve stocks are being drawn on throughout the country, and a shortage is threatening.

The business of hunting for oil, as a whole, has not been a profitable one, and no one has ever sought a monopoly of this branch of the business. Successes arising from the drilling of "wildcat" wells have been comparatively few, conspicuous and long remembered, and failures many, obscure, and soon forgotten by the general public. There is said to be a game known as roulette (I speak only from hearsay), wherein the chances are largely against the player and the rewards proportionately large. While it is not so respectable, I imagine it would be more profitable for the "wildcatter" to utilize his capital in playing this game rather than in hunting for oil or gas, and as to the latter I speak from experience and not from hearsay. There are failures in other lines of business, but in most there is much greater salvage. The principal item in a "wildcat" well is the hole, and I know of nothing so valueless as a hole drilled for oil or gas which fails to produce. The incentive which actuates the

"wildcatter" and upon which the world depends for the maintenance of its supply of oil and gas, is the hope of capturing a capital prize, the development of a gusher well.

The theory that 9 per cent is a sufficient return on capital and that all above that is abnormal may apply to the majority of stable and permanent businesses, and is supported by the fact that in normal times certain securities yielding 4 to 5 per cent have found a ready market, but it can not fit the oil and gas producing business with its hazards and instability. Capital which is well satisfied in normal times with investment in stable and permanent lines which yield 5 per cent will, not even in such times, be invested in oil and gas properties, with their hazards and uncertainties as to the continuance of production, unless they promise to pay out in three or four years, depending upon what may be left at that time for the profit, and the cases are many where the promise is not realized. No sane man would cheerfully contemplate the investment of his money in the oil and gas producing business knowing that the larger part of his yield above 9 per cent, with assets converted into cash treated as profits, would be taken in taxation. The present law which takes little account of the value of properties developed since March 1, 1913, as of January 1, 1917, above the value of equipment, has the effect of compelling the return of assets held at that time, now being converted into cash, as profits, promises to sap many producers financially dry in a few years, and thus the sheep which produces the wool is killed and we live on the mutton for a time and then starve.

The most important man to-day is the soldire and next to him comes the producer and he should be kept financially alive as long as possible, and if it shall become necessary for all to reach the end of their financial existence in the great struggle for things more important than money, the oil and gas producer will be found awaiting the final summons with resignation.

The manufacturing plant can go through the war taking its toll of profit on products finished from the raw material, maintaining its plant in good condition with proper charges therefor, benefiting perhaps by extra profits due to present conditions, yielding up a large share of actual profits, and at the end of the war be more prosperous and have far greater assets than at the beginning. The oil and gas producers, in many cases under the present theory of taxation, face the prospect of giving up not only actual profits, but a large share of assets from rapidly depleting and depreciating investments and at the end of the war gazing upon a scene on their properties as cheerless as that in "No Man's Land" on the battle front, with no value in sight beyond what the junk will bring, and in normal times it is usually of such comparatively little value and there is such loss in pulling wells it is a question whether it should not be considered as an item of expense originally rather than of investment.

The price of producing-oil properties is based on the average daily production. I have been informed of the case of an oil producer who spent his life in the business and capably managed his property, who on December 31, 1916, had a property producing 70 barrels of oil per day, which he could have sold at \$3,000 per barrel, getting \$210,000. He sold oil in 1917 amounting to about \$70,000 (I use round numbers) and he spent on the property in producing oil and drilling and equipping new wells, \$40,000, and on December 31, 1917, the property was producing 56 barrels per day, which he would have difficulty in selling, under taxation conditions, at the same rate per barrel, \$3,000, which would bring \$168,000, a decline in value of \$42,000 against which he would have to apply the \$30,000 derived, above expenses, from the sale of oil, and he would end the year poorer than he started it. Of the \$40,000 expended on the property during 1917, \$15,000 was for equipment of new wells, which would probably have to be treated as investment although it did not add a penny to the value of the property, which depended almost entirely on the production. I understand that the property was in possession on March 1, 1913, under which circumstances he could value the oil and gas leasehold rights as well as the equipment as of that date, and have the benefit of depletion and depreciation charges. But if an individual had accepted the hazards and developed this property subsequent to March 1, 1913, procuring the lease for the consideration that he develop it, and had charged off to January 1, 1917, as is customary, his drilling as expense, leaving the value of his equipment, about \$45,000 on January 1, 1917, with the addition of \$15,000 during the year, standing on his books as the only capital invested, he would be allowed a comparatively small deduction for depreciation of equipment, and a reasonable salary charge, and would have to pay a heavy tax on a so-called profit, when within the year he actually should have suffered a heavy loss. Without doubt there are many cases where the effect is even more inequitable.

The business has a reputation for enormous profits which is largely false. The most important items and the ones which receive the least consideration from the average individual engaged in the business are depletion and depreciation. Wells rapidly decline until they are exhausted. The accounting end has not heretofore had much

attention from a large number of producers. The pipe line companies take the oil from the tanks when they are full, compute, and give the producers credit with the amount. When he needs money he goes to the selling agency and gets a check for the oil with which he has been credited. Business running into thousands of dollars has been transacted with no records other than a check book. Many producers have looked upon all they have received above what they have paid out as income, not taking into account the value of their properties when they have reached their height and not having provided for preserving this value intact in some form. For a few years they flourish, but their financial extinction is practically coincident with the exhaustion of their properties, and no one wonders any more than they how it all happened. The application of a law which compels the return of liquidated assets as profits, strengthens the impression of great profits in the business, and subjects the producer to being miscalled a profiteer. A man could have started in 1917 with \$100,000, and have spent \$90,000 in that year in unproductive drilling, and with the \$10,000 remaining develop a production that might promise to make him whole, but as each year's loss now stands to itself he could not use his last year's loss in the computation of this year's taxes, and the larger part of his yield might be taken in taxation.

The oil and gas producers yield to none in patriotism and are trying to conduct their business so that it will be the greatest possible help to the country. But it is only human nature that they are likely to become discouraged and not hazard their money under present conditions. They might prefer to invest it in Government loans and contribute liberally to the war funds and thus win the plaudits of their fellowmen. These things are important, and they should do their share as heretofore, but of even greater importance is the increase of production.

In conclusion I would say that we have come to you with reluctance. We realize the magnitude of your task and that time is precious to you. We have heard of your willingness to hear various interests in the desire to be fair to all, and have decided to trespass on your courtesy. The oil and gas business is confined to particular localities and knowledge of it is not general and thorough. We know we will be fairly treated when you understand our difficulties. We ask that you carefully consider the special conditions prevailing in the business, that it requires an adequate return for its encouragement, taking due account of the facts that the business is one in which depletion is heavy, that it is full of hazards, and that assets which existed January 1, 1917, in the ground, could not be marketed until produced, and are now being converted into cash.

Respectfully submitted,

A. E. KENNEY,  
Member of the Committee of the Oil and Gas  
Producers' Association of West Virginia.

**STATEMENT OF MR. GEORGE McANENY, VICE PRESIDENT OF THE AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION, AND CHAIRMAN OF ITS COMMITTEE ON SECOND-CLASS POSTAL RATES.**

The CHAIRMAN. State whom you represent.

Mr. McANENY. I appear as the vice president of the American Newspaper Publishers' Association and as chairman of its committee on second-class postal rates. There are present many of the members of the association's committee.

The CHAIRMAN. What business are you engaged in?

Mr. McANENY. I am the executive manager of a New York newspaper, the New York Times. I appear, of course, as in my official capacity as vice president of the association. I will read the list of those who are present. Taking them geographically, there are present Mr. Charles H. Taylor, jr., manager of the Boston Globe; Mr. L. B. Palmer, manager of the American Newspaper Publishers' Association—

The CHAIRMAN. What paper is he interested in?

Mr. McANENY. He is the executive officer of the association itself.

Mr. GARNER. He is not connected with any paper?

Mr. McANENY. No, sir. There are also present Mr. Thomas R. Williams, of the Pittsburgh Press, who, incidentally, is the president of the Pittsburgh Publishers' Association; Mr. Fleming Newbold, of the Washington Star; Mr. John Stewart Bryan, of the Richmond News Leader; Mr. W. S. Jones, of the Minneapolis Journal; Mr. Gardner Cowles, of the Des Moines Register-Leader; Mr. C. P. Mooney, of the Memphis Commercial-Appeal; Mr. Frank P. MacLennan, of the Topeka State Journal; Mr. Hopewell Rogers, of the Chicago Daily News; Mr. W. E. McFarland, of the Chicago Tribune; Mr. Urey Woodson, of the Owensboro (Ky.) Messenger; Mr. E. Lansing Ray, of the St. Louis Globe-Democrat; and Mr. L. T. Wortham, of the Fort Worth Star-Telegram. There has been no effort made to bring an extended delegation of publishers to meet you here, but these are the members of the committee only. There are several other members of the committee who because of the distance were not able to be here.

The CHAIRMAN. What is the committee?

Mr. McANENY. It is the committee of the association on second-class postage.

The CHAIRMAN. With respect to legislation regarding second-class postage.

Mr. McANENY. Yes, sir.

Mr. STERLING. You represent the American Newspaper Publishers' Association?

Mr. McANENY. Yes, sir. That association, Mr. Chairman, is comprised of the publishers who publish the daily newspapers of the country, numbering some 500, all told. They represent those newspapers which will be affected by the present legislation—that is, the legislation about to take effect with reference to second-class postage. I think that outside of their membership the publishers who would be affected materially by the law are very few. That is to say, the small publishers whose newspaper business is carried on chiefly within the counties of publication and who will enjoy a continuation of the free county plan of distribution, and those that would extend only slightly outside of their counties, and then chiefly into the immediate adjoining zones, would not be much affected. The association had its annual meeting in New York in April and adopted these resolutions, which I will read because they express succinctly the object of our appeal:

Whereas the postal provisions of section 1101 of the act of Congress approved October 3, 1917, and which is to take effect July 1, 1918, will be unworkable in practice and will be most unfair and oppressive to the newspapers of the country, and to the reading public; Be it

*Resolved* by the American Newspaper Publishers' Association that Congress, if insistent upon legislation of this character, be urgently requested to modify said law in so far as it applies to newspapers along the general lines as proposed by the McKellar amendment, or, if the time be considered by Congress too short to do this, that Congress be urgently requested to suspend the provisions of said law, in so far as it applies to newspapers, until a complete and intelligent investigation can be made of the subject of newspaper postage.

That resolution was indorsed and made the action, also, of the Southern Newspaper Publishers' Association and of the Inland Publishers' Press Association at separate meetings of those respective bodies.

Now, it is late in the day to urge the suspension of the operation of this law, but we submit that through the accident of circumstances that is not our fault. We came to Washington, or our committee did, immediately following this meeting, and, in fact, a short time before that we were advised that because of the then existing parliamentary situation in the House it would be better and more direct to appeal to the Senate, where the Post Office bill was then in committee, and where it was urged that an amendment might be added to suspend the operation of the provision if the Senate saw fit. That advice we received from the chairman of the House Postal Committee, Judge Moon. We did go to the Senate, and hearings were held before the Post Office Committee on April 30 and May 1. It was clearly the sense of the committee that at least there should be a postponement until we were out of the present troubled waters and until it was possible to ascertain more clearly and definitely what the nature and effect of this legislation would be. It appeared, however, that for parliamentary reasons, inasmuch as even an amendment to the postal bill extending its operations would be judged an amendment to a revenue-producing measure, it was ruled by those whom the Senate committee consulted—the Vice President, I believe—that the Senate could not consider a suspension resolution unless it had originated in the House. There was a good deal of open debate in the Senate and that was explained.

Senator Watson added that he violated no secret of the Postal Committee in declaring that a majority of the committee favored a suspension, and that it was prepared to act except for this conflict of authority between the two Houses. We then returned to the House and asked the Postal Committee for hearings, upon the theory that this legislation had been incorporated in the war revenue act of last October, not as a war-revenue producing measure but as permanent postal legislation, and that, naturally, what might happen thereafter would be within the province of the Postal Committee. The Postal Committee, a week after our request, advised us by wire that they thought it unwise to hold another hearing; that this was a matter concerning the war revenues, and they recommended that we make our application to you. It is for that reason, sir, that we are here to-day. We are asking that the operation of this law be suspended and that it do not take effect, as designed, on the 1st of July, nor for a year or more, according to your wisdom. We appreciate the fact that the time is short between this and the 1st of July, but we understand that it is amply sufficient for the passage of a resolution of suspension, if your honorable committee and Congress follow the views of those who favor this matter in the Senate.

I have said that we do not understand that the act of last October, in so far as it applies to second-class postage rates, was a war measure, and that is the declaration of the Postmaster General contained in his annual report. I assume that, in as much as it has been established permanently as a part of the system of the Post Office Department, it will not necessarily reappear in the bill you are now considering for the raising of further revenue. It is fixed; it is established; it will be a law, and it will take effect on July 1, unless our plea for further consideration is received favorably. We are advised by the Post Office Department that the increased revenue that would be received through the operation of these rates—and I do not rehearse the pro-

visions of the law itself, because you gentlemen are entirely familiar with them—as I say, it is the judgment of the Post Office Department that the increased revenue during the first year of the operation from newspapers will be a little less than \$2,000,000. In the midst of measures that deal with several billion dollars as the amount required from taxation, I do not suppose that it is considered seriously that that item is a bit of war revenue is seriously required. Offsetting even that sum, there is the fact that in order to make this system work, complicated as it is and requiring as it will further clerical and further mechanical service and expense, it will cost the Post Office Department a great deal more than the present system does, and added to that there is the fact that there will be reductions of circulations, and serious reductions of circulations, throughout the country as a result of this measure that will reduce the revenue still further, so that there will not remain one cent of additional revenue to be received from this source.

Therefore, gentlemen, we come before you asking for a suspension, not because it is a matter of revenue, not because the newspapers of the country object for a moment to the payment of their full share of those taxes that are laid commonly upon every industry, but for the reason that it is not a war revenue measure, and for the reason that it will operate to compress and reduce the efficiency for service of the newspaper press of the country at a time of great need, and, finally, because we have been asked by the postal committee to appear to you. I stand upon the technical fact that this original legislation was incorporated in your revenue act of last October.

Now, gentlemen, the demand for an increased return from second-class postage has been heard in the Post Office Department and in Congress for a long time, and we do not argue that there is not justice in some degree in that demand. We do maintain, however, that if measures are adopted to increase the revenues from this source they should be considered with more care than it has been possible to consider this scheme, and that those whose industry will be affected and those who are trustees for the reading public in this matter shall have an ample opportunity to be heard and to be consulted at the fabrication of the plan proceeds. Just what the rates shall be in an affair entirely between Congress and the people themselves. The people pay this postage, whether it be great or small, and of course they will continue to pay it. The newspapers are charging to the people, I am sure, with a very few insignificant exceptions, the rate that the Government charges for postage itself. It was the custom until not a great while ago for the Government to collect directly from the subscriber his postage on this matter, and the subscriber got in his mail box periodically his bill for postage from the department.

But as a matter of convenience that was transferred to the direct subscription and incorporated there. The newspapers, therefore, are in a sense collecting this postage rate for the Government. They receive practically none of it for their own benefit. In fact, I am speaking very directly for one of them that receives less from its mailed newspapers than it does from those that are sold through other means—that is, it gets less from those newspapers that go into the mails under individual wrappers. The bill that has been passed, the operation of which was suspended until the 1st of July, provides for numerous things. It has several independent elements. It is

not a flat provision for increased postage, but it increases the flat rate upon the news section of publications, which are to be measured and taped up, each edition for each day in the year, for the purpose of that assessment, and it then applies a separate rate upon the advertising section, gradually increasing according to the zones of distance from the place of publication. Finally, in the case of newspapers, it does establish a pretty well fixed zone system, the outer rate of which will be absolutely prohibitive, and the only consequence of which will be a serious reduction in the newspaper's circulation. It is not a matter of dollars and cents to any one concerned, so far as I see it. It surely is not a matter of dollars and cents to the Government, and I have cited the figures of the department to show that. It is not a matter of dollars and cents to the publisher, because the publisher must increase his rate to his subscribers. He is already notifying his subscribers to that effect. It is a matter only of reducing the volume of second-class mail that should be carried by the Post Office Department, on the one hand, and of reducing the number of individual publications that reach the subscriber, upon the other.

And now, gentlemen, without regard to the merit of the general plea for an increase in these rates, may we not urge upon you that this is a most inopportune time to derange absolutely the publishing industry of the country; to take from these subscribers who can not afford to pay the increased rates their present supply of news and information, of opinion and of advertising? Is there anything of an important nature to be gained by pressing this matter at the present time? We submit that there can not be, and for that reason we urge that even within the time left there shall be this suspension.

Mr. GREEN. Mr. McAneny, before you go any further let me ask whether you object to the zone part of the law, or both to the increase in the flat rate and the increases provided for by the zone system?

Mr. McANENY. There are individual publishers the country over whose views differ upon that question according, I assume, to their natural interests. That is not unnatural.

Mr. GREEN. Well, I am now speaking of the general plan.

Mr. McANENY. I am speaking for the association and for a program upon which the association has unanimously agreed. And, as I read it, sir, it presents, first of all, by implication, our general plea, that there is no need for these increases at the present time. It adds that if Congress insists that there is, then rather than this involved, complicated system, this measuring of news and advertisement, that there should be a flat zone system modeled upon that which Senator McKellar introduced in the Senate, which I think was passed in the Committee of the Whole there but not by the Senate, which sent nothing on this subject to the conference last fall. The Publishers' Association would greatly prefer to have the flat zone system. Senator McKellar's plan exempted the first two zones. It continued the present rate of 1 cent for the first two zones and then graduated upward to something approximating these figures in the outer zones.

The CHAIRMAN. The first three zones.

Mr. McANENY. Yes; you are correct.

Mr. GREEN. The rate in the first two zones is the same under the present law, is it not?

Mr. McANENY. In the first two zones it is the same, yes; although at an increased figure.

Mr. GREEN. So it is really a flat rate in the first two zones under the proposed law?

Mr. McANENY. Yes; that is, the first 150 miles.

Mr. GREEN. What proportion of the newspaper circulation outside of the big cities circulates 150 miles from the place of publication?

Mr. McANENY. The Post Office Department has not furnished figures on that subject. They have said that of the individual newspapers a large percentage or a majority are circulated within those zones; but if you take newspaper circulation; that is, the volume of individual copies that go to individual subscribers, it is pretty generally distributed throughout the country. Of course, the heavier part would be within those first zones.

Mr. GREEN. Take it in Iowa and Illinois, the States with which I am most familiar, outside of the Chicago papers would there be much circulation beyond the second zone?

Mr. McANENY. A very considerable circulation.

Mr. GREEN. Outside of the Chicago papers?

Mr. McANENY. You mean in Illinois?

Mr. GREEN. Yes; or Iowa, either one.

Mr. McANENY. I do not know that that would be true of the State of Illinois, but it would be of many other cities throughout the country.

Mr. GREEN. Oh, yes.

Mr. McANENY. For instance, Minneapolis and St. Paul.

Mr. GREEN. Of course, and also New York and San Francisco; but in those two States, of the papers published there, there would not be much circulation beyond the second zone outside of the papers published in Chicago?

Mr. McANENY. In the other cities of the State I should say that is the case; yes. Of course, the effect of this would graduate as the distance and the prices graduate; and those that would suffer the most in their losses of circulation would be those that are best able to carry the Associated Press dispatches, their own special correspondence, individual papers, reports, addresses, articles that bear on the war, the pictured illustration of the war; in short, the greater part of the Government's own propaganda. It is that class of newspapers naturally that would feel this thing in the most severe way.

Mr. O'SHAUNESSY. Mr. McAneny, if the estimated revenue by the Post Office Department from newspapers was twenty or thirty or forty million dollars, would the association's attitude be the same?

Mr. McANENY. If the revenue reached that figure, without any more damage than this plan does, of course that would affect the association's attitude, but that is—

Mr. O'SHAUNESSY (interposing). Would you be objecting to it then?

Mr. McANENY (continuing). But that is very much of a hypothesis.

Mr. O'SHAUNESSY. Would you be objecting just the same?

Mr. McANENY. We would object the same to any plan that changes the system itself in this doubtful way at the present moment.

Mr. O'SHAUNESSY. Of course, I was taking it that you were looking upon this as a trifling addition to the Government's revenues for war purposes.

Mr. McANENY. I cited the fact that it is a trifling addition because it appears that that is all that stands in the way of our request for a suspension until it can be ascertained what these rates ought to be and what the effect of the increases will be. I meant it only in that way.

As to the system itself, in the first place, gentlemen, the Post Office Department is not in possession of facts and figures upon which an accurate schedule of charges for this class of postage can be made. The last figures that were collated and brought together for the information of the department were those of the Hughes Commission in the year 1908, and at the hearings before the Senate committee it was to those figures that Mr. Koons, who appeared for the department, referred. He added that in some cases they had been brought down to 1912, but there is not anything later than 1912; that is, within the past six years.

Now, the revenues of the Post Office Department have doubled within that time. There must of necessity have been an entire redistribution of costs between the several classes of mail, and nobody can tell to-day what it is really costing to carry second-class mail. We ask and urge with all vehemence, as a matter of justice to the newspapers and to the reading public, that those things shall be ascertained and a scientifically constructed bill passed before anything is made final.

Mr. GARNER. Mr. McAneny, may I ask you a question for my information?

Mr. McANENY. Yes, Mr. Garner.

Mr. GARNER. When the Hughes Commission made its report, did your association urge the adoption of the policy recommended by the Hughes Commission?

Mr. McANENY. I do not recall. I was not a member of the association at that time. Possibly some other gentlemen here can answer that.

Mr. GARNER. I was just wondering why it was your association, with the powerful influence it had, did not take up that report and urge Congress to adopt that policy if you are in good faith now in objecting to the present plan, and I know you are. I was wondering why you have not come forward and assisted Congress in ascertaining a just rate for second-class matter and based that upon the figures furnished by the Hughes Commission.

Mr. McANENY. Gentlemen, in the first place, the findings of the Hughes Commission were very incomplete. They consisted chiefly in the end, of explaining and protesting that they could not get the data at that time upon which to make a report.

Mr. GARNER. Well, you do admit—

Mr. McANENY. If I may just finish my answer—

Mr. GARNER. Do you know whether second-class matter as applied to newspapers pays anything like the cost of handling it through the mails?

Mr. McANENY. We think that the cost of handling the newspapers is far less, sir, than the figures that are stated usually by the Post Office Department.

Mr. GARNER. But that is not the question. Is it as much as the Post Office Department now has to pay for the handling of second-class mail matter as applied to newspapers?

Mr. McANENY. It is not as much, nor could it possibly be.

Mr. GARNER. Do you believe that the newspapers, as a matter of public policy, should pay the necessary cost of transacting this business through the Post Office?

Mr. McANENY. The newspapers are paying the necessary cost that falls upon them, and I assume your question really is, Do I believe the people who receive the papers should pay the cost that the Government incurs in carrying such second-class matter?

Mr. GARNER. Just as you like; if you want to put it in that way.

Mr. McANENY. Of course, that is the fact. That is undeniable.

Mr. GARNER. Do you believe that?

Mr. McANENY. That the people should pay that increased cost?

Mr. GARNER. Yes.

Mr. McANENY. I do not, gentlemen. I believe that a thorough inquiry into this whole matter would disclose innumerable instances in which the second-class cost may be cut down through the prevention of waste, a reduction in its use, or otherwise, but I do not believe that there should be any attempt to assess that increased cost, so-called, upon the people of the United States, and for the reason that the people are already paying that cost. The Post Office Department is one organization, but it has four divisions. Its four sections of mail are interdependable and work together. The second-class mail is the greatest single producer of revenue for the first-class mail; so is the third for the second and the third for the fourth. You can not separate any one and say it must stand by itself. On the contrary, the people who pay the first-class revenues—and which, according to the figures of the department yield a profit of \$60,000,000 a year—are identically the same people who get the second-class mail. There is hardly a man, woman, or business concern in the United States that mails letters that does not also get some form of second-class printed mail. The Post Office Department as a whole serves the people in this way, collecting their money for their own purposes and redistributing it, and the Post Office Department last year turned into the Treasury of the United States a profit of over \$9,000,000.

Mr. GARNER. But you said a while ago that you wanted us to postpone this matter in order that a thorough investigation might be made to determine the rate that should be applied to second-class matter, but according to the argument you are now making it is wholly unnecessary to do anything except to repeal the law and let it stand as it is.

Mr. McANENY. I did not mean that. What I said was that while we recognize that it may be shown—we do not recognize that it has been shown—that there would be justice in a further increase we do think that, first, there should be an effort made to get at an exact and dependable cost, and, in the second place, that whatever figures are reached should be properly and accurately assessed upon those who use the second-class mail. In the Hughes Commission's report, or, at least, in figures that the Post Office Department has compiled from that report, they give the total average cost of the department in carrying second-class mail as \$8.34, and in the same column they say that the daily newspapers, as a part of that total, are costing \$6.91, but when you come to legislation, the same price is laid on all of them. In the first place, we can not recognize

that figures which were compiled 10 years ago are applicable to this situation, and, in the second place we can not recognize—

Mr. GREEN (interposing). You would not say it was any less to-day, would you?

Mr. McANENY. With the volume of business doubled I should say that in particular items it may be considerably less. There has been a redistribution—

Mr. GREEN (interposing). When you are conducting a business at a loss and the business doubles, that reduces the loss; is that your contention?

Mr. McANENY. No; I did not mean that, but I think it is quite conceivable that when some of the mail years ago cost more and some less, and when you have had a doubling in the business and a redistribution, that all of those figures might change, that thus the ratio might change and some of the things cost less than at that time. What we do know is that the whole department is run at a considerable and material profit and that the department has been able to do that very largely upon the receipts from second-class mail.

Mr. GREEN. That is what some people complain about, that they are paying a little more than the cost and they ask that some of the other classes of mail matter pay their cost.

Mr. McANENY. I do not believe that is a complaint from the people of the country who read the newspapers, although they are the people who will pay these bills in either event. But we have not heard a complaint from them; they appear to be fairly well satisfied to have the postal revenues that they pay into the Treasury applied for their benefit in the way in which they are being applied to-day.

Mr. SLOAN. Is there any objection on your part, if these other people are not complaining?

Mr. McANENY. I did not quite catch your question.

Mr. SLOAN. I thought the objection was on the part of the publishers instead of the people whom you say are the readers and who are paying the bills.

Mr. McANENY. The publishers are naturally the spokesmen for the people who read the newspapers upon a matter of legislation of this kind, and they are bound to be heard. Their interest, as I have said, is not immediately financial; it is in maintaining their circulation and in continuing to serve the reading public and to represent their subscribers in asking that these additional burdens shall not be laid upon them.

Mr. SLOAN. One of the principal arguments submitted is that it would cause the suspension of a great many of these publications. A good many letters that come to my desk give that as one objection, and the sole objection in some cases.

Mr. McANENY. In the nature of things there would be two alternatives from which to choose. Either a newspaper would have to assume the cost of this additional postage—and it is possibly from that class of publishers that you hear about suspension—or do what the papers of the country are preparing to do, of necessity, namely, to add it to the subscription list. That has been definitely determined on in every large city of the country as the only thing to do. After the year the publishers have been through in the matter of the increased cost of white paper, the increased cost of ink and every thing that goes into the composition of a paper, the increase in cable

tolls, and every other sort of service they have it would be impossible for the publishers to carry this additional burden.

The CHAIRMAN. I did not want to interrupt you at this time, but at this point let us ascertain whether this increased cost has been such a great burden to your newspapers. What was the net income return of the New York Times in 1914?

Mr. McANENY. I am not here prepared with statement of that kind as to the New York Times.

The CHAIRMAN. I am going to tell you something about it. I think your net increase during this war has been more than 100 per cent. I am only guessing at that, but that is my guess.

Mr. McANENY. The New York Times—

The CHAIRMAN (interposing). I am going to make the guess that even with all of this increased cost that you refer to, the increased cost of print paper, the increased cost of machinery, the increased cost of labor, cable tolls, telegrams, and everything, that the net income of the New York Times has increased as much as 100 per cent. Now, you can find that out by wire or by going up to the revenue department, because they will let you know and show you the return, because you are the business manager and you made out the income-tax return, did you not?

Mr. McANENY. No; I did not.

The CHAIRMAN. You looked over it, did you not? You swore to it, did you not?

Mr. McANENY. No; I did not; that does not come within my department's activities.

The CHAIRMAN. You said you were the business manager, did you not?

Mr. McANENY. I am the executive manager, but not the business manager.

The CHAIRMAN. Do you know what the net income of the New York Times was in the year 1915?

Mr. McANENY. Frankly, I can not tell you just what the income of the New York Times was.

The CHAIRMAN. I am going to guess that it had an increased income of 50 per cent in 1915.

Mr. McANENY. But let me tell you that its increased earnings have not been from the war, but from its own natural growth, but I do not know that that would be true as to all newspapers.

The CHAIRMAN. You pointed out in your answer that the materials which newspaper men use have gone up so much—ink, print paper, apparatus, telegrams, and labor—that they are hard pushed and can not stand an increase in anything else, especially a tax.

I was going to illustrate it by the papers. You ought to know something about that, and I want to find out in your case whether that is true. Now, then, you say that it has considerably increased its net income, while these other articles that have been mentioned have also greatly increased in cost. In the case of your paper, does the increase in material and in labor in any way prevent you from still increasing your income, or has it done so?

Mr. McANENY. Notwithstanding this increase during the war period, there has not been an increase this year as against last year. In this year there has been a substantial decrease, but during the war period there has been a material increase.

The CHAIRMAN. Will you be kind enough to incorporate in your remarks the net income returned by the New York Times Publishing Co., or whatever the company's name is, for 1914, 1915, 1916, or 1917? Then we can get a concrete example of this relation between the rising cost of material and labor and the real net income.

Mr. McANENY. I beg your pardon; you could not get a concrete example from the experience of the New York Times, as you suggested a moment ago, that would illustrate my point. It would not illustrate my point, because the situation of the New York Times—

The CHAIRMAN (interposing). I think that instead of illustrating your point, it would frustrate your point.

Mr. McANENY. No, sir; I do not think so. The case of the New York Times is not before you. It has been exceptional, and it is fortunately able to assure you that that is true. But it has decreased since one year ago. The discussion of this question concerns the entire press of the country.

The CHAIRMAN. Then, we will let these other gentlemen make further illustrations in the case of their business. I suggested that because you represent all of the press of the country. I suppose these gentlemen here are as much interested in the press as you are, and, of course, that is natural, and I am making no criticism of that, but I thought it was perfectly proper for you to accompany your statement with a statement of the net income of your paper, inasmuch as you make the assertion that the material and labor cost has gone up. Will you kindly incorporate in your remarks a statement of the net returns of your company?

Mr. McANENY. I would mind it very much, if it is the intention of this committee, or if it is your purpose, to use those figures as having any bearing upon the point I make.

The CHAIRMAN. Don't you think it would be perfectly right to use them in that connection?

Mr. McANENY. No, sir.

The CHAIRMAN. You represent the New York Times?

Mr. McANENY. No, sir.

The CHAIRMAN. You represent the New York Times and other newspapers that are protesting against the provisions in this law. You are protesting that those papers will lose money, and that they are hard hit now, intimating that they are now losing money.

Mr. McANENY. I am not here to represent—

The CHAIRMAN (interposing). Is not the New York Times a member of the organization, and so much so that the committee has appointed you to represent Mr. Glass?

Mr. McANENY. May I correct you there?

The CHAIRMAN. Certainly.

Mr. McANENY. The committee has not appointed me to represent Mr. Glass. Mr. Glass is the president of this association; I am the vice president of the association and, incidentally, I am the chairman of this committee.

The CHAIRMAN. Let us see if you know anything about the other papers. How about the New York World? Do you know anything about its increase of net income or increase of subscribers?

Mr. McANENY. I do not. I know something about the decreased number of subscribers, because those figures are furnished by the

Post Office Department semiannually. They show that the New York World has decreased in subscriptions.

The CHAIRMAN. Has its income increased?

Mr. McANENY. I presume it has, but I know nothing about their affairs.

The CHAIRMAN. Let us take the Chicago Tribune. Do you know anything about that?

Mr. McANENY. I could get those figures from the Post Office Department, if you so desire.

The CHAIRMAN. You were saying that the newspapers all over the country could not stand this high cost of material and labor, which has affected all of them, and I want to ascertain how you know that to be the fact. It seems that you do not know about your own company.

Mr. McANENY. They have not come to me with a statement, but I know that is their own report.

The CHAIRMAN. Do you know anything about the Springfield Republican, of Springfield, Mass.?

Mr. McANENY. I do not.

The CHAIRMAN. Do you know anything about the Cleveland Leader? All of these papers are members of your association.

Mr. McANENY. There are 500 members of the association. That comprises practically all of them.

The CHAIRMAN. Do you know anything about the Cleveland Leader?

Mr. McANENY. I do not.

The CHAIRMAN. Do you know anything about the Times-Dispatch, of Richmond?

Mr. McANENY. I can shorten your effort by saying that I do not know about any of them.

The CHAIRMAN. You do not know anything especially about any of these papers?

Mr. McANENY. I have not seen their books.

The CHAIRMAN. Have any of these publishers told you that they are now losing money, and that their income is less than it was in 1914, or that they are losing subscribers?

Mr. McANENY. Yes, sir. In the first place, that is prospective. They have said in many instances that it would be impossible for them to carry the added charges that this bill would entail. That is as near as I can make it.

The CHAIRMAN. As you know, everybody is taxed.

Mr. McANENY. Those who are taxed twice and thrice might say it more often.

The CHAIRMAN. Some are taxed three, four, or five times by that method of taxation of which you speak.

Mr. McANENY. I would like to attempt, if I may, to answer the personal question—

The CHAIRMAN (interposing). I want to go further with this proposition. Take the case of the New York Times, for instance, I think you said awhile ago that the Times received more from its circulation that did not go through the mails than from the circulation going through the mails?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Do you know what proportion it receives on matter going through the mails?

Mr. McANENY. I am speaking, of course, of the circulation of the Times outside of the metropolitan district. It has a fixed rate. It nets, for instance, from the news service \$9.63, because that is the price that outside dealers pay to it for those packages that are received by express or by mail. Those persons who secure the paper directly in individual wrappers pay \$10 a year. Now, starting with that, the cost of getting the express material to the subscriber is \$1.52, bringing down the net for the paper to something like \$8.04. The cost of getting the paper to the subscriber who receives his paper in packages upon which we pay \$1.85 to the Government, and the cost of handling it is something like \$7.40. I mean by that net to the paper. Starting with that, it was \$8.30, I think, I said, did I not?

The CHAIRMAN. I think you said \$10.

Mr. McANENY. I am speaking of the net return to the newspaper from its sales of papers outside of the city. I say that the net return on those that are handled by express is \$8.04 a year to the paper, while the net return upon those that are handled by mail in packages is \$7.26 to the paper, and the net return on those that go out in individual wrappers, for which \$10 a year is paid, is \$7.12 to the paper. In other words, the return to the paper grades downward in the degree that it uses the mail.

The CHAIRMAN. The net return?

Mr. McANENY. The net return in money.

The CHAIRMAN. Now, what do you get for the paper deliverable within New York City?

Mr. McANENY. Within New York City the price of the paper is 2 cents, outside of the city it is 3 cents. Upon the 2-cent paper sold within the city, I could not give you that figure offhand.

The CHAIRMAN. You get 2 cents in the city and 3 cents outside?

Mr. McANENY. Inside of the city it is on an entirely different basis.

The CHAIRMAN. How much do you net now at the prices charged for it within the city?

Mr. McANENY. I have not those figures at hand.

Mr. GARNER. Do you charge 2 cents within the city and 3 cents outside?

Mr. McANENY. Yes.

Mr. GARNER. Two cents a copy a year would be how much?

Mr. McANENY. The 2-cent rate is charged for the daily paper, and 5 cents for the Sunday.

Mr. GARNER. How much would that be a year inside the city?

Mr. McANENY. Has anybody got that? About \$7.50.

Mr. GARNER. And you charge \$10 for wrapper subscribers?

Mr. McANENY. Yes.

Mr. GARNER. A difference of \$2.50.

Mr. McANENY. We charge a higher rate outside the city because it involves—may I put it this way: Of course, papers that are sold on the sidewalks and in the city have very little handling expense to them. With those that are sold outside the city we encounter a different class of expense, and that is why we charge more for the paper. The figures that are used were to show relatively the net cost through express and the two divisions of the postal service.

Mr. GARNER. A subscriber in Texas pays \$10 and in New York \$7.50.

Mr. McANENY. In New York he is not a subscriber. He gets it at a stand.

Mr. GARNER. Suppose he buys it every day. I am in Texas and I buy it every day. Mr. Rainey is in New York and he buys it every day on the sidewalk, and he would pay in the course of a year \$7.50, and I would pay \$10. You say that it costs more than \$2.50 to send it to me in Texas than in New York?

Mr. McANENY. I haven't those expenses scheduled, but as between the sales in New York and those in Texas there are more intermediate expenses in the latter.

Mr. GARNER. Take this concrete case, Mr. McAneny. I pay you \$10 in Texas; Mr. Rainey doesn't pay you that, he pays you \$7.50, and you are telling the committee that you get less revenue out of me in Texas than you do from Mr. Rainey.

Mr. McANENY. Mr. Mooney has assisted me. He figures out that the price in New York is \$8.86.

Mr. GARNER. That makes a difference.

The CHAIRMAN. Does that \$8.86 include your Sunday paper?

Mr. McANENY. That is subject to some expense allowed to the newsdealers for handling it, but I can not give you the exact figures.

Mr. STERLING. What do they get for handling the papers in the city?

Mr. McANENY. The news dealers in the main get from about 50 to 60 cents in a hundred for handling it.

Mr. STERLING. Per hundred papers?

Mr. McANENY. Yes.

Mr. STERLING. About 6 mills out of the 2 cents.

Mr. McANENY. Yes. It graduates from 5 to 6 mills.

Mr. STERLING. Let us say a cent and a half to the newspaper, then.

Mr. McANENY. Yes.

Mr. STERLING. At least that. Well, at Mr. Garner's town in Texas he pays you 3 cents a copy.

Mr. McANENY. He pays less than that, because he gets it by mail and gets it cheaper. He pays \$10 a year.

The CHAIRMAN. Does that include the Sunday issue?

Mr. McANENY. Yes. He pays \$10, while the man at the stand pays \$8.86.

Mr. STERLING. You mean the stand or hotel in New York City?

Mr. McANENY. The stand or anywhere else in New York City.

Mr. STERLING. Can a man in a hotel in Texas get a paper cheaper than Mr. Garner, who is a subscriber?

Mr. McANENY. I notice that the different hotels in different cities have different prices.

Mr. MOORE. You are not responsible for what they get in the hotels?

Mr. McANENY. No, sir.

Mr. STERLING. Don't you fix the rate at which they sell?

Mr. McANENY. Only in fixing the rate to the dealer who takes the paper. I will give you an instance. Every New York paper sells for 5 cents, but in Brooklyn the news dealers have raised it to 6 cents. They pay us what they have always paid.

Mr. STERLING. It costs you half a cent to sell them in New York City, and you get net a cent and a half apiece. Now, Mr. Garner, in

Texas, pays \$10 a year. The postage on the paper to him is only 1 cent now, is it?

Mr. McANENY. It is \$1.85 a year.

Mr. STERLING. Suppose you put a paper up in a wrapper; you only have to put a 1-cent stamp on it.

Mr. McANENY. I am speaking of the pound rate.

Mr. GARNER. \$1.85?

Mr. McANENY. What the Government charges, 1 cent a pound.

Mr. GARNER. The average rate would be \$1.85 to the subscriber?

Mr. McANENY. \$1.85, the average in the year being 185 pounds.

Mr. GARNER. You mail it to me and you make a net profit, so far as the Post Office is concerned, of \$8.15?

Mr. McANENY. Yes.

Mr. MOORE. Is that the fact, Mr. McAneny? That is the point we are after.

Mr. McANENY. The first deduction is \$1.85.

Mr. GARNER. I understand.

Mr. MOORE. Do you lose on that transaction between Texas and New York, or do you gain?

Mr. McANENY. As between the paper we sell outside of New York within 50 miles and the paper we sell 300 miles in Texas, we lose. On the nearby paper, which I gave you, the figures were net \$8.04. On the middle-class papers we net \$7.26. In Texas we net \$7.12.

Mr. GARNER. I am just trying to get at that net aside from postage. You would get out of me in Texas \$8.15, charging nothing except postage.

Mr. McANENY. Yes.

Mr. GARNER. In New York you would sell your paper for \$8, or your revised figures show \$8.86.

Mr. McANENY. Yes.

Mr. GARNER. You give each newsboy one-half of a cent for selling them.

Mr. McANENY. He gets about four-tenths of a cent of a daily and a full cent on the Sunday.

Mr. GARNER. Four-tenths of a cent a day off from \$8.86?

Mr. McANENY. I hadn't figured it.

Mr. GARNER. I just can't for the life of me see how you make less on the Texas man than you do by your delivery in New York City.

Mr. McANENY. I didn't—

Mr. GARNER (interposing). I thought that was the statement you just made.

Mr. STERLING. Isn't it true now that the Government carries your paper from New York to Texas so that you can sell it for more money than you yourself can carry it from the publishing house to the streets of the city and sell it on the streets? Doesn't the Government do that for you?

Mr. McANENY. It does not.

Mr. STERLING. It seems to me that your figures bear out that proposition.

Mr. McANENY. I will tell you why. The publishing business in order to support itself has its own natural subdivisions, and from time immemorial without regard to the mail rates at all, the metropolitan dailies have had a price for the city and a price outside of the city. That has nothing to do with the postage. The returns from

those two classes make up the aggregate income. Now, you are coming to the mail question, which is a detail of the service outside of the city, and the comparative increases that I gave are those of returns that we got from the papers that are sent by express, for instance, to dealers. They go in the mail in packages to dealers. Those do not go in wrappers. Take the New York Times, which has a daily circulation of 350,000, there are only about 25,000 of that number that go in wrappers in the mail. It is a small proportion compared with the whole.

Mr. GARNER. Don't you have any subscribers in New York?

Mr. McANENY. No; they are practically all served by the dealers, from stands, by carriers, and from the hotels.

Mr. STERLING. Do you send out any at all in wrappers in New York City?

Mr. McANENY. No; it would cost 1 cent apiece.

Mr. GARNER. If I lived in New York City and wanted to subscribe for your paper there, would you permit me to subscribe for it?

Mr. McANENY. If you paid the 1 cent on it that the paper required if sent in a wrapper. As you know, there is a separate mail rate for city delivery, a cent on each piece of mail.

Mr. GARNER. You have no list of subscribers in the city of New York?

Mr. McANENY. No.

Mr. LONGWORTH. If I understand you correctly, your total circulation is about 350,000, and on that only about 25,000 goes through the second-class mail?

Mr. McANENY. No; about 56,000 goes through the second-class mail, and out of that 56,000, 30,000 go not in wrappers but in parcels which are consigned directly to local dealers. May I just explain why I make that difference. The packages that go to the outside dealers, the Post Office Department does not touch at all. They are taken to trains in packages by the publishers, by their own employees and put on cars. There the Post Office Department gets them, and when they get to the city to which they are consigned the local dealer takes them. For that service the department has only the cost of transportation, which is, in the nearby zones, the first zone, only one-fourth of a cent.

Mr. LONGWORTH. What I am trying to get at is simply just what percentage of your daily circulation is actually affected by the second-class postal rate as provided in the last revenue bill?

Mr. McANENY. It is all affected because it has increased, making no distinction between papers that go in packages—and they do not have any wrapper—and the papers that go in the wrappers.

Mr. LONGWORTH. I am speaking of the whole circulation. How many papers out of your 300,000?

Mr. McANENY. Fifty-six thousand.

Mr. LONGWORTH. That is only about 15 per cent, isn't it?

Mr. McANENY. Something like that.

Mr. LONGWORTH. Isn't that really a high average? Does the New York Times circulate outside of New York City more than any other paper?

Mr. McANENY. I think it possibly has a larger outside circulation than any other New York paper.

Mr. LONGWORTH. Would it be safe to say this, then, that on an average about 10 per cent of the circulation of the newspapers is affected by the mail rate? I am asking for information. I thought it would be interesting to know of the average newspaper in the country what percentage of its circulation is affected by the rate of second-class mail.

Mr. McANENY. If by average you mean the papers of the class having, say, a circulation of 10,000—

Mr. LONGWORTH. Let us put it 100,000, the big papers?

Mr. McANENY. I really could not tell you accurately.

Mr. MOONEY. About half and half.

Mr. McANENY. About 50 per cent. I think Mr. Jones's paper in Minneapolis would go more than that. Our bulk is large, but our proportion is small.

Mr. LONGWORTH. Well, what I would like to know is, and the committee would like to know—we have never had this information so far as I understand—what proportion of circulation of newspapers is affected directly by the rates of second-class mail matter.

Mr. McANENY. I can not answer that directly.

Mr. LONGWORTH. In your case it was 15 per cent.

Mr. McANENY. I do not know whether anybody could, because the mere estimating of these amounts on the zone plan would take weeks. I know that it took the auditing department of my paper eight weeks to compile the figures which I have given you.

Mr. MOORE. Does any other New York paper have as large a circulation as the New York Times?

Mr. McANENY. No.

Mr. MOORE. So, if yours is 15 per cent, 10 per cent might be a fair average.

Mr. LONGWORTH. That is as far as New York is concerned.

Mr. McANENY. I dare say, the Post Office Department ought to be in a position to give you that exactly, but it is an illustration of the fact that they haven't the figures.

Mr. SLOAN. Isn't it true that a large proportion of the out of the city circulation is from cities from 25,000 to 100,000 inhabitants? In other words, those cities having papers serve a large country population, as for instance the papers of Omaha or Minneapolis and Kansas City have a greater circulation outside of their own municipalities than would New York, Philadelphia, or Chicago papers?

Mr. McANENY. Yes, that is true; and that would account for Mr. Mooney's estimate of fifty-fifty.

Mr. MOORE. And isn't it true that they have a free in the county circulation?

Mr. McANENY. No; that is only in the nondelivery system.

Mr. MOORE. That applies to Omaha, Nebr., and elsewhere, but not to the metropolitan papers.

Mr. McANENY. They have that service. It costs the Government about \$4,700,000 a year. That is part of the deficit.

Mr. SLOAN. That is a very small portion of the share of the \$90,000,000 which is the total deficit arising out of this second-class matter.

Mr. McANENY. Yes; comparatively.

Mr. MOORE. Might they not add a few millions to the deficit on account of rural free delivery?

Mr. McANENY. I understand that a very large part of the deficit under the second class is attributable to the rural free delivery. Of course, they charge that in their overhead expense.

Mr. MOORE. Mr. McAneny, that induces me to say to you that if you were in Congress, coming from a great metropolitan city, you would probably hear a great deal about subsidy to newspapers, and while you indicated in the early part of your address that the people pay this second-class postal deficit, if there is one, you would hear in the discussion of the rates that the newspapers in this country are enjoying a subsidy. I think that you would find, and a great many Members of Congress would find, that it is claimed that a subsidy is granted newspapers and that this law would correct that condition. I thought you might like to discuss that question.

Mr. McANENY. I should be glad to. I think there must be a widely prevailing opinion, for I hear echoes of it constantly. If I were in your honorable body I would expect that my associates should always be prepared on learning that, to see that it was corrected.

Mr. STERLING. I do not think that any Member of Congress, as Mr. Moore says, thinks that this disposes of the subsidy. A great many Members of Congress think that it helps to dispose of the subsidy, but nobody thinks that it wipes it all out.

Mr. MOORE. I do not say that it was intended to wipe out the subsidy, but I want you to know that there is a very widespread opinion in Washington which it is very difficult to counteract that there is a subsidy to the newspapers under existing law.

Mr. McANENY. I know that there is a widespread opinion.

Mr. MOORE. I am inclined to think that there is a loss on the second-class matter.

Mr. McANENY. What can we say to correct this misunderstanding more than we have said here?

Mr. GARNER. Let me make a suggestion. The theory of the Post Office Department has been through Congress from time immemorial that each piece of mail should pay as nearly as possible the cost of handling it through the post office. We based the second class and the parcel post on that theory. Now, if you gentlemen could get together and assist us in some way to arrive at an equitable rate of postage on second-class matter, that would injure your business as little as possible, and those who patronize it, you would render a great service. But up to date you have not done anything to help. The idea has been inculcated into the people's mind that you are helping out the first-class mail, the third-class mail, and the fourth-class mail, and therefore, you ought to continue with \$50,000,000 loss of \$70,000,000 or whatever you want to term it—I don't care if it is \$10,000,000, it is a loss. If you gentlemen would get together, I think Congress would adopt any method you suggest.

Mr. McANENY. If Congress or its committees is willing to accept our cooperation in that respect, it would be given with the utmost pleasure.

Mr. GARNER. I will say for one that I would be glad to have you, and I believe I speak for the committee and Congress. We labored hard to arrive at a conclusion in this matter, and we went to the Senate, and you remember the hearing we had there, and we postponed it so that you could arrange your business to test this out.

Mr. McANENY. We tried hard to come back and talk about it.

Mr. GARNER. Somebody has been making such a campaign in the country with reference to this present law until the Members of Congress who passed it have been compelled in self-defense to meet that campaign. My judgment is that the power you have—I realize what it is in this country—if the people were to realize and were made to understand just what the relation between the second class matter and the Post Office Department is, and the amount of money they are having to contribute in a tax, the difference between what it is costing without and what it is charged in the post office, I believe we would be able to maintain our position clear, and therefore I am anxious to adopt some plan by which we may have some equitable adjustment for carrying second-class mail, and I beg you and your associates to do that. Instead of you gentlemen giving any constructive remedy, you criticize what we have done.

Mr. McANENY. We have always been willing to cooperate in the hearings before the Senate committee. A year ago, or last fall, I believe, when the subject first came up, Mr. Seitz, who was then chairman of our postal committee, made a direct proffer of any aid or cooperation that we could give and we have repeated that offer to the postal committees. On the other hand we have not made any campaign in this matter. The newspaper publishers have made no campaign in this matter beyond the adoption at their convention of the resolution that I have read.

Mr. GARNER. I will withdraw that so far as the newspapers are concerned. I only mentioned that because of the many editorials of criticism of the present law that I have seen, but I do know that another class of papers has done that.

Mr. McANENY. May I add this further, that we are not here to criticise?

Mr. GARNER. Let me make a suggestion to you. There are two classes that patronize the second-class matter, the newspapers and the magazines. They are the bulk of the weight of stuff that goes through the second-class mail.

Mr. McANENY. And the trade journals.

Mr. GARNER. We will class them as magazines. Let me, as one of the committee, ask you to do something, you and your associates. Prepare a law, suggest such a law that will apply to your business that would be satisfactory, and at the same time provide something like the revenue that the Post Office will have to pay out for the transaction of your business. I don't ask you to do it for the magazines, because I think that would be asking too much of you, but I do ask you and your associates to prepare some kind of legislation and suggest to this committee and to Congress that you would be willing to stand up for and convince the country that that was just the legislation that ought to be on the statute books.

Mr. McANENY. In the first place, that brings me back to the point I made at the start, that no one has the data upon which a fair bill can be prepared, and that we believe that there ought to be further inquiry before anything is crystallized into a permanent postal law.

Mr. GARNER. Do you believe, Mr. McAneny, that we should take another year or two years, and this matter shall be thoroughly investigated, and when the time comes to levy the tax and that tax is

going to increase the cost of transporting your stuff through the mails, that we could come to an agreement?

Mr. McANENY. I think we would come very near it.

Mr. MOORE. Would you include all publishers in that bill? We have evidence that the publishers have not thoroughly agreed as to the method to be pursued, the magazines on the one hand and the newspaper publishers on the other. They could not agree on a flat rate.

Mr. McANENY. We appear only for the daily newspapers. It is only the daily newspapers that would be materially affected by this law. We haven't anything to say about the case of the magazines and trade journals. Our cases are different. If they have grievances, a case of their own, naturally they have our sympathies, so far as it can go, and we respect their opinion in the matter, but our cases are different and our plea is put on a different basis. The difference between the two is a natural division, but the newspapers themselves are now quite united. They were not in accord several months ago at the time this thing was first passed, but one of their divisions, the Southern Association, backed by the Inland Association, did present an argument in hearings before Judge Moon's committee, did present a substitute plan which they were willing to adopt, and which we are willing to accept, gladly accept, as a substitute for the plan that is now before the country. That has been done, sir. That was the first item in our program adopted in New York, and our first plea here is that if there is to be any legislation at once, do it that way, as the Southern Association proposes. But we naturally assume that it would be difficult within the slight time remaining to bring about the adoption of this entire thing, so we say that if the time is too slight, to spend another year and give us a chance to argue on these alternatives, and to take the matter up with the Post Office Department, and, of course, we are prepared to recognize any inequities that may develop in the course of such an inquiry.

Mr. MOORE. Could this thing be done by classification of the various businesses instead of by a zone system? Could we classify the business in any manner to produce the revenue on the one hand and cover the alleged deficiency on the other? Suppose we separated magazines from newspapers, giving one a flat rate and reverting to a classification system for the other.

Mr. McANENY. I hesitate to propose such a plan, but I think it would come very much nearer recognizing the place of the newspapers.

Mr. MOORE. If something of that kind were done, what would you say to a tax on advertising, in view of the Government's necessities for revenue now, in both magazines and newspapers, if any measure of relief might be found?

Mr. McANENY. My opinion about taxing advertisements, chiefly, would be this: In the first place, under the present revenue law advertising is heavily taxed, representing as it does the profits of the newspaper business. There is no newspaper that I know that makes money out of its sales. On the contrary, the returns from the sales scarcely more than pay for the white paper and the other ingredients that go into the mechanical composition of the paper.

Mr. MOORE. Would the newspapers be taxed if advertising was taxed? Wouldn't it be charged up to the advertiser anyhow?

Mr. McANENY. The newspaper would be taxed in this respect, that the advertiser would pay more than he was paying to-day for his advertising, and the result of an additional tax, if we attempted to put it upon him, would inevitably be a serious reduction in the volume of advertising. Now, we think that that would not only be injurious to the newspaper in reducing the assessable tax, but that it would be a very serious thing for the business.

Mr. MOORE. Mr. McAneny, I presume we could not state this proposition to a man better qualified to pass upon it in the United States, remembering your representative capacity. The President has asked for a very large sum of money to conduct the Government. The Secretary of the Treasury has indicated that \$8,000,000,000 will be needed for the year 1919, which must be met by taxation apart from the \$16,000,000,000 that will have to be forthcoming on loans. Now, with the powerful influence of the newspapers throughout the country, all advocating war, and the continuance of our preparations for war and victory, how can we avoid putting some additional taxes upon those who do business through the newspapers, to wit, the great business concerns of the country?

Mr. McANENY. I think in this way, Mr. Moore. You have got to recognize that this \$8,000,000,000 that must be raised by taxation are to come out of the business of the country, and that so far as it is possible and compatible with the use of the industries of the country for war purposes, we want our business plants to do the best that they can.

Mr. MOORE. Do not we simply utilize for the purposes of the war the various manufacturers of the country as sluiceways through which we can at the end collect large sums of money from people who are amply able to pay; that is to say, the man who can afford to advertise to obtain business?

Mr. McANENY. You could not make a tax that would discriminate in favor of those who would be bound to be paying a flat tax, and our experience as publishers is that they are doing as much as they could to recoup the losses of the past year, and we can not get any more out of advertisers. The result would be that the advertiser would reduce that item in order to let his business run on without interruption. The tendency would be to cut that item.

Mr. MOORE. Isn't it a fact that the rates for advertising have increased since the war?

Mr. McANENY. About 15 or 18 per cent, and the cost of white paper has increased anywhere from 60 per cent to 200 or 300 per cent, and, of course, the paper is more than one-half the running cost of the newspaper.

Mr. MOORE. To a certain extent that increased cost has been covered by the increased price of advertising?

Mr. McANENY. No; indeed not. The added returns from advertising have hardly scratched that added increase of the cost of paper. But so far as can be, higher advertising rates have been employed. I do not say that they would not stand 1 or 2 per cent higher, but I think it would be hazardous and I think a very high tax would surely reduce the volume greatly.

As illustrating that point, may I give you these facts, the fact that already there has been a great slump in the advertising business in the newspapers of the country. Take the month of January, for

instance. That is prepared by the statistical bureau. That is audited regularly, the standard bureau of the country. We estimate by thousands of lines in our statistics. In the year 1918 in the principal cities of the country there were 49,674,000 lines. In 1917, the year before, those figures had been 54,657,000 lines, in other words, a loss as between the two years of 1917 and 1918, of 5,000,000 lines of advertising. That slump has been reflected in the figures taken since. In the case of individual papers it has been in some cases serious. In other cases there has been an increase in the amount of advertising, as, for instance, in the case of the New York Times. But those instances are very few. The average, the bulk, are the figures that I have given you.

Now, to further reduce, to give acceleration to that tendency down, we think would not fail to hurt us, as it certainly would. We admit that it is different from the postage rate, because we can pass the other to some degree. We can not pass the advertising.

Mr. MOORE. A flat 5-cent rate was suggested when this bill was introduced, and it was thought at that time that if such an amendment were adopted that all the newspapers would have to do would be to collect that as a collector for the Government.

Mr. McANENY. You can't collect from an unwilling customer. If Congress passed an act requiring them to advertise, it would be a good thing.

Mr. O'SHAUNESSY. But if they were making money it would be well to collect it for the Government.

Mr. McANENY. That is the way to get a tax from any source. If you tax advertising, the result will be that you will get less revenue from the excess profits out of the newspapers; you will take 20 per cent from the peak they are paying you when you tax advertising.

Mr. MOORE. We can not escape raising \$8,000,000,000, an enormous sum of money, and that must come even if it draws blood.

Mr. McANENY. But the means of raising it—haven't they got to be considered first of all, just as the means of raising the bond issue, which was through the newspapers, through newspapers and advertising; and if for the sake of what is a dropping return you take away the greatest thing that moves the masses in the end, haven't you done a real injury to the tax-collecting system?

Mr. MOORE. We had this suggestion day before yesterday, that we might raise \$100,000,000 by adding 1 cent to each street car ticket; but if we did that, it would mean that we would have to have 10 other means of raising \$100,000,000 in order to get \$1,000,000, and then we would have to find 700 more to get the \$8,000,000.

Mr. McANENY. Isn't it a question of proportion? Your street ticket tax you can get because people have got to use the cars. If you put a 5 per cent addition on advertising I don't think it would net more than \$10,000,000, and for that slight return you would have reduced the service for the Government.

Mr. Roper, the Internal Revenue Commissioner, has told the public that the increase in the yield of last year's tax bill over what was estimated was due chiefly, in his judgment, to the good that the newspapers did in getting the people stirred up to pay and in putting the right start upon it in public opinion, and the same is true in increased postal rates. In exchange for an estimate of \$2,000,000, a

four-thousandth part of the sum that you need to raise—in exchange for that you will materially reduce the area of circulation of newspapers through which you wish to reach the people.

Now, Mr. Moore, may I add one thing to that by way of emphasis and comparison, that at the very moment that our Congress is preparing to do this thing, to increase these charges and to reduce circulation, the government of Canada, in a similar situation, is anxious to get its propaganda before all the people, and has reduced its flat rate, which was one-half of a cent, to one-fourth of a cent, and has done that in order that they may get printed material all over the British Empire, which goes to any part of it at one-fourth of a cent.

Mr. O'SHAUNESSY. Two million dollars distributed among the members of your association would be a very trifling amount.

Mr. McANENY. It bulks very large in some cases. It is an estimate only, but whatever it is it would hurt and disturb circulation, because they will not pay the added prices.

Mr. O'SHAUNESSY. Why won't your people pay the added prices, there are so many of you?

Mr. McANENY. Because <sup>the</sup> newspapers of the country can not afford to do it. Not only that, it is paid the first year, and the next year it goes to a double rate and the next year higher still until it reaches \$7,000,000.

Mr. O'SHAUNESSY. We would more readily appreciate the argument if it were \$20,000,000 instead of \$2,000,000.

Mr. McANENY. That is a powerful \$2,000,000, the small thing that will break the back in the matter of local mail circulation. If we send out a lot of papers with an increased rate from \$1 to \$1.80, which we would have to do, we are going to get a great many stop orders, on that slight increase. That is in the case of the average newspaper. I can assure you, gentlemen, that I am not talking from the point of view of the newspaper with which I am associated. On the contrary, the New York Times will be but slightly affected by this bill. If we wished to be helped in the general postal situation, you could not have done anything better for the New York Times than to have passed the bill just as it is. I think that the character of its circulation is of a sort that will keep it pretty compact. For that matter it is better able to sustain losses than almost any of the others, or a great many of the others.

Mr. GARNER. I do not know whether I got your exact view of your association as to whether or not you favored a flat-rate system, if of it was an increase—and up to date I have not heard you say that we should be an increase, particularly in second-class matter.

Mr. McANENY. I do not think, Mr. Garner, that that need has been shown, because, in the first place, as I have said, the Post Office department is self-supporting, and it is but a division of its interlocking activities, and in the second place, if there were a loss, I think naturally it should be charged to the Government service and not to subsidies to anybody. It is no more a subsidy than the expenses of the Department of Commerce are a subsidy to individual plants and concerns. It is not any more a subsidy than the service of the Department of Agriculture, which is doing so much to promote the prosperity of the country. You might as well talk about subsidizing public schools, or the public libraries, because a part of their funds

REVENUE BILL.

are taken from the public common treasury. And that is true here that if there were a loss, so-called, it would represent the expenditure of the Government out of their own postal revenue to get literature and education over the country without limitation, and therefore you can not deal with this thing as you would with any express company. You can not say that I or you, or anyone else, that it ought to be made to pay its cost, and that a flat rate will produce that cost better than a zone rate. In order to produce that cost, in my judgment, the first inquiry should be as to what the cost is. That, we do not know. Under this bill, it will cost more to put newspapers in the farther zones that go from the office of the publishers at the pound rate than it will cost the individual to put the newspaper in the mail at the third-class rate. There you have an instance of unscientific preparation, because of the way in which this bill will work.

The CHAIRMAN. Suppose we adjourn now and come back here at 2.30.

(Thereupon, at 1.15 p. m., the committee took a recess until 2.30 p. m.)

AFTER RECESS.

The committee reassembled at the expiration of the recess.

**STATEMENT OF MR. GEORGE McANENY, NEW YORK TIMES,  
NEW YORK CITY, REPRESENTING AMERICAN NEWSPAPER  
PUBLISHERS' ASSOCIATION.**

The CHAIRMAN. Mr. McAneny, do you want to make any additional statement now without interruption by questions from members of the committee?

Mr. McANENY. If I may, Mr. Chairman, I would appreciate that.

The CHAIRMAN. I regret that we interrupted you with questions this morning.

Mr. McANENY. I was very glad to answer the questions.

The CHAIRMAN. The reason I broke my general rule and did so was that my questions were in connection with that particular part of your discussion and would have been out of place anywhere else. But you may now complete your statement without interruption.

Mr. McANENY. Well, I trust the committee will be patient with me if I repeat here and there in a small degree some argument of this morning, as the discussion then suggested certain points that ought to be brought in and can best be understood if again woven with points that have been made.

But I would like to speak first about the theory of the subsidy. As was suggested here this morning by Mr. Moore, that idea, of course, has been prevalent. It has been converted into more or less of a cry which has been accepted by a great many people who have not had the time, or the patience, perhaps, to go into the underlying facts.

As a matter of fact, we ask you to recognize upon the evidence that we can readily present, that there is no subsidy involved in the present postal rates that goes to the newspaper publisher; that the benefit of the present rates, expressed in terms of dollars and cents.

goes only to the reading public, and that in similar instances of a return to the people of moneys paid by them to the Government, such return is not called a subsidy, but it is called a Government service; that whatever there may be of so-called deficit attributable to this class of mail, it really has been passed on long ago in the adjustment of the publishing business to the individual reader, and if there be any questions coming out of a doubtful mind upon that subject, we will frankly answer them. But that is the fact.

I endeavored to show it, to some degree, from the figures with which I am most familiar, in the case of the New York Times; and Mr. Garner's questions suggest to me a further reply that I would like to make directly to him, but of course to the committee also.

He spoke of the cost of buying paper in Texas, for instance, as against buying it in New York, and of the relative profit. I showed that in the business of every metropolitan newspaper in every large city there are certain sales made at a city price, as in New York at 2 cents, and outside sales at an outside price, as 3 cents, and that the two must be read together in order to get a view of that particular newspaper enterprise. The fact that they differ is a fact that has stood as long as newspaper selling has stood, as a natural incident of the business.

But going out into the outside field, I then showed how the net receipts from the sales decrease from those that are sold through expressage, from those that are sold through dealers' packages in the mail, and, finally, from those which are sold in wrappers through the mails, which are those which you have commonly in mind when you speak of the second-class newspaper mail.

I showed that those net receipts run from \$8.04, which we get through expressed material, down to \$7.12, which we get on the wrapped material.

That is not a net profit, you will understand; there is not any profit in the sale of the paper; the profit is only realized when you get to the proportion of the receipts from advertising that may be kept as profit. We were speaking merely of net receipts in case from the sale of the paper.

I have figured more closely during the recess than I did this morning, and I find that our net returns on the papers that we sell, even at the 2-cent rate in the city through the news dealers, after allowance for all percentages that go to them and for other costs, in the year are \$7.10. That represents the net receipts upon each year's sales, theoretically, if you choose, to one person who buys on the street or from a hotel stand, and so on, while in Texas it would be \$7.12. So it happens coincidentally that, even as between the 2-cent and the 3-cent gross rates, it comes out about the same in the matter of net return.

Again, I offer that as evidence of the fact that there is no subsidy coming from the mails to the newspaper, nor any semblance of one. But under the increased rates provided by the act of October 3, 1917, where we charge Mr. Garner, for instance, who is in the seventh zone with relation to New York, \$1.85 now for his postage, the rate that the Government fixes, there will be an increase next year of \$2.18, bringing the postage rate to \$4.03 upon his subscription. In the second year there will be an increase of \$4.16, bringing the total postage rate to \$6.01. In the third year there will be an increase of \$6.01 funds

bringing the total to \$7.86, and in the seventh year a total of \$7.86, bringing the total to \$9.71.

In other words, charging Mr. Garner now \$10 a year, \$1.85 of which represents postage, we should have to charge him under the full fruit of this act \$17.90, of which \$9.71 would be postage, in the seventh year.

That is the result in a concrete case of the adoption of this act, and I offer it as evidence of the fact that if this increase to which I refer is a part of a subsidy that has been paid to somebody, who has been getting it, the newspapers or Mr. Garner—as Mr. Garner is now required to give it up in the shape of the increased postage that the act itself provides?

Mr. LONGWORTH. May I ask a question at this point, or would you prefer to proceed and have me ask it later?

Mr. McANENY. I shall be glad to answer it now.

Mr. LONGWORTH. It is simply in regard to a remark that was made this morning. When I asked a question as to what proportion of the average newspaper circulation went through the mails this morning, some gentleman stated that he believed 50 per cent did. You have called attention to the fact that in the case of the New York Times not over 15 per cent of the circulation was affected directly by rates on second-class mail.

Mr. McANENY. Yes.

Mr. LONGWORTH. And I have spoken to one or two newspapers since then, and they seemed to think that the gentleman's estimate of 50 per cent was an overestimate to a considerable extent.

Mr. McANENY. I have also talked with some of the members of this committee who think that would be a fair average. The percentage in the case of a city newspaper like the Times is low, but the bulk of the circulation of a metropolitan newspaper is paid through there. The case of the Times is exceptional. But you go to the West, and in many cases the bulk of the circulation is paid through the mails, as in the case of the Minneapolis Journal.

Mr. LONGWORTH. I would like to have you cite a case where the bulk of the circulation was through the second-class mail. I would like to hear of one such case.

Mr. McANENY. I would say the Minneapolis Journal, for instance. Mr. Jones, of the Journal, is here.

Mr. LONGWORTH. Well, about what proportion of the circulation of that paper is sent through second-class mail?

Mr. JONES. We have a circulation of 115,000, net paid circulation; and 50,000 of that goes to the country through the second-class mail and 65,000 is delivered through our own carriers.

Mr. McANENY. That, I judge, is about 45 per cent.

Mr. GARNER. That is on account of the two cities being close together; that is an abnormal condition, is it not?

Mr. McANENY. I do not think they view it in that way out there.

Mr. JONES. The two cities have no interchange of newspaper circulation. St. Paul is less than 7 miles from Minneapolis; and there are less than 7,000 copies of our paper that go to St. Paul daily.

Mr. LONGWORTH. There is a case where your outside circulation is 60 per cent of the whole.

Mr. JONES. No; 48 per cent.

Mr. LONGWORTH. Well, my question was general; take the newspapers throughout the country; do you think the circulation through the second-class mail would approximate 50 per cent?

Mr. JONES. Our paper is a very fair example of those in the West in that respect. Take the western cities as a whole, and ours is a very fair example.

Mr. McANENY. The western papers would be hit a great deal harder than the eastern ones by this law.

Mr. LONGWORTH. The reason I asked that question was to determine the situation with regard to the magazines and the situation with regard to the newspapers, and to see how they differed. What proportion of magazines are circulated through second-class mails?

Mr. McANENY. That I can not tell you.

Mr. LONGWORTH. There is a difference, as you pointed out this morning, between the two cases.

Mr. McANENY. Yes, there are substantial and important differences.

Mr. LONGWORTH. And I wanted to find out what I could in regard to the differences as to outside circulation between magazines and newspapers.

Mr. STERLING. Do you send out newspapers by express?

Mr. McANENY. Pretty nearly half of our outside service is by

express receipts 1

Mr. McANENY. That no doubt is true in cases where time is not an essential element. The magazines may be sent in advance, of course; they are not tied to particular dates. The newspaper has got to get out at 2 o'clock every morning, and it has got to make train service and local deliveries, and all of that, and therefore it must choose that which best serves its purpose in the matter of time.  
Mr. MOORE. There must be an advantage in the express service, however?  
Mr. McANENY. Well, the evidence of that, as I say, is that, I should say, about 40 per cent of our out-of-town circulation is handled by express.  
Mr. STERLING. In sending your papers to Philadelphia and Boston, for example, you send them by express, do you?

Mr. MOORE. There must be an advantage in the express service, however?  
Mr. McANENY. Well, the evidence of that, as I say, is that, I should say, about 40 per cent of our out-of-town circulation is handled by express.  
Mr. STERLING. In sending your papers to Philadelphia and Boston, for example, you send them by express, do you?

Mr. McANENY. That is outside of the 15 per cent.

Mr. STERLING. You actually mail 15 per cent of your issues in the mails, what per cent of your issues are sent by express?

Mr. McANENY. Yes; or about 55,000 copies of the daily; 30,000 in the mail in dealers' packages that the Post Office Department does handle.

Mr. STERLING. Can you circulate your papers more cheaply by express than by mail?

Mr. McANENY. In the districts served by express we can. Of course, in the districts served by mail we cannot.

Mr. MOORE (interposing). Mr. Farelly, of the American News Co., testified to the committee several days ago in the course of his statement that the freight service of the country could beat the Postal Service, and that it paid them to use the freight service—I mean the freight railroad service.

Mr. McANENY. That no doubt is true in cases where time is not an essential element. The magazines may be sent in advance, of course; they are not tied to particular dates. The newspaper has got to get out at 2 o'clock every morning, and it has got to make train service and local deliveries, and all of that, and therefore it must choose that which best serves its purpose in the matter of time.

Mr. MOORE. There must be an advantage in the express service, however?

Mr. McANENY. Well, the evidence of that, as I say, is that, I should say, about 40 per cent of our out-of-town circulation is handled by express.

Mr. STERLING. In sending your papers to Philadelphia and Boston, for example, you send them by express, do you?

Mr. McANENY. That no doubt is true in cases where time is not an essential element. The magazines may be sent in advance, of course; they are not tied to particular dates. The newspaper has got to get out at 2 o'clock every morning, and it has got to make train service and local deliveries, and all of that, and therefore it must choose that which best serves its purpose in the matter of time.

Mr. MOORE. There must be an advantage in the express service, however?

Mr. McANENY. Well, the evidence of that, as I say, is that, I should say, about 40 per cent of our out-of-town circulation is handled by express.

Mr. STERLING. In sending your papers to Philadelphia and Boston, for example, you send them by express, do you?

NT. We send them by express except as they go in  
papers to mail subscribers.

CHAIRMAN. You did not finish your statement, Mr. McAneny.  
I believe we agreed that we would not interrupt you with ques-  
tions, as that might interrupt the consecutive course of your state-  
ment. You will let us know when you have finished, will you?

Mr. McANENY. Yes. Passing from the question of who carries this  
cost, which I trust that I have made clearer, Mr. Chairman, may I  
speak of the place of this legislation in the war revenue producing  
scheme?

We feel that it has been unfortunate that a permanent change in  
the postal system, the establishment of the great second-class busi-  
ness upon a basis that is revolutionary in its change, should be treated  
as anything except postal legislation.

Last year, when this bill was passed, everything, of course, was in  
a hurry. The House had passed a species of flat zone increases; the  
Senate had passed nothing; and in conference the present plan  
worked up—I understand proposed by the Post Office Depart-  
ment but with the reservation on the part of the Postmaster Gen-  
eral that the department did not think it ought to be done in this way.

That was a matter of opinion, where, of course, you  
are within your right and according to your own notion of what  
is right. But inevitably it led to rather hasty construction work, and  
the result that the newspaper publishers had no opportunity  
heard or to offer their argument upon either the necessity of  
the new plan before the bill accepted in conference was.

Now, the Postmaster General in his annual report re-  
fers to this matter in this way: he is reviewing the last fiscal year:

The language of the act clearly indicates that the increased rates on first-  
class mail and the tax on parcels post were imposed as a war tax, and therefore  
temporary, while the rates on second-class mail were to partially reimburse the  
Government for the enormous loss it suffers in the handling of this class of mail, and are  
legislation.

As I said this morning, we understand that it will remain  
permanent legislation; and it does not necessarily come up in con-  
nection with the discussion of the next revenue bill: it is fixed, it is  
settled. At least, it will be if it goes into effect on the 1st of  
July.

Now, gentlemen, not only is it not a war revenue legislation in  
the sense of the intent of the bill, or the character and scope of the dis-  
position of the act, but in the vital test of producing war revenue it is not  
a war revenue bill.

I have mentioned the figures of the Post Office Department. They  
estimate that from all classes of second-class material there will be  
an increase next year under this bill of \$4,900,000; that from news-  
papers within the second-class mail—and it is the cause of the news-  
papers that I am pleading—there will be less than \$2,000,000 realized.  
Now, against that we must charge the increased cost of handling  
this system. There are very few newspaper men—I mean the prac-  
tical men who handle the mechanical department—who believe that  
it will be possible to operate this law.

As I have said, it requires a separate measurement of the news-  
paper advertising in every edition of every day's issue of every daily  
paper in the United States. When that division has been made,

it applies seven different rates on the same night, base  
 In other words, you multiply the difference in the ratio  
 and advertising by a zone rate in each case; and you have  
 that in one newspaper office, running off four editions, for in  
 as most do of a morning newspaper, and there will be 28 differ-  
 rates of postage to be paid; and the basis upon which they are paid  
 must be estimated practically on the night on which the work is done.  
 It can not be done, gentlemen.

The Post Office Department has prepared regulations interpreting  
 the act and intended to go into effect on the 1st of July, in which they  
 attempt to make it work by providing that the assessments upon  
 zones need not be for the individual issue, but that the publisher  
 may take a six months' average and charge according to that average.

Well, if that can be done it will lighten the burden, although it will  
 leave it complicated beyond degree nevertheless. But if they do  
 that, then they have got themselves to violate the act of October 3,  
 with 17 because that act does not permit anything except assessment  
 proportional to each day's newspaper.

Mr. McANER to do that—or to do anything that this act requires—  
 Mr. LONGWORTH says they have got to spend more money for clerical service and  
 morning, but they have got to spend more money for mechanical handling; and \$1,000,000 would, in my  
 Mr. McANER come a long way short of meeting that extra expense.

Mr. LONGWORTH get down with that deduction, you come to the fact that  
 Mr. McANER what remains would be wiped out over and over again by  
 to the difference in circulation that these war prices are bound to bring  
 newspapers.

Mr. STERLING, is it not fair, gentlemen, to recognize that as a revenue

Mr. McANER in the sense in which you are dealing with the revenue  
 express there is practically nothing in this bill?

Mr. STERLING to the effect upon circulation—I have shown that the  
 express, Mr. McANER most must be passed on. As to the effect upon circulation,  
 mail, Mr. McANER increases have been made for purposes incidental to the  
 speak of rates, in New York, for instance, and in other cities, there has

I show a marked shrinkage of circulation immediately afterwards.  
 through not already happened; a little of it has been recovered. But  
 wrapped in circulation figures of to-day of all the papers are far, far

That is, the figures of six months ago.

profit in the figures of six months ago.  
 get to know never, let me take the case of Mr. Jones's paper again, if I may  
 kept as a moment. He tried this thing out in a very practical way.

the so: In the 1st of March he sent out to 800 of his subscribers whose  
 subscriptions were due for renewal at about that time two cir-

ing, I had letters. In one of them he merely reminded the subscriber  
 at, that his subscription was due, without reference to rates. That

went to 400. In the other 400 he indicated the coming increase,  
 and said that he would be obliged to collect that on the 1st of July.

He did that in order to see what the result would be on that chance  
 list, not selected, but coming on his books right along. And out of

the first 400, up to the time that the bulk of them were in, he had  
 received only two stop orders; and out of the second 400 he had

received 200 stop orders; 50 per cent of his mail circulation had dis-

appeared under the application of the higher rate to the individual  
 subscriber.

Am I right in my figures, Mr. Jones?

Mr. JONES. I could go a step further and say that out of the  
 say, anywhere no statement as to increase was made all paid but 3; could  
 express. paid by

Mr. STERLING

or example, you } — by express, do you?

Boston,

3 stops out of the 400. On the other 400 there were 200 stops, 9 paid, and the balance never recognized the bill or made any comment whatever, and they automatically went off for nonpayment. We only got 9 subscribers out of 400 in one case, and we got 39 in the other.

Mr. McANENY. That, gentleman, with variations of degree, is bound to be the common experience in the application of these higher rates.

I have not anything further to present in the way of argument, except this final appeal to your judgment: That at this particular time, when the Government of the United States and its people need the service of the newspapers for all their normal purposes more than they ever have needed that service before; at a time when the President of the United States and the heads of the various departments have written public letters expressing their appreciation of the service that the newspapers are doing and calling on them cheerfully for more—is such a time opportune for making a change of this character the effect of which is scarcely financial from any point of view in a serious way, but which, in the dislocation of a system and the complete disorganization of the publishing business, so far as its mail side goes, is bound to be hurtful and harmful to the highest degree?

Gentlemen, is it worth while when as an alternative the daily newspapers of the country, not pressing their plea upon the ground of service immodestly, I trust, or too far, nevertheless ask you merely that this matter shall be held in abeyance for another year until they have had an opportunity to study with you or with the Post Office Department, the underlying facts; the two Houses through resolution might require an official inquiry that would yield more dependable results; and until the newspapers along with the rest of the country are in clearer waters.

That, gentlemen, is our plea. We ask, on the one hand, what is gained during the next year by pressing this matter? And the answer must be a doubtful million or two of dollars. On the other hand, you have a solution that has been offered for the second-class problem that necessarily is faulty from one end to the other; that ought to be revised; that is bound to breed trouble for us and for the business and reading interests of the country, and that can be made right very much more readily when another year has passed that that would seem to be almost the natural course to take.

Mr. Garner asked this morning about our willingness as publishers to join in any effort to get a permanent bill that would be generally accepted. I repeat that we will most cheerfully enter into that cooperation, and I will repeat, too, that at the hearings of nearly a year ago Mr. Sykes on behalf of our association made that offer, urging that the inquiry be made through official sources, and pledged our cheerful help in whatever might be undertaken.

We should hope that such an inquiry—Post Office Department or congressional or otherwise—would lead to a general agreement that this thing should be done upon a different theory with the purpose of getting the press as widely circulated throughout the country as possible, in the interest of a national unity and in the interest of a broader sort of educational propaganda, and of every other consideration that makes under the head of the national progress—with the

hope that that view might be accepted as a result of further test and inquiry.

But whatever is brought out in such a test, whatever is brought out in the way of assessment of costs that may be taken as a rightful basis for a system, we will accept. We would depend upon the justice that that careful process would be bound to develop, and we would not fear the result, gentlemen.

Now, I shall very gladly answer any questions, Mr. Chairman, if you will kindly allow me a few minutes in conclusion.

The CHAIRMAN. All right. Does any gentleman desire to ask Mr. McAneny any questions? I suggest that the different members question him in order one at a time; after Mr. Rainey has finished another member may question him, and so on. In that way we will avoid having members of the committee interrupt each other with their questions.

Mr. RAINEY. Mr. McAneny, your proposition is to have this matter investigated by a commission; that is one of your propositions, is it not?

Mr. McANENY. Yes.

Mr. RAINEY. With a view to ascertaining what? Whether there is a loss occasioned by carrying second-class mail at the present rates or not?

Mr. McANENY. We suggest such an inquiry, Mr. Rainey, with a view of ascertaining, in the first place, not only what the actual cost of carrying these various classes of second-class material is, but as to what its proper distribution and assessment within the system is. There are many different kinds of second-class material, and they are carried under varying conditions; they may well be shown to be entitled to different rates.

Mr. RAINEY. Are you anxious to find out whether newspapers are carried through the second-class mail at a loss or not?

Mr. McANENY. Not as narrow as that, sir.

Mr. RAINEY. You admit that they are carried at a loss, to start with, do you not?

Mr. McANENY. We admit that they are carried at a cost; that is, less than they pay to the Government.

Mr. RAINEY. Well, that would be a loss to the Government, would it not?

Mr. McANENY. A loss borne by the Postal Service. It is the cost of a Government service.

Mr. RAINEY. Yes. Now, do you know how many investigations we have had by commissions on this very subject?

Mr. McANENY. I know that the last one of any conspicuous sort was the investigation of the Hughes Commission in 1908.

Mr. RAINEY. How many altogether?

Mr. McANENY. I did not go very much back of that.

Mr. RAINEY. We have had six investigations for the purpose of ascertaining the facts for which you now propose another investigation.

Mr. McANENY. Which was the most recent one, Mr. Rainey?

Mr. RAINEY. I do not remember the most recent one.

Mr. McANENY. I do not think you or I will recall any in the last 10 years.

Mr. RAINEY. Of course, the expenses of the Government have been increasing for the past 10 years and the situation is now worse than it has ever been. Do you know what the results of the investigations of all six of these commissions were in the matter of ascertaining whether newspapers were paying their way through the mails or not?

Mr. McANENY. I have the Hughes Commission report before me.

Mr. RAINEY. I think they all agreed on the proposition that there was a very large loss. That is from my standpoint. From your standpoint it is a Government service, and therefore nobody can lose anything if it is a Government service.

Mr. McANENY. Well, it goes to the people, whatever it is; it is usually called a Government service.

Mr. RAINEY. The Government is carrying freight now; the railroads are under the control of the Government. We have just raised the freight charges in order to make it possible to carry freight without a loss to the Government. Is that not a public service now, the carrying of freight over the railroads?

Mr. McANENY. Of course, any operation of the Government, whether it is new or old, is a public service.

Mr. RAINEY. Yes.

Mr. McANENY. And of course in the carriage of freight you will have an effort to meet the costs of administration; and of course that cost will vary with the distance. That is all peculiar to the business of carrying freight, but not to the business of carrying newspapers.

Mr. RAINEY. In your judgment that is true of everything that the Government carries now, that it ought to pay the expenses of carrying it over our railroads and our rural routes, wherever they go—everything except newspapers?

Mr. McANENY. No; I would not put it that way, Mr. Rainey.

Mr. RAINEY. Well, is not the effect of your argument to put it that way, whether you are willing to put it that way or not?

Mr. McANENY. Permit me to correct myself. The Government is conducting the business of the railroads as a new department. I do think it should adjust the revenues of the service so that it will pay for itself; and the Government apparently is doing that. Now, the Government is also carrying the Post Office Department as a department, and the Post Office Department is paying its way to-day.

Mr. RAINEY. Well, there was a time when that was a new department?

Mr. McANENY. The Post Office Department?

Mr. RAINEY. Yes.

Mr. McANENY. Oh, yes; 50 years ago it had a zone plan.

Mr. RAINEY. And under the zone plan the Government so managed it that it paid its own way, did it not?

Mr. McANENY. Well, do you think that there is much value in the figures of 50 years ago? The conditions have changed so absolutely that they have not the same meaning now.

Mr. RAINEY. Only so far as they show that the various classes of mail paid their own way 50 years ago; and your position is that they ought not to do it now, as I understand it, but it ought to be charged up to the service generally?

Mr. McANENY. No; my position is—

Mr. RAINEY (interposing). What about the Parcels Post Service rendered by the Government? Do you think that ought to be carried at a loss, or carried at its cost?

Mr. McANENY. That, of course, is a great deal nearer the principle of the carriage of freight or express; it is the assumption by the Government, under the Post Office Department, of something very much like what it has assumed under the Railroad Administration; and I do not think there is a very clear analogy there when you have freight, on the one hand, carried on express principles, and the dissemination of news and of literature and knowledge, on the other hand, carried on the principle of Government service.

Mr. RAINEY. We carry books by parcels post and make them pay their own way. We carry the Bible and make it pay its own way. And if we make the Bible pay its own way, do you know of any reason why we should not make your paper pay its own way through the mails? Half of your paper is advertisements, yielding a return to your office; and I never yet saw the Bible with a paid advertisement in it. [Laughter.]

Mr. McANENY. I do not say it with irreverence; but a new edition of the Bible comes out less frequently than a new edition of a New York newspaper.

Mr. RAINEY. Well, they do get out a great many new editions, however.

Mr. McANENY. Yes; but the Bible circulates or is distributed in such a way that it can, without injury to the consumer, be sent out and distributed through the mail much more slowly.

Mr. RAINEY. Some years ago we paid to the southern railroads and to other railroads an additional compensation for carrying the mails; more than we paid to most railroads. Would you call that a subsidy?

Mr. McANENY. I should hesitate to get into the larger field of railroad economics, Mr. Rainey.

Mr. RAINEY. But the Government itself subsidized the southern railroads, because the southern railroads said that they were not paying their way and needed that assistance from the Government.

Mr. McANENY. Well, the Government built, bought, and owned and subsidized the Pacific railroads for a good many years, in order to build up the West. There is some analogy in the building up of the West, or of the South, or East—any part of the country, through the dissemination of the press.

Mr. RAINEY. Confining the proposition now to the southern roads, do you remember how recently it has been that we abandoned that subsidy?

Mr. McANENY. I do not.

Mr. RAINEY. Do you know why it was abandoned?

Mr. McANENY. I do not recall.

Mr. RAINEY. We never could get rid of it until the southern roads gave it up voluntarily themselves. They said that they could not in good conscience accept that any longer out of the Treasury of the United States. Have you heard of any newspaper that enjoys this subsidy, with a few exceptions, who are advocating its abandonment?

Mr. McANENY. I know of no newspaper that enjoys this subsidy, Mr. Rainey.

Mr. RAINEY. Does the New York Tribune belong to your organization?

Mr. McANENY. Yes; it embraces all the principal papers in the United States, I think, with the exception of the New York Herald, for some reason or other.

Mr. RAINEY. And all of your organization favors continuing the present rates, do they—all the papers belonging to your organization, so far as you know?

Mr. McANENY. Our papers favor the continuation of the present rates.

Mr. RAINEY. The papers that belong to the association for which you appear?

Mr. McANENY. Yes.

Mr. RAINEY. And the New York Tribune belongs to that organization?

Mr. McANENY. Oh, I see your point. [Laughter.]

Mr. RAINEY. Let me read you what the New York Tribune says—

Mr. McANENY (interposing). I had forgotten that the New York Tribune was the only paper that had taken the other side.

Mr. RAINEY. How about the Philadelphia Ledger?

Mr. McANENY. I have not read the Ledger recently.

Mr. RAINEY. Here is an editorial I have from the New York Tribune of October 4, 1917, at about the time this law was passed; they head it:

The Second-Class Subsidy Fight. Lopping Off a Subsidy.

And they say, among other things:

One of the most gratifying features of the new war-tax law is the partial withdrawal of the present Government subsidy to users of second-class mail.

You could not agree with them on that proposition, although they do belong to your association?

Mr. McANENY. No; I would not agree with them upon that editorial at all.

Mr. RAINEY. On August 6, 1917, the New York Tribune carried a similar editorial:

The House is entitled to credit for the recent second-class mail rates, and for establishing a zone system of charges, payment to be proportionate to the length of the haul.

On June 4, 1917, the New York Tribune, under the heading "Take away the subsidy," was pleading that we abolish this subsidy on account of the fact that it was a subsidy, and that in good conscience newspaper publishers ought not to have it any longer.

Is that the only newspaper that belongs to your association which regards this proposition in the light of a subsidy?

Mr. McANENY. That is the only paper that I have seen or heard about that makes that argument. I am speaking, of course, of papers that are members of the association; and that comprises practically all.

Mr. RAINEY. I have heard of others, but I do not have the names with me.

Mr. McANENY. Perhaps there are others, but I have not heard of them. Of course, there are members of the association who believe in a modified zone plan. That I have explained.

Mr. RAINEY. That is what you believe in, too, is it?

Mr. McANENY. No, I have not—

Mr. RAINEY (interposing). I thought you stood for the McKellar proposition?

Mr. McANENY. There were a series of propositions under consideration, Mr. Rainey. I would adopt them as my own.

Mr. RAINEY. Would you be opposed to the McKellar proposition?

Mr. McANENY. I would say, first of all, that nothing should be done until the need has been more clearly shown, or the propriety has been more clearly shown.

Mr. RAINEY. By a seventh investigation?

Mr. McANENY. Yes.

Mr. RAINEY. In the meantime and pending that investigation, you want us to stop the operation of these zone laws?

Mr. McANENY. We all most earnestly urge that.

Mr. RAINEY. You send out a lot of your papers by express. How far does the express company carry them?

Mr. McANENY. Some of them go as far as Chicago.

Mr. RAINEY. By express?

Mr. McANENY. Yes. The express rate to Chicago is identical with the Post Office rate.

Mr. RAINEY. And therefore you send to Chicago by the express route?

Mr. McANENY. For instance, it costs the same price to send the bundle of 200 papers to a big hotel in Chicago that it costs to send them by mail.

Mr. RAINEY. Delivered to one address?

Mr. McANENY. Yes; to one local dealer.

Mr. RAINEY. To one local dealer; you find that costs just the same to Chicago by express as to send by mail?

Mr. McANENY. I think it does to that point; as you know, the rates vary.

Mr. RAINEY. You send papers to Chicago that go to other persons than this local dealer, do you not?

Mr. McANENY. We send them by three methods.

Mr. RAINEY. Yes.

Mr. McANENY. Some go by express—

Mr. RAINEY (interposing). That is, those go by express that can go just as cheaply that way as they would go by mail?

Mr. McANENY. And where it best suits the convenience of that particular dealer.

Mr. RAINEY. That is true, is it not?

Mr. McANENY. Yes.

Mr. RAINEY. Now, what is the second means?

Mr. McANENY. The second means is through the so-called dealers' packages that go by mail. That is just the bulk package of newspapers bound together and sent to one person.

Mr. RAINEY. You say they go by mail?

Mr. McANENY. Yes.

Mr. RAINEY. Why?

Mr. McANENY. It is a question of convenience in reaching the local dealer.

Mr. RAINEY. Does it cost any more than to send them by express?

Mr. McANENY. In that single instance it costs about the same; and frankly, I do not know just how that divides.

Mr. RAINEY. Except that the Government delivers it to one local dealer?

Mr. McANENY. No, the Government does not deliver it to the local dealer; the dealer comes to the train and gets it.

Mr. RAINEY. He goes to the train and gets it?

Mr. McANENY. Yes.

Mr. RAINEY. And what is the other way?

Mr. McANENY. The other way is the individual wrapper; that goes into the mail into sacks; sacks are made up in the office of the paper.

Mr. RAINEY. That is sent by mail?

Mr. McANENY. That is sent by mail in sacks to Chicago and there distributed by the carrier service.

Mr. RAINEY. To a great many different addresses?

Mr. McANENY. Yes.

Mr. RAINEY. Why do you not send those by express also?

Mr. McANENY. Because it would not be possible to do by express what the Government there does in order to get the papers to the people.

Mr. RAINEY. Because it would cost more?

Mr. McANENY. Because it would be a prohibitive cost.

Mr. RAINEY. It would cost you more, in the first place?

Mr. McANENY. No; it would not cost us more, because we could not undertake it.

Mr. RAINEY. If you did undertake it, would you have that additional expense?

Mr. McANENY. If we undertook it, we undoubtedly would.

Mr. RAINEY. If you undertook it, you would add just that much to each paper?

Mr. McANENY. It might add a dollar an issue.

Mr. RAINEY. And the only reason you send those by mail is because it would cost more money to send them by express?

Mr. McANENY. It would be impossible to do it that way, just as it would be impossible to send a letter in that way.

Mr. RAINEY. The express company, we will assume, makes a little money carrying the Times to Chicago in bundles to be delivered to one dealer. Therefore you give that business to the express company and do not give the Government an opportunity to make any money on that package, but where the express company would lose money and you would lose money on the delivery, you put that expense on the Government?

Mr. McANENY. Oh, no; we do as any other person in business would do.

Mr. RAINEY. You would put the expenses on the people who mail letters with 2 cents postage on them?

Mr. McANENY. No; just as the Post Office Department and the newspapers there have two methods of getting these newspapers into circulation; and naturally the publisher of the paper chooses the express where it is cheapest for his purposes and the other method where it is cheapest for his purposes there; but in choosing the other he runs up against the other side of this proposition, the fact that the Government is getting that paper to the individual subscriber.

Mr. RAINEY. And you want the Government to keep on doing it at this rate, no matter what it costs those who buy 2-cent stamps for letter postage?

Mr. McANENY. So long as those who pay the 2 cents letter postage are paying for all of this, and incidentally turning in a profit to the Government.

Mr. RAINY. One cent pays the cost of carrying a letter through the mail and the other 1 cent is profit that the Government makes out of it; that is true, is it not? That is what the department says.

Mr. McANENY. It is an excess of receipts for that particular class of mail.

Mr. RAINY. The department gives those figures. When the purchaser of a 2-cent stamp puts it on a letter and mails the letter, 1 cent pays the cost of carrying that letter to the addressee; the other 1 cent is a surplus. Now, that surplus is the only surplus the Government gets from any part of its service, and you have a service which you impose upon the Government and which you seek to have retained, which absorbs that 1 cent profit.

Mr. McANENY. We print a supplement which is practically a separate newspaper on Sunday; and we do not get a cent for it; but its earnings go into the earnings of the paper. It is the same thing exactly.

Mr. RAINY. Has the cost of the Times increased since the war started?

Mr. McANENY. The cost of production?

Mr. RAINY. No; the cost to the reader; the cost to the purchaser of single copies.

Mr. McANENY. Yes; the New York papers increased their rate early this year from 1 cent to 2 cents for the local service and from 2 to 3 cents for the outside service.

Mr. RAINY. In other words, they doubled their charges?

Mr. McANENY. Yes; they were obliged to do so.

Mr. RAINY. I understand that they are making large sums of money, more money than they made before the war started.

Mr. McANENY. That is true of individual papers here and there.

Mr. RAINY. Well, that is true of your paper?

Mr. McANENY. It certainly is.

Mr. RAINY. That is, you doubled your prices to the purchasers of your paper at a time when your profits were greater than they were before the war?

Mr. McANENY. No; we did not do it at all in that way.

Mr. RAINY. Did you ever make as much profit before the war as you are making now on the Times?

Mr. McANENY. No. But that is because—

Mr. RAINY (interposing). Then, making such a profit, you doubled your price to your purchasers—because they had to have the Times, of course.

Mr. McANENY. No; we would have preferred to remain at 1 cent.

Mr. RAINY. Why did you do it then?

Mr. McANENY. Because in a given city where papers are at 1 cent, no one can go to a higher rate unless all agree to do so. The position of the Times, as stated to its associates, was that, "We are not keen for this increase, but we shall do what the rest of you will do, if necessary"; and when they all found it necessary, those whose plight was a great deal worse than ours, to go to 2 cents, we naturally joined with them. There is a similar situation in Boston to-day.

Mr. RAINY. You did that reluctantly, of course?

Mr. McANENY. Yes; although you may doubt it, reluctantly. I will explain that if you like.

Mr. RAINEY. That is, the position of the Times is this: You are making more money than you have ever made before; but the other papers forced you to make still more?

Mr. McANENY. Oh, no; I would not put it that way.

Mr. RAINEY. I know you would not put it that way; but that is the way it analyzes.

Mr. McANENY. No; the other papers did not do anything of the kind. The force of circumstances did require all papers in concert to take care of their mounting bills by providing additional revenue; and no one paper could do that in a given city unless all would. As I said, exactly the same situation exists in Boston to-day, where all wish to go to 2 cents except one, and he will not, and so none of the rest can. You will readily appreciate that if one newspaper in a city remained at 1 cent while all the rest went to 2 cents, half the circulation of the other papers might turn to that one.

Mr. RAINEY. What kind of agreement do newspapers in cities enter into which makes it obligatory for each one of them to charge the same as all of them charge?

Mr. McANENY. Not a formal agreement—

Mr. RAINEY (interposing). Was not your agreement up there, which you were reluctantly forced into, a violation of the antitrust laws?

Mr. McANENY. I believe newspaper publishers in the city of Philadelphia, in which this step was first taken, was advised upon that point by a great constitutional lawyer, and that his advice was to the contrary; and that they did not go to him seeking advice as people who wished to dodge a law or statute, but as people who found it absolutely necessary to provide this revenue or else go out of business.

Mr. RAINEY. When people engaged in other businesses besides newspaper publishing enter into a combination to maintain their prices and to prevent others from infringing upon those prices, the law has held that to be a violation of the antitrust laws, and there are penalties provided for it.

And, morally, what is the difference between what you are doing and what any combination of manufacturers does to keep up the prices of their products and not to compete with each other? Can you think of any moral difference at all?

Mr. McANENY. I certainly can.

Mr. RAINEY. I will be glad to hear it, because I can not.

Mr. McANENY. As to legal differences I would not undertake to advise you; but I refer you to the gentlemen from Philadelphia who were competently advised on the matter.

Mr. MOORE. Who was that attorney in Philadelphia?

Mr. McANENY. The late John G. Johnson.

Mr. MOORE. John G. Johnson; he was a great constitutional lawyer.

Mr. McANENY. As to the moral side of it, that moral side is a business side; and there is nothing improper in any industry that is run at a loss, where costs are mounting above receipts and threaten to go higher, taking steps to provide for its own protection in this way.

Mr. RAINEY. But this business was not running at a loss.

Mr. McANENY. Not our particular paper; no.

Mr. RAINEY. No. Now, have you any objection to telling us what the net receipts of the Times—or the net profits of the Times—were in 1914, and what they have been in subsequent years?

Mr. McANENY. I could not tell you that accurately, for the reason that—

Mr. RAINEY (interposing). I know, but are you willing to utter, I us a statement—

Mr. McANENY (interposing). May I answer your question?

Mr. RAINEY. Yes; certainly.

Mr. McANENY. For the reason that I stated to the chairman of this committee, Mr. Kitchin, this morning: I am unwilling to present the statement of a single newspaper intended to go into your record as evidence as to what should be done in the case of 500. If there is a request for the statement of every daily newspaper in the United States, for the information of your committee, ours will be readily forthcoming; but until that request is made, I can only say to you that the net profits of my paper are considerably greater than they were before the war; that every bit of it has been earned through the building up of its service; that for the present year, they will be considerably less than they were last year; and that what profit will remain goes, in a very considerable degree, into the Treasury of the United States.

The CHAIRMAN. I do not like to interrupt you, Mr. McAneny, but there is a roll call of the House, and we will be obliged to take a recess of 15 minutes to answer it.

(A recess of 15 minutes was taken.)

Pursuant to the taking of recess, the committee resumed the hearing at 3.50 o'clock p. m.

Mr. RAINEY. Did you finish your last answer?

Mr. McANENY. I think I had finished it.

Mr. RAINEY. I understood you to say that you would be willing to show what your profits have been in the past three or four years, provided that the other newspapers of the country do the same thing?

Mr. McANENY. We have shown all our profits to the Commissioner of Internal Revenue.

Mr. RAINEY. That is not for our information.

Mr. McANENY. And my answer to your question was that I would be quite content, as one of the newspaper publishers, to submit a statement of financial returns for the year 1917 if that is exacted in common from all publishers. I make that point merely because the purpose of any such information here would be to use such material as findings as bearing upon our argument, and it will be recognized, of course, that the experience of one exceptional newspaper, or of a case which is exceptional, would be of little value in investigating the case as a whole.

Mr. RAINEY. I understand your position. You made that same argument before, and you made that same claim, too. But you will not be willing to furnish us that statement?

Mr. McANENY. I should prefer not to do so except under the general call that I have suggested.

Mr. RAINEY. That we get the same statement from everybody else?

Mr. McANENY. Yes, sir.

Mr. RAINEY. The Times, you say, has not had any propaganda for the repeal of the second-class postage rate?

Mr. McANENY. Oh, no. The Times has commented upon this matter in such place as a public question would receive such comment, just as the Tribune has. You read a while ago, I think, from the Tribune. But of course a matter of this significance has been under discussion for several months and no doubt has received some attention from every paper in the United States.

Mr. RAINEY. You have opposed the proposition in the columns of the Times, have you not, to do away with this attempt to compel newspapers to pay their way?

Mr. McANENY. Of course you do not put it as I would.

Mr. RAINEY. I am putting it from my point of view, and my point of view is not the point of view of an interested publisher.

Mr. McANENY. But mine is not only of a paper but as a witness on the part of the reading public. The attitude of my own paper has been, I should say, substantially that which has been expressed here to-day, because that has been the attitude of practically all the papers; not an opposition in itself to increases on second-class matter, but opposition to its being done in this particular way and at this time.

Mr. RAINEY. Have you ever favored any particular proposition by which the Government could recoup a part of this sum?

Mr. McANENY. We are without data upon which to base any such suggestion.

Mr. RAINEY. And therefore you have not made any?

Mr. McANENY. We have not. I think you are equally without that data.

Mr. RAINEY. Without any data you did do it because I have your editorial in the New York Times of August 17, 1917, in which you favored the Weeks' amendment to the revenue bill and I will read it to you so that you can see it:

#### SECOND-CLASS MAIL.

Senator Weeks, of Massachusetts, has offered an amendment to the war-revenue bill, striking out the sections increasing the postal rates on second-class mail matter and imposing an additional tax on the income of newspapers and periodicals. So far as second-class postage is concerned, there will be no disagreement as to the obligation of the publishers of newspapers and periodicals entered into that class to pay all the cost of mail transportation, but it is obviously unfair to shift some of the burden of the large cost of transporting certain kinds of publications upon the publishers of others which can be carried more cheaply. There should be a distinction between magazines and newspapers. The magazines carry much heavier mail. They are published once a month, some of them once a week, and an extra force is required to handle them in the post offices. The newspapers are put in the mails 365 days a year. Few of them have to be carried out of comparatively small areas. They are more easily handled, and by the regular force.

A large number of publications passing through the mails as second-class matter have no net income in excess of \$4,000. The proposed tax, therefore, would not be generally levied upon such second-class matter. The purpose of the tax to compel additional payments for the second-class privilege would be defeated. It would be a special tax levied upon publications which already pay a heavy tax on incomes and other taxes. Viewed in this light, the proposed additional tax is shown to be unfair, discriminative, and arbitrary.

You are opposed even to that proposition?

Mr. McANENY. I do not recall that particular, but I gather from its tone that it is negative. That is, it opposes the particular plan put forward for the solution of this problem. That is quite consistent with my previous statement.

Mr. RAINEY. Have you ever favored any plan except the continuation of the old law?

Mr. McANENY. Oh, yes. We have favored an inquiry to determine what the plan should be.

Mr. RAINEY. That is, a seventh inquiry, after having six?

Mr. McANENY. Do you recall the period covered by the six? Do you go back to the beginning for 20 years? The last of them was 10 years ago and presented inconclusive evidence, stated that it could not get the evidence upon which to base a definite suggestion, and that was 10 years ago. I have the reports here and would be glad to read its findings, if you wish.

Mr. RAINEY. If it is printed we can get it. Now, how much does it cost you to get a copy of the Times to the purchaser on the street in New York?

Mr. McANENY. The cost for the individual paper, you mean?

Mr. RAINEY. No; how much does it cost you to get the paper from your printing office into the hands of a purchaser on the streets? Do you pay a commission to some newspaper distributing agency?

Mr. McANENY. The papers are circulated partly through news companies and partly through individual dealers.

Mr. RAINEY. When that goes through the news company how much do you pay that news company?

Mr. McANENY. The rate paid by all the newspapers to news companies is usually, I think, on a quantity basis per package. Individual dealers pay \$1.40.

Mr. RAINEY. A little over 1 cent apiece to get a newspaper from the Times office into the hands of any purchaser in the city of New York?

Mr. STERLING. They sell them for \$1.80 at the news stands.

Mr. McANENY. We pay four-tenths of a cent.

Mr. RAINEY. To get your newspaper in the hands of a purchaser?

Mr. McANENY. Yes.

Mr. RAINEY. That is the commission that goes to the news stand?

Mr. McANENY. That is the dealer's profit.

Mr. RAINEY. Do you deliver it to the news stands?

Mr. McANENY. They are delivered mainly through the news companies to the news stands.

Mr. RAINEY. What does the news company get out of it?

Mr. McANENY. I do not know.

Mr. RAINEY. They ought to get almost as much, ought they not?

Mr. McANENY. Mr. Rainey, you are asking me a line of questions with relation to the minutia of the mechanical side of the operation of my paper, which I am frank to tell you I am not very familiar with.

Mr. RAINEY. Would you think it would cost as much or more?

Mr. McANENY. Of course the obvious things I can readily give you; I mean how much we pay to get our paper to the sidewalk, but I do not know all the detail in relation to the news companies.

Mr. RAINEY. Is not that a large charge to get the newspaper from the printing office to the news company?

Mr. McANENY. I have said four-tenths of a cent is the entire cost.

Mr. RAINEY. The news price is about 10 cents a hundred, and what is the amount that the news stand takes out?

Mr. McANENY. It is the same; that is, the rate to these we pay them is practically 40 cents a hundred. Putting it the other way, they pay \$1.60 a hundred to us for the papers they get and sell in their own way.

Mr. RAINEY. That is half a cent the news stand gets out of each paper?

Mr. McANENY. Four-tenths of a cent.

Mr. RAINEY. How much do the news agencies get who distribute to the news stands in addition to the four-tenths?

Mr. McANENY. Mr. Palmer has passed the statement that it is one-tenth of a cent, but that is only a part of the delivery that goes through them. The great part of it goes directly to the dealers.

Mr. RAINEY. How do the newsboys get paid; do they get their commission?

Mr. McANENY. I do not know.

Mr. RAINEY. They get something, of course?

Mr. McANENY. I trust they do; they are a pretty clever lot, and I guess they get it.

Mr. RAINEY. Do you pay that?

Mr. McANENY. No, we have nothing to do with that.

Mr. RAINEY. You pay that out of the four-tenths of a cent?

Mr. McANENY. I do not know.

Mr. RAINEY. The situation then is this, one newspaper delivered to a reader in New York costs you one-half of a cent?

Mr. McANENY. I did not say that, Mr. Rainey.

Mr. RAINEY. How many newspapers weigh a pound?

Mr. McANENY. It varies. I think the average is about 2.7 of the daily paper to the pound. In other words, the daily paper weighs about four-tenths of a pound on the average.

Mr. RAINEY. Of the Times there would be three to the pound?

Mr. McANENY. Yes.

Mr. RAINEY. Then you get three Times under this present system carried to San Francisco and delivered there to three separate purchasers for three-tenths of a cent. That is a system you champion. That is, the system you champion imposes on this Government the burden of delivering three of your papers in San Francisco for a total of three-tenths of a cent when you yourself pay agencies in New York one-half a cent for delivering one.

Mr. McANENY. There is not the slightest relation between the two propositions.

Mr. RAINEY. But I have stated the fact, have I not?

Mr. McANENY. In a way that is meaningless. In the first place, your half cent does not apply except in some cases. I have told you that the normal rate is four-tenths of a cent. In the second place the paper that goes to San Francisco costs a great deal more to handle in the office to put in the mails, to wrap, to prepare for that delivery, and all that cost goes into the cost before we get our net receipts. The paper that is delivered to San Francisco gives us in a year \$7.12, and the other paper nets us \$7.10.

Mr. RAINEY. But the fact remains that no matter what kind of a package they are in they are some of your papers and you are asking the Government to deliver three of them in San Francisco for three-

tenths of a cent when you pay one-half a cent to people in the city of New York.

Mr. McANENY. Mr. Rainey, why can not we agree upon the fact that the Government asks the man in San Francisco to pay that postage in order to get his New York paper? We do not ask him to pay us. We do not get the benefit.

Mr. RAINEY. Then your position is this, if your theory is right you are asking the Government to deliver for nothing in San Francisco what it costs you half a cent to deliver in New York?

Mr. McANENY. Not a bit of it, because there are other costs on the way to San Francisco that more than balanced the New York cost. I can not make that much clearer.

Mr. RAINEY. They are not costs to you. They are costs to the Government.

Mr. McANENY. I beg your pardon; they are costs to the newspaper incidental to wrapping the paper and handling it and classifying it and putting it in the sack, of taking care of everything incidental to its carriage across the continent.

Mr. RAINEY. That is no reason why the Government should carry the same weight to San Francisco, three of them for one cent simply because from the standpoint of ordinary business simply because they cost you more money to put a wrapper on them to send them to San Francisco than they cost in the city of New York.

Mr. McANENY. But that is an issue between the Government and the man who buys the paper.

Mr. RAINEY. And we are representing the Government, or trying to as against the interested publishers.

Mr. McANENY. Are not you also representing the man who buys the paper? That has been my own theory for some time.

Mr. RAINEY. Therefore, representing the man who buys the paper, we ought to stand for a \$90,000,000 loss to the Government every year in order that the man who buys the paper can get the benefit of it?

Mr. McANENY. Mr. Rainey, upon that argument I have closed. I have nothing more to say on that.

Mr. RAINEY. Now, you say that what you get is not any more a subsidy than is embraced in distributing farmers' bulletins, agricultural publications, and pamphlets.

Mr. McANENY. We do not get it. I say what the subscriber in the West gets in the way of mail service is no more a subsidy than what he gets in his agricultural pamphlets or bulletins.

Mr. RAINEY. Has anybody made any money out of the distribution of agricultural pamphlets and packages of seeds?

Mr. McANENY. They are sent to the farmer on the theory that he is a better farmer because he gets them.

Mr. RAINEY. And it is your theory that whoever gets your newspaper derives considerable benefit, and therefore the Government ought to pay his expense in getting it?

Mr. McANENY. I would not for a moment say my newspaper; I would say newspapers generally.

Mr. RAINEY. I think the Times is a great newspaper myself.

Mr. McANENY. Thank you. I would broaden it and say that the man who gets any publications, and especially newspapers of the United States, is improved by getting it and wants to have it for that reason.

Mr. RAINEY. In other words, the Government, in your method of arguing, pays the expense of carrying the farmers' bulletin directly out of the Treasury to the recipients; in your case the recipients pay those expenses to you?

Mr. McANENY. As a matter of convenience to the Government. I am told that under the old plan——

Mr. RAINEY (interrupting). As a matter of convenience to the Government you keep the receipts and distribute them in your distribution to your stockholders.

Mr. McANENY. That is not true. I have stated it repeatedly, and I can not understand the justice of that suggestion. You will pardon just a bit of breeze; I nevertheless must make that point.

Mr. RAINEY. That is all I want to ask you.

Mr. STERLING. You stated just before noon that it cost the Government \$4,000,000 a year for county free delivery of newspapers.

Mr. McANENY. About \$4,700,000.

Mr. STERLING. How did you arrive at those figures?

Mr. McANENY. The fact that they carried last year 60,000,000 pounds and their estimate of the cost, including their overhead, is six-sevenths cent a pound for carrying.

Mr. STERLING. How did you find they delivered in the counties 60,000,000 pounds?

Mr. McANENY. From the reports of the Postmaster General.

Mr. STERLING. And how did you determine it cost the Government six-sevenths of a cent a pound?

Mr. McANENY. I also took the figures.

Mr. STERLING. How did you arrive at them?

Mr. McANENY. I went over to 1906 and took the House report.

Mr. STERLING. And you regarded that as a fair statement?

Mr. McANENY. As the statement available. Of course, that is based upon the only statistics available.

Mr. STERLING. If the Post Office Department could determine the cost to the Government of free delivery in the county why can not it determine the cost of carrying second-class mail matter?

Mr. McANENY. It is dealing with all alike. As I have said, the figures on the cost of free county matter go back along with all those other figures 10 years. I do not understand it has prepared any figures on that class of mail since that time.

Mr. STERLING. You do not think the Post Office can determine just what it costs to deliver second-class mail matter?

Mr. McANENY. They have not done it.

Mr. STERLING. They have given it out frequently that it has cost so much. Do you not believe their computation is correct?

Mr. McANENY. May I read from the testimony of Mr. Koons?

Mr. STERLING. Just answer the question. Do you believe the computation is correct?

Mr. McANENY. I believe the figures made in 1908 were correct when they were made, but I am without information as to whether they are correct to-day.

Mr. STERLING. Do you remember what Mr. Koons said about it to this committee last year when we had the bill under consideration?

Mr. McANENY. I do not.

Mr. STERLING. Well, it has been reported that it cost the Government about \$89,000,000 more to deliver second-class mail matter

than it received for it. Have you any reason to think that is not a fair computation or fair estimate of the cost?

Mr. McANENY. In the first place, as I have said, we have not got the basic figures and we can not tell how it is distributed. In the second place, they failed to get statistics as to the second-class mail which would cover the case I am talking about. Why carry it back to 10 years ago?

Mr. STERLING. I want to ask the question: Do you think the Post Office Department can determine with fair definiteness as to what it cost the Government to deliver this second-class matter?

Mr. McANENY. I can not answer that question in any other way than to refer to their own statement.

Mr. STERLING. They would do it in the very same way they would determine the loss that they sustained on free county deliveries, would they not?

Mr. McANENY. Yes; and they so stated, and their determination of that goes back to 1908. That is part of my point.

Mr. STERLING. If they could determine it in 1908 they could determine it by the same process now?

Mr. McANENY. But they have not done so.

Mr. STERLING. How do you know they have not done it?

Mr. McANENY. I have asked them and they have replied that they have not.

Mr. STERLING. They came before the committee and gave us figures last year.

Mr. McANENY. Mr. Koons testified before the Senate committee stating that 3.86 cents was the average overhead charge for second-class matter and he introduced a table of the cost, and he said:

It is the overhead charge on second-class matter, the information for which was obtained in 1908 by the most careful investigation under authority of an act of Congress. The cost of handling all classes of mail, the distance transported, and everything; and those figures were later supplemented by additional information secured for the Hughes commission in 1912.

That is the language. That is his own statement, that those figures were supplemented by additional information up to 1912.

Mr. STERLING. Do you think it would be less now than it was at that time?

Mr. McANENY. I can not tell. I think it quite likely.

Mr. STERLING. Is it not quite likely to be more?

Mr. McANENY. No, I do not think so. The methods of carrying second-class mail, of freight and express, have gone through several changes during that time, and each time the Government expected to secure a money profit out of it. There have been all manner of changes in the administration of the post office. Take the Rural Free Delivery Service, for instance—and, by the way, there is no proposition to put that on a cost-paying basis that I have heard of.

Mr. STERLING. I think rural delivery would cost twice as much as it did in 1908.

Mr. McANENY. It cost about \$45,000,000, I believe, but it has been a greatly extended service. I am talking about the piece cost.

Mr. STERLING. You said a while ago that this would produce about \$2,000,000 this next year.

Mr. McANENY. That is Mr. Koon's statement.

Mr. STERLING. And you say it would add so very greatly to the cost of the post office administration that there would not be very much left. Wherein does that additional cost come?

Mr. McANENY. In the additional clerical cost it would take, to take over each day, sample copies of every newspaper of the United States and measure up the proportion between the news and advertising, of keeping those copies on file, and making up bills based on 28 different rates of postage in one evening. That is a general statement of some of the difficulties they would have to meet, and of course it is going to cost them more to do it.

Mr. STERLING. You assume the Post Office Department could do that, of course, or you would not compute it that way?

Mr. McANENY. The law requires them to do it.

Mr. STERLING. Suppose the New York Times were to print a statement of the per cent of the New York Times that is advertising. What per cent of the Times is advertising?

Mr. McANENY. About 45 to 85 on the average.

Mr. STERLING. Suppose you would print on the face of the Times, "45 per cent of this issue is advertising matter and 52 is reading matter," and you weigh it and take it to the Post Office Department. Do you imagine the Post Office clerk would take up a copy of the Times and divide it and weigh it and measure it to see whether your statement was correct or not each day?

Mr. McANENY. In the first place, it would not be physically possible to do that. And, by the way, the department notices proposed regulations with identically that provision. It was shown to them, however, that in order to carry out that plan the newspaper would have to be measured out at the last moment before it went to press, and that the process of measurement would require the holding of the last stereotyped form of the first page in order to carry that imprint and would delay the process about half an hour of a night issue when every minute is worth its weight in gold. Thereupon the Post Office Department very reasonably withdrew the suggestion that you have made and in the regulation as printed they eliminated that requirement.

Mr. GREEN. Can you possibly explain to us why that has to be made before the newspaper is printed?

Mr. McANENY. In order to stamp on it the ratio of news to advertising. That was the proposition, to print it on the face of the paper.

Mr. STERLING. Does it happen very often that the ratio is very much changed between the advertising and the news?

Mr. McANENY. It is changing every moment up to the time it goes to press.

Mr. STERLING. Very materially!

Mr. McANENY. Very materially, but not only that, it is changing from one edition to another edition of the same day. The advertising in the first edition is different from the advertising in the second, and in the second from the advertising in the third and in the third from what it is in the fourth.

Mr. STERLING. Which edition do you send to the country through the mail?

Mr. McANENY. The first, in the main; but some of each gets in.

Mr. STERLING. You do not think that the Post Office Department would require you to specify to the line just how much is advertising and how much is reading matter, do you?

Mr. McANENY. The law requires them to do it. I do not know how complacent they are going to be in going about it.

Mr. STERLING. Do you not believe that all these difficulties you speak of are purely imaginary; that it would not add any cost to the Government to carry the newspaper under that law?

Mr. McANENY. If you will pardon me, we have examined into this thing with the greatest care because it affects our working machinery very seriously. Every paper will be affected by this law. There is no imagination about the fact; it would make the greatest possible complication and disturbance, and we do not see how it is going to work.

Mr. STERLING. I agree that there would be some additional trouble to the newspapers.

Mr. McANENY. I have pictured what it would be.

Mr. STERLING. I do not imagine that it would be very much additional work to the Post Office Department. So I think the \$62,000,000 would be practically net. Now, you said a while ago that you thought a newspaper ought to be treated more as a public library or as a public school, and that inasmuch as the Government subsidizes public schools and libraries we ought not to complain if the newspapers are subsidized. Do you think that is a fair argument?

Mr. McANENY. No; I do not; only I did not make it, sir. May I correct that inference. What I did say was that the educational side of the circulation of a newspaper and other literature is as much a public institution as the circulation of public libraries or the work of the public schools, and that it is as reasonable to refer to the cost of carrying on that service to the people as a subsidy as it is to refer to distributing the newspapers to the people as a subsidy.

Mr. STERLING. There is this difference between the two.

Mr. McANENY. A newspaper is not subsidized.

Mr. STERLING. It is run for profit.

Mr. McANENY. Neither is the public library subsidized.

Mr. STERLING. The public school of the library are not mercenary institutions.

Mr. McANENY. The newspaper is run incidentally at a profit, and if it did not earn a profit it could not run.

Mr. STERLING. Its primary purpose is the money they make out of it?

Mr. McANENY. Yes; but the newspaper offers its goods, its product, to its customer for sale, and it will sell it wherever it can sell without incurring a serious loss.

Mr. STERLING. And the educational feature is the merit the public sees in it, and that is the reason they buy it?

Mr. McANENY. And the reason a farmer buys a plow is because he sees some merit in the plow, and that induces him to buy that; so there has got to be some merit to everything if you will sell it on the market.

But he does not buy it from a producer who could not deliver it to his town because the delivery would involve a loss. In the case of the newspaper business the postal service takes it where the newspaper necessarily stops. The newspaper company can sell its paper in its town or nearby, or anywhere else, so long as the load is not an oppressive one, but you get to a point in the charting of these zones where it could not carry the paper farther and sell it upon the basis proposed.

Mr. STERLING. Do you not think the newspapers of the country made a great mistake when they reduced their price from 5 cents to 1 cent?

Mr. McANENY. Oh, Lord; that was long before my day.

Mr. STERLING. Do you not remember when the leading metropolitan papers sold on the streets for 10 cents a copy?

Mr. McANENY. I am proud to say I do not remember that.

Mr. STERLING. I can remember when the Chicago Times sold for 10 cents a copy, and all of them sold for 5 cents. If you would sell to-day for 10 cents a copy do not you think the public would read them?

Mr. McANENY. The public would buy them so far as the public could afford, but there would be an immense reduction in the circulation.

Mr. STERLING. There would be for a little while, but do you not think they would soon sell for 5 cents a copy?

Mr. McANENY. No. I have reason to know that a raise in price from 1 to 2 cents has resulted in a material reduction of the aggregate circulation.

Mr. STERLING. When was that price raised?

Mr. McANENY. About the first of February.

Mr. STERLING. How much did the circulation fall off?

Mr. McANENY. It varied from paper to paper. It fell off anywhere in the first week or two from seven or eight per cent to 40 per cent. Some of that has been recovered.

Mr. STERLING. And in time it will all be recovered?

Mr. McANENY. It has not all been recovered in Philadelphia, where the thing was done a year earlier.

Mr. WHITE. How does the Cincinnati Enquirer maintain a 5-cent rate?

Mr. McANENY. I can not explain that. That is the only paper that does.

Mr. LONGWORTH. It has always sold for 5 cents and never made a reduction.

Mr. McANENY. May I make a little plainer possibly the answer I made to Mr. Rainey with relation to the increases to which he referred. He asked about concert of action, and so on. Of course, there was nothing of that sort in the raising of the price from 1 to 2 cents, which practically took place all over the country. That was a recognition in every city of the economic need for such an increase. Without it the newspapers could not have continued. I have forgotten which was the first city to change from 1 to 2 cents, but pretty nearly all are changed that are of a very large consequence, excepting Boston, and they have been unable to do it because one man holds out. But there has been no agreement between the publishers in the sense of coming together to increase the price of a commodity in order to benefit themselves. On the contrary, they were urged by the Government itself through the Federal Trade Commission to increase their prices from 1 to 2 cents, and the Federal Trade Commission, in the person of Commissioner Harris came to New York City and at a meeting of the publishers said, "Gentlemen, in order to meet the rising cost and to decrease the volume of consumption of news-print paper, you must raise your prices from 1 to 2 cents," and it was at the suggestion of the Government in that session that

the New York publishers first took this matter up. It was not concert of action in the sense which sometimes is understood. It was the meeting of the national necessity upon the recognition of the National Government.

Mr. GREEN. Let me ask a question with reference to this rise of price, but not with reference to the particular matter of which you have just been speaking. The New York papers doubled their price, with the result that there was a light falling off in circulation?

Mr. McANENY. There was a considerable falling off. I have the figures here.

Mr. GREEN. You stated, I believe, that if one paper alone had raised the price its circulation would have fallen off very largely, perhaps to less than one-half or more.

Mr. McANENY. I should say more.

Mr. GREEN. If it was one paper alone?

Mr. McANENY. Yes.

Mr. GREEN. Or if a change was made by about half of them the ratio might be a little different. Now, you gave an illustration from some newspaper—I have forgotten what the paper was—where the manager sent out a notice with reference to expirations.

Mr. McANENY. That was the Minneapolis Journal, whose publisher is here.

Mr. GREEN. And he sent out notices to some of his subscribers, stating his intention with reference to raising the price, and to others he did not notify them that there would be a raise in the price, with the result that a large number of those who were notified of the raise in price did not continue their subscriptions. Was not that just in the same situation that you speak of where one paper in a city should put its price up to 2 cents and the others keep their price to 1 cent?

Mr. McANENY. I think not at all, because in that case if he raised his rate on account of postage that would fall upon everybody.

Mr. GREEN. Oh, no; he could not do that.

Mr. McANENY. He referred to the increased postage.

Mr. GREEN. There is the trouble with his notice. These papers did not know whether any other papers were going to advance their prices or not.

Mr. McANENY. There might be some paper that would attempt to carry this cost itself, and thereby give additional advantage to the individual subscriber?

Mr. GREEN. I am asking the question, if you please, if you will permit me. They could tell anything about what these other papers were going to do, these farmers that these notices were sent to, and they did not have any idea whether any other papers were going to increase their prices or not. We know perfectly well that there is a large number of newspapers sent out, especially those gotten by farmers and people in the country, in which the price does not compare at all with the cost of the paper. Some farm papers are sent at a subscription price of 50 cents a year, or for 50 cents for five years.

Mr. McANENY. You mean daily papers?

Mr. GREEN. No; they are not daily papers.

Mr. McANENY. I am not discussing the others.

Mr. GREEN. But the farmer gets them just the same, and they would not know where this cost was going to. They would be in the same situation as the paper would be in the city.

Mr. McANENY. I think the difference is that if one publisher in a city raised the price his customers are the customers on the street and they would learn pretty quickly that it was the only one there that had raised the price, but in the case of increase of postal rates that ought to be borne by everyone, and I can not conceive of any paper in this particular territory or any subscriber assuming that they were going to get a free gift of this increase of postage.

Mr. GREEN. And you think there would not be any way to find out about it?

Mr. McANENY. I do not think one in a thousand would.

Mr. GREEN. I am afraid you do not understand the temper of the people as some of us do who deal more directly with them.

Mr. McANENY. I have read to Mr. Garner what these rates amount to. In a Texas town a paper that nets in rates \$8.15 under this bill would have to pay \$9.61.

Mr. GREEN. But they are not taking papers from New York down in Texas, to any extent.

Mr. McANENY. He showed me his. I received that assurance with a great deal of pride.

Mr. GREEN. But this Minneapolis paper you were talking about would naturally circulate in the first and second zones.

Mr. JONES. I would like to tell you about that.

Mr. ANENY. I understand Mr. Jones is very largely in the fourth and fifth.

Mr. JONES. I do not want to interrupt, but in order that the members of this Ways and Means Committee may realize the position that certain papers in Minneapolis, St. Paul, Omaha, Kansas City, St. Louis, Chicago, Dallas, and Fort Worth, Tex., were in you must analyze the situation geographically. Many of you people here in the East, while you may have traveled—

Mr. MOORE. Mighty few of us, Mr. Jones, in this Congress and this committee are from the East.

Mr. JONES. Very few of you people realize the area of the States in which we live and the territory reached from certain primary markets. In order that you may grasp the situation in the Northwest, which applies equally to the States of the Southwest, Minnesota is larger in area than Maine, New Hampshire, Vermont, Rhode Island, Connecticut, and half of New York. In other words, the circulation of your paper goes into the fourth zone before you get out of your own State. To the west of us lie North and South Dakota, each equaling, or nearly so, in area Minnesota. West of that comes Montana, 800 miles long and 400 miles deep, in area larger than Maine, New Hampshire, Vermont, Rhode Island, Connecticut, New York, Pennsylvania, New Jersey, and Delaware. This is the territory that we are circulating in. In all that territory from Minneapolis to Spokane, 1,700 miles, there are no Associated Press franchise papers because they have no service. Three hundred miles west of us is Fargo and Grand Forks. Then beyond is the little city of Bismarck and other small cities. Those two cities have pony service, and they merely have the benefit of a skeleton service.

Mr. MOORE. That is paid for by the Government.

Mr. JONES. It is not paid for by the Government but by the individual man who buys the service.

Mr. MOORE. Many people in the East pay postal rates which will enable the population of such States as you mention to secure mail and enable them to get news service at lower rates.

Mr. JONES. There is no news service from the territory beyond that point that anybody pays for excepting the individual who pays for the delivery of everything he gets.

Mr. MOORE. Free delivery goes there, and the New York Times would go there, and a paper in the territory would probably have a larger circulation, and therefore a larger advantage derived from the expenditure of the Government's money to maintain that service.

Mr. JONES. In this great district, which is the bread basket of the world, the normal wheat production of the four States for the last five years was 200,000,000 bushels. I am going to give you a concrete illustration of what six newspapers can do. I am going to take some credit to ourselves.

The CHAIRMAN. That is quite interesting, but I understood you to interrupt Mr. McAneny to answer a question. I think you have answered that.

Mr. GARNER. If you have those letters that you referred to will you leave them with the committee?

Mr. JONES. I have not them with me. I gave them to Mr. Burleson.

The CHAIRMAN. The committee will be glad to give you such time as you want after Mr. McAneny is through. We would like to hear every one of the representatives of the newspapers here.

Mr. McANENY. The members of the committee have discussed the proposed and they have decided upon who will speak for them.

The CHAIRMAN. We will be glad to hear them to-morrow, or Monday.

Mr. GREEN. I had practically finished, but I thought, coming from the West myself, I would see if a New York paper could double its price without very greatly reducing its circulation; those in the West might possibly want to say something on the subject.

Mr. McANENY. The increases that have been made already were made in the main in order to make up for losses that had gone before, to reduce the balances in the matter of increasing costs. As I have said they were made practically at the instance of the Government itself. There has been a variety of experience as the result. I think Mr. Williams told me last evening that in Pittsburgh the early losses have been almost entirely recovered. In Philadelphia I know that they are still somewhat shy. How it is in St. Louis, in Washington, in Buffalo, all of which have gone to 2 cents, I can not tell you, though I believe they are still back of the mark, more or less.

In New York they are still a little bit behind in the matter of recovery. There were some retained for the first three or four weeks, but apparently they have crystalized at a lower basis now. I am speaking, of course, of the aggregate of newspaper circulation within the city. There are one or two instances, I think, where the circulation is even greater than it was before the increase from one to two cents, but they are not typical instances and have really no relationship to the general question; and moreover the fact that so much circulation has been taken off already by the increases of the price we are bound to make would naturally lead to a greater proportion.

of cancellations when you come to another and even greater addition, as this law would compel us to do.

Mr. STERLING. What is the purpose of the comic sections in the Sunday papers?

Mr. McANENY. I am afraid I should have to refer you to some one else who uses them. We do not, but the argument is that a great many readers of such a paper who buy them for that purpose, that depend on them for home amusement, or otherwise; and it is also argued that the circulation gained through that particular attraction of course becomes useful in news and information to people who otherwise might not get it.

Mr. GREEN. What is the outside price of the Sunday edition of the New York Times at this time?

Mr. McANENY. Seven cents. Five cents in the city and 7 cents outside.

Mr. MOORE. The comic supplement of a newspaper is very popular with women and children and with those who enjoy a smile once in a while and do not take life too seriously.

Mr. McANENY. Those papers that use them are convinced that they supply a very real need and they have a very useful purpose, they would be very loath to give them up.

Mr. MOORE. They may add to the circulation, and they do no harm and afford a great deal of amusement.

Mr. McANENY. They do not bulk very largely in the entire proportion of the State.

Mr. GREEN. Have you made any investigation as to what the rate ought to be in the first and second zones in order to pay the cost to the Government?

Mr. McANENY. The Government's own figures show the cost. That is, going back again to 1908, they say that the cost of \$5.44 a hundred, practically 5½ cents a pound, is the average of the first three zones. In other words, in nearby zones, as far as the whole of the paper is concerned, it would cost more proportionately according to them than in the longer zones.

Mr. GREEN. Unquestionably that is true. I assume the higher charges in the nearby zones are large based on the fact that the overhead would be the same as it would be in the longer distances. That is the cost of distributing the paper to each individual.

Mr. McANENY. Exactly. Their cost runs this way. The first, second, and third zones—we reach the transportation figures by zones. To each of these is added a flat overhead charge. The first, second, and third zones average \$1.50. In the first zone that is only 25 cents, but the average for the three would be \$1.50; in the second \$2.49, and so on.

The CHAIRMAN. What page is that?

Mr. McANENY. Page 54 of the pamphlet containing the hearings before the Senate committee. Shall I resume?

The CHAIRMAN. Yes, go right ahead.

Mr. McANENY. On fourth, \$2.49; on fifth, \$3.90; on sixth, \$5.52; on seventh, \$7.14; and on eighth, \$8.76.

To each of those rates for transportation they add a flat overhead estimate of \$3.86. They argued that it cost just as much overhead to carry a piece of mail 50 miles as it does 3,000 miles; and, with some minor modifications, probably it is true. Observance of those

figures gives a final zone cost, as they put it. The average of the first three zones is \$5.44; the fourth, \$6.35; the fifth, \$7.76; the sixth, \$9.38; the seventh, \$11, and eighth, \$12.62. With figures like that it is pretty hard to venture any counter proposition.

Mr. GREEN. Why so?

Mr. McANENY. Because so much is involved in this element of service. Nobody could attempt to offer an alternative based upon these costs, or even the modified and corrected costs, because that would simply bar the newspapers entirely out of the mail.

Mr. GREEN. I understand you then that you would not bar the newspapers paying costs?

Mr. McANENY. Decidedly, sir; that is, the cost shown in this schedule.

Mr. HAWLEY. What is the weight on which they base that?

Mr. McANENY. That is per pound. Coming down to 12.62 cents, their cost rate on the pound in the last zone——

Mr. GREEN. I do not know that I would myself favor the newspapers paying costs. Of course, the claim is that, on the part of the Post Office Department, they have not even approximated that, and there is some claim made that these proportionate rates in the first and second zone are too high, and it has even been claimed at more cost to the Government.

Mr. McANENY. The plan of Senator McKellar's amendment was to exempt utterly the first three zones; that is, where they show a cost of 5.44, and continue 1-cent charge, and to grade the zones upward beyond that point.

Mr. GREEN. That would not cover a case like that of Mr. Jones, of Minneapolis?

Mr. McANENY. That would cover a good deal of his case, the first three zones out of four, of course.

Mr. GREEN. He would have to go in under the new or fourth zone?

Mr. McANENY. Yes; he would commence at the fourth zone.

Mr. GREEN. It would help within the area that encompasses most of this circulation?

Mr. McANENY. Oh, yes; it would help everybody. You take our own figures, so far as they are good, for illustration of circulation. Out of our 56,000 in the mails, that is, both packages and individual wrappers, the first, second, and third zones, there were 34,760 out of 56,000; and in the other five zones, 20,000.

So that you see even in a large metropolitan daily, the plan that exempted the first three zones would be of material assistance to get the paper to the people who want to buy it.

Mr. STERLING. Senator McKellar's amendment applied only to newspapers?

Mr. McANENY. I think Senator McKellar's amendment would apply to newspapers. It was the proposed substitute of the Southern Association that applied only to newspapers.

Mr. GARNER. There is no difference between the present and the McKellar law, except the first three zones exempted?

Mr. McANENY. No; the advertising division is novel in the new law entirely. That came up quite freshly out of the clear sky.

Mr. GARNER. The principle of the zone system was retained in the McKellar amendment?

Mr. McANENY. Yes. But in the present plan, which groups news and advertising, on the theory that news is to go for a flat rate and the

advertising for the zone rate—of course we do really get a common zone plan, very much like the McKellar plan, except in degrees, because none of the newspapers, for instance, are allowed to change materially their zone of ratio news to advertising, because the premium is made on the news in this composite scheme. The Federal Trade Commission has kept statistics of the used news space for the last several months as between news and advertising, and the percentage is 46 advertising to 54 news.

That ratio is pretty general, and no doubt it would be maintained, and the result is that when you take this fixed newspaper established along those lines, and then charge a flat rate for one-half on the zone rate you do get a compounded zone rate. In the case of 50/50 news and advertising newspaper, the zone rates run up to the maximum in the last zone of 5.75 a pound under the new plan, an increase of about 500 per cent.

Mr. GREEN. Has the Post Office Department announced upon what plan it would compute the rates?

Mr. McANENY. It has sent out a circular of regulations, which of course incidentally constitutes a circular of operation, proposing that while the measurement of advertising and news shall be made each day and filed with the department, subject to verification, that when it comes to the division into zones—and, mind you, every one of our 56,000 publishers has got to be put by itself in the designated zone, every one of them has got to be treated individually; and that after that is done they are willing to let the average of the six months' period stand as a basis for the postal charge until another six months. Another six months may come around, and they substitute another average. That I referred to a moment ago, as they are afraid to lead the way in putting this plan into effect. I can see, however—in fact, I said to Mr. Koons, "This law is being violated by yourself." And he laughed and said, "Yes; we are violating it, but we will take the consequences,"

Mr. GREEN. Why do you say "violating the law"?

Mr. McANENY. The law says it shall be based upon the actual number of newspapers carried for each zone each day.

Mr. GREEN. Oh, no; you are mistaken.

Mr. McANENY. It does not say it in that exact language, but it implies it pretty clearly.

Mr. GREEN. The law says that newspapers shall furnish to the Postmaster General a statement containing such information as he may prescribe for determining the postage charges thereon.

Mr. McANENY. Very true; but what is the clause as to the charge?

Mr. GREEN. Those two sentences have got to be taken together in construing the law.

Mr. McANENY. It seems to me, first, the law fixes the charge.

Mr. GREEN. Yes.

Mr. McANENY. And then says in order to fix certain data thereby determined.

Mr. GREEN. I think you are very clearly in error.

Mr. McANENY. Not in error as to their legal right to do it, and, of course, whether they do it legally or not we welcome it as some measure of relief. But it would alter the general situation very slightly. It will not make a great deal of difference to us whether

the zone is averaged once in six months or once a week; in fact, a good many of them would prefer it once a week. The rub comes in on the exact measuring up of each paper and each edition, and inasmuch as under their own plan they are going to check every newspaper and every issue, I can not see how they are going to avoid that extra clerical service for which we look.

Mr. STERLING. That would be done in the newspaper office instead of the post office?

Mr. McANENY. Oh, no; the checking up and the making out of the bills would be done by the Post Office Department. The file copies they make each day will fill a warehouse in a year.

Mr. MOORE. You are referring to paragraph C of section 1100, "With the mailing of each issue of each said publication, the publishers shall file with the postmaster a copy of such issue, together with a statement containing such information as the postmaster may prescribe," which I presume he has done in the regulations for determining the postage chargeable thereon. That is one of the things that worried me somewhat when the bill was passed. Does not that mean the charging up of the advertising on the one hand, and of the literary matter on the other, is up to the publisher, "who shall file with the postmaster a copy of each issue," and so forth?

Mr. McANENY. The publisher can make his original statement of how these ratios compare, but I am not sure it will be within the business plan of the department to accept them without checking.

Mr. MOORE. I took it he was going to rely very much on the integrity of the publisher.

Mr. McANENY. That would be flattering, but it would be an unusual business relationship.

Mr. STERLING. Do they not do it that way now?

Mr. McANENY. No; in most instances they weigh the sacks of mail at the publisher's plant before they go to the trains.

Mr. STERLING. In my town—

Mr. McANENY (interposing). They are weighed by Government weighers.

Mr. STERLING. We have a very excellent paper in my town. It weighs the papers and a man takes them over and throws the bag into the door of the post office, and never makes any statement to the postmaster unless there is a change in weight. If there is a change in weight he gives him a statement. But it goes on that way day after day, just the same.

#### STATEMENT OF MR. C. P. J. MOONEY, MEMPHIS COMMERCIAL APPEAL, MEMPHIS, TENN.

Mr. MOONEY. Pardon me, but the railway mail clerk will not receive newspapers on a train unless they have a certificate from a Government weigher, and in the case of daily papers those papers are either weighed by the Government man at the office of publication, or in the post office itself.

Mr. STERLING. Every day?

Mr. MOONEY. Every day.

Mr. STERLING. What business are you in?

Mr. MOONEY. I am managing editor of a newspaper, the Memphis Commercial Appeal. They may do that in your town, but I undertake to say they do not do it in one town in ten.

If I may make this statement, the process by which the papers are handled by the Government in cities of our size is this: The Government sends a clerk to the newspaper office; the newspaper itself previously sends to the post office and gets sacks. Those sacks are filled by the clerks in the publishing office, are addressed, and then are thrown on a scale, and the Government agent weighs those sacks on the scale; then those sacks are loaded into wagons, and that shipment will not be received on a train until the railway mail clerk on the train has a certificate of weight signed by the Government agent.

Mr. STERLING. That may be the regulation.

Mr. MOONEY. That is the way it is done in respect of about nine-tenths of the newspapers.

Mr. STERLING. But the Government clerk simply gives a statement made by the publisher?

Mr. MOONEY. But the papers are then weighed in the post office.

Mr. McANENY. I doubt whether in any instances the receipt of any considerable portions of the mail is made without some check.

Mr. STERLING. They get it just in that way. The Government clerk takes the statement of the publisher and gives a certificate of it, and I venture that is done nine times out of ten.

Mr. MOONEY. We lost a carload of papers last Saturday night, about 12,000, because the Government clerk went to sleep and we could not get the certificate in time to catch that train, and the train left without the papers getting on board.

Mr. STERLING. I do not dispute but what they have to have the certificate.

#### STATEMENT OF MR. GEORGE McANENY—(Resumed.)

Mr. RAINEY. You say the Times has not entered into any propaganda on the second-class postage proposition—I think you stated that at the start—except what has appeared in the newspaper. You have not mailed anything to Members of Congress?

Mr. McANENY. No.

Mr. RAINEY. The editorial I read you from the New York Times as of August 17, 1917, was printed separately on slips of paper and sent to each Member of Congress, and I do not know who else. This is not a clipping [referring to paper] from the Times. It is a reprint on this slip of paper. Was that done by the Times—can you tell by looking at it [exhibiting sheet of paper to Mr. McAneny]?

Mr. McANENY. I imagine somebody has flattered us.

Mr. MOORE. You have not gone out of business altogether since the passage of the act?

Mr. McANENY. No, sir.

Mr. RAINEY. You did not do it?

Mr. McANENY. Oh, no.

Mr. RAINEY. It was apparently circulated in that way, Mr. McAneny.

Mr. McANENY. I have no personal knowledge of it having gone from the Times office.

Mr. RAINEY. Those were printed on one side, and it is a reprint from the New York Times. It is not a clipping from the paper?

Mr. McANENY. Oh, no; it could not be a clipping from the paper. It was not sent from the New York Times. We present our propaganda differently.

Mr. RAINEY. No other paper except the New York Tribune was opposing the position you took?

Mr. McANENY. Among 500 there may have been one or two other instances. I said I had not heard of any.

Mr. RAINEY. Does the Evening Telegraph of Philadelphia belong to your association for which you are appearing?

Mr. McANENY. I assume it does; yes.

Mr. RAINEY. In its issue of September 19, 1917, under the heading "Second-class postal subsidies," they say, among other things:

It seems almost inconceivable that there should be any disagreement over this matter. The Government is paying over \$100,500,000 a year for the transportation of magazines and similar publications, for which it receives in postage \$11,383,000, making a loss of \$89,000,000. This amount comes out of the Treasury and goes into the pockets of the publishers, substantially as a subsidy.

That is the Evening Telegraph. I will publish the entire editorial.

Mr. McANENY. You will permit me to observe that even a newspaper might profit by the information we have been able to give here to-day. There have been a good many misstatement of facts.

Mr. MOORE. I think there has been a change in editorship of the Evening Telegraph since that article was published.

Mr. RAINEY. Does the Ithaca Daily News belong to your association, and do you appear for them to-day?

Mr. McANENY. I believe not. Our members are the larger newspapers.

Mr. RAINEY. On Saturday, September 22, 1917, they published an editorial under the heading, "The second-class postage rate," opposing the position you now occupy.

I have another article from the Evening Telegraph.

Mr. MOORE. What is the date of the article?

Mr. RAINEY. It is September 17, 1917.

Mr. MOORE. That is the same old letter.

Mr. McANENY. Justice moves quickly in Philadelphia sometimes.

Mr. RAINEY. What have you to say as to Claremont, Minn.?

Mr. McANENY. It does not sound probable. Mr. Jones says it circulates the copies of its publication free in the county.

Mr. RAINEY. The Daily Dispatch of Moline, Ill., belongs to your association?

Mr. McANENY. I do not think it does.

Mr. RAINEY. On the 12th day of April, 1918, the Claremont News, of Claremont, Minn., under the heading, "Just a little more graft," published an editorial opposing your position, which was copied approvingly in the Daily Dispatch of Moline, Ill., at a later date, on the 27th day of April, 1917. Does the Philadelphia Record belong to your association?

Mr. McANENY. I think the Record does.

Mr. RAINEY. I have an editorial which appeared in the Record on the 28th day of April of this year, "The cut in publishers' subsidies," opposing the position you now occupy.

I want to ask permission of the committee, so that we can see that the newspaper publishers do not agree with the position taken by the representatives of this association, to print these editorials in our record.

Mr. McANENY. While I do not wish to encumber the record, Mr. Rainey, might I ask the privilege of publishing the editorials approving our position?

Mr. RAINEY. I suppose nearly all of them agree with you.

Mr. McANENY. It is a rather bulky document, but I am sure you will grant us that privilege.

Mr. GREEN. Just a moment. Do you think that is a fair proposition? You come here representing a number of papers, and then Mr. Rainey says you are not correctly representing all newspapers and to show that he wants to print some editorials. We assume as to the others that you represent them.

Mr. McANENY. I do not think that was Mr. Rainey's point. Of course, any one familiar with an organization of any character in the United States, with several hundred members, will appreciate that upon a given issue there may be a few dissenters. The American Newspaper Publishers Association passed upon this matter at its annual meeting in New York, at which something like four hundred of the five hundred members were present, and after careful discussion and debate this action of ours, which we present to you, was taken unanimously. There was not a single dissenter present in the meeting, and while, of course, there is no newspaper publisher who, because of his membership in an organization, will renounce the right to express his opinion upon any public question, the fact remains that those who have taken the other ground in this general discussion are very few. With all courtesy, I merely wish to point out, by comparison, the very great preponderance that this proposition has received from the daily newspapers.

Mr. RAINEY. I am willing to admit that the great preponderance of magazines and newspapers, especially the larger ones, agree with you.

Mr. STERLING. There is a very great difference in the character of the testimony of the two sides.

Mr. McANENY. You mean these editorials?

Mr. STERLING. Yes.

Mr. McANENY. Naturally so, if they take the other view they are apt to urge it.

Mr. STERLING. The statement made by these newspapers which you represent are simply self-serving statements; these others are against their own interests.

Mr. McANENY. I do not think that naturally follows. One might tell perhaps more certainly from their own mailing lists.

Mr. MOORE. There is a great deal said in the newspapers these days about lobbyists. Much force has been given to newspaper comment about lobbies by the President of the United States, and in his last address to Congress, telling us of the necessity of raising war revenue, he stated boldly that there was a lobby, and that the members of it were known. He spoke of lobbies and spoke so that every one could understand. Members of Congress hear a great deal about so-called lobbies. They see—I am speaking from experience—they see very little lobbies except men who come and go who have to do with legislation. These charges of lobbies and of their influence upon Members of Congress naturally irritates them. I am saying that now as a member of the majority, in fairness to the majority. Do you not think that an organization like yours, for instance, which is repre-

representative of the great newspapers of the United States, whose influence upon public affairs is tremendous, should have the right to come before the Ways and Means Committee, or any other congressional body, to make a fair and frank statement of what you believe to be proper for your interests?

Mr. McANENY. It is because that we do believe that we have that right that we are here, Mr. Moore.

Mr. MOORE. It is merely because, for one, I feel that right should be accorded to every citizen who feels he has a grievance has a right to approach his member of the legislative body. But I differ with some of my colleagues sometimes about the attitude of the papers. I feel sometimes they are unjust and perhaps unwarranted in their criticism of the members of Congress, but that they should be denied the right to come to a committee of Congress and present their case I can not agree.

Mr. McANENY. This committee has been very courteous in giving this hearing, although it has been a bit late.

The CHAIRMAN. I would like to dispute that right.

Mr. HULL. You would not consider that any members of this committee would deny you the right to come before the committee to make an argument?

Mr. McANENY. Personally, I should not.

Mr. HULL. I never heard that before.

Mr. RAINEY. Nobody on this committee ever took that view of the matter.

Mr. McANENY. As I had occasion to say in reply to a question earlier in the day, the American Newspaper Publishers' Association has appeared here only in person at hearings that have been granted for that purpose, and it has appeared in no other way. There have been conferences with the chairman of the committee and others necessary to arrange hearings, and I assume that is the natural avenue of approach to Congress that Congress has itself provided.

Mr. STERLING. Our chairman has always given you to understand that the committee wanted to hear you, has he not?

Mr. McANENY. Our application to your chairman has been very courteously received and we are here in consequence.

Mr. MOORE. The President himself has given credence to these rumors, and it seems to me fair to you gentlemen as well as the chairman of this committee, that some reference be made to this question of lobby, because this committee holds that men have a right to come here and present grievances, and so far as I have observed—and again in fairness to the majority—I have testified that the chairman of this committee has thrown the doors wide open for every man to come, and, as a matter of fact, under the Constitution of the United States this is the first place to come on a question of revenue. There has been some little dispute between Senatorial action and House action. But revenues, under the Constitution, originate with this committee.

Mr. RAINEY. I want to say, in that connection, that nothing the President has ever said, in the wildest stretch of the imagination, could be construed in any sense as any opposition on his part or on the part of the administration to the fullest investigation by committees of this House, and we are glad to have the information given to us by representatives of any interests who appear before us, and,

in fact, we invite and propose to continue to invite fullest attendance on these hearings until they are complete, and the President has never taken any other position.

Mr. HILL. In that connection, I do not think any person could justly construe anything the President has said to embrace within what you term "lobbyists" any body who comes before the committee and presents an argument.

Mr. McANENY. I understand Mr. Moore's reference to the matter—

Mr. MOORE (interposing). Pardon me just a moment. I would like to quote just what the President did say, so there may be no misunderstanding:

If lobbyists hurry to Washington to attempt to turn what you do in the matter of taxation to their protection or advantage, the light will beat also upon them. There is abundant fuel for the light in the records of the Treasury with regard to profits of every sort.

The President is the one who originated this question of "lobbyists" and there it is in his own message, and I think we are justified in calling attention to it, for, as one Member of Congress, I feel every man who has something to say to his Congressman, every group of men who have a grievance, should have the right to come freely and fairly to his Representatives, and that has been accorded by this committee.

Mr. RAINEY. You will not find any Member of Congress disagrees with the position you take.

Mr. McANENY. I, for one, agree with you. I understand Mr. Moore's references are to the larger aspect of this matter and not particularly to the President's suggestion. I do not understand that it has anything in it that refers in any way to our appearance here, for instance.

Mr. MOORE. Oh, no; I assume he was not referring to anybody in particular, except as he indicated in that address; but, in consequence of his address, there was severe criticism in the newspapers generally as to lobbyists in Washington. He was the bellwether, and they commented on his suggestion that the lobbyists were here and that Congress was being unduly influenced; and that has had the effect of sending to us witnesses who have appeared before this committee who have stated squarely—one of them was here some time ago, the second or third day of these hearings—that he feared that Congress was under the influence of the newspapers, and that the newspapers were under the influence of the bankers, and that the whole country was going to the demnition bowwows in consequence thereof.

The CHAIRMAN. Mr. McAneny, I want to examine at some length and we want to adjourn certainly by 6 o'clock. Will it be possible for you to come back to-morrow?

Mr. McANENY. I can do it if necessary. I would gladly stay on my feet for some time if it will suffice to clear this up.

The CHAIRMAN. I have a good many questions I want to ask you from my standpoint, and inasmuch as you are evidently about the best posted man on this second-class matter in your association I want to ask them now.

Mr. McANENY. That is true only by reason of the accidental fact that I am on this committee, and there may be questions that you will ask me for which I might have to refer to elsewhere.

The CHAIRMAN. But before we get down to the main question, I want to direct your attention to a few things. I want to clear away as far as I can some of the matters to which you have referred. I notice that you have referred, and others who have been before us have referred, to the rural carrier service as being a subsidy. Do you appreciate the fact that the rural carrier service is for every person in the United States, man, woman, and child—every kind of business, from the newspaper business down to the paper-of-pins business—and that all use this rural service on the same conditions and at the same rates, do they not?

Mr. McANENY. Yes, sir; but I, of course, did not refer to the deficit in the rural mail service as a subsidy.

The CHAIRMAN. You did not?

Mr. McANENY. No; but what I did say was that it was just as logical to ask it to pay its own cost as it was that any other department pay its own way. For my part I think this is a good service and should be continued.

The CHAIRMAN. Is there any more loss by the rural service than by any other part of the mail service? The second-class postal matter uses \$30,000,000.

Mr. McANENY. A large part of the Rural Delivery Service you will find charged to second class.

The CHAIRMAN. Let us see. Do most of your papers that go through the mail go to rural-delivery subscribers?

Mr. McANENY. I couldn't possibly answer that without a great deal of analysis; in fact, I couldn't answer it without the aid of the Post Office Department. We mail our papers and we do not know what they do with them.

The CHAIRMAN. Isn't it true that a very small part of that mail matter goes through the rural deliveries?

Mr. McANENY. I should think it must, because they charge it with a great part of the loss.

The CHAIRMAN. No; they do not.

Mr. McANENY. I do not recall exactly but I think it is \$17,000,000 or \$18,000,000.

The CHAIRMAN. Now, wouldn't you give it as your opinion that the greater part of your subscribers who get your paper through the mail get it where it goes to the city where there is a city carrier service?

Mr. McANENY. The only one who could answer that question would be the officer in the Postal Service who has to do with this distribution. My judgment is the greater part goes on the rural routes.

The CHAIRMAN. Do you think so?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Your paper?

Mr. McANENY. Yes, sir; outside of the first, second, and third zones.

The CHAIRMAN. I don't care where it goes if it goes through the mail and goes to the rural routes. Won't you please, when you go back to New York have your man that attends to it tell you how many of these 56,000 subscribers you address on the R. F. D. routes? He can find that quickly.

Mr. McANENY. If that will aid you, I will, gladly.

The CHAIRMAN. And my guess would be that you send four times more papers to the cities having City Delivery Service than you do to rural carriers—that is, on routes of rural carriers. You will find that to be a fact.

Mr. McANENY. Well, then, much of that entire schedule of costs—

The CHAIRMAN (interrupting). I am coming to the rural carrier now. You use the city carrier for your paper four times more than you do the rural service, whereas perhaps many papers now represented here will use the rural service more than the city service. If the rural service is to be classed as a subsidy, or if it be said we have a deficit in that and charge something else up to it, why not to the City Delivery Service also.

Mr. McANENY. I don't think it ought to be charged anything. I would leave it exactly as it is.

The CHAIRMAN. So, then, the rural service and City Delivery Service and railroad service is a part of the general service that makes up the total deficit, isn't it?

Mr. McANENY. It is all included in the 386 which they charge as an overhead charge.

The CHAIRMAN. And the rural carrier service is no more a privilege to the people who live in the country than the city delivery is to the people in the city.

Mr. McANENY. Certainly not.

The CHAIRMAN. In fact, there is no special privilege, because all use it?

Mr. McANENY. There is a great deal more charged to the rural routes, but I want them to have it, nevertheless.

The CHAIRMAN. Don't you see a great difference in principle; the rural service everybody uses, and why charge that service five times as much as another; another service has four times as much use by some people, but it all goes through the same post office, the same railroad, the same City Delivery Service—

Mr. McANENY (interrupting). I confess I don't quite see your point.

The CHAIRMAN. I know you don't.

Mr. McANENY. I am willings to, if you will let me. I don't see how it affects the question we are discussing.

The CHAIRMAN. I will tell you. The first class pays its own way and a profit; the third class pays its own way and a little profit; the fourth class pays its own way and perhaps a little profit. The only class which does not pay, according to the calculation of the experts in the department and who have no financial interest in the result of the investigation is the second class, and it has a big deficit, and that class is the class which imburses the newspapers, periodicals, and magazines. In 1918 there were 40,000 rural carriers, and we appropriated last year \$53,000,000 for that service; and there were 40,000 city delivery carriers, and we appropriated for that service in round numbers \$50,000,000. So the service is exactly alike, except the one supplies the people who do not live in incorporated cities or towns and the other supplies those who live within incorporated cities and towns. Now, the railroads supply identically the same service to the town dweller and to the rural man, and there is a loss

in transportation. Now, if I understood you this morning you seemed to be under the impression that the establishment of the zone system was through hasty legislation?

Mr. McANENY. No——

The CHAIRMAN (interrupting). Do you mean the establishment of the zone system or the establishment of the zone system for advertising rates?

Mr. McANENY. I meant this particular bill, which establishes three principles in one: The flat rate, the weight rate, and the zone system.

The CHAIRMAN. You gentlemen had an idea and you expressed it to-day, practically, that that was just flung together as a compromise in the conference committee, without the presence of any persons who had any knowledge of postal matters having given any thought or consideration to it?

Mr. McANENY. On the contrary, I think I said that the Postmaster General had suggested it, but that the matter was put in while the bill was in conference, and that this bill did not appear in either House as it was after it came from the conference, and therefore no opportunity was given for hearings.

The CHAIRMAN. I want to set you straight about that, Judge Moon the chairman of the Committee on Post Offices and Post Roads, was the man who first suggested that, and that was three or four months before we began to write the bill. But, as I understood it, the experts of the department had been working on this very system affecting a zone system for the advertising portion of the paper, the commercial part of the paper, and not on the reading matter. Did you ever compare the rates of the present law with the zone rates, not separating the advertising matter from the reading matter, in the bill as it passed in the House?

Mr. McANENY. Oh, yes.

The CHAIRMAN. Take your paper, how much more would your paper pay under the present law than in the bill as it passed the House?

Mr. McANENY. That I have not figured.

The CHAIRMAN. You will find it practically the same. Only one or two are a little higher under the present bill. So what you are after in this present bill is a rate. If it is going to cost you \$200,000 under either one of two systems, would you as leave it be under one system as the other, if the administrative features are approximately the same?

Mr. McANENY. Well, if the bill were presented to me, I would not care under which factor it happened to come, but I would continue to object to the process by which it was presented. It will not be presented to me; it will be favorable to subscribers.

The CHAIRMAN. Do I understand your association is objecting to the zone system; to a graduated rate?

Mr. McANENY. No; my statement was that, while not recognizing the need for this increase in postal rates, but if it was to be increased we would rather have it a zone system.

The CHAIRMAN. You would rather have a zone system if you have to have anything?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Then your association is opposed to it, but if we need anything you will want that?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Your association has changed its mind since April, 1917, has it not?

Mr. McANENY. I don't know.

The CHAIRMAN. Do you know Lafayette Young?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Do you know Urey Woodson?

Mr. McANENY. Yes, sir; he is here now.

The CHAIRMAN. He is a member of your association?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Do you know Mr. Ewing—Robert Ewing?

Mr. McANENY. Yes, sir.

The CHAIRMAN. He is a member of your association?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Do you know Maj. E. D. Stahlman?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Do you know Mr. Louis J. Wortham?

Mr. McANENY. Yes, sir; he is here.

The CHAIRMAN. He is a member of your association?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Let me read you a published statement which they handed me, and let us see how your association stood a year ago last April:

The American Newspaper Publishers' Association, composed of more than 500 publishers of daily newspapers in the United States, at its annual session in New York in April last, apprehended that an advance in letter postage would call for an advance of the rate on second-class matter, and after proper consideration of the subject, declared by unanimous vote in favor of the zone system and appointed a legislative committee with instructions to govern itself accordingly in their presentation of the matter to Congress.

Is that right?

Mr. McANENY. I hope you are not trying to stir up civil strife.

The CHAIRMAN. No; I am trying to get at the facts.

Mr. McANENY. Well, while there may have been some poetic license in the writing of that report the fact is that at that time if there was anything we agreed upon it was that if an increase was needed we desired the zone rate.

The CHAIRMAN. Can you put in the form of that resolution?

Mr. McANENY. Yes, sir. Mr. Palmer, have you it?

Mr. PALMER. No, sir; I haven't it here. While the resolution was very short it was put to a vote for those in favor of the zone system or those in favor of the flat rate, after quite a long talk by the president—

The CHAIRMAN (interrupting). That resolution didn't say anything about any condition you were going to prefer?

Mr. PALMER. It didn't come out and favor it. It put it that we were opposed to any increase without any discussion, which precluded any knowledge of the costs or conditions. And then while under the view that we were opposed to any increase until these conditions were solved, then should there be a necessity of an increase, are we in favor of a flat rate, or do we favor a zone system, and the result was that there was no negative vote on the zone system, and there was no affirmative vote on the other.

Mr. GARNER. You did, then, favor the zone system?

The CHAIRMAN. These gentlemen, then, are mistaken when they handed me this paper?

Mr. PALMER. There is a qualification there.

The CHAIRMAN. I wish you would get me the form of that resolution. I think I have it in some of my papers if I can find it, but I think you can find it easier than I can. Certainly you are under this impression, that a great many members of your association were left under the belief that your association was in favor of the zone rates?

Mr. PALMER. Under that condition, if there was to be an increase.

The CHAIRMAN. Didn't this legislative committee appointed by your association, when the question was really up and pending in the Senate, come down here and abandoned the zone system and combined with the publishers of periodicals not to have any increase at all?

Mr. PALMER. That I believe not to be a fact.

The CHAIRMAN. Let us see what they said:

It appears that this committee, composed of capable men, did not follow the instructions given by the association, as expressed in the unanimous action of the large annual meeting of its membership, but was persuaded that the publishers of the newspapers should cooperate with the publishers of magazines, trade papers, and other periodicals in an endeavor to defeat an advance or change of any kind in the postal rates. To the extent that this committee acted in this manner in conjunction with the publishers of magazines, trade papers, etc., it did not represent the American Newspaper Publishers' Association.

Mr. McANENY. May I ask, Mr. Chairman, what you are reading from?

The CHAIRMAN. I am reading from the paper signed by E. B. Stahlman, Louis J. Wortham, Robert Ewing, Urey Woodson, and Lafayette Young, dated Washington, D. C., August 15, 1917. What I am getting at is that I gathered this impression. You gentlemen must realize I was not present at that meeting. I did not know you were going to hold it, and I have never talked with any members of your association that ever denied this, and now I am glad to get a denial; I did not think that these gentlemen, men like Maj. Stahlman and Mr. Woodson, Mr. Young, Mr. Wortham, and Mr. Ewing ought to come down here and mislead me and mislead Congress.

Mr. McANENY. But I can't believe that these gentlemen had any such purpose.

The CHAIRMAN. They said they had. That is the one question I wanted to ask you, whether that is true or not. We must hear both sides of this.

Mr. McANENY. What you have read is the reflection of a difference of opinion which occurred a little over a year ago, and which has long since been buried.

The CHAIRMAN. I am getting at why your association changed its mind.

Mr. McANENY. I think you have a settled desire to make trouble among friends.

The CHAIRMAN. No; I am led to believe that this is true, that your association went on record for a zone system and appointed a committee to work for the zone system. When they got here they found the representatives of the periodical publishers, the magazine and trade publishers here, and then they went into cooperation with them and to disobey instructions. This paper, you see, misled me <sup>in</sup> believing it. I am glad you gentlemen come here and say it need not be.

Mr. McANENY. May I complete your disillusion? While I am not familiar with this earlier piece of history—

The CHAIRMAN (interrupting). That was just 30 days before we passed the zone system in the House. That was in April and we presented the bill April 9. It could not have been but 30 days.

Mr. McANENY. There was something you said about other members coming down with other things in view and finding magazine people here and cooperating with them; I must correct you in that.

The CHAIRMAN. Not correct me; correct these honorable men.

Mr. McANENY. I will permit you to correct them.

The CHAIRMAN. All right. As a matter of fact there has been no cooperation.

Mr. McANENY. And no connection whatever between the two bodies in interest in this matter between the newspapers and the magazines. I explained this morning that whatever our sympathies may be with their troubles their interests are not ours.

The CHAIRMAN. To what class of publishers was Mr. Frank P. Glass referring a few weeks ago when he said that only in April of this year were they able to get together?

Mr. McANENY. This very class to which I am referring now. [Laughter.] He had no doubt had in mind these little differences that you have referred to. The reconciliation of those differences, which were merely of detail, occurred quite a while before April. The meeting at which this resolution was adopted was the annual meeting held in April and then the opinion was crystalized and the action taken to do real work together. Mr. Woodson will inform you.

The CHAIRMAN. It happened a long while ago and they got together a short while ago to fight this proposition.

Mr. McANENY. We are quite united now without any differences of opinion.

Mr. MOORE. What Mr. Glass said was about what Mr. Kitchin had said?

The CHAIRMAN. Yes. Let us see whether you agree with these honorable members of your association who are now here cooperating with you in this matter and have been cooperating with you since April according to Mr. Glass.

Certain it is that the zone system is the one and only one equitable method for the fixing of postal rates, and the one that will produce the greatest amount of revenue to the department, and cover such publications as those so greatly favored in the past by causing them to pay their rightful portions toward enabling the department to meet at least a portion of its annual deficit.

Do you subscribe to that?

Mr. McANENY. No; there will be a great deal of difference of opinion yet.

The CHAIRMAN. Have you and Mr. Young, and Maj. Stahlman, and the others got together? You differed a great deal a year ago; have you got together now for or against this?

Mr. McANENY. Our action is expressed in the resolutions I read to the committee.

The CHAIRMAN. What I want to know, have you gentlemen got together or are you still divided?

Mr. McANENY. Where there has been differences of opinion they have been yielded in favor of the one side or the other and our opinion

has been crystalized in the resolution. That frequently occurs in organizations for various purposes.

The CHAIRMAN. Let me read you further:

Members of the committee—

The committee appointed by your association—

who appeared at the Senate committee hearing, as the representatives of the American Newspaper Publishing Association, had been directed by the unanimous vote of that association to advocate the adoption of the zone system.

I believe you deny that?

Mr. McANENY. That has been explained.

The CHAIRMAN. That is what is misleading me.

Mr. PALMER. I differ with the last statement just made that we subscribe to that.

The CHAIRMAN. All right, I am glad to hear that. Let us read this:

The association realized that something should be done to get rid of at least a portion of the large annual deficit of the Post Office Department, and that this result could not be reached in an equitable way by an advance of the existing flat rate. The association never for a moment thought that its committee would signify its approval of a continuance of the flat-rate plan, or an inadequate and improper advance of rates under it.

Did these gentlemen correctly state that in April, 1917? Did these five gentlemen who signed this paper state the attitude truly of your association in April, 1917?

Mr. PALMER. I didn't hear all that you read.

The CHAIRMAN. I will read it again:

The association realized that something should be done to get rid of at least a portion of the large annual deficit of the Post Office Department, and that this result could not be reached in an equitable way by an advance of the existing flat rate. The association never for a moment thought that its committee would signify its approval of a continuance of the flat-rate plan, or an inadequate and improper advance of rates under it.

Mr. PALMER. I haven't any recollection of that, that the association has ever opposed any principle of zone rates; on the other hand its attitude was one of a desire for investigation so that full knowledge of costs may be had so that there should be no occasion for lack in that, and that it never did advocate so far as I know an increase in the flat rate. So far as I know it never has departed from the principle of zone rates.

The CHAIRMAN. What paper do you represent?

Mr. PALMER. I am manager of the association.

The CHAIRMAN. The business manager of the Publishers' Association?

Mr. PALMER. No; manager.

The CHAIRMAN. Do you manage it in such a way as to collect the dues from the members?

Mr. PALMER. That all comes through my office.

The CHAIRMAN. Let me ask you, since you have volunteered, and got on your feet, you know more than these gentlemen here about it, how much more have been the dues and contributions passing through your office in the last six months than they were in 1916?

Mr. PALMER. That I don't know. The revenue has increased, but the amount I do not know. I can supply you that.

Mr. McANENY. It has increased by special funds.

The CHAIRMAN. Did you impose an assessment on the members of your association?

Mr. PALMER. Yes, sir.

The CHAIRMAN. When was that?

Mr. PALMER. April 9.

The CHAIRMAN. This year?

Mr. PALMER. Yes, sir.

The CHAIRMAN. How much did you assess the New York Times?

Mr. PALMER. That I do not know; there was an assessment of 20 per cent authorized on paper tonnage.

The CHAIRMAN. So it paid a good deal more than Brother Woodson's paper over there?

Mr. PALMER. Yes, sir. Naturally the newspapers using the greatest tonnage would have the greatest interest in the increased cost of news print paper and securing more evidence and figures of cost before the Federal Trade Commission.

The CHAIRMAN. How much did you as manager, or the committee, estimate that it would cost for the propaganda to fight against this tax?

Mr. PALMER. Not anything.

Mr. McANENY. Not one cent.

The CHAIRMAN. Why did you increase your assessments more this last year than the year before that?

Mr. PALMER. Because there was no occasion for it the year before that.

The CHAIRMAN. Then what was the occasion to do it now; to have these large assessments and contributions until the postal rate situation developed?

Mr. PALMER. Until the paper situation developed, and that is the only question involved.

Mr. McANENY. There is no other condition involved; nothing whatever.

Mr. PALMER. Nothing but the news-print paper situation is involved.

The CHAIRMAN. Let me get to that now. How much more are you paying for news-print paper in 1918, this year, than you did in 1917?

Mr. PALMER. The Federal Trade Commission has fixed it lately at \$3.10.

The CHAIRMAN. It is less now than then?

Mr. PALMER. No.

The CHAIRMAN. Let us see.

Mr. PALMER. The price of news-print paper in 1915 was \$1.90. It steadily increased until in 1916 there was hardly any limit and sometimes it was \$5 or \$6; in many cases it went up until on spot purchases it was that price. That was last year.

The CHAIRMAN. That was last year, 1917?

Mr. PALMER. That was in 1917.

The CHAIRMAN. How much did you pay for it in March?

Mr. PALMER. That depends entirely upon the mill with which the publisher was dealing.

The CHAIRMAN. That was this year?

Mr. PALMER. It is impossible to answer that question.

The CHAIRMAN. Did it sell for \$2 or \$3 or \$4 or \$5 a ton?

Mr. McANENY. \$3 up.

Mr. PALMER. \$3.50 would be high for a given publisher; \$3.10 about, normally; the price fluctuated.

The CHAIRMAN. \$3.50 to \$3.10?

Mr. PALMER. Yes, sir; I should say \$4 was an extremely high price.

The CHAIRMAN. How much are you paying now?

Mr. PALMER. The Federal Trade Commission fixed it last week at \$3.10.

The CHAIRMAN. You said in 1917 it was sometimes \$5 and \$6?

Mr. PALMER. No; last year it was a case of a great many publishers buying wherever they could and paying whatever they had to. For instance, one mill was offering contracts at that time at about \$2.50. Conditions varied.

The CHAIRMAN. Anyway in 1916 and 1917 it was a good deal higher than it has been from January to now?

Mr. PALMER. No; not at all. You see during 1917 the conditions of the paper market were very much upset and some publishers who were not protected by contract, or those who were protected by contract and not getting a supply for one reason or another, sometimes had to buy on the open market and had to pay an extremely high price. Their necessities were absolute, and they had to pay whatever price was demanded and buy wherever they could.

The CHAIRMAN. Are you interested in any newspapers that buy paper?

Mr. PALMER. No; I am connected with the association.

The CHAIRMAN. Have you any stock in any paper? In any newspaper that buys paper?

Mr. PALMER. No; only by my connection with the association.

The CHAIRMAN. You say in 1915 it was \$1.90?

Mr. PALMER. Yes, sir; I say for the period of—

Mr. McANENY. That was the sidewalk price.

Mr. PALMER. That was the approximate price of news print paper in comparison with \$3.10 to-day plus freight.

The CHAIRMAN. It was \$1.90?

Mr. PALMER. \$1.90.

The CHAIRMAN. What did you mean when you said in 1915 and then in 1916 it had gone up to \$5 or \$6?

Mr. PALMER. During 1915 the paper market was very much disturbed, owing to a large number of causes. Since that time the prices have been materially higher.

The CHAIRMAN. Higher than in 1916?

Mr. PALMER. Higher than in 1916.

The CHAIRMAN. In 1916 it was \$5 and \$6.

Mr. PALMER. No; it was higher—

The CHAIRMAN (interrupting). You are a practical man, Mr. Palmer, what do you say as to the cost of print paper? If you men in the business don't know how much it is costing how do we know? Now what do you say the average price for news print paper was in 1917?

Mr. PALMER. It was subject to so many fluctuations.

The CHAIRMAN. So was cotton and still we can tell the average price; so was wheat and we can tell the average price.

Mr. PALMER. Approximately \$3.25 was the average price.

The CHAIRMAN. All right. What has it been in 1918?

Mr. PALMER. About the same.

The CHAIRMAN. Don't you feel that they have been getting print paper for the last 2 or 3 months cheaper than they got it in February or March?

Mr. PALMER. It is impossible to state.

The CHAIRMAN. You do admit that it is a little cheaper this year than it was last year?

Mr. PALMER. No; most of these contracts run for 12 months.

The CHAIRMAN. All right, a man that made a contract in 1915, in January 1915, how much did he pay?

Mr. TAYLOR. Mr. Palmer isn't buying any paper.

The CHAIRMAN. What is your name?

Mr. TAYLOR. My name is Taylor, of the Boston Globe.

The CHAIRMAN. I ask you what was the average price in 1915?

Mr. TAYLOR. I was paying \$2.05.

The CHAIRMAN. What were you paying in 1916, the average price?

Mr. TAYLOR. \$2.50 plus the freight. The \$2.05 rate was delivered on the sidewalk.

The CHAIRMAN. All right, what was the freight?

Mr. TAYLOR. The freight rate was 16 cents, and then we paid storage, and we paid insurance.

The CHAIRMAN. Anyway the paper man got \$2.50 from you; what did you pay in 1917?

Mr. TAYLOR. About 3 cents.

The CHAIRMAN. That is \$3, you call it?

Mr. TAYLOR. Yes; 3 cents a pound.

The CHAIRMAN. What did you give for it January this year or February?

Mr. TAYLOR. We were paying approximately \$3.10, plus some more conditions—insurance, and every cost from the minute the paper leaves the mill.

The CHAIRMAN. You did that in 1916?

Mr. TAYLOR. No, sir.

The CHAIRMAN. You did it in 1917?

Mr. TAYLOR. Part of it.

The CHAIRMAN. What do you think the former witness meant when he said that in 1916 it was \$5 or \$6?

Mr. TAYLOR. There were people who jammed and had to pay any price.

The CHAIRMAN. All right; do you say paper is higher or lower than in 1917?

Mr. TAYLOR. It is in my case and in many cases. Competitors in my city are paying less than I am.

The CHAIRMAN. You made a contract for—

Mr. TAYLOR (interrupting). Anybody in the paper business can answer your questions better than a newspaper man. You can't buy paper at the market price. I can't go outside of my mill and buy paper.

The CHAIRMAN. Are you paying more for your paper this June than you were last June?

Mr. TAYLOR. Yes, sir.

The CHAIRMAN. How much more?

Mr. TAYLOR. Fifteen per cent.

The CHAIRMAN. Do you make your contracts for a year?

Mr. TAYLOR. I tried it.

The CHAIRMAN. What time of the year?

Mr. TAYLOR. We tried to make it in August and didn't close the contract until September.

The CHAIRMAN. For the contract you have now?

Mr. TAYLOR. Yes, sir.

The CHAIRMAN. How much did you pay in December?

Mr. TAYLOR. \$3.10.

The CHAIRMAN. When did you make a contract before that?

Mr. TAYLOR. I should say a year the previous August.

The CHAIRMAN. What did your contract call for then?

Mr. TAYLOR. \$2.50 or \$2.60, I have forgotten which.

The CHAIRMAN. And plus?

Mr. TAYLOR. Plus; prior to that it was \$2.05 on the sidewalk and all of those charges paid.

The CHAIRMAN. The commission has now cut it down?

Mr. TAYLOR. Yes; at the mills; freight has been increased 55 to 60 per cent now.

The CHAIRMAN. Mr. Palmer, after hearing this gentleman, do you think print paper was higher this year than it was last year on the whole?

Mr. PALMER. Through the Federal Trade Commission we have been informed that the cost of production has been steadily and constantly increasing in the manufacturing of news-print paper, and for that reason they have fixed the price at the moment at \$3.10 at the mill.

Mr. MCANENY. As of date of the 1st of April?

Mr. PALMER. Yes; as of date of the 1st of April, subject to change at any moment.

The CHAIRMAN. The reason that you gave me a while ago as to why you increased your assessment last April was because of the news-print paper situation?

Mr. PALMER. That was true.

The CHAIRMAN. Well, you don't need that money now, do you, since the Federal Trade Commission has fixed the rate at \$3.10?

Mr. PALMER. We do need it.

The CHAIRMAN. How do you operate with that money now?

Mr. PALMER. There has been a hearing lasting for many months, or several months.

Mr. GARNER. Didn't it commence in the early part of 1917?

Mr. PALMER. Yes; it did. But there has been a hearing on the question of establishing the cost of news-print paper, at which both sides have been represented by attorneys, and it has been necessary to get evidence and aid in every way in determining the cost of news-print paper, and that cost varies very much in different mills.

The CHAIRMAN. Do you keep books, as manager, showing the amount each member pays?

Mr. PALMER. Yes, sir.

The CHAIRMAN. Have you an account of how it was paid out?

Mr. PALMER. Every cent of it.

The CHAIRMAN. You haven't any objection to filing that, have you?

Mr. PALMER. Under the direction of the committee.

Mr. TAYLOR. I am a director, and I will guarantee that you will get it.

The CHAIRMAN. I have noticed some of your officers have been in Washington quite often and quite much of the time; Mr. Glass has been here right much of his time?

Mr. PALMER. Yes, sir.

The CHAIRMAN. Does your association contribute to his expenses coming and going?

Mr. PALMER. We do at times contribute to his expenses, repay him his disbursements.

The CHAIRMAN. What do you allow him?

Mr. PALMER. We don't allow anything.

The CHAIRMAN. You said awhile ago you did pay him.

Mr. PALMER. Some reimbursements and expenses.

The CHAIRMAN. Have you any idea when he was here three weeks or four weeks how much of his expenses he sends in for reimbursement?

Mr. PALMER. I haven't an idea.

The CHAIRMAN. Will you put that in?

Mr. PALMER. I will put in anything under the direction of the committee.

The CHAIRMAN. Mr. Glass lives at Birmingham, doesn't he?

Mr. PALMER. Yes, sir.

The CHAIRMAN. That is his home?

Mr. PALMER. Yes, sir.

The CHAIRMAN. For the last six months he has been here most of the time?

Mr. PALMER. I don't know.

Mr. MOORE. You mean, Mr. Chairman, Birmingham, Ala., not Birmingham, N. Y.

The CHAIRMAN. Yes; I mean Birmingham, Ala.

Mr. PALMER. Yes; Birmingham, Ala.

The CHAIRMAN. You are in your association's offices all the time?

Mr. PALMER. I am most of the time.

The CHAIRMAN. Don't you see him up there?

Mr. PALMER. Occasionally.

The CHAIRMAN. Occasionally; how long does he stay up there when he comes?

Mr. PALMER. Sometimes one day and sometimes two or three.

The CHAIRMAN. He has been spending most of his time in Washington?

Mr. PALMER. To that I should say no; but I don't know.

The CHAIRMAN. How many times has he sent in bills for trips?

Mr. PALMER. That I couldn't answer.

The CHAIRMAN. Your books will show?

Mr. PALMER. Yes, sir.

Mr. GARNER. Will you put that in?

The CHAIRMAN. Do you know of anybody else that has been in Washington the last six months that put in bills?

Mr. PALMER. Yes, sir.

The CHAIRMAN. Name them.

Mr. McANENY. Mr. McAneny was one.

Mr. PALMER. I think every member of our paper committee has been reimbursed for taking trips anywhere that might be necessary in connection with that matter.

The CHAIRMAN. Which matter? The print-paper matter?

Mr. PALMER. Yes, sir.

The CHAIRMAN. Do you mean to tell this committee that you think that is the only matter which Mr. Glass was in Washington about for the last six months?

Mr. PALMER. No; there have been very many.

The CHAIRMAN. He has been here about this postal zone rate provision?

Mr. PALMER. Yes; I believe he has been under the command of Mr. McAneny, but how he may have spent his time I don't know.

The CHAIRMAN. Does he have to report to Mr. McAneny about this any more than he does on the print-paper matter?

Mr. McANENY. Yes; that is, when he reports on that he reports to me.

The CHAIRMAN. I will resume with you.

Mr. GARNER. Mr. Glass is chairman of your association?

Mr. PALMER. Yes, sir.

Mr. GARNER. Would it embarrass or be inconveniencing to you to give us the amount of the allowances that you have allowed to members of your association and your directors that come up here about the print paper or otherwise?

Mr. PALMER. My employers are here and I act naturally under the direction of my employers.

Mr. GARNER. As one member of the committee I would like to have you put that in.

Mr. McANENY. Anything you like will go in.

Mr. GARNER. I want that matter.

The CHAIRMAN. You say, Mr. McAneny, Mr. Glass reports to you about the postal zone rate matter?

Mr. McANENY. I used that expression.

The CHAIRMAN. Mr. Palmer says that he reported to him about the paper matter.

Mr. McANENY. Since I am chairman on that subject, what Mr. Glass has to say he says to me, and I have the leadership of that part of the association and not Mr. Glass.

Mr. MOORE. Mr. Glass, as I understand it, is the president of the Newspaper Publishers Association.

Mr. McANENY. Yes, sir.

Mr. MOORE. And Mr. McAneny vice president?

Mr. McANENY. Yes, sir.

Mr. MOORE. And you are chairman of the newsprint committee?

Mr. McANENY. Yes, sir.

The CHAIRMAN. How often did you send or did Mr. Glass come down here in the last six months with reference to the postal-zone proposition?

Mr. McANENY. We were here, Mr. Glass and I, immediately following the meeting in New York, and we were here to ask hearings of the Senate, which were granted at that time.

The CHAIRMAN. It wouldn't take you but 30 minutes to ask for a hearing, would it?

Mr. McANENY. Yes; and I presume twice since; but I propose, if you will pardon me, to say a word on that subject.

The CHAIRMAN. Yes.

Mr. McANENY. Mr. Glass has been here in Washington during the period of two years chiefly upon the business of the paper committee of the association, of which he was chairman. Mr. Glass has given unselfishly of his time, as the usual volunteer and informal president that requires work to be done on his own time.

Mr. MOORE. He is a publisher?

Mr. McANENY. He is a publisher and a gentleman of the highest standing in the United States, and I am a little bit inclined to make the suggestion that this line of implication should not go a great deal further.

The CHAIRMAN. We want to get the truth and facts about this thing, without reference to the expense account of members of your association, but we are going to find out if we can.

Mr. McANENY. You are going to find it out, sir

The CHAIRMAN. Now, I ask you how often did he come down here on the newspaper proposition?

Mr. McANENY. You mean, by the newspaper proposition, the postal matter?

The CHAIRMAN. Yes; he reports to you, you say.

Mr. McANENY. Yes; I recall meeting him here once since the day in April.

The CHAIRMAN. Now, in New York, when he would go back from Washington to New York, would he see you?

Mr. McANENY. He goes to Alabama when he goes home.

The CHAIRMAN. I know when he goes to his Alabama home he goes to Alabama, but when he goes to his New York staying place, did he see you?

Mr. McANENY. I have not seen Mr. Glass in New York since April.

The CHAIRMAN. Has he written to you about this?

Mr. McANENY. I do not recollect.

The CHAIRMAN. What?

Mr. McANENY. Certainly; he has. There has been the usual correspondence between members of this committee as to the subject matter of his work.

The CHAIRMAN. He has been here very often, has he?

Mr. McANENY. He has been here.

The CHAIRMAN. Now, what kind of work did he tell you he was doing with respect to this postal-zone-rate proposition?

Mr. McANENY. May I speak a moment?

The CHAIRMAN. Yes; in answer to the question.

Mr. McANENY. You speak of Mr. Glass's presence in Washington. I told you that for two years he has been unselfishly working in the interests of the print-paper committee.

The CHAIRMAN. That is what the other gentleman said.

Mr. McANENY. And his presence in Washington has been given further to this matter.

The CHAIRMAN. You said—

Mr. McANENY (interposing). May I finish my statement?

The CHAIRMAN. Yes; all right.

Mr. McANENY. This matter has been of importance to the papers, and also to the Government. Certain members were invited, and the Government secured an agreement whereby they did not defend. The indicted men plead nolle contendere, and the Government accepted small fines, and the Federal Trade Commission was made an arbi-

tration committee on this paper matter with the newspaper association committee, of which Mr. Glass was the head and continued to represent it, although Mr. Elbert Baker, of Cleveland, is gradually taking his place. It engaged counsel and several counsel of standing to represent it before the Federal Trade Commission, and they have occupied weeks and months, and counsel upon the other side have been here and the presence of Mr. Glass in Washington has been almost exclusively devoted to that matter. The Federal Trade Commission the other day fixed a price of \$3.10, but the form of adjustment provided that there might be an appeal to the Federal court in New York for final adjudication, and they have already announced they are going to appeal it, or in that manner they have announced it, and it is supposed that it will be appealed and they will be likely to appeal it. I think the association will be continued to be represented by counsel and to be represented by Mr. Glass.

The CHAIRMAN. You took a very long time not answering me.

Mr. McANENY. I think I have answered you.

The CHAIRMAN. Here is the question I asked you: You suggested you had communications about the postal zone proposition; now I ask you what kind of work did he say he had done in connection with this postal-zone rate proposition?

Mr. McANENY. Nothing that I recall.

The CHAIRMAN. He did report his work first to you, and I ask you to explain.

Mr. McANENY. I can't quite catch that point. I don't mean that he reported and submitted reports as a clerk would of his views of this matter.

The CHAIRMAN. Didn't he ever say anything to you in the last six months as to what he was doing in the interest of the publishers' association in this matter?

Mr. McANENY. No; I have had a running correspondence with him; I don't recollect what he said.

The CHAIRMAN. You said he did?

Mr. McANENY. I might add, to complete my reply to the suggestion made by your questions, that of course the publishers' association has paid the expenses of its volunteer officers when they have come here on a public errand.

The CHAIRMAN. They should, and why should you think there is an implication when I am asking about it?

Mr. McANENY. I don't think I am alone in my feeling.

The CHAIRMAN. Since you have brought up the expense matter, have you paid for their time?

Mr. McANENY. No, sir.

The CHAIRMAN. Simply paid for their expense account?

Mr. McANENY. Yes, sir. You are familiar with the principles of mileage and what it is granted for.

The CHAIRMAN. Did you grant 40 cents a mile both ways?

Mr. McANENY. We haven't got it together.

The CHAIRMAN. You paid it when they sent it in; they didn't itemize it?

Mr. McANENY. That is the customary practice among gentlemen.

The CHAIRMAN. I don't blame you. To go back one minute more to the revenues of this association, has an assessment ever been made—

Mr. McANENY (interrupting). The contributions Mr. Palmer referred to was for the purpose of continuing the representation before the Federal Trade Commission.

The CHAIRMAN. What I don't understand is that this year it has been \$3.10 and \$3.65, the print paper, and in 1917 and in 1916 it went to \$5 and \$6, why they should levy a bigger assessment in this year when it was lower.

Mr. McANENY. That was not laid to make up the difference in the price of paper; that was laid to make our appearance here.

The CHAIRMAN. Do you know of anybody else than your association that this year has come to Washington at the expense of the association in the interest of themselves?

Mr. McANENY. I remember of one Maj. Stahlman and we properly paid his expenses.

The CHAIRMAN. His bill of expense is probably considerable, as I see him at the New Willard Hotel every time I go through there, and his bill of expense is probably considerable.

Mr. McANENY. He was in Washington a month, and I imagine he paid the usual living expenses for that length of time.

The CHAIRMAN. He was here a considerable time last year?

Mr. McANENY. I dare say he was; he was not then—

The CHAIRMAN (interrupting). Was he here last year and this year in the interest of this print paper proposition or the postal zone proposition?

Mr. McANENY. He was here at that time, I assume, as an officer of the publishers' association. I don't know the name of the association; he was not then a member of the association.

The CHAIRMAN. He is a member of the National Publishers' Association?

Mr. McANENY. Oh, yes.

The CHAIRMAN. Is not the southern association a part of the national association. Does it not embrace practically all of the papers?

Mr. McANENY. It is a distinct organization, although coincidentally many of their members are members of the national association, but their affairs are absolutely apart.

The CHAIRMAN. Why was Maj. Stahlman, if he was not representing your company and representing your association, but representing the southern association, sending his expense bills to your association?

Mr. McANENY. Because, in the meanwhile, in April last he was added to the postal committee of the American Association.

The CHAIRMAN. He is now on that committee?

Mr. McANENY. Yes, sir; since that time he has been a member of this committee and not of the other.

The CHAIRMAN. He has been a member of this committee since April?

Mr. McANENY. Yes, although possibly he is a member of both committees; he has been a member of this committee since action was taken by our association in April last.

The CHAIRMAN. You got the major over?

Mr. McANENY. I am inclined to think the major got us over, more or less. I have referred to compromises which frequently, I imagine, are employed in Congress in order to get good results.

The CHAIRMAN. He has put in more appearances for your association, in the interest of this postal proposition, than Mr. Glass and all others put together, has he not?

Mr. McANENY. He has appeared only once, within my knowledge, at a hearing at which I was present.

The CHAIRMAN. You have frequently talked to Major Stahlman about his work with respect to this postal proposition, have you not?

Mr. McANENY. I have not talked to him about his work, no.

The CHAIRMAN. You talked to him about his general work?

Mr. McANENY. I have discussed this question with him.

The CHAIRMAN. Did he tell you how he had seen this Member of Congress and that Member of Congress, and the arguments he put up to them for the repeal of this law?

Mr. McANENY. I do not recall any reference to Members of Congress.

The CHAIRMAN. Did he tell you the splendid arguments he has made to me?

Mr. McANENY. I do not recall any reference to you, Mr. Chairman, or any other member of the committee.

The CHAIRMAN. The executive committee of your association really regards him as one of the best men you could send to Washington to handle this situation?

Mr. McANENY. Oh, no; the major is quite incidental, quite casual.

The CHAIRMAN. I know you are tired, having been on your feet for a long time, so we will adjourn until to-morrow morning at 10 o'clock a. m., when I will go into these other matters.

(Thereupon the committee adjourned to meet Saturday, June 22, 1918, at 10 o'clock a. m.)

## REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Saturday, June 22, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman), presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, White, Moore, Green, Sloan, Sterling, Martin, and Hawley.

### STATEMENT OF MR. GEORGE McANENY—Continued.

The CHAIRMAN. Mr. McAneny, I believe your association or the heads of your association admit, however wide the difference of opinion between your association and the Post Office Department as to the cost of carrying second-class matter may be, that it would at least be 1 cent per pound. By that I mean the handling of the matter, its delivery by the postmaster, the handling by the railway mail clerks, by city carriers, or by rural delivery carriers. You admit that the cost would at least amount to 1 cent per pound?

Mr. McANENY. I think there can be no doubt of that.

The CHAIRMAN. The department estimated about 4 cents, or, to be more accurate, 3.86 cents per pound, or \$3.86 per 100 pounds. Now, then, if that be admitted, and I think all of us agree that the overhead charge would be at least 1 cent per pound—since the newspapers and magazines are paying now only 1 cent per pound, it would be admitted, I think, that the Government is really transporting magazines and newspapers free.

Mr. McANENY. Any answer that I might make to your question in relation to cost must be predicated upon my general statement of yesterday, that the difference between the cost and the revenue does not go to the newspaper, but goes to the subscriber.

The CHAIRMAN. Well, it will be admitted that it will go generally, or that practically all of it, we might say, will go to your subscribers and to your advertisers, or to your patrons. I can conceive of some cases where you could not transfer it all to your patrons. It might be so large in some cases or there might be such an increase in the cost of materials and labor that it could not be done. I am not attempting to say that the company can transfer all of it to its patrons, but, speaking by and large, it is the fact, ordinarily, that it will go to your patrons.

Mr. McANENY. I do not understand that it goes to our advertisers in any sense.

The CHAIRMAN. I will cover that, and see if it really does not go to them.

Mr. McANENY. It goes entirely to the subscriber.

The CHAIRMAN. I must admit that I have not studied the advertising proposition in relation to the newspaper as I have with relation to the magazines and other periodicals. I have made somewhat of a study of that. Now, I believe you stated yesterday that you had 56,000 mail subscribers, or about that, for the New York Times?

Mr. McANENY. Yes, sir; for the daily paper, with several thousand additional for Sunday papers.

The CHAIRMAN. How many subscribers would you say you have whose papers go by mail?

Mr. McANENY. Those that go in wrappers—and that is what we usually mean by mail subscribers—number 26,000.

The CHAIRMAN. All that you put in the mail, whether in packages or wrappers, I understood you to say yesterday, numbered 56,000.

Mr. McANENY. I will give you the exact figures. The last figures that we had compiled, and that was several days ago, showed that the individual subscribers, or those who received their papers under wrappers, numbered 26,751, and the number of papers carried by mail in packages, that are simply put on the train by the newspaper employees and are not handled by carriers employed at the other end, is 29,957. The rate is common to those two classes, or 1 cent per pound.

The CHAIRMAN. I understood you to say 56,000. Now, I do not want to ask for any of your business secrets, but, as I understand it, you have about 360,000 subscribers.

Mr. McANENY. Between 355,000 and 360,000.

The CHAIRMAN. Do I understand that most of your subscribers are—

Mr. McANENY (interposing). For the Sunday papers there are about 100,000 more.

The CHAIRMAN. Do I understand that most of your subscribers live within the city limits of New York or Greater New York?

Mr. McANENY. Of those who get their papers by mail?

The CHAIRMAN. No. Most of your papers, I might say, are sold in New York City, are they not?

Mr. McANENY. Yes, sir.

The CHAIRMAN. About what proportion would you say were sold in New York, Brooklyn, and around Greater New York?

Mr. McANENY. I should say, roughly, about 230,000, or 135,000 within the metropolitan district and 120,000 out.

The CHAIRMAN. They are delivered by you, or those papers are deliverable by your company?

Mr. McANENY. The 120,000 delivered outside of the city are handled in about equal proportion by express and mail.

The CHAIRMAN. How many are sold inside the city by boys on the streets?

Mr. McANENY. I am afraid that I can not give you that separately. I can simply give you the bulk for the city, or the entire number.

The CHAIRMAN. In other words, the papers circulated in the metropolitan district and in that vicinity number about 230,000?

Mr. McANENY. Approximately; yes, sir.

The CHAIRMAN. Now, you spoke yesterday about this zone rate, and I believe you stated that, while you are now charging Mr. Garner, we will say, in the seventh zone, \$1.85 on account of postage, when the

zone rate goes into effect it would be increased to \$7.86, and that he would be paying on account of postage on your paper, instead of \$1.85, \$7.86. In fact, after the law goes into effect, his paper would cost him \$18, I believe you stated.

Mr. McANENY. Yes, sir.

The CHAIRMAN. I am just using the New York Times in the questions I am asking you this morning, as an illustration, and the facts I am bringing out in reference to the New York Times would apply to any large daily paper.

Mr. McANENY. There is a higher rate than the one you mentioned. The rate of \$7.86 would be in the third year, and in the year following it would be \$9.71. In four years the total postage in Mr. Garner's district, which is now \$1.85, would become \$9.71, and that is not the worst zone.

The CHAIRMAN. A man in Texas would subscribe for that paper not for the purpose of reading the advertisements, but for the purpose of reading its news and editorials. You recall, of course, that the law makes a flat rate for the reading portions of your paper, and that it increases that after July 1, 1919, only one-half a cent, while the advertising portions of the paper carry a zone rate graduating from only 2 cents in the first and second zones to 10 cents in the eighth zone. Now, if you are going to make Mr. Garner pay only for the increase in the reading portions of the paper, his increase would be only 93 cents, would it not?

Mr. McANENY. I have not figured that out.

The CHAIRMAN. Two of your papers weigh one pound, according to your calculation. For 365 days there would be 365 papers that are now carried at \$1.85, at the rate of one cent per pound, and, as I understand it, two of your papers weigh a pound. Now, the law provides for an increase, and you have to pay that. Then, you would have to raise Mr. Garner's rate, and if he were made to pay all of it on the reading portion of the paper, which would be perfectly proper, it would be an increase of only 93 cents. Now, that being true, why are you going to charge Mr. Garner \$7.86? Why should you make him, a subscriber and reader, pay for the increase which the law provides for the advertising portion of the paper? Do you think that that would be right and proper?

Mr. McANENY. It would be inevitable in practice.

Mr. GARNER. Did you say it would be inequitable in practice?

Mr. McANENY. No, sir; I said it would be inevitable in practice.

The CHAIRMAN. You say you would charge Mr. Garner about \$18 for the paper when this law goes into effect. Now, a man in Texas subscribes for the paper only for the reading matter, on which there would be an increase of the flat rate of one-half a cent per pound after two years, or after 1919. You propose to charge those subscribers \$18, while you are going to let your subscribers in the State of New York have the paper for \$7.30. Is that right?

Mr. McANENY. No, sir; it would cost the man who buys in New York, \$8.86.

The CHAIRMAN. Do you mean the man who buys the paper in New York? You do not pay any additional rate there, because you deliver the papers?

Mr. McANENY. I am referring to sales within the city.

The CHAIRMAN. I am going to take up the question of sales in the city, and then in the metropolitan vicinity outside.

Mr. McANENY. A person buying the paper in New York—

The CHAIRMAN (interposing). Now, you propose to charge \$18 for the paper in Texas. What will you get for the same paper in New York?

Mr. McANENY. Approximately \$7. That represents net receipts. That is not profit, of course.

The CHAIRMAN. But you are going to get \$18 from Mr. Garner for that paper?

Mr. McANENY. That is net receipts from sales.

The CHAIRMAN. And \$7 in the city. Now, what will you get for the other 120,000 papers in the vicinity of New York?

Mr. McANENY. They are not within the vicinity of New York.

The CHAIRMAN. I mean for that other 120,000 papers you are going to send by express?

Mr. McANENY. The expressed papers net \$8.04, while the packages by mail net \$7.26. Those that are sent in wrappers net \$7.12.

The CHAIRMAN. How much does it cost you to send your papers by express to Philadelphia—about 40 cents per hundred?

Mr. McANENY. I do not recall the tariff. I am not in touch with that.

The CHAIRMAN. So you will not go up on him at all on account of the zone rate, for the reason that you send the papers by express?

Mr. McANENY. The zone rate has nothing to do with the matter sent by express.

The CHAIRMAN. You stated yesterday that your paper contains from 45 to 48 per cent, or practically 50 per cent, of advertising matter. Now, is not four-fifths of this advertising especially for those 230,000 purchasers who live in New York or in the vicinity of New York?

Mr. McANENY. I would not put the proportion quite as high as that.

The CHAIRMAN. What is the proportion?

Mr. McANENY. I have looked over it this morning, and it seems to be about four-fifths. For the month of January, of the advertising carried by New York City papers, there was a total of 6,600,000 lines, and out of that 1,600,000 lines was what is roughly termed national, as against local advertising. That would be 1,600,000 lines of national advertising, as against 5,000,000 lines of local advertising.

The CHAIRMAN. Now, the Times will make Mr. Garner, in Texas, pay an increased rate of over \$7 for the benefit of those readers and advertisers in New York City.

Mr. McANENY. The Times is not going to do it.

The CHAIRMAN. That is so, is it not?

Mr. McANENY. Your question leads—or, I assume, what you are leading to—

The CHAIRMAN. I want you to answer the question. Just answer my question.

Mr. McANENY. I might amplify it a bit; I could answer it better that way.

The CHAIRMAN. Mr. Garner, of Texas, takes the paper for the reading matter. Five-sixths of the advertising matter in the paper is intended for people in New York, but Mr. Garner, according to

your statement, is going to pay on account of that advertising, or you will charge it up to him, over \$7, while the man in New York, for whom the advertisements are put in the paper, is not going to pay one cent of increase, but the New York people are going to get their papers for \$7.05 and \$8.04, while Mr. Garner must pay \$18. Now, is that fair?

Mr. McANENY. In the first place Mr. Garner, estimable citizen though he is, does not represent the only class of readers in Texas.

The CHAIRMAN. Then I will say all of the readers in Texas.

Mr. McANENY. Among the readers in every State there are persons in business who are intensely interested in even the local advertising of New York City, because it spells to them the New York market, and it spells to them for that matter the different gradations of the market as between New York and their home town.

The CHAIRMAN. Could he not get that information in his daily paper right there in town three days before your paper could reach him? Could he not get that from the Houston and Dallas papers, for instance?

Mr. McANENY. I doubt whether his local daily paper would carry anything like that volume of national advertising. His local daily paper would carry hardly any of it, in fact.

The CHAIRMAN. Do you mean that they would not carry the report of the New York and Chicago stock market?

Mr. McANENY. I am not talking about the stock market.

The CHAIRMAN. Then what are you talking about?

Mr. McANENY. Those quotations are printed without charge to anyone, except the gentlemen who lose by following them. I refer to the markets of trade and business; and then, too, it would be physically impossible for the publisher of a newspaper in New York to separate his paper in the middle of the night, cut out, clip out, and eliminate matter, and then mold it together again for Mr. Garner and the subscribers in Texas. They would have to print two papers to carry out that plan.

The CHAIRMAN. The point is, why not make the man who needs this advertising pay some of this increased burden? Why not make the man who puts in the advertising and the man for whom the advertising is inserted pay some of the increased burden?

Mr. McANENY. That man will pay less in the future, because you will reduce our circulation very considerably, and it is the volume of circulation that controls the price of advertising. He will pay less, not more.

The CHAIRMAN. We will see if you will increase it before we get through. You do admit that the man in New York is going to get his paper 50, 60, or nearly 75 per cent cheaper than the man who lives in the seventh zone, and that that increase is mainly on account of advertising matter, five-sixths of which is meant for New York City and its vicinity?

Mr. McANENY. I did not say that, and I did not imply that.

The CHAIRMAN. Is that true?

Mr. McANENY. No, sir.

The CHAIRMAN. Let me see if it is. You said that five-sixths of it—

Mr. McANENY (interposing). I said 1,600,000 lines out of 6,600,000 lines.

The CHAIRMAN. That is, that about five-sixths of it is intended for local people.

Mr. McANENY. About three-fourths of it.

The CHAIRMAN. And you said you would get from them from \$7 to \$8.04, while Mr. Garner, if he lives where he does live, would have to pay in the neighborhood of \$18. You said he would have to pay around \$18 for his paper.

Mr. McANENY. I used those figures, but we have not made an accounting.

The CHAIRMAN. You did say yesterday that you would charge Mr. Garner \$7.85 increase on account of the zone system?

Mr. McANENY. I said that you would charge him that.

The CHAIRMAN. No; you said that your paper would. You said that if the zone system went into effect it would cost Mr. Garner that much additional.

Mr. McANENY. Yes, sir; he must give up his subsidy.

The CHAIRMAN. Now, don't you know that neither newspaper publishers nor the publishers of other periodicals will charge a man in Texas or Illinois or in Denver or in Colorado, or a man in the seventh zone, any more for a subscription than they will charge a man in Pennsylvania, or any more than they would charge a man in Tennessee or Arkansas?

Mr. McANENY. The geography does not matter, but they will charge according to the zone rate.

The CHAIRMAN. Are you going to make that charge to subscribers? Will you charge Mr. Garner in Texas \$18 and charge a man in North Carolina \$12?

Mr. McANENY. Certainly; if there is that difference in the zone rates.

The CHAIRMAN. Is that what you will do?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Have you notified them that you will do that?

Mr. McANENY. We are proceeding to.

The CHAIRMAN. And you will have different rates?

Mr. McANENY. Yes, sir.

The CHAIRMAN. I am glad you have come before the committee, because I have asked a great many of the publishers about that, and they have told me that they will strike an average; that the rate will be a little bit higher to everybody, but that it will be the same rate. Mr. Farelly, who was here, and who is one of your big subscribers, he being the manager of the American News Co.—

Mr. McANENY (interposing). He has nothing to do with us.

The CHAIRMAN. Does he not buy your papers?

Mr. McANENY. I do not think he handles any of them. He handles magazines mainly. Mr. Farelly's testimony in relation to our purposes would not be of the slightest value to you.

The CHAIRMAN. Do you not think it is pretty late in the day to give that notice, with the zone system going into effect on July 1? If you have not notified them—

Mr. McANENY (interposing). They were notified on the 3d of last October.

The CHAIRMAN. You have not notified them in your paper?

Mr. McANENY. We do not change our advertised table of rates until the day comes along on which they will take effect, but we

your statement, is going to pay on account of that advertising, or you will charge it up to him, over \$7, while the man in New York, for whom the advertisements are put in the paper, is not going to pay one cent of increase, but the New York people are going to get their papers for \$7.05 and \$8.04, while Mr. Garner must pay \$18. Now, is that fair?

Mr. McANENY. In the first place Mr. Garner, estimable citizen though he is, does not represent the only class of readers in Texas.

The CHAIRMAN. Then I will say all of the readers in Texas.

Mr. McANENY. Among the readers in every State there are persons in business who are intensely interested in even the local advertising of New York City, because it spells to them the New York market, and it spells to them for that matter the different gradations of the market as between New York and their home town.

The CHAIRMAN. Could he not get that information in his daily paper right there in town three days before your paper could reach him? Could he not get that from the Houston and Dallas papers, for instance?

Mr. McANENY. I doubt whether his local daily paper would carry anything like that volume of national advertising. His local daily paper would carry hardly any of it, in fact.

The CHAIRMAN. Do you mean that they would not carry the report of the New York and Chicago stock market?

Mr. McANENY. I am not talking about the stock market.

The CHAIRMAN. Then what are you talking about?

Mr. McANENY. Those quotations are printed without charge to anyone, except the gentlemen who lose by following them. I refer to the markets of trade and business; and then, too, it would be physically impossible for the publisher of a newspaper in New York to separate his paper in the middle of the night, cut out, clip out, and eliminate matter, and then mold it together again for Mr. Garner and the subscribers in Texas. They would have to print two papers to carry out that plan.

The CHAIRMAN. The point is, why not make the man who needs this advertising pay some of this increased burden? Why not make the man who puts in the advertising and the man for whom the advertising is inserted pay some of the increased burden?

Mr. McANENY. That man will pay less in the future, because you will reduce our circulation very considerably, and it is the volume of circulation that controls the price of advertising. He will pay less, not more.

The CHAIRMAN. We will see if you will increase it before we get through. You do admit that the man in New York is going to get his paper 50, 60, or nearly 75 per cent cheaper than the man who lives in the seventh zone, and that that increase is mainly on account of advertising matter, five-sixths of which is meant for New York City and its vicinity?

Mr. McANENY. I did not say that, and I did not imply that.

The CHAIRMAN. Is that true?

Mr. McANENY. No, sir.

The CHAIRMAN. Let me see if it is. You said that five-sixths of it—

Mr. McANENY (interposing). I said 1,600,000 lines out of 6,600,000 lines.

The CHAIRMAN. I just have them for the fiscal year 1917.

Mr. McANENY. That is different.

The CHAIRMAN. The number of your subscribers has largely increased since January 1, has it not? You have sold more papers since January 1, have you not?

Mr. McANENY. You mean the sales of the paper?

The CHAIRMAN. Yes.

Mr. McANENY. The New York Times has been singularly fortunate in that respect.

The CHAIRMAN. You increase your rate 100 per cent and even with that increase the number of your subscribers increased, and yet you now say that the sale of your paper is going to decrease by reason of an increased rate of anywhere from 35 to 40 cents.

Mr. McANENY. The receipts from the sales of the paper are subordinate in importance to those from advertisements. In the first place, the doubling of the gross price did not double the gross returns of the paper.

The CHAIRMAN. You did not lose any sales of the paper by increasing the rate 100 per cent, did you?

Mr. McANENY. I have said that was peculiar to the New York Times, and I have attempted to suggest a doubt as to the relevancy of making these comparisons with the New York Times.

The CHAIRMAN. How can you arrive at the conclusion that while you have increased the sale price of your paper 100 per cent, from 1 cent to 2 cents, and still gain in the number of sales, that by simply adding 35 cents or 36 cents to your sale price, which would be less than 10 per cent, 5 per cent, you will lose subscribers, because if you increased your general sales of papers and your subscriptions just 5 per cent you will more than cover the increased cost.

Mr. McANENY. May I answer that question?

The CHAIRMAN. You will more than cover the increased cost to be imposed under this zone system?

Mr. McANENY. May I answer your question a little more elaborately? In the first place, as I have stated before, the increase in the gross price of the daily papers in all of the great cities was intended to cover the increases in cost that all had encountered, in fact, it was compelled by those increases in cost. At the moment the Times, for instance, was receiving a somewhat increased net revenue from its sales of papers, it also was compelled to deal with a continually increasing bill of costs. The fact that the Times has weathered those days fairly well has no relation to the case of the other newspapers of the United States. There are, of course, other fortunate instances where business has been built up, through the service offered, and the returns come in proportion, but the case of one, two, or three is no indication whatever as to the principles or circumstances that underlie the case of the other 497. But coming down to your question as to the ability of those papers that have been gaining a profit, even a substantial profit, to accept a new loss under this head, the proposition there would be to accept a loss, let us say, of \$250,000 a year in addition, in order to retain a fraction of the general business of the paper. Do I make that clear, Mr. Chairman?

The CHAIRMAN. Yes; I think so.

Mr. McANENY. In other words, your argument logically would lead to the suggestion that any business concern that is making a profit, and a substantial profit, can afford to give away a quarter of a million dollars of that profit and do it joyfully. We do not propose to give away that quarter of a million dollars or any part of it; that properly should be paid by the subscriber who takes that paper.

The CHAIRMAN. Of course, I do not question the purpose or the motive of your increase—

Mr. McANENY (interposing). It is not a question of motive, but a question of business economics.

The CHAIRMAN. I asked you a question of fact about your increase of 100 per cent and the cost to the buyers, and yet instead of the number of buyers diminishing they increased, and I asked how, as a matter of fact, if an increase of 100 per cent to the buyers did not cause a decrease in the number of buyers, but actually an increase, you can say that by an increase in the price of your paper of only 5 per cent, which would cover the increased cost, there will be a decrease in your subscription list, and that the number of subscribers and buyers will diminish.

Mr. McANENY. Mr. Chairman—

The CHAIRMAN (interposing). That was my question. If you are satisfied with the answer you gave I am, and I will go to another question.

Mr. McANENY. You have put a new question, which I am also prepared to answer. As I said to you yesterday, very frankly, the New York Times is not going to suffer through the operation of this postal act, and I do not believe we will lose an appreciable fraction of our out-of-town circulation. I said to you then, and I am obliged to repeat it, much as it may offend the feelings of my brother publishers, that if you had contrived this plan to operate for the benefit of the New York Times you could not have worked it out more successfully for us. We do not expect to lose much of our circulation; we think that the great bulk of our mail subscribers will continue; our experience in other respects has indicated that, and we know our class of subscribers. Therefore these constant references to the case of the New York Times are really wasting your time.

The CHAIRMAN. They may be wasting yours and mine, but I will just say that my observation has been that the New York Times has denounced this bill, its provisions, and its authors about as much as any paper in the United States.

Mr. McANENY. Do you not suppose that the New York Times—

The CHAIRMAN (interposing). Wait a minute. All of that was done when it knew that what we had done was for its pecuniary benefit. Yet they continued to denounce the bill and its authors, and in doing so do you think they are very grateful for something which you say will result in making more money for them?

Mr. McANENY. Do you suppose that the New York Times, or any other paper in New York, Philadelphia, or anywhere else in the United States, is run purely to make money?

The CHAIRMAN. You said that if we had contrived this plan to operate for the benefit of the New York Times we could not have done better. In your judgment, then, this provision which we put in the revenue act last session is going to help the New York Times financially?

Mr. McANENY. It is not going to hurt it, but I did not say it was going to help it.

The CHAIRMAN. I understood you to say that if we had contrived this plan to help the New York Times we could not have done it better.

Mr. McANENY. In a relative sense, so far as its position with its competitors is concerned, but we do not want it understood that we do not think that there will be some loss of subscribers.

The CHAIRMAN. I thought you said that you would not lose a subscriber by mail?

Mr. McANENY. No; I said the number would not be appreciable, although there will be some, of course.

The CHAIRMAN. You may lose Bill Jones, but you will get Tom Smith and John Brown?

Mr. McANENY. We will do what?

The CHAIRMAN. You may lose Bill Jones when this goes into effect, but you will get Tom Smith and John Brown in his place?

Mr. McANENY. I do not know the habits of Tom Smith or what his views may be.

The CHAIRMAN. But you do know the habits of the Times?

Mr. McANENY. Yes; I am quite familiar with them. But I would like to complete my answer to your suggestion. We have been opposing this plan because we think it is against the public good and we think it is going to work an injury to the public, but we think we can adopt an editorial position on a public question which will not be governed by our accounting room.

The CHAIRMAN. I presume you can.

Mr. McANENY. Well, we can and do.

The CHAIRMAN. We will give you credit for that.

Mr. McANENY. But the case of the New York Times is of no value to the hearing, Mr. Kitchin. I am appearing here as the representative of 500 newspapers.

The CHAIRMAN. I am just taking that as an illustration. There are some other papers about as good as the Times.

Mr. McANENY. Oh, there are some that are better, although I do not know how they do it. You compel me to make these statements, and I do it with regret.

The CHAIRMAN. Have you ever figured out or has your accounting manager ever figured out the increased cost of postage which this zone rate provision will add to your paper, that is, to carry the same poundage.

Mr. McANENY. Oh, yes; I have the data right here, giving the prospective schedules.

The CHAIRMAN. What will be the increased postage after this zone rate provision goes fully into effect?

Mr. McANENY. You mean in dollars and cents?

The CHAIRMAN. Yes, taking as the basis the same poundage which you are now carrying.

Mr. McANENY. You do not mean the composite rates that we will charge, or that everybody will charge?

The CHAIRMAN. No. After July 1, 1920, the provisions go fully into effect. Then, basing it on the poundage you are now carrying through the mails, what will the increase in cost amount to?

Mr. McANENY. Upon the theory that the present circulation would be maintained?

The CHAIRMAN. The present poundage and the present proportion of advertising matter to reading matter.

Mr. McANENY. And taking for convenience, as I have, an even 50 per cent of news and 50 per cent of advertising as the average—

The CHAIRMAN (interposing). That is the way I have calculated it.

Mr. McANENY. In the first year—

The CHAIRMAN (interposing). Take the last year, that is, the year it all goes into effect.

Mr. McANENY. In the last year, that is, when this plan becomes fully effective, the additional rate that would have to be paid for postage would be \$225,000.

The CHAIRMAN. We are pretty widely apart on those figures. What is your average haul?

Mr. McANENY. I do not know.

The CHAIRMAN. You are proceeding on the basis of fifty-fifty now.

Mr. McANENY. That is for convenience.

The CHAIRMAN. I make it \$145,000, but you have given a much larger figure, and you may be figuring on a longer haul.

Mr. McANENY. The haul does not make any difference to us.

The CHAIRMAN. It does when you come to these zone rates.

Mr. McANENY. It does as to the zones, yes.

The CHAIRMAN. You paid last year \$119,020.35.

Mr. McANENY. I will tell you how we arrived at these figures, and it took us eight weeks to do it, too. We were informed by the Post Office Department that this zone plan would proceed on the zone plan of the parcel post, which has about 3,500 different squares throughout the country as the units of delivery. Then we proceeded to drop into those 3,500 squares each one of our 56,000 subscribers, and that gave us our total distribution as to zones of the reading matter and our total distribution as to zones of the dealers' package matter, comprising 56,000. We then took the average weight of the paper and figured the annual weight at 185 pounds; we took the zone rate on that 185 pounds and simply multiplied it by the number of subscribers in each zone that we have assigned under our plan, and that gives us in a positive way the figures I have read to you.

The CHAIRMAN. What were your figures?

Mr. McANENY. \$225,000.

The CHAIRMAN. I find, when I calculate the total amount on 45 per cent advertising and 55 per cent reading matter—

Mr. McANENY (interposing). I do not think that would make much difference; you apparently took some average haul or average zone.

The CHAIRMAN. Yes; because that is the only way we can get at it.

Mr. McANENY. We took the actual figures.

The CHAIRMAN. Figuring it on the fifty-fifty basis, it appears, according to the amount you paid last year and your average haul within the third zone, that is, 300 miles, that you would get \$208,000 instead of \$145,000, which was based on 45 and 55, which you said would be the average.

Mr. McANENY. To be exact, it is \$225,212, which we will pass to our subscribers.

The CHAIRMAN. You sell your Sunday paper at how much?

Mr. McANENY. In the city 5 cents and 7 cents outside the city.

The CHAIRMAN. If you increased the price of your Sunday paper just 1 cent, it would more than pay the cost by \$25,000 or \$30,000—just 1 cent for the Sunday paper.

Mr. McANENY. Why should any concern attempt to raise more money in order to give money away?

The CHAIRMAN. You are looking at it from one viewpoint and we are trying to get at the facts. I am showing you how you could take care of it without any loss to you and with very little increase to your subscribers. Here is one general question I want to ask you and every other man, whether in the newspaper business, periodical, or magazine business: Why is it, when the law gives a flat rate and only increases that rate a half a cent to the reading portion and the zone rate applies only to the commercial portion or the advertising portion, do you all unite in insisting that the subscriber, the man who takes it for the reading matter, shall bear all the burden of the increased cost and that the advertiser shall not bear any of that burden?

Mr. McANENY. Because the subscriber buys a newspaper and a newspaper is made up of news and advertising, and the business of publishing has been adjusted to that basis immemorially, and it can not possibly be changed now. You can not tear a paper apart in the middle of the night and send a man a clipped section of the news. The mere fact that there is a difference in the usual ratios is not going to change the character of the newspaper.

The CHAIRMAN. You say it is going to cost you \$225,000 to get it out under this zone system. What proportion of the gross receipts of the Times do you get from advertisers?

Mr. McANENY. I can not give you that figure.

The CHAIRMAN. But you get a great deal more from advertisers than you do from subscribers, do you not?

Mr. McANENY. Oh, yes. I think it is about two-thirds, but I can not give it to you accurately.

The CHAIRMAN. Could you not take the amount which you charge advertisers and add 2 per cent, 3 per cent, or 5 per cent of the cost to them and would you not then make the increased cost?

Mr. McANENY. We did that when we had to meet the cost of white print paper, but the advertiser is not going to pay any more. He is not a philanthropist, either.

The CHAIRMAN. You did increase the cost to your advertisers on account of white print paper?

Mr. McANENY. As far as they would stand it, yes.

The CHAIRMAN. In order to meet the Government's expenses why do you refuse to put any of the burden on the advertisers? You put the increased cost of white print paper on them, you put the increased cost of ink on them, and you put the increased cost of labor on them, so that when it comes to getting a little money for the Government why do not put that on them, too?

Mr. McANENY. I said a while ago that the advertiser will pay less and not more in the future, because you are going to reduce his circulation.

The CHAIRMAN. You do not know that?

Mr. McANENY. We know it mighty well.

The CHAIRMAN. I do not think you would lose any subscribers by the method I suggest.

Mr. McANENY. But your reasoning is not the reasoning of the newspaper publishers.

The CHAIRMAN. In my judgment, if you do what I suggest you will not lose a subscriber, because you will not charge all of the burden to him.

Mr. McANENY. But we lose the advertiser instead; instead of losing our one-third we would lose two-thirds.

The CHAIRMAN. You would have the same number of subscribers and keep your advertisers, too. Do you believe a man who was advertising with you at any length would stop advertising in your most valuable paper if you increased the rate 5 per cent?

Mr. McANENY. No; but he would cut the space he takes; he would tell his story in shorter space.

The CHAIRMAN. But could you not get another advertiser?

Mr. McANENY. That would never be dreamed of in a newspaper office.

The CHAIRMAN. Let us see whether you could not get additional advertisers and whether you have not gotten additional advertisers. How many columns of advertisements did you have in 1914?

Mr. McANENY. I can not give you that figure.

The CHAIRMAN. I am going to ask you to put that in the record, because you can ascertain from your office. Please give us the number of columns of advertising matter in your issue of June 1, 1914, June 1, 1915, June 1, 1916, June 1, 1917, and June 1, 1918, and let us see whether you have not been increasing your columns and have not gotten more advertisements.

Mr. McANENY. Of course we have.

The CHAIRMAN. And you have increased your number of advertisers?

Mr. McANENY. But other gentlemen have not.

The CHAIRMAN. You say you have increased the number of your advertisers?

Mr. McANENY. Of course we have, and that is why I say our case is of no value to you.

The CHAIRMAN. Please include in the information I have asked for the rate you charged on June 1, 1914, for a column of advertising, the rate you charged on June 1, 1915, June 1, 1916, and June 1, 1917, and let us see whether you have not increased your rates. You say you have increased the number of advertisers and the number of columns, and if you have been able to do it in the past, why not in the future under this zone system?

Mr. McANENY. I will gladly send you copies of our printed rate cards for these three or four years, but we never vary them. I will gladly do that, but I repeat that they will only confuse any consideration of this subject. On this point—and I want to use this same memorandum later on another point—I hand you a statement of the advertising experience in New York for the first two months of this year: that is, the gains and losses, in which you will find a loss of \$17,425,000 in 1917, and that out of that has been cut a loss of \$2,258,000, and that those losses are distributed through every newspaper in the city of New York, except the New York Times, which showed a gain of \$40,550. Then I ask you whether there is any fairness in using that case as typical of the whole?

The CHAIRMAN. It is not a question of fairness, but it is a question of getting at the facts

Mr. McANENY. I am giving you the facts, but I think the facts about the newspaper publishing industry as a whole and not the facts about the New York Times are what the committee really needs.

The CHAIRMAN. It is because the Times has been one of the greatest kickers and protesters against our revenue bill and its provisions.

Mr. McANENY. The Times has frankly spoken its mind as a public servant.

The CHAIRMAN. I see you have in this statement the American, the Telegram, the Post, the Sun, the Tribune, and the World. When they come before us, or any one representing them, we will try to find out the facts from them just as we have from you.

Mr. McANENY. But I did not come here representing the New York Times. May I ask this question as a matter of privilege? Do you deny my presence here as the representative of the American Newspaper Publishers' Association?

The CHAIRMAN. No; and I am glad you come as their representative.

Mr. McANENY. I ask that I be not used as a means of gaining information about one particular newspaper because of the incidental fact that I am related to it.

The CHAIRMAN. You are now acting as the president of the Newspaper Publishers' Association.

Mr. McANENY. Vice president.

The CHAIRMAN. In the president's absence you are acting for him.

Mr. McANENY. No; I am here as the chairman of the committee on postage.

The CHAIRMAN. Then you represent in that capacity the American, the Brooklyn Eagle, and all the other papers whose names you have given me?

Mr. McANENY. The papers which are members of our association.

The CHAIRMAN. If you are not the special representative of the Times, have I not the right to ask you about these other papers?

Mr. McANENY. But you are devoting this matter almost exclusively to the New York Times.

Mr. STERLING. He does that because he assumes you know about that paper.

Mr. McANENY. I know about the rest, too, in a general sense.

The CHAIRMAN. How much poundage did we haul last year for the American?

Mr. McANENY. Of course, I do not know, and I do not recall how much poundage you carried for us.

The CHAIRMAN. How much did the American pay the Government in postage last year?

Mr. McANENY. I would refer you to the Post Office Department for that.

The CHAIRMAN. You do not know?

Mr. McANENY. Of course not.

The CHAIRMAN. Do you know how many mail subscribers it had last year?

Mr. McANENY. I do not.

The CHAIRMAN. Do you know how many it had in the city?

Mr. McANENY. I do not.

The CHAIRMAN. Do you know how much it paid for its print paper in 1915?

Mr. McANENY. Oh, yes; I have pretty fair information about that.

The CHAIRMAN. Do you know how much the American paid for print paper last year?

Mr. McANENY. It is rumored they came off pretty well in 1917 under an old contract.

The CHAIRMAN. How much did they pay this year?

Mr. McANENY. For their print paper?

The CHAIRMAN. Yes.

Mr. McANENY. I could not give that exactly.

The CHAIRMAN. How much last year?

Mr. McANENY. I can not give you any of that information as to any one of these newspapers.

The CHAIRMAN. You say you do not know how many subscribers it had?

Mr. McANENY. No.

The CHAIRMAN. I want to show you why I did not ask you about these other papers, but have asked you about the Times.

Mr. McANENY. My objection to your line of questions is not because they are annoying personally, I assure you, but because of their extreme irrelevancy. I could not give you any of that information, and I doubt whether any of these gentlemen here could do so.

The CHAIRMAN. When Mr. Wortham and these other gentlemen come before us we are going to ask them about their papers, because they know. I knew you did not know about these other papers, and that is my reason for not asking you about them. Do you not think that the questions I have asked about the Times are perfectly natural questions?

Mr. McANENY. I do not, Mr. Chairman. I can not undertake, and I do not think they could undertake in the case of their own papers, to come here and give you the minute and detail of the business offices.

The CHAIRMAN. Do you not know something about the details of the New York Times, the New York World, Post, Sun, Brooklyn Eagle, and the other papers? Of course you do.

Mr. McANENY. Of course I do, but those are not the questions at stake in this issue.

The CHAIRMAN. I think we know what is at stake in the issue. I have my ideas and you have your ideas.

Mr. McANENY. I have my idea about the relevancy and purpose of this sort of a cross-examination.

The CHAIRMAN. I am going to a general proposition now. I suppose the New York Times pays the same express rate as is paid by all the other papers, and that there is no special privilege?

Mr. McANENY. No; it has no special privilege, and I do not think it would take any.

The CHAIRMAN. You send your papers to Philadelphia by express, do you not?

Mr. McANENY. We send them by express; yes.

The CHAIRMAN. You send them to Washington by express, do you not?

Mr. McANENY. All except those that go in wrappers.

The CHAIRMAN. But most of them are sent by express.

Mr. McANENY. Yes, sir.

The CHAIRMAN. How much do you pay per pound from New York to Philadelphia?

Mr. McANENY. I can not tell you how much exactly.

The CHAIRMAN. How much do you pay from New York to Washington by express?

Mr. McANENY. I can not recall the exact figures.

The CHAIRMAN. What is the farthest point to which you send papers, as a rule, by express?

Mr. McANENY. I think Chicago—part of the Chicago papers go by express and part by mail.

The CHAIRMAN. Do you know what you pay to Chicago?

Mr. McANENY. I do not know exactly.

The CHAIRMAN. What is the express rate to Denver?

Mr. McANENY. I do not know, but I do not think we use it.

The CHAIRMAN. How much is the express rate from New York to San Francisco—something like \$5 or \$6, is it not?

Mr. McANENY. I do not know.

The CHAIRMAN. Now, you have some subscribers in Denver, have you not?

Mr. McANENY. I have no doubt of it.

The CHAIRMAN. Why do you not send papers to Denver by express, and have them delivered by the express company at Denver?

Mr. McANENY. Because we can not afford to have papers delivered at Denver at that rate.

The CHAIRMAN. That is because the express company bases its charges upon a zone rate, is it not?

Mr. McANENY. Yes, sir.

The CHAIRMAN. While the Government only charges you a flat rate. But whenever the express rate is less than 1 cent per pound, you use the express service?

Mr. McANENY. Yes, sir.

The CHAIRMAN. And whenever the express rate, on account of the distance, is more than 1 cent per pound; you have your papers handled by the Government through the mails, because you make more money that way.

Mr. McANENY. No, sir.

The CHAIRMAN. Then, why do you do it?

Mr. McANENY. You said it was because we make more money out of it, but it is not that way.

The CHAIRMAN. Then, why did you say awhile ago that when it was more than 1 cent you sent it by mail, but when it was less than that you did not?

Mr. McANENY. I will explain that. At the point where the newspaper, for economic reasons, can not send the papers farther by express, the Government comes in and carries them at this so-called rate of loss.

The CHAIRMAN. It is a cheaper rate.

Mr. McANENY. The Government does that in order to take the paper that the newspaper or the newspaper company can not send to the subscriber, and the Government itself carries it to the subscriber. That is where the Government's function comes in.

The CHAIRMAN. You send papers to Philadelphia for 25 cents per hundred or to Washington for 40 cents per hundred; or four-tenths of a cent per pound, while you send them to my town in North Caro-

lina at the Government rate of 1 cent per pound. You send your papers to Washington at six-tenths of a cent cheaper per pound than you can send them to my town. Now, do you let your subscribers in Washington have the paper for less than they pay for it in North Carolina, or do they get it at the same price?

Mr. McANENY. I have given you those figures.

The CHAIRMAN. Is it the same price?

Mr. McANENY. The average is a little higher than the Washington rate.

The CHAIRMAN. It is a little higher than the Washington rate?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Then, you have a zone rate now?

Mr. McANENY. No, sir.

The CHAIRMAN. You send your paper from New York to Philadelphia for 25 cents per hundred and to Washington at 40 cents per hundred, because the express companies carry it cheaper between those points than the Government, and then the Government carries it to North Carolina at a rate of 1 cent per pound, while the express rate to Washington is four-tenths of a cent per pound. Now, have you not three zone rates in there?

Mr. McANENY. No, sir. We do not send our paper by express to you.

The CHAIRMAN. That is because it costs too much.

Mr. McANENY. No, sir. We send our papers to the dealer by express, and then the dealer takes care of them at his own expense.

The CHAIRMAN. You do not send it to me down in North Carolina by express, because it costs you too much.

Mr. McANENY. It would cost you too much.

The CHAIRMAN. But you are selling the paper to me in North Carolina at the same price that you are selling it to the man in Philadelphia and Washington, and yet it costs you three-fourths of a cent per pound more to send it to me than to Philadelphia, and 50 per cent more than it costs you to send it here to Washington.

Mr. McANENY. I am perfectly willing to reread those figures to you.

The CHAIRMAN. Now, if you sent all of your papers by express, let us see how many zones you would have. You would have a zone at Philadelphia, at 25 cents per hundred; one at Washington, at 40 cents per hundred; and if you went as far as Denver it would be \$2 and something.

Mr. McANENY. To California the cost would be about \$5.

The CHAIRMAN. You use the zone rate because you have two people competing with the Government. You use the zone rate when it is to your peculiar interest to do it; but whenever the zone rate or distance rate is greater than the Government's flat rate, you use the mails.

Mr. McANENY. I have explained that the rate by express here to Washington means simply bringing the package to the local dealer here, who does the rest.

The CHAIRMAN. Why don't you send them by express to a local dealer in Denver?

Mr. McANENY. It could not be done.

The CHAIRMAN. It would cost you too much?

Mr. McANENY. It would cost the Denver man too much.

The CHAIRMAN. Have you figured what the cost would be?

Mr. McANENY. Would you pay that much? We could not sell them at that price.

The CHAIRMAN. At what price does your paper sell in Denver? You have subscribers in Denver, and what does your subscriber in Denver pay you where the papers are sent in packages?

Mr. McANENY. You say the subscriber—

The CHAIRMAN (interposing). What do you charge him for the paper delivered by mail?

Mr. McANENY. \$10 a year.

The CHAIRMAN. What do you charge me in North Carolina, which is one-fifth the distance?

Mr. McANENY. \$10 per year.

The CHAIRMAN. So you have charged the same. Both subscribers get the paper for the same price.

Mr. McANENY. Yes, sir; through the grace of the Government.

The CHAIRMAN. What do you charge a man in Washington?

Mr. McANENY. If he takes the paper by mail?

The CHAIRMAN. Yes.

Mr. McANENY. A man who gets his paper in an individual wrapper pays \$10 per annum, wherever he lives.

The CHAIRMAN. What does the man who buys his paper in Philadelphia pay for it?

Mr. McANENY. He pays the rate that the local dealer charges him.

The CHAIRMAN. What is that rate? Is it the same rate in Philadelphia, Raleigh, N. C., and Washington?

Mr. McANENY. The rate is 3 cents for the daily paper and 7 cents for the Sunday paper.

The CHAIRMAN. It sells for 3 cents in Washington, 3 cents in Philadelphia, and 3 cents in Raleigh, N. C., does it not?

Mr. McANENY. Yes, sir.

The CHAIRMAN. So there you have three zones rates, but the subscribers get it at the same rate, because you strike an average. You have three zone rates, and therefore you strike an average.

Mr. McANENY. I can not follow you, Mr. Chairman.

The CHAIRMAN. Let us go to another phase of it: There are three or four ways in which you can send your paper; for instance, you can send it by automobile and have men to deliver it. It might take a little longer—

Mr. McANENY (interposing). We could take it ourselves, but it would cost more.

The CHAIRMAN. You could send them by fast freight, but you do not do that. You send them by express.

Mr. McANENY. We can not send them by fast freight.

The CHAIRMAN. There are two ways: You can send them by mail or send them by express. The other ways cost too much. Now, when this zone rate goes into effect will it not be cheaper, and a great deal cheaper, for you to send them by the Government agency than by any other agency outside of the Government that will carry the papers for you? Is not that so?

Mr. McANENY. We will not do it unless the subscriber pays the difference.

The CHAIRMAN. It will be cheaper to handle them in that way than any other way?

Mr. McANENY. You can put any rate on them. Suppose you have a higher zone rate, or anticipate a higher express rate, and add it on the subscription price, there would be no appreciable difference in the result.

The CHAIRMAN. You do that in the first instance.

Mr. McANENY. We collect it.

The CHAIRMAN. You pay it to the Government.

Mr. McANENY. Yes, sir; we collect it from the subscriber.

The CHAIRMAN. You collect it from the subscriber—

Mr. McANENY (interposing). At the Government's request some years ago.

The CHAIRMAN. I think I asked you this before, but don't you know that it will be the business of your paper and other papers to strike an average and charge all of the subscribers the same rate when this zone rate goes into effect?

Mr. McANENY. No, sir; I do not. May I give you some figures that bear on your line of questioning?

Mr. GARNER. Mr. McAneny, I believe that the second-class matter patrons of the Post Office Department ought to pay what it costs to transact their business through the Post Office Department, just as we believe now that first-class, third-class, and fourth-class matter should pay its way. That is my opinion.

Mr. McANENY. Then you are reconciled to your \$10 increase.

Mr. GARNER. Yes. I believe that, and I believe that the American people want that done. I do not hesitate to say that I would like to try that out in any congressional district that has as many as three or four or five counties in it. I would like for you and your association—because I know that your association does represent the newspaper industry of the country, and as to the magazines, we will hear their side of it—I would like for your association, not agreeing with that theory, although I think a great many of them do, to suggest a method. I have talked with a number of them, and they have agreed that we ought to be fair and just, the only question being as to how much the rate should be. As I say, I would like for your association to suggest a method that will carry into effect that idea. I would like to have your association suggest the best method that we could adopt that would disturb your business the least. Whether you agree with my view or not, I think that we have a large number of Members of Congress who have to deal with this question who take that viewpoint, and you gentlemen who know this business better than anybody else, because you and the Post Office Department have all of the knowledge, ought to at least advise us as to what is the best method of getting this amount of money from second-class matter, whether you agree with my viewpoint, or not.

Mr. McANENY. Mr. Garner, at the hearing before the Senate committee on May 14 and 15, 1917, just a little over a year ago, Mr. Seitz, who was then the chairman of our post-office committee, used this language:

We do not object to a zone system where the rates are laid with some regard to the value of the service performed and the cost of the article transported. In making such a schedule we will be glad to aid.

Now, a year afterwards that is still our position. We are willing to help in any way we can. We are willing to cooperate, and it is

because we are ready to do that and anxious to do that that we ask for this suspension to enable us to do it; but if you let this go into effect on the 1st of July, with all of its inequalities and difficulties, it is going to be extremely hard to go back to another plan.

Mr. GARNER. Let me see if I get your association's viewpoint: If you accept the premise that this matter should pay its way through the post office then you believe that a zone system worked out as Mr. Seitz stated would be the equitable method of levying this tax?

Mr. McANENY. If there must be an increase, the great majority of our association are of the opinion that the zone principle or plan would be the better method.

Mr. GARNER. Then, it is only a question of judgment as to whether there should be an increase, or not.

Mr. McANENY. And it is a question of how the rate shall be graduated, as to what proportion the publisher shall pay; what the subscriber should pay, and what the Government should pay.

Mr. GARNER. Well, taking my viewpoint—

Mr. McANENY (interposing). Of course, eliminating this distinction between reading matter and advertising—

Mr. GARNER (interposing). As a matter of public policy, you do not think that we ought to increase it at all?

Mr. McANENY. Not at this moment. This is the most inopportune time at which it could possibly be done.

Mr. GARNER. But you do not undertake to say that we should not do it at some time.

Mr. McANENY. No, sir.

Mr. GARNER. You do admit the proposition, then, that you should pay your way through the mails?

Mr. McANENY. On the cost findings of the Government, that would be absolutely impossible.

Mr. GARNER. I am not talking about that—

Mr. McANENY. When you pay your way, that usually means paying the cost. If you mean paying our way in the sense of contributing toward the cost a reasonable proportion of it, by all means, yes.

Mr. GARNER. When we do put it into effect, the zone system should be the method employed?

Mr. McANENY. Yes, sir.

The CHAIRMAN. Returning to the express service, when you send your papers by express to Chicago or Washington, the express companies have no people to distribute them or to deliver them to your patrons? They do not perform that service for you?

Mr. McANENY. No, sir; they go right to the dealer, and that is what the post office does with the bulk of our mail.

The CHAIRMAN. When you send your papers by mail to Raleigh, N. C., they go through the mail to the post office to be distributed, do they not? They are delivered by the city carriers, are they not?

Mr. McANENY. That applies only to the wrapper stuff. The bulk of the newspapers going into the mail are handled substantially as the express companies handle them to-day and with no greater trouble than the express companies have.

The CHAIRMAN. If you sent 25 of your papers to Raleigh, N. C., they would come in one bundle, would they not? The postmaster or

clerk would open up that one bundle and distribute the papers into the boxes or among the carriers, would he not?

Mr. McANENY. No, sir; the bulk matter would be taken off the train at the station by the news dealer. The postmaster would not touch it.

The CHAIRMAN. At places where you do not have news dealers, the postmasters do handle them and distribute them, do they not?

Mr. McANENY. When they are sent to local rural offices, they are put in the boxes.

The CHAIRMAN. If you did not have a news dealer in Raleigh, N. C., and had 200 subscribers in Raleigh, you would then have a separate wrapper for each paper sent there, would you?

Mr. McANENY. Yes, sir; if they were individual subscribers. But in Raleigh, N. C., there are undoubtedly news dealers.

The CHAIRMAN. You would wrap up each one?

Mr. McANENY. The paper of each individual subscriber would require a separate wrapper.

The CHAIRMAN. You would not send 250 in one bundle?

Mr. McANENY. No, sir. That makes the difference I referred to in the case of one going in packages and the other in wrappers.

The CHAIRMAN. I know that in the case of weekly papers the name is marked on the paper, but they do not wrap each one separately. Those papers will go to the postmaster in a bundle to be distributed in the boxes, and if it is an office with city delivery, the city carriers take them out and deliver them. Now, as I understand it, you do not handle yours that way.

Mr. McANENY. No, sir; not in the carrier offices.

The CHAIRMAN. You spoke yesterday about this matter and said that it should be delayed, postponed, or suspended in its operation for a year: Are you acquainted with the history of this agitation during the last 20 years on the subject of increased postage for second-class matter?

Mr. McANENY. I have read the current discussions.

The CHAIRMAN. Is it not a fact that every time it has been before the committees of Congress the newspapers and magazines have said, "This is not the time, or this is not the opportune time, and the matter should be delayed, or you should have a commission or committee appointed"? Has not that been their plea and defense every time?

Mr. McANENY. No, sir; I do not recall that that has been the fact.

The CHAIRMAN. I do recall it.

Mr. McANENY. Moreover, at the previous hearings upon the previous propositions, you have never had a proposition like this before you.

The CHAIRMAN. I am talking about increased rates.

Mr. McANENY. We have said that we will accept any proper increase in rates when we are sure of its propriety, but this plan does a great deal more than that.

The CHAIRMAN. You think your association is absolutely sincere—and I do not doubt it—in simply asking for a postponement of the operation of this law for a year? Now, then, if that be true, and you do not want to get another hold to fight the whole thing, would your association and the other publishers be willing to enter into a gentlemen's agreement with Congress that if we postpone it this year

you will accept the law as it is as a full and final agreement between the publishers and the Government?

Mr. McANENY. Do you mean to enter into an agreement never to come back, no matter in what form of unrighteousness it might be put upon us?

The CHAIRMAN. If we suspended its operation, you would not be willing to take it as it is and let it operate for five or six years?

Mr. McANENY. Do you think that would be a reasonable agreement?

The CHAIRMAN. If you are not willing to do that, then you are not after a postponement, but you are after fighting the proposition and after another year of agitation.

Mr. McANENY. No, sir; we are after an opportunity to understand what it is proposed to do; we are after an opportunity to study the effect of it, and we are after an opportunity to be present during the discussions of it, and we have never yet had that opportunity.

The CHAIRMAN. Have you not had since last October to find about it?

Mr. McANENY. We have spent a large part of that time trying to get light upon it.

The CHAIRMAN. Do I understand now that your purpose in asking a postponement is to fight the bill in the future, or do you simply ask a postponement of its operations for a time and then have it to go into effect?

Mr. McANENY. Our purpose in requesting a postponement is to afford an opportunity to investigate this matter in a proper way, and to devise a correct system, or a system that is not going to injure the country—a system that will work fairly and equitably. Our second and greater reason for asking it is that at this time the country is at war and when it needs every day all the propaganda it can get through the circulation of newspapers, it is almost vicious to depress and reduce the volume of newspapers circulation.

The CHAIRMAN. Everybody who comes before us says that. That is everybody's plea.

Mr. McANENY. The newspaper people?

The CHAIRMAN. Everybody who is taxed.

Mr. McANENY. This is not a tax.

The CHAIRMAN. They do not want any increase of their taxes.

Mr. McANENY. This is not a tax. The newspapers are not objecting to the taxation of their business.

The CHAIRMAN. Let us see about the postponement of its operation for a year, or if we were to postpone its operation, as you say. You say you want it postponed so an investigation can be had to see whether it is a just and equitable provision. Do you think, if we should postpone it for a year and should begin an investigation of it, that we would ever be able to convince the Newspaper Publishers' Association that this system we have is a just one?

Mr. McANENY. Yes, sir; if your plan is a just one.

The CHAIRMAN. Nobody could convince you of that, could he?

Mr. McANENY. Certainly it could be done.

The CHAIRMAN. If the experts of the Post Office Department who have given 25 or 30 years of their lives to a study of the question and in gathering data upon it, and knowing, as they do, everything about the mail that is possible to be known—if they say now that this

is a just and equitable system, how much more light could the Government ever hope to get on the subject?

Mr. McANENY. It could get the testimony of the experts who are within the newspaper industry; they could get testimony from people who are in touch with the fraternities, the agricultural fields, teachers, etc.

The CHAIRMAN. Do you think that those teachers and newspaper men know more about it than the Postmaster General and his experts, some of them having given 20 years' study to it—men who have given study to the question of how much they have to pay; how much they have to pay postmasters; how much they have to pay for postal cards; how much they have to pay for stamps; how much they have to pay for railway mail service; how much they have to pay for rural-delivery service; and how much has to be paid for the actual transportation in the postal cars? Newspaper and magazine publishers do not know how much it costs to transport third-class matter and fourth-class matter. Could they give these Post Office Department experts any information on that?

Mr. McANENY. Certainly not. You are going back there to your post-office experts—

The CHAIRMAN (interposing). You want men who never knew anything about postal matters to get up this postal system.

Mr. McANENY. We are contending that the Postal Service is not an express business. It is the function of the Post Office Department to serve the people in the circulation of news, literature, and educational material. I contend that when you come to the newspaper end of it you have got a side that is quite as important as that of the Government, and you ought to consult those who are expertly familiar with the newspaper industry, and then go to those who are to be affected by depressed circulation and understand how it will affect their industry and how it will affect the institutions of the country. I think that all of those things have a proper place in a postal investigation.

The CHAIRMAN. This advertising and reading matter proposition now in the bill has been practically worked out in dollars and cents. It is the regular provision which passed the House. Now, the administrative feature of separating the reading matter and the advertising matter is a question to be worked out by the administrative officers of the Post Office Department. Let me give you some few statistics gotten up by the Post Office Department experts, and not by me. Have you any idea how much poundage per year is sent through the mails by the New York Times? Do you know how much it was in 1914?

Mr. McANENY. Yes, sir; something like 12,000,000 pounds.

The CHAIRMAN. It was 4,600,000 pounds in 1914, and you paid \$46,000 of postage. They increased that poundage during the war from 4,600,000 to 11,902,000 for the fiscal year 1917. Now, according to the figures—and you say these are wrong, because you say they are based upon a calculation of the cost of transporting, handling, and delivery—but, according to the figures that the experts of the department give, let me tell you how much the Government lost on you during that time: In 1914, the Government in handling and delivering that 4,600,000 pounds of matter lost \$184,000 and it would lose that much each year with that same poundage. In 1917, that

loss had increased to \$534,000, so that last year, instead of losing, as in the year when the war broke out in Europe, \$184,000, in the handling, transportation and delivery of the New York Times the Government lost \$534,000, or an increase in the annual loss of \$350,000. That increase took place in three years. Now, the provisions of this bill will not pay back within \$350,000 the annual loss to the Government in handling the New York Times based upon the same poundage, and your poundage is increasing all the time. But based upon the same poundage, it will lack that much of paying back to the Government the cost of rendering you that service. If there is a subsidy now, you will still have a subsidy of over \$350,000 after this law goes into force and effect.

Mr. McANENY. Now, Mr. Kitchin, you speak of that as a loss.

The CHAIRMAN. I speak of that as a loss, because according to these figures it cost the Government that much more to render the service than the New York Times paid back to the Government for the service. If the Government is rendering that service and there is a loss, somebody on the outside gains.

Mr. McANENY. Who gains that money?

The CHAIRMAN. I say that according to your testimony you gain it, the advertisers gain it, and the subscribers gain it.

Mr. McANENY. How do we gain it?

The CHAIRMAN. How do you gain it? You said a while ago, and that was the sole argument upon the point, that the higher you put the subscription price, the fewer subscribers to the paper you would naturally get, and if you got this reduced rate, would it not enable you to give a reduced subscription price, thus increasing your subscription list, and by increasing your subscription list would you not be able to increase your advertising rate, the number of advertisers, and the amount of space given to advertisements? That is the full argument of the Association of Newspaper Publishers.

Mr. McANENY. The differences in the volume of circulation affected either by this bill or by these anticipated rates are hardly appreciable. That advertising would be carried, anyway. The only possible basis for ascertaining whether a newspaper receives the benefit directly in cash of any of the money that you are talking about is an examination of what its net receipts are from the sales of its paper. I have showed over and over again—

The CHAIRMAN (interposing). I wanted you to give us those receipts, but you objected to doing that.

Mr. McANENY. No; I did not.

The CHAIRMAN. Yes; you said you would not do it unless the others did it.

Mr. McANENY. You are talking about another thing. I have shown over and over again that our net receipts upon the mail matter are less than on the others, and yet you still say that we are gaining a great deal out of it. How do we do it?

The CHAIRMAN. Are not the newspapers gaining by this low rate?

Mr. McANENY. Of course not.

The CHAIRMAN. If the newspapers are not gaining by this low rate, why do you need to have this low rate?

Mr. McANENY. They gain some outlying circulation, to be sure, but do you suppose that is not offset in any degree?

The CHAIRMAN. Let us see who gains that.

Mr. McANENY. I want to finish my statement, because I have some other things to say. In return for that it carries that advertising into the outside zones at a lower rate of profit than it does inside. That is an offset right there at the start.

The CHAIRMAN. If you had to pay 5 cents instead of 1 cent, or paid the same rate the express companies charge, you would lose more.

Mr. McANENY. No; we would not lose anything.

The CHAIRMAN. You would have to give up your business or lose?

Mr. McANENY. Certainly.

The CHAIRMAN. Suppose the Government were to compel the express companies to charge only a cent a pound to carry hats to any point in the United States, but to charge every other commodity a zone rate from 5 to 14 cents. Would you not say that that was a subsidy and special favoritism to the manufacturers and sellers of hats?

Mr. McANENY. Yes, Mr. Chairman.

The CHAIRMAN. All right.

Mr. McANENY. But there is no analogy between hats and newspapers. Hats are not in the Constitution of the United States, while newspapers are.

The CHAIRMAN. If the Government charges for the use of its mails from 5 to 14 cents on every other class of article that goes through the mails, and from 8 to 14 cents on every other kind of reading matter, whether it is history, geography, spelling books, or President Wilson's history or histories, and charges the newspapers and magazines only 1 cent for their stuff, would you not call that favoritism and a subsidy to the newspapers and magazines?

Mr. McANENY. I should say that when you come to carrying those things through the mail you strike an entirely different field, and that there are no analogies there, so that I can not answer your question for that reason.

The CHAIRMAN. This flat rate of 1 cent a pound for transporting and handling that stuff you think is in the interest of the intelligence and information of the general community?

Mr. McANENY. I have no doubt about that.

The CHAIRMAN. Then any further increase would really be a tax upon information and intelligence, you think?

Mr. McANENY. It would be an increased charge for getting it.

The CHAIRMAN. Why not remove this 1 cent then, in the interest of the general welfare and of intelligence? Why should not the Government pay your total transportation charges, which it practically does, according to your testimony, because 1 cent is certainly not enough to cover their overhead charges, and therefore your transportation is free; that being so, why should not the Government transport free and pay the freight on your print paper before it goes through the presses as well as after it goes through the presses? Would it not all be in the interest of intelligence and information?

Mr. McANENY. No; because the print paper is a commercial product until it reaches the press room. However, we do not ask for these extreme things that you suggest.

The CHAIRMAN. If they are sending out the newspapers for nothing, after it is printed, in the interest of intelligence and information, why should they not pay the freight on your linotypes and on all of your

other materials—send them to your office free? Why would not that be in the interest of intelligence and information?

Mr. McANENY. You might add the clothes of the editor. I see no analogy, Mr. Chairman, in any of your suggestions.

The CHAIRMAN. I know you do not, but I want to get them in the record. Yesterday you mentioned the Hughes Commission's report and said you had it before you. You said that report declared it had no data from which it could estimate the cost of handling and transporting newspapers and magazines.

Mr. McANENY. The subdivisions, the units of the second-class matter. Of course, they could get the bulk figures.

The CHAIRMAN. Wait one minute. It declared it had sufficient data from which to find the cost of the transportation service, did it not?

Mr. McANENY. Yes; that is very easy.

The CHAIRMAN. And that the cost of the transportation service was between 5 and 6 cents, and that with proper economies that could be reduced to a little over 5 cents? The report stated that, did it not?

Mr. McANENY. I think it did.

The CHAIRMAN. So the Hughes Commission, to which you have several times referred, is on record as saying that it costs the Government to transport your newspapers and magazines, on an average, 5½ cents.

Mr. McANENY. That was the simplest kind of arithmetic at the time, and it did not require a Supreme Court Justice to determine that.

The CHAIRMAN. Is that same kind of arithmetic right now?

Mr. McANENY. As to the cost of transportation, yes; and that is about the only thing that can be determined definitely.

The CHAIRMAN. The Hughes Commission's report showed that it costs the Government, on an average, 5½ cents to carry the newspapers and magazines—just the transportation; and yet you gentlemen are down here insisting that they be carried for 1 cent and delivered, too. Now, you spoke of Canada and stated that Canada had reduced her newspaper rate for the war. Are you not mistaken about that? Well, I know you are; and let us look into the reasons why Canada gave a flat rate of a quarter of a cent.

Mr. McANENY. I have no information beyond the bald statement that she had done so.

The CHAIRMAN. And why she made the magazine rate so grossly low. Let me read you something from the greatest English expert on postal matters and postal rates. He is A. D. Smith, of the secretary's office, General Post Office, London, and the introduction was by Hon. Herbert Samuel, postmaster general, 1910-1914 and 1915-1916. This book was first published in 1917, and speaks of the Canadian law. I want to see if you gentlemen have suspected that the same means and methods could be used as this gentleman says were used in Canada:

But in well-informed quarters it is held that, in general, the leniency shown to newspapers is not due solely to the acceptance by Parliament of the arguments usually advanced in their favor, plausible and convincing as they probably are to many minds, but has always been dictated more or less by fear of the political power wielded by them; or, what is really the same thing, as a result of direct pressure at Ottawa by the newspaper proprietors, based on their influence with the electors or the chiefs of parties, and exercised in their own interests.

I have sometimes wondered, especially since reading that, whether any newspapers or magazines ever dreamed about bringing pressure in Washington on Members of the House or Members of the Senate, as is suggested here, that perhaps their criticism in the papers might intimidate some and their flattery in the papers might influence others. I want to know whether that ever crossed the minds of these publishers?

Mr. McANENY. Do you know of any newspaper publisher who has ever done it?

The CHAIRMAN. I will not say, but I just wanted to ask you what you think about that..

Mr. McANENY. I certainly do not recall any that ever did it.

The CHAIRMAN. I won't admit recalling a single newspaper that ever criticized a single Member of the House or Senate for voting in favor of putting in the law the establishment of this zone system.

Mr. McANENY. I am not talking about newspaper criticism, but I am talking about newspaper pressure, as you call it. Do you recall any instance of that sort?

The CHAIRMAN. You said that this thing was going to hurt the subscribers, and that your fight is in the interest of the subscribers; that you have given them notice and that they have had notice of it ever since October 3. How many letters have you gotten from subscribers protesting against this and saying that it ought not to be done, and that they protest against it because it is going to be a burden on them?

Mr. McANENY. I do not know.

The CHAIRMAN. Suppose when you go back you find out.

Mr. McANENY. I do not think that would necessarily be the criterion of their opinion. Their protests would not come to us, but I dare say you have had a few.

The CHAIRMAN. I will give you a little illustration of my experience in the matter. A very important agricultural paper in the South, which claims to have 175,000 or 185,000 subscribers, and published in my State, and in Birmingham, had several severe criticisms of myself about this postal zone rate; I think they had a page or two. Then in that paper, and in several other papers, they suggested that the readers—about 40,000 or 50,000 in North Carolina and 10,000 or 15,000 in my district—I do not know exactly how many—should write to me insisting on my voting to repeal it, and to change my views. Out of the 185,000 subscribers, and 40,000 or 50,000 in North Carolina, I received two letters from two subscribers.

Mr. McANENY. What paper was this?

The CHAIRMAN. A paper in my State.

Mr. McANENY. A daily newspaper?

The CHAIRMAN. No; not a daily newspaper.

Mr. McANENY. Oh, well—

The CHAIRMAN (interposing). They wrote to me, and then I wrote back to them giving them the facts, and both of them wrote to me saying that Congress was right and that I was right, and saying that it was a mistake not to make the newspapers and magazines pay more. So, you see, the subscribers to this paper, who are, according to your statement and according to the statement contained in the

paper published in my State, going to bear the whole burden of this increase, do not mind it. If that is a fair sample—

Mr. McANENY (interposing). That is quite possible; but their opinions may change during the coming year.

The CHAIRMAN. Do you know anything about Great Britain's postal laws as to newspapers?

Mr. McANENY. They have been changed rather recently, but I am not up to date on those changes.

The CHAIRMAN. They have increased the rates during this war for war purposes.

Mr. McANENY. But their problem is very different from our problem.

The CHAIRMAN. I want to correct a mistake that has appeared in every paper and practically every magazine in the country about the British postal laws, as regards newspapers and magazines. Their rate for a paper like Mr. Woodson's or Mr. Wortham's, that averages about 2 ounces to the paper, is 8 cents a pound, and they carry it less than 200 miles, which makes the rate three or four times higher than it is here. The big papers, like the London papers, which are similar to the New York Times, go for 1 cent a copy and some of those copies weigh a pound. According to statistics in the department the daily papers will weigh about two and a third ounces, and at the rate, if we had the English system here, the rate would be greater; and, as I have said, they carry papers a shorter distance than we carry them here. So it would appear that in Great Britain they have increased the rates for war purposes.

Mr. McANENY. But the British problem is an entirely different one from ours. They have very little mail circulation of newspapers.

The CHAIRMAN. Your paper and every paper I have ever seen—and I have watched this closely—as well as the magazines and periodicals of the country have stated that in Great Britain they can send a pound of paper at a half penny anywhere in the United Kingdom.

Mr. McANENY. I think that referred to Canada.

The CHAIRMAN. No, to Great Britain. I have just read to you the statement of an Englishman, Mr. A. D. Smith, as to why the Canadian rate was so low.

Mr. McANENY. I would like to have the Ottawa opinion alongside of his.

The CHAIRMAN. He is very much interested in Ottawa, and was secretary of the post office department for years.

Mr. McANENY. You spoke of a statement that had been made with relation to several other postal services. The only one I can recall referred to Canada and to the quarter-cent rate—the fact that for a quarter of a cent mail from Canada will go to any part of the British Empire. That is a fact, no matter when the rate was fixed. As to Great Britain, the problem is absolutely different. There is very little news matter carried in the mails in Great Britain. It is a small, compact country and their circulation is almost entirely within the big municipalities and whatever they send outside goes, in the main, by express.

The CHAIRMAN. You are discussing daily newspapers now?

Mr. McANENY. I am discussing only daily newspapers.

The CHAIRMAN. Their average haul, according to the findings of the Hughes Commission, was 255 miles, so that you are well within the third zone.

Mr. McANENY. I should say that the average haul in Great Britain is from 10 to 30 miles, and there is very little of it. It does not amount to anything.

The CHAIRMAN. Do you recall the deficit in Canada on account of carrying the newspapers and magazines?

Mr. McANENY. I do not, but I imagine the Government cheerfully carries it.

The CHAIRMAN. This book states that in a year it was from \$50,000 to \$75,000, while here it is from \$75,000,000 to \$90,000,000.

Mr. McANENY. If the figures that the Post Office Department used in 1908 are still good, it is a pretty severe indictment of that department.

The CHAIRMAN. The Hughes Commission said that the cost of transportation was about 6 cents, but that by the introduction of certain economies it might be reduced to 5½ cents.

Mr. McANENY. But I am talking about their overhead mainly, and the Hughes Commission did not go into the question of their overhead charges. The transportation question was one that was very easily arrived at.

The CHAIRMAN. Do not your overhead charges advance in proportion to the number of your subscribers, and are they not greater than they were 10 years ago? That is one of the reasons you gentlemen want this thing postponed, because your overhead charges, your materials, and everything else, have gone up.

Mr. McANENY. I dare say that it is the experience of every big newspaper that as the circulation has increased and the receipts have increased that the overhead charges have decreased accordingly, and so it ought to be in the case of the Post Office Department.

The CHAIRMAN. You pay your labor a great deal more than you did 10 years ago, do you not?

Mr. McANENY. Oh, yes, but I am not calling that an overhead charge.

The CHAIRMAN. And the salaries of your officers are greater?

Mr. McANENY. The whole expense of getting out the paper is the overhead charge.

The CHAIRMAN. What they call the overhead charge is the proportionate charge that the second class mail matter bears to all of the clerks in the department here, to the postal clerks, the railway mail clerks, the rural delivery service and the carrier service. Those are the charges they say should be taken into consideration when considering the overhead charges.

Mr. McANENY. Surely, but those are charges that fix the cost, the ultimate cost of carrying various kinds of second class matter, but they do not know what they are.

The CHAIRMAN. Do you not think they ought to be increased in proportion to all of the increases that have naturally taken place?

Mr. McANENY. But who can tell whether they have increased or not. Let me read this brief paragraph from the report of the Hughes Commission:

Seventh. That to obtain the total cost of transporting and handling the subclasses of second class mail known as paid-at-pound-rate, free in-county and transient matter, it would be necessary to add to the ascertained cost for the services above mentioned

the shares of these subclasses respectively in the general post office expenses, and miscellaneous outlays not directly assignable for the proper apportionment of which the commission is without adequate data.

And they could not get it.

The CHAIRMAN. They had enough data on the question of transportation to find it was five or six cents.

Mr. McANENY. They could have gotten those charges from the books of the Post Office Department in a day.

The CHAIRMAN. I do not think they could get them in a day.

Mr. McANENY. It would not have taken much longer.

The CHAIRMAN. They might have gotten them in a day but it would have taken weeks to figure it out.

Mr. McANENY. That was a trifling part of their work.

The CHAIRMAN. I might give you what they figured it to be, although you read it yesterday, just exactly what they considered it cost.

Mr. McANENY. The Post Office Department figured out those charges upon their cost, based on what they gave to the Hughes Commission, but the Hughes Commission said it was not able to do the big thing, because it could not get the data, and nobody has had it since.

The CHAIRMAN. The big thing was the transportation charge; they wanted to find out the cost.

Mr. McANENY. I am talking about the function of an investigating committee. They could get that from the books, but their function was to get the other thing.

The CHAIRMAN. These experts have investigated it and they have ascertained almost to the cent.

Mr. McANENY. Which experts?

The CHAIRMAN. Of the Post Office Department.

Mr. McANENY. The transportation and overhead charges.

The CHAIRMAN. No; they have not estimated the overhead charges.

Mr. McANENY. They say now it is \$3.86. That is what they say.

The CHAIRMAN. And they have subdivided it for you.

Mr. McANENY. Subdivided it how?

The CHAIRMAN. According to the various classes of second-class matter, and they say that some of it costs twice as much to carry.

Mr. McANENY. But they do not show what it costs to take one piece of mail to any one place; they have merely lumped everything together, and they charge us for the service to other people.

The CHAIRMAN. Does not the Government, in transporting your mail, pay more to the railroads for carrying it from New York to San Francisco than from New York to Philadelphia?

Mr. McANENY. I really do not know that it does, but I know that they figured out once that it would cost \$3.20 to send the New York times out there.

Mr. DICKINSON. In charging your advertisers do you increase the amount of your charge by reason of the fact that you deliver your paper beyond and outside of New York City?

Mr. McANENY. There are a few classes of advertisers who may pay a slightly increased rate because they get to a greater number of people at a remote distance from the city, but that is a very slight proportion of the advertising in the paper; the advertising in the

main is intended to reach not only the metropolitan district, which comes first, but the great cities of the country, the reading public generally, to be sure.

Mr. DICKINSON. The charge made to the advertiser is largely by reason of your large circulation ?

Mr. McANENY. Well, it is affected in some degree by it.

Mr. DICKINSON. If your circulation were confined to the city of New York your charge to the advertiser would be less than if it extended to distant points to any perceptible degree, would it not ?

Mr. McANENY. Yes; and the business of that advertiser would be less, too.

Mr. DICKINSON. I understand that. Is not the charge made to the advertiser due alone to the extent of your circulation or is it due in part to the cost of sending that advertisement and the paper to distant points, to points outside of New York City ?

Mr. McANENY. I beg your pardon. I am afraid I did not catch the question. Will you kindly repeat it ?

Mr. DICKINSON. Does it cost your paper more to send it outside of New York, to Philadelphia, to Denver, or to various points, than it does simply to deliver it in New York City ?

Mr. McANENY. Yes; very considerably more.

Mr. DICKINSON. By reason of that do you increase the charge to your advertisers, or do you make it solely by reason of your increased circulation ?

Mr. McANENY. No; we have fixed annual rates for different classes of advertising, and there is no variation in those rates, and they are flat rates.

If what you are after is this—that is, how many advertisers might be affected and the prices they are willing to pay by the drop of circulation through this new law—I will put it in this way, that in the first place our mail subscribers are really scarcely more than 26,000 that go through the mail with wrappers—about 6 per cent of the circulation—and I should say that out of this 6 per cent of circulation we will lose very little—somewhat less than 3 per cent. I do not think that the reduction of that 3 per cent would materially affect the willingness of the advertiser to pay the current rates.

Mr. DICKINSON. When an advertiser makes a contract with you for a given amount he pays more to you by reason of the fact that you take his advertisements beyond the territory of the city of New York ?

Mr. McANENY. That may be a consideration in the minds of a very few that would be benefited by going so far away from the metropolis, but it does not amount to much.

Mr. DICKINSON. The question of additional cost does not cut any figure ?

Mr. McANENY. No, no; I mean that the question of a slight difference in circulation in the remote parts of the country will make very little difference in the advertiser as to his willingness to pay the rate that is fixed. We do not look for any material change there at all.

Mr. DICKINSON. But under this law now, it would cost more to get your paper to the distant points than it does now. Now, would it be fair for the advertiser to pay more by reason of the increased cost of getting his advertisement there ?

Mr. McANENY. Well, if he felt that there was an added advantage in getting it farther by making up this loss, he undoubtedly will do it; but he is not likely for one moment to have that view. He will not pay more than he is paying now.

Mr. DICKINSON. That is natural

Mr. McANENY. His only expense for advertising is on account of the fixed disbursements of his business. This has to be included in his accounting, and when his profits come he has got to regard it, and they have got down to that point now where they can't do more advertising, and they won't.

Mr. DICKINSON. With the increased cost, you expect to put that cost upon the purchaser of the paper at remote points?

Mr. McANENY. Yes.

Mr. DICKINSON. Well, now, if your circulation were to be materially decreased, would the advertiser be likely to say to you that he did not want your advertising?

Mr. McANENY. Where it is materially decreased it will be affected.

Mr. DICKINSON. And the advertiser won't want to pay as much because he did not get it out to remote parts?

Mr. McANENY. He won't pay the higher rate. The only effect will be to decrease the income of the publisher, and, of course, the matter of the tax that will be paid to the Government.

Mr. DICKINSON. And to the extent that the man who has been purchasing the paper declines to purchase it further the newspaper loses, and also the man who advertises loses by reason of the fact that he does not get his advertisement sent out.

Mr. McANENY. In whatever degree that would be the effect, yes. That would vary with different papers and different classes of advertisers.

Mr. DICKINSON. Your newspaper, I think you said, through the grace of the Government which bears the expense, you are able to sell your newspapers in Denver for \$10, and also at a near point in North Carolina for the same amount?

Mr. McANENY. Yes.

Mr. DICKINSON. You sell your Sunday paper, I believe, in New York at 5 cents and the same in Washington at 7 cents?

Mr. McANENY. Yes.

Mr. DICKINSON. What do you sell your daily paper for at these points?

Mr. McANENY. 2 cents in New York and 3 cents here.

Mr. DICKINSON. You sell for the additional amount here because of the additional cost of getting it here?

Mr. McANENY. Partly for that and partly for the reason that in every newspaper office the nearby sales and the out-of-town sales have been held in the balance, the one recouping the other. I mean there has been a larger rate for the out-of-town class, and except for it, the in-the-town class would hardly be able to get along. That has nothing to do with postal rates at all.

Mr. DICKINSON. You don't think the advertiser would bear any of the increase due to the putting into effect of this law?

Mr. McANENY. I don't think he will bear any appreciable part of it.

Mr. DICKINSON. And you will not be able to make a contract easily with him because he will refuse to pay?

Mr. McANENY. I should say quite certain that where he has interests that will be affected by the reduction of circulation in the remote districts he would ask for a lower rate and not offer to pay a higher one.

Mr. DICKINSON. He is interested in having his advertising carried to these remote points, and when he discovers that the purchaser pays more for your paper to carry this advertisement don't you think that the man who wants to get the advertisement for the purpose of selling his goods would be willing to bear a portion of the increase so as not to reduce circulation?

Mr. McANENY. No; I think he would regard only the reduction of circulation and ask for a decrease in rate. He would not want to adjust it by paying part of the decrease.

Mr. GREEN. Mr. McAneny, this is a matter that I do not inquire into, because it seems to me that if this law goes into effect, you would have a right to put those charges where you want to, and if the subscriber did not want to pay the rate, he would not have to take the paper. But I want to get at this matter fairly and my views in some respects may not accord with some of the other members of the committee. You speak about this overhead not being determined definitely, but being merely an estimate on the part of the postal authorities, as I think it is.

Mr. McANENY. Of the total second class?

Mr. GREEN. Yes.

Mr. McANENY. They have not even in their estimates attempted to subdivide their estimates according to the subdivisions of the second class.

Mr. GREEN. What part of the second-class matter would have a smaller overhead than the newspapers?

Mr. McANENY. Well, I think there would be very few. I think there are a number on which there would be a higher overhead charge than the newspapers.

Mr. GREEN. Can you specify some?

Mr. McANENY. I am afraid I can not with much safety. It is a very involved question, but the Hughes Commission points out in various parts of its report the distinctions that exist, and admits its inability to deal with them.

Mr. GREEN. Undoubtedly, but I would have thought that you, coming before us at this time, if the overhead was less on the newspapers, would be able to show us why.

Mr. McANENY. It is part of my plea that we ought to have an opportunity to have an inquiry that will bring out the facts. We can not show you why because we do not know.

Mr. GREEN. If you do not, who does?

Mr. McANENY. It has been stated by various commissions in various terms that there are various distinctions, but the Post Office Department has not yet undertaken, or been able to apportion these charges between the several classes, and the only way to do that would be to determine what they are.

Mr. GREEN. Yes. Well, now, you people have had a year, and you come in here and don't have anything?

Mr. McANENY. We can't find it.

Mr. GREEN. Can't you?

Mr. McANENY. Of course not. The experts of the Post Office Department, to whom the chairman refers, must find it, and I think they ought to be aided by experts from the outside.

Mr. GREEN. They won't give you information?

Mr. McANENY. The Hughes commission had Mr. Waterhouse.

Mr. GREEN. These experts won't give you any information about it? Did any of you go to these postal experts and try to look up these matters?

Mr. McANENY. Yes.

Mr. GREEN. To whom.

Mr. McANENY. We have asked the Postmaster General to give the subdivisions of cost of second-class mail, and he says it can not be done at the moment because it has not been ascertained. He said it would cost a lot of money to ascertain it. Personally, I think it would be worth the outlay.

Mr. GREEN. There is a question whether it could be ascertained with any great degree of accuracy. I hardly see how it could be.

Mr. McANENY. Judge Hughes thought it could be, and suggested the establishment of a system of cost accounting that would show that. That was 10 years ago and it has not been done yet.

Mr. GREEN. I know what he said, but now with reference to another statement of yours that I hardly understood. Possibly I did not understand your talk. But I thought you said that these present rates resulted in no gain to the newspapers.

Mr. McANENY. Resulted in no financial gain to the newspapers. They do result in some increased circulation, and in the satisfaction of their being able to serve that circulation, but that circulation does not turn in any profits to the newspapers.

Mr. GREEN. Then, if the rates had remained at the higher point that they were before these reduced rates were made, the newspapers would have suffered no financial loss?

Mr. McANENY. If they had remained at the higher rates?

Mr. GREEN. Yes; that were established a long time ago before these reduced rates went into effect.

Mr. McANENY. That was 33 years ago. I am afraid I can't tell you what the conditions were then, or how they would have been affected by one policy or the other. I know that the cheapening of the rates, from the date of the cheapening of the rates in 1885, the business of the newspapers has gone bounding, and that it began from that year to increase its revenues from all sources.

Mr. GREEN. Pardon me, when I ask a question; it seems to me sometimes you start to ask something else.

Mr. McANENY. No; you asked me what I thought the effect would be, and I answered at that time when the rate was reduced—

Mr. GREEN (interposing). Let us drop that, and then get it into some form so that there won't be any trouble about it.

Mr. McANENY. Go ahead.

Mr. GREEN. If there is no gain to the papers by reason of these rates, then there would be a loss by reason of their being advanced?

Mr. McANENY. There would be no direct loss to the papers, so long as the subscriber pays the rate, as he does to-day.

Mr. GREEN. I just wanted to get your view about it, because most of the newspaper men that have spoken to me about it have considered that there would be a very considerable financial loss to them by reason of this proposition.

Mr. McANENY. I think that those publishers who in the early consideration of this matter thought of attempting to carry the loss them-

selves may very well have told you that that would have resulted disastrously to them. I think that as the effect has become more clearly understood there is an almost universal recognition among publishers of the fact that they have got to take the other course and put the increase upon the subscription, that it would be almost impossible for them to carry it themselves. There will be individual exceptions, possibly, to that rule, but they are few.

Mr. GREEN. But the point is that on the whole those that talked with me thought that they were going to suffer financial loss.

Mr. McANENY. Well, they had the alternative, I mean it is optional to them as to which course they will take. My understanding is that almost universally they take the course of losing circulation rather than assuming a tremendous loss of revenue.

Mr. GREEN. That loss of circulation results in a financial loss?

Mr. McANENY. Not compared to the loss that will result from consumption of these charges.

Mr. GREEN. Can you answer these questions directly?

Mr. McANENY. Well, I trust so. What ailed that answer?

Mr. GREEN. Why, it was not a direct answer.

Mr. McANENY. Try again once more.

Mr. GREEN, No; I think I will stop.

Mr. McANENY. Seriously, I wish you would.

Mr. HAWLEY. Mr. McAneny, do you know why the Hughes Commission, who found certain difficulties in the matter, did not proceed to solve those difficulties to a final conclusion?

Mr. McANENY. Well, they were appointed for a temporary purpose, of course, to investigate and report, and when they reached the end of their ability they reported that fact.

Mr. HAWLEY. They did not have the necessary authority to go further?

Mr. McANENY. Simply an investigating body.

The CHAIRMAN. Is Mr. Walters present? If not, do you other gentlemen of the newspaper association wish to be heard. If so, we will come back here in the afternoon, or if you prefer we will put it off until Monday.

Mr. McANENY. I would not take more than 5 or 10 minutes to finish what I have to say.

The CHAIRMAN. Pardon me, I thought you had finished. Go right ahead.

Mr. McANENY. In view of the length of the hearing and the multitude of things that we have covered, perhaps you will pardon me a brief word by way of conclusion.

After all, our final word, Mr. Chairman, is the repetition of our urgent request that for all the reasons that have been brought out here this matter be held in suspension until a more fortunate time. I trust that you will pardon me if I will put it that the newspaper press of the country feels that it is entitled to make that request. The conclusion can not be avoided by anyone concerned that these increasing prices must be borne by the individual newspaper subscriber. It will be an inevitable result that corresponding decreases of circulation will occur. The loss of that circulation at this time will be a thing so injurious to the Government and to the country and to the people that we protest it should not be seriously permitted. The Government is asking for large sums of money, asking for more

than this bill would yield in the first year from the newspapers for the purpose of a publicity bureau. It is preparing material through other bureaus. It is using all these agencies to get material before the people through the final agency of the press. We submit that at such a time that it is a thing that will actually hurt us, hurt our war activities, and reduce the circulation of the press.

We come back frequently, we have certainly here, to that question of a subsidy to some one. We feel we have shown you in the analysis of figures that there is no gain to the newspapers through these rates in money; that on the contrary it costs us more to carry this circulation in the districts served in the mail than it does in the district served by the carrier and the usual city methods.

I am going to read these figures by way of final illustration of that fact. We used Mr. Garner yesterday as a sample, but proceeding beyond his zone to the next farthest where the present net receipts a year upon each subscription that we serve is \$7.12, the net rate proposed for the first year would reduce that if carried by the paper to \$4.76, in other words, more than \$2 less than we receive in New York City for the same commodity. The new rate in the second year would reduce the net receipts to the paper from that subscription to \$2.50. The net receipts of the third year would be 42 cents, and in the fourth year there would be a minus amount of \$1.66. Now, when we have shown that the present receipts are all the newspaper can afford to take for that service, can it be argued for a moment that any paper could accept a scale like that and continue to carry the cost of postage itself. It can not be done. These figures and demonstration can be amplified. It is sufficient to say that the newspaper publishers themselves have examined it, and they find no other course, and naturally they will announce, the great majority of them, certainly all of the larger papers, that this must pass to the subscriber. We do not think that the committee should fail to recognize for a moment that it is there that the loss must fall, that it is there that the loss of service must fall, and that that is a matter between the Government and the newspaper reading public, necessarily more than it is between the Government and the newspaper publishers.

May I repeat what is, of course, the obvious fact, set forth in the report of the Postmaster General, that this is not a war tax, but that it is an increased charge of service, and that, of course, it will have no place definitely in the plans for the raising of war revenue. May I repeat that the increased profits that the Post Office Department has estimated which in turn will be subject to the reductions of the greater cost to them, would be one four-thousandths of the amount that you set out to raise in a new revenue bill.

May I repeat, or assert, as I have not previously referred to it, that the reduction of the output of newspapers entailing, as it will, a considerable reduction in the amount of labor that is performed within their plants will mean very serious losses to labor, which I understand labor itself has recently recognized in the statement made a few days ago by Mr. Gompers.

May I ask again whether in view of the complete derangement of the newspaper industry, so far as its mail service is concerned, this will involve these losses of service that are of national consequence and innumerable other by-results that I have mentioned but

which I will not tire you with. Is it worth while to do this in exchange for the theoretical return of \$2,000,000?

And finally, may I respectfully at least refer, Mr. Chairman, to the fact that when this bill was passed in October, and was received in the Senate from the conference committee, that the chairman of the Finance Committee, Senator Simmons, as we supposed at the time representing in effect Congress itself, used this language:

I do not believe that we ought to tax these facilities for the purpose of defraying the expenses of the war. That has been my view all the time. Entertaining that opinion about it, I felt that the adjustment of postal rates was not a matter for the Finance Committee, but was a matter for the Post Office Committee. I was glad, therefore, when in conference we were able to write into the terms a provision now under discussion—the provision that the tax now imposed should not take effect until July, 1918. I trust, Mr. President, that before that time arrives, the Post Office Committee will work this matter out in a more satisfactory way than your committee or the conferees have been able to work it out.

That assurance given to the newspapers has never been contradicted, but the effort of the publishers to secure attention for their proposed changes in the plans, for their proposed corrections of what they considered to be unjust or unfair or unworkable, have been up to this time practically without result. The hearings given in the Senate brought out in the main only the fact that while the committee favored suspension and while the majority of the Senate apparently did, for parliamentary reasons an amendment carrying suspensions could not be brought to a vote, as you know, and as I stated in opening yesterday, it is for that reason that we are here first having brought the matter to the attention of the Postal Committee on the assumption that it would resume its functions in this matter when permanent changes are in question. We were advised that it would be better to present it to the Ways and Means Committee, and upon receipt of that advice we cheerfully came here.

Therefore, gentlemen, the fact that it is late in the day that this plea is made to you is a matter due to circumstances that we could not control, and there still remains time in which to order this suspension, and we urge upon you with all vehemence, gentlemen, that the suspension shall be ordered. I have in response to Mr. Garner's questions given repeated assurances on behalf of the publishers that they would cooperate in the framing of any plan that is to be put in place of this and that they will recognize promptly the reasonable character of any such plan. Upon that assurance we leave the matter with you.

The CHAIRMAN. When you have concluded, I would like to make a statement. It was not the understanding of the House conferees on the present revenue act, nor do we understand that it was the understanding of the Senate conferees that this provision of the postal rate would be simply temporary and put in there just to get a bill, and that it was going to be reconsidered at the succeeding session before July 1, 1918. The House conferees understood it very thoroughly and it was never asserted to the contrary, that that was a well-worked-out proposition of the experts in the Post Office Department. We discussed it for two days. We had Mr. Kuhns, and I think Mr. Stewart—I am not certain of Mr. Stewart—before us, and that proposition went into the bill as a settlement of the question, in so far as we thought was to be a permanent proposition, so far as going into operation, and after it went into operation and the matter

was tested, it was for future Congresses to repeal, amend, modify, or do what it pleased with it. It was not the understanding that it was temporary so that the bill should become a law, and that in the meantime, from April 3 until July 1, 1918, on which it was to begin to operate, Congress would reconsider it again.

Mr. McANENY. In other words, Senator Simmons's understanding of the matter was not your understanding?

The CHAIRMAN. No.

Do any of your gentlemen want to be heard this afternoon or Monday? I think Mr. McAneny has covered the ground for everybody.

Mr. McANENY. The most of the committee have been obliged to leave before this.

The CHAIRMAN. Suppose we come back this afternoon, or would you prefer Monday morning? Do you prefer this afternoon or Monday?

Mr. MOONEY. Whatever is the pleasure of the committee. If you can get the committee together, this afternoon would be preferable.

Mr. McANENY. I want to add this brief word for the record, that while we have appeared here in favor of a suspension of the provisions of the present act, we have made no representations with regard to your new revenue bill. That has not been our purpose. We have been discussing the present situation. But if in any way measures are considered in connection with the new bill that do affect our interests, we shall naturally wish to be heard again. We have nothing ourselves to propose. We are here in this matter as an established bit of postal legislation.

The CHAIRMAN. Mr. Palmer, let us correct this right now. It leaves a very wrong impression. The stenographic report is that Mr. Palmer said there was an assessment of 20 per cent authorized on paper tonnage. He meant 20 cents a ton.

Mr. McANENY. How much has been realized from its assessment?

Mr. PALMER. I do not know. The request was sent out only a short time ago, and checks have been coming in.

Mr. McANENY. As high as \$10,000 or \$15,000?

Mr. PALMER. I think it was \$17,000.

The CHAIRMAN. It appears here that it was about \$6 a ton.

Mr. McANENY. It is a third of 1 per cent of the value of the tonnage.

The CHAIRMAN. We will be back at 2 o'clock.

(Thereupon, at 12.45 p. m., the committee took a recess until 2 p. m.)

#### AFTER RECESS.

(The committee met at 2 p. m., pursuant to adjournment.)

#### STATEMENT OF MR. L. T. WORTHAM, STAR-TELEGRAM, FORT WORTH, TEX.

Mr. WORTHAM. Mr. Chairman and gentlemen of the committee, I really did not anticipate appearing before you at all. I have no statement to make that would be of value to you further than what may be embraced in the following statement, namely, that I represent the Southern Publishers' Association and others here, and along with the Southern Publishers' Association, the Inland Publishers' Association.

- I want to state that we have all the time been for the zone method, and we have been ab initio for that method, and that we are for that method now. The only difference between us and the committee consists of the fact that the committee has a narrower limit to its zones than we have been contending for. I presume that all of you are familiar with the McKellar amendment, which has often been referred to and sometimes discussed by you. We stand for the 300-mile zone; the 250-mile zone as a compromise.

We are all opposed to the tax on advertising matter, because we think we know that any attempt to segregate advertising matter from reading matter would prove not only vastly annoying but impractical.

Mr. GREEN. Will it disturb you if I ask questions?

Mr. WORTHAM. No, sir; just go right ahead.

Mr. GREEN. I just wanted to get at your idea. Then, as I understand you, you favor the zone system, but with no distinction between the advertising and the reading matter?

Mr. WORTHAM. Yes, sir.

Mr. GREEN. And the first zone you would want to have commence where?

Mr. WORTHAM. We would like to have it extended, because we believe—

Mr. MOORE (interposing). Well, I think it ought to be myself.

Mr. WORTHAM. We insist on its extension for the reason that we think that the Government can transport our product well within 1 cent a pound. We may be mistaken about it. If convinced that we are mistaken, we are willing to abide by the consequences of our mistake.

Mr. GREEN. The reason why I think it ought to be extended—and I do not know just how that would commend itself to you—but the reason why I think it ought to be extended is that a very large part in the first zone, and even the second zone, as we have it now, is overhead, and as applied to those zones—and possibly further—it would seem to me that it would not be advisable to make the distinction between advertising matter on the one hand and reading matter on the other, because this would be just the same without advertising as with the reading matter.

Mr. WORTHAM. To be sure.

Mr. GREEN. And so far as that is concerned it is the same, the overhead is just the same; that is to say, if you are delivering a paper to a particular individual and another one there, it will cost just as much for that delivery whether there is advertising in it or whether there is not.

Mr. WORTHAM. Exactly. We predicate our advertising receipts on circulation almost wholly. No other element enters into the taxation of our advertising rates save and except the number of subscribers to whom the advertising is carried. It is measured obviously by our circulation.

Mr. GARNER. Mr. Wortham, you say your association believes in the zone method of collecting revenue for second-class matter?

Mr. WORTHAM. We do.

Mr. GARNER. Are you perfectly willing to adjust the rates according to the cost of doing the business?

Mr. WORTHAM. Yes.

Mr. GARNER. Your only contention with reference to the first, second, and third zones—that is to say, 300 miles—is because your association believes that 1 cent a pound will cover the cost for the first 250 miles?

Mr. WORTHAM. That is true; that is our case.

Mr. GARNER. If a thorough investigation should arrive at a different conclusion, you would be willing, your association would be willing, for Congress to levy the rate that that information might reveal?

Mr. WORTHAM. Yes, sir; with this proviso, our association would look upon the figures that have already been submitted from high-ups with some degree of reluctance. If the Government can show in good faith that it costs more, then we are willing to pay more.

Mr. GARNER. But I assumed that they arrive at a correct conclusion. As to what it costs to handle the second-class matter, and based upon the zone system, your association is perfectly willing that that rate should be applied by Congress?

Mr. WORTHAM. I think so.

Mr. GARNER. Your other criticism of the present law is that it is impractical to fix a zone system on the advertising and a flat rate on the reading matter?

Mr. WORTHAM. For this reason. Let me give you an illustration. My paper has a circulation of 67,000, according to the last report. That paper circulates; a pound rate would carry it to practically the limit of its circulation. I want to deal fair and square with this committee about that. Now, we get out eight editions a day of that paper. We have adopted a method of adjusting our editions to our mail schedule. We were one of the first newspapers, and the only paper in Texas for a long time, to abide by that system of adjustment. It is not necessary to go into why we did it. That is not interesting for you. But if we had to segregate the percentage of reading matter from advertising matter, or vice versa, on each and every one of those editions, we would have to have a very thoroughly organized and numerous auditing department.

Mr. GARNER. Do you recall the provisions of the bill that was reported to the House by this committee?

Mr. WORTHAM. Yes, sir.

Mr. GARNER. The only objection that I understood you to have at that time as to that bill was the question of the charges on the first 300 miles.

Mr. WORTHAM. Yes.

Mr. GARNER. And if that had been adjusted, it would have been satisfactory to your association?

Mr. WORTHAM. Yes.

Unless some member of the committee desires to ask me further questions I am through.

Mr. SLOAN. I was very much interested in this legislation. A year ago there was proposed a flat rate, I mean an increased flat rate, which I did not think should have been done, and I understood the newspapers were favoring the zone system. For that reason, among others, I took a great deal of interest in the work of the committee, and the work on the floor with reference to establishing the zone system, understanding that the newspapers were in favor of that system as against the increased flat rate. Is that correct?

Mr. WORTHAM. Yes, sir.

Mr. SLOAN. I understood that they continued in that frame of mind until the magazine folks became very much interested in it.

Mr. WORTHAM. Why, my dear sir, neither the Inland Publishers Association nor the Southern Publishers Association ever changed its mind one jot or tittle on that proposition.

Mr. SLOAN. The newspapers of the United States generally are in favor of the zone system?

Mr. WORTHAM. Yes.

Mr. SLOAN. This opposition that we are hearing so much about through propaganda is the opposition of the magazines, is it not, instead of the newspapers of this country?

Mr. WORTHAM. I have no opposition.

Mr. SLOAN. I mean to the zone system.

Mr. WORTHAM. Opposition to the zone system? Yes, sir.

Mr. SLOAN. And so I am correct in understanding that this deluge of protests that we are receiving from all sources condemning generally the zone system is not sanctioned by the newspapers in the country?

Mr. WORTHAM. I think you are entirely correct. Of course we know how that propaganda has been brought about by these magazine publishers. I would not hesitate to call their names.

Mr. SLOAN. I wish you would, just tell us something about that. I want to tell you first that I was opposed to increasing these newspaper rates—I am not claiming any credit for it—but after the committee had concluded that they were going to raise these rates, I tried as far as I could to temper the wind to the shorn lamb, and then was somewhat chagrined after two or three months of work to find out that that for which we sought was being turned over and repudiated.

We would be pleased to have you go ahead and make the statement you said you desired to make.

Mr. WORTHAM. I will tell you a case that came under my own observation, and I do not care to discuss any other. There is a very enterprising little woman in Trinity County very actively connected with the war charities that is working for the circulation of publications in Europe among our soldiers at the front. She showed me a lot of correspondence the other day from several magazines—I do not remember all their names. I know that the Saturday Evening Post was one of them. I just happened to recollect that—

Mr. GREEN. We would assume that.

Mr. WORTHAM (continuing). In which they claimed that they could not furnish the club rates any longer because the zone system had imposed a burden upon them that was exceedingly and extremely hard for them to struggle along under. The Ladies' Home Journal has been writing its subscribers, and very actively, to protest to Members of Congress. Those facts are notorious. I have no quarrel with the magazines, nor have I any quarrel with the periodicals.

Mr. SLOAN. You may not have a quarrel with them, but I would be glad to know if you have any agreement with them.

Mr. WORTHAM. No, sir; we haven't any agreement and we are not going to have an agreement with them.

Mr. GARNER. The real opposition to the zone system in this country is coming from the magazines and periodicals?

Mr. WORTHAM. Undoubtedly. When the magazines cease to be carried at the flat rate of 1 cent a pound they are going to be small.

The CHAIRMAN. One question on this advertising proposition. believe that we can work it out by an administrative feature, so that it would not be so objectionable. Suppose that the department would just let you take a blank and state just what the average advertisement rate and your reading rate would be. You would not have to go over these seven or eight editions, would not have to count them, but you could keep copies of papers, and three or four days before the expiration of the month you could just run over and see the average for the month, the columns that went into advertising matter and the columns that went into reading matter. You know the weight of the paper to start with.

Mr. WORTHAM. I do not see any very practical way to get the average, because the advertising varies in quantity so much.

The CHAIRMAN. I know you would not go to mathematical precision to see, but say you had 10 columns to-day and to-morrow you had 15 columns, and then you could get your general average a few days before the expiration of the month, your average for the 30 days.

Mr. WORTHAM. I think that would be possible.

The CHAIRMAN. I have talked with a gentleman, a Member of Congress, who was a newspaper man. He said that he had no objection to that, but he understands that the present regulation requires that you would have to do what you said.

Mr. GARNER. The administrative features would remedy that.

The CHAIRMAN. I told him that if we did not remedy it by regulations, we could by provision in the bill, which would eliminate the very objectionable feature that you called attention to.

Mr. WORTHAM. Speaking for myself individually, I would not be disposed to be contentious in the matter if it would be practical to arrive at a general average in a thing that varies so widely from day to day as the volume of advertising.

Mr. SLOAN. Could not the Postmaster General at the end of each month ask you to arrive at your average, he selecting the days, the 5th, the 11th, and 28th of May and the next month, as your representative days the 1st, the 15th, and the 30th, and so on, so that they would arrive at something like what would be an average. The Government does not want to split pennies with you gentlemen any more than you want to split pennies with the Government.

Mr. WORTHAM. If you have dealt with the Government you know the Government stands by its own construction. I am not adverse I would not be adverse individually to some such deviation as that.

Mr. SLOAN. That suggests just a little amendment; that is all.

Mr. HAWLEY. What was the radius you suggested for the first zone?

Mr. WORTHAM. 300 miles.

Mr. HAWLEY. And for the second zone?

Mr. WORTHAM. I do not know. It is suggested in our amendment I have forgotten the distance.

Mr. HAWLEY. Are the distances for the zones greater than in the existing law?

Mr. WORTHAM. I think so; yes.

Mr. SLOAN. Would you have a less number of zones?

Mr. WORTHAM. I think the ultimate was 6 cents and something more. Mr. Woodson, what was our last zone rate?

Mr. WOODSON. Six cents under the McKellar amendment.

Mr. WORTHAM. And what was the last?

Mr. WOODSON. The eighth zone, over 2,000 miles.

Mr. HAWLEY. Are these zones just to be for newspapers or for magazines and other periodicals.

Mr. WORTHAM. All second-class matter.

Mr. HAWLEY. It makes no distinction between newspapers and other periodical publications?

Mr. WORTHAM. No, sir.

Mr. GREEN. With the permission of the chairman, I would like to make an observation here. The gentleman who has last spoken has answered so fully and frankly all questions of the committee, and has been so fair with the committee, that I feel very much like commending his statement.

#### STATEMENT OF MR. C. T. J. MOONEY, MEMPHIS COMMERCIAL-APPEAL, MEMPHIS, TENN.

Mr. MOONEY. Gentlemen, I would be glad if the condition of the New York Times were representative of the condition of all the papers of this association, but unfortunately for the other papers it is not. Now, the paper that I represent is probably more fortunate than other southern newspapers, and the condition of that paper would not be a fair index of the condition of papers generally, but I want to make this general statement about the papers, as I understand it. It is not a fact that the papers of the United States in 1917 were more prosperous than they were in 1916. It is a fact that the papers of the United States now are less prosperous than they have been at any time since the beginning of the war, and we are now running into a very serious condition. I believe that if things keep on as they are started, the tax on advertising in one year will be an academic question. There is all over the country a marked decline in advertising. That decline is first in automobile advertising, it is in department-store advertising, and it is in male-clothing advertising, furnishing goods and things of that sort, for the reason, for instance, in my town because there are 7,000 young men gone out of Memphis and out of Shelby County in the Army and Navy. The clothing stores are beginning to feel that, and they are cutting down. The volume of advertising in the American newspapers generally during the last three months was lower than it was during the same months in 1917. The volume of advertising in the American newspapers for the first three months of the year was much lower, but I think that was because of the extraordinary bad-weather conditions.

Now, it is fact that to the papers generally the price of white paper has been advancing during the last three or four years. Owing to confusion and to lack of organization for a certain period last year, to those papers who did not have any contracts, the price was extraordinarily high. During that time you hear of 5 and 6 cent prices.

Now, the price that our paper has paid for white paper during the last three or four years is probably representative of the prices generally paid by those papers, except the paper of extraordinary size in New York City.

Now, in 1914, the Commercial Appeal paid for white paper delivered in its cellar \$2.23 a hundred pounds. That contract ran for four years, but during 1916, the paper people came to us and informed us

that they would live up to their contract, but they would lose a large amount of money—no, that contract expired in January, 1917. During 1916 we made a new contract and canceled this contract and gave them an advance from that time on with the result that during 1917 we got the paper in our office at \$2.45. That contract expired on the 1st of January, and we made a new contract with the same firm, and we are now paying for paper delivered in our office \$3.35 a hundred, with a proviso that if there are advances in labor and advances in freight rates, that we will have to stand that advance. There will be an advance in freight rates in a few days, affecting southern papers, and you must remember that freights on paper, the average rate in the South runs about 35 cents a hundred.

Mr. SLOAN. Do you have paper mills in your vicinity?

Mr. MOONEY. There are no paper mills in the South. The paper used throughout the South and Southwest is manufactured in Maine or Canada, New England States, northern New York, Canada, or Wisconsin. There is not a newspaper paper mill in the South. Added freight rates would be about 25 per cent yearly on paper throughout the country.

Mr. SLOAN. It is not perhaps entirely relevant, but I ask you this question: Haven't you a great deal of paper material in the South, forests?

Mr. MOONEY. Not of the sort that the finer grades of paper, and even newspaper paper, is made out of. There is a bit of strawboard and heavy board that is made from fiber in the South, but the pulp that is ground in the South is ground out of cottonwood, and that pulp is used for making powder.

Now, the Federal Trades Commission the other day fixed a price on white paper at \$3.10 at the mill. Now, that is a figure higher than the publishers thought it would be. That price of \$3.10 in the mill would run to the publishers in the South and West about \$3.50 in their buildings.

Mr. SLOAN. That would apply only to new contracts, or would it apply to existing contracts?

Mr. MOONEY. This price fixing is done by the Federal Trade Commission, and I think there were certain conditions as to awards that I am not familiar with.

Mr. WOODSON. It went back to April 1.

Mr. MOONEY. It was to go back to April 1. Now, gentlemen, what is true of white paper is true of ink and labor. Contracts are expiring, and we are running into new labor contracts, so that it is a fact that papers throughout the United States are beginning to feel very heavily the added burdens of publication, and there is also a decline in advertising.

Mr. HAWLEY. Does this price that you just referred to compel you to pay advances in labor costs that the contractors require?

Mr. MOONEY. The paper situation is like this, as I understand it: This award was made by the Federal Trade Commission between publishers having contracts with the International Paper Co., which is one of the big companies, and a group of other companies. The company that we have to deal with, and some of the publishers deal with, is another company, called the Great Northern, which is not a party to that agreement or award. The fact is that the Great Northern Paper Co. has been one of the companies that has attempted

to deal as easily as possible with their customers. Our relations with them have been very satisfactory; so much so that we voluntarily gave up a contract that we might have held for about three years and three months.

Mr. HAWLEY. The award does not affect the entire newspaper situation?

Mr. MOONEY. The award affects probably 65 per cent of the consumption of newspapers. The changes that are true as to white paper are true as to ink and labor.

There are some other things about subscription conditions of the papers, the representative papers outside of New York, which are entirely different from those which were outlined to you as applicable to the Times. For instance, the price of our paper in the city of Memphis is 15 cents a week, or \$7.80 a year.

The CHAIRMAN. That includes your Sunday issue?

Mr. MOONEY. Yes, sir. For \$7.80 a resident of Memphis gets his paper delivered into his house. The price of our paper to the mail subscriber who orders his paper direct from the office is \$7.50 a year. It happens to be 30 cents cheaper; the daily without the Sunday correspondingly a little lower. Now, we have another rate on the paper, and that rate is probably applicable to a great many other southern papers and papers not printed in Chicago or New York. A great many papers have what is known as a rural free-delivery rate. Our rural free-delivery rate for the paper is about \$4.20, exclusive of the Sunday. Those are about the rates that apply to the morning paper subscriptions generally throughout the country.

Now, as to the division of circulation: Our paper has 90,000 daily and 130,000 Sunday. Of the dailies, I think, probably about 22,000 are delivered within the city of Memphis. The remainder go throughout the country. I think probably 35,000 of the remainder—yes, 40,000 of the remainder—go thorough the mails. The balance go by express.

Of the Sunday circulation of 130,000, about 30,000 are in the city, about 10,000 go by mail, and about 40,000 by express.

Mr. COLLIER. There is a train which leaves Memphis which goes down through Jackson and New Orleans and gets into Jackson about 8 o'clock or 8.30 which carries your paper.

Mr. MOONEY. Yes, sir.

Mr. COLLIER. Now, does that paper go to places like Winona and Grenada? Does that go by mail there or by express to Jackson and Vicksburg?

Mr. MOONEY. It goes by mail to Jackson; it goes by mail to Vicksburg; it goes by mail to Winona. It might on that particular train. Most of the papers go by mail, because it is a night train, and the deliveries are only made at stopping points.

Mr. COLLIER. Your paper sells on the streets at Memphis for how much?

Mr. MOONEY. For 5 cents a copy.

Mr. COLLIER. Just the same as Vicksburg?

Mr. MOONEY. But we have no street sales to amount to anything. We do not sell 300 papers a day by newsboys. They all go into the homes, hotels, and news stands. The paper is sold to dealers, who sell it for 5 cents, for 2½ cents.

Mr. COLLIER. You have the same sale on the streets of Memphis as in Vicksburg or Jackson?

Mr. MOONEY. Just the same. Our situation is a little bit different than it is with other papers. As you know, we have two trains we subsidized. At the outbreak of the war the Southern Railway took off a train which we have had for 25 years running from Memphis to Huntsville, Ala. We have secured that train to go from Memphis to Sheffield, for which we pay \$1,200 a month to the Southern. Now, we are paying for that train and we are furnishing that train to the United States and to ourselves, and we are also paying the Government postage on that train for hauling our papers.

The CHAIRMAN. How much do you pay?

Mr. MOONEY. \$1,200 a month to the Southern Railway. It was estimated that the train would cost a certain figure. The Southern Railway said it would run at a deficit, if it depended only on its passengers. So we made a contract by which we agreed to make that deficit good, of about \$1,200.

Mr. COLLIER. How about the I. C. trains that run down there?

Mr. MOONEY. We made a contract, guaranteeing them as to loss running from Memphis to Jackson. It didn't lose anything.

Mr. RAINEY. How much have you paid under that guaranty?

Mr. MOONEY. Nothing; we just guaranteed them against loss.

Now, gentlemen, we also have a weekly newspaper that has a circulation of about 100,000. That paper circulates all over Texas and Mississippi and that country down there.

Now, just one more thing and I am through. All of our papers, save a thousand single wrappers, are handled by the office itself. The only thing the United States does for us in the handling of our papers is to haul them. We load the papers into the car, and for about three-fourths of our mail subscribers we load into cars in bundles, and they are unloaded at distribution points and do not go through the post-office, and I submit that with a paper such as ours; 1 cent a pound within the limit of 150 or 200 miles, is certainly remunerative, when the fact is that the only thing the Government does is to haul those papers in a car. We do everything but weigh them. We route them; we deliver them by our own wagons, and our men get them at the end of the route. We could take those papers to the post office and post them one hour before train time and the Government itself would have to haul those papers from the post office to the station.

Mr. GREEN. I am not sure that I quite understand. These papers are not distributed by the Government on their arrival?

Mr. MOONEY. I said that about two-thirds of our daily mail circulation is handled in that way. For instance, Grenada, Miss., it may be, has 300 circulation. Three hundred papers are put in a bundle and are sent by mail to the agent at Grenada. The agent for the paper is there and he takes them out of the car and they do not go through the post office at either end. All the Government does is to transport on the train.

Mr. GREEN. Transport them in a bundle?

Mr. MOONEY. Yes, sir; they are not addressed at all. The agent at Grenada, Miss., has an order with us for 300 papers and we send them by mail.

Mr. GREEN. I think that 1 cent a pound is enough for that, or perhaps too much, for that particular distance, shipping them in bundles.

Mr. MOONEY. For the distance, I believe seriously that the average daily paper which has a circulation within a radius of 100 miles of the city of publication, handled as our paper is handled, is not a loss to the Government.

Mr. SLOAN. You would favor the zone system, then, would you not, as applied to your system of distribution?

Mr. MOONEY. Well, I think if it is the feeling of the Government that the newspapers are not paying enough postage, that a zone system is the most logical and the fairest. I do think this about it, that the question of the services rendered by newspapers should apply to the extreme zones, and I believe what Mr. McAneny says about services, etc., and about the advantages that come to the Government and to our educational advantages, etc., might be argued to bringing down the far zones. I submit that probably a 5-cent postage on a paper to San Francisco is a little high, and deprives San Francisco of the illuminating influence of New York.

The CHAIRMAN. How much would you think would be a fair rate from New York to San Francisco?

Mr. MOONEY. I do not know.

The CHAIRMAN. It really ought to be more than is charged within a radius of 150 miles.

Mr. MOONEY. Once you get a zone system, certainly it ought to be. But I do think this: You take in telegraphing, the telegraph companies on their message tolls will sometimes send a message cheaper we will say, from New York to Chicago, than I might send a message from New York to Scranton. There are more trunk wires to Chicago and the facilities are better, and the wire conditions are better, and once the loading is done, and once the overhead is cared for, probably the added 1,000 miles of the 3,000 to San Francisco could be much cheaper done than the first 1,000 miles.

Mr. SLOAN. The zone system, whether it is in this bill or is in the parcels post, does carry that feature. The further the zone the greater the radius.

Mr. MOONEY. I know; true, but you take your zones in your zone system, your advertising in that San Francisco zone would be pretty heavy. Of course, it will not affect us because our circulation is all within a radius of 400 or 500 miles, except we have some circulation in England. Our paper is peculiar because it is a cotton paper, and wherever there is a cotton spinner in Europe he gets our paper.

Mr. COLLIER. The biggest part is within 400 or 500 miles?

Mr. MOONEY. Yes; within 400 or 500 miles, or thereabouts.

Mr. COLLIER. Mississippi?

Mr. MOONEY. Through Mississippi, north Alabama, west Kentucky, west Tennessee, and Arkansas. We have some very distinguished citizens within our circulation.

Mr. GARNER. I don't want you to appear from a selfish standpoint in your defense of what is known as the McKellar amendment. If a thorough and accurate investigation of the cost of transporting your paper 300 miles or 150 miles should show that the present rate ought to be increased, you as a patriotic American citizen would say, I take it, that that rate ought to be levied.

Mr. MOONEY. Ought to be raised, certainly.

Mr. GARNER. And your only object in suggesting the McKellar amendment was to have a thorough investigation to arrive at a correct conclusion that the rate suggested in that would pay the cost of handling your paper through the post office.

Mr. MOONEY. So far as my particular paper is concerned I rather believe that it is not at a loss to the Government, but generally, yes.

Mr. GARNER. I want to get your viewpoint. If I get it it is——

Mr. MOONEY (interposing). We southerners are a little different from our friends in the East. We are a little sensitive about this intimation that we wanted, or are enjoying, a subsidy. We are greatly against subsidies. I have heard many a speech down South about that.

But now, just one more suggestion, and then——

Mr. SLOAN (interposing). Right there would you state what the McKellar amendment was? You are familiar with it? It has been spoken about a number of times.

Mr. MOONEY. It was one of the bills in the Senate.

Mr. SLOAN. Yes, I remember; but I would like to have it go into the record; but if you are not ready, I will withdraw the request. The chairman will furnish it for the record.

Mr. MOONEY. I do insist, gentlemen, that as to the handling of the daily newspapers, the daily newspaper's relations to the post office, is entirely different from the relation of any other sort of publication, that is, in the second-class rate, but as much of the initial work, much of the work at the beginning of the transportation, that is done entirely by the newspapers. For instance, it is a fact that our paper, and about nine-tenths of the other papers throughout the South, are delivered for the most part to the trains themselves out of the newspaper office, and the Government never sees these papers at all.

Mr. GARNER. After a thorough investigation, if we should arrive at the exact cost of transporting the daily newspapers, if we should arrive at the exact cost of transporting magazines, and another cost for trade papers, then as a public policy would you think that Congress ought to levy a tax or rate of postage that would remunerate the Government to the extent of its expenditure?

Mr. MOONEY. Well, no, because I do believe—of course, everyone thinks his own chicken is the whitest, you know—but I do believe, and I do submit that there is a certain service that the American daily newspaper performs, I believe that it discharges certain citizen or policy obligations to the Government, and that if the circulation in breadth of that paper is stopped, that the Government ought to take into consideration how much of a burden can that paper stand in its circulation being materially reduced. Now, I have no sympathy with those who say that they do not want the postage increased because they want to keep their money. We do not want to make any money out of the saving, understand, but I do submit that the American newspaper to-day is doing a work, and I do submit that the American press has always done a work, that entitles it, for the benefit of the Government itself, that would warrant the Government itself in making it so that those papers should have a reasonably wide circulation, so that if they are of any educational use and any intelligence use, the citizen may get the benefit thereof.

Now, as to the tax on advertising. The fundamental objection to the tax on advertising on the part of the newspaper publisher is this, that you have taken a branch of our business, which we hold to be as legitimate a business as the business of selling hams or meat or meal or flour or any other sort of business that is dealing in a necessity, and you set that aside in a class by itself along maybe with cigarettes, and cigars and liquor, perfumery and things of that sort, and levy a tax upon it. Now, it is our contention that the newspaper advertising is a business as legitimate, a business entirely necessary in the development and the carrying on of the commerce of this country. We hold that a newspaper advertisement is simply a salesman, a drummer, as we call them down South, in type. Now, it is a fact, as you gentlemen who are lawyers know, that 25 or 30 years ago there was an attempt in a great many cities to tax drummers, to give drummers a license you know. That case finally went up to the Supreme Court of the United States, I think from Memphis. It was decided that you could not tax a drummer, you could not put a tax on a traveling salesman, that his business was just as much a business as any other, and we very properly feel that the newspaper advertising has been singled out and that the frame of mind in which you singled it out was one in which you did not regard it as a necessary or a useful business. Now, so far as we are concerned, and the other papers are concerned, of course, they all say it, but we have proven our faith by our work. Our income tax returns—I happened to see it the other day—amounted to \$43,000, and then there is our corporation tax and the other taxes that the Government levies. We would be entirely willing—this postage the first year will go about \$12,000. I would rather for the principle of it give the Government \$80,000 through the income tax than have to the advertising taxed this amount of money, and put it as a tax upon advertising. Slap a tax on picture shows, etc.

Mr. SLOAN. You do not say that it would be unconstitutional to tax advertising?

Mr. MOONEY. I am not saying that it will. I am not raising that point, with our printed salesmen.

Mr. SLOAN. I am not in favor of the advertising tax, but I think it is constitutional.

Mr. MOONEY. I am not a lawyer and only a layman as to the Constitution. But I say, though, that the advertisement is merely a traveling salesman in type. As to the advertising itself, gentlemen, in about a year, if we keep on as we are going, we won't be worrying much about advertising, though we will be worrying because we do not get it.

The CHAIRMAN. I think your illustration is pretty good about printed matter being like a traveling salesman, but now that the Government has got control of the railroads, would it be principle or policy to require every traveling salesman to pay one-fifth of what it would charge me to go on the train?

Mr. MOONEY. No.

The CHAIRMAN. And take your illustration about meat, hams, etc.; do you think the Government should, if a man sent a ham by parcel post, take the ham at a flat rate all over the United States, and all other articles should pay the parcel-post rate from 5 to 13 or 14 cents a pound?

Mr. MOONEY. No; but there is another phase of the newspaper. You do not regard it as a business, but regarding it as a business, I think it is a legitimate business. And there is another function about advertising, also, that I wanted to say a word about. I intended to come to it. That is, that the advertisement itself has a news value and enters into the life of the paper itself, and for that particular reason we feel that to make this distinction is an attitude toward advertising that certainly the newspapers do not have, and what we think our representatives ought not to have.

The CHAIRMAN. What rate would you favor? You get in the first, second, and third zones, 1 cent; in the fourth, 2 cents; fifth, 3 cents; sixth, 4 cents; seventh, 5 cents; and the eighth, 6 cents. Take the sixth zone, 4 cents. Suppose a paper was going to this zone and had 50 per cent advertising and 50 per cent reading matter. This would be 2 cents for the advertising and 2 cents for the reading.

Mr. MOONEY. It would depend upon the amount of reading matter as compared with advertising.

The CHAIRMAN. I say 50 per cent reading matter and 50 per cent advertising matter. It would be 2 cents for advertising matter, and 2 cents for reading matter. Or suppose that you had 60 per cent reading matter and 40 per cent advertising matter, then the advertising matter would be 1.6 cents and the other at 2.4 cents. We are asking simply that the man pay a tax on the advertisement. If the proposition were to levy a tax on the receipts that the paper gets for the advertisement, I am with you. I don't believe that is right.

Mr. MOONEY. But, Mr. Chairman, even when you have made a differentiation between advertising and news in a paper, isn't it a fact that it was a tax?

The CHAIRMAN. Just as an increase in postage. I assume that one of the reasons for that was to answer the argument that the magazines and newspapers have made that these were instruments to sway intelligence and carry information and general welfare, and I think that was one of the reasons why it was finally decided in conference to put a flat rate on matters of intelligence and information, and to apply the zone rate to the commercial portion of the paper, the advertising portion. I think that was one of the arguments that was presented to Congress at that time.

Mr. MOONEY. At the same time, coming back to your working proposition, it would not cost any more to haul the advertising section.

The CHAIRMAN. Personally, I preferred not to separate them, and the House conferees preferred not to separate them, but to carry out your idea that there should be one charge for the paper regardless of whether it was advertising matter or reading matter.

Mr. MOONEY. It doesn't cost any more to haul this section with the reading matter, and our position is that one is necessary to the other, and that the whole newspaper itself is in these days of cheap circulation necessary.

The CHAIRMAN. Here are seven or eight pages of advertisements in the New York Times. Now, you take all the pages of advertising and put them together separately and it would cost to send them out from 8 to 14 cents a pound, but when you take that same advertising, that same ink, that same reading matter, and put it with the reading matter, it goes out for 1 cent a pound. There is your proposition.

Why should these same advertisements, on the same paper, the same columns, and the same print, and everything, standing alone cost 8 cents a pound to go through the mail, when you connect it up with a few pages of reading matter, that same advertisement should take a rate of 1 cent a pound. Here is the Saturday Evening Post, with 60 per cent advertising. You give that Post a stamp, and you have the same wrapper and the same paper and the same advertisements, and the same print, and everything, and let either their advertiser send that through the mail it will cost from 8 to 14 cents, but when you just take that same thing and put it together with the reading matter of the Saturday Evening Post, it goes through the mails for 1 cent. That is what bothered the conference.

Mr. MOONEY. I do not see why it should have bothered them, because I submit I know little about the Saturday Evening Post, except as any other reader knows, but even with 60 per cent advertising and 40 per cent reading matter, the Saturday Evening Post itself would not get that advertising if it did not have that reading matter; and the whole thing must be considered as one. If the Saturday Evening Post did not send out good reading matter it would not have any advertising at all, and it is a fact that the advertising in the United States is based on the character of the paper itself, and the character of news the paper carries, and the amount of circulation that the paper has.

The CHAIRMAN. Take the Saturday Evening Post or Collier's Magazine. They can take a 2-page advertisement of an automobile, and they can say, "If you send that out, it is going to cost you 8 to 14 cents a pound just like it is; but if you will pay me a good price I will send it out for you for 1 cent a pound."

Mr. MOONEY. I know the advertiser would not send it out in a circular if he could get it for nothing, because it is settled that circular or dodger advertising has relatively small pulling value; that the value of an advertisement depends principally upon the paper, upon the publication which it is in.

The CHAIRMAN. And the number of subscriptions in the territory in which they live.

Mr. MOONEY. Yes. In the small towns you will find merchants who will send out dodgers that the Red Hot Store is going to have a bargain sale Monday. They will pay \$5 a thousand for those dodgers; but if the same merchant would put a \$5 advertisement in the small town paper he would get more returns from the dodger.

The CHAIRMAN. Let me tell you what advertisers are doing under this flat rate. There is a certain periodical that is going through the mails, and they get out a catalogue of the same size, same paper, and everything as the magazine, and it is sent out, 24 pages, as a circular, printed between the covers of the magazine, and they pay from 8 to 14 cents, while the next issue of the magazine takes that catalogue and incloses it and gets it sent out for 1 cent a pound.

Mr. GARNER. The original print?

The CHAIRMAN. The original print; and everything was for 1 cent. I know you do not indorse that.

Mr. MOONEY. That is a police condition which the post office ought to remove.

Mr. GARNER. They could remedy it in the second class.

Mr. MOONEY. You spoke about advertising itself. If we could operate under the same conditions as to the zone system that the larger magazines and the general weeklies can operate under, it would make no difference to us. As you know, under the law passed now they can ship by freight to Denver, say, and mail them out from there.

The CHAIRMAN. Only every week or month.

Mr. MOONEY. We can not do anything like that.

The CHAIRMAN. Therefore there is a higher rate for the magazines. The average haul of newspapers, according to your estimation, is 255 miles. The average haul of the Chicago Tribune and the New York Times is 300 miles. The average haul of the weekly papers is 400 miles. The average haul of what we call periodicals, like the Saturday Evening Post and Collier's is from 800 to 900 miles. The Saturday Evening Post, Ladies' Home Journal, and Collier's Weekly are 1,200 miles. They are going to two or three times more than your paper.

Mr. MOONEY. But you see, after all, after you discuss this thing and go into it, don't you see the immense difference between the daily papers and the other publications, and don't you see in your zone rulings, etc., that while really attempting to equalize things with certain publications that you are putting a prohibitive tax on us. I don't want to throw it off on them.

The CHAIRMAN. I will tell you the difference. The increase in your paper will be just about 1 cent, perhaps  $1\frac{1}{4}$  cents. The increase in Collier's Weekly and the Saturday Evening Post will be about  $4\frac{1}{4}$  cents. So you see the increase is three or four times what it will be for you. Under the flat rate the Government makes you pay just as much for sending your paper an average of 255 miles as Collier's Weekly 1,200 miles, and it costs the Government more, and for that reason we favor the zone system.

Mr. MOONEY. I do not favor the zone system for myself and my paper. You were speaking about the Southern Publishers' Association. But let me make this point about one paper, the New York Times. Now, I hold no brief for that paper. Some things about it I do not like. But it is a great national newspaper, and I believe, Mr. Chairman, that it will be a most unfortunate thing for this country if there are not a few copies of the New York Times in California, and if there are not a few copies of the San Francisco Chronicle, for instance, in Philadelphia, and if there are not a few copies of my paper down South as a representative southern newspaper in New York and in Michigan. Because through the newspapers the New Yorker and the Frisco fellow and the North Dakota man will understand one another a little better. I really believe, Mr. Chairman, that if we had had a circulation of the daily newspapers that we have now from 1856 to 1860, I do not believe that we would have had the Civil War. I think that there is a value in the catholicity of thought that comes throughout the country by the wide circulation of daily newspapers from one section to the other. It breaks down provincialism. And it breaks down local prejudice, etc., and causes each section to have a little better understanding of the others.

And as to the daily papers, I think you are doing the New York Times and other great papers a great wrong when you make it impossible for that paper to circulate in San Francisco.

Another thing: In sending our papers to Europe, for the soldiers over there, we have to pay about \$15 or \$20 a year to get them there; and we pay that.

The CHAIRMAN. Do you think it would destroy those papers to keep them from going to San Francisco? I do not think it will.

Mr. MOONEY. It will not destroy the New York Times, or papers like that.

The CHAIRMAN. I mean the other papers.

Mr. MOONEY. But it will deprive the citizenship of the two sections from having a close communion and great appreciation and understanding of each other.

The CHAIRMAN. Do you think that these rates and existing law will prevent the San Francisco Chronicle, for instance, from going to New York, and the New York Times from going to San Francisco, and will prevent your paper from going to the uttermost parts of Texas with their editorials? Now, I do not think so. But suppose it does. I tell you how you can get the thought of a great newspaper to other sections. Suppose the New York Times reads a good thing in the San Francisco Chronicle; it will just quote that editorial and thus let the people in New York get the benefit of it; and if the San Francisco Chronicle sees a good thing in the New York Times it will copy it and thus let all of its readers read it. And would that not do more good than sending the papers out there, for the reason that the San Francisco Chronicle has 50 times as many subscribers in California as the New York Times has there, and therefore the Chronicle could take the editorial from the New York Times and give it 50 times as much publicity in California as the Times itself could. Could they not do that?

Mr. MOONEY. No; for this reason, that is as far as it goes. Here is what has already happened in the American newspaper offices.

I was interested the other day in the statement of Mr. Creel, the distinguished publicity chief of the Government. Some witness testified that the small weekly papers and the small daily papers, instead of gathering their war news and their governmental information from Mr. Creel's slips which he sends out—and which, by the way, are fairly useful; I do not think we have been exactly fair to Mr. Creel, but that is a horse of another color—instead of getting the news that way, the weekly papers get their information and news from the dailies, that they do not get it from these slips.

Now, it is a fact that the larger dailies, and the city dailies themselves under this new arrangement, are fast cutting out their exchange lists with the country weekly newspapers; those country papers are not getting them any more.

Now, the country editors are men of fine intelligence; they have splendid influence in their communities. The country editor in one of your counties of North Carolina, Mr. Chairman, can not afford to subscribe for the Chicago Tribune or the New York Times, or even the Louisville Courier Journal, under these new conditions. If Mr. Bryan himself turned the Commoner into a daily paper he could not afford to do that.

The CHAIRMAN. I thought you exchanged paper through courtesy!

Mr. MOONEY. We formerly exchanged papers through courtesy, you understand, but this condition is doing away with that. We formerly had an exchange list with 250 Texas papers, most of them

weeklies. That exchange was made because we wanted to get from the weekly papers the reports of cotton crop conditions; we run a cotton statistics department for the benefit of the grower. Now, we can hardly afford to send them to our daily under this increased postage rate.

There is one other consideration. You speak about passing it on to the consumer. We do not intend to pass it on to the consumer until we are losing money on our investment, because we feel this way about our subscribers, that they have been loyal to us in the past and we are going to stand by them as long as we have got a dollar left, and we will raise the price only when we are forced to do it by necessity.

As to meeting these losses by increasing advertising rates, we and probably other papers like us have a bill for white paper which is \$100,000 a year more than it was two years ago on the same tonnage. Our income tax is \$43,000, and we figured that we would get part of that back by raising the advertising rate. We raised the advertising rate, and we got \$24,000 of it back, and that is all. So we have finished raising prices on the advertiser. We do not intend to raise prices on the subscriber.

The CHAIRMAN. You made that increase on the advertiser, but did not get back the \$43,000?

Mr. MOONEY. We had an added expense of \$100,000 for white paper, and we had \$43,000 income tax, which is all right; and we had other added expenses running to about \$25,000, as near as we could figure them; and the only raise we could put on was a 3 per cent raise on our advertising, which yielded us about \$24,000; and we put that on six months ago.

So that we are at the end of our row in raising prices. And the other papers throughout the South. They can not raise the price of their daily papers and hold. We probably will have to do just as other southern papers will have to do.

For instance, it costs \$100,000 a month to print our paper. We buy Phillip Gibbs's cables from the New York Times; we buy foreign cables from the New York World; we have our own man in Europe. We have got to cut that off. And this thing will be particularly hard on the paper printed in a town of 150,000 or 200,000 population.

If this were the only thing, it would be a bagatelle. We are willing to give you 5 cents out of every dollar we take across the counter or anything like that.

And another thing is that we are protesting against this measure only for the reason that this is an accumulation; it is one of the various things that have run along, and run along; and we do submit that the tax on advertising is, we think, a tax that is a little bit unfair.

When it comes to adding a tax on business, if you want to raise \$8,000,000,000 by taxation—and I think you ought to raise half the expenses by taxation. You can not go along on your bond issues alone. You can not leave it all to posterity to pay—we have got to, in part, pay for this war by taking a dish off of the table; eat turnips instead of porterhouse steak, and it will carry us along just as well. But when it comes to adding a tax on business, get your tax out of the earnings; keep the business going and then tax the life out of it—or not quite tax the life out—

The CHAIRMAN (interposing). All the traffic will bear?

Mr. MOONEY. Yes; all the traffic will bear; but do not put us into such a condition that we can not function, because then your golden goose is dead. Whenever you get ready, tax all business in some way—and you may come to it, and say that “every time a dollar passes Uncle Sam is going to sweat 5 cents out of it.” We are perfectly willing for you to do that. We are willing to be taxed on our gross receipts, no matter if we are losing money.

We are not seeking to evade anything. If these advertisements yielded you \$10,000,000 or \$15,000,000, it would be a different question; but they will yield you only about \$2,000,000.

The CHAIRMAN. Do you mean \$2,000,000 on the daily newspapers?

Mr. MOONEY. On the daily newspapers.

The CHAIRMAN. For the first year?

Mr. MOONEY. For the first year. Mr. Chairman, they can say what they want at the Post Office Department, but it will take \$1,000,000 worth of bookkeeping to get that \$2,000,000—that is, unless we do it ourselves. And if we have to pay the added clerk hire to do it, then you are putting another tax on us of another \$100 a month, or something like that.

If it yielded you a revenue it would be different. But that is what we can not understand, Mr. Chairman, that here we are put to this trouble of having to come up here to this beautiful city. It is a beautiful city, but I do not like to come to Washington except for the intellectual pleasure of meeting you, gentlemen.

But here we are. We have been hammering at this thing for a year and a half, and the net result, in dollars and cents, is \$2,000,000; and I believe it is going to cost you 50-50 to collect it.

As a taxation proposition it is a bagatelle. It is a bad principle of taxation. As to increasing revenues of the Post Office, I do not think there is much in it.

Another thing, Mr. Chairman, with regard to weekly newspapers. You know there are a great many dailies in the South that print weeklies. The Louisville Courier-Journal used to have a weekly with 100,000 circulation. In 1896, when I was a little boy, Henry Watterson could not see the free and unlimited coinage of silver, you know, and the circulation of the weekly edition of his paper suddenly dropped.

The CHAIRMAN. That was the time that the Memphis Commercial Appeal began to build up its circulation, was it not? You took some of his subscribers from him, did you not? You ushered into a hole that he had just rushed out of?

Mr. MOONEY. No; we have built it up in this way: The way to build up a newspaper is to buy the news and sell it; and the more news you buy the more circulation you will have. Now, we have more daily circulation than any paper in the South, and there is only one reason for it—we buy more news and give it to our readers.

But as to weekly papers: The Atlanta Constitution has one with a circulation of 150,000 to 200,000; the Atlanta Journal has 100,000; we have one with 100,000; the Kansas City Star has one of 200,000 or 300,000. We sell our weekly at 50 cents a year to the subscriber. We get out of that weekly—I am entirely frank with you in this, and our books are there to show it—we get about 30 cents a year. The postage on those weeklies when the zone system goes into effect. I am afraid, will put those southern weeklies out of business.

The CHAIRMAN. The weekly of the Kansas City Star sells for 50 cents, does it not?

Mr. MOONEY. I think they sell it for 25 cents. It is about a 6 or 8 page paper. The Kansas City Star and the Atlanta Constitution and other weekly papers of that sort are papers of tremendous educational value, and they are the papers that you should not destroy, but which you will destroy by this system. Those are the papers that go into the home of the share-cropper, or the one-mule farmer, or the cabin of the "one-gallus" man; and it is about the only literature those people get. Those people can get our paper for 50 cents a year, or 5 pounds of cotton in normal times. They get the Kansas City Star for 25 cents. And the quality of the matter in those papers is high; there is a little Sunday-school lesson in them; there is a splendid farming page in most of them. I think we have the best farming paper in the South, if you will pardon my lack of modesty in saying so.

The CHAIRMAN. And you sell that for 50 cents a year?

Mr. MOONEY. Yes; 50 cents.

The CHAIRMAN. And you have about 100,000 circulation?

Mr. MOONEY. Yes; for the weekly.

The CHAIRMAN. I would not be at all surprised if it is the best farming paper in the South—except the North Carolina farm papers, whatever they are. [Laughter.]

Mr. MOONEY. The Progressive Farmer is a good paper.

The CHAIRMAN. Yes; it is a very fine paper; I know it.

Mr. MOONEY. They print it in Memphis; that is the reason it is so good.

The CHAIRMAN. Do you think that, in order to pay the increased cost of sending your farm paper through the mail under this zone system, if you would only increase your subscription price 5 cents, a single one of your subscribers would stop that fine agricultural paper rather than pay 5 cents additional? It is a fine paper; I have read it.

Mr. MOONEY. I expect he would.

The CHAIRMAN. Well, I do not believe he would.

Mr. MOONEY. You know the average man does not like the principle of it—this thing of passing it on to the consumer. I resent it myself. I am in it now up to the neck.

The CHAIRMAN. Suppose you would say something like this to your readers: "The Postmaster General under the present administration says that there is an annual deficit of seventy or eighty million dollars by reason of carrying newspapers and magazines throughout the country in the mails. The Curtis Publishing Co., of Philadelphia, for instance, which is the owner of three or four periodicals, pays the Government only about \$700,000 for the mail service for those papers, while it costs the Government over \$5,000,000 for that service; and they and their patrons and advertisers and subscribers are making out of the Government every year \$4,000,000 or \$5,000,000 clear, over and above what they pay the Government for the cost of the service. Now, we are in favor of a zone system in order to stop that annual deficit and stop great big concerns like the Curtis Publishing Co. from being subsidized \$4,000,000 or \$5,000,000 a year"——

Mr. McANENY (interposing). Why not separate the newspapers and magazines in this respect?

The CHAIRMAN. Wait a minute; let me finish. And suppose you say, "We want our readers to pay 5 cents extra for the best farming paper in the South," I believe under those circumstances they are patriotic enough to sustain this zone system, in order to enable the Government to recoup a few million dollars a year of these tremendous losses sustained on the second-class mail. Do you think you would lose any of your subscribers under those circumstances?

Mr. MOONEY. I think we would lose half of them the first round.

The CHAIRMAN. I do not believe it; I believe they would pay the 5 cents extra.

Mr. MOONEY. You can not handle such a small transaction in that way; you could not add that 5 cents; you could charge 25 cents, or 50 cents, but not 30 cents or 55 cents. You could get more subscribers at a dollar a year than at 75 cents, for example.

The CHAIRMAN. What proportion of the matter in the Kansas City Star consists of advertisements?

Mr. MOONEY. I suppose 8 or 10 columns. For instance, in our paper we run 10 pages, a 70-column paper, you understand, and there will not be over 10 columns of advertising in that paper.

The CHAIRMAN. In your whole paper?

Mr. MOONEY. In the weekly.

The CHAIRMAN. Yes; I understand.

Mr. MOONEY. That is during the summer time, and during the wintertime there may be 20 columns of advertising; but if there are 20 columns, we run the issue up to 12 pages.

The CHAIRMAN. So that 75 per cent of the contents of your weekly is reading matter?

Mr. MOONEY. Probably; yes.

The CHAIRMAN. That would not take more than 3 cents extra then, to pay for your advertising; I was figuring on a 50-50 division; it would take only 3 cents extra to pay the increased postage on that paper. I think it would do you good.

Mr. MOONEY. You will see how much trouble it is making when you come to consider the net revenues you get for the Government out of this infernal revenue tax; you will see then how vain it all is.

The CHAIRMAN. Well, they have calculated it for the four years; you have to have one year to start; and then they estimate that after the 1st of July, 1920, they will get in \$25,000,000 to \$30,000,000 extra. That will still leave a loss to the Government on account of serving the newspapers and magazines of \$60,000,000 a year.

Do you think, as a fair-minded man, between man and man, that Congress, in the face of these facts and the figures which the Post Office Department gives us, is pretty moderate now in those rates, and gave sufficient time to the publishers to adjust their subscribers and their advertisers to the increased rates?

Mr. MOONEY. I do not, for this reason, Mr. Chairman: In the first place, with all respect to the statistical department of the Post Office Department, there is none. In the next place, we ourselves, in seeking a basis, in seeking arguments, etc., in this matter, we ourselves in seeking to find out whether the Post Office Department view was correct or our view was correct, can not get any information at the Post Office Department. The whole thing, Mr. Chairman, is a shot in the dark.

The CHAIRMAN. But you must admit that the Government is transporting newspapers and magazines for nothing—free.

Mr. MOONEY. I do not. I make a distinction between newspapers and magazines. Of course, the magazine people are smarter than we are. Somebody said newspapers have a wide influence. They have not; newspapers, when they work together, are the frailest force; they have less influence than any other association that you know of. We have no influence. We can hardly get together; it is the hardest thing in the world for us to get a delegation to come to Washington.

The CHAIRMAN. When you do get together, you have almost as much influence as the newspapers in Canada.

Mr. MOONEY. Even the newspapers in one town will not get together on any proposition.

The CHAIRMAN. Not on anything except to oppose increasing their costs.

Mr. MOONEY. They will not even get together on the main chance.

The CHAIRMAN. When you want to get together to oppose a rate which would give a little money to the Government, it is pretty easy to get them together.

Mr. MOONEY. We are not all together on this proposition.

The CHAIRMAN. Yes; you are all together in not wanting any increase; some are for a zone system and some are for a flat rate; but all of you are together on opposing the rate just at this time. That is true, is it not?

Mr. MOONEY. That is true, but it is true with this addition: Mr. Chairman, we are not seeking to avoid any tax; we are not seeking to avoid any burden that has been put on us. I submit that the American newspaper publishers have been under a greater burden during this war than any other instrumentality in this country.

Now, I do not say this boastingly; but my paper itself, if it had charged advertising rates for matter that was legitimate advertising, would have charged the United States Government last year for free advertising—not free news, you understand, but for stuff that they sent us that we would properly classify as advertising—what do you suppose our bill would have been, Mr. Chairman, at the current card rates? It would have been \$178,000. Now, if it had not been for the fact that the United States sent us that stuff, we would not have printed it at all.

The CHAIRMAN. I think you could have charged the Government—and all the newspapers and magazines could have charged the Government—the same rates that anybody else would be charged, and still they would not have charged as much as the \$70,000,000 that the Government is losing on handling their papers. And after this zone rate goes into effect, you are going to cost the Government, according to the statistics of the department, about \$60,000,000 more than it gets from you; and does it not seem as if that \$60,000,000 the Government will give you every year will really pay for some of this free advertising you are giving the Government in advertising liberty bonds, and all of that sort of thing?

Mr. MOONEY. That is not the point, I submit most respectfully.

The CHAIRMAN. Well, I just make that suggestion.

Mr. MOONEY. But we have never regarded our relation to our Government as a dollar-and-cent thing, you see. The fact is now

that the United States Government in the city of Washington has 70 agencies attempting to get free space in American newspapers. There is one particular part of the Government that I must make an exception of, because they have not been particularly avaricious—I do not mean avaricious, but greedy—and that is the Marine Corps.

The newspapers during this war have been printing this matter, or as much as they could. They have practically responded to every demand the Government has made, at a heavy expense; some of the newspapers, because of the very demands of the Government, have had to put on additional men. On one occasion I have had to print two extra pages of white paper in order to print Government publicity—which was my duty, as a prosperous newspaper; I ought to have printed it.

The CHAIRMAN. Let me ask you this: Approximately how much more was the net income of your paper, or your publishing company, in 1917, than in 1914?

Mr. MOONEY. 1914 was the year of the outbreak of the war, was it not?

The CHAIRMAN. Yes.

Mr. MOONEY. 1914 was very little more; perhaps \$20,000 more net income.

The CHAIRMAN. Was it more in 1917 than in 1916?

Mr. MOONEY. No, it was not; 1916 was a better year than 1917.

The CHAIRMAN. It was better than in 1915, was it not?

Mr. MOONEY. I do not think so; I think our bad years—

The CHAIRMAN (interposing). When you revise your remarks will you get from the Treasury Department—they would give the information to you, although they would not give it to me—the figures as to your income tax for 1914, 1915, 1916, and 1917, and insert in the record a statement as to how they would run? And I believe they will show that you have made more money in 1917, more net income, than you have at any time since 1908, 1909, or 1910, or somewhere along there.

Mr. MOONEY. I think you will find that is not correct.

The CHAIRMAN. I hope you are making more money, because then we will get more tax out of you, and I think you deserve it; I think your paper is one of the most remarkable papers I know, and its success has been remarkable.

Mr. MOONEY. I will say this, that our condition was unique and differed from that of most other Southern papers, because we had a paper contract that ran us nearly into 1918; but let me also say that our profits this year will not be one-half what they were last year.

The CHAIRMAN. Do you mean after paying excess-profits taxes and income tax—

Mr. MOONEY (interposing). They will not be one-half before the next taxes are paid, because of conditions as to white paper. Now, we made last year a profit of about \$170,000; between that and \$180,000, but part of that was doubtful stuff. Say, a profit of about \$170,000.

Now, Mr. Chairman, that was on \$1,100,000 worth of business; that was not an enormous profit on that much business.

If we had charged off our income tax from that \$170,000, we would have cut our profits down to \$130,000.

This year, our paper, as things are running now, will not make more than the amount it paid last year in income tax, to wit, \$40,000, because our white paper alone is \$10,000 more a month now than it was this time last year, and there is \$120,000 gone, you see.

And what is true of the Memphis Commercial Appeal is, unfortunately, more true of most of the other papers in the South.

The CHAIRMAN. Just for our information, can you get now a contract with the paper companies extending over two or three years, as you formerly could?

Mr. MOONEY. No, Mr. Chairman, that is a thing that is very nebulous; I do not understand it much. That is a thing the the American Newspaper Publishers Association has been concerned in more vitally than anything else, because that trouble began three years ago and pressed us and pressed us, and last year it was not a question of paying 5 cents a pound more for paper; it was a question of the supply.

Mr. GARNER. It was a question of whether you could get it at all?

Mr. MOONEY. Of whether we could get it at all. If they did not like you, if they did not like the color of your eyes, they would stop doing business with you.

The CHAIRMAN. You know that this Congress and several of the last preceding Congresses has done all it could, constitutionally, to help you out as to your white paper; has it not?

Mr. MOONEY. Mr. Chairman, I want to be respectful; but I would like to get a bill of particulars of how you have helped us.

The CHAIRMAN. I remember when you gentlemen came here and asked us for free print paper; and Congress gave it to you.

Mr. MOONEY. That is true.

The CHAIRMAN. Wait a minute; that is what your association went on record for; you demanded that?

Mr. MOONEY. Yes.

The CHAIRMAN. And I remember that Herman Ridder was chairman of your committee which worked on that; and I remember that in the Sixty-first Congress they were talking themselves hoarse to the effect that all of your newspapers would be ruined because these monopolies were gouging you and robbing you, and you had to have free print paper and wood pulp. And we gave it to you. Then, in 1916, you came back here and said that the price had been increased from 3½ cents to 4 cents; and we gave you the relief you asked then. But I said on the floor of the House both times that I doubted whether the legislation would give you very much relief. So that those are some of the things this committee has done; I think it has done pretty well by you.

Mr. MOONEY. Mr. Chairman, I do not think I can say anything further.

The CHAIRMAN. You have made a very interesting statement.

Mr. MOONEY. I shall be very glad to answer any questions.

The CHAIRMAN. I have no more. Does any member of the committee desire to ask any questions?

Mr. RAINEY. I did not understand your statement as to only \$2,000,000 being involved in this zone proposition.

Mr. MOONEY. I understand, if I am correctly informed, that the Government will get out of the daily papers about \$2,000,000 added postal revenues; that is my understanding.

Mr. RAINEY. We understand that the entire zone proposition as it appears now in the law will bring in about \$30,000,000 after it goes into full force and effect in 1920; of course, it does not go into full force until 1920.

Mr. MOONEY. But even then the papers themselves would not——

Mr. McANENY. Pardon me, but may I quote the figures of the Post Office Department? Their estimate in the fourth year is not \$30,000,000, but \$16,000,000; and their estimate in the fourth year upon newspapers is \$6,400,000.

Mr. RAINEY. I mean the total.

Mr. MOONEY. The total is \$16,000,000 the fourth year.

Mr. RAINEY. That is what the figures show, \$16,000,000?

Mr. MOONEY. Yes, at the end of four years.

Mr. RAINEY. Then, you make a lot of fuss about it for such an amount as that.

Mr. MOONEY. That is our contention; we contend that the whole system is vicious as a system of taxation; and, after all, you do not get much revenue from it.

Mr. RAINEY. If you will only return by this law \$16,000,000 out of a loss of \$80,000,000 to the Government carrying your papers, then we have not taken all the steps we ought to take; we ought to raise the figures still more.

Mr. MOONEY. If you will pardon me, instead of raising your rates, if the Post Office Department itself will do away with some of the wastes and abuses that this second-class mail system entails, I believe that this alleged deficit will be cut down and down; and I do stand squarely upon this contention, Mr. Congressman, that the daily and weekly newspapers of the United States——

Mr. RAINEY (interposing). What wastage do you refer to in connection with the distribution through the mails by the Post Office Department of newspapers and magazines that can be remedied?

Mr. MOONEY. If the Post Office Department itself would first clearly look into certain publications that claim to be magazines and claim to be periodicals for a particular class, etc., they would find that a great number of those are not legitimate second-class publications, do you understand, and would take them out of that privilege?

Mr. RAINEY. What, for instance?

Mr. MOONEY. Well, there are certain so-called agricultural papers, for instance, they sell them to the subscriber for 10 cents a year, or something like that. There are certain publications that are published entirely for an advertising revenue, and have just enough reading matter in them to get them in. The Post Office Department ought to have the courage to keep those things out of the mail.

Mr. RAINEY. Such as the Literary Digest?

Mr. MOONEY. No; I think the Literary Digest is a very useful publication.

Mr. RAINEY. Nearly all of it is advertising matter.

Mr. MOONEY. No; I read it yesterday; and it had several very good articles in it; I read it an hour last night.

Mr. RAINEY. You have to hunt through a microscope to find anything among their numerous advertisements.

Mr. MOONEY. I read that; and then I went to sleep over Col. Harvey's Weekly.

Mr. RAINEY. Then you would exclude from the mails newspapers which contained too much advertising?

Mr. MOONEY. No; I would not state it that way. I would exclude from the mail any publication that any man of ordinary judgment would see was using barely enough news or reading matter to get by its advertising; that you yourself, as a man of common sense and of experience could say was not really printed in good faith as a magazine and had no right to the second-class mail.

Mr. RAINEY. Such as the Iron Age?

Mr. MOONEY. I never saw that publication.

Mr. RAINEY. Would it not be a most difficult proposition for any department to determine how much advertising ought to be in a newspaper in order to allow it to go through the mail as second-class matter?

Mr. MOONEY. No; when it ceases to be a newspaper it ought to be barred, not only from the second-class mail, but from all mails.

Mr. RAINEY. We would cut the newspaper circulation of the country one-half, at least, if we adopted your proposition.

Mr. MOONEY. I do not think so at all.

Mr. RAINEY. You do not?

Mr. MOONEY. No.

Mr. RAINEY. You spoke of your giving publicity for the Government in the matter of the liberty loans. Is that your reason for continuing your rates?

Mr. MOONEY. In the matter of loans?

Mr. RAINEY. Yes; Government loans and other Government publicity furnished by you.

Mr. MOONEY. No; I said this, that there were 70 departments of the Government seeking publicity through the newspapers, and that if we had charged the Government for the amount of free matter that we printed last year it would have amounted to \$170,000. But that does not include the liberty loan advertising.

Mr. RAINEY. A great many newspapers did charge for liberty loan advertising, I understand?

Mr. MOONEY. No.

Mr. RAINEY. Yes; a great many did.

Mr. MOONEY. At the time of the first liberty loan we would not accept advertising, even when it was paid for by the merchants in the city.

Mr. RAINEY. One paper that belongs to your organization, in Boston, refused to carry a liberty loan advertisement which contained extracts from speeches of the President of the United States, and violated its contract rather than publish a liberty loan advertisement, and paid \$500 as a penalty for not doing it, and that paper belongs to your association.

Mr. MOONEY. Well, the editor of that paper was very stubborn and very much out of line with the sentiment of the newspapers generally.

Mr. RAINEY. And another paper in your association refused to give any information about this last liberty loan without pay.

Mr. MOONEY. That editor was certainly shortsighted. Do you not think so? And, of course, you know there are 500 or 600 members of our association—probably 600—and they can not all be 100 per cent Americans, you know.

Mr. RAINEY. I have a certified copy of the statements to which I am referring, and if you want to see them I will produce them. postal

Mr. MOONEY. No; I am not interested in them. I am sorry there is a member of the association that is so narrow as that.

Mr. RAINEY. A great many members of your association did receive pay for carrying the advertisements of the Government in regard to the last liberty loan.

Mr. MOONEY. They received payment in this way, that certain interests in a city grouped themselves together and paid the newspapers for that advertising.

Mr. RAINEY. And they were also paid out of the Treasury of the United States, some of them.

Mr. MOONEY. I do not understand that there was any daily newspaper paid out of the Treasury of the United States; I do not see how it could have been done.

Mr. RAINEY. Well, the Secretary of the Treasury had the right to do it, and I think he did it in some cases.

Mr. MOONEY. I thought the law forbid advertising the loan in newspapers.

Mr. RAINEY. No; it did not forbid that at all. And they demanded it; papers belonging to your association carried a paid advertisement here in Washington—I have a copy of it in my office which I can produce—advocating pay for newspapers for advertising liberty loans.

Mr. MOONEY. Well, as a matter of fact, I do not see that they were outside of their rights when they did that.

Mr. RAINEY. I do not either; but when they take that position, they have no right to have you, representing them here, say that they are carrying those advertisements free and therefore they ought to go free through the mails.

Mr. MOONEY. I was only speaking for my particular paper when I spoke of the \$170,000 worth of advertising. I am not speaking for any other paper as to what it did about the loans. But I know a great many of them do about what I do as to Government war advertising. But if the Government had done all its advertising in the newspapers, the expense of floating the loans would have been about 50 per cent of what it was; and they would not have wasted their money on signboards and orators.

Mr. RAINEY. Yes; that was the argument that was used in that article.

Mr. MOONEY. The fact was that the newspapers themselves had to finally put the loan through, and without the newspapers the loan would not have been the success that it was.

Mr. RAINEY. The liberty loan information that they published in their columns was among the most interesting matter that they published; and their readers read it with greater interest even than they read the editorials.

Mr. MOONEY. I doubt it. Of course, for the average reader the editorials are a little heavy; but in the newspapers the story of the liberty loan could have been told from day to day in 100 words. The most interesting things the newspapers are publishing are the death lists that come from abroad.

Mr. RAINEY. I do not know why you should speak of that in connection with this matter.

Mr. MOONEY. I am just talking about news value.

Mr. RAINEY. You are in favor of producing catholicity of thought; and you think that is brought about by the present system?

Mr. MOONEY. I think that is helped by the present system.

Mr. RAINEY. Helped by the present system. You think that we are avoiding sectionalism in our newspaper and magazine press by the present system, do you?

Mr. MOONEY. Yes; it is one of the things that help to do away with sectionalism; they are newspapers, railroads, and telegraphs.

Mr. RAINEY. In what section are the national newspapers published that would be principally affected by the law as it stands now?

Mr. MOONEY. So far as the newspapers are concerned, they are affected all over the country; so far as the magazines are concerned, they are affected mostly in New York and New England.

Mr. RAINEY. That is where they are published?

Mr. MOONEY. That is where they are published.

Mr. RAINEY. They are published in that zone; and by perpetuating that zone of publication under the system as it existed heretofore—by perpetuating this zone system here in the East, you think we are going to abolish sectionalism, and bring about catholicity of thought? Is that your idea? In other words, they are enabled now, under the present system, to publish newspapers right next door to the paper mills, as they do—and that is the principal reason why they are published in the East and then carried all over the country from the East, disseminating the thought of this particular Eastern zone. You say that is a method of obtaining catholicity of thought in the country?

Mr. MOONEY. Let me make this distinction. In the first place, magazines and literary publications in all countries are always printed in one city. There is a center of literary thought in every country in one city.

Mr. RAINEY. Yes.

Mr. MOONEY. The center of the printing and magazine business in Germany was Leipsic, and the center of the business in France was Paris. And we will never have any general diversification of the printing of newspapers and magazines.

Mr. RAINEY. Not under this system.

Mr. MOONEY. Or any other system.

Mr. RAINEY. Your newspaper is published in the South, is it not?

Mr. MOONEY. Yes.

Mr. RAINEY. It is published in Memphis?

Mr. MOONEY. Yes.

Mr. RAINEY. Let me call your attention to what a distinguished southerner said about the system which is now in force, and has been since 1885, when it was inaugurated.

In about 1791 the question of a zone system or a flat-rate system for newspapers was discussed in the Congress of the United States. At that time Mr. Bourne was a Member of Congress from the State of Massachusetts, and he presented to the Congress the theory that newspapers and magazines ought to be carried over the entire country at a uniform rate, in order to insure catholicity of thought and to prevent a sectional press. That was the position taken by Mr. Bourne of Massachusetts; he was a very distinguished Member of Congress from that State, who had occupied other responsible positions.

In response to that, Mr. Goodenow of the State of New Jersey, presented the southern theory. At that period there was not any

West; there was just the North and the South. Mr. Goodenow presented the southern idea, and he answered Mr. Bourne. You can find all of this in the "Congressional Globe."

Mr. Goodenow said that a uniform system of postage for newspapers and magazines would result in establishing and perpetuating publishing houses in the seat of Government and in the North, and that it would give them an undue advantage over the South. That was the argument presented by Mr. Goodenow.

Mr. Goodenow's argument prevailed; and the zone rate was established, the first zone for 100 miles, and the second zone for more than that. And there were other zones established. There were fifteen changes made in the zone system, down to the time when you got the 1 cent a pound rate; and as soon as you got the 1 cent a pound rate cheap magazines sprung up, getting all of the valuable advertising that you clamor for—and that you do not get—

Mr. MOONEY (interposing). We get all we need.

Mr. RAINEY (continuing). All published here in the East, nearly all of them, and circulated all over the country. In other words, Mr. Goodenow's advanced ideas in 1791 prevented the occurrence of the thing the dangers of which he pointed out, until 1885; when we did establish a uniform rate and the sectional magazine and national newspaper press which we now have.

Mr. MOONEY. I do not care what sort of a system of postage you have, your magazines will always be printed around one center in the United States; it may pass from New York to Chicago; the fact is that it has already passed from Boston to New York; it may go somewhere else, but it will always be in one city in the United States.

Mr. RAINEY. I want to call your attention in this connection to how we came to establish the 1-cent rate:

It was not established for any such reason as you have given, or any gentleman who appeared for you has given.

The reports made in 1885 from the committee, and the speech on the floor made by Mr. Townsend, of Illinois, advocating the 1-cent rate, were to the effect that it would enable the newspapers and magazines not only to pay their own way, but to yield a large revenue besides. On account of that argument, and that presented by the committee in 1885, we adopted the 1-cent a pound rate, because it would not produce but would yield very large revenues to the Government and pay its own way. And at that time our Post Office bill amounted to only \$50,000,000 or \$60,000,000.

And for a year or two, and until this mass of advertising made its appearance in the newspapers and magazines, it did yield some revenue. After that the deficit has increased, until it is now from \$80,000,000 to \$90,000,000.

Now, that is one thing that you gentlemen never call to the attention of the readers of your papers.

I do not believe I want to ask any more questions, Mr. Chairman.

The CHAIRMAN. Does any other gentleman desire to ask Mr. Mooney any questions? If not, we are much obliged to you, Mr. Mooney.

Is there any other gentleman present representing the newspapers who desires to be heard.

Mr. MOONEY. We want Mr. Cowles, of the Des Moines Register, to speak a few minutes.

**STATEMENT OF MR. GARDNER COWLES, DES MOINES REGISTER AND TRIBUNE, DES MOINES, IOWA, REPRESENTING AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION.**

Mr. COWLES. I only want to speak very briefly.

The CHAIRMAN. Please state your full name and whom you represent.

Mr. COWLES. My name is Gardner Cowles, and my paper is the Des Moines (Iowa) Register and Tribune.

Of course, I live in the interior, in a State without large cities. Des Moines is the capital of the State and has a population of, perhaps, 110,000 to 120,000.

It has seemed to me, Mr. Chairman, that you were giving an undue amount of attention and interest to newspapers like the New York Times and too little relatively to the smaller dailies of the country.

Using Iowa as a typical State, we have, aside from the dailies in Des Moines, probably 12 or 15 other daily newspapers in Iowa that are fairly representative, that secure a fair press report, and serve a very useful purpose. I mean to say that, while I would be willing to admit that we publish a most excellent newspaper, it circulates very largely within the State of Iowa; for instance, 96 or 97 per cent of our circulation is within the State. The average haul which the Post Office Department carries our paper—and you will pardon me for simply referring to our own paper in illustration—is 75 or 80 miles. We have believed, and still believe, that in any fair arrangement, the 1-cent a pound, or dollar a hundred, rate was equitable. We may be in error about that; but I am giving the basis under which business has been built up and which we believe was fair. We do not tax the facilities of the Government to any great distance.

This law that you have enacted, which nobody seems to have been willing to take the parentage of; it seems to have just happened—

Mr. RAINEY (interposing). We take it.

The CHAIRMAN. There is such a thing as being the real father of a child, and as being the father of an adopted child. So far as I am concerned, I am willing to adopt it. I am not the real father, but I am willing to adopt it. [Laughter.]

Mr. COWLES. The law seems to me to be inequitable. Now, we print nine editions of our paper a day. The paper varies very much in size in the different editions. It becomes a very difficult matter to figure the postage under this bill; it will take a lot of accounting, either by the Post Office Department or by us, or by somebody else. I just mention that to emphasize the difficulties of the administration of this law the way it is drawn.

I doubt myself the wisdom of this indirect tax on advertising. At the present time, we have made a very careful estimate of this law—I do not know whether this will interest you or not—as to the effect of it. We have a very large mail circulation. Conditions in the West are very different from what they are in many of the eastern papers. Probably two-thirds of our circulation is outside of the city, and probably 50 per cent or more of our total circulation goes through the mail; so we have relatively a very much larger postal bill than appears in cities very much larger than Des Moines.

A careful computation here a few months ago about this bill showed that, if there is no change in our business as it is running, under the old rate we would pay the Government in postage, \$37,000 a year.

The CHAIRMAN. You do pay that now?

Mr. COWLES. That is the present rate we pay, for a haul that averages 75 or 80 miles; the computation that we make on the basis of which we run news and advertising shows that when the four years are gone through, it would add about \$29,000 to the postage.

We will, of necessity, have to pass that on to the subscriber. It means the disorganization of our business and changing the whole system under which it has been built up.

Here is a newspaper that does not normally circulate out of the State to any extent that I think serves a useful purpose or the people would not take it in the numbers that they do, and the law would injure it in that way. I do not believe—at least, some of the Congressmen have told me that they had no idea that it affected the smaller newspapers in the way in which it does; they seemed to refer to the Curtis Publishing Co., or some of those great offenders, as being the ones that they were trying to reach instead of the more moderate size daily newspapers through the West and the South. I do not know whether you are interested in this or not.

There are papers like the Washington Star that hardly use the mail at all. The Chicago Daily News hardly uses the mail at all; it is practically wholly a local proposition.

There are other publications, like the Wichita papers and those at Lincoln, Nebr., and Des Moines, Iowa, that are published in relatively not very large cities, that are using the mails very largely; and this law will entail really a complete reorganization of their business if it is not modified in some way.

The CHAIRMAN. How many subscribers have you?

Mr. COWLES. One hundred and fifteen thousand.

The CHAIRMAN. One hundred and fifteen thousand; and it circulates within 75 miles?

Mr. COWLES. I say the average, Mr. Chairman.

The CHAIRMAN. I mean the average is 75 or 80 miles?

Mr. COWLES. Yes.

The CHAIRMAN. That is, you come within the second zone?

Mr. COWLES. Between 96 and 97 per cent of our business is within the first two zones.

The CHAIRMAN? You have about as many subscribers as any paper I know of within such a short distance. You have another wonderful, unique paper. How much is your subscription price?

Mr. COWLES. The price by mail for a six-day paper varies from \$4 to \$5 a year.

The CHAIRMAN. By July 1, 1920, you would only have to raise your subscription, in order to absorb the whole increased cost, about 21 cents. Do you not think your subscribers could stand that? I mean, would they not be willing to do it?

Mr. COWLES. All I can say is that we have raised since these print-paper troubles have come on the mail subscriptions \$2; we used to sell it at \$2 a year.

The CHAIRMAN. For the daily paper?

Mr. COWLES. For the daily paper. We have already got the minimum up to \$4. Whether another increase will be possible I do not know.

The CHAIRMAN. How many more subscribers have you now than you had two years ago?

Mr. COWLES. About 30,000.

The CHAIRMAN. Thirty thousand more?

Mr. COWLES. Yes.

The CHAIRMAN. So your increasing your subscription from \$2 to \$4 did not decrease your number of subscribers, but nearly doubled it?

Mr. COWLES. I think we have been able to get where we are—I simply tell you the facts—

The CHAIRMAN (interposing). I understand. And you think that simply raising your price 20 cents would decrease your circulation, when you have three years in which to make that raise—that is 6½ cents a year?

Mr. COWLES. I think you underestimate that there are difficulties under which a newspaper using as much white paper as we do in a town of our size operates. We are paying \$100,000 more for white paper than we paid two years ago. We have had to do all the financing that was possible to meet the added cost, and I was using our case as wholly typical of what other newspapers have to meet.

The CHAIRMAN. What is the difference between your income tax return in 1917 and that in 1914?

Mr. COWLES. Well, our business is very much larger; but there are various other elements that enter into that.

The CHAIRMAN. So that your net income was considerably more in 1917 than in 1914?

Mr. COWLES. Yes, but it will be less in 1918.

The CHAIRMAN. Yes.

Mr. COWLES. That is, so far 1918 indicates that it will be. We were operating under very favorable paper conditions up until September 1 last year. We paid 2½ cents for paper at that time; that was the highest that we had paid; we had got it as low as 1.90; and now, of course, we are paying 3.10, with 60 or 70 per cent increase in freight.

The CHAIRMAN. How close are you to the paper mills?

Mr. COWLES. We buy from Canada, Sault Ste. Marie, which is a long way off; there is no mill at all close to us.

Mr. DICKINSON. What is the name of your paper?

Mr. COWLES. Des Moines Register and Tribune.

The CHAIRMAN. Does any other gentlemen desire to question Mr. Cowles?

Mr. HELVERING. As a matter of fact, the regulations carrying this zone rate into effect are what you object to, are they not?

Mr. COWLES. Well, are you asking my personal opinion about it?

Mr. HELVERING. Yes; I am asking for your opinion.

Mr. COWLES. I think in the first place that this advertising part of the law is going to be very burdensome and annoying in its application—if it is passed. Secondly, my own belief is that these papers that circulate only on an average of 75 or 80 miles—the 1-cent rate that they have heretofore enjoyed was fairly compensatory to the Government for the service.

Mr. HELVERING. Let me ask you this question: You said you had nine issues a day. But you have just one mailing issue, have you not?

Mr. COWLES. No, practically every issue goes into the mails. We

Mr. HELVERING. It would be necessary for you to figure the advertising in all the different issues of your paper, would it? That is, you would have to make up the proportion of advertising of all the issues of your paper?

Mr. COWLES. Yes.

The CHAIRMAN. But if the department should adopt a regulation that you could average it by the month, taking three or four days in the month as a basis, that would help considerably, would it not?

Mr. COWLES. That would be very much better than to attempt to calculate it on each issue every day.

The CHAIRMAN. Certainly. I do not see how they could do it on each issue; they would have to do it the other way.

Mr. DICKINSON. Do the different issues have different advertising?

Mr. COWLES. We run what we call a 24-hour newspaper. We get the day and night full press reports, and it becomes a continuous performance. We get out five issues during the night and four during the day. We give the man the last possible edition that will reach him.

The CHAIRMAN. Have you any other statement to make?

Mr. COWLES. No; I simply wanted to say to you: Do not get your mind focused on the thought that it is only the big newspapers that are affected. There are scores of the smaller daily newspapers that will be forced to seriously change their business methods if this law continues.

Mr. HELVERING. We have in my State several papers not as large as yours, but otherwise about the same. What proportion of your paper goes by mail, and what is the city circulation?

Mr. COWLES. We will say that of the 115,000, about 40,000 are in the city, or where we distribute, the city or the immediate suburbs, and 75,000 go outside, and approximately 60,000 of those go into the mail.

Mr. HELVERING. Then slightly over 50 per cent of your paper goes by mail. Well, that is about the same as the Topeka and Wichita papers. Some of them have been writing to me on the subject.

Mr. COWLES. They are similarly situated to Des Moines; that is, they have a very large mail circulation; and then there are papers like the Washington Star and the Chicago Daily News that have practically no mail circulation, so that this law does not affect them at all.

Mr. HELVERING. That is all.

The CHAIRMAN. Is there any other gentleman who would like to be heard on this subject?

**STATEMENT OF MR. THOMAS R. WILLIAMS, BUSINESS MANAGER PITTSBURGH PRESS, PITTSBURGH, PA., MEMBER AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION.**

Mr. WILLIAMS. I should like to say a few words, Mr. Chairman. My name is Thomas R. Williams. I am not here as a member of the postal committee of the American Newspaper Publishers' Association, although I am a member and director of that association, but as a substitute.

The CHAIRMAN. What paper do you represent?

Mr. WILLIAMS. I am business manager of the Pittsburgh Press. I appear as a substitute—and, I feel, a very poor one—for Mr. George S. Oliver, publisher of the Gazette-Times and the Chronicle-Telegraph of Pittsburgh. Mr. Oliver is a member of the postal committee of the American Newspaper Publishers' Association, and he fully intended to attend this hearing with the other members of that committee.

But at this time Mr. Oliver, who is president of the Pittsburgh Chamber of Commerce, is working at a power proposition with the Government, which is aimed to ultimately greatly increase the output of war materials in Pittsburgh. That is why Mr. Oliver is not here, and that is why I am here in his place.

Mr. RAINEY. Is Mr. Oliver against this zone proposition?

Mr. WILLIAMS. He is for this proposition that has been outlined by the American Newspaper Publishers' Association; he stands on that.

Mr. RAINEY. Was he not for this zone system as we have it now?

Mr. WILLIAMS. No.

The CHAIRMAN. Did not his paper take the position after it was passed that it was proper and ought not to be repealed; and did not his paper take a stand in favor of the House bill very strongly?

Mr. WILLIAMS. I can not answer for the editorial attitude or utterances of his paper, Mr. Chairman, but I can say, as a member of the American Newspaper Publishers' Association and as a member of our Pittsburgh Publishers' Association, Mr. Oliver voted in accord with the resolution of the American Newspaper Publishers' Association that we have presented here to your committee.

The CHAIRMAN. Is he the son of the former Senator from Pennsylvania?

Mr. WILLIAMS. Yes; he is the son of George T. Oliver.

The CHAIRMAN. Yes; I remember distinctly that in the House Mr. Longworth read an editorial from his paper very strongly commending the House bill, where the rates were higher than they are in this bill—in the original bill.

Mr. WILLIAMS. I can say this: I am not familiar with the editorial utterances of his papers on the subject. I am familiar with the vote of Mr. Oliver in our local publishers' association in Pittsburgh. I happen to be president of that local association at this time, and that is why, I assume, Mr. Oliver asked me to come down here in his place. Our association about a year ago, when this matter was up here, voted in favor of the zone system and sent a telegram to that effect. And it was conditioned on the ground that a thorough investigation should be made; and if the need for raising this revenue in this way was apparent, then we favored the zone system. That is identical, I take it, with the stand and view of the American Newspaper Publishers' Association.

And I feel that a citation of the case of our Pittsburgh paper, the Pittsburgh Press, or the other Pittsburgh newspapers, would add very little to the information that you gentlemen want on this subject, because it is identical with that which has already been given. The measure would affect us all in the same way.

The CHAIRMAN. How many subscribers has the Pittsburgh Press?

Mr. WILLIAMS. The daily, 125,000 to 130,000, and about 150,000 on Sunday.

The CHAIRMAN. How much do you get for it?

Mr. WILLIAMS. \$9 a year.

The CHAIRMAN. Do you know how much postage they paid the Government last year?

Mr. WILLIAMS. I do not.

The CHAIRMAN. Have you made a calculation to see how much this zone system, after it finally got into full operation July 1, 1920, would increase the cost of your postage?

Mr. WILLIAMS. We are in a peculiar position on the Pittsburgh Press; and I can say, like the New York Times, which is not materially affected by this proposition. We are not materially affected by it as it stands to-day, for this reason: We are an afternoon paper, and we have a very small mailing list. Our mailing list is so small that we are having an investigation made to ascertain whether it would be profitable to us to charge this additional postage rate to our subscriber, or bear it ourselves, for the reason that the cost of keeping tab on it from day to day and billing it out to the subscriber may be more than what it will amount to with us.

The CHAIRMAN. You say yours is an afternoon paper?

Mr. WILLIAMS. Afternoon.

The CHAIRMAN. You do not go through the mails?

Mr. WILLIAMS. Not to a great extent. That is the reason—

The CHAIRMAN (interposing). Have you put up your rate from one cent to 2 cents, or has it been two cents—the papers that you sell on the streets?

Mr. WILLIAMS. The Pittsburgh newspapers were among the first in the country to see that it was an absolute necessity to increase the rate from one to two cents.

The CHAIRMAN. Did they do that after January?

Mr. WILLIAMS. No.

The CHAIRMAN. Since October 3?

Mr. WILLIAMS. No.

The CHAIRMAN. When did they do that?

Mr. WILLIAMS. That was done December 1, 1916.

The CHAIRMAN. 1916?

Mr. WILLIAMS. Yes.

The CHAIRMAN. So that your paper, like those of the other gentlemen who have spoken, was making more net income in 1913 than it was in 1914, 1915, and 1916?

Mr. WILLIAMS. I am not prepared, Mr. Chairman, to answer that question. I know that our income this year will be very much less than last year or 1916, or 1915, on account of increased expenses that have come on since 1917.

The CHAIRMAN. When you say "this year" you mean 1918?

Mr. WILLIAMS. Yes, 1918.

The CHAIRMAN. Refreshing my memory as to what Mr. Longworth read when we had the bill under consideration, which was higher—not very much higher, but somewhat higher—on the zones than the present law, I will read from the Congressional Record of May 22, 1917, as follows:

Mr. LONGWORTH. Mr. Chairman. I want to say that all Pennsylvania statesmen are not as one upon this subject. I will send to the clerk's desk and ask to have read in my time a letter that I received this morning from a very distinguished Pennsylvania statesman, containing an editorial published in a newspaper owned by him.

(The clerk read as follows:)

PITTSBURGH, PA., *May 19, 1917.*

HON. NICHOLAS LONGWORTH,  
*House of Representatives, Washington, D. C.*

MY DEAR MR. LONGWORTH: I inclose editorial published this morning in my newspaper, the Pittsburgh Gazette Times. I wrote this editorial myself.

It would seem to me that the stand taken by most publishers against any increase in second-class rate was very selfish and narrow, that it was up to me to disclaim any sympathy with them, and to say that all newspaper publishers are not anxious to shift the burden of taxation to other shoulders.

Very sincerely, yours,

GEORGE T. OLIVER.

Then follows at some length the editorial. The page of the Congressional Record is 2766, of May 22, 1917.

Mr. WILLIAMS. Mr. Chairman, if you will permit me to make a little explanation I will show that that is not contrary to the principle that has been asked for here by the American Newspaper Publishers Association. That editorial that says the newspaper and the publisher is not opposed to paying an increased postal rate, I take it, is the stand of the American Newspaper Publishers' Association precisely.

But our point and our request, that Mr. McAneny so ably presented here, is that we feel and believe that it has been done in an improper way, and all we ask is that an investigation be made in a proper way—in a sufficient way to establish the necessity or need of this additional revenue, and then apply it along the lines of the amendment, and if such an investigation shall show that this rate that has been applied and that is to go into effect the 1st of July is too small and should be larger, it is equally true that the American Newspaper Publishers' Association will not oppose it but will willingly pay the increased rate.

Our point here is not to get out of paying something, Mr. Chairman. We do not come here and just say, "This is too high"; but we say, we believe it should not be done until a proper investigation is made.

That is why the request is made by the American Newspaper Publishers' Association to suspend the operations of it until such time as that investigation can be fully made, and then apply the rates that are found to be necessary upon that investigation.

Mr. STERLING. Have you any doubt about the question as to whether or not the newspapers are paying their way? Is there any doubt on that point in the mind of anybody? You all concede that they are not, do you not?

Mr. WILLIAMS. I have not made a particular study of this subject. I have not been on the postal committee, as I have stated. We have left that study to Mr. McAneny, and Mr. McAneny has made a thorough study of the subject, as I believe you gentlemen will agree, after listening to his presentation of the subject.

Mr. STERLING. He does not assert that the newspapers are paying their way through the mails. At no time did he say that—that they have paid the full expense to the Government. Now, conceding that that is true, do you not think that Congress ought to raise the rates?

Mr. WILLIAMS. If it should be found that that is true with everything else taken into consideration.

Mr. STERLING. I say, conceding that it is true now, will you agree that there ought to be an increase in rates?

Mr. WILLIAMS. That question was answered, I believe—exactly the same question—by Mr. McAneny—

Mr. STERLING. What did he say about it?

Mr. WILLIAMS (continuing). Who has made a real study of the subject.

Mr. STERLING. How is that?

Mr. WILLIAMS. I will answer the question in this way, if you want my personal opinion.

Mr. STERLING. Yes.

Mr. WILLIAMS. I am not speaking for the American Newspaper Publishers' Association—that if upon a real investigation, as has been requested, it is shown that the postal department needs a higher rate from second-class mail matter, I believe the newspapers will not object to paying it.

Mr. STERLING. Can you not answer the question squarely? Assuming it to be a fact that they are not paying their way, will you say that Congress ought to raise the rate?

Mr. WILLIAMS. I believe that it is improper to separate the second class from all other classes of mail, and assume that just that one class does not pay its way. If the second class were the only class of mail, and we were not paying our way, I would say yes, we ought to pay our way.

Mr. STERLING. Do you think that first-class mail is paying its way?

Mr. WILLIAMS. Yes; I do.

Mr. STERLING. And it is paying much more than its way, is it not?

Mr. WILLIAMS. Yes.

Mr. STERLING. So that that is out of the way.

Mr. WILLIAMS. Yes.

Mr. STERLING. Now, what other class of mail do you think does not pay its way?

Mr. WILLIAMS. I do not know. I have not made a study of this situation.

Mr. STERLING. There is not any other class of mail of very great importance, is there, outside of the first and second classes?

Mr. WILLIAMS. Yes; that is true. It has been pointed out, however, that the second-class mail does originate a vast amount of first-class mail that more than pays its way. That was pointed out by Mr. McAneny, and should be taken into consideration.

Mr. STERLING. Do you think that because second-class mail may originate first-class mail that is any reason the Government should carry it at a loss?

Mr. WILLIAMS. Hardly; but I believe that that should be taken into consideration in the investigation in determining what amount of increase should be placed on second-class mail.

Mr. STERLING. Were you here when Mr. Rainey questioned Mr. Fairlie about that?

Mr. WILLIAMS. No; I was not. I did not attend that hearing.

Mr. STERLING. I think he showed very clearly that the increase in the first-class matter that is induced by the second-class matter is very small compared to the loss that the Government is sustaining on the carriage of second-class matter. I think he showed that the Saturday Evening Post had probably increased first-class matter about \$400 in one week, and it was costing the Government \$70,000 to carry the mail—that is the Government had lost that. It cost the

Government \$70,000 more to carry the Saturday Evening Post than it had received.

The CHAIRMAN. Let me read what Mr. Rainey did put in the record. [Reading:]

Mr. RAINEY. Well, I will tell you what the result was. There were 118 advertisers in that particular issue of the Saturday Evening Post, and 83 replied and 35 did not.

He evidently investigated each advertisement, as to whether they replied to those advertisements.

They wrote to each one of them asking how many letters they got that week in response to their advertisements, and assuming that only one-half of them replied, they received 10,000 answers, and assuming that the other half who did not reply received the same number of answers, then that week the advertisements in the Saturday Evening Post brought a total of 20,000 replies. The Government lost that week in carrying the Saturday Evening Post through the mails \$70,000 on that one issue. Now, assuming it cost nothing at all to carry the 20,000 replies through the mail, the Government received, then, \$400 on those replies, and that is assuming that every 2-cent stamp they bought—and of course we are not figuring on 3 cents, because 1 cent goes to the Treasury—was a clear profit to the Government and that it cost nothing at all to carry and deliver those replies, that leaves a loss of \$69,600 on that one issue.

The CHAIRMAN. So that there is really not much in that. They use the argument. Now, that is no argument why the Saturday Evening Post or Collier's or any other magazine should go through the mail at a flat rate of 1 cent a pound, that they bring business to the first-class mail. Why should we let a mail-order house—why should we let Sears, Roebuck & Co., for instance, who send out a 3 or 4 pound catalogue, send that at a flat rate because every time they send out that catalogue it is going to originate an amount of first-class mail in the orders people send in? They receive ten times the amount of mail that the Saturday Evening Post or any other magazine receives.

Mr. WILLIAMS. That is true. You must understand that we have presented our case here for the daily and Sunday newspapers.

Mr. STERLING. That would apply to the advertising in the newspapers.

Mr. WILLIAMS. If that argument is to be brought in here, I would like to ask you if it would be a possible proposition to separate the newspapers and the magazines on this proposition?

The CHAIRMAN. I have never thought of a plan to separate the magazines and periodicals and the newspapers except by the zone system. It has been found by the experts, on the zone system—the House went into it, too—that the haul of the daily newspaper averaged about 255 miles.

Mr. WILLIAMS. That is true.

The CHAIRMAN. And that the haul of the weekly newspaper averaged 400 miles, while that of the magazines was about 669 miles. But the haul of periodicals like the Saturday Evening Post, the Ladies' Home Journal, and Collier's Weekly averages about 1,200 miles; so that when you increase the zone it catches those that are not newspapers.

Mr. MOONEY. Under the law, the very things you are seeking to reach will escape.

The CHAIRMAN. How will they escape?

Mr. MOONEY. They will escape, because they are going to be shipped west of Chicago as freight.

The CHAIRMAN. Do you know that the Government loses on the Saturday Evening Post before this law goes into effect—I have made that calculation, and others have made it too—two or three millions, and they would save that much if they would send it by express or whatever other way?

Mr. WILLIAMS. Mr. Chairman, this argument, if that is correct, brings us back to a part of the proposition we are laying before you, and that is that if there is need for this increased revenue, we agree that a zone system is the proper way of doing it. We need not have any discussion about that. That has been so covered by Mr. McAneny that I can not add anything further. He has made a study of the proposition.

The CHAIRMAN. About investigation. We have investigated six times at the request of the publishers of magazines and papers.

Mr. WILLIAMS. The last time, 10 years ago.

The CHAIRMAN. And some way or other they have always had enough influence with Congress, or Congress took their view of it, that there should be a postponement. Now, they have had experts in the department that have been there 20 years and for years have gone into this cost proposition, and these overhead charges, men who have given their lives to that very study, and if there are any men who should be experts on it, it is those gentlemen. Now, they have made their report as to the cost of overhead charges and mileage, and why should we have another investigation of outside people who know nothing about the postal proposition. If another set of people were to make a study of the proposition and the experts were to investigate again, they would find just like it has been found before. It has been investigated, and we have the results of the investigation.

Mr. WILLIAMS. Mr. Chairman, that is a point upon which the opinion of the American Newspaper Publishers' Association differs from yours. We believe that this bill has been passed upon the investigation, as Mr. McAneny pointed out, of 10 years ago, and subsequently to that there have been changes. Probably the cost has been increased since then. Probably the rates may be higher. Ten years ago they did not make an investigation as to the overhead charges. There is no trouble about what the transportation charges are, because they know how much they pay the railroads, and they know what the railroad and the letter-carrier service costs, because they have to make appropriations for that every year. I think that Congress or any other body would be very remiss in their duty if they should propose to act upon such legislation as we have without the investigation of experts; but they have felt that they had it, and they have been investigating and verifying their conclusions ever since this bill was passed. It has been investigated so far as the Government men, who have been in the business and have no financial interests to serve and only the purpose to serve their Government and find the true relations between their Government and the Post Office Department on the one hand and the publishers on the other; and that is what they found.

Mr. RAINEY. And to show that there is nothing partisan about it, the present Postmaster General and his predecessor have both called attention to the dangers of this system, and where it is leading us; the economic danger to the country; and they have both recommended that some steps be taken so as to eliminate this situation which you gentlemen want to project still further into the future.

The CHAIRMAN. And I want to add that not only the last two Postmasters General, but Postmasters General ever since the administration of Grover Cleveland, including his Postmaster Generals, both Mr. Bissell and Mr. William L. Wilson, called attention to the enormous loss to the Government in hauling and handling and distributing the second-class mail matter, and showed how each year it was increasing the loss to the Government as the poundage of the second-class mail would increase, and asked Congress to pass some act to remedy that. I think that probably every Postmaster General, except the man who served just a few months under Mr. Roosevelt, who was first assistant and then was appointed Postmaster General, Mr. Robert J. Wynne, recommended it.

Mr. Hitchcock called attention to it for four consecutive years. Two under Roosevelt called attention to it. Under the McKinley administration it was called attention to, and under Cleveland, and it just looks like, as Mr. Oliver said here, the time has come when we must increase the charge some way, and the only question is how to increase it equitably and fairly.

Mr. RAINEY. And notwithstanding all that, you gentlemen charge that this legislation is hasty and ill-considered and extortionate.

Mr. WILLIAMS. While we agree that this deficit has existed here, and there have been these reports as you state, yet it does not necessarily follow that this bill is the best remedy that could be devised.

The CHAIRMAN. No; that does not follow.

Mr. WILLIAMS. No; it does not follow.

The CHAIRMAN. But it is the judgment of the experts in the United States Post Office Department that it is the best and most equitable way to solve this problem.

Mr. RAINEY. No remedy has ever been suggested that meets with your approval except the remedy provided for it by the McKellar bill, which gives large zones in which your papers circulate. Therefore you stand for the proposition which would make it impossible for you to contribute anything toward paying this deficit, but would make it necessary for everybody else to do it.

Mr. WILLIAMS. Granted. There is one feature of this bearing on your argument that this was not done hastily, the feature as to advertising that was gotten in late. That is a point that was not discussed.

Mr. RAINEY. Yes.

Mr. WILLIAMS. You admit that that was hasty?

The CHAIRMAN. That was not discussed in the House. It was discussed in the Senate, and—

Mr. WILLIAMS. You remember that is one feature that we bring up when we say we would like to have it considered further.

The CHAIRMAN. It was considered several days in the Senate.

Mr. STERLING. The advertisers generally know when a newspaper goes to press?

Mr. WILLIAMS. Yes.

Mr. STERLING. And they know they have got to get their material there by a certain time. That is true, is it not?

Mr. WILLIAMS. Yes.

Mr. STERLING. Now, if you said "You must have it here two hours earlier," they could get it there just as well, could they not?

Mr. WILLIAMS. No, sir.

Mr. STERLING. There is not a thing in that idea.

Mr. WILLIAMS. What do you mean?

Mr. STERLING. Because the newspapers permit the stuff to come in at the last moment.

The CHAIRMAN. What is that?

Mr. STERLING. Advertising.

Mr. WILLIAMS. There is nothing, without taking this into consideration at all, that we would like better in our Pittsburgh newspapers than to have the advertising matter laid down in our composing room 24 hours ahead of the date of publication, or if we could not get it 24 hours ahead we would like to have it 12 hours ahead; and especially at the present time, when the question of labor is crowding and cramping us so that we can hardly get out, as it is; there is nothing we would like better than to have the advertising matter 24 hours or 12 hours ahead of the date of publication; but it is impossible for the stores to furnish it. Why? Because they in many cases do not definitely fix their prices before 10 or 11 o'clock in the morning, and it is very often five minutes before the time of publication when those advertisements are corrected and put in the press.

Mr. STERLING. Why do they wait until that time? Because they know that they have until that time to get it in that day's paper. If they found out that they did not have that much time to get it into the day's paper, they would not wait so long.

Mr. WILLIAMS. If we could accomplish that, I think it would be a strong reason for our turning around and looking with favor on the proposition, because it would help our papers so much.

Mr. COWLES. We require the advertisement to be in the office the day before it comes out.

Mr. STERLING. And if you do not get it then you do not publish it?

Mr. COWLES. It is the news that holds up the paper, it is not the advertising. It is waiting for the late news.

Mr. WILLIAMS. As far as the working out of this postal law lay with the Pittsburgh newspapers, I do not think it would cause a great deal of difficulty.

Mr. RAINEY. What is that?

Mr. WILLIAMS. I say I think there will not be much difficulty about it. The Post Office Department has sent out these regulations as to what they want us to do, and we are making provisions for it.

Mr. RAINEY. You said that if we wanted more revenue you could not object to it?

Mr. WILLIAMS. No; I say that the fact that more revenue is needed by the Postal Department is no argument that this bill is the best possible method of raising your revenue; any more than if you say that it is possible for a newspaper to pay this extra postage, and so on, and still make money, that that is any justification of the principle of the revenue.

Mr. RAINEY. Now, let me call your attention to something that you already know. We have increased, by bills that have passed the House, the compensation of rural carriers \$20,000,000. We have increased the compensation of field employees of the Post Office Department, ultimately, at least \$70,000,000. In other words, we have already added to the expense of the Post Office Department—and you gentlemen have all favored it in the newspapers, not one of

you has ever objected to it. A few of us have made objection to it on the floor, but you never did. We have increased the expenses of the Post Office Department \$80,000,000 at least, perhaps a good deal more than that.

We now know just how much an increase of 1 cent a pound in postage will yield a year. It will yield \$60,000,000. That is all it will yield, because people are economizing on their letter postage. One cent of that is paid for the expense of carrying the letter to its destination and 1 cent goes into our war fund and 1 cent of it goes to you gentlemen.

Now, with those facts before us, we know that when this war is over, if we are to pay the expenses of the Post Office Department out of the Post Office Department receipts, letter mail will never be less than 3 cents as long as any of us live; and notwithstanding all that, and this situation, which you did not help to avoid at all—these are the highest paid postal employees in the world, and you never protested for a moment, in war times, which I think was most unjustifiable. In fact you encouraged it and advocated it. You contributed to a situation which will not only make impossible 1 cent postage but will make impossible anything less than 3 cent postage— notwithstanding that you are still here seeking to avoid paying the expense of carrying your newspapers through the mail.

Mr. WILLIAMS. Pardon me, we are not here trying to avoid the payment of what is just and proper.

Mr. RAINEY. That is what everybody believes.

The CHAIRMAN. You favor the zone system?

Mr. WILLIAMS. We were willing to adopt the zone system if it was necessary.

The CHAIRMAN. Your position is, and I think the position of the Pittsburgh Press is, that they will pay the cost of the service rendered by the Government if the cost can be reasonably ascertained by an investigation?

Mr. WILLIAMS. That is the idea.

The CHAIRMAN. I have understood that that is the position of the press of Pittsburgh.

Mr. WILLIAMS. That is practically the position of the American Newspaper Publishers' Association.

Mr. RAINEY. Are you willing to submit a statement to the clerk of the internal revenue as to the income of your paper for 1913, 1914, 1915, 1916, and 1917?

Mr. WILLIAMS. We will be glad to do that if that is requested of the newspapers generally. I do not believe you would pick out an isolated case, the Pittsburgh Press, and use the figures in the same way without having the figures of others to use in the same connection.

Mr. RAINEY. Of course, we can only ask those that appear before us. We could not compel the other papers to give us those figures. You will admit, of course, that your income was larger in 1917 than in 1914?

Mr. WILLIAMS. It was somewhat larger in 1917 than in 1914.

Mr. RAINEY. All of the representatives of this association who have appeared before us so far have asserted patriotically that they are not much affected by this; that their income is bigger than it ever was, but they are appearing for the other members of the association who

are going to be injured. Now, so far, nobody has appeared who is going to be injured by this legislation; no member of your organization who has made a statement before this committee has said that he was going to be injured. They seem to have picked out representatives who are not and can not be hurt. Now, if you will give us the name of anyone who is going to be injured, or who will say that his business is going to be injured, we will be awfully glad to hear him.

Mr. WILLIAMS. I appreciate your position in that, Mr. Rainey.

Mr. RAINEY. You started out with a representative of a newspaper whose earnings are fabulous—the New York Times—and who refused to deny that their income was 100 per cent more than it was four years ago. You started out with him as your principal representative. You then followed him by others, including yourself, who state you are not affected and are prepared to meet it. So that altogether you have not made a very good case, except that we have enjoyed having you all here, and you are delightful gentlemen.

Mr. WILLIAMS. Let me add to that. It is not that we have not the money and do not want to pay it, but it is the principle that is involved here.

Mr. RAINEY. The principle involved, of course, is that of the protection of the newspaper publishers in the increased revenues they now enjoy.

Mr. WILLIAMS. I wish to just make one other little reference, Mr. Chairman. This whole hearing has been devoted to a plea to hold up the putting in operation of this postal bill on the 1st of July until it can be properly investigated. Nothing has been said which applies to the new revenue bill, which you have under consideration. There has been some intimation made of taxation on advertising.

The CHAIRMAN. Yes.

Mr. WILLIAMS. We have said that if any other proposition comes up of that kind we want an opportunity to appear and present our views along that line.

In conclusion, I want to say, on behalf of the American Newspaper Publishers' Association, that I want to thank you and your colleagues for the time and patience which you have given and exhibited here to-day and yesterday in hearing this matter that we have presented to you. I want to thank you.

The CHAIRMAN. And I want to say that the committee thanks the gentlemen who have appeared, Mr. McAneny and all you gentlemen. Very much of the testimony and many of the statements made have been very interesting and instructive. We are glad you came.

Mr. WILLIAMS. Thank you.

Mr. MOONEY. Mr. Chairman and gentlemen, one more point: I want to speak about the deficit in the second class. We believe this, that the deficit in the second-class postage does not result from the daily papers, and I have got this suggestion to make: You are going to take over the express companies soon. You gentlemen will remove the deficit that the American newspapers create if you will compel the newspapers to ship all their short hauls through the post office. That will wipe it out.

Mr. RAINEY. Through the post office?

Mr. MOONEY. Yes. In other words, now we ourselves on the long routes pay the express companies from 40 to 50 cents a hundred

pounds for hauling our papers, up to a cent. They seek that business. They say it is profitable to them. Now, I believe that if all of us would give the post office all of our business, and the benefit of the short haul, this newspaper deficit in the second class would disappear.

Mr. RAINEY. Your position, then, is this, that the newspapers at this time give to the express company the only carrying business which they have which is profitable, and the express company makes money out of it; and they give to the Government the carrying business which is unprofitable, and the Government loses money on it?

Mr. MOONEY. That is not my statement.

Mr. RAINEY. That is the fact, though.

Mr. MOONEY. No; it is not a fact. There are certain places where we pay the express company just as much as we pay the Government—maybe a little bit more. The express company can get those papers to the subscriber quicker than the Government can do it. Much of the stuff which we could send by express cheaper than by the Post Office Department, we send by the Post Office Department because of the convenience, but generally, I say this, that if all the newspapers sent all of their matter through the post office, including this short-haul stuff, then there would be a profit there which would compensate the Government for the deficit we create by the long haul.

The CHAIRMAN. Not if the Post Office Department is in any way correct when it says that the overhead charges are \$3.86 a hundred pounds for handling it.

Mr. MOONEY. Yes.

The CHAIRMAN. Do you think that the express companies could carry newspapers from New York to Washington at 40 cents, and in addition to the carriage have a building and clerks in there and deliver that mail to those who called for it, and have carriers and deliver it all over the city for 3 cents. They could do it for \$3 a hundred pounds, could they?

Mr. MOONEY. These express companies take these bundles in 100 and 200 bundles, don't you see?

The CHAIRMAN. Yes.

Mr. MOONEY. And we deliver those bundles to the express company in New York, and they bring them here and the agents get them: just as we deliver similar bundles to the post office, and they get them the same way. There is no overhead in it. The only expense that the express company has to pay is the train haul from New York to Washington.

The CHAIRMAN. Have you not frequently contended years ago in your paper—many papers did—that the railroads were giving excess weight to the express companies; that is, giving rates to the Government for doing the same poundage hauling that were two or three times more than they were charging the express companies? Now, supposing that the Government is paying the railroads a good deal more than the railroads will charge the express companies for the same service—

Mr. MOONEY. Why should the Government do it?

The CHAIRMAN. Why should the Government do it?

Mr. MOONEY. Why should the Government permit the railroads to hold them up? They ought not to. They ought not to now; they ought to regulate that.

The CHAIRMAN. They say that it costs the railroads two or three times more to haul the Government's mail and cars than to haul express.

Mr. MOONEY. In the work that the express companies do for newspapers, it is all bundle work. There is no overhead to the express company attached to it. The owner of the paper hauls his papers and dumps them in the express car. The express company hauls them from one place to the other, and the agent of the newspaper comes and takes the bundles out of the car, and that is the end of it.

The CHAIRMAN. There are overhead charges attributed to everything that the express company hauls, and also everything that the Government hauls.

Mr. MOONEY. But the express companies seek that business, and go after it hard; and if they can make a profit out of it, then for that same service you would charge a cent a pound. Go ahead and charge us a cent a pound, and take over the business.

The CHAIRMAN. All that you get from your daily advertisements goes to help to pay the overhead charges as well as the labor charges.

Mr. MOONEY. That is true.

The CHAIRMAN. It does not make any difference how small or how large a rate you get, each one must contribute a part to the overhead charges; that is true, is it not?

Mr. MOONEY. Yes, but this point is well established also. After your overhead charges are arranged for you can do a great deal of business afterwards without extra charge. Now, our overhead charges between Washington and New York are already arranged, and the added expressage would increase the overhead none, and the revenues would be large.

The CHAIRMAN. But we still would be losing on every pound.

Mr. MOONEY. We would reduce your loss, then. We would cut it down.

The CHAIRMAN. You do not think that any overhead charges should be charged up to the second-class mail, because the trains are going to run just the same?

Mr. MOONEY. No; that is not the proposition. They ought to bear their proportion of it; but with the same overhead charges the same train will haul a car that will haul a half a car.

The CHAIRMAN. If you are going to keep this overhead charge fixed, if you are going to run a car from here to New York, whether you have 10 pounds or 10,000 pounds in it—of course, it is not that way—but if we did not have the handling and hauling of second-class mail matter, which is, by the way, about 60 per cent, or over 60 per cent, of the total poundage hauled of all classes, newspapers and magazines, our overhead charges would not be anything like as much. We could dispense with trains and cars and railway mail clerks, and city carriers to a large extent, and postal clerks, and your papers would not have to pay anything like as much. That is true, is it not?

Mr. MOONEY. Yes; I do not see how you could dispense with many city carriers.

The CHAIRMAN. I think you could. Many of them carry mail that is nothing but newspapers.

Mr. MOONEY. There is a great deal of the second class that carriers never touch at all.

The CHAIRMAN. Right in the street where I live I have seen a carrier many and many a time come and deliver nothing but newspapers. He has been to my house many a time two, three, and four days out of the week and has brought no letters—nothing but newspapers from our State, every morning.

(Thereupon, at 4.45 o'clock the committee adjourned until Monday.)

## REVENUE BILL.

---

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Monday, June 24, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collins, Dickinson, Oldfield, Crisp, Helvering, White, Green, Sloan, Longworth, Fairchilds, Sterling, Martin, and Hawley.

### STATEMENT OF HON. THOMAS U. SISSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MISSISSIPPI.

Mr. SISSON. Mr. Chairman, I do not know that there is anything I can add to the terms of the bill I have introduced, H. R. 12510. If you should decide to include this tax in the proposed revenue bill it would not be necessary, perhaps, to carry all of its administrative features which I have in this bill, because they could be provided for in your general law.

When I presented this matter to a subcommittee of the Committee on Ways and Means, a year or two ago, the Census Bureau stated that there was something like 1,000,000 of these firearms and weapons sold during each year. I can not, nor can the Census Bureau, tell with any degree of accuracy at this time how the war has affected the sale of deadly weapons. I take it that the higher-grade pistols are not manufactured for the trade to any large extent now because the Government, perhaps, has taken over all of those factories.

I have fixed the tax in this bill at \$5 on the manufacture and sale of each pistol, dirk knife, sword cane, and so on.

There is one feature about this character of legislation to which I wish to call the attention of the committee. When this bill was first introduced, the police authorities of a good many cities became very much interested in it. They stated that if in the administration of this law a register could be kept of all the firearms sold, and they were sold in their States and their cities, they could then get that end of it and could keep up with the purchasers of firearms, the carrying of which concealed is a violation of the law of the State, and that if they were in a position to know who the possessors of firearms were, it would help a great deal, and thus the police authorities would know the criminals, who are usually spotted in a city, who own deadly weapons. That feature of it had not occurred to me at the time, because I introduced the bill purely as a revenue measure. Therefore I incidentally mention that the bill would be of advantage to the police authorities throughout the country.

Unless the sale of these deadly weapons has been very much curtailed—as it perhaps has by reason of the war—you would raise something like \$3,000,000 or \$4,000,000 a year by the levying of this kind of a tax. The administration of this law would be very simple because the regulations could require that those engaged in manufacturing any of these firearms should enter into a bond, of reasonable amount, to properly list all of the firearms and deadly weapons enumerated in the bill, and upon those returns the tax could be very easily collected.

If there are any questions that any member of the committee desires to ask, I shall be glad to answer them.

Mr. HAWLEY. You propose a specific tax of \$5 rather than an ad valorem tax.

Mr. SISSON. I provide both. I provide a \$5 tax on every weapon mentioned in the bill and 25 per cent ad valorem. I do that because the higher-grade weapons should bear a considerably greater tax than the others. Personally I would not object to the tax being so high on this character of weapons as to absolutely prevent the sale of them.

Mr. HAWLEY. I was wondering whether this would tax them out of existence.

Mr. SISSON. I would not object to that, but from my viewpoint I do not believe the Federal Government is authorized, under the taxing power, to destroy an industry. I do not think that under the guise of the taxing power the Federal Government ought to destroy an industry by a tax, although the end obtained might be very desirable. I think that would be a perversion of the taxing power of the Federal Government. For that reason I would place a tax such as is mentioned in my bill.

With a tax of \$5 and a 25 per cent ad valorem upon the manufacture and sale of the weapons the amount would be, we will say for argument sake, \$10 for the manufacture of the weapons and the 25 per cent ad valorem would be \$2.50, which would be \$12.50, and the addition of the \$5 specific tax would be \$17.50. That price, with a profit added, would, in my judgment, deter some of the purchasers of these weapons. At this particular time, of course, there can be no objection to resorting to any means to raise revenue, when we are looking for things to tax in order to raise money to pay the expenses of the war.

Mr. HAWLEY. Along the same line of this tax, why not tax shotgun shells?

Mr. SISSON. I introduced a bill, along with this, to tax pistol cartridges and shells, but there was considerable protest from the sporting world to a tax on shells at that time, and I did not reintroduce that bill. But I see no reason now, in war times, why you should not put a reasonable tax upon shells used in shotguns, and certainly there ought to be a very heavy tax placed upon pistol cartridges.

Mr. HAWLEY. How much would be raised by a tax of that sort?

Mr. SISSON. I made an investigation of that at the time I first introduced these bills and I think you can raise more money by a reasonable tax on shells—although the consumption of shells may not be as great in times of war as in times of peace—than you can raise under this particular sort of a tax, and I think that since we are in war you could put a pretty heavy tax upon shells used in shotguns

and get a considerable revenue. Then you might put an enormous tax upon pistol cartridges—you might put a 100 per cent tax on pistol cartridges—and then you would raise considerable revenue.

Mr. HAWLEY. You would place that tax so that it would be collected by the manufacturer and passed on by him to the consumer?

Mr. SISSON. Absolutely; so that the manufacturer would attach the tax, by means of a stamp, to each box of shells and each box of cartridges manufactured and sold. Of course, there would be an opportunity to evade the tax on broken packages of shells—that is, by refilling them—but if the manufacturer is honest that can not be done. That was the trouble they had with the collection of the tax on tobacco in boxes. They first tried to have the tax paid by the manufacturer, without having a stamp attached, but they found that was subject to a great deal of fraud. They then changed the law so that every manufacturer had to attach a revenue stamp to each box of tobacco before he offered it for sale. Even, then, of course, after the box was opened, it might be refilled, but that was an extremely difficult thing to do, because the manufacturer would have to be in league with the man operating a retail store in order to have the box refilled.

I would urge upon the committee that they not only adopt the idea contained in the bill (H. R. 12510), but that in the same section of the revenue bill they put a tax upon pistol cartridges and, for war purposes, put a tax upon the manufacture and sale of shells for hunting purposes. I would be glad if each member of the committee would get a copy of the bill, because I do not think it needs any further explanation.

The CHAIRMAN. I think the suggestion is a very valuable one, and the committee will be very glad to consider the proposition.

Mr. SISSON. I am very much obliged to you gentlemen for this hearing.

#### STATEMENT OF HON. OSCAR W. SWIFT, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK.

Mr. SWIFT. Mr. Chairman and gentlemen of the committee, I have assumed that you would insert in the new bill some provisions governing postal rates and, therefore, that section 1100 in the last public revenue act, which was approved October 3, 1917, will undoubtedly appear in the new bill. This section provides, among other things, "that the rate of postage on drop letters of the first class shall be two cents an ounce or fraction thereof."

The practical effect of this section is that it results, we believe, in a discriminatory manner against the city of New York. The effect of the section is that in every city of the United States, with the exception of the city of New York, a drop letter can be mailed for 2 cents within its entire territorial limits, but in the city of New York a large proportion of our letters require 3 cents postage, even though they are mailed within and are for delivery within the city of New York.

This fact results from the incorporation, under the consolidation act of 1898, of very large communities of population. The average city, of course, has a normal growth of population, but in 1898, under our consolidation act, the borough of Brooklyn, for example, was incorporated, and it had at that time a population exceeding 1,000,000;

to-day it has a population of over 2,000,000, and if it were a separate city it would be to-day the third largest city in the United States. If a letter is mailed from the general post office in the lower end of Manhattan to the city hall of the borough of Brooklyn, which is a distance of a mile and a half, a rate of 3 cents is required; whereas in the city of Philadelphia, from Hog Island to Somerton, which is the most northerly postal substation, the rate is only 2 cents.

The CHAIRMAN. Why is that? Why is the rate on a drop letter in Philadelphia different than it is in the city of New York?

Mr. SWIFT. That arises in this way: At the time the city of Brooklyn was incorporated into the greater city of New York it had a separate postmaster, and that separate office exists to-day and discharges its functions just as independently as the post office in Philadelphia or in Boston.

The CHAIRMAN. They are regarded as two separate post offices?

Mr. SWIFT. Yes, sir.

Mr. HAWLEY. You have a post-office building in Brooklyn?

Mr. SWIFT. Yes, sir. We have in the greater city of New York six such postal districts, and it is practically the unanimous opinion of the citizens of New York that it is absolutely necessary that these separate post offices should be maintained to insure efficiency in the Postal Service. I desire to say in that connection that the service rendered by the present postmasters is of the very highest order; they are men of large business experience, and, of course, we do not want these post offices abolished. It would be very detrimental to the interests of the city of New York if any such action were contemplated, but I believe no such action is contemplated.

Mr. HAWLEY. Do I understand that a letter mailed in any one of the six postal districts to the other five is charged for at the rate of 3 cents?

Mr. SWIFT. Yes, sir. What I desire to bring to the attention of the committee particularly is this, that if this section is enacted in the new bill, and I believe it should be with a modification, that after the words "that the rate of postage on drop letters of the first class shall be 2 cents an ounce or fraction thereof," this should be inserted as a new paragraph:

The term "drop letter of the first class," as used in this section, means any letter of the first class mailed within, and for delivery within, the same postal district, or within any part of the territorial limits of any incorporated city of the United States.

A section of that character, of course, would be general in its application, and in proposing a section framed in such language I have been mindful of the fact that we want to avoid any legislation which would be regarded as special in character, and by making it apply to the territorial limits of any incorporated city of the United States I feel that legislative objection would be eliminated.

I have talked with the chairman on this proposition, and with several members of the committee, and it is my feeling that it is the intention of the committee to deal fairly and justly in this matter, not because it is the city of New York, but because it is a matter of simple justice.

I might add in this connection that as far as I have been able to ascertain the city of New York turns over to the Federal Government a net sum of \$20,000,000 in postal revenues. We have there an average mail of about 17,000,000 letters per diem, drop letters, but

of course, you realize that only a portion of these would be subject to the 3-cent rate, because the greatest number of these letters are mailed in the Borough of Manhattan, that is, the old city of New York, and also in the city of Brooklyn, and such letters only require 2 cents, because they are for delivery in the same postal district. As far as I have been able to ascertain this additional 1 cent rate probably affects about 750,000 or 1,000,000 letters per diem.

I have also ascertained that there is a feeling throughout the country in many of these cities—having gathered that information from representative men with whom I have talked on this same proposition—that the drop letter rate should be uniform throughout the United States.

I thank the committee for its attention.

The CHAIRMAN. Have you introduced a bill covering the matter referred to?

Mr. SWIFT. Yes, sir.

The CHAIRMAN. Please file a copy for the record.

(Said copy follows.)

[H. R. 7920, Sixty-fifth Congress, second session.]

A BILL To amend an act entitled "An act to increase the revenue, and for other purposes," approved October third, nineteen hundred and seventeen.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section eleven hundred of the act entitled "An act to increase the revenue, and for other purposes," approved October third, nineteen hundred and seventeen, which reads as follows:

"That the rate of postage on all mail matter of the first class, except postal cards, shall, thirty days after the passage of this act, be, in addition to the existing rate, 1 cent for each ounce or fraction thereof: *Provided,* That the rate of postage on drop letters of the first class shall be 2 cents an ounce or fraction thereof. Postal cards and private mailing or post cards when complying with the requirements of existing law shall be transmitted through the mails at 1 cent each in addition to the existing rate.

"That letters written and mailed by soldiers, sailors, and marines assigned to duty in a foreign country engaged in the present war may be mailed free of postage, subject to such rules and regulations as may be prescribed by the Postmaster General," be, and is hereby, amended so as to read:

"That the rate of postage on all mail matter of the first class, except postal cards, shall, thirty days after the passage of this act, be, in addition to the existing rate, 1 cent for each ounce or fraction thereof: *Provided,* That the rate of postage on drop letters of the first class shall be 2 cents an ounce or fraction thereof. Postal cards and private mailing or post cards when complying with the requirements of existing law, shall be transmitted through the mails at 1 cent each in addition to the existing rate.

"The term 'drop letter of the first class' as used in this section means any letter of the first class mailed within, and for delivery within the same postal district, or within any part of the territorial limits of any incorporated city of the United States.

"That letters written and mailed by soldiers, sailors, and marines assigned to duty in a foreign country engaged in the present war may be mailed free of postage, subject to such rules and regulations as may be prescribed by the Postmaster General."

Mr. HAWLEY. Do I understand that this would affect about 300,000,000 letters in the course of a year?

Mr. SWIFT. I should think so, although that may be a little high. Of course, that is purely guesswork on my part because it is very difficult to get from the Post Office Department any accurate statements, as they do not keep a separate account of drop letters that are mailed between different postal districts.

**STATEMENT OF HON. WILLIAM A. AYRES, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF KANSAS.**

Mr. AYRES. Mr. Chairman and gentlemen of the committee, I want to say at the beginning that I am not an experienced oil man by any means. My interest in the oil business from the financial standpoint or in the oil game, is that I have invested a few hundred dollars in what are called wildcat ventures, none of which indicate that I should have any worry at all on the score of income or excess-profits taxes. However, I am interested in this matter because it is one of the industries of my State and particularly of my district. The new field that was developed and that is known as the Augusta, Eldorado, or Butler County oil field, is in my district, and I understand that it is one of the best oilfields in the West or the Middle West. I am also told that, like all other oil fields, or practically all of them, it was discovered by what is generally known as a wildcatter. In fact, I know that this field was, because I happen to know personally the party who made the discovery. In other words, this man had the nerve to bet all that he had, all that he could get together, and all that his freinds could get together, that there was a pool of oil under those broad prairies. My information is that those men who are ready to exhibit such nerve, make a good bet about three or four times in one hundred, and that they make a bad bet about ninety-six or ninety-seven times out of a hundred.

Now, for the most part, after these men have made their investment, have undertaken to discover the oil deposits, and after they have gone "busted," and also have taken along with them the money of their friends, some one will come along, about a year afterwards, with better luck and succeed in finding oil within a reasonable radius of the place where they have failed. This will, of course, make the lease of the prospector valuable, but, in the meantime, he has blown in all of his funds and those of his friends, and he is unable to develop his lease, and he can not sell it. That is to say, if some one wants to buy the lease, he can not afford to sell it. If he could get \$100,000 profit for his lease—he has already probably blown in that much money—or anywhere from \$75,000 to \$100,000 in drilling dry holes; if he should sell his lease at a profit of \$100,000, the Government would step in and take that, or a the major part of it, in the way of income tax and excess-profits tax, and therefore he holds on to his lease, hoping that something will happen by which he will not be compelled to give up the major part of his profits in the way of excess profits and income taxes. Of course, it is understood that if the amount that he has expended in drilling these dry holes was expended in past years, he can not deduct it from the profits, and, therefore, he would have to give up practically the major part of his profits in the way of taxes. By this means the Government is not only deprived of the oil, of which it is badly in need, because of the failure of the party to either develop it or sell it to others who can develop it, but the Government is also deprived of the revenue. Therefore, the Government is losing at both ends.

I am also reliably informed that by this method the little fellow is practically driven out of the business in which he was the pioneer. My understanding is that such institutions as the Standard Oil Co. and the larger companies seldom prospect, or, at least, they have

not done so until within recent years. They wait until the wildcatter or the pioneer makes the discovery. After the wildcatter or pioneer has made the discovery, he goes to the Standard Oil Co. or other large company and they develop the field, because they have the means with which to do it. I want to give the committee a statement of an actual case that I know of personally in my own district. That was a case where a group of men of ordinary means got together several pots, you might say, at different times, and drilled within a year or so six dry holes, which cost them in the neighborhood of \$120,000. It was a clear loss. About all that most of them had left was nerve and a little credit. They got together again about \$130,000 and made a new venture. In other words, they bought a royalty, and I was informed by one of those gentlemen that they could sell this royalty for about \$230,000, but that they can not afford to sell it for the reason that it would represent a profit of about \$100,000. The \$120,000 that they had already blown in on dry holes was expended last year, and, of course, that could not be deducted from their income tax and excess-profits tax. They could not deduct that loss by reason of its having occurred a year ago. If they should sell at a profit of \$100,000, the Government would step in and take the major part of it, and they would still be losers by anywhere from forty to fifty thousand dollars, even with that profit of \$100,000. As a result, they are not selling their royalty but they are keeping it.

If there was a provision in the present law by which in selling the royalty they would be taxed a reasonable percentage, there is no question at all but that they would sell it and gladly sell it. I do not know what would be a reasonable percentage, because I am not, as I have said, an experienced oil man by any means, but if it were anywhere from 3 or 4 to 5 or even 8 per cent on that profit of \$100,000 on the sale of the royalty, they would gladly sell it, and, as a result, the Government would reap that revenue, or whatever the percentage of revenue might be on that profit of \$100,000. Then, that same royalty, in all probability, would be sold anywhere from two to three times during next year, and the Government would again reap a revenue of a certain percentage on each one of the sales. That is a thing that the oil men are very much interested in. I think it is important that there should be some provision placed in this law whereby a reasonable percentage or rate may be charged upon the profits arising from both the sale of royalties and the sale of leases. In that way the Government would not only reap the revenue on each of those sales on which there was a profit gained, but it would also stimulate production. I have received a letter from one of the leading citizens of my city on this subject. He is not an oil man, but is simply a business man and one of the leading attorneys of the city, with no interest whatever in oil. In that letter he makes this statement:

What the Government desires is revenues to avoid bonds as much as possible. My solution of this problem, in a measure, is as follows: All sales and exchanges of real estate, oil lands, royalties, etc., should pay the amount due to the Government at once, in order that when a sale is closed it will be paid; that is to say, within 30 days, to the Internal Revenue Department, at the place of the sale or exchange. The points are: In every sale or exchange of oil lands, royalties, etc., there should be due

and payable to the Government, by payment to the officer, the sums of money herein after set out, to be payable within 30 days after the closing of a transaction to the proper internal-revenue officer:

1. Sales of real estate from \$5,000 to \$10,000, one-half of 1 per cent.
2. \$10,000 to \$20,000, three-fourths of 1 per cent.
3. \$20,000 to \$30,000, 1 per cent.
4. \$30,000 to \$40,000, 1½ per cent.
5. \$40,000 to \$50,000, 1½ per cent.
6. Then up to \$60,000, 1½ per cent.
7. Up to \$70,000, 2 per cent.
8. Up to \$80,000, 2½ per cent.
9. Up to \$90,000, 2½ per cent.
10. Up to \$100,000, 3 per cent.
11. \$100,000 to \$500,000, 4 per cent.
12. \$500,000 to \$1,000,000, 5 per cent.
13. \$1,000,000 up, 10 per cent.

This gentleman further states in his letter that at least two or three hundred sales in Kansas have not been consummated by reason of the present tax laws, and I know that to be the fact. For instance, one sale there in the city of Wichita of \$200,000 was called off because they could not agree as to who should pay the war-revenue tax, and this gentleman states in his letter, "To my knowledge, one sale of \$500,000 was called off for the same reasons." He further states, "Wichita, alone, in my judgment, on its actual sales would have paid the Government something like \$50,000." I could give you gentlemen specific instances occurring within the last few days where sales were called off on that account. I could file a statement of them with you. I do not know how many sales have been called off, but sales involving several million dollars have been called off in that field along simply because they could not arrive at the method of how they would pay the tax. They could not afford to sell even at a reasonable profit because of the way in which the present income tax and excess-profits tax would operate upon them.

Mr. SLOAN. For the purpose of obtaining revenue, would you favor an amendment to the law so that when there was a profit in the property it should be taxed by the Government whether it was sold or not?

Mr. AYRES. As to that proposition, I can not say, because I am not an experienced oil man and would not know anything about that. That is a matter that could be answered better by these gentlemen here, like Judge Shea. That could be better answered by these experienced oil men. I am only bringing to your attention these specific cases where sales were not made because of the operation of the law. It is very clear to my mind that if you are the owner of a lease and lack the means of developing it, you should be in a position where you could sell it. Now, while you may be able to sell it at a profit of \$100,000, if you have expended in prior years \$100,000 in drilling half a dozen dry holes, you could not afford to sell. If you drilled those dry holes last year, you would not be entitled to deduct that amount from your present profits. You could not do that, because the loss occurred last year. Therefore, as I say, you can not sell it. You can not afford to sell it, and you will keep it in the hope that some provision will be placed in this revenue bill, or that the war will cease, or that some other means of taxation will be devised, and that you will either be able to develop the lease

or sell it under circumstances where the Government will not take the major part of your profits.

Mr. SLOAN. If I correctly understand your statement, around in your State there is a good deal of oil profits earned, but, by reason of making no sales, the Government fails to collect a very large amount of revenue?

Mr. AYRES. What do I understand you to mean by the word "earned?" Do you mean in the selling of actual oil?

Mr. SLOAN. Not in selling it; but, for instance, if the property should be increased in value so that it could be sold at a profit of \$200,000, that would represent the profit accrued. Now, would you recommend that the Government, in raising this \$8,000,000,000 should tax that profit before the sale was consummated?

Mr. AYRES. No, sir; I would not make any recommendation at all, because, I will be frank to say, I do not know that I would be competent to pass upon a matter of that kind. I am only bringing to your attention a few specific instances where the sale of royalties and leases could not be made. I am only giving the committee in my feeble way specific instances that I know of in my own particular locality where sales could have been made and would have been made if some provision had been made whereby they could be relieved from the payment of all their profits in the way of taxes, and whereby they would know specifically what they had to pay in the way of taxes. My understanding is that at the present time they do not know that because of the various rulings that have been made and that are contemplated by the Commissioner of Internal Revenue.

Mr. STERLING. You spoke of selling royalties. By that do you mean the selling of oil on a royalty basis?

Mr. AYRES. Yes, sir. For instance, the owner's royalty is in most cases one-eighth. I think that in our country that is the royalty in most cases.

Mr. STERLING. By selling the royalty, do you mean where the owner of the land getting a certain share of the oil desires to sell it out? Is that it?

Mr. AYRES. Yes, sir; he sells that one-eighth royalty, for instance, for \$100,000, using that as a basis for my illustration. Now, those people who purchase it later on can probably sell it in many instances for from \$150,000 to \$200,000, and that would make a profit to them of from \$50,000 to \$100,000, but, under the present arrangement, of course the Government would take the major proportion of that profit in the way of excess profit and income taxes.

Mr. STERLING. I do not just see how losses in previous years would interfere with a sale of that kind. The owner of the land would not care who had the lease.

Mr. AYRES. I am not speaking about this particular owner or his sale of the royalty, but I am speaking of the case of the speculator, for instance. Using as an illustration this specific case that I know of; here were some men who had drilled six dry holes which had cost them in the neighborhood of \$120,000. They got another pot together, if you will allow the expression, and bought a royalty. Now, they could not deduct their losses of a year ago, which were incurred in drilling those six dry holes, from the profits that they could realize from the sale of this royalty at this time. They could sell the royalty for about \$230,000, which would make them a profit of \$100,000.

Mr. HAWLEY. Was the same land involved in the two transactions?

Mr. AYRES. No, sir; but the same people were involved. Now, they would be glad to sell their royalty at a reasonable profit, and that same royalty would probably be sold again and again in course of time, and if it were sold again at a profit, the Government would reap that much additional revenue.

**STATEMENT OF MR. PERCIVAL D. OVIATT, SECRETARY  
NATIONAL ASSOCIATION OF EMPLOYING LITHOGRAPHERS,  
ROCHESTER, N. Y.**

Mr. OVIATT. Mr. Chairman and gentlemen, I represent the National Association of Employing Lithographers, and I am here advocating the return to the old rate of 1 cent as the mailing rate on post cards. The purpose of the new rate was to increase the revenue from that source. The result has been, and it has been demonstrated, that the revenue from that source has been decreased. The cards in which we are interested are the cards of which you gentlemen have been handed samples, and they represent souvenir, view, picture, and fancy post cards. There are no Government statistics to show that the revenues have actually been reduced from this source, but the reports from the manufacturers would seem to indicate clearly that the Government has actually lost revenues in conjunction with the manufacture of these cards. As one illustration of that, I will say that under the old law, during the past year, the Illustrated Post Card Novelty Co., of New York, manufactured and sold 75,000,000 cards, while, under the present law, according to the estimates for this year, the output will be only 15,000,000 cards. Under the present law, at the 2-cent rate, 15,000,000 cards will bring in \$300,000 of revenue from the postage, while under the old law, 75,000,000 post cards at the 1-cent rate would bring in \$750,000, so that the loss to the Government in revenue would be \$450,000, so far as the manufacture of this particular company as it relates to that proposition is concerned.

Now, another thing: This loss in revenue to the Government represents a loss in the most profitable mail matter transported by the Government. In the matter of the transportation of the mail and in the matter of its handling, at the old rates post cards showed an overwhelming percentage of profit. For example, post cards run about 133 to the pound, and the average would be \$2.66 for postage per pound, or \$5,320 per ton carried. Under the old rate of 1 cent per card, the post card paid 133 times as much postage as second-class mail matter. Under the present law, with first-class letter postage at three cents, first-class matter would yield about 48 cents per pound, while, as I have said, the average post card yields \$2.66 per pound. Of course, the difference there is due to the difference in weight, and, as I have said, that 48 cents per pound on first-class matter is to be compared with \$2.66 per pound on post cards under the present rate. In other words, it is several times as much. We feel that the relative unfairness, regardless of its effect upon our business, which is fast going into decline, should be taken into consideration. I might say, further, that every time we lose any money on the manufacture of post cards, the Government loses several times that amount. These post cards retail on an average at 1 cent, while we sell them at wholesale at a quarter of a cent to 1 cent each. As a result of this new rate, under

these circumstances, when we lose one quarter of a cent because we do not sell the card, the Government loses 1 cent of revenue. That revenue is not the cost of carriage, but it represents a possible profit to the Government. It represents a profit which has been realized by the Government in its ability to do away with large appropriations to meet deficits. As I say, what we rely upon are the manufacturer's figures with reference to the manufacture of post cards.

Canada has done the same thing. She has had the same experience we have had. Three years ago, or nearly three years ago, she increased her rate on post cards from 1 cent to 2 cents, and her business, so far as post cards are concerned, has decreased about two-thirds. There is an absolute loss of revenue in Canada under the new rate, and the decrease occurred in the most profitable item.

Now, we have no complaint to make at all against taxation. If the injury done to us was done in such a way that the Government would get any benefit from it, we would bow to it, as every American bows to exactions made of him for war purposes. This tax imposes an injury upon us, so that our business is practically extinguished, and, at the same time, the Government is suffering a like or greater injury because of the loss of revenue from this source. We favor a return to the old rate, because a return to the old rate will permit us to go on with our business, and, at the same time, will permit the Government to realize larger revenues. We are dealing here with a thing that is not like first-class letter mail, because first-class mail matter is indispensable. In the case of post cards, if advertisers and other people choose not to spend so much money for postage on this class of matter, the Government simply loses the revenue. The Government loses the revenue because it has taxed an article the use of which can be eliminated.

You gentlemen have been handed some post cards, and you can see what they are. You will recognize the fact that they are largely used by soldiers. They are used for patriotic advertising, or just the things that the Government is seeking to accomplish through large appropriations by means of posters, etc. Therefore, for reasons of patriotism, for reasons of economy, and for the reason that it will afford greater revenue, we think that a return to the old rate would be in the interest of everybody concerned.

The CHAIRMAN. Does it cost more to manufacture these post cards this year than it cost last year or year before last?

Mr. OVIATT. I am certain that it does; but I am not prepared to say how much.

The CHAIRMAN. Do you know how much the wholesale dealer and the manufacturer of these cards got for them in 1917, or in the first part of 1917?

Mr. OVIATT. No, sir; but I will be glad to file the exact figures.

The CHAIRMAN. Do you know how much these cards were retailing for in 1917, before this act of October 3, 1917?

Mr. OVIATT. I will file with the committee the accurate figures on that.

The CHAIRMAN. Will you also file figures showing what they retail for now?

Mr. OVIATT. Yes, sir.

The CHAIRMAN. You may find, possibly, that some part of the falling off in the demand is due to the greatly increased price that the retailers charge the people who buy from them.

Mr. OVIATT. I dare say that is not quite true. I will advance this as a guess, that the sales since the new act went into effect, have been from stocks which were already largely in the hands of the retailers and jobbers, and, therefore, the increased cost of production does not affect it; but that is only a guess.

The CHAIRMAN. I know that my children bought some this year, of the same kind they bought a year ago, and they paid 100 per cent more for them than they paid last year. I was wondering if that large increase in price did not have something to do with the diminution in the manufacture of the cards.

Mr. OVIATT. I will file with you as exact information as I can obtain on all those points. I ask leave to file as a part of my remarks this rather more orderly prepared statement.

(The statement referred to is as follows:)

MEMORANDUM SUBMITTED BY NATIONAL ASSOCIATION OF EMPLOYING LITHOGRAPHERS  
IN RELATION TO THE MAILING RATE ON POST CARDS.

Before the war revenue act of October 3, 1917, the mailing rate on post cards was 1 cent each. That act made the rate 2 cents.

*Purpose of increased rate.*—The purpose of increasing the rate was to increase the revenues.

*The result of the increase.*—The result of the increase has, beyond any question of a doubt, decreased the revenues hitherto derived from the mailing of souvenir, view, picture, and fancy post cards, and in all probability has actually decreased the revenues so far as post cards generally are concerned, including Government cards. There are no Government figures to show this, but unofficial reports from certain local post offices show reductions. The decrease in volume of manufacture clearly demonstrates a loss of revenue.

*The reason for decreased revenue under new rates.*—The greater number of cards retail at 1 cent. The purchaser must pay twice as much to mail it. He isn't obliged to use it and he chooses not to use it.

The cards wholesale from a quarter of a cent to 1 cent each. The increase postage, therefore, is from 100 per cent to 400 per cent of the wholesale rate. The percentage is prohibitive. Cards used by advertisers are sold at from a quarter to a half cent each. They cost 2 cents to mail. Advertisers will not and can not increase their appropriations by any such percentage, and have largely dispensed with the article. The Government loses the revenue, its source of greatest profit, because it has unreasonably taxed an article whose use can be eliminated. That isn't good business, nor is it wise tax legislation.

*Relative unfairness of the rate.*—Post cards (according to their weight) average \$2.66 postage per pound or \$5,320 per ton carried. No other mail (not even letter mail) pays anything like the same rate, and the reductions in cards used, due to this expensive rate, cuts off that most profitable part of the mail. Even the old 1 cent rate was 133 times the rate paid for second-class mail. Letter mail at 3 cents an ounce only yields 48 cents a pound, while the average post card yields \$2.66 a pound. The post card pays as much as the drop letter.

Under the old rate the post card was the most profitable mail matter carried by the Government.

*Canada's experience.*—Canada increased its post card mailing rate from 1 cent to 2 cents about three years ago. The business has decreased over two-thirds and soon will be extinguished. Canada's revenue actually decreased, and the decrease occurred in the most profitable item.

*The results occurring in the United States.*—Unit cost of cards increase very rapidly, as volume decreases. The business can not continue on any material reduction. If wiped out, it means the loss of all revenue from this source, which represents the largest percentage profit of all mail carried by the Government. And this injury is inflicted with no resulting benefit to anyone and with a concurrent injury to the Government.

The 2 cent rate imposes no direct pecuniary loss on us. It must be assumed that our opposition to it is based on the indirect loss imposed through restriction in manufacture. Restriction in output must mean reduction in those Government receipts in which are involved its greatest profit.

Respectfully submitted.

NATIONAL ASSOCIATION OF EMPLOYING LITHOGRAPHERS.

Mr. CRISP. You understand that the duty that confronts us is to raise more revenue for the Government.

Mr. OVIATT. Yes, sir.

Mr. CRISP. I understood you to say that the Government was receiving less revenue from post cards at 2 cents postage than it would receive, in your opinion, if the old rate of 1 cent were restored.

Mr. OVIATT. I ventured that as my opinion.

Mr. CRISP. If the old rate of 1 cent on post cards were restored, what effect would that have on the total revenues to be derived from first-class matter? In other words, with a rate of 3 cents on letters and only 1 cent on post cards, would not the public use post cards more largely than they do at the present rate of 2 cents, thereby reducing the revenue that would be derived from the rate of 3 cents on letters? Have you given that phase of the matter any consideration?

Mr. OVIATT. I am very much of the opinion that it would have no effect upon it, because there you have two classes of mail that are not interchangeable. I think that the purpose accomplished by mailing a post card is so rarely the purpose that could be accomplished by mailing a letter that one would not be exchanged for the other. A man in mailing a post card is doing it for a purpose entirely different from that which he has in view in mailing a letter. So far as post cards are concerned, they to-day pay the same rate as drop letters. I think the differentiation in the use or purpose there would justify a difference of 1 cent as between the post card and the drop letter. I think that the purpose of the sealed letter is so absolutely different from the purpose of the post card as to present an entirely different proposition.

Mr. STERLING. Do you have any record by which you can determine just the falling off of revenue from post cards?

Mr. OVIATT. In my desire to be entirely accurate, I will try to give the committee the best figures I can obtain. I spent some time with the Post Office Department on that question, but I could not get the figures. I can get the figures from the Canadian Government, and they are now on the way. The best that I can do is to submit the experience of the manufacturers, and it is to be presumed that those that are manufactured are mailed.

#### **STATEMENT OF MR. JOHN J. SHEA, ATTORNEY MID-CONTINENTAL OIL AND GAS ASSOCIATION, TULSA, OKLA.**

The CHAIRMAN. Give the stenographer your full name and business and state whom you represent.

Mr. SHEA. My name is John J. Shea, and my residence is Tulsa, Okla. I am an attorney at law and am engaged in the production of oil. I represent the Mid-Continental Oil and Gas Association, composed of oil producers, refiners, marketers, and prospectors, in what is known as the Mid-Continental field, comprising the States of Kansas, Oklahoma, and north Texas. It is a voluntary association, comprising about 1,500 producers and men engaged in the oil business.

Mr. GARNER. Have you ever held any public office in Oklahoma?

Mr. SHEA. I have been on the district bench or judge of the district court in the State of Oklahoma.

Mr. GARNER. That district is similar to the judicial districts in Texas.

Mr. SHEA. Yes, sir. One member of our committee who signs this recommendation is at the present time State auditor of Oklahoma. That is Mr. Howard, but he is not present.

We come before you fully realizing that you are face to face with an extremely difficult problem, and that you will be compelled to raise a large amount of money.

While we have no concrete suggestions as to other things than our business that ought to be taxed, we desire to make the suggestion that such matters as can properly be taxed and are not now taxed be considered by the committee in raising the amount of money that it should raise, and that having placed the proper tax upon such things that the inequalities that are patent in the present law and the things of which we complain be ironed out, and that the producers oil be given an equal opportunity with other industries. Then, when you get that done, we have not a word to say about the rate of taxation and the amount of money that you want to raise. We do not care how much it is, and we are not complaining about rates at all; we are complaining about inequalities in the existing law.

I first desire to call your attention to the matter of invested capital. At the present time there are thousands of men, individuals and corporations, who have had a small nominal capital stock, except that it is not considered nominal by the terms of your law, but nominal in proportion to the amount of business they do. They have not kept accounts of invested capital; it was not necessary heretofore, and it did not enter into their transactions in any way. Take it, for instance, in the State of Oklahoma. There is a gross tax upon your production in lieu of all other State taxes, and they are not interested in making any valuation of their property for taxation. The Government collected its income tax without regard to the amount of the invested capital, and then came this law, and it found them in this situation: Many of them undercapitalized, many of them with no account of capitalization at all, and the result was great inequalities.

I can give instances where one piece of property, 160 acres of land, is owned in this way: One man, with a capitalization of \$10,000, owns an undivided one-half in 160 acres, while another concern, capitalized at \$1,500,000, owns the other one-half, both honest capitalizations, and when it came to the payment of the excess-profits tax the \$1,500,000 concern got a deduction of \$120,000 before it was subject to any tax and the other man a deduction of \$8,000, although they were both interested equally in that property, not interested in any other, and each owned an undivided half of the same property.

The CHAIRMAN. Did the \$1,500,000 concern pay on that amount?

Mr. SHEA. Yes, sir; but before this law went into effect.

Mr. LONGWORTH. And, of course, that man having made more profit ought to pay more than the other man?

Mr. SHEA. Surely, and he did, but it was based on the amount before the law went into effect. For instance, I know of one instance where \$1,000,000 was paid for a half interest in a property in November of 1916 and \$100,000 represented the other half of the same property. Now, \$100,000 was the invested capital—

Mr. LONGWORTH (interposing). If I start with \$10,000 and buy half of a certain property—

Mr. SHEA (interposing). But he did not buy it; they both developed it. He went out and wildcatted; took his chance and developed it.

Mr. LONGWORTH. He took his chance.

Mr. SHEA. Yes, sir.

Mr. LONGWORTH. And he made a tremendous profit. He might have made 10,000 per cent.

Mr. SHEA. All right.

Mr. LONGWORTH. And you only made, say, 1,000 per cent. Do you not think that if he made 10,000 per cent he ought to pay a higher tax?

Mr. SHEA. But that does not answer my question as to the distinction and discrimination there.

Mr. LONGWORTH. Mind you, I am not arguing in favor of an excess-profits tax based on capital, but the fact is that is the only basis we now have.

Mr. SHEA. No.

Mr. LONGWORTH. And the only other resort would be to adopt the English system.

Mr. SHEA. And using the valuation of the property.

Mr. LONGWORTH. Yes. So long as we have the tax based on invested capital, ought not the man who puts in the smallest amount pay the highest tax?

Mr. SHEA. He probably ought to pay a higher tax, but it ought not to take all of it away from him, which it does; he pays 60 per cent on what he has in there and the other people pay 20 per cent or 15 per cent on what they have in there.

Mr. LONGWORTH. Precisely, and they put in infinitely more.

Mr. SHEA. They have put in more money, of course. If you put \$5,000 into an enterprise and I put in \$10,000, ought you to pay more taxes than I do?

Mr. LONGWORTH. Under a tax based on invested capital, surely.

Mr. SHEA. I can not agree with you. I think there ought to be some way of ascertaining the value of the property and then treat that as capital, and I believe there is no other honest way to do it; there is no other way it can be done fairly to all concerned.

Mr. LONGWORTH. You want the value taken as of what date?

Mr. SHEA. When the tax began, the first of the year 1917.

Mr. LONGWORTH. In other words, you would have the value of the property based on an estimate of the value at the time the tax began?

Mr. SHEA. Not an estimate, but a sworn appraisal, the same as you make a return of your property in the States for taxation, by sworn appraisals and subject to inspection, revision, and correction by the Treasury Department.

The CHAIRMAN. You mean based on the net value—

Mr. SHEA (interposing). Of each share, when your tax went into effect; yes, sir.

Mr. STERLING. How would you determine that question? By the earning power of the property?

Mr. SHEA. That would be one of the things that would enter into it.

Mr. STERLING. If you did that would you consider 8 per cent as a fair estimate of the earning power?

Mr. SHEA. Not in the oil business.

Mr. STERLING. Then how much?

Mr. SHEA. At least 15 per cent.

Mr. LONGWORTH. Then there would be practically no excess-profits tax?

Mr. SHEA. Yes; there would be an excess-profits tax to be collected by the Government. If the oil business does not pay more than 15 per cent it would have to go down because of the irregularities, the uncertainties, the great risk and hazard there is connected with bringing it to the surface and finding it. Oil profits are made by finding oil.

Mr. LONGWORTH. I agree with you that there should be a difference made as to investments in oil, zinc, and other risky ventures of that sort, and I think you ought to have a much larger allowance than 7 or 9 per cent, but the moment you advance the proposition that you should only pay an excess-profits tax based on the value of the property at the time the tax was assessed you destroy all revenue.

Mr. SHEA. I do not agree with you at all. I do not care anything about the rate, and you can fix that by your rate of taxation.

Mr. LONGWORTH. Of course, we might fix a rate of 100 per cent.

Mr. SHEA. Let it be 100 per cent or let it be 200 per cent. I do not care what rate it is when you put us on an equality and make others toe the scratch at the same time; then you can start the race whenever you want and make the tax as much as you want.

Mr. LONGWORTH. Put whom on an equality?

Mr. SHEA. Everybody.

Mr. LONGWORTH. Does not the tax bear equally on you and everybody else?

Mr. SHEA. There is certainly no equality among ourselves, not among the oil producers, and I presume there have been inequalities in other businesses under this law.

Mr. LONGWORTH. In every business there is bound to be some inequality.

Mr. SHEA. Yes; but I think it is more overwhelming in this business than in any other business.

Mr. LONGWORTH. Have you figured how you would come out on a fair oil price tax like the English tax?

Mr. SHEA. In the book which I have filed with the committee there is a sheet showing the prices of oil from 1903 up to the present time, but you must remember that the sale price of oil does not depend nearly so much on the conditions of the market as it does on the amount which you produce and that sometimes the production is enormous and sometimes it goes away down.

Mr. LONGWORTH. That does not answer my question, and I am speaking of your industry generally. Would you prefer to pay a tax under the English system, which would be, say, 80 per cent?

Mr. SHEA. That would be a difficult thing in the oil business for a lot of reasons.

Mr. LONGWORTH. Those were the only two resources that we had.

Mr. SHEA. I do not know whether they could do that. You know the war paralyzed the oil business for the whole of the year 1914.

Mr. LONGWORTH. I should like very much to know, because it is a question whether we shall continue this excess-profits tax or provide a tax under the English system.

Mr. SHEA. I am not prepared to say at this time whether the industry would prefer that. If, upon examination, it is found that that would put them on something like an equality with other industries they have no complaint at all.

Mr. LONGWORTH. Would you favor a tax based on what you made since the war and before?

Mr. SHEA. That would present a difficulty in regard to those concerns that had newly started in business.

Mr. LONGWORTH. The difficulty that faced us was that we had to do something, and we had a choice between two systems, and only those two systems. Can you suggest any other excess-profits tax except one based on the difference between the price before the war and during the war or a tax providing an arbitrary amount based upon the invested capital?

Mr. SHEA. We are in a different situation from other industries in this way: There is no way that we can produce oil except to find new fields.

Mr. LONGWORTH. Are you arguing that you should be placed in a different classification from all other businesses?

Mr. SHEA. Yes. We are a wasting industry, and from the moment we sell the first barrel of oil we begin selling our capital and there is no way you can produce more except by finding new fields. Now, that is not true of wheat, or a great many other things. The supply of wheat is unlimited, and you can produce more of a great many other things, and you can increase the supply of those things to an unlimited extent. But with us you can not produce until you find or discover oil. It is always a problem. You may or may not discover it.

Mr. LONGWORTH. I will agree with you that the oil business is different from other businesses, and I should not object to a different classification for it, but if we still continue this tax it must be based on invested capital, and must not be based on the value of the property at the time the tax was assessed?

Mr. SHEA. Why?

Mr. LONGWORTH. Because it destroys the whole thing.

Mr. SHEA. You are wrong about that, altogether wrong. Put the rate as high as you like—

Mr. LONGWORTH (interposing). Precisely, but you destroy the basis.

Mr. SHEA. You can set the rate in the classification, and there would be no trouble about that.

Mr. LONGWORTH. Do you mean to say, as a general proposition, that if I buy a piece of real estate for \$10,000 and it goes up 1,000 per cent that I have a right to be taxed only on the amount that the real estate cost me?

Mr. SHEA. I am not talking about that value. Your rentals do not go up in proportion to the increase in value of your real estate and the same is true with us. You tax us on the profits we make in the business—I will get to sales of property presently; you tax us on what we make, the income from our business, just as we would tax you on your real estate, on the income you make from it. While I am there, I might as well say that I think you can raise a very large amount of money by taxing the rents and incomes of individuals to a greater extent, and I think you ought to do it. In other words, I think the present law leaves free a great many incomes that are obtained from invested money.

Mr. LONGWORTH. Your proposition, as I understand it, is that you should be allowed a deduction of 15 per cent?

Mr. SHEA. Yes, sir; at least that.

Mr. LONGWORTH. And that the valuation should be not on your actual invested capital, but the value of your property as determined at the time the tax becomes due?

Mr. SHEA. Yes, sir.

Mr. LONGWORTH. Therefore, what margin you have to tax the excess profits?

Mr. SHEA. I could not just say at this time, but you would have a large margin, and the probability is that it would not affect as many people as you think. You take concerns with ample capitalization; they would not be affected. There would be many instances where the capital on which they are entitled to earn at this time would be greatly decreased by an assessment of that kind. There are many who are honestly in the business, but in such a way that it is impossible to trace all of those things, and yet the value of their property may be greater than on January 1, 1917, and our suggestions would tend to greatly equalize all of those things.

Mr. GREEN. If we could devise some plan by which we could equalize these values throughout the oil fields—

Mr. SHEA (interposing). That is the only thing we ask.

Mr. GREEN. As patriotic people, the same as patriotic people elsewhere, you do not object so much to the amount of the tax as you do the inequalities in the way it works out, and possibly in order to equalize things the value ought to be arranged so that some might have to pay more and others less. However, that might be, I think you will agree with me that if we could have a general plan for valuing the property equally, as nearly as may be through appraisement, or something like that—and by equally I mean fairly as to—

Mr. SHEA (interposing). As to the particular industry.

Mr. GREEN. Yes; in that particular industry and as between particular corporations—if a plan of that kind could be worked out then we could apply whatever—

Mr. SHEA (interposing). You can apply whatever rate you like, we do not care how much it becomes; if it becomes 50 per cent or 100 per cent, all right, and if we have not enough to meet it, we will have to try to meet it in some way.

Mr. SLOAN. There is no difficulty about rates; the difficulty is how are we going to establish an equitable basis. If the basis is 1 penny and your rate is \$1,000,000, we do not gain anything, so that the difficulty is in arriving at a proper basis. I think we are more interested in that.

Mr. SHEA. There may be some better way in arriving at a proper valuation than the one I suggest; I do not know; but it is the fairest one we can think of. It is the way your property is valued for all purposes in every city at the first of any year.

Mr. LONGWORTH. But that is not an excess-profits tax.

Mr. SHEA. No; it is not an excess-profits tax.

Mr. LONGWORTH. That is what we are talking about.

Mr. SHEA. I know it is, but we are now talking about the proper way of arriving at that.

Mr. LONGWORTH. Are you arguing against this excess-profits tax as a system? Are you arguing against the system?

Mr. SHEA. No; I am not arguing against it at all.

Mr. LONGWORTH. You are arguing against it only as applied to your industry?

Mr. SHEA. Yes; it works such inequalities that the burdens are very heavy.

Mr. LONGWORTH. Do you admit that it is a proper tax with regard to all other industries?

Mr. SHEA. I do not know; I am not speaking for other industries, and therefore I would not undertake to say. While I am on this matter I want to say that the English law recognizes a difference between the oil industry and other industries, and it classifies many industries. For instance, the English law permits 24 per cent to be earned in gold mining, and in its classification of oils there are various classifications. It classifies those engaged in the production of California oil and gives them, as I recall, 10½ per cent; but that is a matter that you gentlemen will have before you—at least, data relating to all of those classifications. However, that is about twice what it gives to the ordinary industry in England. Before I get away from the matter of invested capital I want to say that we think borrowed money ought to be treated as invested capital as well as the money which a corporation earns during the year and puts back into the business. The oil business is maintained by constantly putting back the money you take out in order to keep up your production, in order to keep going, and we believe we ought to be permitted, when we reinvest that money, to consider it as invested capital from that time on. That is only fair to any business—the oil business or any other business. If I make a profit and immediately put that profit back into my business, use it in my business, and subject it to the risks and hazards of my business, then I am entitled to consider it as invested capital and should be permitted to earn upon it.

Mr. GREEN. I want to make a little further suggestion. I do not see quite so much difficulty in getting at this value as Mr. Longworth does. In an ordinary business we might say that its value is equivalent to what it would pay in eight years, and that would be putting it on a 12½ per cent profit; but that would not do in the oil business, and it would result in too high a valuation, would it not?

Mr. SHEA. Yes, sir.

Mr. GREEN. But suppose we establish the rule in the oil business—I am not saying that this is the right proportion because I have not studied it, and probably you can inform us—of taking five years as the basis. That would greatly reduce your valuation and might, perhaps, approximate the proper valuation of an oil well.

Mr. SHEA. I want to say right here that the purchasers of properties value them on the basis of the return on the invested capital in some period within from three to five years.

Mr. GREEN. If we took three years that would cut your valuation down still lower?

Mr. SHEA. Yes, sir.

Mr. GREEN. And we could in that way equalize values?

Mr. SHEA. It would be a very easy matter.

Mr. LONGWORTH. You did not comprehend exactly what I was getting at. My question was not how to determine the present value of the property but simply how to determine invested capital. Is invested capital the amount you originally put in or is it the

valuation of the property at the time the tax is paid? That is all I asked.

Mr. GREEN. That is just simply, in my judgment—if you will pardon me—a play on words.

Mr. LONGWORTH. No, it is not; it is an actual and definite proposition.

Mr. GREEN. We speak of it both ways. When we speak of our invested capital in a business we sometimes mean the amount we put in five years ago, but ordinarily when we speak about what we have invested in a business we mean what the property is worth to-day.

Mr. SHEA. Absolutely.

Mr. LONGWORTH. That is not what the law says.

Mr. SHEA. No; that is not the law and that is what I complain about, that there ought to be some method provided by which we could arrive at a fair value. I do not care about its being big, but I want it to be fair, so that it will give us some basis on which to start. I do not care anything about the rate of taxation you apply, but I do not want you to take all from my neighbor and not any from me, or vice versa. The experience in our country is that the earnings of some men do not pay any excess-profits tax at all under your law, while other concerns may be paying quite an amount in taxes. If Mr. Green and Mr. Longworth each owned 160 acres of land, divided by a road, each having the same number of wells, each producing the same number of barrels of oil and putting it on the market at the same price, it is not fair to make Mr. Longworth pay \$300,000 worth of taxes and let Mr. Green get away with \$8,000.

Mr. LONGWORTH. Suppose I have only originally put in \$10,000 and he has put in \$1,000,000?

Mr. SHEA. Of course, that would be a very extreme case.

Mr. LONGWORTH. No; you just cited such a case.

Mr. SHEA. But you have not only put in that original amount; but you have put in years of labor. I have a neighbor who has had 13 unsuccessful years in the oil business, and last year, for the first time, in 1917, for the first time, after 13 years of effort and labor, he made \$150,000 and his tax on that \$150,000 is \$85,000 or \$86,000, and he put in 13 unsuccessful years before that time. Those are the inequalities that I urge against—

Mr. GREEN (interposing). If the valuation were fixed on a three-year basis there would be very large returns?

Mr. SHEA. Yes, sir. If the method were used that a purchaser of property uses in estimating its value it would give you a large return. I have no doubt but that you can get very much more taxes from the oil industry by the method we propose, and I think they would be equitably distributed over the whole business. If anybody can suggest any good reason why, when a man borrows money on credit outside of the industry in which he is engaged—and a man with a lease in a field that is promising could not borrow a dollar on that credit from a bank anywhere in the world, but he must borrow it on other credit, and he puts it into his business—if there is any good reason to urge why it should not be treated as invested capital from the time he put it in, I have not heard it.

Mr. LONGWORTH. I agree with you on that.

Mr. SHEA. That is good common sense and it ought to prevail.

Mr. STERLING. Are you certain it is not now treated as invested capital?

Mr. SHEA. I am absolutely certain it is not treated as invested capital anywhere. You can deduct what you pay interest on—well, I will qualify that by saying that in the case of a corporation they do treat the borrowed money invested in the business, but upon which they are not allowed to deduct interest, as invested capital, but that is the extent of it.

Mr. STERLING. These inequalities arise from the difficulty in defining invested capital?

Mr. SHEA. Yes, sir.

Mr. STERLING. The value of the property is made up either of the money that is actually put in or the property that is put in and the good will that goes with it?

Mr. SHEA. There is no good will in the oil business.

Mr. STERLING. I think there is a good deal of good will in the case that you cited, where one man invested \$10,000—

Mr. SHEA (interposing). There is no good will, because your enemy will buy your oil just as quickly as your friend.

Mr. STERLING. What would you call it?

Mr. SHEA. I would call it earned increment or appreciation in value.

Mr. STERLING. How are you going to determine the value of the good will or this appreciation value that you speak of? Is not its earning power the only way to determine its value?

Mr. SHEA. Yes; but its earning power depends on its future possibilities.

Mr. STERLING. Eight per cent is counted a pretty fair income on capital, is it not?

Mr. SHEA. Not in the oil business; you could not get money into the oil business for that.

Mr. STERLING. Would you adopt one rule for the oil business and another rule for some other business in determining the value of the good will or in determining what you call appreciation?

Mr. SHEA. Good will does not enter into the production of oil in any degree; it is absolutely eliminated.

Mr. STERLING. Then call it the other thing, call it appreciation of value.

Mr. SHEA. You would not put the production, exploration, and pioneering for oil in the same category that you would put the banking business, would you? If you had \$100,000 to invest and you had the choice of putting it in either one of those businesses at 8 per cent which would you choose, the banking business or the oil business?

Mr. STERLING. Well, I do not know which I would choose, because I do not know anything about either, as far as that is concerned.

The CHAIRMAN. He would put his money in the business that he thought would make him the most money.

Mr. SHEA. The question of safety enters into it and the question of which business would give the surest return enters into it.

The CHAIRMAN. But if he thinks he is going to make more money he will take a risk, just as thousands of men will take a risk on the stock exchange.

Mr. STERLING. I would not put it in the oil business if I thought I could only make 8 per cent; I would put it in the banking business in that case, because I would hope to make a much higher percentage in the oil business. We realize the inequalities of this proposition and those inequalities do not apply only to the oil business but apply to many other lines of business. The difficulty we have is in determining a basis for exemption, and I do not believe you have offered any suggestion that would help us on that proposition. We have adopted invested capital as the basis and that is where the difficulty arises. Now, what would you think of this, saying nothing about capital: To give every concern a flat exemption, not any percentage, but a given amount, say, \$5,000, and then taxing all the rest of the income above the exemption on a graduated scale, without any reference whatever to the amount of money that is invested then capital?

Mr. SHEA. The same as is done in the case of the payment of the income tax?

Mr. STERLING. Yes.

Mr. SHEA. That would put your corporations on a graduated income tax?

Mr. STERLING. Yes. What would you think of that?

Mr. SHEA. If you did that you ought to tax the money when it reaches its final resting place; the man who owns that money ought to pay that tax when it reaches him.

Mr. LONGWORTH. It would not be an excess profits-tax under any consideration?

Mr. SHEA. I would not call that an excess-profits tax at all, and that would be an absolute abandonment of the excess-profits tax.

Mr. STERLING. We do not care what it is called, so we can get this revenue. Would not that be a better plan than the plan we now have of an excess-profits tax?

Mr. SHEA. You might increase the income tax, or the normal income tax on individuals, and it might be increased on corporations. It probably ought to be. When the corporation distributes its dividends to the stockholders, let the stockholder, who is the final owner anyway, pay that tax, and let the corporation pay its flat tax. Let the corporation pay its flat tax, and lay the graduated tax on the income of the individual when it reaches him. That is where it belongs.

Mr. GREEN. I want to ask you another question in regard to the matter that we were just discussing. You were speaking about paying this higher percentage, or using a higher percentage in computing the value of the investment in oil companies, and you were suggesting what that higher percentage ought to be. Now, you were not speaking in the interest of the oil people then, but against their interest, were you not?

Mr. SHEA. Yes, undoubtedly. Now, there is another thing, and that is that oil is just as absolutely necessary as flour, wheat, meat, and other like supplies. It is a fuel upon which we are largely dependent. We are up against this set of circumstances in the oil fields, that after putting forth the greatest efforts we can, and after taking chances that we really ought not to take, we are not able to keep the production normal at this time, and there have been 3,500,000 barrels of oil taken out of storage during each month of 1918. After a while, in a brief time, that storage will be below the point of

safety. A certain amount of oil must be kept in storage so as to insure a safe supply, but, after a while, with those withdrawals from storage, it will be below that safety point. Therefore, there must be something done by which men will be encouraged to go out and discover new fields. If you take 60 per cent from the adventurer when he goes out and discovers a new field, he certainly can not afford to go. The cost of drilling wells has increased enormously. Everything has practically doubled in cost. Labor has more than doubled in cost, and the cost of raising, pumping, and repairing has doubled. As shown by the table that has been prepared, all of those things have more than doubled in cost.

The price of our oil when the war began, or when the United States entered the war, was \$1.70 per barrel, while the price at this time is \$2.25 per barrel. That price is fixed at this time by the Fuel Administration, and the price can not be raised. It is only fixed in the interest of the consumer, and it is not fixed in the interest of the wildcatter or prospector. Those are things that you must keep in mind. You must keep the storage up to the point of safety, and you can only do that by encouraging or permitting these men to take chances. They will only do that if they are permitted to retain a substantial portion of what they discover.

The CHAIRMAN. I have asked several oil men this question, and all of them seem to have different opinions. In your territory, in Oklahoma, what is the average life of a well?

Mr. SHEA. You produce from a well in the first year, or within the first 12 months of its production, from 45 to 52 per cent of the oil that it ever will produce. During the next three years you will get 85 per cent of all the oil it will ever produce. In other words, in four years the well will produce 85 per cent of its total production. At the end of four years there will be 15 per cent of the total production of the well left in the ground. At first it comes slowly, or to the point where it is taken out by pumps. It filters slowly through the sand, and the remaining 15 per cent may be taken out over a period of several years. A well will produce 85 per cent of its total production in the first four years.

The CHAIRMAN. That is the experience in Oklahoma?

Mr. SHEA. That is our experience; yes, sir.

The CHAIRMAN. I believe that the committee generally feels that there must be some modification of the law made in the interest not only of oil and gas but also in the interest of lead, zinc, and other minerals in the mining of which exhaustion takes place in the course of a few years. Of course, coal and iron deposits may last for years, but this provision should apply especially to minerals of the kind I have mentioned. Now, the difficulty is in determining how to get at it, or what the remedy should be. That is the difficulty before us.

Mr. SHEA. I know it is a difficult question. You can get a great deal of information on the subject from the Fuel Administration, and you could get a great deal of information from the Bureau of Mines.

The CHAIRMAN. Don't you believe that the principle applying to other industries, except those that exhaust themselves in a few years, like oil, gas, lead, zinc, etc.—that is, by taking the capital invested—is the most equitable way to get at an excess-profits tax?

Mr. SHEA. I believe that is true.

The CHAIRMAN. Otherwise, we would have the English system of prewar profits and war profits. If we had that in this country, a few corporations would escape taxation to the amount of \$550,000,000. The English system applied to new business or new business started up since the war, with their exemptions—I do not know, but I have understood that last year they increased their exemptions from 6 to 9 per cent—

Mr. SHEA. I do not know as to that.

The CHAIRMAN. I doubt whether it is true.

Mr. SHEA. Mr. Farish, president of the Gulf Coast Oil Association, suggests to me that the average life of their wells on the Gulf coast is about three and a half years. Of course, that is different from the condition in the western fields, and I am speaking only of the Mid-Continental and older fields. There is another thing I want to get before committee: A great many people think that all a man has to do is to put down a well, and that it then begins paying dividends. I want to say that there are 20,000 wells in Oklahoma, north of the Arkansas River, that are producing on an average from one to one and a half barrels of oil per day. In other words, the 20,000 wells are producing about 30,000 barrels of oil. I think that a very fair estimate of the cost of those wells at the beginning would be from \$4,000 to \$4,500 each.

The CHAIRMAN. There is another thing I want to ask you: After you have put your pumping machinery and other machinery up, and the well is exhausted, is that machinery worth anything to you?

Mr. SHEA. It has what is known as a salvage value, which should be considered in connection with all this.

The CHAIRMAN. What would its value be after the well has been exhausted? What would a wooden derrick be worth?

Mr. SHEA. At the end of three years a wooden derrick would be practically worthless. The tubing, casing, and machinery would have a value of probably 40 per cent of the original value. I do not know but what that would be too high.

The CHAIRMAN. It would have some reasonable salvage value?

Mr. SHEA. Yes, sir. For instance, if we bought material at the present prices, and then at the end of three years should go back to normal conditions, the material would not be worth more than 10 or 15 per cent of the original cost, because we are now paying two and a half times as much for material as we did in normal times.

Mr. HAWLEY. You spoke of 20,000 wells producing one and a half barrels of oil each; in what period of time was that oil produced?

Mr. SHEA. Per day of 24 hours. Now, there are thousands of wells throughout the State of Pennsylvania that do not produce one barrel of oil per week; and many of them are only pumped one day in a week. They have gotten down now to the point where they compute Pennsylvania oil wells in gallons instead of barrels. You read about the gushers, but the reliance in the oil business is the settled steady production that is constantly going on. The reliance in the oil business is the producer who is steady and conservative, just as it is in every other business, and not those great strikes and things that you read about. I have myself in past years drilled a number of wells that cost me all the way from \$6,500 to \$7,500, from which the initial production was only 8 or 10 barrels per day, and they have rapidly gone down to 4 or 5 barrels. At that rate it takes a long time to get your money back.

Mr. DICKINSON. You spoke of 20,000 wells north of the Arkansas River that produced an average of one and a half barrels of oil per day.

Mr. SHEA. Yes, sir.

Mr. DICKINSON. You were not including dry wells in that average?

Mr. SHEA. No, sir; I am not considering them at all, but I am talking about producing wells.

Mr. DICKINSON. How many other wells are there in this territory besides those 20,000?

Mr. SHEA. That is the total number of wells north of the Arkansas River in Oklahoma.

Mr. DICKINSON. Of all kinds?

Mr. SHEA. Yes, sir; there are between twenty and twenty-five thousand wells.

Mr. DICKINSON. All the wells together average that production?

Mr. SHEA. Yes, sir. That does not include the Osage Indian Reservation, in which there has been some development, but it includes the Cherokee and Creek Nations north of the Arkansas River. This statement of mine includes only the producing wells, and I have taken no account of the dry holes. They do not enter into it in any degree.

Mr. GARNER. You want this committee to consider your industry in levying excess profit taxes aside from the general industries of the country?

Mr. SHEA. Yes, sir.

Mr. GARNER. You want us to make of you a specific industry, and levy the taxes according to the conditions?

Mr. SHEA. Yes, sir.

Mr. GARNER. The mining people have been here. For instance, the zinc miners have been here, the copper miners have been here, and the coal miners have been here. Representatives of the various mining or mineral industries have come in and claimed something on the same line that you suggest.

Mr. SHEA. I think they are entitled to it.

Mr. GARNER. If the industry is such that it exhausts itself in three or four years, you think that a different method should be applied. You think that a different rule ought to be made in those cases, and I think that is a very good argument. But here is the difficulty that we have: Here, for instance, is a mining industry that exhausts itself, we will say, in 4 years; another that exhausts itself in, say, 10 years; and another that exhausts itself in 15 or 20 years. Now, how is Congress going to write a law or make a prescription that will apply equitably to all of those mining industries?

Mr. SHEA. I know it presents great difficulties, but there must be some way in which it can be fairly reached.

Mr. GARNER. It is my opinion that you and your associates ought to get together, just as I suggested to the insurance companies, and see if you can write a prescription that would be applicable to your condition, so that we could get all of the money out of your business that we possibly can during the war without destroying it or unduly disturbing it. If you will do that, I am sure we will be glad to consider it.

Mr. SHEA. We will be glad to do that.

Mr. GARNER. Of course you understand your business much better than I do, and if you come here and make an argument and produce a lot of figures to show what a hard time you are having and then expect me to write the prescription, I might make a bad job of it.

Mr. SHEA. We will be glad to do that. There is this distinction to be borne in mind as between oil and a body of ore in the ground, and that is as soon as you reach your oil you must bring it up at once. You can not leave it there in the ground. In the case of ore, you don't have to bring it up until it is needed, but you must bring up your oil. Your oil must be produced at once, because your neighbor across the way is, perhaps, drawing from the same pool. Then, you must sell it. You must sell it in whatever market you can get. You can not store it and you can not keep it—

Mr. GARNER (interposing). We have one or two oil sharks on the committee.

Mr. SHEA. We will be glad to furnish you with such information bearing on that as we can.

Mr. LONGWORTH. Supplementing what Mr. Garner has said, you realize the problem that we have. We are attempting to raise almost double the amount now being raised by taxation, and it is our problem to raise that without destroying the machinery by which profits are earned.

Mr. SHEA. We will be glad to give you any data in our power.

Mr. LONGWORTH. What we want you to show us is how we can get the largest amount from your business without in any way destroying your efficiency, your production, or your machinery for earning profits.

Mr. GARNER. You suggest to us the machinery, and you may suggest the rate, if you want to, by which we can get the largest amount of money out of your industry during the time of the war, so as not to destroy or impair the tax-producing or revenue-producing power of that industry, and we will be glad to consider your suggestions.

Mr. SHEA. We will be glad to furnish you such suggestions.

There is another matter that I would like to bring to your attention, and that is the matter of the depletion of leases by the return of the invested capital. Now, growing out of a series of decisions, there is a distinction made between a leasehold and a freehold. The owner of the freehold, who usually receives one-eighth of the amount of oil or gas recovered from the property, is permitted to have his capital returned to him without depletion, the amount deducted each year being the total amount received after paying taxes. We are entirely satisfied with the regulation that we have now, except, as applied by the Treasury Department, there is a distinction made between the leasehold and the freehold, and we contend that that distinction should be eliminated. The distinction between a leasehold and a freehold is purely theoretical, and it ought not to be continued. They are in the same situation as to their legal rights, and I think there should be written into the law a provision that leaseholds shall be treated in the same way as freeholds. The owner of the freehold usually has one-eighth of the oil or gas, while the owner of the leasehold has seven-eighths of the oil or gas. In some instances, instead of one-eighth, the amount of the royalty is one-sixth. The owner of the lease ought to have an allowance made for the return of invested capital.

In other words, unless there is such an allowance made, or unless the producer of oil or the owner of the lease is permitted to have a return on his capital by reason of depletion, when his production ends his capital goes out with it.

We have proposed that this ought to be divided into payments, and I think there will be no dispute about that. It would be paid with less disturbance to business affairs that way. For instance, last December, the bankers through a committee out there notified the oil men at a big meeting that they would not be able to finance the oil men on their taxes, and that they should begin right then to prepare to meet their taxes. They said that they would not be able to finance them. The result was that the oil men began to prepare to meet their taxes and ceased development work. They ceased development work with a view of being prepared to pay their taxes. They met them without any great amount of difficulty, but in order to meet their taxes they began last December to prepare for them. They did that, because they were warned by the banks that they could not finance them or take care of them in the ordinary course of business. So if that demand were distributed over four payments, it would be a good thing.

Mr. WHITE. May I ask whether, in your opinion, the curtailing of new business has affected the production of oil materially?

Mr. SHEA. Yes, sir; very largely. We are engaging in new enterprises now under great difficulties. Labor is scarce and is not good, while material is very high. In many instances it is almost impossible to get labor or material. The cost of wildcatting is now almost prohibitive except to a man with great capital. For instance, a man will not take chances on drilling a dry hole, even in promising territory, when you tell him that the cost will be \$45,000, and that it may be a total loss.

I want to make a suggestion as to sales: At present, if a concern owning several properties sells one of those properties and immediately reinvests the money in its business, the present method of treating it is to take that property separately and treat it as profit and levy immense taxes upon it, although they do not take it out of their business. The English have a very superior method of treating that. They permit the money taken out by the sale of property to be immediately reinvested in the business, taking as profit only the difference between the sale price and that which was reinvested. That is entirely fair both to the Government and to the business.

Mr. WHITE. You stated to the committee that there had been taken out of storage 3,500,000 barrels of oil per month. Did you mean that that much was taken out of storage in the Mid-Continental field?

Mr. SHEA. No, sir; in the total number of fields. I referred to the total storage. Of course, I am not talking about California, because that is in a class by itself. I referred to the total field exclusive of California. I will give you those statistics literally as they are.

Now, returning to this suggestion as to sales of property, sales of property ought to be encouraged. You have heard the statement that there have been no sales of property in the Mid-Continental field since this law went into effect. They can not sell. This provision absolutely stops them from selling. The result is that the oil man who has accumulated a fair amount of property can not sell it.

He can not get his money out of the property and go into other ventures and keep on in business. He can not sell his property, because he can not afford to pay the tax that is assessed against his sales based on capitalization. I can give you the instance of a concern operating in three States—Kansas, Oklahoma, and Texas—which recently entered into a contract to sell provided some arrangement could be made about the payment of the taxes on the sales. They figured out that they could pay \$500,000 to the Government in taxes.

They figured out that both the purchaser and the seller could stand that. They came to the Treasury Department here with a suggestion that if they could be permitted to pay \$500,000 in taxes that trade could be made, but there was no method by which the Treasury Department could accept that, and the result was that the sale was not made, and the Government lost \$500,000, while the people were compelled to keep their property. The suggestion was made a while ago that you could tax earned appreciation or appreciation whether it was earned or not. You would be undertaking a big job in taxing that sort of appreciation, because that would apply to every other industry. It would apply to every house and lot—

Mr. GARNER (interposing). What do you think about the public policy of Congress leaving it very largely in the discretion of the Treasury Department to pass on cases of that sort?

Mr. SHEA. We have made that suggestion here, and we would have a board of equalization to do that.

Mr. GARNER. Suppose Congress should follow that suggestion, and by virtue of a want of conception of the law or a disposition not to construe it as it should be, the administration of the law should be had in such a way as to abuse the privilege given, would you not be among the first to come to Congress asking that that wrong be remedied and complaining at Congress for having permitted it?

Mr. SHEA. No, sir; we would not complain at what you had done.

Mr. GARNER. You would come to us and say, "We want you to give us a remedy against this outrage that has been perpetrated upon us by the Treasury Department in the construction of the law." You would want us to go back and enact a rigid rule.

Mr. SHEA. When we are wronged by any executive branch of the Government, we will come to Congress for relief in the matter, because there is no other place for us to go.

Mr. GARNER. That is what I am pointing out to you now the danger of Congress giving too much discretion to the executive branch of the Government in the administration of the law.

Mr. SHEA. I think there might be too much discretion in something of this sort—

Mr. GARNER (interposing). You are a man of affairs and you have studied political questions, and you know that it is dangerous for the legislative branch of the Government to place too much discretionary power and power to show favoritism in the administration of the law in the hands of the executive branch of the Government.

Mr. SHEA. In the matter of the suggestion I have made in regard to sales, it will be quite an easy matter to write into the law a provision that would cover it. It would not be a difficult matter to cover that.

Mr. GARNER. You might cover all of the points you make by suggesting provisions that might be put into this bill.

Mr. SHEA. We will submit those suggestions in the brief that we will file with the committee.

I want to give one more instance along that line: In this case the concern has a nominal capital, and has been very successful. They have a capital investment of \$10,000, and they have been extremely successful. Their tax this year is \$240,000, and they were ready and willing to pay that tax, except that they did not have the money. They had taken all of the money earned from the business last year and put it back into the business. In order for them to pay the tax, it was necessary for them to sell some property. They have one piece of property that they could sell for \$300,000, but under the present method of figuring it this would be considered under the present law as a profit, while, in reality, it should be considered as a diminution of their invested capital.

The result is that if they should sell their property for \$300,000, thereby reducing their assets in that amount, it would be classed as profits in the current year under the present law, to which would be applied a 60 per cent tax, and they would still lack \$120,000 of having enough money to pay the tax now assessed and the tax upon the sale. That being the case, they are now considering making a proposal to the Government to let the Treasury Department sequester and sell enough of their property to pay the tax. If they sell it to pay the tax, they can not get enough money to pay both of the taxes that would be assessed.

Mr. LONGWORTH. Can you say how the average profits from the oil business last year compare with the profits for 1911, 1912, 1913?

Mr. SHEA. No, sir; I can not say. You have no statistics for 1911 and 1912, but beginning with the income tax, your income tax reports would show that pretty well. Speaking personally, all the money I have ever made in the oil business was made in 1911 when oil was selling at 35 cents per barrel. That is the only time I have ever made any substantial sum of money in the oil business. I did that by producing oil at 35 cents per barrel, but I did it because of a discovery.

Mr. LONGWORTH. The reason I asked that question was to get some idea about how the English system would affect the oil business.

Mr. SHEA. During the war—

Mr. LONGWORTH (interposing). I am referring to war profits.

Mr. SHEA. I am inclined to think that the war has rather injured than helped the oil business. Although the price is greater, the production is less. For instance, in 1914 and 1915 the wonderful Cushing field, a strip of ground 6 miles wide and 12 miles long, produced more oil than the entire State of Oklahoma is producing just now. When, if we go back to 1916 and 1917, the Eldorado and Augusta fields in Kansas produced such an enormous amount of oil that the price was kept at a very moderate figure. Now all of those fields are decreasing rapidly.

Mr. LONGWORTH. You think that the war has hurt rather than helped the industry?

Mr. SHEA. Yes, sir.

Mr. LONGWORTH. Then, in getting at the excess profits by the present method—

Mr. SHEA (interposing). I am not claiming that exemption.

Mr. LONGWORTH. I am saying that—

Mr. SHEA (interposing). I am willing that you shall take the price of oil at the beginning of the war and take any increase since then and call that a war profit.

Mr. LONGWORTH. We have two methods of getting revenue by means of excess-profits taxes, one by our present system and the other by the English system. You say you think that would not affect you, because we could not get any tax from the industry under the English system?

Mr. SHEA. I do not believe that the profits have been increased by the war.

Mr. LONGWORTH. Then, we would not get any tax out of the industry under that system, and so our only recourse would be our own system. That is the reason I hope you will give us all the assistance you can in devising a method to raise a substantial revenue without actually destroying the machinery by which it is produced.

Mr. SHEA. I think we can do that very easily. I would like to call your attention to the fact that there is an error in the calculation shown on page 24 of the brief, and I have inserted a typewritten page to be taken in lieu of page 24. You will please not consider that example on page 24 in print, because it is a miscalculation.

The CHAIRMAN. In allowing you a deduction for depletion of oil, do they allow you the value of the oil in the well?

Mr. SHEA. No, sir.

The CHAIRMAN. How do they treat that?

Mr. SHEA. They treat that in this way: There are two methods of doing it. The first method, and a very satisfactory method, is to estimate the amount of oil in place at the beginning of the year. For instance, we have 1,000 barrels of oil in place at the beginning of the year, and we take out 200 barrels of it. Then your property is depleted to the extent of 20 per cent of the invested capital.

The CHAIRMAN. And in making up your return of profits you deduct that?

Mr. SHEA. Yes, sir; for the return of invested capital.

The CHAIRMAN. Do you treat a lease in the same way?

Mr. SHEA. They do not permit it now on a lease, although the owner of the lease owns seven-eighths of the oil. They do permit it in the case of the owner of the property. A lease may represent a large investment. A single quarter section frequently sells for \$250,000, or the lease does. On the Osage Indian Reservation many leases have brought at public sale in the neighborhood of \$100,000. That is simply for the lease itself.

Mr. WHITE. Before oil was produced?

Mr. SHEA. Yes, sir; a mile or more from any production.

Mr. GREEN. What is usually paid for a lease?

Mr. SHEA. In the Osage Nation the royalty is one-sixth, but almost everywhere else it is one-eighth. There is usually, also, a cash bonus paid.

Mr. GARNER. In buying a lease, you would pay a cash bonus for the privilege of prospecting for the oil, and then you would pay a royalty of one-sixth or one-eighth of the oil produced?

Mr. SHEA. Yes, sir; you really buy the oil in place.

Mr. COLLIER. And in case you do not develop that field, you pay the owner so much every year?

Mr. SHEA. Yes, sir.

Mr. COLLIER. That is paid in advance?

Mr. SHEA. Yes, sir; it is so much per acre per year until development begins. Then when the royalty equals the annual payment to the lessor, the annual payment stops.

The CHAIRMAN. Is there any deduction for depletion allowed as to the lessee?

Mr. SHEA. No, sir; but I think it was the purpose of Congress in the act to do that.

The CHAIRMAN. How would you word it? Suppose we substituted the word "acquire" for the word "purchase" in section 5?

Mr. SHEA. I have not that section before me.

The CHAIRMAN. Well, any way, the depletion provision.

Mr. SHEA. I would just say, "No distinction to be made between owner and lessee in this matter."

The CHAIRMAN. Then how would you get it in the case of the lessee?

Mr. SHEA. Of course, when he acquires it it is his, and whatever he has got in there ought to be returned to him.

The CHAIRMAN. So that when the lessee had 1,000 barrels, you take 200 from it as 20 per cent?

Mr. SHEA. Yes, sir.

The CHAIRMAN. In the same way?

Mr. SHEA. In the same way. I would treat the owner and the lessee on an equality. They are on an equality so far as that depletion is concerned; and that is only so that at the end of the useful life of the property the man may have back his investment and have it intact, just as he does in any other business. In the mercantile business, for instance, his profits are the difference between his cost and expense and his sale price, and it ought to be the same way in this case.

Mr. Chairman, I would like to say that Mr. E. H. Letchworth, of Buffalo, representing Forman & Hochstetter, Oklahoma operators, also appears with the committee in this matter, and Mr. Hayes, of Oklahoma City, would like to make a brief statement.

**STATEMENT OF MR. S. W. HAYES, OKLAHOMA CITY, OKLA.,  
ATTORNEY, AND ALSO INTERESTED IN OIL PRODUCTION  
AS A PRODUCER.**

Mr. GARNER. Judge, may I ask you a question before you start?

Mr. HAYES. Yes.

Mr. GARNER. Did you ever live in Texas?

Mr. HAYES. Yes, sir.

Mr. GARNER. Were you born in Texas?

Mr. HAYES. No, sir; I was born in Arkansas. I have a double combination on that.

Mr. GARNER. Is it not a fact that most of the good people living in Oklahoma either were born in Texas or came from Texas?

Mr. HAYES. Well, we have a great many good people from many States. We have a great many Texans there, and they predominate. We also have a number from Alabama, and we have a number of Mississippians.

Mr. COLLIER. You have some mighty good Mississippians in Oklahoma.

Mr. HAYES. Yes, sir.

Mr. GARNER. I am not reflecting on them. I simply wanted to claim that as a predominating factor a majority of them were either born in Texas or have lived in Texas.

Mr. LONGWORTH. You left Texas as soon as you could get away?

Mr. DICKINSON. I understood the best people they have down there came from Missouri.

Mr. HAYES. We have a great many good people from Missouri. One of our Congressmen, Hon. Scott Ferris, is from Missouri, and our governor is from Alabama, and several members of our supreme court are from Kentucky.

Mr. STERLING. Did all the smart people leave those States for Oklahoma?

Mr. HAYES. A great many of them did. We do not undertake to say that they all did.

Mr. Chairman, I am not going to attempt to burden the committee with more than one or two matters. Judge Shea has very generally covered the field. There is one condition and one effect and result that flows from this present act and its application which should be remedied if a way can be found to remedy it, and that does not seem to us at all impossible, and at the same time not diminish or impair the amount of revenue to be received by the Government.

This act operates as a great inequality between the company that goes out and pioneers, takes the long chances and has a small investment to begin with, as against the company that has a settled production, has a large investment and a large capitalization, and an almost uniform rate of income. You may take the example that has been given in the typewritten sheet which has been handed to you and that is fairly illustrative. The Congressman from Ohio propounded a question to Judge Shea that seems to me worthy of noticing, when he asked whether the man who had gone on to the 160 acres had invested \$10,000 and several years of effort and ultimately discovered oil and developed before this law became effective a very large valuation for his investment, whether or not he should not be treated upon the same basis as the man who waited until a value was developed and then went in and bought a sure thing at a million and a half dollars with a certainty of no loss in his investment but a reasonable return upon his investment. I say unqualifiedly that the man who takes the chances and who develops the property and discovers that great amount of wealth and makes it available for our country deserves a consideration upon some other basis than the actual amount of money he put into it that he has a record of, to wit, the \$10,000; and if the pioneer in the oil business is to be treated upon that basis in arriving at the amount of excess-profits tax he shall pay, solely from the number of dollars he put into it, the small pioneer will be driven out of the business.

For illustration, take the example which is given to you on the typewritten sheet here. A company that has a large capitalization, say of \$3,000,000, and with a regular income, its activities are scattered over a wide area and a wide territory, in some of which it will have losses and in others it will have gains by means of its production and by means of its discoveries, and it has an average income of 25 per cent for four years. You take a pioneer who goes out with a

capital, say, of \$300,000 and who pioneers and develops for a period of three or four years—and one who goes into new territory generally finds it takes from two to three and a half or four years to make his property a paying property—if he makes a new discovery and is successful in finding oil, he is away from the pipe line and he has to develop it, and ordinarily it is difficult to get supplies and materials necessary for development purposes, and frequently they are located some distance from the railway and freighting facilities are difficult and inconvenient and it is from two and a half to four years before he realizes any great income from his properties. Then he may realize in his fourth year 100 per cent on his property. You will find from the sheet which has been submitted, and which is illustrative, that with 100 per cent in his fourth year he will pay approximately 48 per cent of the entire amount of his profits in the fourth year as an excess-profits tax under this law. On the other hand, the company that has eliminated very largely the chances by getting the benefit of the law of averages, having a large investment scattered over a wide area of territory in different fields and having production realizing 25 per cent a year on his investment for four years, also makes a total income of 100 per cent and is taxed 16.71 per cent under this law as its excess-profits tax.

Now, there can not be any question, after a full study of the act, as it now is, that it operates as a very heavy burden upon the pioneer and the small investor. Then with the high-profits tax following, if he discovers oil, it makes it almost impossible for him to dispose of his holdings by way of sale.

I realize that the important point you gentlemen have to consider, and the important feature of this hearing, is finding some method to solve the problem. The difficulty lies in the peculiarities of this industry, and it has conditions surrounding it and has handicaps from the point of view of this legislation that but few, if any, other industry has. They are probably greater than the lead and zinc business. The oil producer, when he finds oil, has got to quickly develop his premises for several reasons. If he does not do so, the man adjoining him will take the oil away from him, because oil is of a fleeting nature and would get away from him. Again, most oil is developed on leases, and if you do not develop your lease immediately and economically, the lessor can forfeit your lease and you lose your property. So you have got to produce the oil and bring it to the earth's surface quickly. You can not postpone it as you can in some of the other industries. Therefore that presents a condition that has to be considered, and is one which is peculiar to the oil industry and does not exist as to other industries.

Now, as to the different methods, Judge Shea and the other members of the committee have presented in the pamphlet filed with the committee the suggestions of the committee. There appear to be three methods by which this might be handled which seem to us practical. In reference to the method that Judge Shea suggested of valuation, I hardly thought the Congressman from Ohio caught the suggestion of Judge Shea in that respect. The valuation of these properties does not seem to us to present any unfairness; that is, to permit the owner of these various properties, whether he be the discoverer of the oil properties or the purchaser of them, before the law became effective, to have treated as his investment the values

of his properties at the time the law became effective. This law became effective as of January 1, 1917. If a man by taking the great hazards of the business prior to that time had developed these values, it occurs to us as a matter of justice and equity that he should have considered as a part of his investment these values which he developed just as much as the man who had gone out and bought the properties after they had been developed before that time or after the values had been discovered; and one of the methods presented to you would be a valuation of these properties as of January 1, 1917, adding thereafter to them the additional capital put into the business.

This, of course, would leave newly discovered properties to suffer some of the inequalities and injustices of the present law, that might be developed subsequent to 1917, and they probably would have to be handled, and should be handled, upon a different basis.

Mr. LONGWORTH. Judge, let me ask you right there, you realize that such a system as you propose applied to industries universally would bring in practically no excess profits taxes at all?

Mr. HAYES. No, I do not recognize that at all, for the very reason that oil properties that have been developed—

Mr. LONGWORTH (interposing). No; I say, if your system was applied to all industries we would not get practically any excess-profits taxes.

Mr. HAYES. That might be true, or at least it might very greatly diminish the revenues.

Mr. LONGWORTH. Precisely; so that your argument is that your particular industry ought to be segregated and a different rule applied to it?

Mr. HAYES. Yes, sir; we take that position.

Mr. LONGWORTH. Your argument is not against the tax as a whole as applied to the industries—

Mr. HAYES (interposing). No, sir; we are not attempting to direct any criticism to this act as applied generally, but we are saying that because of the peculiar condition of the oil industry and the hazards of the business and the rapidity with which it must be developed and the chances to be taken in it, that a different rule should be applied to it; that it should be segregated and a different method applied to it.

Mr. LONGWORTH. That is what I wanted to know.

Mr. HAYES. Yes, sir; that is our suggestion; and in connection with the valuation of properties, that need not present and does not present any great difficulties. In every field there is a standard for measuring the values of properties. In the case of the properties that sell there is a general price fixed of so much per barrel of daily production depending, of course, largely upon the quality of the oil and the thickness of the sands from which the oil is produced. There is a method of arriving at the values and it presents no greater difficulties than arriving at the value of any other property. It is not an insurmountable difficulty to value these properties, if no other more desirable and effective method can be found than to adopt a system of valuation, valuing the properties as of January 1, 1917, and then adding to them the additional capital that is invested and put into the properties since that time. This method will equalize at least the properties that were developed before 1917.

For instance, take the system as it is now and as suggested by Judge Shea, and I happen to know of some instances where properties that have been developed since, say, 1914 will pay taxes under the present law, if literally applied and unless some relief can be found, of 60 per cent to the Federal Government on its profits; and right on the adjoining quarter section will be a property producing the same oil, producing similar quantities with similar wells, paying 25 per cent. The difference is that the properties on the adjoining section are held by companies that have been long organized and have their large capital investments and the property is absorbed into that company, whereas the company that pays the large percentage—in this particular instance I refer to it as the company that discovered this particular field and went out and pioneered it and produced the first well in the field—it takes 60 per cent of its net income to pay the tax to the Government. The result is this: You take, as Judge Shea suggested, with the 50 or 60 per cent profit tax under the present law, if your same basis applies under your new law and you raise your tax rates, as has been indicated and appears absolutely necessary, when you apply the same basis to this company and other like companies, you can readily see that it means practical destruction of the company, because after oil is discovered and when the flush production begins, you have got, as I said a while ago, to develop the property, and there is but one way to develop by these small companies, and that is by putting back into the business what they take out, and if such a company pays 60 per cent of its net income in taxes, you make it impossible for them to develop the properties, because their only means of developing the property is to put back into the property that which they take out of it, and the result will be to almost entirely or very largely, at least, stop development by the small company and by the class of people who have heretofore largely discovered and wildcatted territory for new discoveries.

And in this suggestion it is generally recognized—I do not know just of what percentage it is true—but it is generally recognized that very largely all wildcatting has been done in the past by the small company. The wildcatter has not been the large producing company, but the man with a speculative turn of mind, with small capital, who goes out and discovers oil in a new territory, and after it is discovered it is sold and produced by the practiced and experienced producer and passes into the hands of the larger companies; and the tax as it now exists, and if increased upon the same basis as applicable to these companies, necessarily will very greatly deter discovery and production by such companies in the future. I do not wish to detain the committee longer. What I have said is very largely in repetition of what Judge Shea has said, but the one thing I wanted to emphasize and which I know the committee will find true upon further study is that under the present system with a still greater rate imposed it will be practically impossible for the pioneer to go out and engage in the discovery and production of oil.

Mr. SHEA. Mr. Chairman, if I may be pardoned, there is one more suggestion I overlooked in my presentation, and that is, in determining profits in the oil business it ought not to be confined to the particular year. For instance, in determining the profit, I think you ought to take the taxable year and the two previous years and take the average profits, because of the great irregularity in production,

because new discoveries brought in during a year put a burden that the business can not bear and to find the earnings for 1918 you should also consider the earnings of 1916 and 1917. It might even be that a fair determination might require you to go further back than that; but you should at least take the two years before the taxation applies, in all businesses of great irregularity, particularly when so much depends upon the value of the strike made, and I think it would be fair to determine the average profits in that way. You have got the data in the reports on the income tax, so it would be a very easy matter to ascertain the profits, and I think that would tend to fairness in the business.

The CHAIRMAN. Judge, is there any way you can tell with reasonable approximation how many barrels of oil are in a newly-discovered well?

Mr. SHEA. Not in a particular well, but in a particular 80 acres or 160 acres in a field that has a long history back of it or a recent history, with considerable development, it is a very easily ascertained matter based on an experience of 75 years in the oil business. They have this table—

The CHAIRMAN. Of their territory?

Mr. SHEA. Yes, sir. For instance, there is a sand in Oklahoma known as the Bartlesville sand, which is a very steady producing sand. It is not a high producing sand at any time. It begins with a moderate amount and it is almost like measuring corn in a crib to tell how much oil is in there.

The CHAIRMAN. And how long it will take to exhaust it?

Mr. SHEA. Yes; and how long it takes to exhaust it. The figures will show that 85 per cent is taken out somewhere between the end of the third and the end of the fourth year and the other 15 per cent dribbles along until it finally fails to be profitable any longer.

Mr. Chairman, Mr. Thraves, representing the Kentucky Oil Association, wants to be heard for a few moments.

#### STATEMENT OF MR. W. V. THRAVES, WINCHESTER, KY.

The CHAIRMAN. Mr. Thraves, are you in the oil business?

Mr. THRAVES. Yes, sir; I am in the oil business in the Kentucky field. I just want to emphasize, gentlemen of the committee, what Judge Hayes has suggested to you with reference to the small man going into new fields and discovering oil pools. Kentucky is just now in its infancy, we hope, as an oil-producing State. There are a number of companies and individuals that have gone into that field and discovered small pools of oil that should be developed extensively. There are others who are trying to do the same thing, but under the high price of material and other hindrances such as lack of labor, and so on, at this time, they are not making the progress that should be made in a new field of this kind. Now, there are other strong companies, companies with ample capital, who would like to purchase and will purchase from these people who made the first discoveries some of their properties, but they get up against the proposition talked about and emphasized by Judge Shea and Judge Hayes; that is, if they sell the property they must pay 60 per cent of the profits, based upon the purchase price, the price for the wildcat stuff and the development of it, and it will take perhaps all or a

greater part of the value of the property, and at this time that is hindering the development in the State of Kentucky. The State of Kentucky is capable of producing perhaps a great deal more oil. We are only producing at this time about 10,000 barrels per day.

Mr. LONGWORTH. I notice that all of you gentlemen assume that any man who sells his property must pay a 60 per cent tax on it. Is that the profit in all these cases?

Mr. SHEA. That is nearly always the case with all the pioneers. It is almost universal that the pioneers are the only men who sell.

Mr. THRAVES. I know of properties that will bring millions of dollars and would be purchased and the owners would sell them if they could pay to the Government some reasonable excess-profits tax; but you see they went into Kentucky experimenting, wildcatting as we call it in the oil business, and discovered this oil, and some of them have drilled a few wells on a large acreage. They have not the money with which to go on, and yet if they were to sell it to a company capable of developing it further, they would have to give, as they understand it now, 60 per cent of the selling price.

Mr. LONGWORTH. Mr. Thraves, to what extent, if any, does the Standard Oil engage in the development of these fields?

Mr. THRAVES. To a very small extent. I do not know of any real wildcatting being done at this time by the Standard Oil. I think perhaps some of its subsidiaries at this time or in recent years, or within the last year, perhaps, have gone out and taken over some properties that might be considered partially developed only.

Mr. LONGWORTH. Does the Standard Oil Co. ever finance individuals or corporations in the development of an oil field?

Mr. THRAVES. I do not know about that. Not to my knowledge.

Mr. LONGWORTH. Not in Kentucky?

Mr. THRAVES. No, sir; not in Kentucky that I know of. There is a subsidiary of the Standard Oil known as the Ohio, and they have bought production in Kentucky and some little acreage partially developed and they are working and are pretty active there. But, as I suggested, there are perhaps one dozen good properties that would be developed and the oil put upon the market rapidly by companies who at this time are anxious to purchase and develop those properties, and the present owners are little organizations gotten up in the State of Kentucky and adjoining States that are not able to go on with this vast development.

Mr. LONGWORTH. The real reason for a lack of sales in the case of these properties is the hope that Congress may amend the law as it now stands, is it not?

Mr. THRAVES. The real reason is that in the near future some time—

Mr. LONGWORTH (interposing). They are holding on until they find out what Congress is going to do?

Mr. THRAVES. They are holding on because they do not know of anything better to do. They fear that if they sell now and give away 60 per cent of what they get for the properties, that it will be a mistake afterwards; that it will be worse than if they held it and paid each year a certain amount of the profits.

Mr. LONGWORTH. It would not be 60 per cent of what they got but 60 per cent of the difference between what they get and the amount of capital originally invested?

Mr. THRIVES. Suppose a company put in \$10,000 in the development of one of these shallow properties, which is the case there, and in the case of these shallow properties it does not cost a great deal, and then some subsidiary of the Standard would come along and offer them \$1,000,000 for it. He only has \$10,000 in it, and yet his property is actually worth \$1,000,000 or \$1,500,000, because the large companies always buy or try to buy the property so they can make a profit on it.

Mr. LONGWORTH. Are they the subsidiaries of the Standard that are in the market for these properties?

Mr. THRIVES. I do not know about that; but I know that many strong companies are trying to buy these properties, and I am sure, or I believe, that the Standard Oil and its subsidiaries are always willing to buy producing properties, and I know in Kentucky of at least one dozen properties that could be purchased and would be developed extensively and rapidly if it were not for the fact that the owner feels that he would have to give away at once so much of the purchase price.

The CHAIRMAN. You mean you have results such as this: A company puts \$100,000 in a field, which is its investment, and then it has an offer of sale for \$1,100,000?

Mr. THRIVES. Yes, sir.

The CHAIRMAN. And the company or the individual will hesitate to sell for the reason that he would have to pay between five and six hundred thousand dollars of the profits as a tax?

Mr. THRIVES. Yes, sir.

The CHAIRMAN. But that would still leave that company or that individual \$400,000 clear, net profit, would it not?

Mr. THRIVES. Yes, sir, it would; and yet he takes into consideration the fact that he wants to keep on, perhaps, in the oil business, and when he gets this money out and puts it back the next time, he may lose it. You know that the fellow who made this strike, perhaps, has been trying for 10 years or a lifetime to make such a strike in the oil business, and perhaps has lost a great deal of money in past developments, and now when he makes one strike, which is the case with the lucky man in the oil business, then if he has to sell and give away 50 per cent or 60 per cent, it certainly discourages the operation of the properties.

Mr. SHEA. Mr. Chairman, Mr. Cottingham, of Oklahoma City, would like to say a few words. He will not take more than five or ten minutes. He is a big producer in our country. By the way, gentlemen, I may say that he was born in Kansas and is not from Texas.

#### STATEMENT OF MR. J. R. COTTINGHAM, OF OKLAHOMA CITY, OKLA.

Mr. COTTINGHAM. Mr. Chairman, I am a practicing lawyer, also engaged in the production of oil and gas to a certain extent. I was born in Kentucky, but I came by way of Kansas into Oklahoma.

It looks to me like it would simplify this matter a little bit to apply two or three illustrations and to get the oil business down to the unit of production, which is the barrel, wherever it is, whether it is 1 barrel or 10 barrels or 1,000 barrels, and the production in the

whole country last year was about 341,000,000 barrels, having varying prices, depending upon where it was produced and the quality of it as produced. In our country the price is controlled by the large companies conceded to be the Standard companies, who post a price and say that will be the price "we will pay for oil in this country of a certain grade and character," and all transactions are made on that posted price. It is \$2.25 for some of our oil at the present time, and \$1.45 for some of the other oils in the Mid-Continent field. That is the varying price, between \$2.25 and \$1.45, and it is by the barrel.

Referring to some of the illustrations to show the inequalities of the situation with which I am somewhat familiar, several of the members of the committee have asked very pertinent questions from their standpoint, as to whether or not it would be entirely fair to apply this 60 per cent to the man's investment in the business. It might be, in a way, but as has been said here, that investment is not the capital stock. What we have been talking about now largely has been capital stock being a few thousand dollars——

Mr. LONGWORTH (interposing). No; nobody has said anything about that.

Mr. COTTINGHAM. I understand, but I think it has been applied in that way from my standpoint. I think it would be just to take his investment rather than the capital stock, and, where we have talked about low investment, I am sure it has referred largely to the original investment and not what has accrued subsequent to that time in various ways.

I have an illustration in mind of a man on one side of the road with a small capital, say \$10,000, and a man on the other side of the road with a large capitalization. The leases were divided by a public road. They were acquired at the same time by yourself, for instance, with \$10,000 capital—say you had a corporation with a \$10,000 capital, and that I had a corporation, we will say, with \$50,000,000 capital; but we came to that country at the same time——

Mr. LONGWORTH. Pardon me just there; nobody has suggested the amount of the capital stock. The only suggestion that has been made was with reference to the cash capital investment.

Mr. COTTINGHAM. Yes.

Mr. LONGWORTH. The cash invested, not the capital.

Mr. COTTINGHAM. Yes; just let me finish my illustration. We came to that country at the same time and we acquired these leases at the same time and paid the same amount of money and we spend the same amount of money developing them. They produce the same amount of oil and they return the same in money. When you get your lease you put it into a company—before this law was passed, when no thought of anything of this kind ever occurred to you or me—you put your lease into a company with \$10,000 capital and I put mine into a company which I already have with a \$50,000,000 capital, and we go on and produce this oil, the unit being the per barrel, and we both get the same amount of money for it.

It costs you under this scheme, say, \$1.50 a barrel in taxes to the Government to produce every barrel of oil you get off of your piece of land on your side of the road, and it costs me on my side of the road, say, 25 cents a barrel to produce the oil off of my piece of land, which is exactly like yours, costing the same, producing the same, and returning the same. These are some of the inequalities of this

law that we want to call attention to, and not the amount of money it produces for the Government. I dare say that you, holding your piece of land there, would be glad, if the Government required it, to pay the \$1.50, but you do not like to look across the road and see me paying 25 cents a barrel when the unit of production is by the barrel and the price is the same and when these matters were brought about before the law was passed.

Now, just to pursue that one step further, you do not get the credit for your investment as you go along, and you have to pay your expenses, which are great; you have to pay the investment in capital account, in casing, and all of those things, and you do that this year and you will not have money enough left to pay your taxes to the Government. I know of instances of that kind right now where they have not got the money. That is the condition that confronts them. It is not the amount of money that goes to the Government but it is the inequality between us that we are here objecting to. If this committee concludes, after you place the producers on an equal basis, that you want 50 or 60 or 70 or 80 or 100 per cent of our net income, take it, if the Government needs it during this war, but take it all from the gentleman from Ohio as well as from myself, and take it all from me as well as from him. That is what we are complaining of.

Now, just a word in regard to the sales of these properties. There has been considerable said about that. Take some of the illustrations that have already been given where a sale of property is proposed and the proposed tax on it and the proposed return on it is all considered as profit and 60 per cent taken as the tax.

In the first place, when a sale of property is proposed, it is producing so many barrels and that in turn is figured out on the per barrel basis, and it is worth so much a barrel in the market to the purchaser. He figures that he is going to get his return back in one, two, three, or four years, whatever it is, and that is something like the value of the property. He knows that he is paying about what that property would produce in so many years. To him it is worth that. Now suppose I were selling this property. If I kept the property that length of time it would produce that amount of oil and I would pay that much tax to the Government in that number of years. On the other hand, if I sell it to the company I pay it all to the Government right now, but the property is there and it goes on producing so many barrels of oil just the same, and it pays a tax to the Government in terms, so that the tax has been paid twice. Again, I take the money out and put it right back in this business or in any other business, and every dollar of it is subject to the tax that the Government might impose, so that on that particular transaction the money pays taxes three times to the Government.

Now, we are not complaining about this tax if it is thought it ought to be that way. It has not occurred to us it should be that way. We think there should be some encouragement in the sale of these properties, and I will say to the committee again that there is a further reason that has not occurred to the committee why that should be so, and that is that it is well known in the oil business that the wildcatter and the pioneer who goes out and gets these properties is not an oil operator on an economical basis. He can

not produce oil on an equality so far as economy is concerned with these old companies that are prepared to do it better. The public is interested in having these properties operated economically. The Government is interested in having them produce the greatest amount of oil and putting it upon the market at the present time. Now, this wildcatter, if you please—and I know because I have been right in that business myself—can not produce the oil as efficiently and as economically as these big companies are prepared to do it and can not handle it to the best advantage. Therefore these fields that are discovered do not receive the best treatment or the treatment they are entitled to in the hands of the man who discovers them and who primarily is not an operator but a discoverer or a wildcatter.

Therefore, we feel there should be some encouragement given to placing these properties when discovered in a position where the public will get the largest benefit from them. There is only so much oil in that ground, and if it is operated in such manner as to let water get into it, for instance, that will spoil it at once. It ought to be taken out of there safely and economically, and the public is interested in that proposition and have a right to say that that shall be done and have a right to say when it shall be done; in fact, laws are passed constantly in all of these States controlling such matters, and very properly so.

Now, from every standpoint, the standpoint of the public, the discoverer, the wildcatter, and the Government, that is true, and therefore it looks to me like the man is justified in placing such a sale on a different basis and not counting it all profit, because the property is still there to be taxed and the money realized is put back into the business or into trade and taxed again.

Mr. SHEA. Mr. Chairman, there is a delegation of oil producers here from Bradford, Pa., who are not connected with our association, but who are interested in the same way, and they would like to be heard for five minutes or so. They will not take up a great deal of your time.

Mr. Chairman, I would like if the committee would hear Mr. Bouton, of McKean County, Pa., and also Allegany County, N. Y.

The CHAIRMAN. What is your full name?

#### STATEMENT OF MR. JOSEPH W. BOUTON, SMETHPORT, PA.

Mr. BOUTON. Joseph W. Bouton.

The CHAIRMAN. Are you in the oil business?

Mr. BOUTON. Yes, sir.

The CHAIRMAN. What is your address?

Mr. BOUTON. Smethport, Pa.

I have been attempting to get into the oil business for more than 30 years, and I know something about the experiences of the man who undertakes to open a new field. He generally starts with a number of dry holes. I myself had the experience of drilling or being interested in drilling 50 dry holes before I ever produced a barrel of oil. I finally succeeded in producing some oil.

The wildcatter, as has been suggested by the gentleman who just preceded me, is as much an important factor in the oil business as the heavier producer. Without the wildcatter there would have

been no oil found up to this time. He is the man who starts in and who generally opens up the new field. After he has succeeded—if he does succeed at all—in finding some oil he generally sells out his holdings to the larger companies, who proceed to produce the oil. And it is true, as stated by the gentleman preceding me, that the so-called wildcatter or prospector can not produce oil as economically as the larger companies. Hence it is, as stated, for the best interest of the Government that the properties be turned over to those with more capital who can operate more economically.

The oil business is unlike any other business in the world. The man who engages in coal mining prospects first for coal at a very little expense, and ascertains exactly the amount of acreage and as to the depth of the veins. He starts in to operate for coal and every dollar of money that is put into that business is his capital invested from the time he starts his operations.

In the oil business, the man who starts in to prospect for oil, as I have said, drills a number of dry holes, and the expense of doing that should be considered a part of the capital invested, the same as the man who starts in the coal business, because the oil man does not make a penny for himself until he has gotten back that money which he has lost on dry holes, and it is as important, as I have already said, that the wildcatter flourish, or, in other words, that he proceeds to discover these fields, as it is that the large companies exist when the oil is discovered.

There are other gentlemen from our section who are better posted and who have larger interests than I. But I want to say that there is no class of business men in the United States to-day, more willing, more ready to share the burden of taxation than are the oil men, and if the Government wants it, every dollar we make, only so it is equalized, but it should be made equitable with other grades of business and other classes of business. It is not fair, of course, to the oil man to have to bear more than his just burden, but he is perfectly willing to share his just burden, but let it be equalized so that the oil men can not be taxed out of proportion to the men engaged in the coal business, or their manufacturing business, or any other business.

Let the oil man's capitalization be just what he puts into that business, no matter whether he succeeds in the start, no matter how many dry holes he drills, no matter how much it costs him. If he is producing 20 barrels of oil per day, it has cost him possibly three times beyond what that property is actually worth before he has gotten it. And that is the peculiarity of the oil business. It is purely and simply, you might say plainly a gambling transaction. It is a gambling game. The man who is not a born chance-taker never goes into the oil business. He has got to take his chances, and he does so. We want this oil, and we are all willing to produce every barrel we can just as long as we can do it and not do it at a loss. But to-day the expense of producing oil is very great—three times has pipe advanced in value. The cost of drilling wells as contracted, is more than double. The cost of all sorts of labor is more than double what it was four or five years ago. The market price of oil to-day is not based upon any war profit. If it were not for this war we would be getting more for oil to-day than we are getting now, I am satisfied of that. If the price of all other products, including oil,

were gauged upon the law of supply and demand, we would be getting more for oil than we are getting now.

Mr. LONGWORTH. Why do you not get more—because the Government has fixed the price?

Mr. BOUTON. Yes.

Mr. LONGWORTH. It has fixed the price at \$2.25 per barrel?

Mr. BOUTON. Yes, sir; for some grades.

Mr. LONGWORTH. What grades are they?

Mr. BOUTON. The Pennsylvania grade is fixed at \$4 the barrel.

The CHAIRMAN. Who fixed the price to the oil producers before the Government fixed it, the Standard Oil Co.?

Mr. BOUTON. Not necessarily the Standard Oil Co. It was fixed by the price which was offered and paid by the Standard Oil Co., if you please, and by the Tide Water Pipe Line Co., and by other refiners.

Mr. LONGWORTH. What are the various prices fixed by the Government?

Mr. BOUTON. I am not familiar with them.

Mr. SHEA. Mr. Parish, what is the price on the Gulf coast?

Mr. PARISH. There is no price fixed by the Government on the crude oil.

Mr. BOUTON. Except in the letter that Mr. Requa wrote, and in that letter it was not exactly fixed.

Mr. SHEA. Here is what was done. A letter was sent by Mr. Requa to the oil producers of the country saying that if there be any further attempt to advance the price of midcontinent oil beyond \$2.25 that it would be looked upon disapprovingly by the Government fuel committee, which, of course, is equivalent to a fixing of the price.

Mr. LONGWORTH. Have the producers agreed to it?

Mr. SHEA. Yes, sir; they have agreed to it.

Mr. LONGWORTH. What other prices have been fixed?

Mr. SHEA. The standard price prevails in the different grades of oil, and that letter applies to all fields.

Mr. LONGWORTH. And the Pennsylvania price is \$4?

Mr. BOUTON. The Pennsylvania price is \$4. We agreed to that in Pennsylvania under the same conditions as were stated as to the other oil fields.

The CHAIRMAN. The price of oil fixed by the Government was satisfactory to the oil producers?

Mr. BOUTON. That price is satisfactory to the oil producers as conditions were at that time and are at the very present time.

The CHAIRMAN. One gentleman from Oklahoma stated that in their field the purchasers posted up prices at which the oil would be bought, sometimes \$1.45, sometimes \$1.50, and sometimes \$2. Who was it fixed the price? Did the oil producers ever get together and say, "We will sell at so much"?

Mr. BOUTON. Oh, no; it is the purchaser, the refiner.

The CHAIRMAN. Who posted these prices?

Mr. BOUTON. The refiners say what they will pay.

The CHAIRMAN. Did the refiners get together and all agree?

Mr. BOUTON. I have no knowledge of that.

The CHAIRMAN. It looks to me like there is bound to have been some kind of an agreement between the refiners that they go around and post up a price for a field or territory in which I am operating

and say, "We will pay you for the next 30 days \$1.45," and that is the price I take. If you did not have some kind of a tentative agreement or tacit agreement would not some other oil refiner say, "I will give you \$1.50"?

Mr. SHEA. The price is just announced by the purchasing companies that purchase the oil and transport it to the eastern and southern markets.

The CHAIRMAN. Is there any agreement?

Mr. SHEA. Do you mean is there any agreement among them?

The CHAIRMAN. Does one company stick up a sign on my place saying "I will pay you \$1.45," another company post a notice saying "I will pay you \$1.55," and another company post a notice saying, "I will pay you \$1.60"?

Mr. SHEA. That has been done.

The CHAIRMAN. It looks like if that were done, it would tear down the lower price.

Mr. SHEA. Here is the situation: A pipe-line company comes along and says, "We will, beginning to-day, pay \$1.50 for oil." If companies have only been paying \$1.40, they will immediately have to meet that price or they would not get any more oil. They do not go above it. So that the price is the same for the same grade of oil, except the companies will pay us what is called a premium. Some refiners for oil which is high grade sent to their refineries in connection with the pipe line pay a premium of 10 or 20 cents a barrel.

The CHAIRMAN. For instance, suppose they stick up a poster in your territory that they will pay \$1.80 for oil which you have. Would they say that price would last?

Mr. SHEA. It may go down to-morrow. We have had five fluctuations up or down in a month; just like the price on hogs or wheat or any other commodity.

The CHAIRMAN. The oil is transported by what companies in your territory?

Mr. SHEA. The oil is transported in our territory by the Prairie Pipe Line Co., bought by the Prairie Oil Co. Their oil is transported by the Prairie Pipe Line, the Gulf Co., the Texas Co., the Cosden Co., the Sinclair Co., the Roxana Co., the Oklahoma Producing & Refining Co., the Magnolia Oil Co., and the Empire Oil Co.

The CHAIRMAN. Is this poster signed by all those companies?

Mr. SHEA. No, sir.

The CHAIRMAN. Is it signed by any company?

Mr. SHEA. It is not signed at all, but is just an announcement appearing in the press that "the price of oil to-day is \$1.50," and if you are representing another company that has not been paying that much you must immediately meet the price or lose your oil.

Mr. LONGWORTH. As a matter of fact, all of these companies are subsidiaries of the Standard Oil Co.?

Mr. BOUTON. That is a mistake that many people labor under. They are not the Standard Oil Co., and many of them have no connection.

Mr. SHEA. There are many oil companies in Oklahoma in which the Standard Oil Co. either directly or indirectly has no interest.

Mr. LONGWORTH. The price is the same?

Mr. BOUTON. Not always.

The CHAIRMAN. But you will give the Standard Oil Co. credit with having fooled these people before they found out those companies all belonged to the Standard Oil, but having different names?

Mr. SHEA. All that information is with your Federal Trade Commission, and you can find out about these concerns and who owned the stock.

The CHAIRMAN. I am trying to find out what all you producers think about it.

Mr. SHEA. We do not think it is the Standard Oil.

The CHAIRMAN. You think it is fair, independent competition?

Mr. SHEA. We sometimes think there ought to be more competition than there is, but there is a fair amount of competition the producers feel. Of course, now there is no competition, because the price is fixed at the request of the Government. In these war times a request is equivalent to a command to any citizen, and we have no way of getting it any higher.

Mr. BOUTON. These pipe lines, Mr. Chairman, are common carriers. We are not bound to sell our oil to the pipe line company or the purchasing agent of the pipe line company. They are common carriers and if you say, "I want you to transmit my oil to such and such a refinery," they are bound to do that. I know, as a matter of fact, that there are several refineries in our county, none of which are controlled by the Standard Oil Co. There is one refinery which has been paying a premium of 20 cents per barrel, and I understand the Fuel Commission has said they must not do that—that is, pay that 20 cents premium above the quoted price. We have another refinery in our county that has always paid 1 cent in advance of any other posted price. We have other refineries that are not controlled by the Standard Oil, private institutions, having no connection whatever with the Standard Oil.

It must be remembered that the Standard Oil Co. are not producing all the oil. I have not the figures, but I think the gentlemen here who have know just the proportion that the subsidiaries produce.

The CHAIRMAN. We all understand there is more competition now among the refineries than there was years ago.

Mr. BOUTON. Oh, yes; very much more competition. As has been said, all that the producer wants is to be put on an equal basis with other business. The producing of oil, you must know, is peculiar to to itself, entirely different from any other industry that was ever known, and we are perfectly content to pay any amount of tax that the Government wants, that the Government needs, if it takes every dollar that we make out of the business, but we do desire that they treat other business in the same way. Let us be treated exactly as the coal operators and other operators and other classes of business.

The CHAIRMAN. We will now hear Mr. Franchot.

#### STATEMENT OF HON. N. D. FRANCHOT, OLEAN, N. Y.

Mr. FRANCHOT. I have been in the oil business since 1875. I believe I am a type of oil producer among those here present who have just arrived from Bradford, Pa., who have devoted their time exclusively to the oil business, the actual producing, the raising of the oil out of the ground, after finding a take place to take it from.

The concrete question, it seems to me, with the oil men and with your committee is, to arrive at a fair and equitable basis of taxation as compared with manufacturing interests and other interests. Our trouble is to know what our capital is. We start with the shoe string, we come out with a pair of top boots. We wear those boots with pride, and the next year we get back to the shoe strings again.

It seems to me that the most equitable way would be to let us capitalize our earnings on 6, 8, 10, 15, or 20 per cent basis, and you put your rates on, and we will stand for it; in other words, we do not, most of us, keep the refinements of bookkeeping. We do not consider we have made a dollar out of an oil property until we get our money back. In other words, I keep a sembalce of bookkeeping. I make a guess January 1 what a certain property is worth. Oil may be selling at \$3 a barrel. I go along until March, and oil is worth \$2 a barrel. It seems to me just that statement illustrates the uncertainties of the business, and why in formulating tax legislation a great difficulty arises to put us on an equality with other businesses.

I am interested in a manufacturing concern, a director of it. We have \$600,000 capital. We had a prosperous year last year. Our taxes, however, were \$12,000. I have in my oil business had a nominal value on a lot of old properties that I have accumulated in the last 40 years; and, let me say to you, that in the States of Pennsylvania, New York, West Virginia, Ohio, and Indiana there are probably 300,000 oil wells the average of which is not over 0.25 of a barrel or a quarter of a barrel. It was stated here that 20,000 wells north of the Arkansas River were doing a barrel and a half. I want to say to you that the reports of the Geological Survey will show that there are around 300,000 oil wells producing but about 60,000 or 70,000 barrels a day, or 0.25 of a barrel.

Mr. LONGWORTH. After the present price of oil?

Mr. FRANCHOT. At the present price of oil. I could have brought you accurate statistics showing that it is costing perhaps \$1.50 per barrel to just raise the oil out of the ground, to say nothing of taxes, to say nothing of overhead, to say nothing of 6 per cent on what they may be worth. You do anything that shuts off the encouragement of production in that vast area, and that vast number of wells operated by the real little fellow, and you will retard and restrict production. What am I doing? I have got a number of old wells, some of them over 40 years old, and some of which are very small. Within the past five years it has developed that by flooding the territory—that means putting water into an abandoned well and crowding the oil to other wells and drilling near we get a well that will produce 1, 2, 3, 4, or 5 barrels up to 1,000 barrels, or perhaps 2,000 barrels, before water floods it out. Five years ago when I started that, I was paying \$60 to \$70 for my labor. I was paying 24 cents to 27 cents for my 5-inch casing. I was paying 45 cents for a contractor to drill the holes from a thousand to eighteen hundred feet in depth. To-day I have not got a man working for me that I am paying less than \$100, and this is an old Pennsylvania field.

Mr. LONGWORTH. That is, \$100 a month?

Mr. FRANCHOT. \$100 a month. I am paying the contractor 80 cents a foot for drilling and furnishing the fuel. I am paying 66 cents for some second-hand 5-inch casing I bought last week, which used to be bought at from 24 to 28 cents new. We are getting \$4

for oil. There comes a time, if you will put your pencil to work—understand, this oil is not coming out unless you go after it; it will keep; it will not spoil—when it is nearly approaching the time when with heavy taxation it would be better for me and the other producers to say, “I might better take \$3, \$2.50”—and we were getting that in 1913 and 1914—“than to go on and not get what we feel we should get.”

Get in your minds, gentlemen, this thought about the men engaged in the oil business. I was in Washington here during the enactment of the tariff legislation under Mr. Taft's administration, trying to keep in the bill the provision that had always obtained, a contra-vailing duty as against Mexico, and we were unsuccessful. Every man I met almost that did not know the oil business—some Senators and some Congressmen—when you would say “oil,” would say at once “Standard Oil.” Get in your minds that where there is one Standard Oil man or Standard Oil stockholder there are a hundred or two hundred men engaged as I am in the production of oil—farmers in oil. [Applause.] We bear the same relation to the Standard Oil Co. that the cattleman of the West, the sheep grower of the West, raising a few steers or a few sheep and selling them to the Armour—selling to the so-called “Beef Trust.” We do not care a whoop to whom we sell our products. We would sell to either of you if you were in the oil business, provided your check is good. We are after the high dollar. If a bunch of men come along, organize a refinery, however small, and want our oil and give us 5 cents more a barrel, we will sell to them. We occupy the unique position, gentlemen, that our product is cash. We can go to the Standard's office in the several localities and ask for our oil balance, and they will give us what is to our credit up to 7 o'clock this morning. The price is there, the clerk gives us a check, and we tell him to “go to hell,” if we want to. Those are our relations with the Standard Oil Co. [Applause.] I am taking you time longer than I should. It is seldom that I get an opportunity to say anything to public men and try to get them right in their minds about the production of oil in the United States.

Now, it seems to me—and I have not been in conference with any of these gentlemen—and I only know that after that excess-profits tax bill was in print and I could get a copy of it, I naturally took it up immediately. How did it apply to me? I spent many hours studying it. I have come to the conclusion that the point is how to arrive at our capital in business, which is so different from that of other businesses. I make this suggestion—and I do not know whether these other gentlemen agree with me—let us capitalize our earnings, then put your rates upon that. I do not know whether there would be much difference if you do it that way than by the suggestion, I think, made by the gentleman from Ohio, Mr. Longworth, of a per cent of earnings. It is unnecessary for me to say it is not that we want to—because no American wants to avoid taxation—but we do want an equitable basis, a fair basis comparable with other men in other businesses.

Get this in your minds, too, that when you hear of the fellow making \$1,000,000 it is one of the freaks of the oil business, the spectacular. Apply it to the mining business. I have been through the

West and have lost money in mining. You go into the Cripple Creek or some other district of miners and you will find hundreds of quiet unassuming men who have a little claim and who have been taking out \$10, \$15, \$20, or \$50 a day. But you hear of the great American Benzal Tiger Mining Co. paying dividends. Why? They want to catch the suckers to buy their stock.

I represent, as I have said, the consistent oil producer. And from my study of your excess-profits tax law, our trouble is getting at the capital. If you will bear with me, I will give two illustrations. In the year 1916, for \$22,000, my son and myself got some leases, about 300 acres, in Oklahoma. We drilled the first well. A conservative man in the oil business should figure, if he wants to stay in the business, "What is my loss going to be?" We figured we would lose \$10,000; we would take that chance. On the contrary, the first well we got proved to be a very nice well, of 300 barrels capacity. I think our books will disclose that it capitalized that property. I think we drilled 25 wells, and I think if you will examine the income-tax statements of my son and myself you will see that we paid taxes on capital and income from that property on the basis of the cost of that well. That is one illustration.

We could have sold that property for \$400,000 in the year 1917. However, we could not do it, because we had other sources of income and this would so have swollen our income that we would have paid such large taxes that we would have been giving our property away. The prospective purchaser could not agree to pay our income taxes, because then he would be paying too much for the property. That is the second illustration. Those were facts.

Another phase: We had a little well up on Bird Creek. It was doing 1.50 barrels a day, and it did that steadily for five years, and we used to speak of that as the best well we owned. It ran along during that period. It represented \$10,000 or \$12,000 loss. I went West in January, and made out our statements declaring an earning of \$600 or \$700 on that well. I went again the latter part of February, and my son told me the Alex well was pumping a whole lot of water. We pulled out the tubing, looked over everything thoroughly, and tried to get ahead of the water, but we could not do anything. In other words, she was drowned out over night almost. When I was in Oklahoma four weeks ago, we pulled that well out, abandoned it, and transferred the material to another property. Understand, the price of material when we put it into that well and at the now prices and the jump in connection with that, that well will show a loss for us next year of about \$400.

There is your oil business. You go to bed at night with the sweetest dreams. You are pleasantly at breakfast with your family, and you go to your office, and you get a telegram that things have gone wrong.

I do not mean to say that it is not a good business. I mean to say that after 43 years nearly of producing I have something to show for it, but I want to say that I have made more money at taking what profits I got from my oil business and putting it into some other enterprise or investment than I have made during those 43 years in the oil business—and it has been my business.

I say again, give us a way to fix our capital, and put your rates up.

Mr. LONGWORTH. Generally speaking, tell us what the effect of the war situation has had on your business.

Mr. FRANCHOT. I believe, sir, if the war had not come, with the conditions of the known field—for in this day of the motor, the tractor, the use of gasoline for power for ships and everything, I believe the price of oil to-day would have been as much if the war had not existed. because in the first years of the war our exports were very much restricted. The foreign demand fell off very considerably.

Mr. LONGWORTH. You are not making war profits?

Mr. FRANCHOT. I do not believe we are; but I am willing to pay taxes on it.

Mr. LONGWORTH. You think generally the oil business is not making war profits?

Mr. FRANCHOT. I really do not think so.

The CHAIRMAN. We will now take a recess and return at a quarter to three.

(Thereupon, at 1.20 o'clock p. m. the committee took a recess until 2.45 o'clock this afternoon.)

#### AFTER RECESS.

The committee reassembled at the expiration of the recess.

The CHAIRMAN. Mr. Hayden, do you wish to present somebody?

Representative HAYDEN. Mr. Chairman, I want to present Mrs. Percival Lowell the widow of Dr. Percival Lowell, who established the astronomical observatory at Flagstaff, Ariz.

Mrs. Lowell wants to address the committee on the question of the heavy tax that is to be paid by Dr. Lowell's estate, which she says is seriously hampering the work of the observatory, so that it will be impossible to use the moneys given for the endowment institution.

In this connection, I also want to have inserted in the record a telegram addressed to Senator Ashurst on the subject by citizens of Arizona, which he asked me to present to the committee.

The CHAIRMAN. The telegram may be inserted in the record at this point.

(The telegram referred to is here printed in full, as follows:)

FLAGSTAFF, ARIZ., June 24, 1918.

Hon. H. F. ASHURST, Washington:

We, the undersigned citizens of the State of Arizona, believe for the sake of science and the general good, that the Lowell Observatory should be exempted by the Government from taxation, in order that it may continue unhampered its future scientific work. Our State legislature has so exempted it, and it is the general feeling in this Nation, and wherever the value of science to humanity is appreciated, that the public should lend aid to such institutions, rather than tax them. The Lowell Observatory was founded 24 years ago by the late Dr. Percival Lowell, who since privately maintained it, and by his will provided funds that its maintenance might be permanent. It is hoped that these funds may not be reduced by Government taxation, as such would vitally hamper the future of the institution.

George Babitt; T. A. Riordan, Federal food administrator for Arizona; David Babitt, chairman war savings stamps; M. J. Riordan; G. W. P. Hunt, governor of Arizona; F. W. Perkins, judge superior court; T. E. Pollock, president Arizona Central Bank; Rev. C. Vabre; M. I. Powers, president Citizens' Bank; Flagstaff Board of Trade, A. A. Johnson, secretary; E. C. Slipser, mayor Flagstaff; Tom L. Reese, secretary council of defense; C. B. Wilson, county attorney; Woerber Smith, cashier First National Bank.

The CHAIRMAN. Mrs. Lowell, the committee will hear you now. Please give your full name and your address.

**STATEMENT OF MRS. CONSTANCE S. LOWELL, FLAGSTAFF ARIZ.**

Mrs. LOWELL. My name is Constance S. Lowell; my residence Flagstaff, Ariz.

The CHAIRMAN. You may proceed in your own way and tell the committee what you want and the circumstances of the case in which you are interested.

Mrs. LOWELL. Dr. Lowell erected and established the Lowell Observatory at Flagstaff, Ariz. He was not a man of means, and in order to do that he had to have advances. He also had a business and an office in Boston, but his profession was astronomy. And, finding in 1886 the inadequacy of the facilities for following mathematics and astronomy, he decided to establish this observatory—I do not know exactly how to get at the point I wish to present.

The CHAIRMAN. I understand that Dr. Lowell left an estate, part of which was to go to the observatory?

Mrs. LOWELL. Yes. And then when he had accumulated money he said that he would leave it to endow the observatory. The way he had obtained money was through investing his money. The last summer, 1917, he was ill. He was then writing lectures to deliver to the universities through the Northwest.

He had a nephew who wanted him to put his name in his brokerage house, so that he could have the benefit of his name, which would be a good thing for the house, you understand.

And so he left it somewhat to them to do the business.

And when he came back to Arizona he found that he was accountable for about \$900,000. That was on a margin. And he wanted to realize on it and to liquidate the stock; and he telegraphed those brokers from Flagstaff that he wanted to realize it; that he did not want to be in those stocks; he felt that it was too much for him to carry. And no word came to him from them. He telegraphed them on Wednesday, Friday, and Saturday and no word came, and Saturday he said to me: "Do not let Monday go by; we must understand why they do not answer this, because it is a serious matter."

On Sunday he was taken ill, and he died that night. But in view of what he told me, I telegraphed them that night and said: "Why do you not pay attention to what Dr. Lowell telegraphed you? He wanted to sell the stock. Please answer."

But no answer came to me until the next Thursday, and then they told me that I must wait until I came back; that I had no right to do anything; that they could do nothing.

There was another brokerage house in which he had some stocks, and they did realize.

And when I came back I waited about seven days, and they did very little. And finally I asked a bank to take over the stocks they had—to buy them from the brokers—so that I could have my orders obeyed.

They did so, and when that man was asked why he did not obey my orders he said I had no legal authority; that the legal papers were not issued.

Now we come to the point. When the appraisement was taken on the estate, it was appraised as of the value on the date of Dr. Lowell's death. Holding in his name that amount of stock, it appeared that he was a very wealthy man. His estate was estimated at over \$2,500,000.

The debts alone on that broker's books showed an amount of a little over \$900,000; other debts amounted to nearly \$500,000.

Therefore, you can see what the amount of his estate is; to-day it is just one-fifth of what people think. I am borrowing money in order to pay the tax and to pay the debts that we have, because you see this stock that the bank took over has to be paid for in time, the principal and interest paid on these stocks.

This other amount was over what that broker had in notes by which he was making money on them, using them for his investments.

Now, the observatory stands for an educational and scientific institution; and by maintaining it we support five families, who have their children; and they are all good citizens of Flagstaff.

And if you kill this and do not allow us to keep it, we will have to dismiss all those men; and they have been trained by my husband to do the work; and they are recognized to be among the best astronomers in the country.

The CHAIRMAN. Did your husband leave a will giving all of his estate to this observatory?

Mrs. LOWELL. It is all left to the observatory, with the exception of his personal effects and \$175,000 to me—that, of course, is a private thing, but it is really for education; that comes to me.

The CHAIRMAN. And the balance of the estate—

Mrs. LOWELL. The balance of the estate goes to the observatory; 45 per cent of the income is to come to me during my life.

The CHAIRMAN. Has this stock that you speak of depreciated since your husband's death?

Mrs. LOWELL. It has depreciated within three months. It was stock such as Butte Superior, Ætna Explosives, and Ventura; they put him into all of those things that he had never been in before. And he had a large block of Bethlehem Steel; the day he telegraphed it was at 600 or more; and the day I took it over it was worth \$425; and after that it went down to \$125.

The CHAIRMAN. Did you ever close those stocks out?

Mrs. LOWELL. We tried to do so; with a good many, we could not. I have sold off a good many, so that all we are holding now is about \$100,000 worth.

The CHAIRMAN. Has the department notified you of the amount of the income tax—not the inheritance tax?

Mrs. LOWELL. I beg your pardon; I do not understand.

The CHAIRMAN. The income-tax return has been sent in to the Treasury Department by the executor or administrator, has it not?

Mrs. LOWELL. Yes; and it has been paid, but I had to borrow the money to pay it.

And then it looks as if we had a very large income, because all of the stocks that we have not been able to sell we have the dividends from those stocks. But you can see that it does not belong to us. It is just like buying a house with a very large mortgage on it; we do not really own the house.

The CHAIRMAN. Has any officer of the Treasury Department, or any internal revenue collector in Arizona made a statement as to how much of an inheritance tax you would have to pay under the law?

Mrs. LOWELL. Yes; about \$89,000. And then a young man from Washington came up to Boston to see me about it. I came to Washington in May and asked them not to put such a heavy tax on it. The young man at the department said, "Well, we are trying to get more; we will get all you have got, if we can." And I said, "Do not do it; we can not stand it." And he said, "Oh, yes; you can go to work."

The CHAIRMAN. I presume he said that as a matter of pleasantry with you.

Mrs. LOWELL. Well, I could not stand it; that is all. I said, "I can not stand it. I am doing all I can."

But some young men from the department have been up there since, and they say there are dividends that Dr. Lowell did not account for in 1913 that he should have paid, and that he has got to tax us for them; dividends accrued.

What my husband did was this: He bought some stock, and the man from whom he bought it he gave the dividends up to that time to; so that when he got it he had to deduct those dividends. This young man thought he had not accounted for those dividends, but we showed him the books.

The CHAIRMAN. So that the whole estate of Dr. Lowell turns out to be worth from \$500,000 to \$1,000,000, or something like that?

Mrs. LOWELL. \$500,000, yes; it is about one-fifth of what the appraisal was.

Mr. DICKINSON. It is appraised at \$2,000,000, is it not?

Mrs. LOWELL. Nearly \$2,400,000; about \$2,400,000.

The CHAIRMAN. All right, Mrs. Lowell, we will give due consideration to your statement.

Mrs. LOWELL. I will be very grateful to you if you will. And you will remember what it means, and what astronomy stands for; it is the foundation of navigation, which you need now for all the ships and the standard time.

The CHAIRMAN. Yes, that is true. Have you talked with Commissioner Roper about this matter?

Mrs. LOWELL. Yes, I have; and he was very kind, indeed. And it might be said that Dr. Lowell could have gone to a university and given the money to it; but he said that "they are handicapped at a university; if you want to go ahead you can not do it if you do not have your own means." And therefore he wanted to go ahead as far as he could.

The CHAIRMAN. I should think your best and quickest remedy would be through Mr. Roper, the Commissioner of Internal Revenue.

Mrs. LOWELL. Yes. I have gone there, but he said unless you gentlemen did something, that he could not do anything, or very much.

The CHAIRMAN. You say that all of that has already been assessed under existing law?

Mrs. LOWELL. Yes. I know the law was all right, so far as that is concerned; but when you made that law you did not know that a man would give very much. As they say in Arizona, no one has ever my before, but he always gave.

were

The CHAIRMAN. All tight; we will consider your statement.

Mrs. LOWELL. Thank you very much.

The CHAIRMAN. Is Mr. Byrnes present? If he is not, we will hear Mr. Garrett next.

Please state your full name, Mr. Garrett.

**STATEMENT OF MR. THOMAS GARRETT, JR., REPRESENTING STETSON, JENNINGS & RUSSELL, ATTORNEYS AT LAW, NEW YORK CITY.**

Mr. GARRETT. Thomas Garrett, jr.

I came here, gentlemen, representing several trust companies and banking institutions in New York with respect to administrative features of the law. We do not feel called upon to discuss the economic features which you gentlemen have been considering heretofore, but we wish to discuss more or less the questions which have arisen in the administration of the law, in the capacity of the institutions which are practically agents of the Government in collecting the tax.

You all know that when the income-tax law first went into effect there was quite an outcry from the banking institutions that they were called upon to do a great deal of labor in the matter of collecting at the source and reporting, etc.

This work increased the expenditure for clerk hire and help for the institutions, but the institutions have come to realize that Congress was quite justified in adopting the methods of getting us all to help the department by reporting, by giving withholding in cases, and things of that sort. But we do realize that there has been a great deal of lost motion in that withholding and return process.

As you know, the law is a combination of law and regulations of the Treasury Department, and we have taken the liberty of addressing a petition to this committee, the originals of which have been signed by a great many representative institutions. I shall read a list of them:

Guaranty Trust Co. of New York.  
Bankers Trust Co.  
Central-Union Trust Co.  
Equitable Trust Co. of New York.  
Farmers Loan and Trust Co.  
First National Bank.  
Liberty National Bank.  
Fulton Trust Co.  
Metropolitan Trust Co.  
Empire Trust Co.  
United States Trust Co.

Franklin Trust Co.  
Columbia Trust Co.  
Title Guaranty & Trust Co.  
Lawyers Title & Trust Co.  
Lincoln Trust Co.  
Peoples Trust Co.  
Brooklyn Trust Co.  
Hamilton Trust Co.  
Kings County Trust Co.  
Bonbright & Co.

Then, in addition to that, these recommendations for your consideration have been indorsed by the committee on banking institutions, representing those same institutions and a great many other smaller institutions, so that I think that I can truthfully say that these recommendations as to administrative features have been approved by very much more than a majority of the institutions in New York who have had an opportunity to consider them.

I had expected to be able to report that the New York State Bankers' Association had approved these also; but the telegram which I expected had not arrived—they have had a convention, but these recommendations were presented to them too late, perhaps, to obtain their signatures.

May I present to the committee copies of these recommendations while I discuss them with you? [Passing around a printed paper.]

The first recommendation there is as to returns as to payments in excess of \$800, or such other amount as Congress may fix per annum, shall be mandatory only when such payments are made to individuals by the following persons and represent, respectively, as follows: Rent from tenants, interest from mortgagors, and salary and wages from employers.

It is contemplated under the present law that all of these returns are made to the commissioner; and we verily believe that there can be no effective checking up of these returns, because the provision is so broad with respect to who shall make these returns that a great deal of waste material comes into the hands of the commissioner.

For instance, the large corporations receive these amounts; of course there is a check on that; they have to report them, and their books are examined, and everything of that sort. In other words, the present basis of who shall make a return to the department is anybody who pays to a single person, firm, or corporation "fixed and determinable gains."

Now, we feel that the commissioner in getting a check on these things could call upon any particular class of persons to file returns, but not leave it in the law that everybody has to make a return when they have "fixed and determinable gains."

It is rather a difficult clause to construe, and it is very hard to make an all-embracing statement of the returns which the commissioner would require to be made.

Under these circumstances, if the commissioner were given power to require returns, we think that the full purpose of checking up would be accomplished.

The next suggestion—

Mr. GREEN (interposing). Just a moment, with reference to your first suggestion, if you please. It does not say anything about dividends.

Mr. GARRETT. They are returned under another section; this is only the \$800 clause; it only refers to the \$800 clause.

Mr. GREEN. And you specify mortgagors—and interest, of course, would be paid by other than mortgagors?

Mr. GARRETT. Yes, it would, but I think it would not in large sums. Mortgagors would be the principal payers of interest.

Of course, this is only the \$800 provision. Of course, the dividends and the interest on bond issues, etc., would all be covered by other sections. This is that form which is generally known as the "yellow slip," Form No. 1099.

May I pass to the next suggestion?

Mr. HULL. What is the objection to putting royalties in there?

Mr. GARRETT. I should think there would be no objection to putting royalties in there; I should think they would form a fairly large class; there would be no objection to that that I can see. My only point is that the language as it now stands causes a great deal of trouble, and produces a great deal of surplus or unnecessary matter.

Mr. HULL. Does the department specify that the report shall pass through two or three hands, or what shall be done with it?

Mr. GARRETT. They have not done that.

Mr. HULL. They have not done that?

Mr. GARRETT. Well, there have been some rulings as to apartment houses, for instance, as to the agent in charge; they have fixed certain rule-of-thumb methods there that work out all right.

The next suggestion is that the law should permit the taxpayer to deduct all actual losses ascertained and actually realized in all transactions engaged in for profit, whether or not such losses were sustained in connection with his usual business or occupation.

That is a subject which I imagine you have heard discussed a great deal and which has appealed to a great many people as bringing about a great deal of unfairness.

The example I have set forth in the printed paper is that a lawyer should have as much right to deduct a loss he has sustained in buying and selling real estate as a real-estate speculator. A real-estate speculator under the present law will buy and sell real estate, and he only is responsible for the net business gains; whereas a lawyer, if he buys a piece of real estate and sells it at a loss, as that is not his usual occupation, he can get no credit for that loss as against his income.

Mr. HULL. May I interrupt you just a moment? Your printed suggestion says, "Deduct all actual losses sustained in all transactions"——

Mr. GARRETT (interposing). Engaged in for profit.

Mr. HULL. That transactions not connected with the regular business of the taxpayer should be deducted from the gains of the taxpayer; that means the taxable gains; it does not mean gains that would not be taxable, does it?

Mr. GARRETT. Oh, no. As the law now stands, a lawyer could not deduct his losses from his gains if he bought a piece of real estate and sold it for a profit and bought another piece and sold it at a loss; he could not deduct the loss from the gain; he would have to report and pay an income tax upon his gains, and the rest would be considered living expenses, and so on.

Mr. HULL. Do you not think it would be wise, in undertaking to draw this line, to safeguard very carefully capital deductions and not allow them in there? In other words, if you do not safeguard those carefully, a taxpayer can really make a great amount of capital deductions which are not profit deductions at all.

Mr. GARRETT. The recommendation was only intended to cover losses in undertakings or transactions for profit; that is all it was intended to cover.

Mr. HULL. I know, but there are a great many profit deductions, and then there are other deductions which may be claimed which are really capital deductions and have no place in any kind of income deduction. Now, the trouble is to segregate those capital deductions and not allow them to become mixed with what would be a legitimate profit deduction, I think.

Mr. GARRETT. Well, I think that would work out very simply, if we mean the same thing, by using a little bit of care in the language. But it was the intention of this committee that it should cover all transactions which are actual completed transactions. If property was bought to be resold, and it was resold and there was a gain, and then there is a similar transaction where property was bought to be resold and it was resold and there was a loss, our recommendation is that that loss should be set off against that gain, irrespective of whether the man was engaged solely in the business of trading in

real estate or trading in stocks or what not—that the loss should be set off against the gain.

Mr. HULL. Yes. Of course, under the regular income tax provisions which tax profits derived from any kind of a business or trade, it is rather easy to separate a business deduction from profits, from what would be considered capital deductions; that is, the loss of capital as distinguished from a business loss, which deduction of capital loss is not allowed under the income tax law now.

This provision deals with casual items of profit which do not arise out of any business or trade; and for that reason it seems to me that it would be very necessary to safeguard a provision of this kind—I am not controverting now your purpose; but I am speaking about the necessity for very carefully safeguarding those kinds of deductions from capital deductions, which ought not to be allowed in figuring profits, whether they are profits from the business or merely casual profits which are not derived from any business.

Mr. GARRETT. I see. Well, I think for that purpose the regulations of the department would offer a very sure index. Their regulations generally would give you ample material to safeguard that in framing your statute.

Mr. HULL. Well, of course, there is quite a difference sometimes between the ordinary rules of commercial accounting, and some of the restrictions in the law now that interfere with the ordinary laws of commercial trading with respect to what items shall or shall not be allowed as deductions. Some of them are restricted in part, so that they are not allowed in whole. For instance, take permanent improvements. That is an outlay, but it is now allowed as a deduction from the profits; it is treated as a capital outlay, and, therefore, not permitted.

Now, in dealing with this more difficult class of cases, the profits from no business but from an isolated and occasional transaction, it is very difficult to draw the line between the actual expenses that should be deducted, of all kinds, on the one hand, and cutting out or segregating items that would be pushed in there, under many rules of accounting, as a business expense, or, rather, an expense of the proposition, whereas they are, in fact, capital outlay.

Mr. GARRETT. I think the rule that they have promulgated as to loss which you can deduct is based upon a very simple rule, and that is a realized, closed transaction of buying and selling. The article, whatever it might be, has to be bought and has to be sold, and the difference is the loss. I do not think that they allow any incidental expenses in connection with such a transaction; it has to be a straight purchase and sale; it is not accrual, or any bookkeeping item at all.

Mr. LONGWORTH. Would this be an illustration of what you are bringing out? Suppose I was a lawyer making \$10,000 a year; and four or five years ago I bought a piece of property for \$50,000, and last year I sold it for \$40,000. Would I be allowed under your proposition to deduct \$10,000 from my income last year in paying the tax?

Mr. GARRETT. No; because the department has fixed the date March 1, 1913, as the date the value is to be taken.

Mr. LONGWORTH. But I mean suppose I bought it after March 1, 1913—I bought a piece of real estate, say in 1914, and sold it at a loss of \$10,000 on my original purchase price last year.

Mr. GARRETT. Yes.

Mr. LONGWORTH. And I made \$10,000 as an attorney-at-law. Your proposition is that I should deduct that loss?

Mr. GARRETT. No; not at all.

Mr. LONGWORTH. It is not?

Mr. GARRETT. No.

Mr. LONGWORTH. I thought that was what Mr. Hull was getting at in connection with what he said about reduction of capital.

Mr. HULL. Well, of course, when the law goes outside of the regular profitable transactions that are connected with a man's business, then a little different language has to be employed for computing the profits and losses on casual transactions. You can not say that a person shall have deductions for such losses as arise from the business, because it is not a business. You can only say that any expenses incurred in connection with that transaction, or any losses incurred in connection with that particular transaction, excluding capital losses—certainly, under some kind of sound rule. There is the difficulty of determining how far you will go, in my opinion, in allowing actual expenses or losses.

On the one hand, they are not going far enough to give the taxpayer a chance to ring in the outlays he has suffered in the nature of capital outlays that come in there, because they are not closely or immediately enough connected with the transaction when it happens to occur.

It is easy enough to apply this where it is limited to the business, because you can see that "any loss connected with the business, or any expense of the business" would exclude any other kinds of loss or expense and denominate them as capital expenses.

But this suggested provision is really somewhat more difficult, I think, to handle—and I am still not taking issue with you on your proposition.

Mr. GARRETT. I say it is a question of the manner of carrying it into effect.

Mr. LONGWORTH. I do not quite understand the distinction there. I thought that I had given an illustration which was like the one you gave.

Mr. GARRETT. About the lawyer?

Mr. LONGWORTH. Yes; about the lawyer who, two years ago, engaged in a real estate speculation and lost \$10,000.

Mr. GARRETT. Yes.

Mr. LONGWORTH. And he sold it this year, and the transaction showed a loss of \$10,000. My question was whether, under your proposition, that would be deducted from his fees received as a lawyer this year?

Mr. GARRETT. Oh, yes; that would.

Mr. LONGWORTH. That was my understanding of it.

Mr. GARRETT. I misunderstood your question before. That is my idea; yes. In other words, I feel that that lawyer in that position should be entitled to that deduction; he has that much less as a result of that year's effort, and he should be in an equal position with the real estate speculator who has no other occupation; and he, under such circumstances, should be entitled to deduct that \$10,000 loss against six operations which would have netted him a \$10,000 gain;

I think the lawyer should be entitled to as much consideration as the real estate speculator under those circumstances.

Mr. LONGWORTH. Suppose that applied to a transaction outside of a man's regular business—lasted over a series of years; that is to say, the property was bought three years ago, after March 1, 1913, and was sold this year?

Mr. GARRETT. Yes.

Mr. LONGWORTH. That transaction would cover a period of three years. Would you have him deduct that from his income of the last year?

Mr. GARRETT. The year when the loss occurred; that has been the simple rule which they have adopted with respect to all losses which were permitted to be deducted. The Treasury Department has adopted the rule that a man who is entitled to make such a deduction—for instance, the real estate speculator—is entitled to take the benefit of that loss as a credit in the year in which the same was realized, on the theory that it works out in the end; but the time he actually sustained the loss was a time when he could not afford to pay the tax.

Mr. STERLING. Suppose he made \$10,000 on the real estate; would he turn that in with his lawyer's fees as income?

Mr. GARRETT. Certainly.

Mr. STERLING. Suppose Mr. Longworth had bought the property in 1910 and sold it this year at a \$10,000 loss?

Mr. GARRETT. Well, it would depend on what the value was on March 1, 1913.

Mr. STERLING. And if the appraisal should show a depreciated value at that time, would he be allowed to set that off this year?

Mr. GARRETT. No; only if he made a sale and realized his loss.

Mr. STERLING. Well, if he sold it this year?

Mr. GARRETT. If he sold it this year he would take his loss and get credit for that loss.

Mr. STERLING. Even though the loss was much greater than the appraisal showed the depreciation was on March 1, 1913?

Mr. GARRETT. I think we are talking at cross purposes. The rulings have been that in the case of a loss the difference between the actual value on March 1, 1913, and the date when sold represents his loss. In other words, they take that as a standard, not what he purchased it for 10 years ago. March 1, 1913, is the basis.

Mr. HULL. If I may be pardoned for interrupting you just a little further, I would like to ask a question.

Mr. GARRETT. Certainly.

Mr. HULL. Take, for example, a taxpayer who has some line of business out of which he is making a taxable profit; he may have an old house standing over here of some value; he may have other properties of different kinds which are really not being used to any appreciable extent, and which, in fact, will not realize a profit to him for an indefinite number of years, and may never at all. But he can insist to the Treasury that he is expecting to make a profit out of those things during the year; some profit, more or less; it might be small.

Now, he would not be limited to any particular figure; if he was in possession of those kinds of profits which for all revenue purposes, would amount to nothing, practically, for the Government, but one

of them he should lose in some way, or in some way not provided for as a deductible loss here—he could bring in almost any kind of a capital loss almost, or an expenditure in maintaining as one of the regular deductions, unless he is very carefully restricted.

Mr. GARRETT. Well, I think there should be careful restrictions, and as I suggested before, I think that the rules which the Treasury Department has adopted as to losses which could be deducted where the taxpayer was entitled to deduction should apply here. In other words, what this provision seeks to extend to everyone the same right of deduction which is now under the law as administered extended to those persons who engage in those speculations exclusively.

Mr. HULL. Yes.

Mr. GARRETT. In other words, all this could be cared for by careful regulations; or, if your committee chose to frame the bill in such form that the present regulations should be in the form of law—as we would like to suggest, too, by the way—

Mr. HULL (interposing). Well, the fact is that unless the law safeguards these kinds of expenditures or outlays, the courts would override the regulations of the Treasury Department and hold that the loss of ordinary commercial business would govern whatever they might pay.

And, of course, all the income-tax law does is to impose certain restrictions and prohibitions on the methods of computing income under the ordinary rules or laws of business.

Now, there is so much difference in accounting; some items are put on the asset side by one accountant or one method of accounting, and on the debit or credit side by another accountant or method. Unless the law itself should rather specifically safeguard this new proposal to allow deductions for losses—and it should be for expenses just as well as for losses if we put the provision in—unless it is very carefully watched, the Treasury will be powerless, I think, to protect the Government against every kind of a deduction with respect to any kind of a capital outlay that was not remotely connected with a real profit-producing business.

Now, as to the theory of this—of course, some of the laws elsewhere relate to profits from business. And they say that the tax shall be imposed on the profits of this business owned by a person or corporation, and likewise on the profits of this separate and wholly disconnected business, and that a loss suffered in one of those businesses shall not be deducted from the profits of the other.

Some of the laws go on that theory. Now, in this provision I think the idea was somewhat similar, in view of the very great difficulty of carving out just what allowance might justly be made and at the same time protecting the law from a great many abuses in the way of deductions of a capital nature.

Mr. GARRETT. And I think, as I stated before, that you will find that the present regulations would offer a sure index with respect to the extension of that principle; in other words, that they have given this privilege to taxpayers whose sole business is covered by transactions of that character.

The next proposition is that the law shall provide for the constitution of a commission of three independent officers, not charged with the duty of tax collecting, to hear claims for diminution of assess-

ment or reclamation of taxes erroneously overpaid, and also to furnish information to the public upon the construction of the law and regulations of the Commissioner of Internal Revenue, it being a necessary part of the machinery of such commission that a hearing should be accorded to taxpayers upon all claims for diminution of assessment or reclamation of taxes.

With regard to that suggestion I will say that it seems certain that no officer charged with the duty of collecting taxes and making regulations governing the machinery of such collection is an unbiased tribunal for the decision of such matters and for the summary determination of intricate questions under both the law and the regulations which the commissioner has himself promulgated. As a practical question it has been the experience of most inquirers for rulings that the commissioner has ruled upon questions in a manner studiously calculated to subject to the least possibility of criticism in his (the commissioner's) capacity as tax gatherer. There is a large portion of the public unwilling to submit such rulings to the courts for review, and there is a larger portion to whom the cost of such submission would practically prohibit the submission of the same. The element of time in determining all these questions is so important that a commission with powers to grant a summary hearing on these questions would prove of the greatest service in assisting taxpayers who are anxious to do their duty by the Government, and in return are entitled to fair treatment from the Government, to the extent, at least, of placing them upon a footing equal to that accorded large interests prepared to litigate all doubtful questions.

Now, gentlemen, I think that goes back to the basic principle of our Government; that is, the separation of powers into the three groups of legislative, judicial, and executive. We realize that in the emergency it was necessary; we were treading in an untried path, and it was necessary to give very plenary powers to the Treasury Department. I think that the time is now ripe to relieve the Treasury Department of some of that onus.

This is not intended at all as a criticism of the Treasury Department in its handling of questions. I might say that the idea here of having this commission to pass upon these questions is based upon common sense.

The commissioner makes the ruling; he executes the law; he practically makes the law, in great part. I might recite just one specific instance:

As you gentlemen know, the excess-profits tax law places a burden of paying 8 per cent upon certain gains by professional men and others, and the question came up as to fees of executors. I think every lawyer in the country has worried as to whether he had to return those fees as part of his 8 per cent.

In fact, the other day I was talking to a judge of the United States district court in New York, and he asked me, "How have you been construing that section of the excess-profits tax law? Here I am, a judge of the United States district court, and I am also an executor. I have some large fees as executor, and my coexecutor did not return those fees; he also is a lawyer. He said it was not part of his earnings from his profession." And the judge asked me, "What do you think about it?" "Well," I said, "that has been quite a moot question." But I will tell you what happened. There is a large lawyer

in New York who has been practicing a number of years, and he had a large estate of which he was executor. He wrote to the commissioner for a ruling as to whether he should include those fees which he had earned as an executor in his earnings from his profession. The department wrote back that it would depend entirely upon how much time he had spent upon his work as an executor and upon how frequently he had acted as executor.

The lawyer wrote a letter in reply to the commissioner, in which he stated that he had been practicing law for 45 years; that he had acted as executor twice, and that the time engaged in this particular work was about one week. In other words, I think he stated almost a minimum under that definition or ruling of the commissioner. The commissioner replied that, in his opinion, the commissions so earned should be stated as part of his earnings from his profession.

Now, gentlemen, that is exactly what you must expect. The commissioner has a fixed duty, and that is to collect taxes; and I think he himself would like to be relieved of the responsibility of judicial determinations of questions which would come up under his own ruling.

Of course, in the instance I cited to you, it was quite open to this lawyer to go to the courts and get a determination of the question. But here was a case where the lawyer felt that he wanted to do his duty to the Government; he did not want to be criticized for taking an appeal in a large matter; it was a very large estate, or he would not have applied, perhaps to the commissioner; he would have made up his mind as a lawyer and would have gone ahead and paid the tax under protest and sued afterward. But he did not wish to be regarded as unpatriotic in any way; and he put it up to the commissioner under the provision of the law as it now stands.

It does not seem to me that that is fair, or that it is democratic, that a man should be placed in that position. And we all thought that some kind of judicial body to pass upon these rulings and assist the commissioner and relieve him of all responsibility—which I feel certain that he does not wish—would be very desirable.

Mr. LONGWORTH. Your proposition only involves a hearing, and not any power of determination in the commission?

Mr. GARRETT. Well, I did not mean to so state it. I meant to say as a necessary part of it, "and determination." Did I not say "hearing and determination"?

Mr. LONGWORTH. Not determination.

Mr. GARRETT. I meant to say "hear and determine."

Mr. LONGWORTH. You mean that the commission shall pass upon each case?

Mr. GARRETT. Pass upon these cases, exactly. Of course I do not go into the constitutionality of the thing. I just merely brought it up as a proposition involving policy—

Mr. LONGWORTH (interposing). I think there is a great deal of reason in what you suggest.

Mr. GREEN. Would you have this proceeding final, if the parties choose to submit their cases to this tribunal?

Mr. GARRETT. I do not wish to dictate to the committee. I just put it up as a proposition for you to consider.

Mr. LONGWORTH. You did not say "hear and determine."

Mr. GARRETT. I meant to say "determine." And when I say "I," I mean the gentlemen who worked these printed recommendations up. I mean to say that we did not consider the question as

to whether or not the hearing should be final, or whether it should be subject to review or not. I leave that to the judgment of the committee, as to how the thing should be worked out.

Mr. STERLING. Taking up that case you spoke of, why did the commissioner say that the question depended upon the amount of time that lawyer devoted to the performance of his executorship?

Mr. GARRETT. Well, the law is that earnings from his profession—and I imagine what he had in mind at the time of that ruling was that a lawyer does so many things that it is pretty hard to say what are earnings from his profession; and that he had in mind the possibility of some lawyer specializing and working in the matter of estates and acting as trustee, etc. I believe there are certain lawyers in Boston who described themselves, not as lawyers, but as trustees by profession. I believe he had something of that kind in mind, and therefore that clause crept into his ruling.

Mr. STERLING. Well, that only goes to the question of whether he would pay the 8 per cent; that would all be subject to the income tax in any event?

Mr. GARRETT. Yes; it all would be subject to that. But the excess-profits tax is in addition to the other tax.

Mr. STERLING. So if a lawyer should make money outside of the actual practice of law, by acting as executor or in any other capacity, do they hold that he is not bound to return it as part of his income in the payment of the 8 per cent?

Mr. GARRETT. If he earned it entirely from his profession—for instance, if he got a lot of income from bonds, we will say, or dividends on stock, it is quite certain that he is not subject to the 8 per cent excess-profits tax. Also if he gained it from quite a number of transactions which did not involve professional ability, or the exercise of professional judgment, I do not think there is any question about it that it is not subject to the 8 per cent profits tax.

Mr. STERLING. Yes; I undertsand.

Mr. HULL. This is intended now to relate to the income tax as well as the excess-profits tax—your suggestion?

Mr. GARRETT. Yes; it is to relate to all these kinds of Federal taxation. That is, I do not know whether I stated it clearly at the beginning. All of these suggestions as they may appear apply to both income tax, or war tax, estate taxes and excess-profits tax.

The CHAIRMAN. Who would you have appoint this board?

Mr. GARRETT. I do not know whether I would be presumptuous enough to suggest that.

The CHAIRMAN. Would you have the Secretary of the Treasury appoint, or the Commissioner of Internal Revenue, or would you have the President of the United States appoint, by and with the advice and consent of the Senate?

Mr. GARRETT. Well, I had not even thought of that. I think your committee is more able to pass on that question than a committee of lawyers.

The CHAIRMAN. Well, would it not have the same effect on your returns to the Treasury if the Commissioner of Internal Revenue or the Secretary of the Treasury should appoint the commission who would pass on those questions? Do they not do that now? Does not Mr. Roper select one or two or three men, or as many as they want, as officials to review these cases and to hear these complaints,

and they decide them in the first instance, and then pass them to Commissioner Roper for his approval or disapproval?

Mr. GARRETT. Well, I had more in mind something that would not be a department of the Internal Revenue Bureau.

The CHAIRMAN. You want a separate commission?

Mr. GARRETT. Yes; a separate commission.

The CHAIRMAN. Independent of the Internal Revenue Department?

Mr. GARRETT. Yes; independent of the Internal Revenue Department. I do not want anybody who would be a creature of the Revenue Department—although I do not mean to reflect at all upon the Revenue Department.

The CHAIRMAN. We understand that.

Mr. GARRETT. The next suggestion we have is that the law should definitely show that in the case of all fiduciaries the income which is taxable is the amount of income accrued and distributable as distinguished from the amount of income actually paid.

In that connection, I will say that we do not believe that the public at large generally realizes that this is an exception to the general rule; because, as I stated, I believe it to be the concensus of opinion as to the present regulations, but I do not believe the public at large understands it, because the public generally has the ideas that all of these taxes are based upon the receipts of the beneficiaries, not accruals in their favor; and this is a very complicated question in the regulations, and I thought the thing should be cleared up so that the public at large could understand it.

Mr. STERLING. Excuse me for interrupting you, but I do not think I get your idea clearly, Mr. Garrett. The taxable income is "the amount of income that is accrued and distributable, as distinguished from the amount of income actually paid?"

Mr. GARRETT. You would understand that with the words "to the beneficiaries" at the end of that sentence. You see, when an individual receives an income, it is the income which he actually receives upon which he reports and upon which he pays the tax, not the income which has been earned and accrued.

Mr. STERLING. Does the fiduciary pay tax on the income which he retains in his own hands, as well as upon that which he turns over to the beneficiary?

Mr. GARRETT. That is the rule; where there is an estate in process of settlement, or where there is a trust that accumulates for some time, the income tax is collected upon the basis of what the trustee, executor, or other fiduciary has actually collected, and not upon what is paid to the beneficiaries.

Mr. STERLING. That is the practice now, is it?

Mr. GARRETT. As I have stated, the practice is based upon a number of divergent rulings—they are not necessarily divergent, but they are abstruse; and it has taken a great deal of thought among lawyers to understand exactly what they do mean at present time. In fact, they were not all in agreement when we had the question up; but when the discussion developed it was the concensus of opinion that that was what the present regulations mean.

Mr. STERLING. How would that work out in a case where the executor has a right to determine how much of the income accruing he shall give to the beneficiary—or is that a matter of discretion?

Mr. LONGWORTH. How would that work out in the case where the executor has the right to determine how much of the income accruing he shall give to the beneficiary? Is that a matter of discretion?

Mr. GARRETT. I don't think it would affect that at all because it is only actual receipts upon which he makes his report of income, the income the fiduciary receives, not the beneficiary. In other words, the income that accrues in favor of the beneficiary and not that which is distributable to him.

Mr. STERLING. It would come at the same in the end.

Mr. GARRETT. It would come at the same in the end. What we suggest here is not a departure from the present rulings of the department, it is merely a question of having it stated clearly, because as it is now it is involved in four or five different propositions.

Mr. LONGWORTH. I see what you mean.

The law should set forth with exactitude the treatment of each class of payment to or for the account of nonresident aliens. That a personal return should be required of a nonresident alien only when his total tax is not paid at the source and his income is taxable.

That is exactly in the same class as the other. That presumes to set forth what the law now is, but it is very difficult for the layman to understand it through all this mass of decisions as to the handling of income for account of nonresident aliens.

Mr. GREEN. That is what I understood the law at present to be, but maybe it is not as clear as it should be.

Mr. GARRETT. That is exactly what we understand the present law to be, but we wish it to be set forth clearly in the act itself instead of being hedged about by a mass of regulations which very few understand. I may say that seven or eight lawyers sat around a table, and each lawyer went through a catechism and there was only one in the crowd who could answer the questions. He has been working on the income tax for the past two or three years. It is merely on account of that state of affairs that we should like to have it stated clearly in the law.

The next question is:

The interest on deposits of alien corporations should be excepted from the excess-profits tax unless said alien corporations be otherwise liable to the excess-profits tax.

Now, that goes into the question of economics slightly. There are now large cash balances carried in institutions of this country which are the property of alien corporations, not engaged in doing any business in this country, and we believe that those deposits are a substantial economic benefit to this country and to the institutions here, and that they would be quickly withdrawn, or unseasonably withdrawn, if what seems to be the present policy were continued.

Mr. GREEN. Do you mean that there are more now than in ordinary times on account of war conditions?

Mr. GARRETT. Oh, yes; quite a number.

Mr. GREEN. A very large number?

Mr. GARRETT. I believe so. Am I correct, Mr. Orr?

Mr. ORR. I am not sure.

Mr. GARRETT. I beg pardon, I won't state that. I thought Mr. Orr would back me up on that. I am not certain, but my idea was that there was no reason why we should collect an excess-profits tax

from these corporations merely because there are very many here which draw interest.

Mr. STERLING. They would not be subject to the excess-profits tax any way.

Mr. GARRETT. I believe that since this has been prepared there has been a ruling that they are not subject.

Mr. ORR. I believe they have so ruled. The ruling came down Thursday or Friday.

Mr. STERLING. Regardless of the ruling, you could not get any excess profits tax from property that was paying only bank interest.

Mr. GARRETT. There was a ruling earlier, I believe, which did make it taxable because the language was that they were liable to tax, those foreign corporations, and they figured upon the proportion of the business done by the alien corporation in this country, with reference to the total business of such corporation. That was the law, and under that they first ruled that keeping money in this country was doing business here.

Mr. STERLING. If you compute that interest in computing his excess-profits tax, it would simply go to reduce his income tax. That is the only thing which could possibly be taxed. How much is the bank interest, 3 or 4 per cent?

Mr. GARRETT. About 3½ or 4 per cent.

Mr. STERLING. If you allow him to compute that in his income tax, the tendency would be to reduce his income tax, and you can not get any excess-profits tax where the exception is 7 to 9 per cent out of an income that is derived from a 4 per cent investment.

Mr. GARRETT. It was based upon the proportion of total business done in this country and the total business of the corporation done elsewhere. It was not a question that these alien corporations might have any business in this country whatsoever. But that was under the earlier rulings, and I should think that this is unnecessary, as stated, because there is a later ruling, since this was prepared last week, which holds that they are not taxable. Am I correct?

Mr. ORR. Yes.

Mr. GARRETT. Then, the next is:

The time within which the return of a taxpayer may be reopened for reassessment, and the time within which the Government may sue for the collection of the tax not assessed in the normal times, should be limited to two years.

In other words, we feel that there should be a settlement of these questions at some time.

Mr. STERLING. No limitation at the present time?

Mr. GARRETT. No; none whatsoever. That, of course, would not foreclose the Government in correcting a fraud or anything of that sort; but if the matter of construction of the law and of the regulations be left open, they would have a false security in making these returns, and there should be some limit whereby the corporation or the individual could make certain that he has adopted the right basis and that he can continue to disburse his income in accordance with the return which he has made.

Mr. HULL. What limitation would you put upon the detection and assessment of a taxpayer who had failed to make any return?

Mr. GARRETT. Well, I think it would not be necessary to fix any limitation on that. You can catch that any time.

Mr. HULL. Leave that open?

Mr. GARRETT. Yes; That is a class of fraud, practically. I do not know. I might be mistaken on that.

Mr. HULL. In case of fraud, where there had been a partial return, you would limit it to two years with the other?

Mr. GARRETT. No. When there is fraud, fraud should go from the time of discovery.

Mr. HULL. Then, this limitation is only applied to full, complete, and bona fide returns?

Mr. GARRETT. Yes; made in good faith for a complete return.

Dividends paid to corporations should be treated for the purpose of the normal income tax in the same manner as for the purposes of the war income tax.

In other words, the law now is that it discriminates against corporations, and I do not see any reason at all for it.

All interest paid by corporations should be deducted from its earnings for the purpose of computing its net taxable earnings.

The present law has a very curious rule which only permits the deduction of interest on indebtedness not exceeding the sum of the paid-in capital plus one-half of the interest-bearing indebtedness outstanding at the close of the year. The reason for that is not apparent with anyone with whom I have discussed this question. There should be no relation between the capital of the corporation, the interest it should pay, nor the indebtedness. I think it quite possible, as I have stated in the example, for a corporation to have a capital of only \$10,000 and having a bond issue of \$10,000,000, and if it is possible to pay \$5,000,000 under the present law, they could only deduct interest on \$5,010,000, whereas they might have paid the interest on \$10,000,000 for 11 months and 29 days. In other words, the full interest should be allowed. It should not be limited to any amount of capital and indebtedness at the end of the year.

Mr. STERLING. There is nothing in the law——

Mr. GARRETT (interposing). The law as it now stands says that they can only deduct interest upon an indebtedness not exceeding the paid-in capital plus one-half of the interest-bearing indebtedness outstanding at the close of the year.

Mr. STERLING. I guess you are right.

Mr. HULL. What would you say about a situation of this kind: Suppose a corporation issues \$1,000,000 bonds at 6 per cent and then they are converted into 6 per cent preferred stock? In that case a 6 per cent dividend comes off the common stock, but the 6 per cent interest accrues before the bond has been converted. That does not relate directly to the merits of your proposition, but it is an economic situation which we have with reference to preferred stock.

Mr. GARRETT. Well, if they paid the interest before the conversion, it has not affected the distributable profits, and if they have not paid it, then the profits are that much more, and you are going to get that going and coming.

Mr. HULL. What would you do with the preferred stockholder so far as the normal tax is concerned? What would you do with his dividend?

Mr. GARRETT. Why, as to the normal tax he would be exempted from that, but the Government would get the income from the corporation just the same, because before it paid the dividend it would have paid the tax.

Mr. HULL. Of course, where his stock is 6 per cent the corporation pays out on its profits whatever it pays as dividend.

Mr. GARRETT. Exactly.

Mr. HULL. Where the amount outstanding is bonds which have not been converted into preferred stock the 6 per cent interest is likewise paid over to the stockholder, in the case of the preferred stockholder, and he gets off very light on the normal tax.

Mr. GARRETT. The stockholder would.

Mr. GREEN. This provision that is in the law now, I think, had a little more force and reason back of it before we adopted the excess-profits tax.

Mr. GARRETT. Yes, sir.

Mr. GREEN. Just now it is to the interest of every corporation to keep its capital as large as it properly can, and not lose money thereby, because it gets bigger allowances under the excess-profit tax. It seems to me at the same time that this provision might at least well be modified, if not done away with entirely.

Mr. GARRETT. I think quite a number of States in the Union have provisions that their bonded indebtedness should not be in excess of a certain ratio to the capital stock, or vice versa, and I think that they were based upon exploded economic theories. There should be no relation whatsoever between the capacity of a corporation to borrow money on its capitalization. The capitalization is sometimes the result of an accident, sometimes inheritance, sometimes peculiar laws, and the corporation needs money just as much as an individual does, just as much as it can get or requires, and the expense of getting that money certainly is a legitimate item of deduction in finding the profits.

That as to the estates tax (sometimes called the Federal inheritance tax) the tax shall not be payable until the same has been assessed and a 10 days' notice of such assessment given. However, the assessment shall be made within a reasonable time (say, 60 days) after the filing of the final returns, and the assessment, when made, shall release the lien of the Government on all property reported in said return.

Now, I did not get in in time to hear the last speaker, Mrs. Lowell, but I do know from conversations that most of the lawyers that have been bothered by this Federal and State tax law think that this law is an anomaly among tax laws generally. There is no provision in the law assessing the tax. There is no one who has split up an estate under this law who has known where he stood when he split it.

Mr. GREEN. Her complaint was based largely on the ground that the Government instead of taking the value of the property which consisted largely of certain bonds and stocks that were on a falling market, instead of taking the value at the time of her husband's death, at the time it came into the hands of the executor, that the Government wanted to take it at the time that they were at the highest point, at the death of her husband, I think.

Mr. HULL. After death, wasn't it?

Mr. GREEN. I didn't get her statement very clearly.

Mr. GARRETT. I think the law is as to the date of his death. It is not any arbitrary date. That is fixed.

Mr. ORR. I think what they do is, they take the value of stock at the time of the death of the decedent instead of the value which the beneficiary receives. The stock may be worth \$100,000 when the decedent died, and when she got it it was worth only \$50,000, dropped

when going through the estate, and she paid a tax on the value of it at the time of his death, not when she received the stock.

Mr. HULL. But suppose it had gone up?

Mr. GARRETT. The date of the death.

Mr. HULL. The law does not allow the Government to take advantage of the increase, but the State has to stand the decrease.

Mr. GARRETT. This goes to the whole question that there has not been a single estate administered where anyone can determine as to whether or not they have paid the correct amount of tax. There is no provision in the law for assessing the tax, and we feel that there should be some provision for actually assessing the tax so that the taxpayer may settle up an estate and make a distribution. There is no chance of making a distribution with any certainty under the law as it is now.

Mr. HULL. They can pay a tax any time.

Mr. GARRETT. But no one can tell whether they have paid the right amount.

Mr. HULL. But if the department gives them a receipt in full, that is a termination.

Mr. GARRETT. It does not give a receipt in full.

Mr. HULL. That is because the entire value of the estate has not been determined.

Mr. GARRETT. No; I quite differ with you, because there is no provision in the law exactly figuring the amount of the tax. The lien of the Government attaches upon all the property and remains upon all the property, and there is not any way of releasing it from the lien that we know of.

Mr. HAWLEY. The Government gives a receipt for the amount paid, but it does not certify that that is all the obligation.

Mr. GARRETT. That is the proposition.

Mr. GREEN. If I understand you, no person is authorized by the law to levy and assess these taxes and notify the executors that that is the amount they should pay?

Mr. GARRETT. That is exactly it. It is unique in tax legislation.

Mr. HULL. Of course, some laws levy a tax without prescribing any method of collecting it. The assessment is only for the purpose of determining the amount to be paid.

Mr. GARRETT. And also give a man an opportunity to be heard and also protest against the assessment of his tax. He has no right in the courts until the assessment is fixed.

Mr. HULL. Unquestionably it is a very important thing, but I was calling attention to the fact that some laws have been put into effect without providing the machinery of assessing in a formal way, leaving the main function of assessing to such methods as may be agreed upon.

Mr. GARRETT. Certainly. Then, the next question:

Provision should be made in the estate-tax law for the apportionment of the tax and exemption, on the one hand, as between real and personal property, and, on the other hand, as between the various classes of legatees and devisees under wills.

I may state that under the law as now construed the present effect of the tax is to place the entire tax upon the residuary estate, not to spread the burden over among the other bequests or devisees in the will. Under such circumstances, I think it does not seem fair, because the testator never knows what his residuary estate is going

to be, or rather very seldom does he know what his residuary estate is going to be, and to place the whole burden of the tax upon the residuary legatee does not seem fair, nor in conformity with the general provisions of the inheritance tax laws in the various States of the Union. It is a very serious computation to determine whether or not there will be a residuary estate sometimes. Under the law as it now is, if there should be failure of the residuary estate, we imagine that there can be some priority arrangement made to apportion the tax among the other devises and bequests in the will. Also, there is not any provisions which might cause a portion of the tax to be borne by specific devises of real estate. In fact, we feel quite certain that now the bequests of a specific piece of real estate are not taxed, whereas a bequest of a sum of money would be caught by the tax. In other words, the tax is against the estate, and the rulings are that the residuary estate bears the tax completely.

Mr. HULL. Unless the testator provides in his will that that shall be apportioned.

Mr. GARRETT. He could provide in his will if he has able counsel, and he calls able counsel at the time when he makes his will—one who has studied this law. There has been a lot of wills drawn before this law went into effect, and there is a lot of estates in litigation, and you must remember that there are a great many men who do not keep up with the Federal taxation laws, and, I think, in fact, a very small proportion of them do keep up with it. The usual provision of apportionment of tax between legacies of various legatees is usually in the inheritance laws of the various States, and I see no reason why it should not be inserted here.

Mr. GREEN. Well, I can see some reason why there ought to be a provision in the case of residuary estates, that if there is not sufficient to pay the tax that it should be apportioned among the bequests.

Mr. DIXON. It would be, in that case.

Mr. GARRETT. There is no question about the Government getting its money.

Mr. GREEN. But I understand your contention to be that in some instances a parcel of real estate might escape, under these rulings, and all go on the legacies of cash.

Mr. GREEN. What I was endeavoring to say was that I did not think that that ought to be permitted, but so far as the residuary estate is concerned, that is merely an expression of the testator's will—that if there is anything left it may go to a certain person or in a certain direction. When he allots or bequeaths \$5,000, it is, for example, to a certain person, and he wants him to get that.

Mr. GARRETT. It also occurs that if he feels a certain obligation to some one, we will say he gives \$5,000 to one, \$10,000 to another, and \$50,000 to another; and he figures with a lead pencil as to what is going to be left, and his principal beneficiary is going to have what is left; it may often happen that the principal object of his bounty is in the residuary class.

Mr. GREEN. That is true.

Mr. HULL. A great many estates have lawsuits about it.

Mr. GARRETT. Yes.

Mr. HULL. And those expenses come off the residuary fellow?

Mr. GARRETT. Yes, they do. But this matter of taxation has grown up to be a recognized factor.

Mr. HULL. It should be provided for in the will.

Mr. GARRETT. Of course it should be.

Mr. STERLING. The only way to meet that obligation is to impose a tax on legacies and devises.

Mr. GARRETT. Or provide for an apportionment of the tax as among the legacies and devises, the same as is done in New York State, and in most inheritance-tax States.

Mr. STERLING. And distribute the exemptions among them also.

Mr. GARRETT. And distribute the exemptions among them as well.

Mr. STERLING. According to relationship?

Mr. GARRETT. I do not know that it is necessary to be according to relationship, but to distribute the total exemptions. In other words, the net tax would be distributed among them all. I think that would be the simplest.

That under the estate-tax law, transfers of stock held by nonresident alien decedents should be permitted under a system of waivers similar to that now used in the administration of inheritance-tax laws in New York and other States.

Now, gentlemen, I think that is one of the most serious propositions that we have encountered in the administration of this law, and that is that the nonresident alien stockholder, nonresident alien decedents, stock held in their names, the transfer of which is made by an executor or an administrator of an estate, and it is like a dog chasing its own tail to get anywhere because they can not make a transfer of stock until the tax is paid and they can not pay the tax until they know what the tax is going to be, and they can not determine what the tax will be until they sell the stock, and the stock is the first thing they should sell, yet they have got to pay the tax before they sell the stock. In other words, in the ordinary administration of the estate, stock is the first thing. A lawyer would say "Sell stock. It is perishable, and you should start with that first." And when it comes to the transfer of such a share of stock, you have got to present a receipt of payment of tax in full. In working it out they present a receipt for the payment of taxes upon the provisional return sometimes, which they allow the executor to correct. It seems perfectly simple to build up the same system which they have built up in New York and all the other States in administering inheritances taxes, that is to allow the stock to be transferred, signed by the collector of internal revenue wherein he substitutes the lien of the Government upon some claim or some assurance bond, which they give to the collector of internal revenue that the tax will be paid upon this item of transfer. In other words, to make it workable and businesslike, as it is now, we have all been standing on our heads and didn't know what to do.

In computing the estates tax there should be allowed as a deduction all payments made to States under their respective transfer tax laws.

This question has been the subject of adverse ruling from the department, and there has been a great deal of difficulty in conforming to the laws of the various States. As a matter of fact, in practice and in administration, a tax in the various States is usually the first paid before the tax is paid to the Commissioner of Internal Revenue, and it would seem more than fair probably to allow those deductions. As you realize, the tax is paid in many instances in three or four States. A man dies resident of one State. He has in his estate

stock of corporations. In another State, or three of four States, he has to pay taxes, and it is a question of how he happens to arrange his securities and what States he was unfortunate to live or die in. That brings up the question of how to levy his inheritance tax that is to be paid upon his estate, and it seems no more than fair that the amount of tax that his estate paid to the various States should have an effect in determining this tax here.

Mr. HULL. Is that the only reason you suggest why the State should have the benefit of assessing the full amount before collecting it for the Government?

Mr. GARRETT. Not only that, because he pays in two or three States.

Mr. HULL. There has not been any well-defined determination of this question, has there?

Mr. GARRETT. The last ruling of the department seems to have denied the right to make this deduction.

Mr. HULL. I mean this controversy that comes up between the State and the Government, that matter has never been thoroughly thrashed out?

Mr. GARRETT. It has not. There has been one decision of the surrogate of New York County, I believe, in which the right to deduct the tax paid to the United States Government as against the New York tax, was denied. That is the only ruling I know of.

Mr. HULL. I have noted some decisions where the State courts have held that the States are entitled to priority, even if the Government gets to it first, to take its full amount. The Government, of course, adopts the other contention. It seems to be a situation where both the States and the Government should have equal rights in the assessment, and has this competition of rivalry or controversy as to how they shall treat the estate in determining it settled. I can not see, as a matter of right or power, why either one has an advantage over the other.

Mr. GARRETT. I do not know any reason why one should have an advantage over the other, except this, I think the States were first on the ground, practically. That is a new field, and it might be that they are justified upon that ground. That is a suggestion without any economic reasoning back of it.

Mr. HULL. But they do have the unquestioned right. The one that gets to the estate has the same right as the other to make the assessment on the whole amount—full original amount.

Mr. GARRETT. Exactly. The next is:

That banking institutions reporting interest earned on deposits of nonresident aliens shall report only the net interest earned upon the account of such a nonresident alien.

That is suggested from the fact that depositors, or correspondents, as we generally call them, with respect to nonresident aliens, often have a debit balance on which they pay interest. In other words, it should be the net interest, net credited interest, upon which the return should be paid.

That for the purpose of determining excess-profit taxes, borrowed money be allowed as a part of the invested capital.

The CHAIRMAN. Suppose in the States there is a contest between the different legatees as to whom they shall pay the tax, or whether they shall pay any tax or not, and it is tied up in court, must it

wait until the court decides in order for the Government to get its money?

Mr. GARRETT. The Government is going to get its tax at any rate. You have reference to No. 11?

The CHAIRMAN. Thirteen, isn't it?

Mr. GARRETT. Well, that one meant that in making up the net amount of the estate upon which the tax should be paid, there should be an allowance made for the amount of the tax paid to the various States.

The CHAIRMAN. Suppose they had not settled the estate, and the taxes had not been paid to the State, should the Federal Government then wait?

Mr. GARRETT. Not at all.

The CHAIRMAN. How is it going to get its money if the State inheritance tax is to be taxed?

Mr. GARRETT. They can go ahead and collect it. A man can only deduct what he has paid. It will force him to pay the tax.

The CHAIRMAN. You mean if you have an inheritance tax of \$10,000 that that amount should be deducted from the amount of taxes paid to the Federal Government?

Mr. GARRETT. It should be deducted from the estate.

The CHAIRMAN. Just like the county and city taxes?

Mr. GARRETT. Exactly.

The CHAIRMAN. And then the Federal Government tax would be on the balance?

Mr. GARRETT. Exactly; that is all.

The CHAIRMAN. None of the States levy a tax like this except Rhode Island.

Mr. GARRETT. Rhode Island has now an act passed last year.

The CHAIRMAN. What other States have such a law?

Mr. GARRETT. All the States, practically.

The CHAIRMAN. Have a State tax on the whole estate? They have a legacy tax and a devisee's tax, or one of them, but they don't have an estate tax on the whole estate.

Mr. GARRETT. We do.

The CHAIRMAN. Except, I believe, it is Rhode Island.

Mr. HULL. That is the last to fall in.

Mr. GARRETT. New York has it and New Jersey.

The CHAIRMAN. The rates are different according to relationship?

Mr. GARRETT. There are exemptions apart from relationship. You have exemptions in this tax.

The CHAIRMAN. This tax is a lien on the total estate just like the county or State tax is a lien on the total estate, and it can not be divided up until those are paid. Then if the taxes are paid it is in a condition to be distributed, and after the payment of the estate tax, the inheritance, it goes to the distributees. This taxation under the existing law is a lien on the total estate, is a debt against the estate, just like a debt due a creditor, or just like the tax due to a State. You see, if the States had a tax like we have, as a debt against the whole estate, it would be very easy to administer—that is, if we should adopt your view, to administer your proposition.

Mr. GARRETT. Except this, in the working out of those taxes in the various States, the whole estate is taxed at one time. This is taxed against the legacy of John Jones, William Smith, etc., which

is worked out in one proceeding, and it is made upon the total transfer—that is, upon the transfer to the various beneficiaries—and the reason this tax is more embracing than the State taxes it starts at a higher figure than the taxes in the various States. No. 18—

That for the purpose of determining excess-profit taxes, borrowed money be allowed as a part of the invested capital.

Now, that does not strictly come within the purview of this committee. The trust companies and institutions that I represent put it in here because it was of general interest with respect to the excess-profits provision.

Mr. LONGWORTH. The oil men suggested that this morning.

Mr. GARRETT. I did not hear them discussing that particular issue of it. We think the return allowed to corporations should be allowed on the investment and the borrowed capital. They should be allowed a fair return on it in determining what is their capital employed in the business.

The next item—

that the status of the Virgin Islands and the Canal Zone be clearly defined in reference to the income tax, war tax, excess profits law and estate tax,

should be clearly defined in this tax.

Mr. STERLING. What is their status now?

Mr. GARRETT. I do not know whether they are nonresident aliens or not.

Mr. ORR. The Treasury Department did not know whether they had received any from the Canal Zone when I asked them.

Mr. GREEN. I think your point is well taken. I think you can safely pass on that.

Mr. GARRETT (reading):

That corporations and partnerships filing returns for a fiscal year other than the calendar year be allowed to show when possible actual earnings applicable to each calendar year instead of being required to prorate earnings according to the number of months as under the present law.

The present law—that comes up under a ruling—is a rule of thumb. It is worked out to take the apportionment according to the number of months and prorate it. But if it is possible to take the actual earnings for a certain number of months, use those figures by all means. That is all there is to that.

The next item:

That the provision allowing deductions for contributions and gifts to charitable organizations, etc., allowed to individuals be extended to include corporations.

Now, we have all had that question up as to whether corporations can make charity contributions or not. In New York we secured the law permitting such corporations to make contributions to charities. Whether or not it is constitutional we are not quite sure. They are going ahead. Take those Red Cross dividends which were distributed a year ago. Only 17 or 18 per cent of them actually reached the Red Cross. The corporations are now making payments to the Red Cross and we feel that that form of endeavor should be encouraged, and certainly corporations should be entitled to deduct contributions in the same manner individuals are entitled to.

Mr. HAWLEY. What was that about contributions not reaching the Red Cross?

Mr. GARRETT. A large number of corporations in July declared 1 per cent dividends which were entitled, "Red Cross dividends," which it was intended that the beneficiaries or the stockholders should turn over and indorse to the Red Cross. About 17 per cent of those dividends actually were received by the Red Cross.

Mr. HAWLEY. The dividends received by the stockholders?

Mr. GARRETT. The dividends received by the stockholders. Under that set of circumstances, the corporations in New York secured special legislation authorizing them to make these payments and the corporations went ahead and actually paid the dividends, probably without any authority of law authorizing them to do it, but they took a chance and did it. We should be encouraged in that by having the deduction allowed.

That collectors be given authority to grant reasonable extensions of time for filing returns in meritorious cases.

We now know all the difficulty which occurred with respect to that. There are always cases coming up where there is a reason why an extension of time should be granted. Now the collector can only grant the 30-day extension, and then you have to come down here to Washington to get another extension, and it is a very small matter of discretion to allow the collector to make allowances for an adjournment.

Section 207, subdivision A, should be amended in such manner as to allow a fair method of valuing good will, patent rights, copyrights, etc., in cases where there have been no transfers thereof. It is suggested that such amendment should take the form of permitting the corporation a return on the amount of these items which have been carried as the value thereof on its books, provided such good will and other intangible items have, together with the tangible assets, during a period of three years, earned a return to the corporation at least equal to 8 per cent.

The is no question more difficult to ascertain than the value of good will, which is intangible. Here we have endeavored to state the New York net earnings rule, and I think the old Wisconsin rule as to the value of intangible things on the basis of returns. In the various tax laws which you have adopted 8 per cent is mentioned for various purposes, and if the corporation has set up these intangible items, or if the business has set up these intangible items, it is proposed to allow good will to be capitalized, if the value stated has been sustained by the actual earnings of the corporation during three years—or a fair period—that should be accepted as an item on which they are entitled to a return. In other words, if they are going to sell the business they are going to get something for the good will. It is property just the same as their house, and every little piece of machinery is property. The only difficulty with good will is that you can juggle with it, and I think you can provide against juggling by establishing a rule that it must have been set up on the books and to have been supported by the actual earnings of the company.

Mr. LONGWORTH. Suppose you had a corporation of \$100,000 cash capital paid in, and you had certain trade-marks, good will, etc., and had an income which you could show of \$8,000; then you would have a capital of \$200,000 instead of \$100,000.

Mr. GARRETT. No, I don't think so. You would have \$100,000 as the total capitalization.

Mr. LONGWORTH. I am speaking now of \$100,000 in cash.

Mr. GARRETT. Of cash?

Mr. LONGWORTH. And in addition to that you have certain trademarks or copyrights which bring in \$8,000.

Mr. GARRETT. What are the total earnings of the corporation?

Mr. LONGWORTH. \$16,000, but all that you show for \$8,000 is due to trade-marks, etc. You capitalize that into \$100,000.

Mr. GARRETT. Exactly.

Mr. LONGWORTH. That is what I mean.

Mr. GARRETT. My idea was not to allow them to do that, because they would expect the Government to lose. What I think should be done should be to take their own figures of what they carry for good will, but only take those figures if they sustain the income of \$8,000, \$8,000 on \$100,000.

Mr. LONGWORTH. Suppose you said that the good will was worth \$150,000, but it was shown that they only received \$8,000 therefor. The Government would say that it was only worth \$100,000, and you might add \$100,000.

Mr. GARRETT. That is exactly my idea.

Mr. GREEN. But it seems to me it would be very difficult to get at the true value of good will. You would have to know more than the income of the business to know what came from income. You have necessary expenses, and you have other assets. A firm that has been doing business quite a while in the line of clothing, we will say, has built quite a successful trade, a large portion of that, or some portion of that at least is due to the good will of the concern. How are we to determine how much?

Mr. GARRETT. I would say this, if that concern is a businesslike, well-managed concern that has been in business for years, it would have set up on its books good will, trade-mark, or whatever it is, \$10,000; set that up on its books. The value of its machinery brings its total up to \$150,000, we will say. Now, it would be entitled to that \$10,000 as an investment, provided that the total shown, to-wit \$150,000, had earned 8 per cent.

Mr. GREEN. It seems to me that that system would very soon make the Government short on taxes.

Mr. GARRETT. No; I think it would help the Government on the taxes.

Mr. GREEN. I understand, according to your system of figuring, you would have the entire capital of the concern only paying 8 per cent, assuming, of course, that they would put in those trade-marks and good will at a high enough figure.

Mr. GARRETT. Well, we think they ought to be entitled to around 8 per cent, because that is the figure that has been taken as the allowance under the excess-profits tax. We figure 8 per cent would be the proper figure, allowing for investment. Under the present law, as it works out, we are placing a premium upon reorganization, because you now levy 8 per cent just the same if there has been a sale of the business. If there has been a sale of the business and a purchase of the business, and something has been paid for that good will, you allow it only in the case of a sale of the business to put in good will at any value.

Mr. GREEN. That is true; but I am speaking about your method of getting at this value. We will say that the corporation has \$100,000 actual paid in cash, and owns and has also good will; and you were speaking now of trade-marks; they have a certain amount

of good will. It makes \$20,000 in the course of the year. Now, how are you going to apportion that between good will and actual capital, supposing they claim their good will is worth \$150,000 or \$100,000?

Mr. GARRETT. My idea is, if you will read my statement I think I said, "a return on the amount of those items which have been carried as the value thereof on its books, provided such good will and other intangible items have, together with intangible assets, during a period of three years, earned a return to the corporation at least equal to 8 per cent."

Mr. GREEN. I put my figures of profits too large to figure out the case I wanted to make. I would put it at \$12,000. Suppose their good will as \$150,000, the Government would not get any tax at all.

Mr. GARRETT. Pardon me; it would get more.

Mr. STERLING. It wouldn't get any tax on that. The 8 per cent return on the capital and on the good will would absorb the whole thing.

Mr. GARRETT. No; I mean that they should be allowed a return upon that \$12,000. If that \$12,000, plus the \$100,000 elsewhere which they have—cash, real estate, and machinery—if those two items together had produced 8 per cent per year for the last three years, only in that case can good will be included.

Mr. GREEN. Suppose they put it \$50,000 instead of \$12,000. Then couldn't they say, "Here is 8 per cent on the real estate and cash and 8 per cent on the \$50,000 good will"?

Mr. GARRETT. No.

The CHAIRMAN. Let me see if I understand you. You and Judge Green are going into a corporation that has \$100,000, cold cash, tangible assets, and that corporation makes 40 per cent the first year and 40 per cent on that \$100,000 the next year. Now, then, that shows if you have got the capital, you are making 8 per cent on \$500,000 of capital, aren't you? You are making an amount equal to 8 per cent on \$500,000 capital. Your proposition is that you should have a deduction of 8 per cent on that \$500,000. You go one step further and you say that you must know that you tax his good will. Now, we have made for three years 40 per cent on \$100,000, which is equivalent to 8 per cent on \$500,000. Then, for the three years we will put down \$400,000 good will. You will have \$500,000. Now, do you stop right there?

Mr. GARRETT. I can't see if you have once written down that \$400,000—

The CHAIRMAN (interposing). Now, when you make that same \$40,000 the fourth year, for the first time you write it down as \$400,000 of good will, and the next \$40,000, which is 8 per cent, then your company carries it on your books, and the company should be allowed to have a deduction of \$100,000 tangible assets, and \$400,000 intangible assets, because they have had that experience for three years. Just tell me how many companies with an 8 per cent on their capitalization, but making 40 per cent on their actual capital, could you collect a penny from, because while you are making 8 per cent under the law you are making 40 per cent on the actual capital. But to let them have a capital of \$500,000, the law is going to give him 8 per cent, so you have really a \$40,000 deduction. Where is your excess over deduction?

Mr. GARRETT. I don't think there would be any excess.

The CHAIRMAN. This corporation would not pay any tax at all with \$400,000 out of \$500,000 of its capital pure water. The only objection that I have to that provision is that you allow even that 20 per cent for this good will for corporations in which this 20 per cent was paid in prior to March 1, 1917. I understand that advisory boards have had difficulty over allowing that 20 per cent to go in as part of the capital.

Mr. STERLING. The result of your proposition would be this, that every concern that made more than 8 per cent on the capital invested would claim that the rest was made on good will.

The CHAIRMAN. We all worked your proposition out so that the Government would not get a penny.

Mr. GARRETT. Under the present law the Government would not get a cent if I was managing that corporation. I will tell you what I would do.

The CHAIRMAN. If you will show how under the present law companies like this would not pay a cent, I will tell you you would get enough fees from companies throughout the country to pay these excess profits taxes for them.

Mr. GARRETT. Under the law as it now stands the corporation would reorganize. If you can find a bonanza that would pay 40 per cent upon you cash capital that you put in for a period of three years you have got a bonanza.

The CHAIRMAN. Some corporations have paid over 250 per cent. How are you organized to get anything in under the present law? We thought we had prevented reorganization. That is the thing we gave much attention to, to prevent these fellows from reorganizing and escaping taxation. How can it be done? We want to do something to prevent that.

Mr. GARRETT. I would like to say—

The CHAIRMAN (interposing). The truth about that provision—you have read that provision of the act about reorganization?

Mr. GARRETT. The present bill, I have not seen that provision.

The CHAIRMAN. The present law.

Mr. GARRETT. Under the present law, if the company is reorganized and actual money is paid for that good will, the reorganized company would be entitled to a return on that investment of what it paid for the good will.

The CHAIRMAN. No; my friend, you were never more mistaken in your life. We hedged that in. We have prevented that. I will tell you what you could do. Take R. J. Reynolds Tobacco Co. They have got a cigarette, the Camel brand. They have developed that by advertising and by accommodating salesmen and good management, the way they have conducted their business. Now, if they were to sell their business to the American Tobacco Co., the Camel cigarette brand, and the American Tobacco Co. had paid them \$20,000,000 for it, the American Tobacco Co. could make a deduction for \$20,000,000, because they had paid out this \$20,000,000 in cash as part of the investment to the R. J. Reynolds Tobacco Co. and would not have to put that in because they have paid it out in cash. It is an investment and is just as much an expense of the cigarette as expenses for their traveling salesmen, for their advertising and other operating expenses. The American Tobacco Co. would have the

right to take \$20,000,000 to their good will account for the purpose of deduction.

Mr. GARRETT. Every organization contemplates that you are going to have a new purchaser.

The CHAIRMAN. But you read that provision and see how you would advise a reorganization to escape it.

Mr. GARRETT. That is not my business, to advise corporations how to escape taxation.

The CHAIRMAN. You have made some very valuable suggestions and the committee will take them into careful consideration, and I would like to have you think about it to-night when you get home, and write the chairman of the committee how you think corporations can reorganize and escape this good-will proposition. I mean to put in this good-will proposition as a part of their capital.

Mr. ORR. I will tell you.

The CHAIRMAN. Can you do it?

Mr. GREEN. Just before he goes on. As I understand, Mr. Garrett, you are not interested in any corporation that would have any interest in this provision?

Mr. GARRETT. Not a single provision which I have stated. We are absolutely neutral on all of them. I have stated that trust companies are interested in these provisions because I think perhaps the greatest burden falls on them in making returns and reports.

Mr. GREEN. And so far as you are concerned, in any institution which you represent it won't make a penny's difference?

Mr. GARRETT. No; we are a friend of the court, of Congress.

The CHAIRMAN. We have thought about it, but if you and this young gentleman will consider the question and tell us how a corporation can reorganize to escape this good-will proposition you will do us a great favor, and if you will show the American Tobacco Co. how to reorganize, so that they can put in this good will with respect to the Camel brand and save \$20,000,000, they would be glad to know it.

#### STATEMENT OF MR. W. ORR, ATTORNEY, NEW YORK CITY.

Mr. ORR. As I understand it, if they give stocks for good will you can not include that stock if it happens after March 1, 1917. Stockholders can go out and borrow money and get a check and buy stock for cash, and then they can pay for the stock and sell it back to the company and just work it out in a roundabout transaction.

The CHAIRMAN. You think that is a bona fide sale and transaction? You are a lawyer, aren't you?

Mr. ORR. Yes.

The CHAIRMAN. Don't you think the courts would take into consideration the construction of the laws whether that was a bona fide transaction or not. Now, your proposition would be just as easy as anything in the world. Do you think that the legislature, the senate and the house and the various committees, the finance committee of the senate and of the house, would not have thought of that when they wrote the law?

Mr. ORR. That is the bald statement. It can have a great deal more camouflage.

The CHAIRMAN. You can't do it that way, because it would not be a bona fide sale. In the next place, if 50 per cent of the stockholders

in the reorganized company, if the old stockholders owned 50 per cent of the stock, that would not be bona fide and they could not do it. In the case you put they could not do it.

Mr. ORR. If they paid cash?

The CHAIRMAN. If they paid cash, 50 per cent of the old fellows, into the new organization, it would not count.

Mr. ORR. Why can't the old company buy out the new one. That is all sold out.

The CHAIRMAN. The same stockholders? You did not notice that provision, young man, you have been too busy. That is the very first thought that we tried to guard against.

Mr. ORR. It is not a question of whether it is bona fide.

The CHAIRMAN. But the law says it is. Would your transaction be a bona fide transaction?

Mr. ORR. Not those exact facts, but you can get them so near looking bona fide that it would be hard to tell.

The CHAIRMAN. You will have to think of this thing some more. That suggestion does not relieve the Government. I wish you would think about it, because I am sure there are some loopholes.

Mr. ORR. No cash transactions should be considered bona fide unless you got all new stockholders?

The CHAIRMAN. If you got a majority of the old fellows, it doesn't matter what they thought it was.

Mr. ORR. Couldn't it happen this way? Why couldn't you sell corporation A to corporation B and have, in effect, a new corporation?

The CHAIRMAN. That wouldn't do. Here is this Woolworth concern which has about \$60,000,000 of good will and \$30,000,000 of real assets. That good will is worth it. They would have thought of your solution in 24 hours after it was passed. They have one of the shrewdest lawyers I have known in that concern. This company, R. J. Reynolds Co., would reorganize if they thought your suggestion was good; they would reorganize to-morrow night as soon as they heard of it. They are paying about \$1,000,000 taxes a year. I wish you would really think about that, you and Mr. Garrett, because if there is a loophole we want to stop it. It is a serious matter.

Had you finished your remarks, Mr. Garrett?

Mr. GARRETT. Yes.

Mr. ORR. In connection with those losses which are deductible by an individual if incurred in his trade or business, they are also allowed to individuals to be deducted from the profits made outside of trade or business, and we propose to ask that all deductions shall be allowed. They can be engaged in the real estate business and go out and buy stock and deduct the losses.

The CHAIRMAN. In other words, if a man gambles on the stock exchange—I do not mean that in the offensive sense—and he loses money, he can deduct the loss, while if the merchant in my town puts \$50,000 into it and loses every cent before night, he can not deduct it from his business; and if he had an income of \$25,000 in his mercantile business and has lost \$50,000 on the side in this one day's transaction, he has got to pay his full income tax on that?

There is something in what you say. I have often thought about that. There is something in that.

Mr. ORR. If a corporation can do it, why can not an individual?

The CHAIRMAN. It looks like there is something in it.

Mr. ORR. Then, there is one other question, that is that one about taking interest when it exceeds, for instance, the capital stock plus one-half of your indebtedness. One of the gentlemen made the remark that you would reduce your invested capital by permitting you to take that interest, because you would not then be allowed to put that part that was not deductible in your invested capital, and the taxpayers might not like that, because it would reduce your invested capital; but in being permitted to deduct that interest you are working a deduction of your net income, and it is a great deal better to reduce that net income than to reduce your invested capital, because your invested capital only works on a proportion of that net income, whereas in the net income there is just that much saving in principal. This is an income tax law. It is supposed to tax net income. Therefore we ought to be permitted to deduct our expenses or else we are not taxing net income.

We are not now permitted to deduct our income taxes, and perhaps that is all right; but why we can not deduct all our interest in arriving at the amount we pay is a thing I can not understand. The way it is now I suppose it is aimed at companies going out and borrowing large amounts of money and eating up all their profits by having interest deducted. But there are a great many companies that it works hardship on, because they cannot deduct all their interest, and they are paying excess-profits taxes on a large amount of money that is not real income. That is the reason we have that ninth suggestion there. That is all I have to say.

The CHAIRMAN. All right, Mr. Orr. Mr. Chandler wants to be heard for a few moments.

**STATEMENT OF HON. THOMAS A. CHANDLER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OKLAHOMA.**

Mr. CHANDLER. Gentlemen, I appear before you, not to ask you to reduce any taxes, but, on the contrary, to increase them on certain commodities, and in this connection I wish to call your attention to the bill I introduced a short time ago, which was referred to your committee (H. R. 11516), which I ask you to consider.

The CHAIRMAN. Very well. Append it to your remarks.

(The bill referred to is here printed in the record, as follows:

[H. R. 11513, Sixty-fifth Congress, second session.]

A BILL To increase the revenue and to levy a duty upon imports from foreign countries of lead and zinc ore and manufactured products containing lead or zinc.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That hereafter there shall be levied, collected, and paid upon articles hereinafter mentioned, imported from foreign countries, the rates of duty which are herein respectively prescribed, namely:

Lead ore and lead dross, 2 cents per pound: *Provided,* That silver ore and all other ores containing lead shall pay a duty of 2 cents per pound on the lead contained therein, according to sample and assay at the port of entry.

Lead in pigs and bars, molten and old refuse lead run into blocks and bars, and old scrap lead fit only to be remanufactured, 2½ cents per pound.

Lead in sheets, pipes, shot, glaziers' lead, and lead wire, 3 cents per pound.

Zinc ore or zinc in blocks or pigs, or zinc old and worn out, fit only to be remanufactured, 2 cents per pound.

Zinc in sheets, 3 cents per pound.

Manufactures, articles, or wares composed wholly or in part of lead or zinc, whether partly or wholly manufactured, fifty per centum ad valorem.

Sec. 2. That on all products of lead and zinc, or either of them, or products containing lead and zinc, or either of them, there shall be levied, collected, and paid, in addition to the tax now imposed by law, thirty per centum ad valorem.

Sec. 3. That all laws and parts of laws inconsistent with this act are hereby repealed.

Mr. CHANDLER. I want to ask you gentlemen to embody as much of that as possible, or all of it, if you think proper, in your bill to increase the revenue.

Mr. DIXON. What is it?

Mr. CHANDLER. I was just going to tell you. This bill provides for an import duty on lead and zinc, on lead and zinc ore, and on lead and zinc products, and I especially want to call your attention to the lead and zinc ore provision in it. Now, I am not asking this as a revision of the tariff, but purely as a revenue measure.

The CHAIRMAN. As I understand it, you have a bill there to put a tax on lead and zinc?

Mr. CHANDLER. On lead and zinc, lead and zinc products, and lead and zinc ore; yes.

The CHAIRMAN. You are doing this for revenue purposes?

Mr. CHANDLER. Yes.

The CHAIRMAN. You could not get much revenue from lead and zinc when there is an embargo on their importation, could you?

Mr. CHANDLER. That is the very point I wish to take up with you. The embargo on lead and zinc ore only applies to Mexican lead and zinc ore. In addition to that there is about 1,000 tons per month coming from Canada and about 1,000 tons per month coming from Australia, South America, and Spain.

Mr. STERLING. There is no embargo upon that?

Mr. CHANDLER. No, sir; there is no embargo upon that. And this embargo you speak of was placed only a short time ago. The fact, is there has been very little importation for the last eight months on account of the shortage of transportation facilities. What we fear is that as soon as transportation facilities improve there will be a big influx of Mexican ore into this country. This embargo was only placed there upon the earnest solicitation of the lead and zinc producers of the Southwest. When I say the Southwest I mean northeast Oklahoma, southeast Kansas, southwest Missouri, and northeast Arkansas. This ore, up until the time when the transportation facilities became so bad, was flooding the market, and the average importation price was \$19 per ton. It was said that our mines in the Southwest could not compete with that.

Mr. LONGWORTH. What was that price?

Mr. CHANDLER. \$19.

Mr. LONGWORTH. \$19 a ton?

Mr. CHANDLER. Yes.

Mr. LONGWORTH. Was that for what they call their regular 60 per cent ore?

Mr. CHANDLER. The average of all ores that have been imported. I do not know anything about ore terms. I am not in the mining business.

Mr. LONGWORTH. As I understand it, the ore is sold in this country on a 60 per cent basis.

Mr. CHANDLER. That is what I understand, too.

Mr. LONGWORTH. And that would bring it to about \$45, now?

Mr. CHANDLER. Yes; about \$45, but the average price for the last two years and a half, when they imported something like 700,000 or 800,000 tons from these countries that I have mentioned, the average price at the port of entry was \$19, and the Government collected \$1.90 duty upon the importation of those ores. Now, what I want you gentlemen to do is to place such a tariff, such an import duty upon ores that are coming into this country that you will get a revenue. If the miners that I have mentioned in the Southwest produce it, you will get a revenue from the excess-profits tax and the income tax, and if they do not produce it and it comes in from Mexico, we will get it from them.

Mr. STERLING. That \$20 per ton tariff equalizes—

Mr. CHANDLER. I provide in this bill \$40.

Mr. LONGWORTH. On ore?

Mr. CHANDLER. Yes.

Mr. LONGWORTH. And the zinc on the same basis?

Mr. CHANDLER. The same on zinc?

Mr. LONGWORTH. Yes.

Mr. CHANDLER. It ranges from 2 cents a pound up to about 4 cents, I think.

Mr. GREEN. Is that on the ore or on spelter?

Mr. CHANDLER. No; on the manufactured product.

Mr. GREEN. It is now selling at about 8 cents a pound?

Mr. CHANDLER. I do not know what the market is.

Mr. DICKINSON. That is not sufficient to create an embargo, is it?

Mr. CHANDLER. The bill I propose will practically mean an embargo. It will not altogether mean an embargo, but it practically will.

Mr. DICKINSON. It will be substantially an embargo?

Mr. CHANDLER. Yes; but if ore does get so high that they bring this ore in from Mexico, we will get the revenue from those men.

Mr. DICKINSON. Yes.

Mr. CHANDLER. And if it is embargoed none of it will come in.

Mr. DICKINSON. And there will be no revenue?

Mr. CHANDLER. If the embargo operates, nothing will come in and you will get the revenue from the lead and zinc miners of the southwest in the shape of income tax and excess-profits tax.

Mr. DICKINSON. In other words, in so far as that section is concerned, you and I are very much interested, and the embargo accomplishes everything you want, anyhow, does it not?

Mr. CHANDLER. Yes; but this embargo on Mexican ore may be taken off when transportation facilities improve.

Mr. DICKINSON. It may be only temporary.

Mr. CHANDLER. Yes; the fact is we were told it was only temporary when it was placed there, and we tried to get an embargo on Canadian ore and they said at the time they would not place an embargo upon Canadian ore.

Mr. DICKINSON. I am very much interested in this too.

Mr. CHANDLER. My idea is, as the old gambler says, to "play both ends against the middle," and we will get revenue from it either way; and if these cheap miners down in Mexico mine their ore and send it up here, make them pay for it. They are not paying any taxes in this country that I know of, and they are not buying any Liberty bonds or contributing anything to the Red Cross or to the

Y. M. C. A., or any of these other charitable associations; but on the other hand they are a thorn in our sides, and force us to keep thousands of men in arms on their border.

Mr. DICKINSON. I am inclined to think that this would be a very unattractive bill to many of them.

Mr. CHANDLER. I think so myself. And I hope you will place such a tax on them that their ore either will not come in or if it does they will pay very dearly for the privilege of sending it here. I think that is all I have to say. Mr. Scott Thompson, who is here, can give you figures upon Mexican importations of ore for about two and a half years, of zinc ore. I have not the figures on lead and zinc, but I simply wish to call the attention of you gentlemen to the bill and ask you to embody as much of it as you possibly can, purely as a revenue measure, not as a revision of the tariff or anything of that kind.

The CHAIRMAN. We will give it very careful consideration. We are glad you have come before us.

Mr. CHANDLER. Thank you.

#### STATEMENT OF MR. JOSEPH BYRNE, REPRESENTING THE BARBER SUPPLY DEALERS ASSOCIATION OF AMERICA.

Mr. BYRNE. We have a few things that we want to bring to your attention, and the president of the association, being sick, sent me. Some members who should have come were so far away that they could not do it.

The last revenue measure that was enacted worked severe hardship upon our organization and upon our business, because you classed us with perfumers, with people who sell goods in small packages at long profits. Our business is just the opposite. We sell goods in bid packages in bulk.

We have here a few samples of goods that are manufactured by our members, that will show what the packages are worth, and what they sell at to the barber. The barber supply industry consists of about 500 dealers scattered in all parts of the United States. They do a volume of business of about \$25,000,000. It is equally divided between goods that they manufacture and goods that they buy and job. What we are interested in now is goods that we manufacture. The last revenue measure, as I said, included our industry with the perfume industry, and it has worked great hardship on us. I, personally, am editor of the Barber's Journal, and I have business dealings with barber supply dealers all over the United States, and last January I noticed that some of our best people in the advertising line were slowing down in their payments, and I made inquiries among factories and others who were interested in them, and I found that this was one reason that was hurting them.

Now, here is a package of cream that contains a pound—16 ounces. That sells to the barber at 60 cents [indicating jar of "Greaseless Cream."] When you folks figured on us, you had this in mind [indicating another jar]. This is a 5-ounce jar, and sells to the retail consumer over the counter at 50 cents. There is a big difference. The same applies on talcum powder.

The CHAIRMAN. What is this last you have there?

Mr. BYRNE. This is a face cream. In our supply business we have four lines of preparations, hair tonic, toilet water, cream, and powder. Our hair tonic amounts to 1,000,000 gallons a year. These are legitimate articles that are not sold as hair growers as a good many people think. [Laughter.]

The CHAIRMAN. Continue.

Mr. BYRNE. They are sold, Mr. Chairman and gentlemen of the committee, in gallons—bottles of hair tonic—and they contain, of alcohol, from 20 to 60 per cent. They are not designed to stop the hair from falling out, but they are designed as preventatives of skin diseases and scalp diseases, and as far as hair tonic is concerned it amounts to about a million gallons a year, and it contains from 20 to 60 per cent, as I say, of the very best grain alcohol, from which the Government derives an income.

Now, as to toilet waters, they are just as necessary for use in the barber shop as powder is. I will tell you why. If they are not used when you shave a man's face you open up every pore, and unless an antiseptic of some kind is used you will just throw the whole business open to diseases that can be carried easier in a barber shop, possibly, than in any other place in the country.

Now, creams are of course used for finishing, and the sale of creams amounts to about \$1,000,000 a year as compared to figures that have been given here by other manufacturers of \$50,000,000 to \$100,000,000 worth of goods that are sold over the retail drug counter.

The CHAIRMAN. What did you say the manufacturer sold that for and the merchant sold that for?

Mr. BYRNE. We are figuring only on the consumer. The barber is a consumer and Mrs. Byrne is a consumer.

The CHAIRMAN. What price did you say the manufacturer sold that you have your hand on, for?

Mr. BYRNE. This retails to the consumer at 50 cents.

The CHAIRMAN. What does the manufacturer get for it?

Mr. BYRNE. The manufacturer gets on this about \$2 to \$2.50 a dozen, depending on the case, and this sells to the barber [indicating another jar] at 60 cents.

Mr. DICKINSON. There is 16 ounces in the large jar and 5 ounces in the other?

Mr. BYRNE. Yes. Under the old law this was taxed just as much as this [indicating]. Now, these two creams can be the same; they can be identical; the only difference in the different goods may be in the odor or the color, or some little thing not amounting to over 15 or 20 per cent.

Mr. DICKINSON. It is the same kind of goods?

Mr. BYRNE. Substantially so. Some creams are made of grease and some of other materials.

The CHAIRMAN. What is your tax on that?

Mr. BYRNE. Two per cent.

The CHAIRMAN. That is the manufacturer's price?

Mr. BYRNE. Yes.

Mr. DICKINSON. There are three times as much in one of those as in the other, and you sell that for 60 cents, and you sell the other, 5 ounces, at 50 cents?

Mr. BYRNE. This sells at 50 cents and this at 60 cents [indicating jars].

The point we want to draw a little later on is this, that these two articles should be taxed differently. We want to ask the committee to draw a line on creams that are sold in pounds or larger, and on hair tonics in quarts and larger, because the barber has a limit on what he can pay for his sundries and supplies.

Mr. STERLING. You want the tax on that to be more [indicating]?

Mr. BYRNE. Yes; now that is the same.

Mr. STERLING. Would this tax put some manufacturers out of business?

Mr. BYRNE. The smaller people. Now, we are all small people, in fact. There are 500 of us doing about \$25,000,000 worth of business. This has put the trade in general on a very poor financial basis. Some people who a year or two years ago used to take a 2 per cent discount and pay in 30 days have slowed up, and do not pay now in four or five or six months.

Mr. STERLING. How much should we add to that tax?

Mr. BYRNE. They could not add a cent. Competition is such that—

The CHAIRMAN. That is what you desire, to put a specific tax on it?

Mr. BYRNE. What is that?

The CHAIRMAN. It is your desire now to separate the tax and put a specific tax on one thing and another on another thing, so that you can transfer it—

Mr. BYRNE. We believe the things that are sold in the retail drug stores of the United States can carry a tax, and we can not on the big stuff. On the bulk stuff we can not. We have an average general profit in our line of about 35 per cent; that is, taking the entire line from start to finish. It costs us from 23 to 33 per cent to carry on our business. That is the position we are in.

Now, on talcum powder they go a little further.

The CHAIRMAN. You had better have the tax increased and have the package large enough so that you would be justified on your powders in increasing the price and adding it to the consumer.

Mr. BYRNE. If you increase it, you will drive the little fellows, who are toppling back and forth now, who are in a bad way, altogether out of business.

The CHAIRMAN. It would not cost them anything, because that would be added to the consumer.

Mr. BYRNE. They can not do it. In our industry it is impossible to raise the prices. Prices are established at 50, 60, and 75 cents.

The CHAIRMAN. The cigar men told us that, and they went up to 6 and 11 and 12 cents.

The moving-picture people told us that, too. They said that the people had gotten in the habit for years of going to shows and of paying admission to moving pictures of 5, 10, 15, 20, and 25 cents, and they never could get them to pay 11 cents instead of 10 cents, counting 1 cent for the war tax. It turns out that they keep right on going.

Mr. GREEN. The automobile men told us that they could not add anything to their prices, either.

The CHAIRMAN. We want you to transfer it to the consumer. We want him and not you to bear it. You are paying the excess-profits tax and income tax. We want it so arranged that you can transfer that tax to the consumer, because those are things that the consumer

ought to pay. If I liked to use a hair tonic, I would feel like I ought to pay that 2 or 3 or 5 or even 10 per cent, you know, but the manufacturer ought not to lose it. If I want to powder my face or my nose, I think I ought to pay for that. It is a luxury; a necessary luxury, you might say.

Mr. BYRNE. But these are given away, and not sold.

Mr. HAWLEY. Let the barbers charge enough so that they could afford to bear it.

Mr. BYRNE. We could not raise the price enough to cover the cost. We have tried to do it and failed. There is a limit in doing business in the barber industry, so far as we are concerned. Now, take the moving-picture business. In going into the movies in New York City we notice that the tax is three cents, and a good many of the theaters have been in shape all over the country so that they could absorb those taxes, but we can not.

The CHAIRMAN. We want to fix you so that you will not lose the amount of that tax, but the consumer will pay it. We want to fix it so that you can transfer the tax to the consumer by increasing the cost of the article to the consumer. You are a manufacturer, say, and you sell to the wholesaler——

Mr. BYRNE. No; no, sir.

The CHAIRMAN (continuing). And the wholesaler sells to the retailer and he will add the tax, and a little profit will be added all along the line, and this retailer will sell to the consumer for that much more. Why can you not do that?

Mr. BYRNE. We can not, because we are manufacturers selling to the consumer.

Mr. GREEN. You sell direct to the barbers?

Mr. BYRNE. Direct to the barbers. A little supply man will have, maybe, one or two men on the road. Take Des Moines, Iowa. We will have three men on the road, and they will go from town to town and take orders. This man will pick up a \$5 order here and a \$10 order there, a \$15 order a little farther on, and a \$20 order over here, and they prepay the freight on their goods. They buy the raw materials and bring them to their city and put them up, and they pay their traveling men and prepay the freight on the goods to the barber, and that is the way they make up their business. They are manufacturers; that is the whole story.

Mr. STERLING. Do you mean to say that the barbers would not buy these things? They have to have them, do they not?

Mr. BYRNE. The barbers do not have to have them. When you raise the rate on alcohol, the barber just cuts his use of alcohol in half.

Mr. STERLING. They have got to have something to put on the faces of their customers. They could charge a little bit more for powder, or could put a little less witch-hazel on a fellow's face, or else charge a little bit more for shaving.

Mr. BYRNE. I would like to have them come in here and talk to you.

The CHAIRMAN. Can they not increase their charge?

Mr. BYRNE. Every time they do that they send a man into the hardware store to buy a safety razor.

The CHAIRMAN. We are willing to help you out any way we can and make the other fellow pay it.

Mr. BYRNE. I do not see how you could do it. It has been suggested here that you put a gross sales tax on. That would have

been the finest thing in the world for us. We could have furnished an affidavit every day in the month, and it would have been just what we wanted.

Mr. STERLING. How about a fair amount of revenue tax?

Mr. BYRNE. In our industry you would probably have gotten more money, and much easier, because we know what we do each month, and we could come up and make a little affidavit to the effect of what we did.

Mr. STERLING. You do not have 5 per cent on your gross sales?

Mr. BYRNE. Our average profit is 35 per cent, and our cost from 26 to 33, to do business.

Mr. HAWLEY. Your gross profits?

Mr. BYRNE. Yes; gross profits. We have here a gentleman from Atlanta who happens to be in this section, Mr. Wilson, from the Atlanta Barbers' Supply Co., and he says that if we can make 5 per cent on our gross sales a year we will declare some dividend. They can not do it, and it is not on the cards, and if you folks will just say, "We know that toilet waters will stand a bigger tax than your goods because you sell in bulk," and so on all goods above 5-ounce packages of cream and 3-ounce packages of talcum powder, and so on for soaps all down the list, say that above that the tax is so much and below that so much—

Mr. HAWLEY. Why do you fix on the limit of 3 ounces? I thought you sold yours in pounds.

Mr. BYRNE. Well, take the limit on creams. This is a retail drug package [indicating]. A retail drug man can not and will not sell a package of that size, because if a woman buys it, it will go bad on her hands before she uses it up.

Here is talcum powder. Would you go into a drug store and buy that much talcum powder for 15 cents [indicating] large package]. This sells at 15 cents [indicating smaller package]. You do not have to worry about not taxing these goods because you are going to affect this [indicating], because you will not affect it.

And the same way with shaving powder. There is the way the barber buys shaving powder [indicating]. This is really a small package. This is 1 pound. Most of it is sold in kilos.

Here is a hair tonic [indicating]. There is goods that is very misleading. A good many people that are not handling hair tonics believe there is a big profit in them. Here is a tonic that sells for 50 cents a bottle and contains 5 ounces. That will bring in about \$18 a gallon. Now, this is a drug-store package. When that is sold in a gallon bottle to a barber it sells at \$5.50, and it contains just as much alcohol, and costs just as much to make, as does this [indicating]. The only difference is in the packing.

Mr. STERLING. What do you make when you sell to the barber at \$5.50?

Mr. BYRNE. The discounts just about cover the profits. That is, the profit covers just about the expense.

Mr. STERLING. You make a little profit?

Mr. BYRNE. Well—

Mr. STERLING. You must make a pretty good profit, then, when you sell it at \$18 a gallon?

Mr. BYRNE. We do not sell this [indicating]. This is a big package [indicating].

Mr. STERLING. Well, you sell it to them.

Mr. BYRNE. No, we do not. We do no business with drug stores.

Mr. STERLING. Then where does the druggist get it?

Mr. BYRNE. From the wholesale drug house—from the manufacturer. He makes it.

Mr. STERLING. Do you not manufacture it?

Mr. BYRNE. That is what we call a standard preparation [indicating].

Mr. STERLING. You manufacture?

Mr. BYRNE. Not this. Not our members; no, sir.

Mr. STERLING. Some man makes it?

Mr. BYRNE. Some man makes it.

Mr. STERLING. And he makes the profit?

Mr. BYRNE. Yes, sir; he makes the profit. This is goods that we job, not goods that we manufacture [indicating].

Mr. DIXON. The goods that you manufacture are sold strictly to barbers?

Mr. BYRNE. Yes.

Mr. DIXON. And not to wholesalers or druggists?

Mr. BYRNE. No, sir. They buy this in gallons.

The CHAIRMAN. Let us see that small package of face powder. What does the barber pay for that?

Mr. BYRNE. The barber pays 60 cents for that [indicating].

The CHAIRMAN. Could not the barber pay you a cent and a half more for that?

Mr. BYRNE. How could we charge the barber 61½ cents?

The CHAIRMAN. Do you think that 2 cents more would prevent him from buying that and using it, when we have got this war on here and he knows that that 2 cents is going to help the boys in the trenches?

Mr. BYRNE. The price of this is 25 cents and the price of this is 60 [indicating].

The CHAIRMAN. The barber would not stop buying that and using it just because you charged him 2 cents more. And then, are you not making a little profit on that? That cream that the barber buys by wholesale, how much does he pay for that?

Mr. BYRNE. 60 cents.

The CHAIRMAN. Do you think that he would stop using that if you just charged him 62 cents? Now, really, do you think he would stop buying it if you charged him 64 cents or 65 cents?

Mr. BYRNE. They would drop off at 65 cents; the sales would drop off, and the standard of the goods they are using would be hurt.

The CHAIRMAN. Do you mean to say that the barber that has been using it and paying this much would turn this down if you asked him 65 cents for it?

Mr. BYRNE. He would look for cheaper goods.

The CHAIRMAN. But the other fellow is going to have to pay the same rate that you pay.

Mr. BYRNE. I am told this was sold for 35 cents. It is now 60 cents.

The CHAIRMAN. The price has been raised? He did not stop when the price was increased from 35 cents up to 60 cents, did he?

Mr. BYRNE. It would just put the business in the position I mentioned a while ago. Our members, manufacturers, the people we are speaking for now, are in a bad way.

The CHAIRMAN. What is your suggestion now that we should do? You have been interesting and instructive about these matters, and we have never had anything like this before. What is your suggestion now as to the tax?

Mr. BYRNE. Our original suggestion would be most ideal; if we could get away from the present taxes, and if you would give us a gross sales tax on our business.

The CHAIRMAN. This is a gross sales tax on the business.

Mr. BYRNE. It affects certain goods and does not affect other goods.

The CHAIRMAN. There is 2 per cent on the gross sales now.

Mr. BYRNE. Yes.

The CHAIRMAN. What other kind of gross-sales tax would you want?

Mr. BYRNE. If that could be done away with, and you would put a gross-sales tax on every dollar's worth of goods we sell; there are some lines of our business that are a little more profitable than others.

Mr. STERLING. What are they?

Mr. BYRNE. Razor strops and tools of every kind; and they are growing very hard to get. The Government is taking the factories that make those goods. Most of those goods came originally from Germany, and now the Government is so flooding the plants in this country that make them, with orders, that they tell us they can not supply us, and we will have to wait. We are such a small industry; we amount to so very little.

The CHAIRMAN. Would you prefer a tax on the retail articles—a specific tax of, say, 2 cents?

Mr. BYRNE. On these small packages?

The CHAIRMAN. Yes.

Mr. BYRNE. It would be most desirable.

The CHAIRMAN. Of 2 or 3 cents?

Mr. BYRNE. On this class of goods [indicating]?

The CHAIRMAN. Yes.

Mr. BYRNE. Yes; if you will just keep away from the bulk stuff, Mr. Chairman, the goods that the barber consumes and uses. Most of it he gives away.

Mr. LONGWORTH. What proportion of your whole sales is that?

Mr. BYRNE. About 50-50.

Mr. LONGWORTH. You do not pay any tax on the other sales?

Mr. BYRNE. We are caught just about like everybody else on everything down the line; on our incomes; and now railroad rates are going to affect us very seriously, because they get our traveling men; and then they get our freight shipments.

Mr. LONGWORTH. You say you would prefer a tax of one-half of 1 per cent on your gross sales?

Mr. BYRNE. If we did not have that 2 per cent—a reasonable per cent, say, of one-half, on our gross sales.

Mr. LONGWORTH. If your business was one-half that and one-half the other, the result would be to reduce this 50 per cent, would it not?

Mr. BYRNE. We would then do a larger volume of business in our toilet goods, because we would not be held down by the terribly high price of alcohol; and that, for the purpose of our lotions, is necessary.

Mr. LONGWORTH. You have raised your prices on them?

Mr. BYRNE. Everything that carried alcohol has been raised.

Mr. LONGWORTH. You have raised your prices?

Mr. BYRNE. Most of the preparations that were sold, the fellows that were making them simply cut down the percentage of alcohol to keep within a certain price.

Mr. LONGWORTH. You get a profit?

Mr. BYRNE. To-day, as I said before, the very best people in our lines that used to take goods and pay in 30 days are not meeting their bills as promptly as they used to. We are in bad shape, as an industry.

Mr. HAWLEY. You really are retailers, are you not? Although you make in wholesale quantities, you retail your quantities to the ultimate consumer, the barber?

Mr. BYRNE. Yes.

Mr. HAWLEY. Suppose the tax was placed on the retail sales?

Mr. BYRNE. What do you mean, a stamp tax?

Mr. HAWLEY. Yes; on the retail sales, whatever the quantity sold. The tax would not then be based on the quantity sold but on the price obtained, and that would compel the drug stores to pay a much larger tax on a given quantity than you pay?

Mr. BYRNE. On the value of it?

Mr. HAWLEY. Yes.

Mr. BYRNE. That would be better than anything; better than a manufacturer's—

Mr. HAWLEY. How much could you afford to pay, if that arrangement was made; what rate per cent on your sales?

Mr. BYRNE. If we do not have to stand it and pay it to our—

Mr. HAWLEY. How much would your trade stand; 5 per cent?

Mr. BYRNE. Two per cent more? A gentleman here says it could stand 2 per cent more. I do not believe it, though. It could not; because here would be the effect of a change of that kind. The dealers, half of them, would say, "I will absorb that," just like the theaters have done on this 2-cent and 3-cent business on commissions. The theaters can do it because they have a big, profitable business, but we can not.

Mr. STERLING. I do not know of any that do that.

Mr. BYRNE. I will take you along Broadway, New York, and every show you go into from Fiftieth Street up, you will find that.

Mr. STERLING. It is not so in my country.

Mr. BYRNE. That is what it is in New York. They say, "Tax 3 cents, admission 27 cents; 30 cents," and so on.

Mr. STERLING. The admission was 25 cents before, was it not. Did they not just add 2 cents to their admission?

Mr. BYRNE. To be perfectly frank with you, I have just recently gotten into the habit of going into moving pictures, and I have not noticed as to that.

Mr. STERLING. They add 2 cents in addition to the tax.

Mr. BYRNE. They are making money on it, then. That is something we could not do.

We hope that some difference will be made on our bulk goods. I hope that you are going to classify us. What we really would like to see you do, Mr. Chairman, would be to draw a line. Do not put us in the class of perfumers. Do not put us in the class with people that

sell that class [indicating] over the retail counters, where we are selling it the other way.

The CHAIRMAN. What you want is for us to put you in a class that sells directly from the manufacturer to the consumer? That is, a barber's supply manufacturer must have a different classification from a man who sells it over his counter to Tom, Dick, and Harry?

Mr. BYRNE. You do not have to do that. All you have to do is to say, "We are going to put on all toilet waters and cosmetics, on goods above a certain size we are going to put a certain tax, and on goods under that size we are going to put another tax."

Mr. DIXON. Could they not furnish packages, and so forth, so as to come in under that classification?

Mr. BYRNE. No, sir.

Mr. DIXON. They could not?

Mr. BYRNE. No, sir. These two articles sell at 15 cents [indicating]. A druggist with a \$30,000 stock would have to have from three to five times the space to go into it.

The CHAIRMAN. We will consider that.

Mr. BYRNE. I hope you will.

The CHAIRMAN. Have you got a brief on the matter?

Mr. BYRNE. I was going to present one.

The CHAIRMAN. Suppose you write to the committee and just make a proposition about how to separate that tax?

Mr. BYRNE. We will suggest that in the form of a brief; and shall we address it to each member of the committee individually?

The CHAIRMAN. No; just address it to the chairman, and he will put it before the committee when we begin to write the bill. Make it as brief as possible. Make your brief about how to fix the tax and how to separate in packages with reference to the tax.

Mr. BYRNE. The size of packages?

The CHAIRMAN. Yes. We would like to have that before us.

Mr. BYRNE. I will do that.

The CHAIRMAN. All right.

Mr. BYRNE. You will have to have that within three or four days?

The CHAIRMAN. Yes; before July 1 we will have to have it out.

The chairman will state that Mr. Littlefield was down at the hearings, but he was unable to come before the committee, and he desires to submit a brief to be printed in the record. Without objection it will be done.

Mr. STERLING. What is it on?

The CHAIRMAN. He is here representing the Pennsylvania State Chamber of Commerce. They have sent out letters suggesting matters for consideration. It is on the state taxes.

(At 5.30 o'clock p. m. the committee adjourned until to-morrow, Tuesday, June 25, 1918, at 10 o'clock a. m.)

(The brief submitted by Mr. Littlefield is here printed in full in the record as follows:)

*Letters received by Paul Littlefield, general secretary Pennsylvania State Chamber of Commerce, 101 Telegraph Building, Harrisburg, Pa., sur- v- es- ing changes in the new war revenue bill now before the Ways and Means Committee of the House of Representatives.*

Mr. N. B. Kelly, general secretary Philadelphia Chamber of Commerce, writes regarding a decision rendered by Mr. Daniel C. Roper, Commissioner of Internal Revenue, affecting payment of income tax on trust estates in the present war revenue bill:

"Where estates are left in trust and there is more than one heir, instead of charging each of the heirs with the amount of income that each one would derive from the estate, he has interpreted the present law to mean that the estate must be taxed as a whole. In other words, if there are five heirs, and each heir has actually received an income of \$12,000, the income tax must be paid not on \$12,000 each, but on the total of \$60,000. Of course, you understand that that increases the tax that each of these heirs is charged with to almost double what it actually should be.

"This has actually occurred in the case of an estate in which I am interested. We were compelled to pay the income tax based upon the total amount of income received which was placed in the hands of the trust company for these heirs, instead of paying the actual amount, as stated above, on the income each received.

"I am sure it is not the intent of the United States Government where money is left in trust, to tax the heirs more than where the income is derived direct."

JUNE 13, 1918.

THE PENNSYLVANIA STATE CHAMBER OF COMMERCE,  
101 Telegraph Building, Harrisburg, Pa.

DEAR SIR: It is evident that the Government must collect very large sums by taxation. We write to urge that all such taxation be levied on net profits. Taxes laid on certificates of stock of incorporated companies, or on gross sales, are wrong in principle and very injurious in practice. The war has brought great profits to certain classes of industry, but the tendency in houses doing a distributing business is to increase the risks without increasing the profits. We believe that the Government is thoroughly justified in levying extremely heavy taxes on the excess profits of business, arising from present conditions, although we think that the Government should not take the entire profit. We believe, however, that nearly all business men would agree with us that they very much prefer that the Government should take the entire excess profits made by business rather than have the Government levy taxes on certificates of stock or on the total business irrespective of whether a profit may or may not be made.

Respectfully,

SMITH, KLINE & FRENCH CO.,  
HARRY B. FRENCH, *President.*

[Euston Process Co., corrodors and makers of guaranteed strictly pure white lead, Scranton, Pa.]

JUNE 13, 1918.

MR. P. LITTLEFIELD,  
Secretary Pennsylvania State Chamber of Commerce,  
101 Telegraph Building, Harrisburg, Pa.

DEAR SIR: Our preference would be to have a bill drawn requiring a corporation tax of about 10 per cent of the net earnings of the corporation and a graded tax on all corporation profits above an exemption of 10 per cent on a fair valuation of the capital and surplus employed, the tax rising even to 80 per cent of all profits beyond 50 per cent return on capitalization and surplus employed.

Our reason for considering that the graded tax should be used is that in our case we have been called on to make considerable investments in machinery this year, partly to overcome labor shortage and partly to meet special Government requirements for shrapnel balls, and if excessive taxation were to begin on all profits beyond an ordinary return, we should be in the position of having reduced our quick assets as the result of the business of the year.

Another point of very great importance in such cases as those in which the manufacturer is actually endeavoring to help the Government by putting in machinery of special and temporary value for Government work is the matter of allowing full amortization during the same period as that in which the taxes are figured. If the Treasury Department follows the method which it did in our case last year of allowing amortization at a rate of 33½ per cent per annum, and if we should face heavy taxes during the current year, we might be placed in the unfortunate position of paying this year such an amount in taxes as would ultimately mean an actual loss to us when amortization is completed. Most positively the amortization and taxation should run simultaneously. We consider that this question of amortization is as important as the percentage of taxation that may be adopted. We believe that the rules to govern amortization should be stated in the law and not left to the Treasury Department to decide later.

Very truly, yours,

EUSTON PROCESS Co.,  
By EDWIN EUSTON, *President*.

[The Parkesburg Iron Co., makers of genuine charcoal iron boiler tubes, Parkesburg, Chester County, Pa.]

JUNE 13, 1918.

Mr. PAUL LITTLEFIELD,  
*General Secretary Pennsylvania State Chamber of Commerce,*  
*101 Telegraph Building, Harrisburg, Pa.*

DEAR SIR: We are in receipt of your letter of the 10th instant, in reference to the new war revenue bill about to be drawn by the Ways and Means Committee of the House of Representatives, Washington, D. C., and while we realize that all essential industries are and should be operating exclusively for the benefit of our Government, we feel that those industries can not preserve their efficiency unless they are allowed to spend out of the current earnings amounts necessary for improvements to their real estate, buildings, and machinery, before excess profits taxes apply.

After the expenditure of the above-mentioned necessary annual sums, we think there should be an exemption of not less than 10 per cent of the invested capital of the plant as of the beginning of the fiscal year, and that after this deduction has been made the excess profits should be taxed at such a percentage as the Ways and Means Committee may decide upon.

Yours, very truly,

THE PARKESBURG IRON CO.  
By GEORGE THOMAS, 3d, *Treasurer*

[Law offices of Breitinger & Breitinger, 714-717 Franklin Building, 133 South Twelfth Street, Philadelphia.]

JUNE 13, 1918.

PENNSYLVANIA STATE CHAMBER OF COMMERCE,  
*101 Telegraph Building, Harrisburg, Pa.*

GENTLEMEN: I am in receipt of your favor of the 10th instant relative to the new war revenue bill.

I offer two suggestions. First, that the phraseology of the act be so worded as not to admit of several interpretations.

Second, that the inequality and injustice of imposing the burden of the excess-profit tax on business, professions, and labor, and exempting income from investments be corrected.

Yours, very truly,

F. L. BREITINGER.

## REVENUE BILL.

---

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Tuesday, June 25, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present, Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, Fordney, Moore, Green, Sloan, Longworth, Fairchild, Sterling, Martin, Hawley, and Treadway.

The CHAIRMAN. I understand Representative Slempp, of Virginia, wishes to make a statement.

### STATEMENT OF HON. C. B. SLEMP, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF VIRGINIA.

Mr. SLEMP. Mr. Chairman and gentlemen. In a manufacturing establishment a certain amount of capital is required for the establishment of a factory or plant and the necessary machinery and equipment. Provision is made for sufficient equipment and space to produce a certain definite output. That output can usually then be continued without further capital expenditures. A proper charge for renewals, repairs, and obsolescence will provide for new equipment as the old wears out or improved machines are developed. It would only be through increasing labor or material costs that new capital should be necessary.

With the coal mines such is not the case. To maintain a coal mine at a steady rate of output requires considerable capital expenditures from time to time. Take, as an example, an operation which it has been determined would pass from its development to its operation stage on reaching a daily average output of a thousand tons. This could presumably be reached in a drift mine without any of the working places being over 2,000 feet from the tippie. As the mine ages and the coal area nearest to the tippie is depleted of its minable coal, it becomes necessary to lay additional amounts of rail and to provide more copper, switches, frogs, timber, and everything that goes toward the providing of a tram system for hauling coal from the working places to the dump.

There also must be an addition to the number of cars and motors. As the mileage of the trips increase, the efficiency of the coal cars decrease. The turnover becomes lower as the distance that it is necessary for the cars to travel becomes greater. It is plain, therefore, that the same number of mine cars and motors will not produce an equal amount of coal from an old mine, where much of the coal has to be moved at least a mile to the tippie, as they will where the

distance from the face of the coal to the tipple is less. For the longer hauls it is necessary, as a practical matter, to keep the track in better shape than with the shorter hauls, for stoppages for any reason on the main haulway will have a greater effect on the output. These statements have been true of coal mines at all times.

Now, there are new factors which all coal operators must face.

Housing: It requires more rooms to-day per unit of coal mined than it did three years ago. Put another way, the workers per house have decreased. This is largely attributable to the fact that the single men who have been boarders with the married men no longer form so large a proportion of the mining force. They have been reduced by the draft and volunteer enlistments and have been more attracted to the cities and other industries than have the married men. Perhaps a less important factor is that the coal miners are now making sufficient money, so that their wives do not take as kindly toward keeping boarders as they did in earlier days when wages were lower.

The cost of houses has advanced in the last three years from two causes. First, the increase in materials and labor. A standard five-room mine house that could have been built in 1914 for approximately \$800 will cost very close to \$1,200 at the present time. With the increases which are to come in railroad freights, this cost will be above \$1,200. Second, the standards of living have advanced, and the miners are not contented with the class of house which they were willing to rent in 1914. The coal-mine laborer of to-day does not want to live in a shack, and an operation that has a large proportion of its houses of this nature is almost certain to be cut in its production far below its normal figure. Competition for mine labor has been so keen in the last two years that the suggestion of increasing rents has been quite out of the question. In the operations with which the writer is familiar, there is to-day no income whatever from houses. Maintenance and improvements and repairs up to existing standards, uses up the income, and house rents can no longer be considered as an income to mining companies. As a very large number of mines are located away from centers of population, and at points where persons could not live were it not for the mines, the housing problem is a serious one, and requires to-day far more expenditure per ton of coal produced than at any other time in the history of the industry. Admittedly, these conditions, as regards housing, are probably no different in the coal industry than in any other industry that provides houses for its employees.

Any operator who writes off for repairs and replacements an amount that was reasonable and liberal in the period prior to 1916, finds that his actual cost of repairs and replacements now are far more than any amount he has previously carried in his books for this purpose. It actually costs more to repair a badly damaged mine car to-day than a new one could be purchased for two years ago.

A standard 3-ton mine car could be purchased in late 1915 for \$96 delivered. To replace that car in late 1917, it took \$240, and to-day the price is even higher. Car repairs through the increase in labor and materials are at least double, and probably triple what they were two and a half years ago.

With electrical equipment the situation is even worse. Any operator purchasing new motors, mining machines, pumps, in fact almost

any form of motor-driven equipment now, will have to depreciate its cost at least 50 per cent before a reduction to normal prices comes, or he will find himself with equipment on hand that has been in use for a considerable period, and yet stands on his books at a higher cost than he will probably be asked to pay for new equipment if prices decline to the 1916 basis. Unless, therefore, operators are allowed to make some such liberal allowance for depreciation, they can not afford to buy the equipment which is necessary, not to enlarge their output, but to keep their output up to its existing standard.

It is also necessary in coal mining to always provide a certain amount of advance work, if the coal mine is to continue a producer at a fixed rate. That is, entries must always be driven well in advance of the room requirements of the immediate operation. This, too, entails a cost which should be considered in figuring an operator's profits. If the operator is not permitted to make some reasonable allowance for such advanced work, the temptation will be great for him to merely mine such coal as is obtainable with existing development and equipment.

The writer has tried to show that the coal operator has the problems of other lines of industry, high cost of materials and labor, and necessity for providing additional houses for his employees. In addition, he is called upon to make expenditures to hold his output to normal, which if he is not permitted to charge into cost of coal, will place him in a position of ultimately having an exhausted mine, and only second-hand or scrap values to represent a part of the capital expenditures which he has been forced to make.

The CHAIRMAN. We will now hear the gentleman whose name appears first on the program for to-day, Mr. Willock.

Mr. HAWLEY. Before Mr. Willock begins, Mr. Chairman, I would like to introduce for the record a letter which I have received from Mr. Charles S. Hall, president of the Coos & Curry Telephone Co., of Marshfield, Oreg., with reference to the income tax so far as it affects public utilities.

The CHAIRMAN. All right; that will be inserted in the record. (The letter referred to is here printed in full, as follows:)

COOS & CURRY TELEPHONE CO.,  
Marshfield, Oreg., June 19, 1918.

Hon. W. C. HAWLEY, M. C.,  
Washington, D. C.

MY DEAR MR. HAWLEY: With respect to the proposed or pending legislation increasing or changing the income tax, wish to call your attention to the situation with public utilities.

We are now operating under the same rates that were in vogue prior to the high prices which now prevail. I know it is not the thought of any public utility man to shirk a duty, but the present trend of operating costs, will result sooner or later in our having to ask the public service commission for authority to increase rates. This will be inevitable, and the last few months would indicate that it will possibly come sooner than we have had reason to anticipate.

It is my desire to simply call this to your attention so that it may be given consideration in the perplexing problem with which you have to deal.

Very sincerely, yours,

CHARLES HALL, *President.*

The CHAIRMAN. Mr. Willock, the committee is ready to hear you now.

**STATEMENT OF H. H. WILLOCK, PITTSBURGH, PA., SECRETARY-TREASURER WAVERLY OIL WORKS CO.**

Mr. WILLOCK. My name is Harry H. Willock. I am secretary and treasurer of the Waverly Oil Works Co., of Pittsburgh; and I am now giving my time to the Pennsylvania Food Administration, at Philadelphia, for the period of the war.

I appreciate very much, Mr. Chairman, this opportunity to come before you to say a few words on what I consider, probably, the great question of the war period. And I come before you in a rather unique manner. As I sat here the other day, and listened to the testimony that you were getting that day—and I presume it was only an instance of what you get every day—of why the country should have a billion dollars of taxation this year, and yet why each individual, business, or class of persons, should not pay any of it.

I am here wanting you, pleading with you, to raise the income taxes, to raise the excess-profits tax, and to put another tax on another form of privilege which has not yet been taxed by the taxing power—and that is land.

The CHAIRMAN. Mr. Willock, what is your business, do you say?

Mr. WILLOCK. I am secretary-treasurer of the Waverly Oil Works Co., of Pittsburgh.

The CHAIRMAN. I did not understand you a moment ago when you mentioned it.

Mr. WILLOCK. Each tax that I shall argue for, that I am interested in having proposed or advanced over present rates, will advance my own taxes very materially. But this is a period when no man's personal interest should affect in any way whatever his duty to the Nation.

Taxes in general should be laid so that the values which are created by the immediate contingencies, or values which are created by the community as a whole, should all be absorbed before any levy whatever is made which will have a tendency to restrain or restrict production or to increase cost of commodities to the people.

Some one has said that the art of taxation consists in getting the most feathers with the least squawking. But that is only a joke.

And seriously, no tax should be imposed, unless in case of extreme necessity, that is easily evaded, that is unduly costly in collection; that places a burden on production, or advances the prices of commodities.

All taxes will be more or less evaded, if humanly possible; and men are prone to deceive the tax collector and to perjure themselves to this end.

Production at this time is now carrying a maximum of burden of various kinds, imposed by the unavoidable war conditions.

Commodities were never so high in price, practically speaking, as they are at this time, and millions of our people have had very little advance in wage. We hear of the high wage paid to munition workers, and to many workers in favored fields.

But there are millions of our people who have had practically no advance in wage. An instance of that is found in the report recently made to Mr. McAdoo regarding the wages of the railroad employees, and also a report made within the last six months by the Russell

Sage Foundation, that of the 6,000,000 residents of New York City 2,000,000 of them had a per capita family income of not over \$3 per week above the rent. If that statement had been made by any organization other than the Russell Sage Foundation, I could not have credited it; but, having been made by such an organization, it must be accepted.

The expense of collection of taxes means an avoidable and useless waste of man power at this time, when the productive labor of every man is most needed.

The operation of the draft act will give us a little idea of how we can equitably assess a tax on incomes.

The dollar should only have the consideration that is given to man. They are taking from the men only the strongest and only those whose taking will least affect those who remain, and the same principle should apply to the income dollars of the Nation.

With the tremendous cost of living at present, I do not think any income under \$3,000 or \$4,000 a year is a subject for taxation. In the first place, the taxes on the lesser incomes are exceedingly expensive to collect, the ratio of expense being tremendously greater than the expense in collecting the taxes on the larger incomes.

And then I suggest that the tax on these incomes would be very rapidly accelerated as the income increases. I would like to see an income tax something like this: Three or 4 per cent on \$3,000 incomes.

Mr. SLOAN. \$3,000, or above \$3,000?

Mr. WILLOCK. A normal tax of 3 or 4 per cent on \$3,000 incomes, and above that a surtax.

Mr. SLOAN. Do you mean to tax the whole of the \$3,000 income?

Mr. WILLOCK. Yes.

Mr. SLOAN. Without exemption?

Mr. WILLOCK. Except \$500 or \$1,000 for a wife, and \$500 for each child. \$200 for a child, as in the last income tax law, is certainly not putting a premium on children.

Mr. FORDNEY. You would not get much out of my family on that proposition; there are nine in my family.

Mr. WILLOCK. Well, sir, you are patriotic without paying any taxes. Then that surtax should advance rapidly, at the rate of a least 1 per cent for every \$2,000 increased income, up to approximately \$50,000 income, and then advance 1 per cent for every \$1,000 increased income until a total of 97 per cent is taken.

Mr. FORDNEY. Will you permit me to interrupt you there?

Mr. WILLOCK. Certainly.

Mr. FORDNEY. How much money would that yield, as compared with the existing law?

Mr. WILLOCK. I have not gone into the question under your existing law, as to how much it would yield in toto, because I am not familiar—

Mr. FORDNEY (interposing). Then, so far as the new tax is concerned, you are guessing as to how much it would yield?

Mr. WILLOCK. I am not speaking of the total yield. If the total yield is not sufficient, it can be very readily cured, by a blanket surtax of 3 per cent, 5 per cent, or 10 per cent on all incomes over \$3,000.

But what I am wanting to drive at is that we must take a great bulk of the tremendous incomes of this country to carry us over this

period of stress. We have thought nothing of taking the man, the strong man; without the dependents—

Mr. FORDNEY (interposing). What percentage of the cost of this war would you raise by taxation?

Mr. WILLOCK. By taxation? I think this country could raise—

Mr. FORDNEY (interposing). It is not how much we could raise, but how much do you think we ought to raise.

Mr. WILLOCK. I would raise over 50 per cent.

Mr. FORDNEY. Why would you do that?

Mr. WILLOCK. Because now we are creating the values.

Mr. FORDNEY. Did any country in the world ever do that?

Mr. WILLOCK. No, sir; not that I know of.

Mr. FORDNEY. Why should we do it, then?

Mr. WILLOCK. America has set a mark in many things, and I believe it can set a mark in taxation. If democracy in America—

Mr. FORDNEY (interposing). Just for the purpose of setting a mark?

Mr. WILLOCK. No, sir; for the purpose of equity to our people.

Mr. FORDNEY. Why is it equity to our people to raise it all by taxes at this time, when it is for future generations that this war is being fought?

Mr. WILLOCK. We are taking the men; we have to take the men at the present time.

Mr. FORDNEY. Yes.

Mr. WILLOCK. We take the young man from his period of opportunity and we put him in the trenches.

Mr. FORDNEY. Yes.

Mr. WILLOCK. And how can we, by any logic, equity, or humanity treat the dollars more carefully than we will treat the men?

Mr. FORDNEY. Then you would make him fight and pay now, both?

Mr. WILLOCK. No.

Mr. FORDNEY. Not fight now and pay afterwards, but fight and pay now—that is your principle, is it not?

Mr. WILLOCK. The men who have the tremendously large incomes—

Mr. FORDNEY (interposing). No; we are talking about the boys in the trenches.

Mr. WILLOCK (continuing). Are to a very small extent in the trenches.

Mr. FORDNEY. Oh, no; many of them pay taxes that are in the trenches. Pardon me, will you?

Mr. WILLOCK. Yes, sir.

Mr. FORDNEY. Suppose a man of moderate means has a son or two or three or four sons in the trenches, are you going to make that man furnish those two or three or four sons, or as many as he has, and also pay for the war as it goes along?

Mr. WILLOCK. No; the man of moderate means is the man I am trying to exempt from taxation as far as possible.

Mr. FORDNEY. Your opinion and mine as to what is a man of moderate means differ very much. But perhaps that is not a proper expression for it; let us say the average taxpayer.

Mr. WILLOCK. Yes, sir; the average taxpayer has an income, according to the census of 1910 and applying the ratio of increase since—but in 1910, according to the United States census report, 60 per cent of

the workers of the United States earned less than \$625 a year and 90 per cent of the workers of the United States earned less than \$1,000 a year.

Mr. FORDNEY. Well, the income tax reports for the years since that time give a better idea of the incomes of the country than does the census of 1910.

Mr. WILLOCK. Yes; but in 1917, I believe I am within reason in stating that 40 per cent of our people earned less than \$800 a year; 40 per cent of our workers.

Mr. FORDNEY. Where do you get those statistics?

Mr. WILLOCK. That was given to me a week or two ago by a man who had prepared a statement on the subject; and he had secured it here in Washington; from what source he had secured it I do not know.

Mr. FORDNEY. You do not know whether that is theoretical or whether it is taken from actual statistics?

Mr. WILLOCK. No; but here I am referring to the report of the Russell Sage Foundation made within the last six months, that 2,000,000 people in the city of New York had a per capita family income of not over \$3 a week above rent.

Mr. FORDNEY. You do not know whether they were all workers or whether many of them were of the idler class, do you?

Mr. WILLOCK. No, sir; they were of all classes.

Mr. FORDNEY. No; but you do not know whether they were working people or idlers?

Mr. WILLOCK. No, sir.

Mr. FORDNEY. Well, those statistics are not very reliable, unless information is given as to how many of those people are employed and how many are unemployed.

Mr. WILLOCK. Well, let me say—

Mr. FORDNEY (interposing). Pardon me, will you, but I am employing labor right now. I can not get a man anywhere for less than \$3, \$4, or \$5 a day; and I can not get very many at that. Every industry in the country is short of help.

Mr. WILLOCK. I am an employer of labor, also.

Mr. FORDNEY. Well, do you get men for any such wages as that?

Mr. WILLOCK. We are paying from 37½ cents to 40 cents an hour to our labor.

Mr. FORDNEY. Can you get labor at any such prices as those statistics you have referred to show?

Mr. WILLOCK. No; there are a tremendous lot of men who do not work.

Mr. FORDNEY. And they will not work unless you make them.

Mr. WILLOCK. No; I do not find very many that are that way.

Mr. FORDNEY. Yes; the so-called "slackers"; and we are passing laws to compel them to work.

Mr. WILLOCK. Certainly, and they are very good laws.

Mr. FORDNEY. Those men should not be classed in those statistics, because if they do so class them their statistics are misleading.

Mr. WILLOCK. But still all the people in the country must live.

Mr. FORDNEY. Well, they ought to work.

Mr. WILLOCK. And we know that in our best times in America, times like these, there about 10 per cent of our people unemployed. Largely that is on account of the difficulty we have had heretofore

of getting the man and the job together. That is going to be changed, I believe, somewhat by the National Employment Bureau.

Mr. FORDNEY. It is very hard for you to get the man and the job together, unless the man is seeking the job and wants the job. Is that not true?

Mr. WILLOCK. Certainly.

Mr. FORDNEY. Well, there is where the difficulty is.

Mr. WILLOCK. But I would not charge the American Nation with being a nation of idlers.

Mr. FORDNEY. Neither am I. I am just questioning the correctness of those statistics.

Mr. WILLOCK. There is always that percentage of idlers and slackers.

Mr. FORDNEY. I am questioning the statistics; that is all; I am not reflecting on the American people. But there are men who do not want to work, and will not work if they can eke out an existence by imposing on somebody else.

Mr. WILLOCK. There is no question about that, and I have no more sympathy with those men than you have.

Mr. FORDNEY. Pardon me for interrupting you.

Mr. GARNER. May I interrupt you with a question? You say you would collect at least 50 per cent of the expenditures for this war by taxation?

Mr. WILLOCK. Yes, sir.

Mr. GARNER. Now, I agree with you on that. I would like to collect all that we can possibly collect from taxes if it will not decrease the tax-producing power next year.

Mr. WILLOCK. Yes, sir.

Mr. GARNER. But I submit to you that you can not collect 50 per cent of \$24,000,000,000 this year by taxation, without destroying, in a very great degree, the tax-producing power of the Nation for the next year.

Now, if you were convinced of that, being of the opinion that you are now, after a thorough investigation, would you insist then on levying a tax that would decrease the tax-producing power of the Nation next year, in order to carry out your theory?

Mr. WILLOCK. No. But I would have to be convinced of that. I can hardly conceive that.

Mr. GARNER (interposing). Well, if you are a fair man, and I take it that you are, when you made that investigation you would come to the same conclusion that I have come to, that you can not collect 50 per cent of the expenditures for this war by taxation, without destroying the opportunity of getting the 50 per cent for the next fiscal year.

We started out on a 50 per cent basis, to try to make it 50-50, when we first took up these questions; and I advocated that theory and the House adopted it; but as the expenses went up by leaps and bounds, we found it absolutely impossible; and I believe that if we get 33½ per cent of the expenses of this war, that is to say \$8,000,000,000 out of \$24,000,000,000, next year we are going to be very fortunate in getting that, and at the same time being able to collect an equal amount the next fiscal year.

Mr. WILLOCK. Well, my idea on incomes is, that I believe taxes can be immensely increased on incomes, and it is not going to seriously interfere with the taxing power next year. I believe that practically

all excess war profits tax can be taken, and it can not interfere very seriously with the tax returns next year, and I believe that a tremendous revenue can be secured from a land tax, that will have a tendency to increase the taxing power next year.

Mr. GARNER. Well, you have gone off into a field with your land taxes that I do not know anything about, and I would have to be educated on that subject before I could make any estimate about the revenue it would produce.

But with regard to the excess profits and income taxes, where we are bound to get the bulk of our revenue, my understanding of the figures—and they will be sent here from the Treasury Department in due time—is that it will be impossible to get the 50 per cent you speak of and still have the tax producing power for next year.

Mr. WILLOCK. It may be that that is true, but add the other tax, add the land tax, and I think you will get your 50 per cent very readily.

Mr. STERLING. Why would you tax land? Why do you pick out that form of property and tax it, and not suggest the taxation of any other property?

Mr. WILLOCK. I would tax that for several reasons. In the first place, land has absolutely no value except the value the community gives it, and therefore none of the equities are being violated by taking a part of that value for the public need.

Mr. STERLING. Well, is there a particle of difference in that regard between land and any other form of capital? Has money invested in stocks or bonds of a corporation any value except that the community gives it?

Mr. WILLOCK. Oh, yes; money invested in corporations, in stocks or bonds, must require the human intelligence, the human direction, the human management to make it at all productive.

Mr. STERLING. Well, let me say as to that—

Mr. WILLOCK (interposing). Will you let me finish and carry that a bit further?

Mr. STERLING. All right, go ahead.

Mr. WILLOCK. We all know that there is no line of business where every individual activity in it succeeds; some fail and some win, and the great majority of them fail.

Now, on land a man might be an imbecile, confined in an asylum, having title to land—and this actually happened in Seattle, Wash., where a man became a multimillionaire from the city growing up around his land, the owner all the while being confined in an asylum as an insane man.

Mr. HAWLEY. How many instances do you think would occur like that?

Mr. WILLOCK. I do not understand.

Mr. HAWLEY. What proportion of the value would arise out of instances like that?

Mr. WILLOCK. No man can do anything to improve the value of the land he owns, except in the proportion as he bears to the whole community—as one member of the whole community.

Mr. HAWLEY. Well, take this case, for example: Here is a man who buys a farm and clears it up; some of the land is swamp land; and he drains it; some of it is sour, and he limes it; and he does a lot of things to it.

Mr. WILLOCK. Yes.

Mr. HAWLEY. Now, he has done something to that land that has made the land that was worth \$3 or \$4 an acre worth from \$50 to \$60 an acre.

Mr. WILLOCK. Yes; but you misunderstand me, Mr. Hawley. All the things that he did to that land are improvements on the land, and I do not care to take them. It is not right that they should be taken.

Mr. FORDNEY. He has put his land into a high state of cultivation by the sweat of his brow.

Mr. WILLOCK. Those are improvements—they are not land.

Mr. FORDNEY. Those improvements you do not want to tax, then? You do not want to tax any improvements at all?

Mr. WILLOCK. No.

Mr. FORDNEY. You want to tax improved land the same as wild land, between here and Baltimore, for example?

Mr. WILLOCK. Yes, sir; absolutely, according to its location. Location is all that gives land its value.

Mr. FORDNEY. Does not personal property get its value in the same way that you say land gets its value?

Mr. WILLOCK. No. Let me illustrate—

Mr. STERLING (interposing). Did you ever know of an industry that grew rich and prosperous by reason of a town growing up around it and giving it a market?

Mr. WILLOCK. What was that?

Mr. STERLING. Did you ever know of an industry of any kind—a manufacturing industry, or a railroad property, or any property in which money is invested—did you ever know of an instance where it grew rich and prosperous by reason of the community growing up around it and giving it a market?

Mr. WILLOCK. The railroad, you know, is what gives the land value; the improved macadam road gives land its value.

Mr. FORDNEY. What gave the property of your corporation value?

Mr. WILLOCK. Work; human work.

Mr. FORDNEY. Not the railroads, then, and the roads that you are talking about as to other cases?

Mr. WILLOCK. Not at all; they did not add any value.

Mr. STERLING. The man who owns the land pays for the railroads, does he not?

Mr. WILLOCK. The man that owns the land?

Mr. STERLING. Yes; he helped pay for the railroad, did he not?

Mr. WILLOCK. No; he did not help pay for the railroad.

Mr. STERLING. Well, where was the wealth produced that built the railroad and the highways, if it was not from the farm?

Mr. WILLOCK. It was produced from the land, unquestionably.

Mr. STERLING. Yes. Now, another thing: You know that land returns a less profit on the investment than any other form of property as a class. Do you know that?

Mr. WILLOCK. No; I do not know that.

Mr. STERLING. You take the farms of the country and they will not pay over 3 per cent; they will not pay over 2½ per cent on the investment. Now, you would consider that a pretty small profit on money invested in stocks and bonds, would you not?

Mr. WILLOCK. Farm lands, of course, do not produce very much value; they have not got very much value. Farm land, under a land tax, would pay very little, because they have very little community value. The land value of New York City is greater than all the land value in the States that went into rebellion from 1861 to 1865. The farmer, under a land tax, would pay a very infinitesimal amount of that tax, because his community value is not great.

Mr. STERLING. Well, they pay just as much in proportion to the value of land, in proportion to their wealth, as a man who owns property on Broadway, do they not?

Mr. WILLOCK. No; you see the great proportion of value in the farmer's land is not land value; it is improved value; it is the clearing value; it is the fencing value; it is the bringing to a high state of cultivation value. Let me illustrate that—

Mr. FORDNEY (interposing). Let me ask you, first, this question: A few minutes ago you said you would not tax the improvements.

Mr. WILLOCK. No.

Mr. FORDNEY. Now, you say land has practically no value without improvement. Where in the world, then, are you going to get your value?

Mr. WILLOCK. No; the land has no value outside of what the community gives it.

Mr. FORDNEY. Well, what is the value of 160 acres of land, taken up as wild land, by a homesteader—what is the community value of that property when the man has cleared that up by the sweat of his brow and made it susceptible to cultivation, removing the stumps, putting up fences, and buildings, and so on? It had a very small original value.

Mr. WILLOCK. And the value has not—

Mr. FORDNEY (interposing). Wait a minute. The Government gave the land away years ago.

Mr. WILLOCK. Yes.

Mr. FORDNEY. Now, the man has gone on and, by his labor, improved that land. What is the community value of it? Give that in concrete figures, please.

Mr. WILLOCK. The community value has not grown in any way by that man adding the improvements to it, unless—

Mr. FORDNEY (interposing). The building up of the community and settling it up has nothing to do with the increased value there?

Mr. WILLOCK. If I could just continue and finish what I wanted to say, I could make it intelligible.

Mr. FORDNEY. Well, I will let you finish, but so far as I can see you are getting into deep water all the time.

Mr. WILLOCK. The actual value of that land has not increased any by the man clearing it up, fencing it, etc. The only increase that will come to that land in actual value is as the community grows up around that farm. If that one man clears up a farm in the midst of the wilderness, it remains a wilderness value until his neighbors begin to come in and do likewise; then there will grow up a community value. A community value comes from people, not from improvements on the land.

Mr. FORDNEY. What is that community value now, as compared with the cost of clearing the land and building roads and opening up railroads, and all of those things?

Mr. WILLOCK. That all depends on where this farm is located, and how it grows; it changes every year.

Mr. FORDNEY. Well, will you give some concrete case anywhere on earth; pick out your own place.

Mr. WILLOCK. I can illustrate that, in my own affairs. I bought a farm in southern Alabama about 10 years ago, on Pedigo Bay in Baldwin County. I bought 100 acres of land fronting on the bay. I cleared that land, fenced it, and put it under a state of cultivation. During all of those 10 years there has not been one change made within some miles of that farm of mine. Outside of my fence is still the second growth of pine wood.

Now, what is the result? That second-growth pine woods is still assessed at \$4.50 per acre, as second-growth land. My little farm there, because I cleared it, fenced it, put it under a state of cultivation, put a little shack or so up on it—my checks were the only cash current in the community down there for all those 10 years—is assessed on the basis of about \$80 an acre.

Mr. FORDNEY. That is land value now, is it?

Mr. WILLOCK. No; that is all improvement value. I am illustrating the difference between community value and land value. You understand that there is no community value there at all.

Mr. FORDNEY. Wait a minute. If you were asking this committee now to put a community value on property, how would you ask us to fix the value of your property and other like property? What tax would the Government get on the community value tax?

Mr. WILLOCK. That land would be \$3.50 land unquestionably, the same as that land on the outside is assessed, the unimproved land.

Take another instance, the Park Building in Pittsburgh, situated at the corner of Smithfield Street and Fifth Avenue. In conversation with the superintendent of that building I asked how they arrived at the rental values, and he said they put a man on the corner; they count the people that pass on both streets; they count the vehicles that pass; they get data from the railway company regarding the street cars that pass on both streets, and from that they figure the rental value.

And I made the statement that land has no value outside of what the community gives it, and he disputed it; and I said, "Now, taking that data, and knowing how you rented that corner to the Riker-Hegeman Drug Co., and suppose you would pick that whole business up and set it down in the middle of the Desert of Sahara, would the Riker-Hegeman Drug Co. pay you 5 cents a century for it? No; the only value that that property has is those people going around that corner; in other words, the community value."

Mr. FORDNEY. Will you tell this committee how to assess community value on property in the city of Pittsburgh?

Mr. WILLOCK. Community value?

Mr. FORDNEY. Yes; that is what you are talking about, is it not?

Mr. WILLOCK. Yes.

Mr. FORDNEY. Tell us now—give us some figures to show how you would impose that tax on property in the city of Pittsburgh.

Mr. WILLOCK. I would take the land value assessments of the city of Pittsburgh.

Mr. FORDNEY. You would do what?

Mr. WILLOCK. I would take the land value assessments of the city of Pittsburgh.

Mr. FORDNEY. You do not compare that with your farm down in Alabama?

Mr. WILLOCK. No; but I would take the land value assessments of the city of Pittsburgh. I am speaking very seriously. That is the community value.

Mr. FORDNEY. All the value of the property in the city of Pittsburgh is the community value, is it?

Mr. WILLOCK. Absolutely; the people of Pittsburgh; it is the city that gives it its value; nothing else; you can not give land any value without people.

Mr. MOORE. Suppose you transfer some of your Pittsburgh land over to the Desert of Sahara and use that again as an illustration.

Mr. WILLOCK. It would have no value; there is no community; that is the whole idea.

Mr. FORDNEY. Just outside of Pittsburgh, how much would the community value be on a farm that would sell at \$100 an acre? How would you figure the community value there?

Mr. WILLOCK. At \$100 an acre?

Mr. FORDNEY. Yes.

Mr. WILLOCK. There is one illustration.

Mr. FORDNEY. Notwithstanding the fact that wild land might sell for \$4 to \$5 there, but well improved land might sell at \$100 an acre, it is all community value, as long as it is outside of the city of Pittsburgh? Is that your idea?

Mr. WILLOCK. Why, you take wild land, and the wild land would not be worth \$4 an acre, unless it was situated in the United States of America.

Mr. FORDNEY. Why?

Mr. WILLOCK. Because there is wild land, untold millions of acres of it, on the desert of Sahara, that you could not sell for one one-hundredth of a mill a square mile.

Mr. FORDNEY. That land in the desert of Sahara would not be worth anything after you got it into America; after you got it here you could not raise anything on that desert land.

Mr. WILLOCK. We have had some deserts in the United States, where the land has been made valuable by irrigation.

Mr. FORDNEY. Do you compare the land in the United States with the land in the desert of Sahara?

Mr. WILLOCK. Well, take some of the good farms in Africa, that are not cleared or accessible, and compare it to those in the United States.

Mr. FORDNEY. How much tax would you put on a corporation? You are an officer of a corporation; how much tax would you put on a corporation?

Mr. WILLOCK. On excess war profits?

Mr. FORDNEY. On any kind of profits.

Mr. WILLOCK. I would not tax corporations one penny until I took as much of their excess war profits as it is possible to take.

Mr. FORDNEY. What is an excess war profit? How are you going to tell this committee to get at an excess war profit?

Mr. WILLOCK. I think the only way this committee could get at an excess war profit would be to take the average of the years 1911, 1912, and 1913.

Mr. FORDNEY. Then the existing law in that respect you think is all right?

Mr. WILLOCK. Except in one instance.

Mr. FORDNEY. Oh, except in one instance?

Mr. WILLOCK. And that is where it says it makes a minimum profit of 7 per cent for those years and a maximum of 9 per cent. That makes it very unfair. No matter what a man could earn during the prewar period, without any special privilege and honestly, that should not be taxed as a war profits tax; and that 9 per cent limitation there was unfair, because it has worked a tremendous hardship on a lot of the small firms that have not capitalized their firms in order to sell stocks to the public, but have capitalized them honestly.

Mr. FORDNEY. Let me ask you, then, would you place a heavy tax on the profits of corporations above the normal profits made during the prewar years?

Mr. WILLOCK. I would tax it just so heavily that I could get every cent of it, except to leave enough to keep the cupidity of man working. Now, that is all. Whether that would be 80 per cent or 90 per cent of the excess war profits I do not know.

Mr. FORDNEY. Let me interrupt you with a question: The farmer's wheat was selling for 80 cents a bushel before the war; now it is selling for \$2.20 a bushel. That is war profits, in your opinion, is it?

Mr. WILLOCK. No, sir.

Mr. FORDNEY. Why not?

Mr. WILLOCK. The farmer has had a hard row to hoe, and he has a hard row to hoe now.

Mr. FORDNEY. He has? Then the difference between 80 cents a bushel then and \$2.20 a bushel now is a hard-row proposition for a farmer, but not so with a corporation?

Mr. WILLOCK. I am not a farmer raising wheat.

Mr. FORDNEY. I know; but I am.

Mr. WILLOCK. I do not believe he should be taxed on that as war profit.

Mr. FORDNEY. Why should I not be taxed for my war profits on my farm, the same as I would be on stock that I hold in a corporation?

Mr. WILLOCK. Here is the way I would get it from you: I would take it from you—

Mr. FORDNEY (interposing). But I am talking about the taxes; how would you get the taxes?

Mr. WILLOCK. That is what I am telling you. I would take it from you in your income tax. If that produced for you a large income over the years I have mentioned, I would take it from you very heavily.

Mr. FORDNEY. Then you tax the farmer for his profit on that?

Mr. WILLOCK. In that way, just on the income.

Mr. FORDNEY. No; you would tax him just the same as you would in any other business.

Mr. WILLOCK. Not on the excess profits.

Mr. FORDNEY. How are you going to get the money from him then on the farm, when he makes money on the farm, or on the corporation when he makes money in the corporation?

Mr. WILLOCK. The corporation would pay its excess-profits tax before any dividends was declared to the farmer stockholder. But the farmer is an individual.

Mr. FORDNEY. Yes.

Mr. WILLOCK. The corporations that do farming are so few that we do not need to consider them, and you would take the individual income tax.

Now, you had a question here before you the other day, regarding the taxation of oil lands, under the excess-profits tax. In most cases of those corporations the honest ones, at least, the stock is very closely held. And that is where a real income tax would come in and catch those big earnings from wildcatting, etc., and still not discourage them by this war-profits tax. There is a very great difference there.

Mr. FORDNEY. You say that you would tax incomes of corporations when they get above a certain amount 97 per cent?

Mr. WILLOCK. No; incomes of individuals. I am speaking of an individual income tax.

Mr. FORDNEY. Why do you fix 97 per cent? Why not make it 98 or 96 per cent?

Mr. WILLOCK. Well, if the individual would still keep working, I would just as soon make it 98 per cent or 99 per cent.

Mr. FORDNEY. Well, do you think that if you taxed him 98 per cent he would stop working, but he would work if he was taxed at 97 per cent?

Mr. WILLOCK. Well, he might work more at one than he would at the other. These large incomes of \$1,000,000 a year and upward, taxed as they are now, it is indefensible, in view of the sacrifices the people of this nation are making.

Mr. FORDNEY. What are the taxes now?

Mr. WILLOCK. As I have the figures here, an income of \$1,000,000 now pays about \$475,000; an income of half a million dollars pays about \$192,000; and an income of \$100,000 pays about \$16,000. Now, my idea would be to tax that \$100,000 man \$33,000.

Mr. FORDNEY. Are you speaking of individuals now?

Mr. WILLOCK. The individual—not the war profits tax; the individual. That \$100,000 man ought to pay \$33,000; the \$500,000 man ought to pay \$400,000; and the \$1,000,000 man ought to pay \$850,000.

Mr. LONGWORTH. How much money would that raise?

Mr. WILLOCK. I have not the figures in my mind.

Mr. FORDNEY. If it would raise more than 50 per cent of the expenses of carrying on this war, would you still tax it in that way; in fact, would you tax it in that way, no matter what it raised?

Mr. WILLOCK. Certainly. Every dollar that can be raised by taxation without putting a burden on production—without advancing the cost of commodities to our people, and when it largely consists of community values, or war profit values, as it does in the war profits tax and in the land tax, should be taken.

Mr. FORDNEY. Well, without knowing whether it would raise a sufficient amount of money to meet the needs of the Government or not, you fix that amount, and you say that ought to be fixed; you do not know how much it would raise, whether it would be a great or a small amount; but you say we ought to fix that amount of tax, and you have not figured it out and do not know how much it would raise. Now, what have you to say about that?

Mr. WILLOCK. I have not come here prepared to suggest to you gentlemen an entire revenue bill.

Mr. FORDNEY. You came here prepared to enlighten this committee, did you not?

Mr. WILLOCK. I came here to give you—yes, sir—my ideas of what an equitable tax and a remunerative tax would be. I have suggested a very great advance on income taxes under the last bill.

Mr. RAINEY. Would you tax a man with a family on an income of \$1,000 as much as they tax him in England?

Mr. WILLOCK. I do not know what they tax him in England. What do they tax him in England?

Mr. RAINEY. We tax him more here than they do in England.

Mr. WILLOCK. Then, I would tax him more than they do in England and more than they do here.

Mr. RAINEY. The total English tax on an income of from \$500,000 to \$600,000 is 52.5 per cent; in the United States it is 54 per cent. On an income of \$1,000,000 it is 52.5 per cent in Great Britain and 65 per cent in the United States. We have gone higher than England in the tax on large incomes.

Mr. WILLOCK. I am very glad to know that; but there is no reason why we should weary in well-doing.

Mr. FORDNEY. Why are you glad to know that?

Mr. WILLOCK. Because the strong man must bear the burden of fighting in the trenches; and the strong dollar should bear the burden of paying the bills.

Mr. FORDNEY. Are you taxing the strong man by doing that?

Mr. WILLOCK. Yes.

Mr. FORDNEY. Where does he get his money—the strong man that you are talking about?

Mr. WILLOCK. Where does he get it from?

Mr. FORDNEY. Yes.

Mr. WILLOCK. From returns on his investments.

Mr. FORDNEY. Well, who pays him the returns on his investments? Who pays him his profits?

Mr. WILLOCK. The people that he does business with.

Mr. FORDNEY. Well, do they not pay it over to him when he pays it to the Government as a tax?

Mr. WILLOCK. Yes; but this income tax can not be passed to the consumer.

Mr. FORDNEY. It can not.

Mr. WILLOCK. No.

Mr. FORDNEY. My friend, can you point out a dollar of income tax that is not passed on to the consumer?

Mr. WILLOCK. That is not passed? Yes; you can not pass one dollar of income tax in an added price to the consumer.

Mr. FORDNEY. My friend, let us work that out right here. Suppose you and I are engaged in an industry producing the same article. You would charge up to your cost of production all of your costs, including your regular taxes, would you not?

Mr. WILLOCK. Yes, sir; but not my income tax.

Mr. FORDNEY. Yes, you would.

Mr. WILLOCK. No, sir.

Mr. FORDNEY. Then you would go broke, if you did not.

Mr. WILLOCK. No, I would not go broke.

Mr. FORDNEY. Then you would not be able to pay any tax next year. My friend, we are in deep water. If you do not charge up all your cost of production, you are going to go broke, are you not?

Mr. WILLOCK. Yes, sir.

Mr. FORDNEY. Then, if you do not charge up your taxes, including your income tax, you are not a good business man, and you will surely go broke.

Mr. WILLOCK. Just let me explain that to you. Suppose I have a business—

Mr. FORDNEY (interposing). Now, how can I pay a large tax, a heavy tax, and not charge it up to my cost of production and make a reasonable profit, and not go broke; please tell me that?

Mr. WILLOCK. You are not differentiating between the effect of different taxes.

Mr. FORDNEY. What?

Mr. WILLOCK. You are not differentiating between the effect of different taxes.

Mr. FORDNEY. Well, there is no way to differentiate between your income tax and any other tax in that way?

Mr. WILLOCK. Oh, yes, there is. Let me explain how to differentiate.

Mr. FORDNEY. Go ahead.

Mr. WILLOCK. If we are manufacturing socks, and there is a tax of 25 cents a pair put on socks, we immediately add the tax to the price, and the consumer pays it.

Mr. FORDNEY. Why, certainly.

Mr. WILLOCK. But if we are manufacturing socks, and there is no tax on socks, but we are each earning \$10,000 a year, and we clear that much money, and we have a 50 per cent income tax imposed on us, we each take after the year is over, the business transacted, the business done, and we take \$5,000 of that \$10,000 profits and pay it as income tax. It can not be added on the socks.

Mr. FORDNEY. My friend, wait a minute. Mr. McAdoo, a very intelligent gentleman, and a good friend of mine, of whom I am very fond, and also the President of the United States, who is supposed to be a very intelligent gentleman, have said to this committee, when we wanted to postpone the framing and passage of this bill until next winter, "It is not practicable, for the reason that we want the people of the country to know how much we are going to tax them, so that they can add it to their costs this year, and be able to pay it."

Now, that is their opinion. What do you say their opinion is worth?

Mr. WILLOCK. I say it is worth a tremendous lot. I have a great admiration and respect for the President and the Secretary of the Treasury.

Mr. FORDNEY. And then you still say that this income tax will not be added to the cost of production?

Mr. WILLOCK. Yes; but let me give you this idea: The President of the United States and the Secretary of the Treasury wanted the people to know, when they paid their income tax, when they were figuring this year on their current expenditures for this year, how to cut their cloth according to what you were going to leave them. If a man earned \$100,000 this year he knew he was earning it from time to time and he lived accordingly, and he had in his mind the income tax of 1917 under which he would pay \$16,000 or \$18,000 and he

had spent all of his income except the \$16,000 or \$18,000, and that next session you come along and put a tax of 50 per cent on \$100,000 incomes, and that would put him in a very serious position because he has spent some of the money he should have saved.

Mr. FORDNEY. You have explained that to my satisfaction but you have not changed my opinion. Suppose you are manufacturing shoes and the price of shoes—I purchased a pair of shoes of a make that I have been accustomed to wearing for several years, because they fit me satisfactorily, and I purchased them for \$4 a few years ago, and now I pay \$7. Who pays the extra cost on that?

Mr. WILLOCK. You pay it.

Mr. FORDNEY. That is just what I am talking about. You say that the manufacturer does not make it over to the consumer.

Mr. WILLOCK. You are confusing income tax and excess profits tax.

Mr. FORDNEY. Oh, no.

Mr. WILLOCK. That man would pay—a certain proportion of the excess war-profits tax would not be passed on to the consumer.

Mr. FORDNEY. Who would pay it?

Mr. WILLOCK. How would you make up your tax returns?

Mr. FORDNEY. I know that in my own case I put in all my costs of production, everything that I paid out, taxes, insurance, depreciation, labor, raw material, and every other charge.

Mr. WILLOCK. Did you put in your excess-profits taxes?

Mr. FORDNEY. Wait a minute now. When I paid my taxes it was the difference between what I sold and what the business cost me. That was my profit, and I paid all my taxes out of that. Didn't you do that?

Mr. WILLOCK. No; because the examiner would come back and bring me a refund. You can not put into a statement as an offset income tax and excess-profits tax. Those are taxes that will not be allowed.

Mr. HULL. This was in the last act, 1917.

Mr. GARNER. I would like to relieve the situation between you and Mr. Fordney, by telling you that you are both wrong. There are certain income taxes that the consumer pays, and certain others which he does not pay.

Mr. WILLOCK. I am speaking of the individual income tax.

Mr. FORDNEY. I am glad to be corrected. My wife often corrects me. But I would like to know where I am wrong, and where you are right.

Mr. WILLOCK. Let us get back to this question of holding the title to land.

Mr. HAWLEY. Before you take that up, I would like to ask you a question. If you take so large a proportion of the income as you propose, what will be left to the individual or corporation for betterments of his business?

Mr. WILLOCK. Betterments should not be made out of income. Betterments should be made out of new capital. That has been a fallacy that betterments should be made from earnings.

Mr. HAWLEY. If everybody pays his surplus income all into the treasury where is this new capital to be obtained.

Mr. WILLOCK. Here is what I meant by my remark. I live in a little community out from Pittsburgh. They spent \$5,000 about 30 years ago in cash to put in the waterworks in that community. The

earnings have been large. They have been paying 6 per cent dividends, and their surplus they have been putting back in to their business right along, been earning 110 and 150 per cent, but have been putting that right back into the business right along until now the question comes up about the rate the company is charging and that company goes before the public service commission and attempts to prove an investment of \$800,000 on the land. There was only \$5,000 put into that land, in cash money. Now they try to collect water rates based on an investment of \$800,000, the investment consisting of very large earnings taken out of the people. Those should have been proper subjects for taxation at a time of this kind.

Mr. HAWLEY. My question was not based on a business that watered its stock as you suggest, but on a legitimate business which must make some betterments in order to care for its growing business and maintain its plant. If you take all they get out of their business in the year, and everybody else what they get out of their business in a year, for taxes, where would you find that money for these betterments.

Mr. WILLOCK. The income tax law allows a proper percentage of profit. They allow them their prewar profits and then they go further than that and say we will allow you up to 7 per cent, if you do not make that much. That is an adequate return on the capital invested, and keeping up the plant is not something that comes out of the profits. It is deducted before the 7 per cent is considered earned. It is already out and into buildings in addition to the plant, and in batterments, in replacing worn out machinery. Any new machinery must be taken out of new capital, out of the savings those people make from that 7 per cent that is allowed them, because all the capital in the world, all we call property in the world is nothing but the accumulated savings from the people.

Mr. FORDNEY. You spoke about taxing corporations. How much normal tax would you put on corporations?

Mr. WILLOCK. Do you mean excess profits—excess war-profits taxes?

Mr. FORDNEY. I am talking about the normal tax. The normal tax is not an excess war-profits tax.

Mr. WILLOCK. I am not speaking of the normal tax on corporations, because I am opposed to normal taxes on corporations. Normal taxes on corporations are the kind that are always added in the profits and paid by the people. They are the taxes that are the most harmful of all taxes.

Mr. FORDNEY. I wanted to know whether or not you would tax a corporation the normal tax.

Mr. WILLOCK. No.

Mr. FORDNEY. What excess-profits tax would you put on them?

Mr. WILLOCK. I would take every dollar of excess profits, of war profits.

Mr. FORDNEY. Don't get in that war profits.

Mr. WILLOCK. That is the only way we can speak of excess profits.

Mr. FORDNEY. You can define between the two.

Mr. WILLOCK. I can define between the two.

Mr. FORDNEY. You have been so clear on the other facts I thought you might be on that. I haven't heard anything very clear from you. What do you call war profits and those excess profits?

Mr. WILLOCK. I call war profits profits earned in the great majority of manufacturing businesses since August, 1912.

Mr. FORDNEY. The great majority. What minority would you exempt?

Mr. WILLOCK. I do not have in mind any. That is the reason I spoke of the great majority.

Mr. FORDNEY. Why don't you say all?

Mr. WILLOCK. I don't want to be too inclusive.

Mr. FORDNEY. Why not?

Mr. WILLOCK. Because I might be unfair. There may be some exceptions.

Mr. FORDNEY. How would you impose that tax on excess profits?

Mr. WILLOCK. What was made over the average of the years 1911, 1912, and 1913.

Mr. FORDNEY. Suppose they didn't make anything?

Mr. WILLOCK. I would allow 6 or 7 per cent profit.

Mr. FORDNEY. You would allow them some profit.

Mr. WILLOCK. Yes. On that basis because there are many firms getting into business. I would not work any hardship on business at all.

Mr. FORDNEY. What does your corporation produce?

Mr. WILLOCK. Petroleum oils.

Mr. GARNER. Let me ask a question. You are contending that you would base the war profits or excess profits, whatever you want to term it—they are all the same?

Mr. WILLOCK. Yes.

Mr. GARNER. On the prewar period, and you would take all in excess of the average that had been made in 1911, 1912, and 1913?

Mr. WILLOCK. Yes, sir.

Mr. GARNER. Now, we will take Mr. Ford, for instance. He made a greater profit in 1911, 1912, and 1913 than he is making now. You would exempt him entirely?

Mr. WILLOCK. From the war profits tax, but you would tax him on this tremendous income tax that I propose.

Mr. GARNER. You would take a few companies that are making tremendous profits, that were making tremendous profits then, and you would exempt them from the entire excess-profits tax?

Mr. WILLOCK. This tax is called an excess war profits tax.

Mr. GARNER. There are two kinds of taxes. You use two terms. There are two well defined ideas in this country, one of them is an excess war profits tax, so called. That is based on the average earnings of corporations or individuals for the prewar period. Then there is another called an excess-profit tax which is based upon the excess of profits above a certain amount. Now, you could have two profit taxes, so-called profit taxes, one war tax, the other excess-profits tax, and apply them so as to catch them either way. It seems to me that when you levy that kind of taxes you are going to complicate the situation and have more criticism that it is so complicated that nobody could make out his returns.

Mr. WILLOCK. Let me illustrate this. Excess profits can only be earned in two ways. They may be earned perfectly honestly, economically speaking, by a man by outstanding sheer ability, like Henry Ford. I do not think the public depreciate earnings like Henry Ford has made under such conditions. We rather admire a

man that can by sheer force of ability pile up such earnings, but, on the other hand, there are some businesses that are earning excess profits by a great privilege that has been given to them. Now, I don't think it fair to put the excess-profits tax on all corporations, thereby fining the man of outstanding ability and industry in order that you may catch the man who has made unholy earnings through privilege that has been extended to him. In other words, remove the privilege and then he will not have those excess-profits taxes from wrong sources.

Mr. GARNER. You want to go before the judicial committee with reference to removing privileges.

Mr. WILLOCK. No; this last tax will do that.

Mr. GARNER. Why in war times should anybody be permitted the right to make a large profit after paying all expenses and interest charges, and have a net profit? How would you get your tax from a corporation which is honestly run?

Mr. WILLOCK. In this way, tax his excess war profits, take all that it is practicable to take, at least 80 per cent, then tax the incomes that I spoke of. All these big earnings that would not be caught as excess war profits would go into incomes and be caught there. If some poor man with an income of \$3,000 were left out, they are so few that you would have to hunt for them with a microscope, that happened to have a share in these corporations that are earning such large profits. You would find that all these big copper companies that are earning such tremendous earnings that their stock is not distributed among the poor people, but it is distributed among men who could well afford to pay it.

Mr. FORDNEY. How about the American Steel Co.?

Mr. WILLOCK. That stock is more widely distributed than any other corporation in the country, and at the same time if any little employee of the steel company has a few shares of stock, and his total income is not more than \$3,000, in times like this let him have it.

Mr. GARNER. In other words you would lose \$33,000,000 income tax paid by the Steel Corporation, because you would not levy any income tax against corporations?

Mr. WILLOCK. I would levy this excess war profits tax.

Mr. GARNER. Excess war profits would not get it out of the steel company.

Mr. WILLOCK. Aren't they earning excess war profits?

Mr. GARNER. Yes; but nothing like \$33,000,000, based on the prewar conditions as you base it.

Mr. WILLOCK. If we take 80 or 90 per cent of the excess profits of the country and the income, that won't leave any man in this Nation over \$100,000 income. We will have a tremendously greater income than we ever had before from these sources.

Mr. FORDNEY. Do you know that that is so?

Mr. WILLOCK. I know as well as I know anything.

Mr. FORDNEY. You haven't figured it out but you know it is so.

Mr. WILLOCK. Yes.

Mr. FORDNEY. You made the statement that makes me feel that I can ask the question that I am going to ask. You say this would increase your taxes. You are engaged in the oil business?

Mr. WILLOCK. Yes, sir.

Mr. FORDNEY. What were your profits before the war, and what are they now?

Mr. WILLOCK. I can give you them exactly, sir, I think.

Mr. FORDNEY. I would not ask you that question if you had not made that statement, because I think it is very personal.

Mr. WILLOCK. I do not hesitate to give you all the information that I have. In 1911 our company paid \$110,000 dividends.

Mr. FORDNEY. On how much capital?

Mr. WILLOCK. \$400,000. In 1912, \$90,000 and in 1913, \$150,000.

Mr. FORDNEY. How much since?

Mr. WILLOCK. 1914, \$90,000; 1915, \$95,000; 1916, \$240,000; 1917, \$290,000.

Mr. FORDNEY. You have made a good fair profit.

Mr. WILLOCK. Sure, and we want to pay it to the Government.

Mr. FORDNEY. Oh, we will take it; don't you worry about that. We will get it.

Mr. WILLOCK. I was very sorry you did not get it last year because you missed a fine juicy melon.

Mr. FORDNEY. You are one of the fellows that love to see the other fellow pay his money. You say that last year you made \$290,000 on \$400,000?

Mr. WILLOCK. That was the dividend. The last year, up to the end of the present fiscal year, it has been \$150,000. We jumped down on excess war profits. You see what it does now.

Mr. FORDNEY. You paid \$290,000 in dividends. How much were the taxes?

Mr. WILLOCK. I do not have those with me, but they were not much.

The CHAIRMAN. How much were the total earnings? You paid \$290,000 dividends.

Mr. WILLOCK. That was the total. But this year the excess war profits tax will cut down our earnings.

The CHAIRMAN. You are not making so much this year exclusive of the war profits?

Mr. WILLOCK. This \$290,000 only got caught to the extent of about \$30,000.

The CHAIRMAN. Before any tax levy, how much were the earnings of the corporation this year as compared with last?

Mr. WILLOCK. About the same, maybe \$300,000, about the same. I don't have it exactly in my mind.

Mr. FORDNEY. Seventy-five per cent of the capital?

Mr. WILLOCK. Yes; but that again was the personal business of my father, established 40 years ago, only incorporated at his death, 10 years ago; when it was incorporated all the stock being held by myself and my brothers and sisters.

Mr. FORDNEY. You are lucky boys.

Mr. WILLOCK. And the business was not earning as much then as it does now.

Mr. FORDNEY. The father did not make as much money as the boys?

Mr. WILLOCK. Not quite as much, but he laid the foundation, but when that business was incorporated we did not incorporate the business to sell stock. We didn't incorporate merely for the sake of incorporation. There were actual physical assets of over \$600,000 in the business.

Mr. FORDNEY. Were the profits put back into the business or was that original capital?

Mr. WILLOCK. This business was all built up out of nothing.

Mr. FORDNEY. A few minutes ago you advocated that original capital be put in.

Mr. WILLOCK. When you are taxing profits you must consider profits as not going back into the business.

Mr. FORDNEY. You would not have other corporations build up that way?

Mr. WILLOCK. Ours should not have been permitted to build up that way.

Mr. FORDNEY. Why did you do it?

Mr. WILLOCK. Because there was no tax of that kind.

Mr. FORDNEY. You were not prevented by law?

Mr. WILLOCK. Absolutely.

Mr. MOORE. You are entirely permitted by law? It was not a question of violating law, was it?

Mr. WILLOCK. There was no moral wrong there. The wrong is economic that we permit these things to happen.

Mr. MOORE. Let me ask you if other people do not do business in the same way.

Mr. WILLOCK. We compete with the Standard Oil Co., so you know we had no easy time.

Mr. MOORE. There is nothing wrong about this kind of business. It is commendable.

Mr. WILLOCK. I think if people can do that with the competition of the Standard Oil Co. they are to be commended.

Mr. MOORE. They do it in the lumber business, the cotton business, and the farming business. What is wrong about it? I think the gentleman has the right to respect for making a success of his business.

Mr. FORDNEY. The only criticism I have to offer to your statement—all corporations build up where they can as you did. It is legitimate.

Mr. WILLOCK. Absolutely.

Mr. FORDNEY. But you take the exact position that Andrew Carnegie did in occupying the spot right where you stand now, that he built up his great industry under a protective tariff and the moment he sold out he wanted free trade. You have built up this plant from the foundation, and you want to stop other people doing the same, but to pay it out of original capital.

Mr. WILLOCK. Here is the point, there was no privilege there, there was no taxing of corporations at that time at all.

Mr. FORDNEY. That has nothing to do with the principle. You say it should not be permitted at all?

Mr. WILLOCK. From an economical standpoint it should not have been permitted.

The CHAIRMAN. I think you have made a remarkable success and deserve it. What amount of taxes, income and excess-profits taxes, did you pay for the fiscal year ending this last May?

Mr. WILLOCK. That will depend, Mr. Kitchen.

The CHAIRMAN. Haven't you figured it out? It is due.

Mr. WILLOCK. We haven't figured it out closely. Our auditors are at work on the statement this week, and I expect the statement Saturday. I think it will run to \$120,000 or maybe \$130,000. The

four months' tax for last year that we had to pay in May ran \$38,000. I have those figures exactly in my mind. That is a matter of appeal now on account of our low capitalization, being under the actual cash invested. We just laid our cards on the table and asked for equity.

Mr. MOORE. I would like to ask you a question or two. Mr. Fordney has pressed you pretty hard on these questions. Of course, it grows out of a desire to fulfill the mission of this committee to obtain more revenue.

Mr. WILLOCK. I appreciate that.

Mr. MOORE. You have presented some views for raising revenue which are not in harmony with the views of this committee. You are willing to share your proportion of the increased tax?

Mr. WILLOCK. Surely.

Mr. MOORE. I do not quite understand your suggestion there as to income tax. You said in answer to a question by Mr. Fordney, if I recall, that an income tax might go as high as 97 per cent.

Mr. WILLOCK. On the very large incomes; that is what I meant.

You were probably not in when I spoke of that. Just for your benefit I will say that I proposed starting in with a tax of 3 per cent on \$3,000, with \$500 for exemption for wife or husband, as the case may be, and the same amount for each child, and a surtax of 1 per cent for each additional \$2,000 up to \$50,000, and of the same amount on each additional \$1,000 from \$51,000 to \$150,000. Under this tax a person with an income of \$25,000 would pay approximately \$2,100 against \$1,900 under the present tax, and an income of \$50,000 would pay \$7,300 as against \$5,300 under the present tax, and an income of \$100,000 would pay \$33,500 as against \$16,300 under the present tax, and an income of \$500,000 would pay \$415,000 as against \$192,000 under the present tax, and the \$1,000,000 would pay \$895,000 as against about \$475,000 under the present tax.

Mr. MOORE. You have a graduated scheme. I was thinking of the small income taxpayer in connection with the tax exemption. You think the income tax should be paid as long as the man keeps working?

Mr. WILLOCK. Just as the draft on the man. We took the strong man whose taking will least affect those that remain. We take the strong dollar whose taking will least affect these that remain.

Mr. MOORE. I understand your point as to that, but I can not see how the corporation can keep working and you tax it almost to the limit during the war period, and it still can keep working. I can understand how the strong man, the individual man, can keep on working so long as he has his strength, but there comes a time when the man of small income who pays a small income tax has no strength and is not able to go forward. He must stop; and I wanted to ask you how your scheme would work as applied to that individual income taxpayer who has been paying out all the traffic will bear up to the time he is no longer a strong man and wants to retire?

Mr. WILLOCK. My idea is that the man with \$3,000 would only pay \$90 a year, and he would have an exemption of \$500 for a wife, and he ought to have that for each child.

Mr. MOORE. He is all right so long as he is able to work.

Mr. WILLOCK. Then his income would drop below \$3,000 and he would not pay any tax.

Mr. MOORE. But he has no reserve. What are we going to give to that man who has lost the power to continue. You see you have taken away everything that he had.

Mr. WILLOCK. But only \$90 a year, that \$3,000 man.

Mr. MOORE. I understood you to say that you were willing to tax him along with the larger concern as far as he could stand it.

Mr. WILLOCK. I should want to tax him light. I should want to make it as light on the man of ordinary income as possible because of the increased cost of living. Most of the men of that character are men whose salaries have not increased with the increased cost of living.

Mr. MOORE. If in your present statement, your graduated scheme contemplated a living chance for the strong man who became weak, my questions do not apply.

Mr. WILLOCK. Absolutely. The very wealthy, a man with an income of \$1,000,000 would have \$100,000 a year left, and he ought to be able to struggle along on that and put a few cents by for a rainy day.

Mr. FORDNEY. How much do you think capital ought to be permitted to retain before it pays taxes?

Mr. WILLOCK. That develops itself into two classes, in ordinary times and in war times. I have thought a great deal about a manufacturing man that goes into business now. Unless he has some Government arrangement, under which they are going to take the plant off his hands, a man that goes into an essential industry—and a nonessential industry should not have any consideration at all—a man in an essential industry should receive very careful consideration at the hands of this committee, and he should be allowed 10 or 12 per cent before he is taxed for war profits, because we want some new industries just now.

Mr. FORDNEY. Do you think every corporation ought to receive it?

Mr. WILLOCK. No, sir. I am speaking about new essential businesses which must be established.

Mr. FORDNEY. I am not talking about the ones going into business now, but corporations that have been in business for a long time. How much income ought they to be permitted to make on the actual capital invested before paying a tax?

Mr. WILLOCK. I am not interested in taxing corporations ordinarily. Their earnings are divided into two classes. One is the exceptional class that forces its business to the front, like the Ford business, and that industry, that management should not be taxed; it ought rather to be boosted instead of fined. Then, on the other hand, there are corporations that have had large increases by holding out ore lands and coal lands and that sort of thing, and they should have that privilege taken away from them, and then we need not worry about their excess profits.

Mr. FORDNEY. Let me see if I understand you. Do I understand you to say that you think corporations should not be taxed; old corporations should not pay any tax at all?

Mr. WILLOCK. They should pay no tax at all, but the privilege extended to many of them should be withdrawn.

Mr. FORDNEY. What privilege do you refer to?

Mr. WILLOCK. The privilege, for instance, of the United States Steel Co. buying up most of the State of Michigan as ore land and

holding it as ore land, and there I should add to that tax on account of the unearned increment. Every year the value of those lands is increasing, and then adroit lawyers come down here before you gentlemen and try to prove to you how much more it costs to make iron in America than it does in other countries, when the great cost is the inflated value that they have put on their ore lands in Michigan.

Mr. FORDNEY. Suppose I agree with you on that proposition.

Mr. WILLOCK. I would be glad to have you.

Mr. FORDNEY. How did you build up your industry? The same way as the United States Steel Co?

Mr. WILLOCK. We have no privilege, and the Republican Party has been putting oil on the free list.

Mr. FORDNEY. We might run abreast on that question. How did you build up your own industry, if you did not build it up just like the United States Steel Co. built up theirs?

Mr. WILLOCK. Just the opposite way. We bought crude oil. We had no investment in oil lands.

Mr. FORDNEY. Wait a minute; don't go off half-cocked. You bought crude oil and made a profit out of it.

Mr. WILLOCK. I will have to answer it in my own way.

Mr. FORDNEY. Did you or did you not?

Mr. WILLOCK. You can almost prove that an industry wore tails and horns if you confine a person's answers to yes and no.

Mr. FORDNEY. But did you make a profit on it?

Mr. WILLOCK. We buy crude oil and we have made a profit on it.

Mr. FORDNEY. And when the steel company purchased ore in the ground, they bought it at the market value, or they could not have bought it.

Mr. WILLOCK. Yes, sir.

Mr. FORDNEY. They take it from the ground and convert it.

Mr. WILLOCK. I am not speaking of that class of the profit. I was speaking of the profit that they added to the ore before they converted it.

Mr. FORDNEY. How much?

Mr. WILLOCK. Their books would show. I do not know.

Mr. FORDNEY. No; but you are telling us. What do you know about it?

Mr. WILLOCK. I know the general facts of the case. I do not know any specific facts.

Mr. FORDNEY. Do you know whether or not they are charging up to the cost of production more than they paid?

Mr. WILLOCK. I do know.

Mr. FORDNEY. How?

Mr. WILLOCK. Because it is common talk.

Mr. FORDNEY. Common talk. What do you know about what they are doing? Do you admit that you don't know what they are charging for ore?

Mr. WILLOCK. But I do know what they are charging for ore.

Mr. FORDNEY. How do you know except by common gossip through the newspapers and talk?

Mr. WILLOCK. I know it from people whom I consider very authoritative.

Mr. FORDNEY. Then you know from the inside?

Mr. WILLOCK. From people who are closely connected with the company.

Mr. FORDNEY. Do you know anything about what they are charging on their books?

Mr. WILLOCK. I never saw their books. I know they are doing it right along.

Mr. FORDNEY. How do you know it?

Mr. WILLOCK. Do you know how the sun came up this morning?

Mr. FORDNEY. Yes; I saw it rise when it was clear. I can see the sun rise, but I can not see in the books of the United States Steel Co. I do not know anything about what they charge. I suppose they do just as you do. I don't know anything about you now.

Mr. WILLOCK. As a matter of fact the sun does not rise.

Mr. STERLING. Is that all, Mr. Fordney? You gave as your opinion that we ought to raise at least one-half of the revenue by taxation, did you not?

Mr. WILLOCK. Yes; I thought that would be possible.

Mr. STERLING. Now, you did not give any reason for that. What is your reason?

Mr. WILLOCK. We could raise billions.

Mr. STERLING. Whether we could or not, why do you think we should pay one-half of the cost as we go?

Mr. WILLOCK. Because in the trenches they are paying the price now, and the dollars at home can at least be as patriotic and pay the price now. Any tax that is left off to-day, any just tax that is left off to-day and put on posterity in the form of bonds, is simply making the world less safe for democracy, which we are fighting for. We have got to have a very real thing for those boys when they come home that have been fighting to make the world safe for democracy. We have got to give them a democracy that is worth the fight, and we can't give them a democracy that is worth the fight when we tell them that we have not taxed the dollar as we have taxed the men, when we bring them home maimed and crippled, and they have to dig and labor all their lives to pay these bonds that we should have paid out of our excess war profits, out of our tremendous incomes, out of our unearned increment. They won't respect us very much.

Mr. STERLING. Now, what difference does it make to posterity whether we save a lot of money as we go along, and let them take it and pay for the bonds, or pay as we go along and not leave posterity anything as a working capital?

Mr. WILLOCK. We will leave posterity everything. The only question is now we are leaving it on a few. If we take it in the kind of taxation I speak of, we will only bear on 10 or 15 or 20 per cent of the people.

Mr. STERLING. Do you know how much the wealth of the country increases year by year?

Mr. WILLOCK. Well, I have understood that it was somewhere about \$50,000,000,000.

Mr. STERLING. It has been estimated from \$40,000,000,000 to \$80,000,000,000, which is a good deal.

Mr. WILLOCK. A big increase.

Mr. STERLING. Do you think that it is better now that we pay all this increased wealth year by year and pay the expenses of the Government as we go along and leave no accumulations for posterity, or whether we shall only pay part of these expenses as we go along and leave some of these expenses to pay and leave them a little working capital to do business with?

Mr. WILLOCK. I would pay as we go along, so far as it may be possible. Posterity will recover a great deal more rapidly without the bonds than with them.

Mr. STERLING. It is in the Nation. We can consider it now in the sense of a great national necessity.

Mr. WILLOCK. Yes.

Mr. STERLING. And won't the boys in the next generation be just as well off if we leave a few bonds to pay off, if we also leave some wealth to pay them with? It won't make any difference one way or the other, will it?

Mr. WILLOCK. The boys will not have the money to pay off the bonds, but the people that you leave with the money won't pay them. There will be no excess war profits then to tax after the war. Why not take them now when the war creates them. Take the profits, if the war creates them, to pay the expenses of the war. Are any of the equities violated in that statement? If a war creates values, take them. Are any of the equities violated by taking those values for paying the bills of the war?

Mr. LONGWORTH. Do I understand that all the war expenses should be raised by taxes?

Mr. WILLOCK. I do not think it would be possible to raise them all, but as much as possible.

Mr. LONGWORTH. And you say that is the only way to make this country safe for democracy?

Mr. WILLOCK. Absolutely.

Mr. LONGWORTH. Was the country safe for democracy at the close of the Civil War?

Mr. WILLOCK. At the close of the Civil War we had an entirely different condition existing. The great West was open to homesteaders at the close of the Civil War. We were a new country, and very largely the West was settled by the boys who had spent four years in the war and refused to settle down to humdrum economic conditions of the home, and they went on to the West and made a great country. There is no such place for those boys to-day. Let me ask you—we have got a million men in the Army to-day and we have millions of munition workers, at high wages. Eighty per cent of those men are earning higher wages than they ever earned before. After the war is over and we ask these men, particularly these soldiers, to come back and pick up the tin dinner bucket, and go back into the mill at \$1.50 to \$3 and live in a three-room tenement, will they think that that is what they fought for in France? Will they think that that is the fruition of democracy? I can not conceive it. We have got to give them a better world than that.

Mr. LONGWORTH. Do you know of any war that was ever financed on a 50-50 basis?

Mr. WILLOCK. I am not familiar with the matter.

Mr. LONGWORTH. But you are here as an expert trying to convince the committee.

Mr. WILLOCK. No; I am here merely to make certain suggestions.

Mr. LONGWORTH. Do you know how the Civil War was financed?

Mr. WILLOCK. No.

Mr. LONGWORTH. Any war?

Mr. WILLOCK. No.

Mr. LONGWORTH. Or how France and England are financed?

Mr. WILLOCK. Not closely, only I have information that England is doing well on the excess-profits tax at 80 per cent.

Mr. LONGWORTH. But do you know how much she has received?

Mr. WILLOCK. No; I do not.

Mr. LONGWORTH. Don't know any of those questions?

Mr. WILLOCK. No.

Mr. LONGWORTH. And yet you are here to advise us on financing the war?

Mr. WILLOCK. Not wholly, only a few parts. I do not think it is altogether important what has been done. I know that is the view of lawyers—but what can be done.

Mr. LONGWORTH. You wouldn't issue any bonds at all?

Mr. WILLOCK. Oh, yes.

Mr. LONGWORTH. Why?

Mr. WILLOCK. Because we could not raise enough by taxes.

Mr. HULL. This gentleman's statement is highly interesting, but I just wanted to call attention to the fact that there are a lot of other gentlemen here.

The CHAIRMAN. The gentleman has had an hour and a half, and I suggest that if the gentlemen have any more questions, just ask them now.

Mr. FORDNEY. My good friend, I do not like to make this statement, but it is concrete. Four of my direct family are in this war, two sons, a son-in-law, and a grandson. Do you think they ought to do the fighting and I give up all my money so that when they come home they won't have anything to start with or save some and do a reasonable amount toward the financing of this war, when I have done my full share, when I have given four of my family to do the fighting?

Mr. WILLOCK. I don't think you should give up all your money. That is why I do not want a man with \$800 a year to pay anything.

Mr. SLOAN. You stated that the British have done well in taking 80 per cent of the excess-profits tax. Do you know whether or not if this Government had observed the rule that Britain did, taking 80 per cent of excess profits, whether we would have obtained as much profits tax as we do under the law now? In other words, if we had done strictly as Britain did, would we have obtained as much profit as we are obtaining under the present law?

Mr. WILLOCK. Do you mean that in relation to England's not doing that for several years after the war started?

Mr. SLOAN. I mean as a matter of dollars or pounds. I have heard a great deal of talk about that British plan, and you spoke with special commendation of that, and I want to know whether or not if we had followed the rule that England did, and levied 80 per cent on excess war profits, just as England did, we would have raised as much profits tax as we do under the present law.

Mr. WILLOCK. There may be something about the English 80 per cent tax that I am not familiar with.

Mr. SLOAN. You recommended the British system, and it has been recommended by the press and platform all over this country. I have yet failed to find anyone who suggested that if we had observed their rule, followed the same path, legislatively, that they did, that we would have raised more money from profits than we do under the present law.

Mr. WILLOCK. I do not know what their rule is.

Mr. SLOAN. You spoke in a very commendatory manner of the 80 per cent rule, because it was 80 per cent.

Mr. WILLOCK. I understood that 80 per cent covered all the war profits on a sliding scale. If my understanding is wrong, I do not commend it so highly.

Mr. LONGWORTH. How are they based?

Mr. WILLOCK. On 1911, 1912, and 1913.

Mr. GREEN. Let me suggest, perhaps to save time, for your benefit that there was a gentleman in here the other day who testified that he had made a very careful computation and we have had some others here that agreed with him, and he stated that that 80 per cent, on the system that they were imposing it, was equivalent only to 40 per cent.

Mr. WILLOCK. Then, it is not a good one. Let us have an honest 80 per cent.

Mr. LONGWORTH. Let me give you this thought, that in spite of the English 80 per cent in taxes, we are to-day raising by taxation 50 per cent more than England is.

Mr. WILLOCK. In dollars or percentage?

Mr. LONGWORTH. In percentage.

Mr. WILLOCK. Well, we must not weary in well doing.

Mr. LONGWORTH. To-day, under our present conditions.

Mr. WILLOCK. We have advanced a good deal on England in the prosecution of the war. We had a conscription act within 90 days, whereas it took England much longer.

Mr. SLOAN. Why don't you stand up for America a little now and then?

Mr. WILLOCK. That is true. I want to stand up for America first.

**STATEMENT OF MR. JACKSON H. RALSTON, ATTORNEY AT LAW, WASHINGTON, D. C., REPRESENTING THE MARYLAND TAX REFORM ASSOCIATION AND THE TAX REFORM ASSOCIATION OF THE DISTRICT OF COLUMBIA.**

Mr. RALSTON. Mr. Chairman and gentlemen, I want to invite your attention, for only a few minutes, I hope, to a consideration of a matter which has been touched in a slight degree by my predecessor, Mr. Willock, but which I think deserves the very careful attention of this committee, and which I am led to believe is receiving the careful attention of the Treasury Department.

A very large proportion of the taxes which have been levied, and perhaps a still larger proportion of the taxes urged upon this committee to be levied, are levied or proposed to be levied in one shape or another upon industries which will have the very direct effect of maintaining and increasing the cost of living and making it harder and harder for the citizen of moderate means to get on.

The form of taxation which I desire to urge upon this committee is, at least in my judgment, one which will not increase the cost of living but will have a tendency to diminish the cost of living, and which, as I firmly believe, in its final analysis is absolutely a fair and proper and just one, and exposes a source of revenue which has not yet been touched by the revenue measures of the United States.

Mr. MOORE. Do you think an income tax increases the cost of living?

Mr. RALSTON. I do not think it does, but I am not here—there is a mistake in the announcement. I am not here to discuss the income tax.

Mr. GREEN. Well, the excess-profits tax?

Mr. RALSTON. Neither am I here to discuss the excess-profits tax. If you will pardon me, the point that I want to discuss here, as briefly as I may, is the question of levying a tax upon the value of land irrespective of improvements.

The Constitution of the United States, the constitutional provision the committee is familiar with, says, in brief, that a direct tax—and a tax upon the value of land is a direct tax—must be levied in proportion to population. When it comes to a practical application of this constitutional provision there are certain difficulties, at least in my opinion. The great center of land values, the greatest center we have in the United States, is in New York City; but every large city is a great center of land values, and they are centers of land values out of proportion to the population those particular cities represent or the States in which they are located represent, whereas population in the agricultural States represents a land value proportionately much less than in New York City, as I say, the large centers of population. People gathered together in great numbers are more productive per man than when they are scattered over a wide area and not brought into close association. That makes a strictly constitutional rule, giving narrow application to the Constitution, not entirely a fair one.

Now, the idea that I want to present to this committee, therefore, is this, an idea which it seems to me is a fair one and which avoids the constitutional difficulty. Jumping to the end of things for a moment, I shall present the idea of a tax on the privilege of large land holdings, irrespective of improvements.

Mr. MOORE. That is somewhat different from the single tax?

Mr. RALSTON. Not at all, if you please, so far as its tendency is concerned.

Mr. MOORE. You are applying it only to a certain class of holdings, while a single tax would be universal?

Mr. RALSTON. The single tax would be universal. It does aim to meet the great evils that single tax proposes to meet in its entirety.

Mr. MOORE. That would raise the question, if you will pardon me, and I wish you would consider it before you get through, of driving unprofitable landholders out of business and settling them in places like New York, where land values would be excessive, and thus have a detrimental effect upon the proportion of population.

Mr. RALSTON. I shall try to make it clear. I do not think that that evil will at all be anticipated.

Mr. MOORE. If I own a piece of land in a semiarid section or a section of the country where it is unprofitable, and I am holding it only in the hope that I will be able to dispose of it, and you tax it, I would rather have you take the land. That would drive me into the large center of population, where by reason of the accretion of population my presence might add to the congestion, and that would be undesirable.

Mr. RALSTON. I am going to hope, Mr. Moore, by the time that I get through that you will see that that contention is not well founded.

I want to say that the tax which I propose—I have the draft of a bill which is expressive of the idea—is a tax upon the right to hold land and is in form and in essence an excise tax.

Mr. FORDNEY. Is there any other country that imposes such a tax?

Mr. RALSTON. No; I don't think there is.

Mr. FORDNEY. Doesn't England tax other property; isn't it true that England doesn't tax nonproductive property?

Mr. RALSTON. England has been particularly the home of land monopoly. If it were open to me—and it is not, of course—to go into the general effects of that, I think England in this war has been exceedingly a sufferer from that, because in one way or another it has reduced the physique of her people, it has driven her people to the east end of London and the slums of other cities, and has largely rendered them less capable, less efficient, in many respects than the French or the Germans.

Mr. FORDNEY. Isn't it true that she raises the major portion of her taxes from income tax, but does not tax nonproductive property?

Mr. RALSTON. That has been true, but the tendency is in the reverse direction in England; in other words, to tax this so-called unproductive property, meaning the property held out of use.

Mr. GARNER. So it is a sort of unearned-increment tax?

Mr. RALSTON. Yes.

Mr. SLOAN. Does not England collect more at her ports than we do?

Mr. RALSTON. No; England hasn't up to the time this war began collected anything at her ports, except on certain luxuries, such as tobacco and silk.

Mr. SLOAN. England is collecting more than we are. I am speaking of to-day.

Mr. RALSTON. I was speaking of prior to the war.

Mr. SLOAN. I am talking about the conditions now.

Mr. FORDNEY. Isn't it true that she collected more money at the ports before the war than we collected?

Mr. RALSTON. I beg your pardon.

Mr. FORDNEY. I beg to differ with you. She collected \$3.56 per capita during the last year of the Payne tariff law, and we collected \$2.45.

Mr. HULL. She does collect three-fourths of her \$250,000,000 on tea, sugar, and tobacco.

Mr. RALSTON. I will not undertake to say anything with regard to the present condition in England. That is quite far removed from what I had in mind.

Mr. FORDNEY. I am right, prior to the war.

Mr. RALSTON. I am exceedingly surprised if you are correct. I know I have entered English ports with practically no challenge from the customs officers.

Mr. FORDNEY. Now we are collecting \$1.68 per capita for this year at our ports, and England is collecting \$10.25 per capita at her ports.

Mr. RALSTON. Small collections would be a source of rejoicing to me, but not, perhaps to Mr. Fordney.

Mr. FORDNEY. That is true.

Mr. RALSTON. I think that we have a perfect right, and this United States has a perfect right to collect revenue or a tax upon the privilege

of land holding. The right to hold land can not be considered a natural right. Even so conservative an author as Blackstone tells us in the first chapters of his second book of Commentaries that the right to hold land has no foundation, or at least that the holding of land has no foundation in natural rights.

Mr. FORDNEY. How much, if any, would you permit our people to hold?

Mr. RALSTON. Well, I am an extreme single taxer, and if it came to the matter of land holding as a matter of abstract right, I would say that no man has an indefeasible right to even a foot of land. I would get the backing of economists and I would get the backing of such writers as Emerson.

Mr. FORDNEY. You can get the backing of Meyer London, I think.

Mr. RALSTON. Perhaps he will back some good things.

Mr. FORDNEY. All Socialists believe in that.

Mr. RALSTON. No; the socialistic idea is different.

Mr. FORDNEY. It is the socialists' principle.

Mr. RALSTON. I beg to differ from you on that point, if you will pardon me. The socialistic attitude puts the whole control in the State. The attitude of the single taxer leaves the control in the man who happens to be in control and allots it to him to put it to its best use. The Socialist interferes with the industry at every point. That is the essential difference between us. I want merely to say without elaborating it, that the right to hold land is a conventional right. If it be a conventional right it is the exercise under such circumstances as the State might say, and meaning by that the State and the United States as well. If therefore it be that conventional right, and the State has the right to those qualifications on the exercise of that right, it may require that that right be paid for, and that is the proposition involved in the bill of which I shall leave a copy with the committee.

The proposition is that the exercise of that right when carried out in excess of \$25,000 in value in the individual shall be made the subject of an excise tax which may be graduated in accordance with the desires of the committee, or the desires of Congress.

We levy certain taxes to-day upon very analogous principles. The foundation of the value of land, the foundation of the benefits to be had from land holding lies in its potentiality of income when brought to the last analysis. We levy taxes based upon exactly that principle in connection with our internal revenue matters. For instance, we tax a distillery upon its potentiality of production. It is taxed upon its production. That is one item. It is also taxed upon its capacity for production, and the capacity for production is after all at the basis of, certainly one of the bases of the value of land. So that if we were to levy, if Congress were to levy an excise tax upon the value of land, it would be a tax levied upon the potentiality of production of the land, bringing it to its last analysis.

Mr. MOORE. Isn't it a fact that under those circumstances the most industrious man would pay the most taxes. The man who made the most use of his land wouldn't he pay more taxes than the man who is shiftless and indifferent.

Mr. RALSTON. No, the proposition to be advanced is that an excise tax shall be levied upon the individual according to his landholdings irrespective of the use he makes of the land.

Mr. MOORE. Yes, Mr. Ralston, but we have two tracts of land contiguous—say 10 acres in each. One is held, according to your single-tax system, by a man who is thrifty, industrious, energetic, enterprising, who improves it in many ways. He erects buildings upon it, and if it is a farm he makes it productive and profitable. The other 10-acre tract is held by a man who is shiftless, indifferent, and a drunkard, possibly, and he leaves it to the care of his wife and children, and it grows up in rag weeds. Isn't it a fact that under that condition the thrifty man, the industrious man, the well-intentioned citizen pays the burden of the tax, while the shiftless fellow goes free.

Mr. RALSTON. Exactly the reverse. Assume two tracts to be of the same natural value, if you please, because of their location.

Mr. MOORE. In the beginning.

Mr. RALSTON. Then the tax would be upon the privilege of ownership, which would be exactly the same in either case.

Mr. MOORE. Well, that means that if the profit of a 10-acre tract has more value to me than it has to you who has developed it, then I can outbid you for the tract and take it.

Mr. RALSTON. We are not going into the question of bidding.

Mr. MOORE. That would be so according to the tenure by which you would hold, if I understand you to say that that is as far as you can go in the matter of title. If that illustration does not fit, suppose that a shiftless man had put his tract in such a need of repair, or had allowed it to run down so that no one dared to bid for it, wouldn't the condition be the same that the thrifty man who had made good would pay the tax, and the other man who had put his land out of business would not pay any tax?

Mr. RALSTON. If no one cared to bid for the land, to use your expression, because it was run down, it would simply be because it had no social value, and the same thing would be true of the adjoining tract. It would be so far from civilization, perhaps, in some ways that the land adjoining would be exactly in the same condition, that there would be nothing on either.

Mr. MOORE. What would there be to induce the improvement of the 10-acre tract that stood idle and was running to waste. What would we get out of it?

Mr. RALSTON. The longer it was held idle under the proposition I am advancing, the larger would be the burden upon it and the greater the necessity that the landowner should put it to profitable use for the benefit of the community and for his individual benefit.

Mr. MOORE. I am only getting the practicable side. We want the revenue, and you are advancing the idea of how to get it out of the land.

Mr. RALSTON. Let me speak of it in a large way.

Mr. MOORE. But if you apply this illustration to two pieces of ground on which the farmers are working, the one will rotate his crops, irrigates it, if necessary, fertilizes it regularly, so that everything is productive, and he gets crops every season, while the other man continually plants his with corn or sweet potatoes and keeps it in the same crop until he uses up the land, and it is worthless. By your system don't we transfer the burden of the taxes from the indifferent, the shiftless man, to the thrifty and industrious?

Mr. RALSTON. I think we make it very unprofitable for the shiftless man to hold his lands in a shiftless way.

Mr. MOORE. Well, he is working the ground out and getting everything out of it that was in it and leaving nothing for the Government because no one wants to take the land after he uses it, but the thrifty man still remains, is a prudent man, as well as a profit maker, and a revenue producer and the other isn't. That is what I want to bring up in a practical way, since we are considering the raising of revenue.

Mr. RALSTON. Now, let me speak of it in a large way, and perhaps some of the minor conditions will fall under the important head.

We are at the present time in the condition of increasing land monopoly in this country. One illustration of it is in the fact referred to in the Manly report for the recent industrial commission, that at the time that report was made, or shortly before, 37 per cent of the farms in this country were being held by tenants. That would seem to me to be a clear indication that our present methods of land holding are wrong; and that coupled with the fact that there had been an increase of between 20 and 30 per cent in the tenant farmers within the then preceding 10 years. So that, as far as farms are concerned, if we may trust such information as is open to us, the farms are drifting from the hands of the independent owners into the hands of men who are tenants, paying for the privilege of living to other people.

We have, of course, a similar accentuated condition in the cities. I think I am not far wrong when I say that in Mr. Moore's city, which is spoken of, by way of contrast to other cities, as a city of homes, only in the neighborhood of 30 per cent, or perhaps even less, of the families of Philadelphia live in their own homes. A few years ago in Washington, which is sometimes spoken of similarly, the proportion was 25 per cent, in Baltimore between 25 and 30 per cent, and so on. In New York City the percentage of people living in their own homes runs down to an infinitely small one. So that under our present system, which taxes industry, which does not particularly tax land monopoly, we have the land going suddenly into the hands of a comparatively few men; and unless something is done about it, when our men return, the conditions will be absolutely worse instead of better; and they, finding themselves for the time being out of occupation, desiring to use land in some shape or another, will find it still more difficult than it was when they went away to get the land on which they must live, and on which they may hope to prosper.

But I want to add this, and to emphasize this, if I may: The land of the cities has under our present system gone into the hands of relatively few, and in large tracts. Our great lands areas are either by fee-simple ownership or by the possession of unused leases, in the hands of comparatively few. You gentlemen have created taxes on war revenues. You have increased the income tax. You have plucked the flowers of industry, so to speak; you have not gone to the root or the trunk. Take, for instance, the Steel Trust, which will serve as an illustration, while I may not go into all the details of it. Take the Steel Trust; you are taxing its income or its excess profits, but you are leaving it in the absolute and uncontrolled disposition of its monopoly.

Its monopoly—and it has a monopoly, and a very dangerous one, if you please—lies in its ownership of tremendous beds of ore; lies in its ownership of leases of those same tremendous beds of ore. As I am informed, only a small percentage of those leases are being worked by it. Now, here are these tremendous beds, here are these tremendous

sources of wealth, going into the hundreds of millions and billions—and untold billions—of dollars, which remain untouched by any legislation of Congress, and you have here the potentiality of meeting the entire financial situation confronting this country by going right at the foundation of things, instead of going at the results of industry applied to that foundation. So it remains true in our cities, and you have it, if you please—

Mr. MOORE. Mr. Ralston, you are aware, of course, that real estate is taxed by the States, and rather heavily taxed at the present time. Do you think that a Government tax on real estate, if it were constitutional or permissible, would produce enough revenue to meet the situation that confronts us now?

Mr. RALSTON. It seems to me beyond all question. You have this to bear in mind. The State and county, and so on, tax—

Mr. MOORE. Would not the burden of that tax fall on communities that are already very heavily taxed—such a community as New York, for instance?

Mr. RALSTON. The word "heavily" taxed is, if you will pardon me, a rather uncertain word.

Mr. MOORE. You spoke of iron mines or beds, a while ago, controlled by large corporations. I assume that they would be practically worthless for the purpose of taxation or for the purpose of development without some corporate instrumentality for making them productive. If it should be discovered that there was an ore bed in the middle of the Desert of Sahara, for the individual prospector to derive anything from that I assume it would require corporate action to get the product?

Mr. RALSTON. Yes, altogether.

Mr. MOORE. How could we derive any taxation at all without a corporation or a united agency to get the material and put it on the market?

Mr. RALSTON. I am going to grant that, absolutely; but we do not need to have that corporate agency holding immense tracts, if you please, of ore and of coal, out of use. By its very ownership and possession it stands in the way of some other corporate agency putting that land to use.

Mr. MOORE. While the Rocky Mountains might be subject to taxation on land values now, I suppose it would be very trifling. I do not know just from whom we would collect. But it might be that somewhere imbedded in the Rocky Mountains there is very great wealth that would require a large community of interest to develop, involving the accumulation and expenditure of millions of dollars. There would be no value there for taxable purposes, I assume, until that wealth was brought out.

Mr. RALSTON. Yes.

Mr. MOORE. It could only be brought out by such agencies as are now subject to taxation. You would not discourage those agencies from getting into action—

Mr. RALSTON. No.

Mr. MOORE (continuing). By attempting to raise your national revenue from land which upon the surface is worthless?

Mr. RALSTON. No. We do discourage those agencies. Congress may not; although it does, I think, in certain ways which I do not want to enter into the argument of. The States directly and dis-

tinctly discourage those agencies in almost every way they can think of. They tax them on every single thing it is necessary to do when they start to make those developments. They do that now. I think that is a bad tax, but it is common throughout all the United States, practically. It is not common in every part of the world. It is becoming less common in certain parts of the world, but is common enough here.

I wanted to speak, if you please, of the position in which the United States is left to-day here in Washington by its present system. The Government wants to buy land here in the District of Columbia, and it does not do it; it uses land that is less available, that it can perhaps get at. Or, if it buys land, it is at an extraordinary price; and when it gets into the market as a purchaser, it immediately finds that the value of the land is so high that the Government itself is discouraged from building here in Washington and developing it. The source and cause of that wealth represented in the land values is the Government itself. It has brought its activities here; it has brought its thousands and tens of thousands of employees here. It has contributed to build up the land values of Washington; and the instant it concludes or wants to use any of those lands, the value which it has itself created is used against it. Now, that is the ordinary condition here; not particularly to be criticised if we accept the existing order of taxation; but it is the condition which exists in practically every other city of the United States. Now, the Government of the United States stumbles all over itself in the treatment of the land question in the District of Columbia; and the governments of every State and of every city in the United States are likewise stumbling all over themselves, and placing obstacles in the way of their own industry.

Now, it seems to me that a tax which will make it less profitable for the land to remain in the hands of those who are forestalling industry in the broadest and most complete way possible, a tax which will attack the forestallers while they are in the act of forestalling, will be something of the very highest possible value. And they can not complain of it—with justice. We may complain of the most just thing in the world, of course. They can not complain of it with justice, because the thing they have, and the thing which we are suggesting Congress should tax, is the creation of the community, and the proposition is that there be taxed back into the public revenues the very thing which the whole community has created. Now that, as I say, is the proposition, and it seems to me that viewing it largely, we are bound to see that a tax of that kind is going to open up opportunities, and we are going to need them opened up by the millions, very shortly. It is going to open up opportunities of every kind in the city and in the country, in the mountains and in the plains equally. And that will be done, as I say, for the use, for the benefit, of those who are coming back, and who will feel on coming back, with these opportunities opening up, that they themselves have a stake in the land, and that they are not abroad "fighting for a boarding house," as it has sometimes been expressed, but that they have their fair share, and their opportunity in life, as the result, if you please, in part, of congressional action. Now, I have spoken quite as long as I had in anticipation to speak, and I want to ask permission of the committee to submit as a part of my remarks a draft bill—suggestion—and a short article which I wrote some time ago addressed to the same general subject.

Mr. MOORE. What is the main purpose of the bill, Mr. Ralston? What is the title of it?

Mr. RALSTON. The title of the bill is "An act to provide for the raising of public revenues by tax upon the privilege of the use and enjoyment of lands of large value," commencing with \$25,000 as a minimum land value as the subject of taxation.

Mr. MOORE. I do not want to press you for an answer to the question I put to you at first. It seems to me it hits at the very marrow of the whole matter. Whether in going after the large and valuable lands for revenue purposes we do not discourage the use of poorer lands, which by virtue of the fact that their purchasers are not able to hold them and pay the taxation, would fall into the hands of the Government and would become a burden to it?

Mr. RALSTON. I can conceive that there is to-day land so poor in quality that if a tax were put upon it it would fall into the hands of the Government. I can also conceive, because I know it to be a fact—we all know it—that there are immense tracts of good land, upon which people ought to be working to-day, where they are not working, and which would be brought into use by an increased tax upon it, the present holders not being then able longer to hold the land without putting it to productive use.

Mr. MOORE. We have millions of acres along the Atlantic Coast to-day, from Maine to Florida, that is awaiting the hand of the tiller. No one comes to take it. No one wants to utilize it. Some prefer to go West and settle upon arid lands and wait for irrigation for the fruition of crops which come along in a period of five or more years. Those lands I refer to are the lands which the individuals care little about, and under such a system of taxation as you propose—or we will call it a revenue-raising system, because that is what we are interested in—

Mr. RALSTON. Yes.

Mr. MOORE (continuing). It seems to me we would add to the burden of those landowners in the neighborhood of large communities like Baltimore, Philadelphia, New York, Boston, Chicago, and other large cities, and would release from a large portion of the burden of taxation those who had been the owners or were the owners of those poor lands which by virtue of taxation—of revenue raising taxation—would now probably fall into the hands of the Government.

Mr. RALSTON. You have within the close neighborhood of New York City immense tracts of land which are out of use. If the farmer desires to go to those lands and use them to-day he is asked such a price for them—frequently unproductive; at least they have not been used for production—that he can not apply his industry to those lands and produce the food and other things that the city of New York and other parts of the country absolutely need. That is the condition to-day; and he therefore is compelled very likely to surrender the possibility of using lands at his doors, almost, and is driven out to the arid lands of New Mexico or Arizona or some other place to get land which, comparatively speaking, is after all cheaper.

Mr. MOORE. It is a fact which can not be disputed that good farming land is going begging now in certain parts of New Jersey and Pennsylvania, in places so close to markets that there is no question about the value of the land. The question of farm labor, of course, enters into it; but there is no scarcity of land. Some of it may be

poor, but it requires only cultivation to make it productive. Now, I understand that the war might put some of that land on the market if the Government should locate in a special place a shipbuilding plant or a munition plant or something of that kind. Then, of course, the idea of community value would at once arise, values would jump, and that land would become productive; but a man might wait and hold land of that kind for a hundred years and unless some such accident as that of a war came along it would be unprofitable to him, and a burden of which he might desire to rid himself.

Mr. RALSTON. I can conceive, if you please, the possibility of that existing under certain circumstances; but if it were good farm land the farmer would not go from the neighborhood of New York City or Philadelphia away out West to almost impossible locations unless the price at which this land is going begging is a price in excess, everything considered, of its real value.

The farm question, of course, is but one of a good many phases of the whole thing, and in many respects perhaps not the most important. I say that bearing in mind the fact, which is stated by Mr. Willett and is well known, that the land values of New York City are far and away in excess of the land values of many States taken together.

Mr. MOORE. That is exceptional, of course.

Mr. RALSTON. Yes; and in my own State, in Baltimore, the land values there, of perhaps 1 or 2 acres are in excess of the assessed land values of whole counties in the States.

If I may submit these matters to be incorporated in the record, I will do so.

Mr. RAINEY (in the chair). Without objection they will be incorporated.

(The papers submitted by Mr. Ralston are here printed in full, as follows:)

AN ACT To provide for the raising of public revenues by a tax upon the privilege of the use and enjoyment of lands of three value.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That for the purposes of this act land is defined to be the surface of the ground, with all easements in, on, and over the same, whether covered by water or not, and including water powers and rights, natural growths, if any, of land, and including wild forests, natural deposits of coal, minerals of all kinds, oils, gases, peats, waters and other substances, and not including improvements the result in whole or in part of the application of labor to land.

SEC. 2. All persons, firms, associations, and corporations owning land in value in excess of \$25,000, whether in possession or leased to others, shall be subject to an excise tax upon the privilege of the use and enjoyment of such excess at the rate of — per cent upon the first \$200,000 or part thereof of such excess, — per cent upon the excess over \$250,000 or any part thereof in total value up to \$1,000,000, and — per cent upon the excess in total value over \$1,000,000. Where land is leased and the value of the lease is in excess of \$25,000, such value shall be deducted from consideration in determining the tax to be assessed against the owner, and shall be charged against the lessee. Where the title to land is held in common or by entireties, or in joint tenancies or subject to estates of dower or life estates or otherwise, so that the several ownerships make up the complete legal title and the entire ownership has a value in excess of \$25,000, then the several owners shall pay an excise tax based upon their proportionate share in the ownership, and for the purpose of estimating the value of the proportionate share of those owning estates less than an unqualified fee simple, the Commissioner of Internal Revenue shall establish rules based upon average life expectancy or otherwise as the case may be.

SEC. 3. It shall be the duty of every owner of any interests in land, including those holding an active trusteeship, held either in fee or in lease, the value of the fee or lease of which is in excess of \$25,000, to report his interests therein before March

first of each year to the Commissioner of Internal Revenue on blanks to be prepared by him. Such blanks shall contain, among other things, provisions for the following information:

Tracts in which an interest is held and nature and extent of interest, price paid by taxpayer or, if he received the same by gift or inheritance, the amount paid by his predecessor in interest for the entire tract with its improvements, if any; valuation placed upon entire land (or lease or interest therein) by taxpayer; offers received by taxpayer for any parcel of such land or interest therein within the two previous years; price at which taxpayer within such period has offered land or any part thereof for sale; value of improvements upon land and price at which improvements have been reckoned in any offer of sale; amount spent by taxpayer or, so far as he knows, any other person in making improvements; net price at which owner would be willing to sell land with and without improvements; assessed value of land for all purposes with separate value of improvements if given separately on tax books. Such return shall not be conclusive of the value of the land, but the Commissioner of Internal Revenue shall determine therefrom, and from such other data as he may obtain, the true value of the land holdings of any taxpayer. The returns shall be as of the date of the preceding December thirty-first. But in any proceeding of condemnation or otherwise in which the United States may be concerned, said return may be used as evidence of facts therein stated as of the date of the return.

It shall be the duty of the taxpayer in the event of the sale of all or any part of the land of which he has reported himself the owner, or any assignment of lease thereof within the calendar year in which his report is made, to report to the Commissioner of Internal Revenue the price at which said sale or assignment may have taken place.

SEC. 4. It shall be the duty of the Commissioner of Internal Revenue on or before the first day of June in each year to mail to the taxpayer a statement showing the amount of taxes due and payable by him, but a failure on his part to mail the same or on the part of the taxpayer to receive it, shall not invalidate the assessment or relieve the taxpayer of his duty to pay, such payment in all cases to be made before the first day of July following.

In the event that the payment is not made as herein directed, the taxpayer shall be subject to an additional payment of five per cent, and an additional payment of one per cent for each month it shall be delayed, and no conveyance made by him shall be admitted to record of date on or after July first of any year, unless he shall have first procured from the Commissioner of Internal Revenue and exhibited to the recording officer a certificate that all taxes under this act are paid, which certificate may be recorded once for all in the office of the recording officer.

SEC. 5. In so far as practicable, sections thirty-one hundred and seventy-three and thirty-one hundred and seventy-six of the Revised Statutes of the United States as amended, and sections seventeen and eighteen as amended by the act of October third, nineteen hundred and seventeen, and sections nineteen, twenty, twenty-one, and twenty-two of the act approved September eighth, nineteen hundred and sixteen, shall apply to the terms of this act.

SEC. 6. The Commissioner of Internal Revenue is authorized to make all rules and regulations necessary to enforce the provisions of this act.

SEC. 7. This act shall apply to the United States, the Philippine Islands, and Porto Rico.

#### IS LAND VALUE TAXATION UNCONSTITUTIONAL?

[By Jackson H. Ralston.]

In view of the constitutional provision requiring direct taxes to be apportioned among the several States according to population, is it possible with fairness to adopt for national purposes taxation on the unimproved value of land? This question is not susceptible of easy answer.

The Supreme Court has defined direct taxes to mean taxes levied upon real estate and poll or capitation taxes. The first of these classes would undoubtedly include taxes levied either upon land or improvements, or both.

The Crosser bill proposes to apportion direct taxes on the value of land, exclusive of improvements, among the several States according to population. Undoubtedly it would seem that such a tax was absolutely constitutional, being a direct tax apportioned as the Constitution provides. It would not, however, be a fair tax because the relation between the value of land to the population is by no means uniform. A State wherein there are large cities and where consequently the ability to produce wealth is intensified and magnified, will have a land value per head, much greater

than that which exists in a State of like population, but having its inhabitants scattered among unimportant centers. The strict application of the Crosser bill, therefore, would make the tax on land values in a State like New York much less in proportion to value upon the land taxed than would be the case in Alabama, Mississippi, and Arkansas, for example.

On the other hand, a tax which would ignore State lines and be charged upon real estate or land value only everywhere, according to its value, would be so far unconstitutional that it would not receive any reasonable consideration by Congress.

Is the proposition, therefore, unsolvable? I think not. A solution, however, must be found in a direction different from those so far pursued.

The holding of land by one individual to the exclusion of all others is entirely due to conventional arrangements. Without the convention, it does not exist. This has been recognized more than once by legal writers. Blackstone maintains it in the first chapter of the second book of his Commentaries, wherein he says:

"There is no foundation in nature or in natural law why a set of words upon parchment should convey the dominion of land; why the son should have a right to exclude his fellow-creatures from a determinate spot of ground, because his father had done so before him; or why the occupier of a particular field or of a jewel, when lying on his death bed and no longer able to maintain possession, should be entitled to tell the rest of the world which of them should enjoy it after him."

The right to hold land, therefore, being purely conventional, is to be treated as a privilege, and while the land itself may not be taxed, the privilege—the franchise to hold and use—is fairly the subject of taxation. It differs in no wise from the franchise of a corporation, whose property is taxed separately from the right to hold and control its property.

The tax, therefore, which I propose is a tax upon the individual who holds land, and I would have that tax apportioned to the value of the privilege he enjoys. The value of this privilege is shown by the value of the land he owns, irrespective of the improvements upon that land. The United States, then, would not be concerned in any way with the use he made of his privilege, but only in the fact of its existence, irrespective of the place of its exercise.

The reasoning upon which such a tax would be based would be exactly parallel to that upon which inheritance taxes are based. The courts do not consider that inheritance taxes are upon the thing inherited, but upon the right—the privilege—of inheritance, the value of which privilege is measured by the value of the thing inherited.

An interesting illustration of the underlying principle is afforded by certain distillery taxes which are estimated, not upon the amount of whisky produced in the distillery, or upon the value of the machinery, but by the capacity of the distillery. Laying aside the element of speculation, this is the groundwork of the value of land—its capacity to produce wealth.

Another suggestion remains to be made. If I am right in my premises, it is not necessary that all classes of landed privileges should be taxed at the same moment. The experiment may be made progressively. We can start, for example, by a tax upon the privilege of holding land primarily valuable for mineral productions. We can tax the privilege of holding agricultural lands in excess of 1,000 acres, and other modifications may be possible.

The Industrial Commission in its latest report has pointed out the terrible effects of land monopoly, ownership extending even to tracts comparable in size with States of the Union. This problem can be met and with tremendous efficiency, if we have the courage to address ourself to it, in the manner I have outlined.

#### STATEMENT OF MR. WILLIAM KENT, A MEMBER OF THE TARIFF COMMISSION.

MR. KENT. I want to speak to some rather general principles which you gentlemen have heard over and over, and realize thoroughly, I am sure. Of course the taxes that we are talking about raising are now primarily for the purpose of raising revenue. We want to get all the revenue we can.

Taxes have another function, and that is as a corrective or a remedy. The protective-tariff tax is upheld on the basis of a corrective or a remedy. Other taxes are upheld for the same reason. Just now we are trying to get all the revenue we can. Now, revenue can come from only

one source, if it is to be permanent revenue, and that is out of production; and therefore in framing any tax legislation the primary thing to render that source permanent is to see that production is not crippled or destroyed; that enough is left to continue that production, and enough is left to furnish funds for the increase of that production. And when in a time like this we come to applying what we might call the corrective remedial idea of taxation, it should be along the same line, of driving people into production, of driving land into production, and of increasing the fund thereby out of which permanent revenues can be obtained.

Now, for the purposes of revenue for this war, I believe, without having definite figures—and I suppose I should have to confess to entire ignorance if cross examined, rather than to stultify myself by definite answers, when I do not know the answer—it is my belief that one third of the revenue to pay for this war can be raised. If more could be raised, I should be in favor of raising it, provided always it can be raised without destroying production, and I should hope to see every means taken that would drive people and resources into production.

You take the case of men of large incomes. They have around them something they are not to blame for—it is a matter of custom that has grown up—a large fringe that is unproductive; men working for them that are ministering to their own comfort and luxury, unnecessarily. They may have private yachts with whole crews doing no good. They may have landed estates that are unproductive. I should like to see an income tax placed high enough to drive these unproductive people into industry. There ought to be no such thing as a butler or a footman. The class of chauffeurs should be pretty severely cut into. And it seems to me that these things can be automatically arrived at, to a certain extent, by a large income tax.

Mr. MOORE. Mr. Kent, you are familiar with the present tariff law, being a member of the Tariff Board?

Mr. KENT. I helped pass the present tariff law, and I have read it; yes.

Mr. MOORE. The so-called Underwood law?

Mr. KENT. Yes.

Mr. MOORE. Does it not provide that personal servants, such as footmen, coachmen, and butlers, may come in?

Mr. KENT. I did not recollect that clause. Is not that in contraction of the contract-labor clause?

Mr. MOORE. It may not have been in that law.

Mr. KENT. I do not think it is in there. I never remember seeing it, if it is.

Mr. MOORE. I beg your pardon; it is not in the Underwood tariff law; it is in the naturalization law.

Mr. KENT. That is an entirely different matter, that I do not want to get into.

Mr. MOORE. I withdraw that question. You are an expert on the tariff, and I will ask you if you recollect the Burnett immigration bill?

Mr. KENT. What is that?

Mr. MOORE. Do you recollect the Burnett immigration bill?

Mr. KENT. I do not recall all the clauses of it, Mr. Moore.

Mr. MOORE. Was not provision made in that bill for the exemption of such employees as butlers and others who might come in as personal servants of American citizens?

Mr. KENT. I am talking about another matter now, and not about sociology.

Mr. MOORE. I know you are. You are talking about the propriety of having these personal appendages.

Mr. KENT. I am talking about putting them into production work. I am talking about forcing them economically into production work by limiting incomes that can afford to sustain such people. The immigration law brings up a whole series of other questions which I am not prepared to discuss at the present time, although I am perfectly willing to do so; but the day would be too short.

Mr. MOORE. You remember the discussion over that law, do you not?

Mr. KENT. Yes.

Mr. MOORE. Do you recall that provision was made for the admission of such employees of American citizens?

Mr. KENT. I had forgotten it.

Mr. MOORE. It was catering to a rather fastidious taste with which I assume you and I did not quite agree at that time. I do not know whether you did or not. I know I did not.

Mr. HELVERING. The conditions are different now.

Mr. MOORE. Yes, we have war now; and I think we may probably amend some of the laws which we passed heretofore.

Mr. KENT. Now, the question brought up by Mr. Ralston of taxing unused land into use is one of the corrective phases. It is necessary socially and will eventually be valuable economically. Our population in this country, from various reasons prior to the war, was badly distributed, and even if we had had no war we should have been obliged to face this question of badly distributed and therefore comparatively unproductive population with laws that would drive into use—with appropriations and laws that would encourage and make possible the use—the vacant land in this country, to the end of reaching greater production.

This would have been necessary even without the war. But in view of the war, and in view of the tremendous dislocation of population, I conceive that one of the greatest problems we have to face, and one of the greatest possibilities that will arise out of the war, will be a great Federal land policy, and I believe that Mr. Ralston's suggestion of Federal taxation of land beyond certain limits will have a tendency in this direction. I do not know the contents of his bill, I do not know how his bill is worked out, and therefore as a matter of course I am not at all in position to indorse or to criticize that bill, but one of the correctives that we must apply by taxation will be found to be applied to privilege in natural resources, the holding of natural resources for speculation, or, as it has been stated, in forestalling industry. Those natural resources have been heedlessly scattered and there has been a constant tendency among the competent and the farsighted to gather them up and get them in large holdings. In some cases this, as in the case of accumulating enough lumber for an operation, is an economical matter, and justifiable. In many other cases it represents an oppressive privilege that cuts the average of our people off from what a few of our people, owing to their

financial condition and their foresight, and other things less creditable, have been able to secure for themselves.

In general terms, while you are going into this taxing business these things should be considered along the line of remedial taxation.

Now, I do not know if there are any questions you gentlemen want to ask me. If so, I shall be very glad to answer them. I just came here to make a general statement. First, that I hope the maximum possible without destroying production will be raised by taxation; that taxation will be applied to drive men and resources into production, and that those principles will be followed through as vigorously as they may be in the course of the formulation of your policy. Certain it is that this easy borrowing of money for posterity to pay is piling up principal and interest in discouragement for those coming after.

I have known people to leave a church because the church was so badly in debt, and I hope that we will maintain, through these troublous times a country that will not be so burdened that those after us will have a harder time than is necessary in living under its conditions, and I further hope that as has been well stated, our finances will be so conducted that we will be solvent at the end of the war, and there will be no repudiation.

Mr. CRISP. Mr. Chairman, I would like, in order to understand Mr. Kent, to ask him a few questions.

Mr. RAINEY. Very well.

Mr. CRISP. I know that Mr. Kent is a man of large affairs, and there are two or three questions that I would like to ask him.

Which, in your opinion, Mr. Kent, is the most equitable way for the basis of an excess-profits tax under the present law, allowing certain earnings on an invested capital, or the English system, taking the earnings for, say, three years or five years prior to the war, and levying the tax on the excess profits made over the average made before the war?

Mr. KENT. You are bringing up a complicated question there. It is not as easy as it sounds. In other words, under the stress of war conditions we are asking people to produce stuff below what economists call the margin of operation. We are asking people to produce coal that they could not have economically produced before. If the capitalization were not watered, and you asked a man to continue his coal operation in a place where coal could not have been competitively produced, then I think you should allow that man a profit for his operation, and the use of his capital, although he might not have made a profit prior to the war, although he was working in good faith and his capitalization is not watered.

Mr. CRISP. You understand the practical situation, or the practical proposition that confronts this committee, and you are one of the officials of the Government, and I wanted, for myself, your judgment under existing conditions. We are in war. I wanted to ask you which was the most equitable basis.

Mr. KENT. Getting back to my original proposition, the encouraging of production, it seems to me that you should treat with latitude those who are now engaged in production that did not have a profitable business prior to the war.

Mr. CRISP. What percentage of the expense of the war do you think should be raised by direct taxation?

Mr. KENT. I should hope it is possible to raise one-third, as has been suggested, without damaging production. I only have a loose opinion about it, but I believe it can be done.

Mr. CRISP. I understand, but I have confidence in your opinion, and I am asking these questions to get your views. Have you given the question of what the tax rates of the income tax and excess-profits tax should be?

Mr. KENT. No.

Mr. CRISP. Have you any opinion as to what should be the normal rate of income tax?

Mr. KENT. What do you mean, the limitation? You mean how much should be laid?

Mr. CRISP. No; the present rate is 4 per cent. You understand that the duty confronts this committee of raising practically \$2 where \$1 is now raised, and I think it is the universal opinion that a great part of this amount must be raised from income and excess profits taxes.

Mr. KENT. I should go light on the small incomes, and raise it in increasing measure as you get up to the larger incomes, and I have no objection to taking everything above \$100,000, for instance. I do not think there would be any hardship inflicted. If you wanted to get down to \$50,000, I would not complain.

Mr. CRISP. You have never given any attention to the question of graduated rates of taxes?

Mr. KENT. I have not given it any attention; no.

Mr. MOORE. I want to correct my question about domestic servants, and state the law, so that there will be no misunderstanding about it. You yourself raised that question, because you thought we might get along very well without butlers and chauffeurs and other such luxuries.

Mr. KENT. I never owned a butler. I have a chauffeur.

Mr. MOORE. I think you are a pretty good one yourself, judging from the way you go down the Avenue sometimes.

The Burnett immigration law provides as follows:

That the provisions of this law applicable to contract labor shall not be held to exclude professional actors, artists, lecturers, singers, ministers of religious denominations, professors of colleges and seminaries, persons belonging to any recognized legal profession or persons employed as domestic servants.

Mr. KENT. I think if we have them over here we ought to put them to work, including the lawyers.

Mr. MOORE. I am glad to have your opinion as to them, as well as some of these other ornamental persons who come over here from the other side to tell us what to do on this side. But I want to ask you a question or two about your main line of reasoning, which I understand to be that we should encourage production, with which I agree, and that we must raise our revenues by a tax on production.

Mr. KENT. We have to raise it out of production. It is the only place it can come from, but I do not say that I believe in a tax on production. I believe in taking a part of the products. It is all you can get. It may be in terms of money or in kind, but the only thing you can take, in terms, is product.

Mr. MOORE. Exactly; and you said in your general statement you would apply a tax on consumption, and restrict it to production

only, and I wanted to get your meaning—whether you intended that we should endeavor to raise the revenue exclusively from production.

Mr. KENT. I do not say—I say the only way you can get it is out of production. Now, I have no objection to a consumption tax on certain things. I have no idea but that a semiluxury, like coffee, might properly have a consumption tax placed on it. I think it is proper that an item like sugar, which can be dispensed with to a certain extent without damage, might temporarily, as one measure, pay a consumption tax. But that consumption tax is collected in terms of money, and that has to come out of production somewhere, somehow.

Mr. MOORE. Referring to terms of money, I understand you would be willing to take everything a man earns above \$100,000?

Mr. KENT. Provided it were not needed in his productive business; yes.

Mr. MOORE. That is to say, if it were not to be used over again in producing more?

Mr. KENT. In producing more stuff; yes.

Mr. MOORE. Would you, then, eliminate some of the taxes that are now imposed? In your general tax on production would you eliminate the war excess-profits tax, for instance?

Mr. KENT. No; I think that is a good way to get at it.

Mr. MOORE. Then you would hold such taxes as we now impose?

Mr. KENT. And I would put on all that the traffic would bear without injuring production.

Mr. MOORE. And seeing that we have to raise \$2 next year for every one raised this year, would you simply add that to the tax on production already existing, leaving the other taxes to stand as they are?

Mr. KENT. I do not like the term "tax on production." "Taxes," we will say. The revenue has got to come out of product, but that is a different thing. I say if we can stand it without injuring production, I would double them up; but I would want to be mighty sure that we were not going to destroy production in doing so.

Mr. MOORE. I say, continuing your production.

Mr. KENT. I never used that term, "tax on production."

Mr. MOORE. You said that we had to raise this out of production.

Mr. KENT. Out of products, yes.

Mr. MOORE. You would raise it out of the ore that goes out of the mine, for instance? You would tax that?

Mr. KENT. It depends on what the result would be.

Mr. MOORE. That would be production, and it would be the employment of capital.

Mr. KENT. I have not gone into the detail of specifying how that would come. That ore might come in on excess-profits tax—war-profit tax. It might come in a number of ways. These people who get that ore out of the ground might accumulate a large profit. I might take it out of them with an income tax or profits tax, or any way you could get it.

Mr. MOORE. You would take it out of the profit or the money?

Mr. KENT. I would take it out of the ore mine's income; out of the dividends of the stockholders.

Mr. MOORE. Would you take it out of the product of a farm?

Mr. KENT. I would take it out of everything that pays income above a certain amount.

Mr. MOORE. I want to know if that is as specific as you care to be, because it would be very helpful to us, knowing you as we do and understanding your experience in this matter. Would you take it out of grain, for instance, if we could put grain in such unit form as to be able to tax it?

Mr. KENT. You are figuring now to put the tax back on the consumer.

Mr. MOORE. No; I am trying to put it on the production.

Mr. KENT. If the farmer by his operation made a large net income, I think he should be taxed on his income. I would not want to put a tax on grain and then have that shifted over onto the consumer again.

Mr. MOORE. That is it. Suppose we could group the grain in bushels, or in whatever shape we might make a unit, for purposes of taxation for revenue, would you tax that kind of production?

Mr. KENT. Tax grain?

Mr. MOORE. Yes.

Mr. KENT. No; I would not. I would tax the result, the profit of the operation, the same as I am taxed now in my cattle business. I have to pay large taxes on my cattle business; and at the same time if I had been taxed on the cattle themselves and there had been an open market—I am saying “if,” of course—which there is not, but if there had been a production tax on cattle, I would have put that tax back on the consumer. I do not like that kind of taxation.

But they come to me and say, “Here, you have made money this last year, and we want a large excess profits tax from you,” and I say, “Go to it; and if you want to increase it, go to it;” but I do not want to lay a tax on the product that goes back to the consumer. We want to take the money out of the net that the man has and force the man toward greater economy of living.

Mr. MOORE. You have been studying cotton and wool both in your tariff commission, have you not?

Mr. KENT. We have not had anything whatever to do with cotton.

Mr. MOORE. Cotton comes in unit form.

Mr. KENT. We have not taken up cotton at all. We have done some work on wool.

Mr. MOORE. Would you approve of a tax on cotton?

Mr. KENT. A consumption tax?

Mr. MOORE. Yes.

Mr. KENT. Meaning, thereby, that you would add to the price to the consumer?

Mr. MOORE. Yes.

Mr. KENT. No; I would not. I would tax the surplus profits of the cotton grower. I would not lay a tax that would increase the price to the consumer. I would lay a tax that would take away the excess profits of the man that raised the cotton.

Mr. MOORE. You would tax the products of the mill?

Mr. KENT. I would not tax production of the mill, but tax the resulting dividends or resulting earnings of the mill over and above a reasonable return on capital and replacement.

Mr. MOORE. I may have misunderstood you.

Mr. KENT. I never said I was going to tax the products.

Mr. MOORE. I understood you to start out by saying that we had to increase this revenue by a tax on production.

Mr. KENT. No; I said it must be paid out of products; not by a tax on production. I would not levy taxes that would go back on top of the consumer on top of all these things.

Mr. MOORE. This is one thing that troubles some of us, if we are to raise this revenue, as we must raise it out of products, as you indicate—

Mr. KENT. It can not come from anywhere else.

Mr. MOORE (continuing). If we go and exempt certain products along the line, it is a question how far we can go in raising it.

Mr. KENT. I have never insinuated or said that I wanted to tax the products.

Mr. HAWLEY. Do you think it is possible to frame a system of taxation in which there would be no shifting of the tax burden to the ultimate consumer?

Mr. KENT. There are means whereby a large proportion would be shifted to the ultimate consumer. You take my own personal case; if I am charged a big income tax, what do I do? I shut down on my expenses. I save that. I have very few people connected with me that are not profitably or productively employed, but I will find out where those unproductive people are and turn them into something else; and I can not shift that on to anybody else, and that is taken out of me, that is taken out of my personal economics, out of my method of living; and that is what ought to be done.

Mr. HAWLEY. It has been urged that taxes which would be shifted to the ultimate consumer created a situation in which the general people bore a proportionate share of the burden of carrying on the war. What do you think of that?

Mr. KENT. You can figure out certain things, as I suggested before, that are along the line of what you might call relative luxuries. The nearest to a necessity of those would be sugar. Tea and coffee would be nearer luxuries than sugar. There are some things of that sort where you probably could place a consumption tax that would raise large revenues without any extreme privation to the great body of our people.

Mr. HAWLEY. You would not levy a tax to be shifted to the consumer on the necessities of life, but you would levy one that would be shifted on the nonnecessities?

Mr. KENT. On the relative luxuries. Of course, sugar is now more of a necessity than a luxury.

Mr. HAWLEY. Do you think it possible to frame a tax on that basis?

Mr. KENT. I think so. I think you could frame a consumption tax on those items. I do not see why not.

The CHAIRMAN. Are there any other questions?

Mr. KENT. Thank you, gentlemen.

(Thereupon, at 1 o'clock p. m., the committee took a recess until 2.30 o'clock p. m.)

## AFTER RECESS.

The committee resumed its hearing at 2.30 o'clock p. m., pursuant to recess, Hon. Claude Kitchin (the chairman) presiding.

The CHAIRMAN. The committee will come to order. We will now be glad to hear Mr. Baker.

**STATEMENT BY GIBBS L. BAKER, ATTORNEY AT LAW,  
WASHINGTON, D. C.**

Mr. BAKER. I desire to direct the attention of the committee to—

The CHAIRMAN. Will you please first give your position or what interest you represent?

Mr. BAKER. I represent in this hearing 14 fire insurance companies, as follows: Assurance Co. of America, Colonial Assurance Co., Century Insurance Co., Merchants Fire Assurance Corporation, London & Lancashire Life & General Assurance Association, General Fire Insurance Co., Urbane Fire Insurance Co., Eagle Star and British Dominions Insurance Co., Underwriters at American Lloyds, Underwriters at Great Western Lloyds, Underwriters at New York and Boston Lloyds, the National Underwriters of America, and the Union Underwriters of New York.

I would also like to say that there is present here to-day Mr. John T. Barker, of New York, representing about 20 more fire insurance companies, and Mr. Robert O. Dyer, who is an expert accountant in tax matters, and who has been advising the different insurance companies from time to time.

The matter to which I direct the attention of the committee is rather one more of the administration of the law than any change in it, and grows out of the construction placed on the law by the Treasury Department, which has resulted, as these companies feel, in inequality of taxation. The tax, of course, being levied upon net income permits certain deductions to be made, and under the law of 1916, as amended by the law of 1917, those deductions, as found in Part II, section 12, are—

In the case of a corporation, joint-stock company, or association, or insurance company, organized in the United States, such net income shall be ascertained by deducting from the gross amount of income received within the year from all sources—

First. All the ordinary and necessary expenses paid within the year in the maintenance and operation of its business and properties, including rentals or other payments required to be made as a condition to the continued use or possession of property to which the corporation has not taken or is not taking title, or in which it has no equity.

Second. All losses actually sustained and charged off within the year and not compensated by insurance or otherwise, etc.

And, under section C in this same second clause, there is provided:

In case of insurance companies, the net addition, if any, required by law to be made within the year to reserve funds and the sums other than dividends paid within the year on policies and annuity contracts.

Mr. STERLING. What are you reading from?

Mr. BAKER. From the revenue laws compiled by the Treasury Department from the act of 1916, as amended in 1917.

Mr. STERLING. Is that the law itself?

Mr. BAKER. Yes, sir; this language is identical with that contained in the original act of 1909, and it has gone through all of the acts and has been subject to no change that I am aware of.

Now, a controversy has arisen in the Treasury Department as to what this expression "required by law" contemplates and means, and with what intent Congress enacted it. The Treasury Department in pursuance of that act in its regulations provided, as applying to insurance companies, that returns of insurance companies must be rendered in conformity with reports made to State insurance departments. It further provides:

As all insurance companies are required by law to render their reports to the various State insurance departments for the calendar year, their returns of annual net income for the purpose of income tax should be made for the same period, unless their books are actually kept on a fiscal-year basis.

So that in administering that law the Treasury Department has taken the returns made by the various insurance companies to the State insurance commissions as the basis for the levying of the tax. It happens that in some States the law requires a reserve to be set up by these companies, not only in form but in fact, for unpaid losses—the losses that have accrued but not yet paid. The law of California requires it specifically, and perhaps the law of Illinois, and also Missouri, require these reserves to be set up by insurance companies that have accrued but have not yet been paid; I mean at the end of the year. In all cases arising from these States the Treasury Department permits the deduction from the income of those reserves set up in accordance with the requirements of the State.

There are, perhaps, 135 or 140 fire insurance companies in the United States. Of course a great many of them center in the East, and I presume a very small proportion of them in the States I have mentioned. Under the laws of most of the States, while the reserve is not actually required by law in plain, unambiguous terms, yet it is required in a sense, because the commissioner has instructed that if reserves for these unpaid losses are not set up by the companies it shall reflect upon their solvency, and if found insolvent they must, of course, reinsure or go out of business.

Therefore the practical effect in all of the States, either by virtue of plain, express provision of the law or by virtue of some provision the insurance commission makes pursuant to the law, these insurance companies are compelled to set up reserves for unpaid losses. Yet in three or four States, where no State statute requires a reserve specifically, they are permitted to set it up in deduction of their income for purposes of Federal taxation, whereas in all other States, where they do set it up, they are not permitted by the Treasury Department to deduct it.

Mr. STERLING. You are speaking simply of unpaid losses.

Mr. BAKER. Reserves for unpaid losses.

Mr. STERLING. That is, the next year you get it.

Mr. BAKER. If you make any money from which to deduct it.

Mr. STERLING. You would pay it for the next year?

Mr. BAKER. Yes.

Mr. STERLING. And then you would deduct it?

Mr. BAKER. Yes; if he had income to deduct it from. I am coming to that in a moment and will explain it.

Mr. STERLING. All right. I just wanted to understand that.

Mr. BAKER. Now, gentlemen of the committee, this matter has gone to the Supreme Court on the contention between the Treasury Department and the taxpayers, the taxpayers contending that the

reserve was required by these various States and insurance regulations in effect, and therefore they should be allowed to deduct it. The Supreme Court, in a decision in the matter, in the case of William McCoach, collector of internal revenue, *v.* Insurance Co. of North America, has held that it was evidently not in contemplation by Congress that any reserves should be set off against income, except those specifically required by law, and the decision gives to the law the technical meaning that its words imply and does not give to those companies the benefit of all the requirements made by State regulations in pursuance of State law which would result in an equitable distribution of this tax.

After paying this tax, I assume it is the desire of this committee, and of the Treasury Department and the court, to administer it equitably and distribute it pro rata among the people who have to pay it. We are not here to discuss the amount of the tax or to complain about the tax; we are here to ask that the committee shall so express what the intention of Congress was in the passage of this act, or will incorporate such an amendment in the new law as will cause this tax to be equitably distributed among all the companies affected by it.

The result of the matter is that all the companies that I represent are compelled to pay a tax without the deduction of these reserves for unpaid losses, while in many other parts of the country they are permitted to deduct the losses.

In answer to the question by Mr. Sterling as to why it would not be just as well to have the rule prevail that the loss should be charged off in the next year, I will state that that would be true if these companies made any money in the succeeding year out of which they could charge off these losses that had accrued during the preceding year. As a matter of fact I am informed—and I will submit for the committee's interrogation an expert on this subject—these companies do not earn sufficient money as a rule to permit the carrying over of these losses with any hope that they will be deducted from any income that will be left over and above ordinary expenses and losses during the forthcoming year. I am informed that the average rate of losses is about 60 per cent, and the cost of doing business is about 40 per cent initially, and on a final accounting that the losses are in the neighborhood of 53 per cent on an average throughout the country, while the expenses of operation are about 40 per cent, making a total of 93 per cent, and the total amount of income that these companies receive is less than 5 per cent on the invested capital. So it is not possible as a practical matter to carry over these losses from one year to another and hope to get the benefit of the deduction from the next year's income, because there probably will be no income from which to pay it.

Mr. STERLING. What would you pay them from if you did not have any income?

Mr. BAKER. You could not pay them unless you had income.

Mr. STERLING. I mean the losses?

Mr. BAKER. Oh, the losses. They would be paid out of income from the current year if you deducted them for that purpose.

Mr. STERLING. It seems to me the amount of taxes would be just the same in either case?

Mr. BAKER. If the companies are making money for that year; but suppose a company made money this year and had funds out of which to deduct these reserve-fund losses but were not permitted to do it, and paid taxes and distributed their income as dividends, and then suppose the next year it did not make any money, it would have losses to pay the succeeding year but have no funds out of which to deduct them.

It is not possible that the committee would want the companies to assume any such risk as that when all might easily be obviated by a simple amendment to the law which would provide that these companies could deduct the net addition if any required by law, or regulations made in pursuance of law, which would cover the whole situation.

Mr. STERLING. Have you indicated where you would insert such an amendment?

Mr. BAKER. I would suggest that the law be amended as follows:

Amendment to Part II, section 12 (2), paragraph 2, of the act entitled "An act to increase the revenue and for other purposes," approved October third, nineteen hundred and seventeen.

Amend that portion of the said second paragraph, under subdivision (c) by adding the words "or regulations in pursuance of law" after the word "law" in said subdivision (c), so that the said subdivision will read as follows:

"(c) In the case of insurance companies, the net addition, if any, required by law, or regulations made in pursuance of law, to be made within the year to reserve funds and the sums other than dividends paid within the year on policy and annuity contracts."

That would give these companies the benefit of the requirements of the various State insurance commissions, and would put them exactly on a parity with all those companies where the express language of the statute requires these reserves to be set up.

As to the practical operation of the fund affecting income and the taxation of these companies I desire the committee to hear for a moment Mr. Stewart, who is an expert accountant in the employ of these insurance companies.

Mr. STERLING. Let me ask you another question before you retire: Suppose the committee felt it absolutely necessary to get more revenue from the insurance companies, and we feel that we must ask the insurance companies for more revenue in order to help the Government at this time, have you any suggestions as how best to do it?

Mr. BAKER. Yes; by taxing these companies. But I want to suggest in doing so you should apply it equitably among the companies. If it is the desire of the committee to do that we are not here to object to the rate of taxation, but we do ask that it be distributed equally among all of the companies and be distributed in such fashion that it can be paid out of the profits and not out of invested capital.

I will now ask that you hear Mr. Stewart.

The CHAIRMAN. The committee will hear Mr. Stewart.

#### STATEMENT OF ROBERT L. STEWART, ACCOUNTANT, MAIDEN LANE, NEW YORK.

Mr. STEWART. Mr. Baker has stolen all my thunder—

The CHAIRMAN. I would like you to state whom you represent?

Mr. STEWART. The Colonial Insurance Co. As I said, Mr. Baker has stolen all my thunder. He has covered the point that I had

to make, and that was that the application of the law as it is now made, possibly may, and in fact does, work injustice to the companies. As long as the companies make money year in and year out the amount of the tax will not be reduced, but if at the end of a given year they should have a large sum of unpaid losses which had accrued, and the next year they should have unfavorable experiences, then they could not, under the present method of administration, get back the tax which had been exacted in advance, so to speak. By putting it on an accrual basis—that is, by receiving credit for the unpaid losses year in and year out, the amount of the tax would not be lessened provided the companies made money. On the paid basis if they lost money in any one year they would be out of pocket. In other words, they would pay the tax in advance, which does not seem fair.

Mr. STERLING. Did very many insurance companies last year come up against the difficulties that you have mentioned?

Mr. STEWART. In the year 1917 for something like 135 companies the loss ratio was 57 per cent and the expense ratio was 42.4 per cent I think, which made about 99 per cent. The larger part of that 57 per cent of accrued losses was unpaid during the year, yet the tax has been paid on it. If they run into another year with the same experience there is nothing to get that tax back from, there will be no profit, and it is not unreasonable to suppose that that condition might occur. I think, as Mr. Baker mentioned, the percentage of losses, or the loss ratio, as we term it, for the period of years since the companies have been in business is something like 53.6 per cent, and the expense ratio runs around 40 per cent.

Mr. STERLING. Do you mean to say that insurance companies pay losses amounting to 57 per cent and it takes 42 per cent to operate the companies?

Mr. STEWART. Yes, sir. These are statistics compiled by the National Board of Fire Underwriters, for one, and then again, I have here a table, an exhibit, I will say, showing something like 135 domestic insurance companies, and their loss ratio for the period that they have been in business, not taking into account unpaid losses they had outstanding at the end of the period, is 53.6 per cent; and the experience of these same companies for the year 1917, as I mentioned, shows a loss ratio of 57 per cent and an expense ratio of 42.4 per cent.

Mr. STERLING. It takes almost half the premiums that they collect in order to run the companies?

Mr. STEWART. Yes, sir. The average expense ratio is around 40 per cent.

Mr. MOORE. Is that expense made up chiefly of salaries?

Mr. STEWART. That includes salaries, commissions, taxes, fees, and charges of any and every kind.

Mr. MOORE. What relation do salaries bear to commissions, as a rule?

Mr. STEWART. That I am unable to say.

Mr. MOORE. Commissions, of course, are paid for drumming up business?

Mr. STEWART. Yes. Some companies are operated on a commission basis altogether and pay no salaries.

Mr. MOORE. Some of them are perpetual, run as long as they do business?

Mr. STEWART. What do you mean, commissions?

Mr. MOORE. The commissions run as long as the policies are in effect, do they not? I mean, as long as the premiums are collected?

Mr. STEWART. Yes.

Mr. MOORE. A sort of perpetual commissions?

Mr. STEWART. Yes, sir; and the same commission applies to renewal premiums.

Mr. MOORE. Have you any idea, taking any given company, how much is paid in commissions and how much in salaries?

Mr. STEWART. No, sir; I have no statistics available for that, not to my knowledge.

Mr. HAWLEY. How do you create reserves? If your operating expense is 42 per cent and your losses amount to 57 per cent how do you create a reserve?

Mr. STEWART. These losses are all reported to the various companies through which they operate, with the estimated amounts. As to some losses, of course, it is impossible to tell just what they are going to work out, but experience has shown that the companies come within about 10 per cent of the actual amount of losses paid.

Mr. HAWLEY. Fifty per cent is the estimated loss?

Mr. STEWART. That is the incurred loss, which includes both the losses actually paid and those which are unpaid. The paid amount generally comes within 10 per cent or 12 per cent of the estimate which the company originally charged off.

Mr. HAWLEY. I do not yet see how you create a reserve under those conditions. You must have some reserve funds out of which to pay an unexpectedly large amount of losses in any one year.

Mr. STEWART. Yes, sir; that is what we are required to set aside each year by the State insurance departments.

Mr. HAWLEY. Is that included in the 42 per cent?

Mr. STEWART. No, sir; that is included in the 57 per cent.

Mr. GIBBS L. BAKER. In order to clear that up, may I ask a question? What effect would this amendment have on the revenue as to reducing it or increasing it?

Mr. STEWART. As long as the companies make money it would not reduce the revenue. It is only in event of a company losing money whereby it would be penalized, having already paid the tax on the previous year's business.

Mr. GARNER. Do you mean that the position of the insurance company is this: If you lose money this year, and make money next year, you want the law so drawn that you may have credit for what you lose this year out of next year's income?

Mr. STEWART. No; we want credit for it this year, not next year.

Mr. GARNER. Do they charge you anything if you make a loss this year?

Mr. STEWART. Yes, sir; they do. Perhaps I can give it to you in concrete form: Assume that a company writes a premium income of \$100,000. Our experience shows that it costs 40 per cent, or \$40,000, to get that business. The loss ratio averages around 60 per cent, which would be \$60,000. Now, at the end of the year if we had paid out \$40,000 of these losses we would still have unpaid \$20,000 of accrued losses which we are not allowed to deduct, though on that amount we pay taxes.

Mr. GARNER. Well, wouldn't you be allowed to deduct it next year, that \$20,000?

Mr. STEWART. Yes; if we make enough money.

Mr. GARNER. Suppose you have the same condition next year; you would have a deduction on next year's business of \$20,000 coming over from the previous year?

Mr. STEWART. Providing it was paid during the next year we could deduct it, but if we had the same experience, the ratio of 60 and 40, there wouldn't be any income to deduct it from.

Mr. GARNER. We have had a great many gentlemen coming before us, asking if a man in business loses \$100,000 this year and therefore pays no taxes, and next year he makes \$100,000 profit and pays taxes, and the next year he loses \$100,000, and the following year makes \$100,000, that he be allowed an offset. If we followed that plan we would never get any money, would we?

Mr. STEWART. We do not want that. We just want each year to stand on its own business.

Mr. CRISP. Is this your position? If your income is \$100,000 and \$40,000 represents your expenses and \$60,000 your losses, that you want to be charged on what you do? I mean, if you had deaths during the year sufficient for you to pay out \$40,000, or that you actually paid out for death benefits or fire losses, as the case may be, and in your case it means fire losses, representing \$40,000, and if there were \$20,000 more to be settled for that year, you estimate that you would lose \$20,000 that you have not actually lost and have not actually paid out but you have paid taxes on? Am I correct in that?

Mr. STEWART. Yes, sir.

Mr. CRISP. In making your tax return for that year you want to be allowed to deduct that \$20,000 that you have not paid out and have not lost except theoretically?

Mr. STEWART. Yes; which we have been compelled to set up a reserve for by the workings of a State law.

Mr. CRISP. I thought that was your position.

Mr. STEWART. That is the point.

The CHAIRMAN. Does any other gentleman want to ask Mr. Stewart any questions? If not we will hear Mr. Dyer.

**STATEMENT BY ROBERT O. DYER, ACCOUNTANT, NO. 10 WALL STREET, NEW YORK CITY.**

Mr. DYER. The question involved is largely one of accounting. The general principles laid down in the more recent acts permit corporations to elect upon which basis they will make their returns—an accrual or a cash basis. These fire and marine insurance companies keep their books of accounts by approved methods, and, necessarily, they follow accruals throughout. They make their reports as required by State laws and regulations, on the forms prescribed, which are changed at the whim or caprice of the insurance department of any State. Therefore there is no uniformity of State reports, which State reports are the basis of their tax return to the Federal Government. All other corporations are permitted to make returns on the basis of their books of account, and as a rule I suppose 90 per cent of them make

returns on the accrued basis. The regulations have been quite liberal.

Mr. STERLING. Please explain the accrued basis.

Mr. DYER. That is on a double-entry set of bookkeeping. Take taxes, for instance, accrued but not paid. They are liabilities set up and acknowledged in the books and recognized by the board of directors and officers of the corporation. The Treasury Department has been quite liberal in recognizing charges or liabilities of that kind in the treatment of practically all corporations until they reach fire and marine insurance companies. Under the head of "deduction," as found in the revised regulations of the Treasury Department we find "paid" or "actually paid" dealt with. I will read:

ARTICLE 126. "Paid" or "actually paid."—"Paid" or "actually paid," within the meaning of this title, does not necessarily contemplate that there shall be an actual disbursement in cash or its equivalent. If the amount involved represents an actual expense or element of cost in the production of the income of the year, it will be properly deductible even though not actually disbursed in cash, provided it is so entered upon the books of the company as to constitute a liability against its assets, and provided further, that the income is also returned upon an accrued basis.

It is generally understood, and I do not think there is an exception to the rule, that these 100-and-odd insurance companies all keep books on that accrued basis; and further, the act of 1916 recognized the necessity of establishing a basis for accounting, and there is a provision in the law that the regulations deal with and interpret pertaining to the accrued basis and the cash basis. I would like to read further under article 126:

If in the course of its business, a corporation credits the accounts of individuals, firms, or corporations with the amount of any expenses, interest, rentals, wages, etc., due them, thereby making them subject to the personal drawings of such creditors, or if expenses actually incurred are vouchered in definite amounts, the amounts so credited or vouchered may be treated as paid, and if the amounts so credited or vouchered are expenses incurred concurrently with and in the production of the income of the year, they may be allowably deducted therefrom.

This ruling must not be construed to allow as a deduction any accrued charges which if paid in cash or otherwise would not be deductible.

Of course, that is understood. The language of the excise tax, and pertaining to insurance companies, is practically the same that we find in the act of September 8, 1916, and of October 3, 1913, and the recent act of October 3, 1917, amending the act of 1916. Practically all corporations are permitted to make their returns as they may elect, and to claim liabilities that are properly recognizable and chargeable in their books of account, and such deductions are practically in every instance allowable unless open to question in the examination made by the Treasury Department.

The intent evidently of Congress when the question was first considered was to permit the deduction from their earnings of reserves required by law. It is a very broad term. It did not say "State law" or "Federal law." In the administration of the act under the Treasury Department it was recognized that they had many State laws to deal with. Very few are identical. A few States, as Mr. Baker has recited, California, Illinois, and Missouri, require specifically that if such is the claim reserves shall be set up.

Other States, New York, Pennsylvania, Maryland, and probably all the Eastern States, by indirection require the same thing, but the department is limited to the language of the act "required by law." These regulations have the force and effect of a statute until over-

turned by the courts or reversed by a successor in office. Regulations of insurance departments made in pursuance of law have the force and effect of law, and the law by indirection requires these reserves to be set up. Fire and marine insurance companies are paying taxes often on an actual deficit rather than on income, by reason of the fact that the loss reserves they are compelled to set up in their books are not specifically required except by statute, or only by indirection I mean. Therefore the remedy we ask is that you interpret the meaning of Congress "reserves required by law."

Mr. Barker, of New York, representing about 20 insurance companies similarly situated, would be glad to be heard on the same subject.

The CHAIRMAN. We will be glad to hear Mr. Barker.

**STATEMENT OF JOHN T. BARKER, NO. 27 WILLIAM STREET,  
NEW YORK CITY.**

I represent the following insurance companies:

Norske Lloyd Insurance Co. (Ltd.), of Christiania; Whist & Co. (Inc.), United States manager, marine department.

International Fire & Marine Agency Corporation, United States manager, fire department.

Norwegian Assurance Union (Ltd.); Robert Van Iderstine, United States manager. Western Assurance Co. of Toronto; Whist & Co. (Inc.), United States manager, marine department.

Union Insurance Society of Canton; Willcox, Peck & Hughes, United States manager.

Yang-Tsze Insurance Association of Shanghai; Willcox, Peck & Hughes, United States manager.

Northern Insurance Co. of Moscow; Fester & Folsom (Inc.), United States manager.

Warsaw Fire Insurance Co. of Warsaw; Fester & Folsom (Inc.), United States manager.

Union & Phenix Insurance Co. of Spain; Fester & Folsom (Inc.), United States manager.

Salamandra Insurance Co.; Meinel & Wemple (Inc.), United States manager.

Second Russian Insurance Co.; Meinel & Wemple (Inc.), United States manager.

American Equitable Assurance Co. of New York.

Equitable Underwriters of New York.

Knickerbocker Insurance Co. of New York.

New York Fire and Marine Underwriters.

Norwegian Underwriters.

Assurance Underwriters of America.

Lloyds New York.

Norwegian Globe Insurance Co.; Robert Van Iderstine, United States manager.

European Accident Insurance Co. (Ltd.); Fester & Folsom (Inc.), United States manager.

There is very little that I can add to what has been said by the gentlemen who have preceded me. They have covered the ground so carefully that if I should attempt to extend my remarks it would merely be by way of repetition, and I do not think the committee would care to listen to repetition.

I would like to add, however, that what we wish is to have the law made specific, so that we can understand it. To-day as I understand the law, and I have had some experience with it though not as much as these other gentlemen, we are practically paying a tax upon a loss. As things stand to-day that is the situation at the end of the year when we go to make up our accounts and I might suggest, by way of illustration, suppose we find we have losses not yet paid to the extent of \$100,000. As the law reads to-day we have no right whatever to

make a deduction, and the result is that \$100,000 goes into the returns exactly as it is. The following year on the face of our own return we are taxed upon the full amount of that loss. The next year we pay the tax. We are denied the right to deduct the tax from the income tax return. As a matter of fact almost every single dollar, and perhaps every single dollar, is an absolute liability upon the books and which we are compelled to meet in one way or another.

Mr. GARNER. Is that the fault of the present statute or the fault of the Internal Revenue Department in the construction of the statute?

Mr. BARKER. We are inclined to think it is the fault of the statute. You know as well as I do that we sometimes differ in the construction of statutes, and we think frequently, and perhaps it is true in this instance, if it were made more specific and definite in its language we would be sure of a uniform construction of it. As it is to-day every State in the Union may, if we do business in all the States, cause us to make different returns. As has been well stated by Mr. Baker and Mr. Stewart separate returns may be required according to the desire of the commissioner of any State. I think Illinois requires one statement, and Pennsylvania another, and some other State will require another one.

Mr. GARNER. How could that be regulated by the Treasury Department? You don't think the commissioner of insurance of Pennsylvania, or of Illinois, would require you, if there were a general order issued that an insurance company would report at its own home place?

Mr. BARKER. There is no law of the Federal Government on reserves, and the result is the only law we can conform to is the law of the State in which the business is transacted.

Mr. GREEN. Have you gentlemen prepared an amendment that you think would fit the situation?

Mr. BARKER. Yes, sir; and it has been submitted by Mr. Baker.

Mr. GREEN. All right. That must have been done before I came in.

Mr. BAKER. Now, gentlemen of the committee, we want something definite in the statute, and to be allowed a deduction for these losses when they come. If they are put off to the time actually paid, and will not be paid until next year, we do not think in the meantime we should be taxed.

Mr. DIXON. You want a deduction on the face of the policy?

Mr. BARKER. We want a deduction on the accrual basis of our returns. The accrual basis is simply double-entry bookkeeping, and merely takes in everything that is brought up to the day. It is not necessarily due.

Mr. DIXON. Don't you adjust losses as rapidly as you can?

Mr. BARKER. That is the policy.

Mr. DIXON. About how rapidly do you pay them?

Mr. BARKER. Just as fast as they can possibly be determined.

Mr. DIXON. Then the amount carried over must necessarily be limited to the last one or two months in the year?

Mr. BARKER. Yes; it should be that way, and I think perhaps on the whole would be true, because it is the policy of all insurance companies to settle losses as quickly as possible.

Mr. DIXON. If the losses for the month of December were \$100,000 and unadjusted losses were \$75,000 you would ask a deduction for \$100,000 in December?

Mr. BARKER. Well, we would ask for a fair deduction. I don't know just exactly what the amount would be. It would have to be reasonable. We would have to swear to the returns. The reserves themselves would require that. We would pay upon them.

Mr. DIXON. It could be adjusted in the return for the next year?

Mr. BARKER. Yes. When we come to pay taxes the tax would be fair. We do not want to escape taxation, and believe in taxation, but would like it to be uniform and definite and positive so as not to be taxed upon obvious losses.

Mr. RAINEY. This is not exactly appropos to what you have been discussing, but for the information of the committee in making up the next war revenue bill I want to take up with you, and have no doubt you are advised about it, the subject of insurance which is written in this country by foreign insurance companies who are not authorized to do business here and have no domicile in any of our States. Do you know about that?

Mr. BARKER. How is that?

Mr. RAINEY. Do you know of any business of that kind which we have not so far reached in our tax provisions? We have no law which prevents the owner of a ship from taking out a policy in a foreign country, direct in that foreign country, through its foreign office. I understand of this class of insurance, called transportation and marine insurance, one of your insurance presidents not long ago said with reference to the subject that \$25,000,000 went abroad each year in premiums. These companies do not do business in this country at all; that is, so far as maintaining an office here, and are not authorized to do business in any State of the Union, and yet it seems that they are impinging on the business of foreign companies which are authorized to do business here, and on the business of our own domestic companies. Do you know about business transacted in that way, and how we can reach it for taxation?

Mr. BARKER. I have no information that I could advance to the committee to-day upon which it might depend. I should be very glad to appear before the committee at any time it might have a hearing on that subject.

Mr. RAINEY. If you can get up some data I would like to have it. I favor taxing that business.

Mr. BARKER. I think conditions have changed very largely in the last few months. Of course foreign companies issue what they call "cover notes," perhaps bought by cable. But the funds themselves are reached by taxation. When you go to remit, the amounts received on these notes are taxable at the source. Foreign corporations and foreign individuals are reached at the source. Domestic corporations and domestic individuals are reached by information indirectly at the source.

Mr. RAINEY. We will say that A owns a ship or some sort of floating structure and he takes out a policy directly from some Liverpool company, doing business only in England and not authorized by any State of the Union to do business here. If that ship is lost you say in some way it is taxed?

Mr. BARKER. Well, of course, the premium is collected at some place.

Mr. RAINEY. He remits the premium abroad.

Mr. BARKER. If he remits you see you have your remedy there under the—well I do not know what you call it, but I believe the alien enemy law, or whatever it may be. They have their remedies there to reach funds which are remitted.

Mr. RAINEY. What is the remedy? I do not know of any remedy.

Mr. BARKER. You see insurance companies here doing business abroad through foreign correspondents are required to furnish statements to the Alien Property Custodian, or whoever the proper man may be—

Mr. RAINEY (interposing). But that is not the situation here, and I do not think you understand the question. The insurance contract is made in a foreign country, and although the man taking out the contract is an American citizen he pays nothing here but pays it on foreign soil.

Mr. BARKER. He has a return to make.

Mr. GARNER. He has it paid by exchange in Liverpool.

Mr. BARKER. I do not mean by that that you should not amend the law to cover any such case.

Mr. GARNER. Where, Mr. Rainey asks, is it covered by the present law?

Mr. BARKER. In the making of his return. It is his duty to see that taxes are deducted and paid to the United States Government, because he is liable for the return; he is the source.

Mr. RAINEY. I do not think you can reach such a case in this revenue law.

Mr. FAIRCHILD. We have nothing here to cover that situation that I know of.

Mr. BARKER. He must make a return for payments made. Even domestic companies have to do that.

Mr. FAIRCHILD. You are talking about an altogether different matter I think.

Mr. BARKER. Perhaps I am. I think perhaps I have a different point in mind. As a matter of fact he is paying out funds, he has got to make his returns for payments made.

Mr. FAIRCHILD. You are talking about an altogether different matter I think.

Mr. BARKER. Perhaps I have got the wrong point in my mind.

Mr. RAINEY. I have been informed different individuals in this country take out marine and transportation insurance abroad without the intervention of any agency here at all and from companies that don't do business here at all.

Mr. BARKER. That I believe to be true.

Mr. RAINEY. And that the premiums they send abroad some companies estimate it as high as \$50,000,000 a year and we can't reach them at all.

Mr. BARKER. That is a matter I would have to look up.

Mr. RAINEY. I wish you would. We want to get all the taxes we can.

Mr. BARKER. There are quite a number of people—new companies being organized in this country to-day—within the last few months, and it is to the interest of the people whom I represent to see that the taxation is made fair. I can't speak from positive knowledge to-day, but I may at some later time.

**STATEMENT OF MR. CLARENCE E. REID, OF NEWARK, N. J.,  
REPRESENTING THE NATURAL CARBONIC GAS CO. AND  
ALSO COMPRESSED GAS MANUFACTURERS' ASSOCIATION  
OF AMERICA.**

Mr. REID: Mr. Chairman and gentlemen of the committee, I have only a few words to say, assuming that it is the intention of the committee to tax the soft-drink industry along the same lines as in the present bill, and I have put this in the form of a short brief which I will read, and that is about all the time I will take up [reading]:

I am pleased to accept the opportunity offered, to present to you facts for your consideration in connection with additional revenue tax legislation. I represent the Natural Carbonic Gas Co., at Newark, N. J., also the Compressed Gas Manufacturers' Association of the United States, whose membership comprises 90 per cent of the manufacturers of carbonic gas in the United States.

It has undoubtedly been evident to you from the statements made by the several gentlemen who have been heard by your committee in connection with the soft drink industry, that said industry is willing and anxious to pay the limit of the tax that it can stand without destruction of the business. I will not repeat the arguments of the other gentlemen who have been heard in connection with the soft-drink industry, but would say that I, representing the carbonic-gas industry as a whole, support their position and statements as presented at the hearing held by your committee on the 14th instant.

I, however, respectfully submit that in the drawing of a new bill, there are certain things which should be corrected which appeared in the previous bill:

First, I suggest that a proper ratio be established between the tax on carbonic gas sold in drums and the carbonic gas manufactured by the bottler for use in his own beverages.

It was conclusively shown to the committee at the hearings in connection with the previous bill and recommended to the House in report No. 45 on H. R. 4280 that the proper ratio of tax was 1 cent per gallon on the beverage manufactured by the manufacturer, producer, or importer of carbonic gas, as against each 4 cents per pound taxed on carbonic gas in drums for the carbonating of soft drinks.

Therefore, I respectfully submit that the proper basis should be one to four; that is 1 cent per gallon on the beverage for each 4 cents per pound on the gas. If the tax in the new bill is to be 6 cents per pound on the gas sold in drums, it should be 14 cents per gallon on the beverage manufactured and sold by the manufacturer, producer, or importer of the gas, or whatever the amount of the tax, this ratio should be maintained.

Second, There is a discrepancy in the present revenue tax bill, H. R. 4280, in sections 313 and 315, as follows. Section 313, paragraph (b), reads:

"Sec. 313, paragraph (b). Upon all unfermented grape juice, soft drinks, or artificial mineral waters (not carbonated), and fermented liquors containing less than one-half per centum of alcohol, sold by the manufacturer, producer, or importer thereof, in bottles or other closed containers, and upon all ginger ale, root beer, sarsaparilla, pop, and other carbonated waters or beverages, manufactured and sold by the manufacturer, producer, or importer of the carbonic acid gas used in carbonating the same, a tax of 1 cent per gallon."

Section 315 reads:

"Sec. 315. That upon all carbonic acid gas in drums or other containers (intended for use in the manufacture or production of carbonated water or other drinks) sold by the manufacturer, producer, or importer thereof, there shall be levied, assessed, collected, etc."

The intention of your committee at that time, as expressed in your report No. 45, was to tax soft drinks, and beyond question it was the intention that both of these paragraphs should apply to the same class of beverages, but you will note that the expression "containing less than one-half per centum of alcohol," was not entered in paragraph 315. This causes a discrimination against the manufacturer of beverages containing one-half per cent of alcohol or more, who purchases the gas in drums, and in favor of the one who manufactures his own gas.

I, therefore, respectfully submit that section 315 should read as follows:

"That upon all carbonic acid gas in drums or other containers (intended for use in the manufacture or production of carbonated water or other drinks containing less than one-half per centum of alcohol) sold by the manufacturer, producer, or importer thereof, there shall be levied, assessed, collected, etc."

There are two inconsistencies in the present bill that we think should be corrected. The other matters I think are pretty well covered by other members representing the soft-drink industry here on the 14th.

Mr. STERLING. Would your suggestion reduce the revenue from that source or increase it?

Mr. REID. The other gentlemen connected with the industry suggested an increase.

Mr. MOORE. That is to say, if your suggestion is adopted, you would get more revenue?

Mr. REID. Get more revenue.

Mr. GARNER. That is not necessarily true with the change of the wording of it but the change of the rate. Suppose you leave out the words "one-half per cent alcohol" in section 315 as it is in section 313, what difference would that have?

Mr. REID. That the manufacturers of drinks containing one-half per cent of alcohol or more if they manufacture their own gas they are not taxed and no revenue is produced. The result, of course, is no revenue will be gotten.

Mr. GARNER. If we want to get more revenue and based on the same law as now, we would simply leave out the words "one-half per cent alcohol."

Mr. REID. Then it would be a soft-drink tax.

Mr. GARNER. But we would get more revenue out of that?

Mr. REID. Yes, sir. Carbonic gas, no matter in what manner used, if it is taxed the 100 per cent it now carries would produce more revenue.

Mr. GARNER. If we put the provision in 313 that is in 315, then all carbonic gas used in—in section 313 you only pay tax on the gas that goes into soft drinks; that is less than one-half per cent alcohol, is that true?

Mr. REID. Yes.

Mr. GARNER. All the carbonic gas that goes into drinks above that don't tax?

Mr. REID. Yes, sir.

Mr. GARNER. If you made it in 313 so that the only tax on carbonic gas would be the tax that went in below one-half per cent alcohol?

Mr. REID. Yes, sir.

Mr. GARNER. And above that there is no tax?

Mr. REID. Yes, sir.

Mr. GARNER. Whereas if you cut it out of 315 and 313 you get more revenue?

Mr. REID. Yes; but I imagine it was put in for this reason: A great many of the ingredients put in there are carbonated with their own gas, like alcoholic drinks, champagne, or beer. Beer, some of it, is carbonated artificially by simply collecting it in one part of the brewery and putting it in another part of the brewery, and some it is simply fermented and not carbonated. That would permit the one and not the other. My idea on this was that it was a soft drink.

Mr. FAIRCHILD. You want to keep up the distinction?

Mr. REID. That is the idea. The idea is to have the two paragraphs consistent, not let the soft-drink manufacturer who produces his own gas be free of the tax—that is, if we assume it is a soft drink, or any other drink above one-half per cent alcohol—and the other, who purchases in drums, have to pay the tax on it. That was the whole point in that first suggestion.

Mr. GARNER. And you have no objection to going up on the rate of taxation?

Mr. REID. No. Anything that the industry will stand without destruction. Of course, you gentlemen appreciate there is a limit and you can make the tax so high you will get no revenue.

Mr. GARNER. Then you are perfectly willing that the soft-drink industry be put on the same basis as beer, liquor, and cigars; that is, that the taxation shall be that rate that will get the largest amount of revenue into the Treasury?

Mr. REID. That is our idea.

Mr. GARNER. The carbonic gas going into one will be the same as the other. They are all put on the same basis. Our basis of taxation of beer, cigars, and liquor is the rate that will get the largest amount of revenue into the Treasury, and if you make that difference there will be no—

Mr. REID. No; but as I take it from this present bill, this one-half of 1 per cent alcohol distinguishes the soft-drink business and what was the hard drink, as it were. That was my only point. It should be consistent.

Mr. GARNER. We were not taxing the soft drinks as much as we were the hard drinks.

Mr. REID. You are taxing here the soft drinks through carbonic gas entirely.

Mr. GARNER. I understand we are only taxing soft drinks at its source, as it were, not by the gallon. What would you say about taxing them by the gross receipts—soft drinks?

Mr. REID. When I came down here with some other members of the carbonic-gas industry a year ago and you gentlemen shoved this bomb under our noses—200 per cent tax on our products—we tried to find a way out, putting it on someone else. I mean not putting it on someone else except the burden of collecting it. But when we had canvassed the matter from every standpoint possible, we could walk the man up to the soda fountain and have him take the glass of soda water, but there was no registering machine or anything that would tabulate how many drinks of soda water he put down, and we could not see how you were going to collect it. That was the reason given for putting the tax on carbonic gas. We could not understand why we must pay so heavy a tax. When we came down here we were given to understand it wasn't carbonic gas that was being taxed, but soft drinks being taxed at the source. It is quite a burden to the carbonic-gas industry. We would like to be relieved of it if there is any better way of collecting it. But from what I can understand I fear that the Treasury Department will be up against the providing of the machinery necessary for collecting it. I remember when I came down a year ago I was told that in the Spanish-American War the stamp tax cost 30 to 35 per cent of the total receipts to collect it, and that was

one of the reasons why you were going to put it on carbonic gas. There are hundreds of thousands of handlers of soft drinks in the United States. Mr. Cummings, I believe, made the statement the other day that there were 100,000 soda fountains.

Mr. GARNER. One hundred and ten thousand.

Mr. REID. That is a very small number of the sellers of soft drinks. We take practically every grocery store, every drug store, every confectionery store, every stand, every general store.

Mr. FAIRCHILD. Every little stand.

Mr. REID. Every little fruit stand until it runs up to about 400,000 in the United States, people in the retail business that resell the soft drinks.

Mr. MOORE. Have you any idea how large a proportion of these soft drinks at stores were sold, where they don't bother to drink out of a glass, but drink out of a bottle?

Mr. REID. That is becoming more and more the habit, because of the sanitary laws. Our sanitary laws make it necessary to either use a straw or have some very elaborate system of cleansing glasses, as provided in some States. The result is that—

Mr. MOORE (interposing). Are you aware that all over the country, out-of-way places, where soft drinks are sold, boys will buy it and pick it up and drink it out of bottle?

Mr. REID. Yes, sir; and on the trains. I would like to see it go the other way, but that is the—

Mr. MOORE. To what extent is that done?

Mr. REID. Why, it would only be a guess, but I should say pretty close to one-half of the business.

Mr. MOORE. That would be important in consideration of ways and means to reach those matters, to check them up.

Mr. REID. I notice a suggestion made that the soda fountains wanted you to put it on the other side. It isn't in my province to find reasons why you can't. But I noticed a remark about the soda fountains and their checking system, but even the soda fountain mentioned, I believe, Ogram's, here in Washington—I am not familiar with it and I don't know what their system is, but knowing the business somewhat I would say if you go by there the chances are the checks that are working through that cash register, working all the day long, do not represent soda water only, but they represent ice cream, cigars, lunches, drugs, and everything else.

Mr. MOORE. That is true, but they could easily check it up there.

Mr. REID. You could check it more easily with the larger concerns and the more systematic concerns; yes.

Mr. MOORE. I wanted to know if you had any suggestion for checking up those concerns that use carbonic gas drinks in cases where they drink out of bottles?

Mr. REID. Of course if the bottles were checked that would be only a very small per cent of it. The bottles are supposed to come back.

Mr. FAIRCHILD. About the only way to do that would be to have a system on it?

Mr. REID. The trouble is this: Most of these soft goods are handled in open wagons, in bottles without stamps on them, and I understand that was the trouble in previous years, a rain would come up (?) and the bottles all had the stamp on before, but they were gone.

The CHAIRMAN. That was what they claimed—that they had stamps on.

Mr. REID. I said they had them on. I haven't anything further unless you gentlemen have got some other questions. But we would like to get rid of the burden if the Treasury Department can produce greater revenue through putting it some other way, and if they can handle the proposition.

The CHAIRMAN. All right, Mr. Reid. We are much obliged.

**STATEMENT OF CAPT. WILLIAM P. WHITE, UNITED STATES NAVY, RETIRED, TREASURER AND GENERAL MANAGER OF THE LOWELL PAPER TUBE CORPORATION, LOWELL, MASS.**

Capt. WHITE. I seem to have an advantage over some of those who come before you, because I am not only a business man, but I have also been a professional man, so that I can bring the two point views to this question. I feel one of the questions at fault is a question of fundamentals.

Recently, in Indianapolis, this was promulgated:

There must be a single test and standard for every public policy. Every measure must be put to this test: Is it just? Is it for the benefit of the average man without influence or privilege? Does it in real fact embody the highest conception of social justice and of right dealing without regard to person or class or special interest?

Mr. DIXON. That is part of the Democratic convention.

Capt. WHITE. But that is real good Republican doctrine. I am willing to subject my arguments to that test.

Mr. MOORE. Are you willing to state your authority for that suggestion?

Capt. WHITE. I got it from a newspaper. It is supposed to be a report of the meeting of the Democratic convention.

Mr. GARNER. What do you mean by report, platform, or what?

Capt. WHITE. Embodied in the platform, that is the idea I got.

Mr. GARNER. One of the planks in the Democratic platform adopted in the State of Indiana?

Capt. WHITE. Yes, sir.

Mr. SLOAN. How long since was that?

Capt. WHITE. Last month, I think.

Mr. SLOAN. It is not older than 30 days, is it?

Mr. MOORE. Did you come all the way down here from Massachusetts to discover for us that there was a plank in the Democratic platform demanding fairness and justice?

Capt. WHITE. I thought it would be well to state that because some of the gentlemen that have been before you don't seem to understand the meaning of that statement.

Mr. SLOAN. That is just a matter or a bit of Indianapolis humor you are reading, isn't it?

Capt. WHITE. I hope we may be guided in the consideration of this question by that principle enunciated.

Following that, I believe our Government is founded on the equal privilege of its citizens to a voice in its government; to equal protection of its laws; to equal duty of service to protect the Government; and to equal responsibilities to contribute through taxation to the support of the Government, and I am sorry to say that some of the arguments used this morning do not contain that, I feel, fundamental

principle, because some of our friends have been recently reading literature and haven't profited by the example or doctrine they preach of what is going on in Russia. It is the test of that and the effect that doctrine will have in the United States as in Russia. It might not be so rapid, but the ultimate effect will be the same.

Mr. **FORDNEY**. One man stated this morning he built up a great industry by adding to the industry the money he made in the business.

Capt. **WHITE**. That has been one of the fundamental principles of American business, to put the profits into the business so as to build it up. In fact, all our previous taxation has been with the tendency to promote thrift, and that is one of the fundamental principles of taxation, to promote thrift and if we depart from that principle we are not going to have the means of financing this war through the borrowing which the Government must necessarily make in order to pay the enormous bills that are rolling up, and that has to be thought of in your taxation.

Mr. **DICKINSON**. You can't put it all back. You have got to keep out enough to meet the necessities of the Government and the public in time of war.

Capt. **WHITE**. I say I feel it is necessary. It may not be necessary, but I feel it is necessary for the Government to borrow. The Government has got to borrow. It has already borrowed, and the response has been very general, and the last response has been more unusual, but not more generous, than the previous ones.

Mr. **DICKINSON**. Then, if you borrow the money to carry on the war, you have got to meet the interest some time, and then you must keep out enough to meet these interest demands and the ordinary taxes of the Government and not put all of that back into the business. It would be impossible.

Capt. **WHITE**. We will get to that presently. A tax should be so laid as to conserve the industries of the country and it should be so laid as to be equitable to each one of us so that we should contribute in proportion to our abilities to contribute. Taxes should be so formed that it would not interfere with the economic principles.

Tax law should be simple in form so as to be readily understood and without the necessity for legal interpretation. I do not know what it will cost to collect the income that has accrued to the Government during the last year, but it cost the people who made out their returns ten times what it cost the Government to collect it, and it isn't yet definitely settled what that tax is going to be, and it will probably be years before it is definitely settled what the tax law that you passed last session means to those who pay the tax.

Mr. **FAIRCHILD**. Is that surprising? Hasn't that occurred every time that any nation has suddenly undertaken to increase its taxes very largely?

Capt. **WHITE**. I feel probably that the Members of the former majority that were in Congress belong to the legal persuasion.

Mr. **FAIRCHILD**. Yes; because in ordinary legislation one sees no connection with taxes. We have never been able as legislators, either in State or National legislation, to lay down principles that are so delightfully plain and easy that a wayfaring man can understand it.

Capt. WHITE. I understand it is no longer apparently just to hang a man for obeying a law that was issued some three or four thousand years ago. We have gotten past the law—

Mr. FAIRCHILD (interposing). We have got treatise after treatise on murder as we have on taxation, and the difficulties of solving it are still very great. Another law is the statute of frauds law, which reads just as delightfully plain as possible; still we have great shelves filled with books over here in the library interpreting it.

Capt. WHITE. I feel we can pass a law that is much simpler in its location than the present law, and one that would continue after the present Congress.

The CHAIRMAN. What is the special provision of the existing law you desire to call the attention of the committee to as being so unjust and inequitable?

Capt. WHITE. I take your tax on excess profits and incomes from corporations.

The CHAIRMAN. What is your company?

Capt. WHITE. Lowell Paper Tube Co. We make tubes anywhere from the size of a knitting needle up to 40 inches in diameter.

The CHAIRMAN. What is it used for?

Capt. WHITE. For winding paper and for yarn, and things of that kind.

The CHAIRMAN. How much taxes for this year, fiscal year ending June 30, 1918, will you have to pay for excess profits?

Capt. WHITE. We didn't make any excess profits.

The CHAIRMAN. Were you making any excess profits before the war?

Capt. WHITE. I don't know what you call excess profits.

The CHAIRMAN. What percentage on your capital did you make last year?

Capt. WHITE. I say that varies from year to year. Normal years about 20 per cent on the invested capital.

The CHAIRMAN. How much this last year?

Capt. WHITE. It was about one-tenth.

The CHAIRMAN. About one-tenth?

Capt. WHITE. About 1 per cent of the invested capital—no; 10 per cent of the invested capital.

The CHAIRMAN. You mean you are making less net profits this year than you did before?

Capt. WHITE. Than ever before since I have been in the business; net profit.

The CHAIRMAN. Why was that?

Capt. WHITE. Because we had to pay a great deal for paper in the middle of last year and the value of paper shrunk and business fell off, nobody knows why. We did about the same volume of business as the year before, but we had to pay enormously more for our materials and labor, and we were not able to add it on to the consumer.

The CHAIRMAN. How much did you increase your price; what per cent?

Capt. WHITE. During last year from 10 to 20 per cent, I think.

The CHAIRMAN. How much is the capital of your company?

Capt. WHITE. I prefer not to state the capital of the company, if you please.

The CHAIRMAN. What part of your capital is water?

Capt. WHITE. There isn't any water.

The CHAIRMAN. I know, but how much stock did you really issue in excess of the actual cash you put in?

Capt. WHITE. I have been in the business for six or seven years and when I entered the business I reorganized the business in a way; and for the valuation I received I paid actual cash value for what I received, and what I have received since then I paid actual cash value or the value in service.

Mr. GARNER. Do you mean that you paid 100 per cent for each dollar of stock you received?

Capt. WHITE. For each dollar of stock I have received I gave 100 per cent cash on the stock.

Mr. DICKINSON. Did I understand you to say you had no excess profits this last year?

Capt. WHITE. Yes, sir.

Mr. DICKINSON. So you paid no excess-profits tax?

Capt. WHITE. No, sir. I don't come here to argue in regard to the taxes or the taxes on the Lowell Tube Paper Co. I am only interested in the principle of the thing.

The CHAIRMAN. How much stock have you issued out represented by surplus there?

Capt. WHITE. We have not issued any stock to cover surplus.

The CHAIRMAN. But you have a surplus?

Capt. WHITE. We have a surplus; yes.

The CHAIRMAN. Is your stock issued on the market?

Capt. WHITE. No; no stock on the market. It is closely held and is not for sale. There are a half a dozen stockholders.

The CHAIRMAN. Do you mind telling how much cash was paid into the company before you reorganized it?

Capt. WHITE. I say the value that I accepted as being the value of the company was the cash value in the company when I came in and when I reorganized it it was simply to change the form of the stock.

The CHAIRMAN. You issued no more stock when you came in?

Capt. WHITE. No. I say there was preferred stocks given so as to equalize the common stock I acquired, so as to give me control of the corporation.

The CHAIRMAN. When you went into the corporation how many of the old stockholders remained?

Capt. WHITE. They all remained. I simply put so much new capital into the corporation.

The CHAIRMAN. The old stockholders became new stockholders. Now you see you are not interested in the whole company, so you don't mind telling so we can catch some other company. It don't affect you at all. How much stock did you issue after the reorganization in excess of the stocks then outstanding?

Capt. WHITE. I can give you that in proportion. We will suppose that the stock represented the—the ordinary stock represented 100 per cent, the value of the corporation represented 150 per cent, so that in order to distribute the value equitably between the incomer who is going to take 50 per cent of the company's stock, we had to issue to the members who are in the corporation already 50 per cent

of preferred stock. It simply changed the voting power. The preferred stock does not have voting power.

The CHAIRMAN. When was it you reorganized that corporation?

Capt. WHITE. In 1911.

The CHAIRMAN. Did you have any patents that followed that old company?

Capt. WHITE. No patents. We had machinery and processes, good will, and things of that kind.

The CHAIRMAN. Good will; that is the thing I am coming down to. What proportion of the total value of the assets was the value of the good will and processes?

Capt. WHITE. None.

The CHAIRMAN. I thought you said you had bought good will?

Capt. WHITE. I did buy good will but it went in with the company's stock I took, but I say that was not an assessable value, nor was it a value in assessing the——

The CHAIRMAN (interposing). Did the new company buy or issue any stock or pay anything for good will in these processes when it was reorganized?

Capt. WHITE. If I had purchased the entire plant I would have paid 150 per cent on the original capitalization for capital represented by machinery.

The CHAIRMAN. And not by processes or good will?

Capt. WHITE. Not by good will or processes.

The CHAIRMAN. You mentioned good will as one of the elements of valuation in that?

Capt. WHITE. It should have been considered, but it was not considered, because in estimating the thing the corporation was not in a very good financial condition.

The CHAIRMAN. These what you call processes, were they capitalized at all?

Capt. WHITE. No.

The CHAIRMAN. All right, sir. Now, about your excess profits, what provision in the excess-profits tax do you think is so unjust and inequitable?

Capt. WHITE. Because it doesn't apply to all corporations in an equal way. You have got 48 different States under which corporations are organized. Some of them incorporate different ways. Some of them put in as capital stock, or are allowed to, good will or patents.

The CHAIRMAN. You evidently haven't read the bill. Didn't you know there was a provision that you couldn't put good will in?

Capt. WHITE. You couldn't now, but that law was passed after they were organized.

The CHAIRMAN. Is that unjust to prevent them doing so hereafter?

Capt. WHITE. The unjust part of it is when people go into a business on a certain basis and you pass a law of taxation on that basis; it is unjust to people who are in that kind of business; it is inequitable.

The CHAIRMAN. You mean unjust because we don't allow this good will and trade-marks and trade brands that had been capitalized before the war, to permit corporations to deduct in arriving at excess profits tax the amount of the valuation of the good will and trade-marks?

Capt. WHITE. I think it was unjust, yes; but there isn't any adequate way of determining—

The CHAIRMAN (interposing). In other words take the Woolworth Co. It has got \$30,000,000 worth of assets. It put in \$60,000,000 of good will. Do you think it is very unjust not to permit the Woolworth Co. to have a deduction of 9 per cent on that \$60,000,000?

Capt. WHITE. No; I am not defending that; because that good will is a matter of guesswork.

The CHAIRMAN. I thought you said that was the injustice of it in not permitting these gentlemen—

Capt. WHITE (interposing). I didn't say that. The difficulty is arriving at the value of good will.

The CHAIRMAN. How do you measure it?

Capt. WHITE. By the return the business brought in.

Mr. GARNER. Suppose the business earned a revenue on the \$60,000,000 at 10 per cent, would you give them that exemption?

Capt. WHITE. I say if, when that business was incorporated, that question of good will had been considered in capitalizing, then they are justified in selling the stock and saying to their stockholders this stock will pay 5 or 6 or 7 or 8 per cent on this capitalization and the capitalization consists of so and so and so, and enumerate the elements of the capitalization.

The CHAIRMAN. Woolworth never paid a cent for that \$60,000,000. He just put the stock in for what the public generally call water.

Capt. WHITE. I don't agree with you, Mr. Kitchin.

The CHAIRMAN. I know you don't agree with me, but here is your position, that if the Woolworth Co. was making 10 per cent on \$90,000,000, although they only put in \$30,000,000, they should be allowed to capitalize at the rate of \$90,000,000, \$30,000,000 for the real stuff they put in and \$60,000,000 for good will.

Capt. WHITE. You are reorganizing the company now.

The CHAIRMAN. I understand, but your position is that if they were making this much for years and years, this 10 per cent on \$90,000,000, that they should be allowed to capitalize it at \$90,000,000 and have a deduction on the total \$90,000,000.

Although they had only invested \$30,000,000 and \$60,000,000 they regard as trade-marks, trade brands, and so on?

Capt. WHITE. Organization, organized business, and so on.

The CHAIRMAN. Is that your position?

Capt. WHITE. No; it isn't my position.

The CHAIRMAN. I misunderstood you and the committee did, a moment ago.

Capt. WHITE. My position is that when that business was organized, it was organized with certain capital and part of that capital represented the business ability of the men who went into it. They call it good will as it developed. That is where good will comes from, business ability. When it is put in a business it becomes good will, part of it, and those men are entitled to a return just as much as on any other capital put in, but after the business becomes prosperous and is built up in a certain series of years, a volume of business—I will give you an example or exactly what I mean—

The CHAIRMAN (interposing). Take the Woolworth Co. Let's take your proposition. Suppose you and myself and Mr. Garner were to form a corporation and put \$100,000 in that corporation. We would

go to work and we were to make 30 per cent the first year, 30 per cent the next year, and 30 per cent the next year. Now, then, you think it is all right for Mr. Garner and you and myself to issue stocks to ourselves to the amount of \$300,000?

Capt. WHITE. If you please, yes, so far as that is concerned.

The CHAIRMAN. Because it is paying 30 per cent, that is, it is paying 10 per cent on \$300,000, when we only put in \$100,000. That is all we had invested there.

Capt. WHITE. Yes.

The CHAIRMAN. And in the excess-profits tax you and Mr. Garner and myself should have a deduction on 9 per cent of the \$300,000 instead of 9 per cent on \$100,000.

Capt. WHITE. If that is the value of the business, they are entitled to a business return on that valuation.

The CHAIRMAN. Then, if after we issued this \$300,000 stock, instead of \$100,000 as it was when we began it, it is now \$300,000. We are still making \$30,000, 10 per cent. You would think that that stock, every dollar of it, was worth dollar for dollar if it was making 10 per cent?

Capt. WHITE. It may or may not be, depending on future business.

The CHAIRMAN. If we were making it for years?

Capt. WHITE. It must be, or you wouldn't make it.

The CHAIRMAN. If we were depending on a 10 per cent exemption, we would never get any tax from that corporation.

Capt. WHITE. No, sir.

The CHAIRMAN. If we had 9 per cent exemption, we would only get 1 per cent taxes?

Capt. WHITE. Yes, sir.

The CHAIRMAN. That is your position?

Capt. WHITE. Yes, sir. On the other hand, suppose Mr. Woolworth had put in his \$100,000 and had taken out of that \$100,000 invested capital nothing but the most meager returns that would maintain his soul and body together, and had put all his energies and profits back into the business and it comes to a question of where his business is finally extended to \$30,000,000. When you come to measure by your excess taxes you say he should only have an excess tax on \$100,000?

The CHAIRMAN. No. You haven't read the bill. Every one of those 10 years, he would have a deduction for all of that. You come here and denounce this bill. You have just read the newspaper accounts of it. Do you think that is fair for the Congress that passed it practically unanimous and the President that approved it, such a tax as that, do you think it is fair for you to make that statement?

Capt. WHITE. I read as much of that bill as I could probably digest at one time, at one reading.

The CHAIRMAN. You have got the poorest mental digestive capacity of any man that ever appeared before us. If you think the bill wouldn't permit in the case mentioned to deduct that \$100,000 he has put in his business every year, I would suggest that before you come before us to inform us as to the inequities of this bill, that you give it a little more time and digest it a little bit better than you have. Don't you think that you owe us that, and in all good humor

don't you feel that you owe us that much? If you will do that and come back here any time from now till August the 1st—

Capt. WHITE. I think you are in duty bound to hear what I have to say before you commence your questions.

The CHAIRMAN. Go ahead. You said you denounced it as inequitable or unjust, and I asked you to point out an instance, and you pointed out a provision of it, and you show it, and we show that you hadn't read it. Your principle of taxation is just. Be sure the next principle that you denounce as inequitable and unjust that you have read it.

Capt. WHITE. The question comes in as to the form of taxation. The principles that are involved here are as between income taxes and corporation taxes.

The CHAIRMAN. We would like to hear you on that.

Capt. WHITE. Income taxes—and I will say specifically in regard to corporations, because I wish to bring out the corporation income tax. The income taxes of the income of a corporation are not exact entities. They are matters of bookkeeping, even where the conditions are identical, the material is identical, the valuation of that material is a matter of judgment. I will give you specifically, to illustrate, where those inequities may arise. Up in our part of the world we have big cotton mills and we have to carry large stocks of cotton. One of our mills when cotton was low, was able to lay in a large supply of cotton at 10 cents. That cotton has been kept in the storehouse and unused for the last three or four years because they have taken the new product that came in and made it up and sent it out. New sales contracts have been made on the basis of the cost of the cotton in hand. They may have calculated it more than the increased cost of cotton, but when they came to make up the increased return each year—we will suppose two mills had each 500 bales of cotton and one of them paid 26 or 30 cents for that cotton and the other one obtained it at 10 cents a pound. What is the fair valuation to be adjusted according to law of the material in hand? The law provides that you can either take the market value or the invoice value on it. Here are two companies, one of which shows the measurable return which may be subject to excess-profits tax and the other because it is served with cheaper cotton is it not? It is paying a less tax, perhaps, than before the war.

Mr. LONGWORTH. What provision of the law is that?

Capt. WHITE. The interpretation of the law allows as to either the value of the sale stock you have in hand or the invoice stock. The income tax, the excess-profits tax, are on the same basis.

Mr. LONGWORTH. I wish you would tell us what section you are referring to.

Capt. WHITE. I couldn't offhand.

Mr. LONGWORTH. If I show you the law can you?

Capt. WHITE. I suppose I can. No; I can not do it.

The CHAIRMAN. Let's see about the cotton. Here is a mill man that bought his cotton at 10 cents and held it there. And here is another fellow that bought his cotton at 26 cents. The manufacturer that bought it at 10 cents, he manufactures it with a lower raw material and he makes a great deal more profit than the fellow who sold manufactured products made out of the 26-cent cotton.

Capt. WHITE. If he used up his 10-cent cotton, yes.

The CHAIRMAN. Do you think there is any injustice in both of those concerns paying the same rate of income tax?

Capt. WHITE. That their income is determined by the values of the cotton they keep in hand. One man may have used up his cotton and the other may not, and when values are increased it doesn't show. But when they commence to decrease, this man that has a supply of cotton at 26 cents and it goes down to 10 cents, he is going to sustain a loss.

The CHAIRMAN. Yes. Just like I would buy Bethlehem steel at 300 and it goes down to 50. I would sustain a loss if I sold at 50.

Capt. WHITE. The Government doesn't allow you anything for your loss.

The CHAIRMAN. If I sold it when it got up to 500, I would pay a great big tax on that. Is there anything wrong on that principle or not?

Capt. WHITE. I think the principle is wrong; yes.

Mr. LONGWORTH. The reason I asked you the provision of the law you were referred to is the fact that there is no such provision.

Capt. WHITE. I have been misinformed.

The CHAIRMAN. You have been misinformed. They don't consider what you have got on hand. They just consider what you pay for it and what you are getting for your products. That is all.

Capt. WHITE. You have got to keep a reserve of so many bales of cotton. One man has sold his cotton and realized a profit on it; the other hasn't.

The CHAIRMAN. You simply pay a tax on what you put it on your books for. Then, when you sell it, if you have a profit you pay a tax on it, and if you have a loss you don't. I know you are in just as good faith and some of the principles you refer to are just and fine, but you have been misled as to the provisions of this bill by newspapers and by magazines. I know you haven't had time to go down and thoroughly digest that bill, because it is a very difficult proposition to do.

Capt. WHITE. I only asked the advice of a lawyer that I had access to in regard to it.

The CHAIRMAN. There is nothing in the regulations carrying out your suggestion at all.

Capt. WHITE. How, then, is a man to determine the value of his material at the end of the year?

The CHAIRMAN. I tell you the regulation you got mixed up on—it is a regulation of dealers in stocks and bonds and securities, but not on manufacturers at all. Your lawyer had his mind on securities and stocks and bonds.

Capt. WHITE. Well, I will say the question is simply a question of bookkeeping.

Mr. FORDNEY. Let me ask you a question. I think I am right. If I am not, the chairman and other gentlemen of the committee will correct me. In manufacturing an article, if you purchase your raw materials since March, 1913, you may charge for your raw material just what you paid for it, no more and no less.

Capt. WHITE. You mean as a taxable entity?

Mr. FORDNEY. No; just suppose your cotton case, and made so much money out of your business. The way you determine your profit is by way of taking the cost of your raw material and your

labor, and all that. If between what you pay for it and what you sell it for there is a profit, you pay a tax on it. If you purchased your cotton prior to March 1, 1913, the law permits you to value it as of March 1, 1913, and whatever its real market value was that day that value you can put in as a cost charge in your cost production.

Capt. WHITE. Suppose we are buying through the year the same kind of material from one end of the year to the other, and at the beginning of the year the material is worth 10 cents and at the end of the year 20 cents, and we have bought it as we went along, and at the end of the year it is very simple to determine what our manufactured gains are. But suppose at the end of the year we lay in a large supply of this 10-cent material and keep it in stock, and then during the year go and purchase a more valuable material and use it as we go along—

Mr. FORDNEY (interposing). I think under the existing law in a case of that kind you would show what your raw material cost you on an average during the year and that would be the basis of your deduction, not what you paid for the highest price or the lowest price but what did your raw material cost you on the average during the year and how much did you use. You would use as a basis for your valuation the average cost during the year.

Capt. WHITE. Suppose we use during the year the material that we paid 10 cents for—

Mr. FORDNEY (interposing). Suppose during the year you had a certain amount of cotton at 10 cents a pound, during the year you purchase another 50 per cent at 20 cents your average cost of cotton during the year would be the difference between 10 and 20, or, 10 plus 20 divided by 2 or 15 cents.

Capt. WHITE. You started in at 10 and you go up during the year. We may have kept some of this cotton that we paid 26 cents for.

Mr. FORDNEY. In your return you put in what your average cost of raw material was and the Government will allow you for that.

Capt. WHITE. Then I say you wouldn't be fair as regards another industry who had done business in a different way, who had accumulated a large supply of cotton during the year and was entirely without cotton at the end of the year.

Mr. FAIRCHILD. Do you think we could make a law or regulation so as to fit the way of doing business of the business men of the whole country?

Mr. WHITE. I think we can, yes; but not on the basis which you have designed.

Mr. GREEN. No; nor not on any other.

Mr. FORDNEY. On what basis would you recommend that we write it?

Mr. WHITE. On consumption tax. For 50 years we have paid expenses on the basis of consumption tax, and we have collected it when the material consumed came into the United States.

Mr. FORDNEY. Oh, no; I want to differ with you. That is not a consumption tax.

Mr. WHITE. It isn't?

Mr. FORDNEY. No.

Mr. WHITE. We call it a tariff tax. It is paid by the consumer and I call it a consumption tax.

Mr. FORDNEY. I beg to differ with you. Are you a protectionist, or a free trader?

Mr. WHITE. I have voted the Republican ticket all my life.

Mr. FORDNEY. So have I. Let me tell you the difference. A consumption tax is a tax on an article made in this country and consumed here. Germany had a consumption tax of one-half cent a pound on sugar consumed at home; the sugar sent away did not pay that tax.

Mr. WHITE. Mr. Fordney, I agree with your idea in general. But what I mean is a tax on material consumed and paid by the consumer.

Mr. FORDNEY. The point I am making is this: You and I are in the same business, and we pay the same tax. The man that buys our product has to pay the tax; that is, an internal tax. But you may be engaged in this country and I across the sea in the same line of business, and your production is away below mine, but I have to pay a tax to get my goods into this country, and my cost comes up to your cost, due to the tax I have to pay; my Government has permitted you to have that advantage over me; that is the difference in the two taxes. One is an import tax for protection and the other is an internal tax to apply to everyone.

Mr. WHITE. I know, but I say that difference in price is paid by the consumer of the article. If I buy an imported cloth which pays a duty I pay the difference.

Mr. FORDNEY. Unless, Mr. White, that same article is made in this country and would be sold at a higher price, or a lower price, the consumer would not pay it if the foreigner pays it. In most instances the foreigner pays it and makes less profit on it than if there were no tax upon it.

Mr. WHITE. He pays it whenever he didn't have stimulus enough to his business to demand a sufficient increase to take care of the tax.

Mr. FORDNEY. For instance, you take hosiery. Under the old laws hosiery valued at less than a dollar a dozen pairs paid a certain price. This same class of hosiery were made in this country and sold at 25 cents a pair, although the value of those were less than a dollar per dozen pairs abroad. Now, then, the foreigner could not put our men out of business in this country, because a tax put his cost up equal to ours. Now, in such a case the consumer has to pay that; but where it can be made in this country and sold, if you permit the industry to go on, and made and sold as cheap as anywhere else in the world, that tax—

Mr. WHITE (interrupting). Mr. Fordney, in the case of certain cloths made in the United States in imitation of cloths made in England, those cloths sold for a little less than the foreign goods. The foreign goods commanded a higher price because they bore a foreign trade-mark.

Mr. FORDNEY. Not because they were any better?

Mr. WHITE. Not because they were any better. In fact, they might not have been so good. Now, in that case you do concede there was a tax which must have been paid by the consumer, although he could have bought the same goods in the United States at a less price.

Mr. FORDNEY. Yes. Just as with the hosiery; when the domestic hosiery was selling for 25 cents a pair the foreign hosiery sold for 40 cents a pair, and the consumer paid the difference.

Mr. GREENE. He didn't need to?

Mr. FORDNEY. He didn't need to. It was made here, and he bought the foreign goods.

Mr. WHITE. What I am driving at is, whoever paid that paid a cost tax added to the production.

Mr. FORDNEY. The same as internal revenue.

Mr. WHITE. Exactly the same as internal revenue. Then what I would suggest instead of a tax on corporations, on their income, tax them on the gross.

Mr. FORDNEY. Before you get away from that, Mr. White, let me point out the effect of such a tax. Take the wholesale grocery trade of this country. The average wholesale grocery in this country makes about 2 per cent on a sale; but they turn their money over several times a year and on the actual capital invested they make 10, 15, or even 20 per cent; whereas, if you tax them on their gross sales 2 or 3 per cent, you are going to take all their profit, therefore a gross sale tax is very dangerous; but if you tax them on their income——

Mr. WHITE (interrupting). Doesn't it depend on the rate of the tax? Suppose instead of taxing them 2 per cent, you tax them one-half of 1 per cent?

Mr. FORDNEY. Suppose you take the tax on automobiles, which is 3 per cent, and they passed that on to the consumer?

Mr. WHITE. They do it anyhow.

Mr. FORDNEY. Not in all cases. But they have in automobiles, although they said they didn't think they could. Now, that tax was 3 per cent. If you put that tax on everybody in business, you will put some of them out of business.

Mr. WHITE. Mr. Fordney, it is not necessary to put so high a tax on all business; but if it was taxed in that way the business would adjust itself to that.

Mr. FORDNEY. That might be possible, but it is impossible for this committee to know what tax to put on the various industries, or the various products, and the only hope we would have of not putting them out of business would be that the business would adjust itself to the tax. Now, if you tax me on my gross sales, you may take all my profit and my capital, but if you tax me on my income you tax me only a portion of my income, and leave my capital unimpaired.

Mr. WHITE. If the profit is represented by funds that you really have in money and have it in your pocket——

Mr. FORDNEY. You will have the money invested, I mean.

Mr. WHITE (continuing). But, unfortunately, the profits are sometimes represented by the materials on hand, and it is a question how much the corporation is going to make in any one year, unless the business is wound up in that one year.

Mr. FORDNEY. Mr. White, I think the consumption tax is a very dangerous tax.

Mr. WHITE. We are doing it right along. On freight rates, for instance, 3 per cent. On railroad fares, 10 per cent. On Pullman fares, 10 per cent. People are paying that and I haven't heard any complaint about it.

Mr. GREEN. You are not in the position of the Ways and Means Committee, or you would have heard it.

Mr. FORDNEY. I heard a man damn the administration yesterday because of that tax.

Mr. WHITE. But we have got to raise \$8,000,000,000 and you put it on profits and income; where are you going to get the money to float another \$8,000,000,000?

Mr. FORDNEY. Mr. White, there were 210 people in the year 1916, according to the Internal Revenue Commissioner's report, who paid taxes on \$1,000,000 or over.

Mr. WHITE. How did they get that income?

Mr. FORDNEY. I don't know. I know how I got mine. I worked hard for it.

Mr. WHITE. I can get you the information and tell you how it is impossible to prevent enormous incomes of that kind from having to pay out of dividends they get out of business.

Mr. FORDNEY. Let me see, Mr. White. You ask where they get that. I can tell you where some of it came from. I presume, although I do not know—no Government official is permitted to give that information under penalty, heavy fines, and imprisonment. But I presume Mr. Morgan was one of those men who paid taxes on more than \$1,000,000, on account of his very large amount of business. I presume Mr. Rockefeller was another. I am quite certain Mr. Ford was one, because in his own statement for 1916 he showed where his income from the business—not his particular income, but the income from the business—was between \$60,000,000 and \$70,000,000; if his company made \$60,000,000, he held 58 per cent of the stock; therefore he made approximately \$33,000,000.

Mr. WHITE. That is 50 per cent on the invested capital.

Mr. FORDNEY. Yes; and more than that. They made \$60,000,000 that year; so I say the men with a very large amount of capital invested and large profits should pay larger taxes.

Mr. WHITE. I think the case of Mr. Ford is an apt one for my illustration. I suppose Mr. Ford, as any other business man going into business, should be allowed a dividend on his invested capital.

Mr. FORDNEY. You believe he ought to be, you say?

Mr. WHITE. I think he ought to be. Any business man going into business ought to be allowed a fair return on his capital.

Mr. FORDNEY. A fair return on his invested capital.

Mr. WHITE. Yes, sir.

Mr. FORDNEY. If you have more capital than I, that is no reason why you should be penalized?

Mr. WHITE. No, sir; but gains should be made on other things than capital.

Mr. FORDNEY. This existing law, Mr. White, is intended to tax Mr. Ford and other people with such incomes very heavily, because the income, based on the capital invested, is very great.

Mr. WHITE. I know; but suppose a case where the capital has not been distributed, as in the case of Mr. Ford?

Mr. FORDNEY. What?

Mr. WHITE. I say, it is in the distribution of the capital that it can be assessed directly and won't weigh unduly on business. And that is what we should do. Now, in the case of the express companies, they were compressed into one company and were allowed 5 per cent on the capital invested by the stocks of that new company, and if they made any more, and suppose it were subject to distribution, that the Government took three-fourths of it and the express company got one-fourth. Now, why not use that same principle in

business in general, and say, if you have distributed 5 per cent on a business during the year on your capital, and then the Government steps in and says, "If you want to distribute 6 per cent you have to pay so much additional, and if you want to pay 7 per cent, you pay so much," and so on, until it will be no longer profitable for the company to distribute it in that year.

Mr. FORDNEY. This law provides he must distribute it or pay heavy taxes on it; that is the present law.

Mr. WHITE. Then you tax out of existence the people who make these expenses. Think of the slumps after the war is over.

Mr. FORDNEY. Oh, no; he can put money back into the business, and use it as surplus. The law permits him to do that. But if he doesn't put it back, then he must pay an extra tax on it, if he doesn't distribute it.

Mr. WHITE. I say, make the law so that when the dividend is distributed by the corporation the tax is paid for the privilege of distributing it, and not taken from the man to whom it goes.

Mr. FORDNEY. The money doesn't belong to the corporation.

Mr. WHITE. No, not to the corporation.

Mr. FORDNEY. The money doesn't belong to the corporation. The corporation is trustee for the stockholders, to handle their money, and to make money for them, and to pay its debts. Why not, then, tax the money, as the law now does, in the hands of the man individually after a reasonable tax has been paid as an excess profits tax and as a corporation tax; and then it goes to the individual, and on that he pays a tax?

Mr. WHITE. Because it is not profitable for the corporation, if they are going to go on and pay a profit.

Mr. FORDNEY. The law and regulations permit you to keep a certain reserve on hand.

Mr. WHITE. Yes, sir.

Mr. FORDNEY. And protect your business.

Mr. WHITE. I say, they should be allowed to keep enough to protect it against future depreciation.

Mr. FORDNEY. The law permits that now.

Mr. WHITE. I say all right; then let the stock going to the stockholder be taxed.

Mr. FORDNEY. That is existing law.

Mr. WHITE. I say no; because after it goes to the stockholder, if John Jones is the owner of two shares he gets off and doesn't have to pay any more tax; he goes and spends his money as he pleases, or reinvests it; but the other man, who has a hundred shares, he has 100 times as much as the other man, and he has to pay an additional tax.

Mr. FORDNEY. I beg to differ with you. Whatever the share may be, it goes into the general pot and the taxes are paid out of that. It doesn't go into the normal tax.

Mr. WHITE. The normal tax has been already collected.

Mr. FORDNEY. Yes; but when that gets to you you pay a tax on it, except you don't have to pay a normal tax on it. It goes into your income, and whatever the law says you must pay you pay a tax on that. You are not exempt because you get the money from a corporation any more than if you got it from some other source.

Mr. WHITE. No; and no matter what your outgo is nor to whom it goes.

Mr. FORDNEY. I beg to differ with you about that.

Mr. WHITE. Oh, yes; to certain charities.

Mr. FORDNEY. Certain expenses you are permitted to charge.

Mr. WHITE. I say if they be charities, or expenses attached to the business; but as far as income is concerned you pay a tax on that income?

Mr. FORDNEY. Yes.

Mr. WHITE. Now, what I protest against is that one section of the community should be taxed for its income and another section of the community is not taxed at all and has expensive tastes and goes to work and gratifies them, whereas a person with an income goes ahead and does not gratify his tastes and lives economically and then by that means acquires a competence.

Mr. FORDNEY. I don't understand that. Everyone pays a tax alike; isn't that true?

Mr. WHITE. Everyone that has the same income is taxed alike, but what I protest against is that a man should be taxed on his income, when he should be taxed on his outgo.

Mr. GREEN. You think the provisions for this income tax are wrong—

Mr. WHITE (interrupting). Because they are basically wrong.

Mr. GREEN. Well, in the first part of your paper you read a statement that people should pay according to ability?

Mr. WHITE. Yes, sir.

Mr. GREEN. And yet you say there should be a consumption tax. A consumption tax is not based on the ability to pay at all.

Mr. WHITE. How are you going to determine the way for each person to pay their relative share?

Mr. GREEN. You are begging the question. You are talking now about the relative share.

Mr. WHITE. I am talking about the equity.

Mr. LONGWORTH. Your idea is to have a consumption tax and transfer the consumption tax to the consumer?

Mr. WHITE. Entirely. It goes there eventually.

Mr. GREEN. A consumption tax is the most inequitable tax that could be devised and paid.

Mr. WHITE. Why?

Mr. GREEN. Because it is not paid in by people according to their ability to pay, but according to their needs. For instance, the section man may pay as much as John D. Rockefeller pays.

Mr. WHITE. Let me put it differently. Suppose we put a consumption tax on beef. We want to send to the other side certain cuts and pieces of beef; say, the hind quarters, which I understand are the most profitable for export to the other side. Suppose we put a consumption tax on that part of the beef and do not touch any other part of the beef. If anybody wants that part of the beef he has to pay the increased cost, because of the tax on that part of the beef.

Mr. FORDNEY. That is a consumption tax.

The CHAIRMAN. Your remedy for the tax we now have is to put a tax on gross sales?

Mr. WHITE. Yes, sir.

The CHAIRMAN. On everybody's gross sales?

Mr. WHITE. Yes, sir.

The CHAIRMAN. And then wipe out the excess-profits tax?

Mr. WHITE. Yes, sir.

The CHAIRMAN. You think that would get the money?

Mr. WHITE. Yes, sir.

The CHAIRMAN. And more of it than we get now?

Mr. WHITE. Yes, sir.

The CHAIRMAN. You represent a very respectable class of people in the United States. I have letters from a large number of people advocating that same thing; and I have heard Members of Congress argue that same thing.

Mr. GREEN. Yes; when we had the bill up that was discussed.

The CHAIRMAN. If you have a tax on shoes, say, of 10 per cent, when the Douglas Shoe Co. makes that shoe and puts it out he puts on an extra 10 per cent on the price; and then Tom, Dick and Harry will pay that, according to what they buy. Of course, if they didn't pay it—if the people who bought didn't pay the tax—if the consumer didn't pay it—

Mr. WHITE (interrupting). The corporation would have to pay it.

The CHAIRMAN. But in your opinion the corporation would not pay it, but the people would pay it.

Mr. WHITE. They would do that, or buy somebody else's shoe, that didn't have so much tax.

The CHAIRMAN. A cheaper shoe?

Mr. WHITE. A cheaper shoe.

The CHAIRMAN. But your idea is for the consumer to pay that 10 per cent, added to the sale price?

Mr. WHITE. Yes, sir.

The CHAIRMAN. A great many rich people favor your proposition, because it would not decrease their income any at all. For instance, the corporations made a net income in 1915 of \$3,019,000,000; for the calendar year ending June 30, 1917, they had gone up to \$8,069,000,000, and this last year, which will end June 30, they will make, in round numbers, \$10,000,000,000; that is almost three times as much as they made when the war began. Your proposition would not touch any of that, but would permit these corporations to continue to pile up and pile up profit, and without taking one penny from them. Now, that is your proposition, isn't it?

Mr. WHITE. Not exactly, Mr. Chairman.

The CHAIRMAN. Now, that is what you said.

Mr. WHITE. No.

The CHAIRMAN. Your proposition appeals to all these corporations and other individual tax payers who make those large profits and do not want the profits interfered with during this war. Some of them who agree with you want to make this war an opportunity to get fabulously rich; they want to coin money out of the blood and flesh of the boys at the front.

Mr. WHITE. I wish you would take that—

The CHAIRMAN (continuing). You have some of the richest corporations of the country agreeing with your propositions.

Mr. WHITE. I don't think they agree with me.

The CHAIRMAN. They do agree with you. The result of any gross sales tax is that the people pay all of it. As Judge Green says, the laboring man who is working for \$2 or \$3 or \$4 a day, will drink as much coffee and tea, and need as much sugar—

Mr. GREEN (interrupting). And shoes; he will wear out more than Rockefeller.

The CHAIRMAN. Yes, he will need more shoes; and his buying provisions, the ordinary laboring man, making perhaps \$2 a day, will pay more taxes than John D. Rockefeller, and you think that is right, don't you?

Mr. WHITE. You start out by laying the rate of taxation on the things consumed by the great mass of people, rather than on the luxuries.

The CHAIRMAN. You don't care what it is; you advocate a consumption tax?

Mr. WHITE. Yes, sir.

The CHAIRMAN. That doesn't interfere with any concerns in the United States; all the profits will be as great, because they will add that tax to the article they sell. But the income tax and the excess-profits tax will be paid by the proper persons.

Mr. WHITE. But you didn't get the whole argument.

The CHAIRMAN. I didn't get the whole argument, but I got your position.

Mr. WHITE. The income that comes to the corporations is only to help carry on the business. When it comes to distribute it then there should be a tax paid to the Government.

The CHAIRMAN. I thought your proposition was to do away with the income and excess-profits tax?

Mr. WHITE. Oh, no; I said there should be a tax on certain distributed income.

The CHAIRMAN. What do you think the rate should be on the distributed income in order to raise \$8,000,000,000?

Mr. WHITE. I should say to start with 10 per cent; if 10 per cent doesn't get enough money, make it 20, or 30, or 40, or 50, or, as in the case of the Adams Express Co., 75 per cent; but if you make it too high—

The CHAIRMAN. So you are for a gross-sales tax and a corporation distributive tax?

Mr. WHITE. Yes, sir. So that when the corporation makes money, before it can distribute it to the stockholders it has to pay a tax to the United States for the privilege of distributing it; and you will get more money than you are getting now.

Mr. GREEN. I think it would, perhaps, because that shows how little you understand the excess profits' tax.

Mr. WHITE. One per cent over the five per cent additional tax.

The CHAIRMAN. Then, would you let them distribute all the earnings?

Mr. WHITE. No, sir.

The CHAIRMAN. You would let them carry as much of a surplus as they thought necessary?

Mr. WHITE. As much as they needed to carry on the business.

The CHAIRMAN. Then, under your plan they wouldn't distribute any.

Mr. WHITE. It is no good to the stockholders unless it is distributed.

The CHAIRMAN. Your philosophical taxation principles are very fine, but your practical taxation methods will, I think—really, I think you ought to think more about it and come again.

Mr. WHITE. Now, tell me, why did you levy a tax of 3 per cent on freight rates?

The CHAIRMAN. Because that is really a part of the people's consumptive tax. We said that when we presented the bill that all the people ought to share in financing this war; most of it to be paid by the people who are able to finance it—that is, from income and excess profits taxes—but we did not want to relieve all the people of all taxation altogether, and that is one of the forms of tax which the people pay. The small earner pays something. We thought that he ought to pay something, the poor man as well as the rich man, and that this small tax would make him pay something.

Mr. WHITE. Then, why did you put a tax of 5 cents on telephone messages where the charge is 15 cents or more?

The CHAIRMAN. The people generally don't use the telephone for toll calls; that is an excise tax to help pay the war. If I want to use the telephone I can pay 5 cents for it. People as a rule, one in a thousand, don't telegraph or telephone once in a month.

Mr. WHITE. Why shouldn't he pay?

The CHAIRMAN. If he uses the telephone he does pay that. The people generally have to wear shoes every day, and have to wear clothes every day, and have to wear hats every day, and underwear, and every man has to eat something every day to live, and it is your proposition to tax the one who has to buy these things as a consumption tax.

Mr. WHITE. I am only proposing to tax him on the more expensive cuts of meat and articles.

The CHAIRMAN. Well, we will not agree on the principles of taxation, but we will agree that you have made a very interesting speech.

Mr. FORDNEY. England, with less than half the population that we have in this country, collected four times as much money last year from telephone and telegraph messages as was collected in the United States. Great Britain last year collected over four millions. I want to ask you, Mr. White, how would you put a consumption tax on banks? I mean, a gross sales tax?

Mr. WHITE. On their gross loans.

Mr. FORDNEY. On their gross loans.

Mr. WHITE. On their gross loans; yes, sir.

Mr. FORDNEY. Then you would have to raise the rate of interest to the people of the country?

Mr. WHITE. Naturally. You are raising it now.

Mr. FORDNEY. Oh, no.

Mr. WHITE. Well, they raise it as high as—what they do now, instead of loaning money and paying an increased rate, they go to the Federal reserve and inflate our currency.

The CHAIRMAN. You have made a very interesting speech. The committee will adjourn, to meet to-morrow morning at 10 o'clock.

Mr. MOORE. Mr. Chairman, may I put one question to Mr. White?

The CHAIRMAN. Yes.

Mr. MOORE. In your remarks you suggested that you thought it would be possible to raise \$8,000,000,000 by taxation, but you inquired, "Where will we get the remainder?"

Mr. WHITE. By borrowing.

Mr. MOORE. I want to ask you if you have any doubt about our ability to do it?

Mr. WHITE. Well, we will say you have \$8,000,000,000, and \$16,000,000,000 to raise—suppose they propose to raise that. It is going to be difficult to raise that \$16,000,000,000, possibly. I say, if you increase the taxation by excess profits tax it is going to be difficult to float the loan.

Mr. MOORE. I took it that you had doubts about our ability to raise that additional.

Mr. WHITE. I have very grave doubts, if you increase the tax on income and excess profits.

Mr. MOORE. As the President has called for that amount of money, what would you suggest if the loans are not sufficient?

Mr. WHITE. That we start in and put on, as I have said, a tax on gross sales, 1 per cent a month.

Mr. MOORE. That is, increase the volume of taxation?

Mr. WHITE. Increase the volume of taxation; but put it where it belongs, and not put it on the people who are trying to conserve their incomes, but out of the people generally who do not save.

Mr. MOORE. Do you think that would be destructive of business to any large degree?

Mr. WHITE. It would check some branches of business. For instance, if you increase the theater tax it would reduce that to some extent.

Mr. MOORE. \$8,000,000,000, I think you will concede, will tax business pretty heavily next year.

Mr. WHITE. It will tax it very heavily. I don't know whether we will be able to get it or not.

Mr. MOORE. I thought you had some suggestions to make as to where it could be had?

Mr. WHITE. No; the only place I can see to get it is to put on a consumption tax. The tax this year is not necessarily paid out of the profits of this year—that is, when it is increased they must necessarily increase the prices so as to pay the taxes of this year.

Thereupon the committee adjourned to meet at 10 o'clock, Wednesday, June 26, 1918.

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,

*June 26, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman), presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Crisp, Oldfield, Helvering, Dickinson, Fordney, Moore, Green, Sloan, Longworth, Fairchild, Sterling, Martin, Hawley, and Treadway.

The following letter was submitted by Mr. Hawley to be made a part of the record:

IRRIGATION DISTRICTS ASSOCIATION OF CALIFORNIA,

*Stockton, Cal., June 20, 1918.*

Hon. WILLIS C. HAWLEY,

*House of Representatives, Washington, D. C.*

DEAR SIR: As I understand you are the Pacific coast Representative on the Ways and Means Committee, I am sure you will be interested in the inclosed copy of a letter which I have sent to the Commissioner of Internal Revenue in response to one from him under date of June 8. He advised me that the matter of assessments levied by irrigation districts had been fully reconsidered, and it was now held that such assessments are not deductible for income-tax purposes since they constitute assessments against local benefits. This reverses a ruling made by him last February to the effect that such taxes paid to meet current expenses of operation of irrigation districts were deductible. He also says that Treasury Decision 2090 with regard to special assessment districts is held to be applicable under the present law.

As there are a number of irrigation districts in Oregon, and in practically all of the Western States, the matter is of direct interest to you and your constituents.

We are sure Congress did not contemplate such discrimination as is explained in my letter to the commissioner, and if the ruling is not modified, we believe the law should be amended to remove any doubt as to its meaning. Inasmuch as Congress is to revise the revenue law this summer, the time is opportune for such action.

I presume that the ruling in regard to irrigation districts applies also to reclamation and drainage districts, and other similar taxing subdivisions. It has been suggested that the law should be amended by eliminating the words "not including those assessed against local benefits" from the section authorizing the deduction of all taxes in computing net taxable income, and by inserting the words "and assessments" after the word "taxes" so as to make it clear that all taxes and assessments are to be deducted. While some assessments against local benefits, such as those for street improvements, do increase the value of the land assessed, yet they constitute a heavy burden upon the land, which results either in great public benefit, or in an increase in the productiveness of the land. To tax money spent for increasing the productiveness of land, and then to tax the increased income resulting from that increased production seems like double taxation.

If, however, Congress does not desire to go so far, it surely ought to be willing to amend the law so as to exempt taxes levied by any district to meet such expenses as would be deductible if incurred by farmers outside of such a district.

I have written to several members of the California delegation in regard to this matter, and have told them I would write to you. It seems to me the subject might well be taken up with Representatives of the States in the West, the South, and the Mississippi Valley where there are numerous irrigation, reclamation, and drainage districts that will be affected by the commissioner's ruling. I would appreciate any suggestions from you as to how we may most effectively present the matter to the Ways and Means Committee.

Very truly, yours,

A. L. COWELL, *Secretary.*

STOCKTON, CAL., June 18, 1918.

HON. DANIEL ROPER,  
*Commissioner of Internal Revenue,*  
*Washington, D. C.*

DEAR SIR: I am in receipt of your letter of June 8 advising that the matter of assessments levied by irrigation districts has been fully reconsidered and it has been decided that such assessments are not deductible for income tax purposes since they constitute assessments against local benefits.

Permit us to suggest that this ruling involves consequences which we are sure were never contemplated by Congress in the enactment of the income tax law, and we therefore respectfully ask that further consideration be given to the matter to determine whether the wording of the law requires an interpretation which penalizes the farmers who have adopted the plan of public ownership of their irrigation facilities.

Take the cases of four farmers, Smith, Jones, Brown, and Black, all having irrigated farms. Smith is a member of a mutual water company, Jones obtains water from a private corporation selling water for profit, Brown has a large pumping plant on his place, and Black is in an irrigation district. In computing their taxable incomes, Smith will deduct as business expenses the assessments which he pays to the mutual water company, Jones will deduct his water rates paid to the private corporation, and Brown will deduct the cost of operation and upkeep of his pumping plant and something for its depreciation. The payments by Smith and Jones will probably go in part into funds for the payment of interest on bonds and for sinking funds to redeem those bonds, and if Brown has borrowed money to pay for his pumping plant, he will deduct the interest paid on it. Why, then, should Black be denied the right to deduct similar amounts for the same kind of business expense merely because he pays for irrigation service in the form of taxes?

Under the law of California our irrigation districts may charge tolls for the use of water. Tulare district does this. Such tolls undoubtedly are deductible in computing net income. If the farmer in the Tulare district is allowed to deduct what he pays for irrigation service, why should the farmer in the neighboring Alta district, whose cost of similar service is covered by his district taxes, be denied the right to a similar deduction.

North of this city is a territory now served with water by a private corporation. A farmer in that territory would undoubtedly have the right to deduct from his income what he pays the corporation for the use of water, even though part of the payment goes to meet interest on the company's bonds and presumably to build up its sinking fund. It is proposed to organize an irrigation district in that territory and take over the private system. If that should be done, why should that farmer be denied the right to deduct the cost of the same service because he would then pay for it in taxes to the irrigation district?

That it was not the intention of Congress so to discriminate against the people of irrigation districts is evident from the fact that mutual nonprofit-making organizations are especially favored by exempting their incomes from taxation. Furthermore Congress in 1916, after providing for the deduction from incomes of taxes levied by counties, municipalities or school districts, inserted the significant words "or other taxing subdivision of any State." We respectfully submit that your ruling leaves these words without any meaning, although in the act they are emphasized by the repetition of the conjunction "or." To what form of organization can these words refer except such subdivisions as irrigation, reclamation, and drainage districts, which unquestionably exercise the taxing power? It seems clear to us that Congress regarded the phrase, "not including those assessed against local benefits" as well understood to mean taxes levied to pay for permanent improvements designed to increase the value of certain land and assessed in accordance with the benefits supposed to be conferred on the property taxed. Such taxes were undoubtedly regarded as a part of invested capital or for the personal comfort and convenience of the taxpayer. But Congress, of course, knew that considerable portions of the levies made by such districts are not of that character, but are to meet administrative and operating expenses and interest on bonds, and that in some districts even taxes for constructing works are levied on an ad valorem basis, without any consideration of the benefits to individual holdings. Congress must have meant to allow the deduction of at least some such portions of the taxes levied by "other taxing subdivisions of any State," for only by so assuming can we conceive of any good reason for inserting in the law the words quoted.

In considering the deductibility of irrigation district taxes paid for interest on bonds, it does not seem to us to be material that income derived from interest on such bonds is not taxable. A farmer may borrow money for a pumping plant from a Federal farm loan bank or from a mutual savings bank or building and loan association, whose

incomes are exempt from taxation, but that will not affect his right to deduct from his income the interest on the money so borrowed.

Therefore, as the rule is that in case of doubt, such statutes are to be construed in favor of the taxpayer, we respectfully urge that it is possible to construe the law so as to give effect to what seems to be the intent of Congress and so as to be consistent with the policy to encourage, and not to penalize, cooperative effort for increasing the productivity of the soil.

I have been unable to obtain here a copy of Treasury Decision 2090, referred to in your letter, but have written to the collector at San Francisco for it. If there are any other opinions or rulings throwing light on the matter we should be glad to have them.

Respectfully,

A. L. CORNELL, *Secretary.*

The CHAIRMAN. The committee will come to order. Is Mr. Zoller present?

**STATEMENT OF MR. J. FRANK ZOLLER, ATTORNEY, SCHENECTADY, N. Y.**

The CHAIRMAN. Mr. Zoller, state to the committee your name, address, and the business in which you are engaged, and whom you represent at the hearing.

Mr. ZOLLER. J. Frank Zoller, Schenectady, N. Y. I represent the National Conference of State Manufacturers Associations. The National Conference of State Manufacturers Associations represents manufacturing associations of 28 States. These State associations met in conference and appointed a committee to present their views concerning the new revenue bill which we understand is to be drafted and passed by Congress at this session. None of these manufacturing corporations appearing are asking for exemption from taxation. We hope to present to this committee certain ideas and information that may be helpful in drafting the bill which we understand is to raise the revenue required by the Government for the prosecution of the war.

In the first place, we believe that a great deal has already been accomplished in the preparation, passage, and construction of the revenue bill that is already law. It is probable that a great deal could be said in favor of the present law from the standpoint of the Government, because it has exceeded the amount of revenue anticipated; and also from the standpoint of the taxpayer, for the reason that its construction has made it possible for the manufacturer to pay his taxes and at the same time keep his manufacturing plant in operation. There are, however, necessarily inequities and complexities in the present law which we think might be remedied in the prospective act and at the same time not interfere with the purpose of Congress, which, we understand, is to increase the amount of revenue that has been raised under the existing law.

In raising a large amount of revenue in taxes from the manufacturing industry, we believe that it is first necessary to insure to each manufacturer a certain return upon the capital invested free from the so-called "excess-profits" tax. If the manufacturing industry does not receive some assurance that, notwithstanding the tax, a fair return is to be had on the investment, then we believe the law would necessarily result in materially decreasing throughout the country the value of the securities held in these corporations, making it difficult for manufacturers to finance themselves for the requirements of the business that they are required to transact, with the result that

production would be decreased rather than increased at a time when increased production is vital to the success of the Government in winning the war.

The present law provides for a certain deduction based upon prewar earnings, but such deduction is to be not less than 7 per cent nor more than 9 per cent upon the invested capital of the taxable year. It is noted that under the present law the average manufacturer does not receive the benefit of this deduction except under the bracket imposing the 20 per cent rate on excess profits. In other words, if the total net income of the manufacturer exceeds 15 per cent of the invested capital the manufacturer is subject to a tax at rates varying from 25 to 60 per cent, taking into consideration the whole net income, and the 9 per cent deduction in no way affects the amount of income subject to tax at the rates beyond the 20 per cent bracket. We submit that the object of an excess-profits tax ought to be to tax profits beyond a fair return on the capital invested, and for that reason we believe that there should first be a deduction representing such fair return, and that then the balance only should be taxed as an excess profit.

Mr. HELVERING. If it won't interrupt you——

Mr. ZOLLER. It won't interrupt me.

Mr. HELVERING. You stated that the 9 per cent as I understand, did not affect the war profits in excess of 15 per cent. Would you mind giving an illustration to show what you mean?

Mr. ZOLLER. I think I could. You remember the law says that applying these rates, 20 per cent upon such a proportion of the net income in excess of the deduction, but not in excess of 15 per cent of the invested capital. Twenty per cent is the rate under that bracket. Then it says upon such a proportion of the invested capital that is in excess of the net income, that is in excess of the 15 per cent of the invested capital, but not in excess of 20 per cent of the invested capital, the rate shall be 20 per cent. You see the deduction is gone. You are considering the whole income in applying the tax and not the 20 per cent bracket. That is the point I wanted to make, and it is a great difference. Take a corporation that earns \$100,000 net income. Suppose that the deduction on that was to be \$10,000. It is a great difference whether you deduct that \$10,000 and then take the \$90,000 and tax that at rates from 20 per cent to 60 per cent or any other rate, or whether you undertake to tax that whole \$100,000 allowing an exemption under the first bracket only.

Mr. GARNER. May I ask you a question now?

Mr. ZOLLER. Yes, sir.

Mr. GARNER. Your plan, as I understand it, is based on the graduation of the excess profits?

Mr. ZOLLER. Yes.

Mr. GARNER. Suppose this committee should decide that they would have no graduation, only flat excess-profits tax, then there would be no complaint?

Mr. ZOLLER. No; my complaint was not on the graduated scale. I am perfectly willing and these associations are perfectly willing to leave that feature of it to Congress. My plan was in not allowing absolutely a certain deduction.

Mr. GARNER. Suppose you say allow an 8 per cent deduction and take 80 per cent over that? Somebody suggested that. Would that suit you?

Mr. ZOLLER. I do not agree on the 8 per cent, but that is the theory that I have in mind here.

Mr. GARNER. You think that policy would be a good policy to adopt with reference to excess profits?

Mr. ZOLLER. But I would want the 8 per cent figured on the total net income, and then deduct from the total net income, and the balance only subject to tax either at the graduated or flat rate, as Congress may determine.

As the matter of referring to the prewar earnings is difficult and complicated, we suggest that no reference be made to prewar earnings at all for the purpose of determining the deduction that should be granted these manufacturing corporations in ascertaining the amount of income subject to the excess-profits tax; but, on the other hand, that all these corporations be permitted to earn, free from any excess-profits tax, a reasonable return on the invested capital and that the balance be made subject to excess-profits tax at rates to be determined by Congress as sufficient to raise all revenues that reasonably could be expected to be raised from this source, taking into consideration the total earnings of the manufacturing industry. Under the present law the amount of the deduction, we think, in a majority of cases for manufacturing corporations, is 9 per cent of the invested capital of the taxable year. We submit that this allowance should be increased to at least 10 per cent upon such invested capital and that such allowance should be permitted regardless of the prewar earnings. Since the last revenue bill was enacted the interest rates upon money borrowed have steadily increased, and the cost of doing business has also increased. Therefore, assuming that 9 per cent upon the capital invested was a fair allowance at the time the present law was enacted, it is submitted that such allowance is insufficient under present conditions to represent a return on capital invested sufficient to stabilize the present market for industrial securities.

The United States Treasury Department has determined that unless a manufacturer earns at least 10 per cent upon the original investment of the corporation the stock is not worth par. It is therefore submitted that this finding is some proof of the contention that 10 per cent on the actual capital invested does not constitute an excess profit, and for that reason the excess-profits tax should only apply on profits in excess of 10 per cent on the invested capital.

Congress is now in a position to ascertain the total earnings of corporations subject to Federal taxation.

Mr. RAINEY. May I interrupt you? Do you discuss the question of capital invested?

Mr. ZOLLER. I am coming to that.

Mr. RAINEY. All right.

Mr. ZOLLER. Congress can, therefore, determine what the earnings amount to that are in excess of 10 per cent on the invested capital and also what the rate or rates would have to be upon such earnings in order to raise the proper amount of revenue from such source.

The scheme which we advocate of substituting an allowable deduction without regard to prewar earnings we believe would do much to simplify the present law, and no taxpayer under our scheme could

feel aggrieved because his prewar earnings were not equal to those of his competitor because of special or local conditions.

In regard to "invested capital" we are of the opinion that as a general proposition the provision in the present law as construed by the Treasury Department is fair to the average taxpayer. That it is also fair from the standpoint of the Government is manifest from the fact that the present law exceeded in revenue the amount anticipated by the Government. Some attorneys are taking the position that the Treasury Department has exceeded its authority in connection with rulings under the present law. In order to avoid ill-advised litigation at a time when our whole purpose is to raise revenue in an equitable manner and unnecessary confusion, we suggest that such rulings in cases of doubt be clearly incorporated in the new act.

In regard to the income tax, we believe that corporations should be permitted to deduct as a loss the difference between the present cost of property purchased for capital account and the average cost of such property under normal conditions to avoid increasing the capital account beyond an amount that would fairly represent the average going value of the plant, so as to insure solvency of the business after the war. The Government would not necessarily lose revenue as a result of such a provision because the write-off would reduce for all time the invested capital for the purposes of the excess-profits tax.

We further submit that under the new bill which is to produce much more revenue than the present law, all dividends received from other corporations subject to the income tax be deducted in ascertaining the net income taxable under any income-tax act, in order to avoid a multiplicity of taxation upon the same income. At present dividends so received are not deductible in ascertaining the 2 per cent income tax under the act of September 8, 1916.

Corporations are now called upon to make contributions to corporations or associations engaged in charitable enterprises which have to do with rendering valuable assistance in connection with the prosecution of the war. Many States have passed enabling acts making it lawful for the directors of corporations to contribute to these enterprises. Under the present income-tax law individuals who contribute to such enterprises are permitted to deduct such contributions in an amount not in excess of a certain percentage of the total net income, in ascertaining the taxable net income. We believe that a similar privilege should be afforded corporations in connection with like contributions.

Prior to the payment of the income and excess-profits taxes, some banks were of the opinion that it would be difficult for them to loan sufficient funds to meet these taxes on June 15, the time provided for payment under the present law. Many taxpayers at that time asked the Treasury Department to defer the payment of a part of these taxes beyond June 15, charging interest at rates to be determined by the Treasury Department upon all installments paid subsequent to June 15. The Treasury Department answered this request by saying that it had no authority under existing law to defer the payment of such taxes and that the financial condition of the Treasury was such that it could not sanction an amendment to the present law permitting the payment of any part of such taxes beyond June 15. As the new bill, as we understand it, is to produce much

more revenue than that provided in the present law, we think it more important than before to provide in the new law that the taxes thereunder may be paid in installments on and after June 15 in order to avoid any unnecessary strain upon the finances of the country.

There is one other suggestion and it has to do with the administrative machinery in collecting the tax rather than with the tax. After the present law had been enacted, there was appointed an administrative board to advise with the honorable Commissioner of Internal Revenue concerning proper rulings to be made under the law. We would like to suggest that the new law create a permanent board of this character with powers not only of an advisory nature, but also of a judicial nature, to whom any taxpayer who felt aggrieved because of any decision of the commissioner might appeal before bringing his action in the Federal court.

The foregoing is substantially the position of the manufacturers here represented. We have no violent complaint to make to this honorable committee and we do not ask exemption from taxation. We believe that there is nothing in our position that is in conflict with the address of the President of the United States before Congress upon this subject or in conflict with the recommendations which we understand have been made by the honorable Secretary of the Treasury concerning this matter.

In imposing any corporate tax we believe the vital thing to have in mind is an assurance that, notwithstanding the tax, there will be a return reasonable under the circumstances upon the capital actually invested. Without this assurance corporate securities fall in value, thereby wiping out without any adequate return to the Government a substantial part of the Nation's wealth and placing the corporations affected in a position where they can not make and distribute the income which we expect to tax to meet the requirements of the Government in the winning of the war.

I thank you.

Mr. STERLING. Do you suggest that we pass a law giving corporations the right to contribute to charitable purposes?

Mr. ZOLLER. Yes; within certain reasonable limitations.

Mr. STERLING. Do you think Congress would have any right to do that outside of the national banks?

Mr. ZOLLER. Well, I do not think that it is a question. I think they would have a right to do it, so far as the income tax is concerned. Whether they have a right to make any contributions is a matter which seems to me determined by the law, not by Congress, but by the State under which they are created.

Mr. STERLING. Why, certainly; but if we should pass a law to that effect, it could not be binding on stockholders?

Mr. ZOLLER. No.

Mr. GARNER. But I do not understand that he suggested that Congress pass a law, but suggested that we give corporations the same exemption that we now give to individuals, so that where they contribute a thousand dollars, when they come to make their statement of income they can deduct that the same as the individual does now.

Mr. ZOLLER. That is as far as my suggestion was intended to go.

Mr. HELVERING. Mr. Zoller, as to installment taxpayers, you are not of the opinion that the present ruling allowing payments as they are now allowed meets the situation?

Mr. ZOLLER. I am afraid that it does not with a number of taxpayers. Every taxpayer is zealous to use all the capital he has in extending his plant for the purpose of carrying out Government contracts, and he does not seem to be able to arrange in advance. This is merely asking the Government to finance him for a short period, but charging him interest, of course, during that time, and it puts him in a better position to meet this great pressure for capital that is now being put upon the industry.

Mr. HELVERING. It is simply a matter of deferred payment?

Mr. ZOLLER. Yes.

Mr. GARNER. Suppose you give a man the right to pay the tax on the 1st of March and give him 6 per cent discount, then you would provide that if he wants to pay it after June 1, charge him 6 per cent?

Mr. ZOLLER. That is all right.

Mr. RAINEY. Of course, in these tax bills we are doing new and novel things, and would you consider it best in arranging this bill to ignore capital investments entirely with the difficulty of intangibles?

Mr. ZOLLER. I do not see how you can do it and have an excess-profits tax. We hear so much about the English system, and some people would lead us to believe that under the English system they do not consider the capital invested. They do. If capital remained constant all the time, it would be possible to ignore it because you could compare the earnings, having the same amount of capital all the time. Capital is all the time changing, and certainly if a man makes \$100,000 with \$1,000,000 he is not in the same position with a man who makes \$100,000 with an investment of \$2,000,000. I do not see how it is possible to levy an excess-profits tax without considering the capital invested.

Mr. RAINEY. Do you think it would be possible to ignore these distinctions between excess profits, war profits, and all kinds of profits, and simply say that this Nation is at war, ignoring invested capital, and appeal to every individual partnership and corporation to contribute a certain amount of its profits, no matter how much he has invested?

Mr. ZOLLER. Yes; have an income tax at a rate sufficient to get what money you want. That is your proposition?

Mr. RAINEY. That is it, permitting him to put it back into his business as the money he needs to keep his business going in order to make a reasonable amount of new capital.

Mr. ZOLLER. You can not graduate taxes on profits. You have got to have a flat rate if you are going to bring corporations, copartnerships, and individuals in all together. You can have a flat rate income tax of 40 per cent of the total net income, ignoring all these excess-profits taxes and all other kind of taxes, and raise enough revenue, but, of course, that does violence to the fellow who makes a small profit as compared with the one who makes a big one.

Mr. RAINEY. Couldn't it be arranged so as not to do any violence, tax everybody 40 per cent, we will say, whose income is in a certain bracket, whose income is between \$60,000 or \$70,000, and tax everybody a smaller amount whose income is between \$20,000 and \$30,000 in that bracket.

Mr. ZOLLER. You can not apply that to corporations, however, with any degree of equality, and I will tell you why you can not. When you reach an individual you know how much money he is to

got, and you can tax him at either a flat rate or a graduated rate, but the corporation is a combination of a thousand or more individuals, perhaps, and according to your scheme a corporation—

Mr. RAINEY. That is not my scheme.

Mr. ZOLLER (continuing). According to your proposition as I understand it, you take a corporation that earned a million dollars, regardless of the capital invested, and you would tax that corporation at a graduated rate. Now, another corporation might earn \$1,000,000 with twice the investment, and they ought not to pay the same tax as the other one, because if you do that you are going to discriminate against larger aggregations of capital. Where the income is large they have got to split it up and have the income small or they will be penalized.

Another thing, a tax on a corporation is necessarily a tax upon the individual stockholders, and the theory of additional tax is that no individual shall be taxed unless his income exceeds a certain amount. But if you put that tax upon the corporation you are taxing all the stockholders, regardless of whether their return of income is on a million dollars or fifty dollars. Both of those, through the corporation, have been subject to the additional tax, which is contrary, as I understand it, to the theory of a surtax.

Mr. GARNER. You do not object to the necessities of the Government compelling Congress to go up in the normal tax.

Mr. ZOLLER. No.

Mr. GARNER. But you would not want a graduated tax as to corporations, but would so far as individuals are concerned?

Mr. ZOLLER. That is true.

Mr. GARNER. But the normal tax would be applied, and the surtax.

Mr. ZOLLER. Yes.

Mr. GARNER. You would rather have one tax, an excess profits' tax, than a graduated tax?

Mr. ZOLLER. I did not say that.

Mr. GARNER. I know you didn't say that, but your argument would lead one to believe that that was in your mind.

Mr. ZOLLER. If I was speaking selfishly I would say yes. But I do not think there is any argument that can be made upon the graduated tax upon excess profits, providing deduction is first allowed, and the balance subjected to tax.

Mr. GARNER. Suppose we should say we would want \$2,500,000,000 out of the excess profits. Would you have it a flat excess profits' tax, or a graduated tax, your associations?

Mr. ZOLLER. Now, the associations do not agree on that. Personally, if I was drawing a law I would graduate it. There are members of the association that I represent that would have it flat.

Mr. GARNER. Your association is not a unit upon that?

Mr. ZOLLER. Not upon that one thing.

Mr. RAINEY. Do you think we could stand a normal tax as high as they do in England on corporations?

Mr. ZOLLER. Why, I think we can stand a normal tax if properly levied on corporations, individuals and copartnerships, just about as high as is necessary to raise all the revenue the Government needs.

Mr. RAINEY. It is 25 per cent in England, up to \$12,500.

Mr. ZOLLER. Now, you are talking about excess profits.

Mr. GARNER. Twenty-five per cent normal.

Mr. HULL. Of course, the normal tax in England on corporations is different from the normal tax here. There the corporations pay 25 per cent, now 30 per cent, on the total net profit. When they go to distribute interest and dividends, they are allowed to deduct that 30 per cent on the entire amount that is paid out for interest and dividends, but that only leaves the corporation subject to 30 per cent on what it retains in the business.

Mr. ZOLLER. There is great danger of taking the law of any country and just taking the rates and applying them here or anywhere else. You have first got to take into consideration the base. When the base is proper and equitable the rate would take care of itself. It doesn't make any difference what the rate is if the base is equitable and just, and when I say it does not make any difference, I mean within reasonable limits. Of course, there is a limit to Uncle Sam's pocket, the same as there is to everybody else's, but within certain limits the rate will take care of itself if the base is just and equitable, but it is not fair to take a rate in one law, which has a different base, and apply it in this country.

Mr. LONGWORTH. I didn't have an opportunity to hear all of your opening statement. I understood that you figured a deduction of 10 per cent regardless of war profits in all cases. Would you think it would be fair to segregate certain classes of industry, say like oil production, zinc and lead products, from other industries, and allow a greater deduction in their case than in others? That is, would you advocate a classification of industries?

Mr. ZOLLER. Yes; and, of course, as a part of that same proposition, would lower the exemption in the case of public-utility corporations that have not made up to the present time—and it looks as if they never would make—10 per cent. I don't suppose—I am not trying to get at a fair return on capital here—that many would admit that 10 per cent is a fair return on capital under ordinary conditions, but we are trying to get at what would be a fair return under the circumstances in connection with raising this revenue. It seems to me that in that case you have got to reach a point that would be fair in the majority of cases. Now, personally I would not worry if a lot of corporations were exempted from the excess-profits tax, because they do not make 10 per cent. My opinion is that under present conditions any corporation that does not really make 10 per cent upon the capital invested ought not to be subjected to excess-profits taxes, and I may say that I do not want to advocate a tax on anybody else here. I have tried to keep away from that sort of thing. In regard to oil companies and what they make, I am not in a position to know what should be done in that case, but I do believe, as a general proposition, that an exemption of at least 10 per cent would tend to meet the situation.

Mr. MOORE. Now, that you are away from your paper, several gentlemen did not hear it who have come in, and I wish you would restate your proposition about the allowance of 10 per cent. How are we going to raise the money, according to your plan, after we make an allowance of 10 per cent?

Mr. GARNER. Mr. Moore, just before he leaves the statement of policy that Mr. Longworth asked about, you do not care to express your opinion of what the exemption should be on oil, zinc, or lead? I understand you do believe it would be a good policy to classify the business and apply a different exemption according to the business.

Mr. ZOLLER. No, that is not hardly my opinion.

Mr. GARNER. Would you classify the business with reference to exemption?

Mr. ZOLLER. I don't think I would.

Mr. GARNER. What would you say about public-utility corporations, railroads of the country, banking interests of the country, putting them on the same parity with the oil industry or any other kind of hazardous business, or making exemptions to take care of them? If you take care of them all you wouldn't get any money, that is the trouble.

The CHAIRMAN. If I understood you, if you have an exemption of 10 per cent, it would insure capital some return.

Mr. ZOLLER. Yes, sir.

The CHAIRMAN. And you base that upon the idea that we are going to raise considerably the corporation tax. Suppose you raise it 20 per cent instead of 30 per cent like Great Britain has. Now, if you deduct that corporation tax of 20 per cent and the excess-profits tax, give an exemption of 10 per cent, it only leaves you 8 per cent exemption because you see the corporation tax would take 2 per cent.

Mr. GARNER. That is on the assumption that you are going to raise it.

The CHAIRMAN. If I get your idea, if you allow this reasonable exemption which would be enough to be of some little inducement to continue the business, you would expect the rate would be considerably increased.

Mr. ZOLLER. Very high.

The CHAIRMAN. And you would have as few brackets as possible?

Mr. ZOLLER. Yes, sir.

The CHAIRMAN. I think the committee is with you on that proposition. Then the rate is whatever amount we absolutely need?

Mr. ZOLLER. Yes, sir.

Mr. MOORE. Let me restate your proposition.

The CHAIRMAN. That was the purpose of the House Committee in conference, exactly as you have stated it.

Mr. MOORE. Starting with the allowance of 10 per cent how will we raise the tax?

Mr. ZOLLER. First you know how much you are going to get from the income tax.

Mr. MOORE. That you would have constant?

Mr. ZOLLER. Yes, sir. You know how much you are going to get from the income tax, then you know the balance you must raise from this source.

Mr. MOORE. Then starting with your 10 per cent, you would have a corporation income tax?

Mr. ZOLLER. Then I would raise the balance upon the income that is over this 10 per cent allowance.

Mr. MOORE. You would wipe out the excess-profits tax?

Mr. ZOLLER. I would put it on the income that exceeded the 10 per cent of invested capital.

Mr. MOORE. Would you retain that as a special tax, or include that in the income tax?

Mr. ZOLLER. I think I would. Now, there are some people who believe that certain profits are excessive when they are not perhaps. But I think that I would have an excess-profits tax.

Mr. MOORE. That is a war term exclusively, Mr. Zoller.

Mr. ZOLLER. I admit that.

Mr. MOORE. I have no means of telling what the committee is going to do. Some men have conferred upon it, but I do not know what the program of the committee will be, but as the situation presents itself now, the question is, Have you got it, and if you have it how are we going to get it without putting you out of business?

Mr. ZOLLER. I say the way to get it without putting us out of business is to give us a certain allowance that is free of any excess-profits tax, and then tax the balance sufficiently to raise the revenue that ought to be raised from these particular concerns.

Mr. MOORE. You have been very liberal in your statement as to willingness of the associations you represent to do their full part, and I think you are entitled to credit, and the associations, for the position they take; but the action of this committee may be very drastic, evidently it must be, because of the demands made upon it, and therefore I wanted you to be cautious, so far as I am concerned, about your predictions as to what the business can stand, because it is going to be a question of what the traffic can bear, especially as against the manufacturers of this country. They have got to bear a very heavy burden, and it may hurt some of them to some extent, as some see it. May I ask you just what associations are represented by you?

Mr. ZOLLER. There is a national conference of State manufacturers' associations. That conference represents manufacturers' associations—

Mr. MOORE (interposing). State associations?

Mr. ZOLLER. State associations from 28 States.

Mr. MOORE. Is Illinois represented?

Mr. ZOLLER. Yes, sir.

Mr. MOORE. It is a large association and was to have had a spokesman here. Do you speak in his place?

Mr. ZOLLER. I assume I do. I assume that I represent all of these associations.

Mr. MOORE. Then there is no special reason for any individual appearing as long as you are authorized to represent them all.

Mr. ZOLLER. That is my understanding. We appointed a committee and sent out notices that the committee would meet in New York City, and what I have stated is in general terms the position of these associations.

Mr. MOORE. Can you tell us what States were represented in this conference?

Mr. ZOLLER. I do not think that I can give all of them. New York, Illinois, Indiana, Georgia—I think Mr. Glenn, if he is here, can perhaps give those States.

Mr. MOORE. Is Mr. Glenn of the Illinois association?

Mr. ZOLLER. He is secretary of the Illinois Manufacturers' Association.

Mr. MOORE. He was to have part.

**STATEMENT OF MR. JOHN M. GLENN, OF CHICAGO, ILL., SECRETARY OF THE NATIONAL CONFERENCE OF STATE MANUFACTURERS' ASSOCIATION, AND SECRETARY OF THE ILLINOIS MANUFACTURERS' ASSOCIATION.**

Mr. GLENN. Here is what happened. I made an appointment for the Illinois association to appear here by its representative on the 17th, and it was so early that the chairman of the committee could not get here, and when Mr. Zoller was to appear it was merged with this appointment. Mr. Clark was the man.

Mr. MOORE. Mr. Zoller speaks for you?

Mr. GLENN. And I will file with the committee the names of the associations that he represents.

Mr. MOORE. Was the Pennsylvania association on it?

Mr. GLENN. The Pennsylvania association affiliates with the conference. There is no one here from Pennsylvania this morning.

Mr. MOORE. And he speaks for the Pennsylvania association as well? May I ask if North Carolina is represented here?

Mr. GLENN. I do not know. I do not think so.

Mr. MOORE. Does that State have an association?

Mr. ZOLLER. I do not know.

Mr. GLENN. They have an association of textile people down there that manufacture textiles.

Mr. FAIRCHILD. What percentage of the manufacturers of New York are identified with your association.

Mr. GLENN. From a capitalization point, or from the point of number, or the value of the products? Now, you might take the industries of New York, and they would represent, say, \$5,000,000,000 value of products which might be 95 per cent or 99 per cent of the total product value of New York, yet they might only represent 45 per cent, so far as numbers, on account of the smaller concerns not identifying themselves, the concerns that can not afford to maintain a membership.

Mr. MOORE. Let us get it in this way. Is the National Association of Manufacturers represented in this conference?

Mr. GLENN. No, but they are in the room.

Mr. MOORE. Does Mr. Zoller speak for them?

Mr. GLENN. No.

Mr. FAIRCHILD. The point I wanted to get at is that a great many manufacturers are not members of this association.

Mr. GLENN. There is no conflict between this conference and the National Manufacturers Association. We are working with them right here.

Mr. MOORE. But Mr. Zoller is making a very important statement. If his views are the views of the manufacturers, or if they are not, I want to know that.

Mr. GLENN. This conference of State manufacturers' associations—I am the secretary of it—the by laws provide that we get together and talk things over. The action of the conference is in no way binding on the different State associations, yet the State associations are represented in this meeting, created this committee, and sent this committee to draft a plan, and sent Mr. Zoller over here to make a statement.

Mr. MOORE. Let me ask you this. You are interested as an actuary. Are the steel interests represented in this conference?

Mr. GLENN. They belong to this association, and the steel interests in Illinois practically belong to the manufacturers association. The same is true of other States where they have plants.

Mr. MOORE. Are the textile interests represented?

Mr. GLENN. Pretty strongly. Connecticut and Massachusetts are identified with this conference.

Mr. MOORE. Well, it would help me very much as one member of the committee to know just what States are here, and just what lines of manufacture they represent.

Mr. GLENN. I will file with the committee the States that are represented in this conference, that created this committee, and I will file with the committee the State associations that are affiliated with the National Conference of State Manufacturers Associations, so far as I can get it, the capitalization of these different concerns in the different States, and the employees, and such matters as I think you will be interested in.

The CHAIRMAN. The committee will be glad to have it.

Mr. MOORE. If the chairman will let that go in I will be obliged.

I want to say here that so far as the income tax is concerned, four States in the Union pay most of it, and the manufacturing interest contribute largely to that bulk, so it is important to know whether a man who comes here to speak for those interests does actually represent the manufacturing sentiment in the United States.

Mr. GLENN. These gentlemen that own these properties are much concerned in this question.

Mr. MOORE. You have a right to be.

Mr. GLENN. But there is no disposition that we come here with a view of avoiding the tax.

Mr. MOORE. I understand just the reverse. You are coming in a very fair and open-minded way.

Mr. GLENN. That is what I want to do, and I will file the statement with the committee.

(Mr. Glenn filed the following list of delegates present:)

DELEGATION OF NATIONAL CONFERENCE OF STATE MANUFACTURERS' ASSOCIATIONS.

J. Frank Zoller, spokesman, New York.  
 William Butterworth, president Illinois Manufacturers' Association, Illinois.  
 B. H. Howard, Iowa.  
 Roger C. Sullivan, Illinois.  
 A. D. Oliphant, New Jersey.  
 Max W. Babb, Wisconsin.  
 T. P. Linn, Ohio.  
 Guy G. Pritchard, West Virginia.  
 Frank M. Smith and E. B. Knight, Indiana.  
 John H. Buck, Connecticut.  
 John Q. Ross, Michigan.  
 Frank Tregoning, State of Washington.  
 John M. Glenn, secretary National Conference of State Manufacturers' Associations,  
 76 West Monroe Street, Chicago, Ill.

The CHAIRMAN. Is there any other gentleman now that wants to be heard representing the State Manufacturers' Association. If not, Mr. Emery wishes to be heard, and I think it would be well for Mr. Emery to make a statement if he desires to do so in regard to the National Association of Manufacturers.

Mr. LONGWORTH. Before that, Mr. Zoller, I would like to ask with regard to the excess-profits tax. This committee is now facing a different problem than at the time of the first revenue bill and that is due to the Government policy of price fixing. You realize, of course, that if that was carried to its ultimate conclusion there would be no abnormal profits.

Mr. ZOLLER. Yes, sir.

Mr. LONGWORTH. Now, we have that question to face as to what effect the price fixing so far has had or will have on next year's excess profits, how much further the Government may go.

Mr. ZOLLER. If the Government does not permit corporations to make a profit, all I have said does not apply, because my statement has been made on the assumption that they would be permitted to go on and make profit, but the more the profits are cut down the less they are to be taxed, and that will simply mean that if the Government does not allow profits it will not get any taxes, but will have to get the revenue in some other way. And it further means that if they are not able to make earnings, the Government will have to operate it, and the Government will have to do the financing.

Mr. HULL. Mr. Zoller, it looks like, just viewing it from the outside, basing our computations on the net income and excess-profits tax in 1917, the excess profits computed will run up in the neighborhood of \$5,000,000,000. Of course, if we should establish that rate of 80 per cent on the same computation for 1918, the profits should be as large, and we would secure \$4,000,000,000 excess profits. Now, we have had to deal with special cases, with special circumstances that attend the individual business and some industries or subordinate subdivisions of industry. The result is that where their capitalization is not fully shown on account of the fact that they have peculiar factors in them, which do not come within the strict definition of capital invested, some concerns pay a higher proportion than others.

Mr. ZOLLER. Could you give an illustration of just what you mean?

Mr. HULL. For instance, one concern where the profits are derived as much or more from the individual capacity, from the expert business knowledge and capacity of the owner, or the operator.

Mr. ZOLLER. Isn't that in the case of small concerns usually?

Mr. HULL. It is more apparent in the case of small concerns, undoubtedly, but the point I was getting at is that the 10 per cent you refer to as a fixed basis of exemption might be too much in some cases and in some exceptional cases might not be enough, might it, provided you wanted to reach the same level of profits and of capital invested in making your computation?

Mr. ZOLLER. Yes, sir; that is true. If I may be permitted, just a word on that point, on that feature. I know that the small business man and the copartnerships feel in some cases that they are paying more in proportion than the larger concerns.

Mr. GREEN. I would like to say that I think several members of the committee, including myself, have been somewhat impressed by that consideration, and they think probably there ought to be some allowance.

Mr. ZOLLER. Now, in my opinion, the only thing you can do in that case is to increase your specific exemption. You already have \$3,000 for corporations and \$6,000 for an individual. If that is too

low, I suppose it could be increased. That specific exemption does not make any difference at all. Someone whose capital is in the millions might just as well not have it, because it is so small. I think you have got to reach the individual cases that way, and I think it would be dangerous to try to help out the individual by changing the system that changes the whole financial system of the country. You must put them in in a special case by themselves.

Mr. GREEN. Mr. Zoller, not in the form of a question, but merely in the form of a statement, in view of the fact that some questions have been asked you with reference to the term "excess profits," and further, in view of the fact that there has been a great deal of discussion, it seems to me, speaking for myself individually, and my understanding of the purpose of the committee—although I do not pretend to speak for the committee in that respect, the purpose of the committee in using that term—I want to make the statement that to me that term, "excess profits" does not necessarily mean unreasonable or extortionate profits, although possibly there may be some instances in which there may be profits which might properly be taxed under stress of war and great need and exigency, such as we have upon the country at this time.

Mr. ZOLLER. Now, I just want to make one more statement, and call the committee's attention to the fact that I did not say that 10 per cent was the amount. I said it ought to be at least 10 per cent. My assumption is that this committee upon investigation is just as able to raise that 10 per cent as they are to lower it.

Mr. STERLING. I did not hear all of your statement. Did you define what you think invested capital is?

Mr. ZOLLER. No, I have not.

Mr. STERLING. Now, that is one of the problems of this committee. It is one of the things that has caused a great deal of complaint in the present law.

Mr. ZOLLER. I do not believe that you are going to be able to define invested capital without having some complaints. I think the Treasury Department has endeavored to the best of its ability to construe the present law equitably, and they have allowed with regard to borrowed money—I do not want to use this illustration—but they have said that if there was any excess where you could not deduct the interest under the income-tax law on money borrowed, that money borrowed should be considered as a part of invested capital, and that helps out to a great extent those concerns which are capitalized by using bonds or certificates of indebtedness instead of issuing stock. Of course, the Treasurer saw that they certainly should not have the right of deducting interest and reducing the income at the same time, putting in the debt as a part of invested capital, so he tried to meet them halfway, which was the best he could do under the present act. Now, I simply made the statement that I thought that invested capital as construed by the Treasury Department was fair to the average taxpayer. Now, I have no doubt that there are innumerable cases where it is not fair, and I do not feel competent to go into those individual cases and discuss the fairness of the situation.

The CHAIRMAN. Can you conceive of any tax law which will raise a considerable amount of taxes and yet not be inequitable in certain individual cases? It is impossible to avoid that, I take it.

Mr. ZOLLER. I do not believe one was ever enacted.

The CHAIRMAN. Even the income tax bears very heavily and unequally on a great many. Here is a man who puts out a million dollars, and the only return he gets is 1 per cent, and yet he has to pay the same income tax as the man who puts out a million dollars and gets 100 per cent. It is impossible to write into the books any tax law that does not bear unequally on somebody. We did try before and we are going to try again to rub out all inequalities if we can, of course, when we write the law we now have in view. But when it becomes a law there will be a great many cases where it will bear unequally on certain individuals or corporations, but it is one of those things that can not be prevented.

Mr. ZOLLER. Yes, sir; that is true.

The CHAIRMAN. Now, Mr. Emery, I think in this connection we may save time by permitting you to make some remarks at this time, if you prefer; or, we can wait until we get through with this general subject, if you prefer that should be done.

Mr. EMERY. I would prefer to be heard at this time, Mr. Chairman and gentlemen of the committee, if you are willing to hear me.

The CHAIRMAN. All right, we will hear Mr. Emery at this time.

**STATEMENT BY JAMES A. EMERY, COUNSEL FOR THE  
NATIONAL ASSOCIATION OF MANUFACTURERS OF THE  
UNITED STATES, WASHINGTON, D. C.**

Mr. EMERY. I will say that I am counsel for the National Association of Manufacturers of the United States, and in this matter represent also the National Industrial Conference Board, composed of some 19 national craft industrial organizations. These include the American Cotton Manufacturers' Association, American Paper and Pulp Association, Electrical Manufacturers' Club, Manufacturing Chemists' Association of the United States, National Association of Cotton Manufacturers, National Association of Manufacturers of the United States of America, National Association of Wool Manufacturers, National Automobile Chamber of Commerce, National Boot and Shoe Manufacturers' Association, National Council for Industrial Defense, National Erectors' Association, National Founders' Association, National Metal Trades Association, Rubber Association of America (Inc.), Silk Association of America, United Typotheta and Franklin Club of America, and National Hardware Association.

The National Industrial Conference Board, gentlemen of the committee, is what its name implies, a conference of the associations named, in which each is represented by its president and one delegate of that association. The board meets monthly, and possesses a staff which is constantly at work on industrial research work; it is an advisory and investigating body. It is for the purpose of enabling organized industries of the United States to conduct research work that they might better know themselves.

The conference board has given a great deal of time and attention to the subject of taxation from the manufacturers' viewpoint. It has not endeavored to enter into all the details of taxation, but has undertaken to ascertain certain fundamental principles that it believes ought to underlie the base of taxation, being chiefly interested in securing a fair and equitable tax bill. It is not concerned in the

rate except that it realizes that the purpose of revenue legislation must be to secure, not revenue for a single year, but under the circumstances which we face a constantly augmented stream of revenue for the future. So that we assume that a taxing body will lay its tax with the idea that it must not merely secure its return for this year, but must do its part to stimulate production in order that there may be an assured return in consonance with the needs of the Government in the future.

The conference board and the associations composing it are familiar with the conference of State manufacturers' associations who have presented their views to you; and naturally many of our members are members of State associations and most friendly relations exist between them. But we differ somewhat on our tax view at least in one respect. With much that Mr. Zoller has so ably presented to you we are in entire accord, but I want for the moment to call your attention to the one specific thing in which we differ.

The great difficulty in discussing tax questions is the difference in definition of the terms used. Some one has said that evolution had lost all value as a scientific phrase because it had been used in so many connections. So the phrase "excess profit tax" has been used to denote so many things that unless one defines what he means by it he is likely to be misunderstood in using it. I assume that an excess profit tax may be either arbitrary or what I should call natural. I mean by arbitrary excess profit tax one in which a return is fixed by the taxing body arbitrarily in order to meet the revenue needs, and all returns above the amount of the tax fixed is called, for the purpose of taxation, excessive or excess profit, and is a tax in such terms as the taxing body likes. I should call a natural excess profit tax one which was laid on the excess above the normal return of the industry, the average return being ascertained upon a broad base that permitted the industry to naturally express itself not only in terms of its normal profit, but in accordance with the varying efficiency of its management and the various elements that enter into the varying return of one business to another.

The excess-profit taxes as laid, for instance in Great Britain, are predicated upon an ascertainment of the normal prewar returns, the theory being that the taxpayer making his return upon two of the prewar years, the normal return expresses itself in the natural variation of the business, assuming, of course, that the years selected express the business. Of course the revenue-laying body is to select years, or permit the selection of years, that do express that normal return, so that neither injustice is done the government obtaining the tax, on the one hand, or the person or corporation paying it upon the other hand. If a base can be laid which fairly represents the normal return upon capital actually invested, we believe that that is what may be termed the normal return of that business, and that a tax laid in any succeeding year upon profit in excess of that normal return would be the natural excess-profit tax as distinguished from an arbitrary excess-profit tax. But naturally the return is determined not by the circumstances of the business, but by the necessities of the tax layer.

We venture, therefore, to call the committee's attention to a matter which, of course, has often been raised before it, but to which I must refer for the purpose of making clearer the position of these organ-

izations. I assume that the committee recognizes that nothing could be more unfair in normal conditions than to tax in like amount all forms of business. It would be similar to paying an equal wage for unequal service. In all business there must be naturally and economically speaking—I say economically speaking, and by that I mean under any economic law that might be permitted to express itself—the natural relation between risk and return. All business obviously is not of equal risk. It would seem very unfair to tax equally the return from investment in the form of farm mortgages and, I will say, investment in the construction of ships to be operated upon the dangerous seas. It would be equally unfair to say that returns should be taxed equally coming from various industrial operations of equal risk. Not only would that be unfair in itself, but it would seem to have a tendency to discourage that form of industrial enterprise which has been the pride of this Nation and the greatest stimulant to its industrial development, the great pioneer industries, which are by no means things of the past, but which have been operated and have prospered in the very midst of war. Because since we entered into this struggle we have builded, for the first time in history, the American chemical industry, and built it in the face of industrial and financial peril, and its future depends entirely upon the character of protection which it shall receive, not only from private enterprise but from public policy.

Mr. MOORE. Do you refer to the dye industry?

Mr. EMERY. Yes, sir; the chemical industry generally, but the dye industry is a part of it. We are also developing drugs and medicines, and we are developing a great optical industry, and making as good optical instruments in parts of the United States as were ever made in England.

While it is true, gentlemen of the committee, that the needs of the Government are not only very great but are dominant, yet the needs of private industry under the circumstance of war are also great, and we assume that they will receive that consideration from you which is consonant to the necessary increase in your revenue. So we have ventured to believe and assert that an excess-profit tax predicated upon an arbitrary standard, without reference to the normal earnings of the subject of the tax, and without due regard for the varying risks of the varying forms of business, is inequitable and likely to hazard the future of industry itself. Practically every European country which lays such a war tax does so by reference to normal antebellum standards. The ordinary method pursued seems to us not only condemned by reason and experience, but tends to establish a false notion in the public mind as to a fair return upon an investment, and to provide an erroneous basis for unjustly criticizing larger returns for more efficient management and a larger enterprise in its effort to stimulate business and secure a reward. We realize that while you are meeting the necessities of the present you are also making policies for the future that may be regarded as a precedent and may, by the same example, creep into the State.

So the National Industrial Conference Board, and the associations composing it, in view of these considerations and the universal European practice, urge that the committee consider a form similar in principle but differing in its details to the system pursued by Great Britain.

Mr. FORDNEY. Mr. Emery, have you a copy of the laws of Great Britain as to the amount of return capital is permitted to make before taxes begin?

Mr. EMERY. I have not got it here, but will be glad to supply it to the committee.

Mr. GREEN. All of us have that.

Mr. EMERY. All right.

Mr. FORDNEY. I wish you would put it into the record. All the rest of the committee may have it but me, but I would like to have it in detail.

Mr. EMERY. You want the whole law?

Mr. FORDNEY. Yes; I want to know how much capital they are permitted to deduct before beginning to add to the taxes further, and how it is done. I am informed generally, as are the rest of the committee, I take it, but I haven't it clear in my mind how it is arranged in detail.

Mr. EMERY. Do you realize that the British tax act has changed slightly since January 1?

The CHAIRMAN. What change has been made since January 1 in regard to the excess-profit tax?

Mr. FORDNEY. Pardon me, Mr. Emery, their fiscal year begins April 1, so that their new tax law went into effect then and not January 1, I take it.

Mr. EMERY. No; there is a variation as of January 1 in the so-called excess-profit tax or war-profit tax. Prior to January 1 the controlled industries of Great Britain predicated upon their prewar earnings, they being permitted to make returns on two out of three prewar years, but—

Mr. FORDNEY (interposing). Of how much?

Mr. EMERY. Controlled industries made their returns upon two out of three prewar years, and then they were allowed to prove their normal or average earnings for that period not to exceed a further profit of 20 per cent. Upon the return after that a tax was laid. But since January 1 the 20 per cent is stricken off and they return the whole of their profit over and in excess of their average prewar earnings for two out of three years preceding the war.

Mr. FORDNEY. Do they permit the making up of a loss, say, this year for last year before the tax begins?

Mr. EMERY. That general rule is subject to a very considerable body of exceptions which are applied through a committee which undertakes to adapt the rule to the condition of the industry as nearly as possible in order to assure to the industry its prewar returns.

Mr. SLOAN. Who composes that committee?

Mr. EMERY. I think there are two forms of committees. One is a committee of first consideration, as I might call it; and, secondly, there is an appeals committee. It is appointed by the minister charged with the collection of the tax. It is not a standing committee, as I understand it, but a committee which varies from time to time, and whose membership is composed with regard to the particular character of the business under consideration.

Mr. MOORE. Mr. Zoller suggested that there should be a commission to cooperate with the Commissioner of Internal Revenue. Does this committee to which you refer correspond with that suggestion?

Mr. EMERY. I think it might be said to correspond to it, depending upon the personnel of the committee proposed.

Mr. MOORE. Is it a committee of adjustment or a committee of appeal?

Mr. EMERY. It is a committee of adjustment in the first instance, whereby the taxpayer has an opportunity where a condition arises which promises to do him an injustice if the law were enforced, to present to the committee his peculiar conditions and circumstances and for it to act thereon; and its action is subject to consideration by the appeals committee.

Mr. MOORE. Does the committee have power to allow adjustments if it finds inequalities?

Mr. EMERY. Yes, sir.

Mr. LONGWORTH. I agree with you entirely on the particular general proposition that the theory of a natural excess profit tax is better than an artificial one, such as we have. In fact, when this excess profit tax based upon invested capital was first proposed before the war I was opposed to it and opposed it on the floor. But we found that the application of the English system here in the United States would result in exemption for a large number of very rich corporations, so that they would not pay any tax at all.

Mr. EMERY. Well, I do not suggest that we shall Anglicize any more than we shall Gallicize, but that we shall profit by the experience of England in laying our own standard.

Mr. LONGWORTH. I am not talking about that, but that we should not adopt a system whereby the larger corporations and the richer corporations here, who were making about the same profit before the war as they are making now, should be relieved of the tax. If we did that it would relieve them of the excess profit tax entirely. Would there be any way under the natural system to have these corporations pay an excess profit tax?

Mr. EMERY. I was about to read to the committee the base that is proposed.

Mr. HAWLEY. Do you think that we, under our constitution, could delegate to a committee broad powers of adjustment such as the British Government delegates to its committee that is charged with this tax legislation and of giving it flexibility, of which you speak so well and clearly?

Mr. EMERY. I was perhaps stating the English practice too broadly, but the advantage in it is the somewhat broader application of the principle we have in our own law by which if an individual suffers injustice under the rigid application of the law, in our case, he makes his return to the Treasury officials and they are to give him an allowance within the limited powers conferred upon them. That is, for instance, new corporations organized since the war, or corporations within the terms of our present law, are allowed to make their returns and the law itself forces them before the Treasury officials for advice. The only difference is that under the British system they have much broader powers; but, of course, we recognize in this country very fully and always that Congress may delegate the ascertainment of facts to a commission or other body and then apply the principles which the legislature has determined. They are not thereby exercising legislative powers.

Mr. HAWLEY. Before you develop your theory as to how these corporations may be reached under the English system, let me ask what would you think of having both systems incorporated into the new law, and having one apply to one class of corporations and the other apply to the other class of corporations?

Mr. EMERY. I think it very possible. I think what we are chiefly interested in is the laying of a rigid rule by which they would levy an excess-profit tax on all corporations in the United States earning above a certain amount.

Mr. HAWLEY. I agree with you it is entirely wrong in theory, but it is the only method we have now, and it is a method under which we can raise a large revenue. Of course, it does work injustice in some individual cases.

Mr. EMERY. We are not complaining of this particular situation, but endeavoring to point out to you certain defects that we fear may follow the adoption of a wrong policy at this time, and we want to give you the reasons why we think an arbitrary application of excess-profit taxes is erroneous.

Mr. GARNER. Suppose you have the double system suggested by Mr. Longworth. Would you not put in a general clause that in case prewar-period profits were very large—we will say 100 per cent or 200 per cent—if based on that that they should not exceed a certain amount at this time?

Mr. EMERY. I think any general rule is subject to exceptions.

Mr. CRISP. In regard to any rule with reference to elasticity in administration between all these laws I have had the view that the main object was to adopt such methods as would enable the Government and the taxpayer to compute a relatively fair level of profits subject to this tax and a relatively fair level of capital invested, so far as that is concerned. With that arbitrary rate of comparison it would not avoid inequalities in many cases, and you would not reach a fair level in every case, no matter whether you took a prewar standard of profits or a capital percentage of profits, but I regard them as exceptional cases and due to special circumstances. For instance, one concern with a capitalization of \$100,000 makes \$20,000 net profit, and another concern with a capitalization of \$50,000 cash paid in makes \$20,000 net profit, but substantially half of that \$20,000 was made on account of the exceptional knowledge and business capacity of the individual owner. Now, if you wanted to reach the same relatively fair level of profit on capital invested, you would want to prescribe a little different rate of comparison than the fixed arbitrary comparison that would step down to normal conditions where the total profits were made from the actual cash invested and where the capital invested was as plain and simple as calculation.

In other words, it would do no violence to the validity of one of our statutes if in order to make its computation relatively accurate and fair we should give to the Treasury Department enough latitude to adopt a different method of calculation and computation, within the machinery of computation, in order to fit in with exceptional conditions. Isn't that true, as a rule?

Mr. EMERY. Of course, you can see that you must have two extremes of exceptional conditions; one we will say exceptional good fortune and good management, and the other exceptional adversity.

Mr. CRISP. I was speaking of exceptional cases and the necessity for elasticity if you want to approximate equality.

Mr. EMERY. Yes. Of course, every universal law does injustice in exceptional cases. That is unescapable; but the object of the law is to try to avoid injury to public or private interest.

Mr. TREADWAY. Before you proceed, would you mind stating a little more in detail your views in regard to the establishment of policies now and for the future in view of all the exigencies and needs at the present time. I think you made a statement that the existing exigency is likely to establish a policy for future taxation. Did you not state that?

Mr. EMERY. Yes, sir.

Mr. TREADWAY. Will you be kind enough to explain that a little more in detail?

Mr. EMERY. I suggested in furtherance of the principle here stated that while the public interest is dominant in the laying of the tax, and the public interest must control the amount laid, nevertheless an erroneous policy now would seriously affect our taxing policy for the future. To illustrate, if you did not recognize but obliterated in your tax law the distinctions between risk and return, and between efficiency and inefficiency in management by making the reward to all equal, you would tend to establish in the public mind the belief that 10 per cent, or 8 per cent, or 9 per cent, or whatever arbitrary amount you may fix, is a fair return upon any form of investment. And if you do that, then in the future you make it exceedingly difficult for those who come after you to allow rates of return that are in correspondence with the risk of new ventures, because you have educated the public mind to believe that nobody is entitled to more than 7 or 8 or 9 or 10 per cent upon his investment, no matter how great his risk nor what the character of his business. And you know obviously that the great body of new enterprises at every stage in our history has been financed by men who took the risk because they were assured that if successful they would secure a large return. All your mining ventures represent that type, varying in accordance with the nature of the metal and the circumstances attending the opening of the mine, as well as ship ventures, etc.

Mr. LONGWORTH. That is the reason I asked Mr. Zoller the question whether it would not be fair to segregate certain industries where very large risks were necessary, like the oil and similar industries?

Mr. EMERY. Yes.

Mr. LONGWORTH. And allow them a larger return?

Mr. EMERY. Yes.

Mr. GREEN. I take it that you are opposed to our present income tax, because the same argument you are making applies to it, where we tax a man just the same regardless of whether engaged in a business in which there is little risk or large risk, or whether his income is derived from one in which the risk is small or great.

Mr. EMERY. Well, I think we can distinguish between the personal and the corporate risk. One is the risk of business, which, if you protect, you have sufficiently protected the individual in his return from it.

Mr. GREEN. But the individual pays the corporate tax.

Mr. EMERY. I know, in proportion.

Mr. GREEN. It is simply the way of getting at it. The excess-profit tax, after all, is merely another form of income tax.

Mr. EMERY. Well, it is impracticable to distinguish between taxation of the individual source from which he secures his return. I can not tell when taxing John Jones whether he got his money from a highly risky business or one without risk. I have only the amount of the return. But when taxing business I have the circumstances and conditions under which the business derives its income.

Mr. GREEN. It would be just as easy to get it from the individual if you want it.

Mr. EMERY. Well, I do not see any impracticability about it.

Mr. TREADWAY. May I finish with the line I had in mind before you take him up further, Mr. Green, or was yours the same line of policy?

Mr. GREEN. Well, one more thought on that: Mr. Emery, your argument to a considerable extent is based upon the main subject of excess profits. For myself, and possibly for some of the rest of the committee, I am not so much interested in names as in the justice and equality of the tax, upon which you have also presented argument. But suppose we had called our tax, as they have in Canada, simply a tax on business profits instead of calling it excess-profit tax, then would we not come to the question simply of whether we could properly in this time of stress and exigency of the Government lay a tax on the profits which we are discussing? Isn't that after all the real question and not one of terms or names?

Mr. EMERY. Well, I do not think we are discussing fiction. I think we are discussing a highly important fact. I do not believe I am distinguishing between phrases; I am merely considering the exigencies of the hour and the essential needs of things. I do not care by what name you call these things; I have merely given them the names by which they have been baptized by legislation and public discussion. I am compelled to treat them by the name I find attached to them. I think there is quite a distinction between them and it goes to the very nature of the business which is the subject of tax action. If I have emphasized the relation between risk and return, and between efficiency and inefficiency in the conduct of business, I have done so because these features seemed especially to be overlooked in any form of arbitrary taxation.

I want also to call your attention to the contribution which each one of these forms of business must make to the United States Government, not only in the amount of revenue which it must pay but in the sustained charge of its own production and all that. All these things are considerations that go to this very matter arising out of the very nature of the business in order to sustain every one of these businesses in the performance of its function, because they are merely gigantic tools at the service of the Nation, and they must be permitted to have a return adequate to perform that function.

When we suggest this base of taxation we are not doing it, I beg to assure you, as in the main lessening the amount of taxation that may be laid upon these industries, but dealing with the nature of the thing itself and its contribution to public effort, that it may be maintained and recognized in the form of law, not only for their present protection against undue or improper discrimination, but for future pro-

tection of the thing itself as a social contribution to the future of the Nation.

The CHAIRMAN. I will have to go over to the House in about 10 minutes and would like to ask one or two questions before Mr. Treadway takes Mr. Emery up again.

Mr. EMERY. If you will pardon me, I am at your service in dealing with or laying down this base that I have suggested, but if permitted to go a little further with what I have in mind I think I would answer many of these questions. It will be very short, and then may I respond to your questions?

The CHAIRMAN. All right, go ahead.

Mr. EMERY. We therefore suggest to your honorable committee a substitute for the pre-war standard proposed the following:

(1a) That the pre-war standard be for a five year period from 1911 to 1915, inclusive.

(2b) That the taxpayer be permitted to select as the basis of his return any three of such years, the average for the years thus selected to provide the base from which to compute the war excess profit tax. This would be in consonance with the British law, which permits the taxpayer to select two periods out of three.

(2c) Add to the average normal income thus ascertained an amount sufficient to provide a like rate of income upon new capital invested in the business prior to the taxable year, the rate allowed upon new capital to be that actually earned upon the old capital actually employed during the pre-war years selected by the taxpayer.

(d) Levy upon the amount of war excess profit for the taxable years thus shown a rate sufficient to produce the amount which in the judgment of your committee must be provided from this source.

The CHAIRMAN. What is the deduction from the percentage of profits before the excess-profits tax attaches in Great Britain on new business? That is, a new concern that has been organized and started in business since the beginning of the war. It was 6 per cent at first, wasn't it?

Mr. EMERY. I think that is the minimum, as I understand it. The same standard is applied to new business as for any like business. It is thrown for the purpose of computation into the group in which it belongs, and it is allowed the base of the group to which it belongs.

The CHAIRMAN. The principle that you announce is to take the prewar standard and then lay a tax on the difference between the prewar standard, with some modifications, and the conditions existing during the war?

Mr. EMERY. Yes.

The CHAIRMAN. I will ask Mr. Dixon to take the chair, as I must go over to the House.

Mr. GARNER. I gathered from your answer to Mr. Treadway that you had the idea that the necessities of the Treasury after the war might continue the policy of an excess-profits tax. Do you have such an idea as that?

Mr. EMERY. No, sir. What I am indicating is that the viewpoint of taxation presented in the law might create an erroneous public opinion with respect to a reasonable rate of return between the risk of an enterprise and its profit.

Mr. GARNER. But you do not contend that after this war is over the system of taxation in this country will be based upon the present

policy of excess profit either as applied in England or in this country under the present law?

Mr. EMERY. Well, I know that reduction of taxes, historically speaking, has always been a very slow process, and in the face of the tremendous burden which we are assuming, it is likely that we must for a long time live under a system of taxation which will produce a large amount of revenue, and there is only one thing out of which we must pay it, and that is increased productive wealth, so it becomes necessary to be very rational and consistent with public policy to encourage those forms of productive wealth that establish the greatest social return to the country.

Mr. GARNER. Would not you consider the policy of securing revenue out of incomes more preferable than excess profits, as a general policy of the Government in time of peace?

Mr. EMERY. Incomes of corporations or persons, I assume you mean?

Mr. GARNER. Both.

Mr. EMERY. There we are merely returning to the circle as to form, whether we shall lay taxes on excess profits, on income, or secure the needed revenue through some other form of taxation. It must be obtained either from income of persons or businesses or by tariff taxation.

Mr. TREADWAY. Your definition of policy referred rather more to educating people to the extent of laying these taxes and to the kind of taxes?

Mr. EMERY. Yes, sir.

Mr. TREADWAY. My thought was this, and I see that I was in error and that your definition rather corrects it: I thought when you referred to educating the people to the policy of taxation that you referred to this kind of taxation we are now levying, that is, excess profits, income, etc., rather than the possibility of the return of a larger revenue than we are now getting from the tariff.

Mr. EMERY. I can only refer to recent political history as to the power of phrases in educating the people. We live under a Government of headlines and phrases in many respects, and once you create the idea that the amount returned is excess profit you have developed in the public mind a belief that anybody who earns more than that in any form of business is getting a return to which he is not entitled, and it seems to me once you have done that you have discouraged many forms of pioneer enterprise, which have been not only in the past but especially in the future are going to be of tremendous importance.

Mr. GARNER. May I ask another question: You spoke about elasticity of the English system with reference to administering the excess-profit law. That gives an opportunity for favoritism, which we have sought in this country to avoid by statute as far as possible. During war times I am inclined to think that public policy would justify a great deal of elasticity in the Treasury Department, but in times of peace would you advocate a policy of the Government that would give to the Treasury Department opportunity for such elasticity as is necessary to administer this law at this time?

Mr. EMERY. The beauty of equity is that it can accommodate itself to the peculiar circumstances of any case, and for that reason it often does greater justice than statutory law can. So if we can ap-

ply to any legislative act—particularly a tax act, which is peculiarly liable to do great injustice and create hardship in a country as great as ours—such elasticity we have approximated justice, not the justice that does injustice to public interest but which is fair play to the individual and undertakes to treat him justly in the light of the law.

Mr. FAIRCHILD. Have you any suggestion as to a way to secure greater flexibility in the administration of the law as between extra hazards and hazards?

Mr. EMERY. Well, that system is flexible.

Mr. FAIRCHILD. I did not know whether your association had made a study of that part of the law and had some suggestions to make?

Mr. EMERY. You, of course, perceive, Mr. Fairchild, that the Government itself has tried to make the law elastic by the appointment of various advisory committees, none of which has had legal authority to finally act upon many things but can only recommend lines of action that were intended to lessen the hardships of the law.

Mr. FAIRCHILD. Your statements have been so very interesting to myself, and I think to the whole committee, that I thought possibly you had gone deeply into that question and were prepared to make suggestions.

Mr. EMERY. I think suggestions can be made, Mr. Fairchild, in the line of your proposal, when the proposed law is thrown into form. The difficulty at the present time is that one has to suggest a line of elastic treatment for an abstraction rather than discuss something that has been put into form. But the moment the law assumes its form I do not see why a proper committee can not be created in the Treasury Department, or perhaps the present Treasury officials who now possess limited powers can be given such powers as your committee think safe in the public interest and adapted to applying the law to present conditions.

Mr. LONGWORTH. Would you mind repeating those suggestions for the benefit of the committee?

Mr. EMERY. This base that I have?

Mr. LONGWORTH. Yes.

Mr. EMERY. I will be glad to do it. Our suggestion to your honorable committee as a substitute for the prewar standard is the following:

(a) That the prewar standard be a five-year period from 1911 to 1915, inclusive.

Mr. MOORE. Do you mind stating there an explanation of your reasons for that suggestion?

Mr. EMERY. All right. I can possibly shorten it by just reading a statement I have here. The necessity for a reasonable flexibility within the standard prewar period selected is recognized in the legislation of every European country levying a like tax, by according to each taxpayer the privilege of eliminating one or more periods from those designated as the basis of return.

If reason and experience approve this standard abroad, how much more strongly is it urged by the varied circumstances of American industrial life. For in a country so vast as ours, comprehending within its borders many great communities differing greatly in physical and economic circumstances, local conditions operate at various times to produce in different degrees conditions which,

while confirmed in their influence, are nevertheless often active over areas greater in territorial extent than any European nation whose war taxing experience we possess. Each member of this committee is sensible of the fact that drought, flood, industrial disturbances, and like causes have seriously affected industrial and commercial areas in one or two years out of substantially every five. Thus the great Ohio Valley, a thriving industrial hive, suffered within the past three years a destructive flood which paralyzed its industry at a time when the rest of the Nation enjoyed substantially normal prosperity. In terms of the knowledge and experience of every Member, like conditions have operated during various periods to seriously affect large areas in the southern, southwestern, and western sections of our country. It is likewise equally obvious that the events of the past three years have so disarranged and revolutionized business in the United States as to necessitate the reorganization of material standards in comparing the business circumstances of the present with the conditions of the recent past.

In view of these considerations and the universal European practice, we urge that the taxpayer be permitted to eliminate one or two years from a selected prewar period of five as a basis of calculating the average normal net return. This is readily accomplished by adding to the rigid prewar standard proposed either the years 1914 or 1915.

Of course, what is said there is equally true by including 1916. We mean by "prewar years," previous to the European war. If we adopt our own standard we would adopt the years 1916, 1915, 1914, 1913, and 1912. This suggestion is not intended to be rigid as to years. The illustration is brought to you because these years offer a fair opportunity to business to normally express itself, and to provide you with a fair photograph of its actual outline.

Mr. MOORE. There is a popular impression that this device of our English brethren, which we have enacted into our law to a certain extent, and which you propose to extend, rather increases opportunity for bookkeeping and for such accounting as might lead to unfair—or preference, I would say—to certain large established concerns over those that have recently begun to do business. In other words, that to go through all these ramifications of past years and past accounting have very largely the purpose of adding to the general confusion in the interest of the taxpayer, and is unfair to the other taxpayers who have to pay upon the present rate. I do not know whether that impression has come to you, or whether you have ever heard anything about it, but I hear complaint occasionally of people juggling the returns due to the minutia necessary to be gone through with in order to ascertain the returns.

Mr. EMERY. Of course, a part of that objection goes back to the lack of clarity in the law itself. Any law that lacks clearness necessarily implies trouble with its administration. But as to any business that comes into being after the enactment of the law, and for which the standards here can not be applied, there is a means of treating it fairly without any difficulty, in the light of our own law or in the light of a foreign law, where it is thrown into a group and decided by the general average of the group. If a man established—I will not say shipbuilding plant, because that is all in the hands of the Government to-day, but I will say a chemical industry; if he

establishes a chemical plant he goes back into the chemical group, and his return is predicated upon the average return of the group to which he belongs. So it is subject to the minimum allowance of return within the law.

Mr. GREEN. Something has been said with reference to the flexibility of the English statute. I had occasion, along with the rest of the committee, to make some study of the English statute two years ago when we were preparing this law. I found it so extremely complicated and with so many exceptions, or as Mr. Moore suggests, exemptions, and I will broadly class them exemptions, or allowances would probably be a better term, that I went to work to prepare, although I did not do the work myself, and had this elaborate chart made of its provisions in order that it might be better understood.

I found that there was not only a board of commissioners created, the board of commissioners of inland revenue, but also a board of referees, and that there was case after case in which they might review the returns and make practically such allowances as they saw fit; and while the nature of these cases was given and they were enumerated in the law, the final specification was that this might be done with any special circumstance specified in regulations made by the Treasury, which practically gave the Treasury power to assess the taxes about wherever they saw fit. Now, whether that was made necessary by the nature of this law, and all, I have some doubt whether under our Constitution in this country we could make a law so flexible as that.

Mr. EMERY. Oh, I quite agree with you. I am not suggesting the adoption of the English plan. I have been arguing with reference to the adoption of the prewar standard, the recognition of experience under the English principle. Now as to the detail with respect to, and the seeming flexibility of, administration, one may of course suggest that only so far as flexibility is a gain and not an injury may it expect itself to be adopted, and it is to be adopted in accordance with the circumstances of our law and our traditions and our practice, and the physical nature of the business to be subject to it. We can not adopt the English system, especially, because the English legislative system differs in so many respects so greatly from our own, on account of the enormous judicial and legislative powers which the Parliament can confer upon a minister of the Crown. They can practically turn over to him any group of powers that they please, in the absence of any constitutional restraint, which of course we can not do; so do not hold me accountable for the fact that the English law is not adaptable to our system; but permit me to suggest that in the English experience there is a valuable suggestion as to the adoption of a reasonable or unreasonable but unconstitutional increased flexibility.

Mr. GREEN. I think your suggestion should be considered.

Mr. EMERY. Let me suggest what has happened in the administration of our own law, that because of this lack of flexibility, and of the difficulty of interpreting many of its provisions, we have had to do almost extralegal and extrajudicial things. We have had to appoint a variety of committees, who held hearings on the subject and various provisions of the act. Take our own cases for instance. When the advisory committee of the Treasury was appointed, I obtained for them about 200 specific, concrete cases of manufacturers' difficulties

in making returns, taken from the experience of a great number of manufacturers spread over many statements, reduced to the most concise expression of facts, and these were turned over to the advisory committee to illustrate the difficulties of applying the law in individual cases.

Mr. GREEN. Pardon me; that is the difficulty, not in applying the law, but the Treasury regulations, right there.

Mr. EMERY. Both. Now, this advisory body was appointed by the Treasury to assist it. It was not provided for in the law. Other similar committees have been appointed by the Treasury, for instance, to assist in the making of excess-profits tax or other returns which are in their hands, and some of those returns will not be made possibly for a very much longer period than the law, because of the difficulties involved; and these committees are going to undertake to assist the manufacturers; and they all represent, I do not say illegal, but extra-legal, bodies, which have had to come into being in order to assist in the interpretation of the law, but were not provided for in it.

Mr. GREEN. Let me suggest, as I was going to do, another point that might be considered in connection with the English law, namely, that when it was necessary to have these commissioners of inland revenue and also the board of referees, and possibly some other boards—I have forgotten at this moment—with permission under Treasury regulations to do almost anything that they wanted to with the law, it looked as if this law did not work out with entire smoothness in its original sphere. That is what I had in mind. But I wanted also to come to another point that is entirely distinct from that. You are aware, of course, that your plan would entirely, ordinarily, exempt certain corporations that are making extremely large profits, 60, 75, and even 100 per cent; is not that so?

Mr. EMERY. Would it not also bring in a very large number?

Mr. GREEN. Yes; it would bring in a very large number that are making small profits and tax them heavily.

Mr. EMERY. Yes, but—

Mr. LONGWORTH. Before you go further, I wish you would read those other suggestions you have there, so that we will get the whole thing together; if you do not object.

Mr. GREEN. No; I am out of place here. I ought not to have interrupted.

Mr. EMERY. Do you mean the base statement?

Mr. LONGWORTH. Yes.

Mr. EMERY. For the purpose of ascertaining the prewar status we take a five-year period. These suggestions are as follows:

- (a) That the prewar standard be a five-year period from 1911 to 1915, inclusive.
- (b) That the taxpayer be permitted to select as a basis of his return any three of such five years, the average for the years thus selected to provide the base from which to compute the war excess profit tax. This would be in consonance with the British law, which permits the taxpayer to select two periods out of three.
- (c) Add to the average normal income thus ascertained an amount sufficient to provide a like rate of income upon any new capital invested in the business prior to the taxable year, the rate allowed upon new capital to be that actually earned upon the old capital actually employed during the three prewar years selected by the taxpayer.
- (d) Levy upon the amount of war excess profit for the taxable year thus shown a rate sufficient to produce the amount which in the judgment of your committee must be provided from this source.

Mr. MOORE. Do you mind explaining briefly each point there?

Mr. EMERY. That is, the prewar standard?

Mr. MOORE. Read (b), and then give a few words of explanation of it?

Mr. EMERY [Reading]:

<sup>b</sup> That the taxpayer be permitted to select as his return any three of such five years, the average for the years thus selected to provide the base from which to compute the war excess profit tax.

Mr. MOORE. Why do you make that suggestion?

Mr. EMERY. Because we believe that three out of the five years suggested, or with the inclusion of the year 1916, fairly presents the normal operation of business.

Mr. SLOAN. Would it not be fairer for the Government to exclude one of the five years and the taxpayer one of the five years, leaving the three representative years? Yours is a onesided position, leaving the taxpayer to select the three years he thinks fit. I presume that the rule that would be followed would be that the taxpayer would exclude the most profitable year and the Government would exclude the least profitable year, and you would then have the three most representative years of the period.

Mr. FORDNEY. Would it not be fair to take an average of the five years?

Mr. EMERY. The only reason for taking three out of the five years is based on the physical difference between Great Britain, for instance, and ourselves. Great Britain is a comparatively small country, and we have several States in which we could easily place it; and in a country physically as great as ours there are physical circumstances resulting in catastrophies. For instance, take the Ohio flood.

Mr. MOORE. Or you can take a drought in Texas.

Mr. EMERY. Yes; that affected the cotton crop. Or you may take cyclones or fires that wiped out great sections of the country. That is something not likely to occur in a country so small as Great Britain.

Mr. MOORE. You mean it is a matter of choice to the taxpayer? That is one point that it seems to me might be questioned.

Mr. EMERY. Please understand that I am not offering this to you personally, nor do I understand that the conference board is, as a rigid plan. It is offered first as a proposal, and second, as an illustration of a principle of taxation to which you must give attention in order to be fair.

Mr. MOORE. What is the objection to Mr. Fordney's suggestion, to take the average of those five years? A drought or a cyclone do not usually last five years.

Mr. EMERY. But the trouble is that if you leave out one year and take three out of four or four out of five, unless you leave out some one year, it seemed to us that from the standpoint of business concerns you did not afford the opportunity to cover a year of disaster or misfortune or of exceptional business conditions, which would greatly lower the average, and unfairly present the normal operation of the business. There is hardly any period of five years in American manufacturing business in which there is not some very exceptional years on account of trade conditions, physical disaster, or other exceptional or unusual circumstances.

Mr. MOORE. And sometimes there are other conditions, to which we are not permitted to refer.

Mr. EMERY. Well—

Mr. MOORE. That would be every four years.

Mr. STERLING. The Bethlehem Steel Co. would take 1914 and 1915 as two of its years, would it not?

Mr. EMERY. I do not know.

Mr. STERLING. And then they would take the other next highest years. They made more money then than they are making now, did they not?

Mr. EMERY. I can not speak of their particular case; but I can not think of any proposal, Mr. Sterling, that will not subject either particular individuals and concerns to disadvantage, or operate greatly to the advantage of particular firms or individuals.

Mr. STERLING. It seems to me that with the choice, you would give an advantage to the concern that made big war profits.

Mr. EMERY. That made big war profits?

Mr. STERLING. Yes; during the first two years of the war.

Mr. EMERY. You mean of the European war, now?

Mr. STERLING. Yes.

Mr. EMERY. Yes.

Mr. STERLING. They made more money then, I think, than they do now, since we have become involved in the war; is not that true?

Mr. EMERY. I think it is true of particular concerns; but of course I am bound to think in terms of general industry rather than of exceptional organizations within industry. We went over a great many particular cases in the conference board, which you will understand did not represent any single corporation or industry; but, as I have read to you, you can see that it is fairly representative of nearly every form of industry in the United States, so that, for instance, the textile industry checks the steel industry, and the boot and shoe industry checks the electrical industry, so that the moment any one industry in the group begins to touch any one particular phase, it is met and checked by some industry over here that represents a different set of conditions; so that an average has to be struck for that—

Mr. LONGWORTH. Under your suggestion, would not the Standard Oil Co. escape taxation under that bill?

Mr. EMERY. I can not say as to that particular instance. I can say as to the general average. I think it is the consensus of opinion—

Mr. LONGWORTH. And the American Tobacco Co. would escape taxation under that bill?

Mr. EMERY. I have seen various statements in regard to that, including one by the American Tobacco Co., which showed to the contrary.

Mr. LONGWORTH. And any corporation which in the previous five years was making as much as it was to-day would be wholly untaxed, no matter how much capital they had?

Mr. EMERY. As the gentleman stated, wealth is taxed in so many ways that wealth itself, income, can not escape. Whether it gets taxed at its source, in the business which creates it, or in the hands of the individual who ultimately receives it, it tends to pay its tax, and the thought that we have in presenting this thing is just this,

that these represent the sources of the production of wealth, and we assume that the committee wants to stimulate production, and it wants to reach the fruits of the production and compel them to bear their proper share in national affairs.

Mr. LONGWORTH. We want to do that, but how can we justify a tax based on this system which you advocate, which I agree theoretically is accurate, which would exempt from taxation concerns like the Standard Oil Co., or the Ford Motor Co., or a number of others? Now, I believe it is calculated that over \$500,000,000 would be lost under that system; that is to say, all corporations which were making large profits before the war, as large as or nearly as large as or perhaps greater than they have made since then, would wholly escape taxation under the method you have laid down. Could we justify that?

Mr. EMERY. I think I would have to say, in reply to that, Mr. Longworth, that I should like to see the evidence of the fact rather than the assumption of its existence, because in a number of cases—

Mr. LONGWORTH. I said that applied to some, not all.

Mr. EMERY. Yes. In a number of cases that was discussed a number of times in the conference board, and invariably, whenever a condition of that kind was presented, at the next meeting figures were brought in to show that the contrary was the case; that perhaps there would be a reduction in the amount of the tax, but that it did not materially affect the condition; that furthermore, and taking it as a war profits tax, for instance, the tendency of any such proposal was to reach at the true war profit, so that the profit, which had in any way come into existence as an outgrowth of the war bore its proper proportion of the burden of the war, and that it tended to conserve the normal situation of the business; and that taking it upon the whole, on the average, while here and there there was one individual who profited by it, there was another individual—corporations, I am speaking of now—that paid a larger proportion for it, but always in terms of one thing, war profits—war excess profits.

Mr. LONGWORTH. It happens that in this country many of the very largest and most powerful corporations are those which have not been affected by the war practically at all—that is to say, whose profits before the war were at least as great as since the war. Those would all escape taxation under your method?

Mr. EMERY. There is a very easy way to right that.

Mr. LONGWORTH. How would you do it?

Mr. EMERY. By increasing the normal tax.

Mr. LONGWORTH. Oh, yes; but that is outside of the war-profits tax.

Mr. EMERY. Yes, indeed.

Mr. LONGWORTH. And if we increase it on them, we must increase it on the small ones.

Mr. EMERY. Then, we must come back to this proposition, that if we want to make each business pay its tax, that is one thing; but if we want to tax war profits, then we must undertake to determine what is a war profit, and tax it, and not undertake to take something which is not a war profit and tax it.

Mr. STERLING. The result of your suggestion is this, that you will not get the war profits by allowing them to take the years 1914 and 1915, because that is not a prewar period at all; that is a part of the

war period, and you do not get the war profit by taking in those two years.

Mr. EMERY. The schedule suggested is quite flexible enough to allow the committee to arrive at a conclusion on the principle of taxation to meet the objection.

Mr. FAIRCHILD. What is a war profit?

Mr. EMERY. I think, before we put an adjective before the word, it might be well to determine what is a profit.

Mr. MOORE. Is not a war profit the \$1,500 that a Congressman makes in salary, above the \$6,000 in exemption? That is an instance of a profit that is the same, now the war is at its height, as it was before the war, and yet that is subject to a war-profit tax. I thought that might help Mr. Fairchild.

Mr. FAIRCHILD. Mr. Emery, I agree with you in the theory, but the trouble is that we face this actual condition, that a number of the very largest and strongest and most profitable corporations in this country would wholly escape taxation under your method as laid down. Can we justify that at this time? Will it not be better to adopt the other system rather than your system?

Mr. EMERY. I believe thoroughly that a rational working relationship can be established between the two systems, but the thing to which the great body of industry, I believe, is opposed, is the arbitrary form of taxation, as I say, which fails to recognize the natural relationship between risk and return, and between efficiency and inefficiency in management, so that it involves an equal treatment of the unequal, which is the worst form of injustice, and so works hardship which I have little to say about now. In peace times we could talk about the hardship to industry; but now industry wants to make its contribution, and it is making it now with all the power at its command; but it believes also that the Government must maintain a policy that is stimulating, continually, production, and increasing production and the making of new wealth; because the debts of the future can only be paid by increased production. There is no other possible way in which we can meet the obligations of the future except out of what we can manufacture.

Mr. LONGWORTH. There, again, I agree with you; and I myself, so far as I have considered it, can see no objection to a classification of different kinds of business, depending largely on the risk involved. For instance, I can see no reason why we should not segregate a very profitable industry like the oil industry or the lead mining or zinc mining industry, which are very hazardous and in which the profit, if any, must be made within a very short time. I can not see why they should not be allowed a larger deduction in their profits than others.

Mr. EMERY. If you will permit me, I will have performed my task, and will have represented truly the views of this conference board with these manufacturers on it, as I understand it, if I can impress upon the committee what they believe to be a reasonable objection against an arbitrary as distinguished from the natural form of estimates.

Mr. LONGWORTH. Could you suggest, further along, any method for classification of different businesses?

Mr. EMERY. I should be very glad to do it.

Mr. LONGWORTH (continuing). Based on the essential risks involved, so that in determining their excess profits tax we might make the kind of deduction that you suggest, that would bear equally, under the circumstances, on all?

Mr. EMERY. Now, I wanted to make it clear that we did undoubtedly agree very fully with many of the suggestions of an instructive nature made by Mr. Ziller representing the Trade Associations, and I wanted to emphasize our objection, over that agreement and indorsement, to the arbitrary form of taxation which we believe to be not only unfair to the individual, but in the long run to the unwise in the public interest.

Mr. GREEN. Now, when you speak about the fairness, and the arbitrary nature—

Mr. EMERY. Not the fairness of Mr. Ziller.

Mr. GREEN. No, I understand.

Mr. EMERY. Yes, sir.

Mr. GREEN. You think it would be fairer, do you, under your plan, to take some corporation not having anything to do with munitions or strictly war necessities, which before the war was making only a slight profit and now is making 25 per cent profit, and to tax that corporation heavily, and exempt entirely a corporation that is making 50, 75, or 100 per cent, simply because they made that much before the war?

Mr. EMERY. I think in theory, the fairest form of taxation would be one that undertook to approximately reflect the natural condition of the industry. The difficulties of doing that in the drafting as well as in the administration of the law are, of course, very numerous; but on the other hand, the committee will take notice of the fact that there is going on in the administrative departments of the Government a continuous fixing of prices not only of raw materials but of commodities, through the instrumentality of Government contracts, and the Government is becoming the greatest single customer of the manufacturers; so that the Government through another department is fixing those profits in all these so-called war industries; that is, in every industry engaged in production for war purposes.

And, on the other hand, it is trimming the so-called—I will not say nonessential, because the phrase is unhappy, but—nonwar industries. It is taking their material and their workmen and their transportation. So that, under the impulse of the war itself, it is really adjusting, by its own very operations, those relations of profit, and distributing them among different individuals and on different terms.

Mr. GREEN. If you will pardon me, all that is interesting, as indeed, everything you have said is, and quite informing, but it is not answering my question at all.

Mr. EMERY. Pardon me; I made that in answer to the remark that comes up constantly as to these excessive profits, as though these excessive profits were not being controlled, or as though some individual was responsible for their existence, when in many cases they are the expression of exceptional conditions.

Mr. GREEN. Having simply called your attention to the defect in your system I will let the matter drop there.

Mr. LONGWORTH. Let me ask you one question right there, apropos of what you have been saying: Do you think that the profits in American business will be as large this year as last year?

Mr. EMERY. You mean in 1918.

Mr. LONGWORTH. Yes.

Mr. EMERY. I think not. I should assume that profits of 1917 would be the largest of years; 1916 was the largest year up to that time. It is very interesting to note, there, that the corporate income of the United States for the year 1916, based on the returns of the corporations to the Commissioner of Internal Revenue, is about \$8,000,000,000, net. That is the net corporate income of the United States.

Mr. LONGWORTH. Would you care to estimate what it would be for this year?

Mr. EMERY. You mean for 1918?

Mr. LONGWORTH. Yes.

Mr. EMERY. I think it will be less than for 1917. That is my personal estimate.

Mr. LONGWORTH. Do you think, if we had not adopted the system of price arrangement, it would not have been so large, or do you think that it is largely due to the fixing of prices that the amount will be less?

Mr. EMERY. No; because I think that an aggregate of small businesses which contribute a very considerable amount of income will be very greatly reduced. We have in the United States, substantially speaking, 280,000 manufacturing concerns, and the average number of men employed is only 25 to the concern. We have only a very few thousand manufacturing concerns whose product is valued annually at a million dollars or more. It is the great number of small manufacturers, the middle class manufacturers, who constitute the backbone of our industries; it is not the exceptional corporation here and there, which is a law unto itself, economically speaking, because of its great size and its resources; so that in thinking of this matter I am taking the middle class manufacturers, and not the extremes at either end.

Mr. LONGWORTH. I am only speaking of the aggregate results. We will admit, of course, that the system of price fixing so far pursued has a tendency to reduce the profits, and we do not know how much further it is going; but leaving that out of the question entirely, would the profits of American business for 1918 have been as large as for 1917?

Mr. EMERY. How is that?

Mr. LONGWORTH. Leaving out the question of price fixing, do you think that the profits of American business for 1918 would have been as large as 1917?

Mr. EMERY. Leaving out price fixing?

Mr. LONGWORTH. Yes.

Mr. EMERY. That is rather hard to say, especially because I can not turn over in my mind the great number of things that the Government has been compelled to take over. Take the shipbuilding industry, which represents an enormous industry to-day, and which under normal conditions I assume, in view of the risk of the industry, would have represented a high degree of profit, if it had any at all.

Mr. FORDNEY. And the railroads.

Mr. EMERY. Yes, and the railroads. Of course the railroads had their profits limited.

Mr. STERLING. We have fixed the prices on steel and on coal and on wool.

Mr. LONGWORTH. And on copper.

Mr. EMERY. Yes; and especially, you take a new industry like the chemical industry, there I suppose that the rate of return would be very high because it is a pioneer industry.

Mr. LONGWORTH. But generally, in view of the price fixing and the taking over, it is your opinion that during 1918 the taxable income of corporations will be substantially less than it was in 1917?

Mr. EMERY. I am inclined to believe that.

Mr. HELVERING. What do you think about the net results to business?

Mr. EMERY. It is like doubling the circulation of a newspaper and cutting the price in half.

Mr. HELVERING. If a concern has been making 40 per cent, and it is cut down by price fixing to 20 per cent, and it would largely increase its production, then the amount of net profits would not be correspondingly reduced, would it?

Mr. EMERY. I did not get that.

Mr. HELVERING. I say that the amount of net profit would not be reduced correspondingly provided the concern measurably increased its production, under the 20 per cent.

Mr. EMERY. You would have a larger volume and a smaller profit on each piece.

Mr. HELVERING. Yes.

Mr. EMERY. Yes; of course.

Mr. HELVERING. That would make up a considerable amount for each industry.

Mr. EMERY. Of course if you take all industries and assume that condition to apply to them, the conclusion would be, undoubtedly, that result; but when you take into consideration the contraction of various forms of business due to the war that is the thing that makes me believe that it will offset it. And then the entire shipbuilding industry being practically a Government operation, the profit of shipbuilding, which I assume normally would be higher in accordance with the risk, would be lower, I assume, under the Government control of the profit itself.

Mr. HELVERING. I agree with you. I think there will be somewhat less profit, but I do not think there will be a very much lower level than there is.

Mr. EMERY. No; I do not think very much more, but of course that is one of those things about which one might be very positive and be mistaken. It reminds one of what Tom Reed said, that it is better to prophesy as to a thousand years hence than a year, because figures may check your opinion.

Mr. FORDNEY. I started to ask you a question some time ago, and I was interrupted by others. You have stood a long time on your feet, and I am not going to detain you but a moment. Do you believe that the association you represent would favor a provision in this new law that would permit the payment of taxes in installments instead of calling them all in on the 15th of June, as under the existing law?

Mr. EMERY. They have all favored the system in the present year.

Mr. FORDNEY. This bill, if enacted into law, as proposed by the administration, would carry \$8,000,000,000, or thereabouts, of taxes. That is two or two and one-half billions of dollars more money than

there is in the United States. There is less than \$6,000,000,000, according to statistics.

It would be of great advantage to the industrial world if those taxes could be collected in installments, would it not?

Mr. EMERY. I think not only to the industrial world but to the public interest itself; because our position in this matter, entirely, is that we are not trying to think of any of these things in terms of a selfish interest, but in terms of the public interest from the standpoint of our relationship to it.

Mr. FORDNEY. Yes. I meant it in this way, that it is a great draft upon the banks of the country to furnish people money all at once to pay this great tax. Of course the internal-revenue office, together with the Secretary of the Treasury have, at the present time, adopted a plan which eased things up a little bit; that is, to permit a reduction of 3 per cent per annum on payments made prior to a certain date, and again, to permit them to buy certificates of indebtedness and turn them in on the 15th of June in payment of taxes, and so on, and get the benefit of the interest that those certificates draw. That eases up some. But would it not be far better if those taxes under this law could be paid in installments?

Mr. EMERY. I should very strongly believe so, Mr. Fordney.

Mr. FORDNEY. Beginning as early as possible after the filing of the reports by the people?

Mr. EMERY. Yes. I think, too, that next year, if there are no great novelties in the law and the law is approximately clear, the difficulties presented in its interpretation in the making of returns will be very greatly improved, and in that event taxpayers will be able to make their returns earlier. On the other hand, if the interest allowance made by the Treasury for early returns is not comparable to the price of money at the time, you can see that there is little to be gained by making the return, and getting, say, 3 per cent, if the money is worth 5 per cent to the manufacturer in his business; and secondly, if the amount of tax to be paid is to be double the amount of taxes this year, the strain on our banking institutions becomes correspondingly greater, especially in view of the many other demands for financial assistance.

In past years we have weathered this thing splendidly, and it is a remarkable demonstration of the strength of our industries and of our country, but it is good policy not to double that strain in the second year of the war. This time we had a number of cases in which the amount of personal income and corporate taxes to be paid by an important industrial unit was very considerably in excess of the banking reserves of the community.

Mr. FORDNEY. I asked that question because I, as other gentlemen undoubtedly have here during the past few months, have had a great many constituents, and people paying taxes, requesting that we try to induce the Secretary of the Treasury and the Commissioner of Internal Revenue to straighten out this return, and permit the taxes to be paid in installments instead of calling them all at one time.

A little while ago I referred to the English method of taxation. I did that for this reason. Many Members of Congress, and many people who are not Members of Congress, frequently say to me, as I presume they do to other Members of Congress, "Why do you not adopt the English system of raising income taxes?" If I am cor-

rect—and I want you to correct me if I am not, because I think you are well informed on the English law; I have talked with you heretofore about it—we have a system of raising taxes in this country entirely different from that of Great Britain. We have the city, township, county, and State local taxes that Great Britain does not have, and raise a very large amount of money, for the payment of general expenses of the country, in an entirely different way from that of Great Britain. The money raised in Great Britain, by taxes, for the maintenance of the Government, is very largely raised by the Federal Government of Great Britain, is it not?

Mr. EMERY. Yes.

Mr. FORDNEY. They do not have a land tax there similar to our land taxes in this country for local purposes, do they?

Mr. EMERY. I would not be sure of that; there have been so many forms of British taxation in the last six months outside of the war taxes that I hesitate to answer as to the detail.

Mr. FORDNEY. Well, if you will correct me, I will be grateful to you, because I want that information. I have studied the English laws all that I could. I have them in my possession, but I have not the most recent changes. They have made some very great changes in their tax laws within the last year. Among other things they increased their import taxes about 25 per cent and will raise from imports this year \$1,100,000,000, estimated value, more than last year's revenue, and their income taxes will very greatly increase. I have those increases, as compared with last year's taxes. If I am correct, before the war Great Britain put a tax not upon the lands but upon the income from the property. The nonproductive property did not pay a tax, as nonproductive property customarily does. Therefore to compare our income-tax law with that of Great Britain is an impossibility; no fair comparison can be made because of the entirely different system of raising taxes over there, as compared with ours. Am I not right in that?

Mr. EMERY. Yes, sir.

Mr. FORDNEY. Now, that is all I want to say on that.

Mr. Longworth spoke a few minutes ago about asking your opinion as to the profits in this country this year as compared with the year of 1917. One is led to believe, however, by things that are occurring that they will not be as great this year in some lines, especially, and in others perhaps not, but recently an order has gone out if I am correctly informed—and I got this from a mill man that there shall be no wheat manufactured by local mills—as to mills, at least—between the 1st day of July and the 1st day of September.

Mr. EMERY. A Food Administration order?

Mr. FORDNEY. Yes; and a committee has been appointed, situated at New York, with power to export wheat. But the price has been fixed upon bran and middlings and flour, and so forth, and the mills will be closed, and consequently can not make any money, and their income will be much less.

Now, when you come to shipbuilding and Government work, where the cost plus contracts were let the profits were very high—were very great. That was a great mistake, to let a cost-plus contract.

Mr. EMERY. Yes; one of the most demoralizing things in our whole industry.

Mr. FORDNEY. Yes; I know a party that came into my office with \$25,000 capital, who made \$125,000 last year in putting up cantonment buildings—500 per cent on his money—on cost-plus contracts. If other cost-plus contracts were carried on like that was for a while at Hog Island, there would not be anything left.

Mr. EMERY. Yes; those contracts had a demoralizing influence on wages as well as on produce.

Mr. FORDNEY. Yes. I think the Government saw that mistake, but with price fixing I do not think the profits in this country will be as great this year as last year, and consequently this opportunity of the Government to obtain taxes from profits, from incomes, and so on, will not be as great. That would be my general idea of the matter. Now, you have been kept a long time. If there is any answer you can give to those questions, that you can put in concrete form in the record, I would appreciate it very much, and I know the committee would, to make it plain.

Mr. EMERY. I would like as soon as I can to put before the conference board some of the suggestions made by Mr. Longworth and others, indicating a desire to have an answer to some of their inquiries, as, for example, the adoption of the dual system of a flat excess profit modified by a prewar standard, and I would be very glad indeed, with the permission of the committee, to undertake to secure answers from the board, or with a commentary of what they have said, and give it to you.

Mr. SLOAN. All this price fixing or profit fixing would have a tendency to reduce what we call the prewar excess-profits tax, so that as a matter of fact, if you get a large profit tax it must come from the large flat tax rather than from the increased excess-profits tax as we find it in England?

Mr. EMERY. Yes, sir.

Mr. SLOAN. So that in view of what has been said, it is absolutely necessary, to get the tax, to use the dual system and to depend rather on the second than on the excess-profits tax; is not that true?

Mr. EMERY. Of course, you have various modes of raising it. You can raise the normal tax.

Mr. SLOAN. I mean so far as the profit tax is concerned—profit tax and not income tax.

Mr. EMERY. Yes, sir. On the theory of an arbitrary tax, so that you would simply scale all industry, and say, "From the incomes of 5 or 10 per cent," or whatever you fix, "these must pay so much."

Mr. SLOAN. Do you believe we could classify the industries, say in three or four different grades, with different amounts of exemption and also different percentages of levy, and find it entirely constitutional and enforceable as a basis for your so-called flexibility?

Mr. EMERY. Are you referring now to the legality of such a procedure?

Mr. SLOAN. Yes.

Mr. EMERY. All right.

Mr. SLOAN. Under the legality, first?

Mr. EMERY. Your taxing powers are almost unrestrained, assuming that the tax is laid without discrimination.

Mr. GREEN. Do you think that the question of the ability to pay the tax has anything to do with the propriety of the tax?

Mr. EMERY. Pardon me; I did not get that.

Mr. GREEN. Do you think that the ability to pay the tax has anything to do with the propriety of levying the tax.

Mr. EMERY. With the propriety. Not always with the legality. Surely, I can not conceive a tax being laid as a matter of public policy that could not be paid, producing income; but I mean that the mere fact that a man has not got the money with which to pay his taxes does not relieve him from the penalty of the law.

Mr. GREEN. Yes; but you do not understand my question. As a rule we do not put taxes on people who have nothing with which to pay them. Assuming in the two given cases that both parties are able to pay, but one has been making large profits and has had large returns and has a large income, and the other relatively small. Now, it is often said that taxes should be levied in proportion to the ability of the parties to pay them. Do you think that is a correct principle, in a general way?

Mr. EMERY. Surely.

Mr. GREEN. Well, then, I do not see why you call this tax that they levy under the present law an arbitrary tax. We have undertaken to levy it in accordance with the ability of the people to pay it, in accordance with the amount of their profits.

Mr. EMERY. I do not think that is the only element that should enter into your consideration.

Mr. GREEN. Oh, very true.

Mr. EMERY. And I am referring to other elements of taxation: You have referred to one, of course, not the controlling one, perhaps, and certainly not the only element; but I am referring to the relationship of certain forms of business to your tax.

Mr. GREEN. I mention that as a reason why it does not seem to me that the term "arbitrary" is properly applied to it.

Mr. EMERY. I say arbitrary in connection with a certain phrase, and that is "excess profits." I say that the term "excess profits" is one about which men could dispute all day, because, primarily, it must come back to what is a reasonable profit.

Mr. GREEN. I think the term "excess profits" is a very unfortunate expression. We should have used the term "business profits" instead of "excess profits," because it has led many to believe that the tax should be laid in accordance with the proper construction of those words "excess profits," whereas I do not think the committee has undertaken to levy them based upon those distinctions.

Mr. EMERY. I come back to it because I have noted in the literature of industrial controversy in this country references to the fact that a certain concern was earning excess profits.

Mr. GREEN. Yes.

Mr. EMERY. And the standard which has been established in the act has been accepted as a social standard of property earnings, so that a firm that was earning so much was charged with excess profits.

Mr. GREEN. I think we would have done better if we had called it a tax on business profits.

Mr. MOORE. Before you go, if no other gentleman around the table has any other questions to ask you, I want to put one or two.

Much has been said about raising revenue through income tax and excess-profits tax. There is a disposition to increase the income tax and to waive the excess-profits tax. That was discussed this morning

by the gentleman who preceded you. Some other gentleman who has been here indicated a like desire to put the burden of the tax on income. I want to ask you now, in view of the question of the equity of the tax and the fairness of its distribution, if you are familiar with the report of the Commissioner of Internal Revenue for the year ending 1917, wherein it is stated that the four States that the largest amounts of corporation income tax are collected in are New York, Pennsylvania, Illinois, and Ohio.

Mr. EMERY. Yes, sir.

Mr. MOORE. It is a fact that those four States pay the burden of the corporation tax to-day?

Mr. EMERY. And the 12 leading industrial States of the Union carry very close to 20 per cent, I think, of the tax.

Mr. MOORE. Yes; so that the corporations are paying a very large proportion of the tax that is levied to-day for war purposes?

Mr. EMERY. Yes, sir.

Mr. MOORE. And in a very few States?

Mr. EMERY. Yes.

Mr. MOORE. Now, as to the income tax which it is proposed to increase, and which probably will have to be increased, is it not a fact that the report of the Commissioner of Internal Revenue states that the four States in which the largest individual income tax was collected are New York, Pennsylvania, Illinois, and Massachusetts?

Mr. EMERY. I believe those are the States.

Mr. MOORE. So that the burden of the tax, so far as incomes are concerned, rests upon those four States?

Mr. EMERY. What I said with reference to the corporation tax, in regard to the industrial States, is also true of the income tax in the industrial States.

Mr. MOORE. This corporation tax and this income tax are derived from those four States—five States, including Ohio—all of which are industrial States; and of course there are others. Does it not follow that where the industry is most pronounced, there the burden of taxation is heaviest?

Mr. EMERY. Yes.

Mr. MOORE. You represent the manufacturers of the United States, who are a part of the National Association of Manufacturers. They have been bearing a very large proportion of the burden of taxes for the purposes of the war. They are accused of having made excess profits out of the war, and are being accused of that.

It is inevitable that it will have to be increased this year, because the President has indicated what the necessities of the case are, and the Secretary of the Treasury has fixed the amount that we are to raise at \$8,000,000. Have you any suggestions, before you leave, as to any method by which we may more equitably distribute the taxes of the United States, seeing that they are to be doubled this next year? The manufacturers are not the only people of the United States who are prosperous. Have you any suggestion as to any other sources of revenue that we might tax if the committee were so disposed?

Mr. EMERY. Well, if you will turn to the table of occupations and forms of business, and the percentage of their contributions to the

national tax, I think you may get some very instructive suggestions as to sources which pay practically little or no taxes at present.

Mr. SLOAN. Does that include cotton, or have you examined that?

Mr. EMERY. Well, I am simply impressed, myself, with the fact that, for instance, in the tax of 1917 agriculture as a whole paid twenty-four one-hundredths of 1 per cent of the tax contribution, as I understand it. That is on the figures of the Commissioner of Internal Revenue. Whether that means that the farmer is not able to be taxed, or whether it means that the tax law is not fully enforced, I can not say.

Mr. SLOAN. Is it not a fact that the number of taxpayers has been recruited more largely from the farmers, under the last bill, than from any other occupation?

Mr. EMERY. I would not say so, from the indications of the returns. There are about 14,000 returns out of 6,000,000 farmers, according to the Commissioner of Internal Revenue.

Mr. SLOAN. For this year?

Mr. EMERY. For 1916.

Mr. SLOAN. I mean for this year.

Mr. EMERY. I have not the figures for this year. I mean the tax being raised, in which we have the farmers.

Mr. SLOAN. The limit has been very materially reduced, so as to reach the farmers.

Mr. EMERY. Yes.

Mr. DIXON (in the chair). Could you come back after recess, Mr. Emery? It is 1 o'clock.

Mr. EMERY. If there is anything further you gentlemen desire to ask me, I am at your service.

Mr. DIXON. Is there anything further any member desires to ask?

Mr. EMERY. There is only one thing further I want to say, and that is that I hope the committee will find some means for distinguishing between earned and unearned income.

Mr. DIXON. There are so few of the members left now, I thought the committee might adjourn until afternoon, and you might return then if you have anything further to present.

Mr. EMERY. I have substantially finished.

Mr. MOORE. I would like to have you submit in writing a memorandum of any other sources of revenue that might occur to you.

Mr. EMERY. I will be glad to do that.

Mr. MOORE. You can add anything you have to your statement here.

Mr. EMERY. I will do so.

Mr. MOORE. Mr. Chairman, I ask permission to insert in the record a letter which I have here from the governor of Pennsylvania.

Mr. DIXON. Without objection it will be inserted.

(The letter referred to is as follows:)

JUNE 21, 1918.

HON. J. HAMPTON MOORE,

*Member of Congress, Washington, D. C.*

DEAR SIR: The Farmers' National Committee on War Finance is properly exercised over the sinful and illegal profiteering that now menaces this Nation and that after the war will, if we incur great bonded indebtedness, lead to an inflation of prices that will disturb our whole economic policy and menace our capacity to compete in world trade.

For these reasons I respectfully suggest that it would be wise to tax war profits to the limit and out of current revenues carry as far as patriotism and justice warrant, the burden of financing this war.

I urge you, therefore, to use your influence in framing such a revenue bill at the earliest moment.

Very truly, yours,

M. G. BRUMBAUGH.

(At 1 o'clock p. m. the committee took a recess until 2.15 p. m.)

---

AFTER RECESS.

The committee met pursuant to adjournment at 2.15 p. m.

The CHAIRMAN. We will hear Mr. Berenson.

**STATEMENT OF MR. LAWRENCE BERENSON, ATTORNEY AT  
LAW, NEW YORK CITY.**

Mr. BERENSON. I desire to state at the outset that I represent no interests whatsoever in coming to the committee, but come entirely unbiased.

The CHAIRMAN. What is your full name?

Mr. BERENSON. Lawrence Berenson, New York City.

The CHAIRMAN. What business are you engaged in?

Mr. BERENSON. I am a lawyer.

The CHAIRMAN. Whom do you represent in appearing here?

Mr. BERENSON. No interests; I represent nobody.

The CHAIRMAN. You are here just in your individual capacity?

Mr. BERENSON. I am of the firm of Stern & Bernhold.

The CHAIRMAN. Do you represent any society on taxation?

Mr. BERENSON. None whatever.

The CHAIRMAN. All right, Mr. Berenson.

Mr. BERENSON. One of the greatest difficulties of the law has been its application, the mechanics of applying the law. I venture to state that not 20 per cent of the taxpayers in the year 1917 filed what might be regarded as perfect excess-profits tax returns. Only last Monday I had a talk with Mr. Eisner, who is collector of the second largest district in the country, and he told me that of the many excess-profits returns, he recalled but very few instances of perfect returns having been filed.

This has been due to the difficulty in determining how to regard capital in many instances, such as changes in invested capital and the like. There are one of two instances that I can speak of, which came under my own observation, of the difficulties of determining what was and what was not capital. The president of a corporation came to me last March and put this case before me, and wanted to know whether this item should be regarded as capital. He and three of the chief stockholders of the company, controlling perhaps 80 per cent of the stock, agreed in January, 1917, that they would loan to the corporation 75 per cent of the dividends that they had earned in 1916, to keep it as a loan to the corporation, and eventually to get stock for it, and they agreed among themselves that they would accept preferred stock for it. The stock was not issued until some time in November, and the query was whether or not they could

regard, or the corporation could regard these loans to the business, which were in a way subscriptions to preferred stock to be issued at a future time, as capital.

Another serious case, which shows the difficulties that I met with in discussing capital, is the case of patents which have been marked off in previous years out of the surplus, not out of income, but out of surplus, out of which a tax has already been paid, and there has been a tendency this year among all corporations to revive the amounts paid for those patents as capital in order to permit of big deduction rates. The result has been this year that most businesses have been unable to prepare their excess profits tax returns, and they have had to seek the services of expert accountants and lawyers who have specialized in taxation, to assist them in the preparation of their returns. In all the cases that I had anything to do with—and the experience seems to be the same with other lawyers and accountants—you are obliged to go into the history of the concern from 1911 to date in order to ascertain exactly what you would regard as capital and what deductions to make from capital and what exemptions to make to capital. Of course, we all know how severe the confusion was this year when the Commissioner of Internal Revenue had to grant a general extension of 30 days to all concerns to prepare their excess profits tax returns, and in very many cases extensions were even granted to May 1.

Mr. SLOAN. Have you prepared some phrasing of the law which you criticize that would make a fairer statement of it?

Mr. BERENSON. No; it is rather an informal statement that I have.

Mr. SLOAN. It is generally admitted, of course, that a new law in an entirely new field is difficult to phrase, to construe, and perhaps to follow, and while we like criticism, we also like constructive criticism that would provide a substitute where ours is at fault.

Mr. BERENSON. I have no formal statement. These are things that have come out of my own experience in preparing returns.

I am told that to examine the excess profits returns for 1917 it will take at least three years for the Government to make the proper examinations. It is going to require the services of a tremendous force of expert accountants, not accountants alone, but it will also require the services of lawyers to go into the corporate minutes, agreements, and the like, as to what items should or should not be regarded as capital.

The CHAIRMAN. Are lawyers complaining that they are being employed too much to help the taxpayer?

Mr. BERENSON. No; it has been a very remunerative source of revenue.

The CHAIRMAN. You are showing a self-sacrificing spirit if you would make it so that they would not need the services of lawyers like you.

Mr. BERENSON. If you prefer to put it that way, I will let it stand.

Now, another serious objection to the law has been the practical effect in applying it. Under section 207 a corporation, partnership, or individual which had a small capital and earned more than 9 per cent in the prewar period and which since 1914 found itself doing a large war business, requiring new plants and heavily increased capitalization, was comparatively slightly affected in 1917 by the excess-profits tax. Again, concerns which could do business only when they

had large capitals were likewise slightly affected. On the other hand, old, established, reputable houses, whose credit was so sound that they could do business on a large scale with small or borrowed capitals, were in effect severely penalized in applying the 9 per cent deduction rate to their 1917 capital.

In other words, the mushroom concerns which sprang forth in 1914, 1915, and 1916 to embark on a large scale in war enterprises, and likewise corporations which converted their plants into munition factories, etc., were comparatively slightly taxed in 1917 by virtue of their deductions on large invested capitals, although their profits were earned purely out of war enterprises, while old, established concerns with small capitals engaged in occupations remote from the war were, comparatively speaking, heavily taxed.

Now, as an instance of the difficulty in preparing returns, not long ago I talked with a lawyer for one of the largest corporations in the country, and he told me that in preparing excess-profits returns this company had a large force of accountants and lawyers called in to assist in the preparation of the returns, and he said that in no single figure could any two lawyers or any accountant and lawyer agree in that conference because of the great difficulty of determining what items should or should not be regarded as capital.

Another serious objection to the law has been its failure to reach the incomes of realty corporations, and in good part the incomes of banks and trust companies, because in the case of earnings of trust companies with their huge surpluses which they usually carry in their item of undivided profits, added to their capital, the deductions on those items are so great that it takes them from the higher class of taxation, and in the cases of realty corporations, corporations controlling property in the big cities, it is a particularly well known fact that the return on their investment is never greater than 9 or 10 per cent, so that they escape from the excess-profits tax, although they are engaged in a business, the investment in which is very sound and very secure, yet they escape in a great many instances almost entirely from the excess-profits tax.

Mr. SLOAN. I take it then that you would favor a reduction in the exemption in classes of business where the return is stable, with little risk or hazard.

Mr. BERENSON. Well, that would be a way to get at such concerns as those, but my plan is a more elaborate one than that, which I shall reach in a second.

Now, there is growing up throughout the country to-day a very vicious practice of accumulating large capitals, of building up large capitals for the purpose of the deduction. That practice is growing very, very rapidly, and lawyers and accountants are advising their clients and insisting on their doing everything they can to build up large capitals in order to get the advantage of the 9 per cent deduction rate, and there are a large amount of these, and it is a very, very serious practice, it seems to me, because it is going to raise the rates of interest, and furthermore when liberty bond time comes around again, business men will find themselves in difficulties in trying to procure funds to purchase liberty bonds. Those two items, it seems to me, are very serious items for the future of the excess-profits tax, as it stands to-day.

Mr. SLOAN. Then it would be a good thing to have a new law about every year so as to keep up with the advanced bookkeeping?

Mr. BERENSON. My plan would be to have this one law, which I think could stand every year.

Now, a suggestion has been made to allow borrowed capital to be regarded as capital, invested capital, in order to prevent discriminations which the law has in effect made this year against concerns with simply borrowed capital, which have large turnovers.

Theoretically, this seems to be a good thing to do, but there again if the committee should decide upon allowing borrowed capital to be regarded as invested capital, it is going to open the door to many vicious practices, and how will these particular conditions be overcome. If borrowed capital should be regarded as invested capital, and interest is paid on borrowed capital, borrowed capital in that case would be better than invested capital, because they will be paying interest on their borrowed capital, and then they will have that borrowed capital as invested capital, whereas no interest is being allowed on invested capital this year as the law stands to-day.

The CHAIRMAN. Interest is allowed as a deduction, but the borrowed capital can not go as a capital deduction.

Mr. BERENSON. As I understand it, it is not regarded as invested capital.

The CHAIRMAN. No; but they are allowed a deduction on the interest paid.

Mr. BERENSON. But some suggestion has been made to the committee, I understand, that borrowed capital should be permitted to be regarded as invested capital.

The CHAIRMAN. It would take some pretty good arguments to convince the committee against the position it took last year.

Mr. BERENSON. I quite agree with the committee that it should not be allowed.

The plan which I have in mind would get away from the difficulty in preparing these elaborate returns, and we cut clear of any question of what item should or should not be regarded as capital, because we disregard capital entirely. We would have a tax which would be easy to understand and easy to apply, and it would save the Government perhaps hundreds of thousands of dollars in the machinery of examining these elaborate excess-profits tax returns, and that plan would be to impose an income tax on all businesses instead of as we do this year, impose an excess-profits tax on all businesses. Impose an income tax on a business conducted by an individual or corporation, say, a flat rate of 20 per cent, if you wish, or more if we require, then have a graduated income tax on the business profits, similar to the graduated tax they now apply to personal income tax.

Mr. MOORE. Would you cut out the existing excess-profits tax?

Mr. BERENSON. Well, that would be my suggestion to cut away clearly from the excess-profits tax and adopt an income tax on business. Have each business pay an income tax.

Mr. MOORE. You want to get rid of the trouble in accounting that is now necessary to make returns?

Mr. BERENSON. It is a bigger problem than the details of accounting.

Mr. MOORE. I understand that that would be incidental, but would you raise as much revenue under the new plan as is raised now?

Mr. BERENSON. Well, I do not see why not, if we started out, say, for instance, with a flat rate of 20 per cent on the income of all business, whether conducted, of course, by individuals, partnerships, or corporations.

Mr. DIXON. Would you give them an exemption before you applied the 20 per cent?

Mr. BERENSON. Yes; a reasonable exemption.

Mr. DIXON. What is your suggestion as to that?

Mr. BERENSON. You can have a flat \$6,000 exemption, similar to the \$6,000 exemption in the case of partnerships and in concerns on the excess-profits tax. You could allow a certain percentage of the income of the firm to be exempted from this income tax.

Mr. MOORE. I like your argument favoring simplicity of returns. I think that is what you are driving at. The question is whether we should derive as much revenue, especially in view of the fact that we must get more than last year.

Mr. BERENSON. I do not see why you would not. It seems to me that you can derive as much revenue as you want out of this plan, and furthermore the large corporations which should be the big contributors, and to whom we must look for the greatest part of the tax, would be wealthy contributors under this plan, because if we apply a graduated tax system, depending on the amount of income, any corporation that you will reach under the graduated rate, would be the large corporations.

Mr. MOORE. Have you prepared a table showing how high your graduation would go?

Mr. BERENSON. No; I have not prepared a table, but it occurred to me that a maximum of 33 per cent as a graduated tax would be a sufficient maximum to raise the requisite amount that you are looking for.

Mr. MOORE. Have you made sufficient calculations to satisfy yourself that 33 per cent graduated in the manner indicated would raise the revenue we desire?

Mr. BERENSON. Well, I have not compiled them, and I do not know what income, for instance, large corporations have, or what the total income is from all the businesses in the country, but it seems to me that it would be easy to ascertain that fact and prepare a graduated rate classification.

Mr. MOORE. Have you thought out the graduation plan sufficiently to enable you to say whether it would work out unfairly to the small business man, or play favorite, as it were, to the larger operators?

Mr. BERENSON. It would not work unfavorably to the small business man, and in fact it would get the larger operator, in the sense that it would reach income pretty severely, because if we have a graduated tax rate, of course the rates would commence at a very small rate on small incomes and increase proportionately as the size of the incomes increased.

Mr. MOORE. Your proportion that would go to the large concerns would be a very large proportion; that is, the aggregate would be very large. Some gentlemen have appeared before the committee who have urged, and very insistently, too, that the Government should take everything above a fixed amount; \$100,000 has been

mentioned and there has been a compromise of some on \$50,000. In the case of an individual graduated scale, of course, it would not permit any such limitation as that.

Mr. BERENSON. Well, of course, you could go as high as you wished on the graduated scale. Roughly, I figured that having a graduated scale commencing with, say, 5 per cent and running up to 33 per cent in addition to the flat income-tax rate, which I suggest for all businesses, after allowing a reasonable exemption, would be a big source of revenue to the Government under such a plan.

Mr. DICKINSON. You abandoned the lower exemption. You suggested \$6,000 exemption.

Mr. BERENSON. Yes.

Mr. DICKINSON. You abandon the lower exemptions that are now in the law?

Mr. BERENSON. No; we could keep the \$6,000 exemption. Do you mean the 7, 8, and 9 per cent deduction rate under the excess-profits tax?

Mr. DICKINSON. Well, you are not speaking about income. You are speaking of excess profits.

Mr. BERENSON. My plan is to substitute an income tax on business in the place of excess-profits tax.

Mr. DICKINSON. If you substitute, you have normal exemptions as low as \$1,000 for individuals and \$2,000 for families.

Mr. BERENSON. This plan of mine is entirely apart from the personal income tax as it stands. It is simply a plan to substitute income tax on business apart from the personal income tax as it stands to-day.

Mr. DICKINSON. You retain the present income-tax law, and then substitute this income-tax law in which you levy 20 per cent normal with exemption of \$6,000?

Mr. BERENSON. Yes.

Mr. DICKINSON. But you increase the per cent in addition to the normal 20 per cent?

Mr. BERENSON. Have in addition to the 20 per cent tax a graduated tax.

Mr. DICKINSON. All right; I understand you.

Mr. BERENSON. Of course, a great many people have raised objection to this plan that we are not regarding the return from capital, that is, we are not taking capital into consideration, and the concern earning \$100,000 with \$1,000,000 capitalization would be just as good or just as bad off as the concern earning \$100,000 on a much smaller capitalization. That is one of the difficulties of capital at any rate.

The CHAIRMAN. As I understand it, you do away with the excess-profits tax and put the whole on income tax?

Mr. BERENSON. Yes.

The CHAIRMAN. Would you graduate the income tax on corporations?

Mr. BERENSON. Yes.

The CHAIRMAN. Have you figured out how much the straight income tax would be on corporations to raise the required amount?

Mr. BERENSON. No; I have no data of that kind before me.

The CHAIRMAN. Your proposition would be, if there is a corporation, say, with profits of \$100,000, which would be 50 per cent on its capital, and another corporation makes \$100,000, which is only 1

per cent on its capital invested, you would make both corporations pay the same?

Mr. BERENSON. Yes.

The CHAIRMAN. Do you think that would be exactly right, to make the corporation which is getting only 1 per cent on its capital pay as much as the concern that is getting 50 per cent on its capital, the incomes being the same?

Mr. BERENSON. That is a rather extreme case.

The CHAIRMAN. Last-year in the returns that ended for this fiscal year 347,000 corporations made returns, and 140,000 of those corporations made no net income; that is, had less than 1 per cent—practically no net income. You are going to make those pay an income tax of the same amount as those corporations that made 10, 15, and up to 400 or 500 per cent?

Mr. BERENSON. The law, as it now stands, makes them pay an income tax.

The CHAIRMAN. No; 140,000 of them pay no excess-profits tax.

Mr. BERENSON. But the income tax would apply.

The CHAIRMAN. How is he going to pay any excess-profits taxes income?

Mr. GARNER. They pay no excess-profits tax, but they pay an income tax.

The CHAIRMAN. Some 140,000 made no income, had none; 50,000 or 60,000 had 1 per cent and up to 5 and 6 per cent. You would tax them just as much as a corporation making 1,000 per cent. Some corporations did make 1,000 per cent. Would not that be one of the difficulties of your proposition?

Mr. BERENSON. As the law stands to-day, a corporation, no matter what its capital is or how small the return is on its capital, pays a 6 per cent income tax without regard to the amount of capital.

The CHAIRMAN. Now, 6 per cent, of course, would not get us anywhere with the amount that we must raise. On your proposition the income tax would have to be 30 or 40 per cent normal and then graduate up to 80 or 90 per cent to get the proper amount.

Mr. BERENSON. I do not know whether you would have to go to the point of 80 or 90 per cent under such a plan as this to get the amount, because I understand this year the largest corporations in the country, very few of them, came under the heavier excess profits rates. Most of them came under the small rates because of their large capitalization, and the deduction on their capitalization saved them from the very high rates.

The CHAIRMAN. Would you give them any exemptions or deductions?

Mr. BERENSON. I would allow a reasonable exemption and then apply the 20 per cent rate.

The CHAIRMAN. Say that a corporation has \$500,000 invested and makes \$100,000. How much exemption would you allow them before your tax attaches, your income tax?

Mr. BERENSON. You could allow them, say, an 8 per cent exemption on their income; on all above that you could apply your flat 20 per cent income tax rate, and then an additional graduated scale tax rate similar to the additional rate under the personal income tax. Now, in the case of personal incomes, we do not regard how much capital a man has. A man may have \$100,000,000 and receive an income,

say, of \$100,000 on that. Another man may have only \$100,000, and for the last year he might have made on that capital \$300,000, but still we apply the rates the same.

The CHAIRMAN. But we are pretty well settled that if a man has \$100,000 for his individual use he can live pretty well, although prices are high, and it make no difference whether he has \$1,000,000 or \$10,000,000 invested. But here is a corporation in business, and it must maintain its business, and if that corporation makes only 1 or 2 per cent, or even 5 or 6 per cent, it is going practically to get out of business, while the individual can keep on in his business, because you leave that in his individual business.

Mr. BERENSON. It is not the tendency of capital to stay in industries that do not make a fairly decent return on the capital invested.

The CHAIRMAN. But there are 140,000 corporations that did not make anything, according to the returns they made. They may have had shrewd lawyers to make their returns and figure them out, but according to their returns they made nothing. If they made false returns, it must be looked into.

Mr. BERENSON. In my opinion, there is no reason why any corporation should not pay a substantial income tax. I understand the committee plans to raise the corporate income tax considerably. If you should, I think you should consider raising it without any regard to the capital invested in the business.

The CHAIRMAN. I do not think the committee would raise it to the extent of crippling or very materially handicapping any corporation, but if necessary, we would have to do that, even to the total amount received with respect to the profits on invested capital.

Mr. BERENSON. The effect of the excess-profits tax this year, as I have seen it, has been to penalize the small man, the man with a small capital, or with a large borrowed capital, whereas the great big corporation, as I attempted to point out before, very few come into the higher rates of the excess-profits tax. The higher rates were applied most frequently, in the case of people doing business with small borrowed capitals, and people of that type. People who do business with borrowed capitals so much, as I have observed, are established firms who can borrow all they want from the banks without having big capital on hand. It works very unfairly.

Mr. FORDNEY. I know of a firm that has a capital of \$25,000 and made \$125,000 profit last year net. Do you mean to say that that company should not pay more tax than if they had made only \$2,000 on \$25,000 capital?

Mr. BERENSON. Why, of course, they should pay more.

Mr. FORDNEY. A minute ago you said that they should pay a very heavy tax whether they made any profit or not.

Mr. BERENSON. That is one of the defects of my plan, but it is to me—of course, it seems to me that that is about the only defect. It is a pretty serious one, but the excess-profits-tax law this year, in the cases I pointed out of the business being conducted by small capital, or borrowed capital, is a very serious defect.

Mr. FORDNEY. They are permitted to use borrowed capital.

Mr. BERENSON. They are allowed interest on borrowed capital, but that is not as good as the 9 per cent deduction on borrowed capital.

Mr. FORDNEY. Six per cent is not as good as 9, but that is borrowed, that is not real capital in the business. It is not a very great distinction, but don't you think a firm that makes 500 per cent on its capital ought to pay more than a firm that makes 2 per cent?

Mr. BERENSON. Yes.

Mr. FORDNEY. Then why did you say that a corporation should pay heavy taxes whether they make profits or not? If a corporation is called upon to pay a heavy tax that doesn't make a profit, that is not income tax.

Mr. BERENSON. My plan would tax income, not capital.

Mr. FORDNEY. Why did you say they should pay a heavy tax on income?

Mr. BERENSON. No; I didn't make that statement. No; my plan was to levy a 20 per cent income tax right on the income of a corporation, after allowing a reasonable exemption, say, 8 per cent of their income, impose your income tax right on the incomes after the 8 per cent exemption, and then add on your additional tax rates.

Mr. FORDNEY. Under existing law a corporation has an exemption of \$3,000, then they have an exemption of 7, 8, or 9 per cent, as the case may be. Then the first tax is 20 per cent on their income up to 15 per cent, less their deductions, then it jumps to 25, 35, 45, and 60 per cent. The existing law produces in round numbers \$4,000,000,000 from all the revenues of the Government. Congress is called upon to double up that amount and furnish \$8,000,000,000 instead of \$4,000,000,000. Those rates must be raised. Of course, they must. Have you figured out in your judgment what rates this committee ought to impose under the circumstances to get \$4,000,000,000 in addition to the amount that will be raised under the existing law?

Mr. BERENSON. Under the plan I suggest, or under the excess-profits tax?

Mr. FORDNEY. I did not hear your plan. I came in a little late.

Mr. BERENSON. I thought you referred to my plan.

Mr. FORDNEY. I asked if you had figured out a plan that you would suggest to the committee to raise this additional \$4,000,000,000.

Mr. BERENSON. My plan would be to substitute an income tax on business and then go ahead and levy your rates, and you can levy rates sufficient to raise the amount.

Mr. FORDNEY. How would you put it on the business?

Mr. BERENSON. I would start out with a 20 per cent income tax, the income on any business, whether it be an individual, partnership, or corporation, after allowing, say, 8 per cent of the net income of the business as exemption.

Mr. FORDNEY. Eight per cent of the capital?

Mr. BERENSON. Eight per cent of the income.

Mr. FORDNEY. Eight per cent of the income, earnings based on the capital invested?

Mr. BERENSON. No.

Mr. FORDNEY. Where would you land if you put it that way?

Mr. BERENSON. But the law as it stands to-day imposes a 6 per cent income tax on corporations without regard to their capital, and the law makes no discrimination whatever.

Mr. FORDNEY. That is really a minor tax of 6 per cent.

Mr. BERENSON. But I have heard suggestions about increasing that tax, say, to 12 per cent, for the purpose of contributing to the \$4,000,000,000 necessary.

Mr. FORDNEY. Twelve per cent on their net income after deducting everything else. I think it was the intention of this committee, when they passed that law, to have that normal tax deducted from the net income before the supertax applied, but the Commissioner of Internal Revenue put it right the reverse because he raised more money, I imagine.

Mr. BERENSON. Yes.

Mr. FORDNEY. How would you apply that normal income tax, take it first or last from any income?

Mr. BERENSON. You mean the personal income tax?

Mr. FORDNEY. The normal income tax on corporations.

Mr. BERENSON. Why, I would allow it first before levying the tax and 8 per cent deduction.

Mr. FORDNEY. Off the profits, instead of 8 per cent on the capital, 8 per cent of the net earnings?

Mr. BERENSON. Yes.

Mr. FORDNEY. Then what would you do?

Mr. BERENSON. And then on the excess of what was left over.

Mr. FORDNEY. No, your normal tax, if you had one.

Mr. BERENSON. Impose a 20 per cent rate.

Mr. FORDNEY. That isn't the normal tax. I am talking about the normal tax, 6 per cent on the corporation, then comes your excess-profits tax after that.

Mr. GARNER. He would do away with excess-profits tax entirely.

Mr. FORDNEY. And just put a straight normal tax?

Mr. GARNER. A straight normal tax. After making the allowance he would put on 20 per cent, and then graduate the tax above that.

Mr. FORDNEY. In order to get away from what is termed excess-profits tax?

Mr. BERENSON. In order to get away from the difficulties of it.

Mr. FORDNEY. Have you figured out how much money the Government would raise on that plan?

Mr. BERENSON. It seems to me the Government could raise as much as it wished.

Mr. FORDNEY. What it seems to you, my friend, and what might be the result, might be two things. Where did you get your statistics?

Mr. BERENSON. I haven't prepared any statistics.

Mr. FORDNEY. Then where would we get the amount of money that we require?

Mr. BERENSON. Practically the entire income of the corporation or the businesses could be taken under this plan, and you could go ahead and impose your flat 20 per cent rate, and then your additional tax rates as high as you wished in order to get the \$4,000,000,000 that you are looking for through the excess-profits tax this year.

Mr. FORDNEY. Do you think that 8 per cent on the net profits would be more equitable than an 8 per cent deduction on the actual capital invested, do you think it would be more just to the man in business?

Mr. BERENSON. I think it would not be more equitable, no, but I think it would be quite equitable, not quite as equitable as an 8 per cent on capital. My plan is purely suggested for the purpose of getting away from the difficulties which questions of capital have raised this year.

Mr. FORDNEY. Let me give you an illustration. Suppose there is a corporation with \$1,000,000 capital, making \$300,000 net profits under existing law. Their tax, we will say, under the present law, would be \$70,000, and then on the remaining \$230,000 there would be a tax imposed, graduated. Now, your plan would leave \$24,000 instead of \$70,000, wouldn't it?

Mr. BERENSON. Yes.

Mr. FORDNEY. Do you think \$24,000 exemption on a \$1,000,000 business would be a fair rate of income for the capital invested?

Mr. BERENSON. My plan does not take away all the income of any corporation or of any business. Of course, there is a great deal of income left over for distribution.

Mr. FORDNEY. Suppose you made only \$70,000 with \$1,000,000 capital. You have got, according to your plan, \$24,000 exemption, then you begin to tax that \$46,000 very heavily.

Mr. BERENSON. Yes.

Mr. FORDNEY. Do you think that would be equitable and just? Do you know of any country in the world that has adopted a tax law of that kind?

Mr. BERENSON. We have done it in a form under the present law as it stands.

Mr. FORDNEY. Who are "we"?

Mr. BERENSON. The American Government. I can't get away from the case where the law now applies a 6 per cent income tax on corporations without regard to the amount of capital they have, whether they have \$1,000,000 of capital earning \$10,000 or \$100,000 and earning \$200,000.

Mr. FORDNEY. The difference between your exemption and your tax is too great, my dear friend. One is a tax and the other is an exemption that you are talking about. The 6 per cent tax is upon the net income. Now, you are talking about a deduction of 8 per cent on that income, instead of 8 per cent deduction on the capital invested.

Mr. GARNER. I think, Joe, you are confusing the idea that he is going to do away with the excess profits. May I give an illustration of this part?

Mr. FORDNEY. Sure.

Mr. GARNER. Suppose a company with \$100,000 makes 10 per cent. Under your plan that \$10,000 profit you would allow them 6 per cent or 8 per cent, did you say?

Mr. BERENSON. Eight per cent.

Mr. GARNER. You would allow on the \$10,000, \$800 exemption, and you would tax them on \$9,200 at 20 per cent?

Mr. BERENSON. Yes.

Mr. GARNER. You would do away with the excess profits. Under the present law you would take 6 per cent of the \$10,000, which would be \$600, as a normal income tax, and then you would apply the excess-profits tax to that company and get very little money, and under your plan you could go down until they had very little left for the stockholders. You would be taking away from that 25 per cent of that income, which was 10 per cent on the capital stock. Whereas under the present plan you do not take that much money. I think the fallacy of your scheme is allowing the deduction of 8 per cent on the net profits and not taking into consideration the capital invested.

Mr. BERENSON. Well, it is a better plan to travel along with the excess-profits tax as it stands to-day, but there have been so many difficulties with the question of determining what is and what is not capital, and then in addition, the law as it is working to-day is that these concerns, all businesses to-day are piling up their capitalization as far as they can do it so that they can get advantage of a big reduction rate. The practice is growing pretty vicious, but lawyers and accountants have advised every business concern to increase its capital.

Mr. FORDNEY. You can not pile up capital unless you use it in your business. The law does not permit you to do it without taxing it. What are you talking about?

Mr. BERENSON. I do not know anything in the law that prevents it.

Mr. FORDNEY. The law provides that if you do not distribute the money——

Mr. BERENSON (interposing). Distribute the surplus.

Mr. FORDNEY (continuing). You must use it in the business, or call it surplus, and the law does permit you to put it in there and use it for the purpose of raising the capital.

Mr. BERENSON. That practice is going on, nevertheless.

Mr. FORDNEY. The law to-day is that you must pay an additional 10 per cent if it is not distributed.

Mr. GREEN. If it is going on, we will make an additional effort to stop it.

Mr. FORDNEY. A corporation can not increase its capital unless it has use for it in its business. What would they be doing with it if not using it in their business?

Mr. BERENSON. So far as I know, the law has not applied the 15 or 20 per cent penalty where it fails to distribute surplus.

Mr. FORDNEY. Wait a minute. Let me ask you: Suppose in the business you had \$400,000 capital and you want to increase to \$800,000, what are you going to do with the \$400,000 you put in? Just hold it as capital, letting it lay in the bank on which you are going to ask deduction?

Mr. BERENSON. Businesses are employing it that do not need it, absolutely.

Mr. FORDNEY. If you use it in your business, you are permitted to do it; the law permits you to do it.

Mr. BERENSON. They are all making use of it.

Mr. FORDNEY. You can't have it and make your books jibe with the Government inspector unless you use it in your business. You can't get around the law in that way.

Mr. GARNER. I am afraid they have been doing it as he says.

Mr. HULL. There is a difference between profits, isn't there, that may be retained in the business and put back in the business and which are subject to our tax laws, other profits which constitute capital in the business as distinguished from taxable profits?

Mr. BERENSON. Precisely.

Mr. HULL. There is a little distinction there.

Mr. BERENSON. That is what I have attempted to point out.

Mr. FORDNEY. I did not mean to be sarcastic.

Mr. BERENSON. No. There are instances where a partnership concern has converted large quantities of securities which they have

held, their own personal securities, and have taken that money and put it into the business, adding to the capital. They employed it, but they really didn't need it. The banks are willing to loan these concerns money, but notwithstanding that they are doing away with the use of borrowed capital, and they are using these large deductions as invested capital.

Mr. FORDNEY. My dear, good friend, the ordinary returns on stocks and bonds produce a less rate of interest than the average business can borrow money at the bank. I know because I am a money borrower. I never owned any bonds, but I know what rate of interest they are sold at. Therefore, I never would borrow from the bank if I had the money to do the business without borrowing, never in the world. I would not pay 6 per cent or 5 per cent for money to carry on my business if I had the cash on which I could not get more than 3 or 4 or 5 per cent by loaning.

Mr. BERENSON. Your practice of carrying on business is different from most businesses that I have run into.

Mr. FORDNEY. I never knew a man to loan money at 4½ per cent and go to the bank and borrow it at 6 per cent, and I have been in business since I was a boy.

Mr. BERENSON. A great many men borrow money on securities at about the same rate that the securities pay.

Mr. FORDNEY. The average man that would loan money at 4½ per cent and borrow money at 6 per cent, you would find him in the number of 140,000 who do not make money.

Mr. GARNER. You expect those fellows that borrow money at 6 per cent to purchase liberty bonds?

Mr. FORDNEY. The purchase of liberty bonds is different altogether. Your patriotism, your desire to support your boy on the battle field, leads you to buy those bonds whether you have a penny or not. It is your duty to put up your money to support your Government to carry on this war without making more profit. Everybody does it. It is patriotism; it is an investment, but not a profitable one. Everybody can loan money at a rate that the Government pays on Government bonds, and get good security. I have borrowed money to buy liberty bonds, and pay 6 per cent to buy them that will yield me only 4½ per cent. Do you think I am doing it as an investment?

The CHAIRMAN. Any other gentleman have a question to ask?

Mr. GREEN. Just one suggestion. I will say with reference to the matter you spoke of in respect to the present tax bearing heavily upon the man who is engaged in business in a comparatively small way, for my part I think that may well merit the serious consideration of the committee; in fact, the committee has considered it before, and will, no doubt, consider it again. We want to work it out fairly, and your suggestion comes along with others who have spoken along the same line, and also your suggestion with regard to borrowed capital.

The CHAIRMAN. Have you any other remarks?

Mr. BERENSON. No.

The CHAIRMAN. We are very much obliged for your statement.

**STATEMENT OF MR. C. P. PETERSON, ATTORNEY, OF LINCOLN, NEBR., REPRESENTING THE BANKERS' LIFE INSURANCE CO., OF NEBRASKA.**

The CHAIRMAN. Give your name and business and address, Mr. Peterson.

Mr. PETERSON. C. P. Peterson; Lincoln, Nebr.; attorney, representing the Bankers' Life Insurance Co., of Nebraska.

Mr. Chairman and gentlemen of the committee, I stated that I represent but one insurance company. I have observed in watching the proceedings of the committee that ordinarily the persons representing the committee represented large groups, and I assume that under those conditions I am not justified in taking any great portion of the committee's time. I trust I appreciate fully the fact that your duties in framing revenue legislation is more important than the success or failure of any business or line of business. We are presenting a statement, not with the view of reducing our tax or reducing our ratio of tax, but to get, if it will be possible, in the next revenue bill a more adequate definition of Federal taxation as applied to insurance companies. I should like, therefore, if I may, to analyze from our point of view the elements of life insurance, with a view of pointing out the necessity for such definition.

I know that the life-insurance business has been presented to your committee already by counsel for the American Association of Life Insurance Presidents—Mr. Hedges and Mr. Dunham, I believe. I have noted the brief which they have filed; I have noted the argument which they presented, and which it will not be necessary for me to repeat, that life insurance is not in a condition to profit by the condition of war. Life insurance is experiencing adverse conditions, a number of which were presented by counsel for the association, and one of which was not mentioned, I believe—an increased mortality, due not only to the men in the service, but I think every one is now beginning to recognize an increased mortality due to the strain and stress of the conditions of war and business. That mortality is, I think, felt by all the companies, and if war continues will be increasingly felt as we go along.

The basis of investments of insurance companies is also operating adversely to the insurance business. Our company, with assets of \$13,000,000 plus, has invested at the present time an excess of \$1,000,000 in Government securities of 3½ to 4½ per cent. Like a good many of the smaller companies, especially the western companies, we have undertaken with the policyholders to accumulate our funds, our reserves, on the basis of interest compounded annually at 4 per cent. With our investments on the present basis it does not require any argument to convince the committee that our margin of profit is getting exceedingly narrow.

With reference to the excess-profits tax law, or, as I suppose it might have been properly called, the capital-earning tax law, a dispute has existed since the last enactment between the insurance companies and the Treasury Department, I think primarily due to the fact that the definition of invested capital which was framed by Congress in the last enactment was made generally for all corporations, on the theory that invested capital was general in all business, failing, as it appears to me, to recognize that the ordinary business

enterprise makes its profit and gets its income from a capital turnover, whereas the insurance business does not represent a capital turnover, but accretion, on a predetermined basis, for policyholders.

I noted the amendment proposed by the counsel for the association as a suggested amendment for the new revenue bill. I indorse the position which was taken and also the principle of the amendment, with this exception, however: As I understand the proposed amendment, it incorporated into the definition of invested capital a new element of reserves required by law.

I suggest to the committee that if that is incorporated into the regular definition for all invested capital, we are inviting new confusion with reference to other business enterprises. There are reserves required for other concerns than insurance companies. The definition is intended, and I think should be reserved, for a definition as applied to insurance companies. I would suggest, therefore, that instead of attempting an amendment to the definition as applied to the ordinary mercantile enterprise, a separate and distinct definition for insurance companies, and except possibly the matter of surplus used in the business, which is now incorporated in the regular definition. I do not know whether the committee would desire to have submitted any form of amendment; I do not know how the committee plans going ahead with the new revenue plan, whether it will be amendatory in form or entirely rewritten. If, however, such rewriting is to take place, I suggest as a definition of invested capital for insurance companies:

1. Actual cash paid in.
2. Actual cash value of tangible property paid in other than cash, subject to the same limitations and payments other than cash as is found in the definition of invested capital for other corporations.
3. All the reserves required by law.

As to the income-tax principle there has been and still continues to be some dispute. There has been language in all of the income-tax legislation of Congress which has been subject to various interpretations as applied to insurance, due to the same condition, I believe, of seeking to cover the insurance definition within the ordinary definition for mercantile enterprises.

At this point I would like to suggest to the committee the distinction or classification, perhaps, by the Treasury Department, dividing life insurance companies into two classes, mutual companies and stock companies, as not being sound in principle. Mutuality of a life insurance company does not depend upon the plan for its organization. It does depend upon the disposition of the receipts of the company or policyholder. In other words, it depends upon whether the business the company writes is participating business or nonparticipating business. If there is to be any classification of insurance companies for income tax it ought to follow that line rather than the ordinary line of organization. The disposition of the receipts—two classes of receipts, premium income and earnings on reserve—determine the character of the business and the mutuality of operation. It has been my privilege a number of times during the last few months to discuss with the Treasury Department Federal tax as applied to insurance. I believe the Treasury Department has sought at various times to strain the language of the acts passed heretofore with a view to imposing tax upon insurance companies, notwithstanding the fact

that the fundamental tenet of legislation is that it shall be construed against the taxing power and in favor of the taxpayer. This has come about, it seems to me, due to a conviction on the part of the officers of the Treasury Department that there exists and has ever been in the hands of the insurance companies large sums of money which should be reached and taxed in some form.

It has been suggested, I believe, to the committee, and this will be further suggested to the committee, that so far as means is concerned of increasing the revenue to the Government, it ought to take the form of a premium tax. I believe that has already been suggested. I want to submit to the committee as definitely as I can that it is my conviction that that principle of taxation is wrong in principle; that it is unjust, inequitable, and, for the present purposes, inexpedient. My reason for that is this: If John Smith has a policy of insurance of \$5,000, and he pays an annual premium of \$150, his payment of a premium, his payment of \$150 paid over has already been subject to the payment of an income tax and ought not to be taxed again. It probably ought to be taxed more than it is and probably will be taxed more than it is, but it ought not to be taxed twice. The premium ought not to be taxed in the hands of the company after it is received, first, because the company is charged by its contract to accumulate that fund for the benefit of the policyholder. I am speaking now of participating business. If John Smith has a reserve in the hands of the insurance company on his policy of \$5,000 amounting to \$1,000 and the company earns its net earning power for a year, he will receive on his earnings \$40—I mean the earnings on his reserve. If, with that \$40, his total income does not measure up to his exemption he ought not to be taxed on his earnings, or his savings in the hands of the insurance company. I say it is inexpedient, and for the present emergency, probably, the most potent reason it is inexpedient is because, if it is taxed at all it ought to be taxed on the theory that it is being accumulated for the benefit of the individual policyholder, and if it is to be included in any tax return it ought to be included in that tax return.

If the committee deems it necessary, therefore, to have an additional tax on insurance, I suggest the advisability of requiring of insurance companies that they determine the average rate of their earnings for the tax year; that the individual policyholder include as income in his return the earnings on his reserve in the hands of the insurance company, by applying to that reserve the earning rate of the company. If that be done the reserve which has been earned will be taxed in the ratio that the other income of the policyholder is taxed. In other words, if John Greenback has accumulated \$1,000,000 as reserves in the hands of insurance companies, and he is earning during the tax year on that reserve \$40,000, and has other income, which brings his gross income to the point where he will be taxed at the rate of 20, 30, or 40 per cent, the earnings on his premium reserve is taxed in the same ratio. I do not know—I am not able to submit the amount of additional revenue that that would create. I do not think it would be possible to reach it without applying it in detail to the income-tax returns in the hands of the Treasury Department after the policyholders had been ascertained.

These three things, then, I am suggesting to the committee:

First. A more definite definition of capital invested, for the purpose of the excess-profits tax law.

Second. A more specific definition for the purpose of the income-tax law.

Third. If the committee deems additional revenue necessary from the insurance business, that it be brought about by the inclusion in the tax returns of the earnings on the premium reserves held and accumulated for the benefit of the individual policyholder.

Mr. HAWLEY. Do you speak from the standpoint of the old-line companies?

Mr. PETERSON. Yes; from the point of the old-line company.

Mr. HAWLEY. You spoke about the increased mortality, due to the present conditions. Do you know what that increase is?

Mr. PETERSON. It is not possible to determine the increase of the mortality from the normal until we have the war mortality segregated; that has not been done by any of the companies to date.

Mr. HELVERING. I want to ask you a question. You stated a moment ago that if a man had \$5,000 insurance and paid an insurance premium of \$150 a year, that it had already paid income tax; what did you mean?

Mr. PETERSON. I mean the individual has no exemption of his income for the amount he is paying on his premium. The individual has already paid income tax on that, assuming that it is above his exemption.

Mr. HELVERING. Assuming he is paying an income tax at all?

Mr. PETERSON. Yes, sir.

Mr. HELVERING. If he is a married man and earning less than \$2,000 a year he doesn't pay any.

Mr. PETERSON. Yes; that is true. The way to reach that is to reach it by exemption of the man who carried insurance above the man who did not.

The CHAIRMAN. We thank you for your statement, Mr. Peterson.

**STATEMENT BY MR. F. W. A. VESPER, OF ST. LOUIS, MO.  
PRESIDENT OF THE NATIONAL AUTOMOBILE DEALERS  
ASSOCIATION.**

Mr. VESPER. I represent the National Automobile Dealers of the United States as their president, and before presenting a brief I want to say that our idea in appearing before you is not in order to object to a tax, but rather to suggest one that we feel will increase your present income and not disturb whatever income you may now be deriving from an automobile tax, and purely from a dealer's standpoint, or rather the man who distributes the automobiles that the factories build.

In appearing before you as representative of the automobile dealers of the United States, our desire is first to make plain the fact that we do not oppose any equitable tax on the automobile business where it is considered necessary to raise revenue or where it is for the purpose of having the industry bear its proper proportion of the expense of conducting the war, but rather to place before you what seems to us as an injustice, due to the mistaken classification under which the automobile has apparently been placed and its proper place in our national affairs has not been fully understood.

That the automobile has been one of the world's largest factors of development is apparent by the multitude of uses that the car is being put to, all of which, when taken into account, clearly demonstrates the designation "pleasure car" a misnomer. Of all the cars built and sold, less than 20 per cent can properly be called purely pleasure vehicles and while in this classification might appear such types of cars as speedsters, broughams, town cars, etc., yet even these are used in a great measure not for recreation purposes only, but as in the instance of the closed car or town car, are usually used as the family vehicle and therefore come in for a share of utilitarian service. It is safe to say that the larger proportion of the balance of passenger cars are combination cars which are being used in actual business pursuits part of the time and the balance of the time possibly the same as the spring wagon and the serry of olden days for recreation purposes on Sundays and evenings. A careful canvass of almost any locality will show that comparatively few automobiles of the latter type are being used exclusively for pleasure purposes and that in the combination, the actual service usage predominates.

Nearly half of the moderate-priced cars are sold in what is known as the rural districts, and a large proportion direct to the farmer himself, who utilizes the car not as a pleasure vehicle but one for actual service purposes, and it is a fact easily demonstrated in rural districts that the automobile is responsible for the increased efficiency of the farmer and the increase in his production, due to the fact that it has been a time saver for him, for before the advent of the automobile a trip to town meant a loss of practically the entire day, whereas by the use of the automobile it has been shown that the greatest number of trips made to town are usually after working hours, in the evening, or at odd times. Not only this, but the farmer's ownership of an automobile has increased the trading radius of practically every town and village in the country and has been the factor of increasing the business of the merchants of these towns because the farmer visits his market oftener, due to the fact that before the automobile was generally used one living 10 or more miles from his market required practically the entire day to make the round trip with the team. During market times with an automobile a farmer can make his market trips every day without the loss of time. This one fact alone would disprove the seemingly accepted idea that an automobile is a nonessential and as such is unnecessary in the plan of things at this time.

The unnecessary use of an automobile and the one used strictly for pleasure purposes can be determined by proper investigation and necessary regulation can be made to correct and reduce this use to a minimum, and the automobile dealers throughout the United States will be more than willing to cooperate in this direction to the fullest possible extent.

The automobile business has become an industry so large in its proportions that it has built up around itself an organization of distribution probably second to no other industry in the country and as its sale and handling is similar to no other industry, it has had to develop a peculiar organization of its own, which in this country is made up of over 28,000 establishments devoted to the sale and distribution of automobiles. Of this number possibly 2,500 or 3,000 are located in what is known as automobile distributing centers, the dealers in

which either sell cars to the residents of large cities or in addition thereto have jurisdiction over the distribution of cars in a large territory tributary. In addition to this there are approximately 25,000 dealers located in the smaller cities and villages whose business is almost entirely made up of the sale of cars in their surrounding neighborhood, the largest proportion of which goes into the rural and urban districts adjacent to them. These dealers have, owing to the peculiar requirements of the business, built or had built for them buildings to meet their requirements and as a result would, if unable to continue the sale of automobiles, be placed in a position where they would be unable to utilize these properties without very expensive rearrangement.

A majority of these dealers, possibly 85 per cent, do not own the buildings but occupy them under lease and in the building of them—a greater proportion being built to the dealers' specifications—loans have been contracted the payment of which depends upon the returns received and a serious disturbance of the business would endanger the safety of the investment. Besides this nearly, if not all of these buildings are built under special restrictions prescribed by law on account of the peculiar fire hazard of the business which by its own observance renders them unfit for any other line of business.

It is a significant fact that there is no line of merchandise that will replace automobiles in the hands of a dealer. There is nothing now manufactured that can be taken into an automobile dealers' organization to be handled and sold by the same equipment; consequently it would mean practically the entire disorganization of the establishments of a large number of the 25,000 what might be termed small town dealers.

There is no other business, we believe, where special equipment for the handling of sales and distribution is so necessary, nor is there any other business where some satisfactory addition or substitute can not be taken on where the prime business itself is curtailed, nor is there any other business where its special sales organization can not quickly be utilized in the handling of other merchandise.

Conservatively figuring eight people dependent to an establishment gives approximately 200,000 people who are directly affected and add to this a conservative estimate of 20 to the large city distributing organization would make 50,000 more. This applies purely to the dealers or automobile sales organizations and does not take into consideration something like nearly 25,000 additional strictly garage owners, who are not actually sellers or handlers of automobiles, but are established for the purpose of maintenance, care, etc., nor does it take into consideration the strictly accessory dealer who is neither a garage man nor a seller of automobiles but who maintains an establishment for the purpose of selling and distributing automobile supplies of various sorts.

Therefore, an actual hardship would develop to the exclusive automobile dealer whose place of business has been built for the purpose and whose entire investment is represented in a building and organization constructed for the purpose of handling automobiles and which is, in most cases, not practical for any other line of business, without a large expenditure for rearrangement.

A substantial decrease in the efficiency and production of our farms is sure to result if the farmer can not supply himself with an

automobile if he requires it, not only because of the use the automobile has been in itself from an actual service standpoint but because it has been one of the greatest factors for keeping the boy on the farm that has ever developed. Careful investigation of any rural district will readily demonstrate the fact that where an automobile is owned by a farmer, his children are remaining with him longer, due to the fact that by its use they are enabled to enjoy some of the conveniences, the lack of which have in the past driven them to the cities. While this use of the car by the young people of the family of the farmer for trips to town and otherwise might easily be construed as a pleasure feature, yet the fact remains that it has resulted in actual conservation of man power on the farm. Besides this there is no question but what the efficiency of the farmer has been increased because in his use of the car, a certain recreation has been given him which can not help but have been beneficial to him mentally and physically.

Nearly 2,000,000 of the automobiles now in use are owned by farmers. A careful investigation in any rural district will indicate that the largest proportion of these cars are a necessary part of a farmer's equipment, and in sparsely populated sections it is as much or even more necessary to a farmer. As an evidence of this fact the registration records show that the strictly agricultural States have the largest per capita ownership of automobiles. Iowa and Nebraska have 1 car to every 8 people; South Dakota, 1 car for every 10 people; Montana, on account of its distances, 1 car to every 11 people; Kansas, North Dakota, Minnesota, and California, 1 car for every 12 people; Arizona, also on account of its distances, 1 car to 13 people; Michigan, 1 car to every 14 people; Indiana, Wisconsin, Colorado, Ohio, and Wyoming, 1 car to every 15 people. This evidence of car ownership increases gradually through the balance of the principal farming States at about the same ratio. It will be noted in the States mentioned above that there are practically no large cities, with the possible exception of California, Ohio, and Michigan. These figures, which are as of June 30, 1917, are clear evidence of the fact that the motor car is used more extensively for rural utilitarian purposes than for so-called pleasure purposes in large cities. When the figures are available as of June 30, 1918, the proportion may change slightly; but if so, it is safe to assume that the change will be an increase in the farming States rather than the others. For your further information, a complete list of cars registered, dealers by States, etc., I attach hereto a statement,<sup>1</sup> prepared by Automotive Industries, giving the figures in detail.

From the service point of view in cities, naturally comes the car used for business purposes during business hours, under which classification come cars used for light delivery, by physicians, salesmen, solicitors, and dozens of other similar uses. Therefore, from an actual transportation standpoint it represents a tremendous usage from those citizens who live in suburban districts now so located that in many cases the only means of transportation is the automobile. The effect that the motor car has had on the expansion of cities, is at once apparent to everyone because without the motor car, many of

<sup>1</sup> Not printed.

these extensions would not have been possible. The increase of values of suburban properties is therefore almost due entirely to motor-car transportation. This also is responsible for the increase of farm values due to the fact that distance from the market or city is not now the factor that it was before the motor car was so universally used.

Take the evidence, for instance, of any practicing physician, especially the general practitioner in the moderate sized cities or country. In his work alone the use of motor cars has increased his efficiency many times over, because of his ability to increase his zone of usefulness and in rural districts particularly the doctor has been able to render quicker aid to hundreds of more cases than he was able to do in the days when he was obliged to serve them in the old way with a team.

While I do not have the exact figures, yet I have been informed that there are nearly 150,000 doctors in the United States and it is safe to assume that 95 per cent of them are owners and users of motor cars in actual service. This is only one of many of the strictly utilitarian uses to which an automobile is put, but illustrating in no small way the feature of the automobile industry which is not generally taken into account.

As stated in the beginning, the automobile dealer does not object to the levy of an equitable tax for the purpose of raising revenue for the conduct of the war, but believes that any tax so levied that will stop or greatly curtail the manufacture and sale of automobiles will not only be unwise but unwarranted from a standpoint of the Nation's efficiency, and that any tax levy that will tend to handicap the prospective purchaser in buying an automobile or one that will undermine the establishment of the dealer is not justified. We believe that no patriotic dealer will object to paying any tax that is not out of proportion with other lines of business, nor that any owner of an automobile will object to paying a Federal license upon his car if it is levied as war measure. Merely as a basis for calculation in order to arrive at a possible revenue from a Federal license or wheel-tax standpoint, the following schedule is presented as one which the dealers believe will be an equitable one and will meet with no serious objection from any patriotic owner of a car. Take, for instance, a license fee of \$5 on a car selling for \$600 or less; \$10 on a car selling for up to \$1,100; \$15 on a car selling for up to \$2,000; \$20 on a car selling for up to \$3,000; and \$25 for a car selling for over \$3,000.

Mr. GREEN. Right there: Is that to be levied at the time of the sale or simply collected after it is sold?

Mr. VESPER. Our object there is and our thought that it should be collected at the time of the State license tax.

Mr. HAWLEY. An annual affair?

Mr. VESPER. Yes, sir.

Mr. SLOAN. Annually?

Mr. VESPER. Yes, sir; an annual license and not a tax.

This would net an average of approximately \$13 per automobile per year if figured on the average of the first four classes as those are greatly predominating in numbers. Multiply this by approximately 5,000,000, which is the figure given as the number of automobiles now in use in the United States, and it will net \$65,000,000. Add to this the cars to be produced during the coming season, and the amount

will of course increase in that proportion. This license can easily be collected, as automobiles are registered by States and by cities, and in many cases counties, and can easily be collected at the time the State licenses are made returnable, and will therefore not seem to present any very great expense or any great difficulty of manipulation. A tax of this sort will not represent a hardship either upon the present owner of a car or a prospective purchaser.

Causes already in force have had a tremendous effect upon the automobile dealer's business, and one of the greatest has been the scarcity of labor, especially the expert labor necessary in the repairing and maintenance of motor cars, yet in spite of this fact the National Automobile Dealers' Association has been vigorously carrying on a campaign for some months, which has been highly successful and has been extending as rapidly as possible, curtailment in operation in every department where skilled labor is used, for the purpose of making available for the war purposes, mechanical help of all classes and it is estimated that through its efforts at least one man per organization has been released to date, which means that by its own efforts upward of 25,000 skilled drivers and mechanics have become available for Army purposes or for work in plants where such help is necessary. A general closing of garages and service stations on Sundays, holidays, and at night will release a large number of mechanics but it will also reduce the earnings of the dealer who depends partly upon this branch of his business for his income. All of this has been done willingly and voluntarily upon the suggestions made by a committee of dealers themselves, after carefully investigating the dealers' business in an effort to determine what they could do to help the conservation program as originally outlined by the economy division of the War Industries Board. Steps have been taken that will extend this work to all garages, accessory houses, oil stations, and in fact every branch of the automobile business, on the theory that such voluntary curtailment is a war measure which will represent a substantial saving of man power and material. Therefore, within a short time, the automobile dealer industry will be upon a strictly war basis, fully as rigid if not more so than that of any other industry and evidences the fact that the automobile dealer is willing to cheerfully do anything that he can to help the cause.

Owing to the conditions confronting the factories whose product we sell and distribute, due to scarcity of labor, difficulty of transportation, advance of prices and other factors of this sort, not the least of which is the fact that the automobile factories generally are doing a large proportion of war work, production has already automatically been greatly reduced. Therefore, any additional burden in the shape of taxation that will further curtail the manufacture of automobiles will place a tremendous hardship upon the automobile dealer. Especially is this true when the difficulty of delivery is considered.

During the past winter and spring and continuing up to the present time nearly half of the cars manufactured have been delivered to the various dealers and selling organizations upon their own power, thus relinquishing freight equipment entirely, this even to the extent of upwards of 1,200 miles from the factory; as many driving deliveries were made as far away from the factories as Texas, most of the shipping done being to those dealers at points beyond the possibility of

self-delivery. As a further factor for the relief of transportation, automobile dealers generally favor and are heartily supporting the rural motor express and return loads movement, and will probably be the biggest factors in its ultimate success, because with the establishments maintained in towns and villages through which these express lines pass the trucks in use for this purpose are assured of necessary mechanical attention wherever and whenever required.

In presenting the situation from the automobile dealers' standpoint no attempt has been made to take into consideration and to cover the problem confronting the manufacturer himself, nor the disturbance that it will cause manufacturing organizations if a tax that will tend to curtail the manufacture and sale of passenger automobiles should be advocated, but is considered purely from the dealers' standpoint, who, by the very nature of his organization, is dependent absolutely upon the sale of a reasonable number of automobiles per year, to properly maintain his establishment and to keep himself and his family. Therefore, in considering the matter of automobile tax, it is hoped that the dealers' standpoint will be carefully considered and that no measure be advocated that will tend to handicap his business that he can not continue to operate, and also that due consideration will be given the fact that when he loses his source of revenue and livelihood, thus his ability to hold up his end in the purchase of bonds, donations to the many worthy causes that exist and his many other activities in this direction will be impossible; and also that as a class there is no bigger, broader, and more patriotic group of business men in the country nor one who will more cheerfully help the Government in every possible emergency than the automobile dealer.

Mr. STERLING. You say your suggestion will produce about \$65,000,000?

Mr. VESPER. Yes, sir.

Mr. STERLING. How much does the tax under the present law produce?

Mr. VESPER. As I understand, from October 4, last year, up to within a few days short of April 1, making it a trifle under six months, it produced \$15,000,000 and a fraction.

Mr. STERLING. There have been about four ways suggested here for taxing automobiles. One was a tax on gasoline and lubricating oil used in the automobiles that were not used for useful purposes, commercial trucks, and the like; another, a gross sales tax; another, a tax on chauffeurs; and, another, the license tax. What do you think of some of these other propositions?

Mr. VESPER. Well, a gasoline tax would be a tax on use. I don't know that there would be any serious objection to a gasoline tax, if it could be made operative. But so much of the gasoline is being used for other purposes, for pumping machines, and a great quantity of other purposes outside of automobiles, it is doubtful whether that could be made operative.

Mr. STERLING. You think it would not be practicable?

Mr. VESPER. I think it would be a splendid way of raising revenue, and I think it would be one sure way of reaching automobile owners.

Mr. STERLING. I suppose you would prefer a gross sales tax?

Mr. VESPER. Yes, sir.

Mr. STERLING. You represent the manufacturers?

Mr. VESPER. No; we represent the dealers purely. We have no interest in the taxing of the manufacturer at all. Our interest is purely from the dealer's standpoint.

Mr. STERLING. Now, it might be necessary to impose all of those four forms of taxes; what would you think of that?

Mr. VESPER. Well, I would say for the automobile dealers and automobile owners generally that if it was necessary to impose all four of those taxes that they would pay it cheerfully.

Mr. FORDNEY. What tax, if any, on gasoline do you advocate?

Mr. VESPER. I do not advocate any. I have no means of suggesting a tax on gasoline. But if it is contemplated, a reasonable tax per gallon, and I have no figures to show the amount of gasoline used, so that I can not give you any figures on the revenue it would produce, and therefore I am not in position to advocate any particular amount on gasoline. But I am sure you would get \$65,000,000 wheel tax, or rather a license, and I can't see, nor can the dealers in our discussions at our conventions, we have not been able to see why a Federal license was not entirely practicable.

Mr. FORDNEY. On the automobile in the hands of the individual?

Mr. VESPER. Yes, sir.

Mr. FORDNEY. Then you can tax any other personal property in the same way.

Mr. VESPER. Not necessarily, because you do it in all States. You will have a State license; you will surely have a State license, and in some cases a county license. In those counties and States I don't know of any tax to offset any other type of personal property.

Mr. FORDNEY. Oh, yes; they tax personal property in many States.

Mr. VESPER. I know, but they tax it under a particular tax. You also have to list an automobile under a personal-property tax, but in addition to that you pay an automobile license.

Mr. FORDNEY. Wouldn't the automobile owner have to pay it if they put a tax on the gross sales?

Mr. VESPER. I assume they would.

Mr. FORDNEY. They do now, don't they?

Mr. VESPER. In some cases they do; in some cases the dealers absorb the tax; in other cases the tax is collected at the time of the sale.

Mr. FORDNEY. You are not advocating a gross sales tax. Most dealers now pass it on the purchaser.

Mr. VESPER. I think quite a few do. I think quite a few absorb it; I think quite a few absorb it themselves. That may be particularly true in some communities where the competition is particularly keen, or where for some reason or another the cars are not moving as fast as they might; but I don't believe it would accomplish the result from a money-getting standpoint nearly as well as a Federal license, and I don't believe, also, that a Federal license will be objected to by any owners of cars to any great extent.

Mr. LONGWORTH. Can you cite the case of any standard car where the tax is paid by the manufacturer?

Mr. VESPER. I don't know that I can.

Mr. LONGWORTH. You can't, because there isn't any such.

Mr. VESPER. Not, as a car, Mr. Longworth, but I can, I think, give some cases, and some of my committee here can give cases where the manufacturer absorbed it. No; we, as dealers, pay it.

Mr. LONGWORTH. You pay it to the manufacturer?

Mr. VESPER. Yes, sir.

Mr. FORDNEY. Do you think the tax you recommend should be graduated, owing to the age of a car?

Mr. VESPER. No, I don't think so; I think it should be a license, the same as the State license.

Mr. FORDNEY. Then you would tax a car that is 10 years old as much as you would one that is 1 year old?

Mr. VESPER. No; it has to have a stipulated value. In handling cars, there is a certain value on each car.

Mr. FORDNEY. Now, if you bought a new automobile and six weeks later sold it, you couldn't get more than 50 cents on the dollar from me or anybody else, could you?

Mr. VESPER. I would have to say that would depend on the car a good deal.

Mr. FORDNEY. That is usual with a dealer. A dealer usually in taking in a car wants to cut that price square in two.

Mr. VESPER. He necessarily would have to do that. That happens to be one of the evils in the automobile business, growing out of the fact that the business just grew. If I may digress a little and say that the business as a business has absolutely no basis upon which to establish itself. There is no other similar business, due to the fact that its unit of sale is \$684, and its price is usually cash, or bill of lading, and therefore there was nothing similar established upon which it could go; and, therefore, certain evils, that we consider evils in the trade, crept in, and one of the evils at that time was the taking in of a used car, and we contend there is no more reason for taking in a used car than there would be for taking in a used suit of clothes or a used piano, so far as business is concerned; but it happens to be one of the usages of the trade that has developed, and it necessitates in many cases two sales for one profit, and therefore the allowance made must depend on the type of the car, in the fact that you have practically two overheads for one sale.

Mr. FORDNEY. I am not criticizing the dealer. Let me ask you this: Some gentleman awhile ago in this committee advocated a tax on gasoline of 25 cents a gallon, not including gasoline used in commercial trucks. Have you any idea how any track could be kept of the gasoline used in a pleasure car aside from that used in the trucks and impose a tax in that way if that kind of tax were to be imposed?

Mr. VESPER. I have no idea, unless it was collected at the time of the sale.

Mr. FORDNEY. It would be a very difficult problem, wouldn't it?

Mr. VESPER. Yes, sir; it would be a very difficult problem. I think you would have another difficult problem from the facts which I have tried to bring out. If you will take into consideration the number of cars in use, and the fact that a number of those are a combination car of pleasure and business, much as the old democrat wagon was years ago—the old wagon was used all the week for business and would be used for pleasure on Sundays. That was the kind of business that I was in years ago. And we find now a number of automobiles used in the same way—except those in the larger cities, they are actually used as a combination vehicle.

Mr. FORDNEY. It seems to me that it would be impossible to keep track of the gasoline used unless all gasoline used should have a like tax, whether used in a commercial truck or in a private car.

Mr. VESPER. I confess I don't see how you would keep track of it, because of the multitude of uses the combustion engine is put to, and the fact that the farmer uses it in his sawing outfit, and in his tractor outfit, and in his pumping outfit, and a multitude of uses. I don't see how you could arrive at the amount of gasoline he was using in his automobile.

Mr. FORDNEY. I can't see any practical way, but I thought you, being an automobile dealer, might know; I wanted to ask you.

Mr. LONGWORTH. I want to ask you one more question about the tax on cars. You say there are a number of cases where the dealer absorbs it?

Mr. VESPER. I think there are a number of dealers. I don't think there is any particular line of cars or makes of cars, but I know it is a fact that many of our dealers absorb the tax in the transaction of their business.

Mr. LONGWORTH. You say it never is the case with the manufacturer?

Mr. VESPER. I don't say it never is; I don't know that it is. I don't know whether the manufacturer absorbs it himself in any case. I know in a great many cases the dealer pays it. I know we pay it.

Mr. LONGWORTH. What kind of cars do you handle?

Mr. VESPER. The Buick.

Mr. LONGWORTH. What is the dealer's price on the Buick?

Mr. VESPER. They run from \$790 to \$1,200.

Mr. LONGWORTH. The tax, then, is \$36?

Mr. VESPER. Approximately.

Mr. LONGWORTH. And you pay the manufacturer \$36 for the tax?

Mr. VESPER. Yes, sir.

Mr. LONGWORTH. And then you don't charge it in?

Mr. VESPER. Yes; we do.

Mr. LONGWORTH. I just asked you, and you said you didn't.

Mr. VESPER. I said some dealers on some lines of cars do not. I did not say we absorbed it. But in some cases some dealers do absorb it; some retail dealers absorb it, just the same as some dealers absorb the freight, although the cars are sold on the basis of factory delivery, but there are some cases where the dealer absorbs the freight, or a part of it.

Mr. LONGWORTH. What do you pay the manufacturer of the Buick car for a car that sells for \$1,200?

Mr. VESPER. I can't tell you right off hand, but it is practically 25 per cent discount; I think they will average 20 per cent in most cases.

Mr. LONGWORTH. Well, even if you did absorb the tax, it is only 3 per cent; it is rather insignificant, isn't it?

Mr. VESPER. We are not advocating the removal of that tax, Mr. Longworth. We are perfectly willing that should continue. That isn't the theory; the theory is not the elimination of that tax by any manner of means. There is no reasonable objection to a tax of that sort, and the dealer would have no objection if he had to pay the tax, but we advocate that it is not equitable to tax against the purchase of a new car and not avail ourselves of getting additional revenue from the cars already in use.

Mr. LONGWORTH. You would have no objection to a slight increase in the tax, would you?

Mr. VESPER. Why, no; I don't think there would be any objection to a slight increase in the tax if it was necessary as a war measure, and I don't think you will find any criticism from any source on account of a Federal license tax.

Mr. LONGWORTH. I am very glad to hear you say that, because last year we were assured it was going to ruin the automobile business. But the tax was so small that it was not viewed really as a tax; it was so insignificant.

Mr. HELVERING. You say we got \$15,000,000 on the automobile tax?

Mr. VESPER. The figures were \$15,400,000, I believe; I have the figures here.

Mr. HELVERING. You say under this scheme of yours we may get \$65,000,000 additional?

Mr. VESPER. Yes, sir.

Mr. HELVERING. And you think both taxes should be levied?

Mr. VESPER. Yes, sir.

Mr. HELVERING. And, if necessary, a slight increase on the present tax?

Mr. VESPER. Yes, sir; we do not object to a slight increase on the present tax. As automobile dealers we do not object to any tax you think necessary; but the thought we want to convey is that we do not believe, as some of the statements we read in the paper would suggest, that it would almost amount to a curtailing of the industry by reason of an excess tax, because the placing of an excess tax would reduce the amount of the buying, because the man who would have to pay 15 or 20 per cent on the purchase of a car would not buy it, and that would have a very marked effect on the business as a whole.

Mr. FORDNEY. How many months were included in the time that those \$15,000,000 were collected? The impression will go out in your remark that it was for a year.

Mr. VESPER. No; I tried to say a moment ago, from the 4th of October, which I think was the date, and about to April, making it two or three days short of six months, the figures which I have here, which I understand are correct, \$15,200,000.

Mr. LONGWORTH. Where did you get the figures for the year?

Mr. VESPER. I haven't it for the year; six months.

Mr. LONGWORTH. That is six months?

Mr. VESPER. Yes, sir; \$15,000,000 for the time lacking about four days of six months, and doubling that that would be \$30,000,000 for the year. There is an increase in April, May, and June, but there will be a decrease during a part of the year.

The CHAIRMAN. \$32,000,000 is the amount estimated for the automobile tax.

Mr. VESPER. Well, \$32,000,000. We do not say these figures suggested in the license are just what they might be, but basing them even on a small license fee of that size it would produce \$65,000,000.

Mr. STERLING. Both of them would produce \$100,000,000?

Mr. VESPER. Yes, sir; easily that, I should say.

**STATEMENT OF MR. GRANT CARPENTER, OF LOS ANGELES, CAL., ASSISTANT SECRETARY OF THE MOTION-PICTURE SERVICE ASSOCIATION.**

Mr. CARPENTER. I appear before your committee as the representative of the Motion-Picture War Service Association, an organization formed primarily for the purpose of unifying and concentrating the patriotic work of the 175,000 people employed in the motion-picture business. It includes in its membership persons engaged in all branches of the industry—producing, distributing, and exhibiting. Particularly, however, do I represent a class that heretofore has never had a hearing—the workers in the artistic branch of the business—production, which include the small, independent producers, the actors, directors, authors, editors, photographers, and laboratory operators of southern California, where 75 per cent of all motion pictures in this country are made.

Among the officers of this association are David Wark Griffith (chairman), Mack Sennett, S. E. V. Taylor, Cecil De Mille, Mary Pickford, Charles Chaplin, Lois Weber, Douglas Fairbanks, W. S. Hart, Jesse L. Lasky, Marguerite Clark, and William Fox.

In order that there may be no misunderstanding of our purpose in this hearing we state positively and unequivocally that we neither urge nor desire any reduction in the income tax. The members of our association are not only willing, but eager, to bear their full share of the burdens of the war, and they consider it a privilege to serve our country in this crisis. We ask merely the opportunity to call to the attention of this committee of the existing tax law, and some of the results that will flow from a material increase of the present rates.

The minds of the people of this country generally have been so concentrated upon patriotic work that the question as to who has given the most has scarcely been considered. But, we believe we discern some inequalities and inequities in the tax law such as are usually found in every hastily-drafted emergency measure, which may be easily and readily readjusted by the legislation now contemplated and which will equalize the burdens which must be borne.

Especially do we ask for a heavier tax on unearned income than upon earned income, adopting as a definition of "earned income" the phraseology of the English law as follows:

Income arising in respect of remuneration from any office or employment of profit or in respect of any pension or compensation given in respect to past services of the individual, or of the husband or parent of the individual in any office or employment of profit, and income derived from the exercise of a profession, trade, or vocation.

Income derived from any other source, therefore, shall be deemed "unearned." This definition is obviously based upon a recognized distinction between tangible and intangible capital, and income derived from accumulated wealth, and that derived from cumulative effort. Permit us at this time to draw a comparison between the individual who derives his income from his art, and the individual who derives his income from dividends on investments. I have in mind a woman in one of the arts who began only last year, after many years of poorly paid apprenticeship, to earn large sums of money. Her intangible capital is the experience and the knowledge of her art she has accumulated, and upon which she has only begun to realize.

The tax, as now applied, takes almost half of her earnings. In the nature of her business she can not expect, under the most favorable conditions, to enjoy the popularity that brings her this income for more than a few years—five at the outside—and the hazards and risks of her employment—a brief illness or a scar on the face may end her earning power at any moment for all time. During that period she may be taxed anywhere from 25 per cent to 50 per cent of all the earnings of a lifetime, and at the end of it her capital is gone.

On the other hand, take a man with a similar income derived from dividends. This man's income would not be taxable at all under the excess profits law, nor would he pay any normal income tax; so that, when the war is over, and the tax removed, this individual's capital would be unimpaired, and he would perhaps enjoy a larger income on the increased valuation of his property through no effort of his own.

Mr. MOORE. Will you pardon me at that point? Twice, and perhaps more than twice, you have referred to the fact that revenue derived by actors and actresses, those for whom you speak, have no reference to the war; isn't it a fact that the moving-picture shows have been doing a larger business generally since the war began than prior thereto?

Mr. CARPENTER. No, sir; it is a fact that the industry as a whole has suffered a depression; many theaters have closed all over the country. And I know, on the production in Los Angeles, where 75 per cent of the pictures are produced, the production has been largely decreased, and the salaries have been cut, and the falling off of business has impaired the earnings of the artists and actors.

Mr. MOORE. Well, we get a good many rumors here in Washington about the large incomes of some of the artists and actors and actresses to whom you have referred; their names are household words, so that it is not necessary to name them now. It is said that some of them have invested very heavily in liberty bonds, which was patriotic, but the rumor is that they earn very large incomes. Take Charlie Chaplin, a very amusing and interesting fellow; we hear that his income is very large. If you take his case and put it alongside of that of the shipyard worker, I question whether your argument in his behalf would hold, or if you put his earning capacity and ability to hold what he earns against that of the man who has capital invested equal to his earnings, I also question whether your argument would hold. I thought possibly you might want to dwell on that feature. When he invests \$100,000 or, say, \$300,000 in liberty bonds, he has a capital that would sustain an ordinary man all his life, although you have indicated that an actor might be cut short in his career by a scar on the face or some sickness that would stop his earning power. If one of your actors or actresses can make enough in one or two years, arising from their intense popularity and the demand of the public for their services, wouldn't they be better off in the long run than the average business man who had capital invested equal to their earnings, who had invested it and was risking it in his investment?

Mr. CARPENTER. I was coming to that a little later on. In these cases you cite the reports of the amounts received by moving-picture actors has been greatly exaggerated.

Mr. MOORE. It may have been.

Mr. CARPENTER. It has been.

Mr. FAIRCHILD. My information is that Mary Pickford has \$500,000 or \$600,000 a year; that Douglas Fairbanks and Charlie Chaplin have almost an equal amount; that there are others that get all the way down to \$150,000 a year, and down, for instance, to \$25,000 a year, and I suppose on down. But I say my information is good that the income of one of your stars was \$600,000 last year.

Mr. CARPENTER. I only know of one star in the motion-picture business whose income is over \$500,000 a year, and there may be one other approaching very close to it; that there may be a few—another one or two—that may be \$200,000. And from there there is a big drop. It is only the distinction—the unusual distinction of popularity gained by the few—they are very, very exceptional. Out of about 35,000 people engaged in the production of motion pictures there are 4, or you may say, there are a dozen, or 20, or 30, out of the 35,000, who have made big salaries or big earnings. Their success is what has stimulated the others to go into the business; but it is like the business of the stage, and those high salaries that are paid or high earnings are due very largely to the fact of the brief activity of their professional career.

Mr. LONGWORTH. In that connection, I absolutely agree with you—

Mr. CARPENTER. Thank you, sir.

Mr. LONGWORTH (continuing). That the unearned income should pay a higher tax than earned income. I have been making that speech for many years.

Mr. CARPENTER. I may have unconsciously gotten it from you.

Mr. LONGWORTH. I assume that the income which you referred to is not Miss Pickford?

Mr. CARPENTER. I didn't say.

Mr. LONGWORTH. No; you said a while ago a lady that just had come into the fullness of her income should not be taxed as heavily as a man who had invested in bonds. I assume, I say, that was not Miss Pickford?

Mr. CARPENTER. I did not say, Mr. Longworth.

Mr. LONGWORTH. The reason I ask you that is this: I have great hopes, in fact I have confidence, that the present revenue law will make a distinction between unearned and earned income. You quote the British law; the British law only makes a distinction between unearned and earned incomes up to \$12,500 a year. After that, the revenue law is the same. Would you advocate that we should go higher in that distinction?

Mr. CARPENTER. I have not reflected on that; in fact, I have had very little opportunity to give any of this subject deep consideration, and I feel I owe an apology to the committee for appearing here at all.

Mr. LONGWORTH. The reason I say that, the actors under the English system would receive no benefit, because the distinction only runs to \$12,500; the lady you refer to, is her income over \$12,500?

Mr. CARPENTER. Oh, yes; much over. I call your attention to the fact that under the English law she would not be affected. I only went so far as to quote the English definition; as to the limits, I have nothing to suggest.

Mr. LONGWORTH. In the English law, starting at the lower incomes, along about \$2,500 a year, they make a distinction in favor of the earned income of something like 30 per cent—that is to say, on an income of \$2,500 a year. An income of \$2,500 a year, if earned, is taxed only about two-thirds of what an income of \$2,500 a year is if unearned, and that difference continues up to and including incomes of \$12,500 a year, but thereafter the tax is the same on all incomes.

Mr. CARPENTER. An excess-profits tax?

Mr. LONGWORTH. No; there isn't an excess-profits tax; that is the most iniquitous thing in the whole business. There is no excuse for that. I am speaking of the income tax now. I have every hope that the excess-profits tax as applying to professional incomes will be repealed entirely, and that the distinction will be carried to unearned instead of earned incomes; but I want to call your attention to the fact that the higher-priced actors and actresses would not be benefited under the English system, and therefore I wanted to know how far you thought we ought to carry the distinction between earned and unearned income.

Mr. CARPENTER. That would require more consideration than I have been able to give this subject on a hasty trip across the country, leaving Los Angeles on an hour's notice and arriving here this afternoon at 2.15.

Mr. LONGWORTH. We would be glad if you would let us know.

Mr. CARPENTER. There are so many incomes that start suddenly along artistic lines; if an author becomes popular and distinguishes himself and earns \$1,000,000 on a single book, he has served a long apprenticeship, and this intangible property has finally begun to yield a large income; now, why should he be taxed half of it? The man whose earnings are accumulating more and more, and whose efforts come to fruition gradually, should he be taxed more? His income does not come in a brief period, in a crisis like this, where he is taxed all at once. It is just an accident, a chance, if this man who has this intangible property suddenly has a large income.

Mr. MOORE. In order to be fair and not pick out these higher priced artists altogether, who are you speaking for?

Mr. CARPENTER. I represent nearly all the people in the production end of the business in Los Angeles.

Mr. MOORE. Where you said 75 per cent of the business is done?

Mr. CARPENTER. Yes; about 75 per cent.

Mr. MOORE. About how many people do you think you speak for engaged in the industry?

Mr. CARPENTER. I couldn't say.

Mr. MOORE. Because you take into consideration those who produce the films, those who produce the stage effects, I suppose, as well as the artists themselves?

Mr. CARPENTER. The performers and the photographers, the camera men, who are just as essential in transferring dramatic action to the screen as are the authors.

Mr. MOORE. You include the mobs and others who appear on the screen?

Mr. CARPENTER. I don't think any of the mobs would pay income tax.

Mr. MOORE. I am using that in a professional sense, the large number of people; you speak for them as well as for the Pickfords and the Fairbanks?

Mr. CARPENTER. I speak generally for the people who appear in the making of the picture, and I feel there is a little inequality in the production end of the business.

Mr. MOORE. But chiefly, I assume, as they would be more directly affected than the others, the high-priced officers of the association?

Mr. CARPENTER. They are officers of the association I represent.

Mr. MOORE. You named them, I think, in your statement?

Mr. CARPENTER. Yes, sir.

Mr. TREADWAY. I understood you to say 75 per cent of all the pictures were produced in Los Angeles?

Mr. CARPENTER. Yes; although there are no exact figures on it.

Mr. TREADWAY. By how many firms?

Mr. CARPENTER. I can't say that; somewhere between 10 and 25 big studios are there, and then a great number of small individual producers.

Mr. TREADWAY. Are these big studios rival concerns?

Mr. CARPENTER. Yes, sir.

Mr. TREADWAY. How many large companies, in other words, would you say are located in Los Angeles, where 75 per cent of the pictures are made?

Mr. CARPENTER. All the large companies have studios there.

Mr. TREADWAY. How many are there?

Mr. CARPENTER. I haven't the figures on that. They are so mixed. You see, a company like the Universal Co., there are subsidiary producers; take the Lasky Co., the Artocraft, and the Paramount, and others; they are so interconnected, I don't know.

Mr. TREADWAY. In the course of your description you named four large companies?

Mr. CARPENTER. Yes, sir.

Mr. TREADWAY. Are the others as large as the Universal?

Mr. CARPENTER. No; I think the Universal and Lasky are the two largest operating there.

Mr. TREADWAY. And then you spoke of this association you represent being a patriotic association; that title does not appear.

Mr. CARPENTER. Primarily, it is a war service association.

Mr. TREADWAY. War service, what is meant by that?

Mr. CARPENTER. It is a newly organized association; the membership has been pouring in from different parts of the country; it aims to take in all persons—already they have organized a woman's committee in every studio; every person in there, or every individual who is idle a moment, could be doing something toward Red Cross work or salvage work. And, another thing, they are raising funds for the erection of a hospital for the use of the United States Government. At their first meeting they raised \$31,000 for that fund; at the first preliminary mass meeting they raised that much of the fund. They have offered their services, and it has been eagerly accepted by those having in charge the raising of the various funds for war work, and the sale of liberty bonds. These people have been rendering this service, and the service they give is rendered as individuals. They thought, by organizing and concentrating, they could render much more service to the Government, and that was the primary purpose of the organization. And the second was to do those things which would benefit the industry as a whole, and

then benefit the individual members of the association. They expect to provide for the moving-picture people who go to the front.

Mr. TREADWAY. Have you had any experience in the actual production of war pictures?

Mr. CARPENTER. No; no experience, except to watch them.

Mr. TREADWAY. You mean you have watched them?

Mr. CARPENTER. Yes; I have seen them.

Mr. TREADWAY. On the coast?

Mr. CARPENTER. Yes, sir.

Mr. TREADWAY. By whom are those pictures produced?

Mr. CARPENTER. I think all the companies there produce what is termed in the business war pictures.

Mr. TREADWAY. That is, sort of an allegory; not historical facts?

Mr. CARPENTER. No; the pictures do not pretend to be historical facts.

Mr. TREADWAY. I mean by that, pictures actually taken at the front, and among the war industries?

Mr. CARPENTER. The pictures actually taken at the front were taken by Mr. Griffith. The pictures were taken by Mr. Griffith and his camera man at the front.

Mr. TREADWAY. What company is he connected with?

Mr. CARPENTER. He has his own individual company, the D. W. Griffith Co.

Mr. TREADWAY. Has the Pathe Co. a studio there at Los Angeles?

Mr. CARPENTER. They have, but I understand they have suspended all operations except serials. The star they have had has organized his own company, and is his own producer.

Mr. GREEN. Either I did not understand you correctly or you do not understand the law correctly. I understood you to say you had no objections to the income tax?

Mr. CARPENTER. We have not, as it now stands.

Mr. GREEN. Then how do you object to the tax of 50 per cent on these people? The only other tax they would be liable to is, if they have above \$6,000, a tax at 8 per cent?

Mr. CARPENTER. We are not objecting to the tax as it stands, and we want a distinction drawn between earned and unearned income.

Mr. GREEN. That 8 per cent tax was the one, I assume, Mr. Longworth referred to, and expressed his strong disapproval relative to; but it does not take any large percentage of the income. The other tax which these people have to pay is simply the income tax which everybody has to pay, and which, I understand you, you are not objecting to at all. So, as a matter of fact, it is this 8 per cent—

Mr. CARPENTER (interrupting). The excess-profits tax.

Mr. GREEN. The 8 per cent.

Mr. CARPENTER. Yes, sir.

Mr. GREEN. Suppose we should add that tax to incomes generally; do your people have any objection to it, then, if we make it universal?

Mr. CARPENTER. I don't think the people I represent would have any objection to placing an excess-profits tax where they think it belongs—upon those who are making profits from the war on account of the war; they are not objecting to that.

Mr. GREEN. Let us not trouble ourselves about names, because names do not bring us in any revenue, and that is what we are asking with relation to the 8 per cent tax on incomes. Now, as to

earned income above \$6,000, and to provide for unearned income; now, if that was equalized by putting a larger tax on unearned income, so that the people having the unearned income would be taxed the same, would you then object to the tax?

Mr. CARPENTER. I don't exactly understand you. I have tried to crystallize here the opinions of the people I represent, hastily gathered, because we had so very little time.

Mr. GREEN. I will try to make myself clear. What the committee is seeking in the first place is more revenue, if possible. Now, where it is plain that one class of people are paying more than they should in comparison with others, and thus we find that that particular class is assuming an undue burden perhaps, we are very much inclined to see if we can not raise this other class to equalize, instead of taking off any of the tax.

Mr. CARPENTER. I understand you, sir.

Mr. GREEN. Now, as Mr. Longworth says, there has been a good deal of complaint because unearned incomes are not taxed as much in certain instances as earned incomes. Now, suppose, instead of taking the tax off the earned income, we should simply add some more to the tax on the unearned income, and thereby help the revenues of the Government, instead of reducing revenues by taking it off on the earned income. The task of the committee is to get more money, if possible, and we are somewhat inclined to look upon people who get salaries of half a million dollars a year and upward as getting rather easy money.

Mr. FAIRCHILD. Mr. Carpenter, I was in Los Angeles recently, and I was amazed at the development of the moving-picture industry. I visited all the studios, and talked with the people, and I think Los Angeles has a development along this line larger than any other city in the country. And it is for that reason that I am somewhat surprised, in view of the immense interests there, that the people should complain of the taxation when there is money to be raised for the Government.

Mr. CARPENTER. Well, I am not here to represent the picture manufacturer in the motion-picture business. I do not represent them. I presume that they have had their representative here, and that you have heard from them. The people I represent, as I stated in the beginning, are the people—the artistic element of the business, the actors and the camera men, and the performers, and the directors, the small producer, the director who has made a success directing a picture, and who wishes to get in on a larger scale and goes into the production end; those are the people I represent. Now, as to the easy money. It does seem to the ordinary man like very easy money, but it is only for the few; it goes to the very few that have the easy money. Charlie Chaplin, whose name was mentioned here, was taken to the music halls by his father when he was a child, and he suffered all the privations up to a very short time ago, and served a long apprenticeship.

Mr. GREEN. Oh, my dear sir, can't we find many other professions, lawyers, doctors, and others, those who have gone through privations in the early years of their profession? Do you want the committee to solve distinctions of that kind?

Mr. MOORE. If Mr. Green will allow me, I was going to suggest that we heard the same sort of an argument concerning John D. Rocke-

seller. I do not want to take advantage of you because you have made a strong and interesting argument, but the concentration of capital in the hands of a few men has been referred to before this committee; and the concentration of artists and the ability to reach others in the profession would be probably a parallel case. Now, I understand that you are opposing the application of the excess-profits tax to salaries, in which Mr. Longworth has indicated he agrees with you. Would you object, or do you believe, the profession which you represent would object, if there should be a release of the excess-profits tax so far as salaries are concerned, that the income tax should be increased so as to meet so far as that proportion would help out the exigencies of the Government.

Mr. CARPENTER. I can't say as to that. I think that the people I represent want to do whatever is right and fair.

Mr. MOORE. I believe that.

Mr. CARPENTER. And they want to bear whatever is their share of the burden, and not more. And, in the final analysis, that is what the committee will have to decide.

Mr. MOORE. I believe that, thoroughly, and the representatives of the moving pictures have been here, and they have spoken with equal evidence of patriotism, and they are willing to be taxed, and we have admitted, most of us, I think, that the moving picture industry, and the moving-picture artists, have done wonders to contribute to the success of the various war funds. Now, the President has issued a call for \$24,000,000,000 and the Secretary of the Treasury has said, speaking for him, that we must raise approximately \$8,000,000,000 of that by taxation; we must go into the pockets of the moving-picture actors and artists, and others, and raise twice as much by taxation as we did last year. And the problem we have is raising more, and without any changes, lowering the tax unless we have been properly charged with inequality. I state this to you in all fairness, because I know that you come here in good faith.

Mr. CARPENTER. All that we are maintaining here is the question of the capital proposition and capital principle; and we believe that unearned income should be distinguished and differentiated from earned incomes.

Mr. MOORE. I think you have made that point clear, and many members of the committee agree with you. But let us see; this is not demagogic, I hope. If a man earns \$500,000 a year, whether he is a United States Steel Corporation man or a powder man, or a munition manufacturer, or a moving-picture man, or a moving-picture actor, he can't, from my point of view, escape his share of the tax which we must impose; that \$500,000 man or woman is mighty conspicuous just now; it may be his misfortune to be so, but the probability is that he must give such an amount out of his income for 1919 which will be just about twice as much as he gave in 1918. Now, the question is, How can we best do that without interfering with the profession or with business?

Mr. CARPENTER. I quite agree with you that you are quite right in taking the money from the big incomes, but where you are taking not only the income, but you are taking the capital of the individual, whose capital is intangible. Here is his income, his capital has come from a chance; all that he will be able to earn in five years—for a motion-picture star five years is a long time of activity. Now,

there is all the work of a lifetime concentrated in that. Now, should he be taxed as much as a man who has accumulated or inherited capital, and still has his \$500,000? You take one man's intangible capital, and large proportions of the earnings of his whole life, while the other man, who may pay all his income for the support of the war; but he still has his capital left that produced it.

Mr. GREEN. You do not regard this, then, that by reason of the discovery of the moving-picture industry there have been people who gathered in what most of us would call an enormous fortune in a single year, you regard that as having in some mysterious way become capital that we ought not to reach, as I understand you.

Mr. CARPENTER. I would have you understand that we would regard the intangible, the effort of a man's or a woman's whole life toward a certain actor, a certain profession, or in scientific work—the effort of his whole life, which represent his capital, and that capital is just as sacred as the capital of the man that has been saved little by little and accumulated.

Mr. GREEN. Is it any more sacred in the moving-picture industry than in any other profession, law, or medicine?

Mr. CARPENTER. Not a bit. I have included all the professions.

Mr. GREEN. How would we get at this matter?

Mr. CARPENTER. By the definition I have given. By the distinction made in the English law.

Mr. GREEN. Mr. Longworth has already explained to you that the English law would not cover these enormous incomes because they only undertake to go to \$12,500.

Mr. CARPENTER. That would help some.

Mr. MOORE. May I put this example to you? It is crude, maybe, but it will illustrate to you what I have in my mind at the present time. If I earn \$500,000 this year, and the Government taxes me 80 per cent I still have \$100,000 left. If I earn \$1,000 this year, which the masses do earn, and the Government taxes me 80 per cent, an equal proportion, I have left \$200, haven't I?

Mr. CARPENTER. Yes, sir.

Mr. MOORE. That would be my capital to start on next year with. I merely want to submit that to you as a sample in the effects of taxation. The great number of men who earn no more than \$1,000 per year, if the proportion was carried out to the end, would have only \$200 left on which to live, if this was the end of his earning capacity, whereas the artist who earned \$500,000 would have \$100,000 left with which to meet conditions. It is rather a striking illustration, and it is crude, but it may give some idea of what is in my mind.

Mr. CARPENTER. And the man who had his earnings from capital would not only have his \$100,000 left but would also have his capital, his tangible capital.

Mr. MOORE. Yes; but if he had his \$100,000 he would be pretty well off considering these war times, whereas the man who only had \$200 left would have hard scraping. Don't apply it to the artist only, but apply it to the large manufacturer, if you please, or apply it to the lumberman, or any other of the big interests, and it works out the same. There are some gentlemen who have been

before us who advocated taking everything a man earns above \$50,000 a year. On the basis of \$500,000 per annum earning the highest possible rate of taxation that has yet been mentioned is 80 per cent, and even at that rate it would still leave that man \$100,000, which would be to many a man a fortune. Yet I say if it were not for this war I would not stand for this sort of taxation for a minute. It is just a case where the President has practically ordered the raising of \$24,000,000,000, and we of the committee are put to the stress of using these very harsh examples and taking what appears to be blood money from the people.

Mr. CARPENTER. We feel that it is a question of taking a rather unfair proportion. It is a mere matter of chance that the heavy taxation on incomes falls just at the time when some particular person has achieved some results. Two hundred thousand dollars a year does seem like a large sum of money, and even \$100,000 seems like a large sum of money, but if such earning capacity only covers a short period and then a very large portion of that money is taken away from the person earning it he is losing the result of long and laborious preparation. Take the author, and he may make it from writing one book this year; or the playwright may make it from producing one play, and still not write another play, and that play may go on for years and years, earning as it goes. But as to the moving-picture actor, the big returns may come only at the time when the Government needs money, and if a large part of it is taken away from him it does not make it equitable, in our opinion.

Mr. MOORE. We will agree with you on the equity of what you have said. A man is entitled to the results of his brain-work and results of enterprise, but pressing war conditions modify a consideration of the matter.

The CHAIRMAN. Mr. Carpenter, I was out when you made your remarks. Do I understand that some of these moving-picture actors get \$200,000, \$300,000, and even \$500,000 a year?

Mr. CARPENTER. I stated that there were not more than one, or possibly two, who have made as much as \$500,000 in the last year.

The CHAIRMAN. Are there many whose salaries are as much as \$100,000 a year?

Mr. CARPENTER. I beg pardon.

The CHAIRMAN. Are there many whose salaries run as high as \$100,000 a year?

Mr. CARPENTER. No; not very many.

The CHAIRMAN. I was just thinking that those people who were making \$500,000 a year might have saved a little in the last three or four years, and have it laid by at the present time?

Mr. CARPENTER. They have not been making it for the last three or four years. The people who have made it have made it perhaps during the last year. And the most of this talk about big salaries is press-agent stuff.

The CHAIRMAN. Then your idea is that the earning capacity of these moving-picture actors will not last more than two years?

Mr. CARPENTER. A woman's popularity will not last more than five years. Some of them are taking great risks every day, going into the war for five hours, and then walking around and doing various stunts, and having their pictures taken, and run the risk of having a serious illness, or a scar being made on the face, which may end her earning power for life.

The CHAIRMAN. I have heard some of the members say, just let them make \$500,000 a year and they will be willing to be scarred up after one year and still pay the Government half of it.

Mr. CARPENTER. Yes; perhaps so.

The CHAIRMAN. I had seen in the newspapers something of moving-picture stars making \$200,000 and \$500,000 a year, but I thought it was all stuff.

Mr. CARPENTER. Yes. But a great deal of that is exaggeration.

Mr. LONGWORTH. That looks like a good deal of money even at any time.

Mr. HAWLEY. How many moving-picture actors do you estimate earn as much as \$100,000 a year?

Mr. CARPENTER. I can only speak as to Los Angeles, and not very accurately as to that. Reports of salaries are continually exaggerated, even among the people themselves.

The CHAIRMAN. Of course your proposition would apply to actors, singers, contortionists in circuses, baseball players, and all that?

Mr. CARPENTER. Yes.

The CHAIRMAN. Their earning capacity is just for a few years?

Mr. CARPENTER. Yes.

The CHAIRMAN. You would not only apply your proposition to moving-picture people but to any persons engaged along that line?

Mr. CARPENTER. To all earned incomes by personal service. It is the same with a director, or a skilled photographer in the moving-picture business. He gets a large salary, but the business is very new, and it is progressing so rapidly that the life of his service is very greatly reduced. You take even the directors in the business and the older men are constantly dropping out and new men coming in. Take a man who has been at the work for five years and he is considered an old man and becoming superannuated. His methods are old fashioned and new ideas are coming in to supersede his. If they got big salaries by working at it it is not for a very long period.

Mr. HAWLEY. Can't you send them to the bush league? Have you any such thing in the moving-picture business as bush leagues?

Mr. CARPENTER. No; there are no bush leagues in the moving-picture business.

The CHAIRMAN. What kind of an exemption should they have?

Mr. CARPENTER. We are not asking for an exemption. We are asking that if there is to be an increase in the tax that motion-picture people who earn their incomes by their efforts be excepted from the operation of the excess-profits tax, because their earnings have no connection whatever with the war. On the contrary, the war has depressed the business greatly and has reduced the earnings of the business.

The CHAIRMAN. There will hardly be an excess-profits tax on Mary Pickford or Charley Chaplin or William S. Hart, or these other people, I think I can say.

Mr. MOORE. What Mr. Carpenter complains of is the 8 per cent tax.

The CHAIRMAN. Oh, the 8 per cent tax. I think the committee may consider striking that out and putting them in the same class with the income-tax payers.

Mr. GREEN. In other words, we are very likely to remove the feature that Mr. Carpenter objects to, but in the end the people he represents are likely to pay more.

Mr. CARPENTER. We do not object to paying more, if it is equitable

The CHAIRMAN. In other words, my suggestion is this: A great many members of the committee think the excess-profit tax ought not to apply to individuals. In fact, the bill as it passed the House excepted individuals from the excess-profit tax; but if individuals are omitted from the excess-profit tax, then the income tax is going to be high enough to catch the 4 per cent that they pay now and the 8 per cent that they would pay on this excess-profit tax provision. So, while they may probably be left out of the excess-profit tax and pay our regular income tax, it may be seen what the probabilities are. The real point, in fact, is that parties who make from \$100,000 to \$500,000 have to pay a surtax or an additional tax. That is what gets them pretty heavily, and not so much the 8 per cent tax.

Mr. CARPENTER. Yes; the surtax catches them very heavily. It is taking from them these earnings for a very short period at a big rate. You take the capitalist, the man who gets his earnings from dividends and receives \$500,000 a year. What do you take of that? Look at the small proportion you are taking in the way of taxes from those earnings. But at the end of the war period, at the end of this emergency taxation, he has all the capital left that earned him that \$500,000 a year to struggle along with, while these people, with their whole capital of a lifetime coming to them within a period of a very few years, and you are taxing them heavily, and thereby taxing their capital.

Mr. LONGWORTH. I call your attention to the fact that while the English system did discriminate between earned and unearned incomes, and in that I am entirely with you, yet it does not go up to \$500,000. The distinction stops at \$12,500. I would be willing to even go further than that, as high as \$25,000, but not to continue the difference between earned and unearned incomes to \$500,000.

Mr. CARPENTER. Why not continue it to any limit if it is equitable?

Mr. LONGWORTH. Well, I do not think—while I will not say a man has no right to earn \$500,000 a year as a moving-picture actor, yet, if he does he has a lot to put aside as capital, and when we have war on, he ought to pay at least half of that every year.

Mr. CARPENTER. And yet the man who has inherited from three or four generations back the capital that he puts in securities and gets dividends from does not have his capital touched in that way.

Mr. LONGWORTH. He pays the same, except the 8 per cent, and that is insignificant.

Mr. CARPENTER. Does he pay his tax on his dividends if it comes as income?

Mr. LONGWORTH. Exactly the same. The only difference is this 8 per cent, and that is a relatively small amount. That is the only difference in their situations. I am with you, absolutely, on the proposition of a reasonable salary, where it is in fact an exhaustion of brain power, and where after a few years the ability to earn ceases. But when you get to these enormous income, such as acting in moving pictures and getting \$500,000 a year for it, I haven't very much sympathy with the man who wants to hold that.

Mr. CARPENTER. Mr. Longworth, wouldn't any member of Congress who could satisfy the public all the time be an artist and be worth \$500,000 a year?

Mr. LONGWORTH. It is a question whether he is worth it.

Mr. STERLING. He wouldn't be worth anything if he could do that.

Mr. SLOAN. Every Member of Congress is paying an income tax, and also an excess-profit tax, and no complaint was made by them. I think a distinction between unearned and earned incomes should not go above \$12,500 a year, or something like that. That is based upon a relation between earning power and necessary living expenses, and where the earning power happens to be so very great it becomes clearly capital and is not entitled to the distinction that the lower sum is entitled to. I think that the British rule is a very liberal one in making the distinction between earned and unearned incomes up to \$12,500 a year.

Mr. CARPENTER. What particularly seems inequitable and oppressive to the people I represent is the element of time that enters into it. One man may be in business and accumulate from year to year and year after year, but he is not taxed on that accumulation; he is taxed on his natural income. And then there may be another person, in another line, who works, no matter at what, as a moving picture actor, as a tight-rope walker, as a baseball player, and so on, and he studies and practices and works and works toward a given end and then suddenly achieves success, which may only stay with him, so far as public popularity is concerned, for a year or two or a few years at best, and during that time the most of that income, which is really his capital, is taken away from him.

Mr. LONGWORTH. If I understand you you think there should be no limit between earned and unearned capital?

Mr. CARPENTER. Equitably and justly there should be no limit. If one man's accumulated capital of a lifetime comes within a short period and you take it from him you are just as surely taking his capital as if you, in the case of a capitalist, not only took his income but his capital as well.

Mr. LONGWORTH. What did Charley Chaplin pay in taxes last year?

Mr. CARPENTER. I do not know.

Mr. LONGWORTH. If he had \$500,000 he would have paid 38 per cent under the income-tax law, and in addition to that he would have paid 8 per cent over \$8,000 a year.

The CHAIRMAN. I think you can tell Mr. Chaplin he will not have to pay 8 per cent next year but he will have to pay his surtax, like anybody else.

Mr. MOORE. Which is likely to be considerably larger.

The CHAIRMAN. Yes.

Mr. LONGWORTH. You can take that cheering hope back to Mr. Chaplin, that he will probably get out of paying the 8 per cent.

Mr. HAWLEY. These women have been getting pretty good salaries in the moving-picture business, have they not?

Mr. CARPENTER. In any given case the salary has jumped up suddenly, perhaps.

Mr. HAWLEY. After their unusual popularity is over, haven't they the ability to earn a reasonable sum each year?

Mr. CARPENTER. No; they are almost useless. No one who has been a star at one time can consistently take a minor part.

Mr. HAWLEY. That is a matter of pride.

Mr. CARPENTER. If they are not taxed too heavily they will be relieved of that necessity. Many of them would have a little earning power, of course.

Mr. HAWLEY. There are many other people who would like to be relieved of the necessity of making a living or paying taxes hereafter.

Mr. STERLING. Mr. Chairman, there are three or four other persons on this program who are yet to be heard by us, and I suggest that we proceed a little faster.

Mr. SLOAN. Who can you think of who has profited more by these war conditions than these three or four individuals we have been talking about? Haven't they risen to these large salaries largely on account of the condition created by the war?

Mr. CARPENTER. I am firmly convinced that the war has not benefited one of them one penny, but, on the other hand, it has cost them money. I am positive of that.

Mr. RAINEY. I notice that one of them has been engaged recently in an extra-hazardous employment, having been sued by the wife of another actor; or rather made correspondent in a suit for \$700,000.

Mr. CARPENTER. I hadn't heard that.

The CHAIRMAN. Have you anything else to say?

Mr. CARPENTER. If I may have permission to file a copy of this paper I would like to file it, and to hand you a better copy, because this was prepared very hastily upon the train.

The CHAIRMAN. All right; you may do that.

Mr. CARPENTER. There is one thing I want to say before I close, just a word. I want to call the attention of the committee to the useful and essential character of the services of motion-picture actors. You may think that it is a frivolous employment altogether, but there are about 175,000 people engaged in the industry, showing pictures through about 15,000 theaters to about 45,000,000 people a week. Any industry that can stir up the patriotism and keep up the hopes and confidence of the people of the country is useful. Any business that can do what this industry has done in the way of advancing Government propaganda, second in publicity not even to the press, is absolutely essential. And, gentlemen of the committee, a part of my mission here is to see in the various departments of the Government how the motion picture industry can further help the Government by any publicity or any sort of production that can be given.

Mr. MOORE. I think that Mary Pickford and Douglas Fairbanks and William S. Hart and a number of other moving-picture stars responded to the call of the Secretary of the Treasury recently in an effort to sell liberty bonds.

Mr. CARPENTER. They did, and traveled all over the country and sold millions of dollars worth of bonds.

Mr. SLOAN. Mr. Moore, do you know of anybody who has not done that at this time?

Mr. MOORE. Perhaps not, but at the same time I do not know of a single individual who has drawn such large audiences and spoken to so many people as these moving-picture stars except the Secretary of the Treasury.

The CHAIRMAN. Mr. Carpenter may hand in the paper which he has and it will be considered by the committee.

(The paper is as follows:)

Grant Carpenter, Los Angeles, Cal., assistant secretary Motion Picture War Service Association:

I appear before your committee as the representative of the Motion Picture War Service Association, an organization formed primarily for the purpose of unifying and

concentrating the patriotic work of the 175,000 people employed in the motion-picture business. It includes in its membership persons engaged in all branches of the industry—producing, distributing, and exhibiting. Particularly, however, do I represent a class that heretofore has never had a hearing—the workers in the artistic branch of the business—production—which includes the small independent producers, the actors, directors, authors, editors, photographers, and laboratory operators of southern California, where 75 per cent of all motion pictures of this country are made.

Among the officers of this association are David Wark Griffith, chairman; Mack Sennett, S. E. V. Taylor, Cecil De Mille, Mary Pickford, Charles Chaplin, Lois Weber, Douglas Fairbanks, W. S. Hart, Jesse L. Lasky, Marguerite Clark, and William Fox.

In order that there may be no misunderstanding of our purpose in this hearing, we state positively and unequivocally that we neither urge nor desire any reduction in the income tax. The members of our association are not only willing, but eager, to bear their full share of the burdens of the war, and they consider it a privilege to serve our country in this crisis. We ask merely the opportunity to call to the attention of this committee some of the effects of the existing tax law and some of the results that will flow from a material increase of the present rates.

The minds of the people of this country generally, have been so concentrated upon patriotic work that the question as to who has given the most has scarcely been considered. But we believe we discern some inequalities and inequities in the tax law—such as are usually found in every hastily drafted emergency measure, which may be easily and readily readjusted by the legislation now contemplated and which will equalize the burdens that must be borne.

Especially do we ask for a heavier tax on unearned income than upon earned income, adopting as a definition of "earned income" the phraseology of the English law as follows:

"Income arising in respect of remuneration from any office or employment of profit or in respect of any pension or compensation given in respect to past services of the individual or of the husband or parent of the individual in any office of employment of profit, and income derived from the exercise of a profession, trade, or vocation."

Income derived from any other source, therefore, shall be deemed "unearned." This definition is obviously based upon a recognized distinction between tangible and intangible capital and income derived from accumulated wealth and that derived from cumulative effort. Permit us at this time to draw a comparison between the individual who derives his income from his art, and the individual who derives his income from dividends on investments. I have in mind a woman in one of the arts who began only last year, after many years of poorly paid apprenticeship, to earn large sums of money. Her intangible capital is the experience and the knowledge of her art she has accumulated, and upon which she has only begun to realize.

The tax, as now applied, takes almost half of her earnings. In the nature of her business she can not expect under the most favorable conditions, to enjoy the popularity that brings her this income for more than a few years—five at the outside—and the hazards and risks of her employment, a brief illness or a scar on the face may end herearning power at any moment for all time. During that period she may be taxed anywhere from 25 to 50 per cent of all the earnings of a lifetime and at the end of it her capital is gone.

On the other hand, take a man with a similar income derived from dividends. This man's income would not be taxable at all under the excess profits law, nor would he pay any normal income tax; so that when the war is over and the tax removed this individual's capital would be unimpaired and he would perhaps enjoy a larger income on the increased valuation of his property, through no effort of his own.

Take, for example, a single man with an income of \$10,000 from dividends. He will pay only a surtax of \$100 a year throughout the war period, as the law now stands. Even if he should eventually be taxed up to 50 per cent of his income, he would still have \$5,000 a year and all of his capital at the end of the war. When the war taxes are removed he would again have his \$10,000 a year income and eventually transmit his unimpaired capital to his heirs.

Compare with this man a director, author, or actor, who through many years of apprenticeship has brought himself to the point where he earns \$10,000 per year. His earning power at this point will continue for only a comparatively brief period of his life. His entire productive period may be covered by the war. On his \$10,000 income as the law now stands, he would pay a total tax, income and excess profits, of over \$700, seven times as much as the capitalist with the same income from dividends. At the close of the war his earning power might be at an end, and he has no capital left—tangible or intangible. And bear in mind that though he pays an excess profits tax of \$320 his income has no relation whatever to the war.

While the excess profits provision was designed to take the profits of big business resulting from war activities, it does not so operate. Big business by inflating its

tangible and intangible capital may almost, if not entirely, escape this tax, while the members of this association whom I represent, being what might be called brain-workers with no tangible capital, have nothing to inflate, except, possibly, their heads, and that would get them nothing.

Now, compare with this class the single individual engaged in business in a small way. With a capital of \$100,000, normal prewar profits of \$10,000 a year, and a taxable year profit of \$15,000, he pays no excess-profits tax, because the deductions allowed are equal to his profits, but he does pay an income tax of \$770, only about \$70 more than the professional man, though his income has been \$5,000 greater. At the end of the war he still has his capital, augmented by war profits.

It is hardly necessary to cite a concrete example of big business with tremendous capital on which deductions are allowed, sufficient, in many cases, to wipe out entirely actual war profits.

While we hold no brief for the inventor, the architect, the sculptor, the singer, the musical composer, or others in the class that may be termed brain workers, the inequalities we have called to your attention apply with equal force to all of this class, but the consideration we ask is consistent with the policy of the Government in protecting and encouraging them by copyright and patent laws, guaranteeing them an adequate reward for years of unproductive effort.

Take a man of 40, who at this time perfects an invention which would mean as much to the world as Ford's car has meant. He will have insufficient capital with which to establish his business, and his income might be so taxed that he would not be able to accumulate it. His capital is largely intangible, being the workings of his hands and brain. He must of necessity have recourse to capital in order to develop his invention, and in consequence he parts with a great portion of the earnings of his invention to the capitalist, whose accumulation remained not only unimpaired but may be greatly augmented.

Take a man who after careful preparation and long effort, representing his intangible capital, writes a successful play. It may earn for him \$200,000 in one year, and the tax will take a very large proportion of it. His intangible capital is partly confiscated, for he may never write another successful play, and year by year his one work earns smaller and smaller sums.

The small producer of pictures is confronted by another problem. (I have in mind the experience of one such man.) With his accumulated earnings and a big idea he interests outside capital, and a picture is produced by the corporation thus formed. He takes his profits from this production and puts it all in a new individual production. It proves a failure. His capital is gone, but he can not balance individual losses against corporate gains, and he has to borrow money to pay his income tax. The capitalist, however, still has his profits. The handicap of the income and the excess-profits taxes and the element of chance inseparable from the motion-picture business are obstacles impossible for the artist to overcome in competition with established capital.

Consider the man with investments of \$15,000,000. He would have an income, say, of \$600,000 a year. He pays no excess-profits tax because his income is from dividends, but he would pay a surtax of about \$220,000. If the Government took an additional \$300,000, he would still have \$80,000 a year and his unimpaired capital to struggle along on. But suppose an author, a director, or an actor should this year win public recognition and earn \$600,000 (and I may say right here that the reports of tremendous salaries earned by moving-picture stars are greatly exaggerated; I know of but one, or possibly two, who earn \$500,000 a year). This person would be taxed about \$270,000—almost half of his capital—the accumulation of the greater part of his life. The chances are that he will never have another success. His intangible capital has been taken. But if the Government took a single dollar of the capitalist's tangible millions, you would hear a great outcry about confiscation.

The artist has been compelled to pay a heavy excess-profits tax, though it is scarcely necessary to tell this committee that his earnings have no relation or connection with war activities. As a matter of fact, the war has impaired his earnings, for the motion-picture industry as a whole has felt a great depression. Hundreds of theaters have been closed, many companies have ceased production, and those still operating have been compelled to retrench by reducing forces and cutting salaries.

We believe that to tax the artist, the brain worker, and the individual who renders personal service at higher rates than the capitalist tends to discourage effort, arrest progress, create social unrest, and establish an autocracy of wealth. We are sure that no worker in our industry who may have accumulated capital would object to a direct emergency tax of 5 per cent or even 10 per cent if necessary upon the principal. To urge a direct tax on capital may seem revolutionary, but grave emergencies require drastic remedies; and if a direct tax is imposed to pay the cost of municipal, State, or national police, it may be resorted to in order to pay the cost of international police employed to restore peace and order to the world.

We are not political economists or tax experts, and we do not presume to offer an adequate remedy for the situation. We do, however, offer these suggestions even though some may be considered visionary:

First. That a heavier tax be placed upon unearned income than on earned income, and no person should be allowed an unearned income exceeding \$50,000 a year. Below this sum, and in excess of \$5,000, unearned income should bear a special graduated tax.

Second. That income derived from occupations based on personal service and having no relation to the war be excluded from the operations of the excess-profits law.

Third. That the excess-profits provision be changed to conform to the English procedure; that is, taking 80 per cent of the actual war profits, with a special provision that where such profits are derived altogether from the manufacture of articles essential to the prosecution of the war, all in excess of normal prewar profits be taken by the Government; and in business that had no prewar existence, all profits above reasonable earnings on the invested capital be taken.

Fourth. That a direct emergency tax at graduated rates be imposed upon accumulated wealth, inherited or unearned, in any form whatsoever, in excess of a principal of \$250,000, with provisions that will prevent a shifting of the burden during the war and for 10 years thereafter.

Fifth. That a heavier surtax, equaling the present excess-profits tax be placed on unearned incomes in excess of \$4,000, and an additional surtax on incomes derived from inherited property.

Sixth. That a heavy direct tax be placed on the membership of social and country clubs, and upon private homes in excess of the valuation of \$40,000.

Seventh. That a direct tax of 1 per cent be placed upon all accumulations of wealth in excess of \$200,000 when earned by the possessor; 2 per cent on similar accumulations which have been inherited; 3 per cent on such inheritances in the second generation; and 4 per cent on all inherited wealth belonging to persons residing permanently abroad.

Eighth. That a tax be put on the profits from all manufactured articles used by our Government or our allies in the prosecution of the war or for relief work, so as to allow only an 8 per cent return on the capital actually invested in grounds, buildings, or materials, and that no salary in excess of \$20,000 a year be allowed to persons directing or managing such concerns, or to the partners in such works.

Ninth. That incomes not derived from the manufacture of war materials or articles used by the Government in the prosecution of the war or giving aid to the allies, be excluded from the operation of the excess-profits law.

Before closing I wish to call the attention of the committee to the useful—even essential—character of the motion-picture industry in the prosecution of the war. Any business that, operating through 15,000 theaters and reaching 45,000,000 people weekly, stimulating their patriotism, relieving their anxieties and inspiring their confidence, is useful. As a medium of publicity and a disseminator of Government propaganda, it is not second even to the press. It is not necessary for me to remind you of the immense service that the motion-picture people individually and the industry as a whole have already rendered the Government, and which they will continue to render; but I do desire to tell you that a part of my mission to Washington is to ascertain how the industry, united in one national association, can render fuller aid and assistance to the Government in this war.

#### SUGGESTED AMENDMENTS.

Suggested amendment of section 209 of the war excess-profits law:

"SEC. 209. That in the case of a trade or business having no invested capital, or more than a nominal capital, there shall be levied, assessed, collected, and paid, in addition to the taxes under existing law and under this act, in lieu of the tax imposed by section two hundred and one, a tax equivalent to eight per centum of the net income of such trade or business in excess of the following deductions: In the case of a domestic corporation, \$3,000, and in the case of a domestic partnership or a citizen or a resident of the United States, \$6,000; in the case of all other trades or business, no deductions: *Provided*, That nothing contained in this section shall be construed as taxing the income derived from personal service and not from capital."

Suggested amendment to section 201 of the war excess-profits law:

"Using as a basis of the tax the provisions of the English law—that is, allowing the taxpayer to select the most prosperous two years out of the three years immediately preceding the war as a basis for establishing an average normal profit and taxing all income above the average normal prewar profit so determined (which may properly

be considered actual war profits) at eighty per centum: *Provided*, That where such war profits so determined are derived from the manufacture of or trading in articles essential to the prosecution of the war, a tax of one hundred per centum.

The CHAIRMAN. The committee will now be glad to hear Mr. Johnson.

**STATEMENT OF NORMAN H. JOHNSON, SECRETARY OF THE SOUTHERN WHOLESALE DRY GOODS ASSOCIATION, RICHMOND, VA.**

Mr. JOHNSON. Our organization embraces all the jobbers in the Southern States doing business in dry goods, notions, and furnishings. The States included are North Carolina, South Carolina, Georgia, Florida, Alabama, Louisiana, Mississippi, Kentucky, Texas, and, in fact, all the Southern States, starting in south of Washington and including El Paso, Tex. There are 158 such jobbers in the Southern States. They do a business in the neighborhood of about \$150,000,000 a year; that is, distribution. The business in which they are engaged is classed by all students of the business as being the most hazardous business there is. We are dependent upon the retail trade, and under these war conditions our position has been very much changed. It used to be our function and our only function to finance and supply the retailer. To-day the problem has been shifted to where we have been forced almost to finance the mills, the selling agents, as well as the retailer. In Mr. Hurley's book, *The Working of Business*, you will find it thoroughly confirmed that the retailer always has been and always will be a very hazardous proposition, for 90 per cent of them fail during a period of five years.

Back in 1914 the jobbing business, which is comparatively young in the Southern States—and I say young because it is not 20 years in its full development, and just a few years ago there were such markets only in Richmond, Charleston, New Orleans, and perhaps some scattered in between, so that the great growth and development of the jobbing business has been in a period of the last 12 years, that is, in its full growth. But along in 1914 we found ourselves pretty near "broke." We were just existing. A great many houses went out of business when the slump in prices came after the German guns commenced booming. It showed a depreciation in merchandise stocks of 25 to 30 per cent, and a great many old established houses went out of the dry goods business.

We are not here to seek any especial favor nor to ask for any reduction. We have had our full experience in the South. The peculiar nature of this business is hazardous, and we are now up against a number of problems as to which we can not see our way clear enough to know exactly where we are drifting. Like other businesses, we are confronted by new and changed conditions, of course, but we think that our business is peculiar and different from others. You take all of the very ordinary merchandise and prices have changed wonderfully. The cheapest hosiery that was made prior to the war, purchased at 55 cents a dozen, to-day we can not purchase for less than \$1.85 a dozen, even if that low. For the 84-needle goods, which were 60 cents a dozen before the war, we now have to pay from \$1.35 to \$2.25 a dozen. Ordinary gingham that were 7½ cents a yard can only be purchased to-day at 27½ cents.

Consequently I say all merchandise has increased from 300 per cent to 500 per cent in valuation. If you take the condition as it applies to the jobbing trade, the very small retailer out in the country whom we allowed \$1,000 credit before the war—and that was taking a risk that no other people in the world would assume, that no other credit organization would pass, or even understand—as I say, we allowed that man a credit of \$1,000. You gentlemen have heard it frequently stated that a man could come into the market with \$250 in cash and get \$1,000 worth of merchandise. I regret to say that owing to the demand and the desire to sell that has generally been true. Now the demand upon us by that retailer is not for \$1,000 credit, but the same hazardous risk that we took at \$1,000 we are forced to take at from \$4,000 to \$5,000; we have to give him that line of credit. Consequently a greater amount of the profits which we have counted on during the past year is tied up in these credits, and with the hazards that I have called to your attention.

I want to say right here in this connection that, unlike some other businesses, our profits in 1918 will be larger than they were in 1917; but they are attended by these contingencies which I have mentioned, the greater amount of credit extended and the greater risk. For this reason we base our profits on two very weak propositions—

Mr. GREEN (interposing). It seems to me your trouble is largely psychological.

Mr. JOHNSON. No; it isn't. And I will get to that in just a little while. We are figuring on profits on two bases: First, we are figuring on enhanced value of the merchandise. The merchandise that we bought at 60 cents, of course, the longer we have kept that merchandise the greater the margin of profit. If our merchandise did not turn over and we have some stock left, of course, it is worth more money. One of the big things we might consider is the amount of merchandise that we might have, and of course we have some on hand purchased heretofore. One peculiar situation about merchandise, and of course that depends on when sold and how, but we assume as our profits our back accounts in the hands of the retailers. No matter what our terms may be, the terms are only to show when the bill becomes due. We can not necessarily get the money. That is, the sale may be completed, but we can not get the money until the merchant pays us. Consequently there are some stocks in the hands of retailers to-day, and I would say a larger amount than at any other time, and these stocks are based upon our capitalization and not upon the capitalization of the retail trade. Therefore it is unusually hazardous.

Now, you understand we have to make our contracts six or eight months ahead of the time that they are actually sold to the retailer. You take the year 1914 and our contracts were made for those goods in 1913. When the man shipped us that merchandise it was done after a great deal of it had been reduced from 20 to 30 per cent below the spot market. I mean that at the time they delivered the merchandise we could have gone out into the market, and in fact in some cases did go into the market, and buy the identical goods at a price from 20 per cent to 30 per cent lower than the price at which the merchandise had been actually purchased that was being delivered to us as of that date.

Mr. GREEN. That is back at the opening of the European war that you are now talking about?

Mr. JOHNSON. Yes, sir.

Mr. GREEN. We are not going to tax you on that.

Mr. JOHNSON. I know you are not going to tax us on that, but I was telling you that to show you that we are now in the market in a very different condition.

Mr. GREEN. You are now buying on a rising market?

Mr. JOHNSON. It has been rising continually; yes. And we have made unheard of and undreamed of profits under those conditions. I unhesitatingly say so; that is, according to the standing of book-keeping. But according to the standards of business we have not made those profits; they are hypothetical. We think we have got them, but the conditions are so hazardous that we may not have them in fact. Our taxation during the past year would average about 30 per cent to 40 per cent of profits which we make. I mean, that of the money we made we figure 30 or 40 per cent was represented by excess-profit tax. If they were increased under present conditions, this jobbing business could not possibly stand it, in my opinion. That is for the reason that we own the merchandise at extremely hazardous prices, and that our cost of doing business has been constantly rising and rising. I would figure that it has jumped from about 14 per cent to the neighborhood of 21 per cent, and perhaps higher in many instances. But as well as I can make the average it would come to about that.

Then, again, we are facing a 25 per cent increase in freight rates. Twenty-five per cent in our business is extreme margin, because in the prewar business the best business and the best organized business that we had only yielded 4 per cent.

Mr. FAIRCHILD. Well, you don't pay this freight.

Mr. JOHNSON. The freight—here is a peculiar situation; I think it would be of interest to this committee to know it, that right to-day the primary market which is the market of the mills, you can go into the jobbing houses of the South and the retailer can buy merchandise from the southern jobber to-day at a lower price than if he had the buying capacity—the small retailer with only a small capitalization can buy merchandise to-day from the jobber cheaper than if he had a large capital and went into the primary market to buy merchandise. We are not like the manufacturer who can sit down and make his prices on merchandise. He can make his prices and fix them so much as cash. The munition makers can go ahead and say here is my completed product and say it is worth so and so. But we are the middlemen. We have to supply those merchants with merchandise that is salable to the consumer. It is unquestionably true that the retailer is selling that same merchandise to-day to the consumer at a lower price than he can buy it from the jobber.

Mr. FAIRCHILD. Where do you find those consumers?

Mr. JOHNSON. The further you go into the country districts you will find that condition. It is really a condition that you can buy to-day the athletic underwear, like B. V. D., that ought to sell at 75 or 80 cents a garment, you can buy from numerous small stores from 45 to 50 cents per garment.

Mr. MOORE. You mean to say the rates have not gone up to the consumer?

Mr. JOHNSON. No, sir. I am talking about on the average of dry goods and furnishings and notions in the country districts.

Mr. MOORE. If that is true, that experience is not borne out in cities like Washington.

Mr. JOHNSON. No, sir; it is not. Washington is the exception to all rules.

Mr. MOORE. The Southern Wholesale Dry Goods Association for which you speak has its headquarters in Richmond, has it not?

Mr. JOHNSON. That is, its officers are there.

Mr. MOORE. The members of this association are jobbers—they are middlemen?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. They purchase from the manufacturers or act as manufacturers' agents?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. Then they pass the goods along to the retailer?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. Affording this help as you have indicated in the way of credits?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. The manufacturers' prices have gone up on dry goods?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. The jobbers' prices have gone up on dry goods?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. And retailers' prices have gone up, haven't they?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. Who loses if the consumer back in the country somewhere buys his hosiery or overalls at the same old price?

Mr. JOHNSON. Where the loss comes in—ordinary business suggests, what I mean is if a business would be sound (and we are admitting that the retail business is not a sound business), the cost of an article of merchandise should be the replacement price plus the cost of doing the business, should it not? Wouldn't that be the way of determining that? If you had to go into the market to replace an article which you already had and which you had for sale, would it be good judgment to sell that merchandise on a price below the market level?

Mr. MOORE. It might be. In war times you have to do a great many things you regard as approaching imbecility in times of peace.

Mr. JOHNSON. Yes, sir.

Mr. MOORE. We are dealing with this whole question now as a war problem, because of an exigency with which we are all familiar. But I come from a manufacturing district and I know we are paying larger prices for our raw material, for instance, cotton—for cotton yarns that go into manufacturers' articles as you say are dispensed. If we are paying higher prices due to war conditions and we are getting higher prices from jobbers again and the jobber is getting higher prices from the retailer, somebody must be losing something somewhere.

Mr. JOHNSON. I didn't mean that as a rule with the retailer. I said it was exceptional cases with small merchants and you can find that they are not keeping up their prices in the larger stores. If we didn't sell a few responsible merchants we wouldn't have any chance in the world of doing business. But we are the source of supply for

that class of merchants who do not have any other source of buying power except through us.

Mr. MOORE. The reason is that the consumer is now better able to pay these higher prices than before or we would hear from him. But he is paying higher prices the country over for what he buys, certainly paying it for groceries and household supplies, and certainly paying more for dry goods in communities where I live, more for his collars and shirts and other things that he wears. I want to ask you whether your association is not in a position to control the price situation?

Mr. JOHNSON. No, sir; we are not, and wouldn't like to be. We wouldn't like to get into the price-fixing arrangement, and there is something we are looking forward to now with a great deal of fear and trembling.

The Government has already withdrawn practically a large quantity of all the underwear that we sell. For instance, we have been the largest purchasers in the country of elastic seam drawers and balbriggan underwear. We can't get any of that now. None of it is offered.

Mr. MOORE. How many States are covered by this organization or how many States are represented in it?

Mr. JOHNSON. Thirteen—all of the Southern States. They run all the way down to Texas, Arkansas, and Oklahoma.

Mr. MOORE. All of the cotton-growing States?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. How many separate concerns are represented in the association?

Mr. JOHNSON. About 158.

Mr. MOORE. Does anybody except the members of this association do any substantial jobbing business in those 13 States?

Mr. JOHNSON. Yes, sir. We have to meet the competition of Chicago, Omaha, St. Louis, New York, and all the markets in the world.

Mr. SLOAN. Do you include Philadelphia in those markets?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. Philadelphia is still in the running.

Mr. JOHNSON. Yes, sir; and a very good market.

Mr. MOORE. I want to find out in view of your suggestion that business is not what it ought to be and the taxation is heavy, and I want to find out whether your association is really in a position to control prices in these 13 States?

Mr. JOHNSON. If we had the Government's permission to do so we would be; yes, sir.

Mr. MOORE. Certain collars and cuffs are sold by your jobbers, are they not?

Mr. JOHNSON. Yes. The collar people have gotten together and organized and make the price and we take that price. There are a great many cases where the price is made so that the jobber is not able to pass it on in the merchandise.

Mr. MOORE. The price is made back in the factory?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. And the jobber has to follow that price?

Mr. JOHNSON. Yes, sir; or we don't get the merchandise.

Mr. MOORE. Do the retailers in any one of these 13 States obtain any of these standard goods, the price of which may be fixed at the factory, at any other place than those jobbers?

Mr. JOHNSON. No, sir.

Mr. MOORE. Would a retailer in any one of those 13 States be likely to last very long in his business if he undertook to do it without buying his goods from the jobbers of the Southern Wholesale Dry Goods Association, which is not unable to—

Mr. JOHNSON (interposing). The point we make is they don't last very long. The retailers don't last very long, no matter whether it is in the South or Pennsylvania or anywhere else. The life of the retailer is very hazardous.

Mr. MOORE. I am endeavoring to find out whether you could correct the situation of which you complain without violating any antitrust law, and if the price is made at the factory and you maintain that price, taking off of course whatever allowance is made, why don't you raise the price?

Mr. JOHNSON. I don't mind saying we are trying to do away with as much branded merchandise as we can for the simple fact we can get as good or better quality at a lower price and distribute it with a fairer profit to ourselves and a fairer profit to the retailers than if we buy these so-called standard advertised lines.

Mr. MOORE. If there are two retailers in a given town in Georgia, both of them buying from jobbers, members of your association, and each of them selling a collar that sold before the war for 25 cents, for 30 cents now during the war, wouldn't they be able to meet the new conditions? The consumer couldn't get it anywhere else, could he?

Mr. JOHNSON. He certainly would; yes, sir.

Mr. MOORE. If a consumer is making more wages, is better able to pay, why would your association suffer, or why would the retailer suffer, if he can get 5 cents more for a collar now than before the war?

Mr. JOHNSON. We are taking this into consideration. If you would take one standard merchandise—what I mean, the so-called well-known brands, there would be less than 5 per cent of the merchandise which we distributed. You must bear in mind that our line—our salesmen go out and sell as many as 8,000 different articles. They carry sometimes five, six, and seven trunks. And they represent not one factory, but factories throughout the whole country, and we are distributing all of that merchandise. We are convinced in our own case, notwithstanding certain writers of the Congress, that the jobber is in every respect the most economical distributor of anyone.

Mr. MOORE. We are not prejudiced against the middleman. I don't see very well how we can get along as between the producer and consumer without having the middleman agencies.

Mr. JOHNSON. It wouldn't be possible.

Mr. MOORE. The same with farms and the same with factory products, but if your association is in a position to pass along to the consumers the increased price that starts with the factory, I don't quite get your argument as to the added burden, because it seems to me the burden is passed on.

Mr. JOHNSON. We are not able to do that. For instance, a few years ago, in 1914, some compilation was made of the jobbing business throughout the United States, as between the dry goods, notions, and furnishings. These amazing facts were brought forth, not only in the South but everywhere else. The jobber distributes 20 per cent

of his stuff at cost. For instance, you take some concerns in Philadelphia, they are old-established businesses and they will come out of Philadelphia with their new brand of underwear. He feels that is his leader. Take Mr. Strawbridge, or Mr. Evans, they are great importers of colonial linen. They do a lot of linen business, and consequently they call themselves the linen kings of Philadelphia. When those men get into the Richmond territory, they would get into competition with a gingham king, and consequently it got to where they had leaders, and every market had leaders, and when they got into the whole market those markets would match leaders, and consequently nobody had a leader.

The jobbing business in 1914 was the least productive; that is, the least money-making business in the country. You might take these figures. When I first became secretary of the Wholesale Mercantile Association I undertook to study the failure of retail concerns, and I found out that the jobber of dry goods, notions, and furnishings—I found out that the jobber only sold the general merchant 17 per cent of the stuff he had. In other words, the hardware dealer, the shoe dealer, and so on made up the other per cent. When failures came, it would average that the dry goods and notions made up 80 per cent. By reason of a close study of this situation some of the causes have been eliminated. But business has not adjusted itself to a real solid and sound basis. The hazards they run in selling that stuff have depreciated their profits.

Mr. MOORE. You use the term hazard in connection with credit?

Mr. JOHNSON. Yes, sir; entirely.

Mr. MOORE. That is rather surprising. I thought the word hazardous was used in connection with insurance or perishable commodities and that way.

Mr. JOHNSON. Extremely hazardous. That is using Mr. Hurley's own words. Mr. Hurley says it is the most hazardous business in the world.

Mr. MOORE. I want to ask you one question and then I won't press you any further. You say there is competition with the members of your association in the 13 States enumerated?

Mr. JOHNSON. Every one of them compete with one another.

Mr. MOORE. Other jobbers come in, too?

Mr. JOHNSON. Yes, sir; and other markets come in.

Mr. MOORE. Your jobbers, do they represent principals in Chicago and western cities as well as Boston and New York?

Mr. JOHNSON. We have no principals in a jobbing business.

Mr. MOORE. I mean manufacturers.

Mr. JOHNSON. No, sir; we are independent. We buy merchandise from all over the world. Anywhere in the world we can get it. In ordinary times we are large importers of merchandise.

Mr. MOORE. On your own account?

Mr. JOHNSON. On our own account, and we sell those mostly under our brand.

Mr. MOORE. Then you buy outright in most instances?

Mr. JOHNSON. We buy outright in all instances.

Mr. MOORE. I misused the word agency.

Mr. JOHNSON. We buy outright. We don't sell on commission basis any article of merchandise.

Mr. MOORE. The field is free in these 13 States for any jobber to come in there that wants to?

Mr. JOHNSON. Yes, sir; and they come in there, too.

Now I am making this point further than that. The business as I stated is dependent upon the retail trade. We are stocking up with merchandise that will increase from 300 to 500 per cent in valuation. The manufacturers from whom we buy knowing that we are rather substantial as classed by the retailer, they have already recognized the unusual hazard we are taking and now they have reduced their selling terms to us. We used to buy merchandise at 2.10, and 60 extra, and so on. But it has gotten so now on certain lines of merchandise we have to pay for the merchandise even before they ship us, notwithstanding our solvency is well attested at the banks. They understand the hazard we take and we are likely to go up with the increased pressure brought to bear on us.

The jobbing business is not a healthy business in its outlook; because our problems are two lonesome facts. One is book accounts. You know the condition of the average retailer in the country towns; or small merchant. He will pay if he gets it. With this high-priced merchandise you have got to take into consideration this fact while our business in dollars and cents is growing, our volume in yardage and turnover is decreasing. One reason for decreasing is the population, the second is higher price of the stuff. When a woman could go and buy ordinary gingham at 10 cents and now she has to pay 35 cents a yard for the identical gingham, she is cutting down on her dressing. The people throughout the country are doing it. Wages in the South while increased largely in the munition plants, and have increased in fact very much, the very cost of living, the real necessities, are out of proportion to the cost of merchandise—in other words, merchandise has soared up so high that it is impossible with the increased earnings they get for them to have enough money to buy the clothing and fancy goods and things of that sort. I think that is as it ought to be.

We are not here with the idea of saying, "Cut our taxes down." We want to stand every bit we can. We are just in this position: We are willing to lose an arm, a leg, or any part of our anatomy, just so we don't lose our heart, to keep this thing going. We want to live and let live. When we came up here a year ago you gentlemen discussed the numerous problems we have. I don't see how physical nature can stand it. Here is the great big octopus, the motion-picture fellow and the automobile fellow, that wants the other fellow to stand the tax because they own an automobile. I don't see how the committee can be maintained. But I do want to bring this to your attention. We contributed this last year 30 per cent. Having that 30 per cent is the first time in our lives. We never had in all of our lives from the establishment of it in Philadelphia—and Philadelphia used to be such a fine market that my grandfather used to go there in a wagon from his home town down in the South.

Mr. MOORE. You are improving, Mr. Johnson, as a witness, as you go along. [Laughter.]

Mr. JOHNSON. The southern market has grown. As I stated, we are doing a business down there now, possibly \$175,000,000, classified among businesses, who have a distribution of anywhere from \$200,000 up to \$14,000,000. I mean that we do a business to that extent.

I was very glad to have Mr. Lincoln Cromwell, head of the Munitions Board, say to me when he made requisition for underwear, and so on, that the price at which the southern manufacturers gave him merchandise as well as the quality was far out of the demands of this country.

As a resolution passed in our sixth division, we have gone further than any jobbers in this country. We have said we are going to try to substitute and take all our sheetings, which the Government has not as yet said they would need, but which we feel sure they will need—we are trying to get substitutes in order to turn that over to the Government at the prices we paid for it. We have not attempted to accept a Government contract at a profit. We don't want it. We are willing to give the Government as much as we can. We recognize we have been large payers of revenue to the Government. And we are glad that we were able to do it. We don't believe our own business ability was entirely responsible for that. It was due to conditions that brought it about, the market advanced faster than we could turn the goods over, and when we got ready to turn it over it was advanced so greatly that we made profits by it. We have given the Government that.

If the taxation is increased on the middleman, we don't claim we are producers, but we do claim we are economical distributors. We can prove we are selling merchandise at a lower level of cost than merchandise can be bought at the mill, for the reason we purchase that merchandise from 6 to 8 months in advance of the time that it is sold to the retailer, and 12 months from the time it goes into the hands of the consumer. Furthermore, we buy up the entire product of a number of small mills that could not sell their products—the average selling expense of a mill would be 15 to 17 per cent expense. We go in there and take the entire product and they have no selling expense at all, so consequently we take that and form a necessary and economical link in the retail trade.

Mr. SLOAN. What is the concrete proposition that you ask this committee to follow? What is it you want done?

Mr. JOHNSON. I came up here with a number of jobbers from Richmond, Lynchburg, Dallas (Tex.), Mobile (Ala.), and New Orleans. We came up here without trying to bring any great deal of statistics with us—

Mr. SLOAN (interposing). Without the statistics, what is it you want the committee to observe in making up this bill that will relieve your business?

Mr. JOHNSON. I think I can answer that in this way. That having reported it, the fact that we will sell less merchandise in 1919, and that the profits we anticipated in 1918, and some of which we have already made, equalizes only our losses up to this war period. Notwithstanding that we were equalized to our war period, we then managed to go ahead through the period of 1917 and were able to pay the taxes. Now I don't mean to say that we haven't had to borrow money to pay those taxes. We have certainly had to borrow money to pay the taxes. We couldn't have gotten it any other way, because we haven't a large capitalization. We do business on just the smallest margin it is possible to do.

Mr. SLOAN. Passing that, what is there that you think ought to be done to modify the laws in your particular case?

Mr. JOHNSON. We don't want to modify the present law at all. We can live under the present law.

Mr. SLOAN. You feel the committee ought to let the present law stand?

Mr. JOHNSON. Yes, sir. We feel we can live under this with what we know has got to come. We have merchandise on our shelves to-day that we feel that we had to pay 500 per cent more than it is worth. We know that it is not worth that, but we had to pay for it.

Mr. STERLING. You wouldn't have us make an exception for your concern?

Mr. JOHNSON. We don't want any exception.

Mr. STERLING. You would be satisfied to have an increase?

Mr. JOHNSON. No, sir; we can't stand an increase.

Mr. STERLING. Would you ask this committee to make an increase in getting revenue on other business and except yours?

Mr. JOHNSON. I would make a suggestion, that with the establishment of the Federal Trade Commission and the Bureau of Commerce, that an analysis be made, with a clearer review of what conditions the jobbers were facing under these peculiar conditions and leave it to the actual findings as to what the taxation should be.

Mr. RAINEY. Leave it to what commission?

Mr. JOHNSON. To the Federal Trade Commission.

Mr. RAINEY. As to what taxes should be levied?

Mr. JOHNSON. Yes, sir; as to whether or not the jobbers could stand any taxation, and if we can stand it we want to stand it.

Mr. RAINEY. But we have got to draw this bill now.

Mr. JOHNSON. I know that; but I am saying the jobbers can not stand any more taxation.

Mr. RAINEY. But your proposition is to have the Federal Trade Commission find out what they could stand and then draw another bill there?

Mr. JOHNSON. I think that would be a good way to do it.

Mr. RAINEY. We have got to win this war and we have got to have money to do it with, and we have got to have twice as much. We couldn't do that—wait for a commission to conduct an investigation.

Mr. JOHNSON. I say you have got to take twice as much out of the jobbing business, and if this war goes on to 1920, in my opinion there won't be any jobbing business in the country.

Mr. RAINEY. What do we get out of the jobbing business except excess taxes, the same taxes that is levied on every other business?

Mr. JOHNSON. You don't get any more than other businesses; no, sir.

Mr. RAINEY. Your proposition is that we are to exempt the jobbing business from the imposition of this taxation?

Mr. JOHNSON. I think you ought to exempt them from any further taxation; yes, sir.

Mr. RAINEY. And impose the further taxation upon other classes of business?

Mr. JOHNSON. From the best information I can gather, and this is very hurriedly, we stood 30 per cent. Some say we could possibly survive if a 10 per cent increase was added. Others say we couldn't. The opinion seems to be very much divided among jobbing men as to whether or not we could stand it.

Mr. RAINEY. Nobody will survive if we lose the war.

Mr. JOHNSON. Nobody wants to lose it. We are willing to give you every cent we can make, but you don't want to kill us during

the war. We are having a large line of merchandise withdrawn from us.

Mr. RAINEY. We can't make an exception.

Mr. JOHNSON. All the line of merchandise the consumer is going to have from now on until the close of this war is largely represented in the stocks of merchandise which we have already assembled. You take 600 mills; they have already been commandeered and requisitioned by the Government, so all the merchandise the consumer is going to get is in the hands of the jobbers and middlemen.

Mr. STEBLING. Your taxes are going to be increased. You will charge it up to the retailer, and he will charge it up to the consumer, and you will go on. That is all there is to it. We have got to get this money some way.

Mr. JOHNSON. There is such a thing as carrying things that far. We would like to deliver it. But that is not as easy a proposition as outlined.

I stated in the beginning that we were not always able, by reason of peculiar competitive prices in this country, to get as much for merchandise as we ought to get.

Mr. FAIRCHILD. You understand that we put the same tax on your competitor that we do on you.

Mr. JOHNSON. It is going to lower the whole competition. There are plenty of men that believe they can sell merchandise below cost and survive. There are plenty of them that do that. Of course, it doesn't sound sensible to come before your committee and say that such a thing is a fact, but being that is true, as Bill Arp used to say, "No use in arguing against facts"; but that is a rule that the average business man in America in the distribution of merchandise still believes that he can sell merchandise below cost and still continue. That is the reason of the hazards of this business being so large.

I am representing the practical element of the jobbing business in this country that know we have got to face that proposition. On account of those great hazards we are standing as much as we can.

**STATEMENT OF MR. W. J. D. BELL, OF LYNCHBURG, VA.,  
SECRETARY OF THE SOUTHERN WHOLESALE DRY GOODS  
ASSOCIATION.**

Mr. BELL. I just want to add a few words to what Mr. Johnson said, and that is that we think that the dry goods jobbing business is in a class by itself. I want to assure you gentlemen that we down South are just as much interested in this proposition of winning the war as any class of people on earth. We are buying liberty bonds and we are doing everything. We are just in this war to the end, and we want to do our duty and full part, but we do want you to recognize we are doing business under an extraordinary hazard. We are buying these goods from 300 to 500 per cent up, and we are having to buy them from 6 to 12 months in advance. We take our inventories and arrive at our profits at the end of the year. We have got, say, \$500,000 worth of goods on hand. We don't know whether they are worth \$500,000 or \$300,000 or \$150,000. Our taxes are based on the cost of those goods. It may be that when we go to pay these taxes on June 1 that those goods will be worth \$150,000.

Where would we get the money to pay those taxes with? We don't want to lose our business. We have taken these businesses in

the South in the last 25 years and built them up to a great big interest down there. Our concern paid \$93,000 this year.

Mr. RAINEY. How are we going to get the income for this year?

Mr. BELL. I think the proposition to tax business concerns out of existence is wrong. I think the taxes ought to be distributed among the people.

Mr. RAINEY. We don't want to put anybody out of business. What sort of constructive proposition have you got to leave you out of it?

Mr. BELL. We don't want to be left out of it. We are willing to stand an increase, but this proposition of doubling our tax—

Mr. MOORE (interposing). Can you pass it on?

Mr. BELL. We could if we had any measure of protection of what is going to happen to us, but we have not. When we buy these goods and take an inventory, we don't know what is going to happen in six months. We are making money now and we are not kicking about that. We are willing to give them a large per cent, but what protection have we got that we will finally wind up with anything after these years we have been working? It might easily happen, and doubtless would, that by the end of the war, as some people think, these prices will slump off precipitously, and that we will lose more money than we have made during the war.

Mr. SLOAN. Does that refer any more particularly to your business than to every business in the country that has made money?

Mr. BELL. It occurs to me that it is more so in the dry goods business than any other business.

Mr. TREADWAY. Your business has increased with the present tax?

Mr. BELL. Yes, sir.

Mr. TREADWAY. If the levy applies to your competitors, there is an additional tax on all of you, where is your argument that you can't stand it?

Mr. BELL. We are scared to death about this decline that is about to come in our business.

Mr. RAINEY. You are not scared as badly as we are.

Mr. BELL. We think these things ought to be distributed more generally over every line of business. We are paying taxes in one hundred different ways, in freight, stamps, express, and things like that.

Mr. DIXON. The retail merchant is subject to the same conditions that you are, except in a lesser degree?

Mr. BELL. Yes; but when he makes his loss, we have to take it.

Mr. DIXON. Except in a larger degree he is liable to suffer the same as you are?

Mr. BELL. Yes, sir.

Mr. MOORE. If you put more tax on the dry goods industry, wouldn't the remedy be to ask more for the goods you sell?

Mr. BELL. Well, we would probably try to do that, but our price of goods is regulated by the different markets and the market is regulated every day.

Mr. MOORE. We are in an era where precedents are being broken daily. The old standards don't seem to prevail during war. People must pay more for beefsteaks, potatoes, and everything they eat, and probably have to pay more for everything they wear. They are doing it in certain instances now. Wouldn't your remedy lie in asking more for the goods you sell to meet the increased demand on you by taxes?

Mr. BELL. Yes, sir. Some of our members are already contemplating going out of business.

Mr. MOORE. I want to reecho the statement made by Mr. Rainey, that this committee doesn't want to put anybody out of business. Our task is hard enough to put these taxes upon business, and we know if business goes out of business we get no tax from business, and the committee has every possible desire to have business going.

Mr. BELL. Can't you appreciate the extraordinary hazard of our business?

Mr. MOORE. I think it is sometimes in the way of styles of the people. You may buy a lot of shirts that are very popular to-day that won't be very popular next month. The demand runs in some other way.

Mr. BELL. We are paying 26½ cents for goods we used to pay 6½ cents for.

Mr. MOORE. Isn't there going to be an increased demand for them?

Mr. BELL. The prices have gone 400 or 500 per cent, and we don't know where we are going to get off.

Mr. MOORE. I suppose the wage earner don't know where he is going to get off.

Mr. BELL. He is escaping the tax, too.

Mr. MOORE. He is paying for it in the increased prices he pays for what he gets.

Mr. FAIRCHILD. This increased cost, the freight, will be paid by the consumer.

Mr. MOORE. I merely suggest to you that the remedy would be to be in asking more for the goods you have to sell to meet the taxes you have to pay, because you and Mr. Johnson agree, and most of the gentlemen that appear here agree that we must help the Government out in this cause.

Mr. BELL. It is difficult to buy these Liberty bonds and pay these big prices and still meet this tax. It is very difficult to do. I am afraid some of them are going out of business.

Mr. MOORE. I want to get it out of your mind that this committee wants to put anybody out of business, either in the North, in the South, in the East, or in the West. We want business to go on.

Mr. BELL. We are not afraid of that, but we are afraid the taxes will be doubled.

Mr. MOORE. Here is President Wilson coming along with an address to Congress which we didn't anticipate. We felt we could avoid it, but he came along with that message and said so much money will be needed, and that means just \$2 for this year more than last year.

Mr. BELL. I am as deeply interested in this matter as any of you gentlemen that have the responsibility of it.

Mr. STERLING. The only consolation is that this war won't last long. We are going to win it, anyway.

Mr. BELL. I noticed a piece in the Wall Street Journal that England only paid \$3,500,000,000 in taxes, and we are trying to raise \$8,000,000,000.

Mr. STERLING. We can do it easier than England can raise three.

Mr. RAINEY. We are going to do the best we can for the jobber, as we are going to do the best we can for everybody else.

(Thereupon, at 5.20 p. m., the committee adjourned until to-morrow, Thursday, June 27, 1918, at 10 o'clock a. m.)

COMMITTEE ON WAYS AND MEANS.

HOUSE OF REPRESENTATIVES.

SIXTY-FIFTH CONGRESS, SECOND SESSION.

CLAUDE KITCHIN, North Carolina, *Chairman*.

HENRY T. RAINEY, Illinois.

LINCOLN DIXON, Indiana.

CORDELL HULL, Tennessee.

JOHN N. GARNER, Texas.

JAMES W. COLLIER, Mississippi.

CLEMENT C. DICKINSON, Missouri.

WILLIAM A. OLDFIELD, Arkansas.

CHARLES R. CRISP, Georgia.

GUY T. HELVERING, Kansas.

GEORGE F. O'SHAUNESSY, Rhode Island.

JOHN F. CAREW, New York.

GEORGE WHITE, Ohio.

JOSEPH W. FORDNEY, Michigan.

J. HAMPTON MOORE, Pennsylvania.

WILLIAM B. GREEN, Iowa.

CHARLES H. SLOAN, Nebraska.

NICHOLAS LONGWORTH, Ohio.

GEORGE W. FAIRCHILD, New York.

JOHN A. STERLING, Illinois.

WHITMELL P. MARTIN, Louisiana.

WILLIS C. HAWLEY, Oregon.

ALLEN T. TREADWAY, Massachusetts.

JOHN E. WALKER, *Clerk*.

## REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
SATURDAY, JUNE 29, 1918.

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, Carew, Fordney, Moore, Green, Sloan, Longworth, Fairchild, Sterling, Martin, and Hawley.

The CHAIRMAN. The committee will come to order. We will be glad to hear Mr. Post against this morning.

**STATEMENT OF MR. CHARLES JOHNSON POST, DIRECTOR, PUBLISHERS' ADVISORY BOARD, NEW YORK CITY—Continued).**

Mr. RAINEY. Following up the line I was on when we adjourned last evening I would like to ask—

Mr. POST (interposing). Before we begin this morning might I ask about the charts that we used on yesterday? I do not know whether those automatically become a part of the record, but if they do not and it is necessary formally to suggest that they become a part of the record I would like to make that suggestion at this time, for the reason that otherwise very many pages of the record will be absolutely meaningless to anyone reading them.

The CHAIRMAN. Mr. Post, we can not do that unless the joint Committee on Public Printing of Senate and House order it. I will, however, try to have it done.

Mr. POST. You can readily see that page after page of the record of our hearing would be perfectly meaningless to Members of Congress and others reading them without these charts which we used. If there is no technical question about which I am not familiar I should like very much to have the privilege of having plates made, of the same size as your printed reports, so that you might print in these charts, without expense to the Government at all, if that is the point under consideration.

The CHAIRMAN. We just can not put into the record any maps or anything of that kind without the consent of the Joint Committee on Printing.

Mr. POST. Well, all right. As I understand, the Ways and Means Committee will take care of that.

Mr. HAWLEY. I would like to suggest, Mr. Chairman, that if the gentleman, as he has suggested, will be willing to have plates made

and these pages printed and sent over we could very easily insert them.

The CHAIRMAN. All right, we will be glad for him to do that.

Mr. POST. We will do that, if the clerk will tell me where to send the plates.

The CHAIRMAN. The clerk will give you any information you desire along that line.

Mr. RAINEY. On yesterday you said you thought propaganda in your office by which copies of resolutions adopted by woman's clubs were being sent to Members of Congress, had stopped so far as your office was concerned.

Mr. POST. It has stopped as a general rule, and applies only to Members and Senators in whose States those resolutions originate. It is sent to Congressmen of the State from which the resolutions originate, for the information of those gentlemen.

Mr. RAINEY. I want to say that I got one from your office, dated June 24, 1918, mailed to me from your office, but purporting to be a resolution adopted by the Indiantown Household Science Club, of Tiskilwa, Ill.

Mr. POST. That is from your State, I believe, Illinois?

Mr. RAINEY. Yes.

Mr. POST. Well, my answer covered that. Unless you specifically request that no resolutions of that character be sent to you they will be sent.

Mr. RAINEY. I will not request that. I like to get them, and I preserve all of them: "

Mr. POST. They will continue then.

Mr. RAINEY. Very many of them are written in your best literary style.

Mr. POST. I thank you; but I do not feel that I have the right to bow to the compliment.

Mr. RAINEY. As to this farewell editorial of the Woman's Farm Journal, of St. Louis, how extensively did you send that out?

Mr. POST. May I see that?

Mr. RAINEY. Certainly. Here is a copy of it.
