COMMITTEE ON WAYS AND MEANS.

HOUSE OF REPRESENTATIVES.

SIXTY-FIFTH CONGRESS, SECOND SESSION.

CLAUDE KITCHIN, North Carolina, *Chairman.*

HENRY T. RAINEY, Illinois.

JOSEPH W. FORDNEY, Michigan.

LINCOLN DIXON, Indiana.

J. HAMPTON MOORE, Pennsylvania.

CORDELL HULL, Tennessee.

WILLIAM R. GREEN, Iowa.

JOHN N. GARNER, Texas.

CHARLES H. SLOAN, Nebraska.

JAMES W. COLLIER, Mississippi.

NICHOLAS LONGWORTH, Ohio.

CLEMENT C. DICKINSON, Missouri.

GEORGE W. FAIRCHILD, New York.

WILLIAM A. OLDFIELD, Arkansas.

JOHN A. STERLING, Illinois.

CHARLES R. CRISP, Georgia.

WHITMELL P. MARTIN, Louisiana.

GUY T. HELVERING, Kansas.

WILLIS C. HAWLEY, Oregon.

GEORGE F. O'SHAUNESSY, Rhode Island.

ALLEN T. TREADWAY, Massachusetts.

JOHN F. CAREW, New York.

GEORGE WHITE, Ohio.

JOHN E. WALKER, *Clerk.*

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Friday, June 7, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Helvering, White, Fordney, Moore, Green, Longworth, Sterling, Martin, Hawley, and Treadway.

The CHAIRMAN. This is the first public hearing on the proposed new revenue bill. The committee is anxious that any person who has any suggestions as to methods of taxation or as to new subjects of taxation, or anyone who has any suggestions as to repeal or amendment or modification of the provisions of the present law, to come before us and state their views. The committee will gladly give full consideration to such suggestions. We recognize that no bill can be perfect. No statute on the books is absolutely perfect. We know that in a large revenue measure such as we enacted last October there must be some inequalities and there must be some provisions that should be modified or amended and, perhaps, repealed. As I said, the committee would be glad to hear any person who may desire to present their views and offer suggestions and such amendments for repeal or modifications as they desire. I hope the press will give this invitation of the committee the widest publicity.

## STATEMENT OF MR. THOMAS O. MARVIN, ATTORNEY, SECRETARY OF THE HOME MARKET CLUB, BOSTON, MASS.

The CHAIRMAN. Mr. Marvin, state whom you represent and your business or occupation.

Mr. MARVIN. Secretary of the Home Market Club of Boston, interested in revenue legislation and particularly such revenue legislation as pertains to the tariff.

In the notice relative to these hearings on the proposed new tax measure it was wisely and properly stated that "in the preparation of the new tax measure the committee will give careful consideration to all suggestions with reference to the measure, together with suggestions of other revenue sources."

This is a broad-minded and statesmanlike proposition and it will meet with a hearty response throughout the country. Revenue in enormous sums has been asked for and revenue in increasing amounts will be needed to bring to fruition the hope, the purpose, and the determination of the American people to fight this war to a victorious issue.

Senator Underwood, who presided with such courtesy and fairness in the hearings in this room in 1913, in a recent interview is quoted as saying:

That in order to carry the great load we must all get ready for a wider and wider distribution of taxes. In many ways this war is rapidly being brought closer and closer home to us, and there will be a more widespread sharing of the burden of taxation. This greater distribution, when found necessary, can be brought about through consumption taxes on necessities. This is a field that we have scarcely touched, and we will not go far into it, of course, until pressed to do so by necessity.

The Senator also referred to the opportunity presented by stamp taxes, a form of taxation to which we have not "resorted to to any considerable extent."

There is another source of revenue, another "field that we have scarcely touched." I refer to revenue derived from customs duties. With importations the largest in value in our history the percentage of revenue derived is the smallest in our history. In 1850 and for several years thereafter the average ad valorem rate of duty on all imports was about 23 per cent. In 1861 it had dropped to 14.21 per cent, but we fought the Civil War from 1862 to 1865 with an average customs duty of 31 per cent, and during the prosperous reconstruction period, when our industries showed remarkable growth and expansion, the average rate of duty was 44 per cent. From 1872 to 1890 it averaged about 30 per cent; then, during the period of the Gorman-Wilson law, about 21 per cent; during the Dingley law, about 28 per cent; and for the last year of the Payne-Aldrich law, 18.58 per cent.

But the average ad valorem rate on all imports for the nine months ending March, 1918, was only 6.21 per cent.

The following table shows the total imports, the per cent of duty-free imports, the duties collected, and the average ad valorem rate of duty for the calendar years 1912 to 1917, and for nine months of the fiscal year 1918:

*United States imports, duties collected, and average rate of duty, 1912-18.*

	Total imports.	Per cent free.	Duties collected.	Average ad valorem rate.
Calendar year:		<i>Per cent.</i>		<i>Per cent.</i>
1912.....	\$1,818,073,055	54.58	\$326,339,620	18.14
1913.....	1,792,596,480	55.34	310,551,961	17.49
1914.....	1,789,276,001	61.36	241,394,619	13.62
1915.....	1,778,596,695	65.64	197,318,004	11.09
1916.....	2,391,635,335	67.39	217,589,766	9.24
1917.....	2,952,467,955	72.32	206,926,754	7.09
9 months ending March, 1918.....	2,083,530,107	73.05	126,028,355	6.21

The following table shows the amount of revenue derived from taxation in the United Kingdom for the fiscal years ending March 31, 1914-1918. It will be seen that the amount of revenue derived from customs duties has doubled since the beginning of the war, whereas our revenue from customs is less than half of what it was in 1912, in spite of the need of all possible revenue from every legitimate source.

*United Kingdom revenue from taxation.*

[Prepared by the Bureau of Foreign and Domestic Commerce, Department of Commerce.]

[Amounts in thousands of pounds sterling.]

	Fiscal years ending Mar. '31.				
	1913-14	1914-15	1915-16	1916-17	1917-18
Customs.....	35,450	38,662	59,606	70,561	71,261
Excise.....	39,590	42,313	61,210	56,380	39,772
Estate and other taxes.....	27,359	28,382	31,035	31,232	31,674
Stamps.....	9,966	7,577	6,764	7,878	8,300

Total receipts from taxes.....	163,029	189,305	290,088	514,105	613,040
Total expenditures.....	197,493	560,474	1,559,158	2,198,113	2,696,221
Advanced by loans.....		337,780	1,165,819	1,622,815	1,984,779

There is, then, ample warrant and justice for an argument for increased revenue from customs duties. Instead of \$206,000,000 of revenue from customs duties for the calendar year 1917, the revenue from those imports would have been \$618,000,000 if even the low average rate of the Gorman-Wilson law had been applied.

It may be well to state in this connection that the United Kingdom raised in customs duties for the fiscal year 1917-18, £71,261,000, or approximately \$350,000,000. We raised in customs duties for the calendar year 1917, \$206,000,000. England raised in customs duties for that year nearly \$8 per capita. We raised about \$2 per capita. It is estimated that for the current fiscal year over \$100,000,000 will be added to the receipts from customs duties in the United Kingdom, making the receipts from customs duties for the fiscal year ending March 31, 1919, \$460,000,000, or \$10.25 per capita. If our revenue from customs duties yielded an equal amount per capita the receipts from customs in this country would be \$1,050,000,000. But instead of a possible revenue from customs of \$1,050,000,000, our receipts from customs for the fiscal year ending June 30, 1918, based upon the yield for nine months ending March, 1918, will be only \$168,000,000, or \$1.60 per capita.

It is evident that England's customs tariff is a tariff for revenue. It is equally evident that ours is not.

The total receipts of the United Kingdom from all taxes for the fiscal year 1917-18 will be £613,000,000, or about \$3,000,000,000. Thus England raises from customs duties about 11 per cent of its total revenue derived from taxes. Our revenue for the current year will be about \$4,200,000,000. Our receipts from customs duties will be about \$168,000,000, or only 4 per cent of the total amount of revenue derived from taxation.

The Constitution empowers Congress "to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States," and from the days of our first Congress it has been customary to raise a very considerable portion of the Federal revenue from duties on imports. In fact, customs duties as an appropriate and effective

source of national revenue were so highly regarded in the early days of the Republic that President Jefferson in his message to Congress December 5, 1801, said that—

There is reasonable ground for confidence that we may now safely dispense with all the internal taxes and that the remaining sources of revenue will be sufficient to provide for the support of the Government, to pay the interest of the public debts, and to discharge the principals within shorter periods than the laws or the general expectation has contemplated.

From the days of Jefferson down almost to these present anxious times customs duties have been relied upon as a very considerable source of revenue by all administrations. During the campaign of 1912 Woodrow Wilson, then candidate of the Democratic Party for election to the Presidency, said:

You can't have free trade in the United States because the Government of the United States is of necessity, with our division of the field of taxation between the Federal and the State Governments, supported in large part by the duties collected at our ports.

It did not escape the attention of that able Democratic President, James Madison, who followed Jefferson in the White House, that "duties laid on imported articles may have an effect which comes within the idea of national prudence." We are in the midst of the greatest crisis in our history. We need the utmost devotion and the most patriotic and enlightened service of every man and woman in the Nation. Our young men by the millions will carry our flag to distant battle fields and many of them will pay the last full measure of devotion. The country asks that partisanship yield to patriotism and theories to necessity. Immense sums of money will be required to see the Nation through to renewed liberty and to a conclusive victory. No legitimate source of revenue should be neglected, and that source, sanctioned by the Constitution and approved by time and precedent, revenue derived from customs duties, should become a recognized and integral part of our revenue legislation; not only because we need to utilize every possible source of revenue, but because, as President Madison said, duties laid on imported articles "have an effect which comes within the idea of national prudence."

Mr. GARNER. Does the gentleman object to being interrogated?

Mr. MARVIN. Not at all, sir.

Mr. GARNER. If I understood you correctly, you said that the English Government is now collecting \$10 and something per capita while we are collecting \$1.60 per capita.

Mr. MARVIN. Yes, sir.

Mr. GARNER. And that theirs was based evidently on a tariff for revenue while ours was not? Will you differentiate or explain how that is? Are you advocating a tariff for revenue only?

Mr. MARVIN. I am here advocating an increase of tariff duties in order to increase the revenues needed by the Government in this emergency.

Mr. GARNER. Then you are not advocating a duty at the custom-house for any other purpose than revenue?

Mr. MARVIN. I am not emphasizing the purpose for which the duty should be applied except to increase our revenues.

Mr. GARNER. I was trying to ascertain your viewpoint. England now collects \$1,050,000,000, if I understood you, at the customhouses,

and our collections would be that much if we collected as much per capita as they do.

Mr. MARVIN. England collected in 1917-18 approximately \$350,000,000 at the customhouse.

Mr. GARNER. That is how much per capita?

Mr. MARVIN. My estimate of \$10.25 was based on the estimate of England's revenue from customs duty in the next fiscal year, which would be \$100,000,000 more than raised in the last fiscal year, or \$460,000,000, about \$10.25 per capita.

Mr. GARNER. And that duty was levied with reference purely to getting revenue?

Mr. MARVIN. Not wholly; no, sir. If you will see the articles on which England has applied its duties, particularly since the war began, you will find that some of them have been in the nature of protective duties, on watches and clocks and automobiles and parts and articles of that nature; but the bulk of it is a pure revenue measure, of course.

Mr. GARNER. You are differing now from the statement in your original paper. In your original paper you said England was levying a duty at the customhouse purely for revenue purposes, whereas in this country it was based on a different theory. Now, I want to ascertain from you whether or not you advocate a tariff for revenue at this time at the customhouse based upon the same theory as the theory of England?

Mr. MARVIN. I am perfectly willing to have it based on the same theory that England has adopted, because England combines both, Mr. Garner.

Mr. RAINEY. Does your organization favor the English system of tariffs at the ports?

Mr. MARVIN. We do, with this modification, which has apparently come over the system employed in England during the last few years. I think England has adopted more of a protective policy than heretofore; perhaps more than we have in recent years.

Mr. RAINEY. As evidenced by these increased collections at the ports?

Mr. MARVIN. As evidenced by the articles upon which duties were placed and the purpose for which they were placed.

Mr. RAINEY. Now let me call your attention to the English tariff and the articles upon which they impose it at the present time. They collect on tobaccos and snuffs, £25,743,000; on tea, £13,962,000; on sugar, £8,848,000; on spirits, £5,324,000; on cocoa, coffee, and chicory, £1,761,000. In other words, of the total, £71,000, to which you called attention, they collect over £50,000 on the articles I have been mentioning here which are not competitive and upon which we do not collect anything at the ports. They come in here free. That is the English system of levying a revenue tariff, and of course that is a revenue tariff without any other element in it. Does your organization favor a tariff at the ports upon the articles I have mentioned?

Mr. MARVIN. Pardon me one moment. If the gentleman will continue the reading of that list he will find that England—

Mr. RAINEY (interposing). I will read the rest of it later. Those are noncompetitive things I have mentioned. There is no element of protection in there at all. Does your organization favor the English tariff on these articles which I have read?

MR. MARVIN. We do not take into consideration in our revenue measures, so far as they are applied to this country, the policy of Great Britain. We look at our own interests and our own welfare. If we were framing or had anything to do with suggesting the framing of a revenue measure, it would be based on protective-tariff lines. I am not appealing to you to-day for protection, because this hearing was called for an increase of revenue, and I was suggesting a means by which, through increased tariff duties, revenues might be raised, regardless of the question of protection.

MR. RAINEY. I understand that; but you have been calling attention to the English collections at the port as amounting to so much per capita, and to our own collections as being inconsiderable as compared therewith. Now, I have called your attention to the major portion of those collections, which are entirely upon articles non-competitive; and to levy such a tax is exactly opposed to the protective theory for which you say your organization stands.

Now, let me call attention to the other items: On motor cars and motorcycles they only collect £541,000; on clocks and watches, to which you have called attention as indicating that they are levying protective tariffs, they only collect £244,000. The manufacture of clocks and watches is not an English business at all. That is a business which is conducted in Switzerland and in the United States and in France and in Germany. On cinematograph films they collect £184,000, and that is an American industry.

MR. MARVIN. Evidently with the idea of protecting their market so that it may some day become a British industry.

MR. RAINEY. So there is not any element of protection in this English tariff which you quote so approvingly at all.

MR. MARVIN. After all, they applied needed protection to the very items the gentleman has referred to, and the purpose for which those taxes were increased and levied shows that England has a decided tread to-day toward a protective tariff; but what is the need, gentlemen, of going into that question at this time?

MR. GARNER. We did not go into it at all.

MR. RAINEY. You have gone into it yourself.

MR. MARVIN. I simply suggested a source of revenue, and I have suggested an increase of tariff duties. The purpose of that increase is for the majority members of the committee to determine. If they prefer a pure revenue system based upon taxes raised at the custom-house from noncompetitive imports, it is within their province to levy such a tax. If the country approves of that, of course, such a law would remain on the statute books.

MR. RAINEY. Would it interrupt you if I asked you upon what articles you would increase the rate now?

MR. MARVIN. I would rather not go into details now because, as I say, I am not here for that purpose. I am here to make the suggestion that in a general way a larger portion of our revenue be raised from increased customs duties. I will be glad to make definite suggestions and if the committee wants me to, I will do it with a great deal of enthusiasm if the committee will say that they will adopt some of the suggestions.

MR. RAINEY. We could not agree to that.

MR. MARVIN. I know you could not.

Mr. RAINEY. But we will be glad to have your suggestions.

Mr. MARVIN. I shall be very glad to do it or to respond in any way I can to any request of the committee.

Mr. MOORE. Mr. Marvin, you have no hesitation in saying that you believe in protection as a policy, have you?

Mr. MARVIN. Absolutely not.

Mr. MOORE. You do believe in a tariff for protection as well as for revenue?

Mr. MARVIN. Yes, sir.

Mr. MOORE. The gentlemen seem to differ with you on that point. You are not ashamed of the fact that you stand for a protective policy?

Mr. MARVIN. I am no more ashamed of that than I am of the American Flag or of the American soldier. I believe it is an American policy.

Mr. MOORE. I want you to restate for the benefit of the gentlemen of the committee who have come in since you started, your statement what it was per capita that the English paid and what it was per capita that the United States paid on the tariff you referred to.

Mr. MARVIN. Based on the estimated revenues for the fiscal year ending March, 1918, the British revenues from customs will be about \$460,000,000, which will be approximately \$10.25 per capita. The best estimate I have been able to obtain on the revenues derived from customs in this country for the fiscal year ending June 30, 1918, is \$168,000,000, or about \$1.60 per capita.

Mr. MOORE. In other words, in England the amount raised per capita from customs duties is \$10.25, and in the United States the amount raised per capita is \$1.60; and your suggestion is that the committee might find that a fruitful source of inquiry and possibly of profit if it took up the matter of increased customs duties?

Mr. MARVIN. I certainly think so; yes, sir.

Mr. HULL. Mr. Marvin, I came in just as you were giving the rate of percentage of revenue to the amount of imports. I believe you gave the rate of the percentage to the value of dutiable imports and also to the value of all imports; is that correct? I came in just as you were on that subject. I am sorry I was not able to get here earlier.

Mr. MARVIN. I asked permission, sir, to incorporate in my remarks a table showing the average ad valorem rate of duties on imports from the year 1912 to the year 1916, and said that the figures showed that for the nine months ending March, 1918, the average ad valorem rate of duty on our imports would be 6.21 per cent. Is that what you referred to?

Mr. HULL. What I was getting at was this: Which is the best criterion to take, the average rate on dutiable imports or the average rate on all imports, dutiable and nondutiable, and what do your rates signify when you do take them?

Mr. MARVIN. I think there is possibly more significance, if we are looking at the question from a protective tariff point of view, in the rate of duty on the dutiable imports, but if we are looking wholly at the question of revenue, it is more important, I think, to see what the average rate of duty is on all imports, because that eliminates the question of dutiable imports and the reason why such imports are dutiable.

Mr. HULL. Then, you would adopt one course in order to determine one proposition and adopt the other in order to determine more accurately the other question?

Mr. MARVIN. It would depend a great deal on which direction I started. If I had my mind definitely made up to go to a certain place, I would take an entirely different course than if I were arriving at another result. It is, perhaps, interesting to note that over 73 per cent of our imports are now absolutely free of duty.

Mr. HULL. Would you base your customs tax program on specific or ad valorem duties at this time?

Mr. MARVIN. Well, I believe that specific duties are more easily collected—there is less danger of misrepresentation, and, I think, they are more effective as a means of gaining revenue and also as a means of protection.

Mr. HULL. The prices of all imports, as well as other things, have practically doubled. If you had an ad valorem basis, would you not get a much larger amount of revenue in the customhouse than you would if you had a specific basis, which would apply to the quantity rather than to the value?

Mr. MARVIN. In the case of inflated values I think there is, perhaps, an advantage in the ad valorem rate, but in normal times I think it is a disadvantage.

Mr. HULL. You would feel inclined, during this emergency, under war conditions and during these times of greatly inflated prices, to recommend an ad valorem duty, would you not?

Mr. MARVIN. If careful safeguards as to the value of the imports could be devised, I should think the point is all right.

Mr. HULL. There is no real way of making a comparison between the customs receipts of this country and Great Britain, because there are wholly different subjects of taxation which would be involved, unless we were to provide a coffee, tea, and sugar tax.

Mr. MARVIN. That is true. The situation in England and in this country is entirely different. England is a trading country, while we are a producing country. I think our economic policies should be based on our needs and not on the needs of England.

Mr. HULL. I remember that Secretary of the Treasury Chase, during the Civil War, stated that customs systems were entirely unreliable as sources of revenue during war times, with embargoes on so many kinds of imports as well as exports. What would you say to the view he then expressed?

Mr. MARVIN. I think it was correct. I think when we are in abnormal times—

Mr. HULL (interposing). You think they should be considered very unreliable?

Mr. MARVIN. I should think so; yes, sir; as a basis for legislation for normal conditions.

Mr. HULL. I notice in the English Parliament when the tax bills come up—although the Parliament is made up of different political parties—that during this war situation they unanimously agree, or with practical unanimity, that in view of the fact that the customs taxes are so unreliable it is not wise to enter into any of these questions except as to the simple items of tea, tobacco, and sugar, in the main. Do you think it would be wise for us to take up all of these

raw materials, or other items that are coming in, and undertake to forecast the situation, the volume of imports and trade movements, and try to get some kind of a substantial and stable revenue at this time from those sources?

Mr. MARVIN. It would be very difficult, I imagine, to draft a tariff law to-day that would be wholly applicable to the conditions that will confront us after the war.

Mr. HULL. If you drafted one now you would have the same necessity to draft a new one under the newer conditions, would you not?

Mr. MARVIN. From my point of view it might become a greater necessity.

Mr. HULL. You were comparing the possible rates under some of the schedules with those under the present schedules. Would you feel justified in taking wool and making it one of the items from which to raise some war taxes? I am speaking of the war period and am not speaking of the situation that will arise when the war closes.

Mr. MARVIN. Personally I should.

Mr. HULL. Taking into consideration the general legislative standpoint and the economic situation as well as the fact that the Government is utilizing and commandeering practically all the wool it can get hold of for the Army?

Mr. MARVIN. It might serve, Mr. Hull, a very useful purpose. We need wool and we have got to have wool. If the difficulties of importing wool were increased, we would raise more wool. If we lost revenue on the basis of free wool as compared to a tax on wool, we would more than make that up in national prosperity by the production of the wool, and instead of sending abroad a part of the money to pay foreign dealers to raise the wool all of that money would remain here, and you would get your money ultimately by income taxes on the producers. You would lose nothing in revenue, the country would prosper, and we would get more wool.

Mr. HULL. In view of the fact that the price of wool has gone up practically four times would you put an ad valorem duty on it for war purposes at this time rather than to put a specific duty on it?

Mr. MARVIN. I should think that would be a fairer plan at present.

Mr. HULL. You are very familiar with the prices of commodities and everything connected with our economic situation. In order to keep the economic situation on a somewhat even keel under these war conditions, if a substantial tax should be put on wool, do you think it would be wise, feasible, or advisable to have the price of manufactured woolen products fixed—an agreement as to the price of labor and then an agreement as to the distribution of the profits with respect to the manufacturer, the laborer, and the consumer who would purchase those products? Then the consumer would not have to pay inflated prices, the manufacturer would get his due share of the profits, and the skilled laborers would get their proportionate share also.

Mr. MARVIN. Personally I am opposed to a price-fixing program, and I think the objections to a price-fixing program are apt to outweigh the reasons in favor of it.

Mr. HULL. This is just during the war!

Mr. MARVIN. Yes, sir; if we could leave the matter of prices to the adjustment of competition, I think it would be fairer all around, but there are so many details that enter into such a question. You might fix the price, but you might overlook the equal obligation to fix the cost. The price must be based on the cost of production, and it is an unfair proposition, it seems to me, to fix one element of the problem, namely, the price, and to leave the cost of production out of consideration.

Mr. HULL. Somebody would have to fix the price in any event before the product is sold.

Mr. MARVIN. Of course, in normal times the price is fixed by supply and demand as well as the amount of competition, but during war times—

Mr. HULL (interposing). I am referring to these war conditions.

Mr. MARVIN. It would be a beautiful thing, I think, if there was some great genius who could work out all of these matters with fairness and justice, but it seems to me that experience has shown that it is better to leave those questions to be worked out in experience rather than to be worked out in the seclusion of some man's office. I doubt if human ability is capable of handling the problem of price fixing and the correlative problem of fixing the cost of production and do justice to everyone concerned.

Mr. HULL. I thank you very much. I am not undertaking to express any views myself, but simply trying to get your views.

Mr. GARNER. I want to ask you one question and then I want to express my views. You live in Boston and you are the attorney of the Home Market Club.

Mr. MARVIN. Yes, sir.

Mr. GARNER. Have you ever raised sheep?

Mr. MARVIN. My duties have not called upon me to raise sheep or cattle.

Mr. GARNER. I am asking you merely for information now. You are not in the sheep business and have never produced sheep. How do you figure out in your mind, as the attorney for the Home Market Club, or in any other way, that a duty on wool at this time would stimulate the production of wool, when the Government is fixing prices?

Mr. MARVIN. As I said to Mr. Hull, I am not in favor of the policy of the Government fixing prices, because I think it does more damage than good.

Mr. GARNER. I agree with you fully on that. I do not favor the Government fixing the price on anything and I would like to have a lot of revenue through the customhouse, but I can not join you in your reasoning that the putting of a duty on wool would stimulate production in this country, and that we, therefore, would have more wool. The Government is fixing the price now.

Mr. MARVIN. Yes. I think if you say to one man, "Go to work," and to another man, "Stand over him and club him if he does not go to work," you are not going to get much work done.

Mr. GARNER. Any duty you levy at the customhouse now can not have the effect that you protectionist gentlemen think it usually has.

Mr. MARVIN. No, sir; it can not have that stimulating effect on production when there is a fixed price and a limited production. One offsets the other.

Mr. DIXON. Will the statement that you are filing show the average rate of duty on the total importations as well as the average rate on dutiable importations?

Mr. MARVIN. The average rate on the total importations and not the average rate on dutiable importations.

Mr. DIXON. Not on the dutiable importations.

Mr. MARVIN. No, sir.

Mr. DIXON. The statement is limited to just the one.

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. Mr. Marvin, the Government has fixed the price on wool at 65 cents a pound.

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. Wool is very largely used for manufacturing cloth?

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. But cotton is used to a greater extent in the manufacture of cloth than wool, is it not?

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. Is there any reason why the Government should fix the price on wool and not fix the price on cotton? Is there any inconsistency in fixing the price on the two if you fix it on the one?

Mr. MARVIN. Well, it would seem to be a fair proposition that if they are going into that policy it should bear on all products. I do not myself approve of the policy, so that I am not keen to have it extended. I think it works a hardship instead of a benefit.

Mr. FORDNEY. Mr. Marvin, a question was just asked you about the percentage of the duty on dutiable goods. Did I catch the question correctly?

Mr. MARVIN. I was asked about the table which I incorporated in my remarks.

Mr. FORDNEY. The duty collected under our law is 6 per cent ad valorem, and 73 per cent of all the imports are on the free list?

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. Great Britain prior to the war—I want you to correct me if I am not correct, because you are an expert on statistics—collected \$3.56 per capita on imports, while we collected \$3.25?

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. She collected 31 cents per capita more than we did?

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. We are now collecting \$1.60 and Great Britain \$10.25?

Mr. MARVIN. That is what I understand.

Mr. FORDNEY. Do you not believe we ought to collect some of this money that we are exacting from the people on imports instead of by direct internal revenue taxes?

Mr. MARVIN. I have spent several minutes in arguing that point. I believe that is the policy that should be adopted.

Mr. LONGWORTH. Do you favor a duty on tea and coffee?

Mr. MARVIN. I quoted Senator Underwood in my remarks as saying that we might have to come to a consumption duty on necessities of that kind. In putting a duty on tea and coffee, particularly on coffee, I think consideration would have to be given to what would be the probable action on the part of Brazil, for instance, from which we get a large part of our coffee. If Brazil should immediately

retaliate by an increase of duty on American exports, the gain from a duty on coffee would be infinitesimal; it might be more than offset

Mr. FORDNEY. We consume 1,200,000,000 pounds of coffee per annum and we consume 1,000,000,000 pounds of tea per annum. At 5 cents a pound on coffee and 5 cents a pound on tea we would get a revenue of from six to seven millions of dollars a year, but a tax upon tea or coffee—which is a tax on something we do not produce—is a direct tax upon the people, is it not?

Mr. MARVIN. It is a direct tax.

Mr. FORDNEY. It is equivalent to a consumption tax.

Mr. MARVIN. Yes, sir.

Mr. FORDNEY. Mr. Marvin, do you recommend a consumption tax on anything?

Mr. MARVIN. I do not, as a general policy, but in times of emergency, when so much is at stake, as it is to-day, it may become necessary to obtain revenue from sources that would not be approved under other conditions and in other times.

Mr. FORDNEY. There is no question, is there, that a consumption tax would be a direct tax upon the consumer?

Mr. MARVIN. It would be a direct tax upon the consumer.

Mr. STERLING. Mr. Marvin, you base your suggestions on the condition in which we find the country at the present time, do you not?

Mr. MARVIN. Yes, sir.

Mr. STERLING. You abandon your theory of protection for the sake of revenue during the war?

Mr. MARVIN. I have not altogether; no. Personally I think that if we could devise a protective tariff that would, perhaps, decrease in some degree certain importations and, perhaps, decrease the amount of revenue derived from those importations, that we would make those things in this country, and that through an income tax, and other measures of that kind, a larger amount of revenue would be derived, and that the prosperity from that amount of increased production would be particularly beneficial to the country.

Mr. STERLING. I assume that in time of peace, in normal times, if you were imposing a tariff duty, you would impose it, first, with a view of protecting American industries, would you not?

Mr. MARVIN. Personally, I would. I think it is more important in normal times than revenue, because under a protective tariff, in normal times, we have always had ample revenue; in fact, we have piled up big surpluses.

Mr. STERLING. In these times, when revenue is the main purpose and main need of the Government, in imposing a tariff duty I take it that you would not frame a tariff duty strictly with the view of protection but with the view of raising the most revenue for the Treasury?

Mr. MARVIN. In this emergency I think tariff legislation should be framed to raise the most revenue.

Mr. STERLING. Do you not think that a consumption tax, during these times, would be a very good way of spreading the burden throughout all the country?

Mr. MARVIN. Yes, sir; and Senator Underwood said it would distribute the burden.

Mr. STERLING. And an excess-profits tax and an income tax, then, would impose a still heavier burden on those who were best able to pay them?

Mr. MARVIN. Yes, sir.

Mr. STERLING. You would not favor a plan whereby all taxes were to be raised by an income tax and excess-profits tax and leave some of the people without any portion of the burden at all, would you?

Mr. MARVIN. I should think that the duty to support and maintain the Government is the main duty; it bears upon every citizen, and to the amount of their ability they should carry that burden.

Mr. STERLING. They should pay in proportion to their ability to pay?

Mr. MARVIN. Yes, sir.

Mr. STERLING. You said, in your remarks, I think, that under the Wilson-Gorman bill the rates there imposed would have produced \$600,000,000 last year on imports, if those rates had been in force.

Mr. MARVIN. Those rates, applied to the same amount of importations, would have produced about \$618,000,000; that is, at the rate of 21 per cent instead of at the rate of 7 per cent.

Mr. STERLING. Did you compute what would have been produced last year on imports if the Payne-Aldrich tariff rates had been in force?

Mr. MARVIN. Well, it would have been a trifle less than that. The rate in the Payne-Aldrich bill was 18.58 instead of 21 and some hundredths, as in the Wilson-Gorman bill; so that would make only a slight difference and bring it down under \$600,000,000, rather than over that amount.

Mr. STERLING. I will ask you whether an ad valorem duty will produce more than a specific duty on imports? I suppose that would depend altogether on the rates, would it not?

Mr. MARVIN. Well, it would depend on the rates, of course, and on the values. With inflated values there would be a larger return than there would be under normal conditions.

Mr. STERLING. You could produce more revenue by one than the other, providing you fixed the rates high enough to do it, could you not?

Mr. MARVIN. That is the idea exactly.

Mr. STERLING. The character of the tariff has nothing to do with the amount of revenue obtained, I take it, whether it be ad valorem or specific.

Mr. MARVIN. Well, in theory that would seem to be so, but in practice it does not work out that way, because of the opportunity there is under the ad valorem system to misrepresent prices—the question has been so thoroughly gone over and there have been so many arguments pro and con.

Mr. STERLING. If they should misrepresent the prices, then the raising of the rates a little higher to offset the misrepresentation would cure the evil, would it not?

Mr. MARVIN. But you know how difficult it is to raise the rates.

Mr. GARNER. I am a little confused about two answers you made to Mr. Sterling. I understood you to say that you would levy the duties at the customhouse, so as to increase the production in this

country, and, therefore, increase the revenues of the Government through an excess-profits and income tax.

Mr. MARVIN. I think it would result in that way. If we had a large production, we would have a larger revenue from taxes on that production.

Mr. GARNER. You would increase the collections at the custom-house through an excess-profits and income tax?

Mr. MARVIN. I hope you will take my answers to these questions in connection with the context in which they are given. I was asked whether I thought a protective tariff would decrease the receipts of the customhouse. I said it might decrease certain importations, and in that sense decrease the amount collected on those importations, but that the protection afforded by those rates would stimulate the production of those goods in this country and give us a larger income on which a direct tax could be levied.

Mr. GARNER. If you were levying this tax—if you were going to prepare the schedules—would that be the theory on which you would work in fixing the rates?

Mr. MARVIN. I am a thorough believer and an honest believer in the advantage of the protective tariff policy, and if I were drafting a revenue law I would consider the advantage to the country of a protective tariff rate, because I believe it is more to our advantage to produce than it is to import.

Mr. GARNER. Perhaps I can get at your idea in this way: If you were going to make it your business to levy the rate at the custom-house, would you levy it on raw materials?

Mr. MARVIN. On such raw materials as we could raise in this country to advantage, because I believe we ought to be self-sustaining as far as possible.

Mr. GARNER. Would you levy it on the raw materials that a manufacturer had to go out and buy during this war?

Mr. MARVIN. I think, Mr. Garner, you asked me about the fixing of the price on wool. I do not think that a protective tariff on such raw materials would stimulate production where the price is limited to a certain figure, so that we can not apply a theory directly to particular items without knowing the conditions surrounding those items, taking into consideration the correlative facts.

Mr. GARNER. In other words, in making up this revenue at the customhouse, you would have to consider all of the approximately 4,000 items that are on the list?

Mr. MARVIN. Yes, sir; and I think in this emergency it is not so much a question of our economic condition as it is the question of the need of the Government, and that is the prime consideration.

Mr. COLLIER. Mr. Marvin, there is a question I wanted to ask you about the tariff on wool, when I yielded to Mr. Fordney. I understood you to say that you believe a tariff on wool would stimulate the production of wool in this country. The question I want to ask you is this, without pretending to go into any extended tariff discussion: How do you explain the fact that at the time of the enactment of the Dingley law, or about that time, we had about 63,000,000 sheep in this country, and from that time up to 1912, during the period when we had the highest protective tariff on wool perhaps in the history of the country the sheep decreased from 63,000,000

to 52,000,000, and at the same time the value of other farm animals increased from \$3,000,000,000 to \$5,000,000,000, an increase during that time of over \$2,000,000,000 in value of other farm animals, whereas in the same time there was a decrease of nearly 12,000,000 in the number of sheep, and in the State of Texas—Mr. Garner has asked you several questions along this line—about the time of the enactment of the Dingley law there were 2,500,000 sheep in Texas, and in 1912 they had decreased to about 1,400,000, a decrease in the value of sheep of about \$7,000,000; and at the same time other farm animals in the State of Texas increased in value something over \$80,000,000. Now, if during the period of the highest protection on wool there was a decrease in the production of sheep in this country, how do you figure it out now that with an increased price on all meat products, and the Government itself wanting all the wool it can get, a tariff on wool would stimulate and increase the production of wool in this country?

Mr. MARVIN. The theory of a tariff on wool is that it will make the wool industry sufficiently profitable to warrant a man engaging in that industry. The figures you have quoted show that men can engage in other lines of agricultural industry either to greater profit or to greater personal comfort. It would indicate, sir, that the stimulation had not been sufficient; that the inducement had not been enough; and if you will compare other tariff periods you will find that while there was a decline under what you call the high protective tariff rates on wool, there was a much more rapid decline as those rates of duties and that degree of protection was reduced, showing—

Mr. COLLIER (interposing). You do not mean to say, Mr. Marvin, that there was a higher tariff on other farm animals than there was on sheep and wool, do you, during those 12 years which showed a great decrease in the number of sheep and in the production of wool and at the same time a tremendous increase on all the other farm animals which did not have anything like such a high tariff?

Mr. MOORE. Mr. Marvin, can you not find a better answer to the question of the gentleman from Mississippi in the fact that the gentleman from Texas, Mr. Garner, succeeded in obtaining through the Underwood tariff a protection of about 150 per cent, in one form or another, to encourage the development and stimulation of the Angora goat in Texas?

Mr. MARVIN. Well, it was a very wise move on the gentleman's part, I think.

Mr. MOORE. I want to ask you while you are on the stand, because you come from a large industrial country which pays enormous taxes into the Treasury, and being interested, and those whom you represent in the textile industry, whether if we put a tax on raw wool, as some gentlemen have seemed to indicate we should do, we should not also put a tax on raw cotton?

Mr. MARVIN. You mean a custom tax?

Mr. MOORE. No; an internal tax—a revenue tax—a war tax. Judge Hull raised the question as to the propriety of putting a tax on raw wool which enters into your manufacture of woolen goods, and I am asking about the propriety of putting a tax on raw cotton, which also enters into your manufacture of cotton goods.

country, and, therefore, increase the revenues of the Government through an excess-profits and income tax.

Mr. MARVIN. I think it would result in that way. If we had a large production, we would have a larger revenue from taxes on that production.

Mr. GARNER. You would increase the collections at the customhouse through an excess-profits and income tax?

Mr. MARVIN. I hope you will take my answers to these questions in connection with the context in which they are given. I was asked whether I thought a protective tariff would decrease the receipts of the customhouse. I said it might decrease certain importations, and in that sense decrease the amount collected on those importations, but that the protection afforded by those rates would stimulate the production of those goods in this country and give us a larger income on which a direct tax could be levied.

Mr. GARNER. If you were levying this tax—if you were going to prepare the schedules—would that be the theory on which you would work in fixing the rates?

Mr. MARVIN. I am a thorough believer and an honest believer in the advantage of the protective tariff policy, and if I were drafting a revenue law I would consider the advantage to the country of a protective tariff rate, because I believe it is more to our advantage to produce than it is to import.

Mr. GARNER. Perhaps I can get at your idea in this way: If you were going to make it your business to levy the rate at the customhouse, would you levy it on raw materials?

Mr. MARVIN. On such raw materials as we could raise in this country to advantage, because I believe we ought to be self-sustaining as far as possible.

Mr. GARNER. Would you levy it on the raw materials that a manufacturer had to go out and buy during this war?

Mr. MARVIN. I think, Mr. Garner, you asked me about the fixing of the price on wool. I do not think that a protective tariff on such raw materials would stimulate production where the price is limited to a certain figure, so that we can not apply a theory directly to particular items without knowing the conditions surrounding those items, taking into consideration the correlative facts.

Mr. GARNER. In other words, in making up this revenue at the customhouse, you would have to consider all of the approximately 4,000 items that are on the list?

Mr. MARVIN. Yes, sir; and I think in this emergency it is not so much a question of our economic condition as it is the question of the need of the Government, and that is the prime consideration.

Mr. COLLIER. Mr. Marvin, there is a question I wanted to ask you about the tariff on wool, when I yielded to Mr. Fordney. I understood you to say that you believe a tariff on wool would stimulate the production of wool in this country. The question I want to ask you is this, without pretending to go into any extended tariff discussion: How do you explain the fact that at the time of the enactment of the Dingley law, or about that time, we had about 63,000,000 sheep in this country, and from that time up to 1912, during the period when we had the highest protective tariff on wool perhaps in the history of the country the sheep decreased from 63,000,000

to 52,000,000, and at the same time the value of other farm animals increased from \$3,000,000,000 to \$5,000,000,000, an increase during that time of over \$2,000,000,000 in value of other farm animals, whereas in the same time there was a decrease of nearly 12,000,000 in the number of sheep, and in the State of Texas—Mr. Garner has asked you several questions along this line—about the time of the enactment of the Dingley law there were 2,500,000 sheep in Texas, and in 1912 they had decreased to about 1,400,000, a decrease in the value of sheep of about \$7,000,000; and at the same time other farm animals in the State of Texas increased in value something over \$80,000,000. Now, if during the period of the highest protection on wool there was a decrease in the production of sheep in this country, how do you figure it out now that with an increased price on all meat products, and the Government itself wanting all the wool it can get, a tariff on wool would stimulate and increase the production of wool in this country?

Mr. MARVIN. The theory of a tariff on wool is that it will make the wool industry sufficiently profitable to warrant a man engaging in that industry. The figures you have quoted show that men can engage in other lines of agricultural industry either to greater profit or to greater personal comfort. It would indicate, sir, that the stimulation had not been sufficient; that the inducement had not been enough; and if you will compare other tariff periods you will find that while there was a decline under what you call the high protective tariff rates on wool, there was a much more rapid decline as those rates of duties and that degree of protection was reduced, showing—

Mr. COLLIER (interposing). You do not mean to say, Mr. Marvin, that there was a higher tariff on other farm animals than there was on sheep and wool, do you, during those 12 years which showed a great decrease in the number of sheep and in the production of wool and at the same time a tremendous increase on all the other farm animals which did not have anything like such a high tariff?

Mr. MOORE. Mr. Marvin, can you not find a better answer to the question of the gentleman from Mississippi in the fact that the gentleman from Texas, Mr. Garner, succeeded in obtaining through the Underwood tariff a protection of about 150 per cent, in one form or another, to encourage the development and stimulation of the Angora goat in Texas?

Mr. MARVIN. Well, it was a very wise move on the gentleman's part, I think.

Mr. MOORE. I want to ask you while you are on the stand, because you come from a large industrial country which pays enormous taxes into the Treasury, and being interested, and those whom you represent in the textile industry, whether if we put a tax on raw wool, as some gentlemen have seemed to indicate we should do, we should not also put a tax on raw cotton?

Mr. MARVIN. You mean a custom tax?

Mr. MOORE. No; an internal tax—a revenue tax—a war tax. Judge Hull raised the question as to the propriety of putting a tax on raw wool which enters into your manufacture of woollen goods, and I am asking about the propriety of putting a tax on raw cotton, which also enters into your manufacture of cotton goods.

I am asking whether if we should put a tax on raw wool we should not also put a tax on raw cotton which pays no tax at all?

Mr. HULL. May I interrupt—

Mr. MOORE. I think it would be better to let the witness answer, because cotton is going to be just as interesting a subject as wool.

Mr. HULL. But I no not want to be put in an improper attitude. We are discussing customhouse taxation, and to take up internal taxation is another matter, which I will be glad to go into—

Mr. MOORE (interposing). Then, perhaps, I did misunderstand the gentleman, because the illustration would be very unfair since much more wool is raised in foreign countries than in the United States, whereas the United States has a complete monopoly in the raising of raw cotton; but I wanted to ask the gentleman who comes from an industrial center, where they fabricate both raw wool and raw cotton, whether, if we should put a tax on raw wool or on raw wool products we should not also put a tax on raw cotton. Let us be fair about it and go right down the line.

Mr. MARVIN. I think so. I am not in favor of a policy that will make sheep of one and goat of another.

Mr. MOORE. When we have got to raise \$24,000,000,000 a year to pay our own expenses and the Treasury demands it, and when we have got to go into consumption taxes as you have already indicated in the opening of your address, quoting Senator Underwood on the subject also, the question is whether or not we should proceed to tax all along the line and include cotton as well as wool, and cotton products as well as woolen products.

Mr. MARVIN. As the gentleman said, the wider and the fairer the distribution of the taxes, the fairer and wiser is the system.

Mr. GARNER. Do you advocate an internal consumption tax?

Mr. MARVIN. I have not advocated that. I am here merely for the purpose of advocating increased customs duties.

Mr. MOORE. Do you not think that cotton has become such an immense necessity during war times, and of course, is a war necessity, that it might prove to be a very fruitful source of revenue, if we should impose some tax upon it and make it bear a part of the burden which the people of the United States have to bear to carry on this war?

Mr. MARVIN. Undoubtedly, much revenue could be derived from that source if thought wise and fair.

Mr. MOORE. Do you think if we imposed a tax on raw cotton it would seriously impair our ability to manufacture raw cotton into fabricated materials and also to pay excess profit taxes and other things to be derived from the manufacture of cotton products?

Mr. MARVIN. Oh, according to the present theory if a tax is put on the raw cotton, of course, the price would be fixed too.

Mr. MOORE. So long as it applies to other commodities, copper, iron steel, and things of that kind, why should it not apply to cotton, wool, grain, or any other substance that enters into the prosecution of the war?

Mr. MARVIN. There is no reason why it should not.

Mr. GREEN. Mr. Marvin, your answer to the gentleman from Mississippi with reference to the wool situation indicated a very clear insight into the course of trade and the natural trend of prices. Being

from an agricultural region and also familiar with the sheep-raising districts farther west, I might make some further suggestions that would throw some light on the situation. You are probably aware that in the latter part of the nineties, that is, of the preceding century, and all along through this century, there has been a very rapid rise in the prices of ordinary agricultural products, particularly food products?

Mr. MARVIN. Yes, sir.

Mr. GREEN. Could you inform me as to whether there was a corresponding rise in the price of wool during that period?

Mr. MARVIN. No, sir; there was not.

Mr. GREEN. That is what I was well aware of. Consequently it became very much more profitable for farmers to raise food products than to produce wool.

Mr. MARVIN. Yes, sir.

Mr. GREEN. And I do not know whether you are aware of the fact or not that during this same period, on account of the increasing price of food products, gradually what had been known as grazing land, and possibly in many instances thought only fit for grazing land, in the West was largely taken up and used for the purpose of raising food products, therefore diminishing the area upon which sheep could be grazed; that is a fact, is it not?

Mr. MARVIN. Yes, sir.

Mr. GREEN. And that is what largely caused the reduction in the number of sheep. Now, turning to another subject, Mr. Longworth asked you with reference to a duty upon tea and coffee. Have you any views to express at this time as to the propriety of levying a duty on food products during this war?

Mr. MARVIN. I would rather not be drawn into the details of a revenue measure of that kind. I do not think I could add anything to the enlightenment of the committee along that line. They involve too many considerations and ought not to be dealt with offhand, it seems to me.

Mr. RAINEX. Mr. Marvin, I understood you to say that in normal times a protective tariff yields ample revenue?

Mr. MARVIN. Yes, sir.

Mr. RAINEX. Did I understand you correctly in that?

Mr. MARVIN. That is the general statement I made; yes, sir.

Mr. RAINEX. You refer to the Payne-Aldrich tariff duty?

Mr. MARVIN. I referred to the period since the Civil War, when for the most part we were under a protective tariff system, in many of the years of which we developed a large surplus.

Mr. RAINEX. Do you know how much money we got during the peak year of the Payne-Aldrich system, which was the highest tariff we ever had?

Mr. MARVIN. The revenue?

Mr. RAINEX. Yes.

Mr. MARVIN. In 1912 the revenue derived from customs duties was \$326,000,000.

Mr. RAINEX. Was that the highest?

Mr. MARVIN. I imagine it was pretty near the highest. I think it went \$350,000,000 or \$360,000,000, perhaps.

Mr. RAINEX. When?

Mr. MARVIN. I have not those facts here, and, of course, I do not keep them in my mind, but there is the fact that in 1912 the revenue from customs under the Payne-Aldrich law was \$326,000,000, and for the present year, under your present tariff law, the estimate is it will be about \$168,000,000, with greatly increased importations.

Mr. RAINEY. And under present war conditions?

Mr. MARVIN. Yes.

Mr. RAINEY. Do you think the amount yielded in the peak year of the Payne-Aldrich tariff bill, which was the biggest we ever got from tariffs, would be sufficient in normal times which are to follow this war?

Mr. MARVIN. Whether that amount of revenue will be sufficient in normal times?

Mr. RAINEY. Whether it will be sufficient in amount when we have a restoration to normal times and when the war is over?

Mr. MARVIN. Sufficient for what?

Mr. RAINEY. Sufficient for revenue purposes. You say a protective tariff has always in normal times yielded ample revenue. That was your exact language.

Mr. MARVIN. Yes.

Mr. RAINEY. After the war is over, do you think a return to the Payne-Aldrich tariff rates would yield ample revenue?

Mr. MARVIN. After the war is over the expenses of the Government will be greatly increased, of course, and we can not for many years to come hope to—

Mr. RAINEY. After the war is over, if we retire any bonds we will have an annual expense of \$5,000,000,000.

Mr. MARVIN. And we can not hope, of course, to raise from customs duties any such proportion of our total revenue as we raised before the war.

Mr. RAINEY. No; of course not.

Mr. MARVIN. But that is not any reason why we should not raise all we can fairly and justly and reasonably.

Mr. RAINEY. We are framing now simply a war-tax bill which will end with the war. What articles besides wool do you think need protection during this war period?

Mr. MARVIN. I think the war itself is the highest form of protection we have had. During the war I have not heard anyone ask for an increase of protective duties.

Mr. RAINEY. And if the war conditions continue indefinitely we will have an ideal tariff from the standpoint of the New England protectionists.

Mr. MARVIN. What do you mean by "war conditions"? No man in New England wants this war to last a second longer than necessary to vindicate American rights.

Mr. RAINEY. I said if it does continue, you will have the highest type of protection, as you have just indicated, from the standpoint of your organization. You said that war conditions furnish all the protection anybody needs, did you not?

Mr. MARVIN. Yes, sir.

Mr. MOORE. In order that the gentleman's statements will not be left in that condition, you do not advocate the continuation of the war for the purpose of continuing a protective policy, do you?

Mr. MARVIN. Absolutely not.

Mr. MOORE. On the other hand, you prefer to have the war cease at once in order that we may have an intelligent and efficient tariff policy; is not that the idea?

Mr. MARVIN. The only thing that I know that is worse than free trade, is war.

Mr. RAINEY. My question did not imply that anybody was in favor of the continuation of this war.

Mr. DICKINSON. Mr. Marvin, I would like to ask you a question. The taxation of cotton has been suggested. I did not understand you to say that you favored a direct tax on cotton for the purpose of raising revenue; but if they should put a direct tax on cotton, would you also favor a direct tax on wool?

Mr. MARVIN. I think if you are going to enter into a system of that kind it should be evenly and wisely distributed, and not just a few items picked out. I am not in favor of a tax on cotton or a direct tax on wool unless the necessities of the Government require the distribution of a similar form of taxation on as many similar products as possible.

Mr. DICKINSON. Formerly, under the Payne bill, there was a customs duty or tax on wool; but to levy a tax on cotton would be a different kind of a tax, because the cotton is raised in this country.

Mr. MARVIN. Yes; the gentleman's question referred to a direct tax, an internal tax and not a customs tax, as I understood it.

Mr. DICKINSON. I did not understand you to say you favored a tax on cotton.

Mr. MARVIN. A customs tax on cotton?

Mr. DICKINSON. No; a direct tax.

Mr. MARVIN. No, sir; not unless the necessities of the Government require a tax of that kind laid on all commodities.

Mr. DICKINSON. But you favor a customs tax on wool?

Mr. MARVIN. Yes, sir.

Mr. DICKINSON. Do you know whether there is now a customs tax on foreign cotton, or Egyptian cotton, or whether that has been taken off?

Mr. MARVIN. In this country?

Mr. DICKINSON. Yes.

Mr. MARVIN. No, sir.

Mr. DICKINSON. There is not one now, but there used to be.

Mr. MARVIN. I do not think there has been.

Mr. GARNER. Yes; there was; on Egyptian cotton.

The CHAIRMAN. Mr. Marvin, there is one matter I want to call your attention to. I am not going into a discussion of the theory of a Democratic tariff or a Republican tariff, because that is something that is not going to enter into the question of our raising revenue. In the framing of the last big revenue bill there was no partisanship involved, and at no time did the Democrats vote one way and the Republicans another. Of course, when we get to talking about protective tariff and tariff for revenue the boys are a little "touchious" and will have little disputes; but there is one matter I want to call your attention to. I understood you to say that with the same rate under the Payne-Aldrich Act we would raise, with the importations now coming in, about \$600,000,000.

Mr. MARVIN. That calculation is not based on the rates of the Payne-Aldrich Act, Mr. Kitchin, but on the average rate that prevailed during the Gorman-Wilson Act.

The CHAIRMAN. You said that it was \$600,000,000 under the Wilson Act and a little less than that under the Payne-Aldrich Act?

Mr. MARVIN. Yes.

The CHAIRMAN. Have you given consideration to the fact that the bulk of the importations or the great increase of importations, as statistics show, are articles that were upon the free list, both under the Underwood Act, the Dingley Act, and the Payne-Aldrich Act; and if you were to take the rates, as I have done, of the Payne-Aldrich Act, the specific and ad valorem rates, and apply them to the specific articles that come in, you will find you would not get \$300,000,000, because there was \$1,850,000,000 of imports on the free list, and practically all of those imports, except wool, were on the free list under the Payne-Aldrich Act and the Underwood Act, and only about \$850,000,000 of dutiable goods came in. So when you apply the specific ad valorem rate of either the Wilson or especially the Payne-Aldrich Act you will find it would be very difficult to get \$300,000,000.

Mr. MARVIN. That shows that the Payne-Aldrich rates were rather low, then, Mr. Kitchin, does it not?

The CHAIRMAN. Yes; they are bound to be low on silk and rubber and tea and coffee and hides, because they were on the free list under the Payne-Aldrich and the Underwood Acts, and a large part of the importations that come in are articles that were on the free list under both acts. I have heard that statement made so often that I have looked into it, and I have found that they have just taken the average rate under each one of the acts and applied that average rate to the total amount of importations, without differentiating between the great increase of importation of articles on the free list and those on the dutiable list remaining practically the same.

Mr. MARVIN. I tried to make it clear that it was the line of my argument that the Gorman-Wilson rate, an average of, say, 21 per cent, was considered at the time very low rate, and probably the country would be willing to concede to-day that an average rate of 21 per cent was a low rate. With such an average rate applied to present importations, necessarily the income derived would be a great deal larger than it is with a rate of only 6 per cent. about.

The CHAIRMAN. But you should not take the average rate.

Mr. MARVIN. And I thought we had gone too far in reducing the rate.

The CHAIRMAN. Both under the Dingley bill, and the Wilson bill, and the Payne-Aldrich bill the free importations and dutiable importations are just about the same. The importations of articles on the free list both under the Payne-Aldrich Act and the Underwood Act are just about double. Now, of course, that applies to either one of the theories and I just wanted to call your attention to that with reference to the basis of making your average.

Mr. MARVIN. Of course, the application of my argument would involve the application of duties to many articles now on the free list and to extending the dutiable list as well as raising the rate.

Mr. GARNER. Mr. Marvin, I would like to call your attention to one thing. In making up the last revenue bill the House of Represent-

sentatives placed a 10 per cent ad valorem on all imports. The bill went over to the Senate and the Senators from New England insisted it go out of the bill. Was that the viewpoint of your organization?

Mr. MARVIN. The viewpoint of our organization was that the application of a flat rate was not a just way of getting at the question. Some items might well have stood a 10 per cent increase, but it would have applied all along the line and would have brought about very serious disarrangement in certain lines of manufacture, and it would not have borne equitably on the product.

Mr. DICKINSON. Mr. Marvin, you referred to the comparatively small amount collected in customs duties this last year, I believe, \$168,000,000.

Mr. MARVIN. That is the estimate for the current fiscal year. Last year it was \$206,000,000.

Mr. DICKINSON. Now, that reduced amount or lower amount collected is due largely to the war having cut off our trade relations with some of the countries, is it not? For instance, we used to collect a larger amount of duties or taxes from German goods that came in, and from other countries, and naturally the amount would be much larger than that if the war was not on; is not that true?

Mr. MARVIN. The total imports, you know, have greatly increased. The importations are \$1,000,000,000 larger than they were at any period with which I have compared in getting up these figures. For revenue purposes we have larger importations to-day than we have ever had in our history.

Mr. DICKINSON. Do you mean of those things that would bear duties?

Mr. MARVIN. Well, it depends upon what the duties are placed, because to-day we have an exceedingly large free list. Seventy-three per cent of the importations are absolutely free of duty.

Mr. GREENE. Mr. Marvin, with reference to this increase of 10 per cent ad valorem in the rate which was placed in the last revenue bill by the House and afterwards taken out by the Senate, I might say that while that provision, as everybody confessed, was unscientific, yet it was a singular fact, and one I think most of the members of the committee will agree with me upon, that there was less objection to it in the House, and less personal objection, so far as I heard, from anybody that was affected by it, than almost any other provision in the bill. Do you think that was because it did not strike anyone very hard, or can you give any reason why there was no more protest against it?

Mr. MARVIN. I heard a great many favorable comments in New England about the suggestion, not because the details of it were approved but because it showed a tendency toward an increase of tariff duties. They liked the manifestation it gave of looking toward a higher rate of customs duties. It seemed to appeal to New England particularly, so far as I was in touch with the men there, as an indication that we were probably in for a period of what they consider wiser and more reasonable tariff rates; not that they approved the suggestion itself, because, as you say, it was not scientifically arranged and did not take into consideration different conditions.

The CHAIRMAN. We are very much obliged to you, Mr. Marvin.

**STATEMENT OF MR. BENJAMIN C. MARSH, SECRETARY FARMERS' NATIONAL COMMITTEE ON WAR FINANCE, 35 BLISS BUILDING, WASHINGTON, D. C.**

The CHAIRMAN. Mr. Marsh, state your name and business, or occupation.

Mr. MARSH. Benjamin C. Marsh, secretary of the Farmers' National Committee on War Finance, a committee of which Gov. Arthur Capper, of Kansas, is chairman and upon which we have representatives of the National Grange, the American National Livestock Growers, the Dairymen's Union, Buttermakers' Association, the Society of Equity, and the Farmers' Union, and the Gleaners.

Mr. MOORE. What is your home place?

Mr. MARSH. I am here in Washington, at the headquarters here. Mr. Chairman, may I say that I think appreciation ought to be expressed to this committee of the sacrifice you are making in staying here and getting right at this job. The Congressmen are often criticized, and I believe it is only due to say to you that I think it is very much appreciated. Personally may I say, Mr. Chairman, that I will not be satisfied with this revenue bill which you gentlemen are preparing if you do not make me pay a much higher income tax next year. Now, I do not know how many of the folks that will appear before you will say that, but I say it in all sincerity. I have been talking to thousands of the boys down at Camp Meade and I am going to do it again, because they have asked me to come down there. I have been talking straight economics to them and why we are in this war, and I can not look those fellows in the face if I pay the income tax I did last year, my wife and I both working, with no exemption, or about \$31.50, or on about \$1,500 net. Now, gentlemen, please make me pay a decently heavy income tax, and for Heaven's sake make it a straight income tax and not a camouflage tax on consumption.

That is the most unpatriotic tax, I believe, that can be conceived, because you do not know who is going to pay it.

I am to speak chiefly this morning on an excess-profits tax and a tax upon incomes, and urge this: That the one principle upon which this war must be financed, and we believe the only adequate principle, is the equality of financial sacrifice. Yesterday I spoke in New York at a meeting at which there were several multimillionaires. I suggested this principle and they did not know whether to faint or call the police. But I think it is absolutely unanswerable. This is not a regular war. We all have got to insist, as far as possible, upon the principle of equality of financial sacrifice.

You may recall that the Grange adopted a resolution last year at St. Louis urging that the Government should take over all incomes in excess of \$100,000. It would seem that \$50,000 would be enough for a patriot, and a certain number are not entitled to more than half that. I do not see how a patriot could ask for more than \$50,000 to live on. I think you gentlemen will agree, having read the statements which many of you have made, and which I have seen in the press, with what I am going to suggest to-day, because I think I know what is in your minds, and what I am going to say I can substantiate with some statistics. May I ask the privilege of submitting later a

much fuller table of statistics and suggestions and just outline the matter this morning?

The CHAIRMAN. Without objection you may do so.

Mr. MARSH. I am here in Washington, in the Bliss Building, and if I can be of any service in getting information for you I will be glad to get it.

It has been suggested that we should put taxes upon consumption. When you come right down to it taxes on consumption are indirect income taxes. A man can not pay them if he does not have them. I am going to quote a rather conservative authority to you this morning, the Bankers Trust Co., of New York, among others, and the Commerce and Finance Journal, published by Mr. Theodore H. Price, at least up until this week, when he came here to be the actuary for the Railroad Administration. The Bankers Trust Co. estimates that in 1916 the total national income was \$50,000,000,000. Prof. Anderson, of Harvard University, estimates the national income for 1917 at \$68,600,000,000. That was criticized and I received a letter from him this morning in which he says that certainly for 1917 it will be \$60,000,000,000 or will be between \$60,000,000,000 and \$63,000,000,000. He is coming down here to do some work and he promises to prepare some figures which I will be glad to submit.

It seems to me that in this revenue bill we have two things which we want to do. We want to raise revenue without producing inflation and in such a way as to conserve the material resources of this country at the same time. Now, I urged yesterday what has been called conscription of wealth, but I think the fairer term is the equality of financial sacrifice. I urged that at this meeting in New York, where they were considering how to get war economy. It seems to me pretty obvious that if you take the income which a man might spend upon luxuries, and I was a little astounded that there was a \$2 luncheon at a meeting on war economy, but I did not take a ticket; but if you are going to have war economy you have got to see to it that people do not blow the money in foolishly. I do not know any better way to prevent that than the way the Government has of putting the property and incomes of this country on the same basis as it is putting the men of the country, or, perhaps, it would be fairer to say, on the same basis that the men of the country ask to be placed in this war.

The distribution of income is simply astounding. I was unable to send a second copy of this statement to you, but out of 27,304,000 families 7,288,000 had an income of under \$850. Many of these were individuals, of course.

Mr. STERLING. What are you reading from?

Mr. MARSH. From the Bankers Trust Co. pamphlet, which I have here. Roughly speaking, out of twenty-seven and a quarter million families, nineteen and a quarter million families had, in 1916, an income of under \$1,950. Now, the inflation is going on very rapidly and—

Mr. MOORE (interposing). I should like to know what authority there is for the figures you are presenting, because they are astounding. I would like to know what you have behind the Bankers Trust Co., or this professor, whose statement is that the incomes last year were anywhere from \$50,000,000,000 to \$68,000,000,000.

Mr. MARSH. In its issue of May 22 that question was taken up by Mr. Price in the Commerce and Finance Journal.

Mr. MOORE. He is an individual. Mr. Price is just the same as any other one of us; the professor you quote is the same as any other one of us, and the actuary of the Bankers Trust Co., who undoubtedly prepared those figures, is no more than any of the rest of us. Where do those figures come from, and from what source do you get your authority for them?

Mr. MARSH. I got the incomes of over \$3,000 from the report of the Commissioner of Internal Revenue. I have had to make an estimate, because they do not—I have not been able to get the total of the receipts from the people in the different classes, but you gentlemen can get those things, of course, at any time. I certainly trust that you will ask that the incomes being made, at least those over \$25,000, be made public, and that ought to be made a part of this bill.

Mr. MOORE. If you try to make the committee start out with the proposition that the incomes were \$60,000,000,000 last year, or any other amount, you can deduce almost anything, but you may be moving entirely away from the figures which the committee should consider.

Mr. MARSH. I am perfectly willing to withdraw all of my figures if you will ask the Commissioner of Internal Revenue to give you all the information he has. For instance, from their report for the year 1916, it appears that the aggregate corporate return was \$8,697,000,000.

Mr. MOORE. That is official, and there is such a wide difference between that and the amount you have gotten from these professors and others that I am wondering where we are going to get the exact facts.

Mr. MARSH. I have not seen anyone who denies that it was less than \$50,000,000,000.

Mr. MOORE. But, you see, that is vague. I want to be frank with you. We have got to pass a law that affects everybody.

Mr. MARSH. I will say this: If you gentlemen will ask for the information I have suggested I will be perfectly satisfied with the figures you find.

Mr. MOORE. I do not expect to interrupt you again except to ask you to authenticate the figures you have given in some way or other.

Mr. MARSH. As I explained in opening, I would like to place fuller figures in the record, and I will be glad to give you a substantiation of them. I have seen statements from a half dozen Senators, as well as many Congressmen, that you have all of these figures available. Senator Borah says you have them and the President says you have them, and I will take his word.

Mr. MOORE. You just quoted from some publication.

Mr. MARSH. Yes; from the report of the Commissioner of Internal Revenue.

Mr. MOORE. But you say you are predicating your plan upon supposititious incomes running up to as high as \$60,000,000,000, and you say the gentleman who gave you those figures is likely to be in Washington to-morrow. What help can he give us?

Mr. MARSH. I will go into more detail in just a minute or so. I will read something to you.

Mr. TREADWAY. Before you proceed let me ask you this question: You are not trying to substantiate this \$50,000,000,000 or \$60,000,000,000 income feature in any way through the official report of the Commissioner of Internal Revenue, which shows \$8,000,000,000?

Mr. MARSH. No, sir; that \$8,000,000,000 represented the corporate income returns and has nothing to do with the incomes from individuals.

Mr. LONGWORTH. How much of our total war expenditures do you want to raise by taxation?

Mr. MARSH. I do not want to put it upon a percentage basis. I think it is illogical to put it upon a percentage basis unless it is necessary, no more than I think it would have been logical at the beginning of the war to say that 1,000,000 men would be our maximum Army; no matter what happens, we will not send one more man over the million men to France to make the world safe for democracy. It would be just as illogical to do that as to say what the percentage of taxation shall be. This is not an ordinary war, it seems to me, and I think we ought to establish a principle of equality of financial sacrifice; and if necessary, raise the expenditures by taxation up to 95 per cent, or 50 per cent, or 60 per cent, as the necessity might arise. It seems to me that the whole conduct of the war should be upon that principle.

Mr. LONGWORTH. You say we should raise 90 per cent of the expenditures by taxation?

Mr. MARSH. I say if it were possible and necessary.

Mr. LONGWORTH. But you would have it lower than 90 per cent, if possible, and as low as 80 per cent?

Mr. MARSH. I certainly would pay as we go along, because I do not like the idea of piling up big debts.

Mr. LONGWORTH. You want to raise all of these expenditures by taxation; is that the idea?

Mr. MARSH. I would like to, sir, but I certainly can not take the position that this war should be an excuse for piling up enormous debts, and my position is that I would like to have the war paid for, as nearly as possible, as we go along. I am sure there is no man in this country who thinks that this war is for the purpose of piling up large debts. I could not put the case with any more force or with more cogency than did the President in his address to you a week ago last Monday.

The Commissioner of Internal Revenue does not give any figures as to the incomes of the 10 people whom he knows to have incomes of over \$5,000,000. Young Mr. Rockefeller agreed that his father's property was worth well over \$1,000,000,000, and I think it is safe to put his income at around \$70,000,000. I am informed that he subscribed that much to the liberty loan, the first one. I think it was, or perhaps the second. I estimate about \$140,000,000, which is pretty conservative. There are several men whom I know have incomes—that is, so far as people pretty high in Wall Street are informed—of from \$10,000,000 to \$12,000,000, so that \$140,000,000 is a pretty low average for the aggregate income of these 10. There are nine men who have an income from \$4,000,000 to \$5,000,000, making an aggregate of \$40,500,000. I do not believe I ought to burden you with all of these details. I have worked them out and it will take a good deal

of time for me read them to you, and unless you want me to do so, I will put them in the record.

Mr. MOORE. That schedule you are going to put in the record, are you not?

Mr. MARSH. I am going to have it copied and put in the record.

Mr. MOORE. Let us get down to your point. You think that \$50,000 is a sufficient income for any man to get in war times?

Mr. MARSH. It does seem so to me.

Mr. MOORE. What would you do with the rest of his income?

Mr. MARSH. I would put it into the Public Treasury.

Mr. MOORE. Would you confiscate it or just deliberately legislate it out of his hands, or what would you do? He might have industries in which he was engaged and if you took all of the balance from him it might do a great deal of harm to people who were dependent on him for employment. I would like to get at your plan.

Mr. MARSH. Of course, this is not the taxable income, but he is to have \$50,000 after he has paid what he owes and paid his taxes. Of course, a property owner has that deducted, while a tenant does not have those things deducted at all, and, frankly, I think that is all of the income that should be allowed a man, although you might put it up to \$100,000. As you know, the Government is now exercising supervision over all sorts of industry through the War Finance Corporation, and I think that this taking of these excess incomes will enable the Government, in large measure, to exercise control over investments in unwise and nonessential industries during the war.

Mr. MOORE. We have had all that before the committee, because the bill providing for the War Finance Corporation came out of this committee. I think Mr. Amos Pinchot has some such theory as this. He wanted the income to be \$100,000, while you have reduced the limit to \$50,000. What I want to know is what we will do with the rest of a man's income? Shall we take it away from him and confine him to \$50,000? Shall we deprive him of going on with his industry and prevent him from engaging in any enterprise, just holding him down to that \$50,000? What will we do with the rest of it? Suppose he were dependent upon that income for the maintenance of a large establishment which employed thousands of people?

Mr. MARSH. If it is an essential war industry and a going concern, under the rulings of the War Finance Corporation, that will be advanced to him, the capital which he needs.

Mr. MOORE. As a matter of fact, is not your plan that of practically confiscating and taking for the Government everything a man earns over \$50,000?

Mr. MARSH. My plan is to put the man of wealth on the same plane as the man who relies upon his earnings. Now, you do not relieve the man with an income of \$2,000, do you?

Mr. MOORE. No; he is taxed, and so is the man who earns \$50,000. But you are getting away from the question which I am putting to you, which is a plain one: What shall we do with everything a man earns over \$50,000, having due regard to the fact that what he does earn over \$50,000 is employed in an industry which helps in keeping the war going?

Mr. MARSH. I would simply say that the income of such an individual should be utilized directly under Government supervision.

Mr. MOORE. Would you take it from him?

Mr. MARSH. If you want to make it \$100,000 I will compromise on that, as far as we are concerned.

Mr. MOORE. Then above \$100,000 you would take everything away from him?

Mr. MARSH. I do not know why you should not. When you ask a soldier to go and fight you do not say, "Will you give 50 per cent of your life to the Government?"

Mr. MOORE. That is all right and that is a very clear answer. But you know that a soldier must be maintained. We have got to supply him with equipment; we have got to supply him with munitions of war; we have got to build ships to take him over and get supplies to him, and do many things to take care of the soldier; but if you take away the money that a man earns through an enterprise which is devoted to the support of the war I am wondering where you are going to land.

Mr. MARSH. But I am not talking of a capital tax; I have not mentioned a capital tax, and your criticism would lie only against a capital tax, which, by the way, has been discussed, as you know, in England, and which, I think, it would be very foolish to attempt at this time. I think it would mean the breaking up of business.

Mr. GARNER. If this war continues two or three years—and some other able men, who know more about it than you or I, have said that it will probably continue that long—you have got to collect taxes in the next fiscal year.

Mr. MARSH. Yes, sir.

Mr. GARNER. And in the next fiscal year. If you destroy the incentive of a man to have an income because the Government is going to take everything away from him above a certain figure, how are you going to collect taxes at all? In other words, you are killing the goose that lays the golden egg.

Mr. MARSH. Your question postulates a lack of patriotism on the part of the rich which I would not expect anybody but an I. W. W. to accuse them of.

Mr. GARNER. I have never seen a man who was so patriotic, as you intimate, as to be willing to give the Government all of his money above a certain amount.

Mr. MARSH. Why in thunder should he not do it? Lincoln said, you know, when a bunch of rich men—

Mr. GARNER (interposing). The fact that he does not do it answers your question.

Mr. MARSH. All right, then, but I think it is on the same basis as the supervision which the Government is now making of almost every individual and industry in the country. It seems to me it is perfectly obvious that the Government could take everything above a certain amount, as well as it can supervise these various industries. May I continue to make some other suggestions?

Mr. HAWLEY. Suppose a man having an industry should earn, after paying all of his obligations, \$1,000,000. He has planned to extend his industry so as to produce more of the things needed for the war and intends, by the expenditure of \$600,000 of that million dollars, to enlarge the industry. Would your proposition to take all in excess of \$100,000 prevent him from putting that \$600,000 into

an enlargement of the industry, or is it your proposition to take all of the \$900,000 and put it into the Treasury of the United States?

Mr. MARSH. It would prevent him from putting that money which he had secured—it would not prevent the money being put into that industry. I tried to make that clear.

Mr. HAWLEY. How would you accomplish that?

Mr. MARSH. The Government is to-day assuming, and necessarily so, absolute control over all industrial activities, financial transactions, and everything else in the United States—railroads, express companies, and everything else, and it can not do that logically as long as the Government has got to go out and compete with private capital which may be going into nonessential industries. I think that such a measure—

Mr. HAWLEY (interposing). My question was based on an essential industry. All enlargements are made by borrowing the surplus earnings of somebody else or using one's own surplus earnings. If he can not put \$600,000 of his own earnings into an expansion of his business he must borrow it from somebody else, which would represent the surplus earnings of somebody else. If all of the surplus earnings must be put into the Treasury where would you get the capital with which to enlarge a business?

Mr. MARSH. Get it from the Treasury, into which it goes, because that is where it will go.

Mr. HAWLEY. That would mean the nationalization of all industries?

Mr. MARSH. If we do not nationalize industry we are going to lose the war.

The CHAIRMAN. We must go to the House in probably three minutes.

Mr. MARSH. May I come back again, because I had only gotten started.

The CHAIRMAN. How long will it take you to finish now?

Mr. MARSH. It will take me about a half or three-quarters of an hour.

The CHAIRMAN. You are in the city?

Mr. MARSH. Yes, sir.

The CHAIRMAN. Would it be perfectly satisfactory for you to come here at some other time?

Mr. MARSH. Absolutely.

The CHAIRMAN. And continue your remarks?

Mr. MARSH. Yes, sir. I have only suggested one of my topics and I have not had time to develop it, so that I would like to continue it.

(Thereupon the committee recessed until 2.30 o'clock p. m.)

## REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Saturday, June 8, 1918.*

The committee this day met, Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, O'Shaughnessy, White, Moore, Green, Longworth, Sterling, Martin, Hawley, and Treadway.

The CHAIRMAN. Mr. Johnson, you want to be heard this morning, and we will be glad to hear you.

### STATEMENT OF HON. ALBERT JOHNSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON.

Mr. JOHNSON. I am glad of the opportunity to come before this committee to open briefly the troublesome subject of the second-class postage rates. I would like to say that I have been consulted by no one affected by the zone system. I introduced a bill last may in an effort to advance what I thought was an equitable method of arranging the second-class zone system.

Mr. GARNER. Have you a copy of that bill?

Mr. JOHNSON. Yes; I have a new bill, which is now numbered H. R. 12374.

Mr. GARNER. Will you put it in the record?

Mr. JOHNSON. Yes, sir.

(Said bill follows:)

[H. R. 12374, Sixty-fifth Congress, second session.]

A BILL To provide for the revenue of the Government by establishing a graduated rate for payment of a tax on newspapers and periodicals according to rate of subscription price and number of copies circulated through the mails, in addition to existing rates.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That on and after January first, nineteen hundred and nineteen, the rates of postage on all mail matter of the second class shall be, in addition to the existing rate of 1 cent for each pound or fraction thereof, as follows:

For newspapers, magazines, and other periodicals whose subscription price is 50 cents or less per year, and whose circulation through the mails is less than twenty thousand copies per issue, one-half of 1 cent for each annual subscription circulated through the mails.

For newspapers, magazines, and other periodicals whose subscription price is 50 cents or less per year, and whose circulation through the mails is more than twenty thousand copies but less than one hundred thousand copies per issue, 1 cent for each annual subscription circulated through the mails.

For newspapers, magazines, and other periodicals whose subscription price is 50 cents or less per year, and whose circulation through the mails is more than

For newspapers, magazines, and other periodicals whose subscription price is more than \$5 but less than \$6.01 per year, and whose circulation through the mails is less than twenty thousand copies per issue, 6 cents for each annual subscription circulated through the mails.

For newspapers, magazines, and other periodicals whose subscription price is more than \$5 but less than \$6.01 per year, and whose circulation through the mails is more than twenty thousand copies but less than one hundred thousand copies per issue, 12 cents for each annual subscription circulated through the mails.

For newspapers, magazines, and other periodicals whose subscription price is more than \$5 but less than \$6.01 per year, and whose circulation through the mails is more than one hundred thousand copies per issue, 24 cents for each annual subscription circulated through the mails.

For newspapers, magazines, and other periodicals whose subscription price is more than \$6 per year, and whose circulation through the mails is less than twenty thousand copies per issue, 10 cents for each annual subscription circulated through the mails.

For newspapers, magazines, and other periodicals whose subscription price is more than \$6 per year, and whose circulation through the mails is more than twenty thousand copies per year, 20 cents for each annual subscription circulated through the mails.

SEC. 2. That the additional postage charged provided for in section one hereof shall be due and payable quarterly, on the first days of September, December, March, and June, and shall be collected by the postmaster of the office at which such newspaper, magazine, or other periodical is presented for mailing under the provisions of the general law.

SEC. 3. That the Postmaster General be, and he is hereby, authorized and directed to promulgate such rules and regulations as may be necessary for the proper computation of charges as provided in section one hereof, and for the collection thereof.

SEC. 4. That all free-in-county privileges granted to publications under existing laws are hereby retained.

MR. JOHNSON. The bill can be better understood by noting that the "free-in-county" privilege remains and by condensing the remainder to a table of graduated rates as follows:

*Second-class rates.*

Subscription rate.	Up to 20,000 subscribers.	20,001 to 100,000.	100,000 and up.
	Cents.	Cents.	Cents.
50 cents or less.....	0 1/2	1	2
More than 50 cents, less than \$1.01.....	1	2	4
More than \$1, less than \$2.01.....	2	4	8
More than \$2, less than \$3.01.....	3	6	12
More than \$3, less than \$4.01.....	4	8	16
More than \$4, less than \$5.01.....	5	10	20
More than \$5, less than \$6.01.....	6	12	24
More than \$6.....	10	20	40

MR. JOHNSON. Now, that's a tentative schedule for second-class rates, and only for second-class rates. A war tax on advertising is quite another thing. We will come to that. It is the particular work of this committee, and I would like to say, in parenthesis, that I do not envy the members of this committee the gigantic task ahead of them. If I can help even in a small way, I sincerely desire to do so, and if the committee will but say the word I'll take my coat off and go to it—endeavor to estimate second-class postage receipts and the like.

First, let me affirm that I believe the committee will find it advisable to divorce the matter of equitable second-class rates from the

matter of a war revenue. I believe that it will be necessary to take from all the periodicals carrying advertising a war tax, but I do not think that a war tax on advertising should be confused with the matter of raising the proper amount of money as second-class postage. That is what is about to happen under present law. Congress tried to correct second-class postage inequalities, but between House and Senate, back and forth, we produced a zone system applicable to the advertising pages, which will bring in some additional postage, but puts advertising in a position where you can not readily tax it for war purposes.

So my bill, to put it before you as quickly as I can, proposes to regulate the second-class postage rates on a graduate scale—I think the committee is familiar with that—based on the subscription price and the number of subscribers, carrying it on up to the first division, say, of 20,000, the next division 100,000, and so on. That takes care of the second-class rate. Then after you have done that and are looking for war revenue let some of it come from advertising. Put on a revenue tax of whatever the committee, in its wisdom, thinks necessary, based on the pages of the publication and regulated in accordance with the size of the pages, and the quantity of paid circulation.

Mr. GARNER. You realize, then, that the second-class matter is not paying as much toward the postal receipts as it should pay.

Mr. JOHNSON. I do not dispute that.

Mr. GARNER. Your only criticism is that this should not be considered as a method of getting taxes for war purposes?

Mr. JOHNSON. No. I think we have made a mistake—

Mr. GARNER (interposing). Just a moment. When the committee put that in the bill I do not think the purpose was merely for the purpose of deriving revenue for the purposes of the war, but that it was done more for the regulation of second-class matter, so that it would pay its just portion of the expense of the Post Office Department.

Mr. JOHNSON. And that brings us to the very trouble I now have, namely, in undertaking to appear here, when, as a matter of fact, my bill is always referred to the Committee on Post Offices and Post Roads. That is, the Post Office part of it.

Mr. GARNER. You realize, Mr. Johnson—at least, you have been a Member of Congress long enough to realize—that the influence back of second-class postage makes it impossible for the Post Office Committee of the House and the Post Office Committee of the Senate to pass any such bill, and that therefore the only chance we had was to make it a part of the war revenue bill, which could not be defeated.

Mr. JOHNSON. I realize that. My object is to endeavor to reach an equitable plan. I regret that there does not seem to be a method by which a plan could be made effective prior to July 1, because I am afraid that the zone system is going to make a lot of trouble. However, I did not come here to analyze the zone system or point out any of the many objections, except that I desire to point out a few troubles in connection with its operation.

Here is a sheet containing instructions to postmasters for the handling of the zone system, effective July 1. That sheet has just been printed in the printing office of the Post Office Department in the

city of Washington. It is made up of nearly three hundred lines of the smallest type and has only been sent to the largest post offices. It has not reached the small post offices, and has not reached the small newspapers. They will secure their information through the printing of it, if it has not already been done, in the supplement to the postal guide. The blanks on which newspaper publishers are to report their proportion of advertising and their zones of circulation have not yet been printed; and the Post Office Department tells me that the congestion at the Government Printing Office is such that they can not say when they will be printed. It is not a big blank, and they have given me copies in typewritten form. I discovered all of this in an effort to ascertain how this thing could be put into effect for my own newspaper, published on the edge of the Pacific. I might take up that paper and the Post Office Department's statement just to show the difficulties—

Mr. COLLIER (interposing). Will your bill bring in more revenue than the present law?

Mr. JOHNSON. I think it will—a great deal more.

Mr. STERLING. Is it on the zone plan?

Mr. JOHNSON. No. Let me state the plan again. The bill which I have introduced proposes only a plan to regulate second-class postage rates, and not to make the people in the eighth zone pay extra for the privilege of taking any periodical that they want to take, and at the same time not force the local advertiser to pay anything additional to the newspaper for advertising, because certain copies of that local newspaper are circulated 1,200 or 1,800 miles away. That is the inequality of the zone system as applied to all but the greatest publications. The zone system will be helpful to and will not especially embarrass certain national newspapers. There are about 24,000 periodicals and publications in the United States, and I am satisfied that three-quarters of them will be under a great handicap because of the zone system, to say nothing of unnecessary trouble and expense. The Government will gain heavily in postage from the few at the expense of the many.

Take my own paper, a little local newspaper. It probably has 2,500 subscribers. A short time ago it had less than 200 going throughout the United States; now it has 600, 400 of which go to soldiers 3,000 miles away or more. Ninety per cent of the advertising in that paper is local. The price of the paper is \$7.20 a year, but it is sold to soldiers at \$4 a year. A local advertiser takes a half page at a rate he can pay. Perhaps he thinks he is making the publisher a gift when he pays 20 cents an inch. It is a hardship on the local advertiser to charge him, say, 24 cents an inch because 400 copies go 3,000 miles away, giving him no benefit. As I said a minute ago, 20,000 of these newspapers and publications, or at least 18,000 of all that are printed, receive their advertising chiefly from local sources. In the State of the chairman of this committee, North Carolina, where they have a large number of fine small dailies, the bulk of the national advertising that goes to those papers is paid for at the lowest possible rate.

Mr. GARNER. Your bill has been referred to the Post Office Committee of the House?

Mr. JOHNSON. Yes, sir.

Mr. GARNER. Have you had a hearing before that committee?

Mr. JOHNSON. No; but I am trying to get one. A moment ago the gentleman from Mississippi, Mr. Collier, asked whether I thought my bill would bring in more revenue. We will put it this way: If we can induce the Post Office Committee or this committee to bring out a bill that does not discriminate against the people who live far away from the place of publication but fairly attempts to make the newspapers pay what they ought to pay—and when I say newspapers I mean periodicals—for the use of the second-class privilege, then this committee is perfectly free to fix a tax on advertising, and when this committee undertakes to do that—and I think it is a proper source of revenue—then it must not only tax the advertising in all newspapers and periodicals but all advertising on billboards, street cars, and wherever it can be reached, whether that advertising is done directly or by contract.

Mr. GARNER. You know the status of revenue from second-class matter?

Mr. JOHNSON. Yes.

Mr. GARNER. I think it has been admitted by all parties that the province of the Post Office Department was to carry at cost all letters, parcel post, and other mail matter. Do you agree to that principle?

Mr. JOHNSON. That it should carry it at cost?

Mr. GARNER. As nearly as possible at cost; at least, pay its own way?

Mr. JOHNSON. Yes, sir.

Mr. GARNER. The second-class mail costs the Government about \$90,000,000 a year.

Mr. JOHNSON. Yes; I have heard that stated.

The CHAIRMAN. It was \$103,000,000 last year.

Mr. GARNER. That may be so, but I know that the lowest estimate was \$90,000,000. Out of that the Government got back \$11,000,000. Now, if you or anybody else can devise any scheme whereby we can get \$90,000,000 or \$100,000,000, the cost of carrying second-class matter, speaking for myself, I am for the proposition.

Mr. JOHNSON. I am very glad to hear that. The bill I offer will produce much more than the zone system:

Mr. GARNER. But I do not want you to come along and say, like most of them do, that you do not want to pay your part of the cost of running the Post Office Department.

Mr. JOHNSON. Of course, I have never quite agreed that we positively knew there was a dead loss of \$90,000,000, but we will say there is a great loss, and we will call it \$50,000,000. Then it is proper to devise any plan that is possible to produce that \$50,000,000 or \$60,000,000.

Mr. GARNER. I agree with you.

Mr. JOHNSON. And I think it can be done along the lines of my bill, a copy of which I have placed in these hearings. Let me present an example, and I will place others in the record of the hearings.

For instance, Comfort, with 1,276,800 subscribers, would pay 1 cent a pound, and 2 cents for each and every subscription sent through the mails outside of the county in which it is published, or \$25,536.

But, if a tax of about \$25,000 on a 25-cent periodical with more than a million subscribers is thought to be out of proportion to a

tax of ten cents a subscriber on a \$5 publication with 10,000 subscribers—or \$500 per annum—then the second doubling of the tax for publications selling at 50 cents or less can be omitted—that is, the increase after 20,000 subscriptions are gained.

Now, that is, in a sense, a small indirect tax on the advertising which sustains that publication at its low subscription rate. It is assumed that a circulation of a million or more copies warrants its publisher in charging advertising rates in proportion. There is still left open the door for a direct tax on advertising, based on number of pages and number of subscribers, and possibly all three, collected, not by the Post Office, but by the Treasury Department. And a very small tax on all advertising, day in and day out, will produce a great sum annually. The tax must not be heavy enough to discourage advertising.

To ascertain how the plan will work for small country papers, let us take the Calvert Gazette, published in Prince Frederick County, Md., with 500 subscribers, at \$1 per year. It would have its circulation in county free, pay 1 cent a pound for papers sent outside the county, and would pay 1 cent war tax on each annual subscription sent out of the county. If it sends 100 copies outside, it will pay \$1, which is enough. If when the zone system goes into effect, July 1, the Calvert County Gazette is sending 100 subscriptions to all parts of the United States, it will find itself subject to many perplexities; so will the postmaster at that town.

I believe that newspapers of that size are doing so much work these days free of charge for the Government, and that their very existence is so jeopardized by war costs of print paper, labor, etc., that they should be exempted from the graduated scale if their circulation is 2,000 copies or less and exemption from any increase beyond the 1-cent-a-pound second-class rate.

I have a statement furnished by the Post Office Department showing the difficulties that attach to a little daily paper of 2,500 subscribers, and I would like to present it, as follows:

POST OFFICE DEPARTMENT,  
THIRD ASSISTANT POSTMASTER GENERAL,  
Washington, June 5, 1918.

Hon. ALBERT JOHNSON,

*House of Representatives, Washington, D. C.*

MY DEAR MR. JOHNSON: In response to your request of to-day, there is inclosed a copy of Form 3539a to be used by publishers in setting forth the circulation of their publications outside of the county of publication, as prescribed in paragraph 7 (b), section 536, amended Postal Laws and Regulations, a copy of which is inclosed.

With respect to your particular inquiry concerning mailings of your publication, the Grays Harbor Daily Washingtonian, published at Hoquiam, Wash., I have to say that there were 312 issues of this publication mailed during the year 1917. There were mailed within the county 3,389 pounds free of postage, and there were mailed to subscribers 6,614 pounds on which postage was paid at the rate of 1 cent a pound, an average mailed under postage of 21 pounds a day. It appears from a copy of the publication on file in this office that there are about seven copies to a pound, and thus the average daily mailings on which postage is required amounted to about 147 copies. Some of the copies on which postage was paid are addressed to Aberdeen, Wash., which is within the county of publication and on which there has been no change in the rate of postage under the new law.

The number of copies of your publication going to subscribers outside the county is, therefore, somewhat less than 147. Such of these copies as are addressed for delivery within the first and second zones, even though outside the

county, are subject under the law to the postage rate of 1½ cents a pound during the year beginning July 1, 1918, regardless of the amount of advertising contained in them. Of the remaining copies going to the zones other than the first and second, the portion devoted to advertising would be subject to the zone rates, while the portion devoted to matter other than advertising would be subject to the flat rate of 1½ cents a pound.

No change whatever is made in the manner of mailing copies for distribution in the county of publication. The copies subject to the zone rates may be presented for mailing in bulk as heretofore, the publisher furnishing the postmaster twice a year, or oftener, if he desires, on Form 3539a, the per cent of such copies which go to the respective zones.

The publisher will file with the postmaster a copy of each issue of his publication, marked to show the per cent of the matter which is devoted to advertising and the per cent of that devoted to matter other than advertising. If, therefore, 50 per cent of the matter contained in your publication should be devoted to advertising and 50 per cent devoted to matter other than advertising, one-half of the weight of the copies going to the zones other than the first and second would be subject to the flat rate of 1½ cents a pound, while the other half would be subject to the rates applicable to the respective zones.

Yours, very truly.

A. M. DOCKERY,

*Third Assistant Postmaster General.*

Mr. JOHNSON. I have shown the letter to one member of the committee, and he says he is not quite clear as to what that third paragraph means. I think it means that the advertising charge is not picked up this coming year until the paper reaches the third zone.

But, whatever it means, it is clear that the same processes and the same difficulties apply to all of the smaller daily newspapers everywhere, including those in North Carolina, and I have analyzed those in that State, which I visited recently. Take Charlotte, N. C. I found two fine papers there—the Charlotte Observer, delivering 13,200 copies, at \$8 a year, and the Daily News, with 9,500 subscribers, at \$7 a year. Now, where do those papers circulate? Probably three-fourths of all the circulation is in their counties, not a matter of post-office concern, and the others go out into the State. North Carolina is a long State and runs over three or four zones. Those papers, living largely on local advertising, are handicapped in an effort to reach the parts of the territory in which they should circulate.

The CHAIRMAN. The Charlotte Observer has a State-wide circulation, while the Daily News is an afternoon paper.

Mr. JOHNSON. It is a local paper.

The CHAIRMAN. Yes.

Mr. JOHNSON. Both are good journals. The Charlotte Observer is as fine a newspaper as you will find in any city of Charlotte's size. I might say the same about the Raleigh News-Observer and the Greensboro News.

The CHAIRMAN. Have you the statistics as to the zones in which those papers circulate.

Mr. JOHNSON. No exact statistics.

Mr. MOORE. I understood you to say that North Carolina is a long State and runs over three or four zones.

Mr. JOHNSON. Yes, sir; and is not that so?

Mr. MOORE. That is what I am asking you.

Mr. JOHNSON. Let us see whether we are clear about it. Do the zones for charges on newspaper advertising run the same as the parcel-post zones?

Mr. MOORE. You have looked into it, and I am asking you. As a matter of fact, how many zones are in North Carolina?

Mr. JOHNSON. Well, I am not an expert.

Mr. MOORE. I thought you said three or four.

Mr. JOHNSON. Yes; at least three. Let us look at these instructions as to the increased rates on second-class matter, effective July 1. Let us find out. This statement was put out on May 27 by ex-Gov. Dockery, the Third Assistant Postmaster General. It gives the rates per zone, but does not give the size of the zones, and I assume that the zones were perfected to run with the parcel-post zones when we were passing this law. The first zone is up to 50 miles, and the second zone is from 50 miles to 150 miles. These two are incorporated in the first zone for the postal system, but omitted as regards advertising charges by zones, if I read the provision correctly. The third zone is from 150 to 300 miles; the fourth zone from 300 to 600 miles; the fifth zone from 600 to 1,000 miles; the sixth zone from 1,000 to 1,400 miles; the seventh zone from 1,400 to 1,800 miles; and the eighth zone over 1,800 miles.

Mr. MOORE. You say there are only eight zones. Would not Carolina run into the fourth zone?

Mr. JOHNSON. I believe so.

The CHAIRMAN. What did you say the fourth zone is?

Mr. JOHNSON. From 300 miles to 600 miles.

The CHAIRMAN. From Wilmington to Asheville it is over 300 miles.

Mr. JOHNSON. That would bring it within the fourth zone, then.

The CHAIRMAN. But the average radius of the Charlotte Observer, the News-Observer, and the Daily News, of Greensboro, N. C., would be within the third zone.

Mr. JOHNSON. Of course, on the bulk of the circulation, so that they must go through all of the travail of the zone system, and will not be called upon for much additional postage payment. That is the very point, and I mean it with no disrespect to the smaller dailies.

Further, there are three well-defined zones in North Carolina, and four for some extended cases, and New York City is only 300 miles from North Carolina: 300 miles will take you well into North Carolina. You can not travel around in those little cities and stop at the various hotels without finding copies of the New York Times in every place, and the people waiting for their copies. So, with the zone system or without the zone system, you will not stop the metropolitan newspapers from going as far as they can go.

The CHAIRMAN. Do you know how much the New York Times has increased its advertising rates and its subscription rates since the act of October 3, 1917?

Mr. JOHNSON. I know it has made a great increase above its quoted price in the Newspaper Annual of one year ago. I think the price of the New York Times is now about \$12 a year.

The CHAIRMAN. Have you ever looked up the date in an effort to ascertain how much the Government was losing on the New York Times alone?

Mr. JOHNSON. I have endeavored to do it. I have a statement here about their circulation, but it is a confidential letter from the Post Office Department.

The CHAIRMAN. Have you any figures showing what the Government is losing in that connection?

Mr. JOHNSON. No; I have not the figures. But I hope the chairman will not put me in the attitude of undertaking to exempt any periodical from the payment of the full second-class rates. I believe the big newspapers are quite willing to pay their full share.

Mr. GARNER. In other words, you want the New York Times to pay what it costs the Government to handle that paper?

Mr. JOHNSON. Yes.

Mr. GARNER. That premise is understood.

Mr. JOHNSON. Yes, sir.

The CHAIRMAN. From calculations made while the last revenue act was pending the publisher of the New York Times, for the year 1916, paid the Government \$100,232 for the service of handling, transporting, and distributing its paper, while it cost the Government for rendering such service \$551,276, making a clear loss to the Government of \$451,044 and a clear subsidy to the publisher and its patrons of \$451,044.

Mr. JOHNSON. Let us see what would happen to the New York Times if we made two charges as a matter of post-office regulation, based upon the subscription price of the New York Times, if it is \$12 a year, one scale applying as a post-office charge for that and the second scale based on the price of each subscription, and charged on that. That would be the cost of getting it through the mails.

The Daily Times has approximately 400,000 subscribers. Say it puts one-half in the mails, and we can easily find exactly the number it mails. The top rate I offer is for a \$6 subscription. Let the committee add other rates on up to \$12, and you can secure from the Times several hundred thousand dollars in addition to 1 cent a pound on the twelve million-odd pounds it mails per year.

And then you can look to the matter of raising war revenue. The New York Times, on Sundays, has, we will say, 112 pages. Why has it 112 pages? Because it gets advertising to support that number of pages, and 40 per cent of the pages, roughly speaking, are advertising. Now, then, if you want to tax advertising, tax the number of pages in the periodical or newspaper in proportion to the number of subscribers, and put on any tax that this committee thinks is necessary to raise sufficient revenue, being always careful not to discourage advertising by making the tax too high.

Mr. MOORE. Are you favorable to that?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. To the taxing of advertising?

Mr. JOHNSON. Absolutely. We have got to go far deeper into all places than the public realizes to raise revenue.

Mr. COLLIER. I want to ask you a question to see what your general idea of this is. Do you believe that the second-class mail matter should be carried at a loss or that it should be self-sustaining?

Mr. JOHNSON. I believe it should be placed in the position of sustaining its cost, or nearly so.

The CHAIRMAN. The only difference between Mr. Johnson and this committee is the method.

Mr. JOHNSON. That is it.

Mr. COLLIER. Do you think our present rates are too high?

Mr. JOHNSON. No. I have a letter from a very important weekly saying they hope I will not undertake to disturb the zone system. It seems to think it is getting the best of it.

Mr. COLLIER. You want second-class mail to pay its way?

Mr. JOHNSON. Well, it should nearly pay its way. It can afford to do so, if you do not make some of them pay what they have not got, and will not get under a zone system. I stated to the committee in the beginning that I did not intend to criticize the zone system, although I could do so on many points. I am not going to waste your time in making those criticisms, because they can wait. It is a question now of devising, if possible, a better plan to raise the necessary second-class postage revenue so as to fairly distribute it and not penalize the minor publications.

Mr. COLLIER. You do not take the position that on account of the educational feature of some of the publications they should go through at a very low rate.

Mr. JOHNSON. No. I oppose special privilege. I take the position that it is a mistake to exempt a lot of publications because they are educational, scientific, philanthropic, agricultural, labor, fraternal, or religious, the net income of which goes for the benefit of no private stockholder or individual. Let us see what we do there. We let a large number of classes of publications come into the mail through the second class and thus disturb the situation so that we may never know what is the actual and proportionate cost of carrying second-class matter, because they have practically a free rate as compared with the other publications. On top of that we invite them to solicit advertising and they fill up their pages. A man who has Castoria to sell does not care where he puts his ad if he can get results, and if you make it hard for Castoria to advertise in a Philadelphia periodical that is run for profit and make it easy for him to put his advertisement in a religious paper, he will put his advertisement in the latter, even though it is a cooperative paper. Because of that it will always be difficult, if ever possible, to have a proper classification of the second-class rate, which we want to raise to the point of paying its bills.

Mr. COLLIER. You think that a fraternal and religious journal should bear the same rate as other publications and provide some other way to take care of them?

Mr. JOHNSON. I believe there should be no distinction. If we make these exemptions we defeat our own argument that second-class matter should pay its bills, pay what it costs to circulate it, because the argument generally is that second-class mail matter must not stick the Government for \$90,000,000 a year.

Mr. MOORE. Have you explained your bill or have you read it.

Mr. GARNER. It is in the record.

Mr. MOORE. Several members have come in since that and it might be helpful to briefly explain it again.

Mr. JOHNSON. My bill provides that for a subscription rate of 50 cents a copy, up to 20,000 subscribers, there shall be a charge for the second-class privilege of one-half cent per subscriber; that from 20,001 to 100,000 subscribers the tax rate for the second-class privilege should be 1 cent per subscriber, and in excess of 100,000 subscribers that the tax rate shall be 2 cents per subscriber. All of that is based on a subscription price of 50 cents. High subscription prices, higher rates.

Mr. MOORE. Is that the tax?

Mr. JOHNSON. Perhaps I should not use the word "tax" because I prefer it to mean the cost of delivering the paper through the mail.

Mr. MOORE. That is the revenue the Government is to get under your proposition.

Mr. JOHNSON. Yes, sir; which the Government is to take in to cover the expense of carrying second-class matter through the mails.

Mr. MOORE. Let me see if I understand you. Would you abolish the zone system?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. And substitute a charge in the form of government revenue against the subscriber?

Mr. JOHNSON. It is not against the subscriber.

Mr. MOORE. Let it be laid against the paper but really charged up to the subscribers?

Mr. JOHNSON. Well, not quite. Give me \$500,000, and I'll gladly pay a fair postage toll for each one.

Mr. MOORE. Then you would have to add something to that which you propose, because that would not make up the difference in second-class matter to-day.

Mr. JOHNSON. No, perhaps not. Neither will the zone system.

Mr. MOORE. Then, would you tax advertising?

Mr. JOHNSON. Then I ask this committee to come in and place a tax on the number of pages in every publication, based on the size of the page, whether it be the size of the ordinary small magazine, the Saturday Evening Post page, or the seven-column page of the Chicago Tribune, and based on the number of subscriptions in the mail and out of the mail.

Mr. MOORE. Would not that leave open the same old question of favoritism to a certain class of business men?

Mr. JOHNSON. Not a bit of it. Where does favoritism come in?

Mr. MOORE. In having a certain advantage of the mails which others do not enjoy?

Mr. JOHNSON. Who would have the advantage of the mails?

Mr. MOORE. The publishers.

Mr. JOHNSON. If any publisher circulates anything outside of his county in the mails he pays through two forms of graduation.

Mr. MOORE. Let me put it to you a little more clearly, from the viewpoint of another matter. I am going to do this in your time because you are a newspaper man and it will fit in here very well. We receive many letters from users of the mail, first class, complaining about the prospect of the repeal of the proposed zone system going into effect in July. These protests come from men who pay full postal rates for the use of the mail, and, perhaps, more now under the 3-cent first-class postal charge. They complain that the publishers will have an undue advantage in the matter of the second-class rate under the zone system as they had it heretofore.

This is a business man's point of view and not a public man. I am quoting from a letter from Walter Cox, president of the Pennsylvania Wire Glass Co., and it is in the same form and substantially in the same language of many other protests that come from business men. Mr. Cox says—

It certainly does seem outrageous to us that first-class postage should bear the brunt of all mail-carrying charges; that the business men of the country should be taxed to pay, what amounts to a subsidy, the carrying cost of

second-class postage. The increase in the number and extent of magazines of late years only goes to show the enormous profits which they are getting in the magazine business, owing to a subsidy granted to them by the Government.

You are familiar, of course, with that general line of argument.

Mr. JOHNSON. Oh, yes. It is a just complaint.

Mr. MOORE. And it grows out of the fact that in the matter of publications using the second-class mail privilege, there is a great distinction made. The Government loses money in permitting the use of the second-class mail privilege as it has been permitting it to be used.

Mr. JOHNSON. That is just what we are trying to cure.

Mr. MOORE. It is due to the fact that magazines carrying a large amount of advertising seem to have an unfair advantage over first-class mail, just as the country newspapers, of which, I think, you spoke, have an unfair advantage over other newspapers in their free circulation in the counties where they are published. Those things are what we call subsidies, and I am presenting to you the view of a business man on them so that you can consider it in making your argument.

Mr. JOHNSON. If this committee will consider this plan, I would be glad if the committee would appoint a subcommittee to look into the whole question, because, in my opinion, it will have to be considered in conjunction with the matter of raising revenue. The question of equalizing the zone system or the second-class system has been before another committee, but we want it equalized now so that you will hear no more complaints like that you have just read.

Mr. MOORE. Then, as I understand it, you consider the present system faulty, and think it ought to be modified?

Mr. JOHNSON. Yes; and if the gentleman will permit me I will make the further statement that later on, when all the little daily newspapers—I see there are 30 of them in Mr. Kitchin's State—have to make reports every day as to the number of papers put into the mail by zones and the percentage of the pages of advertising, the percentage to be reported each and every day, it will add greatly to the congestion already existing in the post offices, of which the letter-postage payers are now complaining bitterly. Take any medium-sized post office. The postmaster is already worked nearly to death; he is not only the postmaster but he has many other duties. As postmaster his duties have been greatly added to because of parcel post; but, in addition to all that, he is an important Government factotum in the matter of the draft and in war matters generally. The probabilities are that the zone rules have not yet reached him. The Post Office Department, only day before yesterday—

Mr. MOORE (interposing). We are now putting into effect the zone system?

Mr. JOHNSON. Not until July 1 for newspapers; and these regulations embrace nearly 300 lines of the smallest type that is used.

Mr. MOORE. You must bear in mind the fact that that act was passed on October 3, 1917, and at that time it was generally announced that the newspapers would have six or seven months in which to adjust themselves to it.

Mr. JOHNSON. How can a newspaper adjust itself? Take, for instance, the daily paper at Charlotte, N. C. We will suppose that the

Charlotte paper has 4,000 subscribers in certain zones in that State, with 300 papers going to subscribers clear into the eighth zone. It is a morning daily. The publisher of that paper must certify to the Post Office Department every day the percentage of advertising in those papers for each zone. That will make confusion out of all proportion to what that paper will pay in addition to the second-class postage rate. The regulations say, among other things:

3 (a). The copy of the publication filed with the postmaster as required by paragraph 1 of this section shall be marked by the publisher to show the portion devoted to advertisements and that to matter other than advertisements, and the percentage of each shall be indorsed on the first page of such copy by the publisher. The term "advertisements" as used herein and in paragraph 1 (b), section 429, embraces display, classified, and all other forms of advertisements purporting to be such, as well as all editorial or other reading matter for the publication of which money or other valuable consideration is paid, accepted, or promised. (See par. 2, sec. 443.)

3 (b). When a news agent presents for mailing second-class matter subject to the zone rates of postage, he shall submit to the postmaster a statement showing the per cent of the space in such matter devoted to advertisements and the per cent devoted to other than advertisements. Publishers should furnish this information to news agents purchasing copies of their publications in order that such agents may be able to prepare the statements required.

And so on, with numerous references to forms which are not yet printed.

Mr. MOORE. You are familiar, of course, with the law which requires circulation statements to be made by newspapers?

Mr. JOHNSON. Yes, sir.

Mr. MOORE. Is it not a fact that the newspapers find difficulty in making those statements or returns?

Mr. JOHNSON. I think not.

Mr. MOORE. Have you heard of any statistical companies or auditing companies that have been taking over that business for the papers and covering the work of preparing those circulation statements because of the confusion that was caused by that work in the newspaper offices?

Mr. JOHNSON. No; I doubt if it should be attributed to a matter of confusion in the newspaper offices. There are concerns that audit circulation statements of newspapers and undertake to assist those newspapers having the circulations to get a better rate from foreign advertising because of the fact that the circulations are certified.

Mr. MOORE. Is it not a fact that certain large newspapers have found it difficult to prepare their circulation statements, and for that reason have employed those agents?

Mr. JOHNSON. I do not think so at all. I think those agencies and this auditing business have developed for the purpose of certifying, for instance, that the Jamestown Gazette has so many subscribers, and the Jamestown Gazette can then go to Peruna, for instance, and say, "Here is our certified circulation." They can do that and demand such-and-such a rate based on that circulation.

Mr. MOORE. It did not become necessary to employ those agencies to prepare those statements because of the confusion that was created in the newspaper offices in the preparation of them?

Mr. JOHNSON. I do not think it is necessary on that account. They employ those agents, of course, for other reasons.

Now, gentlemen, I think that the very machinery by which the newspapers now state their circulation to the Post Office Department

could be used in the collection of the form of second-class rates that I have outlined. The newspapers would then have to divide their circulation into free county circulation and outside county circulation reducing it to two forms, rather than dividing it according to zones.

Mr. HAWLEY. Do you propose to withdraw the privilege that local papers now have of circulating free of charge in the counties where they are published?

Mr. JOHNSON. No; I propose to continue that as it is. I think it would be well to exempt them.

Mr. HAWLEY. What does it cost the Government, out of this deficit to which reference has been made, to pay for circulating those papers free in the counties where they are published?

Mr. JOHNSON. I have not exact information as to what it costs, but it is a considerable sum of money.

Mr. HAWLEY. What proportion of the deficit of \$90,000,000 would it be?

Mr. JOHNSON. I would hate to guess, but I should say it would represent \$15,000,000 of the deficit of \$90,000,000.

Mr. RAINEY. I saw the estimate of that, and it was \$1,000,000.

Mr. JOHNSON. For the handling of weekly papers in the mail?

Mr. RAINEY. For circulating them free in the counties.

Mr. JOHNSON. I was brought up on a county weekly that had 8,000 subscribers, and 2,500 of the copies were circulated in the county. I know that it made quite a weight every week. Now, on that subject of exemption, in conjunction with any tax rate made, I would exempt the small papers up to a certain number of subscribers. For instance, I know that Mr. Kitchin's own home paper, the Scotland Neck Commonwealth——

The CHAIRMAN (interposing). You mention that because it is one of the best papers.

Mr. MOORE. Why do you use as an illustration a paper in the chairman's district?

The CHAIRMAN. It is because that is the best country paper published.

Mr. JOHNSON. I am glad to hear that. I am only using that as an illustration, because that belongs to the class of papers that can not exist long if any burdens are added to them. That paper is published on Tuesdays and Fridays, twice a week, at \$1 a year, and it has 1,400 subscribers. Now, if many of the citizens of that county go to France as soldiers and have that paper follow them, the paper can not afford to do it at \$1. That paper has to live on the advertisements of the dry-goods merchants, phonograph-record sellers, and other lines of business in that town. The cost of white paper is sky high and will be higher. Few weekly newspapers will exist at \$1 per year, and this one has an edition twice a week.

The CHAIRMAN. I want to say in that connection that the owners have never complained about the zone system. It may be that they have not found out about it.

Mr. JOHNSON. Perhaps not. It won't pay much zone revenue at best. In my opinion, not many of the newspapers are complaining, and I said at the outset that no newspaper man has asked me to take any steps in regard to this matter.

The CHAIRMAN. As I understand it, a very large majority of the newspapers, especially the editors of the weekly papers, are very strongly in favor of the zone system. In fact, a telegram has just been handed me giving their view on the matter. The National Association of Editors is meeting at Hot Springs, Ark., and this telegram is dated, "Hot Springs, Ark., June 7." It reads as follows:

The National Association reiterates the action of a year ago favoring second-class zone postage, but urge simplification in operations. Publishers Advertising Board have endeavored to put association on record against system, but were overwhelmingly defeated.

That telegram is from the National Editors' Association. You are a member of that association, are you not?

Mr. JOHNSON. I am not a member of it.

The CHAIRMAN. It looks like the newspapers agree with us on that.

Mr. JOHNSON. I am not so sure of that.

Mr. RAINEY. Do you know what action the Chamber of Commerce of the United States took, or the result of their referendum vote?

Mr. JOHNSON. No, sir.

Mr. RAINEY. They favor a system that compels the newspapers to pay their way through the mails.

Mr. JOHNSON. And I do, too. I have said that over and over again.

Mr. RAINEY. That would be three times as much as our bill proposes.

The CHAIRMAN. Yes; three times as much as our bill proposed.

Mr. JOHNSON. I am proposing a bill that would impose at least twice as much in the way of second-class rates alone, and then leaving the newspapers' advertising a subject for war taxes, which I think should be imposed.

The CHAIRMAN. As I said a while ago, we have talked over this matter, and it is the main purpose to make them pay more or something approximating the cost.

Mr. JOHNSON. If the committee will undertake that, we are not a long ways apart.

The CHAIRMAN. Now, the question is as to the method.

Mr. JOHNSON. Whether the National Editors' Association favors the zone system or not makes little difference, because we will presume that few newspapers will be able to sit tight in some little community and because the zone system makes it harder for a national paper to go there, rise to the occasion and be the localized national newspaper. I will not take up any more of your time. I think you will find it necessary to place a tax on all advertising wherever you find it, and it is easy to place it. Then, my suggestion is that you drop the zone system and substitute a graduated system, based on the number of papers carried in the mails and upon the subscription price. Then, you would have the entire advertising field before you from which you could raise more revenue, or such revenue as will not drive the advertisers out of business.

Mr. LONGWORTH. You would not include the sales of papers made over the counter?

Mr. JOHNSON. Yes, sir; for a war tax on advertising. One of the great difficulties, or, rather, the reason for the heavy Saturday Eve-

ning Post expense, for instance, was that the Saturday Evening Post utilized the second-class mails to get great quantities of papers from Philadelphia to Chicago or Seattle, for instance, advertising on the first page a subscription price of \$1.50 per year, and then peddling them out at 5 cents apiece. That justifies the adverse statement that Mr. Moore has read, and it is no wonder that this committee wants to stop that sort of privilege. That is what the leading business men are complaining about.

Mr. HAWLEY. Suppose the deficit is \$90,000,000? Would the provision that you have been referring to, if enacted into law, earn that \$90,000,000?

Mr. JOHNSON. I am frank to say that I have not had time to carry the whole thing out on an estimate of the number of papers circulated outside of the counties of publication by the 24,000 publications in the United States, but I am satisfied that the plan I propose is heavy enough to raise a good large sum.

Mr. HAWLEY. Would it raise more than we are raising now by the other system?

Mr. JOHNSON. By getting a report from the newspapers of the number of subscribers outside of the counties, together with the other data involved here, it would be easy to make an estimate to a nicety.

Mr. HELGESON. You made a suggestion along the line of taxing advertising. Of course, the county newspaper would have a very low rate for advertising as compared with the advertising rate of the big paper.

Mr. JOHNSON. That could be carried right along with the record as to the number of subscribers.

Mr. HELGESON. The advertising rate, of course, is based on the subscriptions.

Mr. JOHNSON. Yes, sir. Owing to the difficulty that the smaller newspapers are having—600 of them dropped out last year—I would exempt the papers from tax on advertising up to 5,000 circulation. If a man has 5,000 subscribers, then charge enough for the advertising to represent a fair percentage on his production as a war tax. As I understand it, the newspapers of the United States and all the magazines are assisting the Government in every way possible, and they are willing to stand any sort of equitable tax.

Mr. HELGESON. I think everybody agrees that the newspapers are rendering good service.

Mr. TREADWAY. Is it your suggestion that we should incorporate here the bill now before the Post Office Committee?

Mr. JOHNSON. I would be glad if you would. My bill can only be referred to the Post Office Committee.

Mr. TREADWAY. You do not think that it is a subject that is properly before this committee?

Mr. JOHNSON. Only for this reason, that when I introduce the bill it is referred to the Committee on the Post Office and Post Roads.

Mr. TREADWAY. The whole zone system arose out of a revenue bill.

Mr. JOHNSON. Yes.

Mr. TREADWAY. I wanted to make sure that I understood you correctly. As I understand it, your bill is before the Post Office Committee?

Mr. JOHNSON. Yes. The zone system came about in connection with a revenue bill in an effort to equalize second-class postage. As the revenue bill finally became a law, the zone system was made applicable to the advertising pages in newspapers, making it an uncertain and unfair proposition—that is, making it partly a provision for the collection of revenue and partly a provision for the equalizing of rates. Now, as I said, I do not see why advertising should not be made the subject of a war tax all along the line, covering street-car advertising and every other sort of advertising, provided that tax is not so heavy as to stop advertising, which is a very vital thing in making the wheels go around in the United States.

I thank the committee for according me this hearing.

**STATEMENT OF MR. WALTER E. KELLY, PRESIDENT OF THE MANHATTAN OIL CO., 27 CEDAR STREET, NEW YORK CITY.**

Mr. KELLY. Mr. Chairman and gentlemen of the committee, I am the president of the Manhattan Oil Co., a producer of crude petroleum. It is my purpose to deal with the proposition of depletion as it now affects oil and gas lands, and more particularly oil lands.

Mr. TREADWAY. Would you mind stating how large a concern the Manhattan Oil Co. is?

Mr. KELLY. We hold approximately 5,200 acres, and the production is about 1,200 barrels per day. The stock is really nominal. The capitalization is nominal in view of the value of the assets. It is \$60,000.

Mr. TREADWAY. Where is the land?

Mr. KELLY. The land is principally under the jurisdiction of the Interior Department, the leases being on land of the Osage Indians. The oil and gas rights were segregated for the Osage Tribe, and we received leases from the Osage Tribe with the approval of the Secretary of the Interior.

Mr. MOORE. In what States are those lands located?

Mr. KELLY. In the State of Oklahoma. I might say, also, that we have some few additional leases in the State of Kansas; and some other holdings which are undeveloped at the present time.

Mr. MOORE. You said that the capital stock of your company was nominal?

Mr. KELLY. I meant that it was nominal in view of the value of the assets held.

Mr. MOORE. What are the assets?

Mr. KELLY. The assets depend largely upon the value of the leases, which, of course, is always problematical, because you can not say ahead how much oil you have. In addition to that, there is the equipment.

Mr. MOORE. Is there any way by which you can estimate the value of the assets?

Mr. KELLY. I should say that according to an appraisal made under ordinary market conditions it would be worth, perhaps, \$3,000,000.

Mr. MOORE. That is not in actual property, but in rights?

Mr. KELLY. It is in rights, and, of course, that goes to the very gist of the question I want to discuss.

Mr. MOORE. Does your company hold title to any of this land?

Mr. KELLY. No, sir.

Mr. MOORE. You simply lease the land?

Mr. KELLY. Yes, sir; we simply lease it; and those leases are for as long a time as oil or gas are found in paying quantities.

Mr. TREADWAY. Is the stock of your company dealt in on any stock exchange?

Mr. KELLY. No, sir; it is a close corporation, the stock being held entirely by my father. He is the holder of all of the capital stock.

The CHAIRMAN. How much money have you actually put into the business?

Mr. KELLY. I should say approximately \$600,000.

The CHAIRMAN. And you think that the property you purchased for \$600,000 is worth about \$3,000,000?

Mr. KELLY. I should think so; yes, sir.

The CHAIRMAN. How long has your company been in existence?

Mr. KELLY. The company has been in existence since 1909. The point just raised goes to the gist of the argument I would like to make. We claim here that there has been a distinction made in the law between owners in fee of oil property and those owners who are lessees. I suppose that, by way of preface, it might be well to refer briefly to the conditions we encounter in oil operations. It is impossible to tell from any surface indications just where oil can be found. While it is true that geologists in late years have assisted us somewhat by their researches, by showing where oil can not be found, and even going further and showing us that there are certain structures which seem favorable, yet the only way that you can finally determine whether oil is under a given piece of land is to put down your drill. Now, it is obvious that that condition causes the business to be very hazardous from the financial standpoint. It is not even like mining for solid minerals, because the miner for solid minerals, after doing a certain amount of development work, can know to some extent, at least, what he has ahead of him and can make his financial calculations accordingly. But in a new field where you are prospecting for oil the percentage of dry holes is very much in the majority. I do not know that there are any exact statistics on that subject. In new localities, or, as they term it, wildcat territory, of course, here and there there is an operator who is fortunate in bringing oil in an oil deposit.

From that time on the field gradually becomes a proven field, but even in the proven territory there is a very considerable percentage of dry holes, and those dry holes, of course, represent a total loss, except for the salvage of the equipment that is used in drilling them. That equipment, or a certain part of it, can be taken out and used again in drilling subsequent wells. However, it is a very hazardous business, even in a field that has been proven. Even after a field has been proven, and the operator has a certain number of wells, he has to contend with the continual decline of those wells. Now, a well at the outset declines rather rapidly, and there is a very material drop in the curve of production during the first few months of its life. If the decline is less rapid there, it is, nevertheless, certain, so that at the end of a given period you may be sure that there is no more oil left in that particular well. You are dealing not only with

a wasting product, but also with a fugitive product, because oil is found in sands and strata beneath the earth. That condition results in your neighbor being able to put down a well and taking oil from the same reservoir that you are taking oil from beneath your land without your being able to stop him in any way. So that the development of oil lands by the operator is dependent on quite a degree of diligence.

It is for this reason, moreover, that the development of that industry in this country has taken place in the form of leases. The average oil operator who goes out in the country where there has been some discovery can not afford to pay large sums to buy property outright, and it is also a generally known thing that it is very seldom that the owner of a piece of property, with his lack of experience in the business, develops that property as oil or gas property. Now, as you can see, by reason of the lease arrangement the owner himself takes none of the risk; the operator, who is the lessee, taking it all. If the operator is successful the owner receives his royalty, and that brings us really to the consideration of the type of lease which is used in the oil-producing industry. This lease is considerably different from any contract used in any other form of industry, and I have made a notation here of the salient provisions, although the details vary in different parts of the country according to the difference in State laws, but the main provisions are the same. The term is generally for a given number of years, three or five, or whatever the parties may agree on, and as long thereafter as oil and gas are found in paying quantities. There is also an initial bonus paid in many cases, but that is a matter of agreement between the lessor and lessee. The lessee is usually bound to complete one or more wells within a given period, or, in default of completing those wells, to pay a rental for the privilege of deferring the completion until the end of a stated term.

He could, in any event, defer it beyond that stated term, so that if the lease is for three years and as long as oil is found in paying quantities, he only has that three years in which to prospect. If he fails to discover oil within that time, then all the rights go back to the lessor and the lease comes to an end.

Mr. MOORE. Is that the universal system of leasing?

Mr. KELLY. Yes; that is the usual form. As I say, whether a man is drilling one well, two wells, or three wells is a matter of agreement between him and the lessor, but the general scheme is the same throughout the country.

Mr. MOORE. The lease runs for three years on the present basis.

Mr. KELLY. Yes, sir. The lease, as I have said, terminates if the prospective well is not found before the expiration of that time, but if the prospective well is found at that point an estate vests in the lessee, and, therefore, he is entitled to all the oil and gas that may be found underneath those premises upon the payment of the one-eighth royalty, or whatever royalty is agreed upon. One-eighth is usually the royalty agreed upon, but there are other rates. We pay one-sixth in the Osage Nation, and I think there are some cases where they pay one-tenth. That is regulated by local conditions.

The nature of the interest, respectively, of the owner and lessee before the discovery of oil leaves no doubt that the owner's right is

a much higher one, because the owner can wait as long as he likes to develop that property and prospect it at his leisure, whereas the lessee only has three years and must complete his operations before his lease terminates.

So far as this depletion question is concerned, we are not very much concerned with that proposition, because it is obvious that once oil is discovered there can be no depletion. What we look to, then, is the interest, respectively, of the owner and the lessee after the discovery of oil. We find that the owner's right really remains what it was before. He has a right to all the oil and gas beneath the surface of that particular land, but, again, it is a peculiar right which is distinguished from any other legal title that I know of, for he has no title to any specific oil or gas until he brings it to the surface and reduces it to possession. In other words, it is a mere naked thing to say that he has title to some oil beneath the surface which may be drawn from beneath the surface by an adjoining operator.

Mr. STERLING. Does not the State law regulate the distance from the partition lines of the lands?

Mr. KELLY. It does in some cases.

Mr. STERLING. Where the wells shall be located?

Mr. KELLY. It does in some cases; yes, sir. As to the property on which we are operating in Oklahoma the Department of the Interior has promulgated regulations which regulate that.

Mr. STERLING. That is so in Illinois.

Mr. KELLY. Yes; that is the usual provision. But even if they are located, as they generally are, some 200 feet back of the boundary line, it is the usual thing to find a pool large enough so that if you drew a line down through the surface it would connect that reservoir. The result is that if an adjoining owner puts down a well, even some distance removed from the boundary line, he is bound to take your oil if you do not offset him within a reasonable time.

Mr. WHITE. Is it not a fact that the Interior Department requires an operator to offset a well?

Mr. KELLY. I have not charged my memory with that particular point, but I believe that is the case. I may say that is generally done.

Mr. WHITE. In self-defense?

Mr. KELLY. Yes. Of course, there are isolated cases where some company may have more capital than another and may have very favorable conditions and be able to put down more line wells than another man or company.

Mr. WHITE. As a matter of fact, those regulations grew out of the fact that the large companies were doing that as against other companies?

Mr. KELLY. I can not think, offhand, of a specific instance, but I have heard that there were some such instances. But that is the condition which exists. The owner is bound, in self-defense, irrespective of regulations, State laws, or what not, to put down his wells and continue his work with a reasonable degree of diligence or he will not get oil.

The particular point that I want to address myself to is just this: That after a lessee has put in a producing well he has the right to all the oil and gas beneath those premises for as long as that oil and gas can be found. Now, that is all that the owner has. It is true

that the owner's estate is quite the more valuable because he does not have to pay a one-eighth royalty to anybody. The lessee must continue to pay that one-eighth royalty, or whatever may be agreed upon, for as long a time as oil and gas can be found. But that difference is a difference not in the character of the property they hold, but merely in its value, and, of course, it is subject to definite appraisal. The existing law provides, in the case of those operators who purchased their properties prior to March 1, 1913, that they may set up the valuation of those properties as of that date, but the regulations of the Treasury Department have construed that—evidently because of the occurrence of the word "purchase" in there—to mean that depletion may only be computed by an owner in fee. It is true that they allow a lessee to compute depletion—

Mr. MOORE (interposing). Have you the law before you, and, if so, can you quote that section?

Mr. KELLY. I think I have made a note of that particular section. It is under the general heading of deductions that are allowed both individuals and corporations. I think the quotation is like this—it is the act of September 8, 1916, as amended by the act of October 3, 1917.

Mr. MOORE. If you have it there, I wish you would read it.

Mr. WHITE. Is it not a fact that that ruling has had the result of men putting their money into royalties rather than into deductions?

Mr. KELLY. I do not think so; because, of course, the allowance after March 1, 1913, is restricted in the case of both the owner and the lessee to the actual amount paid therefor. However, it might have that effect to some extent; but, of course, the purchasers of the royalties are a very small factor in the industry as a whole.

Mr. MOORE. I wish you would quote that law.

Mr. KELLY. I will. It is section 12, paragraph 2.

The CHAIRMAN. That is in the 1916 act?

Mr. KELLY. Yes; but the same provision appears in the amended act of 1917:

In the case of oil and gas wells a reasonable allowance for actual reduction in flow and production to be ascertained not by the flush flow but by the settled production or regular flow.

I will omit the part relating to mines.

*Provided*, That when the allowance authorized in (a) and (b) shall equal the capital originally invested, or in case of purchase made prior to March first, nineteen hundred and thirteen, the fair market value as of that date, no further allowance shall be made.

I think that is the substance of that particular provision. So that in the case of both the owner and the lessee, after March 1, 1913, there will be a restriction as to the amounts actually paid. I am frank to say that I have not given sufficient consideration as to whether or not there ought to be some allowance made there in view of the hazardous nature of the business, but I was confining myself in my prior argument to the capital which existed on March 1, 1913.

The CHAIRMAN. That is provided for in another section. In making up their income tax returns they are to consider the cost of, say, lumber or other raw materials, not as of the time they made the purchase, but the value as of March 1, 1913.

Mr. KELLY. That is what the department has held in respect to owners, but they do not let the lessee take advantage of that. In other words, they say that the lessee, even though he has a right to all the oil and gas beneath that territory for as long as those products can be found, that because of the fact that technically he is some kind of a lessee, and the other man on the other side owns his land in fee, even though the actual value is practically the same, that the owner may deduct the depletion as of March 1, 1913, but that the lessee is restricted to the actual amount put in there, and it is that particular point that seems to me to result in inequity.

Mr. MOORE. Will you state that in some concrete way?

Mr. KELLY. Perhaps I might give an example. Let us take the case of a corporation that would acquire 1,000 acres of land, and take that acquisition as of 1910. By the expenditure of, perhaps, \$50,000 that corporation might be lucky enough to bring in wells making the property worth \$200,000. If that corporation is a lessee there is no deduction or no amount upon which it can ever claim depletion, yet if at the outset instead of taking a lease it had paid, perhaps, \$1 or \$2 more per acre, and had expended, perhaps, \$2,000 more, it would be in the status of an owner and could set up that \$200,000 valuation as of March 1, 1913. In other words, in the case of the owner they make an allowance for the—I do not know whether you would term it the unearned increment or the actual wealth which has been created by reason of their operations, but in the case of the owner they make an allowance which is perfectly proper. But the average oil lessee—and I may say that 90 per cent of the operations are carried on by lessees, there are very few owners—

Mr. MOORE (interposing). How has your concern been drawn into this?

Mr. KELLY. In this way: That in making up our return this last year we have made the claim that under the particular Government regulations our status is practically that of the owner, and that, therefore, we should have an allowance for depletion.

Mr. MOORE. Has the department made a ruling that you shall not have such a deduction?

Mr. KELLY. They have not ruled specifically, no.

Mr. MOORE. Is there any ruling on the part of the department which leads you to believe that will be the result?

Mr. KELLY. Only this general ruling which says that in the case of everyone except the owner in fee a deduction will not be allowed. In other words, they seem to attach some magic to the words "owner in fee" even though that does not comprehend any more, so far as the oil industry goes, than a perpetual lessee.

Mr. MOORE. Take the language you have quoted from the act of September 8, 1916. What changes would you recommend?

Mr. KELLY. I should think that some appropriate language placed in the second clause, beginning with the word "provided," would cover it. Instead of saying in case of purchases made prior to March 1, 1913, I would have some such words as "purchase, lease or other acquisition." I do not know the exact language, but some appropriate language which would cause the perpetual lessee to receive this allowance?

The CHAIRMAN. Just add the words "or acquire" after the word "purchase."

Mr. OLDFIELD. Your desire is to put the owner and the lessee on the same footing?

Mr. KELLY. Yes, sir. Of course, so far as the actual value of those interests are concerned, they will always be slightly different, because the owner does not have to pay his one-eighth royalty to anyone.

Mr. MOORE. Your fear is that while you are the lessee you may be held as a purchaser; is that the point?

Mr. KELLY. No; quite the opposite. I am afraid they will not consider us as a purchaser and will not allow us the deductions. My fear is that we will be held merely to be lessees and will not be allowed the deduction.

Mr. HAWLEY. How much difference would it make to you in money if your status were that of an owner instead of that of a lessee?

Mr. KELLY. That is a rather hard question to answer, because the appraisal of the properties as of March 1, 1913, is subject to the approval of the Secretary of the Treasury, and that will be dependent on the value which he puts on them.

The CHAIRMAN. Do you buy these leases outright or do you pay so much a year? Say you have a lease for 10 years; do you pay so much a year?

Mr. KELLY. We pay a one-sixth royalty on the holdings which we have in the Osage Nation, to the superintendent of the Osage agency for the benefit of the tribe, and in the case of the other leases, we simply remit to the lessor, at stated intervals, one-eighth of the gross production as his royalty.

The CHAIRMAN. Were these leases to which you are referring now made prior to March 1, 1913?

Mr. KELLY. They were not made prior to March 1, 1913; they were actually executed on March 16, 1916, but that was a situation which grew out of prior operations. The Department of the Interior said, in effect, to the lessees who had previously been operating there that the leases which expired on March 1, 1916, should be given to them in the shape of new leases, and that was done.

The CHAIRMAN. They all had notice that after March 1, 1913, an income tax was constitutional and that in all probability one would be passed, and March 1, 1913, was put in because a person might have purchased property long before there was any constitutional power in Congress to levy an income tax. Take lumber, for instance. A person might have purchased lumber at 50 cents a thousand in 1899 and 1900, and on March 1, 1913, it had appreciated in value to \$5. They had no right to put an income tax on that appreciation before March 1, 1913, because there was no constitutional power to levy any income tax. So the committee provided that they could take the fair valuation of the property, say of lumber, oil, or coal, as of March 1, 1913, when Congress did have the right to levy an income tax.

Mr. KELLY. The intent being to fix a fair valuation on the capital existing as of that time.

The CHAIRMAN. Yes. I want to ask you a question for my own information. About what is the average length of time, after you strike oil, that you can continue the operation of a well?

Mr. KELLY. That depends entirely on the field and it is dependent upon so many natural conditions, the depth of the well, the thickness and texture of the sand, and the amount of gas.

The CHAIRMAN. Some last as long as 1 year, some 3 years, and some 10 years.

Mr. KELLY. Yes; and there are some wells in Pennsylvania that have been in operation for 25 years.

The CHAIRMAN. What do you think about the average life of new wells now—wells that have been developed in the last four or five years?

Mr. KELLY. That, again, is dependent on the field.

The CHAIRMAN. Would you say it would be three years or a good deal more?

Mr. KELLY. I should say it would be more than that.

The CHAIRMAN. A committee of oil men told me it was three years.

Mr. KELLY. That may have been true of their particular localities.

The CHAIRMAN. They represented oil wells in Oklahoma and Illinois, as well as other States. I just wanted to get your best judgment.

Mr. KELLY. I was just speaking of the general average.

The CHAIRMAN. But there is really no way you can get at the general average, is there?

Mr. KELLY. No, there is not; although after a field has been proven and in operation for a considerable number of years you can then approximate it, and you can come near enough, perhaps, to do substantial justice for tax purposes in computing depletion, but it is a very difficult situation to compute depletion properly so that the Government will get sufficient revenue and at the same time the producer have a reasonable allowance.

The CHAIRMAN. The real question is the allowance to be granted?

Mr. KELLY. Yes, sir. We feel that under present conditions there is no allowance, because, again, we are in this situation: The oil producer must take the greater part of his earnings every year and put them back into the ground, because as his old wells decline he must drill new wells in order to keep his production stationary. Now, there comes a point after he gets his property pretty well drilled up, that in spite of everything he does he can not keep his production stationary, and it is going to continue to go down. It is not like a steel mill. If you take the greater part of your profits and reinvest them in your steel mill, at the end of 15 years you probably have a big business; but that is not the case with the oil business. You are through; there is no more oil under there, and therefore you must have made enough to pay back the initial investment, the reinvestments you have made, plus a reasonable profit.

The CHAIRMAN. As a matter of fact, in the oil business you get rich mighty quick or poor mighty quick.

Mr. KELLY. That is just about what it sums up to; yes.

Mr. WHITE. How many wells has your company?

Mr. KELLY. I should say in operation about 180.

Mr. WHITE. And you have a 1,200-barrel capacity?

Mr. KELLY. Yes, sir. That, of course, is entirely approximate, because sometimes it might be a little less or a little more.

Mr. WHITE. Is that gross?

Mr. KELLY. That is net.

Mr. WHITE. Are you continuing your drilling operations?

Mr. KELLY. Yes, sir; we are very active on that.

Mr. WHITE. You could not tell us what your falling off in production has been?

Mr. KELLY. No.

Mr. WHITE. You could as to your old wells, could you not?

Mr. KELLY. Yes; although from a practical standpoint it is sometimes difficult to do that, because that comes in again under Treasury Decision 2047, where the department laid down certain rules for the computation of depletion. If you had one well that ran into one tank, so that you could gauge that tank from time to time and see what that well did, it would be practicable to keep a check on it, but you frequently have a number of wells.

Mr. WHITE. You mean that you would have a new well running into an old tank?

Mr. KELLY. Perhaps it would be a well that had been in operation for some time, or a number of old wells, running into the same tank. It is not practicable from the operating standpoint to separate them.

Mr. HULL. On this question as to whom particular allowances for depletion should go, whether to the lessor or the lessee, the courts have been holding that the person who leases land for mineral purposes does not acquire any rights to the minerals in place, as they call it, but that the legal title to the minerals in place, so far as these allowances are concerned, remains in the person who leased the land.

Mr. KELLY. I believe that probably is true with respect to solid minerals, although I believe there was a decision handed down by the Supreme Court of the United States within the last few weeks construing the act of 1909, and, as I recall the decision, they reaffirmed the proposition that there could be no allowance for depletion under the act of 1909. At the same time they discussed at some length the relative interests. But, as you can see, that is the very point of the oil business. Neither the owner or the lessee can get any title to any specific oil in place until he finds it out.

Mr. HULL. That is what I am speaking of. You want legislation to relieve against a practice, and to some extent against the law, or you want relief on account of some court decisions under the present wording of the law.

Mr. KELLY. I think that would probably cover it; yes, sir. If you dealt with abstractions and called this estate of the lessee some intangible thing, you would not get anywhere, but you should look at it from the practical standpoint and see what the lessee in such cases is dealing with. If a man comes to purchase your property, he might give you just as much, with the exception of the royalty interest, for a lease, as long as oil and gas are produced, as he would for the fee.

Mr. HULL. There has been some conflict in the department and in some of the decisions with reference to certain classes of miners. There has been some conflict between their holdings.

Mr. KELLY. Yes, sir. It seems to me that from the standpoint of tax legislation it is entirely proper to cover this estate of the lessee as something different from the estate of the owner. For example, I believe it has been held that if there is a life tenant in possession of property and he attempts to drill oil wells, he can be restrained by the remainderman by reason of the fact that he is committing waste. It is not simply a matter of having some definition of the owner of the fee title, but we are considering here tax legislation, and it seems to me that we must look at the practical situation which is presented.

Mr. MOORE. Are you a mining engineer?

Mr. KELLY. No, sir.

**STATEMENT OF MR. H. B. SPALDING, VICE PRESIDENT A. G.  
SPALDING BROS.**

The CHAIRMAN. Please state your name, business or occupation, and for whom you appear.

Mr. SPALDING. My name is H. B. Spalding, and I am one of the vice presidents and the treasurer of the A. G. Spalding Bros., a company engaged, as you possibly know, in the manufacture and sale of athletic goods. Our head office is in New York City. We have branch stores and factories located throughout this country, as well as in England and France. We have a branch store in Paris, a branch store in Sydney, Australia, and two branches in Canada. We are perhaps alone in the athletic-goods trade, in that we cover the entire athletic-goods field. We have plenty of competitors, but most of our competitors restrict themselves to one or more lines of athletic goods rather than covering the entire field of athletic spots, which we aim and endeavor to do. I therefore feel in competing before you that I am in a position to cover the trade generally far better, perhaps, than our competitors would be able to do, because they are restricted to one or more single lines. I do want to say this, however, with regard to the war-revenue act of October 3, 1917—and I presume that this general scheme of arrangement would be followed in your revenue act under consideration—that the clause covering sporting goods, which is titled 6, section 600, subdivision S, includes in the athletic-goods line billiards and pool, or pool balls and tables, fishing rods and reels, checker boards, chess boards, etc., and also contains the words "games and parts of games."

We are not interested in those items which I have enumerated. They are very frequently dealt with in the same wholesale and retail establishments along with athletic goods, but in the manufacture they are generally manufactured by separate manufacturers, or by manufacturers making other lines than sporting goods, and in the drafting of any new legislation I would suggest that for convenience athletic goods be made a separate subdivision and not be included with other lines which come under another classification.

The CHAIRMAN. You mean to give them a little higher dignity!

Mr. SPALDING. Not so much for additional dignity as for clarifying the matter. We have had a little trouble, to which I will refer at this time, with reference to the interpretation by the Treasury Department of the words "games and parts of games," and I might say with some gratification that they have taken our view as to what

that means, but I am not sure whether our views were really in the minds of the committee that drafted that original subdivision. I am also in a little difficulty as to the principle that is actuating Congress in the matter of taxing athletic goods. In Mr. McAdoo's letter the other day he referred, among other things, to the taxing of luxuries, but we are not assuming that sporting goods would be classed with jewelry in imposing taxes. If the committee assumes that sporting goods are luxuries and should be taxed as luxuries because of their classification, I would call your attention to some other parts of section 600. I find in section 600 that there is an excise tax imposed upon motor trucks, and certainly motor trucks could not be classed as luxuries. They are certainly not luxuries to ride in.

The CHAIRMAN. On the subject of sporting goods, while they may not be luxuries, so far as the revenue bill was concerned they were classed by the committee as luxuries. Now, regardless of whether they are luxuries or not, they are among those things that should be taxed rather than bread, flour, sugar, and other necessaries of life.

Mr. SPALDING. That is the point I was coming to. I assume that what the committee wants to do in the revenue bill is to raise the maximum amount of revenue, and that it is not the intention of the committee, under the guise of raising revenue, to kill any particular industry, and that you are not considering the imposition of taxes such as those imposed in Civil War days upon State-bank notes, and which were intended to exclude State-bank notes from circulation; and that, therefore, it is not so much an effort to tax luxuries, because they are something that the people should not indulge in during the period of the war, as it is to impose a tax upon some articles the users of which can, in the opinion of Congress, afford to pay the taxes upon. I think that at this point we ought to subdivide the different classes of athletic goods, and I have divided them into seven major groups. In the first group is baseball; the second group includes football, basket ball, and all those games that use leather inflated balls, and boxing gloves.

The reason for including boxing gloves is that they are made of leather and are produced in the same factories that produce the leather inflated balls. The third group takes in lawn tennis and a number of similar games in which almost the identical implements are used. The fourth group embraces golf. The fifth group cover skates; and the sixth group embraces implements that are used in what we term field games, such as implements used in running, jumping, hammer throwing, etc. The seventh group covers gymnasium apparatus, both for indoor gymnasiums and outdoor playgrounds. Now, with regard to the first two groups—that is, the football and baseball groups—we can treat those two groups together, because we have very largely the same class of users of those implements. During the past six months, our sales of that class of goods have either gone directly to the Army through the purchases of the Y. M. C. A. or of Mr. Fosdick's committee on training camp activities, or they have gone to the Army indirectly through other committees that have been purchasing them for the same purpose, or they have gone to the Army on purchases made directly by the soldiers themselves. Fifty per cent of them have gone directly to the Y. M. C. A. and

the Fosdick committee, and 25 per cent of the purchases may have reached the Army indirectly through sales made to soldiers or made to people who intended to send the athletic goods to the soldiers. I think that statement is also true of other manufacturers. Therefore three-fourths of the purchases made of baseball and football athletic goods have been made by institutions and others furnishing those goods to the Army.

Mr. LONGWORTH. Any tax that may be imposed on these goods would be passed on to the purchasers, would it not?

Mr. SPALDING. Every consumption tax, I believe; it always is passed on to the consumer. It may be absorbed to some extent or in some slight degree, but eventually it is passed on.

Mr. LONGWORTH. I am glad to hear you say that, because there are certain industries, notably the automobile industry, which claim that this tax would be a tax on their gross receipts.

Mr. SPALDING. I say that it is passed on. If we do not pass it on, it is because we can not do it.

Mr. LONGWORTH. Any tax imposed upon the sale of goods, whether they are luxuries or necessities, is a tax that will be paid by the consumer and not by the producer.

Mr. SPALDING. The tax is unquestionably paid by the consumer. I do not mean to say that if the tax is 10 per cent that 10 per cent is added to the price that the consumer will pay or the price that the dealer or jobber will pay, but the price in some form will include the tax, and it will be paid by the consumer in the end.

Mr. LONGWORTH. And very often more than the amount of the tax is assessed in the price.

Mr. SPALDING. That is possible. I think we are all familiar enough with the tariff law to realize that wherever importers, or in almost every case where importers have paid a higher duty, that duty has gone on to the consumer, with a profit added to the duty that the importer paid.

Mr. STERLING. That is true, because there would be no competition in this country, but suppose there was competition? Then he could not do it.

Mr. SPALDING. I know that some time before the war we were importing from abroad leather for use in footballs. I think it was the tariff law of 1913 that reduced the tariff on leather by 10 per cent, but the net result of that reduction was a 10 per cent increase in the price charged by the foreign producer.

Mr. STERLING. If it had been a protective tariff, he could not have added that profit, because his American competition would have prevented it.

Mr. SPALDING. A protective tariff carried to the fullest extent will, of course, keep foreign goods out entirely, unless they are of such a character that the same things can not be produced in this country.

Mr. STERLING. Then we would not get any revenue on them at all.

Mr. SPALDING. For instance, the high tariff on automobiles does not exclude the importation of automobiles altogether, because there are always a few people who enjoy paying the highest possible price for any articles. I can not personally comprehend why anybody would want to pay twelve or fifteen thousand dollars for a foreign automobile when he can obtain an article which is equally as good, in

my opinion, at least, and, I think, also in the opinion of the American manufacturers of this country, for five or six thousand dollars. But you have only to take a walk along Fifth Avenue and see the number of Rolls-Royces to see that there are a great many people who want to do that very thing. I do not know that it represents a large element in the total volume of sales made.

Mr. MOORE. You always get in trouble here in Washington when you start to using the tariff for illustrative purposes. You have just stated that when a man had to pay a duty at the customhouse the tendency was to add a little more to the price than the amount of the duty paid. Now, is not that also the practice of business where other taxes are imposed, and especially in war times, where a man has paid a little war tax? When a man pays that war tax, does he not add a little more to the price than the war tax amounts to?

Mr. SPALDING. There has been an increase in war taxes, and our prices have increased. Our prices have increased a great deal more than the extent of the war taxes, but materials have gone up and labor has gone up. All the expenses of doing business are going up, and what is still worse, on top of it all, the volume of our sales is decreasing or our percentage of overhead expense is increasing very heavily on individual articles.

Mr. MOORE. Is it not true that the price always goes up in the way I have indicated when a tax is imposed?

Mr. SPALDING. I can only answer that by saying that, so far as our business goes, we are to-day making about 50 per cent of the profit that we were making a little over a year ago, or when the war started. Our sales were affected very materially by the war.

Mr. MOORE. Is that due to the fact that you are selling directly to the Government?

Mr. SPALDING. No, sir; I would say that it is due to the fact that our sales to the public have fallen off.

Mr. HAWLEY. Is that because of the fact that the men who were principally engaged in athletic sports are in the draft?

Mr. SPALDING. I think that is true. I think that is absolutely true.

Mr. LONGWORTH. The reason I ask that question is this: I think that we had as well start now as later with the understanding that we will not listen with favor to any argument which involves the proposition that the producer, in case his sales are taxed, is going to be compelled to pay that tax himself.

Mr. SPALDING. All right

Mr. LONGWORTH. They will raise the price at least as much as the tax amounts to, and possibly a good deal more. I want to mention one instance of that for the record. In the case of cigarettes, we were told that the price of cigarettes could not be raised and that the only resort would be for the factory either to reduce the size of the cigarettes or to reduce the size of the boxes, putting fewer cigarettes in them. They said that it was absolutely impossible to raise the price of a standard brand of cigarettes. For instance, they said that a certain brand of cigarettes put up 20 in a box sold for 15 cents per box, and had been selling at that price for 30 or 40 years. They said that they could not raise the price on the box of cigarettes. They said that they could not sell those cigarettes at 20 cents per

box. They claimed that they could not add enough to pay the tax and that they would have to stand it themselves. Now, those cigarettes have been selling and are selling to-day at 20 cents per box. They have added 5 cents to the price to the consumer to meet a tax that did not amount to over 1½ cents. They are selling the same article for a price which is considerably more than the added cost, although they said that it was impossible to do it. Now, we are not going to listen to arguments of that sort before this committee with any degree of favor.

Mr. SPALDING. I do not see any reason why you should. We have not come down here for the purpose of presenting any such argument. In fact, I am going further and will suggest specific taxes that might go on athletic goods to produce revenue. I do not think that very great revenue is going to be produced out of athletic goods, because there is not a sufficient volume of them produced, but such revenue as can be produced, we are perfectly willing to have produced. I merely want to suggest how it can be done with least inconvenience to the trade and to the Treasury Department, and be shifted on to the shoulders of the consumers best able to pay it. That is the reason I was discussing the question of the football and baseball lines first, because I do not believe that a tax should be imposed on that line of goods, unless Congress is going further and impose a general consumption tax on sugar, meat, clothing, and other necessities, because I believe that particular line of goods is just as essential to the welfare of the people and just as necessary as many of the items of clothing and many of the items of food. Take up the Army situation just for a moment. When the war started in England, there was immediately a sort of sentimental wave that went over the entire country in England to the effect that it was unpatriotic to indulge in athletic sports. Our business there went all to pieces, and we were down and out there after the 1st of August, 1914.

Mr. LONGWORTH. But there was a reaction from that?

Mr. SPALDING. Yes, sir; there has been a violent reaction, and to-day both the English Army authorities and the French Army authorities encourage athletic sports. They consider athletic sports as absolutely essential in promoting the welfare and morale of the army. Capt. Dingle, who is connected with the purchase of athletic goods for the Canadian Army, was in my office the other day on a business matter regarding the purchase of goods for the Canadian Y. M. C. A., and he told us then that the men on coming out of the front-line trenches and going back to rest are ordered by their officers to take part in athletic games. He told of one instance where a company or battalion of Canadians were charging the Germans while the officer leading the charge was carrying a football across No Man's Land, as he approached the German line. I picked up a newspaper article the other day reporting a speech by Mr. Herbert L. Pratt, who is connected with the Y. M. C. A. work and who has just returned from abroad. He was talking before the War Work Council of the Y. M. C. A. and he said this:

The American soldier is more highstrung than the allied soldier. He is always alert and on the go. When he is not fighting he seeks an outlet for that energy, and it is of vital importance that his energies be directed rightly. One of the worst catastrophes to the Y. M. C. A. abroad was the loss by submarines

of \$30,000 worth of baseballs, bats, and other athletic materials, and the impossibility, because of tonnage, to make it up. That loss has deprived thousands of our boys of their ball games, and that is what they need more than anything else.

So much for the importance of athletics in the Army, and I certainly can not believe that it would be a wise piece of legislation to impose a tax on athletic goods which will be sold to the Army, and which must be paid for by the Government, the Red Cross, the Y. M. C. A., or some other Government agency.

Mr. STERLING. Don't you think that the people of this country who give their money to the Red Cross, the Y. M. C. A., and the Knights of Columbus give it as freely and as cheerfully as they would to any other organization in the world? If that is true, why is that not a good way to get taxes for the use of the Government and for the support of its Army? The people give that money voluntarily. The Y. M. C. A. is not a money-making corporation nor is the Red Cross, but they get their money from the people, who give it voluntarily.

Mr. SPALDING. Let me ask you this: Do you think that the Y. M. C. A., the Knights of Columbus, or the Red Cross, or whatever the organization may be, is going to collect from the people any more than they will need to spend?

Mr. STERLING. I believe that they will collect every dollar that they do need, and I believe that the people will give it cheerfully to those organizations.

Mr. SPALDING. Do you think that the people would give it as cheerfully if they felt that a part of their money that they were giving for a specific purpose was going back to the Government in the shape of taxes?

Mr. STERLING. I do not imagine that they would object to it on that account, because the money would go for the support of the Army. I think this committee would like to know, in reference to athletic goods, what rate will produce the greatest amount of income. That is my idea of a tax on sporting goods.

Mr. SPALDING. Then, I can only say this in response to that, that if the committee feels that they should submit athletic goods generally to a tax by reason of the fact that they are going to be bought by the Y. M. C. A., the Knights of Columbus, the Red Cross, and those different organizations, and because it thinks that those people will cheerfully give to those organizations, then they should also put a tax on hospital grounds, and a thousand and one supplies which are being purchased by the Y. M. C. A., the Knights of Columbus, and the Red Cross.

Mr. STERLING. I do not say that that is the reason why the tax should be imposed, but the fact that those organizations do buy some of the goods is no reason why the tax should not be imposed. The purpose of framing a tax law is to get revenue.

Mr. SPALDING. Those organizations are buying to-day probably 50 per cent of the sporting goods directly for the Army, and I should say that 25 per cent more of them are going to the Army. I think that the percentage will be even more than that as the young people are being taken into the Army. I think the percentage will increase rather than decrease.

Mr. O'SHAUGHNESSY. What is the percentage of sales now for war purposes and for the general public?

Mr. SPALDING. Dealing with these particular two groups—

Mr. O'SHAUGHNESSY (interposing). Is it about 50 per cent?

Mr. SPALDING. Fifty per cent of the purchases we know are made for war purposes, and we estimate that one-half of the remaining purchases are indirectly made for the Army.

Mr. O'SHAUGHNESSY. Then, you would say that 75 per cent of the purchases are made for war purposes?

Mr. SPALDING. Yes, sir.

Mr. O'SHAUGHNESSY. Does that proportion obtain also under all of those other schedules that you mentioned?

Mr. SPALDING. No, sir.

Mr. O'SHAUGHNESSY. I want to say that you are absolutely mistaken about the attitude of the people toward taxation. I, as one member of the committee, would be absolutely opposed to your point of view. I think that the people are only too willing to pay the taxes.

Mr. LONGWORTH. Is it your purpose to suggest a rate of taxation for those goods?

Mr. SPALDING. It is my purpose to suggest a tax. I would suggest a tax on tennis balls and golf balls. My idea is to have no tax on baseball goods or any football goods. I see that several members of the committee do not agree with me on that, and I am not arguing against that point of view.

Mr. LONGWORTH. If we are to raise \$8,000,000,000, as suggested by the Secretary of the Treasury, we may be called upon—although I hope not—to put a consumption tax on the necessities of life.

Mr. RAINEY. There is a feeling in the country that sporting goods are nonessential in time of war, and that, therefore, they are really luxuries. The golf players and others who need exercise can get it just as well by working in a war garden, by chopping wood, or doing something of that kind, under the old-fashioned rule of rendering some service. Some of us think that sporting goods are luxuries, and that, therefore, they should be taxed.

Mr. SPALDING. Well, that is a view that I can not discuss at all, because we take precisely the opposite point. Any work in war gardening—tilling the soil—is hard work. It may be physical exercise, but it is hard drudgery, and we contend that people who are engaged in heavy business cares, whose nervous energy is burdened with the volume and magnitude of the problems with which business men, men in public office, are confronted to-day can not secure the relaxation by indulging in hard physical drudgery, but they can secure that relaxation if they go out and play, and they can get that by playing tennis or golf. Take President Wilson; he plays golf regularly, and I believe he does that from a stern sense of duty to keep himself physically fit in this time when he is needed at the helm more than probably at any other period in the history of the United States.

Mr. MOORE. Conceding everything you say about exercise and the wisdom of relaxation for men engaged in hard work, and particularly for men like President Wilson, who necessarily has much upon his mind, but the President, through the Secretary of the Treasury, has indicated that the taxes we raised last year were not sufficient for the purposes of the war, and the Secretary of the Treasury has written this committee that it will be necessary to double those

taxes this year. In other words, whereas we raised \$12,000,000,000 last year, we must raise about \$24,000,000,000 this year. Now, instead of being in the position of reducing taxes, we are put in the position of increasing taxes, doubling them, and I would like to know if you could make any suggestions as to how we can get more money without unnecessarily depriving men like yourself of the opportunity to go on and do business.

Mr. SPALDING. Will you permit me to take up the case of golf and tennis, because that I am prepared on, and then come back to baseball and football?

Mr. RAINY. I do not think that the committee wants to suggest putting any further burden on you that you can not put on your customers.

Mr. SPALDING. That is what I assumed was the attitude of the committee, and it was because I believed that the customers in the baseball and football groups were not in a position to pay this tax that I am urging that it be not imposed upon those two groups.

Mr. COLLIER. As I understand it, you contend that some of these athletic goods are essentials. I believe you described them as being as much essentials as meat, sugar, bread, or hospital garments. You are asking that certain athletic goods pay no tax at all?

Mr. SPALDING. Yes, sir; but I want to correct the opinion of the committee. I did not say that I thought athletic goods were as essential as meat, sugar, or hospital garments. I mere answered a question from the other side of the committee. I said that I thought it was like putting a tax on goods sold to the Red Cross and other organizations, because it was easy to collect the money by subscriptions to the Red Cross or the Young Men's Christian Association.

Mr. COLLIER. I am glad you answered that, because I gathered the other impression.

Mr. SPALDING. I am glad you gave me an opportunity of correcting that impression. I do consider that athletic goods are as necessary to the normal users of athletic goods as certain articles of food and clothing, and by saying that I mean the articles of food and clothing that we might drop into the general luxury class. I do not believe that a man needs to go to Kaskel & Kaskel's on Broadway in New York and pay from \$3 to \$5 for a necktie. That, I suppose, might fall in the luxury class, and that expensive necktie is more of a luxury than golf balls or baseballs.

Mr. COLLIER. I gathered that you said that baseballs and these other athletic goods were just as essential as these actual necessities of life, and for that reason I asked the question to get your viewpoint.

Mr. SPALDING. I am glad you did, because I do not pretend to go to that extent. We have got to have food and clothing and housing in order to live. We do not have to play baseball to live, but there are a thousand other things that are considered necessities that we might name. Take hot and cold running water in our homes. I like it, and I consider it a necessity; but I realize that it is not a necessity, and I could live if I had to go out to the corner pump and draw a pail of water when I wanted water.

Mr. COLLIER. Many claim for play and exercise that to exercise is as necessary as to eat.

Mr. SPALDING. For health.

Mr. COLLIER (continuing). And you have these athletic goods, baseballs, etc., as a part of the exercise and enjoyment at the same time.

Mr. SPALDING. Certainly. It helps them to exercise in an enjoyable way, and they get greater benefit when they get enjoyment from the exercise than if engaged in some hard physical exercise which is mere drudgery.

Mr. COLLIER. In other words, you think more people exercise by reason of the fact that they get pleasure out of it than would exercise if they did not have these athletic paraphernalia to exercise with?

Mr. SPALDING. Exactly. Now, if I may take up, first, tennis goods—

Mr. LONGWORTH. Before you do that, are you going to estimate how much revenue this will bring in?

Mr. SPALDING. I only had about two days at my disposal to gather together information, and these estimates are very rough, and they deal only with the golf and tennis lines. I have estimated the present revenue from the golf goods, balls, and clubs both, at, in round figures, \$35,000. I am proposing a tax of 50 cents a dozen on golf balls alone, which we estimate would produce a tax of \$72,000 more than double the present tax now produced from golf clubs, golf sticks, and balls combined. In the case of tennis I am proposing a tax of 75 cents a dozen on the tennis balls, which would produce a revenue of about \$35,000, as opposed to an estimated revenue of about \$24,000 from the present tax, applying on balls and tennis racquets combined.

The reasons I do not think that tennis and golf are any less essential to the people who engage in them than baseball and football are to those who engage in those games, are, first, the average users of tennis and golf are generally older men and are generally men of greater means—especially in the case of golf. The heaviest expense there is for the golf course, and in order to play the game you have got to be able to contribute your share toward the maintenance of that golf course, and Congress has recognized that in its tax on club dues of 10 per cent.

Mr. MOORE. I would thank you for your suggestion to put a tax on golf balls and tennis balls and those things that have not yet any tax upon them, but I could not understand how at this time, when we have to double the amount of tax we raise, we could very well take it off of something else.

Mr. SPALDING. There is already a tax on tennis balls of 3 per cent.

Mr. LONGWORTH. We have estimated that the tax on sporting goods, altogether, would be \$3,800,000. Would your plan reduce that or increase it?

Mr. SPALDING. That statement surprises me very greatly. Sporting goods, of course, takes in other lines than those lines I referred to, of which I have no knowledge as to what the volume of their sales is.

Mr. HULL. That estimate includes all the items of that subdivision.

Mr. SPALDING. I think we could probably do this. I did not have time to do that in the short time at my disposal. I think we could

have our items analyzed to see what tax has been paid on the different items in that line, and I think that the percentage to our total—the total tax that they paid—would give a reasonably accurate proportion to use in regard to the trade as a whole. In other words, the Treasury Department have got the result of what has been produced as a whole from this section alone. We can tell them what we have paid as a whole, and also how that item is made up—so much on baseballs, so much on tennis balls, so much on tennis racquets, and so on down the line, and I think you can then take that proportion and apply it to the total tax received, according to the revenue department's report, paid under this section, and you will find just what will be paid under the present law.

Mr. LONGWORTH. What I am getting at is, relatively speaking, if we accept your proposition, would it decrease the amount of revenue we are now getting?

Mr. SPALDING. I am dealing now with the group that the tax is now imposed on, baseballs and footballs and tennis balls and tennis racquets and golf sticks and balls.

Mr. LONGWORTH. I know, but I want—

Mr. SPALDING. The tax I am proposing I think would reduce the revenue, because I am suggesting eliminating the tax on baseballs and footballs, and I think it would increase the revenue you received from golf goods alone.

Mr. LONGWORTH. I am speaking about that total of all sporting goods.

Mr. HAWLEY. Suppose your suggestion were adopted, how much revenue would be lost on goods used in baseball and football?

Mr. SPALDING. You mean under the present rate?

Mr. HAWLEY. Yes.

Mr. SPALDING. I should hesitate to make an estimate on that. I should say possibly in the neighborhood of \$100,000 to \$200,000. That is a pretty broad limit.

Mr. LONGWORTH. The total sales last year of baseballs, baseball bats, and footballs amounted to somewhere near half a billion dollars.

Mr. SPALDING. Oh, yes; probably higher than that.

Mr. LONGWORTH. And we would, according to your plan, be deprived of that much revenue—half a billion dollars?

Mr. SPALDING. Half a billion dollars, did you say?

Mr. LONGWORTH. Yes.

Mr. SPALDING. Oh, I thought you said half a million.

Mr. LONGWORTH. No; half a billion.

Mr. SPALDING. Oh, my goodness, no; nowhere near that.

Mr. LONGWORTH. In your brief, which I have here, you said that the total on baseballs and bats figures \$300,000 and on footballs \$500,000. [After making calculations.] This total would be about \$3,800,000.

Mr. SPALDING. I thought you said half a billion.

Mr. LONGWORTH. No; those are the total figures.

Mr. HAWLEY. There are masks and gloves and various other things that go with it?

Mr. SPALDING. Those articles are not now subject to tax.

Mr. LONGWORTH. The total is \$3,800,000.

Mr. SPALDING. I am taking a great deal of the time of the committee, but there have been so many questions asked that I have been shifted off to other lines.

Mr. LONGWORTH. It is very interesting, because it involves the whole principle.

Mr. SPALDING. What I am recommending to the committee is: Take each thing separately, because I think each group stands or falls on its own feet, and in the golf and tennis lines we are of course interested in not having a tax imposed so large as that it would kill the business and reach the point of diminishing the returns; and the committee are equally interested with us in not reaching that point, because they want to raise the maximum amount of revenue, and this revenue that it is desired to be produced can be produced from those sports—can be produced by imposing the tax entirely on the balls instead of on the other implements that are used.

Let me take golf and show why I make that recommendation. We manufacture both the clubs and the balls. We are entirely impartial, and we have not any ax to grind as between the manufacturers of balls and clubs. The golf balls and clubs both have to be produced in quantity production. They have got to be produced in factories of large size. The small man can not start up a shop and make golf balls or tennis balls. It is too difficult a manufacturing proposition. There are a comparatively small number of manufacturers of golf balls in this country. There are a comparatively small number of manufacturers in this country of either golf balls or tennis balls. Therefore the administration of the law, the collection of the tax, becomes a simple matter. I do not believe the total number of reports of golf balls would exceed 20 reports in this country. The amount in each report would run into several hundred dollars, and probably several thousand dollars, each month, and it is a simple matter to keep track of them.

What is the situation with golf sticks? We manufacture completed sticks, but we, as well as all other manufacturers of golf sticks, do a much larger business in turning out the rough shafts and the heads and leather strips for the binding, and we sell those in that shape to golf professionals at golf clubs throughout the country; and a professional takes a shaft and puts the head and the stick together, and polishes it, and fits the handle on, and sells it to some member of the club, or to someone else he comes in contact with. Now, for the manufacture of golf clubs, you have got to ask the Treasury Department to go to all these golf professionals, and they are not often very good business men, they are hard men to deal with, and you have got to ask them to turn in a monthly report on the few sales they have. In the winter time that golf professional would turn in a report with a tax, say of 50 cents. It becomes a burden on the department. The collection of the tax is difficult, and it opens an opportunity where you are dealing with small people that way for a certain kind of evasion. I do not mean to say that the golf people will evade any more than anybody else, but they are ignorant of the law; and that is their sole business and it is located in some country place always where golf is played, and I think that is an unsatisfactory group of manufactures to attempt to collect a tax from.

Now, in addition to that, we find it a great burden, in the case of golf clubs and tennis rackets, with some of our concerns to keep account as we send uncompleted tennis rackets and golf clubs to those places, and we have one or two workmen at the larger points of supply engaged in that work, and we have got to make a return from those. The cost to us of keeping track of those small, picayune reports of the kind I am speaking about is very great; they are small matters with an immense amount of detail and expense attached, and it would simplify the thing enormously not only for us, but also for the Treasury Department, and produce just as much revenue. I do not care how much revenue you want to collect out of golf and tennis, all that you can possibly collect can all be collected, in our opinion, by a tax on balls alone, without trying to include the rackets and clubs. Now, of course, this only covers golf and golf sticks. There are a number of other small things.

For instance, there are the tee-boxes that contain the sand and water. Those can be made by local carpenters. We do make up boxes, some of them under patents, some made of wood and some of metal, that we sell, but the total amount throughout the year would be very small, and it would be unwise to include it because it would produce a large amount of detail and very small tax.

Going into the tennis line, there are nets and posts that are not to-day subject to tax. I think the total sale of the tennis posts at the manufacturer's price does not exceed \$50,000 a year, and probably this year will be considerably less.

Mr. LONGWORTH. Does that include anything else?

Mr. SPALDING. No. I think I have probably referred to all these other points in my brief, here, which with the permission of the committee I will submit; and I will go further and say that if you want to go back and collect a tax on the baseball lines, and on football lines, there again it would be better to confine yourselves to the ball than it would be to spread out and try to include all the thousand and one trivial implements.

Mr. HAWLEY. How about the bats?

Mr. SPALDING. The bat business, at manufacturers' prices, as I said, last year was about \$300,000. It is a very small amount. And the bat is another proposition where you can have the article made anywhere. Any wood-turning establishment can turn out baseball bats. A man can go to any local carpenter shop that has a lathe, and have a bat turned out.

Mr. STERLING. They do not do it much, do they?

Mr. SPALDING. They do not do it much, but there is the possibility.

Mr. STERLING. How many manufacturers are there of baseball bats?

Mr. SPALDING. Of large baseball bats to-day I would say that there are only two principal manufacturers, ourselves and another firm at Louisville. There may be others that make bats in small quantities, but I think those two are the only ones.

Mr. STERLING. Would not a little tax deter them from going into business, so that it could be confined to two or three concerns, and it would be a very simple matter for the Treasury Department to go to those concerns and collect the tax?

Mr. SPALDING. Yes. I will say, so far as baseball bats are concerned, I do not think it is a particularly difficult matter to assess a tax. You do not there run into that difficulty that you do in the case of tennis racquets and golf clubs. Tennis racquets are finished in a great many small retail stores throughout the country.

Mr. STERLING. They are made in the rough, though, in just a few places, are they not?

Mr. SPALDING. Yes.

Mr. STERLING. And the manufacturer pays the price.

Mr. SPALDING. Now, we might point out to the committee where they would lose if they applied that rule, in an enormous amount, in taxation. The finished club at the price at which the manufacturer sells it to the jobber is probably, roughly, about 50 per cent of the retail price of that article when sold over the counter to the consumer.

Mr. STERLING. Then he would just do this, he would just double on the rough manufacture and let him pass it to the man who sells. We could overcome that by the finished rate.

Mr. SPALDING. Do you mean put one tax on the rough product and another on the finished?

Mr. STERLING. No; just put a tax on the manufacturer of the rough article. The next man, do not tax him at all. The Government has got the revenue.

Mr. SPALDING. Now, another reason why I do not like to see a tax on golf clubs and tennis racquets is, this is a consumption tax. It may be called an income tax or anything else, but it is a consumption tax. A man buys a golf club, and he may retain it for a great many years. He does not have to buy a new club this year if he has one. He can use his old set of clubs; and the truth of that is shown by the fact that while our golf-ball sales have fallen off somewhat, they have not fallen off anything like the sale of clubs. The same is true in regard to tennis racquets. Of course, the sales of balls have fallen off because so many players have gone into the Army, but the sales of balls have not fallen off anything like the sales of tennis racquets have. Of course, if a man is going to play golf, he has got to buy new balls, and if he plays tennis he has got to buy new tennis balls. He can not use last season's tennis balls because they are not good, and even old golf balls are not so good as new ones. He wants new balls.

Now, the same people buy tennis racquets and tennis balls as buy golf balls and golf clubs. You are reaching the same class of individuals, if you throw your tax on balls; therefore your tax is in proportion to their consumption and not in proportion to an accidental sale made this year as against a year ago; and by virtue of the very fact that the man has got to buy balls if he wants to play and he has not got to buy clubs, you will get your revenue, because he is so deeply interested that he will not give up. He must buy the balls; whereas he will say, "Tennis racquets have gone up to a pretty high price, and I guess my old one, restrung, will do for this year," or "I will not buy a new golf club this year." In other words, the business of the sale of clubs will be hurt very much more quickly than the sale of the balls.

That is also true to a large extent of baseballs and footballs and the other lines. I would not urge that if I did not feel that you can

collect just as much total revenue of that particular industry by putting your entire tax on the ball as you can be attempting to spread it out thinner over any other industry.

Mr. RAINEY. Are you leaving with us several copies of your brief?

Mr. SPALDING. I have several copies here. I do not know what the custom is about printing briefs.

Mr. RAINEY. You can have that printed in the record if you want to.

Mr. SPALDING. Very well.

Mr. RAINEY. And you may revise your remarks and make any changes that are necessary.

Mr. STERLING. Did you say clubs were not covered by the tax under the present law?

Mr. SPALDING. Yes, sir.

Mr. STERLING. I think you would render this committee a great service if in extending your remarks you would put in everything that you know of that comes within the sporting-goods category.

Mr. SPALDING. You mean athletic goods? Of course, the term "sporting goods" covers guns and fishing tackle and everything else.

Mr. STERLING. Yes.

Mr. SPALDING. I do not know that I can do any better for the committee than to send you one of our general catalogues. That covers every article. I shall be very glad to do that, but I should also be very sorry to see the committee spread itself out over everything, because it has become a serious matter in our accounting to-day—how we can prepare and file the reports which we are required to file. You see, the difficulty we are confronted with is this, that everything we sell is not taxed. It could not be taxed unless you went out to tax clothing and all merchandise. If the committee should decide finally that they want a general consumption tax of 1 per cent or 2 per cent upon sales, I would say all right, because that is something we can find very easily.

Mr. STERLING. How many different articles do you make and handle?

Mr. SPALDING. Individual articles?

Mr. STERLING. Yes.

Mr. SPALDING. I could not give you the number, but our catalogue runs into the thousands.

Mr. STERLING. Thousands?

Mr. SPALDING. Yes. You see, you take it in the baseball line, and there is the subject of baseball uniforms. There is a uniform made for the special purpose of playing baseball, but it is a garment which any dealer can make up. We make initialed sweaters and we make bathing suits and all kinds of garments of that kind—bath shoes and athletic wear of all kinds. You can see that the shoes that these fellows use for baseball can be used for other purposes. The shoe that is made for any special purpose by manufacturers can be usually adapted for baseball. Should that be subject to a tax?

Mr. STERLING. No; I would not say that a shoe that is used in that way—that anybody could wear, that can be used for general purposes—should come within the category.

Mr. SPALDING. What about the other shoes that are used by tennis players? They are bought by thousands of people for other things, who do not want to play tennis.

Mr. STERLING. I should not say that they came within the category of athletic goods—I mean strictly athletic goods.

Mr. SPALDING. Well, you would come, probably, onto a few shoes that are so incidental in their purpose that they could not be used for any other purpose; but the bulk of our goods are not confined specifically to use in a particular sport. The difficulty is that there are so many details in our line that it would take all day to mention them, and I do not know how the committee drafts legislation, or particular sections; whether they have a subcommittee to consider each section or not.

Mr. RAINEY. We are drafting this to get a lot of money.

Mr. SPALDING. Yes; I understand that, but I do not know whether it is intrusted to subcommittees or to individuals to draft a particular section. I should be very glad to hold myself at the disposal of the committee to come down to Washington at any time to cover details; I do not mean to argue on the subject generally, but to assist when you are drafting the thing into form.

Mr. RAINEY. We want to draft this bill for additional revenue, and we are unwilling or reluctant to take up any proposition to take away revenue.

Mr. SPALDING. You know, we are also subject to the income tax and the excess-profits tax, and the individual owners are subject to the taxes.

Mr. RAINEY. Yes. If we exempted individual owners on account of other taxes we would not have anything to draw an additional amount from, at all.

Mr. SPALDING. If any individual tax you might place would have the result of so decreasing the amount of sales in any particular industry that its profits were reduced to a point where you would collect smaller excess and income taxes from the businesses and the owners deriving their incomes from the businesses—

Mr. RAINEY. From the standpoint of raising taxes of course we do not want to do that.

Mr. HAWLEY. You submitted a list of seven specifications there.

Mr. SPALDING. Yes.

Mr. HAWLEY. You mentioned four of them in your discussion.

Mr. SPALDING. I mentioned four because I did not want to go into details. Our business has so great a variety.

Mr. HAWLEY. I want to just ask this question about the other three: In the recommendations you made on the other three classifications you did not discuss or oppose an increase of revenue on them?

Mr. SPALDING. At the present time there is no tax on those other classifications, and I did not propose putting on any tax. Of two of them, the implements for these field games and the gymnasium apparatus, the sale is trivial under any circumstances, and in war times it is going to be very much reduced. The skate industry is in pretty bad condition at present. The largest skate manufacturers in the country, Barnes & Berry, of Springfield, Mass., are in the hands of receivers. We have many other lines that are falling off. I do not think a large tax could be derived from skates without killing the industry to even a larger extent than it is now. You know there is a Member of the House of Representatives who is engaged in the skate business.

Mr. RAINY. If we could get additional revenue from the business, the fact that he is a Member of Congress would not help him.

Mr. SPALDING. I do not believe it would; but he knows more about the skate business than we do, because that is only one of our lines.

I want to thank the committee very much for their attention.  
(The following statement was submitted by Mr. Spalding:)

BRIEF SUBMITTED BY H. BOARDMAN SPALDING, REPRESENTING A. G. SPALDING & BROS.

#### INTRODUCTION.

This brief is submitted by H. Boardman Spalding, vice president and treasurer of A. G. Spalding & Bros. A. G. Spalding & Bros. is a New Jersey corporation engaged in the manufacture and sale of athletic goods, and widely known throughout the United States.

It is assumed that in the original draft of the proposed war-revenue act the general form and arrangement of the war-revenue act of October 3, 1917, would be followed, and hence reference is here made at the outset to Title VI, section 600, subdivision F of the latter law, which imposes an excise tax on certain items of athletic goods, and which reads as follows:

"Upon all tennis rackets, golf clubs, baseball bats, lacrosse sticks, balls of all kinds, including baseballs, footballs, tennis, golf, lacrosse, billiard and pool balls, fishing rods and reels, billiard and pool tables, chess and checker boards and pieces, dice, games and parts of games, except playing cards and children's toys and games sold by a manufacturer, producer, or importer, a tax equivalent to 3 per cent of the price for which so sold."

A. G. Spalding & Bros., on whose behalf this brief is submitted, is in no way interested in the manufacture of any of the items specified in the foregoing subdivision, except the following: Tennis rackets, golf clubs, baseball bats, lacrosse sticks, baseballs, footballs, tennis, golf, lacrosse balls, and other athletic balls.

It was apparently the intent of the framers of section 600, of war-revenue act of October 3, 1917, to subdivide the section by industries, and it is assumed that the reason for the classification of subdivision F was because it is not unusual for retail and wholesale sporting and athletic goods dealers to handle all, or substantially all, the items enumerated in that subdivision. In the case of manufacturers, however, the industry is further subdivided, and by far the greater majority of manufacturers of athletic implements are not engaged in the manufacture of billiard balls and tables, fishing rods and reels, chess and checker boards and pieces. It is, therefore, submitted that in the framing of new legislation it would tend to clarify the law if athletic goods and implements were treated in a separate subdivision.

#### I. PRINCIPLES OF TAXATION APPLICABLE TO THE EXCISE TAX ON ATHLETIC GOODS.

It is not the purpose in this brief to enter into a discussion of the wisdom during war time of imposing an excise tax on so-called luxuries. We assume, as a fundamental basis of the argument herein presented that the purpose of Congress is to raise a maximum amount of revenue in the fairest and most equitable manner and with the least disturbance to industries; that it is not the purpose of Congress in framing revenue legislation to thereby accomplish any direct curtailment in the consumption of the products of a particular industry simply because that industry may not be engaged directly in the production of war materials or necessities.

We therefore assume that if and when the committee has decided that there should be an excise or consumption tax on luxuries, that in so doing it has reached the conclusion that by such an excise tax it will collect more revenue than will be lost under the income and excess-profits sections of the law from the industries subjected to the excise tax by reason of the fact that the excise tax tends to reduce the volume and profits of such industries.

The arguments relating specifically to athletic goods which are herein set forth are built upon the premise that an excise or consumption tax on luxuries or semiluxuries will add materially to the total income of the Government from taxation.

## II. DIVISION OF ATHLETIC GOODS BY SPORTS.

Athletic goods or implements can probably be best classified or grouped in accordance with the major sports or groups of sports in which they are used, and the classification which we would suggest is the following:

1. Baseball.
2. Football, basket ball, and implements for all games played with a leather inflated ball, and boxing gloves.
3. Tennis, including indoor tennis, squash, and racquets.
4. Golf.
5. Skates, which include ice and roller skates.
6. Implements used in field games, such as running, jumping, shot putting, hammer throwing, pole vaulting, etc.
7. Gymnasium and playground apparatus.

In the present law none of the implements included under groups 5, 6, and 7 are made subject to the tax and only a part of the implements in the first four groups are made subject to the tax. What the reasons were for the selection of these items which are taxed, we do not know. It was suggested at one time that the framers of the war-revenue act of October 3, 1917, may have assumed that by the phrase "games and parts of games" they were including all athletic implements not specifically enumerated. When this section, however, came up for interpretation by the Treasury Department, it was found that these words could not, without violating their meaning, be given such broad interpretation. There is no dictionary definition of the word "game" which is broad enough to include implements used in the playing of athletic games or sports, and there is no trade custom to designate or speak of the implements used in athletic sports as a "game or part of a game." The only trade use of the word "game" to cover an article of commerce is in the case of games such as parlor or special card games most generally played by children, and only to a small extent by adults.

## III. BASEBALL AND FOOTBALL IMPLEMENTS SHOULD NOT BE SUBJECT TO AN EXCISE TAX.

The only implements used in the playing of the games of baseball, football, basket ball, and other games in which leather inflated balls are used which are now subjected to any excise tax are the balls themselves used in the games, and, in the case of baseball, the bats. This constitutes only a small part of the equipment ordinarily used by teams engaged in the playing of such games as baseball, football, basket ball, etc. In almost all these games special uniforms and protective devices of various kinds for the players are generally employed and which are not now subject to any excise tax. The same is true of boxing gloves. All the games included within this group are played almost entirely by young men of military age, and as they enlist or are drafted into the Army, the civilian market for these goods is very greatly reduced.

It has been found by the military authorities of all the allies—especially France, England, and the United States—that athletic sports and games play a very important part in the training and morale of the armies. It is perhaps not putting it too strong to say that athletic equipment for the armies is almost as essential as the regular quartermasters' and ordnance supplies, and we believe that they would to-day be a regular part of the quartermasters' supplies had the furnishing of athletic goods to the armies not been so efficiently provided for by such organizations as the Y. M. C. A. and the Fosdick committee for war-camp community and recreation work. Approximately 50 per cent of our production of this class of goods during the past six months has been sold to organizations furnishing goods directly to the Army, and we estimate that at least 25 per cent of the balance has reached the Army indirectly. This latter can not be an accurate estimate, because many sales for goods which are used by soldiers are made at retail through our stores or through dealers handling our goods located near Army camps. We believe it is entirely safe to predict that as time goes on the percentage of these goods used by the Army will increase rather than decrease, and hence any excise tax imposed on such goods falls upon either the Government or semigovernmental agencies engaged in supplying the Army with such goods or upon the soldiers themselves. We believe that it is only necessary to make this statement for it to be self-evident that any tax imposed on the goods so sold does not conform to the principles of the excise tax on luxuries.

With regard to the balance of goods in this class which are sold and consumed by the general public, these in turn may be subdivided into three groups:

1. Professional clubs and leagues, such as exist in baseball.
2. College and school teams, such as exist in all of the sports mentioned in this group.
3. Individual players or teams formed in small communities or amongst the employees of industries.

With regard to the first group, all professional baseball clubs are to-day having great difficulties in paying their expenses, to say nothing of earning any profits, and not only is it unfair to throw any greater tax burden upon them than they are now bearing but there is a great risk that any increase will greatly imperil revenues now being secured directly from professional baseball by the tax on receipts. It must be remembered that in addition to the regular income and profits taxes which they have to pay the same as all individuals and businesses, there is a gross tax of 10 per cent on their receipts, and in addition they are very seriously affected by the increased railroad fares and taxation on railroad fares.

With regard to the second group—that is, college and school teams—these also have had their revenue greatly cut down as the result of the war. Even in the case of the large universities, their athletic program, as the result of the war, has been seriously curtailed, and they are finding it difficult to raise the funds necessary to keep up the amount of athletics which is deemed essential for the physical welfare and morale of the students.

In the past the college athletics have been supported largely by gate receipts from the intercollegiate athletic contests in the major sports, such as football and baseball. The attendance at these games and the curtailment of the number of such contests which have been held has so reduced their revenue that it will be necessary for most of them to appeal to the graduates for subscriptions in order to keep up the athletic sports in the colleges on even the most economical basis.

If this is true of the large universities, it is even to a greater extent true of the small schools and colleges throughout the country.

With regard to the third group—that is, individuals—the individuals who play baseball, football, and basketball, come largely from the poor and people of moderate means, the sports of the relatively wealthier classes falling more in the tennis and golf groups. I don't mean to imply that only the wealthy play tennis and golf, but merely in comparing the players of the two groups that the average in tennis and golf would consist of the people of greater financial means than those in the baseball and football group.

We can appreciate that the fact that a particular class of merchandise is purchased largely by the poor and people of moderate means, would not in itself be a reason for not imposing an excise or consumption tax. If the poor or people of moderate means can in war time indulge in the extravagance of useless luxuries, this is probably in itself a very good reason why they can pay the consumption tax on such luxuries, but we contend that athletic goods do not fall into the group of comparatively useless luxuries. It is in common experience that many things which are luxuries of one decade become the necessities of the next decade. We contend that there is no other single factor which has contributed to a greater extent to the physical development of the youth of the United States than the popularity and indulgence in athletic sports. No one can to-day predict how long this war is to last. Many persons whose views are entitled to respect are predicting a war lasting from four to five years longer. Such a prediction sounds to us to-day as extreme and impossible. Does it sound any more extreme and impossible than did the prediction of Lord Kitchener in August, 1914, when he said that the war would last at least three years? In any event, it is the duty of the Nation to prepare and lay its plans for a long war. Everything, therefore, which will aid to the physical development of the youth of the Nation, especially those in schools and colleges who are now under the draft age, but who will, if the war lasts, in all probability be called into the Army before its end, should be encouraged. Therefore any taxation which might result in limiting or decreasing participation would be unwise at this time. We therefore strongly and respectfully urge on the committee that no tax should be imposed on the balls and implements used in the playing of the sports enumerated in this group.

#### IV. TENNIS AND GOLF.

With lawn tennis should be included the closely related games of indoor tennis, rackets, squash, and handball, which all bear a close similarity to

each other, and which in a way are probably played by the same classes of people.

The present tax covers only tennis balls and tennis rackets; the only other implements, however, used in these games which could be practically subjected to tax would probably only be tennis nets and posts and the sale of these is probably not sufficiently large to warrant including them within the tax.

Assuming that Congress has decided in favor of the policy to impose a consumption tax on luxuries or semiluxuries which presumably will fall on those best able to pay it, we believe that in the application of such a policy it is entirely proper to impose a tax on tennis and golf goods. We do strongly recommend and urge upon the committee, however, that this tax be confined entirely to tennis balls and golf balls and the balls used in playing the games of squash, rackets, and indoor tennis. That there may be no doubt in our motives in urging this, I wish to state at this point that we are manufacturers both of the balls used in these games and of the golf clubs and tennis rackets, we are, therefore, in an entirely impartial position between the manufacture of the rackets and clubs as opposed to the manufacture of balls.

Our reasons for urging that the tax be applied on the balls only are, first, that the volume of sales of balls in these sports constitutes far the greater proportion of all the sales; second, the balls lend themselves to the imposition of a specific tax of so many cents per dozen, the advantage of which as against a percentage tax we will urge in a later part of this brief; third, the tax on balls which are substantially all consumed within the same season conforms more in theory to the war consumption tax than a tax on clubs and rackets, which may be retained and used for a long period of years; fourth, the purchase of balls by each individual is far more closely proportionate to the amount of his indulgence in the games than is represented by the purchase of golf clubs and tennis rackets; fifth, manufacturers and producers of the balls are very few in number, because they can not be produced economically except in quantities, the tax would be collected from a very few individual manufacturers and producers and would all be collected in comparatively large amounts, whereas the manufacturer of tennis rackets—that is, the man who finally completes the racket by stringing it—and even to a greater extent in the case of manufacturers of golf clubs, namely, the man who completes the golf club by joining the shaft and head, varnishing and polishing, and puts on the grip, is in a large number of instances a small retail dealer or golf or tennis professional, producing only a few dozen rackets or clubs a year, and in order to collect the tax requires the filing of hundreds of small monthly reports, the amount of tax collected on each in many instances being less than \$1. This adds very greatly to the expense of the Treasury Department in collecting the tax and is likely to result in evasion in many instances.

This particular feature of the law has in the case of our own business been an extremely troublesome and expensive one, as it renders necessary keeping a separate report of tennis rackets and golf clubs which are finished in branch stores operated by us under subsidiary corporations from those clubs which are manufactured complete at our factories. The expense and trouble involved by this particular feature greatly exceeds the tax which we pay on the clubs and rackets finished in our branch stores; sixth, it is entirely feasible, in our opinion, to fix the tax on the balls at such an amount that the total produced will be equal to the tax which it was contemplated to raise by assessing a tax on tennis rackets and golf clubs, including balls, and that such tax will fall entirely fairly, because it will fall on precisely the same people who would also ultimately pay the tax on the tennis rackets and golf clubs.

The amount of the tax which we would suggest to be assessed on tennis balls is 25 cents per dozen and on golf balls 50 cents per dozen. In our opinion it is not necessary to make any distinction between the prices at which the various grades of golf balls and tennis balls are sold. In the first place, the golf ball and tennis ball trade is an exception to the general rule, in that far the greater majority of the sales are always in the highest priced balls rather than the lowest priced. The majority of the manufacturers in this country produce both the expensive and cheap grades, and in arriving at profits they generally estimate them by averages on the entire line, so that a uniform tax on balls would probably be met by the manufacturers by simply a horizontal increase in prices sufficient to cover the amount of the tax on the whole line, and since this adjustment between balls of different grades can be made by each individual manufacturer, any theoretical unfairness of the same amount of the tax on the cheap

as on the expensive ball is offset by the far greater simplicity and convenience in collecting and assessing the tax at a specific amount on every dozen balls regardless of the price at which sold. Here again we believe that we are in an impartial position, as we manufacture and sell both cheap and expensive balls.

#### V. SKATES.

Skates, either roller or ice, are not to-day subject to any excise tax. We do not, of course, know whether it is the intention of Congress to impose a tax on them. There is probably no part of the athletic goods industry which has been curtailed to a greater extent since the war than the sale of skates. Skating seems more than other athletic sports to be largely subject to great fluctuations of sales in normal times. Skating in one or two years may be very fashionable; everybody is indulging in it. In succeeding years it will probably drop off to only a very small percentage of the consumption in those years. Because the craze for skating would probably have fallen off somewhat under normal circumstances during the past year, also largely as the result of the activities of men and women of leisure in Red Cross and other war work during the past winter, our sale of skates has been only approximately 50 per cent of what it was in the preceding year.

While we are manufacturers of skates, being at the same time manufacturers of athletic goods generally, a falling off in our skate department is not of serious consequences to our business as a whole; on the other hand many of our competitors in skates manufacture nothing else, and when there is a falling off, such as there was last year, they are faced with a very serious financial situation. For these reasons alone we believe it would be a serious mistake to subject a business which will have for the next few years the greatest difficulty in keeping its head above water to an additional burden of an excise tax. We fully appreciate, of course, that an excise tax or consumption tax is only paid in the first instance by the producer and is a tax which must be, and is intended to be, passed on to the consumer of the goods subjected to it. Nevertheless it hurts the business by resulting in higher prices, causing a decrease in consumption, and if business failures enervating to the financial strength of the country are to be avoided, businesses which are already finding difficulty in avoiding insolvency should not be subject to the added burdens of an excise tax.

#### VI. WITH REGARD TO IMPLEMENTS USED IN FIELD GAMES AND GYMNASIUM APPARATUS.

No tax is to-day imposed on such implements. The total volume of their sales is very small. We have never found the manufacture and sale of these goods in our business to be profitable and have only continued their manufacture and sale because we aim to be general athletic outfitters. The equipment is also largely purchased by communities for public buildings, playgrounds, and such semicharitable institutions as the Y. M. C. A. An attempt to classify all the various items would be very difficult and any general classification would probably lead to difficulties and disputes between taxpayers and the Treasury Department. Much of the apparatus also can be made by local carpenters or builders. The great necessity also of curtailing any public or charitable expenditures except for direct war purposes results in a very greatly increased demand for items under this group so that we strongly urge that no tax be imposed on them. The amount collected would be very small and the amount of trouble and expense involved in the collection would greatly exceed the amount of the tax.

#### VII. A SPECIFIC TAX SHOULD BE IMPOSED RATHER THAN A PERCENTAGE TAX.

The present law calls for a tax of 3 per cent on the price at which the articles taxed are sold by the manufacturer, producer, or importer. The manufacturers', producers', and importers' sales may be grouped into three general classes:

1. Sales in considerable quantities to jobbers.
2. Sales to retail dealers,
3. Sales to consumers.

The prices at which the manufacturer sells to these different groups differ very widely in the athletic-goods trade. The average may be stated in the

following percentages: Assuming the price at which the article is sold to the consumer to be 100 per cent, the price to the retail dealer will be 66 $\frac{2}{3}$  per cent, and the price to the jobber will be 50 per cent. Of course, in individual instances, this percentage may be greater or less, but what I have stated is probably a fair average. We can not, without unduly lengthening this brief, enter into a broad general discussion of the business economics which justify these different prices.

It is probably enough for this purpose to say that they have been established under strictly competitive conditions, and from our knowledge of the athletic goods business we know that they result in only very moderate profits to the manufacturer, jobber, and dealer. It is perfectly apparent, however, that the tax which a particular manufacturer must pay will vary to the extent of at least one-half of the possible amount of the tax according to whether the sales were made to the consumer direct or to a jobber. It must be remembered also that merely because he is selling direct to the consumer he is not any more able to pay the double tax because he will have the same and in some cases even greater expenses in reaching the consumer direct than the combined expenses of the jobber and retail dealer where the sales are made through the channel of these two agencies, hence the next result of the tax which is a percentage on the price at which the goods are sold by the manufacturer results in a double burden on the manufacturer who sells directly to the consumer as against the manufacturer selling to the jobber. It would, however, make the matter very much simpler for us and also would be much fairer as between manufacturers, one having a sales policy to sell only to dealers or direct to consumers, and the other a sales policy selling to jobbers, if the price were a specific tax and identically the same on similar articles of the same grade. This can be done very simply if the tax is limited to golf balls and tennis balls, as we have suggested. It could also be done in the case of all athletic goods if Congress should decide to extend the tax to goods other than golf balls and tennis balls by providing that the tax should be a certain percentage on the retail price published and advertised by the manufacturer.

We believe that it is the general custom in the trade for all manufacturers of athletic goods, at least such as would be likely to be subjected to any tax, to publish retail prices. While they can not under the existing decisions of the Supreme Court compel by contract adherence to these selling prices on the part of their purchasers, nevertheless in general the prices are actually adhered to, and, in any event, where they are not adhered to the goods are sold, not at a higher price, but at a cut price, because in the practical operation of competition it is impossible for a dealer to charge more than the retail price published by the manufacturer. It should be borne in mind, however, in fixing any rate of taxation that the amount produced by putting the assessment on the retail price would be very nearly double what it would be if fixed on the manufacturer's price to the jobber.

Some objection might be made to this on the part of the manufacturers who make what are known as "special brand" goods—that is, goods which do not bear their name but bear the name of some jobber or dealer. I recommend that the law be so drawn that the tax on special-brand goods be paid by the jobber or dealer whose name appears on the goods or on the package containing them. He puts himself forth to the public as the ostensible manufacturer, and we believe it is not only fairer but would simplify the administration of the law for the tax to fall on him rather than the man who may actually make the merchandise.

#### VIII. CONCLUSION.

In the short time at our disposal we have been unable to gather any accurate statistics of sales of golf and tennis goods; from our general knowledge, however, of the trade we are able to make some estimates which may be of value to the committee.

In the tennis trade the sales of tennis balls in a normal year in the United States run from 150,000 to 200,000 dozen. The present average manufacturer's price for tennis balls is approximately \$4.25 per dozen, which in a normal year would mean total manufacturers' sales of tennis balls of \$850,000. Tennis rackets in a normal year at manufacturers' prices would make about \$750,000. During the 12 months we have been in the war, and probably continuing during the war, the sales of tennis rackets have decreased to a far greater extent than

the sales of balls, the reason probably being, as we have stated in a prior portion of this brief, that a tennis racket may be used for a number of years while the balls are consumed each season.

We would estimate that in the fiscal year commencing July 1, 1918, the sales of tennis balls in this country would be about 140,000 dozen, or, in round figures, would amount at manufacturers' prices to about \$600,000, and that the sales of tennis rackets will probably not exceed 200,000. Under the present tax of 3 per cent this would produce a revenue of \$24,000. Our suggested tax of 25 cents per dozen on 140,000 dozen would produce revenue of \$35,000.

In the case of golf, the quantities of golf balls sold in a normal year in this country are approximately the same as tennis balls. The average manufacturer's price per dozen for golf balls is to-day about \$6. Assuming that during the fiscal year commencing July 1, 1918, there will be sales of 150,000 dozen golf balls, which we estimate as a probable maximum quantity, this would amount to a total at manufacturers' prices of \$900,000. The sales of golf clubs at manufacturers' prices are in normal years about 600,000. This item of golf clubs is very difficult to estimate from the standpoint of the tax because of the large amount of clubs which are made up and finished by golf professionals and sold by them. During the next ensuing fiscal year we would estimate factory sales on golf clubs at about 300,000, or 50 per cent of normal. This makes the total golf sales 1,200,000, which at the present 3 per cent would produce a revenue of \$36,000. Our suggestion of the tax of 50 cents per dozen on golf balls would produce, if 150,000 dozen were sold, a revenue of \$75,000.

In presenting this brief we have only been able to deal with the general situation of the tax and also present suggestions and criticisms which occur to us in view of the section of the existing law covering athletic goods. It very often happens in the drafting of legislation of as complicated a character as our tax laws that confusion arises in their enforcement due to unfamiliarity with the technical or trade language which has to be used in order to specify the items intended for taxation; also lack of familiarity with conditions existing in the trade may result in the law containing provisions which cause unnecessary hardship and inconvenience. We realize that we can not take up the time of the committee by lengthening a discussion on the general principles involved, or ask for another hearing on those principles, but we do believe that we can render valuable aid and assistance to the committee when it has determined upon the principles that will apply on this section of the tax law in possibly making suggestions for the wording of the section in order to avoid confusion and conflict of opinion in its enforcement. For that purpose we place ourselves at the disposition of the committee for such assistance as we may be able to render.

Respectfully submitted.

H. BOARDMAN SPALDING,  
For A. G. SPALDING & BRO.

#### STATEMENT OF MR. A. H. EMERY, OF GLENN BROOK, CONN.

Mr. RAINEY. Please state your name.

Mr. EMERY. A. H. Emery, civil and mechanical engineer; moving pictures, postal rates, and advertising.

First, I would like to speak on the subject of moving pictures. Moving pictures should be a source of very great education.

Mr. RAINEY. Before he starts, I would suggest that Mr. Emery be allowed to finish his statement, and the members of the committee make notes and ask no questions until he finishes. Would you prefer that, Mr. Emery?

Mr. EMERY. Yes, sir. I will take the moving pictures and finish that subject up; and then there is another subject.

Mr. RAINEY. We will ask you questions on that subject when you finish, and you can indicate when you are ready for questions.

Mr. EMERY. Yes, sir. The moving picture, if properly selected and properly made, should be a source of very great education. The moving pictures as they are made and shown to-day are a source of

very great revenue to the operators and of very great payment by the public who patronize the pictures, and of very great injury to millions of people who patronize them. We have in the little town of Stamford, Conn., half a dozen of those picture shows. They are all of them open in the evening, and part of them in the afternoon. Many of them are low priced places—10 or 15 cents. The Government tax on all these moving pictures is 10 per cent. Whatever the patron pays for admission, 10 per cent is added to what he pays for the tax.

Many children—boys and girls—and others, go to these moving pictures, if they can get away, every evening. Many of these pictures that are shown are pictures of crimes, and they are in the class of our old sensational dime novels—showing many scenes of crime—and many boys who go to see these pictures are thus led into crime. They are made bad citizens by seeing these pictures. They are taking time to see them which should be spent in study or a useful pursuit; so that they are wasting a large portion of their evenings, and they are being despoiled of good morals. A minister in my town will not allow his children to go to these pictures. I tell him that he is right. The children think it is very hard to be kept from them. There are persons in that town that are supported largely by charity, and it is found that they go almost every evening to these pictures.

If we would raise the price of those pictures to just double the amount of admission that the proprietor charges, instead of making the tax 10 per cent make it 100 per cent, or double the admission, we would wipe out a lot of those pictures. Those that now charge 25 cents admission would charge 50 cents instead of 28 cents, and these little boys and girls, and the poor people who go to these places and lose so much time could not go. The other people would go very much less frequently and be less harmed by those things. This mass of pictures, many of them, show infidelities in the family; they teach crime; they teach that the relations of men and women are very bad; they promulgate whoredom. They are teaching children and educating them to make the way to hell easy. We want to submit that, as good citizens, we want to stop this waste of time of all children and other people who support these pictures.

If we could have only good pictures shown, pictures which would educate us, they would be very useful. Now, I can go in and see a film and see the cotton plant growing and see the men picking the cotton, and see cotton baled and shipped to the market, see it carded, spun, and woven. That teaches us in a single hour as much as we could get running around the country in a week. That is very useful. But that is a small part of the moving picture; seeing things that way. If we had, on the other hand, these pictures of stories which are often useful as to morals, which would make us better, our censors would not permit any pictures to be shown unless they were right and tended to increase the morals of the people, then the result would be good.

Let us cut down these objectionable pictures and at the same time give the Government additional revenue. This will give you a lot of revenue and at the same time wipe out a lot of this cheap stuff. There should not be any admission less than 25 cents, and adding the tax of 25 cents it would make the admission 50 cents. That will

create a great reduction in the number of those who attend and will save a great deal of the time of the people who are now patronizing these pictures, to the great detriment of their own interests and destruction of their morals and waste of their time. I think that is enough on the moving picture.

Mr. RAINEY. Does any member of the committee want to ask any questions on the subject of moving pictures?

Mr. GREEN. Did you appear before the committee that was investigating the subject of moving pictures in the Senate?

Mr. EMERY. I did not.

Mr. MOORE. Do you think we could regulate that by Federal law—censorship; by Federal enactment?

Mr. EMERY. It is a difficult thing to do; but it would be very beneficial to the public. Our generation of children growing up now would be the better for it.

Mr. MOORE. I asked because I wondered how your supposed remedy to raise more revenue by reducing the number of bad shows and increasing the number of better shows would work out. It is a question whether, if they paid more, the moral tone would rise as you intend. Some people are willing to pay a higher price to see—

Mr. EMERY. One that is worse.

Mr. MOORE. To see a worse show. That is the point. How would we get more revenue out of it?

Mr. EMERY. We should have two objects in making these laws, one to get revenue and one to make our people better.

Mr. MOORE. Our idea, of course, is to get two dollars for one to-day, in the way of revenue. We have got to have two dollars this year where we got but one last year.

Mr. EMERY. No man can say how much your revenue would be changed by wiping out these low-priced admissions.

Mr. MOORE. The question is whether by abolishing them we would increase or decrease the revenue. I suppose primarily we have nothing to do with the moral question.

Mr. EMERY. I doubt very much whether it would make much difference. I think the revenue would be very much increased. Of course, it would not wipe out all those that are bad. The probability is that the revenue would be increased very much by charging double the price instead of only 10 per cent on the price of admission.

Mr. MOORE. Just illustrating, and not for the purpose of detaining you at all, there are a number of people that would pay a pretty high price for a show that was a little risqué.

Mr. EMERY. The revenue will not help those people. They will continue. They will pay the increased admission. You will get more revenue that way, but you will not help the morals of those men or women; but the censorship must do that, and that is a much more difficult problem.

Mr. MOORE. That does not help the revenue very much.

Mr. EMERY. No; I think not.

Mr. RAINEY. Will you proceed, now, with the other subject you had?

Mr. EMERY. If we take the zone-postal rate and add a tax on advertisements, it becomes a very complicated subject; whereas if you take the zone rate and you carry this piece of paper which weighs a pound [indicating pamphlet] and put a tax on that pound, it is

very simple; and it matters not to this postal expense whether this car carrying a ton of this paper is carrying some advertisements in it or not. The expense of carrying it is so much per pound.

Now, if you leave the advertisements out of that entirely, out of this zone rate, you will simplify the matter very much. All these advertisements that are published in these papers, if they had to pay a postal rate on the advertisements, because of the advertisements going in there, for this week, not because it is an advertisement, but because it is in this paper they are carrying, it is very complicated. Leave the advertisement business out of the carriage of these mails. It is second-class postage. What shall the second-class postage be to-day? As a matter of fact, there was a loss of \$80,000,000 to pay its costs. If the postal rate is fixed on zones, as it should be, in my mind, it will do two things. In the first place, it will help to wipe out a large class of 15-cent and 10-cent magazines which to-day are a curse to this country. They are the old dime novel dressed up and sent about over the country at a cost of one-fifth of what it costs the Government for carrying them. Let the Government charge whatever the cost of carriage may be. Then you can wipe out a large class of these cheap magazines, and you will save to the country a large amount of paper which, by its consumption, to-day is destroying our forests; and that is destroying our climate.

Now, if you will put that tax on advertising, where it belongs, then you will simplify the procedure and you will carry the second-class mail at a price which makes it up, which is not 1 cent a pound for this zone but several times that; and if you are carrying it to the farther zone, you will pay a price that makes it up; so that instead of collecting ten or eleven millions a year for second-class matter you may wipe out that cheap magazine business and collect \$40,000,000 from the second-class mail. If you carry it at cost, you will get \$40,000,000 instead of \$10,000,000.

Now, let us raise that revenue to the cost of carrying the mail, whatever it is; and the cost of carrying depends on the weight, not on the number of pages or the size of it, but the weight of it. If you put the tax on advertising in a revenue bill, the postage should be paid to the post office for that. You will increase the revenue to the Government about \$40,000,000 instead of having a loss of \$80,000,000. They will get that \$40,000,000 back, and they will not have wasted so much of our forests or done so much harm to the morals of our people through these cheap magazines, which are carried by the Government for one-fifth of the cost of carrying them.

Mr. RAINEY. Are there any questions that any member desires to ask? If there are none, you may proceed, Mr. Emery.

Mr. EMERY. This divorces the tax on advertisements from postal rates and puts it where it belongs, and puts a tax on this second-class matter such as that it shall pay the cost of carrying it.

Mr. RAINEY. Have you anything else you want to discuss?

Mr. EMERY. Yes; I want to discuss another subject in the law, and that is the tax on advertisements and a tax on pictures in all papers and magazines. I have written a little paper, which I will read, and then bring in the details again [reading]:

A very large revenue may be collected each year by leaving a large tax on all advertisements of all our newspapers and magazines, and on all the pictures published therein.

I should add to that the billboards and tax all car advertisements, wherever they appear. All those advertisements which appear under a glass should be taxed [reading]:

This is especially the case as regards the newspapers, which are rapidly wasting our forests and greatly injuring our climate by using so much paper, much of which is worse than wasted in publishing comic pictures; much more is wasted in pictures there is no excuse for publishing; and still more is wasted in publishing advertisements far beyond the necessities of the public.

In regard to this wasting of our forests, I read last winter that we were paying men \$15 a day for cutting up our forests to make paper. Cutting up those forests does this, it destroys our climate. When I was a child our southern wind would come up to the north where I live, and there great big masses of trees protected the snow, which had fallen there, and those winds were quickly checked and killed by those forests, and our winter remained winter from November to April, and it was very rare to see a bare spot of ground. You would say, "I saw a spot of bare ground to-day," in March, which was unusual. You might be able to say, "I did not see a spot of bare ground in April." To-day, these forests are so denuded that those warm winds come up there in winter and we get freshet after freshet, and thaw after thaw. It is hurting our climate very much.

Now, the northern winds come south, and our forests being cut away, they come down much farther, and to-day frosts in Florida and in New Orleans and in Texas are common, where they used to be very rare. They go down there and spoil our orange groves and our lemon groves and our pineapple gardens and other growing things. Now, let us try to protect our climate by trying to protect our forests; and one great source of waste to-day is the paper, consuming so much of the woods, and the magazines, consuming so much of the woods. [Reading:]

To illustrate this waste, we find from Ayers Newspaper Directory of 1917 that the daily circulation of all the papers published in the State of New York may be taken approximately at 6,000,000 copies on week days, and 5,000,000 copies on Sunday. The weight of to-day's Washington Post for 14 pages is 4 ounces, at which rate 6,000,000 copies would be 1,500,000 pounds, or for six days, 9,000,000 pounds. The Sunday papers are much larger, fully five times the average number of pages that the dailies have. Taking the average weight of the Sunday paper at 1½ pounds for 5,000,000 copies it is 6,250,000 pounds more, which added to the papers for the other six days of the week makes together 15,250,000 pounds for all the dailies published in the State of New York for one week, or more than 7,500 tons, at which rate the paper used for these dailies for 52 weeks, or one year, would be 390,000 tons, and this is for the dailies published in the State of New York only.

Of the Sunday issues probably a fourth of this paper is required for the pictures only, and fully half of the rest for advertising.

I may say right here that the advertising, which was very small 50 years ago, is very large to-day, and is rapidly growing, so that the advertising, if there is no change in the law, will increase and soon be much more than 50 per cent [reading]:

In part of the papers one section is devoted almost exclusively to pictures of fine quality, but they are all out of place and go mainly to enlarge the volume of waste paper, while in many of the papers many pages are devoted to comic pictures of no good use to anyone, but very bad for the children to see them, and all the colored sections are particularly bad and not fit to be seen in any home. All the Sunday papers have a very large quantity of advertising.

In most of the Sunday editions we have four sheets, each printed on both sides, making eight pages, and there is some advertising in that, and those pictures are printed on a heavier paper, a more expensive paper, not with black ink, but mostly with colors, and they are works of art. If the work of printing that eight pages on that quality of paper was put into a single sheet of paper of the same size of that eight pages, and of the cost of the paper which is put into that eight pages, and the same quality of work in good artistic form, that single page would be worth a dollar, to buy and hang in your house; but to-day the eight pages is looked at for four or five minutes and then goes into the wastebasket. The paper is expensive and the pictures are beautiful, and there they are, each Sunday, millions of copies going into the wastebasket. That is wasting our forests again. [Reading:]

The advertisements in the daily papers are, many of them, needless. For instance, on May 3, the Washington Post had an advertisement of the Saturday Evening Post covering a whole page, calling attention of the public to this paper. There was no need for this advertisement. All the reading public of the United States know well of the Saturday Evening Post, its cost, its value, and where to get it. To publish this advertisement it consumed about 400 pounds of paper in the Washington Post that date. The circulation of the Washington Post of May 3 may be taken at, say, 45,000 copies. For the same reason this advertisement covering a whole page was put in the Washington Post that day, it might have been put in a hundred other papers in the country. I don't know that it was in any of them, but there was the same reason to put it in a hundred that there was in this one Washington Post. If it had been put in 50 of them with the consumption of paper equal to that used by the Post for this advertisement, there would have been consumed for this needless advertisement in these 50 papers 10 tons of paper. This one advertisement in the Washington Post covered many thousand pages of the issue. If there were 50,000 copies of the paper published, there were 50,000 pages of this waste paper, wasting the paper on which it was printed. I give this as a single instance of waste.

Many instances might be cited showing an unnecessary advertisement in the daily papers. For instance, a single cigarette is advertised, day after day, in many papers, and on Sundays a very large advertisement of this cigarette, which does the public no good, but, in proportion to the extent it benefits the advertiser it curses humanity by the use of these cigarettes. All advertisements for tobacco in any form, and all advertisements for liquor in any form should be taxed at either double or triple the rates the Government should tax ordinary advertisements. As a rule, all the papers contain several times as much advertising matter on Sundays that they do in other issues.

The pictures and advertisements in the Sunday papers bring up the Sunday issues to fully five times the weight of the ordinary daily issues. Many single advertisements cover a whole page in each of several different papers on Sunday, and thus waste an enormous sum of money. The people who buy the advertised goods have to pay for this advertising, most of which should not have been made. If half the money spent in this advertising were spent in making the goods better, the buyers of the goods would be that much better off, and the manufacturer might have saved the other half for his pocket, because if he made these goods so much better, he would still get the sales.

A good way to save a very large part of this paper wasted in advertising would be to tax every square inch of advertisement 30 per cent of the charge made by the papers and magazines therefor, tripling this charge on all advertisements of tobacco, in any form, and all liquor, in any form, and doubling all these rates of advertising in the Sunday papers.

I want to wipe out these great issues of the Sunday papers.

Mr. MOORE. You would abolish the Sunday issues altogether?

Mr. EMERY. No; I would double the advertising tax on Sunday issues.

Mr. MOORE. You have given a great deal of thought to this. Have you made any calculation of the amount of revenue that might be derived?

Mr. EMERY. I will get to that a little later.

Mr. MOORE. All right.

Mr. EMERY (reading):

Again, a very large quantity of paper may be saved with great profit to the public by charging on each square inch of space used for pictures, the same price that is charged for the ordinary commercial business advertising.

That is, charge the publisher for a page of pictures as much tax as he is charging for a page of advertisement; and all space used for comic pictures, tripling the price, as advised in the case of liquors and tobacco, and on Sunday issues doubling this charge.

That would wipe out a very large quantity of these pictures, and would decrease very largely the quantity of paper used, and still bring a large revenue to the Government. [Reading:]

This would cut our papers down to a reasonable amount of space and would save an enormous amount of paper that is now worse than being wasted. Our children are being greatly injured by seeing these comic pictures; no one is benefited by seeing them, and their use results in this fearful waste. The other pictures are of little real value and result in a very large waste of paper. If the plan recommended is adopted, a very large revenue will be obtained, and the public will be saved this fearful waste of voluminous Sunday papers—first, of paying for them, and next in wasting their time in looking at and reading them. Most of the advertisements in the Sunday papers are probably not read by one person in a thousand who look at the papers. Now, let us save this waste of paper, and not go on destroying our forests and injuring our climate by this great waste.

I should have stated in this paper that the habit of mixing the advertisements all through the reading matter of any magazine or paper is seriously objectionable. To illustrate, a few years ago the Ladies' Home Journal was a delight to any household and a credit to any household. To-day it is a mass of advertisements—the reading matter scattered all through the advertisements—and a cumbersome nuisance in any house. I would not have it as a gift. It is so voluminous that you can not keep it for long, and the reading matter, as I say, is scattered through a great mass of advertisements.

Our magazines to-day have their advertisements scattered all through them. Every piece of reading matter in them we will find "continued on such-and-such a page," and the result is that few of our magazines are fit to keep on account of having the advertisements scattered all through them and being so voluminous.

Many years ago Harper's Magazine was a beautiful and well illustrated magazine, and we could keep the numbers and have them bound at the end of the year, and it was a good book to keep in our own house, to keep in the library. To-day, the advertisements will occupy probably one-third of that paper, and they are mixed into the reading matter so that it is not fit to keep, and it is not fit to bind, and so it becomes waste, only as you read it to-day and then give it away or throw it away. [Reading:]

To prevent scattering the advertisements through the reading matter I would suggest that whenever an advertisement is put in through the reading matter the Government tax should be double what it is otherwise.

That would probably cause them to put the advertisements where they belong, together at the end of the other matter in the magazine. [Reading:]

I want the tax on advertisements high enough so that we can bind the reading matter of our magazines together if we wish.

Let us assume that the 390,000 tons of paper used for the daily papers of the State of New York is one-sixth of all the paper used

for newspapers in United States in one year, and that without a change in the laws one-half of the paper used in the next four years is for advertising. I speak of four years here because I think that this law should be made in such a way that we would not need to change it in four years and because there is very likely to be four years of war.

If one-half of this paper is going to be used in the next four years for advertising, then we have 390,000 tons multiplied by 6 to get the quantity of paper used in the United States, instead of that in the State of New York, for newspapers, which gives 2,340,000 tons of paper to be used in one year in the entire United States, and that multiplied by 4, for the four years, gives us 9,360,000 tons of paper used by the newspapers alone in the United States in four years. One-half of this used for advertising would be 4,680,000 tons. Now, make the tax on this advertising such that the average equals the charge for advertising; and suppose that this tax cuts the advertising to one-sixth of the estimated amount, then we have a saving of the paper used of five-sixths of the 4,680,000 tons, or 3,900,000 tons, saved in the four years, and this for the newspapers alone. That does not include the magazines, but it is the saving in paper used for newspapers alone.

Now, take the cost of advertising in the various papers and magazines, billboards, cars, and one way and another at \$500,000,000 a year. That is the estimate that Mr. Koons gave in this statement in the hearings before the Senate committee in May—the entire charge for advertising \$500,000,000 per year. If you take one-sixth of that, supposing that we cut the advertising down to one-sixth, that would give us \$83,333,333.33, and you have to add for the taxes proposed a tax sum of \$83,333,333.33 for a period of a year. That would give the Government this three million and upward of dollars for this tax in one year. The saving per year to the advertisers is just three times this. They pay for the advertising one-sixth of what they pay now; but the Government steps in and doubles that rate, because it is one-sixth of the advertising at double the rate, and that would give the sum paid by the men who are paying for the advertising \$250,000,000 for one year, or for four years \$1,000,000,000, besides the amount paid to the Government of \$83,333,333.33, which is just that much gain for the people. They have gained this \$1,000,000,000 that they do not pay for the advertisements, and, counting what they have to pay for the advertisements, we have \$333,333,000 saved to the public in four years by cutting these advertisements down to one-sixth of their present volume.

Now, what will one-sixth of the present volume do for us? Here is a merchant in Washington. In this morning's Post there is a half a page of advertisement, and to-night I will buy the Star, and there he has got another half page of advertisement. That makes twice that I have paid for those advertisements to-day, and in six days I will have paid 12 times for them. I do not read those advertisements at all, and you do not, and there is not 1 out of 1,000 who does read them. If this publisher had stated to this advertiser, "Now, instead of advertising six days in the week you advertise one day in the week and pay double the rate, then he would pay only one-third as much for his advertisement; and if that paper is

known to have his advertisements in it on Wednesdays, and there is any reader who wants to read his advertisements in the future, he can just lay that Wednesday's copy by and read it later.

Mr. GREEN. Do you think those advertisements always tell the truth?

Mr. EMERY. No, sir; I know they do not.

Mr. COLLIER. The fact is, is it not, that notwithstanding the food advertisements of bargains, practically the prices are always the same?

Mr. EMERY. The prices are the same. Let me tell you of two instances to illustrate this point. John Wanamaker has built up a very large business. John Wanamaker puts in his stores in New York and Philadelphia first-class goods. Now, when I want to buy any goods in that line which he deals in, and it is a large line, I always go to his store, because I know I will get good goods at a fair price. I do not read his advertisements at all. John Wanamaker puts in the Sunday Sun a whole page of advertisements, and he pays a lot of money for that. Here is a 75,000-copy edition of that.

Mr. RAINEY. And you pay part of that.

Mr. EMERY. Yes; a very small part, though. Yes; I help to pay it. The consumers of his goods pay for the advertisements.

Mr. GREEN. The consumers of goods eventually pay it all?

Mr. EMERY. They pay it all. Now, John Wanamaker puts that in the Sunday Sun; but for the same reason that he puts it in the Sunday Sun he must put it in the New York Times and in the New York Tribune and in the New York World and in the New York Journal, and in the Hearst papers and in several papers in Philadelphia. Now, that comes to my attention, and that advertisement being by John Wanamaker, and he is a first-class business man, but all the money for that comes from his consumers of his goods. He gets somewhat larger sales by that, but nothing like in proportion to the cost. As I say, I and a lot of other people, when we buy, buy from him. We do not do it because we see his advertisements, though, but because we know that we always get good goods from him at a fair price. I never got poor goods there in my life.

Mr. RAINEY. You are giving him a very fine advertisement now.

Mr. EMERY. That is very true. Now, Mr. Hearn keeps a department store also in New York. He advertises to sell goods very cheap, very much below their value, and people reading those advertisements would actually think they were getting goods at a low price. And so they are fools; for they go and pay for those advertisements and pay for the poor goods which they think they are getting at a bargain. Now, if he put half that money in making those goods better and left off the advertisements, he would not sell as many goods, and he would not fool as many people, but the goods that people want would be bought by them, which is something. Suppose there was no advertising. I am doing work, and my son wrote me the other day that work was being forced on me, more than I could do. Why is that? It is because I am known to do good work. I do not advertise at all and never did. I pay not one solitary cent for advertising in any direction in the year; and I am busy enough. If there was very little advertising, only one-sixth of what is done now,

and then in these daily papers they put in a single issue one advertisement, and it was known by people that we did put in an advertisement one day of the week, they could take the issue of that day and save it for that advertisement.

These figures which I have given show what could be done with that saving, and so that you would get a large revenue, you would get in four years this large amount which I have calculated, and the public will be saved this enormous bill for advertising and paper, paying only one-third as much, and the same goods are sold everywhere in the country, and the only difference is that these fellows that are trying to skin you by advertising cheap goods and making you think you are getting bargains, do not get the business, and people who furnish good goods, who are entitled to it, get it. The people will get their goods, and they will be saved that enormous cost of advertising and saved the wiping out of the forests, which is done to supply these enormous amounts of paper.

Mr. RAINEX. Are you through, now?

Mr. EMERY. Yes, sir.

Mr. RAINEX. Are there any questions? If none of the members have any questions to ask, that will be all.

(At 1 o'clock p. m. the committee adjourned until Monday, June 10, 1918, at 10 o'clock a. m.)

WILLIS C. HAWLEY, Oregon.

ALLEN T. TREADWAY, Massachusetts.

JOHN E. WALKER, *Clerk.*

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Monday, June 10, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, O'Shaunessy, White, Moore, Green, Longworth, Fairchild, Sterling, Martin, Hawley, and Treadway.

## STATEMENT OF MR. BENJAMIN C. MARSH, SECRETARY FARMERS' NATIONAL COMMITTEE ON WAR FINANCE—Continued.

The CHAIRMAN. Mr. Marsh, we will hear you now for 20 minutes.

Mr. MARSH. If by any chance it could be made half an hour, I would appreciate it. As I stated previously, Mr. Chairman and gentlemen, I appear in behalf of the Farmers' National Committee on War Finance.

Mr. GARNER. How is that committee constituted? Is it a governmental organization?

Mr. MARSH. No, sir; it is entirely a private organization. I will be glad to read, or to insert in the record, a list of the gentlemen who are members of this committee. We organized it hurriedly when we thought that a revenue bill would probably come up at this session.

Mr. HAWLEY. How long has that organization been in existence?

Mr. MARSH. About three weeks or a month. We are confident that you gentlemen will be hearing from your constituents back home on this question. We believe that we completely and sincerely represent their position.

Mr. GARNER. As I understand it, you organized this committee in the District of Columbia about three weeks ago?

Mr. MARSH. In the District of Columbia, yes, sir; but there are representatives from all over the country, as I was going to say, and out as far as the Pacific coast.

Mr. GARNER. Did you select these members by yourself, or how did you get them to be members of your organization?

Mr. MARSH. We wrote to them and told them what the situation was, as we saw it; and asked them if they would become members of this committee, so as to get the principles that we believed in enacted into legislation in this revenue bill. Some of them have been seen personally and others we have heard from through correspondence.

Mr. GARNER. From that beginning you started a propaganda throughout the United States by correspondence—

Mr. MARSH (interposing). No, sir; we believed that the resolutions adopted by the National Grange, the National Nonpartisan League, the Society of Equity, the Gleaners, the Farmers' Union, the Dairy Union, the Buttermakers' Association, etc., on the subject of revenue, or on the means of raising revenue, were pretty indicative of the opinion of the people of this country; and I might add parenthetically, although I have no right to speak for organized labor, that they have adopted substantially the same resolutions as most of those adopted by those big farm organizations. But you gentlemen are well aware how valuable it is to have an organization for a specific purpose. We do not want you to accept a single one of our suggestions because it emanates from the Farmers' National Committee on War Finance, but we want you to consider our suggestions solely on their merits.

Mr. HAWLEY. Did you have a public meeting or some assemblage at which your organization adopted a platform of principles?

Mr. MARSH. No, sir; we discussed that in this committee.

Mr. HAWLEY. How many were here when it was discussed?

Mr. MARSH. They have not been here. We got this committee together here. We knew the principles of most of them, because we knew what resolutions their organizations had adopted, and we submitted these proposals. You will hear from every one of those organizations, and I hope your mail will be full of this.

Mr. HAWLEY. You have never had any meeting of your organization?

Mr. MARSH. We never had a meeting of this organization, but the organizations which these gentlemen represent have had meetings and have adopted substantially the same proposals. I can quote what they were in some cases. I explained one of them on Friday when I said that the grange had suggested a maximum income of \$100,000 if anything like the amount that it is anticipated will be necessary next year is to be raised.

Now, I would like to take up the discussion at the point where I stopped last Friday. Last Friday, as the meeting was closing, the question was asked me whether or not I thought that we ought to have nationalization of industries, and I said that that was to be taken entirely in connection with the question of financing industries. My reply was that we would have to win the war. I did not mean by that that the Government should take over and operate all industrial organizations, but we were discussing then the question of the financing of industries, and it was in that connection that I said that we would have to have practically a nationalization of industries during the war. Now, if the Federal, State, and local governments spend, exclusive of the war, about \$3,000,000,000, and if the war costs what it is estimated to cost next year, then the cost of Government next year will be about one-half of the total national income this year. That is something that I think we will agree upon.

Mr. Moore asked me concerning the validity of some of my figures the other day, and I said that I would show the facts by the figures of the Commissioner of Internal Revenue, and I have been informed since that he has approximately those same figures. It has been stated frequently that this war has got to be paid for out of the earnings of the present generation, or paid out of the earnings of

the people during the war. I want to refer to that, because the point was raised as to whether or not those wealthy men could stand it to have their incomes in excess of \$100,000 or \$50,000 taken. Now, as a matter of fact, is it not true that this war will not be paid for out of earnings during the war, but that it will be underwritten out of earnings or savings made during the war? Now, if gentlemen with an income, we will say, of \$10,000,000 do not contribute all of their income in excess of \$100,000 to the cost of the war, then, in order to raise for the purposes of the Government during the war one-half of the total national income, the Government will have to take that money as a loan. Can anybody suggest any other alternative? We must raise in the neighborhood of \$30,000,000,000. Now, there is a certain minimum which the people have got to have for subsistence, and the Government can not tax below that minimum necessary for subsistence. So far as the business of the individual is concerned, it does not make any difference whether the Government takes all of his income in excess of \$100,000 or not.

It does not make any difference, so far as the immediate conduct of that business is concerned, if the money is taken out of the individual's control, whether by taxation or in the form of a loan, because it is out of the control of the man to use it in his business. There are two or three other aspects of the matter to be considered in connection with this financial bill besides merely the question of how to get revenue. When I suggest to you that we are in this war, and are in this war to win, I think you will agree with me that billionairism is pretty nearly as big a menace as Kaiserism. I suggested that to a Federal official yesterday, and he said, "No; billionairism is a greater menace." However, I did not agree to that, because I think that Kaiserism is the greater menace right now until it is defeated. Now, we have men in this country with these enormous incomes of ten, fifteen, twenty, twenty-five, or fifty million dollars, and I do not know how many million dollars a year, and if we do not compel that wealth to be as patriotic as the great mass of the people of this country are it is going to have a bad effect upon the country and will create a condition of general industrial revolution and unrest. We therefore suggest that you will achieve two purposes by making the principle of equality of service and sacrifice the principle on which this bill is drafted—that is, you will raise this revenue and you will reinforce the morale of the people of this country.

Frankly, I can not conceive of a better stroke against Kaiserism nor anything more apt to bring Russia back into this war with us, where she belongs, than to have the inspiration of the American Government saying, "We are going to put property on a par with individuals or human beings in this war." It has been stated, but stated unjustly, that this is a rich man's war. In proportion to the number of men engaged in the war, I think that there are as many rich men's sons in the war as there are poor men's sons. When you take a large proportion of the earned income of a working man he has nothing to fall back upon, but when you take the incomes of those men who derive their incomes from securities and investments, their capital remains. Now, frankly, it seems to me that any man who asserts that the 10,000 men, roughly estimated, who have incomes in excess of \$50,000, would refuse to work if the Government

limited their income to \$50,000, is asserting something that is very unfortunate, because that is equivalent to saying that those 10,000 men are traitors and slackers. If they are, they should be treated as traitors and slackers, and if you gentlemen have any hesitation or misgivings about those men responding to the levies made in this war revenue bill, if incomes are limited to, say, \$100,000, or even \$50,000, I suggest that their names ought to be made public so as to let the people know where they stand on this question of financing the war.

I say that because it will be a very unfortunate thing for the impression to get abroad that we can not bring these men to exactly the same basis of service and sacrifice to which we are bringing the people of smaller means. In urging that at least \$10,000,000,000 should be raised by means of a revenue bill, I want to refer to the fact that if we do not raise the maximum possible proportion of the revenue necessary for the prosecution of this war by taxation, we are going to have a tremendous inflation. I would like to read into this record two statements. One of them is from a report recently published by the Treasury Department of a special committee of the American Economic Association. I will read one paragraph of the report, as follows:

While the war lasts the commodity price level will inevitably mount by leaps and bounds unless we adopt rigorous preventive measures. In particular we must avoid, so far as possible, lending by borrowing. Loans to the Government made not from savings but from borrowings will tend to increase bank credit. Further extension of bank credit will chiefly bring about a rise in commodity prices.

The British select committee on national expenditure, in its second report, discusses the causes of the increase in prices and the possible check that may be applied and says:

The chief causes are—

The expansion of credits during the war.

The demand for commodities exceeding the supply and the inadequacy of Government action to control prices.

While this committee found it difficult to determine the order of importance of these factors it said that—

It is certain that among the most important is the extension of credits.

When the committee made its recommendations as to what might be done to keep the cost of living from going higher and higher, its first proposal was:

Whatever measures are possible should be taken by the Government to avoid the creation of new credits in financing the war.

I completely concur in that suggestion.

Now, I want to read at this point four specific recommendations as to the new revenue bill. We think that the revenue bill should—

1. Make it a criminal offense not to give the real equitable ownership of stocks in corporations and business concerns.
2. Compel all corporations and business concerns to declare dividends and prohibit the issuance of stock to conceal earnings.
3. Provide for full publicity as to incomes of over \$25,000.
4. Levy flat instead of graded rates.

In other words, instead of saying that between \$5,000 and \$10,000 the rate shall be so much and between \$10,000 and \$20,000 the rate

shall be so much, to say that there will be a flat rate on the whole income.

Mr. GARNER. Let me see if I understand you: Under that arrangement you would not have a supertax at all?

Mr. MARSH. I would put a supertax or a higher rate on all of the incomes. For instance, on all incomes from \$2,500 or \$3,000 up to \$5,000, say, have a rate of 6 or 8 per cent, or have that rate on all income in excess of \$2,000. On incomes from \$10,000 to \$15,000 have a flat rate, say, of 10 or 15 per cent on all surplus in excess of \$2,000. That would greatly simplify it and would yield a great deal more revenue. I hope I have made it clear that I am not trying to get an exemption for myself or anybody else. I think that with an income of \$3,000 or \$3,500, which my wife and I earned last year, instead of paying \$32 income tax we ought to have paid \$100. I expect to have an income larger than that this year, and if we have an income of \$4,500 or \$5,000, I think we ought to be compelled to pay a tax of \$400 or \$500.

Mr. GARNER. Are you representing all of the people you spoke about? Have you authority to represent them?

Mr. MARSH. I am speaking personally now.

Mr. GARNER. But from what you said this morning, I am frank to say that I do not know whether you represent the farmers in Texas, Indiana, Washington, or anywhere else. It appears that you simply organized a little committee while here three or four weeks ago and wrote to these other people asking them if they agreed with you, and, as I understand it, they have not authorized you to speak for them. That, it seems to me, from your statement is the size of it. I am frank to say to you that I have a great deal of respect for the element of people for whom you are undertaking to speak through this committee you have referred to, and if I knew that you had full authority to speak for them I would give much greater weight to your testimony. Of course, you want me to be frank with you, and I certainly want to be frank with you.

Mr. MARSH. As I said earlier in my statement, you will be getting letters from these people shortly, and you do not have to rely upon my statements.

Mr. GARNER. I understand that, but I would like to know whether or not, in your opinion, these people you speak for want this limit reduced for single men from \$1,000 to, say, \$700, and for married men from \$2,000 to \$1,200?

Mr. MARSH. I think they would rather have that than a consumption tax.

Mr. GARNER. Do you believe that the people you purport to represent would like to have those exemptions reduced to \$700 for single men and to twelve or fifteen hundred dollars for married men?

Mr. MARSH. As I said, I was speaking there personally—

Mr. GARNER (interposing). What is your opinion as to their position on that subject?

Mr. MARSH. I think, frankly, having talked with representatives of those big farm organizations and with individual farmers from at least 15 or 20 States within the last few months, that if you will take all incomes in excess of \$100,000 they will say "Yes" to that proposition.

Mr. GARNER. But suppose we do not do that?

Mr. MARSH. Well, I think they would say, then, that it was not fair to do it. I will not say that it should be exactly that figure of \$100,000, but it should be approximately that.

Mr. GARNER. You were just speaking of the menace of billionaireism. You stated that that should not be permitted, and with that statement I agree. Have you ever studied the question of how you would take care of that problem? Of course, we will have to take up all of those questions in the course of time; but we are now talking about war revenue. We have undertaken in this committee heretofore to levy an inheritance tax. By imposing a stipulated rate of inheritance tax you can in the course of two or three generations dissipate those large fortunes or turn them into the Treasury. Is not that a better way to deal with that problem than to levy a rate of income tax now that would produce that result?

Mr. MARSH. You asked me first how I would do it. Personally, I think, Mr. Congressman, that the Government has got to take over all of the natural resources from which those big fortunes come. For instance, the Government must take over the oil resources, and pay nothing for that which is given by nature and nothing for good will. The same thing is true of coal and water power and everything else of that kind. That would simply mean taking the investment and wiping out the huge unearned income derived from such resources. I think that the second, and equally fundamental, measure would be to take over all of the land into the Public Treasury—and by that I do not mean a single tax but a triple tax—

Mr. GARNER (interposing). You have gone clear off from the question we were discussing. I asked you what was the best way to dissipate those great incomes, or whether it should be done by means of an inheritance tax or an income tax?

Mr. MARSH. I think that for the present an income tax would be preferable, and I will tell you why: I do not think that this is the final way of doing it, but I think the income tax is preferable, because the raising of revenue by an inheritance tax now would mean the unscrambling of a good deal of property; and it seems to me that an inheritance tax of that sort would practically mean the taking of large amounts of money from business; and I think that during the war we ought to be as careful as possible not to upset or disturb existing business arrangements. I think that we ought to allow a fair amount of profit in business; and, therefore, I think that to levy so large an inheritance tax would be an unfortunate thing during the war, because we want the capital that is invested in business to be kept intact and unmolested, so as to secure the maximum production. I think that a reasonable inheritance tax would be all right. However, I do want to say this very strongly, that, in addition to paying a big excess-profits and a large income tax, it seems to us that there ought to be imposed a tax of 1½ or possibly 2 per cent on the value of unused or inadequately used lands held for speculation, because that is one class of property that is exempt from Federal taxation.

It is completely exempt under the law. I was informed that some people are investing in unused land as a safe investment that could not be reached by the Treasury officials, or as a safe investment

which could not be reached by a Federal income tax, because there is no income from it for the time being. I will not take time to read the Grange resolutions I received Saturday. A lot of them are coming in. These resolutions are on the line of conscripting wealth, and, with your permission—

Mr. MOORE (interposing). Is that organization in favor of conscripting wealth?

Mr. MARSH. Absolutely.

Mr. MOORE. From whom did those resolutions come?

Mr. MARSH. These are from the Thurston County, Pomona Grange, of Washington.

Mr. MOORE. Washington City?

Mr. MARSH. No, sir; Washington State.

Mr. MOORE. That is from one local grange?

Mr. MARSH. Yes, sir.

Mr. MOORE. If Mr. Garner is through, I want to ask you some questions concerning your organization, because your prospectus is so broad as to startle business conditions. I will be frank with you about that. You represent, as I understand it, the Farmers' National Headquarters here in the city of Washington?

Mr. MARSH. I am the secretary of that organization, and I am the executive secretary of the Farmers' National Committee on War Finance.

Mr. MOORE. Does that include in its membership the Farmers' National Legislative Council, of which G. P. Hampton is the secretary?

Mr. MARSH. If you will permit me to interrupt you, I am speaking now on behalf of the Farmers' National Committee on War Finance.

Mr. MOORE. Let us come down to these associations that seem to be affiliated with the Farmers' National Headquarters, of which you are the secretary and director of publicity here in Washington. I believe,

Mr. MARSH. Yes, sir.

Mr. MOORE. I find represented here the Farmers' National Legislative Council, of which G. P. Hampton is the secretary, and the American Society of Equity, D. O. Mahoney, president, and J. Weller Long, secretary and treasurer, Madison, Wis. How large an organization is the American Society of Equity?

Mr. MARSH. I think they have in the neighborhood of 125,000 or 130,000 members, although I can not state that positively.

Mr. MOORE. Is that a branch of the Nonpartisan League?

Mr. MARSH. No, sir; it has nothing to do with it.

Mr. MOORE. Is that Mr. Townley's organization?

Mr. MARSH. No, sir; that has been going for a quarter of a century.

Mr. MOORE. The next organization here is the Gleaners, John Livingston, president, and Grant Slocum, superintendent-secretary, of Detroit, Mich. What are the Gleaners?

Mr. MARSH. It is an order of farmers that is strongest in Michigan and out through the Central West. The Gleaners order is one that works for legislation, and it has a membership of over 100,000.

Mr. MOORE. That organization is affiliated with the general organization that you speak for?

Mr. MARSH. Yes, sir; they have adopted resolutions. Mr. John Livingston is the president and Mr. Grant Slocum is the secretary of the Gleaners, and they are members of this Farmers' National Committee on War Finance.

Mr. MOORE. The next is the National Dairy Union, of which William T. Creasy, is secretary. I know Mr. Creasy, who is a Pennsylvanian. How large an organization is that?

Mr. MARSH. I can not tell you. It is a State organization. I think they have thirty-five or forty thousand members.

Mr. MOORE. The next is the National Creamery Butter Makers' Association, of which John J. Farrell is president. Is that organization connected with this committee?

Mr. MARSH. Yes, sir; the National Creamery Butter Makers' Association is connected with the Farmers' National Committee on War Finance.

Mr. MOORE. The next is the American Association of Creamery Butter Manufacturers, of which Prof. George L. McKay is the secretary.

Mr. MARSH. That is not connected with this organization at all. That is not connected with the Farmers' National Committee on War Finance.

Mr. MOORE. That is aside from this general organization?

Mr. MARSH. It is connected with the work of the Farmers' National Headquarters here.

Mr. MOORE. The next one is the Rural Credit League of America, of which G. P. Hampton is the secretary. Mr. Hampton also appears to be the secretary of the Farmers' Legislative Council. Is that a separate organization?

Mr. MARSH. That is an organization that has been working for land banks, and has also been working for rural credits for farmers.

Mr. MOORE. How large an organization is it?

Mr. MARSH. That is a large committee or league, I meant to say. It has 50 or 75 members.

Mr. MOORE. Where do they get together and when?

Mr. MARSH. They do not get together except when they are going to make a drive for some legislation, such as rural credits.

Mr. MOORE. It is a legislative committee?

Mr. MARSH. Yes, sir; it is a legislative committee to work for specific purposes. You see the farmers have adopted precisely the principle that the large business interests in this country are so successfully using, and that is that, while they do not always agree upon everything, yet when there is one proposition on which they do agree, then they have a committee here for that specific proposition.

Mr. MOORE. The next is the Postal Express Federation, Frederick F. Ingram, chairman of the executive committee. How large a body is that?

Mr. MARSH. I do not know how large an organization they have, and, to be frank with you, it really has nothing to do with this Farmers' National Committee on War Finance.

Mr. MOORE. It is listed here as a member of your organization.

Mr. MARSH. It is, but they are a working committee on parcels post, rural credits, etc.

Mr. MOORE. Was that a promotion committee for the purpose of securing legislation?

Mr. MARSH. Most of those committees are promoting committees, if you would so designate them, for securing legislation that the farmers want, following a time-honored practice from one end of America to the other.

Mr. MOORE. Then I find listed the Farmers' National Committees on Marketing, War Finance, Popular Government, Food Supply, Postal Reform, and Industrial Alcohol. Are those farmers' committees made up of members of the other committees?

Mr. MARSH. There are a few duplications, but very few.

Mr. MOORE. You present a very formidable list of organizations here for whom you speak, and I am endeavoring to get at the mass of people that they represent. Apparently, they are committees, or legislative committees.

Mr. MARSH. They are just what they purport themselves to be.

Mr. MOORE. Is the Farmers Open Forum, of which you are the editor, connected with those various committees?

Mr. MARSH. It is entirely independent of those committees. I am the managing editor of that publication.

Mr. MOORE. The Farmers' Open Forum, of which you are the managing editor, claims to be the Bulletin of the Farmers' National Legislative Council and affiliated organizations, including the Rural Credit League of America, the National Marketing Committee, the Postal Express Federation, and the Farmers' National Committee on Tax Reform.

Mr. MARSH. Yes, sir; but none of those committees contribute anything for the support of this magazine. The magazine does serve as the propaganda agency or educational feature of their programs.

Mr. MOORE. You have a subscription blank for subscriptions to the Farmers' Open Forum, in which rates are given and which seeks to increase the circulation of that paper. You have the second-class postage privilege, I suppose?

Mr. MARSH. Yes, sir; but we have very little advertising.

Mr. MOORE. One of the articles in the May issue of the Farmers' Open Forum is headed "Shall privilege or property pay the cost of the war." Is that article written by you?

Mr. MARSH. Yes, sir; I wish I could get it into every household in America.

Mr. MOORE. That is a point I wanted to be clear upon. I want to ask you about this statement in that article:

The writer was told a few weeks ago by one of the leaders in the House that the reason Congress did not levy higher rates of taxation on excess profits and large incomes last year was that the bankers controlled the newspapers, and that the newspapers intimidated the Members of Congress.

Was that written by you?

Mr. MARSH. Yes, sir.

Mr. MOORE. Do you mind stating who made that statement to you?

Mr. MARSH. I will go to that gentleman and ask him if I may do so. I asked him at the time to let me make his name public, and he said no.

Mr. MOORE. Your statement is that a Member of Congress told you that the reason Congress did not levy higher rates of taxation

on excess profits and large incomes last year was because the bankers controlled the newspapers and the newspapers intimidated the Members of Congress.

Mr. MARSH. Yes, sir.

Mr. MOORE. You do not care to say at this time what Member of Congress made that statement to you?

Mr. MARSH. You would not want me to betray a confidence, would you?

Mr. MOORE. Do you think that statement is true?

Mr. MARSH. That is a direct question.

Mr. MOORE. I am a newspaper man myself and evidently you are, and it is not fair to ask you who was your informant, because you have admitted you wrote this article, but if you published the article believing it to be true it is perfectly fair to ask you whether, in your judgment, it is true.

Mr. MARSH. I am afraid it is, in large measure.

Mr. MOORE. Your judgment is, then, that Members of Congress are intimidated by bankers and by newspapers?

Mr. MARSH. I am afraid in some cases that is true. You asked me the direct question.

Mr. MOORE. That is a frank answer.

Mr. MARSH. I say in some cases, because I want this to be accurate.

Mr. MOORE. Do you make that suggestion with regard to any member of the Ways and Means Committee?

Mr. MARSH. I do not.

Mr. MOORE. But you have a belief that apart from the Ways and Means Committee there are Members of Congress who are intimidated by bankers and newspapers?

Mr. MARSH. I am afraid so.

Mr. MOORE. Do you think the intimidation is more on the part of the bankers than it is on the part of the newspapers?

Mr. MARSH. Well, it would be hard to differentiate.

Mr. MOORE. I gather from the statements you have heretofore made that you have no special love for the bankers.

Mr. MARSH. I have no occasion to have.

Mr. MOORE. You continue this article by expressing an opinion. You say:

A timid Congressman has no place in a war Congress, and it is the privilege—is it not the duty?—of the farmers of the country to insist that there be a show-down in Congress on the question of financing the war, right now.

That you wrote?

Mr. MARSH. I did.

Mr. MOORE. And you were appealing to the farmers to have a show-down on the part of the Members of Congress who are being intimidated by bankers and newspapers.

Mr. MARSH. I think it would be wise. And that is why I urged upon the President and some others some weeks ago, on behalf of these organizations, that there be a revenue bill enacted at this session, because we are fighting to make the world safe for democracy, and we have got some fight to do that right here in America. Our first job is over there. I am for this war to the limit, but I also think we have got to do something against the enemies of democracy in this country.

Mr. MOORE. You are following President Wilson in prosecuting the war?

Mr. MARSH. Absolutely.

Mr. MOORE. You are quoting him constantly in your publication and in your public speeches.

Mr. MARSH. Very nearly all; yes; because I think he voices the best democratic statesmanship of the world.

Mr. MOORE. In the circular which you issued under date of June 5, 1918, you urge the Members of Congress to read the articles which you say are in process of publication for the Forum, which is your Farmers' Open Forum, by Robert Lansing, Secretary of State; William G. McAdoo, Director General of Railroads; Newton D. Baker, Secretary of War; Josephus Daniels, Secretary of the Navy; Franklin K. Lane, Secretary of the Interior; David F. Houston, Secretary of Agriculture; and William B. Wilson, Secretary of Labor. You also say that "the following representatives of important commissions and bureaus of the Government have promised to write an article" for the Farmers' Open Forum, which you represent and which expresses the views that you are now advocating.

Mr. MARSH. Yes, sir.

Mr. MOORE. Hon. Daniel C. Roper, Commissioner of Internal Revenue; Hon. Herbert Quick, member Federal Farm Loan Board; Hon. William Kent, member of the Tariff Commission; Hon. W. B. Colver, member of the Federal Trade Commission; Hon. Frank P. Walsh, member of the War Labor Board; and Mr. George Creel, chairman of the Committee on Public Information. You say in this circular that "a majority of the members of the President's Cabinet felt that the Farmers' Open Forum is such an important method of reaching the farmers that they have agreed to write an article for the Forum during the next year on the relation of their department to the farmers of the country." Have you letters or promises from the members of the Cabinet and the other prominent gentlemen indicated here, that they will write articles for the Forum to the farmers of the country on the lines indicated by you?

Mr. MARSH. I have the articles in hand, one by Secretary Houston, one by Secretary Baker, and one by Mr. Creel.

Mr. MOORE. Secretary Baker has written an article for you?

Mr. MARSH. A very brief article.

Mr. MOORE. Secretary Houston has written an article for you?

Mr. MARSH. Secretary Houston wrote that he would be very glad to do it.

Mr. MOORE. And you have received those articles at the hands of Mr. Creel, chairman of the Committee on Public Information?

Mr. MARSH. No; Mr. Houston's article came directly to us; so did Mr. Baker's; and Mr. Creel sent me his own article. But, mind you, I am not joining Mr. Creel's campaign in connection with Congress, and I do not want to be misunderstood.

Mr. MOORE. You are enough of a newspaper man and enough of an advertising man to know that if you get a little publicity in regard to these articles that it will not hurt your publication?

Mr. MARSH. But I am not trying to do that. And I did not initiate the procedure here. I am here to discuss the specific problem of how to raise revenue and help us to win the war in the most effective way.

Mr. MOORE. But you say these gentlemen have promised you articles, and two of them are already in. I want to ask you whether you wrote the article which appears on page 7 of the Farmers' Open Forum for the month of May, 1918, entitled "Menace of mammoth fortunes," in which you say:

Let the intelligent people of this country remember always that wherever a democracy, a government of, for, and by the people, has fallen anywhere in the world, it has fallen at the hands of those who have built up great private fortunes, and it has fallen the moment when those possessing these great fortunes reached a point in power which enabled them to overthrow the democratic government.

Do you care to say at this time whether Secretary Baker, or any one of these gentlemen who have promised to write you an article, holds the same views that you do with regard to the destruction of private fortunes?

Mr. MARSH. I do not feel that I could speak for them, but I am very sure that if you will ask Secretary Baker to come before you he will tell you what he thinks about the democratic financing of the war.

Mr. MOORE. I presume you know that Mr. Baker has officially sent to the Committee on Appropriations estimates asking for very large sums of money which must be raised by taxation of the people to prosecute the war, and some of those large sums must come from private fortunes as well as from other sources. Now, I want to ask you again whether any of the gentlemen know of your views with regard to the destruction of private fortunes and whether any of them have written you along that line?

Mr. MARSH. In the first place, let me correct you. I have not urged the destruction of private fortunes. I think you were here the other day when I said specifically that I did not favor a capital tax, and let me add that I think it is a great misfortune that the Republican Party did not, when it was in power for some 30 years, make an enumeration of the incomes in this country.

Mr. TREADWAY. Are we obliged to listen to criticisms of political parties?

The CHAIRMAN. I would not do that.

Mr. MARSH. I apologize, and ask to have it stricken out; but I thought it was germane to the question that was put to me.

Mr. TREADWAY. It is not.

Mr. MARSH. Then I apologize and withdraw it.

Mr. MOORE. I am only quoting to you from the document before me, and I am not endeavoring to introduce politics at all.

Mr. MARSH. Neither am I.

Mr. MOORE. I trust not. You are advocating something with which some of us may disagree, and it is only fair that we should get your viewpoint and find what is behind it.

Mr. MARSH. Surely. I was trying to lead up to that.

Mr. MOORE. You say that you do not believe in the destruction of private fortunes. How, then, do you account for this article headed, "Menace of mammoth fortunes," in which you refer to the fact that so far as the history of the world is concerned, it shows that governments built up by great private fortunes have been the first to fall?

Mr. MARSH. There is very little difference between destroying fortunes and between the Government taking those fortunes for public

use. That is my answer, if I get your question clearly. Now, I think it is utterly un-American and undemocratic for any man to have an income of over \$10,000,000 a year.

Mr. MOORE. An income?

Mr. MARSH. Yes.

Mr. MOORE. How many have that?

Mr. MARSH. I will have to refer you to the Commissioner of Internal Revenue—or even over \$5,000,000, of which there are 10.

Mr. MOORE. Why are you unable to say how many men in the Nation have an income of \$10,000,000 a year?

Mr. MARSH. Because the Commissioner of Internal Revenue—

Mr. MOORE (interposing). Let me ask you—

Mr. MARSH (interposing). I appeal to the chairman whether it is fair for you to put these questions and then interrupt me before I can answer them.

Mr. MOORE. I asked you how many and then you started in on an—

Mr. MARSH (interposing). And then you started in and asked me another question, and I am not going to stand for that. I am going to stand on my rights as an American citizen.

Mr. MOORE. The answer to the question would be one, two, three, or whatever the number might be.

Mr. MARSH. It would not. You asked me why I did not know, and I am trying to tell you why. The Commissioner of Internal Revenue does not give out those figures, although I will say that I think it proper that he should give the public information as to the recipients of those incomes.

Mr. MOORE. Have you any reason to believe how many men there are in the United States who have incomes of \$10,000,000?

Mr. MARSH. I am not entering into any conjecture. I think there are several, however.

Mr. MOORE. That would be three or four.

Mr. MARSH. I think so, but I do not know. That is one reason why I suggested that there should be full publicity as to incomes of over \$25,000.

Mr. MOORE. What would you do as to those incomes exceeding \$100,000 per annum?

Mr. MARSH. I should say, if the recipients cared to hang to democracy, that those incomes should be devoted toward the successful prosecution of this war.

Mr. MOORE. How many do you think there are who have an income of over \$100,000?

Mr. MARSH. I am afraid my data has been mislaid, but it is my recollection that there are about 2,200. I have not the figures, but I can get them and read them to you from the report of the Commissioner of Internal Revenue, if you want me to take the time to do it.

Mr. MOORE. I can help you on that.

Mr. MARSH. I can get it, because it is just a question of addition. It would be about 4,000, according to his last figures. I do not know how it stands this year.

Mr. MOORE. I think it is 2,900, Mr. Marsh, in excess of \$100,000. Now, I ask you again, what would you do—

Mr. MARSH (interposing). May I correct that for the record? It says here, \$100,000 to \$150,000, 2,900; \$150,000 to \$200,000, 1,284; \$200,000 to \$250,000, 726; \$250,000 to \$300,000, 427. So, I was mistaken. It is about 6,000, but I was just speaking informally. That number of people have incomes in excess of \$100,000. And many of these men—let me make it clear—are not doing a stroke of work; they are sitting still and raking in the dividends.

Mr. MOORE. May I ask you what the income is doing?

Mr. MARSH. The income which those gentlemen receive is breeding more income.

Mr. MOORE. In what way?

Mr. MARSH. In production.

Mr. MOORE. Is not that commendable?

Mr. MARSH. Yes. But if the income which those gentlemen take to breed more income were taken in taxes, then the income of the toiling men could be left in their hands, and those toilers could have a little income to breed some more income, so that they could have some income with which to look the future in the face, which would result in relieving the poor people of Philadelphia, where I lived for several years.

Mr. MOORE. We have imposed no taxes on poverty.

Mr. MARSH. My dear Congressman, pardon me—

Mr. MOORE (interposing). We can not tax poverty, because poverty has nothing with which to pay.

Mr. MARSH. Let me say a thing, Mr. Congressman, which I think can not be controverted, that the poor people of America are to-day paying infinitely more in proportion to their incomes than are the rich.

Mr. MOORE. Let us get back, then, to the question of income.

Mr. MARSH. Where does this \$2,000,000,000 of miscellaneous receipts come from? Who pays the taxes on food and on clothing? Who pays the increase of 50 per cent in postage on first-class matter?

Mr. MOORE. That is general, of course.

Mr. MARSH. Who pays taxes on all consumption? The working people, who are the enormously great consumers, I do not want to go into this tariff issue and excess-profits issue, but you have raised the question. I would like to show you that you do tax the poor.

Mr. MOORE. If you are going to rest your case on the increase in first-class postage I will ask you to tell me how much the Government derived from the increased first-class postage last year?

Mr. MARSH. I can not tell you exactly. It is a small amount, relatively, and I just mentioned that as one out of a dozen things.

Mr. MOORE. We are expected to raise \$8,000,000,000 through taxation, and I would like to know how much that increase in first-class postage is going to furnish?

Mr. MARSH. It will be a small amount, and I only picked that out as one of many things.

Mr. MOORE. Is it not so small as to make the general argument almost ridiculous?

Mr. MARSH. Not as a part of several. If it was to be so small, what was the necessity for the imposition of the increased cost?

Mr. MOORE. Because we sought to get more money in that way and every other way we could, and, as far as possible, make a fair apportionment.

Mr. MARSH. What do you think is a fair apportionment?

Mr. MOORE. That was determined, according to the judgment of the committee, by the bill that passed last year, with which you are familiar. We apportioned it as fairly as the committee thought it could be apportioned amongst the people of the United States. We taxed excess profits; we taxed incomes; we taxed—

Mr. MARSH. Excess profits were taxed 31 cents, whereas Great Britain taxes them 80 cents.

Mr. MOORE. And consumption taxes were not imposed. It is a question now whether they will have to be imposed or not. But I want to get back to your organization.

Mr. MARSH. May I answer your question from the report of the Secretary of the Treasury, because I think I can make it clear that they are being compelled to pay something at least. He estimates the total receipts from miscellaneous as something over \$1,000,000,000.

Mr. MOORE. But, you see, that is very much under \$8,000,000,000.

Mr. MARSH. I am endeavoring to show you how to get the balance.

Mr. MOORE. How are you going to get the balance if you destroy production, because you admit that these excess incomes are going into production.

Mr. MARSH. As I understand, the Government is going to have need for about \$30,000,000, and that money has got to come either by taxes or by loans, and your rich men have got to put their big surplus either into loans or they have got to pay it in taxes. Now, the question is whether the Government of the United States will compel something approximating the equality of financial sacrifice, if you please, by taking those big incomes and taxes, and then I can assure you that the farmers and laboring men of this country will loan the Government the difference.

Mr. MOORE. Are you the secretary of the Association for an Equitable Federal Income Tax?

Mr. MARSH. I am.

Mr. MOORE. The president of that association is John J. Hopper?

Mr. MARSH. Of New York; yes.

Mr. MOORE. Do you have headquarters in New York?

Mr. MARSH. No; they are closed. I am doing everything from here now.

Mr. MOORE. What is the main purpose of that association?

Mr. MARSH. The main purpose of that association is to secure a rapid and progressive tax on big incomes, a heavy excess-profits tax, and taxation on land values for the Federal Government, particularly of unused or inadequately used land.

Mr. MOORE. Who is John J. Hopper?

Mr. MARSH. John J. Hopper is a large contractor and engineer in New York City. He was the registrar of the county of New York for four years.

Mr. MOORE. I see that the Hon. Frederic C. Howe is a member of the executive committee of that association?

Mr. MARSH. He is.

Mr. MOORE. Who is Mr. Howe?

Mr. MARSH. Mr. Howe is a well-known publicist and writer and now commissioner of immigration at the port of New York.

Mr. MOORE. Is he in favor of the overthrow of private fortunes and the cutting down of incomes in excess of \$100,000 or \$50,000?

Mr. MARSH. I think he will be very heartily in favor of that.

Mr. MOORE. Have you gentlemen had conferences—you gentlemen of these various associations, and also the committees to which you have referred—on this subject recently?

Mr. MARSH. We had one in January of this year.

Mr. MOORE. Was that the one which was attended by Mr. Townley, the head of the Nonpartisan League?

Mr. MARSH. It was not.

Mr. MOORE. Did you attend a conference in which Mr. Townley took part a short time ago?

Mr. MARSH. Did I attend the conference?

Mr. MOORE. Yes.

Mr. MARSH. Yes, sir.

Mr. MOORE. Did you write an article in the Farmers' Open Forum of May, 1918, headed "Charges of disloyalty against the National Nonpartisan League"?

Mr. MARSH. I did.

Mr. MOORE. That article was rather friendly to Mr. Townley, was it not?

Mr. MARSH. I think that that article was fair.

Mr. MOORE. Mr. Townley is now under indictment for seditious utterances in Minnesota, is he not?

Mr. MARSH. Well, many wealthy men have been under indictment but they have not been found guilty under the indictment.

Mr. MOORE. But he is under indictment, is he not?

Mr. MARSH. I believe he was indicted, but whether the indictment has been quashed or not I do not know. Will you read a list of the officials who were present at that meeting which I attended?

Mr. MOORE. I intended to do that, because I think that ought to be in the record. I think these people ought to know with whom they are associating, so that it will be clear to everybody.

Mr. MARSH. Do you think that the National Grange, which adopted at its last session a resolution in favor of taking incomes of over \$100,000 to pay for the war, was influenced by anything unfair?

Mr. MOORE. It depends on whether the National Grange was acting through one of these legislative committees to which you have referred, or whether that resolution represented the real farmer element of the country and thoroughly and honestly represented the sentiment of the farmer body of this country. But if they were indorsing anybody who made seditious utterances, that would be a very serious matter.

Mr. MARSH. You are not charging me with engaging in seditious utterances, are you?

Mr. MOORE. No; but I am going to read to you a few of these paragraphs and ascertain whether you sympathize with Mr. Townley's views?

The CHAIRMAN. I might suggest that you make it as brief as possible.

Mr. MARSH. I have not quite finished my statement, and I have not had 10 minutes in which to submit my statement, because most of my time has been taken up in answering these questions.

Mr. O'SHAUNESSY. I think that the question is how we are going to raise revenue, and I think he ought to first tell us what his idea is of raising revenue.

Mr. MOORE. If you gentlemen do not want me to go on I will quit.

Mr. MARSH. I would like to have a chance to reach the proposition as to how to get revenue.

Mr. MOORE. In this article to which I refer, after the conference with Mr. Townley, which you say was participated in by William Kent, member of the United States Tariff Commission; William B. Colver, member of the Federal Trade Commission; Mr. Carl Vrooman, Assistant Secretary of Agriculture; United States Senator Robert L. Owen, president, National Popular Government League; Mr. Herbert Quick, member of the Federal Land Bank Board; Mr. Charles R. Crane, member of the President's commission to Russia; Mr. George P. Hampton, director the Farmers' National Headquarters; Mr. Judson King, executive secretary of the National Popular Government League; Mr. E. P. Costigan, member of the United States Tariff Commission; Congressman John M. Baer, of North Dakota; Judge Lawrence Becker, counsel in Treasury Department; and Mr. William Denman, formerly of the Shipping Board—you say:

Mr. Townley admitted the indictment and prosecution of officers of the league, and made it clear that the indictments were in nearly every case not for disloyalty but for illegal assemblage. He created a distinctly favorable impression and certainly convinced a large part of the audience that the league is fundamentally loyal and devoted to the successful prosecution of the war, but equally devoted to terminating profiteering and privilege in this country.

Then you conclude by saying:

The program of the league and the methods by which it has been developed were discussed on these two occasions. Mr. Townley and his associates left no doubt as to the sincerity of their loyalty to the Government and to the principles for which we have entered the war, as enunciated by President Wilson.

I ask you to harmonize your own views and Mr. Townley's views, as indorsed by you, with the fact that Mr. Townley and a number of his associates are now under indictment for seditious utterances in Minnesota and in one or two other States.

Mr. MARSH. I will do that, and ask you whether you ask me that question because you are afraid to face the question of democratic financing of the war? You know perfectly well that an American citizen has a perfect right to be tried by a jury of his peers. I am not before a jury, but I will answer that question. However, I submit that when I am asked to appear on behalf of a revenue bill that the questions of Congressman Moore as to the disloyalty of the Nonpartisan League are unworthy. Mr. Townley saw President Wilson last fall. Does that mean that President Wilson is seditious? I think there are in the Nonpartisan League, as there are in every organization, perhaps, a few men who are pro-German, and I think they ought to be punished to the limit of the law. I have been with the National Nonpartisan League, and I helped them last fall. I am going to be very frank with you about it.

Mr. MOORE. Where; in Minnesota?

Mr. MARSH. In St. Paul.

Mr. MOORE. That is in Minnesota?

Mr. MARSH. Yes; I was at their headquarters there. And I have talked with a lot of those farmers, and I know that it is true of them, as it is of most of the farmers, as Secretary Houston said, that they are working from early in the morning until black darkness at night raising crops, and some of them are going broke. There may be a few disloyalists among the National Nonpartisan League, just as there are a few disloyalists among those of great wealth, who say, "We will strike if you take our money to win the war." You have no more business to indict the National Nonpartisan League on that ground than you have to indict the great body of men who get incomes of over \$25,000, because a great many of them are loyal and are firmly loyal. I think, though, that Gov. Lindbergh was right when he made the statement—although I have never read his book—that this was undoubtedly a profiteer's war, because I think there are some people who want to make money out of the war more than anything else.

Mr. MOORE. Mr. Kent is a member of the United States Tariff Commission?

Mr. MARSH. Yes, sir.

Mr. MOORE. He is a very wealthy man?

Mr. MARSH. I presume he is worth, perhaps, several millions.

Mr. MOORE. He was one of the speakers at the luncheon you had?

Mr. MARSH. Yes; and a strong supporter of Senator Lenroot.

Mr. MOORE. Your article says:

While Mr. Townley was in Washington the National Popular Government League, of which United States Senator Robert L. Owen is chairman and Mr. Judson King, secretary, arranged a meeting for the representatives of the National Nonpartisan League who had come to present the league's answer to the Senate Committee on Military Affairs—Mr. A. C. Townley, president, and Messrs. Arthur Le Sueur and John M. Thompson. Mr. William Kent, a member of the Tariff Commission, who spoke at the recent convention of the National Nonpartisan League in St. Paul, also tendered a luncheon to these representatives of the league.

Among the prominent people present at the meeting or luncheon were the gentlemen to whom I have already referred.

Mr. MARSH. I was not at the luncheon.

Mr. MOORE. Did you hear the speech of Mr. William Kent at the luncheon?

Mr. MARSH. No; I have just said that I was not at the luncheon.

Mr. MOORE. Do you know whether he indorsed the views of Mr. A. C. Townley, Mr. Arthur Le Sueur, and Mr. John M. Thompson, who were being entertained when they came here to call on these public officials?

Mr. MARSH. Do I know whether he indorsed their views?

Mr. MOORE. Yes. He spoke at the luncheon, I understand.

Mr. MARSH. Yes. As I say, I was not at the luncheon, but Mr. Kent spoke at their convention which, I think, was in March.

Mr. MOORE. Was Mr. Townley here when your new national headquarters were organized?

Mr. MARSH. I was not with the headquarters at that time, and I can not answer that question; I am almost positive, however, that he was not, because I think he was out in the northwest then.

Mr. MOORE. Did you hear Mr. Kent speak on this subject at all? Mr. Kent spoke in St. Paul, I understand, according to your report?

Mr. MARSH. Yes.

Mr. MOORE. You say here that—

Mr. William Kent, a member of the Tariff Commission, who spoke at the recent convention of the National Nonpartisan League in St. Paul, also tendered a luncheon to these representatives of the league.

Mr. Kent, of course, as you know, is a former Member of Congress, and he was a very prominent Member, and he is a man of considerable wealth. I wanted to know whether he indorses these general views of yourself and of Mr. Townley?

Mr. MARSH. Why not invite him here and ask him to tell you?

Mr. MOORE. No; you are here—

Mr. MARSH (interposing). I think it is very strange that I am asked to speak here for all the prominent Democrats in America, and I suggest that you ask these gentlemen of conspicuous ability and large business experience to appear here before you and let them acquaint you with their views on this subject of war revenue. May I proceed now with my statement?

The CHAIRMAN. You had half an hour on Friday, and you have been for an hour now on your feet. Can you finish in five minutes?

Mr. MARSH. I hope so.

The CHAIRMAN. Then, if you do not finish in five minutes, you can extend your remarks in the record.

Mr. MARSH. Gentlemen, I apologize if I seem to speak heatedly. It has not been so intended. I am perfectly willing for Mr. Moore to look into my record in Philadelphia, where I lived for seven years. He can do that to the fullest extent he desires.

Mr. MOORE. You have expressed some peculiar views here.

Mr. MARSH. They are held by millions of workers throughout the country, and they are no longer peculiar.

Now, resuming where I left off, the fifth recommendation is:

Tax unearned incomes from secure investments more heavily than incomes earned by labor.

The sixth recommendation is:

Initiate a policy of greater reliance upon income taxes, rather than upon taxes on corporations, excess, and war profits.

We make those suggestions for this reason, that a corporation may for a year or two make enormous excess profits and war profits, but they may be distributed among a lot of small stockholders, whereas a corporation may make a little money, but if the concern is owned by only two or three stockholders, they will make a big percentage of profits. In the one case there will be a wider distribution of the profits.

Now, we suggest that the equitable way to get at it, and the way to apply the principle of equality of financial sacrifice is not to rely so much upon excess-profits taxes and war-profits taxes but to adopt a policy of greater reliance upon income taxes. You should not rely so much upon excess and war profits taxes as a permanent measure, although you must do it this year, but you should rely upon a gradually progressive tax on these incomes. I think that the suggestion that we should have a consumption tax is a very tragic disparagement of the loyalty of the American people in this war. A consumption tax is like a thief in the night, and the man who urges a con-

sumption tax practically implies that the American people do not want this war enough to be willing to pay for it in an open and above-board way. I think that they do want it enough to be willing to pay for it in that way. I do not believe that one-tenth of 1 per cent of the people of America are unwilling to see the thing right through. They know what the purposes of the war are, and they want to go through with it. A consumption tax is a sort of evasion, and we believe that it would be far better to place the chief reliance upon income and excess-profits taxes and upon taxes on the value of unused land or upon the value of inadequately used land. I do not believe in taxing a man's home, or anything of that sort, but a tax should be imposed upon unused land or inadequately used land. I would like to repeat, because there were only five members present when I made the statement, that the man who owns unused land is practically exempt from any Federal tax whatsoever.

Mr. HAWLEY. How much do you suppose you could get from a tax of that sort?

Mr. MARSH. I think that a tax of  $1\frac{1}{2}$  or 2 per cent would yield anywhere from three to four hundred million dollars. I think that much could be derived from the taxation of unused and inadequately used land. That would apply, for instance, to lands in cities where the building does not represent at least twice as much as the value of the land. Usually in a city the value of the building is three times the value of the land, or, at least, one and a half times the value of the land. You may know, perhaps, that the value of the land in New York City is greater than the value of the agricultural farm lands in 20 agricultural States. That would give you some idea of who would pay the tax on inadequately used land. I shall only take enough of your time to summarize my statement in this way: This revenue bill will be watched by everybody in the world, and those who are doing the fighting and dying do not want to have to do the paying. From the way prices have been inflated, the \$30 pay of the soldier, as it was a year ago, will be worth very much less this year. It will be worth only eighteen or twenty dollars, probably, as economists have told me. I have not any official figures on that, but I have talked with some very careful economists, and that is the statement they make. If you estimated it even as high as \$25 it represents a big slump.

It seems unfair to the soldiers and to their families that the Government should adopt a system which would inflate prices to such an extent that their earnings would be reduced that much in real value. I reiterate my statement that I believe that these enormous fortunes are a great menace to any democracy, and we believe that it would be of great encouragement to Russia to come back into the war if America should say, "Although it is the first time that it has ever happened, we are going to put property and human beings on exactly the same basis in this war." The Government has not only the legal but the moral right to conscript men in war times, and it is not only the moral right of the Government but its solemn duty to put wealth on all fours with men in the war. I believe that it will also scare this Kaiser a little bit. He would say, "Those folks are dead back of this war, because their rich people are coming across." I think that Congressman Longworth said in a speech

that Germany was paying only about 11 per cent of the cost of the war in taxation.

Mr. LONGWORTH. I have not the exact figures.

Mr. MARSH. Of course, none of us have the exact figures. Now, why do they do that? It is because the Germans are hoping to be able to collect large indemnities at the end of the war, but, of course, they are not going to do it. We are not in the war on that basis. If we should go into the war on the basis that I have suggested, we could not pay a greater tribute to the worth of the American, English, French, Belgian, and Italian Armies. Now, of course, we all understand that this revenue bill will have a big bearing on the conduct of the war as well as on the revenue.

I thank you very much for your courtesies, and I would be glad to come back and call on Congressman Moore and talk over this matter with him at any time he wants me to.

Mr. LONGWORTH. I want to ask you one or two questions. You say that the reason that Germany has collected only about 11½ per cent of her war costs by taxation is because they hope to collect indemnities.

Mr. MARSH. That is the only reason I can see.

Mr. LONGWORTH. Of course, you know that Italy and France are financing their war expenses at about the same ratio. You would not say that there was any ulterior motive there, would you?

Mr. MARSH. No, sir; I think that they are taking just as large a percentage, or nearly as large a percentage, as we are.

Mr. LONGWORTH. In France they are raising about 15 per cent by taxation, but in Italy only 11 or 12 per cent.

Mr. MARSH. I do not know exactly what their reason is, but I am sure that with all of our wealth we have no reason to do it.

Mr. LONGWORTH. Do you know any instance in history where a nation has financed a war by over 25 per cent in taxation?

Mr. MARSH. I think we financed about 40 per cent of the Civil War by taxation. I may be mistaken, but I think so. I have seen that statement, but I do not know whether we did or not. But, at the same time, there was never any war like this, and there was never any country in the world that had the accumulation of wealth that we have. I do not know of any country that has had to fight with poison gas, or airplanes, or submarines, etc., before. As new methods arise, we must meet the situation that confronts us, not according to precedents, but in the fairest and most just way. That, I know, is what we all want to do. I want to say this, that I think your suggestion in which you urged a rate of unearned incomes higher than upon earned incomes is an admirable one, and you deserve great commendation for the fight that you have made.

Mr. LONGWORTH. I am only asking you what is your theory for the financing of this war, and it seems that you think that we should finance it on a basis entirely different from that on which we have heretofore financed any war, or upon which any nation in history has ever financed a war.

Mr. MARSH. I think we should because of the enormous accumulation of wealth here. I would also suggest that no nation has ever gone into a war before when that nation has had the opportunity to make so much money out of a war that had been raging for some

time. I refer to the profits made by the manufacturers of munitions of different kinds that were sold to the allies before we entered the war. We had a vast sum accumulated in the way of war profits—a sum which, I think, was unique in the history of the world.

Mr. LONGWORTH. Do you mean excess profits or war profits?

Mr. MARSH. War profits. I said war profits, because since going into the war we have had excess profits, but before going into the war we had war profits.

Mr. LONGWORTH. I simply asked that because awhile ago you indicated a comparison between the amount of war profits and the amount of excess profits taxed here and, of course, there is no real relation between the two things.

Mr. MARSH. They are on a different basis. Now, as I said before, we ought to recognize the danger of inflation. You know how prices are being inflated, because it is inevitable where we have large loans, and that is a serious menace to the working people of this country. Have you not felt that the country's situation is very serious?

Mr. LONGWORTH. Because of inflation?

Mr. MARSH. Yes, sir. In England they have gone further, as I understand it, although I have not been able to get any final figures or definite statement, but I think they have gone further in England than we have gone with the program that we have initiated for regulating profits.

Mr. LONGWORTH. I was only speaking about the relative proportion of bonds to taxes.

Mr. MARSH. I am speaking of the regulation of prices.

Mr. LONGWORTH. I was speaking of an inflated currency.

Mr. MARSH. That is what I am talking about, because that is connected with the question of the inflation of prices. I think that England intends to make up a program now, and, as I understand it, it is now being initiated, for the regulation of prices right straight through to the consumer. We can not leave any leaks between the consumer and the producer.

Mr. LONGWORTH. Nevertheless, if England can finance the war in the proportion of 75 per cent by bonds and 25 per cent by taxation, it represents a higher relative proportion by taxation than any other European country has ever had.

Mr. MARSH. But England is now suggesting that the English Government should levy a big capital tax at the close of the war. I think that is inevitable in every country that is engaged in the war. I think that private capital is going to be put right into the hopper of public needs at the close of the war and that private property will have what is left after the Government pays its bills. That is the program of the British Labor Party and that is the plank that has been incorporated in their platform. I think that our proposition that we should have a heavy tax on incomes and excess profits is wiser than a system of taxation that would necessarily involve the unscrambling of property. When the Government calls upon you to give something equivalent to 20 per cent of your property it means that you must sell something.

Mr. HAWLEY. I want to read to you an extract from a speech by Mr. Bonar Law upon the German situation and the difficulty that

they have been having in raising revenues to finance the war. He says:

But there is something else in connection with their taxation worthy of note. With the exception of the increment war tax, to which I have referred, scarcely any of the additional revenue has been obtained from the wealthier classes in Germany. Taxation has been indirect and on commodities which are paid for by the masses of the people. The lesson to be drawn from these facts is not difficult to see. The rulers of Germany, in spite of their hopes of an indemnity, must recognize that financial stability is one of the elements of national strength. They have not added to their financial stability. The reason, I think, is largely psychological. It is, in the first place, because they do not care to add to the discontent by increased taxation all over the country; but it is still more due to this, that in Germany the classes which have any influence on or control of the Government are the wealthier classes, and the Government has been absolutely afraid to force taxation upon them.

Mr. MARSH. God grant that our Government may profit from their terrible experience.

Mr. GREEN. Mr. Longworth spoke of the percentage of revenues raised in England by taxation. You are aware of the fact that many financial authorities in England think that a great mistake has been made in that regard, are you not?

Mr. MARSH. They say that law should have been on a fifty-fifty basis. That is what the British labor party has been urging.

Mr. GREEN. I mean the higher financial authorities.

Mr. MARSH. I know that; yes, sir.

#### STATEMENT OF MR. A. F. THOMAS, OF LYNCHBURG, VA.

Mr. THOMAS. Mr. Chairman and gentlemen of the committee, my name is A. F. Thomas, and I am a resident of Lynchburg, Va. I am interested in manufacturing.

The CHAIRMAN. What kind of manufacturing?

Mr. THOMAS. In the manufacture of wagons. I desire to appear here, however, in a more important rôle than that of manufacturer. I am an American citizen, and my remarks, if the committee will be kind enough to follow them, I think, will absolve me from any purpose to appear in behalf of any special interest in this matter. I further wish to place before the committee as clearly as I may the statement that I have no purpose in appealing to them on the ground of authority, because in the views I shall express I represent no one but myself. I take it that this committee is composed of loyal patriotic American citizens who want to arrive at the best solution of the difficult matter that it has in hand and that its actions will not be decided by precedent or influenced unduly by authority, and that it will exercise its own good judgment, its common sense, its loyalty and patriotism in arriving at a conclusion and in embracing it as the thing that should be done. It is in that capacity and in that spirit that I appear before your committee to-day. In the discussion of economic questions, the bypaths that lead off are innumerable, and as the experience of the preceding witness will confirm, we may become diverted if we undertake to discuss the matter as between the witness and the committee, and leave aside the gist and germ of the thing that should be made most prominent.

The CHAIRMAN. Do you have your statement prepared?

Mr. THOMAS. Yes, sir; and I want to ask that I be permitted to read it.

The CHAIRMAN. I suggest that you read it through, and if any member desires to ask any questions, he may ask them when you have concluded.

Mr. THOMAS. I thank you very much, Mr. Chairman. You anticipated the request that I was going to make of the committee. I will ask also, Mr. Chairman, that members of the committee make a note as I go along of any particular questions that they may desire to discuss with me further when I have finished my statement.

The CHAIRMAN. You may proceed.

Mr. THOMAS (reading):

The highest duty of the American people is to win this war. The death struggle between soul-giving democracy, functioning under and in accord with moral law and autocratic materialistic power, recognizing only the jungle law of the tooth and claw, is now taking place. The result will determine whether mankind shall climb to higher planes as the ages pass or shall descend precipitately into the abysmal depths from which it came in the thousands of years of struggle and suffering that make up the sum of human experience. The time for compromise or accommodation has passed. There is no longer room in the world for these two contending forces. The one must conquer and subjugate the other. We have taken our position. Our lives, our fortunes, and our sacred honor are pledged to the support of the first and to the destruction of the latter. Neither sacrifice of material interest nor dread of loss of life itself must weaken our resolution—that moral law shall be the supreme governing force and that under it the world shall be free. It is in this spirit that we should approach the subject under consideration. We should divest our minds of selfish consideration, and our highest purpose should be to enact revenue legislation that will most fully support the main object in view. The methods adopted should be those that will keep production as near as may be at its maximum efficiency.

#### PRESENT PRODUCTION ALONE AVAILABLE.

War needs can not be supplied from future production. It is absolutely impossible for the Government to feed its armies on wheat and potatoes that are to be produced in the succeeding years, neither can it clothe them with the wool that is to grow on the sheep that are not yet born. There is no such thing as imposing upon future generations the burden of furnishing the sinews of war. War supplies must be furnished by the people who are living, working, and producing now.

The Government has two principal methods of getting its supplies—the one by taxation, the other by bond issue—and both of these sources of support go to the same market to secure the things needed; that is to say, they purchase the things that are in existence now. The difference between the two methods of financing the purchases is that taxation is a final adjustment between the Government and the individual, while the bond-issue method leaves the Government the task of collecting from private debtors and paying the amounts due private creditors when the due date arrives. In other words, the one makes the individual pay as he goes, while the other puts him in debt for the purchase of nonproductive things.

If I may, I would like to develop that further in an explanatory way. A Government bond is not a Government debt. The transaction is one under which the whole people of the Government become debtor to a part of the people of the Government, and the relation of the Government to it is purely that of an intermediary. The Government simply takes money from all the people when the due date arrives to pay the part of the people who hold the obligation. In that connection we will observe that if the tax which the Government collects is properly adjusted every man who buys a bond

is theoretically obliged to remit a part of the bond when he accepts payment for it, because as one of the taxpayers he pays his part of the contribution. [Reading:]

It is manifestly desirable that the war expense should be paid, so far as practicable, from the proceeds of general taxation, apportioned as nearly as may be uniformly, so that the burden will be equitably distributed. The measure of uniform taxation should be the maximum which the weaker classes could reasonably be called upon to pay.

In the imperfect state of social development in which nations find themselves to-day uniform legislation is sometimes impracticable, and even undesirable, since the uniform condition upon which it should rest does not exist. The perfect tax system has not yet been developed, and whether the money is raised by taxation or bond issue the most that can be hoped for is an approximation of the distribution of the burden between individual taxpayers as nearly as may be in accord with the demands of justice, which would seem to require the surrender by every taxpayer of the same percentage of his products for the use of the State in order that it may be enabled to perform a common service. In the matter of taxation, owing to the unequal distribution of wealth, the basic principle may require a graduated scale for individual incomes, while the vital question in the bond-issue method is to preserve a stationary standard by which the public will be required to repay the same amount of products that it borrowed from the bond buyer.

Assuming that capital is entitled to a return for its use the interest paid discharges this part of the obligation, and all that the lender is entitled to receive, as a matter of equity, is the same quantity of products or their equivalents that he originally loaned. A serious objection to bond sales is that the public must borrow in a period of tremendous inflation, while pay day will likely arrive in a period of great deflation. Hence the public may borrow a hundred bushels of wheat, issuing \$225 bonds for it, but when they come due these same bonds, owing to decline in the market price of products, will command 100 bushels of wheat, which gives to the lender the interest on his investment, the repayment of the full product that he loaned, and 100 per cent additional. It does not appear unreasonable, in view of the colossal public debt that the nations are piling up, that an adjustment based upon the average price of products both at the times of the contraction of the debts and the times of the payment of them will be not only equitable and advisable but imperative. This phase of the subject is referred to here, not for the purpose of dealing with it constructively at this time, but merely to show that there is real cause for the objection to paying for the war by unlimited bond issues. Due weight should be given this matter and proper consideration shown those who for this reason are insistent that the greater part of the expenditures of the war should be met by taxation. It is well, however, to keep in mind that judgments based on partial facts are unsafe. While, as already pointed out, there are unreasonable objections to bond issues, we must likewise concede that there are also potent objections to excessive taxation. The safer ground will be found in dividing the sources of revenue between taxation and bond issue. It has been suggested that the proportion be 40 per cent taxation and 60 per cent bond issue, and doubtless the Congress will be able to approximate the correct division.

When the part to be raised by taxation is ascertained the methods of accomplishing the purpose with the least possible harm become matters of prime importance, and it is to this phase of the subject that I desire to invite the committee's attention.

#### THE ECONOMIC SITUATION.

While assessment both of material and liquid values would show that the United States is richer to-day than ever before, this increase is largely imaginary. It partakes of the nature of the limitless wealth of some crazy Monte Cristo, who in his padded cell vainly imagines himself the owner of the universe. The psychology of such periods is always interesting and even ludicrous when the seriousness of the final effect is not considered. Whether this inflation of values comes as the result of rag doll paper money inflation or the general expansion of credit for destructive purposes the results are the same—a rise in nominal values and a decrease in actual wealth. In such periods general waste assumes command and disruption of relative values follows,

necessitating incessant readjustments in the attempt to reestablish the proper ratios—the debtor robs the creditor, wages, salaries, and fixed incomes decrease in purchasing power, and general exhilaration on account of a supposed increase of wealth supervenes. The disorganization that results necessarily increases risks and the percentage of profit increases to cover them.

#### THE INCREASE OF PROFITS.

Once begun, the fever to get as much as possible seizes the public mind, and an era of profiteering is ushered in affecting everybody from the bootblack to the financial magnate. It is as useless as it is unjust to undertake to select a particular class as the horrid example of the conscienceless and unpatriotic profiteer. The humble laborer who does his bit in getting his wage raised from \$1 per day to \$7, the small corner grocer who keeps busy marking up his goods to the limit, the wayside innkeeper who patriotically follows the advice of Mr. Hoover to conserve food by reducing by half the portion and at the same time doubling the price, the poor farmer upon whose shoulders the burdens of civilization have weighed so heavily in the past imbibes that hope that springs eternal and who proceeds to get all he can for his products, that quintessence of patriotic fervor, the dollar-a-year industrial magnate who offers his valuable services upon the altar of his country with apparently no objections to a few large contracts to be sent to his former associates merely as a token of remembrance, are all doing what they can to avail themselves of the present opportunity, if for no other reason, to provide a surplus against the evil day that even a novice knows must come when the inevitable reaction takes place. The fault is not primarily personal. It is the result of a defective economic system that can not function normally under the severe strain that such conditions produce. The defect is inherent in an economic system that requires individual initiative and private assumption of risk.

Price regulation and taxation may mitigate the evil, but they can only effect a cure by killing the patient. Doubtless large profits have been made during this war, and they will likely continue to be made whenever disturbed conditions exist, but it is not altogether so bad as surface indications would lead us to believe. When we consider that our money in circulation has increased two billions—about 60 per cent in four years—Federal Reserve notes from one hundred and eighty-seven million to one billion five hundred millions, our circulation per capita from \$34 to \$50, national debts of the world from forty-three billions to one hundred and sixty-one billions, uncovered paper in the principal countries from two billions eight hundred millions to nineteen billions five hundred millions, and money in the principal countries from thirteen billion six hundred millions to thirty-one billion five hundred millions, and compare it with the production of actual wealth expressed in bushels, pounds, etc.—corn from two billion four hundred million bushels to three billion one hundred million bushels, an increase of about 30 per cent; wheat from seven hundred and sixty-three million bushels to six hundred and fifty million, a decrease of about 14 per cent; coal from five hundred and eight thousand tons to five hundred and eighty thousand, an increase of 14 per cent; copper, five hundred and forty-six thousand tons to eight hundred and forty-three thousand, an increase of 35 per cent; iron ore from fifty-nine million tons to seventy five million tons, an increase of 25 per cent; and petroleum about 40 per cent increase in gallons. And when we further consider that the real wealth produced is being largely devoted to destructive purposes, and, therefore, being consumed more wastefully and more rapidly than in normal times, we must conclude that the increase in the nominal amount of credit instruments has been out of reasonable proportion to the amount of increase of actual wealth, and therefore the nations have embarked upon a sea of inflation which is uncharted, and, as the price index shows, the commerce of the world is being done by guess.

Present profits, invested as they must be in inventories at inflated prices, when the bubble bursts, as in time it must do, will shrink to an alarming extent. Measured by the purchasing power of real wealth to-day these nominal profits would be reduced half. Final judgment, if it is to be just, can not be rendered until the cycle is completed and all the evidence is in. The ascending period is now in process, the descending is yet to follow. It might be well to remember that to be punitive the pains of sin must exceed its pleasures. The reasonable supposition is that during the orgy of inflation, with its fool's paradise of apparent prosperity in which the world is now indulging itself, wealth will be dissipated to a large extent, and when the tide turns we will find a

maximum debt with its additional burden of interest, both to be paid out of a reduced amount of real wealth that will be constantly declining in nominal value. In view of these possible contingencies, it might be well to defer final judgment upon even the most conscienceless profiteer. If conviction is to be had upon motive, it is to be feared that there are not enough innocents to incarcerate the guilty, while if actual accomplishment of the purpose is to be the test, justice demands that the game be concluded first.

#### BUSINESS AN INSTRUMENT.

Business, whether individual, partnership, or corporate in form, is the economic mechanism for supplying the wants of society. Conducted under private initiative, its life principle is profit. Anything that increases profit accelerates it and whatever decreases profit retards it. Its constant aim is to increase profits and conserve gains.

In normal times the mention of taxation gives it tremors, and at the sight of the tax bill it begins to cry, "Murder!" In the great crisis in which the world now finds itself, business, in the main, recognizes that it must do its part, not only in performing its functions efficiently but in supplying means, to a large extent, to keep things going. It must be emphasized, however, that business, normally, is not a taxpayer. It levies tribute for itself and surrenders to the Government only a part of what it collects. Business taxation is the modern adaptation of the Roman and Chinese methods of farming out the taxing function. The principle of the present economic system confers upon business the special privilege of levying tribute upon the individual, who, in the last analysis, is the only ultimate taxpayer. Business, therefore, is a shifter and diffuser of taxes. If it fail to levy sufficient tribute upon individuals to cover all expenses, including taxes, it at once begins the march toward bankruptcy.

The welfare of society and the safety of the Nation make it imperative that all necessary and useful business shall now be kept functioning at its maximum efficiency. Any other course would be legislative sabotage. Any legislation that would weaken the springs of production at this time would in effect be throwing the monkey wrench into the machine to the delectation and benefit of our enemies.

The principles governing the taxation of business and individuals are different. The first must be dealt with as an instrumentality—a utility that must not be taxed to the extent of decreasing its efficiency—while the latter must pay what is necessary, and if the public exigency demands it lower the standard of living in order to make ends meet. In taxing business we should make the egg the object of quest rather than the goose, although I am quite in accord with Talleyrand's suggestion that we take incidentally all the feathers we can get provided we do not excite too much squawking or materially affect the goose's egg-laying capacity. It is generally recognized that the Government must have more income. The problem is how to get the most with the least harm. If business is taxed more heavily, it will probably produce the effect of raising prices, thus shifting the tax to consumers, or of reducing working reserves, which will impair efficiency and lessen production or of curtailing dividends to investors or, what is more probable, it will likely result in a combination of these effects. It is unthinkable that a policy of repression of business activity will be adopted now, when every nerve should be strained to meet the urgent demands for maximum production.

#### TAXATION OF INCOME.

The taxation of income may be most conveniently considered under two heads, viz, business income and individual income. The principles governing the two are different, and the methods must likewise be different. The term "individual income" in this connection being used to designate the results of one's own labor and the returns on capital invested.

#### BUSINESS INCOME.

Let us conceive of the national income derived from business conducted by individuals, partnerships, and corporations as a unit. This represents the net return on the operation of the national economic machine. Each part of this machine, if it is functioning properly, performs its part in the public service, and the whole should be dealt with in a uniform way. If the mechanism is

faulty and there unnecessary parts that produce undesirable results, these can be severely regulated, if not entirely eliminated, by methods that will be explained in the discussion of individual income. The point is that business income should be approached with the single purpose of confiscating so much of it for governmental purposes as can be done without reducing the speed and efficiency of business itself. If undue profits have been taken in the past, and it is conceded that many cases of this kind can be found, the imposition of punitive rates on business income is not a proper remedy for the very simple reason that the effect of the tax on business will be measured not by the innate justice of it, but by the ratio it bears to the present income. If it bears too heavily upon present earnings, the machine will begin to slow down. Less than a proper ration for the work horse now is a poor remedy for over-feeding last year. The income tax, if its potentialities are understood, is a most effective instrument in the hands of democracy. The undue accumulation referred to above can be reached by it, but business does not furnish the means.

I do not think the world comprehends the possibilities of the income-tax principle. I think we will find, as we grow older and the urgent needs of society press more insistently, that we can use it for a great many purposes that are, perhaps, not well understood at present.

The profit fund of business having been selected as the source from which to draw revenue, equitable principles, and effective methods both demand that the tax be definite and the method simple and uniform. Without first analyzing statistics of income not available to the public, it would be difficult to suggest with any degree of certainty the proportion of business income that should be taken. I believe, however, that business could stand a tax of one-third of its net income which if uniformly laid upon all business with no exemptions or exceptions would, I think, yield an amount largely in excess of that received under the present law this year from the same source. The net earnings of the railroads should be included along with the rest, and, if necessary, further adjustment of rates could be made to meet the change of circumstances. The uniform rate here advocated would form a basis for taxation of this subject and future changes could be affected by simply moving the rate up or down as experience might indicate the expediency of it. This plan eliminates all reference to the capital employed, thereby simplifying the process and removing a hiding place in which tax dodgers might operate with more or less safety to themselves and to the detriment of the Government.

In this connection, I recall having been in the Senate gallery a year or so ago and heard Senator Lewis, of Illinois, make the charge upon the floor, that the Treasury Department had the evidence of income-tax robbery amounting to a very large sum. I think it was three or four hundred million dollars. The thing impressed me, and not having heard of any prosecutions or convictions, I have been wondering ever since why there was not more effective cooperation between the Treasury Department and the Department of Justice. If the income-tax law is drawn or administered so as to affect only small taxpayers and the more honest larger ones, while tax thieves are permitted to shirk, it must fall short of giving the results the public have a right to expect.

The policy of secrecy in income-tax returns is indefensible. Whatever there is of income that amounts to much, separately considered, is derived from the public and of right it should have the opportunity to inform itself as to the extent of the tribute it pays whether it be levied by its own taxing power or imposed by the exercise of economic privilege. The public policy that employs "pitiless publicity" to prevent taxpayers and profiteers from going wrong will likely produce better results than that which only uses it to punish those who have been caught, since an ounce of prevention has always been worth a pound of cure. Democracy will not have been made entirely safe so long as secret methods in governmental matters are tolerated.

#### INCOME TAX SECTIONAL.

It has been charged that the income tax is sectional in effect. Let us hope in the interest of our great Democracy and its people who desire to develop its ideals, that the charge is true. It would fail of its purpose if it were not true. The tax is sectional in effect only because conditions are sectional. Under our economic organization with its essential tribute greatly augmented by discriminatory legislation, centralized financial and industrial interests have gathered a golden harvest from the whole country with the result that the

situs of income has become largely localized. There is satisfactory evidence that a relatively small section of the country through control of financial and industrial organization under a public policy of special favor has garnered profits in every field of American effort. The result is that a large part of the annual profits of the entire country is gathered into the tills of these beneficiaries of special privilege, and the income tax reaches them in a disturbing way. It may afford them comfort to reflect that the less favored who now escape income tax, having none to tax, would gladly relieve them of the burden provided the income came along with it. The psychological state of the public mind as well as the facts of the case indicate this as an inopportune time to arouse discussion of the merits or justice of the income tax as affecting those receiving large incomes. It would be safer for them to accept what comes to them with the best grace possible, solacing themselves with the thought that it is sometimes better to bear the ills we have rather than fly to those we know not of. As we get deeper into the war, and its sacrifices become greater, more and more of individual income will likely be taken.

#### PERSONAL INCOME.

The individual is the ultimate taxpayer. Taxes must come out of production and this is the property of the individual. Individuals may shift the burden from one to the other, but some individuals must pay it. If the tax is imposed upon the income from services it may be shifted temporarily by advance in wages, but it comes back in the form of higher prices for articles of consumption. The individual as a productive worker can not escape taxation.

I believe that it is not at all essential that the taxgatherer go to every man's house to get his taxes. In the refinements of social organization no guilty man escapes; we get him, and the poorer he is the more sure we are to get him. [Reading:]

If it does not reach him directly, it comes indirectly through the various tax-shifting instrumentalities incident to social organization. Individual income may be divided into the productions due to the efforts of the individual acting either alone or in collaboration with others and the return on invested capital, which is social tribute. Sound public policy would seem to require that in so far as practicable the tax should be as light as possible on the former, while the latter should be reached by a progressive scale rapidly increasing after a proper standard of living had been reached. Heavy exactions to be taken out of the labor income would have a deterrent effect upon productive effort while a heavy tax on income from investment would not seriously affect the productivity of labor but would strongly tend to reduce consumption of non-essential things. In the discussion of business income reference was made to this matter. It was suggested there that a uniform tax on business without regard to the character of the business was desirable, and now it is suggested that a proper graduation of the tax on individual income will effectually regulate the scope of business, since the reduction of personal income will at once restrict the demand for nonessential goods. The multiplicity of automobiles with numerous chauffeurs, luxurious living with its demand for service, the idleness of the seashore, and the costly arrangements for diversion are not the concomitants of a greatly reduced personal income. If frugality and conservation of resources are desirable, if waste is detrimental to the public welfare, then large personal incomes are productive of evil. As personal income increases, social parasites increase also.

This income, when excessive, superinduces idleness in the recipient and the employment of labor in useless service, thus increasing the burdens of those who are usefully employed. The rich idler with his wasteful entourage is far more detrimental to social progress than his counterpart, the tramp, who regales himself upon the scraps secured from some charitable kitchen. They both are parasites, the cost of keeping the one being many times greater than that of the other.

It is by no means contended that all large individual incomes are wastefully used. I am here referring to that part of the money that is luxuriantly and wastefully used. Much of it finds its way back into productive use. When such is the case it involves no economic loss, but tends to produce a state of monopoly of ownership of the machinery of production, distribution, and finance which still more centralizes income. The ultimate of this process is plutocracy.

The restriction of individual income under the method herein suggested would not affect unfavorably any necessary business, but would induce a general slowing down of all business that ministers to luxury and extravagance. It is but fair to point out that a continuous policy of limiting individual income to the extent here suggested would change materially the class of investors who furnish the reserve capital necessary to the promotion of new enterprise. Either the many smaller investors must take the place of the few larger ones, or new business development slow down, or public initiative be substituted for private. In our present situation the country does not need new enterprises so much as it does the efficient operation of those we now have engaged in necessary work. With ample provision for keeping the present business organization in a state of high efficiency, we can well afford to take time to devise plans designed to take care of new development.

#### TAX ON BUSINESS PROFITS.

I suggest a uniform tax of 33 $\frac{1}{3}$  per cent on the net profits of all business, whether conducted by an individual, a partnership, or a corporation; steamships and railroads controlled by the United States Government, and all public utilities privately owned, to be included. This tax is to be levied upon the net profits of each business without regard to the amount of capital employed or the amount or percentage of profit previously earned. This would be a tax upon the entire business-profit fund of the United States. All business is a privilege, and this tax would in effect be the confiscation by the Government of one-third of the benefits arising from the exercise of the privilege. I believe business could bear this tax without seriously impairing its efficiency. When the income tax returns are analyzed, I suspect that the yield at the rate suggested will show an increase of 30 to 50 per cent in amount above that received from the same source under the present law.

Since writing this I am rather inclined to think that the yield will be very much greater than that; but, of course, it is a guess. I would have to see the actual tabulated statistics in order to arrive at anything like a just and fair conclusion. [Reading:]

The method suggested greatly simplifies the process of ascertaining the tax and at the same time makes impossible many injustices and discriminations incident to the method employed in the present law. In computing business net income, reasonable salaries should be allowed individuals and partners actually conducting the business. In corporations this is already provided for in their salary expense. Two reports should be required from individuals and partners—the one to represent the business and the other the person—the latter should report the salary as income. Stringent provision should be made to compel every business, whether individual or corporate, to distribute to its owners all income in excess of that actively employed in conducting such business. If this were done, the business income would pay its tax, and the surplus not needed in the business itself would go into the hands of the individual, where it would again be taxed as individual income. This method would insure that excess profits would be adequately taxed but in a way that would not deprive business of that adequate support indispensable to its growth and efficiency. There should be no tax on stock dividends, since they do not represent any distribution but are only the issue of evidence of ownership. The profits represented by stock dividends remain in the business, and the stock issue in no wise alters the status either of the corporation or the stockholder. The corporation holds the money and the stockholder owns it in the first case, and the same is true after the stock dividend is issued.

#### TAX ON INDIVIDUAL INCOME.

I suggest that net income of the individual, with provision for the present exemptions, be taxed as follows:

- 5 per cent on net income in excess of exemptions and not in excess of \$10,000.
- 6 per cent on net income in excess of \$10,000 and not in excess of \$12,500.
- 8 per cent on net income in excess of \$12,500 and not in excess of \$15,000.
- 10 per cent on net income in excess of \$15,000 and not in excess of \$20,000.

14 per cent on net income in excess of \$20,000 and not in excess of \$40,000.  
 20 per cent on net income in excess of \$40,000 and not in excess of \$60,000.  
 28 per cent on net income in excess of \$60,000 and not in excess of \$80,000.  
 36 per cent on net income in excess of \$80,000 and not in excess of \$100,000.  
 44 per cent on net income in excess of \$100,000 and not in excess of \$150,000.  
 50 per cent on net income in excess of \$150,000 and not in excess of \$200,000.  
 60 per cent on net income in excess of \$200,000 and not in excess of \$250,000.  
 68 per cent on net income in excess of \$250,000 and not in excess of \$300,000.  
 74 per cent on net income in excess of \$300,000 and not in excess of \$500,000.  
 80 per cent on net income in excess of \$500,000 and not in excess of \$750,000.  
 90 per cent on all net income in excess of \$750,000.

The practical results of this scale would be as follows:

Tax on \$10,000 income, less \$2,000 exemption, would be \$400.  
 Tax on \$12,500 income, less \$2,000 exemption, would be \$550.  
 Tax on \$15,000 income, less \$2,000 exemption, would be \$750.  
 Tax on \$20,000 income, less \$2,000 exemption, would be \$1,250.  
 Tax on \$40,000 income, less \$2,000 exemption, would be \$4,050.  
 Tax on \$60,000 income, less \$2,000 exemption, would be \$8,050.  
 Tax on \$80,000 income, less \$2,000 exemption, would be \$13,050.  
 Tax on \$100,000 income, less \$2,000 exemption, would be \$20,850.  
 Tax on \$150,000 income, less \$2,000 exemption, would be \$42,850.  
 Tax on \$200,000 income, less \$2,000 exemption, would be \$67,850.  
 Tax on \$250,000 income, less \$2,000 exemption, would be \$97,850.  
 Tax on \$300,000 income, less \$2,000 exemption, would be \$131,850.  
 Tax on \$500,000 income, less \$2,000 exemption, would be \$279,850.  
 Tax on \$750,000 income, less \$2,000 exemption, would be \$479,850.  
 Tax on \$1,000,000 income, less \$2,000 exemption, would be \$704,850.

After the income reaches \$750,000 the Government takes 90 per cent of it. This scale practically doubles the present personal income tax. While the method here suggested for ascertaining the tax on individual income is practically the same used in the present law, the motive is reversed. The present law proceeded upon the assumption that business should bear the greater burden of taxation, and further that the parts of it deriving abnormal profits should pay the greater share, and that individual income should be taxed as an ancillary source of income thrown in to help out. The method of taxing business income defeated the object of imposing greater burdens upon war profits in that false capitalization afforded an avenue of escape for many and the limitation of exemption to 7 or 9 per cent practically destroyed any comparison between profits before and during the war. In many cases, too, the small capital with large earning capacity was heavily struck, while business not so well managed received a premium for its inefficiency. The methods here suggested are intended to conform to the principles that business being the economic organism should be supported to promote maximum efficiency, and that if sacrifice is to be made it should be made by the individual in order that waste and extravagance may be reduced to the minimum. The individual scale suggested practically doubles the present tax on individual incomes, but it will be observed that at the increased rates suggested the individual does not pay as much tax as is suggested for business until his income reaches approximately \$200,000 per annum. The rates suggested both for business and individual incomes are, of course, tentative. It would be impossible satisfactorily to arrive at definite figures until an analysis and thorough study of the income-tax returns for the past year had been made.

What I contend for is the recognition of the fact that sound public policy requires the preservation in its full efficiency of the economic machine, industrial, commercial, and financial, and that no greater tax should be imposed upon it than it can bear without impairing its power to serve, and further that the tax should be uniform upon all parts of this machine, and that a simple method of ascertaining the tax be adopted. I contend also for the principle of graduated taxes in individual income taking as much of it as may be necessary to meet the needs of the Government. The scale should be so arranged as to bear lightly on service income needed for reasonable consumptive use, and so that investment income above the amount necessary for reasonable consumption should be taxed heavily. This, in my opinion, is as far as Congress could safely go at the present time.

I am persuaded that legislation along the lines suggested would be helpful to the Government, largely increasing its revenues and highly beneficial in a broader sense in that it will help to clear the field for future action when the need for further remedial legislation shall arise. In conclusion, Mr. Chairman, permit me to thank you and your committee for the opportunity to present these views and to assure you that if I have been able to assist you even in a slight degree in the arduous task you have in hand I shall, indeed, feel gratified.

Mr. GREEN. I never exactly understood the argument that a tax upon capital is a tax upon efficiency. Is not that true in any case where we tax either the earnings or the accumulation of those earnings?

Mr. THOMAS. I think I can make that clear to you. If you tax a business, the more heavily you tax it the less profit it will make and the less risk it will take.

Mr. GREEN. I see I did not make my question clear. Your arguments addressed to the committee would indicate you are seeking to find revenue. We have to go after revenue wherever we find it, and the man who does not make anything would not be an object of taxation.

Mr. THOMAS. Upon what point do you want me to reply?

Mr. GREEN. How are we to escape taxing earnings of property accumulated by earnings?

Mr. THOMAS. That same argument would apply if you go out and attempt to tax maximum production and take it all. Do you think that productive of difficulties?

Mr. GREEN. You are asking me if we have a shower this afternoon whether it would be a good thing if it were a flood.

Mr. THOMAS. The point I have tried to make clear in there is that we recognize, at least I do, that everything must be taxed, and there is a point at which business will yield the largest revenue consistent with the highest efficiency, just as sometimes a man sells goods at lower prices because he makes more money by selling them at lower prices than he would by selling them at higher prices. If he charges too much his overturn is decreased to such an extent that he makes less at the higher price than he would at the lower price.

Besides, there is this element of business, which I have tried to make clear—that it is an organism, it is an instrument, and you can not put any more on it than it can shift. If you do you begin to dig under and destroy its efficiency and impair its usefulness. We can not afford in this stage of the game to do that. There is no argument on my part to the effect that we should take from business any burden that could be reasonably put on it. I think if you will take the schedule I have suggested there and test it by the income-tax returns and include the subjects that will come under those in the law, you will find that the income from it will be manifestly greater than we have already received under the tax law that run up to 60 per cent.

Mr. GREEN. Your plan of taxation is without regard to capital?

Mr. THOMAS. Yes, sir.

Mr. GREEN. I presumed that was so, but if you do that, wouldn't that in most cases amount to a consumption tax?

Mr. THOMAS. You take one-third of the income, and that is pretty heavy. Of course, business is eventually going to shift. If business has not already collected it you can not get it unless you confiscate the capital, and if you confiscate the capital you kill the business;

you go after the goose instead of the egg; and unless you take care of the goose—you may steal a feather, but if you undertake to kill the goose you have lost the egg and lost the goose that laid the egg, too.

Mr. GREEN. Have you reached any conclusion as to how much would be raised under your plan?

Mr. THOMAS. I have not done so, because I have not the facts. The principle is what I contend for, and I contend for the method to be arrived after a thorough examination of the statistical arrangement of the matters affecting the last year's income. I did not undertake to be exact, because it is a thing which the outsider can not be exact about with any degree of justice to the subject or himself.

Mr. STERLING. I understand you would tax all incomes the same ratio, without reference to capital?

Mr. THOMAS. Certainly; they have no relation.

Mr. STERLING. Suppose a business of \$100,000 was making 8 per cent. They would pay \$2,000, would they not?

Mr. THOMAS. A \$100,000 business making how much?

Mr. STERLING. Make \$8,000.

Mr. THOMAS. It depends upon how you would tax it, sir. A third of that would be \$8,000.

Mr. STERLING. After deducting the exemption?

Mr. THOMAS. There is no exemption in business.

Mr. STERLING. You said \$2,000 would be exempted.

Mr. THOMAS. No; \$2,000 would not be exempted.

Mr. STERLING. Let us take a \$100,000 investment that makes \$6,000.

Mr. THOMAS. Are you dealing with the individual or the business?

Mr. STERLING. Either one.

Mr. THOMAS. They do not apply.

Mr. STERLING. A \$100,000 investment that makes \$6,000, and you take one-third of it?

Mr. THOMAS. I would take a third of it; yes.

Mr. STERLING. Suppose there is an investment of \$25,000, making \$6,000?

Mr. THOMAS. That is all right; take the same amount.

Mr. STERLING. Do you not think that would destroy business?

Mr. THOMAS. Not at all; if your schedule of percentage is correct, if your imposition upon business is reasonable, it would not affect business because it comes out of earnings and of a reasonable imposition and therefore will not destroy business. I am assuming that you will be reasonable in your taxation.

Mr. STERLING. I am assuming we take out what you suggest, a third of it.

Mr. THOMAS. I think business could bear that. The man who was making \$6,000—in that \$6,000 is not included any expense, and no interest. All labor, all services—everything is written off, before that \$6,000 is ascertained. That is cash; and if he were getting \$4,000 cash after paying his taxes, if the business itself or work was bad, he might change his business just as we do oftentimes when the revenue is not satisfactory, and that would help to eliminate what we ought not to suggest.

Mr. STERLING. Ought we not to be just and equitable?

Mr. THOMAS. The principle I contend for is entirely fair, and it is the exemplification of a method that can be so exercised as to be fair.

Of course, if the Congress undertakes to exercise arbitrarily this method of any other method, it will destroy the thing it operates upon, because inherently in the power to tax is the power to destroy. What I am trying to do is put before you a simple method by which you can, by the exercise of good judgment, based upon such information as you can get, a regulation of this tax so that it will not stop business, but really prove a source of large income and leave business in the exercise of its functions and yield the most efficient results.

Mr. HAWLEY. Do you propose a graduated tax on incomes?

Mr. THOMAS. Yes, sir.

Mr. HAWLEY. You do not propose a graduated tax on business?

Mr. THOMAS. No, sir.

Mr. HAWLEY. I do not quite understand why you proceed on that basis.

Mr. THOMAS. I will explain that. There is absolutely no base on which you justify an income tax, unless the preexisting condition of injustice of return is admitted. If the returns are just, an income tax is an outrage, because you can not reach all property by an income tax, and if I have gotten what is mine and you have gotten what is yours and he has gotten what is his, there is absolutely no justice in making you and me pay his taxes. Therefore, if you want to go down to the bottom of it, the income tax exists because somebody got off with something that he had no equitable, just right to, and that income tax at its bottom is intended to equalize that injustice. That is the basic foundation for an income tax. My contention is that if you are going to exercise this instrumentality, if you are going to use it, you will have to use it true to its nature to get results. You will have to proceed on the assumption—if the assumption is wrong, then the income tax is wrong—but if the assumption is correct that the distribution has been unjust, then the income tax furnishes the instrument to undertake to restore to some extent the injustices that have resulted from the economic system.

Mr. HAWLEY. Why would not the injustice arise just as much out of business incomes as individual incomes?

Mr. THOMAS. For this reason: You have to be more than a horse. A horse is said to have one idea, but a Congressman has to have more than one idea, because there are a great many different phases to any question that comes up for legislation. You have an instrument. It matters not what the injustice may be, you must preserve that instrument. We are not going to sacrifice that instrument in the face of national danger, at any rate, and if we have to maintain it we must provide for that. Therefore, I would not undertake any distribution based on business for that reason. I would not interfere dangerously with that. That would slow the wheels down. I do not want to slow the wheels down. I want the Kaiser licked, and to lick the Kaiser you have to keep the wheels going, and we have to go with the wheels.

Another reason for not putting it on business is that you miss the objective when you put it on business. If a large corporation has made too much money and you undertake to correct that and the income tax is justified, the distribution is unfair and unjust, you can not reach that by a graduated income tax, because every corpo-

ration of any importance is composed not only of big rich people, but little poor people, and any graduated income tax that digs down to correct an injustice of distribution is correcting the injustice of distribution in the pockets of people that never got it. That is why you find a great many people who are largely interested in corporations are willing to submit to a graduated income tax, because it makes the little poor fellow pay his part of it, whereas, if you take it to the individual and apply a graduated tax, then you get it out of the last owner. If the fellow has gotten off with excess profits you would take it back, and then you do not go to the man who did not get it. In other words, you go to the ultimate source.

Mr. LONGWORTH. I have a question I would like to ask. You are evidently an economist and a philosopher.

Mr. THOMAS. I am not a philosopher, but merely a plain citizen.

Mr. LONGWORTH. I understood you to say that in your opinion a man who spent any portion of his income unproductively was a greater burden on the community than an idler.

Mr. THOMAS. I think I did not say it exactly that way. What I did say was, that the man who idled away his time, or the idler, was more expensive to society than the poor tramp, because he wasted more. That is the sum of what I said.

Mr. LONGWORTH. Here was one question I desired to ask on that subject: Do you think that a man who spends a portion of his income in buying works of art is a greater burden on the community than an idler?

Mr. THOMAS. You want to narrow the question down to what I think are the extremes of economic waste. I would not like to decide that question for you, nor would I like you particularly to decide it for me. The principle I lay down is that things which one man might call extravagant are things of high utility to somebody else, and in an economic discussion I am a little averse to going into any proposition as an aside and saying what is waste and what is not waste. But if there is waste—and I believe there is—I do not undertake to define it, because I think it is indefinable.

Mr. O'SHAUNESSY. Mr. Thomas, do you put business on the same basis where great profits have been made out of material used in the conduct of the war and ordinary business in which the war has made no difference?

Mr. THOMAS. That really has nothing whatever to do with it. It is absolutely a humbug. The profiteer is a dangerous man, no matter whether engaged in war profiteering or in any other kind of profiteering—profiteering is the thing that hurts. I think it is a colossal humbug. It is profiteering I care about; the different kinds of profiteering all look alike to me.

Mr. STERLING. Do you not think there is some difference between the man who takes advantage of the war situation to make big profits out of the Government and the man who does not take advantage of the war situation?

Mr. THOMAS. Did he take advantage? That is the next question. Are you correct about it? Here is the United States Steel Corporation. It has made outrageous profits. Everybody knows that. But did not the United States Government set the price for the steel? Should Mr. Gary get up an army and come down and put President Wilson out of business?

Mr. STERLING. I do not suppose the Government set a price any higher than it had to pay to get the stuff.

Mr. THOMAS. I am not arguing the righteousness of the thing, but I am showing you that the steel corporation has been acting in conformity with law.

Mr. STERLING. I am not referring to the steel corporation.

Mr. THOMAS. Of course, if you go back to the man who goes deliberately to restrict output or corners the supply or does anything else to compel his Government to pay unreasonable profits, I say that man ought to be met with the firing squad at sunup. He is disloyal; he is a traitor. But in the general trend of advancing prices, much of this profit you talk about as being profiteering came from this fact of tremendously increased values of inventories. The man who bought goods in 1913 at one price and sold them at another price that yielded a very large income presents only one side of the picture. The other side is coming on. The devil himself can not feel the decline that must follow in the natural evolution of that cycle, and therefore it does not affect me personally.

Mr. MOORE. Take your own illustration of the United States Steel Corporation. Under your scheme of raising income taxes would you release corporations like the United States Steel Corporation from taxation?

Mr. THOMAS. Not at all. I would require them to pay a third of their net earnings, if that were the percentage reached.

Mr. MOORE. You differentiate, then, between the person and the business?

Mr. THOMAS. That is right.

Mr. MOORE. And in devising a new scheme according to the present law under the graduated income tax you could collect from the individual?

Mr. THOMAS. That is right.

Mr. MOORE. I wanted to know whether under that system you would relieve the steel corporation or the business concern from making the return and rely solely upon the individual?

Mr. THOMAS. No; I do not. There are three parts of the income. All of the income in the hands of the business would be taxed, first, one-third. Then, I would subdivide the rest into two parts, one to be paid out as dividends, which will again be taxed.

Mr. MOORE. You are speaking of income now.

Mr. THOMAS. Here are two things [illustrating]. This [indicating] is business; here [indicating] is the stockholder. Business itself makes all of it. I take one-third. That leave two-thirds in the hands of business. This business may need a certain part of that two-thirds or all of it. If it keeps it in the business, there is no further tax on that particular profit fund.

Mr. MOORE. Is it all funds in the business or just income?

Mr. THOMAS. Income is what I am talking about, not confiscation of capital. Somebody raised the point about low-rate bonds—11 per cent in Germany.

Mr. MOORE. You are starting out in your taxicab with a charge of 50 cents against you before you begin, applying that to the business, and then the profits that result from the various trips, so far as the owner and driver is concerned, that is what we are going to tax.

Mr. THOMAS. I do not charge anything on the cab until he has earned it, and then I take away one-third, after he has done business all day, after he comes home at night; after he comes home at night is the time I catch him.

Mr. MORRE. And your idea is the whole system would be simplified if we adopt your general plan?

Mr. THOMAS. With the proper percentage. I do not undertake to say that; I tentatively suggest that.

Mr. MOORE. I understand you are a manufacturer of wagons?

Mr. THOMAS. Yes, sir.

Mr. MOORE. At Lynchburg, Va.?

Mr. THOMAS. Yes, sir.

Mr. MOORE. You are not a professor of economics?

Mr. THOMAS. No; I do not claim to be that.

Mr. MOORE. You have made a very good statement.

Mr. THOMAS. I thank you.

Mr. DICKINSON. I am highly in accord with your theory on taxing individual incomes, but it troubles me in the light of your statement that you do not want to destroy business. Take, for example, the \$100,000 business Mr. Sterling made reference to as earning 6 per cent. But supposing that \$100,000 corporation made 3 per cent. Do you mean to say you would take \$1,000—1 per cent—and destroy that business?

Mr. THOMAS. All the business is taken care of before that sum is reached at all. The business is taken care of in its expense account, and this only appears as a balance after the needs of the business are met, except for new capital.

Mr. DICKINSON. \$3,000 is the net income?

Mr. THOMAS. I know; but the business has been taken care of before that \$3,000 arises. That is stock dividend; that is earned for stock dividend.

Mr. DICKINSON. How long do you suppose the stockholders would be in that business?

Mr. THOMAS. I would care for him in this computation, because the thing is already established. The stockholder will have to continue; there is nothing else for him to do.

Mr. MOORE. Suppose the wagon business of the United States was pretty well in the control of the United States Wagon Co., as the United States Steel Corporation makes most of the steel, and the Government bought its wagons from the United States Wagon Co., and you were still running an individual concern down at Lynchburg, Va., and you would start out with your proposition to take one-third of the profits of the business before you began taxing, do you think your percentage would work out fairly to your small concern?

Mr. THOMAS. I have already expressed the opinion several times that I am not wedded to any percentage. This was a tentative suggestion; but the principle is the thing I contend for.

Mr. MOORE. You are arguing for a continuance of the business; you do not want the business destroyed?

Mr. THOMAS. Not at all.

Mr. MOORE. And I assume we do not want the business destroyed.

Mr. THOMAS. And the proper percentage of that business on a uniform tax basis will not be destroyed.

Mr. MOORE. And the Government, by levying embargoes and other forms of favoritism, due to the desires to hasten the war, is throwing all of its wagon business into the hands of the United States Wagon Co., and I am wondering what effect it is going to have on your individual company down in Lynchburg, where you may not be able to get your materials, or you may not be able to hold your labor, or you may not be able to meet the United States Government conditions in regard to payment.

Mr. THOMAS. I think that case will arise in a good many businesses, whether you have an income tax at all or not.

Mr. MOORE. We have to raise taxes from as wide a field as possible.

Mr. THOMAS. And mine is much wider than your present law. It reaches out and goes down to the very basis of business, segregates a part which is the unit of profit, all the profit earned in the United States subject to the uniform tax, and the little man pays less because he has got less and the big man pays more because he gets more.

Mr. MOORE. I contend they do not have a chance to proceed now under present conditions, because of concentration of business, and that the tax burden bears heavily on them as small men as compared with larger operators. I assume that in raising the two dollars for one next year as compared with last year we may have to bear now even more heavily upon the small man than before; and I would like to know whether, in your study of the situation, you have reached some running conclusion as to the effect the increased tax will have, especially upon such a plant as yours, if it should be levied upon the small operator.

Mr. THOMAS. My position is that under the present tax law it would greatly relieve the small tax payers, because under the present law war profits and things of that sort, which I do not understand and which is economical foolishness to me.

Mr. MOORE. Bear in mind you have to have as much proportionate machinery outlay for your outfit—for your factory in Lynchburg—as the great Government corporations, and its overhead would be more economical in the end by reason of its system than yours would be.

Mr. THOMAS. The corporate tax law, as a general proposition, ought not to be framed to build up a business or destroy it. We have much, too much, of that in this country already.

Mr. MOORE. You yourself have in your argument that which is potent to destroy business, and I assume that no one is at liberty to destroy business.

Mr. THOMAS. If you apply to little business the present tax it is more oppressive in many cases than my recommendation would be, because a man who has a little money conserves his resources and shows a larger percentage of profits because in economics there is a constant tendency to fall in profits. It has not applied in the last year or two, but if you give it time there is something always to pull profits down. The small man will always make more percentage than the larger man if he lives at all. My judgment is that as we go on into a higher state of corporation management that the little man in a larger degree will have to disappear.

Mr. MOORE. If that is so, the individual cobbler, making shoes, would naturally have to give away to the large manufacturer of shoes.

Mr. THOMAS. That is the point, and I think it would be better for society and the cobbler, both, that is should be so.

Mr. MOORE. This thought occurred to me, you believe in making the statistics in regard to income taxes public?

Mr. THOMAS. Absolutely. I do not see but one class of people who would be benefited by secrecy, except thieves, and I am opposed to thieves.

Mr. MOORE. Do you think that should proceed to the extent of publishing all of the details of a business and having it subject to inspection or published in the newspapers?

Mr. THOMAS. I do not think so. I do not believe in being unreasonable about it; but make it available for anyone who wanted information to be able to get it, not a public record that was open to inspection.

Mr. MOORE. Would it not serve the purpose you have in view, and many other people have in view, simply to make public the amounts of the net income and the amount received from dividends?

Mr. THOMAS. No, sir; the principle calls for the names of the man and the amount, both.

Mr. MOORE. I said, would it not answer all the purposes you have in view simply to give the name of the person—say, A—and the amount of his net income and the amount of dividend received?

Mr. THOMAS. That is all, I think, would be necessary to give the public a fair idea.

Mr. MOORE. Not giving away the details of the person's business?

Mr. THOMAS. I do not think that is necessary.

The CHAIRMAN. You have been very interesting in your philosophy and sound reasoning; but why do you desire to take 90 per cent of a man's income after, say, \$150,000?

Mr. THOMAS. In the first place, I would like very much to get out of the minds of the committee that I am committed to percentages; that is not the point I want to impress upon you.

The CHAIRMAN. In the present rate of graduates, why would not that be a little too high?

Mr. THOMAS. My opinion is that a personal income—certainly in our state of urgent need for conservation and efficiency—is that \$1,000,000 income is as much money as ought to put in the hands of anyone for reinvestment. The country is not interested in reinvestment, and that is what they must do with it or blow it in to the winds.

The CHAIRMAN. Your idea is, a stockholder in a corporation in a business of millions of dollars' extent, and he received, say, \$1,000,000 personal income from a business that has already made enough?

Mr. THOMAS. That is the idea.

The CHAIRMAN. And that Bill Jones should not have more than \$1,000,000 to reinvest in new enterprise?

Mr. THOMAS. That is the idea, Mr. Chairman. I would give him out of his earnings \$300,000, approximately, and I would take the rest for the Government.

Mr. LONGWORTH. You are aware our present taxes are higher than Great Britain's!

Mr. THOMAS. Yes. I am very glad, indeed, to have had the opportunity of being with you.

The CHAIRMAN. The committee will now recess until 2 o'clock this afternoon.

(Thereupon, at 12.50 o'clock p. m. the committee took a recess until 2 o'clock this afternoon.)

AFTER RECESS.

STATEMENT OF MR. A. F. THOMAS—Resumed.

The CHAIRMAN. Mr. Garner, I believe you wanted to ask Mr. Thomas a question.

Mr. GARNER. I do not know that I do, Mr. Chairman. I want to say to Mr. Thomas, as one member of the committee, that I desire to thank him for his very illuminating and interesting paper. It was my understanding we were going to quit at 12 o'clock, and I wanted to be on the floor of the House at that time, or else I would not have mentioned to the chairman that probably your time would go over and that I had some questions to ask you. One of the most difficult problems—to my mind, at least, if not to the entire committee—is the question of the collection from business of what is known as the excess-profits or war-profits tax. We have the greatest difficulty in determining upon what to base that tax. You seem to have solved the problem, except you do not meet the demand—apparently the universal demand—of the people for greater taxation upon these tremendous war profits. Your proposition to take one-third, for instance, in the case of a corporation of \$50,000 which has made a half a million dollars, would not meet that situation. Now, can there be a combination tax, based first upon your proposition where the profit did not exceed a certain percentage, and then another tax covering cases such as I have just mentioned—for instance, a corporation that had \$50,000 capital, and made in the year 1918 \$500,000. Could you not apply the tax that you propose of one-third and then put a clause in the bill that where the profit runs in excess of a certain per cent they take a larger percentage. Of course, that would resolve itself right back to the proposition of upon what you are going to base the tax, whether it is to be the capital stock or value or what.

Mr. THOMAS. The effect of my suggestions would be to do exactly what you say you want to do. It will do this: I have a knowledge of accounting and I understand accounting, and the result of these two methods, this combination of methods that you speak of, is involved in my proposition, first, a uniform tax upon the sum of business profits, that to apply to the different parts of that profit, wherever found. If there are excess profits, of course, that is a matter of name, you know. It is all the same to me. All yellow dogs look alike to me.

The CHAIRMAN. You mean exorbitant profits?

Mr. THOMAS. Yes; that is what I mean. A profit is a profit, and the difference is one of degree, and that is the point I am trying to make. Of course, every individual, perhaps, will have a different idea of what is an exorbitant profit.

Mr. DICKINSON. It is all income.

Mr. THOMAS. It is all income. It is the sum total of the economic result of operation of the economic machine of the entire country.

Now, in so far as that is derived from business I propose a uniform tax to bear equally on every business, regardless of the amount of income or the amount of capital invested.

Mr. GARNER. Let me interrupt you just there. Would you put a minimum amount on the business? For instance, here is a man who has a capital invested, we will say, of \$1,000, or has a little store out in the country, and some of them have a capital of \$100 or \$150 or \$200, and that is a very negligible quantity in the question of the transaction of business throughout the country. Would you have any minimum?

Mr. THOMAS. I would answer that question in this way: We can not sometimes in life—in fact, life itself is a matter of approximation, and we can not see everything or ought not to try to see everything—and if it is thought to be expedient it is not consistent with the principle because the principle I outlined applies from top to bottom, no matter whether the amount is large or small, and has no exceptions, but if in the judgment and wisdom of the Congress it was thought it would be better to lay aside a \$1,000 exemption to cover those cases, or \$1,500 or \$2,000 or whatever the Congress might decide, I can not see any insuperable objection to it. It would merely be a matter of expediency; a sort of sop thrown Cerberus. I hope I have made clear to you one side of the proposition, and that is the taxation of business income. We are now going to deal with what they call the excess-profit tax, which is nothing more or less than a large profit. It does not matter whether it comes out of the war or not, because I would not confine it to war prices. You could tax it wherever you found it. After having taxed this business income, what remained in the business would either be necessary to the business or would not; a part of it might be necessary and a part of it might not. If the residue after taking one-third was necessary to the economic efficiency of that business, it should remain in the business in the public interest.

If there is an excess over and above what is necessary to the highest economic efficiency of the business, that becomes consumptive or investive capital; that is to say, it is subject to be paid out in dividends, to be spent in the frivolities of life, or reinvested in some useful business or some other kind of business, whatever it may be. Now, the position I take there is that you want to reach the excess profits without materially damaging the efficiency of business, which we all would concede was necessary, because you have already passed a law to put your Government in the business of promoting the efficiency of business by lending them money and supporting them if it is necessary, and if it is necessary for them to keep that money, he has simply got the money that you would lend him, and if he has already got the money, why put the Government to the trouble of financing him when he has the money with which to finance himself? Why tax him to make money and put it in the same place? That is not wise.

Therefore, we will concede, or, rather, I assume, that it is necessary to leave in the business what is necessary to the operation of the business. That brings us, then, to the residue that is open to distribution; that is, that which will be paid out or should be paid out either to the stockholder or reinvested by the business itself. I take

the ground there that in our present circumstances the Government is not interested in permitting corporations and individuals and other business interests to reinvest. We are not interested in new developments. We are interested in conserving the efficiency of the present machine, and whatever is left for reinvestment should not be left in the hands of the business to reinvest, but transferred to the stockholder and let the stockholder become the investor instead of the business. Therefore, the minute you take it out of the hands of the business and put it into the hands of the stockholder, then you, with your graduated tax, shall say how much excess profit is confiscated to the Government and how much remains in the hands of the individual.

Mr. GARNER. Now, there comes in exactly the trouble that you do not seem to have anticipated. Who is going to determine what part of this 66 $\frac{2}{3}$  portion should be reinvested in the business wisely, and what portion should be declared as dividends to the stockholders?

Mr. THOMAS. While I did not undertake to outline the method, because I was not drawing a bill—

Mr. GARNER (interposing). But I am simply telling you just the difficulty we have here.

Mr. THOMAS. Let me finish my answer, please. You will find in my testimony this morning I urged stringent laws compelling a distribution of excess. Now, as to how that is done is a question of constructive ability in drafting a law to accomplish the desired purpose. Now, I do not pose as a constructive statesman, particularly—

Mr. DICKINSON (interposing). After the Government has taken one-third as a tax, if it is one-third, what has the Government got to do with what he does with the rest of it?

Mr. THOMAS. For this reason, whatever is necessary for the development of that business the Government should see is kept in the business; but whatever is in excess of the needs of that immediate business then becomes capital for reinvestment; and if you want to reach it as a surplus fund you have got to go out and tax it in the hands of the individual.

Mr. GARNER. That is what I am trying to get at. I can not conceive just at this moment how you would administer a law in which each individual business, as you say, from the lowest to the highest, was interested, and have some governmental official determine whether or not two-thirds of it shall be reinvested in the business or two-thirds declared as dividends to the stockholders, and therefore a tax placed upon it. It looks to me like you would enter into the field of impossibility, just as we are now confronted with the difficulty under the present system of ascertaining the capital stock and the value of things to levy the excess-profit tax. Now, there is the difficulty we have. We do not have so much difficulty in arriving at rates in this committee as we do the procedure upon which we will levy the tax.

Mr. THOMAS. Mr. Chairman, let me suggest that perhaps the difficulty of the gentleman is due to his lack of familiarity with accounting methods. I do not know whether he is an accountant or not.

Mr. GARNER. I am not; no, sir.

Mr. THOMAS. But it is perfectly feasible to draft a statute that will make it very easy and give certain definite tests of whether there

is more money in the business than necessary. I studied your present law very carefully, and also studied the forms gotten out by the Treasury Department. The man who drew the law was in the wilderness, but the man who made out that form was an expert. He knew his business from top to bottom, and if you will get that man—I do not know who he is—and put him to work on that test, he will come mighty near giving you some definite way of arriving at just what ought to be done and how to do it.

Mr. GARNER. You would leave then to the administration of the law the question of how much should be reinvested?

Mr. THOMAS. No, sir.

Mr. GARNER. Whom would you leave that to?

Mr. THOMAS. I would get this man or some other man to construct a statute that would lay down the method that would determine what should be kept in the business and what should be paid out. That is a matter of accounting.

Mr. GARNER. Well, it is mighty hard to draw a law that will tell just how much should return to the business and how much should be paid out.

Mr. THOMAS. It is not as difficult as it appears to be.

Mr. FAIRCHILD. Mr. Thomas, you understand that a good many corporations to-day are not making as much money as they made before the war?

Mr. THOMAS. And they will increase, in my judgment, sir.

Mr. FAIRCHILD. Under present labor conditions and under the increased cost of labor, a great many corporations throughout the country to-day are not making the profits they formerly made; that is, they are not profiting by the war or by any reflex from the war.

Mr. THOMAS. That would be a natural result.

Mr. FAIRCHILD. Do you think it would be fair to tax those corporations that are not profiting 33½ per cent and only tax the corporations that are making these enormous profits 33½ per cent?

Mr. THOMAS. We are proceeding upon two principles there. The first principle of taxing the different business of the country does not proceed upon the equalization theory. We segregate the volume of profits and call that a unit. We tax it and we tax it as a tax upon instrumentality. Now, the result of the operation of the income tax, affecting the individual, accomplishes exactly the purpose that you have in mind of equalization, but the point I make is that the equalization should be between individuals and not between different places of business.

Mr. FAIRCHILD. I understand a corporation is made up of a community of stockholders. Many of those stockholders are poor people. If you tax a corporation that is to-day doing an enormous business, but will, perhaps, do a subnormal business due to war conditions, and tax that corporation 33½ per cent, the chances are these dividends, which are barely earned, being paid to poor people will have to be eliminated. Therefore the stockholders of these corporations will naturally have to pay an excess tax because of the suffering of the loss of their dividends, which are necessary to their existence. A 100 per cent tax it would amount to, or more.

Mr. THOMAS. How is that?

Mr. FAIRCHILD. It would amount to a 100 per cent tax if it took from them their source of income, which, in many cases, would take

their entire source of income, which would be necessary under your plan to stop these corporations from paying dividends. I know a corporation that is made up largely of small stockholders, and many corporations are. For instance, a corporation that I have in mind has worked for years to get in a position to pay a small dividend. It has 700 stockholders. Many of those stockholders are dependent on their dividends for their daily bread. If you tax those corporations that are not prospering in the war 33½ per cent, you put them in a position where they have got to quit paying dividends, and those stockholders will suffer.

Mr. THOMAS. I would like to answer that by saying, first: I will repeat, I have not undertaken to define the percentages of profit that should be taken in any other than a very loose, tentative way.

Mr. FAIRCHILD. You made the broad statement that you should tax all corporations 33½ per cent?

Mr. THOMAS. No; I made the suggestion as a tentative proposition. But I would tax them all equally, with the same percentage. It doesn't matter what the amount is. I think the amount ought to be adjusted after a very careful examination of all of the data your committee can get before it. As for taking care of the stockholders, nobody has a proscriptive right as against the Government and as against an income.

Mr. FAIRCHILD. No; but the Government should have a proscriptive right against corporations making enormous dividends.

Mr. THOMAS. If you will follow my plan you can get to that.

Mr. FAIRCHILD. It would be manifestly inequitable.

Mr. THOMAS. I don't think so, in that the profit tax would be uniform and equal, and, second, having as its motive distribution against the benefits received, I think you couldn't get it more equitable unless you deny the equitability of the income tax.

Mr. DICKINSON. Take a per cent from the income by the tax—his net income. The balance of it is distributed and goes to the individual. You don't take it all.

Mr. THOMAS. There is absolutely no difference between my proposition and the present law, except the present law is a very difficult, inequitable, unfair, unjust measure and one I don't see how could be very well justified.

The CHAIRMAN. It looks like a pretty large difference?

Mr. THOMAS (laughing). Just a small difference.

Mr. DICKINSON. The net profits are distributed, and when you take a per cent for Government purposes you don't take all.

Mr. THOMAS. No; you simply levy a uniform tax just as it levies a uniform tax on coffee that is imported. The rich man that drinks coffee perhaps ought to be made to pay a tax 17 times greater than the poor devil has to pay. But that is not the method of levying taxation. It is levied uniformly. Whoever drinks coffee pays tax in proportion to the amount of coffee he drinks.

Mr. MOORE. Your statement has been very interesting to me, and I am curious to know more about you and your work, and I hope you will pardon me for asking you this question: How did you come to study this matter of taxation? I ask merely in a jocular way. You have a grasp of the subject, and it would indicate you have given special study to it. You have just said the present law is inequitable, unjust, and therefore I assume you are familiar with that law.

Therefore I would like to get a little bit more about your own study of that subject.

Mr. THOMAS. Well, I don't know that my history would be interesting to the committee, but I would in a general way be glad to give it.

Mr. MOORE. Have you made a close study of it in school?

Mr. THOMAS. Yes, sir. I have made a very close study of it in the university of hard knocks, from which I graduated a good many years ago, and have been going back for post graduate courses many times since. I studied it as a business proposition. The way I became interested in it first was about 20 or 25 years ago I was engaged in the domestic and export tobacco business, and I became very deeply interested in the trend of economic events. I thought I saw trouble ahead, and I knew that there would be a landing place or a wreck, and I wanted to land, and I took up the subject of economics when a great many people were saying that the trusts were top-heavy and couldn't pass, and it was an evanescent growth that would pass, and the deeper I got into the subject the more thoroughly I became convinced that underlying it all was a sound, safe, economic principle that meant a revolution of the world, and I studied that and applied it to my own business, and when the getting-off time came I got off instead of drowning. That led me first to the investigation of it. In connection with it, of course, I have always been interested in public matters. I have always tried as studiously and as earnestly as I could to divorce my interest from my vision. If I go to hell, I want to see that I am going there. I don't want to deceive myself.

Mr. MOORE. I hope nobody in Lynchburg has any such hopes or anticipations.

Mr. THOMAS. I don't know about that; but what I want to impress upon the committee is that in studying public questions I try to see just exactly how it is.

Mr. MOORE. Have you had any official connection with the Government, or the Revenue Department?

Mr. THOMAS. None whatever.

Mr. MOORE. Your studies have been outside?

Mr. THOMAS. Yes, sir.

Mr. MOORE. Since you have shown your familiarity with the existing law and done what very few men have attempted to do, and have presented to this committee a very concrete plan, with an improvement, will you state whether you have made any calculations or estimated as to what your proposal would produce in comparison with the present law?

Mr. THOMAS. I haven't figured on that.

Mr. MOORE. You can't say that if your suggestion was adopted, in whole or in part, we would raise more revenue than now?

Mr. THOMAS. That would depend on rates. But on the general principle I assume we would raise a good deal more revenue from the fact that we would touch a good many more subjects than we have now. I have had no data to study.

Mr. MOORE. As a practical business man you must realize that the problem for this committee is to find out where we can get \$8,000,000,000 in 1918 as against four billions we got last year.

Mr. THOMAS. I realize that. I am not telling you what to do except in the merest tentative way, but to offer a method that occurs to me that might accomplish the purpose desired to be accomplished without doing serious injury to anybody.

Mr. LONGWORTH. Now, Mr. Thomas, you say that you feel the present law does not cover—

Mr. THOMAS (interposing). You take the railroads earning 8 and 9 per cent.

Mr. LONGWORTH. We have now a corporation tax based on net earnings.

Mr. THOMAS. How much do you get out of it?

Mr. LONGWORTH. Six per cent. All that your proposition involves is raising that from 6 per cent to 33½ per cent and taking out the exemption and wiping out war and excess profits taxes as a resource.

Mr. THOMAS. Yes.

Mr. LONGWORTH. In other words, you are greatly diminishing revenue.

Mr. THOMAS. Not at all, because if I lose in one hand, I take in the other.

Mr. LONGWORTH. We tax every corporation in this country 6 per cent.

Mr. THOMAS. I suggest you tax a very much higher rate.

Mr. LONGWORTH. You are diminishing it.

Mr. THOMAS. No; I don't think so. You find a great many people that are tax free that will come in under this.

Mr. LONGWORTH. Not corporations.

Mr. THOMAS. Oh, certainly. You take a railroad that earns from 7 to 9 per cent—how much tax do they pay under the present bill?

Mr. LONGWORTH. They pay 6 per cent on their net earnings.

Mr. THOMAS. Under my proposition, if you put your tax 20 per cent on the net earnings regardless of capital, that is what they pay, one-fifth of it. Wouldn't that be an increase?

Mr. LONGWORTH. That would be an increase of tax but a diminution of resources, because you wipe out the whole field of excess-profits tax.

Mr. THOMAS. I don't wipe that out at all. My theory is if there is an excess greater than is needed in the operation of the business, with a proposition in the law for the disbursing of the excess, it depends on what percentage you charge, but you could with a properly graduated law, you can get any per cent. of that income you want. It is up to you whether you get it or don't get it. You have got the grounds.

The CHAIRMAN. The theory is a good one. The principle may be a good one, but the trouble is, how can the Government decide how much of this surplus over 33½ per cent should remain in the business? How can the Government compel its distribution?

Mr. THOMAS. I think that should be met.

The CHAIRMAN. We have a law now that is absolutely vain.

Mr. THOMAS. That is why I think it is too indefinite.

The CHAIRMAN. You couldn't say that. You say he could be taxed a little more. If it gets to the surplus, unless it is used and employed in the business, the weakness in a law of that kind is this, that it lacks a provision, doesn't define a method for ascertaining the result.

Mr. THOMAS. You left it off in the whole. A man may decide it is unnecessary or he may decide it is necessary.

The CHAIRMAN. You leave it to the stockholders or directors; they will keep it in the business, for the reason they don't want to distribute it to themselves, because they will catch this high surtax, and they will keep it piled up in the surplus, without any distribution to the stockholders, with the hope that in the future, before the stockholders really need that money for a living, the tax will all be over, and therefore they will keep it in the business and escape all tax for war purposes. There is the trouble.

Mr. THOMAS. I recognize that.

The CHAIRMAN. Wait a minute. If you leave it to the stockholders, they would keep it all, wouldn't they? I mean to the directors.

Mr. THOMAS. Yes, sir.

The CHAIRMAN. If you leave it to the Government, wouldn't there be so much play for favoritism and discrimination? Couldn't one set of fellows convince a clerk or administrator down here in the Treasury Department it is necessary to keep all this; and another fellow, one not being half so wise or shrewd or half as good a lawyer as you, to talk them into making them distribute it?

Mr. THOMAS. If you will hear me, I think I can make myself clear on that. The weakness in the whole situation is the lack of defining a definite method for ascertaining the amount of capital necessary to do business. There is your difficulty. If you will define a definite bookkeeping method of saying what shall be regarded as necessary and what not, which I hold can be done, then it becomes a matter of administration; and if you don't administer your law, put somebody in jail for not administering it.

Mr. GARNER. You have done the committee, and, I think, the country, a good service here. Will you undertake to draw that law and submit it to the committee? I don't believe there is a man living that can draw that law.

The CHAIRMAN. He could have added, being very courteous, if any man in the world could do it, you could. I am going to give you a concrete example, not with exactness, but substantially with exactness. It really happens right to-day. Here is a corporation of a million dollars capital. They made last year \$4,000,000, clear, net, and everything—400 per cent—absolutely on account of the war and the necessities of the people which the war brought about. Here is another company that has a million dollars capital making about 10 per cent before the war, but made 6 per cent, \$60,000. But just taking and having no graduation in this which you propose, saying that we are going to levy a 33½ per cent of the income, this corporation that is making this 400 per cent out of the war, and because of the war, would, after paying its third, have left \$2,266,000, or 266 per cent on its capital invested. While the corporation that is more unfortunate and in a very unfortunate sense, and very unfortunate since the war, after taking its one-third, would have only \$40,000 left—only 4 per cent—and we have several cases not as intense as that, but we have several cases that almost approach it.

Mr. THOMAS. There is no difference in the world between the chair, the committee, and myself on this thing, that where the man has

been getting too much he ought to be made to come across. There is no objection to my plan.

The CHAIRMAN. How are you going to do it is the question.

Mr. THOMAS. The question is the most fair, just way to make him come across without slowing down the economic machinery.

The CHAIRMAN. Haven't you got to have some kind of graduation for extreme cases like that?

Mr. THOMAS. Of course you have, but I hold if the graduation—

The CHAIRMAN (interposing). But you are going to have it after it strikes the individual when the dividends are paid, but these gentlemen who are shrewd enough to keep out with the eyes of the Treasury on them, the eyes of the Congress on them, the eyes of the people almost on them, are making 400 per cent profit. Don't you think they are about ready to convince the Treasury people or any department in any Government that it is necessary to have that \$4,000,000 when they come to expand their business for the productivity of the country?

Mr. THOMAS. If you made a law that those people had to compute two and two, that made four, you had an officer that ought to administer that and he didn't administer it, you ought to put him in jail.

The point is, coming back to the same proposition, if as Mr. Garner suggests, that no man can devise a method and put it into the law, what is needed in the business and what is not, then you ought to have a tax on corporations adjusted as clumsily as you naturally will do it, to get at it as best you can to meet a situation that ought to be met. There is no doubt about that. But I don't admit that.

Mr. LONGWORTH. Take this case. At the request of the Government practically the corporation will put all of its profit back in its business.

Mr. THOMAS. That would be needed in the business in my judgment.

Mr. LONGWORTH. You would take away one-third of it?

Mr. THOMAS. Oh, yes. I would tax him to one-third of it, and if he needed any more money, let your corporation you have established here lend it to him.

Mr. GREEN. Do you think that we would have any objection to making it higher if we didn't see certain objections to that in so doing?

Mr. THOMAS. The new proposition is to get away from the clumsy, cumbersome, unfair, unjust law that you passed at the last session.

Mr. GREEN. It is very easy to apply those epithets but it is a little harder to demonstrate it is true.

Mr. THOMAS. I think I could demonstrate it.

Mr. LONGWORTH. Of course, you don't claim that an increase of the corporation tax from 6 per cent to 33½ per cent would raise a billion and one-half dollars do you?

Mr. THOMAS. I don't claim anything for figures unless you can show me the facts. I am more exact in my conclusions than in my figures.

The CHAIRMAN. Let me state one thing. If you can devise any reasonable method of compelling the distribution of earnings by corporations, without suggesting any corporation tax at all, why not just raise the surtax?

Mr. THOMAS. For this reason. Business can distribute a certain amount of tax without serious embarrassment of business. That would be greatly helpful to the Government, I think, for that reason. You are not undertaking as I understand it to create an ideal tax law. You are trying to meet a practical situation.

The CHAIRMAN. That is our trouble, the practical part.

Mr. THOMAS. The practical situation. If you add to one, you first arouse an opposition in this country, if you undertook to reach it in a way that would be overwhelming.

The CHAIRMAN. If you could devise a reasonable way to meet your distribution, you wouldn't have to levy a corporation tax. For instance, you could say that a corporation should distribute to its stockholders two-thirds of its earning, three-fourths or one-fifth, but you don't know the practical thing to get at it. That is the reason the corporation tax to your theory has ever suggested itself to your mind because no Government official can ever tell what a corporation distributes and what not.

Mr. THOMAS. That is entirely true.

Mr. GARNER. Mr. Thomas, I don't know whether you would like to go into any other field of taxation or not. But you have such a comprehensive viewpoint of business profits and incomes, we will have to consider the question of luxuries and nonessentials. I don't know whether you have given that any consideration.

Mr. THOMAS. I dislike to do so. I will be forced to conclude that resources are dangerous things to do with. When the gentleman suggested that I can do all these things I am afraid he is unloading on me a job that is too much for me. Of course, there are other sources of income. When Congress get really radical and wants to put in operation some theories that would produce a great deal of revenue and correct a good many other evils, and some very great, I would be very glad to take up with them the tobacco tax in the United States.

Mr. MOORE. You are getting to specific instances of revenue. Have you any other specific instances?

Mr. THOMAS. I intended to narrow my representation to the income field.

Mr. MOORE. Is it your suggestion that we might raise some additional revenue by looking up the tobacco business?

Mr. THOMAS. I am very well acquainted with the tobacco business, and I know that Europe, Italy, Austria, France, Spain, Japan, and England have been largely living on the tobacco of America in the matter of tobacco. Most of it through trusts and monopolies. If the United States Government had a monopoly on tobacco they would find it a very fine field, and at the same time prevent European countries from taking out of America a great deal of money it takes away now.

The CHAIRMAN. The United States does take a lot of tobacco—commandeers it. Other nations operate things like sugar, before the war, and opium.

Mr. THOMAS. I take, for instance, the cotton situation, where they are objecting to the Government setting the price. I would favor very much the Government setting the price.

Mr. MOORE. Would you feel the same way about tobacco?

Mr. THOMAS. I would feel different. I would feel like the Government ought to take it over and operate it as a monopoly. I think after the Government set it at a high enough price it will go down lower if free.

The CHAIRMAN. Does any other gentleman wish to ask Mr. Thomas any questions?

Mr. CRISP. I would like to ask Mr. Thomas a question. Most of the complaints I have had going around my district have not been so much about the rate of taxing, but about the complication of making out the return.

Mr. THOMAS. That is the point I have been trying to cover.

Mr. CRISP. Could you suggest anything that would simplify the form?

Mr. THOMAS. If you will take my suggestions there, I would do away with all that. As I stated a while ago, I am an accountant. Under the present law, in a graduated tax, you would have some difficulty, but it is an interminable system to arrive at what you owe under the present tax law, as a business or corporation. But any graduated tax will be hard to compute. My suggestion would be to the Congressman to move out of his district where they are poorer and they wouldn't have any income-tax problems.

Mr. CRISP. I live in a country that is poor enough. I live in Georgia.

Mr. THOMAS. I should say you ought not to have any trouble there.

The CHAIRMAN. The committee really intends to confine itself to incomes and excess-profits taxes. But the form in which the income tax may be worked out must be worked out by the administrative branch.

Mr. THOMAS. The present form is a most excellent one, under the present law. The man who drew that is an expert.

The CHAIRMAN. If that could be put in one act instead of two or three acts.

Mr. THOMAS. One act; yes, sir. I would like to say in connection with that, Mr. Chairman, you mentioned before lunch there was some complication about the bond issue. If you thought a uniform tax was advisable, I think that difficulty could be met by making the income tax a nominal tax, or 1 per cent, say. I thank the committee. I want to assure you that I have had great pleasure in meeting your committee, and I trust you will be able to work out something that is valuable.

The CHAIRMAN. In spite of the press, we are going to do our best.

Mr. THOMAS. If I can work out anything that will be very helpful, I will send it to the committee.

#### STATEMENT OF PROF. O. M. W. SPRAGUE, PROFESSOR OF BANKING AND FINANCE, HARVARD UNIVERSITY.

Prof. SPRAGUE. A year ago last December, at the annual meeting of the American Economic Association, I read a rather radical paper advocating financing the war mainly by means of taxation. The reasons for that position I set forth at that time were mainly that in taxing we would avoid in a large measure the inflation which accompanies the loan policy.

About a year ago I wrote another paper on taxation, on the ground it would facilitate the mobilization of labor and capital for war uses. I brought along a copy of these articles, which any member of the committee can have if they like.

In the New York Tribune of yesterday there is a rather long article in which I have outlined a scheme of taxation, which is headed by the editor "Billions available without painful taxation." I wish to say that I do not mean to say the proposition I have to advocate would be painless.

As I understand it, something like \$25,000,000 have been appropriated for the next fiscal year for war purposes, and we all hope, I should suppose, that our Government will expend that twenty-five billions, for that would mean an enormous output of very much needed material of all kinds for military purposes. Assuming that the plans are carried out and that \$25,000,000,000 are expended, it necessarily follows that the current consumption of the people of the United States of necessities, comforts, and luxuries will be reduced something like \$25,000,000,000 during the next fiscal year; it doesn't matter how you raise the war money, whether it is by banking money, war bonds, or taxations. It simply means that the people must go without something like \$25,000,000,000 of goods. There might be a slight offset through speeding up production, people who were unemployed last year at work, but that increased production will be offset largely by the number of men withdrawn from work for the Army and the Navy.

The fundamental problem in war finance, as I see it, is not whether you shall tax or borrow. The only difference, real difference, there is whether you shall compensate the people who supply your funds as you do under the borrowing plan or whether you shall not compensate them, as is the case with taxation. The real fundamental question in financing the war is whether the saving which is inevitable in any case is made directly or is made indirectly. Generally speaking, all of the savings which is compelled by taxation is direct. A very large part of a considerable, up to a certain proportion, of that saving which is brought by borrowing is direct and a considerable proportion is indirect. Let me illustrate: Assuming a man has an income of \$10,000. If he is taxed \$4,000 he will presumably not spend more than \$6,000 on himself and family during the year. It is unlikely that he will borrow in order to maintain his accustomed volume of expenditure.

Our friend with the \$10,000 income may economize to the extent of \$4,000 and subscribe to liberty bonds. In that case the same result follows. He reduces his civilian demands for the current products of labor and capital by \$4,000. But suppose instead of reducing his consumption he buys \$4,000 of liberty bonds and provides the funds with which to make his payments by means of loans at his bank. In that case the demand for goods and labor is not directly reduced so far as the individual is concerned. He continues to enter into the market demanding \$10,000 worth of goods. He has, indeed, provided the Government with \$4,000 and the Government entered the market with that \$4,000 demanding goods and labor, and if we narrow the thing down to the Government and this one man, naturally the new demands of this one man and the Government for goods and labor sends the price for goods and labor up.

and consequently the gentleman does not get as much for his money as he did before, as the Government gets its proportion of labor.

We have financed our war during the last 12 months in part by direct saving, in part by indirect saving. It is impossible to say to what extent credit has been expanded during the last 12 months. My estimate is that it is expanded by about \$2,000,000,000. That means in the last analysis that purchasers of liberty bonds have borrowed about \$2,000,000,000 of that banks have bought themselves along with which borrowers purchased something like \$2,000,000,000 worth of bonds.

That simply means that the banks have credited either the Government or the individual buyers of these bonds with money, and it was turned over to the Government. The Government has bought goods with it. There is no increased amount of production of goods and consequently it increased the prices. It involves a saving on part of whom, mainly? Of people with stationary incomes. Take a woman of \$1,000 income on bonds. You would not think of taxing that woman 30 or 40 per cent, reducing her power to buy goods 30 or 40 per cent. But that is just what happens to her under the policy of war financing, which is in part carried through by means of expanding credits.

That is the woman's contribution to the war. Her power to command the products of labor and industry is reduced through the rise of prices and so, by a process of indirection, inflation will enforce economy, but it enforces it unequally—unjustly. Consequently, it seemed to me that in shaping a policy of war finance it is desirable not only to make certain that there shall be adequate revenue, but also to insure, in so far as may be, that the saving necessary in any case shall be direct rather than indirect through the product of credit expansion and rising prices. And it is from these two points of view that I wish to set forth a variety of measures relating to taxation, and incidentally to borrowing.

So far as the technical features of the income tax and excess-profits tax go, it seemed to me fruitless to undertake to say very much, owing to the fact that those charged with the administration of those laws, the Treasury Department, have not yet handed down their reports. If the experts at the Treasury Department come before you and say that they have been able to determine with a reasonable degree of exactness the invested capital of all the businesses in the United States, then no great modification in the excess-profits tax is needed.

It may be that they can indicate modifications in the law which make an excess-profits tax based upon invested capital feasible and equitable. I am quite unable to express an opinion about that. My own impression is that it is not feasible. If the rates are to be high, the moderate amount of inequality, of unevenness, and uncertainty, does not matter very much. If the rates of taxation are low—if we still had the 8 per cent excess-profits tax of two years ago—it would not so very much matter; in the course of time the whole thing would shake itself down. But when you do have rates running up to 60 per cent, and when it may be a question of increasing those rates, it becomes a matter of very great importance indeed whether the base is entirely or reasonably equitable. My impres-

sion is that it would be better to reduce the rates of the present excess-profits tax, and retain it on the statute book with such modifications as may be brought to your attention and seem wise, and to superimpose upon it a war-profit tax of the English type. The English are now taking war profits to the amount of 80 per cent, and there seem to be no seriously untoward consequences. Why should not we impose an 80 per cent war-profit tax of the English type?

After that has been deducted from profits, impose an excess-profits tax of our present description at somewhat lower rates, and then, in the course of time, perhaps, advance those rates on the American type excess-profits tax. The reason for retaining it is this: The English tax ceases with the war, and we shall need some corporation taxes after this war is over. Consequently, if we can perfect this tax—this system of taxing—it is altogether desirable to do so; but to attempt with this new instrument to get anything like the large percentage of war profits which are taken in Great Britain seems to me probably impossible, or undesirable, because of various inequities which are likely to occur.

The English war-profits tax has another advantage. It is likely to convince the masses of the people that no one is making much profit out of the war. Various instances have come to my attention in which workmen have asserted that it did not very much matter whether they exerted themselves or not, that the employers were making such huge profits out of the transaction.

That fact of the huge profits which the employers were or were supposed to be making was obscuring in the minds of these men the vital point of the moral efficiency of everyone for the purpose of winning the war.

As to the income tax, it would seem to me that the rates without any question should be sharply advanced on all classes of income up to \$500,000 or \$1,000,000. In Great Britain an earned income of \$10,000 pays at the rate of 25 per cent on the whole amount—\$2,500. An unearned income of \$12,500 pays at the rate of 33½ per cent. An income that is in excess of \$50,000 pays 52½ per cent. There seems to be nothing in the situation of people with comfortable incomes in the United States which lead one to the conclusion that they can not endure and should not endure the same rates of taxation which are being borne on the other side. Doubtless certain technical changes can be made in the requirements of the income-tax law. That action is a matter with which I will not take up your time.

There are two items, however, of income which I think deserve consideration. The first is the rental value of houses occupied by their owners. It seems to me highly inequitable that a man who happens to own a house should pay no tax upon the rental value of that house, whereas a man who rents must pay on his entire income, and then provide the rent out of that. Why a man with an income of \$10,000 with a \$10,000 house, should not be subject to a tax on that rental value just as much as a man with an income of \$11,000 who rents a house, is to me incomprehensible.

Mr. GREEN. Right in that connection, how about the man who owns two or three houses which he lives in during different parts of the year—a summer home and a home in town, and so on?

Mr. SPRAGUE. They also should be included, without any question.

Another matter of income-tax regulation—

Mr. GREEN. Of course, I am referring to those houses that a man occupies for his own use and does not rent out.

Mr. SPRAGUE. Oh, yes; I quite agree. The case is even stronger. Issues of municipal securities should, in my opinion, if by any means it is possible, be taxed, among other reasons because, since we are to have these income taxes for many years, there will be an artificial low price for municipal issues which will stimulate all sorts of unhealthy municipal undertakings. Now, I am not an opponent of municipal ownership of electric lights or street railroads or other utilities, but I do not think the ownership ought to be forced to occupy a situation under which perhaps a municipality can borrow at 4 or 4½ per cent because its securities are tax exempt, whereas the strongest of local utility companies might not be able to borrow at less than 6 per cent owing to the fact that the income of those securities is subject to taxation. It is doubtless true that the existing issues of municipals could not very well be taxed, at least in so far as present rates are concerned; but it seems to me highly equitable to tax new issues.

Of course, I know that there are constitutional uncertainties regarding the matter, but whether in a separate bill or otherwise, it seems to me a matter which ought properly, in the public interest, to be brought to an issue by being put into law.

Mr. CRISP. May I ask this question: Have you given that question any thought, as to whether it is constitutional for the Federal Government to tax securities issued by the various States and municipalities?

Mr. SPRAGUE. I doubt it very much with reference to the States, and I do not believe in it with reference to the States. The States, at least, seem to be quasi-independent sovereignties. But I can not think of that as true of governmental units which are here to-day and there to-morrow. I can not see any ground for saying that you really could undermine the sovereignty of a State by taxing municipal issues. I know that there are diverse views in regard to the constitutionality of it, but it would seem to me, as I said before, highly desirable to bring the matter to a test, for it is a serious matter of public policy.

Mr. MOORE. Waiving the constitutional question, would you not have to lay that on liberty bonds as well as municipal bonds?

Mr. SPRAGUE. No; because I said "the future issues" of municipal bonds.

Mr. MOORE. Would you not have to carry it to future issues of Government bonds?

Mr. SPRAGUE. Oh, without doubt. I shall come to that in a minute, whether it is desirable to place an income tax on Government bonds or not.

The equity, in the minds of the people who would be subject to the very much heavier income taxes—tax rates—the excess-profits tax, the war tax, which I have urged, would depend in a considerable degree upon whether we subject the great mass of the people of the United States to taxation in some form or other. I have not heard any man with an income of \$50,000 or more object to the amount

which he is paying in taxes, or to a probable increase in the amount, but I have heard numbers say—and although I have no such income I rather sympathize with the view—that it does not seem to them proper and equitable that the great mass of the people in the United States should not, during the course of this war, be subject to certain positive, well recognized taxation burdens; and no one, to my way of thinking, is doing a good service to the mass of the people in urging that they should not be taxed, for, however far you may carry the rates of income taxes and excess-profits tax, you can not possibly raise enough money from those sources to provide \$25,000,000,000.

The money which is raised from income taxes and excess-profits taxes largely comes from sources which would have provided funds for liberty bonds. That is not a reason for not taking it by taxation. That is much better for the community, as a whole, to get \$5,000,000,000 by means of taxes, than to get that much by additional issues of liberty bonds, but you do not tap sources of income which would not be available for war purposes to any great extent by the taxation of larger incomes, inasmuch as those large incomes would in large part go in liberty bonds.

Mr. LONGWORTH. How much do you propose to raise by taxes this year? How much do you advocate raising?

Mr. SPRAGUE. You are raising a billion dollars more than you anticipated, I believe. In this period of abnormal business and Government activity, I think it is quite impossible to determine how much can be raised, in any event, but the larger the amount that equitably can be raised the better for the community.

Mr. LONGWORTH. Let me ask you, further, do you think that the Secretary of the Treasury overestimates or underestimates the amount that should be raised by taxation for the payment of this \$24,000,000,000?

Mr. SPRAGUE. If public opinion can be brought to the point of realizing the advantage of taxation the amount is minimized. That seems to be the whole question. A year ago there were a large number of people who asserted that you could not levy more than a billion and a half in taxes without dampening the spirit of enterprise, drying up the sources of funds for liberty bonds, and various other bogies. You have raised something like four billions, and far from the spirit of enterprise being dampened and checked, it has been necessary to establish a capital issues department to pass upon applications for new uses of capital.

It seems to me clear, from our present experience, that we do not know how much taxation we can endure. The people are prepared to endure any sacrifice, whether it is in taxation or in any other direction, if they are convinced that it is serviceable in winning the war. They are not prepared to endure sacrifices just for the fun of sacrifice. My entire contention is that in the taxes which I am coming to now, if the proposition could be made clear to the mass of the people that this levy of taxation for the war tends to accelerate and mobilize the capital and labor for war purposes, and if you can convince people that that is a fact, they are ready to stand for the taxes, just as they were ready to stand for reduction in the consumption of sugar.

Mr. LONGWORTH. You have not quite given me the information I want. I want to know how much you think it is advisable to raise in taxes, as compared to the amount to be raised by loans?

Mr. SPRAGUE. I should say between twelve and fifteen billions.

Mr. LONGWORTH. No; the percentage—the relative percentage.

Mr. SPRAGUE. Oh, yes.

The CHAIRMAN. That is, if you had to expend \$24,000,000,000 next year, how much would you raise by taxes and how much would you raise by bonds; is that it?

Mr. LONGWORTH. Yes; that is what I wanted to know.

Mr. SPRAGUE. Well, my percentage would vary with the amount. When the total cost of the war was estimated at eight to ten billions of dollars, I believed in raising the entire amount of it by taxation. Now that the amount has gone up to twenty-five billions, I do not believe in that for this simple reason: The higher the rates, the more important it is to be quite certain that your base is entirely satisfactory. That was discussed here a little while ago in a proposition on the net profits, a most vicious proposition, it seemed to me; that you would tax a concern with \$10,000,000 of capital making \$50,000 just as much as you would tax a little concern of \$100,000 that happened to make \$50,000, earnings; an impossible situation! You would drive the larger concerns into bankruptcy. Unless I know that a satisfactory base has been worked out with reference to invested capital, I do not know what rate I would want to impose.

Mr. HAWLEY. Suppose a satisfactory base was worked out, what amount would you want to raise by taxation then?

Mr. SPRAGUE. If a satisfactory base was worked out I would say we could take something more than in the present excess-profits tax.

Mr. LONGWORTH. Perhaps I can make myself clearer. I would like to know your views on this: As a broad, abstract proposition, do you not think, in financing a war, particularly a serious war, that the major portion of the total cost should be paid by subsequent generations, and not by the generation that wages the war?

Mr. SPRAGUE. No, sir.

Mr. LONGWORTH. You do not?

Mr. SPRAGUE. Absolutely not, unless with this qualification: If you can insure that as large a percentage of the money you get in by means of bonds will be derived from direct savings as will be the case in taxation, I will agree; but the bond method, as it has been so far conducted, involves such an amount of inflation and rising prices and unequal burdens as between stationary incomes and those that are not stationary, that I would favor keeping down the bond proportion to a minimum; and before I get through I have an alternative proposition, if you prefer loans, which would require direct saving as definitely as in the case of taxation; and you can have your choice, or, as is more likely to happen, I suppose, take neither.

Mr. LONGWORTH. Is your proposition that as much as possible or all of the cost of the war ought to be paid by the present generation, applicable to this country alone, or do you believe in it as a general principle?

Mr. SPRAGUE. I believe in it as a general principle, for the reason that if your taxes are equitable and well distributed I see no reason why any man should be compensated in the future for income which

he turns over to the Government now in order to finance this war. That is all that the future generation bears.

Mr. LONGWORTH. Take the case of France, for instance.

Mr. SPRAGUE. Yes.

Mr. LONGWORTH. You realize, of course, that it would be really impossible for France to pay the entire cost of the war by taxation?

Mr. SPRAGUE. They have virtually taxation through the process of an excessive issue of the notes of the Bank of France, which has subjected the people with stationary incomes to huge reductions in their incomes. You do it, but you do not do it in a direct fashion. It is the same case as that I put of the woman with a \$1,000 income.

Mr. LONGWORTH. Have the taxes in France advanced anything like that—four or five times what they were before the war?

Mr. SPRAGUE. If you take into account everything there is an increase, and you do not have to have but an increase of 100 per cent to cut the amount in half. That is what you do when prices go up 100 per cent. If everybody's income went up in direct proportion to the advance in prices inflation would not work as a process of financing war.

Mr. LONGWORTH. Assuming that the total expense of France so far has been—my guess is—eighteen billions.

Mr. SPRAGUE. Yes.

Mr. LONGWORTH. Would it have been possible for France to have raised that money by taxation?

Mr. SPRAGUE. Yes. They could have, for example, established an increased tax at an earlier date in the war and imposed present rates—somewhat higher rates. They are certainly no better able to pay taxes now than they were two years ago; rather less able; and yet the taxes have advanced. There is a very common fallacy afloat that we are able to pay more taxes the longer we keep in the war, except so far as prices advance, so that we have a general conception that is by no means the case. The people, certainly with fixed incomes, are not as able to pay a fixed amount in taxation as they were a year ago or to subscribe for liberty bonds. You have to get it from the French people, and you have got to get it from the same source. This which has come from the French people has not come out of the air or out of the future. And they are going to be compensated, of course, in the future for some of the sacrifices they have made in sacrificing income.

Mr. LONGWORTH. Are not the future generations, 30 years from now, say, going themselves to pay a large proportion of the money that the people of France to-day owe?

Mr. SPRAGUE. Yes; but it will be very differently distributed. The result of the process of borrowing with large inflation will be that at the end of the war you will find a rather greater degree of concentration of ownership in the current income of France after the taxation has been collected and the interest paid, than was the situation before the war. There will be very large numbers of people who, because of their military service, were unable to acquire their quota of Government bonds. They will return to active life and work energetically and have incomes which will be heavily taxed in order to pay interest on the bonds which will be owned by a comparatively small number of people in the community.

Mr. GREEN. Who did not go to the war?

Mr. SPRAGUE. Who did not go, or who may be older; and it will come down through relationship, and so on; and it will be a very uneven and haphazard situation; and I think it is to the general interest of the public in France that they should be taxed more heavily than they were at an earlier stage. But public opinion was not prepared for it, because people at that time did not fully realize; they did not realize how long the war was going to last, how expensive it was going to be, and they did not realize the consequences of the extreme inflation which has taken place.

Mr. GREEN. There was another consideration there in the fact that the German invasion overran the country and dislocated a substantial portion of the French industries?

Mr. SPRAGUE. Yes; that is true. It is very much more difficult, having to establish a base for a concern, to know whether they might have made some profits where they have lost a great deal of profits; and that is why I say, if your rates are high you have to be very certain of your base, and that is why I say I believe in financing the war wholly by taxation. I am more convinced that it can be done when it costs ten billions, than when twenty-five billions are required. I can see no reason why, if we can raise eight millions next year, we could not have raised that much this year.

Mr. HULL. What do you estimate the net income of the country at, leaving out unearned increment, and leaving out, of course, increases of capital?

Mr. SPRAGUE. There are various estimates. With prices rising as rapidly as they are, it would be my opinion that the annual income of the people, estimated in money, would run somewhere between \$50,000,000 and \$60,000,000.

Mr. HULL. Do you mean the net or gross?

Mr. SPRAGUE. I mean the net; I mean, out of which they pay their living expenses, and all that sort of thing. I do not mean what they saved before the war. Aside from the depreciation of property owned, which you eliminated, it is my guess that it was five or six billions of dollars. The war has to be financed in some way or other by abnormal saving, and there has been a good deal of abnormal saving during the last year in order to subscribe to liberty bonds, and it is on the increase.

Mr. HULL. What proportion of the income of the country do you think comes through the corporations?

Mr. SPRAGUE. Comes through them?

Mr. HULL. Yes.

Mr. SPRAGUE. There, again, where you have a rapid advance in prices such as occurred last year, and so a large appreciation in inventories, you have a very large increase in income, which really would not count very much when you began to measure it in gallons and bushels and yards. There is an illustration. The British were pretty well pleased by the fact that last year they raised by means of taxation something like £800,000,000, as contrasted with £2,000,000,000 before the war. But calculations based upon prices show that after all they were only taking in about £475,000,000; that is to say, that their real transfer of goods to the State was only a little over two and a quarter times what it was before the outbreak of the war. These

figures with rising prices deceive us all, and you will probably find a year from now, if we finance the war heavily by inflation, that your appropriations will go up, for the same volume of goods, to a very much larger total.

Mr. LONGWORTH. In that connection, in connection with rising prices, do you favor price fixing by the Government?

Mr. SPRAGUE. Only here and there. There may be a few comparatively simple occupations, in which the costs are fairly uniform, in which you can determine costs. But if you have a general advance of prices going on with wages and prices of materials going up, you need to revise your prices every little while. It would greatly facilitate price fixing if you had a situation like this, of generally stationary prices, or certain things going up because of a huge Government demand which would enable the producers to get extraordinary profits, and if you had a simple situation of that sort, then the Government stepping in and controlling the prices would, I think, be entirely feasible. Take the copper companies, for example; it would be very much simpler for the Government, so far as an equitable copper price goes, if general prices had not advanced so much during the last nine months, because then the price originally determined, if equitable, would probably be equitable now.

Therefore, without saying that the original price was equitable, at least there are certain factors entering into the situation that raised the price, like the cost of labor, which leads one to say that this may not be equitable now. As to that I do not express an opinion, not having looked into the matter. I merely cite it as a case showing how the rising price of material and labor complicates the matter of price fixing, and would complicate other things: as, take, for instance, an excess-profits tax. Many companies can only say, "Of course we have apparently made very large earnings, but this bubble is going to collapse, and we are going to have very heavy losses when it does, and we ought to have very large reserves to face a situation of that sort." I believe that is true, that in some way or another the possibility of very heavy losses when we get down from a period of inflation ought to be taken into account, and that can be done in the law if you will allow a certain contingent claim for a rebate on excess-profits taxes, say in the event that within a certain number of years losses occur arising quite as definitely out of the war as the profits arose out of the war. That is the way they have handled the war-profits tax in Great Britain.

Mr. GREEN. In other words, you think that our excess-profits tax should be more or less?

Mr. SPRAGUE. Very much more; and then you can impose very high rates on particular industries or in particular cases. Most proposals for heavy taxes fall down on account of the 3 or 4 or 5 per cent of hard cases. Now, if you can eliminate those people or make provision for them in one way or another, then you can jack up the rest to a very high point indeed.

Mr. GREEN. Coming back to this matter of price fixing, where the product concerned is one of the necessities of life or one of the necessities of war, and the demand exceeds the supply, which may now be said, as I understand, of a great many such products, or at least of some considerable number—

Mr. SPRAGUE. Yes.

Mr. GREEN (continuing). Would it not be well to fix prices in such cases?

Mr. SPRAGUE. Why, if the price fixed does not work against increased production of the output.

Mr. LONGWORTH. In other words, it would be better not to fix prices that would prevent some people from making large profits, if thereby you would decrease the production of the article?

Mr. SPRAGUE. Yes; whereas, if you have your heavy war-profits tax of 30 per cent, you will not be so much concerned about price fixing, and the producer will not be quite so much concerned about taking advantage of every situation to increase the price. But it does not make so very much difference, perhaps, where you catch hold of the animal, but sometimes one part is better than another for the purpose in view.

Mr. LONGWORTH. And if you can take it away from him afterwards.

Mr. SPRAGUE. Yes.

Mr. GREEN. It sometimes seems to me that the ultimate consumers, or the laboring classes, or those who have small incomes, are certainly hurt.

Mr. SPRAGUE. Yes.

Mr. GREEN. Now, for instance, the demand for cotton print goods very much exceeds the supply, and no matter what the price was, it would exceed the supply.

Mr. SPRAGUE. Yes.

Mr. GREEN. So that they have what they sometimes term a run-away market, and can get almost any price they ask.

Mr. SPRAGUE. If your primary object is to relieve people with small incomes from an intolerable burden in such a product as you have mentioned, I see no other method except rationing, because if you reduce the price of this cotton cloth, it is by no means certain that there will be enough to go around at the lower price, and it is by no means certain that people of small incomes would even then get their share of the small supply.

Mr. HULL. If you are to levy an excess-profits tax, there will not be much inducement to make these big profits when they know that they have got to turn it all right back to the Government, will there?

Mr. SPRAGUE. The conditions in a case like this are the result of the economic situation, and are not due to any positive, concerted action on the part of anyone in particular. Let me illustrate: Last year I suppose everybody in the grain business in New England made large profits. They could not very well help making them, because they would order their grain several weeks or some months in advance, and by the time it arrived in New England the price was higher. There was no lack of competition. Business was being conducted just as before; but the whole situation was one in which there was an acute demand for grain, and the price went up. Now, in the case of cotton cloth, if there is an inadequate supply of cotton cloth at 50 cents a yard, no diminution of the inducements to make profits by shop keepers or other dealers will keep that price down to 50 cents. You must in some way or other curtail the demand.

And that leads me to the second class of taxes which I have in mind.

Mr. HULL. May I interrupt you before you take that up?

Mr. SPRAGUE. Yes.

Mr. HULL. I did not get through, a moment ago, on your estimate of the income of the country, amounting to fifty or sixty billions.

Mr. SPRAGUE. Yes.

Mr. HULL. Now, supposing the national wealth to be two hundred and fifty billions under inflated conditions, is it your judgment that the country realized a net profit of 20 per cent on that last year?

Mr. SPRAGUE. I would hardly say that, because this fifty or sixty billions includes all the wages of everybody, and all salaries. Now, you take a corporation in a particular kind of business, with a capital of a million dollars; its wage bill may be two or three million dollars; and all this goes to make up this fifty or sixty billions. I did not mean net income, I meant the actual money income, or gross income, in the case of farmers who grow crops which they consume, largely—all of that taken together, if we estimated it in money for all the individuals, it would run probably between fifty and sixty billions of dollars.

Mr. HULL. So far as deriving revenue from the income tax and the excess-profits tax are concerned, and they are the two largest items in the bill that might be framed—

Mr. SPRAGUE. Yes.

Mr. HULL (continuing). We are obliged to look to the net income that is returned by the individual or the corporation, and compute it under the income-tax law.

Mr. SPRAGUE. Yes.

Mr. HULL. The total income-tax return by corporations and individuals for 1916 did not exceed \$13,000,000,000.

Mr. SPRAGUE. No.

Mr. HULL. How would you extend the law so as to reach, so as to bring within the net, twenty-five or thirty or forty billions?

Mr. SPRAGUE. I would not expect to get it through income and excess-profits tax. When we are so heavily engaged in the war that it takes about half of the products of our industries to keep the war going, then the income of the people of the United States must be reduced by something like 50 per cent.

Now, you may reduce some persons' income by more than 50 per cent. Take a man with an income of \$1,000,000. You can reduce it more than 50 per cent by taxes and subscriptions to liberty bonds. A person with an income of \$1,000 a year, you can not probably reduce by legislation. You will do it by inflation. In that unconscious manner you will reduce the purchasing power of the incomes of a large number of people, whether you will or no, if you get one-half of the products of industry during the next 12 months. That is how the sacrifice must come; and the question as to how it should be distributed is another matter; but there is great danger, of course, that you will not spend \$25,000,000,000, but that it will be found impossible to gather the materials and the labor to produce the particular things in the quantities for which provision has been made, and one obstacle which will be encountered will be the continued

civilian demand for the things which the people have been accustomed to use.

Mr. MOORE. Let me interrupt you, will you, Professor?

Mr. SPRAGUE. Yes.

Mr. MOORE. Before you get on your second point, I want to direct your attention again to Mr. Hawley's question and ask you this: If we had sixty billions of income last year that was taxable, and we imposed a slight tax of 10 per cent upon the sixty billions of income we would derive \$6,000,000,000. If we had increased our percentage we could easily have raised the \$8,000,000,000. That seems so simple that I am going to ask you how you arrived at your conclusion that we had sixty billions of income last year or this year?

Mr. SPRAGUE. That is not, I may say, from any investigations which I have made. Two or three statisticians, at different times, have endeavored from a study of income-tax returns and wage scales of large corporations like the United States Steel Corporation, and so on, to make an estimate of what the probable income of the country was, and people began that some 10 or 12 years ago on the supposition that it might be about thirty billions.

Mr. MOORE. Some one, who was before us yesterday, quoted a Prof. Anderson, I think it was, of Harvard, as estimating the national income in 1917 as \$68,600,000,000, and I asked him how those figures were arrived at, and the answer was not altogether clear.

Mr. SPRAGUE. No.

Mr. MOORE. Whether it is academic or whether it is the result of careful investigation, I do not know; but I would like to know, because it is very material that we should have the facts to go upon to get things clear.

Mr. SPRAGUE. The professor your referred to is in Washington now.

Mr. MOORE. Those are his figures.

Mr. SPRAGUE. He is connected with the Carnegie Peace Foundation now, I believe. But I confess that these figures are vague and uncertain.

Mr. MOORE. But if this amount was taxable—the sixty billions that is not clear to us now, or this sixty-eight billions, if all of that was taxable—our problem would be comparatively simple.

Mr. SPRAGUE. It is very difficult to tax the millions of people with very small incomes, especially those engaged in agriculture. I should think the cost was prohibitive of collection, and I have my reasons for believing that we should have general consumption taxes which would take a positive, perceptible amount from virtually every member of the community.

Mr. MOORE. If you were willing to stand by \$60,000,000,000 as the estimated income for 1917, would you still be willing to say that with a 10 per cent tax we could raise \$6,000,000,000?

Mr. SPRAGUE. No; because I know that you would not get the income of a very large number of people. You would have to take into consideration, probably, the garden patch of an employee of the Steel Corporation and you would have to take into consideration so much of the produce of the farm as the farmer and his family consumed, and so on. That would be only fair to do.

Mr. MOORE. Then, taking sixty billions as estimated by you roughly here, or sixty-eight billions as estimated by Prof. Anderson,

that would be misleading so far as being used for a basis for taxes is concerned?

Mr. SPRAGUE. For income and excess-profits taxes, absolutely.

Mr. MOORE. Then we could not rely on those figures at all in estimating the taxes?

Mr. SPRAGUE. No, sir.

The CHAIRMAN. If I understand you, you meant to include this kind of income: Say that A, a laborer, makes \$1,000 a year and it takes \$1,000 a year to support his family, you would still take that as his income?

Mr. SPRAGUE. Yes. That would be his income.

The CHAIRMAN. And in the United States there are about 30,000,000 families?

Mr. SPRAGUE. Yes.

The CHAIRMAN. And although each of those families earned in that way—although it took every dollar of it to support them—by labor and otherwise, an average of \$2,000 each, which makes \$60,000,000,000—that is, counting all income—you would include that in the \$60,000,000,000 of income?

Mr. SPRAGUE. Yes.

Mr. HULL. If it takes every dollar of their income to live on, where would you get any revenue?

Mr. SPRAGUE. There are necessities, and pressing necessities. But take these people with an income of a thousand dollars who are spending it all, and say that their necessities are all pressing; they will nevertheless have to get along without some of those pressing necessities if we expend \$25,000,000,000 during the next fiscal year.

Mr. HULL. That is what I was getting at by the remark I made. I wanted to get your judgment as to the average amount that would be really necessary and unavoidably necessary to sustain an average family for one year.

Mr. SPRAGUE. Suppose that the average American family with one thousand dollars a year is consuming a certain amount of coffee, and they ought to have it; yet it is more important to win this war than that they should have the same number of pounds of coffee that they had last year or the year before, and if they consumed 10 pounds of coffee last year, let them consume 7 pounds or 6 pounds, if that is an essential factor in winning the war. They will have to reduce their consumption to 7 pounds or 6 pounds through the effect of rising prices and inflation, in any event.

Mr. GARNER. You mean, if I catch your meaning, that we produce in this country \$60,000,000,000 a year?

Mr. SPRAGUE. Yes; because that is the income.

Mr. GARNER. That is, on the farms, in the factories, and taking everything else?

Mr. SPRAGUE. Yes.

Mr. GARNER. In other words, if a man on the farm produces a thousand dollars' worth and only sells \$300 worth he produces a thousands dollars' worth, that included. Is that the idea?

Mr. SPRAGUE. That is the idea.

The CHAIRMAN. Now, Doctor, we are all interested in your second suggestion as to raising the revenue. I would suggest to the com-

mittee that the doctor develop that thoroughly before we ask him any questions.

Mr. O'SHAUNESSY. Can I ask just one question before he takes that up?

The CHAIRMAN. Yes.

Mr. O'SHAUNESSY. I was interested because he agreed with the previous speaker that there had been no profiteering, as I understood. Did you say, Professor, that there had been no intentional profiteering?

Mr. SPRAGUE. Not quite that. I should say that the general situation is such that profits in many instances are just naturally increased; but that when you have a situation of that sort you can by a little manipulation and twisting things about increase them a little more.

Mr. O'SHAUNESSY. But I inferred from your statement that these profits have come as an incident of the war, and that they have not gone out gunning for them and made occasion to get them.

Mr. SPRAGUE. I should say 90 per cent of them probably were of the class that had not been gunned for, and that the various cases where they have been somewhat increased by people taking advantage of the situation were comparatively few. Of course, that is a mere vague impression, and I do not know; but I am very certain that no very considerable amount of profiteering is possible unless you have the favorable circumstances, and I think, undoubtedly, given these favorable circumstances, profits are bound to come whether people profiteer or not.

Mr. O'SHAUNESSY. The reason I wanted to be sure about it is that I understood that some of this legislation was to be aimed at that particular kind of work.

Mr. SPRAGUE. Well, for instance, I should think that a war-profit tax of 80 per cent could be imposed, we will say, upon the United States Steel Corporation, without any animus whatever, without implying that they had been profiteering in the slightest degree, and without any real fear that the highly patriotic management of that corporation would be any less energetic and enterprising in using their organization to provide materials for use in the war.

Mr. O'SHAUNESSY. Then you mean to say that they have not been intentionally profiteering?

Mr. SPRAGUE. I should say that prices had simply gone up.

Mr. MOORE. How do you account for the address of the President to Congress in which he indicated very clearly that there had been profiteering and that there was evidence of it?

Mr. SPRAGUE. I have no doubt that there is evidence of it; but I think it is probably rather here and there taking advantage of the situation, anyhow; but I think a great many people were inclined to suppose, for instance, when the price of iron and steel went up a year ago, that it was due to some Machiavellian actions on the part of somebody or other. I should be rather inclined to say that it was due to forces extraneous to any particular organization engaged in that business; that the demand came, that a situation arose, and prices naturally went up. Doubtless there are particular cases where persons have been able, by taking special advantage of a situation in special products, to squeeze a little more than they should have done, or than the natural forces would have brought about.

Mr. MOORE. Before you go to point No. 2, with the permission of the chairman and of the committee I will ask you to answer this: You have indicated that we will spend twenty-five billions next year and that the public will have to save to that extent.

Mr. SPRAGUE. Yes; curtail consumption to that extent.

Mr. MOORE. I take that to mean that every man, woman, and child in the United States will have to spend \$250 less this year than they spent last year?

Mr. SPRAGUE. On the average; yes.

Mr. MOORE. That means that then on the average every family of four will have to spend \$1,000 less than last year. In other words, they will have to save \$1,000 this year more than they did last year.

Mr. SPRAGUE. That would be true if the income of a community was divided equally, yes; but of course that really means that some person with an income of \$5,000, in order to do his full duty in the premises, probably will reduce his consumption to \$3,000; but a man with an income of \$25,000 will probably reduce his consumption to \$6,000 or \$7,000, and so on.

Mr. MOORE. But carried out on the basis of 100,000,000 of population, which is very reasonable now?

Mr. SPRAGUE. Yes.

Mr. MOORE. The expenditure of \$25,000,000,000 this year will mean that consumers will have to save \$250 apiece, on the average, or \$1,000 for every family of four?

Mr. SPRAGUE. Yes. Expending \$25,000,000,000 in a year is a ruthless thing. War is ruthless, and we are providing for a certain thing which amounts to a certain amount of ruthlessness, if that is to be put through.

The CHAIRMAN. I did not intend to ask you a question, but this is suggested by the question asked by Mr. Moore: Are you exactly sure that you are sound on that proposition that if we spend \$25,000,000,000 on the war there will have to be \$25,000,000,000 less expended by individuals throughout the country? When you get right down to it will there be any less spent? For instance, I pay the Government \$1,000 for taxes or I buy the bonds of the Government and give the Government \$1,000 in money. Does not the Government take that same \$1,000 and pay it out for supplies, so that the finished-product man gets a part of it, the material man gets a part of it, the laborer of the material man gets a part of it, the laborer of the finished-product man gets a part of it, and there is \$1,000 less for me to spend, but is there not \$1,000 for the material man and the laborer of the material man and for the finished-product man and the laborer of the finished-product man to spend? Is it not simply a shifting?

Mr. SPRAGUE. Yes.

The CHAIRMAN. Is it not a shifting of the expenditure from one to the other?

Mr. SPRAGUE. Yes; if you do it.

The CHAIRMAN. Now, that is what the Government is going to do.

Mr. SPRAGUE. If it does it on a sufficient scale, well and good, but that process would involve just that saving. When it has got into the hands of these various people then it makes up for each of them one small part of their various incomes. Then they in turn must

save, the same as you have done, in order to contribute their quota to this twenty-five billions. If they do not do it, then there is pressure and difficulty about getting the funds; it does not flow to the Government, and then toward the end of a liberty-bond campaign everybody is told that they must come along and buy some more, borrow some more to do it, and they all do it in patriotic fashion, or a certain number of people do it, and the Government gets the money, and that has an analogous effect to the financing of the war by Government paper money.

The CHAIRMAN. Suppose I take out of my pocket and give to Mr. Moore here \$1,000, and Mr. Moore then takes that \$1,000 and goes around and divides it up among these 23 other members of the Ways and Means Committee. Mr. Moore and the Ways and Means Committee would have \$1,000 more to spend, and that \$1,000 they can save instead of spending.

Mr. SPRAGUE. That is what I call direct saving.

The CHAIRMAN. Yes.

Mr. SPRAGUE. But indirect saving is, if you go down to the bank and borrow \$1,000 in order to accommodate Mr. Moore, and give him that money.

The CHAIRMAN. That would be an expansion of credit. Now, we are very much interested in your second proposition, and we are going to try and hear you through without asking you questions. We will ask you a lot of questions afterwards, probably.

Mr. SPRAGUE. I will start again with the proposal for a few heavy general consumption taxes by repeating once more that owing to our enormously large appropriations, the income of the well-to-do is by no means sufficient to cover the entire amount, even if all over and above their living expenses is to be saved in taxes and subscriptions to liberty bonds. In some way or other the mass of the people must contribute a considerable amount of their incomes in helping to finance the war. They have responded already in some degree through the purchase of war savings stamps and liberty bonds, and if the cost of the war was not going to be very much greater next year than this year, I am confident that its cost for next year would be fully covered by the increase in saving, together with the revenue to be derived from taxes. But inasmuch as the expenditures of the Government will presumably double, it seems clear to me that we can not rely entirely upon voluntary saving on the part of the great mass of the people to provide anything like their quota, and if they do not provide their quota they will, individuals or large numbers of them, be subjected to the burdens which will come through making up their quota by reason of credit expansion and rise of prices. And this will not fall equally upon the mass of the people. It will fall heavily upon some who have stationary incomes, and lightly upon others, and not at all upon many more.

But I conceive that there is no appreciable number of people in the United States whose economic situation is such that they can not endure or take some share of the burdens in connection with the present war.

The demand for labor is such that the poorest portion of the population of the United States who are capable and willing to work is very much better off now than it was two years ago. Now, everyone would be glad if those people should be better off, but I do not

think that we can take the position that even that poor class in the community has any particular right to be better off on account of this war, even temporarily. There is a very large number of persons with exceptional incomes who are worse off, and will be still further affected unfavorably with a continuance of this inflation, and, consequently, I feel strongly that a few very heavy taxes on articles of general consumption should be imposed. I say a few heavy taxes, because it seems to me far better to impose a few heavy taxes than a large number of little taxes. Suppose, for example, you impose a tax of a cent or 2 cents a pound upon tea. It is by no means certain what the effect of such a tax will be. It is possible that it will be absorbed by producers and dealers. It is possible that they may simply add to the price. But it is also possible that it may be an occasion for the addition to the price of 3 cents to 5 cents rather than the 1 cent or 2 cents of the tax.

If, however, you put a tax of 25 cents a pound upon tea—and that is the British tax—it is certain that a tax so heavy as that will reduce consumption somewhat and consequently dealers and producers will not find it possible to add anything more than the amount of the tax. In addition to the tax of 25 cents a pound upon tea, I should urge a tax of 10 cents a pound upon coffee and cocoa, and correspondingly heavy taxes upon other temperance beverages, and a very considerable increase in the tax on tobacco. The present tax on tobacco is 13 cents a pound. In Great Britain it is 76 cents a pound. If the British can stand 76 cents a pound upon tobacco, I believe that the tobacco smokers of the United States can stand that and continue to smoke as much as they need—I am a smoker myself—at 50 cents a pound.

The tax upon beer could be raised. In England it is \$7.50 as compared with \$3 a barrel in the United States.

Another general consumption tax which occurs to me would be a tax upon flour entirely made of wheat. A tax of \$2 a barrel might be suggested. It seems to me that it is unscientific to be urging people to conserve wheat flour when the cost of all the substitutes is higher than the wheat flour, as has been the case throughout the winter. We could simplify the problem of wheat conservation materially by this tax of \$2 or \$3 a barrel upon flour.

Now, these are taxes on articles of universal consumption, hitting rich and poor alike, on articles which are in such general use that they may be called necessities of life, and not luxuries. But they are articles, a moderation of the consumption of which would not impose an intolerable burden upon anyone in the country.

I turn to a class of taxes which I think may properly be styled luxury taxes.

Mr. MOORE. Did you intend to stop there on the suggestions on general consumption?

Prof. SPRAGUE. Yes.

Mr. MOORE. I notice you did not touch one or two commodities.

Prof. SPRAGUE. I would like to add 2 or 3 cents a pound on sugar.

Mr. MOORE. Do you mean to say that you would make it 1 cent a pound on tea and 10 cents on coffee?

Prof. SPRAGUE. Twenty-five cents on tea.

The CHAIRMAN. May I suggest that you may add any other taxes that you wish when you come to correct your remarks.

Prof. SPRAGUE. I would, as I say, have a fairly small number of high taxes on articles of almost universal consumption.

Mr. MOORE. Have you thought of cotton in any form?

Prof. SPRAGUE. No, sir. That comes in under manufactures, and I would put it, in a measure, in the luxury taxes.

Mr. LONGWORTH. May I ask, are all these internal revenue taxes or customs taxes?

Prof. SPRAGUE. That would involve in the case of these articles an equivalent of customs duties. Of course, tea would be entirely customs.

Mr. LONGWORTH. And coffee?

Prof. SPRAGUE. And coffee. In the case of sugar it would be an excise and a customs tax, that is to say, leaving it as at present, leaving the sugar duties unchanged, and adding, say, three cents a pound to the imported article, and three cents to the article produced in the United States, so as to avoid the whole question of protection.

But I think these taxes ought to be stiff. I have done a certain amount of campaigning with reference to war savings stamps and preaching economy, and I have found quite universally a readiness to assist in financing the war as well as other ways on the part of the masses of the people whom I have addressed.

Now, we come to the luxury taxes.

The CHAIRMAN. As I understand you, you do not class beer and all these other things you have mentioned in the luxury class.

Prof. SPRAGUE. No; they are articles of very wide consumption. Beer is perhaps on the line, but I see no reason why Bevo should not be subjected to the same tax as beer for war purposes.

Mr. TREADWAY. What would be your judgment as to the best method of getting taxes from the soft drinks, coca-cola, for instance, under the present law?

Prof. SPRAGUE. I am not very familiar with the manufacture of those articles, but I suppose they might be taxed at the place of production very much as spirits are taxed, being produced, I suppose, in comparatively a small number of places.

Luxury taxes are based upon two principles: It is desirable to secure the revenue, but it is even more important to set free labor and capital employed in their production. We can not possibly produce the quantity of articles of luxurious consumption which were produced last year, and at the same time meet our war program in full. I dislike to take any one article for specific illustration. It may seem invidious, but the automobile provides so striking and conspicuous a case that I venture to single it out, but not on the ground that it is a more proper subject for repressive taxation than many other avenues of expense. A tax upon the mere manufacture of new cars, however desirable it may be, is not absolutely necessary, and does not meet the principal evil of expenditure in connection with automobiles. The Government can, by the commandeering of plants take over the various factories in which automobiles are produced. Perhaps a heavier tax on sales of new cars would contribute somewhat to that end. But I can not conceive that we can possibly forego the use of materials and all the men employed in making recreation cars, during the next 6 to 12 months. Take, for example, the situation in making ships. There is only one shift to-day in

making ships, even at the present time. We haven't the labor, haven't the housing for them, haven't the organization for two or three shifts to be used in the production of ships. If we had two or three shifts, it would involve a large amount of the men who are making pleasure cars.

But I am more concerned with the use of cars at the present time. There is little evidence of economy in the consumption of gasoline in running cars for merely recreation purposes. There is no form of expenditure by the well-to-do and the moderately comfortable classes that is so conspicuous. It is a little difficult to convince the ordinary man that he should scrimp and save and buy war stamps when he sees the pleasure motors going out into the country in swarms in apparently no diminution in number of what they were in peace times. These cars consume an enormous amount of gasoline; and although it has been stated that plenty of gasoline can be produced, yet it still is true that the production of that gasoline absorbs labor and adds to transportation, adds to congestion. Furthermore, it simply is not a fact that there is plenty of gasoline. A large amount of the gasoline now being used if saved would be suitable for fuel oil with a very slight modification in the process. The supplies of fuel oil are being, I will not say depleted, but what might they not be if the demand for gasoline were distinctly less? For this reason I urge a tax of 20 or 25 cents a gallon on gasoline, a sufficient tax to be really felt by the users of pleasure cars.

The CHAIRMAN. How much tax would you put on automobiles?

Prof. SPRAGUE. I would not tax automobiles. The sale is one matter, but I would not tax automobiles in the possession of the owner. I know a few men who have patriotically put their cars away for the duration of the war.

The CHAIRMAN. Tax the gas, giving the fellow the privilege of buying or not buying?

Prof. SPRAGUE. It is the use of cars, or the excessive use of them, which should be limited, and I think that that clearly can be done by a tax of 25 cents a gallon on gasoline for pleasure purposes. It was found perfectly feasible in Great Britain, before the use of gasoline for pleasure-car purposes was discontinued altogether, to distinguish—

The CHAIRMAN (interposing). What is the tax on gasoline in Great Britain?

Prof. SPRAGUE. Six pence a gallon, but now you can not get it for pleasure purposes at all, so that it has no further interest, but they found it was perfectly feasible to differentiate between the commercial use, the professional and business use of cars, and the use for pleasure and recreation, even if the same car was used for both purposes. The auto used for business purposes should not be subject, it seems to me, to special taxes; or if so taxed, the tax should be very low.

Mr. WHITE. What is your objection to taxing automobiles in the possession of the owner?

Prof. SPRAGUE. I haven't any particular objection to a light tax, but it is the use of the car in the consumption of gasoline and the added repairs necessary on the roads which I chiefly had in view. It is to bring about an economy in consumption as well as to secure

revenue. The luxury taxes are proper in a period like the present. And for the third reason that I do not know anything which would make so strong an impression upon the masses of the people who are, we will say, to be subject to these taxes on tea and coffee, which I hope you will recommend, as to have some big tax on gasoline.

And finally to conclude with the automobile user, I do not believe at the present time that people should be employing chauffeurs to run private cars for ordinary recreation and pleasure purposes. Nearly all chauffeurs have mechanical aptitudes and could be very serviceable in the shipping or allied industries. I would suggest, therefore, that you tax the employer of a chauffeur running a private car, beginning at the rate of \$10 a month and rising by stages of \$10 a month until you reach \$50 a month. That, I think, would probably reduce materially the number of young husky fellows who are still employed as chauffeurs, and it would produce a very desirable effect on the minds of the mass of the people.

Turning now to luxury taxes in general, most articles of luxury can be better taxed, I believe, by stamps which are paid at the time of purchase, rather than by means of a tax either upon the producer or upon the dealer. Both Great Britain and France have adopted luxury taxes this year. In Great Britain the tax was to be at the rate of 2 pence in the shilling on all articles classed as luxuries either from their nature or from their price. A few illustrations to show what can be done in this direction: Let us suppose, for example, that a tax of 20 per cent were imposed upon the bills for rooms at hotels above \$2.50 per night. Let us suppose also that a tax of 20 per cent were imposed on the full amount of the charge for a meal where the price was in excess of \$1. Those taxes would tend in some measure to curtail prices at hotels, perhaps, and would tend in some measure to curtail the consumption of food. Taxes of that sort could be conveniently made at the time the bill was rendered.

The CHAIRMAN. Doctor, I received a letter from a very thoughtful gentleman, a manufacturer in this country, suggesting a tax on the auto, as you suggest, and on retail sales of jewelry, diamonds, etc. Jewelers would sell, for instance, a demand and collect a tax from you. He also mentioned silk dresses over a certain price, and furs over a certain price. What do you think about that?

Prof. SPRAGUE. Here's a list of certain taxes imposed in France at the rate of 10 per cent, partly on articles irrespective of price which are regarded as luxuries, and partly on articles above certain prices. I will leave that with the clerk.

The CHAIRMAN. It may be included in the record.

(The statement is as follows:)

THE LUXURY TRADES—TAXES ALREADY LEVIED IN FRANCE.

[From the Times (London), Apr. 23, 1918.]

The tax on luxuries in France, the principle of which is now to be followed in this country, was instituted by the French finance law of December 31, 1917. It is levied at the rate of 10 per cent on the retail sale price of the scheduled articles. All payments of less than 1 franc are exempted, provided that they are not on account of a larger sum. The schedule of articles classed as "de luxe" was published in the Journal Officiel of March 24, and the tax took effect on April 1. The schedule consists of two lists, one comprising articles taxed irrespective of price, the other comprising articles which are taxed when

the retail prices exceed specified amounts. The following are some of the luxuries enumerated:

Taxed irrespective of price: Photographic appliances, gold or platinum jewelry, billiard tables, silk hosiery and underwear, artistic bronze and iron work, horses and ponies for pleasure purposes, curiosities and antiques, sporting guns, books, servants' liveries, gold watches, perfumeries, soaps and dentifrices, paintings and sculpture, pianos (other than cottage pianos), tapestry, truffles, pleasure boats, and yachts.

Taxed above special prices (approximately shown in English money): Pet dogs, £1 12s.; other pets, 8s.; smokers' requisites, 8s.; bicycles, £10; silver jewelry, 8s.; picture frames, 8s.; walking sticks, 8s.; chinaware table service, £8; single pieces, 1s. 7d. to 12s.; men's headware, 16s.; women's hats, £1 12s.; footwear, women's, £1 12s., men's £2; chocolates, 3s. per pound; corsets, £2; men's suits, £7; women's costumes or mantles, £10; scissors, 8s.; lace and embroidery, machine-made, 1s. 5d. per yard; handmade, 7s. 4d. per yard; artificial flowers, 8s.; furs, £4; gloves, 6s. 4d.; gramophones, £6; games, 16s.; tablecloths, £2 8s.; furniture, £60 per suite; mirrors, 16s.; motorcycles, £80; watches, £2; handkerchiefs, 14s. 3d. per dozen; umbrellas, £1; clocks, £4; photographs, £1 12s. per dozen; cottage pianos, £48; curtains, £4; carpets, 14s. 6d. per yard; pajamas and dressing gowns, £3 4s.; horse carriages, £40; bird cages, 8s.

Payments for goods bought before January 1, 1918, are exempt from the tax.

Prof. SPRAGUE. The English have not yet worked out the specific articles on which they are to impose tax of 16½ per cent, 2 pence in the pound. That is to be worked out by a special committee of the House of Commons. I suppose they are working on it now.

Mr. HULL. Pardon me; in that connection, Mr. Chairman, I think I have a full copy of the French law and regulation.

Prof. SPRAGUE. This is just a summary. I think it had not better go in the record.

The French, it seems to me, do not go nearly far enough. For example, take the case of pajamas. Pajamas do not come under the tax until they cost \$16. I suppose that it might be proper to add anything above \$2. But there certainly is a very large field for taxation. It would have a valuable social effect upon the great mass of people. But when they see the luxurious expenditure by the few they are certainly affected unfavorably.

I will not go into the details of luxury tax further. I am afraid I am taking up a great deal of your time.

Mr. TREADWAY. Would you, so far as you can call to mind, give us a list of what you deem luxuries?

Prof. SPRAGUE. I deem that anything is a luxury which costs very much more than the price which a man in very moderate circumstances would pay for the article. I think it can be illustrated very much better than—

Mr. TREADWAY (interposing). The price doesn't enter into luxuries so much?

Prof. SPRAGUE. In the case of any particular article it does. There are certain articles determined by their nature. Jewelry, for instance, seems to be a luxury at the present time.

Mr. TREADWAY. Regardless of price?

Prof. SPRAGUE. Regardless of price. I should be inclined to think that Victrolas were luxuries at the present time, although they are pretty moderate in price.

Mr. TREADWAY. And furs?

Prof. SPRAGUE. I should be inclined to think so, although there are certain exceptions, in the case of people who live in cold climates.

Mr. TREADWAY. Sporting goods and athletic goods?

Prof. SPRAGUE. Yes.

Mr. FAIRCHILD. Even if used by the troops?

Prof. SPRAGUE. We make all sorts of exemptions. In working out the principles it would not be possible to get in all the exceptions. Take the matter of negligee shirts. I should say that you would hardly call a shirt that was retailed at \$1.50 a luxury. I should be inclined to think that one that cost \$3 is a luxury; and if a man wants a \$3 shirt, if that is essential for his self-respect, very well; let him pay a tax of 20 per cent—that is, 60 cents.

Mr. FAIRCHILD. About these luxuries. These puttees that officers are wearing cost \$16. That is a requirement of the service. Would they come under your designation of a luxury?

Mr. MOORE. You would have to compare that with the cost of puttees formerly.

Prof. SPRAGUE. The morale of the officers is a special thing which I should not wish to characterize.

Mr. FAIRCHILD. Outside of the luxury feature of it, would it have a distinct bearing on the answer to Mr. O'Shaunnessy's question in regard to excess profits that the article was for sale a year ago at \$12 as good as the article selling to-day for \$16.50?

Prof. SPRAGUE. The demand has very largely exceeded the supply. That is a difficulty, I think, that would not be reduced if the officers think they ought to have them. The main thing I had in mind was to curtail in a wholesale fashion the expenditures on all sorts of articles produced within the country, but limited at the present time, so that the owners of plants and the employees in plants will be most eager to transfer themselves to war uses.

One evening, coming down here some months ago, across the aisle were sitting representatives of a certain watch factory, and all their conversation was with regard to advertising and remarks with reference to selling more watches. I confess that I felt very much in the frame of mind of being disposed to put a bomb under their seat. It doesn't seem to me that it is particularly important to produce more watches in this country at the present time, when the men who work in watch factories can certainly be made use of in a variety of undertakings in connection with the war.

Mr. HAWLEY. Would you put a tax on shoes?

Prof. SPRAGUE. I would put a tax on shoes that were above a certain price—\$8 certainly, perhaps \$6.

Mr. LONGWORTH. A bank check is not a luxury, is it? We could do without many that are used now. Would you be in favor of a graduated tax on bank checks, depending on their size?

Prof. SPRAGUE. I think that would be desirable. It would bring in a moderate revenue that could readily be borne. It would be purely for revenue.

Mr. LONGWORTH. A graduated tax would bring a very large revenue. A flat tax of 2 cents would bring in eight or ten million dollars.

Prof. SPRAGUE. Without doubt, that is a tax that ought to go in, and I think a good deal can be said for a graduation of the tax. I do not know of any experience anywhere with the working of such a tax, but I see no reason why.

Mr. HAWLEY. Did England have a tax on bank checks?

Prof. SPRAGUE. They have increased their tax to 4 cents, but I do not think there is any graduation.

Mr. LONGWORTH. I have seen the scheme worked out, on the graduated tax, beginning with \$10,2 cents, and then working up.

Prof. SPRAGUE. I knew that Prof. Plant, of California, had worked up a scheme of that sort.

Mr. LONGWORTH. This was estimated to raise nearly one hundred millions.

Prof. SPRAGUE. I have one more thing that is very dear to my heart, if you will let me have a little more time.

The CHAIRMAN. I was going to suggest that you might add to your list of luxuries.

Prof. SPRAGUE. I have merely indicated the nature of the luxury tax and the reason why I think it is desirable. The more effective it is the less revenue it will bring in, but that would enhance its value rather than diminish it because of the setting of capital and labor over to war purposes.

But when you have provided for all these various taxes that I have been talking about, with the increased rate of income taxes, with the excess-profits taxes, and general and luxury taxes, you still would not by any means have the \$25,000,000,000, and it would be necessary to borrow and to borrow extensively and to induce and to urge very much greater saving on the part of the people through a matter which is not taxed—subscription to bonds and the purchase of war-savings stamps. I very much fear, however, that voluntary effort alone would not accomplish the end in view and that it would become necessary in the successive liberty loan campaigns to fill up the desired total by means of large subscriptions made by means of bank loans and bank purchasers. I have, however, to propose one method of accomplishing the end in view which I think would be equitable. Suppose that in addition to whatever income tax rate you finally decide upon you were to impose a further tax, say, at the rate of 10 per cent on the entire income of the taxpayer, so that a man with an income of \$10,000, in addition to this tax—his regular tax—would have to pay a further thousand dollars; that then you further provide that exemption may be secured from this tax in the event that the taxpayer were to buy three or four times that amount of a new class of bonds, which I will term “economy bonds.”

These economy bonds would mature, say, one year after the close of the war. They would be registered and not transferable. They would be ineligible for rediscount at Federal reserve banks, and bankers throughout the country would be urged as a patriotic duty not to loan to any man to enable him to buy these economy bonds. Let every income taxpayer state in his income-tax return that he is in a position to purchase these bonds from savings which he has made from income; in other words, holdings of property, securities, and so on, or of the same or the equivalent in value of those which he held 12 months before. Bonds of this sort could be issued to the taxpayer at almost any rate of interest you please, but let us say at the present rate of 4½ per cent, and they could be issued for an indefinite period of time at that rate, and I think it is reasonably certain that everyone subject to that tax would consider it worth his while to resort to drastic economy in order to be able to purchase his quota of economy bonds.

On the other hand, the scheme would be more elastic than an additional 10 per cent income tax, for it might well happen that some few people with an income, say, of \$10,000, on account of special circumstances could not in the particular year save enough to buy their full quota. They might buy a part of it, say, \$2,000 in bonds and pay \$500 taxes, or \$3,000 in bonds and pay \$250 in taxes. The tax would be somewhat elastic in the way it would bear upon individuals belonging to a particular class, and that is one of the reasons that you can not always be fair in taxation. That is a scheme, it seems to me, which provides a sufficient amount of elasticity.

Now, if you do not resort to some such method as this, and if voluntary economy does not provide a sufficient amount of direct savings to buy all of the liberty bonds that have to be sold, each successive issue of liberty bonds would have to be offered at a higher rate of interest. The reason that the four-and-a-quarters have gone below par is that out of the three billion eight hundred million subscribed, a considerable portion of the subscription represents subscriptions made by people unable to make payments for them. They had to put those bonds on the market and offer them for sale, and the price necessarily sags. Then, another issue comes out and we raise the rate by perhaps another half per cent.

It has been suggested that perhaps the unpleasant necessity of raising the interest rate might be avoided by granting some special taxation exemptions in connection with the future issues of liberty bonds. I very much fear that the total amount of liberties which must be protected in the future is altogether too great to make taxation exemption an effective means of keeping up the price. The three-and-a-halves are kept at a relatively high price because they are limited in amount, and there are a sufficient number of people with very large incomes to make it worth while to absorb something like all of the first liberties that came on the market. But tax exemptions, when you come to issue ten, twenty, or thirty billions of bonds, will not serve that purpose, because then the quantity will be such that every class in the community will have to purchase them if they are going to find lodgment at all.

The tax exemption seems to me to be a mere palliative, doubtless effective for one, possibly two issues, but hardly, I should judge, for more than that.

Furthermore, it does not pay to diminish inflation, but positively to enhance it, inasmuch as if you grant exemption, then it becomes far more profitable for the man with a very large income to secure bank loans in order to buy liberty bonds than it does for the small buyer, very much more. Now, it will be therefore reasonable to expect that if you grant tax exemption you will have comparatively more inflations than you will if you leave things to take their own course as regards the rate; but if you really wish to meet the situation in a way which is really calculated to meet the requirements of the situation, I believe you can handle this through some such scheme as these economy bonds which I have indicated. Of course this is in a way a novel project—something which has never been adopted heretofore—but there are a large number of things in this war which are novel, and we can not reasonably state that we must not do anything in

financial matters simply because it was not ever done in the relatively small wars, from an economical point of view, which mark previous generations.

Mr. TREADWAY. Did you ever suggest that idea to the Secretary of the Treasury?

Prof. SPRAGUE. I have suggested that to the Secretary of the Treasury. I have also talked it very industriously with all sorts of people during the last three months—bankers, railroad people. I have talked it at the national convention of the Chamber of Commerce of the United States at Chicago, and I have been simply astonished at the number of people whom it strikes favorably, a large number of people who have been inclined to oppose rather violently such taxation. They said that this was a scheme which really seemed feasible and calculated to work.

Mr. TREADWAY. Now, do I understand you to say that you would require the taxpayer to make his return, to certify in his return that he had so much money to invest in these bonds? Would you limit him to savings that he had made during the year, or invest any capital he saw fit?

Prof. SPRAGUE. No; you see, any capital he had from previous years, that is invested, and he can only get it out to buy liberty bonds with by selling it to somebody else. You could not sell very much if everybody was saving for his quota of liberty bonds. It would be difficult to find a market for most existing capital. Moreover, I think you will probably find it desirable to issue certificates of indebtedness which nobody can buy. Then one could cash in the certificates of indebtedness and secure the economy bonds at the end of the year, making the necessary statement, of course, or affidavit regarding the fact as to whether it had secured or purchased them with savings. That is very essential. Then, if a person wants to borrow on his other bonds, let him buy some more liberty bonds.

Mr. GREEN. On the point that if you made that exemption from tax, it would have a tendency to make the very wealthy borrow on their purchases of liberty bonds, would you put that on the ground that if they borrowed the money to buy these bonds they would be able to set off the interest?

Prof. SPRAGUE. Very wisely you can not do that under the present law, but suppose you have an income of \$4,000,000, and that you happened to have a couple of million dollars to invest. Now, the question is whether you will invest in some tax-exempt securities or whether you will invest in some 6 or 7 per cent taxable securities. Now, to the man with the four-million income, if you get your income-tax rate high enough, it would be better to buy four and a quarter tax-exempt Government bonds than to buy 6 or 7 per cent taxable securities, and it will be worth while to do so even to the extent of borrowing in order to accumulate a stock of them.

Mr. GARNER. I want to ask you with reference to your list of necessities. Do you consider beer and tobacco necessities?

Prof. SPRAGUE. Beer, I should not think so. As to tobacco, I should consider that a necessity, for it is consumed by a very large number of the population, rich and poor. Now, I do not notice that a person with an income of six or seven hundred dollars does on that account use no tobacco.

Mr. GARNER. But you would not say that the people could not get along without these things?

Prof. SPRAGUE. No doubt, but the general effect would be to reduce consumption. There are some necessities which you need in a certain amount and no more. I suppose, for instance, the amount of coal or wood for fire that a poor family uses in the course of a year could hardly be reduced without suffering, but when you come to questions of coffee, tea, and tobacco, the amount could be appreciably reduced without real suffering.

Mr. GARNER. You call them necessities, then, they are so universally used?

Prof. SPRAGUE. Yes; and we find that some articles which are used by some, such as tobacco, are not used by everybody. If you include tobacco, coffee, and tea, why there would not be very many people who are not using one or the other of them. But I think you want to put good stiff taxes on them rather than a number of little taxes. A single stiff tax is impressive, but 40 small taxes are not.

Mr. GREEN. Coal is sometimes used as a luxury. For instance, a man may have 30 or 40 rooms to heat throughout the winter, with all the windows open. Is there any way of getting that in?

Prof. SPRAGUE. It is very hard, I think, to get at that. Of course, it would be more feasible, under the present coal distribution, since they have limited the amount. I think people who are doing that are few in number, and I think they would be hit more conveniently by other taxes. It is not necessary to hit hard every avenue of extravagance of a particular individual, if you only hit some of them hard enough. If a man's extravagances total \$15,000 in a year, and he is spending it on 25 different commodities, you can check it by taxing every one of those commodities a certain amount or by taxing some of them heavily and leaving the others free. You will accomplish about the same result.

The CHAIRMAN. Does any other gentleman wish to ask any questions?

Mr. LONGWORTH. Just one question on the matter he brought up with regard to war profits, taxes to be superimposed over our present tax. Did I understand you to say that before submitting that income to the present tax you would deduct the amount under the war-profits tax?

Prof. SPRAGUE. Yes.

Mr. LONGWORTH. Let me see just how that would work out. Suppose the prewar average were \$100,000, and the last year's average were \$500,000. You would take, say, 80 per cent of the difference—

Prof. SPRAGUE (interposing). Between the one and the five, yes, unless there was clear evidence that the hundred thousand dollars was abnormally low. The English war-profits taxes are by no means an absolutely simple matter. They have liberalized it to take into particular account particular circumstances, and are making fairly normal profits in the prewar years the basis, and they will also take into some account the capital investment. The burden of proof is on the protestant to show that the return before the war was not a fair return on the investment.

Mr. GREEN. Is it not really complicated matter with the boards they have?

Prof. SPRAGUE. Yes; but the results are regarded as, on the whole, fairly equitable, and when you consider that the rate is a flat 80

per cent rate, it must be that they have worked out the thing fairly equitably or there would be an immense and vociferous protest from all quarters.

Mr. GREEN. The statute is by no means perfect in its qualifications and exceptions.

Prof. SPRAGUE. They have allowed more freedom to administrative officials than we have been accustomed to allow in this country, but they have reached results.

Now, then, if you had, to take the case you mentioned, to take the difference between \$100,000 and \$500,000 and that you had \$400,000 to tax. You take \$320,000 on that, which leaves a total of a hundred and eighty thousand dollars which might be subject to existing excess-profits tax. Now, assuming that that tax were reduced some, of course the amount taken would depend on the invested capital of the concern; but assuming that the prewar profits were reasonably good and that \$100,000 was a fair return—say that it was about 14 per cent on the invested capital—then I should not think there would be any injustice in subjecting the \$180,000 to the American excess-profits tax, any more than there would be in the event that the concern had only made a hundred and eighty thousand dollars originally and continued to make it through the war.

Mr. GREEN. What would you do with corporations which, like some of the Standard Oil corporations, made 50 to 100 per cent before the war, and are perhaps making a 125 per cent now? Do you think it is sufficient to just impose a tax on the war profits only?

Prof. SPRAGUE. Well, you tax war profits, get a big, stiff tax there, and you get something in the case of excess profits, and most of the stock of those companies is rather closely held and consequently you get a rather heavy rate of income tax. Finally, I should do something more than is done in the present law regarding surplus. This is a matter that was discussed early in the afternoon. My own suggestion in relation to the excess-profits tax as corporate income would be this, that where the corporation exists and the money needs to be retained in the business, let it be retained. But that there be a Government lien on that which is retained. You know money for the business is very difficult to obtain. It means sometimes, if you are going to enlarge, that you must enlarge by means of bonds. For instance, a few corporations used to enlarge by means of small bond issues of its subsidiary corporations. Now, it is enlarging with profits, the profits being large, whenever those enlargements are needed. Whether it is to be financed from profits or not is, of course, a difficult question. But probably in the present difficulty in regard to new financing, it would be better to allow the steel corporation to use its profits in making necessary extensions, conditional on diverting the amount of the taxes to the Government at some later season. There would be elasticity to the operation of law and it would do away with the almost universal objection of business men that they must have profits to go back into the business in order to finance necessary enlargements. This would put the matter more or less to a test.

The CHAIRMAN. Are there any other questions to put? If not, we have other witnesses.

Doctor, you may add anything to the remarks, or revise them. We have been very glad to hear you.

Prof. SPRAGUE. Thank you.

The CHAIRMAN. The next witness was to be Prof. Lindsay, but he is not here. Mr. Hemingway and Mr. Cowles were also to be heard. Mr. Cowles, you live in Washington and you can come in anytime. We have a gentleman here from Massachusetts, who desires to get back on the next train, and if it will be all right, we will hear him. You are interested in these hearings, and if you will just let us put this gentleman on to accommodate him, I presume it will be all right with you.

Mr. COWLES. Yes, sir.

**STATEMENT OF MR. ANDREW P. DOYLE, MANUFACTURER OF SODA-WATER BOTTLES, NEW BEDFORD, MASS.**

Mr. DOYLE. Mr. Chairman, I thank you very much for this courtesy. My experience as a committeeman leads me to know that the only way that a man can express his gratitude is by being very brief, and I will be extremely brief.

I am prepared to discuss for but a moment the general conditions of the soda-water bottling business, and the troubles which we have gone through and the troubles which we will go through if the war tax is on us. My good friend, Congressman Treadway, has informed me that it is a rule of the committee that if there are two men representing an association, one has the right to talk.

Mr. TREADWAY. I think the chairman would be willing to give you both an opportunity.

The CHAIRMAN. Yes.

Mr. DOYLE. In the first place, the soda-water bottling business throughout the whole country is largely made up of a series of very small manufacturers. Men who have capital from \$1,000 up to \$50,000 will probably do seven-eighths of the soft-drink business of the country. In the last revenue bill we were supposed to be taxed to an amount to bring in revenue of \$20,000,000. I doubt very much if it does.

The CHAIRMAN. I agree with you. It would not raise anything like that amount.

Mr. DOYLE. You are right; particularly so, Mr. Chairman, because since the revenue bill has been passed the soda-water manufacturers have not, in the first place, been able to obtain a sufficient amount of carbonic-acid gas to do business; and then came the sugar situation. Our concern was closed down for four months because there was little sugar, and what little there was we thought it would be better to use in the homes of the working people than in soft drinks. I am assured by the committee—of course, I do not know—that it is a very simple matter in the aggregate to raise \$8,000,000,000 that you are going to raise by taxation. If any tax that this committee desires to impose on this business, or proposes to raise more than a million dollars, it at least might be the means of putting small dealers out of business. We are not here to make a holler or to say that our business ought not to be taxed. If it is taxed, we will accept it and do the best we can. But if there is much more tax placed upon us it will result in putting the small fellows out of business and creating a condition, as Senator Simmons very wisely said to us last night, that there will be so little soda water drunk that there will be

no revenue on which to pay a tax. We, of course, feel that there is not going to be any amount of soda water used anyway. In the first place, we were cut to 80 per cent on sugar last year, and we have just received notice that there is going to be further reductions in the amount of sugar, and sugar is the one essential feature of it. Further than that, a matter of 20,000,000 or 30,000,000 pounds of sugar were destroyed by the U boats, which is going to make a further reduction.

The CHAIRMAN. Why haven't you been able to get a sufficient amount of carbonic-acid gas?

Mr. DOYLE. In the first place there is a scarcity of drums. It is an utter impossibility for the manufacturer to have those drums made. Those are expensive articles, costing \$9, \$10, and \$12 each. Formerly, most of them were made in Austria, and I understand that one firm had a hundred thousand drums ready to be shipped when the war was declared. Another thing, the Government has commandeered large-size drums.

The CHAIRMAN. I got a letter a few days ago from a gentleman from some city saying, "You put a tax of one-fifth of a cent on soda water, and the dealers have increased the price 5 cents." That is about 250 per cent.

Mr. DOYLE. That is true to some extent, I think, Mr. Chairman, of the people, the retailers. It is not true of the men who are bottling it, and who are trying to carry part of the tax.

Mr. CHAIRMAN. If that be true of the retailer, that they have gone up from one-fifth of a cent to 5 cents, in order to cover the tax, would it be an unwise suggestion to put a limit on the percentage of the gross sales of the retailer?

Mr. DOYLE. I think that is true. I think such cases are infrequent. I know in my town, the only one I am familiar with, and I am not an expert on this business, that the price to the consumer has been raised 1 cent a bottle. Where it was 5 cents before, it is 6 cents now.

The CHAIRMAN. I think this gentleman referred to drinks over the counter.

Mr. DOYLE. I have not seen anything like that. You understand, Mr. Chairman, that there are a great many other things that are taxed under the law besides the tax placed on us.

Mr. GARNER. What do you say about putting a tax on gross receipt?

Mr. TREADWAY. You mean the retailer?

Mr. GARNER. Yes.

Mr. DOYLE. I do not think there would be any great fault to find with that, because there are some who have gone up outrageously, but in general they are trying to meet the situation placed upon them by this taxation. But there is the increase in everything else in the bottling industry. It is a seasonable industry; there are only six months in the year during which it is possible for us to do business, except possibly in some parts of the South. In Massachusetts six months is the extreme.

Mr. GARNER. But the tax on gross receipts would tend to do two things; tend to get the revenue where it would not put up the price and tend to make for economies in their business, which is quite an important factor.

Mr. DOYLE. Yes; but, of course, there is going to be some difficulty, Mr. Congressman, in making a tax on gross receipts. The soda

water is sold in connection with so many other things that it would make an added burden to separate these funds.

Mr. GREEN. They would have to have a separate cash register, and then it would be rather difficult.

Mr. DOYLE. The bulk of soft drinks that are sold, of the bottled soft drinks, are sold in small grocery stores. You, who perhaps are not familiar with the lower class of business as I am, do not know it, but it is a fact nevertheless. You may talk of the Coca-Cola Co. doing a great business throughout the United States, or the Cliquot Co. making ginger ale, but that is only a small part of the soda-water business of the country. The sweet soda-water is made by the small bottler. We have 600 or 700 in the New England States, and all are small industries, organized within 15 or 20 miles of their places of business. A tremendous amount is sold in candy stores and small grocery stores.

Mr. MOORE. What section are you addressing yourself to?

Mr. DOYLE. Section 315.

Mr. MOORE. Carbonic acid gas in drums?

Mr. DOYLE. That takes in the whole of the soda-water schedule. Sections 314 and 315.

Mr. MOORE. Do you propose changes in that law?

Mr. DOYLE. We have drawn up a schedule here, Mr. Chairman, that we though we might be able to stagger along under, but it is extremely problematical, because we do not know, in the first place, whether we will be declared a nonessential industry or not.

Mr. MOORE. I wanted to know how you thought you could help the committee; the committee has this task before them. Is it your suggestion to reduce any of these items?

Mr. DOYLE. No; we feel, Mr. Congressman, that if you are going to raise eight billions of revenue that we are going to get a part of it, and we do not kick.

Mr. MOORE. What I wanted to know is, if you propose to transfer the tax from the bottler to the consumer—that is, would you place a tax by the glass on the purchaser in the store?

Mr. DOYLE. It is extremely difficult to transfer it. For instance, all the direct tax we pay is a direct price to the wholesaler.

Mr. GREEN. You don't think it would be practicable, on account of the large number of small sales in many establishments, to levy it by the glass?

Mr. DOYLE. It would be difficult; in my town I think there are about 150 establishments selling soda water, to say nothing about what you are selling by the glass, and the way you would have to work that out.

Mr. TREADWAY. How is this in effect now? How is it worked out?

Mr. DOYLE. It has worked out in that it is easier to collect.

Mr. TREADWAY. How has it affected dealers like yourself, for instance?

Mr. DOYLE. Perhaps I can illustrate it better in this way: The last time I was here I was before the Senate Finance Committee, and then we were paying  $4\frac{1}{2}$  cents for carbonic acid gas. When the tax was placed we were paying 11 cents a pound; after we got back we were raised a half cent a pound, and when the tax was laid we were increased 6 cents a pound.

Mr. O'SHAUNESSY. What is tax on the drum; 5 cents a pound, you say you are paying?

Mr. DOYLE. Yes, sir.

Mr. O'SHAUNESSY. How much are you paying now altogether?

Mr. DOYLE. Eleven cents.

Mr. O'SHAUNESSY. You are paying 6 cents for the gas—6 cents a pound for the gas and 5 cents for the tax?

Mr. DOYLE. It is all charged up.

Mr. O'SHAUNESSY. It is very easily collected?

Mr. DOYLE. Yes, sir.

Mr. MOORE. You are a bottler and are speaking for the bottlers?

Mr. DOYLE. Yes, sir.

Mr. MOORE. And not for the manufacturers of carbonic acid gas?

Mr. DOYLE. Oh, no.

Mr. O'SHAUNESSY. You buy from the manufacturers of the carbonic acid gas?

Mr. DOYLE. Yes, sir.

Mr. O'SHAUNESSY. And they collect from you?

Mr. DOYLE. Yes, sir.

Mr. O'SHAUNESSY. And we collect from them?

Mr. DOYLE. Yes, sir.

Mr. O'SHAUNESSY. Your objection now is that it is too much?

Mr. DOYLE. No; it isn't that altogether. We are willing to stand up under this tax and a little more, if possible, but my experience up in the legislature and here is that there is very little information about the soda-water business, and all we heard last year was about the Coca-Cola Co., which was the one great big company.

Mr. O'SHAUNESSY. What I want to get is, what you are objecting to.

Mr. DOYLE. We are not objecting to anything, because we know nothing of what you gentlemen are going to do.

Mr. O'SHAUNESSY. I know; but what is your opinion of the law to-day, so far as you gentlemen are concerned?

Mr. DOYLE. It is no worse on us than on anybody else. We furnished this schedule, because we knew we were going to get something.

Mr. O'SHAUNESSY. It is all right, then?

Mr. DOYLE. Yes; it is all right. But what I wanted to convey to you gentlemen was that in the tremendous task that is before you, you will find that you will need to lay a tax on many of these industries, and we wanted to show you our idea—

Mr. O'SHAUNESSY. If we wanted a little more?

Mr. DOYLE. Yes.

Mr. GREEN. How about the Coca-Cola people at the present time?

Mr. DOYLE. They are being taxed, of course, and I hold no brief for them. God knows. They have a tremendous business. My associates and I would be glad if we could break even during these war times and not make a cent. Our purpose in coming here is to show you that there is one little industry, if you put too much on it it will crush it out, and the corporations like the Coca-Cola people will go on.

Mr. CRISP. You wouldn't object to a gross tax, if you can figure it out?

Mr. DOYLE. If you can figure it out.

Mr. CRISP. I mean the little fellow, if he can put his business in you wouldn't object to a gross tax?

Mr. DOYLE. How would you levy a gross tax?

Mr. CRISP. On gross receipts from the dealer.

Mr. DOYLE. If you can work it out. I don't know how you are going to do it.

Mr. TREADWAY. Let me ask you this: Is there a tax on all soft drinks, say, by having a tax levied on the drums?

Mr. DOYLE. No.

Mr. TREADWAY. Doesn't the carbonic acid gas enter into the manufacture of all the soft drinks you speak of?

Mr. DOYLE. No, sir; not all.

Mr. TREADWAY. As a dealer in your line of business, section 315 is acceptable to you in its present form, is it not?

Mr. DOYLE. Yes, sir.

Mr. TREADWAY. Now, would you make this suggestion: Leave it as it is, or, if more must be secured, add a little to it, a half cent a pound, making it 5½ cents instead of 5 cents. Would that meet your idea?

Mr. DOYLE. Exactly, because that would give us——

Mr. DIXON. The administration of the law has been satisfactory so far as it has gone?

Mr. DOYLE. Yes; if we live under it. But the tax you can raise under a law depends on whether the business taxed can live under it and if you can't get the tax levied, it must be adjusted, when you see you can't raise that tax.

Mr. TREADWAY. Has the secretary of your organization anything to add?

Mr. MOORE. I want to ask a question. Has the law had a fair test in view of the fact that it went into operation in the winter, when soft drinks are not much indulged in; and the business is now just starting?

Mr. DOYLE. It has had practically no test at all, because my own concern was shut down four months—nothing at all bottled.

Mr. MOORE. A great many soft drinks are being sold now?

Mr. DOYLE. Yes; it is having a fair test now, if we can get enough sugar to bottle now.

Mr. MOORE. Isn't prohibition helping some?

Mr. DOYLE. If we can get sugar to bottle——

Mr. MOORE. That is your point?

Mr. DOYLE. It is a seasonable business. In Massachusetts, for instance, it is a short season, sometimes only about three months; if you get six months it is a long season.

Mr. O'SHAUNESSY. The statement was made in the press that the sugar would be cut down on account of the large amount that went down on the boats recently.

Mr. DOYLE. We are here to see that we do not get stepped on, gentlemen. We do not talk about patriotism; everybody is patriotic. We do not want to be taxed to death. We prefer to be told that we can not do business, rather than to be taxed to death.

The CHAIRMAN. I want to ask you a question. Last year we had several men before us, and we couldn't find out from the chemists and the scientists on this line, how many gallons of ginger ale or pop would a pound of carbonic-acid gas produce?

Mr. DOYLE. That is a question.

The CHAIRMAN. If you will furnish that and put it in your statement. Think it over and put it in.

Mr. DOYLE. I was going to say that some bottlers charge less. We charge very high for ours. If you would allow the secretary of our organization to address you for a moment or two, I think he will tell you some things and will not be as long as I have been.

**STATEMENT OF HUGH J. McMACKIN, SECRETARY OF THE EASTERN SODA WATER BOTTLERS' ASSOCIATION, OF MASSACHUSETTS, MAINE, NEW HAMPSHIRE, VERMONT, AND RHODE ISLAND.**

Mr. McMACKIN. Mr. Chairman and gentlemen, I will be very brief.

The CHAIRMAN. Let me ask you if you know now how many gallons of soft drinks, like ginger ale, pop, etc., would 1 pound of carbonic acid gas produce?

Mr. McMACKIN. I can better answer that my saying that out of a 50-pound drum we will average about 111 or 112 cases of half-pint bottles.

Mr. CRISP. How much in a case?

Mr. McMACKIN. Twenty-four half-pint bottles.

The CHAIRMAN. In a case?

Mr. McMACKIN. Two dozen to a case.

The CHAIRMAN. How many cases would it make?

Mr. McMACKIN. About 112 cases.

The CHAIRMAN. One hundred and sixty-eight gallons?

Mr. McMACKIN. Approximately. The question has been asked, Mr. Chairman, as to whether the gas charge that was made and levied last year was a fair tax, and whether or not bottlers are satisfied. They are satisfied, and we have recommended, in order to assist the Government, that the tax be increased to 6 cents, but we do object to the gas manufacturers levying an assessment on the bottlers of 1 cent a pound to collect that tax. We think it is very unfair to levy a tax to collect that money to turn over to the Government. We feel they are getting profit enough out of the gas, without assessing us the extra half cent a pound to collect that.

Mr. TREADWAY. How do we regulate that?

Mr. McMACKIN. Simply by saying in your report, or recommending in your report, that there should be no charge on us for that.

Mr. CRISP. Suppose we enact a tax on gross receipts, then it makes no difference what they charge; a tax on gross receipts.

Mr. McMACKIN. That would be very unfair. We are taxed first on our carbonic acid gas; again, on the sirups which we purchase from the manufacturers; we are also taxed on the sugar and the numerous articles we have to purchase; indirectly, we are forced to pay taxes.

Mr. CRISP. I know; but suppose the carbonic acid gas tax is taken off, and then a gross receipts tax; what do you say to that?

Mr. McMACKIN. Providing sections 313, 314 and 315 were entirely eliminated.

Mr. CRISP. What are those taxes?

Mr. McMACKIN. The present section 313 provides, upon prepared sirups and extracts, intended for use in the manufacture or production of beverages, commonly known as soft drinks, by soda fountains, bottling establishments, and other similar places, sold by the manufacturer, producer or importer thereof, if sold for more than \$1.30 per gallon, a tax of 5 cents per gallon, and graduated, according to the price of the sirups, up to 20 cents per gallon.

Mr. CRISP. Suppose that tax, all specially required, were taken off, and a gross receipts tax, up to 11 cents, were put on; what do you say to that?

Mr. McMACKIN. I would heartily indorse it. It would eliminate this.

Mr. TREADWAY. You would indorse it so far as your organization is concerned. How about the organization represented by the soda fountain retailers? Would they indorse it?

Mr. McMACKIN. I see no reason why they should not be taxed. The soft drink dispensers are taxed for practically the same commodity. They are taxed at the fountain, and not obliged at present to pay a tax. If the present sections are to remain we have recommended in our petition an increase all the way through. And while I might throw a bouquet to my colleague here, ex-Senator Doyle, of Massachusetts, that was drawn up and we submitted it to the Senate Finance Committee almost word for word, and it was adopted and recommended by the Senate Finance Committee, and we have recommended that in our petition here; and we have recommended that soda water fountains be taxed; and we have also recommended that spring water houses, who are not now taxed, especially where it is sold in these 5-gallon carboys at 10 cents a gallon, they pay no tax whatever. In New England we have many spring water houses, and we believe that a tax of 1 cent per gallon on all waters sold for 5 cents a gallon, or more, should be levied.

Mr. Doyle has told you of the loss of sugar to us.

Mr. Hoover, the Food Administrator, has limited us to 80 per cent of our normal supply until July 1, and after that we understand we are to be more restricted. That is a hard thing. We were shut up last winter on account of the sugar shortage. And you gentlemen will appreciate that the bottles that we were buying for \$2.50 a gross we are now paying \$8 a gross for. For the tin caps we are paying much more. I think it was suggested that a gross tax be levied. In Massachusetts we are unable to supply the demand now. At Camp Devens and at the navy yard at Portsmouth and at the navy yard at Newport we can't supply the demand. In that case I should say we should make an exception. The demand to-day at Camp Devens is 50,000 bottles a day; it would be unfair to levy a tax on the goods going to these boys.

Prof. Sprague mentioned a moment ago that we levy a tax of 2 cents a pound on sugar. I trust that will not be done. That is one of our principal commodities.

I am advised by Mr. Bronker, of the War Industries Board, that he hoped later to be heard on the subject. I asked the clerk whether he has heard from him, and he has not as yet. He may be asked to be heard later.

Mr. MOORE. May I ask what that was—that suggestion from Mr. Bronker, of the War Industries Board?

Mr. McMACKIN. Mr. Bronker, he is chairman of the soft-drink men of the Southwest; we are of the Northeast.

Mr. MOORE. What did he indicate?

Mr. McMACKIN. He has advised me that he has requested that he be heard a little later by this committee.

Mr. MOORE. I thought he had suggested some limitation on your production?

Mr. McMACKIN. Not that I know of.

Mr. DIXON. He said that Mr. Hoover had limited them to 80 per cent of their normal amount of sugar.

Mr. McMACKIN. Yes; we are allotted only 80 per cent now, and it looks now as if it would be cut to 50 per cent of last year's output.

While I have the floor I want to thank you, Mr. Chairman and gentlemen, for hearing us this evening out of our order and for the time we have consumed. Kindly keep us in mind.

(The petition referred to by Mr. Doyle and Mr. McMackin is as follows:)

PETITION OF THE EASTERN SODA WATER BOTTLERS' ASSOCIATION (INC.), OF THE STATES OF MASSACHUSETTS, MAINE, RHODE ISLAND, NEW HAMPSHIRE, AND VERMONT.

MONDAY, JUNE 10, 1918.

THE WAYS AND MEANS COMMITTEE.

GENTLEMEN: The soft-drink bottlers of the above-mentioned States are united to assist the Government in the successful prosecution of the war to a victorious end, and we pledge ourselves to stand ready at all times to render all the assistance within our power to that, and it has been—

*Resolved*, That the soft-drink bottlers, whose business has been greatly reduced already in cooperating with the United States Food Administrator, stand ready to further assist when so needed and it is—

*Resolved*, That we recommend that section 814, part A, shall be changed to read as follows, viz, line 14, change "5 cents" to "6 cents" per gallon; change line 16 to read "9 cents" per gallon, change line 17 to read "12 cents" per gallon, change line 18 to read "18 cents" per gallon, change line 20 to read "22 cents" per gallon; also to recommend to your honorable committee that part B, of section 814, line 3, page 38, be changed to "2 cents" per gallon, and that part C, section 814, be rewritten to read as follows:

"(c) Upon all natural mineral, table, or spring waters sold by the producer, bottler, or importer thereof in bottles or other closed containers at over 5 cents per gallon a tax of 1 cent per gallon, and all such waters sold for and over 10 cents per gallon a tax of 2 cents per gallon."

That section 316, line 25, page 38, be amended by striking out the figure "5." and to substitute the figure "6" for the same.

And it is further recommended to your committee that in fairness to the soft-drink bottlers that a tax should be levied upon soda-fountain owners, when they manufacture their own sirup for their own use, and to that end we would suggest that "Upon all sirups manufactured or prepared to be used at soda fountains, and when sirups and extracts manufactured or prepared and sold for use by soda fountains, bottling establishments, and other similar places to be used in what are commonly known as soft drinks, sold by the manufacturer, producer, or importer thereof," and then followed by amended section 314, part A, as recommended above.

Respectfully submitted.

HON. ANDREW P. DOYLE,  
New Bedford, Mass.

HUGH J. McMACKIN,

Secretary Eastern Soda Water Bottlers' Association.

(And thereupon, at 5 o'clock and 20 minutes, the committee adjourned until Tuesday, June 11, 1918, at 10 o'clock a. m.)

# REVENUE BILL.

---

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Tuesday, June 11, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Garner, Dickinson, Oldfield, Crisp, Helvering, O'Shaunessy, Carew, White, Moore, Longworth, Fairchild, Sterling, Martin, Hawley, and Treadway.

## STATEMENT OF MR. JOHN W. BATDORF, PRESIDENT AMERICAN CONSTITUTIONAL ALLIANCE, 117 WEST ONE HUNDRED AND THIRTY-SECOND STREET, NEW YORK, N. Y.

Mr. BATDORF. Mr. Chairman, I am going to make this statement just as short as it can be made, and after the little talk I give, if the members of the Ways and Means Committee will read those little books, they will understand just what I mean. They can not fail to understand, because I know they are intelligent men. I hope you will permit me, if the members are interested, and if they are not interested I will be very glad to retire to outline a plan, because in listening to the speakers of yesterday it seemed to me that what this committee wanted was a concrete, practical plan to raise \$8,000,000,000 by taxation, and in such manner that it might not hurt nor prove a reaction of too great liability upon the consumers. I think that is what you are after.

The CHAIRMAN. Yes, sir.

Mr. BATDORF. Now, I promise you that I will lay before you a plan. I do not say that you will be agreeable to that plan, but I will give you a positive plan to raise \$8,000,000,000 by taxation in a specific way; and I hope you will pardon me if I sometimes become a little dogmatic, because you demand a specific plan, and that will necessarily make some part of my speech a little dogmatic.

The CHAIRMAN. Doctor, whom do you represent in appearing before the committee? I notice you are president of the American Constitutional Alliance.

Mr. BATDORF. I represent an organization which has been studying for years, under my leadership, a principle and thought of Jefferson as he expressed it in France in 1783, to support a patriotic proposition, to support the Constitution and the Government created under it. In other words, we are an absolutely patriotic body of very intelligent men, who believe the time has arrived when we must get at the truth of things. Because of this Government being carried on by the Hamiltonian doctrine of concentration of power for 125 years.

some things have crept into our governmental rulings that have been a hard matter upon the consuming class. The matter with capitalism and the matter with labor is that they have made a sort of bargain to "get theirs" out of society. I would like to speak in strong words of what they think about the consumers, but I will refrain.

I think you understand that this Government, by taking over the control of the railroads, and, possibly, soon the shipping, will start the ball to roll toward Government ownership in time. Government ownership is somewhat deceptive. It is bound to lead further and go into what we call State socialism, the State socialism practiced by Germany especially, an autocracy, and beyond that we are bound to be confronted with the principle of Marxism socialism, and beyond that Bolshevism, and as we enter this path I think, as good American citizens, we should be careful just exactly what we should do. This alliance is ready for work. Its main work has been upon the streets of New York City. It has driven socialism from the streets there. Our organization is the only organization outside of the religious bodies that is permitted to speak on the streets of New York. We supported the Liberty Loan movement and helped the Red Cross movement by our speakers. We have many speakers for this cause, to effect a pure government in this Nation.

I now want to state a few facts in our history which will make a base for the argument that must come, if you want a plan to raise \$8,000,000,000 from taxation to support this Nation in war for the next year. In the eighties the Supreme Court in three cases made of the corporation a person and a citizen. Those cases are 164 United States, 636, in the case of the United States *v.* The Northwestern Express Company, in which it was held by the Supreme Court that the corporations are citizens and under section 1 of the fourteenth amendment to the Constitution the rights of corporations are made to stand on the same basis as the rights of natural persons; and in the case of Santa Clara County, California, *v.* The Southern Railroad Company (113 U. S., 396) the United States Supreme Court declined to hear argument to deny those rights; and, third, in the case of Fire Association *v.* State of New York (119 U. S., 110) the rule is laid down that a corporation of one State doing business in another is to be deemed a person within the meaning of the Constitution. The reasoning of the court was sound at the time. They said that the corporation was formed by a collective lot of citizens and persons, and for that reason that collective or cooperative lot of people should have the same rights as the natural citizen when bound under the corporate law.

They forgot one thing, and that is that they permitted a natural person to represent one little stick, but when you bind tens of thousands of sticks into one concrete bundle, animated by one thought, all of them, for the common good and upbuilding of that collective lot of sticks or citizens you have produced a tremendous power in that bundle of sticks to depress and destroy the opportunities of the natural person, as one little stick, in business affairs; and although we put the Sherman antitrust law in 1890 into effect, it has been very little influence to withstand the steady advance of the creation of corporations and the expulsion of the individual, the natural person, and the citizen from continuing a business in competition with the corporation.

Commencing in 1910, the Government gave to the people some idea of the strength of corporations, and for five years they continued, but they stopped it abruptly with the end of the fiscal year 1914, and we have only the statistics up to that time, as the work was stopped at that time. The statistics showed we had 316,909 corporations doing business upon that date, the end of the fiscal year 1914; that their share capital was \$64,071,000,000; that their bond and note indebtedness amounted to \$37,136,000,000, or a total of \$101,207,000,000.

Our organization thinks it is too bad that the Government deprived the citizens of this Nation of the right of knowledge of how these corporations were created and their affairs were published. We can only go by presumption as to what has grown since. We know, for instance, that in the year 1915 New York State granted more than 10,500 charters to corporations. We know that Maine, West Virginia, Delaware, South Dakota, and Arizona are the homes for creating large corporations to be paid up by the good will of the product of the corporation of the future. We conclude from what has been going on since the end of the fiscal year 1914 that the number of corporations has been largely increased; that its capital, including stocks, bonds, and notes, must amount to somewhere near \$120,000,000,000. We believe also that previous to the time when the war started that if the assets of the corporations were inventoried as the individual's cash capitalization must be when he goes before the credit department of the wholesale house, that its capitalization would not have inventoried more than \$50,000,000,000. We believe at the present time that if the capital assets of the corporations were so inventoried, under the rule which I have spoken of, that there might be a possible real value there, and we believe it is there, of about \$75,000,000,000, and it is on that basis that we plan.

We believe that to escape socialism and Bolshevism coming to this country, to satisfy labor absolutely in its demands, to settle this question of what capital is, the Government will be compelled—and it is only a question of time—to take over the corporations, simply because in the eight-hour law practically the court said, Chief Justice White making the statement, that they will have to be guided by the words the people have ratified in the Constitution, and if they are not there they have got to decide it upon their line of reason. This being the case, the absentee capitalist and the unionist working for corporations had less power to govern the corporation than the laws of the State in which the corporation was organized, or in interstate traffic than what the national law would demand; that practically the corporation to-day under that decision is a machinery of business and a public machinery of business, because in the last analysis the people as sovereigns meet at least one day in four years, a day in November, to indorse a past administration or to institute a new administration, and therefore the people, from that fact, become the sovereigns to rule. But not being as intelligent, all of them, as you wiser men are supposed to be, they simply vote as they have always voted, by parties, and they will have to learn by bitter experience that they must be a body to take care of the state, and not have it as it is in Germany, the state take care of the people.

Therefore, they will have to rectify this, and they will rectify it either by going, as I say, to Government ownership under the Hearst

plan or we are going to something else; and we wish to enunciate a plan whereby the Government shall issue a 4 per cent bond upon all of the prior lien security produced by the inventory which I have suggested, amounting to about \$75,000,000,000. I believe that the environment of the future, leaving the rich man to protect the wealth garnered from the past, the most precious part of our prosperity will be well satisfied, if he can keep that fortune so gained by himself and his forefathers, because it must be kept. It is the safest thing we can depend upon, the \$250,000,000,000 of supposed wealth which this Nation contains, but it must be reservoired not only to satisfy the pride of family, but held in its largeness for the public welfare and for all of the people and not a part of the people. I believe they would be willing to take this when the time comes, and probably soon, very soon. That releases the capitalism of the corporations absolutely and settles it once and for all. The Government becomes the only stockholder and is in the same position as the individual stockholder to-day. There is no change. There is no disruption of the corporations at all.

The people, to get beyond the present situation, which I do not need to tell you gentlemen about, will be glad to pay a profit on corporation products, which will absolutely return to the Government 10 per cent upon this stock valuation of \$75,000,000,000. You there have \$7,500,000,000 coming as an absolute certainty, because this will represent a Government monopoly, limited, of course, which therefore can not be rapacious. But the Government will have \$7,500,000,000 to pay 4 per cent, or \$3,000,000, to the owners of the issued bonds, and \$4,500,000,000 to turn into the Treasury for the people, and it answers the same as taxation. In other words, the individual, to hold a stock share of a corporation, would not be satisfied with less than 10 per cent, and the people would have to pay it anyway, under such a proposition, but if the people know that 6 per cent goes to relieve them of \$4,500,000,000 of taxation to support the National Government, it is my impression and belief, and the belief of my organization, that the people will be well contented to pay that \$4,500,000,000 into the Treasury of the United States.

The next proposition is the thought of Jefferson. Jefferson wrote a letter to the father of our fourth President in 1785 from France, in which he outlined the misery that existed in France six years before the revolution. It is an intense account of real misery. He advocated to the French, seeing so much vacant land owned by the wealthy, that that land should be given over to the landless, whereby through agriculture the people of France could live from the land. He advocated what he had done in the House of Burgesses on the 12th of October, 1776, when he introduced a bill in that house to repeal the law of primogeniture and entail, and destroyed aristocracy not only in Virginia, but in the entire Nation, and that date, the 12th of October, 1776, should never be forgotten by men who are to-day of equal sovereignty one day, at least, every four years. He advocated in France that the family fortune should be distributed to all of the heirs and not to the one heir alone; and then he advocated upon large fortunes that a geometric tax should be assessed in proportion as the fortune increased.

For the last 30 years or more it has been my lot to develop the mathematics of the thought of Jefferson, because we know but very

little about it. There are no books in existence except what Mr. Jefferson wrote, my own books, and the book *Fate and Folly*, by the Reverend Monseignor John S. Vaughn, bishop of London. You will find in the last pages of that I. W. W. book that he describes it very well in likening the distribution of wealth to all the people to the governor which James Watt invented almost 150 years ago to govern the steam entering a steam engine and which made steam possible for use as we know it to-day. I would like to have you read those three pages. I think you will enjoy it and understand the meaning of the geometric tax.

Now, the geometric tax, as I have developed it by mathematics, is simply the power of measurement of what each citizen owes to the Government because of the Government permitting each individual to go out into society to gather a profit and an income from society. That is all the geometric tax is. It is a yardstick, in a sense, and it affects every living citizen and person over 21 years of age.

I think you understand the history of the Federal Convention of 1787, when James Wilson added an amendment to the Madison draft that no State shall pass any law impairing the obligation of contracts. That represents the profit system in our Nation. You can not make profits unless you buy and sell, and there are no words except those in our laws, except they be inferior laws to the Constitution, which is a supreme law of the land.

If it is concluded by you gentlemen that the law of contracts absolutely forces every man to obey what those words mean, then every man must understand that the obligation of contracts in his affairs to gain an income or a profit becomes the center of gravity around which he must swing at least once a year. You people who have studied the tariff question will agree with me that we treat the public as average consumers, and if you do treat the public as average consumers, can you not see that to gain \$1,000 a year in income or profit, that man must encircle that center of gravity, the obligation of contracts, and swing as the law of nature demands around it, the same as all bodies in space or the earth around the sun. Nature demands that everything shall swing in circles.

The CHAIRMAN. Doctor, you have already had one-half an hour.

Mr. BATDORF. I ask the indulgence of the members of the committee to conclude. It will not take me very long.

The CHAIRMAN. All right; go ahead.

Mr. GARNER. Would you mind, Doctor, in the remaining part of your time, telling us just how we are to get this money?

Mr. BATDORF. I am trying to do it, but I am trying to reach your intelligence in an intelligent way.

Mr. GARNER. I realize it is pretty hard to do that with this committee.

Mr. BATDORF. It is the intelligence of your brain I am after and not your credulity.

Mr. GARNER. As I say, that is a pretty hard thing to do with this committee.

Mr. BATDORF. And I do not know of any other way, because there are no histories and no books upon this particular subject, and I am forced to educate you somewhat, if you will permit me, upon this subject. I hope I am not intrusive in the matter, but I feel it is—

Mr. MOORE (interposing). I hope you will continue to address yourself to the gentleman from Texas.

Mr. BARDORF. General protectionists? Well, I could have something to say upon that, but really, Congressmen, I think this is not a tariff proposition. I do not believe the tariff will be but a negligible thought in the future, and I do not see how in the world it can raise more than \$150,000,000 in the future, which is a negligible part of \$8,000,000,000. What you want is the big thing, and you want it quick, just as quick as you can get it. That is the obligation, as I see it, upon the backs of this committee and upon the minds of this committee.

Now, I must describe this geometric tax proposition in just as few words as possible, because you can understand it so much better. Can you not see that if that \$1,000 man has got to swing in a circle you have got to compare him with other men. I know you will permit me to mark on the blackboard a circle of 1-inch spread with the obligation of contracts in the center. The geometric tax has a tabulation in the arithmetical proposition as it rises, and we have thought for 30 years that that should go into the Constitution by amendment.

But Congress, by virtue of clauses 1 and 18 of section 8, Article I, supported by the relative clauses 10, 11, 12, 13, 14, 15, and 16, by the consent of the President can do exactly what Jefferson did in the purchase of the Louisiana territory and what Lincoln did in emancipating the slaves; and upon the conclusion of the Civil War, you will remember we added the Thirteenth Amendment, that neither slavery nor involuntary servitude should exist in the United States, so as to support what Lincoln did. If this man must swing on the outer rim of that representative circle in proportion to other circles, and he gains \$1,000 and the tabulation is in the Constitution, then this Government can go to that man and say to him, "To keep the average consumers within the circle from whom you have gained \$1,000, it having cost the Nation \$1 to give you that privilege, we want that dollar back at the end of the year as a tax."

In the same proportion, if a person should gain an environment which would give him a \$10,000 profit or income and in circling that obligation of contract as the center of gravity, he must go 10 times further out into society to collect the number of average consumers which will give him either for his work or by inheritance \$10,000, therefore he must take the spread of a 10-inch circle, and by mathematics we can prove that that 10-inch circle will hold exactly one hundred 1-inch circles, because you have squared the circle, and as the Government has paid them \$100 for the one hundred 1-inch circles to keep those people in harmony and free from anarchy, that \$10,000 man should pay a \$100 tax, if he is to be in the same proportion with another sovereign to make the law of the future who pays \$1 for the 1-inch circle, and the same thing would apply to one making \$100,000, the 100-inch circle having space within it to put ten thousand 1-inch circles, or 100 times the 100-inch circle of the \$10,000 man, and the Government can say to that person, "You have caused us an expense of \$10,000 and, therefore, your tax is \$10,000; and the \$500,000 man operating on the rim of a 500-inch spread circle having within it space to place two hundred and fifty thousand 1-inch circles will owe the Government \$250,000 at the end of the year.

Now, this tax, I will say briefly, will give to the Nation \$1,500,000,000, because all incomes above \$500,000 would operate under the Jefferson thought of decentralization to the heirs at law for the public welfare or must be placed in the Federal Treasury to pay the taxation for those who have produced that value, because the man owning \$10,000,000 or \$20,000,000 and receiving a dividend of half a million dollars naturally owes something to the community that produced that wealth by toil, and it can only be done by releasing the tax to those who toil in this Nation.

Now, there is just one more proposition, and that is the suggestion which I state there at the end of my amendments; and that is, if we conscript our young men and send them to the battle field not only to defend the integrity of this Nation but also to defend the wealth of the rich, especially if we are invaded, then it is perfectly just to anyone who gains a personal income above \$500,000 that the balance should go to the Federal Treasury for the defense of his property, the defense of his Nation, and for the support of the soldiers in the field.

That would give you two more billions of dollars, or \$8,000,000,000.

Now, Mr. Chairman, if you wish to limit me I will close and be ready to answer any questions you wish to put to me.

The CHAIRMAN. You have made a very interesting talk, and if you desire you can revise your remarks and elaborate your position; of course, as briefly as possible.

Mr. BATDORF. I thank you, sir, but I would rather give it in the concrete form I have.

Mr. MOORE. Mr. Batdorf, you do not agree with the gentleman who appeared here yesterday and to whom you listened very intently upon the proposition of destroying or confiscating all income beyond \$50,000?

Mr. BATDORF. I am absolutely opposed to that and have been fighting the gentleman in New York for more than 20 years.

Mr. MOORE. I gather from your remarks that you are also in favor of retention of inheritances; that you are not in favor of the destruction of inheritances?

Mr. BATDORF. I do not touch the inheritance tax, because the geometric tax will decentralize—

Mr. MOORE (interposing). I am not referring to the inheritance tax but to the general proposition of passing along estates from one generation to the other.

Mr. BATDORF. I believe this Nation was formed to give its citizens personal liberty to devise their property as they think wise and best. Although the law of primogeniture has been repealed, yet there is nothing in our laws that will not permit a parent to devise his whole wealth to the oldest son.

Mr. MOORE. Well, there is an agitation on now for the destruction of inheritances.

Mr. BATDORF. I am absolutely opposed to it.

Mr. MOORE. You are in favor of the passing of property from the father to the son?

Mr. BATDORF. I am in favor of leaving this Nation as the people of the past have created it, just where it exists to-day, and to put something in congressional statutory law, and after the war into the Con-

stitution, that will preserve the institutions of Americanism as they exist at this moment.

Mr. MOORE. I thought I understood you when you were making your address along that line. Now, you and Henry George do not quite agree as to the single tax?

Mr. BATDORF. Absolutely opposed. I belonged to the single-tax party until 1892, when I told Mr. George to his face that he was advocating socialism and that I was going to leave him, and I proved my case, and for that reason the gentleman here yesterday morning and myself are not very good friends.

Mr. MOORE. Is it your belief that the ultimate tendency of the single tax as advocated by Henry George and his followers is socialism?

Mr. BATDORF. Having studied socialism for 40 years, I know it is; that is, if you wish my personal opinion. Of course, that is a little dogmatic, I will admit.

Mr. HAWLEY. How much would an individual with a yearly income of \$1,500,000 pay yearly in taxes?

Mr. BATDORF. It would depend upon decentralization above \$500,000 to his heirs at law, but they in turn would pay taxation under the geometric tax, you understand; in other words, this proposition gives the right to the individual of earning incomes and profits. In other words, we respect the man with vision to create a better civilization. We respect the man that writes, you understand, the blue prints whereby labor can work from day to day.

Mr. RAINEY. Is your geometric tax based upon the proposition that the larger the income the larger the tax ought to be?

Mr. BATDORF. It is based on the exact proportion he should pay. We do not want to be unjust to any person, but we are all of equal sovereignty in this Nation, and we should force everybody to support this Nation in the same proportion. In other words, the population increases geometrically, wealth increases geometrically, expenses increase geometrically—everything increases geometrically except taxation. You have left it out because the wiser brain desires to be arithmetical for his own support.

Mr. RAINEY. Your proposition is exactly the method which is now in force, except you propose what you consider a regular manner of measuring taxes?

Mr. BATDORF. I advocate a scientific yardstick to measure people for the causes they create that concerns the Government in its expenses. If the Government pays out the expenses for any man, surely, if we can prove he has cost the Government so much, he ought to pay it—that is, the individual himself—and not throw it upon the backs of other persons indirectly.

Mr. RAINEY. Yes; I agree with you, and that is what we are doing in this bill, except we are not doing it exactly, perhaps, according to your method of measuring it.

Mr. BATDORF. I do not desire to tell this committee what they must do. I only say this: I can not conceive of any proportionate taxation upon all of the citizens of this Nation except by the thought of Jefferson. To my mind it would be impossible in any other form of taxation. You are bound to depress one class of society and raise

another class of society. It is just like two buckets of water, if they are connected together; if you depress one the other is bound to rise.

Mr. GARNER. Doctor, there is one portion of your statement that made me think probably you were a little partial. You spoke about the citizen being a sovereign who meets and expresses his will every four years. You know we have got to be elected every two years, and I do not believe you fully appreciate the fact that we are only here for two years.

Mr. BATDORF. Pardon me, you are subsidiary to the Government, simply because the execution of government is to elect a President as the prime and therefore you are the affinities to the prime.

Mr. GARNER. I knew we were not very high but I did not know that we were subsidiaries.

Mr. BATDORF. You are not full fledged now and you ought to rise higher than you are.

Mr. MOORE. Do you mean subsidiary to the Government or subsidiary to the administration?

Mr. BATDORF. To the administration. Nature demands that man shall go out and work so as to obtain the dollars from society for his production and he will hold it in conservation, and then by decentralization distribute it to his affinities, where he ought to. The affinities never being taken from the same society, will return to society what another man has taken from society, and then when they do that you are fertilizing society for reproduction. The present system is drawing all from society you possibly can and giving it to concentration, the concentration of business enterprises, the concentration of wealth, and therefore you are impoverishing society all the time and do not know it.

Mr. MOORE. You still adhere to your statement to Mr. Garner that he and others are subsidiary to the administration, do you?

Mr. BATDORF. Why, surely, sir. The President has the veto power. No matter what the gentleman does, if the President does not like it, he slaps his veto on it and his legislation is no good; and no matter what law he may propose, if it goes to the Supreme Court and the court says it is unconstitutional, your work is as if it had not been done at all.

Mr. MOORE. That is what I wanted to get at, because if all that is true why not present this plan for a geometric tax to the President?

Mr. BATDORF. I would prefer to present it, if you will pardon the word, to his servants, the committee of the Congress, because they will have to present it to him.

Mr. MOORE. I thought perhaps you would rather go to the principal than to the subsidiary.

Mr. BATDORF. No; I think his hands are full, and I think a patriotic gentleman who does not want to take up time unnecessarily of other patriotic men should not impose their personal likes or dislikes upon a man.

Mr. MOORE. You know you introduced these pleasantries yourself, Doctor.

Mr. BATDORF. Well, I could not help it. I had no other answer that would be applicable.

The CHAIRMAN. Well, you made him a good one, Doctor, and we are mighty glad to have heard you, sir.

STATEMENT OF MR. S. T. PIRIE, OF CARSON, PIRIE, SCOTT & CO.,  
CHICAGO, ILL.

The CHAIRMAN. Mr. Pirie, give your full name and address and the business you are in and whom you represent.

Mr. PIRIE. Samuel T. Pirie; member of the firm of Carson, Pirie, Scott & Co., Chicago.

The CHAIRMAN. In what business are they engaged?

Mr. PIRIE. General dry goods, wholesale and retail.

The CHAIRMAN. It is a copartnership, is it?

Mr. PIRIE. Yes, sir.

The CHAIRMAN. You are a member of the firm?

Mr. PIRIE. I am here to represent no one except my own firm, and I am a member of the firm. I am here for only one purpose, gentlemen, and that is to try to emphasize the inequality in the present law with regard to the taxation of partnerships compared with corporations. All partnerships seem to have to pay far more taxes than corporations when they are running a business of any size that is at all successful; a business that needs for its own uses the money that it makes; a business such as ours, where we want to leave the money in the business in order to make it successful and strong.

And, if you like, in a larger way the business of the whole country to be kept successful and strong must allow enough money left in it of its profits to insure its endurance. We make a habit, and it is a necessary habit, of drawing out only the amount of money we need to live on, leaving the rest of the money in the business for the purposes of the business, because it requires it. That is very easy to prove, and it is with regard to the income taxes and undistributed profits that I want to call your attention. The reason we have to pay so much taxes is because the profits are undistributed, not drawn out, and we pay on them just the same as if they were drawn out, whereas if we were a corporation we would pay only on what we drew out or only on what is paid out in dividends. Now, the undistributed profits are taxed the same as if they were drawn out. Do not misunderstand me, gentlemen. I am not here to complain for one moment about the amount we pay or the amount any firm pays. I am referring to the inequality between firms and corporations.

Mr. MOORE. Will you give the two cases in parallel columns?

Mr. PIRIE. I will.

Mr. MOORE. And state just exactly how it affects one concern and how it affects the other concern.

Mr. PIRIE. I am coming to that in just a moment. I just want to make it clear that I have no complaint to make about the amount. I wish we could pay more. I wish we could make more and pay more. There is no complaint about that. I know we have to pay it for the support of the war, and if it is going to be increased and has got to be increased, we are glad it is going to get attention just now.

The CHAIRMAN. Mr. Pirie, I believe I can save you time and the time of the committee, too. Your proposition is right. The committee has had that under consideration for several months, and we are going to work it out so as to eliminate that inequality.

Mr. PIRIE. That is all I ask, because I want to give you my reasons. I do not believe—

Mr. RAINEY. Will you furnish for confidential use of the committee these figures?

Mr. PIRIE. Yes. You have them, Mr. Rainey.

Mr. RAINEY. You brought that to my attention immediately after this law went into effect, and I am sure I sent the letter to the chairman of the committee, and the matter was figured out then, and undoubtedly there is an inequality as to partnership arrangements.

Mr. PIRIE. There is no doubt about it, sir.

Mr. RAINEY. And, speaking for myself, I know that I would be in favor of writing into the law what you have outlined in justice to partnerships.

The CHAIRMAN. If you will recall, I mentioned that I felt it was unjust as between partnerships and corporations when I presented the first bill. There is no doubt in the world but what the committee will agree on that.

Mr. PIRIE. It is very clear, and that is really all that anybody would ask. One reason I am here is because I do not believe you gentlemen ever intended any such inequality, but it merely worked out that way. And also I feel it necessary to appear here because I do not believe it is the intention of you gentlemen or the law-making power of this country to drive the business into corporate status.

The CHAIRMAN. The other gentlemen on the other end of the Capitol had something to do with this act.

Mr. PIRIE. Yes. I do not believe you want to drive all partnerships into corporate form. We have a remedy. We could incorporate, but we do not want to.

The CHAIRMAN. Let me suggest this to you: You have not time to think of it now, but you write us a letter about partnerships and corporations from the standpoint of excess-profits tax and income tax.

Mr. PIRIE. Just one moment. I have not a word to say about the excess-profits tax. It is a little bit different, but so little different—

The CHAIRMAN (interposing). But the only thing is that it has your opposition—that is, it makes the inequality by compelling partners to pay income taxes and surtaxes; in your case on undistributed surplus.

Mr. PIRIE. Undistributed surplus and profits.

The CHAIRMAN. And corporations are permitted to carry a surplus and not pay on that at all?

Mr. PIRIE. That is it.

The CHAIRMAN. And the stockholders do not pay?

Mr. PIRIE. Absolutely.

The CHAIRMAN. Another thing. There has been some doubt—I think the present party has held with you gentlemen that in a partnership the partners can not charge salaries, while corporations can. They have held that you can do it, but I doubt under the law if you could.

Mr. PIRIE. They have figured including salaries.

The CHAIRMAN. They are considering that. I do not want to take any more of your time. Don't take ours if the court is with you.

Mr. PIRIE. I am very glad not to take any more of your time.

Mr. MOORE. I would like to say here, merely for the purpose of the record, in view of what Mr. Kitchin, Mr. Garner, and Mr. Rainey have said about partnerships, that this subject has had the careful attention of Mr. Green and Mr. Longworth. I say this because many of these suggestions do not originate with the committee.

Mr. PIRIE. I have already seen that a member of the committee has these figures, and I do not think there is any more to write, unless you care to have me write it further.

Mr. RAINEY. I have already called the figures to the committee's attention.

Mr. PIRIE. It is not necessary to do any more.

Mr. RAINEY. It is not necessary for you to put it in the record at all.

Mr. FAIRCHILD. In New York State we have a large corporation tax. I know of some big corporations in New York State that were acting as corporations up to the imposition of this tax, when they went into partnerships. How could that be? Why would it be to their advantage to do that? Take the firm of Endicott, Johnson & Co., I think the largest shoe manufacturing concern in the world. They were a corporation. After New York State enacted that law providing for a heavy corporation tax, it became a copartnership.

Mr. PIRIE. I can not imagine what their reason was for going into the form of a copartnership, unless the conditions of their business were greatly different from ours. If they wanted to pay out a little more to the members of their firm it may be different. But if it was a successful business and needed more money all the time and the money should be left in, I can not see any reason why they should do that.

Mr. FAIRCHILD. You will find on investigation that quite a number of large concerns have done that—gave up their partnership arrangement for doing business and became a corporation for the purpose, as I understood, of evading or preventing the payment of such large taxes.

Mr. PIRIE. I can not imagine why it would be unless the nature of the business and the amount of money they had in the business and the requirements of it would necessarily be very much different from any business that would be increasing and going along successfully.

Mr. FAIRCHILD. You say your concern conserves your business by retaining all of your earnings except what is needed for the maintenance of the members of the firm?

Mr. PIRIE. Absolutely; that is the way to make the industries in the country strong.

Mr. FAIRCHILD. But suppose some firm pays out all of the profits, and does not conserve its interests or does not expand as your great concern has expanded, would not that make a difference in the application of this law?

Mr. PIRIE. It would not make any difference in the amount of taxes that they pay at all, because no man could find fault if the amount of money he made was paid out to him.

Mr. FAIRCHILD. Would not the question as to the taxes imposed by New York State upon corporations make a difference?

Mr. PIRIE. It would make just that difference—whatever difference there was between the States.

Mr. FAIRCHILD. Would it not make a deficient difference to equalize the situation that you present?

Mr. PIRIE. Oh, I think not; because the corporation tax is very much less than any surtax that is imposed on these undistributed profits. That is what runs into very large figures, you understand.

Mr. FAIRCHILD. I am asking purely out of curiosity, in view of the statements you have made to the committee.

Mr. PIRIE. Yes; but your questions are on corporations, and so vary according to the State in which incorporated, and I am not very familiar with these matters of the difference between the corporate existence in the different States, and it does not concern us at all, you see.

I would not for a moment attempt to say to you gentlemen what the proper remedy is. I would simply say that we would like in some way to be put on the same basis as the corporations.

Mr. STERLING. Mr. Pirie, I presume you understand we are not likely to be able to give corporations any relief; that is, in the way of reducing taxes. We will probably have to increase the tax on corporations.

Mr. PIRIE. We do not care how much; merely make it equal.

Mr. LONGWORTH. That is very fine. Would you suggest now what we shall do to corporations to bring them up so that they will be on the same plane with partnerships?

Mr. PIRIE. I could not right in a moment suggest that, but one thought does occur to me: If you would make it on the same basis as the copartnerships were now that would be easy; we would have no further fault to find. But you would have to decide yourselves whether or not the country could stand it.

Mr. LONGWORTH. Would not the simplest thing to do be to provide that that portion of the income which goes back into the business should be liable to the surtax?

Mr. PIRIE. I have not heard that before, but it strikes me as being very sensible.

Mr. LONGWORTH. And then they would be exactly on the same basis as the corporations.

Mr. STERLING. It would reduce the revenues by doing that. We can not reduce the revenues; we have to increase them.

Mr. PIRIE. I do not want the revenues reduced; I want them increased.

Mr. STERLING. Would not the suggestion Mr. Longworth made reduce the amount of money the Treasury would get?

Mr. PIRIE. Make everybody pay more and do that at the same time.

Mr. STERLING. That was my idea and that is what made me ask the question.

Mr. WHITE. Were you in the room yesterday when a business man appeared here?

Mr. PIRIE. No, sir.

Mr. WHITE. He suggested a flat 40 per cent or 30 per cent on the net income of all business.

Mr. PIRIE. Putting corporations and copartnerships on the same basis?

Mr. WHITE. Yes.

Mr. PIRIE. If that is the concensus of opinion, we would have not the slightest bit of fault to find. All we want is equality with corporations.

Mr. GARNER. You are not suggesting any rates?

Mr. PIRIE. I do not find any fault with rates.

Mr. GARNER. You merely want to be put on an equality with every other taxpayer?

Mr. PIRIE. That is all; and we want to give you all the money we make, because we know we have to pay for the war.

The CHAIRMAN. Say a corporation has got \$1,000,000 capital, and a partnership right across the street has got \$1,000,000 capital, and has got the same number of partners as the corporation has got stockholders, has the same profits, they compete with each other. You want to be on terms of equality?

Mr. PIRIE. That is everything I ask.

The CHAIRMAN. You do not want to be favored over them and you do not want them to be favored over you?

Mr. PIRIE. We have not got a bit of fault to find, and would just as lief, if you gentlemen think it would not break the income of the country, have the corporations brought up to our basis as to have ourselves brought down to the basis of the corporation, every bit.

The CHAIRMAN. The committee will now be pleased to hear Mr. Gadsden.

**STATEMENT OF MR. PHILIP H. GADSDEN, CHAIRMAN NATIONAL COMMITTEE ON PUBLIC UTILITY CONDITIONS, WASHINGTON, D. C.**

The CHAIRMAN. Please give your name and address.

Mr. GADSDEN. Philip H. Gadsden, Charleston, S. C.

The CHAIRMAN. And whom do you represent.

Mr. GADSDEN. I am chairman of the National Committee on Public Utility Conditions, representing all of the electric railway, electric light and power companies and gas companies in the United States. This committee has been formally and officially organized by the three national public utility associations—the American Electric Railway Association, the National Electric Light Association, and the American Gas Association.

Mr. MOORE. Pardon me. Your home is where?

Mr. GADSDEN. Charleston, S. C.

The CHAIRMAN. Your headquarters are in Washington since the organization of the committee you speak of?

Mr. GADSDEN. The committee have an office in the Munsey Building, here in Washington. The other two members of the committee are Mr. E. K. Hall, of New York, and Mr. H. H. Crowell, of Grand Rapids, Mich.

We are here, Mr. Chairman and gentlemen, to bring to your attention in the time that is given to us, the picture of the public utility conditions in this country, with a view of urging upon your serious consideration the putting of public utilities in a special class for the purpose of Federal taxation. In other words, to segregate them so that their peculiar problems, the serious conditions under which they are now operating, brought about by conditions over which they have

no control, may have a proper bearing when you come to consider the burdens that should be placed upon them by way of taxation.

As a matter of fact, as we all know, railway, gas, and electric companies are now segregated into a special class for every purpose, except that of taxation. They are kept apart in a class for regulation of their revenue, unlike any other class of business in this country. They have no control over the price of their products. The street railway fare is fixed automatically at 5 cents; the price per kilowatt, the price per thousand feet is regulated by commissions or municipal council. So that so far as their revenues, so far as their earning capacity is concerned, they have been, almost since their origin, segregated into a special class.

So far as their operating expenses are concerned they are also segregated. The ordinary business man has within his control, to a very large extent, the scope of his operations and his functions. In times of depression, times like these, he has the option of reducing his activities, cutting off here and there, cutting down his expenses of operation to meet increased taxes. So, likewise, the individual, to a certain extent, has it within his power to cut down to some extent, at least, his household, personal, and domestic expenses to meet the demands of the war. On the contrary, the companies that we represent, the class of industry which we represent, not only can not fix their selling price, not only can not adjust their revenues to meet increased operating expenses or increased taxation, but they can not curtail the facilities which they are called upon to render to the public. As a matter of fact, on the contrary, in times like these, when the expenses of their operations have increased enormously, when the cost of coal which they are consuming has gone up from \$1 a ton to \$3, \$4, and \$5 a ton, there comes a demand on the part of the public for greatly increased facilities on their part; there comes a demand for additional car facilities; there comes a demand for extraordinary increases of output on our central electric stations and gas plants.

No better illustration can be had of the fact that I am now referring to than exists in the gas business. Owing to the shortage and high price of domestic coal and the extreme rigor of the winter, extraordinary demands were made upon the gas companies all through the United States for heating purposes. People who had never used gas before in their lives in the winter for heating resorted to the gas companies to be kept warm, thereby developing upon the gas companies demands for excessive outputs and extraordinary increases in the consumption of coal, yet the gas companies were expected to and did sell their product at a price fixed when the price of coal was normal.

Mr. LONGWORTH. Mr. Gadsden, are you familiar with the recent holding of the War Finance Corporation that public utilities are not included in section 1?

Mr. GADSDEN. I am painfully familiar with it.

Mr. LONGWORTH. I have not been able to find out just what that holding was or what the reasons given for it were. Will you state briefly as to that?

Mr. GADSDEN. Mr. Longworth, I know what the holding is, but, as I understand the statements of the War Finance Corporation, it

was predicated upon the construction of the act placed upon it by their counsel.

Mr. LONGWORTH. I will state that it was the intention to include the public utilities—

Mr. GADSDEN. So I understood.

Mr. LONGWORTH (continuing). And it was specifically stated by high authority that they were specifically included in the bill as it passed the House. Just how did they come to reverse that?

Mr. GADSDEN. I do not know. It was a very great disappointment to us. I want to come to that a little later when I take up that phase of this question.

Mr. LONGWORTH. When you do that let me recall that Secretary McAdoo stated emphatically before the Ways and Means Committee that public utilities were included within the scope of the War Finance Corporation. For instance, I asked him specifically the question whether the street railway hauling a man to a munition factory was not doing war work and therefore specifically included.

Mr. GADSDEN. I remember hearing you ask that question during the hearing.

Mr. STERLING. I think the committee did put it expressly in the bill and the Secretary of the Treasury, as I remember it, gave his assurance that his construction would be that it included them without expressly stating it.

The CHAIRMAN. The Senate committee put it in.

Mr. LONGWORTH. The Senate committee put the words in.

The CHAIRMAN. With the understanding that it included electric light and any other industry that was necessarily contributory to prosecuting the war.

Mr. GADSDEN. There are two phases of this public-utility question which always should be carried in your minds—the one I have just been addressing myself to, and that is the question of decreased net revenue; the other is the necessity for some method of financing existing obligations. Without the revenue the second can not be complied with. Therefore, we feel constrained to come before the committee to-day to urge that careful and serious consideration be given by this committee to putting us in a class by ourselves for the purpose of taxation. We are not attempting to suggest any particular rates, but put us where we may be segregated for taxation just as we have been segregated for everything else. So that when you come to that paragraph of your bill you can consider the burdens to be imposed upon this industry in the light of existing conditions.

Gentlemen, let me give you in a very succinct way, if I can, just what the situation is: I have here tabulated statements showing the gross revenues of a large number of public utilities—railway, gas, and electric—for the first three months of 1917, as compared with the first three months of 1918. I have another statement giving the same figures for the electric industries alone, and I wish to call your attention to these and include them in my remarks.

Here is a statement of the income account of 103 electric railways for the three months ended March 31, 1918, compared with the three months ended March 31, 1917: The total operating revenues in 1917 were \$60,456,000—I will only read the round numbers, Mr. Chairman.

In 1918 they were \$61,734,000, or an increase in gross revenue of \$1,278,000, or 2.1 per cent increase in gross.

The total operating expenses for three months in 1917 were \$39,619,000; for 1918, \$43,799,000, an increase in operating expenses of \$4,180,000, an increase in percentage of 10.6 per cent.

The net operating revenue showed a decrease of \$2,900,000, or 13.9 per cent.

The taxes showed an increase of 8.7 per cent during this same period.

The nonoperating income—that is, revenue derived from other sources than street car fares—showed a falling off of 18.9.

The net income for 1917 was \$5,527,000; the net income for the same period in 1918 was \$2,228,000.

Mr. GARNER. Is that all the street railways of the United States?

Mr. GADSDEN. No, sir; it is 103.

Mr. GARNER. You have selected 103 on which to base these figures?

Mr. GADSDEN. We sent them all out, and these are all we got in. I want permission to file a complete statement.

Mr. GARNER. That includes all that have been returned?

Mr. GADSDEN. That includes all that have been returned indiscriminately.

Mr. STERLING. For the first three months?

Mr. GADSDEN. For the first three months.

The CHAIRMAN. You will furnish a statement covering all the roads?

Mr. GADSDEN. We will furnish a complete list. The net income showed the falling off in 1917 was \$5,500,000, which in 1918 was \$2,228,000, a falling off of \$3,298,000, or 59.7 per cent.

The CHAIRMAN. In addition to that?

Mr. O'SHAUNESSY. That was mostly passenger fares, of course?

Mr. GADSDEN. Street railway fares; yes.

Mr. O'SHAUNESSY. Would not there be the same number of people carried?

Mr. GADSDEN. There were a great many more people carried.

Mr. O'SHAUNESSY. And less money?

Mr. GADSDEN. The gross income increased \$1,278,000. We did more business, the net result was 59 per cent less.

Mr. MOORE. Would not a great deal of that depend upon the location of the companies? If they were in the interior they may not have done the increased business, but if they were located on the seacoast, around the cities where war munitions are being manufactured, they may have done more business?

Mr. GADSDEN. They may have done more business and showed the same result in net. We will furnish you that, if you will just for the moment, for the purpose of this hearing, accept my statement subject to verification. The more business we are doing the more money we are losing, for the reason that we are selling our product at a unit of cost less than cost of production; and therefore the more business you do—

Mr. MOORE. In what items have there been increases?

Mr. GADSDEN. Increased wages, increase in cost of coal, car material—that is, electric railways.

Our committee sent out a questionnaire in November—

Mr. STERLING (interposing). In your preparation of those statements, did you compute the taxes paid the year before and the taxes you paid this year?

Mr. GADSDEN. Yes; I have the figures.

Mr. STERLING. You did not pay the taxes the first three months of this year?

Mr. GADSDEN. No; but they are charged up on our books.

Mr. STERLING. What is the difference in the amount of taxes?

Mr. GADSDEN. The taxes for 1917 were \$4,200,000, and for 1918, \$4,600,000, an increase of \$370,000.

Mr. STERLING. That does not account for the increase occasioned by the law passed last year.

Mr. GADSDEN. These are all taxes, not only Federal, but increases of all taxes, local, State—all kinds of taxes.

(The statement above referred to by Mr. Gadsden is here printed in full as follows:)

*Income account of 103 electric railways for the three months ended Mar. 31, 1918, compared with the three months ended Mar. 31, 1917.*

Item.	Three months ended March 31—		Increase or decrease 1918 over 1917.	
	1918	1917	Amount.	Per cent.
Total operating revenues.....	\$61,734,670	\$60,456,333	\$1,278,337	2.1
Total operating expenses.....	43,799,663	39,619,302	4,180,361	10.6
Net operating revenue.....	17,935,007	20,837,031	12,902,024	113.9
Net revenue from auxiliary operations.....	2,508,086	2,271,199	236,887	10.4
Taxes.....	4,637,648	4,267,641	370,007	8.7
Nonoperating income.....	1,136,499	956,071	180,428	18.9
Gross income.....	16,941,947	19,796,660	12,854,713	114.4
Deductions from gross income.....	14,713,512	14,269,320	444,192	3.1
Net income.....	2,228,435	5,527,340	13,298,905	159.7

<sup>1</sup> Decrease.

In the latter part of 1917 our committee sent out a questionnaire to some 300 companies—railway, gas, and electric—all through the United States, to get their operating expenses for 1917 as compared with 1916. Those results were filed by us in the shape of a brief with the Treasury Department during the negotiations leading up to the introduction of the War Finance Corporation bill. They were included in a hearing that we had before the Senate Finance Committee and were available at the time for this committee.

Since that time we have sent out another questionnaire covering the first three months of 1917 and 1918, for all companies—gas, electric, and street railways.

Those answers are coming in, and we have gotten up to this time results from 252 of those companies. We sent out some 350 and these are the results. Now, gentlemen, this is the composite picture. I gave you heretofore only the electric railways; this is gas, railway, and electric. The gross revenue increased \$7,320,000; the operating expenses increased \$11,226,000; the gross operating income decreased \$3,577,000; the operating ratio increased practically 7 per cent. The operating ratios for these public utilities is continually increasing. Reports from 316 companies with an annual gross revenue in excess of \$300,000,000 show operating ratios as follows: In 1915, 61.26 per

cent; in 1916, 62.58 per cent; in 1917, 68.34 per cent; the last three months of 1917, 69.61 per cent; and for the 252 companies which have reported, the operating ratio for the first three months was 73.17 per cent. You can see by the progressive tendency that the cost of operation is simply eating up these profits.

We started in 1917 with an operating ratio of 61.2 per cent. An operating ratio of 60 per cent is considered good operating. So that that was very nearly to normal. It has now gotten for the first three months of this year to 73.17 per cent, and is still increasing. The next three months' statement we bring in will probably show 75 or 76 per cent cost of operating.

(The statement referred to above is here printed in full, as follows:)

Comparing the operating results of 252 companies for the first quarter of 1917 with the first quarter of 1918, we find:

Gross revenues increased.....	\$7, 320, 295
Operating expenses increased.....	11, 228, 508
Gross operating income decreased.....	3, 577, 696
Operating ratio increased practically 7 per cent.	

The operating ratios for these public utilities is continually increasing. Reports from 316 companies, with an annual gross revenue in excess of \$300,000,000, show operating ratios as follows:

	Per cent.
1915.....	61. 26
1916.....	62. 58
1917.....	68. 34
Last 3 months of 1917.....	69. 61
And for 252 companies: First 3 months of 1918.....	73. 17

The foregoing figures show conclusively the trend of operations of gas, electric, and street and interurban public utilities.

Bearing those figures in mind, here is the financial situation in detail: They have maturing in 1918 something over \$225,000,000 of securities. They have in the banks of this country in short-time paper, representing extensions and betterments to their plants which they contemplated would be funded into long-term securities, over \$300,000,000. They have maturing in 1918 something like \$260,000,000 of securities. There has already matured or will mature by the 1st of July approximately \$100,000,000 of these securities, unfunded and unprovided for securities, gentlemen, which were paying regularly the interest charges up to this time. That revenue which was paid out by us to bondholders or to stockholders, and found its way into the hands of the individual and responded to this tax, has gone. Of about 11 billions of securities of these industries, we estimated that at least 6 billions were interest and dividend paying securities. The situation which we present here shows very clearly that if this tendency can not be stopped, these securities will have no value so far as revenue producers is concerned. In other words, that the holders of them will not receive these returns, and therefore will not be in a position to that extent to respond to any tax that may be levied.

Mr. LONGWORTH. Have you any estimate of the falling off of the market value of those securities?

Mr. GARDEN. In that same brief I have referred to we filed a statement showing the shrinkage in values of 17 standard companies, which were listed on the New York Stock Exchange "questionable pay," and the shrinkage was 53 per cent at that time.

Mr. LONGWORTH. Covering how long a period?

Mr. GADSDEN. In a five-year period, and the steam railroad shrinkage at the same time was 52 on exactly the same parity. We have not brought that statement up to date, but we know, of course, that the shrinkage has been very much greater. One of our committee connected with one of the largest companies in this country out in the Middle West, which had been regularly paying dividends on its preferred stock every year since 1910 and dividends on its common stock has passed them both.

Mr. FAIRCHILD. Would it not be well for you to discriminate as between the electric light companies and gas companies and the street railways? Do you think they are all in the same class?

Mr. GADSDEN. They are practically all in the same class. On the question of decrease the railways are the worst, and the gas companies come next.

Mr. FAIRCHILD. The gas companies and electric light companies can, however, vary sometimes their prices to consumers, and the street railway companies as a rule have a fixed price of 5 cents a passenger. My information is, and I have made a study of the situation, that many street railway corporations of the United States are on the threshold of bankruptcy.

Mr. GADSDEN. There is no question about that.

Mr. FAIRCHILD. And the question is a very serious one. The question, however, is whether the same principle applies with equal force to the gas companies and to the electric lighting companies.

Mr. GADSDEN. I can answer you that—that it is merely a matter of degree, that the lowest in the scale is admittedly the electric railway industry. That industry, gentlemen, unless something is done to protect it, as you say, is on the brink of bankruptcy.

Mr. RAINEY. In its last analysis the situation is this: You are confronted with this situation, you have got to pay more for everything you buy and use in your achievements, that the State will not permit you to increase the price of what you have to sell; that you have 200 millions or 300 millions of indebtedness accruing right now which must be met this summer; that the sale of United States bonds has so affected the money market that you can not borrow in the ordinary way in order to meet those maturing obligations, and the War Finance Corporation has said that they can not furnish you under the act any relief. In view of that situation is not the only remedy you have this: A moratorium as to maturing indebtedness and permission on the part of the States to increase your charges?

Mr. GADSDEN. Mr. Rainey, we do not think so. And I ask you gentlemen to give careful consideration to our views on this question of a moratorium. We believe, gentlemen, that that would be the last straw to destroy the industry.

We have given this thing, naturally, the most serious consideration. A general moratorium for all securities in the market is one thing, and a special moratorium involves discriminating and causes people to think that public utility securities are worthless; that the gas, electric, and railway companies cannot meet their obligations; in our mind that would mean death, not only now but hereafter. It would permanently impress upon the securities of public utilities the fact that when a great crisis of national emergency had arisen they had broken down.

Mr. RAINNEY. Would not that be better than receivers, since receivers seem to be inevitable?

Mr. GADSDEN. We do not think so, because all of us will not go into the hands of receivers. Some of them, and a great many of them, will. But there would be that impression left upon the public mind and the minds of investment bankers for 10 years that "You'd better not touch that class of securities."

Mr. O'SHAUNESSY. To what extent have these public-service corporations, principally electric lines, endeavored to increase fares?

Mr. GADSDEN. I would like to tell the committee what we are doing about that. Our committee has divided up the United States into regions. We have eight districts, comprising States in which there are public-service commissions. We have a regional committee composed not of lawyers but of operating men, the executives responsible for the financial results of these properties. In addition to that, in all noncommission States we have a committee of three. The duty of those committees is to bring to the attention of the public-service commissions, of State councils of national defense, and chambers of commerce this picture as I am trying to disclose to your committee.

Mr. O'SHAUNESSY. You are here very likely because of the slowness of that method?

Mr. GADSDEN. Undoubtedly.

Mr. O'SHAUNESSY. And it was news to me what Mr. Longworth said about the War Finance Corporation. I did not know they had excluded you.

Mr. LONGWORTH. I wish you would explain just what happened. You made a formal application to the War Finance Corporation for a loan to help finance these securities. What was the result?

Mr. O'SHAUNESSY. When was that?

Mr. GADSDEN. Within the last 10 days or 2 weeks. Quite a number of applications were made. As a matter of fact, our information is that something in the neighborhood of 200 applications have been filed by public utilities.

Mr. LONGWORTH. I have been unable to find that ruling. Did they make a formal ruling?

Mr. GADSDEN. They issued a public statement.

Mr. LONGWORTH. I have only seen part of it in the newspapers.

Mr. GADSDEN. I will insert it in my statement at this point.

(The statement of the War Finance Corporation referred to is here printed in full, as follows:)

The War Finance Corporation to-day authorized the following statement:

In view of the applications for direct advances which have been filed with the War Finance Corporation, the directors wish to point out that an erroneous impression seems to exist in certain quarters that the corporation is intended primarily to make direct advances to borrowers under the "exceptional cases" clause of the act. This, however, is not the purpose of the act, which was designed primarily to enable credit to be extended by the War Finance Corporation through the banks of the country to "war industries"—that is, to those industries whose operations are necessary or contributory to the war. In other words, the resources of the War Finance Corporation are not intended to be loaned directly to war industries unless in an exceptional case, but only indirectly through the banks. As the Secretary of the Treasury stated before the committees of Congress when the bill was under consideration, "the provisions of the bill permitting direct loans by the corporation, in exceptional cases, is intended to provide for those rare instances where it may be made to appear to the corporation that a meritorious borrower is being unwisely discriminated against by the banks." In the progress of the bill through

Congress advances under the exceptional cases clause were further restricted both as to security and as to the amount which could be advanced—thus indicating the intention of Congress that in order to obtain an advance under this clause the borrower must show some exceptional circumstances clearly entitling him to relief.

In no circumstances was it the intention that the War Finance Corporation should make loans except upon adequate security.

It is expected that the greatest usefulness of the War Finance Corporation will be found in its operations through the banks. As the Secretary of the Treasury stated before the Senate Finance Committee, the organization of the War Finance Corporation should be regarded "primarily as a measure to enable the banks \* \* \* to continue to furnish essential credits for war industries and enterprises which are necessary or contributory to the prosecution of the war. In Europe central banks, which correspond to our Federal reserve banks in a sense, are permitted to grant to banks and bankers loans upon stocks and bonds upon certain well-defined terms; but here the Federal reserve banks are not permitted to do that, the Federal reserve act having specifically contemplated advances of that character only upon what we call liquid or commercial paper, and therefore the Federal reserve banks are not permitted to rediscount any paper for their banks which is secured by fixed investments. The Federal reserve act does not provide for this, and the War Finance Corporation is designed as a war emergency to fill this gap."

The corporation was organized to provide an instrumentality to which the banks of the country could resort to obtain accommodation on advances made by them to war industries upon a character of security not available for rediscount at a Federal reserve bank. It is hoped that as need arises the banks of the country will avail themselves of the facilities thus afforded so that they may be amply able to extend credit to those industries of the country which are necessary or contributory to the prosecution of the war.

From the applications received by the War Finance Corporation there seems to be an impression in certain quarters that the corporation was specially designed to provide funds for meeting maturing obligations, particularly those of public-utility companies. The law expressly provides that the corporation shall not make direct advances to provide funds to meet such maturing obligations, except possibly in some rare cases which could clearly be brought within the "exceptional cases" clause. Of course, the corporation will stand ready to lend its assistance to banks and bankers in proper cases where they have themselves made advances to war industries, whether for the purpose of meeting maturing obligations or otherwise, and direct advances in deserving cases that come clearly within the provisions of the law.

Holders of maturing obligations, whether of public utilities or of other concerns which may find themselves unable because of temporary conditions to meet their commitments punctually, should consider whether in the public interest as well as their own they should not cooperate by consenting to reasonable renewals. Public-utility companies particularly, in cooperation with the communities in which they operate, should have the opportunity of adjusting themselves to the changed conditions brought about by the war.

No machinery has been specially provided for direct purchases of obligations of the public utilities, whether to meet maturities or otherwise, either through the War Finance Corporation or through any other governmental agency. The situation of those public-utility companies is therefore quite different from that of the railroads, where Congress has made specific provision for the purchase of their securities by the Government in certain exigencies; yet even the railroads are expected, wherever possible, to meet their own maturities and to pay what the money is worth to accomplish that end. It must be remembered that the railroads are under Federal operation, and their rates are subject to Federal control, and that the Government is therefore in a position to see to it that their charges shall be sufficient to meet the cost of the service rendered. In the case, however, of the public utilities, neither their operations nor their rates are subject to Federal control. Wherever the charges do not amount to adequate compensation for the services rendered, relief can be had only through the appropriate local authorities, and time is essential to enable the companies and the communities in which they operate to reach a satisfactory solution of this important problem. It is not a problem which can be disposed of by having the Federal Government, through the War Finance Corporation, assume the burden of financing the operations of these local companies, except in exceptional circumstances which make it a matter of national importance that advances should

be made. The local authorities will no doubt respond as promptly as possible in cases where relief is needed because of changed conditions, as it is clear that the soundness and efficiency of public utilities is intimately connected with a vigorous and successful prosecution of the war.

Mr. O'SHAUNESSY. At the same time, Mr. Gadsden, if you had been successful you would have been afforded temporary relief and you would have been borrowing money?

Mr. GADSDEN. We would have been borrowing money.

Mr. LONGWORTH. You can not borrow money at all at the banks?

Mr. GADSDEN. We can not borrow money at all at the banks.

Mr. LONGWORTH. And that was the form of relief?

Mr. GADSDEN. That is only temporary; that is not fundamental. We have got to get the earning capacity; we have got to show the equity before anybody is justified in making a loan.

Mr. LONGWORTH. Were you given any information as to applications made?

Mr. GADSDEN. Our committee was not given any information of that kind by the War Finance Corporation.

Mr. LONGWORTH. Your relations with them were such as one would expect that?

Mr. GADSDEN. Our relations are very cordial and very pleasant, but they have not thought it was advisable, perhaps, to tell us of our applications. We have seen a great many of the applications that men have filed.

Mr. LONGWORTH. I thought you represented the companies that made the applications.

Mr. GADSDEN. We are representing those industries. We are representing those industries generally. The individual companies, which would make applications, would come to our office and tell us what they proposed to do. Our information is that one hundred and ninety and add companies filed applications aggregating something like \$200,000,000.

Mr. LONGWORTH. Do you know whether or not they have made any loans at all?

Mr. GADSDEN. So far as I know the only loan was to the St. Louis Railway.

Mr. WHITE. I saw that in the paper—that they made a loan to the St. Louis Railway Corporation.

Mr. GADSDEN. They did.

Mr. MARTIN. Is that the St. Louis Electric Railway?

Mr. GADSDEN. Yes, sir.

Mr. WHITE. What relief can this committee give you? We recognize you are only subject to the normal corporation tax.

Mr. GADSDEN. The relief which you can give us, in my judgment, to put as in a special class so far as income tax is concerned. We are not interested in excess profits; we are not interested in surplus. But the net that you see here, gentlemen, is approaching the vanishing point. The point we wish to suggest for your consideration is that here is something you can do to help us: Is it not better to leave what little net there is there as a basis to help us get a credit for loans than to impose a heavy income tax upon us? For instance, the income tax now is 6 per cent. Doubtless it would probably be, for the sake of argument, 8 or 10 per cent. This time next year it may be 15 or 20 per cent. Here is something constructive. We are

going to every department and every branch of this Government to bring before them a great national problem. Next to the steam railroads, this is the greatest industry in this country. It represents over \$10,000,000,000 investment; its gross revenue is \$1,500,000,000, and it is going to ruin, gentlemen. Is it not worth while for the United States Government, for the people, to do what they can in the way of tax and say it is more to the real interest of the United States to preserve what little net is left to these companies as a basis for financing than to take it into the Treasury of the Government?

Mr. GARNER. How much investment did you say it represented?

Mr. GADSDEN. Over 10 billion dollars.

Mr. GARNER. What portion of that is money investment and what percentage is watered stock?

Mr. GADSDEN. I am speaking of money; I am not speaking of water.

Mr. GARNER. Do you mean to say all the stock issued for those railway companies was money actually invested?

Mr. GADSDEN. No, sir.

Mr. GARNER. Is that what you undertake to tell the committee?

Mr. GADSDEN. Not a bit; of course I would not.

Mr. GARNER. Are there not some of these corporations unable to pay dividends for the reason that they have watered their stock?

Mr. GADSDEN. Unquestionably.

Mr. GARNER. How are we going to reach that kind of companies? Are we going to exempt them from taxation also and are we going to put them on the same plane and level with the corporations that have issued honest stock for honest dollars and that are not making a living?

Mr. GADSDEN. Mr. Garner, I am not talking about paying dividends on stock or interest on bonds; I am talking about leaving some equity over operating expenses; that is all I am asking for. I say that the company with the watered stock is something that is all gone and is down to where we all are now, trying to keep their heads above operating expenses. And I submit to this committee if there is a few millions of dollars net left in this industry whether it is not wiser, whether it is not better for the United States Government to leave it there for us than to take it by way of taxation, because it is going to be all gone, gentlemen, before I come back here at your next sitting.

Mr. O'SHAUNESSY. Would it not cover the situation better if this proposition had come under the jurisdiction of the Director of Railroads and if they had been included in the railroad bill?

Mr. GADSDEN. We are very much inclined to think so now.

Mr. O'SHAUNESSY. Did you make any effort to be included at that time?

Mr. GADSDEN. No; we did not. I do not think we would have had a sympathetic reception, to be perfectly frank with you. We were not proposed to be considered at that time. We believed we could get these rates increased and our own salvation out and that it was better to try to help ourselves than to lie down. The situation is getting worse.

Mr. O'SHAUNESSY. Do you think now that would be the only effective way to meet this situation, for the Government to take you over?

Mr. GADSDEN. Certainly it would be the most effective way. Of course, there are a great many companies not in need of any such assistance. The electric-railway industry undoubtedly is.

Mr. O'SHAUNESSY. That is what I mean.

Mr. GADSDEN. There will have to be some drastic treatment.

Mr. FAIRCHILD. The railroads were drifting toward bankruptcy, and possibly would have gone further into bankruptcy, because there were a great many under receivers, if the Government had not come to their rescue?

Mr. GADSDEN. We are trailing the history of the steam railroads.

Mr. O'SHAUNESSY. If that is so, should not this situation be presented to Mr. McAdoo, the Director of Railroads, or the Committee on Interstate and Foreign Commerce, which could frame an amendment which would place electric railroad properties within the purview of that legislation?

Mr. GADSDEN. We doubt the propriety of our making such representations. It is well enough for us to come before a committee like this and discuss the subject, but we question whether it would put us in the proper light before the people of the country. We are attacking each phase of the problem as it comes up. Each committee has a problem for consideration, and we are appearing before some committee or tribunal and spending our days and months trying to bring this problem home to the people of the United States, because it has got to be handled, and handled in a serious, statesmanlike way. Otherwise this great industry is going by the board.

Mr. TREADWAY. Would you care to go into the detail of your statement that the street railway lines were not meeting operating expenses at the present time?

Mr. GADSDEN. That is unquestionably true.

Mr. TREADWAY. Is that true in the aggregate of all the organizations you represent, or is it true of each individual organization?

Mr. GADSDEN. In the electric railway industry, I am almost within bounds in saying it is true of every case. There may be one or two exceptional cases of electric railways, but, gentlemen, I do not know them at this moment.

Mr. STERLING. Your statement shows they had net earnings of \$2,000,000. So, some of them must be earning money.

Mr. GADSDEN. They are earning something. I do not understand the question, perhaps. They are earning something over operating expenses.

Mr. TREADWAY. I understood you to say they were not meeting operating expenses now.

Mr. GADSDEN. My statement shows they are. I evidently mis-guided you.

Mr. TREADWAY. I perhaps misunderstood you.

Mr. GADSDEN. I do not want to leave that impression with the committee. They are earning now for the first three months of 1918, a net income of \$2,200,000 as against \$5,000,000 last year, which indicates that by the end of this year they will earn nothing at all.

Mr. O'SHAUNESSY. Your point is that they are reaching the vanishing point?

Mr. GADSDEN. Yes; this thing is progressing.

Mr. TREADWAY. The claim you are making is that it would be no more than fair that this little surplus above operating expenses

you have been able to secure ought to be allowed for general upkeep of the industry rather than to go into general taxation?

Mr. GADSDEN. Not only that, but at the same time this condition is going on we are having demands made upon us by the Government, by the public at large for greatly increased facilities.

Mr. GARNER. What percentage is the two and a half million dollars of the capital stock?

Mr. GADSDEN. I do not have that here. It would be a very small percentage.

Mr. OLDFIELD. What proportion of your companies are making money and what proportion are not making money?

Mr. GADSDEN. What do you mean by "making money"? Do you mean a fair return on the investment?

Mr. OLDFIELD. Yes.

Mr. GADSDEN. There are very few electric railways in this country that are making a fair return on a fair investment.

Mr. OLDFIELD. What about the city of Washington?

Mr. GADSDEN. I will undertake to say the same general condition applies.

Mr. OLDFIELD. Why is it that the street railways of Washington can not make any money when, as a matter of fact, one is not able to see a street car that is not absolutely full of passengers?

Mr. GADSDEN. Will you let me tell you a story?

Mr. OLDFIELD. I would like to have you explain that. If they can not make any money with the traffic they have now, they had better go out of business.

Mr. GADSDEN. If you sell your product at a price below cost, the more business you do the more you run behind.

Mr. GARNER. Does not that come back to the proposition of increasing fares?

Mr. GADSDEN. Yes, sir; undoubtedly.

Mr. GARNER. This committee has nothing to do with increasing fares.

Mr. GADSDEN. You can at least refrain from taking the little net which is left and give us a chance to buy some more cars to carry more people.

Mr. OLDFIELD. You want to be relieved of taxation?

Mr. GADSDEN. We want to be put in position just to bear our burden.

Mr. OLDFIELD. What is your object in being segregated unless you can be relieved of taxation?

Mr. GADSDEN. Not entirely, but to a degree.

Mr. OLDFIELD. You want to be put in a segregated class on the basis of reduced taxation?

Mr. GADSDEN. That is it.

Mr. GARNER. If we should put you in a class by yourself, then other corporations will come in here and say, "We want to be treated like everybody else."

Mr. GADSDEN. Unquestionably. But we believe that the equities of this situation are so strong that we are justified in asking to be put in a special class for consideration.

Mr. WHITE. What is there peculiar in that St. Louis situation that they did get relief from the War Finance Corporation?

Mr. GADSDEN. They got an increase of rate from the commission.

Mr. WHITE. And also got relief from the War Finance Board?

Mr. GADSDEN. They got both.

Mr. WHITE. It seems to me remarkable that when the other railroad companies were refused relief they got a raise of rates and got also national aid.

Mr. GADSDEN. They got both. Without a net increase, we would not be justified in going before the War Finance Corporation and getting the money.

Mr. RAINEY. The St. Louis company that got that increase are connected with the Keokuk Dam and enjoy that monopoly, and they get their power for nothing from the Government. We permitted them to build a dam across the Mississippi River and dam up the Mississippi River, and we do not charge the company a cent for that, and they have a perpetual franchise, and from that dam they get this power and carry it down to St. Louis, and they are all tied up with the dam and are a part of the water-power trust, and, therefore, they get their power for nothing, and they immediately entered into a contract there by which the city of St. Louis will never have anything better than 5-cent fares for a hundred years to come. The fact that they have got that sort of a monopoly, that company, least of all, should be relieved under that law, and yet it is the only one that has been relieved.

Mr. GADSDEN. Mr. Chairman, I would like, in concluding my remarks, to try to state our position, in reference to applications, to this committee. In appearances of this kind, in the matter of war taxation, there is always danger of misconstruction and misunderstanding of the attitude of an industry, and, of course, the last thing we would care to be suspected of is a disposition or a desire to escape whatever is the proper burden-of Federal taxation on this industry. The thought in our minds is that it is for you gentlemen to decide, representing the people of this United States Government, whether it is, in the best interests of the United States.

Mr. STERLING. What is the amount of tax the electric lines would have to pay under the law we passed last year?

Mr. GADSDEN. I tried to get that, but it is not tabulated yet. I wanted to produce that before the committee. But the point I want to make here is this: Is it wiser to impose 6, 7, 8, or 10 per cent tax or leave the money in the hands of these companies so as to create some basis of credit in order to keep the breath of solvency in them; and, second, help them to provide the additional facilities which the increased business is demanding at their hands and for which they can not secure money from either the banks or the War Finance Corporation?

Mr. MOORE. There is a condition which confronts the committee. The President has told the Congress that he needs more money, and the Secretary of the Treasury has indicated the amount needed will be \$24,000,000,000 in 1919, or twice as much as in 1918. You have made no suggestion as to how we might increase the taxes that were raised last year, but have rather indicated that we should reduce them by relieving the public utilities of their portion of the taxes which they now have to pay. Do you not think it would be fair to the committee to make some suggestion as to how we might meet this situation which the President and Secretary of the Treasury have presented to us?

Mr. GADSDEN. Mr. Moore, what we are in hopes of is that by advertising this situation, the desperate condition of it, that Congress and the people of the country will realize that the rates generally have got to go up; and if the rates go up, automatically the revenue derived under the income tax on that industry will be greatly increased.

Mr. MOORE. I have no objection to that advertisement going through this committee or being accomplished by any other method that you can devise. But I think it is fair to say to you that, so far as this committee is concerned, when it passed the war appropriation bill, which became a law, it had in mind fully that the public-utility companies for which you speak would receive some assistance from that corporation, so that there can be no fault attached to this committee for the failure of the department to interpret the law as the committee understood it and as Congress understood it. In spite of the fact that the public-utilities corporations find themselves in the position you describe, in spite of the fact that this particular Ways and Means Committee did what it could to relieve that situation through the passage of the War Corporation bill, the fact still remains that the President comes to us again, backed up by the Secretary of the Treasury, who has the figures, and tells us we've got to get two dollars next year for every one we got last year, and therefore practically closes to us the opportunity to give relief to anybody who was taxed last year.

Mr. RAINEY. I want to say, as a member of the committee, that we intended by this act to give the public-utilities corporations relief. So far as I am concerned I think they need it more than the railroads, and as one of the conferees putting the bill into its final shape, and all of the other conferees on the part of the House I am sure will agree with me, we discussed this question and tried to phrase this bill so that the War Finance Corporation would furnish you with the relief, and we were thoroughly advised as to what it was. We understand now that the War Finance Corporation did not abide by that, but that its legal adviser says that you are not entitled under that bill to relief. The committee did not so understand it. The conferees understood that you were entitled to relief; the House understood that you were entitled to relief when we passed the bill, and so did the Senate; the only agency in this country that does not understand that you are entitled to relief is the War Finance Corporation that was created by that bill.

Mr. DIXON. Reference has been made to the St. Louis Railway Co., where the utilities commission of Missouri has granted them an increase to 6 cents. In Kansas City an effort is being made before the utilities commission for an increase?

Mr. GADSDEN. Yes, sir.

Mr. DIXON. The same as was done at St. Louis. The St. Louis company has, through the War Finance Corporation, gotten aid. I wish you would tell the committee whether the companies that are owned by the municipalities, for instance, the Cleveland company, that charges only 4 cents—that class of companies—are coming or would come to the War Finance Corporation for any relief.

Mr. GADSDEN. So far as I know the Cleveland company has not come yet. You see, Judge, all of the companies have not matured.

Mr. DIXON. Would any companies come except those that are not owned by the municipalities?

Mr. GADSDEN. I think it quite likely that the municipally owned will come, too, when the proper time comes. I have in mind the municipally owned water companies up here.

Mr. O'SHAUNESSY. How far will the remission of the corporation tax go to curing this situation and for how long a time will it keep it cured?

Mr. GADSDEN. I will answer the second question first—a very short time.

The CHAIRMAN. We will have to go over to the House now.

Mr. GADSDEN. I have finished.

Mr. MOORE. Are you going to submit any amendments with your statement?

Mr. GADSDEN. No; except just the thought that we think justice would be subserved by segregating us into a class and imposing whatever tax—

Mr. O'SHAUNESSY. May I ask that Mr. Gadsden be permitted to answer that question? You say "a very short time."

Mr. GADSDEN. I think so, because we have numerous cases where applications have been made for increased rates, and pending increases operating expenses, I am told, have increased to offset what we might expect to get out of 6 cents.

Mr. O'SHAUNESSY. Then any relief that we might grant you would not help the situation?

Mr. GADSDEN. It would help some.

Mr. O'SHAUNESSY. It would help but would not cure?

Mr. GADSDEN. I think atmospherically it will have a tremendous effect on the country at large in enabling us to get increased rates.

Mr. O'SHAUNESSY. It will merely help you in other quarters?

Mr. GADSDEN. Yes; it will show Congress sympathizes with our position and is going to do what it can to help us.

Mr. STERLING. Has the Capital Issues Committee refused to permit you to sell bonds?

Mr. GADSDEN. Not to us.

Mr. STERLING. Have you tried?

Mr. GADSDEN. Oh, yes. We have no difficulty in getting favorable consideration from the Capital Issues Committee, but we have made very few, because the bonds are unsalable and unmarketable.

Mr. LONGWORTH. There is no use in getting that permission?

Mr. GADSDEN. No; that is a nugatory act.

Mr. CRISP. I want to make a statement in conjunction with the sentiment of condemnation that has been voiced here in the committee.

The CHAIRMAN. Can we not take that up after recess?

Mr. CRISP. I think it is very unfair and that the statement I desire to make should go into the record.

The CHAIRMAN. We would like to get over to the House. Could you hold your statement until we get back?

Mr. CRISP. It will only take a minute.

The CHAIRMAN. Go ahead and make the statement. I may say that Mr. Gadsden is mistaken as to the corporation's holding. The corporation holds practically according to the statute there.

Mr. CRISP. In the first place, the War Finance Corporation was not created as an eleemosynary institution. The Secretary of the Treasury stated, and it has been held by the War Finance Corporation, that if it is positively shown that they can not get relief from other sources, then there is a case for adjustment and help. I do not think it is fair for the members of the committee to charge the War Finance Corporation with derelictions, when they do not know the circumstances any more than what has been presented here as to the War Finance Corporation.

Mr. STERLING. I asked whether the public utilities could not get money under this law.

Mr. CRISP. Have they done that?

Mr. STERLING. They have ruled that they could not as a class.

The CHAIRMAN. I will say they have not ruled that. I have just read very carefully the decision. The decision is contrary to what I expected and what other members of the committee understood and members have stated. I think, if Mr. Gadsden will read it carefully, he will find that they have not held according to his construction.

Mr. GADSDEN. In justice to myself and my committee, I have not said anything about the War Finance Corporation. The last thing we would want to do in a meeting before this committee would be to criticise the War Finance Corporation.

The CHAIRMAN. Will you come back at half past one?

Mr. GADSDEN. I will be glad to.

The CHAIRMAN. The committee will take a recess until half past one this afternoon.

(Thereupon, at 12.05 p. m. the committee took a recess until 1.30 o'clock this afternoon.)

#### AFTER RECESS.

The hearing was resumed at 1.30 p. m., at the expiration of the recess.

The CHAIRMAN. Suppose we hear you, Mr. Cowles, briefly now, since you were on the program yesterday and gave way to two gentlemen from Boston.

#### STATEMENT OF MR. JAMES L. COWLES.

The CHAIRMAN. Give your full name, so the committee can hear it, and your occupation, what business you are engaged in, and what parties you represent.

Mr. COWLES. I am a writer and student, preeminently on public transportation. That has been my business for the last thirty years, ever since, if you please, I found myself on the ruins of two New England paper mills destroyed by enormous and discriminating taxation. I was under those mills to the extent of \$20,000 apiece.

The CHAIRMAN. In whose interest do you appear, or whom do you represent?

Mr. COWLES. I think I represent some at least of the publishers. I am deeply interested in that particular service.

The CHAIRMAN. I understand; the second class postage.

Mr. COWLES. Yes, sir.

The CHAIRMAN. And what publishers' association do you represent?

Mr. COWLES. I suppose I am here representing—

The CHAIRMAN (interposing). The National Publishers Association?

Mr. COWLES. I am not, in a sense, employed by them. I am working really for them, for that interest, but not more for that interest than for the entire interest of this country.

The CHAIRMAN. I understand. And your expenses, or your employment, rather, is paid by nobody?

Mr. COWLES. I could not live at all if I did not have some support.

The CHAIRMAN. Do the publishers or any publishers contribute?

Mr. COWLES. There are publishers contributing to my support.

The CHAIRMAN. And you are representing those?

Mr. COWLES. I represent those, of course.

The CHAIRMAN. That is all right. I just wanted to know.

Mr. COWLES. I am the president of the World Postal League, an organization that I established in the city of Boston in, I think, 1913, and my object was and is and has been for many years the extension of the post office over the entire machinery of public transportation and transmission with absolute freedom of intercourse throughout the entire world; for the establishment of cooperation, if you please, in place of competition.

The CHAIRMAN. You have talked with me about this matter very entertainingly and very interestingly several times, and I know the committee would be glad to hear from you on the second-class postage matter.

Mr. COWLES. I want to say for a moment how I came to take that up.

The CHAIRMAN. All right.

Mr. COWLES. I went to the New York and New Haven road and asked for relief. The reply that came to me was practically this: "We own this plant. While you are here you will obey our orders and pay just such transport rates as we see fit to levy." That, to me, was a challenge, a challenge for life, not for myself alone, but for all humanity, because if that was to be the course, then certainly there was a railroad despotism growing up here under which all of us would be slaves, and for one I was not built in that fashion. I had lost a great deal by them, but I determined I would lose every cent that was left before I would yield, and I spent all the money I had in it and spent throughout the life of my daughters, because they were all with me, Mr. Chairman, in this splendid work, and shall I ever forget when my daughter Maud threw her arms around my neck as I came down here in 1906 and said me: "Papa, we will stand by you." When I went back from here on that occasion her life had just gone and she had felt the trouble coming. She rushed to the bathroom and in a moment her life was gone out, and she fell dead in her sister's arms.

I have paid, friends, for the work that I have done and whatever success that has come about. When that happened to me my hope was to look about and see if there was not some place where I had got as much power as anybody else had in determining my transport taxes, and I quickly found in our flat rate letter postage the idea.

First, the gift to us by that great school-teacher, Roland Hill, who gave to the world this wonderful truth, that in public transportation the cost of the service of the transport machinery was absolutely regardless of the distance traversed by any unit of travel upon the moving machinery; that that was also regardless of the character of the matter transported. It was simply a matter of weight and of space, and that was all. Those were the two points he presented before the English Parliament. At that time they had a system of rates—government rates, if you please, at the time—determined by zones, rates so high that the ordinary man could not write a letter. If a workman was seeking work he had to go on his own feet to find it, because he could not meet that system of rates, varying from about 6 cents for a single sheet of paper 15 miles, up to 30 cents or more up to 300 miles. Those rates, said the leading men of that time, were founded on injustice to the poor. Roland Hill proved that it actually cost the English Government fifty times as much to send a parcel a short distance where only a single parcel might be carried than in the great through mail from London to Edinburgh, 400 miles—50 times as much for the short haul as for the long haul—and that was the common law. He presented that to the English Parliament in 1837. It was discussed in England for three years and at the end of that time his idea became law, and then, for the first time in the world's history, did it become possible for the ordinary man and for the ordinary people of the country to combine together for their common welfare, and democracy for the first time became possible, and under it what happened? Under it business grew like the wild wind, with the rates cut from 18 cents for a single sheet of paper down to 2 cents for a half ounce.

The idea came over to this country and immediately caught hold of the leaders of this country, and in 1844 this thought was presented. I want to read it to you because it shows what Congress thought of the post office at that time:

To content the man dwelling more remotely from the town by giving him regular and frequent means of intercommunication, to assume the immigrant who plans his home in the wilderness that he is not forever separated from the kindred and society that still shares his life, to prevent those whom the swelling tide of population is constantly pressing to the verge of the wilderness from sinking into the hunter or savage state, to diffuse throughout all parts of the land enlightenment and social improvement, lifting our people in the scale of civilization and binding them together in patriotic affection.

This, said the House Postal Committee of 1844, is the end of the post office.

Mr. Chairman, the wonderful results that followed the adoption of the flat-rate service of England were so wonderful that the idea spread over the land like lightning. In 1845 a bill was passed in the Senate cutting down our six-zone service, which varied all the way from—I have forgotten now the first, but it ran up to for 400 miles 25 cents, and the lowest, I think, was six cents for 15 miles. This proposition was brought before them, and one of the leading men of New England—who, by the way, once made a trip to Iceland and came back and said that one thing he found there differing from anywhere else was that their post office was absolutely free and supported by the ordinary forms of taxation, and he said that perhaps from that service you might account for the extraordinary intelligence of the Iceland people.

In 1845 the zones were cut down to two zones, 5 cents to 300 miles and 10 cents for greater distances. Other changes were made in the succeeding years, until in 1863 Abraham Lincoln, backed by Montgomery Blair and by Mr. Casson, the Assistant Postmaster General, Congress gave a flat rate here to all the different classes of postal matter.

During the war period things were checked up in Europe, but right in the midst of the war our Postmaster General suggested a flat rate on international service, and just as soon as the war drums in Europe had ceased to beat they adopted in England a flat rate international service, and up until 1914 we had that service, and we had a 2-cent letter service covering all this country and practically all of England and Canada, and running out a little bit later to New Zealand. This continued here until, I think it was under the leadership of Uncle Joe Cannon, in 1885, the 1-cent-a-pound service on magazines and newspapers was adopted. Then a growth came to this country that was beyond the dreams of anyone. Then was carried out just what the Congress in 1844 said should be the aim of the post office, binding the nation and the whole world together in one grand unit.

This great service, carrying to every part of the country the news from the great centers, educating, increasing business enormously, its advertising telling the people in the far-off countries where they might best satisfy their wants and dispose of their wares, at the same time carried comfort and joy and hope to all the people, and especially to the women of the world. One of my friends, who is over here in the library building, said at that time that the news was that the service had largely decreased insanity among the women in the rural parts of the country. At any rate, it grew and grew and grew, like the wild wind, and to such an extent did it grow that finally a certain gentleman named Lowden, of California, representing the railroads of the country, and seeing in that service a great big object lesson to all the rest of the country, attacked it on the ground that it was a great expense to the Post Office, causing the great deficit to the Post Office.

I met him, Mr. Chairman, and met him with what? I met him with truths given to me—by whom? By no less a man than Hon. Joseph H. Choate, our late ambassador to England. The railways were at that time carrying milk distances up to 330 miles at a rate of one-sixth of a cent a pound in cans and one-third of a cent a pound in crated bottles. Those cars ran at least 400 miles a day. There were not any idle cars. They were not sitting still three-quarters of the time and blocking the tracks. They moved and they were continually on the move, and it was discovered that at those rates the Delaware & Lackawana road was paying their agent, Westcott, a clear income of \$50,000 a year to manage the business, and I heard Mr. Choate remark that it looked to him as if that was an arrangement between the president of the road and Westcott to rob the stockholders. If I had been allowed to speak I should have said it looked very much like a scheme to rob the public.

I presented those truths to Congress in 1897. Mr. Lowden made his attack precisely like the attacks you have heard presented to you time and time again. In 1896, almost the 1st of January of that

year. I received a letter from Henry B. Loyd, who was then connected with the Chicago Tribune:

There is a bill now pending in the Senate, and it has passed the House, which to my mind is the most insidious attack ever made on the liberties of the American press. I think you can defeat it.

I did defeat it. I showed the close analogy between the milk question and the mail bag, and it was perfectly clear to anybody and to everybody that if they could make such enormous profits on milk carried 330 miles down to Hoboken over the Catskills, and the empty cans carried back, the loading and the unloading all done by the railroads, then certainly there was small reason for our Government losing anything on that business.

I put those facts in the Outlook. That came under the eye of Houghton-Mifflin, of Boston, and he sent that thing to Senator Marion Butler, of North Carolina, and he made it a part of the minority report against the bill, and the bill died in the Senate.

A little bit later these things happened. A short time after that a man named Patterson came from Chicago with a petition signed by the great leaders and business men of Chicago, supporting his proposition that this second-class matter ought to be cut out. He came to Golden Rule Jones, of Toledo, and asked him for \$10 to enable him to carry on his work, and for his signature. Mr. Jones replied to him, "I am not accustomed to sign petitions until I know something about them. Give this to me and let me have a chance to look it over, and if it is all right I will sign the petition." But the man said, "I am going away to-morrow." "To whom shall I address you?" Mr. Chairman, care of Adams Express Co., of New York City. It was very evident, gentlemen, who was at the basis of the attack on the second-class service at that time.

This happened a little bit later: There was a meeting of the Mississippi Valley Medical Association, held at Louisville, Ky.; and the very man who attacked this second-class service—because there were other things creating a demand for it throughout the whole realm of public transportation—sent requests to the publishers of medical publications, saying to them that they would be glad to carry their mail, their magazines, to this meeting. Wasn't it a funny thing, Mr. Chairman, that our express companies could do this business at 1 cent a pound and the United States Government, our great express company, could not do it? It seemed to me a very curious proposition.

A short time after that, Mr. Jones—Golden Rule Jones, I call him—sent word to the Outlook of what had happened. The Outlook sent it to me, and from that time until his death he and I were in close contact.

Well, gentlemen, a new Congress had to be elected then and Mr. Lowden had to try his game again. By that time I had secured some of these other facts, and when the discussion on this question came up again in the House John Bell, of Colorado, had my book. It was full of material of the same character, and Mr. Simpson, of Kansas, got into his hands this very article of the Outlook, in which I set forth these other facts, and he read that as his sole argument against that bill; and, Mr. Chairman, that Congress by a large majority voted against that proposition, voted that these statements were misstatements and were not true.

A little bit later an arrangement was made for the hearing on railway mail, and one of the officers of the Chicago, Burlington & Quincy Railroad did me the courtesy to say that the arsenage from which the weapons were taken that caused that change were my book and my articles in the Outlook. I had simply proposed a truth that could not be controverted.

In each of the things that have been done since then I have done my level best to present the same truths, and so far as expenses are concerned, I want to tell you of the character of the machinery that we had in New York City for handling our postal matters. They were Noah's arks, dragged by half-dead horses, and walking postmen burdened like pack horses. It is not any wonder that under such conditions there was a loss in the Postal Service.

When the Hughes Commission came along I made my argument at that time. Another thing, I called on Mr. McAdoo, who had just finished his work in tunneling across the Hudson, and he had some very valuable information to give to the commission, and he said he would be very glad to appear before them if they would give him an invitation. They did not give him an invitation. I do not know why, but they did not do it, and the testimony that came out there was just about the same as had been presented before.

Now, I want to say to you that there is a law of transportation, as there is a law of gravity, and this is the law: When a public transporting machine is in operation the cost of its use is regardless of the distance traversed by any unit of traffic upon the moving machinery. It is regardless also of the character of the matter transported. It is simply a matter of space and of weight. That proposition was upheld here in this city some years afterwards by the vice president of the Great Northern Railway, who stated precisely the same thing.

I do not know any use of my going any further. I think I have proved my statements and proved conclusively that that is the rule and the law, and I want to say to you that what we want to do in all our transportation machinery is this: All that machinery should be yoked together, and we should bring everything from starting point to destination over the lines of lowest grades and least obstructive curves and shortest distance.

Mr. TREADWAY. You mean to pay a flat rate for everything?

Mr. COWLES. Yes, sir; and I will present to you here what I have drawn up as a possible system of rates. I would cut down all of these tens and millions of rates, and I would write the whole scheme of rates on a postal card.

Mr. TREADWAY. Charge the same for a passenger from here to Chicago as from here to Philadelphia?

Mr. COWLES. I say when a train is running from Boston to San Francisco there is not a man living, nor will he ever be born, who can tell a particle of difference in the cost of the operation of that train. Whether I as a passenger getting on at Boston and leaving the train at Worcester or go through to the Pacific coast makes no difference. The cost of every passenger depends upon the number of passengers that get on and off the train, and with the fastest trains that run I will get the most money out of those trains with dollar fares than they are getting to-day than my friend Mr. McAdoo will get out of the maximum system of rates that he has already proposed.

If you want to serve these people, take the railways, the steamship lines of the country, and if there is any government business in the world that is the business. Whoever owns them will own the world.

Mr. TREADWAY. Do you charge the same fare from Boston to San Francisco that you do for the man from Boston to Worcester and the same fare for the man who rides from Boston to Worcester that you do for the man who rides from Boston to San Francisco?

Mr. COWLES. My proposition is to do exactly what Roland Hill did. He took the very lowest rate and made it uniform, the standard rate for all classes of business.

Mr. TREADWAY. In other words, you would charge one going from Boston to San Francisco exactly the same as if he were going to Worcester?

Mr. COWLES. Yes, sir; but there are three classes of fares. The local fares in this country are 5 cents a mile. I would make that the uniform fare for all travel of that kind of business, for trains that stop continuously, as they do.

Mr. TREADWAY. It is 50 miles from Boston to Worcester.

Mr. COWLES. I will give it all to you in about two minutes.

The CHAIRMAN. We will give you some other time. We have given you half an hour now. Are you about through?

Mr. COWLES. I only want about two minutes more.

The CHAIRMAN. You can have all the time you want, but I believe the publishers ought to be represented here and have their say-so before the committee and before the public, as well as any other industry, and you will have all the time you want. You know that, don't you?

Mr. COWLES. I do know it, and I thank you very much, indeed. I think we are here to get out of this trouble. There are three kinds of travel—the local travel at 5 cents the wide world over, practically. There is express travel; that means travel where they make stops every 15 miles, say. Then there is the other kind of travel for limited trains, which run from 40 miles and beyond without stopping. My proposition for the dollar fares is where men get on these limited trains and stopping less often, they carry less people than the other, and therefore the rate must be higher. With the express trains they will take more than the other trains, and therefore they must pay more, but the other 5-cent fares pay their way. We have proved it is possible.

The CHAIRMAN. You believe this, don't you? You believe that passengers from a mile upward—all of them ought to pay the total cost of all of the transportation, but it ought to be adjusted so that all should pay the same?

Mr. COWLES. I say that the business of this machinery is to prevent congestion here or starvation there. It is to bind the whole Nation together. It is to develop the country through which it passes, and the business of the railways is to eliminate distances. The moment you make the zone proposition you come right up against the very purpose for which the railways were built.

The CHAIRMAN. Suppose you knock out the zone rates on postage and the zone rates on passengers—that is, the distance rates—you would have one rate?

Mr. COWLES. Absolutely.

The CHAIRMAN. But you would make the rate high enough or low enough to cover the cost of the service, would you not?

Mr. COWLES. Yes; and I would prove it to you.

The CHAIRMAN. But that is what you would do?

Mr. COWLES. Yes.

The CHAIRMAN. And the only difference between you and the committee on this proposition is about the zone rate. You think that it ought to pay the cost of the service, but the zone rate is not the right and fair rate.

Mr. COWLES. I challenge anybody, wherever he may be, to controvert the statements I have made.

The CHAIRMAN. Your challenge will be noted in the record.

Mr. GADSDEN. I want to impress upon the committee that nothing that I stated this morning could possibly, I think, be construed as in any sense a criticism of our committee on the actions of the War Finance Corporation. We are here on this matter of taxation, and so far from even suggesting any criticism of their action we bow to it. Of course, we are disappointed in it, but our committee has been trying to work out our salvation under section 7 of that act, and I want to remove any possible impression in the minds of the committee that we were attempting to criticize.

The CHAIRMAN. I suggest that the secretary will give you a copy of the stenographic report of your remarks, and you may correct it if you wish. I understand what you mean.

Mr. GADSDEN. If the committee will allow a few minutes more to Mr. Hall.

Mr. MOORE. Mr. Gadsden, before you leave, it has been suggested to me since you testified this morning that some of you gentlemen representing the public-utilities corporations had in mind to make the suggestion that an increase of fares might be so devised as to aid the Government in the matter of revenue. We imposed a tax on moving-picture shows in the existing law, and it was generally conceded that that tax has been passed on to the consumer, and since you are here it has been suggested that some of you gentlemen have had it in mind, if the fare is raised from 5 cents to 6 cents, that it might be passed on to the Government and thus create a large fund.

Mr. GADSDEN. I could answer very clearly that we had no such idea as that, Mr. Moore. Of course, it would do the industry no good to get the 6-cent rate which we need now and have the Government take it as a tax. What I wanted to say was that if through the efforts of the public-utility commission we would get another scale of rates, so as to put the property back where they would produce a substantial revenue, it would also produce a substantial revenue for the Government. If you were to increase the rate to 6 cents and the Government takes the extra cent, the only effect would be to deter the traveling public to the extent of that 20 per cent increase. The increase would deter the traveling public and we would then not get any benefit.

Mr. MOORE. I am not passing it on as a suggestion of mine, but as a suggestion made to me as having been in the minds of some of the public-utilities men. I can not see, if the Government got the extra cent, that the company would be benefited.

Mr. GADSDEN. The only effect would be the falling off of the travel due to the increase of fare. Experience has shown that that extra cent deters a certain amount of travel so that we do not realize more than 12 or 15 per cent gross.

The CHAIRMAN. Are the trolley companies in the District of Columbia represented in the combination that you speak for now? Are the District of Columbia traction companies represented here?

Mr. GADSDEN. They are members of the association, and we are members of the association.

The CHAIRMAN. They are in the peculiar position, which is rather unique now, of giving six tickets for a quarter, a system that does not prevail in any other city hereabouts now. That suggestion might or might not apply to them.

Mr. FAIRCHILD. Mr. Gadsden, may I insert one question? Do we understand now that the Finance Corporation has decided that the public utilities do not come within the scope of the law, and are not entitled as war industries to be recognized by the corporation?

Mr. GADSDEN. As I understand the ruling of the Finance Corporation, they have decided that we do not come within what they call the exception class of section 9. There may be individual companies, which on the merits of their claim would be entitled to relief. But as an industry we do not come within the provisions of section 9 of the exceptional class, and we must seek relief primarily and in the first instance through the banking machinery.

Mr. MARTIN. How does the St. Louis Co. do it?

Mr. GADSDEN. They construe that as an exceptional case.

Mr. FAIRCHILD. I suppose where a company carried to a company engaged in the manufacture of munitions, we might say that that was under the general clause, and then they would be entitled to relief.

Mr. GADSDEN. All of the companies engaged directly or indirectly in war work; but, as we understand it, the board construes the language of section 9 as requiring something in addition to that to bring the specific company within the terms of a special case.

Mr. RAINY. Your explanation leaves some hope for public-service companies, which I did not understand before you mentioned it. I do not desire to criticize this corporation that we have created, but I understand that they made a loan to the United Railways Co. of St. Louis.

Mr. GADSDEN. It is so reported.

Mr. RAINY. Here are the facts in relation to the United Railways of St. Louis: They operate over 100 miles of street railways in St. Louis. In 1905 we gave a corporation composed of individuals in Keokuk and Hamilton the right to dam the Mississippi River. We gave them a franchise for which they were never to pay anything. They at once transferred that franchise for \$20,000 to the Mississippi Power Co., which made a dam there in 1913. That company completed its dam and undertakes to deliver power in St. Louis. They carry their current over their own wires to a point 6 miles from St. Louis, then they turn it over to the Mississippi Power Distributing Co., which they own. This company in turn sells their power to the Union Electric Co. and the United Railways of St. Louis. Both these companies are controlled by the North American Co., and the North American Co. owns a large block of stock in the

original Mississippi Power Co. Immediately after perfecting this arrangement the Mississippi Power Co., through its subsidiary company, the Mississippi Power Distributing Co., made a contract with the United Railways of St. Louis for 99 years, by which the price of power in St. Louis could be regulated only by the price of power generated by coal, to wit, the Union Electric Power Co., which company it also controlled, and so the charges for power, lights, and everything else in St. Louis is regulated only by the price of coal in St. Louis. The same company controls absolutely all these companies, and this makes impossible any hope for cheaper power in St. Louis or for cheaper railway fares in St. Louis. In other words, this particular company has a complete monopoly in everything in the city of St. Louis, on account of the fact that Congress gave them a franchise on the Mississippi River.

Now, I take it that this company to which the Government has already given so much aid, is the only company which has been relieved from this corporation which we have created in the matter of its operations in the city of St. Louis, and if this kind of a company, with all its Government aid and with all its monopoly, can not get local assistance from local banks, I am afraid none of you are going to be able to get it. At any rate this demonstrates the fact that too much Government aid is a bad thing, and we ought not to give away these rivers to these companies.

The CHAIRMAN. Isn't it a fact that that is the only company?

Mr. GADSDEN. Information of the actions of the war finance corporation is confined entirely to the public prints, and we have no other information. The information that we have is that the St. Louis Co. is the only one that has received relief. Personally, our committee has no knowledge of the fact.

Mr. Hall would like to say a few words.

The CHAIRMAN. We have a program. If he can wait until we get through with some gentlemen from out of the city, we will hear him.

Mr. TREADWAY. I understand that Massachusetts has taken over the Boston Railway.

Mr. GADSDEN. They have created a board of trustees and those directors are authorized to take over the railway under a cost-plus plan, and the same plan has been offered to all of the railways of Massachusetts—if they desire it.

Mr. TREADWAY. I understand that the fare in the McAdoo Tunnel has been increased from 7 to 10 cents.

Mr. GADSDEN. No; I think it is 6 cents.

Mr. MOORE. It was so reported, and the Secretary issued a denial.

Mr. GARNER. You live in the District of Columbia?

Mr. GADSDEN. My home is in Charleston, S. C.

Mr. GARNER. Do you deal in politics?

Mr. GADSDEN. Down South we always do.

Mr. GARNER. What would the people of South Carolina think about their Congressmen—the farmers and merchants down there—if they went back down there for reelection and had to meet the charge that they had exempted all of the street railways and all of the public utilities corporations in the country from taxation? What answer would you make to that?

Mr. GADSDEN. I would tell the facts, and I think it would be admitted in the extraordinary increase in the cost of everything that

the rate of public utilities should be advanced at least 10 per cent. We have the Director General increasing passenger rates 20 cents and freight rates 25 cents. I think we would be well within bounds if the public-utility rates were advanced at least 10 per cent. If this advance should be made, inasmuch as our gross receipts were \$1,600,000,000, we would contribute an involuntary tax of about \$160,000,000.

Mr. GARNER. You think you would be able to tell them that merely because the operating expenses had gone up, the cost of operating their farms has also gone up, you should be exempt?

Mr. GADSDEN. I think so. For instance, we are selling our cotton at 30 cents which used to sell for 12, 13, 14, and 15. Everybody has been able to pass it on except ourselves.

Mr. GARNER. That is a question for each community, to give you a right to charge more for your transportation.

Mr. GADSDEN. That is entirely, unfortunately, our predicament.

Mr. GARNER. That is not the affair of Congress. It seems to me that that is the affair of your community in which you are doing business. If you can convince the community in which you do business that you are not getting just compensation for the work that you are doing, then it seems to me that they will grant you an increase.

Mr. DICKINSON. Do you know if the street-railway system that is operated by the city of Cleveland, which charges a 4-cent rate, is making any move for an increase in the rates? Has it taken any steps to ask for Government aid under this section of the War Finance Corporation?

Mr. GADSDEN. Not officially; no.

Mr. DICKINSON. Have you any information about it?

Mr. GADSDEN. I have heard that they are appreciating the extraordinary effect of the falling off in their revenue, and that they have got to increase, but I have no official information.

Mr. MOORE. I want to be fair to the public utility companies for general reasons. I want to ask you whether the Director General of Railroads, by virtue of law enacted by this Congress, has not already provided that railroads shall recoup past losses in effect by an increase in the fares and rates?

Mr. GADSDEN. Mr. Moore, I do not so understand the order.

Mr. MOORE. Isn't it a fact that he has issued orders which permit the railroads to increase the passenger fares, which went into effect yesterday, and that he has authorized an increase in freight rates, thus enabling the railroad companies, if they had lost prior to this, to recoup those losses?

Mr. GADSDEN. I think the main purpose was to pay the present operating expenses.

Mr. MOORE. Isn't it a fact that he has given assistance to railways?

Mr. GADSDEN. Undoubtedly.

Mr. MOORE. And wasn't it the expectation of the War Finance Corporation bill, also passed by this Congress, that he should have the power to loan money to the railroads, so that they might rebuild their tracks and their equipment, etc.—rehabilitate themselves?

Mr. GADSDEN. I think the bill so proposes.

Mr. MOORE. Was there any reason to believe that that kind of treatment and increase of rates, both passenger and freight, and the

rehabilitation of the equipment and roadbeds, etc., would be accorded also to public-utility companies?

Mr. GADSDEN. Was there any anticipation of that?

Mr. MOORE. Yes. You are an active man in business. I wish to say to Mr. Garner that I have seen you and heard of you in Charleston, and I know your standing, and that you speak in a representative capacity. Had you any reason to believe, when we were passing the War Finance Corporation bill, that public-utilities companies would receive such assistance as the railroads have since received?

Mr. GADSDEN. We certainly hoped that we would be financially aided by direct loans under section 10, undoubtedly.

Mr. MOORE. You thought that the public-utilities companies would have the same rights to go to the War Finance Corporation and obtain assistance as the railroads do?

Mr. GADSDEN. Unquestionably; and we appeared before the Senate committee to urge it.

Mr. MOORE. In that you have been disappointed?

Mr. GADSDEN. Yes; we have been disappointed.

Mr. MOORE. So that it stands to-day with regard to public-utilities companies that whereas railroads have received advances in rates and an advance in passenger fares on their lines, and will receive direct loans, the public-utilities companies go on in the same old way with such resources as they have, probably limited now more than before, and must charge the same old rates, the same 5-cent fare?

Mr. GADSDEN. I think that is a fair statement of the situation.

Mr. GREEN. In line with Mr. Garner's question, do you have a public-utility commission in South Carolina?

Mr. GADSDEN. No; we have to go before our local city councils.

Mr. GREEN. And they are not willing that you should raise your rates?

Mr. GADSDEN. The experience over the country is that relief from the various municipal bodies is very much slower than from the commissions.

Mr. GREEN. But you have made application. Do you know of any applications having been made?

Mr. GADSDEN. A great many have been made to municipalities.

The CHAIRMAN. All right, Mr. Palmer.

**STATEMENT OF MR. ALBERT R. PALMER, OF THE FIRM OF PALMER & SEARLES, ATTORNEYS AT LAW, NEW YORK CITY.**

The CHAIRMAN. Whom do you represent?

Mr. PALMER. I represent a number of corporations; no one in particular.

I want to say that I appear before this committee because I have enjoyed considerable—or, rather, I used to enjoy considerable—practice—I do not enjoy it so much since this law has been passed—but I have had considerable practice before the Department of Internal Revenue in connection with the tax law, and have various corporations and individuals who are affected by it. What criticism I have to make of this law is not made for the purpose of carping at the various features of it, but to bring to the attention of the committee different portions of the law that have seemed particularly objectionable to my various clients, and I have a few suggestions that I think

might render the sections less obnoxious and raise a little more revenue.

One of the principal objections that I find to the law is the excess-profits tax on salaries, this provision that taxes the recipient of a salary 8 per cent of his salary above \$6,000, not so much for the amount of the tax but because it is called an excess-profits tax. Of course, if I am employed by a corporation at a salary of \$10,000 I receive the \$10,000, win or lose. I do not share in the profits of the corporation at all as far as my salary is concerned. And there has been a great deal of objection on the part of our clients who have received salaries to pay this 8 per cent tax as an excess-profits tax. I do not think there is any objection; at least I have not heard any objection on the amount of the income tax to individuals. Almost everyone I know is glad to pay his tax, but they object to paying 8 per cent on their earnings, when another individual, perhaps, who is not engaged in business, who has the same income or amount of money to spend, receiving it from interest on mortgages and bonds, or in one way or another, both men being entirely equal in the amount of money they have at their disposal to spend for their living or to invest. The one who gets his by his daily labor in the form of a salary pays this tax as an excess-profits tax, while the other man does not. I do not know exactly how much money that 8 per cent tax raised. Of course, that information is at the disposal of the Treasury Department, and, I suppose, can be figured out.

The CHAIRMAN. I expect it raised more fuss than money.

Mr. PALMER. That is exactly the point. It raised considerable fuss, and I do not think it raised a great deal of revenue, and I think it ought to be repealed. I think it would be very much better if it could be done to reverse the proposition, and the man who did not work would pay more than the fellow who did.

Mr. LONGWORTH. I might say for your information that I offered an amendment, not to repeal section 209 but to take earned incomes from the provisions.

Mr. PALMER. I think that would be a very wise provision, because that is the first criticism that any salaried man makes.

Mr. MOORE. Will you state the case of a man who obtains unearned increment, the man who does not work? Give us a case in point. We know about the man who earns \$10,000 in salary or through commissions or otherwise, but who is the man who earns \$10,000 and does not work for it?

Mr. PALMER. Why, he obtains it from his previous accumulations, from interest on his investments.

Mr. LONGWORTH. Or inherits it.

Mr. PALMER. Or inherits it.

Mr. MOORE. Comes to him under a spendthrift trust.

Mr. PALMER. Or by his previous accumulations.

Mr. MOORE. Of course, that is working whether it comes to a man through his own efforts or not; it is paying somewhere along the line.

Mr. PALMER. I understand that, Mr. Moore, but the point is that here is one man who receives a salary of \$10,000, while here is another man who inherits enough money to bring him in \$10,000.

Mr. MOORE. If it comes from income on Federal bonds or on municipal bonds it might pay taxes in some form, in some proportion, but if it comes from railroad bonds or in other securities of one kind

or another it would be money that would be working and paying its way.

Mr. PALMER. Certainly.

Mr. O'SHAUNESSY. Would you differentiate between the man who is living on something he has earned and the man who is living on something he has never earned? I mean one who is living on an inheritance, never having worked.

Mr. PALMER. That would be the ideal system, but I am not enough of a political economist to work that out. The ideal system would be to tax the man at one rate who earns his money by working, and at another rate the man who has worked and retired and lives on his earnings, the income from his earnings, and at still a different rate the man who has never worked at all but has inherited his money. I think if we passed a law like that nine-tenths of the tax would be used up in administering.

Mr. MOORE. Have you considered this phase of the question, whether there can be an excess profit on a salary, which is the same now that it was prior to the prewar period?

Mr. PALMER. A man who receives the same salary now that he received five years ago is not receiving as much actual value.

Mr. MOORE. If he receives over \$6,000, he is subject to excess-profits tax under this law.

Mr. PALMER. Yes, sir.

Mr. MOORE. As a matter of fact, he has received no excess profit because his salary is the same as it was before the war.

Mr. PALMER. That is exactly the point.

Mr. MOORE. I am asking whether you have given any consideration to the propriety of including that man in the excess-profits tax.

Mr. PALMER. I do not think he ought to be.

Mr. LONGWORTH. Isn't it an utter absurdity to have an excess-profit tax levied on an individual?

Mr. PALMER. I think it is the most objectionable feature of the law.

Mr. LONGWORTH. In the House we had no excess profits applied to individuals. They ought not to apply to individuals; but certainly if it does, it ought not to apply to individuals without invested capital when the basis of the law is invested capital.

Mr. PALMER. I see a distinction between myself, for instance, or any other professional man, and a man who is on a salary. I think there is a difference.

Mr. LONGWORTH. There is some difference.

Mr. PALMER. I think that if I can extend my business I get the money I can earn, but the man on the salary can not get any more than his salary.

Mr. MOORE. But he is included in the excess-profits tax if he gets more than \$6,000.

Mr. PALMER. Yes; and I think he ought not to be included. If a man is on a salary of \$10,000 and he received, if the corporation makes a large amount of money, a bonus, I do not see any particular objection to taxing that bonus, if you must tax an excess-profit tax against him. But it does seem to me that a man whose salary is fixed, and if the company makes a million dollars, he doesn't get any more salary; and if it makes less, he still gets his \$10,000.

In my practice I have found this criticism of the law, not so much the money but the fact that you call it an excess-profits tax when it is really nothing of the kind.

Mr. FAIRCHILD. Don't you think that a man who makes a salary over \$6,000 ought to pay some tax?

Mr. PALMER. Certainly, and he is taken care of in the surtax.

Mr. FAIRCHILD. I know, but the man who pays an excess-profits tax pays an income tax, too. Why shouldn't a man who is making over \$6,000 contribute to the Government? You need not call it an excess-profits tax. It is a tax toward the war.

Mr. MOORE. In lieu of the excess-profits tax.

Mr. LONGWORTH. Why should he contribute more than the man who gets money from inheritance?

Mr. FAIRCHILD. He does not.

Mr. PALMER. He does.

Mr. FAIRCHILD. He doesn't pay more than the man who pays an excess-profits tax.

Mr. PALMER. On the contrary, he does.

Mr. FAIRCHILD. Well, I mean, it depends on the percentage of profit that a man makes in his business; if he pays excess-profits tax, this may be more or less. We had to fix some arbitrary method.

Mr. LONGWORTH. Under our present law the way it works out is this: A and B each have a tax of \$10. A has an income from an inherited estate. B earns his whole income of \$10,000. A and B both pay the same tax, and B earns his income and has to pay more than A. 8 per cent more.

Mr. PALMER. \$320.

Mr. FAIRCHILD. In the one case the law gives the man who gets his income from bonds and mortgages 8 per cent exemption, or 9 per cent, whatever the case may be. Of course, men that get their income from that do not make 8 per cent on their investment: They only make 4 or 5 or 6 per cent. You can't get any excess profits out of an investment that pays less than 8 per cent.

Mr. LONGWORTH. There is no excess-profits tax on an income of \$10,000 unless invested, but if he earns the money you charge him 8 per cent more.

Mr. FAIRCHILD. He doesn't make the amount of the exemption, therefore he can't have any exemption. But the man that gets his salary has got an exemption of \$6,000.

Mr. O'SHAUNESSY. He has got his \$10,000 coming in no matter what the per cent is, and so has the man who has his salary.

Mr. PALMER. But the man who gets his \$10,000 from interest would be taxed under the income tax, but he doesn't pay as much tax as the man who earns his \$10,000 by \$320. Now, why should one of them be called an excess-profits tax and not the other?

Mr. FAIRCHILD. That is the question. You come here asking us to take off this tax of a man who gets \$10,000. You say you think we ought to do that in order to equalize these men, tax them the same. Wouldn't it be better for you to come here and ask us to put the tax on the other fellow, so that he would have to pay the same amount of tax as the man who gets \$10,000. We have to provide revenue.

Mr. PALMER. I understand that.

Mr. FAIRCHILD. You understand that we did not put a tax on these men because we wanted to, but because we had to have the revenue.

Why wouldn't it be better to devise some plan so that the man who gets his money from inheritance would be taxed so that the burden would be equal?

Mr. PALMER. That is what I propose to you.

Mr. FAIRCHILD. If that is your proposition I think it is just.

Mr. PALMER. I would say that this amount of tax, whatever it was, that was raised by this 8 per cent tax on salaries can be compared to the total amount of income tax, and a sufficient increase in the rates made to produce that much revenue so that it is paid, but not as an excess-profits tax on salaries.

Mr. FAIRCHILD. If that is your idea I agree with you exactly.

Mr. PALMER. That is my idea, precisely.

Mr. GREEN. As I understand you, then, you think there would not be any serious objection if, in view of the exigencies of the Government in needing to raise such a tremendous amount of money, this tax would be made to bear upon all persons alike?

Mr. PALMER. I do not think there would be any objection among my clients.

Mr. GREEN. The most of us realize very fully the illogical theory upon which this tax is imposed, and many of the committee also think that there should be, if there is to be any tax at all, a similar tax levied upon earned incomes as upon unearned incomes, but as I understand you, taking into consideration the Government, you think there would be very serious objection if this tax was made to bear upon all alike?

Mr. PALMER. No: I do not think there would be, I think it would meet more general approval if it did tax unearned incomes in excess of earned incomes, but it now meets with disapproval because it does exactly the opposite thing, and I do not think it produces enough revenue to pay for the fuss, as the Chairman says.

Another criticism of the law is the tax on—

The CHAIRMAN (interposing). Before you come to that, do you know how this section 209, about which you complain, got into the bill?

Mr. PALMER. I understand it was put in in conference.

The CHAIRMAN. Yes; but the House had no such provision.

Mr. PALMER. I know it, and I commend you for it.

The CHAIRMAN. The House did not have any excess profits accessible against any individual. We only included corporations and partnerships. The House left out individuals for the reason, first, that it was hard to administer. The difficulties of administration were manifold, greater than in partnerships and corporations; secondly, that it gave the corporation a great advantage in the same business with the same capital over an individual, so we left it out.

Mr. PALMER. I understand that.

The CHAIRMAN. The Senate put it in, but it was heralded throughout the country by the press that it ought to be put in. Now, when it came to conference, the House kept the individual out, and would have kept the individual out of 209, but the Senate insisted upon keeping the individuals in at the rate of from 20 to 60 per cent, not 8 per cent, in addition to the original income tax. In other words, under the provisions which the Senate had, and which are now in the law, the individual farmer, the individual merchant, the individual banker, the individual mechanic or contractor or builder

or architect would pay from 20 to 60 per cent in addition to their income tax. Now, then, the House conferees said, "if you put the individuals in which we protested against, if you put in the individual farmer, merchant, and banker, and all the other individuals, we do not think it is fair and just to exempt lawyers and doctors and salaried people who contribute no money to build up industry, give employment to no labor, and are not helping the community any by their capital, and take no risk in investment," wouldn't you say that the House was right if you tax the individual farmer, and merchant, and all the other people 20 to 60 per cent, wouldn't it be an injustice to give the lawyer not more than 8 per cent? Don't you think the lawyer and doctor ought to stay in there.

Mr. PALMER. I mentioned the difference between professional men who are in business for themselves, and the men on salary. Now, I don't think it makes any difference whether the man's salary is \$5,000 or \$100,000, the principle is the same, that he ought not to pay a tax on his salary as such, because it is not at all dependent on the profits of the business. Now, if I or any other lawyer succeed in making \$10,000, and next year I can make \$15,000, I can have it all, but the fellow who works for me for \$10,000 does not get any more no matter how much I get.

The CHAIRMAN. The fixed salaried man.

Mr. PALMER. The fixed salaried man is the man I object to. I do not think that he ought to be taxed at all, but if we have to have money he might as well be taxed.

The CHAIRMAN. I know that several officers of corporations have put in their salaries, and some of their returns amounted to \$500,000. But for this 8 per cent provision the corporation would deduct \$500,000, and they would escape taxation on the corporation. We anticipated that something like that would be done.

Now, there is something in your argument that the fixed salaried fellow can not go up or down—sometimes they go down—undergoes a hardship under this provision, but you made a distinction a while ago between earned and unearned income, which my friend Mr. Longworth sometimes makes. Take a lawyer, now, that makes \$10,000. He earns it. That is what we call earned income. Now, they say that a person who receives an income from a fixed investment or from money loaned, that that is unearned, and then I understood you to agree that a lawyer who earns his \$10,000 should be taxed less than a person who gets his \$10,000 income from lending his money or from investment in stocks.

Mr. PALMER. I said, Mr. Chairman, that that would be the ideal situation, but I do not think it is possible.

The CHAIRMAN. The real fixed incomes on money loaned are mostly or a large part to widows or orphans who got their money from insurance companies. Do you think the widows and orphans and children should be taxed for lending money at 6 per cent. The law will not let them get more than that, and they must pay county, town, and State taxes, and it leaves about  $3\frac{1}{2}$  per cent. Unlike the man in business whose money is in business making 10, 20, or a hundred per cent, and they get 6 per cent. You do not mean to say that the man who receives \$10,000 that way should pay more tax than a lawyer.

Mr. PALMER. That could be corrected by setting a figure of exemption—that is to say, if you think the \$10,000 is sufficient for the widow to live on if exempted up to \$10,000 and tax unearned incomes over that.

The CHAIRMAN. Suppose I put \$100,000 in a corporation, say a cotton mill, I am just simply a stockholder. That \$100,000 goes to build up an industry in my community, gives employment to labor, helps the community, produces something of value to the public, and I will say that that corporation makes 25 per cent on each \$100,000, making my earnings \$25,000. There is a lawyer across the street who gets for his salary \$25,000. Have you ever sat down and calculated under this law? If you have, you found out that my \$100,000 invested in this industry, which is doing good to this community, is paying three times more taxes than the lawyer with his \$25,000. How could you call my income unearned? Lawyers have written to me and told me why that unearned investment of mine was not taxed, when the truth is that that \$100,000 which has earned \$25,000 pays three or four times what the lawyer pays.

Mr. PALMER. Certainly, but the tax in that situation would be exempted because it would be a dividend; that is merely incidental.

The CHAIRMAN. No. It would be a dividend when I got it in my hands, and I would have to pay my surtax.

Mr. TREADWAY. You take an income of \$25,000 derived from interest on bonds and mortgages. Now, that income does not pay any tax except the income and the surtax.

The CHAIRMAN. Because there is no excess.

Mr. TREADWAY. Why not give a man \$6,000, and charge him 8 per cent on the rest.

The CHAIRMAN. That would not be so bad if you were going to have an excess-profits tax.

Mr. TREADWAY. It is doing this: it is taxing earned incomes as well as unearned incomes, while we are not taxing unearned incomes at all.

The CHAIRMAN. If it is an unearned income, we are taxing it three times more.

Mr. TREADWAY. We are not taxing it outside of the income tax. We are not getting any excess-profits tax.

The CHAIRMAN. But the corporation is paying an excess-profits tax before I get the money.

Mr. TREADWAY. I am speaking of individuals.

Mr. LONGWORTH. As a matter of fact, in every country in the world they are taxing earned incomes at a higher rate than unearned incomes. It is perfectly feasible to do so. The Secretary of the Treasury recommends it, and makes that the basis of this law.

Mr. TREADWAY. Do you mean that they tax earned incomes more than they do unearned?

Mr. LONGWORTH. I mean taxing earned incomes less than unearned incomes.

Mr. TREADWAY. You said unearned.

The CHAIRMAN. No country in the world taxes unearned incomes all the way up. Take, for instance, Great Britain. She does not tax incomes all the way up. According to these figures, when it gets to \$2,708, over that they are taxed exactly alike whether earned or

unearned. When it is \$1,000, Great Britain taxes unearned incomes 20 per cent, and the earned incomes 15 per cent.

Mr. LONGWORTH. I think you are wrong, Mr. Chairman. It begins at \$20,000.

Mr. TREADWAY. It begins below that.

The CHAIRMAN. They begin at \$12,500.

Mr. LONGWORTH. \$15,000.

The CHAIRMAN. They end up at \$12,500.

Mr. LONGWORTH. They get together at \$15,000.

Mr. DIXON. They are together at \$15,000.

Mr. PALMER. The point that I had to make, Mr. Chairman, was—I was led astray to the discussion of earned and unearned incomes—it does not seem to the general public fair to tax the salaried man, who, as I say, has no interest in the earnings more than the fellow who is interested in the earnings by being a stockholder or bondholder. Just exactly what this law does—and I do not believe it produces enough revenue to make a great deal of difference, and if it does produce enough revenue it should be distributed over all the people by raising the rate of their normal or surtax enough to cover it.

Mr. MOORE. Have you any fault to find with the \$6,000 limitation on salaries?

Mr. PALMER. No; I do not think the amount of limitation makes much difference. The principal objectant is the fellow who gets around \$10,000 and has to pay \$320, and he wants to know what for.

The CHAIRMAN. Tell him to win the war.

Mr. PALMER. He would rather pay it as an income tax.

Mr. MOORE. If you were to apply this to smaller incomes it is self-evident that the man who has been earning \$3 a day as a mechanic and now by reason of the war can earn \$5, is better able to pay the increased war cost of living than the salaried man who earns \$1,500 in war times and earned \$1,500 in prewar times.

Mr. PALMER. Absolutely.

Mr. MOORE. That sort of mechanic receiving war wages is in a much better position to meet war conditions, war living costs, than is the salaried man whose income is the same during the war as it was prior to the war.

Mr. PALMER. Yes, sir.

Mr. MOORE. Well, now, that rather sustains your argument up to the point of the mechanic or small-salaried man, but you have no objection to the limitation of \$6,000 in which to begin the excess profits.

Mr. PALMER. I think that is high enough.

The next objection that I have found to the law is on the tax on stock dividends. Now, the Supreme Court decided the Yale and Towne case a short time ago, in which they held that stock dividends were not income, and I can not conceive of anybody thinking that they are income.

Mr. MOORE. What was that case?

Mr. PALMER. Yale and Towne.

The CHAIRMAN. You mean the Supreme Court of the United States?

Mr. PALMER. Yes.

The CHAIRMAN. That was mere dictum. It had nothing to do with the case at all.

Mr. PALMER. It was a decision that the distribution made was not taxable, that a certain dividend was not taxable under the 1913 law, and in this law we have not the provision that they are taxable. But they should not be taxable, because they absolutely can not be argued to be income. If you have an apple and you cut it into four parts, you have still the apple. Now, the income arises in a stock dividend when you sell one-quarter of the apple. But as long as you keep all the four quarters you have not had any income. You have four pieces of blue paper for one piece of pink, and under this law there has been a great objection because business men who have corporations wanted to divide stock more widely, among their employees, for instance. Their stock may have become worth \$500 a share, and they may want to give one of their employees five shares of stock, but they did not want to give him stock of the value of \$2,500. They wanted to give him \$500. Now, I can not see that there would be any objection to splitting up their corporation into as many parts as they want to. Now, they will not get any income, and they will not get any until they sell it. Then they are taxed on the income, and Mr. Hughes's brief in the case is very illuminating. He discusses this subject in full, and I think it would be worth while to look into it.

The CHAIRMAN. Let us see how this would work. There is a million dollar corporation that makes \$100,000 a year, and pays in addition a 6 per cent dividend. For 10 years it puts out \$100,000 in surplus until it has a million dollar surplus. There is another corporation that made the same amount, but turn over to me each year what it makes, but the other corporation does not turn it over to me, but keeps accumulating and accumulating until the amount is doubled. Then at the end of 10 years, they give me a stock dividend of a million dollars, worth a million dollars. I can go into the market and sell it for a million dollars. Isn't that a return, an earning upon my million dollar investment in that corporation?

Mr. PALMER. Not until you part with it.

The CHAIRMAN. I have got to sell it?

Mr. PALMER. Certainly.

The CHAIRMAN. All right, let us suppose that I have your note for \$100,000, paying me 8 per cent interest every year, and Mr. Longworth has \$100,000 of your notes with interest due every year. I collect mine each year, \$8,000 for 10 years. He doesn't collect it. I put mine in my pocket, and at the end of 10 years he collects his all at once. Is there any difference between Mr. Longworth's and mine?

Mr. PALMER. Not at all.

The CHAIRMAN. Except I have paid taxes each year, and he has not paid any taxes each year, for it is like the stock dividend.

Mr. PALMER. No.

The CHAIRMAN. Suppose under the law, as it is now, that note of \$100,000, \$8,000 due January 1, I don't want it. Don't I pay an income tax on that?

Mr. PALMER. If you do not collect it, you do not.

The CHAIRMAN. It is worth it, and I am worth \$8,000 more than I was a year before. In the case of the stock dividend I put this

\$8,000 in the corporation, but it did not declare any dividend the first year, but my stock if it makes 8 per cent is worth \$8,000, and in 10 years is worth \$80,000. Don't you think I ought to be taxed on the income?

Mr. PALMER. Certainly.

The CHAIRMAN. I did not get the money, but I can get the money on it. Suppose I take Mr. Longworth's note. It is worth something. I do not collect the \$8,000, but I can go out and get the money any time.

Mr. PALMER. Here is the difference, Mr. Kitchin——

The CHAIRMAN (interposing). Isn't this the fact about your dividends. Now, we have got a million dollars, and we make \$100,000. Ought not the stockholders to be taxed?

Mr. PALMER. When you get it.

The CHAIRMAN. When you get it in money?

Mr. PALMER. Yes.

The CHAIRMAN. Suppose I take it in Government bonds. It ought to be taxed.

Mr. PALMER. Certainly.

The CHAIRMAN. Because you can get the money.

Mr. PALMER. Not for that reason, but because you have got something you didn't have before.

The CHAIRMAN. I have acquired \$100,000 more with these stock holdings.

Mr. PALMER. Yes, sir.

The CHAIRMAN. But suppose we leave it there in surplus. Haven't I got \$100,000 more stock than I had?

Mr. PALMER. Yes; but it is not in your possession.

The CHAIRMAN. I can sell my stock.

Mr. PALMER. When you do you pay an income tax.

Mr. LONGWORTH. Suppose I have \$100,000 worth of stock at par and it goes up to \$200,000. Do you mean that that is income until I sell it?

The CHAIRMAN. I do not mean that and the law doesn't say it, but take your earnings that have accumulated and have escaped taxation for ten years. If paid in cash that year the individual stockholders should receive \$100,000 dividend and would have to pay income tax and the surtax, but if you let them accumulate and never pay that tax for 10 years, and then in 10 years when you have got the million dollars in stock, you say that it will escape taxation, then I am worth a million dollars and would never sell it and would escape taxation on the stock that has accumulated for 10 years and on the million dollars as long as I hold the stock.

Mr. PALMER. You miss the point, I think, in this. Your corporation, ordinarily, here is capitalized at a million dollars and earning \$100,000 a year; in 10 years it would have accumulated another million dollars. Now, I propose to double the stock of this corporation and declare a stock dividend, and you, being the owner of the stock, will get it.

The CHAIRMAN. Yes.

Mr. PALMER. That is the situation.

The CHAIRMAN. Yes; I have got the same property.

Mr. PALMER. You have got exactly the same thing before we doubled the stock.

The CHAIRMAN. My stock before you put this money in surplus would sell two for one.

Mr. PALMER. Certainly.

The CHAIRMAN. Now, when you give it to me, I have got the same amount of stock; it will sell for the same. Suppose I had your 10-year note. Let me give you a case. Suppose I have got your note for \$100,000 and interest for 12½ years, accumulated at \$8,000 a year, and that note is worth \$200,000, isn't it?

Mr. PALMER. Yes, sir.

The CHAIRMAN. Am I not taxed on that \$100,000?

Mr. PALMER. Certainly.

The CHAIRMAN. Certainly; and I am worth the same. One is a note; it has got \$100,000 principal and \$100,000 interest, which makes \$200,000. You paid the interest in money. I am worth \$200,000, and I am going to be taxed and ought to be taxed. And here is a corporation with \$100,000 of its stock, and \$100,000 has accumulated. Shouldn't I be taxed on the \$100,000 earnings which have escaped taxation for 10 years, when the other fellow has paid taxes on his \$100,000?

Mr. PALMER. Certainly; but my point is this, that after the stock dividend has been declared you have got the same thing.

The CHAIRMAN. So the \$100,000 that has accumulated for 10 years is worth \$200,000. You are going to pay me the interest. The principal is the same. You pay me in money or notes, and I have got two papers—two papers worth \$200,000. One is earnings of \$100,000, just like the stock dividend.

Mr. PALMER. Before the stock dividend was declared you had \$100,000 worth of stock that was afterwards worth \$200,000.

The CHAIRMAN. Certainly; and before you take your interest on the note for \$100,000, the paper was worth only \$100,000, but with the accumulated interest, just like the \$100,000 of the stock of the corporation, if it has accumulated 10 years, it is worth \$200,000, and your earnings on your stock and your note are worth \$100,000.

Mr. LONGWORTH. The Supreme Court decided that question specifically in the Towne case.

The CHAIRMAN. The only case brought before the Supreme Court was under the 1913 act, and we have changed the 1913 act in the last year's act.

Mr. LONGWORTH. But the Supreme Court, nevertheless, declared that stock dividends are not income, a decision which Congress can not override.

The CHAIRMAN. They are held so by the statute. That was simply a dictum in that case.

Mr. HULL. I am sorry I was not able to be in when you commenced. Isn't the basis of this question the power of Congress to impose a tax on the stockholders with respect to the undistributed dividends of the corporation?

Mr. PALMER. Do you mean, do I think there is such a power?

Mr. HULL. Yes.

Mr. PALMER. I do. My argument is this, Judge Hull, that stock dividends as such should not be taxed, because they are not an income.

Mr. HULL. Well, I was coming to that. In the Hubbard case, with which you are familiar, I am sure, the court held that Congress did have the power to tax on every penny of undistributed stock.

Mr. PALMER. I agree with that.

Mr. HULL. You think that is still sound law?

Mr. PALMER. I do.

Mr. HULL. Now, under that Congress could tax these stockholders on any dividends when they had been earned, and from that point on, from your standpoint, they could be taxed up to the point where they have become capital?

Mr. PALMER. No; my contention is this: At the time the stock dividend is declared isn't the time when the stockholder is possessed of any more property that he had before; he has two stock certificates where he had but one before, but they are of the same value. The question of the money that made up that value has nothing to do with this value. The present law fixes the stock dividends at the actual value, and assuming that a corporation has a capital and a surplus exactly double its authorized capital, then each share of stock would be worth exactly double.

Mr. HULL. Yes; but I am not going as fast as you are, or you are going faster than I am. I am coming to the question of how Congress can tax profits until they are accrued profits—when they are held by each holder of stock, and held according to the number of shares of stock—now, at what point do you say the power of Congress ceases?

Mr. PALMER. I think that Congress has the power to tax a stockholder every year for the entire amount that his shares of stock bear to the entire capital stock of the corporation.

Mr. HULL. Up to the time they are taxed?

Mr. PALMER. Up to the time they are taxed; it doesn't make any difference—that is, if the corporation makes \$60,000 this year and doesn't distribute any of it. I believe Congress has the power to tax each stockholder for each share; but I don't think it is wise to do it.

Mr. HULL. Then suppose Congress doesn't tax each stockholder for this stock, but was willing that the corporation keep a certain amount for expenses, overhead, etc., but taxed so much as the corporation might decide to transfer to capital account. Now, how would you measure that kind of a tax?

Mr. PALMER. You mean, tax them in a year only after it was transferred to capital account?

Mr. HULL. Yes; you couldn't tax them in advance, because you don't know what amount they are going to transfer.

Mr. PALMER. Well, in the first place, I think a tax on the undistributed surplus that belongs to the stockholder is an impracticable tax, because the stock keeps shifting all the time, so far as that is concerned. Now, to tax a stockholder when a corporation transfers a certain amount of stock to capital would seem to me to be less reasonable than taxing the corporation.

Mr. HULL. I wasn't discussing the policy at all. I was getting your view as to when the power of Congress ceases to tax that portion of the stock which was transferred to capital account.

Mr. PALMER. I don't think they can tax it at all.

Mr. HULL. Then isn't the only purpose of the present act, putting out of sight the legal character of stock dividend transactions—the the only purpose of Congress was to tax not all the profits undis-

tributed but to tax only those which the corporation decided to transfer to capital account at any time, and they are taxed accordingly?

Mr. PALMER. I don't know what your purpose was in writing this in the statute, but if it was for the purpose of raising revenue it has fallen to the ground, because it has stopped stock dividends.

Mr. HULL. I understand—I can't quite get your viewpoint as to whether you admit that Congress can levy a tax on the stockholder with respect to this class of profits and fix some definite rule by which to measure.

Mr. PALMER. I think they can, but I don't think this law does. I think Congress has that power.

Mr. HULL. You think it has the power to say that wherever the directors leave a certain amount of undistributed profits with the view of issuing new capital stock for it that the tax can be then fastened on that stock?

Mr. PALMER. Yes, sir.

Mr. HULL. And it would be a valid tax?

Mr. PALMER. I don't know whether it would be valid. I think it would.

Mr. HULL. I am not discussing the policy. I am discussing the validity.

Mr. PALMER. It would be a special tax, but not an income tax.

Mr. HULL. You wouldn't consider that income, when the stock is allotted to the stockholder?

Mr. PALMER. No.

Mr. HULL. Then would you consider any income that is lodged there?

Mr. PALMER. I don't think logically it should be considered an income until it is lodged in the hands of the stockholder.

Mr. HULL. But held as not being income?

Mr. PALMER. Yes, sir.

Mr. HULL. The Hubbard case held to the contrary, did it not?

Mr. PALMER. Yes, sir.

Mr. HULL. My question is, whether you think the Hubbard case is sound law?

Mr. PALMER. I think it is.

Mr. HULL. Then my question is, whether the Congress should levy a tax on unearned profits; that is, if they have the power to levy that at any stage of the proceedings, then it would become what the Supreme Court has said is capital?

Mr. PALMER. I think that is correct.

Mr. CRISP. Your proposition is that the stock dividend and the unearned profit on the original stock are of the same value?

Mr. PALMER. Yes, sir.

Mr. CRISP. Then if you issue a stock dividend and the person should sell that stock dividend, he should be taxed—

Mr. PALMER. He would be taxed an amount, the difference between the original stock and the amount he got under the dividend.

Passing now to the excess-profits tax. In my opinion, the exemption in this tax should not be based on capital. The tax is, in effect, another income tax, and I do not think that the capital of the corporation ought to be considered. The capital exemption has caused more confusion and more difficulty in administration than any

law with which I am familiar, and its effect is to penalize the man with a small capital and a large amount of brains as against the man who has a large capital and just lets in turn over. It also leaves to the administrative officers of the law a very grievous burden of deciding, under their interpretation, what is capital and what is not capital. I think the officers of the Internal Revenue Department are in the main able men, but I think they have had an almost intolerable burden put on them to decide under this law what is capital, and I venture to say if we were to poll this committee we will get a different opinion from every man on it.

Mr. MOORE. Have you made an attempt to define capital?

Mr. PALMER. I defer to the judgment of the committee on that.

Mr. MORRE. You have not defined it?

Mr. PALMER. I do not think it can be defined.

Mr. MOORE. I think any good lawyer who can render a definition on that will be rendering a very effective public service.

Mr. PALMER. I would like to be able to do it.

Mr. MOORE. Are you going to offer any suggestions in the way of amendments?

Mr. PALMER. Yes, sir. The effect of this tax has been to vary the operation of the tax in a very material manner. I have made a table here of 60 corporations from among our clients, and it shows the difference in the amount of tax assessed against substantially the same incomes. It is really quite startling. It varies from 6 per cent in a corporation that has no excess-profits tax to 40 per cent; there are several at 36 per cent, and all the way up the line. Now, the reason for that in almost every case has been the difference in assets, and the difference in exemption for that reason. Here, for instance, is a corporation in the phonograph business whose net income was \$49,514; their tax, combining income and excess-profits tax, was \$8,682; the per cent of that tax to their income was 18 per cent.

Mr. STERLING. What was the amount of their capital?

Mr. PALMER. The amount of their capital was \$261,374. Their tax was \$8,682, on an income of \$49,514. Here is a corporation in the trucking business. Their income was \$33,896 and their tax was \$8,983, which is \$300 more on \$16,000 less income.

Mr. GARNER. What is their capital stock?

Mr. PALMER. I don't know what their capital stock is, Mr. Garner. The figures I have here are the admitted assets and the net assets. I mean by that, figuring on and figuring off.

Mr. O'SHAUNESSY. What are those figures?

Mr. PALMER. The phonograph company had a net income of \$49,514 and paid a tax of \$8,682; the trucking company had a net income of \$33,896 and paid a tax of \$8,983.

Mr. MOORE. What are the respective assets?

Mr. PALMER. The phonograph company \$261,374 and the trucking company \$109,173.

Here is a corporation who are distillers; their net income was \$359,166 and their tax was \$65,315.

Mr. STERLING. What per cent is that?

Mr. PALMER. That is 15 per cent.

Mr. GARNER. What assets did that corporation have?

Mr. PALMER. \$1,935,479. Now, their tax, bear in mind, was \$65,000 on an income of \$359,000.

Now, here is a corporation engaged in the manufacture of nails; their net assets are \$249,294 and their net income \$131,717, and their tax is \$53,760, at the rate of 40 per cent. The distilling business made \$220,000 more income and only paid \$12,000 more taxes.

Mr. GARNER. But they had so much more money invested in it. Do you think they ought to pay on the amount of their receipts without regard to the capital stock of the corporation?

Mr. PALMER. I believe this tax, Mr. Garner, ought to be assessed on the basis of income.

The CHAIRMAN. What do you mean by the basis of income? All pay the same rate? That is, all corporations pay 20 per cent of their income, or 40 per cent, or whatever it is?

Mr. PALMER. Perhaps I misstated myself. I mean the capital should not be considered, or the prewar income; but the present income.

The CHAIRMAN. Do you know that it was calculated last year that about 150 corporations would have escaped taxation by the difference in the profits of the prewar period, would have escaped taxation of about \$350,000,000? Take Ford, for instance, with millions and millions of income, he would have escaped taxation last year on \$9,000,000 to \$14,000,000—he wouldn't have paid a cent; that is according to the statistics given to us at the department. Ford lacked a little of making as much in 1916 and 1917 as he did in the prewar year. The American Tobacco Co., the same thing; it didn't make as large a percentage of profit on its capital as it did prewar years. So in any tax you will find, as we have found, in any taxes that are suggested from any source, you work it out and you are going to find these things.

Mr. PALMER. I know you are certain; but on this basis—

The CHAIRMAN. Now, your suggestion there would cut us out of about a billion dollars of some of the most prosperous concerns.

Mr. PALMER. I doubt it very much.

The CHAIRMAN. Well, about 150 corporations and many millions of dollars will escape taxation.

Mr. GARNER. What do you say, Mr. Palmer, about these two provisions, one on a prewar basis and then one levied on the excess profits, as it is in the bill?

Mr. PALMER. This bill is so full of difficulties now if another is added to it I think the business men will rise in arms.

Mr. LONGWORTH. We had a man here yesterday, a Prof. Sprague, who recommended that the tax be 80 per cent and that thereafter a tax be imposed on the amount of business done.

Mr. PALMER. The only thing I can suggest about that is that the Government should at once begin to employ a number of watchmen, because it will have a large number of establishment on its hands, because the people will go out of business.

Mr. LONGWORTH. I understood him he would put the tax at 80 per cent and then a tax on the present level.

Mr. GARNER. That was my understanding of his suggestion, but there was another suggestion made, that you apply the prewar capitalization and then put a clause in the bill that if the tax does not equal the tax levied under the bill, you take the other one. In other words, you take the best one.

Mr. PALMER. That is a good scheme, but it won't work. I think if you take the bill submitted in the Senate by Senator Smoot, which a good many business men have gone over, with reference to the capital, that provides that you take the five years before the war and you exclude the high year and the low year; that is, you average it out, and then you average your earnings this year, and provide the tax on those two years. In doing that there could be and should be an allowance made for additional cash money put into the business since the war began.

Mr. GARNER. The question comes right back there to how much money would it get?

Mr. PALMER. I believe, Mr. Garner, you would get more than you do under this bill. I think so. Because I believe that business, generally speaking now, from my experience with my own clients, and speaking for my own clients, they are making more money now than they did five or six years ago, or they are out of business.

Mr. STERLING. The Smoot bill doesn't ignore capital?

Mr. PALMER. No; I know; but there is a method in that bill for arriving at the tax which, I think, is a good one. Taking the pre-war basis and then making allowance for the money actually paid into the corporation since the war began—actual money, not only patents or inventions or secret processes, on which they are profiteering, and which are bunk, in my opinion. I think if they were put in the business and paid for in money, then they are legitimate additions to the capital.

Mr. LONGWORTH. Mr. Palmer, do you think we could justify a bill before the country—an excess-profits tax of any kind—under the figures made by the American Tobacco Co., for instance, or the Ford Automobile Co.?

Mr. PALMER. No; and they couldn't escape it, unless they are not making more money; then it wouldn't be excess profits.

Mr. GREEN. Do you mean, Mr. Palmer, if the Standard Oil Co. was making 100 per cent before the war, and they are making 100 per cent now, they should not be taxed?

Mr. PALMER. Every law will have its exceptions; you can't apply this law without hitting this man where he should not be hit, and—

Mr. LONGWORTH (interrupting). The American Tobacco Co. is actually making less money, I believe, than they did before the war; therefore it wouldn't pay any tax.

Mr. PALMER. These examples, of course, gentlemen, are startling.

Mr. GREEN. I think it is true we are taxing the small business man more than we ought to, in that we do not make sufficient allowance for the kind of man at the head of it. In a small business it isn't the capital, but the man at the head of it.

Mr. PALMER. That is it.

Mr. GREEN. It seems to me they should be placed on a flat exemption of so many thousands of dollars?

Mr. PALMER. Well, I don't think the flat exemption would work, because if you raise it up to \$10,000 you would lose a lot of taxes. There are a lot of people making under \$10,000 who are paying a lot of taxes. On this list there are a number of people making less than \$10,000 that are paying quite a lot of money.

Mr. GREEN. I am glad to hear you speak of that. If it couldn't be done in that way it could be done in some other.

Mr. PALMER. I believe it can be done. It will produce more revenue. It may allow some of these large profit-making concerns to escape if you take the before-war average, exempt the present income on such exemptions as you think best for the additional money put in the business and tax them on the balance. And I think also the obvious thing to do is to raise the rate to everybody. I think the corporations can pay more than 6 per cent.

Mr. HULL. Mr. Palmer, do you think it would be feasible to take the English system and modernize it by American methods and then pick up these two industries and put an especial excise tax on them with such exceptions as would place them on a relative basis or parity with other businesses?

Mr. PALMER. I don't know whether it could be done or not, Judge. That would be a very good method, if it is constitutional.

Mr. GARNER. Who would you suggest to get up a list of these corporations not making any more now than they did before the war?

Mr. PALMER. You have a list of them in the Treasury Department now. The capital stock tax bill required that every corporation must list its earnings, starting with 1911 or 1912, I don't recall just when it did start. You have that list now. Not a list, but they made reports. The people you are after here are the people of over \$99,000 in capital value.

I also wish to call the committee's attention to another phase of this situation, and that is this: That in the commissioner's report of 1917 he says that there were 204,551 corporations that were taxed, and 140,499 corporations that were not taxed. In other words, out of the corporations in this country only 56 per cent of them paid a cent of income tax.

Mr. GREEN. Excess-profits tax?

Mr. PALMER. Income tax. They paid none because they made no money.

Mr. GREEN. They paid a corporation tax. They all pay a corporation tax.

Mr. PALMER. They paid no income tax, because they made no money.

Mr. MOORE. Not because they were exempt, but because they didn't make any money.

Mr. PALMER. I suppose that is it. And because a great many of these corporations are not in business now; they just filed a list to get off the books; but there must be a large per cent of them in business and not paying taxes, because they are not making any money.

Now, I have got a list here of 28 corporations whose gross income was \$3,003,105; their net income taken altogether was \$17,384; they paid the Government a tax of \$1,044. We realized a tax here for the Government—

Mr. LONGWORTH (interrupting). Are those public-utility corporations?

Mr. PALMER. There are all kinds of corporations. I do not represent any public-utility corporations.

Mr. MOORE. Are you going to put this in with your statement?

Mr. PALMER. Yes; I am, Mr. Moore. The income of these corporations ranges from \$10,000 to \$3,856,000, and they made altogether a

net income of \$17,394. I want to suggest to the committee now that it might be very instructive to find out what the gross income of some of these corporations is, of all the corporations, and see what percentage of tax on their net sales would be needed to produce enough revenue, and I believe it will be found that by a very inconsiderable tax on the net sales or the gross income it will a great deal more than equal the present income.

Mr. GARNER. If you levied a tax on these 28 corporations greater than is now levied, wouldn't they go into bankruptcy?

Mr. PALMER. No; because they would pass the tax on to the consumer. I don't believe there is any man on this committee that doesn't believe the consumer pays the taxes anyway.

Mr. LONGWORTH. We were told last year that he wouldn't, but we have found out he does.

Mr. MOORE. On this list that you have submitted you have listed the gross income and the tax. Does it suggest to you the likelihood or advisability of endeavoring to reach gross income?

Mr. PALMER. Yes; I just suggested that.

Mr. MOORE. You just suggested that?

Mr. PALMER. Yes. These statistics that I am presenting here are the files of my own office. There are thousands of them in the internal revenue office. I don't know whether this is a true cross section of the business interests of the country, but I think it is, because we represent a great many different kinds of business, and if it is a true cross section of the business interests of the country a small gross tax imposed on the business man and passed on to the consumer would pay a large amount of revenue.

Mr. MOORE. You have given these 28 corporations where the disparity is so glaring. Has it occurred to you that any of these gross receipts, aggregating more than \$8,000,000, has been turned in to evade the taxes?

Mr. PALMER. I don't think they did, because I looked them over pretty carefully before I put them down.

Mr. MOORE. Could it be due to padding the credits, by padding the pay rolls, or anything like that?

Mr. PALMER. I don't think so, Mr. Moore.

Mr. MOORE. Here is one concern on your list has an income of \$1,955,118, practically \$2,000,000, that didn't pay any taxes at all.

Mr. PALMER. They are a milk concern, since gone into bankruptcy.

Mr. MOORE. Here is another whose gross income was \$260,000 and also paid nothing.

Mr. PALMER. Yes, sir.

Mr. MOORE. How do you account for that?

Mr. PALMER. That particular concern was hit hard by the labor conditions; they have paid in the past and will again.

Mr. GARNER. I thought you said they went into bankruptcy?

Mr. PALMER. No; that was the milk business.

The CHAIRMAN. Do you think a corporation should pay an income tax when they do not make any income?

Mr. PALMER. No; I think a source of revenue is in the gross receipts, because at the present time there are 140,000 corporations in this country, business corporations, not paying any tax at all.

The CHAIRMAN. Wouldn't that make them lose more money?

Mr. PALMER. No, sir; because if it was small enough they would pass it to you and me.

The CHAIRMAN. But his competitor across the street that is not making any money now, by taxing his competitor 5 per cent, don't you think you would run him out of business?

Mr. PALMER. Five per cent might, but 5 per cent would produce all the money in the world.

The CHAIRMAN. Wouldn't a gross-receipts tax involve more inequalities than any other thing you can think of?

Mr. PALMER. I don't think it would.

The CHAIRMAN. You are going to put 5 per cent on this \$350,000,000—

Mr. PALMER (interrupting). Put it at 1 per cent, because at 5 per cent you get too much.

The CHAIRMAN. What are the total amount of corporations in the United States?

Mr. PALMER. I don't know. I have heard gentlemen make statements here that startled me. I prefer not to say anything about it.

Mr. MOORE. The tax on small sales would reach out into the country, wouldn't it, away from the centers?

Mr. PALMER. A tax on mercantile sales I proposed.

Mr. GREEN. You are aware, of course, in various businesses the profits on the turnover are very small indeed?

Mr. PALMER. Yes, sir.

Mr. GREEN. Not large in the aggregate, whereas in other business the profit is 5 and 10 per cent, even?

Mr. PALMER. Yes, sir.

Mr. GREEN. But you would tax these anyway, just the same?

Mr. PALMER. Yes, sir; because they pass it on to the consumer anyway. They did it last year.

Mr. GREEN. You think that is true of any of these taxes?

Mr. PALMER. Yes, sir; I do.

Mr. GREEN. Some of these gentlemen who were before us last year and then wrote us letters were evidently very much mistaken then of how it hit them, but as you say it wouldn't hurt them and they collect on a sale.

Mr. PALMER. And they collect on a sale.

The CHAIRMAN. Do you mean the wholesaler or the retailer?

Mr. PALMER. Everybody, on the sale.

The CHAIRMAN. You mean the wholesaler collects from the jobber and the jobber from the retailer and the retailer from the consumer—he collects it when he sells it to the consumer?

Mr. PALMER. Yes, sir. And some of them make a profit doing it, too.

The CHAIRMAN. Then he collects it and pays the tax?

Mr. PALMER. Yes, sir. That was demonstrated in the tobacco tax. You put a small tax on cigarettes, and they collect on down the line, and they make a little money.

Mr. MOORE. How can we get anything out of these milk dealers?

Mr. PALMER. You, unfortunately, can't. They went into bankruptcy.

Mr. MOORE. These contractors, they are still in business?

Mr. PALMER. Yes, sir.

Mr. MOORE. I presume they pay large salaries?

Mr. PALMER. Yes, sir.

Mr. MOORE. And they pay some in that way, and they got something on the automobiles and materials as it was passed along to them?

Mr. PALMER. Yes, undoubtedly. They couldn't do that much business without paying some tax.

Mr. MOORE. Your only suggestion as to the recovery of any tax on nearly \$4,000,000 of business by this contracting firm, would be on the gross income?

Mr. PALMER. Yes, sir; that is a way. I don't know of any other way you can collect it from them.

Mr. MOORE. Have you the gross taxes proposed in form?

Mr. PALMER. No; but I would be glad to do that.

The CHAIRMAN. Which do you prefer, to take the prewar period and tax on that basis, or to take the gross-sales tax you referred to?

Mr. PALMER. I think the gross-sales tax would be less felt and would be more widely distributed, and I believe the more we can popularize this tax the better off we are. I believe the public is absolutely at one with you or that you are with the public—they know that you need the money, and they know we have to get it—and the more you can make every man pay the better it will be. Of course, it would give us much more pleasure to let the other fellow pay it, but the more widely it is distributed I believe the more popular it will be.

Mr. GARNER. How much would you take, ordinarily, from capital and how much from consumption?

Mr. PALMER. I wouldn't take any from capital.

Mr. GARNER. I mean from income?

Mr. PALMER. I think the tax, assuming the expenses of the Government were \$2,000,000,000, if we collect \$500,000,000 in import taxes and the balance in the various small excise taxes—which would amount to \$300,000,000, \$500,000,000, and \$1,000,000,000 in income and business taxes—the proportion would be about right.

Mr. GARNER. About fifty-fifty?

Mr. PALMER. I think so. I think the import tax is passed on to the consumer.

Mr. GARNER. That has been the Democratic viewpoint for some time.

Mr. PALMER. That is one point on which I have to agree with you.

Mr. O'SHAUNESSY. How much of this passing from the wholesaler to the retailer, and so on, would you expect? Do you think the consumer would be able to stand it?

Mr. PALMER. I think so, because the rate would be very low. Take the difference between the net and the gross income and see how the rate would change.

Mr. O'SHAUNESSY. And there is always a little added.

Mr. PALMER. You can cure that by another statute.

Mr. O'SHAUNESSY. In the end it will be on Mr. Consumer.

Mr. PALMER. Don't you think the American Tobacco Co.—this is just an example, I know nothing about their business—makes the man who smokes cigarettes pay the taxes now?

The CHAIRMAN. The taxes are ultimately paid by the consumer.

Mr. O'SHAUNESSY. We were thinking about a pair of shoes; take on an \$8 pair of shoes, and it kept on going on, how much would the consumer pay?

Mr. PALMER. On a \$9 pair of shoes you might pay 10 cents.

Mr. GREEN. On the same rate as the tobacco company it would be about \$12.

Mr. PALMER. There is one other thing I want to mention, that I skipped over, and that is the question of interest allowed to be deducted. I see no good reason why a man or corporation should not be allowed to deduct in their amount of money they pay during the year for borrowed money; and this limitation of interest has resulted in several cases in our practice in taxing corporations who had no income at all. That is to say, they were not permitted to deduct as much interest as they paid, so they showed a profit, and in a good many cases it has resulted in taxing them on their expenses as interest. And it has caused a great deal of comment among business men and others, and unless there is some very good reason for keeping it in the law it should be taken out. I don't see any good reason for leaving it in.

Mr. GARNER. You would allow them to credit to their expenses the amount of interest paid?

Mr. PALMER. Absolutely. I think if I can borrow a million dollars and am paying interest on that, I ought to be allowed to deduct that interest. It results in taxing commission houses, for instance, who borrow a large amount of money, on their interest.

The CHAIRMAN. Let us see now how that would work in the income tax. You are going to deduct the interest. You and the gentlemen over there and myself are going in together and organize a \$300,000 corporation, and here are three gentlemen here who are going to organize another \$300,000 corporation. Now, you are going to deduct the interest we pay as expenses. Now, we three fellows are a little keener than these three fellows, and they put all their money in their capital stock and don't keep any of it in their pockets. When they come to pay tax they can not deduct anything, because they have their money in capital stock.

You and myself and the other gentleman are a little keener, and we say, "See here, let us put \$1 into capital stock, and then we will loan the corporation the money to do business," and you loan the corporation \$100,000 and I loan the corporation \$100,000 and the other gentleman loans the corporation \$100,000, at 6 per cent, and we can make a deduction of \$18,000 because of this borrowed money, with the same capital and the same profits and the same money and capital, so we are creditors, and we proceed to deduct \$18,000 interest, and these fellows were honest, and they didn't have sense enough to do that. That is the reason that is put in there, to keep such fellows from cheating the Government, and keep the keen, shrewd sort of fellows from taking advantage of such a situation, and make them pay like the fellows who came out in the open like every man ought to do. You know that is right; you said you had some corporations that did borrowing and borrowed from themselves. There isn't so much reason for that now since we have the excess-profits tax. We had that in mind, too. Now, these fellows will be afraid, since there is an excess-profits tax, because, then, they would have to pay that

tax. An excess-profits tax tends to make them swell their capital stock.

Mr. PALMER. Sure.

The CHAIRMAN. There isn't so much reason for that now since we have this excess-profits-tax provision in the law. Now, standing alone, that is the reason it was put in. You didn't know that was the reason it was put in.

Mr. PALMER. I was told it was put in to prevent inflation.

The CHAIRMAN. I think the committee will give very careful consideration to revising that provision when we take into consideration cutting that out.

Mr. GARNER. The excess-profits tax, as you say, protects that now.

Mr. PALMER. I think that was written into the law some time ago.

The CHAIRMAN. In 1913.

Mr. PALMER. And then business was not taxed so much. It was not so good a game then, because the individual has to pay on his income now.

The CHAIRMAN. We will give most careful consideration to that.

Mr. PALMER. One other item, Mr. Chairman, if I may. I urge the committee to give most earnest consideration to the payment of the taxes in installments.

The CHAIRMAN. We will have nothing to do with that. We will work out the tax, and the administrative officers will do that. We thank you, Mr. Palmer, and are glad to have had you before us.

Mr. PALMER. I thank you very much, Mr. Chairman and gentlemen, for giving me this patient hearing.

(The tables produced by Mr. Palmer, and referred to in his statement, are as follows:)

Comparison of taxes assessed against certain corporations for the year 1917 under the present income and excess profits tax laws.

[Submitted by Albert R. Palmer, Esq., of the New York bar.]

GARDNER-18-No. 4-5

**STATEMENT OF MR. VERNE E. MINICH, 52 VANDERBILT AVENUE, NEW YORK CITY, N. Y., VICE PRESIDENT AND GENERAL MANAGER OF THE AMERICAN FOUNDRY EQUIPMENT CO. AND SAND MIXING MACHINE CO.**

Mr. MINICH. Mr. Chairman, I notice that I am on the calendar on the subject of income and excess profits. I haven't anything to say at all on the subject of the income tax. The income tax is an equitable one. I want to speak of the inequity of the excess-profits tax as applied to my particular concern. I do not chance to know and have not learned in rather a wide acquaintance of any case at all similar to ours, and yet I assume there must be a good many of them, and that some of the peculiar ways in which this law affects us must affect others. Mr. Palmer, who just preceded me, referred to patents. That hit me right where I live. In our case it is almost purely a case of patents.

Now, if I may take the time of this committee to give a very brief outline and history of our business, it will perhaps make more clear the reasons why we believe the law operates inequitably as applied to us. Our business is based on a patent which covers a labor-saving machine. I had the occasion recently, fearing that we might have serious difficulty to obtain materials for the manufacture of our machines, to send out a questionnaire to our customers, who comprise many of the leading manufacturers in the United States in the iron and steel industry and who use our machines in the production—so we believed when we sent out this questionnaire—of material that was used

very largely by the Government in the prosecution of this war. We sent out the questionnaire with a view of discovering to what extent the machine assisted them in producing war materials in order that we might obtain exemption in buying materials. The replies that we received indicated that among those who are using our machines they are averaging 61 per cent of war materials. The point that I wanted to bring out, however, is that the machine is a labor-saving machine; that was one of the questions included in our questionnaire, and the replies indicated that the one machine saves the labor of from 2 to as high as 12 men; many of them said that under present conditions they would not be able to get out their present production without the aid of the machine.

Back in 1907 I heard of this machine. It was made down at Pickerington, Ohio. It had been put on the market in a small way down there. It interested me very much, and although I was engaged in other business, it looked so promising to me that I engaged in the business of manufacturing it. I started in the business in 1908 and ran along a little bit, as long as I could swing it, and then organized a company of \$175,000 to take over the patents. Gentlemen, we got for our \$175,000 these patents and obligations amounting to between \$9,000 and \$10,000, if I remember right. Those are the approximate figures. In other words, we got between \$9,000 and \$10,000 less than nothing aside from the patents. The market for our machine was relatively limited, and on deciding on the sales plan by which we should get back our \$175,000, with some profit for our risk and the effort we knew we would have to put into the development of the new field, we concluded we would put our machine out largely on the royalty basis.

I might say that this machine is used for the preparation of sand for making castings in foundries, gray iron castings, steel castings, and aluminum castings, and only in a minor way for bronze and brass castings. Most of you gentlemen, perhaps all of you, are familiar with castings and foundry practice to some extent. The castings are made in sand molds. The molders work in the day, and here <sup>is</sup> a pattern, we will say [indicating]. They have a pattern of aluminum or wood, and they make it in a box or flask. They ram that up in the box, and then in the latter part of the afternoon the molten iron is run into this form, and the molten iron produces the casting and then the sand is shaken out in the evening. This has dried out the sand, so that it is necessary to put water on it.

Now, this has always been done heretofore by shovels, so that when this machine came out it was operated at night mostly. It was a new field, and we thought it was limited, because there is only a relatively small number of foundries arranged so as to use this machine, so we came to the conclusion to market it on the royalty plan. I make this explanation for the purpose of saying that we had a slow process in building up our business. Furthermore, when I got in I learned that the machine was not developed. Our original machine was a type A machine; since that we have developed and thrown into the discard types B, C, D, E, F, and G. We are a close corporation; there are three of us. I was the only stockholder active in the business, and we operated on a very conservative basis. After we put on the market the model B we put it in the discard, and we put in the expense account what it cost us to build

it and all the other expenses. We didn't put that in the capital account. This always went into the expense account; and so on with the others, clear down to model G, always we were foolish enough to believe that we could develop the machine fully; always it went into the expense account and not into the capital. We did not have capital enough to manufacture our machines, and up until 1916 we had our machines manufactured, and we couldn't get them when we wanted them. But early in 1916 we had got to a point where we could start a plant of our own, which we did in Cleveland, Ohio, and then we began to reap the benefits of the results of our very good machine and of our effort, and we could get a machine when we wanted it, and it is a good, satisfactory machine. Briefly, we spent the years from May, 1908, to the end of 1915 showing a profit of a little less than \$5,000. Some years we showed a pretty nice return and another year we lost it by scrapping these machines we had built, and the design, and so on.

In our particular case it happened that in the prewar period we were making practically no returns, and we had gone through all these years with practically no returns, as I have explained; but as the result of our years of effort, as the result of getting to the point where we could establish our own plants, and so on, we began now getting very nice returns. In 1916 we made returns that vindicated our judgment when we paid \$175,000 for \$9,000 less than nothing except a piece of paper guaranteed by the United States Government as a patent. We spent our money in our faith in the value of this patent and in the faith we had in the protection of the Government during the lifetime of that patent if developed. Now, coincident with the passage of this excess-profits-tax law we commenced to get returns which we figured on from the outset, although we did not believe they would be so long deferred, or I do not believe we would have had the nerve to have started it. But we commenced to get returns which, if we could have retained a reasonably good proportion of them, would soon have paid us for the years which we spent in which we got no returns.

Our situation is made doubly difficult in the fact that our patent was issued in June, 1906, and will expire in June, 1923, and I suppose there are none of us here who are optimistic enough to hope that we will be rid of excess-profits taxes before that time, and when June, 1923, comes around our business is gone, in a measure. We can draw no more royalties. Everybody who is in the foundry equipment machinery business who thinks we have made a lot of money and who can add this piece of equipment as an auxiliary and make \$5,000 or \$6,000 out of it, it is velvet for them. They did not spend their years and risk their money in creating a new article and a new market, and any money that they get out of it is easy money for them. But our time and efforts have pretty largely gone.

The CHAIRMAN. When did you buy this patent?

Mr. MINICH. The patent was issued in 1906. I, personally, started operation under it, alone, in 1908.

The CHAIRMAN. You operated it individually?

Mr. MINICH. Individually. I did not own the patent then.

The CHAIRMAN. When did you form your corporation?

Mr. MINICH. The corporation was organized on June 1, 1910.

The CHAIRMAN. Have you had a reorganization of it since then?

Mr. MINICH. No, sir.

The CHAIRMAN. What did you put in as the value of the patent June 1, 1910?

Mr. MINICH. We put in the value of the patent as \$150,000.

The CHAIRMAN. \$150,000; and \$25,000 cash?

Mr. MINICH. We deducted the indebtedness of the old company we took over, whose patents we acquired, and we deducted that from our investment and put in the balance in our books as good will, although, as a matter of fact, the good will was worth nothing; but we so treated it on our books.

The CHAIRMAN. What is the capital stock now of the corporation?

Mr. MINICH. \$175,000.

The CHAIRMAN. The same amount as the other?

Mr. MINICH. Precisely.

The CHAIRMAN. Have you put any surplus to that?

Mr. MINICH. We now have some surplus, but our tax returns were made up after the end of our fiscal year, our fiscal year running from June to June, you see, and the returns made up covered the first five months of the year 1917, and at that time all our assets were just about equal to our capitalization, our \$175,000, a little more or less, I do not recall the exact figures, and they are the figures we have for our exemption.

The CHAIRMAN. They only allowed you \$175,000 for your deductions?

Mr. MINICH. Precisely.

The CHAIRMAN. That is what I am getting at.

Mr. MINICH. Yes.

The CHAIRMAN. That is, you were allowed 7 per cent?

Mr. MINICH. We asked for 9 per cent, we applied for 9 per cent and deducted it in our return. Whether it will be allowed or not I do not know.

The CHAIRMAN. You were allowed 7 per cent?

Mr. MINICH. Yes; under the strict reading of the law I think we could only take 7 per cent. We applied for 9 per cent, and asked for it. To my astonishment and chagrin that made a difference of only about \$300 on our tax return.

The CHAIRMAN. That is all; \$320, I think. Now, you are allowed \$12,250; that is all the exemption you are allowed. Your profits, of course, for 1916 and 1917 were considerably more than that?

Mr. MINICH. Yes, sir; they were very good. Our profits in 1916 were fair and for 1917 they were good.

The CHAIRMAN. What would you suggest to us should be done in this sort of case, under the law?

Mr. MINICH. Mr. Chairman, you have asked me a very difficult question. I hope I can make this clear and emphatic: That we have no objection to paying the tax. I do not object to paying the tax we pay now, if everybody else pays dollar for dollar in proportion to what we pay. If I need to pay every dollar that I have got in taxes, I am willing and glad to pay it, if it must be done to complete this job and do it right, because it must be completed, and we have all got to pay the tax to do it; and we have all got to make sacrifices to do it; and I have no objection under the sun to making the sacrifices

I am making, if others are making the same. All I ask is to be placed on an equitable basis.

The CHAIRMAN. Yes; but would not everybody else having \$175,000 capital invested, making the same profits you are making, pay the same tax, whether in the flour business or in the lumber business or in the Angora goat business, or anything else?

Mr. MINICH. I grant that.

Mr. LONGWORTH. What rate of tax do you pay?

Mr. MINICH. Up to the maximum.

Mr. LONGWORTH. To the maximum?

Mr. MINICH. Yes.

Mr. LONGWORTH. You must remember that under the English system, which is now suggested for adoption, you would be paying much more than you are now paying.

Mr. MINICH. I have no objection, if everybody else pays the same.

The CHAIRMAN. Everybody in the same class with the same capital invested pays the same.

Mr. MINICH. Perhaps they do. May I ask this illustration? Here are two farmers, one of whom is growing wheat in 1908. He gets his returns in 1908 for his wheat, and in 1909 and 1910, and so on. But here is another farmer over here who plants apple trees, and he puts his money into those apple trees, and he tends them year after year, and does not get a cent back. He has got to put all his money and labor year after year into those apple trees; and finally, in 1917, Mr. Wheat Man has had his profits every year from 1908 to 1916, inclusive, and finally Mr. Apple Man begins to get apples from his trees.

The CHAIRMAN. But the other man has paid his taxes, too.

Mr. MINICH. Yes.

The CHAIRMAN. And all the expenses in making his wheat have been deducted, just exactly like in the case of the man raising the apple trees. He has paid no tax at all, and if he had to pay any he would deduct his expense in the same way.

Mr. MINICH. Yes.

The CHAIRMAN. And during all those years he has not paid anything to the support of the Government, during those seven or eight years, while the other fellow has.

Mr. MINICH. Yes; that is true; but the wheat man has gotten his income all the time. Now this man comes in and pays his tax until 1923. The wheat man is getting his returns, and he is saving something. Mr. Apple man finds his trees begin to bear apples in 1917, and that continues up to 1923, and then his trees are done bearing, and he has not made one-fourth as much as the other man, or as the coal man or many others.

The CHAIRMAN. That is a matter of difference in the business. You have not made as much as the coal man has, although you made at least 100 per cent on your investments in 1916, you estimate; the fellows that put their money in coal were in a paying business, and the other fellow went into a business that did not have an income for several years and a business the earnings of which naturally expire in three or four years. But apple trees live longer than that in my country. They last 25 or 30 years.

Mr. FAIRCHILD. Yes. Mr. Minich has got a parallel case to thousands of others in the country. And he has not suggested to us what he would like to have us do.

Mr. MINICH. I confess, gentlemen, I have given that some thought, and have not been able to formulate anything in my mind that seems to cover the case. I do not think there is any question but what we are being done a serious injustice as compared with others.

Mr. MOORE. You have no competitors, have you?

Mr. MINICH. No, sir.

Mr. MOORE. So that your case is entirely special?

Mr. MINICH. It is a special case.

Mr. FAIRCHILD. This case is predicated on a patent.

The CHAIRMAN. There are lots of cases like yours.

Mr. MINICH. I said that I have not any doubt there are; I have not a doubt of it; and yet I think you gentlemen will admit that we are in worse case than a man who has been in a standard line of business and who, if he has conducted his business economically and intelligently and so on, has made his profit and gotten his profit and got it in his pocket or in his bank, or else has put it back in the business and increased the exemption, and so on, or he has put it into something else. It is not all being taken from him when it chances that just coincident with the passage of an excess-profits law he begins to get returns.

Mr. LONGWORTH. The trouble is that there are only two methods of collecting an excess-profits tax. One is the English war tax. There are no prewar profits, but he certainly makes a substantial amount.

Mr. MINICH. Yes; although I feel safe in saying that not 15 per cent of the income we are getting has anything to do with the war. I have figures showing the steady increase of our business that have nothing to do with the war, but is simply a result of our cumulative effort.

The CHAIRMAN. We have several cases like yours of these smaller concerns whose income is not so much on the capital invested, but from the personal efforts of the men who are running the corporation. We are going to give very grave consideration to the question of whether we can differentiate and put those in a separate class in which there will not be so much hardship.

Mr. MINICH. I am glad to know that the matter has received consideration.

Mr. MOORE. It has received consideration. It is a question of helping out in a case where the profit comes suddenly just when the tax is imposed.

Mr. MINICH. We have not made so much money. We are simply beginning now to receive deferred profits. Now, what would my position have been if in 1908 and 1909, and so on, up to 1916, instead of putting these machines out on lease which yields me an income each year through my ownership of the patent, I had sold those machines outright, and invested the money in enlargement of my business and gotten the exemption under this law, every time I sold a machine I had put the money into the business, or if I had taken that money and put it into property that was only yielding an average rate of return, and so on? What would have been the comparison? The comparison would have been that I would have paid only

a small sum of money on the excess-profits tax, if any, whereas now I am enjoying deferred profits.

A very large percentage of our income to-day is rentals, royalties, that we are receiving from contracts that we closed before the war was ever declared, and as for the war increasing our business, within a month after the war was declared I went to Bridgeport, Conn., to have machines made under contract, and carried with me unfilled orders for a year's business, business that we had had on our books before war was declared, more unfilled orders than we have ever had on any one date since. I want to make the point that in our opinion we are not now enjoying profits that we got in 1917, but we are getting deferred profits. We are getting profits on work that was done and on contracts that were closed long before the war was thought of by anyone except the Kaiser, perhaps, and his coterie.

Mr. GREEN. How is it that you have not any larger capital than that which you put in, \$175,000, originally?

Mr. MINICH. We paid that for the patent, you understand.

Mr. GREEN. Yes; but you now own and are using these machines, which must have cost you considerable money.

Mr. MINICH. Yes; but you understand all the time we were putting this money into the development and perfecting our machine and the building up of our trade, and so on.

Mr. GREEN. I do not know just how the revenue officials would construe this, but it seems to me that the real trouble is that you have put the money you made each year into your business and you have not gotten any credit for it as capital.

Mr. MINICH. Yes; that is true; but unfortunately we wrote it into the business as expenses. And during the early stages of our business I was the business and my hat was the office. I did not have an office, and I did not keep a set of books, and it was not, certainly, before 1911—I ought to give you the exact date, but I can not off-hand—that we began to keep a set of books from which I could get those records. It is our fault; yes; we were doing business on too conservative a basis. We were a close corporation, and we were not figuring anything as assets except real money; that is all, but we put it into the machines. There were these various models—

Mr. O'SHAUNESSY. You are suffering the results of the hazard of your business?

Mr. MINICH. Yes.

Mr. O'SHAUNESSY. From the hazard of doing business and from doing business under a patent that is about to expire?

Mr. MINICH. Yes.

Mr. O'SHAUNESSY. That is hazardous business?

Mr. MINICH. Yes; but those who take that hazard invest their money in an article that is guaranteed by the United States Government.

Mr. O'SHAUNESSY. A patent?

Mr. MINICH. Yes.

Mr. O'SHAUNESSY. A patent runs for so long and then it dies.

Mr. MINICH. That is very true; but if we could enjoy a reasonable return from the patent we should be satisfied.

Mr. O'SHAUNESSY. The man who will undertake to do business under a patent knows the risk that he takes.

Mr. MINICH. Of course, that is one view of the matter.

The CHAIRMAN. We are going to give very careful consideration to the cases like yours, and we are going to see if we can work out something.

Mr. MINICH. I appreciate that expression very much. We feel that having taken the risk and done the work to create a business which was new, to develop an article which was new, which has proven valuable and useful, which is proving valuable to-day in the production of munitions of war to fight the enemy, we ought to be entitled to some sort of reasonable consideration. We want to pay our share of taxes the same as anyone else, on an equal basis, and if it takes all we have got, we will pay it cheerfully, if the other fellow is doing the same thing.

Mr. MOORE. You simply want a chance to go on and exist?

Mr. MINICH. We do, and we do not want to feel that in a few years the efforts of a decade and a half have been lost and wasted.

#### STATEMENT OF MR. ELLIS A. BALLARD, GENERAL COUNSEL OF THE PHILADELPHIA RAPID TRANSIT CO.

The CHAIRMAN. You are representing the Philadelphia Rapid Transit Co. here?

Mr. BALLARD. I represent them, and I wish to present to this committee, gentlemen, a situation which has arisen in Philadelphia and probably in other places, although I think we perhaps have it worse than anywhere else.

Under the peculiar laws of Pennsylvania the street railway system of Philadelphia has grown up in this way: Beginning about 1858 the legislature granted to street railway companies perpetual franchises to operate upon the streets of Philadelphia, practically without condition. There was the condition that they should keep the streets in repair. Those were perpetual and exclusive franchises. Our streets are narrow and they are exclusive legally and they are exclusive also for practical use.

These companies, however, had only the right to operate horses. They struggled along from 1858 up until the time when people began to put things together, in the eighties, and then the cable came along and then the electrical system of trolleys, when a bunch of men started to put these roads together. They had been making, throughout the centennial years, a pretty large dividend. They had all had a period, perhaps, like the corporation of the last speaker had had, of building up the business, and the brain of Mr. Johnson conceived the idea of forming a new kind of corporation which, while it had no right to lay or own a track, might nevertheless furnish power and cars for any company that already had a franchise on the street, and operate that under a lease. They could have operated it under ownership had they not been restricted at that time in the amount of their capital stock and their borrowing capacity. The corporation laws of Pennsylvania at that time were quite strict. A million dollars then was the limit of the capital stock, and one-half of that was the most you could borrow, in 1883, when the first of these companies was formed. Therefore they resorted to what were practically perpetual leases—999-year leases.

Of course, the rental reserved in those leases was the interest upon what was considered the fair value of those properties at that time, and that value was nothing, gentlemen, but the franchise. There was a streak of rust in the street which we called a track, and there were horses in the stable that were sold for \$1 apiece, and there were little short horse cars, and I have one in my back yard for my boys to play in, which I bought for \$10. And now grew up the cable system—or started to—at a cost of several million dollars, and then that was abandoned and the trolleys were installed. Now, there has been a succession of phases of financing, and I am not here to defend it, until to-day some 600 miles of trolley line is operated in Philadelphia by a single company called the Philadelphia Rapid Transit Co., which has a paid-in capital of \$30,000,000. Every dollar has been paid in, in cash. It took in, last year, \$30,000,000 in 5-cent fares. We have applied for permission to put up our fares, and we have had a long, hard fight, and we may eventually get it, I do not know.

We earned, after the deduction, practically 10 per cent upon our capital and surplus. So that the Philadelphia Rapid Transit Co. pays in Federal tax the 6 per cent tax and the excess-profits tax—and it had no earnings in 1911, 1912, and 1913, and therefore has a 7 per cent deduction—something like \$220,000 or \$230,000 in Federal taxes on that basis. But when we come to make the return for these leased or dead companies which leased their roads beginning in 1881 and down as late as 1902, we find that the rentals reserved run in one case as high as 72.9 per cent upon the capital stock paid in. There is one company with a capital stock of \$192,520—that is all its books show—which gets a rental of \$140,000, which means income tax and excess-profits tax of \$64,000. Now, every one of these leases has been drawn by a different lawyer. Oh, perhaps the same lawyer drew two or three of them. Mr. Johnson drew two.

Mr. MOORE. Do you refer to the late J. G. Johnson?

Mr. BALLARD. Yes. When we say "Mr. Johnson" in Philadelphia there is only one Mr. Johnson. Now, every man tried to make his lease cast iron. I drew a couple of them, I am sorry to say. Perhaps we overshot the mark; because if you use too many words, you are likely to do something you do not intend to do.

The CHAIRMAN. You mean to say that they did not anticipate the Federal income tax?

Mr. BALLARD. No one said "income tax" or "excess-profits tax," but we did say "all taxes of any and all descriptions levied by any authority whatsoever upon the bonds, incomes, profits, receipts, gross and net, or upon any receipts arising in any way out of the business." [Laughter.] I know them by heart.

Mr. MOORE. Let me say for Mr. Ballard that he is capable of writing one like that.

Mr. GARNER. This is the first instance I ever heard of a Philadelphia lawyer overlooking anything.

Mr. O'SHAUNESSY. I think he could say that in his sleep.

Mr. BALLARD. Now, the Pennsylvania Supreme Court has had one or two cases of this sort before it. One was the North Penn Railroad case and the other the Catawissa Railroad case, and if you people, at this late hour of the day, will not pay too careful attention to it, I will make an even bet that you can not tell in which one of those cases the supreme court said the lessor had to pay the tax

and in which one the lessee had to pay the tax; but, as a matter of fact, they decided those cases differently, and it is no reflection on the supreme court, because they decided those cases early in the day, and when you look closely at them you do see the difference. I will tell you what the difference was. In the North Penn case the lessee stumbled upon these words, "Receipts under this lease," and the supreme court said that the rental was a receipt under the lease, and that the income tax—this was after your 1913 tax, and we had not had the excess-profits tax—that the rental was the income and that the tax was on the rental, and that therefore the lessee company had to pay it.

Now, gentlemen, if the Philadelphia Rapid Transit Co. has to pay all of the taxes which are levied on the leaseholds properties, and if those taxes are calculated upon the basis of the capital and the surplus shown by the taxes of the lessor company, it will pay 150 per cent on the profits over 7 per cent, and the company, for instance, which gets \$140,000—now, do not kick me out of court before you hear me through, because I am right about it, although the figures I gave the chairman yesterday were too big, as I have found—the company that gets \$140,000 on a \$200,000 rental, and will get its \$60,000 tax paid for it, must next year report an income of \$200,000, because anything that is paid for it, the commissioner has ruled, is a receipt; so that next year the tax will be on a \$200,000 basis, and you can not deduct Federal taxes any more in getting up your net income, so that we will have to pay 60 per cent upon that 60 per cent next year, which will increase our tax \$36,000, and the next year we will have to pay 60 per cent on that \$36,000, which will increase our tax \$23,000; and while that is a decreasing ratio, we will in five years get a tax levied under this act, which we will have to pay on a company which has been dead since 1883, getting the same income all the time—we will have to pay \$167,000 tax on \$140,000 rental.

Now, the tax is going against the wrong man. It is going against the wrong man because—

Mr. MOORE. Will you allow me to interrupt you there?

Mr. BALLARD. Certainly; I am glad of interruptions.

Mr. MOORE. Is this underlying company to which you refer a company which is now being operated by the rapid transit company?

Mr. BALLARD. Yes; it is the line on Tenth and Eleventh Streets.

Mr. MOORE. You refer to it as being dead?

Mr. BALLARD. Yes.

Mr. MOORE. But the company itself is alive?

Mr. BALLARD. Yes; the company itself is alive. And, if it is interesting to know, these figures are well known—

Mr. MOORE. Will you also state how many underlying companies there are now incorporated into the rapid transit company?

Mr. BALLARD. It has been stated that there are about seven. The rapid transit company can not lay a foot of track.

Mr. MOORE. I want the gentlemen of the committee to understand the attitude of the Philadelphia Rapid Transit Co.

Mr. BALLARD. I find in a memorandum I have here, 15 different companies.

Mr. O'SHAUNESSY. And how many leases are there?

Mr. BALLARD. I think there are about seven, but if we had a track that came to that door, and if we had a track that came to that window [indicating], and we wanted to connect them, there is no power in the Philadelphia Rapid Transit Co. to lay a mile or a foot of track and there is no power in those companies to extend, and we have to go to our legislature and get a charter to lay that necessary track from the door to the window to connect those two tracks. Those little things do not count, except that they make work for the lawyer.

The percentages and the tax which have to be paid under this act by—I think it is—15 of these companies, in which we own none of the capital stock, the stock being all owned outside—a tax-free investment unless you and I can get at them in some way—are as follows: 72.9, 71.7, 42.8, 40, 36, 33, 31.6, 30.8, 27.5, 24.2, and so one down to 10.1 per cent, and the 4 per cent war income tax on these properties will amount to \$293,000, and the war-excess profits tax, figured as I have said, will amount to \$879,000; and if we had to pay that \$1,100,000 in addition to our \$200,000 out of our net receipts of \$2,008,000 on a \$30,000,000 capital, you will see where it lands us. Now, these cases are being litigated. The first case we will have up is this Catawissa case. We think we can win them.

This company has just entered into a contract with the city of Philadelphia under which it will restrict its dividends to 5 per cent over a period of 40 years and undertake the operation of high-speed lines, which the city has embarked on, and one of the provisions of that contract is that we will not pay anything in the way of a fixed charge which the city thinks of doubtful legality, and they have called upon us, because the lease is not yet approved by the city council, to litigate this matter. In fact, I do not believe that Congress wants to put upon an active company serving the public a tax which will break its back, and let an investment which is not serving the public go tax free. Of course, if we have made our bed, we must lie on it. If we have a contract that can not be broken, that we are going to pay all taxes of every kind and description, including an excess war tax and a Federal income tax, if we were foolish enough in 1883 to make that contract, it may be that the courts will not be bold enough, when everybody ought to bear their own burdens—and it a white man's burden—it may be that the courts will not be brave enough to say that that contract is against public policy. It may be that they will.

Even in those cases where we may lose the income tax I propose to argue to our Supreme Court that the excess-profits tax related to a leased line is not a tax upon income. Two lines may have the same income and one pay no tax and the other a heavy tax. It is a tax on the bargain that those fellows drove with us before they would give up their dog-in-the-manger position in the streets; when they said, "We will not give up our lines, and if you want to operate them you must pay us for our franchise that we got for nothing and pay us such a price"; and so there is not anything in any one of these cases that will make the lessee company pay to the lessor company a tax upon the bargain that he drove. But it is a serious matter to leave it to the last throw, and the court is the last throw; and I believe if you think that this is a matter in which Congress could and should properly express, in so far as it can express, its view of

the public policy without attempting to infringe upon the obligations of contract, if this is a case which appeals to you and if you would like to put something in this act, I have sketched a couple of things that I know would help me a whole lot in my argument. [Laughter.] Now, we might as well be frank.

Mr. GARNER. In that connection your particular case might not apply to Chicago or San Antonio or Seattle. Just the reverse situation might exist in some other place. Your suggestion as to the lessor and the lessee applied to the whole country might prove a hardship against people similarly situated in other cities.

Mr. BALLARD. Yes, Mr. Garner; if it is a hardship to make every man to-day come across and meet his share of this bill that we have got to meet, although he thought he had been shrewd enough to avoid that thing.

Mr. GARNER. You take San Antonio, Tex.

Mr. BALLARD. Yes; now, you put a case where the hardship would be on the lessee.

Mr. GARNER. Suppose the lessor making the contract with the lessee gave them a liberal contract and the lessee got the best of the bargain?

Mr. BALLARD. Then there would not be any excess-profits tax; that is my answer to that.

Mr. GARNER. Well, perhaps not.

Mr. MOORE. Do you know whether the lessors to whom you refer are in such a position as to be able to meet the income tax if it should be transferred in the manner indicated?

Mr. BALLARD. Yes; this matter has been thrashed out in Philadelphia, and these lessors are represented by half a dozen lawyers who are the leaders of our bar, and we have said to them that we will advance them the money to pay their tax this time on the obligation upon their part that we may take it out of the rentals. When they read this in the paper they will all be down here.

Mr. MOORE. Their property is still so preserved and in such financial condition as to meet obligations if this should be imposed upon them?

Mr. BALLARD. Yes; they get a cash payment either quarterly or semiannually. We pay them the cash. Sometimes they do not even take the trouble to meet; they just have a standing resolution that the treasurer shall divide up the money among them. Sometimes under direction they simply furnish a list of the stockholders and order that it shall be divided up.

The CHAIRMAN. You were going to offer amendments to the law?

Mr. BALLARD. I have here two amendments which I would propose to tack onto the law as it exists to-day. I assume you will go along the line of least resistance and not do anything that we have not got used to, because we have got used to some of these things and this is to add on more.

Mr. RAINEX. Let me see if I have the situation.

Mr. BALLARD. Yes.

Mr. RAINEX. This new and novel method of taxation which has come into existence in the last two or three years did not exist in 1883?

Mr. BALLARD. I do not think either side anticipated it.

Mr. RAINEY. And now you have some proposition which, if we write it into the law, will relieve your company from the contract obligation of 1883?

Mr. BALLARD. No, sir; if we assumed a contract obligation, and I am not at all sure that we did assume it, I am not at all sure that any general provision naming specific things, and then with the kind of hurrah at the end, and which does not mention a single Federal tax, will be held by the courts to have been intended to cover such an exigency as this and such taxes as are levied; and as I have written this thing, sir, I have not said anything about the normal income tax—I mean the income tax for revenue under the 1916 act.

I have thought it was only fair—and I find you win your case sometimes if you are a little fair, whereas you do not win your case if you are not a little fair—I have thought it was better to direct my attention to these excess taxes in which I could make an extraordinary argument and appeal to the court, that it should use every intendment possible in construing these leases, which are there and can not be changed—you can not change them and I can not change them—that I would use my best efforts to rid myself of the war tax which we hope, as somebody said, will not go beyond 1923; we hope they will last no longer, and will pay anything in the way of a tax or ordinary revenue which the court might say by intendment we estimated.

Mr. RAINEY. I see the difficulty that you are in, and now you want to get out of it.

Mr. BALLARD. Maybe we will not get out of it, but this reads well, anyhow. [Laughter.]

Mr. O'SHAUNESSY. Is this matter in the courts now?

Mr. BALLARD. No. It will be in the courts after next Saturday.

Mr. O'SHAUNESSY. Oh!

Mr. BALLARD. I did not tell my friends that I was coming down here, because I wanted to tackle virgin soil; but they will all be down here.

Section 205 of the bill is a sort of large wheelbarrow load of stuff that needed explaining and putting in at the end to show what you meant, and I thought if you added a subsection C, something like this—this does not sound vicious—

Mr. MOORE. Section 205?

Mr. BALLARD. Section 205.

Mr. GARNER. You want to put an additional section C on it?

Mr. BALLARD. Yes; a little C on it—see?

Mr. GARNER. Yes.

Mr. BALLARD. This proposed amendment will read as follows:

(c) If an individual, corporation, or partnership has during or prior to the prewar period leased its property to or contracted with another individual, corporation, or partnership to carry on or operate its trade or business, receiving under such lease or contract a fixed sum or a fixed percentage of the results of such operation, the tax herein imposed, as well as the tax imposed under Title I of this act, shall be levied upon and paid out of the net rental or return received thereunder.

Mr. RAINEY. Do you think that would be constitutional?

Mr. BALLARD. If the Constitution will not stand it, it will help me construe my contract.

Here is another one. I do not know which of these is the slickest. [Laughter.] Now, Mr. Moore, if you look at subsection 1 of paragraph 7—I was going to add something to that. Just drop the period out and start with a little letter. It is not so conspicuous.

Mr. MOORE. Will you read it?

Mr. BALLARD. This would read as follows:

and the taxes assessed hereunder as well as income taxes assessed under section 1 of Title I of this act, shall be deemed as not issuing out of any given property, but shall be assessed as a personal tax against persons and corporations liable therefor, computed upon the resultant of their total gains, profits, and income, less deductions as provided for herein, and in reduction of the amount of surplus or undivided profits which the said person or corporation would otherwise have for said current year.

Now, I have no doubt that there are gentlemen here who can do this job better than I.

Mr. LONGWORTH. No.

Mr. O'SHAUNESSY. You flatter us.

Mr. MOORE. I think we see the point, but you are ably representing the Philadelphia Rapid Transit Co., as you always do. It is the one controlling factor in Philadelphia transit now. It has 600 miles of trackage. Will you state about how many shareholders there are in the Rapid Transit Co. and about how many there are in the underlying companies, who might be affected by this legislation?

Mr. BALLARD. I think there are about 3,500 stockholders in the Philadelphia Rapid Transit Co. Any statement I would make would be an open guess on the other, but I would think there would be 10,000 or 12,000.

Mr. MOORE. You run on Tenth and Eleventh Streets?

Mr. BALLARD. Yes.

Mr. MOORE. How many stockholders were there there? That was Mr. Roberts' company, was it not?

Mr. BALLARD. Yes; not many stockholders.

Mr. MOORE. That is certainly nearly all in the estate of Mr. Ellis?

Mr. BALLARD. I do not believe he controlled it. I think 30 or 40 per cent of it is there.

Mr. MOORE. I wanted to get about the number of people that would be affected.

Mr. BALLARD. If it is of any interest and instruction to the committee I will furnish that in a little brief which I would like to print and file with the committee.

The CHAIRMAN. Without objection, you may file that brief.

Mr. MOORE. It is a painful subject to tarry upon, but since I happen to be on this committee and you are a Representative of Philadelphia and in the capacity to speak, the responsibility being now here of raising eight billions of dollars as against four billions raised last year by taxation, could you suggest any new way that this committee might proceed to get that extra dollar for every one we had last year?

Mr. BALLARD. I would start lower down and double it up, and I would stick just as close to the act I had before as possible. We have all scrapped with it, we have all quarreled with it, we have all got a lot of decisions from the commissioner that we think are not right; but we know it, and I would raise my taxes by adding on to that rather than by trying to go into new matters.

Mr. MOORE. Do you care to say anything about fares and the possibility of raising any more taxes by increasing fares? The gentleman who preceded you suggested we should levy a tax on those incomes.

Mr. GREEN. On gross savings.

Mr. MOORE. No; gross incomes.

Mr. BALLARD. I will tell you how the fare situation is. We have a contract with the city of Philadelphia that the rates of fare shall remain as they are until both parties want it changed. When we got into that in 1907 it looked very good, but now the nickel does not look so large, and we have a new contract with our city which is now before the public utilities commission waiting to go into effect, which provides that the fare shall be changed from time to time by the commission, so that the receipts of the system will always be 5 per cent on our stock, and not to exceed the sinking fund charges on the bonds which the city is to issue for the construction of the high-speed lines, that to be adjusted in a fair way by the commission.

After that contract is approved we will have to go soon to the commission to get our fare raised. Until that contract is approved, while there has been a decision of the attorney general of our State that the public-service commission has abrogated all contracts as to fare and that the fare question is now solely in the hands of the commission, we are afraid of the public sentiment that might be aroused if we did not go to councils first, and we therefore went to councils about three weeks ago at the instance of our men who were demanding a very large increase of wages, and told councils "If you will agree to let us put our fares up, we will agree to keep our dividends down to the present level where they have been for two or three years, and will give our men \$1,750,000 wages which they are asking for, and in other matters that will apply to the benefit of the service."

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Wednesday, June 12, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, O'Shaunessy, Carew, White, Moore, Green, Sloan, Longworth, Fairchild, Sterling, Martin, Hawley, and Treadway.

## STATEMENT OF MR. ROBERT R. REED, ATTORNEY, REPRESENTING THE INVESTMENT BANKERS' ASSOCIATION, 155 WILLIAM STREET, NEW YORK, N. Y.

The CHAIRMAN. State your name in full, so that the committee can get it, and your occupation.

Mr. REED. Robert R. Reed, of Reed, McCook, and Hoy, of New York City, representing the Investment Bankers' Association of America, which is composed of the bond and investment houses of the country—the dealers in investment securities.

Individually, the members of this association have special problems under the present tax laws. Collectively, they have at this time one general and very important interest, growing out of their wide relations with the public, which they serve. The one general interest of the investment banker in revenue legislation is to see the Government levy and collect the greatest possible tax with the least possible harm to the business productivity of the country, to get as much as practicable by tax, as much as need be by bonds, and to distribute the tax and the bonds as generally and equitably as possible, throughout the country.

Probably no interest in the country at all times, and particularly at this time, is so completely identical with the general interest, with the interest of the Government. We emphasize this point because it is the basis and the whole basis of our appearance before this committee, of our interest, our very great interest, in the important problems which it is now considering. We are, of course, confining ourselves to the problems with which as investment dealers we are most familiar and most concerned.

### INCOME TAX.

I take it that at this stage the committee is principally interested in two fundamental and primary questions, What is income, and what are war profits that can be subjected to war-profits tax.

On the subject of what is income: For four years a relatively small tax has been levied on "incomes." The general purpose has been

that the "income" taxed should be the actual income of the taxpayer. In most cases this has been so. In many cases it has not been so; the so-called income has represented accidental factors far removed from actual income and the taxpayer without an income has paid out of a depleted capital or borrowed money a tax on an income which he never enjoyed.

If I may, I would like on this point to read a part of an argument which we submitted to the Supreme Court in reference to the recent income tax before that court. The argument was really prepared as an argument in the Treasury Department, and was put into form overnight and printed and submitted to the court. [Reading:]

No word or clause was ever inserted in any constitutional amendment as to which the legislative and popular sense in which it was used was so well known and recognized as was the legislative and popular interpretation and intent of the word "incomes" (plural) in the sixteenth amendment.

The most widely recognized authorities agree with the popular conception of an income tax (and of "incomes" under an income tax) that it rests on the principle of "ability to pay" out of income and aims to reach what Dr. Seligman has called "that amount of wealth which flows in during a definite period and which is at the disposal of the owner for purposes of consumption, so that in consuming it his capital remains unimpaired."

That this was the legislative and popular view on which the income tax amendment to the Constitution was proposed and adopted is so well known as hardly to justify citations.

That the amendment would not have been proposed or adopted on any other view is equally plain.

That it was intended to give Congress power to tax as such the proceeds of the sale of one's house, the gross receipts of one's business, or any other factor of "income" (as distinguished from "outgo") is, in brief, preposterous.

The result of this viewpoint expressed, so to speak, in the terms of the Brushaber decision is that a tax on gross receipts or on factors of income, or on capital in the form of "income" as distinguished from "outgo," is in effect a direct tax on the capital subject to the rule of apportionment and not taken out of that rule by the sixteenth amendment. This, because such a tax is not a tax "on incomes" in the plain sense authorized by the amendment. It is in a very real sense a direct tax under the Pollock case.

Congress in the enactment of the law and the Treasury.

\* \* \* \* \*

For reasons deemed satisfactory the 1916 act met the main problem in a more direct and fundamental way. It levied the tax primarily on "income received," but at the same time and as though to make plain the purpose to reach and tax only "incomes" in the constitutional sense, it added in subdivision (g) of section 8 the important provision providing that "an individual keeping accounts on any basis other than that of actual receipts and disbursements, unless such other basis does not clearly reflect his income, may, subject to the regulations," make his return and have his tax computed on this basis.

This simple provision is in a sense a key to the past and present income tax acts and, in fact, to the sixteenth amendment. It discloses almost unconsciously the purpose and intent of the amendment and of the act. "Income" in this illuminating subdivision of section 8 does not mean "gross income." It means "net income" or "taxable income," an "income" which has its plural "incomes," an income "which is at the disposal of the owner for purposes of consumption, so that in consuming it his capital remains unimpaired."

I might say here that our general viewpoint upon which we address the committee is that when we get down to the really beneficial income, then there is very little that we can take. If we are taxing accidental factors of income we are limited all along the line, and will hear protest after protest from all parts of the country. This creation of what might be called a statutory income, disregarding the real income, first arose for public discussion at the time of the ruling made under the law of 1913 that a loss on the sale of property or on

a trading transaction outside of one's own established business was not a "loss incurred in trade" and therefore not deductible in determining a man's income for the year. This ruling ran counter to what we believe was the original intention of this committee and of the Congress in drafting the law and to the view taken by lawyers all over the country. It also ignored utterly the basic principle of an income tax and of the sixteenth amendment, a principle recognized as to the basis of the income tax since the beginning of tax economics, the principle of taxing a citizen according to his income and to the ability, measured by his income, to contribute to the support of the Government. It is "the ability to pay." There is no ability to pay out of a statutory income that does not exist. In the original Senate debates Senator John Sharp Williams, in reply to a question as to whether income from a business "squandered by speculation" on the board of trade, said:

A squandered income is no income \* \* \* it does not make any difference how the man lost it \* \* \*

I am practicing law, let us say, and I get \$10,000 during the year from that practice, and during the same year I lose \$5,000 in my agricultural pursuits. My net income, therefore, so far as that is concerned is \$5,000. Suppose my house, which is worth \$5,000 burned down; that I had no insurance upon it, and I take my \$5,000 and pay it out during the year to build a new house. If all three of these things happen in the same year I have no net income at all, nor ought I to be charged with any.

Mr. President, the object of the bill is to tax a man's net income; that is to say, what he has at the end of the year after deducting from his receipts his expenditures or losses. It is not to reform men's moral characters; that is not the object of the bill at all \* \* \*. The law does not care where he got it from, so far as the tax is concerned, although the law may very properly care in another way.

And Judge Hull, the original drafter of the bill, was reported to have said that to any person—

Who keeps familiar with his business affairs during the year to the extent that at its end he knows with reasonable accuracy the amount of his aggregate profits, the matter of executing his tax return will be both simple and convenient.

And, gentlemen, those were very happy days.

Under the Pollock decision, a tax on income derived from real or personal property is a burden on the property itself and as such a direct tax within the constitutional requirement of apportionment. The sixteenth amendment took out of this rule of apportionment "taxes on incomes." If in a given year or period you collect \$5,000 from rents and lose \$6,000 on a sale, you do not have an income for that year or period. You have not the ability to pay out of income and must pay, if at all, out of a depleted principal. A tax on the \$6,000 is a tax on the item of receipt from the real property. It is a burden on that property, a direct tax within the constitutional rule, and not an income tax within the sixteenth amendment. Certainly a separate tax on rents or interest would not be a tax "on incomes" within the sixteenth amendment, and a tax confined to items of receipt without deduction for actual losses would not seem to be an income tax in either an economic or constitutional sense.

This principle was recognized and very clearly stated by Senator Cummins in the 1913 debates (Cong. Rec., 3843), when he said:

Our authority is to levy a tax upon incomes. I take it that every lawyer will agree with me in the conclusion that we can not levy under this amendment a tax upon anything but an income. I assume that every lawyer will agree with me that we can not legislatively interpret the word "income." That is purely a judicial matter. We can not enlarge the meaning of the word "income." We need not levy

our tax upon the entire income. We may levy it upon part of an income, but we can not levy it upon anything but an income; and what is an income must be determined by the courts of the country when the question is submitted to them. \* \* \*

If it were within the power of Congress to enlarge the meaning of the word "income" it could, as I suggested a moment ago, obliterate all difference between income and principal, and obviously the people of this country did not intend to give to Congress the power to levy a direct tax upon all the property of this country without apportionment.

And Senator Simmons added (p. 3844):

I readily agree with the Senator in his contention that we have no authority to tax anything except income, and I readily agree with him that, in the last analysis, the court must decide what is income and what is not income.

To which I would add that it is the function of Congress also to determine what is income and what is not income under the Constitution, and to be guided itself by its own judgment as to that principle. As we have said, the error originally in this important matter was in the ruling as to income under this 1913 act, not in the law. The storm of protest that arose resulted in a compromise in the law of 1916, which is continued under the present law. That compromise allows, as a separate item of deduction, as follows:

Fifth. In transactions entered into for profit, but not connected with his business or trade, the losses actually sustained therein during the year to an amount not exceeding the profits arising therefrom.

There are two limitations to this deduction: First, the transaction must be "entered into for profit," thus excluding (according to the letter, which is, I think, not rigidly enforced) a loss on the forced sale of one's house purchased for use rather than profit, and, second, and chiefly, the loss can be deducted only to an amount "not exceeding the profits arising" from similar outside transactions.

Now, put side by side with this the definition of taxable income, which includes "gains, profits, \* \* \* derived from \* \* \* dealings in property, whether real or personal, growing out of the ownership or use of or interest in real or personal property \* \* \* or \* \* \* derived from any source whatever."

In other words, a day could be spent in argument on constitutional questions of this kind. Ignoring for the moment a difference in the constitutional question involved, and taking the largest view of the whole proposition, an income under an income tax should represent an ability to pay, and a normal profit upon a capital asset creates an ability to pay, while a normal loss upon a capital asset destroys an ability to pay. In one year a man may make a profit on the sale of a house inherited from his father. He is taxed on the excess above its appraised value when acquired or on March 1, 1913, if acquired prior to that date. He buys a new house which for one reason or another he sells the following year at a loss exceeding the profit previously taxed. Literally he can not figure this as a loss at all unless the transaction was "entered into for profit."

In nine cases out of ten he could not deduct it, because in the second year he would not have profits against which to offset it.

Now, in a good year he pays on both his business profits and outside profits aggregating say \$20,000, and in a bad year, though his business profits of \$10,000 are wiped out by his outside losses of \$10,000, he must pay out of his capital the tax figured on his statutory income of \$10,000, and he has to borrow the money to do it.

These extreme cases only point the argument they illustrate, but there are tens of thousands of cases where injustice has been done, probably without hope of remedy for the past injury, cases where you have taxed as income items received by men who had no income in fact, cases where taxpayers—that is really the important, fundamental way to look at it—entered the taxable year worth \$10,000, \$50,000, or \$100,000 and went out of it worth little or nothing, a large part of their principal taken from them by a tax, so-called, on income or excess profits. There have been cases of individuals where entire incomes for 1917 were wiped out by losses—not a few of them by losses on Liberty bonds purchased on the slogan of “borrow and buy”—who are now borrowing money to pay that tax levied on that imaginary income which never existed.

I have heard a man, with tears in his eyes, say that he had not been able to borrow the money to pay his income tax; he had not the credit and he had not the money.

The sum and substance of it all is that you can pay a 2 per cent tax out of an income which you are supposed to have but have not, but if you are to pay a 50 per cent tax you have got to have the income to pay it out of. Another class of cases, not so frequent but which are relatively worse in possibilities, is involved in the instances which I have already cited. A dividend is declared to be income, regardless of what it represents in fact to the recipient. I say it is declared to be income, because so far as I know the view has been generally taken, and not disputed in the courts, that in the definition of “income” in the law the items named are supposed to be characterized specially as “incomes.” It seems to me that here is a perfectly possible construction much more in accord with the circumstances to say that what is intended to be stated there are the general principles of what is an income, and that all those things are lumped together as mere instances of what may enter into the computation; but it has been taken to be a fact that dividends as such are characterized and taxed as income.

Normally a dividend is income. We all think of it as such, and perhaps, in the words of Mr. Justice Pitney, used in one of the cases decided last week, that the word was based on the offhand conception of business men. That is right. That has seemed to me to be a rather loose term to express an action of Congress. I think that Congress intends to follow the sound, recognized, fundamental principle of business as understood by decent men, because offhand a dividend is income. As a matter of principle and fact, it frequently is principal or capital. I may have paid \$2 500 yesterday for 10 shares of stock with a par value of \$10 and accumulated earnings of many years. The company may sell out its surplus investments and declare a cash or stock dividend of 2,400 per cent. and I suddenly find that \$2 400 of my principal is converted into statutory income and taxed at a rate established by its addition to my other income. If I am very rich the rate may exceed 50 per cent. To a man of moderate means it is apt to be about 10 per cent. In any event, it is principal, not income, when it is taken, and I may then find the man that sold me that stock the other day had originally bought it in 1913 for \$20, that he had already paid the tax, we will say, on a profit of \$2,300 realized on his original purchase, the very profit—the undistributed profit—of the corporation, on which I am

taxed again to-day. But to him it was income over that period of years. To me it is principal. The Government takes it twice.

An extreme, but apparently actual case, showing the operation of this injustice in combination with the losses in trade proportion is fully set out in a ruling made by letter of Deputy Commissioner Speer under date of August 2, 1917, published in the Corporation Trust Co.'s "Income Tax Service, 1918," as paragraphs 499 to 504. It has all been spread upon the record, and I think I would like to submit it to the committee. [Reading:]

Receipt is acknowledged of your letter of July 31, 1917, inclosing a clipping from the Wall Street Journal relative to the amount of income to be returned for Federal income-tax purposes in a case where the individual purchased "a few months ago" 100 shares of stock, at \$1,000 a share, received thereon a stock dividend of 900 per cent, and later sold his entire holding of 1,000 shares at \$105 a share. In reply, you are advised that, assuming the dividend in question was paid during the present year from earnings or profits which were accumulated in their entirety by the corporation on or after March 12, 1913, the individual will be required, under the provisions of section 2 (a) of the Federal income-tax law of September 8, 1916, to include the amount of its cash value in his personal income-tax returns for the year 1917, and that amount will be subject to additional income tax in his hands. The cash value of the 900 shares of stock received in payment of the dividend is held to be their proportionate share of the entire amount of surplus which was capitalized, which presumably was equal to their par value, or \$90,000. For Federal income-tax purposes the 100 shares of stocks purchased, and the 900 received as a dividend, should be kept separately—

**In business they are kept together—**

the cost of the latter being considered the amount of their cash value, which amount, as previously stated, should be included in the individual's 1917 return as a dividend, and the amount of loss or profit derived from their sale computed and returned as follows:

100 shares purchased at \$100.....	\$100, 000
100 shares sold at \$105.....	10, 500
	110, 500
Loss.....	89, 500

Although under the income tax law they have kept these two items separate, the fact that in this particular case the man resold his stock shortly afterwards and suffered a loss upon it would enable the Government to balance the two accounts upon the returns, if the poor devil had made \$90,000 in some other transaction, and only if he had made \$90,000 in some other transaction; otherwise, \$90,000 of what was a few months ago principal is taxed as income. That is, in substance, what follows here. I will let it go into the record.

Mr. MOORE. Does it state in that letter just how the dual transaction took place?

Mr. REED. He was held to be taxable on the \$90,000 as a presumed par value of the stock dividend when he got it. He was held to be taxable on an additional profit of \$4,500 when he sold it at \$105, or for \$94,500.

Mr. GARNER. Are you not complaining now of the construction of the law rather than of the law itself?

Mr. REED. No; that is pretty well in the present law. It was the construction of the original law.

Mr. GARNER. What remedy would you have for that condition of affairs?

Mr. REED. First, as to losses in trade, I think you have got to allow a deduction. Practically everything you tax is income. If a man is taxed on a profit in a transaction in one year, and suffers a

loss in a similar transaction next year, if the item of the first year is a general item of income, the item of the second year should be an item of deduction.

Mr. GARNER. That will not enable you to tell in any one year, even approximately, how much you were going to get under that deduction.

Mr. REED. Oh, yes; you could. I am not going to compare the two matters. I only want the law to read so that if an item of profit on a transaction is taxable in one year, an item of loss on that transaction, if there is a loss, will be an item of deduction in another year.

Mr. TREADWAY. What kind of transaction do you refer to, a bona fide purchase of the property or a marginal purchase?

Mr. REED. I do not think it makes any difference under this law. This law is not for the purpose of any action on a proposition of morals, but it is to get the tax out of an income, if you have it.

Mr. TREADWAY. That is true, but there is a difference so far as the actual nature of the transaction is concerned, of course.

Mr. REED. There is a very great difference under the operation of any income-tax law.

Mr. TREADWAY. Are you arguing with reference to marginal transactions?

Mr. REED. Oh, not in the slightest. We do not represent the stock brokers. We are not interested in stock transactions as an association.

Mr. MOORE. You made the point before reading this section, that the Government takes the tax twice. This illustration does not bear that out.

Mr. REED. The other does bear it out. The only illustration I have given, and perhaps it is a little clearer than I said before, is this—

Mr. MOORE. In one instance it was taxed as income in the hands of an individual, and in the other case after he had completed his transaction, it was taxed in the hands of another as capital.

Mr. REED. Yes; that was the case.

Mr. MOORE. You said it was taken out of what had been income, and was again taxed—

Mr. REED. I want to make that proposition very clear now, if I can. I will give another illustration that will make it clear. A buys stock in 1913 for \$10,000. In December, 1915, the stock is worth \$52,000. In January, 1916, he sells it for \$50,000 and pays a tax on \$40,000. That brings in a further point, there. He is taxed on what was to him principal, in 1916; but under the law as it stands, it certainly was income, and in January, 1916, he is taxed on \$40,000 profit. He sells that stock to B for \$50,000 in January, 1916. There they turn around and distribute to B, in cash or by stock dividends, the \$40,000 of accumulated earnings on which A had realized his profit on the sale to B, and B is taxed on that \$40,000 as a dividend. You have to worry a little bit about taxing undistributed profits, here; but in some cases you will see that the Government gets them, and gets them twice. That is another problem.

Mr. MOORE. That is the point I wanted to bring out.

Mr. O'SHAUNESSY. Is it your point that the Government gets it twice, and there is only \$40,000 of this in reality, between these two men?

taxed again to-day. But to him it was income over that period of years. To me it is principal. The Government takes it twice.

An extreme, but apparently actual case, showing the operation of this injustice in combination with the losses in trade proportion is fully set out in a ruling made by letter of Deputy Commissioner Speer under date of August 2, 1917, published in the Corporation Trust Co.'s "Income Tax Service, 1918," as paragraphs 499 to 504. Mr. TREADWAY. That is true, but there is a difference so far as the actual nature of the transaction is concerned, of course.

Mr. REED. There is a very great difference under the operation of any income-tax law.

Mr. TREADWAY. Are you arguing with reference to marginal transactions?

Mr. REED. Oh, not in the slightest. We do not represent the stock brokers. We are not interested in stock transactions as an association.

Mr. MOORE. You made the point before reading this section, that the Government takes the tax twice. This illustration does not bear that out.

Mr. REED. The other does bear it out. The only illustration I have given, and perhaps it is a little clearer than I said before, is this—

Mr. MOORE. In one instance it was taxed as income in the hands of an individual, and in the other case after he had completed his transaction, it was taxed in the hands of another as capital.

Mr. REED. Yes; that was the case.

Mr. MOORE. You said it was taken out of what had been income, and was again taxed—

Mr. REED. I want to make that proposition very clear now, if I can. I will give another illustration that will make it clear. A buys stock in 1913 for \$10,000. In December, 1915, the stock is worth \$52,000. In January, 1916, he sells it for \$50,000 and pays a tax on \$40,000. That brings in a further point, there. He is taxed on what was to him principal, in 1916; but under the law as it stands, it certainly was income, and in January, 1916, he is taxed on \$40,000 profit. He sells that stock to B for \$50,000 in January, 1916. There they turn around and distribute to B, in cash or by stock dividends, the \$40,000 of accumulated earnings on which A had realized his profit on the sale to B, and B is taxed on that \$40,000 as a dividend. You have to worry a little bit about taxing undistributed profits, here; but in some cases you will see that the Government gets them, and gets them twice. That is another problem.

Mr. MOORE. That is the point I wanted to bring out.

Mr. O'SHAUNESSY. Is it your point that the Government gets it twice, and there is only \$40,000 of this in reality, between these two men?

Mr. REED. It is unfortunate in some ways that these various illustrations sometimes illustrate two or three fundamental propositions.

Mr. MOORE. Is that the fault of the law or of the regulations?

Mr. REED. That is at present the fault of the law. That is, it is the fault of the law as it has been construed by practically everyone since 1913.

One remedy under the law would be to adopt a very broad construction to the effect that the general definition of income under section 2 is intended to simply characterize some of the items that enter into the determination of what is income, and not to characterize each one of them separately.

Now, you spoke of marginal transactions. I just want to add to this illustration taken from the letter of Mr. Speir that if you will suppose, what is far from impossible, that a man in such case only used \$10,000 to \$20,000 to make the purchase, and he bought that stock on margin, he then has got a \$90,000 taxable income, and he never had \$90,000 in the world—he never had but \$20,000 in the world. That also is true. A man may really have bought that stuff on margin, and then they may have turned around the next day and given him the \$90,000 dividend, and it is taxed, all of it, as income.

I was extremely interested in the very clear statement the chairman gave yesterday during Mr. Palmer's hearing, of a stock dividend proposition. For the purpose of serving the powers of government, there probably is no difference, Mr. Chairman, between a man that gets a \$100,000 note representing the accumulated earnings, or a \$100,000 stock dividend. In other words, in substance, it amounts to this, that the Government may take advantage, if it will, of the stock dividend transaction to tax at that point the accumulated profits.

That is probably true. It is only a book transaction, really, because he has not got any new property, as he would have if he took a note or Government bond. He has got the same property, in different form. But this committee at this time is interested primarily in what it should do under this law. As I said before, it wants to levy this tax in such a way that it will reach net incomes and will impose a tax commensurate with net income, and not impose it upon accidents of income; and when that stock dividend is declared and the value of your stock drops from \$1,000 a share to \$100 a share, then the committee knows that there is no income, and it knows whether it is a stock dividend or a cash dividend, whether it is a \$900 note or a \$1,000 bond; so that if no other changes are made in the law I think you might put into it, if you want to make it fair in all respects, a provision for permitting the Treasury Department in cases of extraordinary dividends to allow for depreciation in the stock on account of payment of dividends. In that case you would get it. There would be limited or allowed \$9,500 less on his stock as against the nominal profit on the dividend, which is what it is in business affairs and what the committee wants to make it.

Mr. LONGWORTH. In other words, if the stock was worth \$110, and a stock dividend of 10 per cent was made, and the stock fell to par, you would say that that was not profit?

Mr. REED. In the last analysis it is not, but in the normal condition of things in the course of a year the stock reestablishes a 10 per cent loss, and you recognize it as a normal dividend, and it does not do

any injustice when you treat it as dividend; but it is a dividend of from 100 to 300 per cent. Under these circumstances you can not put all these details in a statute, and if under all the circumstances the Commissioner of Internal Revenue considers that an extraordinary dividend, and that it is offset immediately by the depreciation in the stock, that depreciation is not made up during the year—perhaps it is realized in early sales—and he puts the two transactions together where they belong, and there is no income, or an income covered by these two features of the transaction.

Mr. LONGWORTH. That is, you think that according to the case just cited it is not income?

Mr. REED. The court does not settle the question.

Mr. LONGWORTH. You say you do not think so.

Mr. REED. The Supreme Court says it is not construing the Constitution, but is construing the statute—the 1913 act. Of course when you are dealing with a corporation you are not confined to income taxes. You have the excise power to take all you want, to-day. And you have got to deal with that and recognize it, and you have got, in many of these points, especially in dealing with the corporations, very far beyond a question of power, and it is a question of justice.

Mr. OLDFIELD. I did not exactly get your answer to Mr. Longworth. Do you think that the 10 per cent stock dividend you were talking about there should be taxed?

Mr. REED. For all practical purposes it may be taxed. If I was rewriting the law I should say that depreciation because of payment of dividend not made up before the end of the year is not counted, but for all practical purposes you only need to worry about the ordinary dividend. Your stock was selling at 110, and after the dividend it is selling at 100, and by the end of the week it may go back to 110, and probably will do so.

Mr. GARNER. The trouble is you and these other gentlemen come here and undertake to point out to the committee how to frame the law so as not to do injustice to this, that, and the other business, but you seem to fail to take into account where we are going to get the money.

Mr. REED. My proposition is that if you define an income to be a real income, you can get all of the money that there is in the country.

Mr. GARNER. Do you not think that you owe it to the committee in trying to arrive at a just law, to submit to us the character of law that you think will get the amount of money that has to be gotten under this law?

Mr. REED. I would be glad to suggest how you can get more money.

Mr. GARNER. The committee desires, I imagine—in fact, I am sure I speak for the entire committee when I say they would like—to draw these income tax and excess profits tax provisions of the law so as not to do injustice, and get a certain amount of money; but you realize that that is a very difficult thing to do?

Mr. REED. I do.

Mr. GARNER. And you come in and suggest that we do not assess this, that, and the other. I think you ought to take into consideration the advisability of helping us draw a law to get the money.

Mr. REED. I do that, and my viewpoint is absolutely yours; and the viewpoint of the investment brokers is absolutely to help the Government get the largest possible tax; and what we are trying to point out to you here to-day is that you can not get that tax unless you first get down to the solid, real incomes of the country and then put the highest possible tax upon them; and we are very much of the opinion that you should raise the rate, after you have done that.

Mr. MOORE. Are you going to point out how we can do that?

Mr. REED. If the committee will hear me, I will be glad to point out everything I possibly can as to that. My personal view is that you should exhaust your possibilities under the income tax in this present year.

Mr. MOORE. Which you think the present law does not do?

Mr. REED. Which it does not do. Which it can not do without causing tremendous injustice, because the income defined under the law is in many cases not real income.

Mr. MOORE. Will you point out where at any time we may wipe out exemptions?

Mr. REED. I am coming to that later—that is, briefly. I think you want to make this change. You want to continue the 2 per cent normal tax, under the old law, and reduce the exemption of one to two thousand dollars, and then you want to put on a large normal tax.

Mr. GARNER. What I would like to do with that would be to get a proposed section of the law that would get the highest possible rate of income this year, 1918, so as not to do injustice to any business. I would like to see your prescription for securing from the American people the highest possible amount of money under the income-tax law of the Constitution without doing injustice to business.

Mr. REED. I heard one Member, Mr. Garner, complain yesterday that some gentleman came down here talking about rates. The thought was that at this time you gentlemen wanted to get the basis of the tax, and then you would put on the rate as high as you possibly could. As I said when I started, I think the fundamental questions before you now are, what are incomes and what are profits, and if you gentlemen solve those two questions there is practically no limit, except as you bump up against 100 per cent, to the rate you may get. But you have got to solve these questions, and there are a number of items involved in them and this dividend question is one of them.

Mr. HAWLEY. Suppose the adjustments you are suggesting are agreed to by the Committee, how much increase could there be in the income tax?

Mr. REED. You, gentlemen, are familiar with the English rates, and I suppose we are as much in this war as Great Britain, and we can stand the rates of Great Britain. That is my personal view.

Mr. HAWLEY. Could we stand the higher rates of Great Britain? Could the business interests of this country stand the higher rates of Great Britain?

Mr. REED. Considering the profits of this year we might. From my personal view I can see no objection at all, especially when we allow the liberal exemption we do in this country. Mr. Garner made the statement yesterday, "We want to find out how much these corporations can live on, and then take the rest." I think there is an element of unsoundness in that as applied to corporations, because

corporations represent the business productivity of the country, and if you apply that principle to them you will endanger it; but as applied to individuals, I think it is absolutely sound.

Gentlemen come down here and talk about taxing 100 per cent over \$50,000 or \$100,000. It is not necessary to do it, that is all. There is no need for 100 per cent. When you get up to 85 or 90 per cent, you are getting it.

The CHAIRMAN. Do I understand that you are going to prepare an amendment along the lines you have suggested?

Mr. REED. I will; yes, sir. I have been a week preparing this argument, and I have no draft that I want to submit at this time. This outline which I have here is pretty long, and I want to make certain points clear in a general way, directing my attention to the basic proposition, here, of what is income.

Mr. STERLING. I do not understand why you distinguish between the individual and the corporation as you do.

Mr. REED. I do think this, Mr. Sterling, that the more you drive through the artificiality of a corporation on these matters, the quicker you are going to get your income.

Mr. STERLING. But would you take from a corporation all except what is necessary for its living?

Mr. REED. This is the only difference. I look upon a corporation as a business entity, and I look on the individuals as its owners. It is your business to get every last dollar out of the individuals that you can. Do not think for a minute that I do not expect you to tax corporations very heavily.

\* \* \* \* \*

Mr. FAIRCHILD. May I give you an example? I have stock in a company myself which last year, to my surprise gave me 50 per cent stock dividend. That stock had been selling, before I got the dividend, around 95 to 98. It has been paying 6 per cent. After I got that 50 per cent stock dividend it began to pay 8 per cent. Now, does it make any difference whether I receive the stock dividend? They could have sold that stock upon the market at 95 to 98 and taken the cash. How would you differentiate there?

Mr. REED. I would so frame the law that a complete accounting might be had on stock transactions for a year, dividends less depreciations. If the stock dividend is paid, it is the value of the stock dividend plus the depreciation in the stock.

Mr. FAIRCHILD. You would go to work and examine all the books and examine all the rules that govern the organization of the company.

Mr. REED. Yes.

Mr. FAIRCHILD. It would be very difficult to treat every organization fairly and equitably.

Mr. REED. That is right. It is very difficult to treat any taxpayer equitably. As a part of the question, and a very important part of the question, of what is income, I think we should also be careful to consider what is income of the taxable year, and to in effect extend the principle already adopted of allocating income to the year in which it accrued. No one, however, wishes to see untaxed any accumulated profits of 1915, 1916, and 1917 which have so far escaped the tax. Possibly no one would object seriously if you taxed for 1918 income accumulated during recent war years and

realized in 1918 provided that the income taxed has all been received as income by the persons taxed and that you make some allowance for extreme cases. An extreme case I would take to be that of a man who refused an offer of \$2,500,000 in 1916 for an oil property which cost about \$400,000 in 1912. He was worth \$2,500,000 in December, 1916. When he sold the same property for \$2,000,000 in 1917, he was told that his profit was subject to all the new taxes for that year.

That man was worth \$2,500,000 in December, 1916. I do not know the exact figures, but we will assume he got of 1917 only a little over a million dollars, and the only satisfaction was that it was only his income for 1917 that was taxed. Now, that is preposterous.

Mr. STERLING. I would like to submit this question to you: Suppose a man out in Illinois bought a quarter section of land 30 years ago for \$50 an acre. He sells it this year for \$250 an acre—and that is happening out there.

Mr. REED. Yes; surely.

Mr. STERLING. How ought his income to be computed? Ought any of that property to be computed as income?

Mr. REED. At \$250 an acre, you say he sells it?

Mr. STERLING. Yes.

Mr. REED. He may have mortgaged that property for \$200 an acre last year or in 1916. If you tax him on the profits from \$200 up to \$250, you take everything he has got left there.

Mr. STERLING. All of that is not profits of this year.

Mr. REED. It absolutely is not.

Mr. STERLING. It is the profit of 30 years.

Mr. REED (continuing). And if you want to tax the income of 1917, if you want to make a man contribute on what he is earning this year, you have to allow him the value of his property on the first day of the tax year. But if it accumulated during prior years when the profits were subject to tax—since 1916—then you should tax him according to the rate of that year. And it is not difficult. It adds to prior years the amounts that are now discovered. You examine them and figure out a man's income tax, and add \$5,000 to it and assess him on the \$5,000 additional.

Mr. SLOAN. The accumulation is not income.

Mr. REED. Under the Constitution, I think, it is not.

Mr. LONGWORTH. Then you would not tax him on that part of the property accumulated between 1913 and 1918?

Mr. REED. Originally the law did, but it is not as the law stands now.

Mr. LONGWORTH. And for that portion of the profits which accumulated between 1913 and the day he sold it, you would call that income?

Mr. REED. Yes.

Mr. LONGWORTH. And you would assess that at the rate of the year 1917?

Mr. REED. No; I would not; because as to your new income tax, and as to your excess profits tax, these are new taxes for the year 1917. Now, on that point, I think you must take into consideration the decision of the Supreme Court which has been rendered within the last month, in which they last interpreted this law, in the case of *Doyle v. Mitchell*. There was never any question of constitutional power to tax corporations, but in 1909 Congress undertook for the first time to impose a tax. The question involved in that case was

whether standing timber, standing on December 31, 1908, sold at a profit in 1909, should be valued for the purpose of determining that profit at its original cost or at its value on December 31, 1908.

The court held that it should be valued as of December 31, 1908; that was a part of the income for that year. Now, when you come in any year to levy a new tax, you are in exactly the same position as Congress was in levying the corporation excise tax in 1909. You should tax a man on his income accumulated during the year. And I want to stress it every time as I go along, every time I say it, that what I am trying to present to you gentlemen is the necessity of taking these extreme cases into consideration, so that you may levy the highest possible tax on actual beneficial incomes. You do not want any man, when you levy 50 or 60 or 70 or 80 per cent tax, to come out of the year, at the end of the year, worth half what he is worth at the beginning of the year, and have him come around and ask you how you did it, and have to say "That was only your 1918 income which was taxed," because he will say to you very quickly that you taxed the 1901 income.

Mr. MOORE. This is a very general question, but while you are on the question of incomes I would like to know, since you are speaking for representative investors, whether it is your belief that under existing law we lose a very considerable sum in collections on such incomes as ought to be taxable.

Mr. REED. I have no way of answering that question.

Mr. MOORE. You have suggested that we might raise more money on incomes, which suggests my question as to whether we are losing money on incomes that ought to be taxed.

Mr. REED. I have no doubt whatever that with the pending tax and with human nature as it is, we are getting to a time when people will more and more try to evade the income tax. I have never seen anyone try to do it; I have never seen people try to withhold or hide their income, personally.

Mr. MOORE. The present law is an intricate one. It is a law for lawyers rather than for laymen and it involves many references to preceding acts, and there are so many provisions which require skillful construction which are beyond the average business man, that I am compelled to ask whether it is possible to incorporate into the law the capital and income on which the Government necessarily loses a large amount of revenue.

Mr. REED. It is wholly an offhand answer, but under the present conditions I think a man might hold back a good many salient facts.

Mr. MOORE. Could you give us any suggestions as to how we might prevent him from holding back the facts so that no injustice will be done to the Government in view of its increasing demands for revenue?

Mr. REED. I have never had the question to study. I think the suggestion is worth while considering, and if I can make any suggestions I will be glad to make them.

Mr. MOORE. The investment bankers have been very patriotic up to date and made suggestions during the pendency of the war-revenue bill, and they could help materially, if they would, to correct such errors of law as we may have been guilty of in passing the bill.

Mr. REED. I think it is a very fundamental and important thing that every possible effort should be made to do that. You might want to license accountants throughout the country to make returns

on large corporate incomes and things of that kind, to be sure that the accountants were of such a character as to be approved by the Government; and, as I said a moment ago, as you increase the tax you are increasing the tendency to conceal.

Mr. MOORE. The tendency to deceive?

Mr. REED. Yes. I think one of the most important factors in the present success of the income-tax law, and taking it by and large it has been tremendously successful in the matter of obtaining disclosures, is its secrecy. A man may make a full return to the Government under secret disclosure and oath which he would be inclined more or less constitutionally to avoid otherwise.

Mr. MOORE. Would you have these returns made public?

Mr. REED. Never individual returns.

Mr. MOORE. Would you have corporation income tax returns made public?

Mr. REED. Only in such cases as the Secretary of the Treasury thought fit.

Mr. MOORE. Do you think it would be wise to leave such a discretion to any administrative officer?

Mr. REED. I think during the war you have got to leave such discretion to the Treasury, and I think that discretion has been exercised splendidly.

Mr. MOORE. Might not such discretion lead to favoritism that would be unfortunate, especially where a man was competing in the same line of business?

Mr. REED. Absolutely in peace times it would be tremendously so, but I have seen a good deal of the personnel in the Treasury Department and there is no doubt about the high-minded attitude adopted up there at the present time.

Mr. MOORE. That is a matter of faith in the present administration. It might be that a change of administration would cause a change of opinion.

Mr. REED. Do not misunderstand me on one point. I am not considering at all the general public policy. I am not a great believer, myself, in privacy; I am only speaking of the income tax from the point of view of a revenue producer. You are not going to get the incomes the Government ought to get if all the records are spread out before the public.

Mr. MOORE. My mind is not as strictly legal as that of some of the members of the committee, and I would like to get at things more directly than by the elaborate details provided by this law. I would like to know how we are going to get the money. We have got to get \$8,000,000,000. It was suggested that the Government might in some instances collect double taxes. That would be unfortunate and I would like to see that corrected, if it is against the same sum of money.

Mr. REED. I have also suggested a difference of principle.

Mr. MOORE. A point extremely important to us is to know how we are going to get additional money, whether you get it out of incomes or from some other source, and we would like to have suggestions as to how the Government can get more income.

Mr. REED. What I said was with reference to the necessity of the paying power of income. You should reach your highest point at this time and this year. That is my present view.

Mr. MOORE. I had hoped that in view of your knowledge of investing conditions and of incomes that you might be able before the close of this hearing to make some suggestions as to how we can derive additional incomes, or to what sources we shall go.

Mr. REED. I shall be glad to do that. I will say you ought to have a much larger war normal income tax.

Mr. HULL. Some of us on the committee are not so much concerned about the rates as to get the knowledge of business people and professional people as to the best methods of applying these tax rates and tax methods, and how to get these taxes from business equitably and efficiently.

Mr. REED. I am glad you asked that because you were not here when I tried to make it very clear at the commencement, directing myself to two fundamental propositions on which the basis could be laid, and those are: What is the income, and what are war profits? I have not given the thought that I was prepared to give later to the question of rates. The sources, I take it, are incomes, and you want to determine an income in such fashion, or possibly in no fashion at all, if you state in that law that you tax incomes and the Treasury be allowed to do the rest, so that you can tax the real beneficial income.

Mr. FAIRCHILD. Would you not also consider what the losses are?

Mr. REED. My point is there is no income until the losses have been deducted.

Mr. FAIRCHILD. For instance, a man invests a million dollars in a security at par. The company gradually loses ground and the value goes down from par to five. He has got a loss of \$950,000 but can not allow for that loss. What is your suggestion as to that?

Mr. REED. I think at the present time the Treasury could possibly extend what is called the inventory basis to the individual. Under the present provisions of the law, stating in the case of an individual keeping accounts on a basis other than that of actual receipts and disbursements, that if such basis does not fairly reflect his income, he may have a reduction for that and compute according to his conscience on that basis. I think Congress should extend and amplify that provision very materially so as to give complete power to the Treasury Department to allow individuals to deduct for depreciation. There is no question about it, that a man in the condition you speak of might be in the bankruptcy courts and have no income or hope of income.

Mr. FAIRCHILD. The Government would have to analyze the conditions for every corporation in the country.

Mr. REED. It would simply have to check up and see if the rates in his books represent a fair depreciation of stock, just as a local assessor would have to do in assessing for local taxes. The proper administration of the tax law compels you to compare the value of the property. It would be a big job, but not in proportion to the amount of property involved. It has been suggested that it is necessary to get the basis correct and if the basis is correct the amount of the income tax is only a question of rates and you can determine what the Treasury needs.

Mr. O'SHAUNESSY. How would you provide for calculating the depreciation in cases similar to the one suggested by Mr. Fairchild?

Mr. REED. There are various ways of doing that. You might accept as prima facie the concern's statement approved by a licensed accountant.

Mr. O'SHAUNESSY. Then, you would get licensed accountants into the game of making returns?

Mr. REED. I do not know whether you have followed the regulation, but under the present law the merchant's inventory of goods is subject to review by the Treasury.

Mr. O'SHAUNESSY. Is there any way to find out depreciation?

Mr. REED. Your bank will tell you sometimes if you have got to borrow money. You may carry that stock into the bankruptcy court.

On the allocation of income I would like to read an extract from this memorandum on behalf of the Investment Bankers' Association of America in the case of the Southern Pacific Co., on page 11:

We submit that the new 1917 tax, both the new income and the new excess-profits tax, must be read as of the date, or at least the year, of its enactment, and under the view first expressed the Congress can not by a new tax in 1917 tax as income and under the Constitutional amendment a right to the earnings of 1913 to 1916 converted into cash by the sale of the stock in 1917.

Also that it was not the intention of Congress to impose these new taxes on incomes accrued but not received prior to 1917.

Further that though not previously taxed, the profit realized by sale in 1917 would be subject to the previous tax at the rate of 5 per cent payable annually and should be paid at that rate.

Finally, if, as is of course the fact, the rate for each prior year was different, the profit attributable to each year must be apportioned on a correct business or legal method and taxed according to the rates of those years.

One more and very important consideration might be mentioned. Assuming that A was engaged in the business of a dealer in securities and that the net profits of such business in 1917, crediting the \$40,000 profit and deducting losses, was \$30,000, but that by a deal in real estate during the year outside of his regular business he lost \$30,000, we feel very strongly that he has no income which can be taxed for that year under the constitutional amendment authorizing "taxes on incomes." He has no income at all. The \$40,000 profit is a factor of income, as is the \$30,000 net profit from his business, but neither of these factors is his income, it seems to us, within the sixteenth amendment, or subject to a tax "on incomes."

Let us take another concrete case: M in 1917 had an incorporated oil business which cost him \$500,000 in 1913 (in the shape of wells and development). In 1916 he was offered and refused \$3,000,000 for it. In 1917 the business earned \$400,000 after paying an excess-profits tax of \$300,000 on the corporation. M sells the stock in December, 1917, for \$3,000,000 after receiving cash dividends of \$300,000 out of the year's profits.

It is quite possible in this and many such cases that the combination of excess-profits and income taxes (all, in fact, income taxes as applied to the individual) as now administered will leave the individual with a mere fraction of what was on January 1, 1917, his capital, and yet each tax is declared to be, and popularly supposed to be—and we contend that in law should be—a tax on income for 1917.

That is practically our whole proposition on all these points, that it should be the income, and the real income, that is taxed, and you never wanted to do anything else, and you do not want to do anything else now, and yet some people are likely to say they have been taxed unjustly, whereas if we wrote it into the law, a dozen times if we had to that we are only intending to tax the beneficial income we would lay the basis, and the sound basis for the highest possible rates.

That brings us to a question which originally we did not think belonged to us or did not think we should discuss at all, the value of undistributed income of corporations, but the more we consider it the more it seems to be tied up with the other question.

The taxation of the undistributed profits of a corporation is more closely connected with this matter of reaching the profits of a particular year and also with the taxation of dividends than is generally supposed. Dr. Adams, of the Treasury Tax Advisory Board, has recently stated somewhat broadly the general proposal of taxing undistributed income to stockholders as though it was distributed. Probably there is no real intention to press so extreme a proposal, but if there were its character and dangers would deserve earnest consideration. It has other and much more vital possibilities than those of Federal revenue.

Let me say by way of preface that the taxes which the Government gets in 1918 out of profits on the sales of securities and out of dividends representing earnings of prior years is a tax on the undistributed income creating the profit on the securities or on the undistributed income of the prior year which was in that year not taxed to the stockholder.

The Government by no means loses all the tax it seems to lose by not taxing directly the undistributed income of corporations. In an instance already cited, we have seen that one man is taxed on \$2,300 profit on a sale of stock carrying accumulated earnings and another man taxed on \$2,400 cash or stock dividend representing the same earnings. Surely no one will question the fact that, even though undistributed in cash, these profits have been twice taxed, once to the man who really got them as income to him and once to the man to whom the corporation distributed the stock dividend representing its income. In 1916 there were large undistributed profits. In 1917 a part of these profits were distributed and a part were realized upon by the sale of stocks. The Government taxed a large part of them at much higher rates than those of 1916. This process is repeated year by year. It is not altogether clear that the Government is the one to worry about the "undistributed income." Sooner or later it can get it all, and some of it it gets twice or more. I say twice or more because it taxes every profit realized on a fluctuating stock and does not, generally speaking, return anything on the losses.

Ignoring these substantial considerations, however, and considering solely the income tax on the net profits of a business as such, these profits may be divided into three parts—those which are distributed, those which normally would and now could be distributed but are not, and those which are normally or necessarily retained to meet the essential growth of the business. The first part are already taxed to the stockholders as dividends. The second part are now largely taxed indirectly either in the year they accumulate or in succeeding years. The third part should not logically be taxed at all. The first and second parts are income or reducible to income and represent "ability to pay." The third part is not income, is not reducible to income, and creates no ability to pay. We can tax it in form, but in fact the tax is shifted to the other part—that distributed or distributable to the stockholders. What is essential to the business remains in the business and the stockholder or partner denies himself accordingly. Business either grows or dies, and in its growth and the growth of the community it demands and absorbs the reinvestment each year of a large part of its earnings. This is universal and inevitable. We recognize, however, the fact that the present situation does not produce the revenue that it should, and also that

a large amount of corporate income is held back and escapes the surtaxes, though just how much of this tax could be collected by an effective use of the broad power given by section 3 of the 1916 act may be worth investigation. In any event the Government should get the tax on the amount, whatever it be, which the corporation would distribute but withholds to avoid the tax.

In determining the amount of the undistributed income which normally should be and now could be distributed, we must have recourse to what is usual or normal in normal times and also to what is exceptional and necessary in these times. There may be some basis on which Congress can say that a certain amount of the actual net income ought to be distributed. Provision should, of course, be made for income necessarily applied to restore a capital impairment or offset a loss of a preceding year.

The CHAIRMAN. Do you realize that you have consumed an hour and seventeen minutes, and as you are reading from your brief you could file it with the hearing.

Mr. REED. I have not started on excess profits yet.

The CHAIRMAN. I just wanted to remind you that we have seven other gentlemen to-day.

Mr. REED. I leave myself entirely in your hands.

The CHAIRMAN. Suppose you take up excess profits and file what else you want to put in the report. I do not want to cut you off.

Mr. REED. I will do that, and if you want to hear from us further we can submit it to you either in writing or here.

As to excess profits, our first thought is to the need of confirmatory regulation. There are so many cases in point to the construction of the 1917 act that we think Congress should make it clear beyond judicial dispute that the regulations which have been adopted carry out the intent of the original act and should confirm the taxes assessed or to be assessed under these regulations. Prior to the adoption of the regulations, there were no two lawyers in agreement as to the interpretation of the law. Everyone, including the responsible leaders in Congress, has accepted the regulations as embodying the law. These regulations, in so far as they may be open to question, bind the Government, not the taxpayer. With a proper provision permitting due allowance to be made for extreme cases, the regulations should be confirmed by act of Congress as conclusive upon the assessments made and to be made under them for 1917.

Also, we urge that the general principle under which these regulations have been made be carried into any new law that is adopted. There should be no doubt in the mind of any taxpayer that the regulation or decision of the department fairly within the principle applicable to him is binding upon him. Neither injustice nor evasion should be entrenched in the letter of the law. As it is absolutely impossible to take care of every possible case by literal application, the remedy lies first in the declaration of major principles to care for necessary adjustments, second in broad power to cover exceptional classes of cases by regulation, third in giving power with discretion and upon a public record of the facts and reason to dispose of special cases.

The machinery for this is already created. It has already in fact removed many of the difficulties of the 1917 act and minimized the impact of the tax in a very considerable degree. And it has produced the revenue.

Take for instance a matter already discussed, the inextricable difficulties surrounding the taxation of profits realized directly or indirectly from corporate enterprise. It is impossible to deal with such cases by rigid provision of law. Congress does not create the corporations nor assert any control over the infinite and intricate statutory and charter provisions under which they operate. It can not by provision cover every possible case. An individual case, however, can be handled by administrative methods. Necessary adjustments can be made. What those adjustments should be is reasonably clear when we come to apply the well-understood purpose of the act to the case. That purpose is defeated by a detailed provision. It can be effected by broad provisions, such, for instance, as the one already suggested that in computing the income derived from dividends proper adjustment may be made for depreciation in the value of the stock caused by the payment of the dividend. Everyone knows what that means as applied to any case. Injustice, but not the tax, can be avoided under it.

There is much greater need for such provisions under an excess or war profits tax than under the income tax. It is essential when you enter the complicated field of business with the perfectly proper desire not of taking here and taking there a few millions but of taking every last dollar that it can stand to make up the billions you demand.

The hand and the power of the tax collector must be controlled in effect and so far as may be by the general principle that the taxes levied are intended to be uniform, to avoid duplication and inequality, and to produce the largest possible revenue.

The adjustments necessary to reach this result can not possibly be prescribed in detail, but they can be controlled by well-understood principles embodied in the law. Numerous instances might be cited from the English law of this method of obtaining a war revenue. The various alternative provided for the determination of the pre-war deduction are familiar instances.

Among the typical instances of this in the English tax acts are the provision in the excess-profits act, fourth schedule, that in allowance of expenses "for the development of the trade or business" only such amount as appears to the commissioner of inland revenue to be reasonably and properly attributable to the year or accounting period "shall be allowed, the provision allowing them to treat any closely held company as a partnership," the provisions permitting them to apportion the profits of a contract over different taxing periods and the quite significant provision which has to be carefully studied to be understood, that where account is taken of income from investments for excess profits only—in the cases of insurance and investment companies only—"any variations in the value of any of those investments which appear to the commissioners of inland revenue not to be due to a variation in profits shall also be taken into account." This last provision incidentally means that I am not taxed on a profit of £6,000 on securities representing an enhanced value which is itself due to undistributed profits out of which the profits tax has already been paid. But for the tax they realize that my profit would have been £8,000 and £2,000 has in fact been taken.

There are other similar provisions in the munitions of war acts general in form but the effect of which is determined, so to speak,

by understood principles of justice. Allowance shall be made for this, proper provision may be made for that. It is provided for, instance, that "any appropriate adjustment may be made in respect of capital expenditures specially incurred for the purpose of munition work" and for "the probable value at the end of the period of control" of any plant erected for war work. All of these provisions, I believe, are understandingly administered between the inland revenue officials and the taxpayer, and I know of no reason why in war time and as a war measure they could not be so administered here. In fact the exceptionally intelligent and efficient work already done makes it plain that they could be.

This machinery now created, working to adapt the letter of the law to carry out its purpose, especially its inherent fundamental purpose of justice and equality, is the Treasury advisory board, or board of tax reviewers, a board of interpretation and adjustment. Many unforeseen and unintended injustices it can not reach. Many unforeseen and unintended avoidances of the tax it can not prevent. The millions that are taken unjustly to the point of confiscation from A, B, and C are balanced on the Government account by the relative immunity enjoyed by the millions of X, Y, and Z. I call them X, Y, and Z because they are not so well known to gentlemen as A, B, and C.

Mr. TREADWAY. Can you offer any suggestion as to how we can reach those we do not hear from?

Mr. REED. By getting a sound basis, with power in the Treasury Department, so that we can get real war profits.

The CHAIRMAN. Do you think it would be a sound basis for us to adopt such a method as the Senate proposed to adopt, providing for a tax of 80 per cent?

Mr. REED. Not as the Senate committee tried to do last year.

The CHAIRMAN. You would favor the substitution of the English law?

Mr. REED. Absolutely, but it should be adapted first to American conditions.

The CHAIRMAN. The same method of determining those profits and income; I do not mean in amount.

Mr. REED. You are familiar with the Senate bill of last year, how they insisted on sticking in a prewar income. If a man was poor in the prewar period he would remain poor all his days; if he was prosperous he could continue to be prosperous. That is not my idea of the English law as it exists. Briefly, you could give the taxpayer all the alternatives the English law gives him, and give the Government the power to step in and see that the proper basis is applied.

The CHAIRMAN. You would not tax 80 per cent?

Mr. REED. Not except, personally, I should say 80 per cent.

The CHAIRMAN. How much more are your clients making during the war than they did during the three years prior to the war?

Mr. REED. Mr. Chairman, I guess it is a well-known fact that the investment bankers are doing nothing but selling Liberty bonds.

The CHAIRMAN. Your clients are not making as much now as before the war?

Mr. REED. Nothing like it.

The CHAIRMAN. They pay no tax?

Mr. REED. No tax at all under the percentage tax.

The CHAIRMAN. Your companies pay no tax at all under the present law?

Mr. REED. I think the Treasury Department knows best, but I think you will find they paid substantially no tax last year.

The CHAIRMAN. I want to find some people who are in favor of taxing themselves, and who do not want to put it all on the other fellow. Do I understand that your clients would pay nothing under this proposition which you desire to write into the law, but would pay something under the law as it is?

Mr. REED. No one knows what 1918 will bring forth. I would say, in my own opinion, they have paid nothing under the 1917 law as a class, and will pay nothing under any war profits.

The CHAIRMAN. I want some gentlemen to show us how we can equitably get more taxes out of themselves. Everybody knows how to get taxes out of the other fellow.

Mr. REED. We do not appear here at all in that sense, or for that purpose; we are speaking for the association as a whole, in a spirit of public service.

The CHAIRMAN. You understand, I am not imputing an improper purpose at all, but I am just telling you the information the committee would really like to have. They said that last year we taxed everybody in the last revenue bill. Now, as I said to the House, the only way we found out about these taxes was in this way: Our offices were crowded with people to tell us how to raise these billions of taxes and how to get these taxes from the other fellow, and just as soon as he left the office another one was standing at the door and showed us how to raise a tax from the fellow that just went out, and therefore we got them all. We want somebody to come right square before us and show us how to equitably get the taxes from themselves or from their clients.

Mr. REED. If the investment bankers could find out any more effective fashion to help the Government at this time than they have, they would have to take it up with the Treasury Department; because their help has been in the way of personal service and it has not been in taxes, and they do not expect to have any during the war.

The CHAIRMAN. I think the banks have done great service.

Mr. REED. Every investment banker makes his living selling securities. This resolution was passed by the board of governors of the Investment Bankers' Association of America March 5, 1918:

Whereas the board of governors of the Investment Bankers' Association of America has already indorsed the plan for the supervision of capital issues which is now in operation:

*Resolved*, That it is the sense of this board that no member of this association should buy or sell or offer for sale, except subject to the final approval of the capital issues committee, any securities which come within the scope of the capital issues committee regulations unless the issuance of such securities first shall have been approved by that committee; and,

*Resolved, further*, That a copy of these resolutions be sent to the capital issues committee, to the capital issues advisory committee, and to each member of this association.

If you realize, as we all do, what the capital issues committee is doing and that there is no power in the law that requires this association to make this declaration, you will realize that this means that this amounts to a moral obligation which the association places upon its members.

The CHAIRMAN. How many corporations does this association represent?

Mr. REED. About 500 members, large and small, throughout the country.

The CHAIRMAN. All the large cities have some memberships?

Mr. REED. Yes, and a good many small ones throughout the country. The board of governors itself comes from all over the country. Now, we approach the tax itself with a great deal of diffidence. Somewhere in one of his notable works on taxation Prof. Seligman tells us in effect, if I correctly understand and recall it, that a tax on profits as such, as a regular source of Government revenue, means business stagnation and brings a nation to a state of stagnation. It is essentially a tax on earned income as against unearned income, a tax on enterprise and capital that is active, daring, and productive, with relative immunity to conservatism, to capital that hides in a stocking or safe deposit vault, or secures itself by investment in gilt-edged securities. A short-sighted investment banker might well favor that discrimination, but the far-sighted merchant even of gilt-edged securities and the far-sighted legislator or statesman knows that the wealth of the world, the rewards of labor, industrial and social production, come from enterprise, from initiative, from risks, and from the profits of success in daring endeavor. A tax on profits, if we are to take the words of some of its leading proponents, asserts a Government interest in business, that business is in some way a privilege or as some think, a foster-child of government. This is very strange doctrine. A corporation is a privilege, a creature of government. A protective tariff may be said by some of us to make a foster-child of the protected industry. But are we ready—is the present majority of this committee or of Congress ready to assume a government-protected and created business, the profits of which as such are to be shared by the Government? That, in brief, is an outline of one argument and counter-argument for a profits tax as such.

When you talk of a war-profits tax, you change the subject and the problem. There is no more brilliant page in Government finance in war than the excess-profits duty in England, and with all its difficulties and errors in our own country. No sounder statement has been made—a statement that I hope this committee will put indelibly in the proposed bill—than that of the President that the profiteer who is not restrained by his conscience and by love of country can be got at by taxation. "Can be got at," said the President, but he did not tell us how. "Must be got at," is his demand, and it is the duty of you gentlemen to get at him.

Who is the profiteer? Instantly our minds recall two classes, but we do not always get them clearly and are apt to confuse them. One class is the going business which, in its efforts to keep pace with or go beyond war conditions, heaps up in one year a 50 per cent to 100 per cent profit on its ordinary business, a profit represented by high prices, extortionate only in the sense that in the normal effort to make money advantage is taken of war conditions to get much more than would otherwise be possible. We do not need to characterize it. Men with both conscience and love of country have made money in these trying days. We only need to apply to these businesses their own principle, to get all they can out of them as they get all they can out of their business at this time.

The CHAIRMAN. In other words, they get all they can to keep a fellow going.

Mr. REED. You have got to consider business itself. Get all you can of that class.

The other class of profiteers which we visualize is war profiteers as such, those who are making or are supposed to be making huge profits out of war contracts and war services. Generally speaking, we should apply the same principle to them, but we should take account of one vital fact in doing it. This profiteer is not as a class a going business. He represents an investment of many millions in necessary war work. He can not do the work unless he can get the money. In analysis, a purely war venture is a single transaction, whether it lasts one month or three years. A man has to get the capital, say, to supply submarine chasers. That man can not obtain capital for that proposition unless he can give a reasonable assurance of return on the capital. To the extent that you treat that as a single proposition, and let him pay back his money that he borrowed, then over and above that, whether for one or two years the Government has a share in profits and it could be a liberal share. That is the view we hold; if you want to get as much as possible out of him you have got to allow him to finance it to get it. When the war commenced the total value of his plant was his income.

Dealing first, however, with the profiteer of the first class and with the war-profits tax generally, what I have said of such a tax as a normal thing applies in our judgment to a profits tax based on capital percentages, whether it be levied in war times or peace times. To the extent that you put a special tax on the normal profits or normal business you discriminate against earned income, the income of industry, enterprise, and production. You also apply a standard which prevents you from getting all you could and should from war profits. There are many concerns whose normal rate of return is very low, who are now making a much larger return. Their excess is war profits and 50 to 80 per cent might be taken for war needs. You now take but 20 per cent under the first bracket of the present tax, and yet an 80 per cent tax on business generally on the excess above 9 per cent of the capital under the present law would be manifestly impossible and ruinous discrimination against active production.

There is no such thing as a normal rate of return on business risks. Even in the limited use made in England of the percentage basis with respect to new businesses and new capital it has been found necessary to allow rates as high as 15 and 20 per cent in certain classes of business. Without such an allowance, and with a high productive tax rate based on capital percentages, capital for business risks will not be obtainable. It will, in fact, be withdrawn wherever possible and to a very large amount to safer and less productive investments.

The CHAIRMAN. Could not we provide for that by putting in some provision as to amortization, lodging with the Treasury Department, perhaps, in special cases under special circumstances, the power to allow a reasonable reduction for amortization?

Mr. REED. You are referring, I think, to capital war expenditures. I am referring to the different risks in different classes of business. You might camouflage it, you might allow a discount on the other side of the ledger where a man can earn more than 9 per cent, but the

idea of war profits is what you are really getting. I want to emphasize this, that the differences in risks in different businesses are not the only differences in risks in business. The fundamental and the far-reaching difference is the difference in financing, the difference between being able to borrow money and being able to have your own money and not have to borrow. You take in any town in this country the case of a successful merchant who dies. His junior partners or clerks are young men and they can carry on that business, but they have not the money to buy it. The widow is willing to take their notes, or if they are men of good character and credit the banks may take their notes, in any event they can buy if they can use the credit they have. The widow can now sell to them or sell to a wealthy competitor. If they buy under this law as it now stands they pay all the money. The Government takes 60 per cent of the income. Practically every dollar they make is subject to the 50 or 60 per cent rate. Now, you can not penalize normal methods of financing. You take a corporation with \$500,000,000 preferred stock and \$500,000,000 common stock. Another corporation does the same business with \$500,000,000 bonds and \$500,000,000 common stock. The common stock bears the burden in each case, and in one case the capital represented by the preferred stock is allowed as capital, and the bonds are not allowed as capital. The earnings are the same and one corporation pays two to one what the earnings of the other paid. It is a punitive, prohibitive discrimination against normal methods of financing.

The chairman spoke yesterday of the reason for the limitation or the exclusion of interest and the deduction of interest under the income-tax law, and said that was balanced by this feature of the excess profits. I think that probably was the reason, although as soon as the original corporation law was enacted the normal tax on the stock of the individual came along, and that equalized it. The exclusion of borrowed money from the computation of capital under a profits tax is one of the most serious features of the present act, if not of the capital percentage profits-tax as such. If you wish to tax a profit or investment as such, you should tax the investor, not the business. If you wish to tax a trade or business as such on a capital percentage basis, and that is the professed object of the tax, you should, we submit, include as capital everything employed in the business and measure the tax by the earned income, without deduction for fixed charges or amounts paid for the property used in the business.

Finally, I take it that the insuperable objection to the percentage basis of tax is the difficulty, in my judgment impossibility, of making any definition of capital that will be both rigid and elastic as well as sound enough to support as high a tax as you want to and should levy on real war profits. The efforts made last summer and since to define capital, the radical differences now existing between leading representatives of the Treasury and between Members of Congress, between representatives of business and between recognized authorities on taxation, demonstrate in themselves that no definition will satisfy the country or avoid serious dangers. The English law, with its limited use of capital, does not define it inclusively, but it does provide that certain otherwise doubtful things shall be included, certain other things excluded.

Dr. Adams, who has exhaustively studied the problem as applied to our law, tells us that the value of capital is not to be found in the original investment, but in the present and future earning value of that investment. It is best represented by security values where obtainable, and as those values by no means represent the temporary war earnings of corporations, they would furnish a basis for a productive percentage profits tax. I take it, however, that such a conception of capital will not be accepted by Congress and that, considering also other objections to the capital percentage basis, we should all of us at this time turn our minds to the problem of finding, if possible, a suitable substitute for that basis.

That substitute, we submit, should be a new tax based on the phenomenally productive English plan, with all the elasticity necessary to avoid extreme hardships and with the high rates possible when that is done.

The so-called Senate prewar plan of last summer did not meet these conditions. It provided for a fixed prewar basis. The man who was poor and unsuccessful in the prewar period could remain poor and unsuccessful the rest of his days, until he went into bankruptcy, while the concern which was prosperous in those years could enjoy a relative immunity from this tax.

The CHAIRMAN. The Senate itself after consideration thought its plan was not wise. They adopted the language of the House; they said they had adopted practically the House definition of capital.

Mr. REED. I suppose no one would quarrel with this if you are levying on a moderate tax, but when you take a tax of 20 per cent up to 60 per cent it is different.

The CHAIRMAN. If you recall, they brought in another amendment of the committee a month after the matter had been under discussion and changed the basis of war profits to excess profits, only they had between 6 and 10, and the conference had been 7 and 8. What have you to say as to their making that change?

Mr. REED. I did not intend to commend them very strongly on that proposition, because they did not adopt the English plan.

The CHAIRMAN. They did not adopt the English plan in the first instance?

Mr. REED. They said, "Here is a man who has made 2 or 3 or 4 per cent, and if he makes more, now he has got to be taxed, and if he is poor he must stay poor, and if he is rich and successful then he can stay rich and successful."

Briefly, then, we would urge upon your consideration a war profits tax primarily and exclusively, but we would not ask you to bind the Government to accept as a prewar basis in any given case an abnormally high prewar income in any three or even five years. We would in the first instance give the taxpayers all the options given by the English act, so as to avoid any possible injustice, so as to make it certain that at least the normal earned income is exempt from the tax and lay a sound foundation for the heavy tax which you expect to levy. But we would also give the Treasury the power, when all question of injustice to the taxpayer has been removed, to see that no injustice is suffered by the Government.

To use the apt language of Secretary McAdoo we would superimpose upon this tax on the prewar basis a tax on some other basis—which might be the capital basis though in our judgment it should

be avoided—a basis definite enough to point the principle, elastic enough to get the tax.

Mr. SLOAN. Do you think under our Constitution we could give the same adjustment as the British could, where the administration is almost superior to the legislature?

Mr. REED. We might have had doubt of that a year ago, but not now, because of the broad discretionary powers given to the administration in war time, and in war time these things are necessary. Second, because of the remarkable work that has actually been done in the Treasury Department along this very line they have gotten three-quarters down the road already, and you gentlemen commend them, and the country commends them. You have got to write into this new law the regulation which they were forced to exercise under the former law, because all the people in the country have agreed to that.

Mr. SLOAN. You would delegate to the administration powers of adjustment which would have the authority of even changing rates?

Mr. REED. Of changing taxes. You have got to point the principle of adjustment on a business basis. We have at this time but one such alternative basis even to suggest as possible. It is suggested partly by the President's allusion to the profiteer. We propose it most tentatively. It was said yesterday that a tax on gross income or on sales would be passed on to the consumer at a profit to the wholesaler and also to the retailer; in other words, that the consumer would pay twice or three times the tax paid to the Government. We feel that the consumer, except of luxuries, is already bearing the burden of war.

Instead of any greater tax on net income as such or on gross income as such we have in mind a tax on the ratio between net income and gross income, an ascending tax on an ascending ratio, a tax that will be in a measure punitive of high prices, that will help the consumer rather than injure him. In brief, a provision that if in any case by comparison with the earnings of similar concerns and with the prewar ratio of net income to gross income of such concerns and also with the deductions determined under the returns filed under the 1917 act, it should appear to the Commissioner of Internal Revenue that the prewar income of the taxed concern was abnormally high, he shall determine the prewar deduction from such and other factors, including the ratio of net income to gross income prevailing under normal conditions prior to 1914, and that the deduction so determined shall be substituted for the deduction on the prewar income basis.

The CHAIRMAN. I suggest that you get the stenographer to give you your remarks as soon as they are transcribed, and then you can incorporate your brief.

Mr. REED. Thank you very much.

The CHAIRMAN. I would like very much to read your brief, because there are some very valuable suggestions in it.

(Thereupon, at 12 o'clock noon the committee took a recess until 1.30 o'clock p. m.)

## AFTER RECESS.

STATEMENT OF MR. ALFRED REEVES, GENERAL MANAGER  
NATIONAL AUTOMOBILE CHAMBER OF COMMERCE, WASH-  
INGTON, D. C.

The CHAIRMAN. Mr. Reeves, we will hear you now.

Mr. REEVES. Mr. Chairman and gentlemen of the committee, a little unlike these other gentlemen who have talked about taxation, the automobile is already taxed, as you very well know.

The CHAIRMAN. Mr. Reeves, give your full name and address and your business and occupation.

Mr. REEVES. Alfred Reeves, 509 Seventh Street NW., Washington, D. C., general manager National Automobile Chamber of Commerce.

The CHAIRMAN. Are you connected with the automobile business at all?

Mr. REEVES. Yes, sir; I am the general manager of the association, and not an attorney.

I want to thank you gentlemen for this opportunity of coming here and talking on this question.

The original tax under war-revenue act of October 3, 1917, of 3 per cent on automobiles, grouping them with piano players, talking machines, jewelry, perfume, and chewing gum, was doubtless placed on the theory of taxing articles that were nonutilitarian.

The automobile industry, the third largest manufacturing industry in the country, deprecates the placing of automobiles with the articles enumerated above, because during the past decade, both passenger and freight vehicles have entered so largely into the personal and business use of our people, that they must be considered articles of great utility.

These time-saving vehicles have so increased our efficiency that their disuse or any marked decrease in the number in use, would be nothing short of a disaster at this time when the speedy movement of persons and commodities is of such vital importance.

It is hoped that no favorable consideration will be given to any plan of taxation that will discourage the purchase and use of motor cars, which are such great factors in our fast-moving American life.

The making and use of automobiles should not be discouraged because:

1. The industry ranks third in manufacturing importance, employs more than 800,000 people, who with dependents would populate several of our States; pays annual wages approximately equal to all the gold in circulation in the United States; employs capital of more than one and a quarter billion of dollars, exceeding by one-quarter billion of dollars the capitalization of all the national banks; produced finished product of nearly a billion dollars in 1917. An important part of the war program is, and should be, the maintaining of industry to the fullest possible extent.

2. The passenger mileage of automobiles exceeds that of the railroads by more than 10,000,000,000 passenger miles; they carried 3,000,000,000 more persons than the railroads carried in 1915; the value of this passenger mileage at 2 cents per mile would have been \$900,000,000. It would be impossible to adequately replace this

service under present conditions by any other form of transit. A recent investigation developed that the farmers in Livingston County, Ill., bought 73 per cent of their automobiles as a necessary part of their farming equipment, 25 per cent for both business and pleasure, and 2 per cent for pleasure alone; 2,000,000 of the automobiles in use are owned by farmers; nothing could be more disastrous to-day than to interfere with the efficiency of the farmer. Mr. Garfield rules the automobiles are public utilities. Mr. Hoover buys new car, although giving up chauffeur-driven car.

3. No automobile is exclusively a "pleasure car"; the most expensive machines are used more or less in a utilitarian way. There can be no danger that so-called pleasure use of automobiles can be permitted to become wasteful of gasoline, because Mr. Requa, oil director of the Fuel Administration, has ample powers to enforce any rules necessary to conserve fuel.

4. There are 5,000,000 passenger automobiles in use to-day. Probably 850,000 per year will wear out. If production is not kept up, residential suburbs would become to a considerable extent impracticable, tending to greater congestion in cities; local and suburban transportation facilities would be inadequate; suburban and farm values would decrease tremendously; the efficiency of farmers would be impaired very greatly.

5. Automobiles are the greatest economizers of time of farmers, doctors, contractors, builders, salesmen, and men engaged in all businesses.

6. They increase efficiency of the individual when farm labor is scarce; physicians are assuming the practice of doctors who have gone to France, and manufacturers are called on for increased production. There are 150,000 doctors in the United States.

7. Railroad service has been curtailed, and many valuable hours will be lost by business men if use of the automobile is curtailed.

8. Automobiles have been used most liberally in the campaigns for sale of liberty bonds and war savings stamps, to raise war funds for the Red Cross and Y. M. C. A., in recruiting, and in many other ways connected with war activity. To discourage the sale of automobiles will make these activities less efficient.

9. Further reduction of manufacture will force out of business a large proportion of the 27,500 dealers and 25,000 garage owners whose livelihood is derived solely from sales and care of motor cars and accessories, and who are located in every town and hamlet in America.

10. Eleven big companies made 85 per cent of the cars in 1917. More than 200 manufacturers produced only 15 per cent of all the passenger cars made. These are the ones who will suffer most from any increased taxation, because their profits are smallest and they are unable to secure war contracts to keep their plants in operation. There are bound to be many failures among them. Forty-nine failed or went out of business since last October.

11. With growing scarcity of foods, the use of the automobile instead of the horse should be encouraged. Every horse continued in use represents 5 acres of land and the necessary labor to produce oats, hay, and other feed diverted from the production of human foodstuffs.

12. The automobile is one of the greatest utilities we have and renders a passenger-car service exceeding that of the steam and electric railroads combined. By no stretch of imagination can it be classed with intoxicating liquors, cosmetics, and so-called nonessential luxuries. A tax on the use of automobiles is provided for in the new bill of Congressman Cox, to which I have heard no objection, so far as the plan is concerned.

13. To replace the cars that are worn out, an annual production of about 850,000 cars is necessary, the average life of an automobile being figured at approximately six years. Production thus far in 1918 was at the rate of only about 1,000,000 a year.

14. A tax on this article with any thought of arresting its production seems unwarranted; the question of how many machines should be produced is one of materials and labor, and production should be maintained on a basis consistent with those conditions. This is a matter entirely apart from taxation and is being dealt with by another arm of the Government—the War Industries Board.

15. It is unfair to compare the motor-vehicle industry of this country with that in European countries. England has only 260,000 passenger cars and imports all her gasoline, whereas in this country we have seven States each of which has more than 260,000 cars (New York leading, with 419,000), while gasoline production here is almost 7,000,000 gallons a day, according to the Bureau of Mines report.

16. It is a great economic mistake to reduce this output and disarrange organizations important to the prosecution of the war more than our own conditions as to material and labor make it absolutely necessary. The more it is restricted because of these reasons, the greater our misfortune.

17. Holding great automobile organizations for war work seems vitally important at this time, and scores of the automobile plants are now doing Government business, with many other companies asking for similar work.

The Government should add no undue burdens to this great industry; it should be maintained as fully as economic conditions will permit, in order that such a vital and large part of our community may be in position to participate in Government loans, income and other taxes, and in other ways.

It is to be regretted that the automobile industry as a whole is sometimes judged by the glittering successes of a few companies. Probably no other business presents the same mortalities during the past eight years, our lists showing 760 companies that failed or went out of business during that period. Since last October, when the new revenue bill was passed, there have been 49 companies that failed or went out of business.

The 450 manufacturers of motor vehicles, and the 825 manufacturers of motor vehicle parts and accessories, and the 52,000 motor vehicle dealers and garages, with their more than 800,000 employees, constitute an important part of our manufacturing business-labor-community. Greater loyalty to our present cause exists nowhere, and it is their earnest desire to pay any equitable tax in their power that is considered necessary for the prosecution of the war.

If it is considered necessary and wise to raise revenue by a manufacturing tax on essential articles, with which the motor car must be

classed, there will be no complaint or objection, but it would then naturally follow that the quota necessary would be so distributed over a wide variety of articles so as not to be too burdensome on any one.

With their business dwindling owing to advanced prices due to increased cost of labor and material, and of which this tax also forms a part, and with a realization, keener than others owing to their close contact with the subject, that motor vehicles are vitally essential to our national efficiency, the manufacturer ask you to now reconsider and come to an appreciation of the point that an economic error is being made in grouping motor vehicles with nonessential articles for revenue-raising purposes.

It has always been felt that a great injustice was done to the motor truck when it was included in the last war revenue bill with perfumes, sporting goods and musical instruments, and subjected to a tax of 3 per cent. There can be no argument on the statement that motor freight vehicles should be taxed only under a plan of taxing articles of use and necessity. The motor truck has so demonstrated its ability to operate not only in the trucking field, but as a long-haul substitute for inadequate railroad facilities, and for marketing farm produce, that this has become self-evident.

In its consideration of tax measures by the members of the Ways and Means Committee, it is hoped that the tax on the automobile manufacturer will not be increased to a point where it would disturb the making or use of the motor car which is now such an important factor in adding to the efficiency of the Nation, because of its ability to transport men and materials in the shortest possible time, and to the needed relief of the railroads.

Mr. DIXON. Mr. Reeves, do you think the present tax has curtailed the manufacture of automobiles?

Mr. REEVES. I think it has contributed to a slowing down of the sales, and the automobile manufacturer would have suffered were it not for the fact that he has been taking on war work in many of the plants. Some of the small manufacturers have suffered as a result of the tax.

Mr. DIXON. The tax has been passed on to the consumer?

Mr. REEVES. Practically in all cases.

Mr. DIXON. You referred to the other method of taxation, the Cox bill. You think that is a better way to adjust the tax than to have a tax on the manufactures?

Mr. REEVES. Mr. Cox's bill, of course, applies good deal heavier fees than the bill suggested last year.

Mr. DIXON. Its principal feature is the bill that was introduced in the Senate.

Mr. REEVES. Quite so, and that bill, based on the figures of last year, at rates ranging from \$5 to \$40, would raise \$50,000,000 from the cars in use, and I would not think very much of any man's patriotism who objected to paying a small tax of that kind on his automobile during war times.

Mr. DIXON. Do you know how much money the Government raised last year from the present tax?

Mr. REEVES. My understanding is that up to this time, since October, they have taken in something like \$17,000,000.

Mr. CRISP. You spoke of the tax slowing down production. Is it not true that all of the automobile companies that are putting out automobiles are behind with their deliveries? In other words, is there not a greater demand for automobiles than they can manufacture and supply?

Mr. REEVES. I think that has become true in the last two or three months as the result of the labor and materials situation. The motor car manufacturer, gentlemen, feels it is a little unfair to take an article of which 5,000,000 have been bought and are used in this country and put it in a class with perfumes and golf balls and sporting goods of that class, and tax it on that basis.

The CHAIRMAN. You do not object to the increased tax, but you want to be taken out of the classification?

Mr. REEVES. We object to the company we are in, and if we are to be taxed we would like other industries of similar importance to be taxed also.

Mr. GREEN. Permit me to call your attention to another matter. You were speaking about the motor truck being put in the same class as luxuries. I did not feel that way about it in supporting the tax that was proposed, but we put a tax on the receipts of the railroads. Now, we can not put a tax on the receipts of motorcars because that would be impracticable; and if we put the tax on in this other way it would amount to far less than a percentage of the receipts or benefits received from the trucks.

Mr. REEVES. Yes; but you did not put a tax on the making of locomotives and freight cars.

Mr. GREEN. No; but we put a tax on them that amounted to a great deal more than it would have been if we had put such a tax on locomotives and freight cars.

Mr. REEVES. But still the fact remains that it was put on automobiles in the particular section of the bill that covered cosmetics, perfumery, and golf balls.

Mr. GREEN. A rose under any other name would smell as sweet.

Mr. RAINEY. In other words, if you could get out of bad company you would not object to the tax?

Mr. REEVES. The tax is on now and I know the automobile manufacturers would feel it would be a good deal of a burden to put any more tax on them now.

Mr. RAINEY. You do not object to the tax, for instance, on the automobiles in the hands of the ultimate consumer?

Mr. REEVES. I do not think anybody objects to that.

Mr. RAINEY. You only object to taxing the automobile before it gets to him?

Mr. REEVES. Because it is a discrimination against a particular manufacturer who is in a great industry and it seems should not be classed in that way.

Mr. RAINEY. You want to be relieved but you do not want the owners of the automobiles that you make to be relieved at all?

Mr. REEVES. It does not make any difference, because whatever tax is put on the automobile manufacturer, even that 3 per cent last year, he could not have absorbed it himself because a good many of them do not make 3 per cent on their sales. That 3 per cent gross sales tax levy the automobile manufacturer is obliged to pay to the

Government, even though at the end of the year he has a deficit, whereas in the average line of business of no better standing than the automobile business he does not begin to pay taxes until he makes profits.

Mr. DICKINSON. Would they not pass that tax on to the purchaser?

Mr. REEVES. I presume they would have to do that, and they feel that that would be a discouragement in the further use and buying of automobiles.

Mr. GARNER. Do you sell automobiles?

Mr. REEVES. I am the manager of this association, which is made up of 117 companies.

Mr. GARNER. That sell automobiles?

Mr. REEVES. Yes, sir.

Mr. GARNER. Do you not know that they do add it to the price of the automobile to the consumer?

Mr. REEVES. Yes, sir.

Mr. GARNER. If they add it to the price to the consumer, how is the 3 per cent going to affect the manufacturer?

Mr. REEVES. Because every raise in price always cuts down your sales field. That is Ford's idea, just as an example, that the purchasing power of the country is in the shape of an apex, and the lower down you get the price of your commodity the more you sell.

Mr. GARNER. But the purchasing power is much greater than the power to deliver just now, is it not?

Mr. REEVES. I do not think that is true of all the companies, but it is true of some of them.

Mr. GARNER. What percentage of the automobiles of this country are used as pleasure cars?

Mr. REEVES. They produced last year 1,700,000 passenger cars and about 160,000 trucks.

Mr. GARNER. That would mean, then, something over 90 per cent of pleasure cars?

Mr. REEVES. Yes.

Mr. GARNER. You know the country is in war.

Mr. REEVES. Quite so.

Mr. GARNER. And you understand that England has stopped the manufacture of pleasure cars entirely.

Mr. REEVES. Yes, sir.

Mr. GARNER. Why do you suppose they stopped the manufacture of pleasure cars?

Mr. REEVES. Because, first of all, their capacity in that respect was very limited and they wanted those companies to make flying motors and things of that nature. In this country—

Mr. GARNER (interposing). They wanted the labor and materials that went into pleasure cars to go into this war, did they not?

Mr. REEVES. Only because that class of industry was very limited.

Mr. GARNER. Well, it makes no difference whether it was very limited or not, whatever limited quantity it was, they wanted the material and labor to go into the products used in the war rather than into pleasure automobiles.

Mr. REEVES. Quite so.

Mr. GARNER. Now, if we need labor and materials in this country, do you not think it probably would be a wise policy to adopt some

kind of method that would restrain the use of labor and material in the manufacture of pleasure cars and direct that toward the uses of the war?

Mr. REEVES. Is it not a fact that the automobile companies of this country have been taking on this war work and are asking for it now, all they can handle?

Mr. GARNER. That may be true, but which would you rather have, a pretty heavy tax on the manufacturer and owner of pleasure automobiles or have them restricted entirely?

Mr. REEVES. There is only one answer to a question of that sort, of course. There is a tax already on the automobile manufacturer which is being passed on to the owner, and we feel—

Mr. GARNER (interposing). In what way?

Mr. REEVES. This 3 per cent.

Mr. GARNER. That is a general tax that applies to everybody.

Mr. REEVES. But the automobile is taxed in every county and State and taxed as personal property, and the man who drives has to get out a license and an operator's card, and there are various other forms of license which have constituted quite a burden to the automobile business from its earliest days, and notwithstanding all those taxes the automobile, on pure merit, has made this great progress.

Mr. GARNER. I gathered from your statement that you were making an argument against any character of legislation or taxation that is going to restrict the manufacture of pleasure automobiles.

Mr. REEVES. Quite so.

Mr. GARNER. For one, I do not agree with you.

Mr. MOORE. Mr. Reeves, have you a list of the number of automobiles in the country by States?

Mr. REEVES. I have not got it with me, Mr. Moore, but I can get it very readily.

Mr. MOORE. I would like to know how many automobiles there are in the country and how many there are by States, if you can furnish the information.

Mr. REEVES. I will be very glad to do that.

Mr. MOORE. You said New York was at the head of the list, with something over 400,000.

Mr. REEVES. Four hundred and nineteen thousand.

Mr. MOORE. You are in favor of the bill introduced by Mr. Cox, of Indiana, are you not?

Mr. REEVES. We have no opposition to it, Mr. Moore, because we feel that no good patriot who is an owner of an automobile would object to paying a small tax.

Mr. MOORE. That bill proposes to transfer the tax from the manufacturer to the individual owner of the machine.

Mr. REEVES. That is a tax in addition to the present 3 per cent tax which the manufacturer is paying, and is a tax on all the cars in use and not the few cars that may be produced this coming year.

Mr. MOORE. It proposes to tax the machine direct.

Mr. REEVES. Quite so, under a Federal license plan, as I understand it.

Mr. MOORE. On a graduated basis?

Mr. REEVES. Yes, sir.

Mr. MOORE. Based on the value of the machine?

Mr. REEVES. Yes.

Mr. MOORE. The manufacturers would continue to pass the charge on to the purchaser of the machine, would they not, whether that bill went into effect or not?

Mr. REEVES. I do not think they could afford to do anything else, Mr. Moore. The margin of profit in automobile manufacture is very small per unit. Taking the gross sales of any company, their percentage of profit is small. It runs into big figures, but the percentage is small.

Mr. MOORE. In answer to Mr. Garner, you have indicated that the manufacturer does actually pass the tax on to the purchaser of the machine now, and that practice probably would be continued, no matter what we did, so far as the manufacturer's responsibility goes?

Mr. REEVES. Quite so.

Mr. MOORE. Did you hear the testimony of Prof. Sprague, of Harvard University, who was here day before yesterday?

Mr. REEVES. No, sir; I did not.

Mr. MOORE. He referred to automobiles as being instruments of pleasure very largely, just as Mr. Garner has in the question propounded to you; and he suggested that the mechanics should be taken out of the automobile industry and put into war-munitions industries and shipbuilding and aeroplane manufacture and wherever skilled mechanics are necessary. What have you to say as to that?

Mr. REEVES. All I can say as to that, Mr. Moore, is that for seven or eight weeks during the winter I went around the country lecturing for that particular purpose for the Signal Corps, and I think Col. Deeds will tell you that they have got in the Signal Corps on the other side some 7,000 American mechanics, and that we have asked every one of the garages and dealers around the country, which number 50,000 or more, to spare from one to three men to go into the service, and they are turning them in very, very fast.

Mr. MOORE. They come out of the garages. How does that affect the manufacturer?

Mr. REEVES. They come out of the factories as well.

Mr. MOORE. Any man who can put up an automobile, build it or take it apart, is necessarily skilled in his occupation.

Mr. REEVES. A very large part of the labor on automobiles is machine labor run by a lathe hand in the plant, and the men they wanted in this service were men who were in the habit of giving service; that is to say, taking care of cars in the garages, and therefore the work was done not alone among the manufacturers, but among the dealers and garages.

Mr. MOORE. The argument seemed to have been that by retaining those skilled mechanics in the automobile industry they were withdrawn from essential war work, where they might aid the Government in the construction of aeroplanes, ships, and the like.

Mr. REEVES. A large part of those men, Mr. Moore, are now in the automobile plants turning out war work, of which the automobile manufacturers have taken on more than \$600,000,000 worth.

Mr. MOORE. But they are turning out automobiles.

Mr. REEVES. Partially automobiles and partially war work.

Mr. MOORE. How does the wage scale stand now, relatively, as between the automobile factory, where these skilled men are employed, and the munitions plant, where similar mechanics are employed?

Mr. REEVES. I do not think I could answer that question.

Mr. MOORE. Do you know whether the Government is paying more than the automobile plants pay for the same kind of work?

Mr. REEVES. I could not say.

Mr. HAWLEY. What percentage of the work done in automobile factories is done on Government contracts and what percentage on producing automobiles?

Mr. REEVES. I think it varies a good deal. I should say in some of the plants, like Chandler, Pierce, and Packard, and some of the makers of high-priced cars that have taken on Liberty motors and trucks, that it is 50-50, and that in the case of some of the smaller or lower-priced cars, with the demand for cars of that utilitarian type, the average might not be quite so big. The general production of passenger cars during the past six months is off between 33 and 40 per cent.

The CHAIRMAN. Mr. Reeves, I remember the Packard representative told me, when we were considering the last revenue bill, that it would be impossible for them to increase the price of their cars at all in order to absorb this 3 per cent tax; that they would have to lose it themselves; that it would be hard to pass it on to the consumer, because the price of the machine was so high that it had reached the limit, and if they charged any more the sales would fall off, and that they could not afford to let that happen and would perhaps have to lose it themselves. Since that bill passed levying a tax on automobiles, they have increased the price of the Packard to the consumer.

Mr. REEVES. I think the Packard and all other cars have increased in price, Mr. Kitchin.

The CHAIRMAN. Something like \$1,000 in the case of the Packard, is it not?

Mr. REEVES. I would not be surprised.

The CHAIRMAN. And the tax at that time was only a 3 per cent tax, or about \$75, or something like that, was it not?

Mr. REEVES. Three per cent on about \$3,500.

Mr. KITCHIN. And in order to take care of that \$75 they proceeded to increase their price \$750 or \$1,000, when they told us they could not increase it at all if there was a tax.

Mr. REEVES. I think, Mr. Kitchin, if you will refer to the brief we filed at that time you will find it very specifically stated that we did not feel the manufacturer, with the narrow margin of profit he had, could afford to absorb this tax himself, although some of the big makers might undertake to do it; but so far as the tax itself is concerned, it is passed on to the consumer now as a tax.

The CHAIRMAN. Do you not take the position that if you increased the price to the consumer the sales would fall down?

Mr. REEVES. I think that would be so.

The CHAIRMAN. But you did increase the price of automobiles like the Cadillac, the Buick, the Packard, and all these other cars, not only the amount of the tax but from five to ten times the amount of the tax?

Mr. REEVES. As a result of the increased cost of labor and materials. I think that is true.

The CHAIRMAN. I understand that, but if you can increase your price to the consumer to take care of the increased cost of labor and the increased cost of material, it is just as easy to increase your price to the consumer to take care of the increased tax cost.

Mr. REEVES. They have been obliged to do that, and the question is how far they can go.

The CHAIRMAN. I know they did that, and we are not blaming them, and we intended for them to do that.

Mr. REEVES. The fact remains that they will not sell half as many automobiles as was contemplated to be made when that tax was suggested.

The CHAIRMAN. Have not the Packard, the Cadillac, the Hudson and the general run of the large companies turned out, whether for the public or for the Government, a great deal more product than they did before the tax was levied?

Mr. REEVES. The production is off substantially in all but a very few companies, Mr. Kitchin. The Packard production is off, and also the Pierce Co., the Hudson Co., that you mentioned, and the Chalmers Co. They are all down. We have all the figures and I would be very glad to show them to you.

The CHAIRMAN. I would like to have those figures. The production, you say, is down, and the cost is up?

Mr. REEVES. Yes, sir.

The CHAIRMAN. So they really make about as much profit with the increased price they are charging as they did when the production was normal?

Mr. REEVES. I do not think they will make anywhere near the same profit.

The CHAIRMAN. Well, take the Packard, for instance, including the work they are doing for the Government, are they not turning out more product than they did before October 3, 1917?

Mr. REEVES. I think the Packard is an exception.

The CHAIRMAN. Then take the Hudson.

Mr. REEVES. No, sir. The Hudson Co. is very much off on their production of cars. I did not mention the Studebaker. They are off 40 per cent below their previous production.

The CHAIRMAN. But you say that the Studebaker is making aeroplane motors?

Mr. REEVES. Yes, sir; Liberty motors.

The CHAIRMAN. There is no tax on that, is there?

Mr. REEVES. No, sir.

The CHAIRMAN. I notice that in March they collected an automobile tax, this little 3 per cent tax, on the manufacturers' cost, the manufacturers' selling price, not the retail—they collected \$2,589,000, and they estimated that for the year 1919 they will collect on that little 3 per cent tax \$32,000,000. We estimated, and the experts worked it out, \$4,000,000 when it was 5 per cent, and that was on the basis of the number being manufactured then 1916. According to this, doesn't it look like there had been a great deal increase in the production of automobiles?

Mr. REEVES. No; because, Mr. Kitchin, the production in the early part of last year was running in excess of a billion dollars, and so far as the tax on the wholesale price is concerned, I am sorry to say that the revenue department here has ruled that the 3 per cent shall apply on the retail price of the car. That has resulted in putting the branches at a disadvantage with the dealers.

Mr. RAINEY. What was it you said about the Studebakers?

Mr. REEVES. I think the Studebaker is off 40 per cent. It has done little during the last three or four months.

Mr. RAINEY. Having trouble in disposing of their cars?

Mr. REEVES. The last year.

Mr. RAINEY. I had a conversation with the Studebaker agent for the District of Columbia within the last hour, and he told me that the price of a 1919, seven-passenger, six-cylinder Studebaker was now \$2,100, and the price for the same machine last year was \$1,100, and he told me that he could not get enough machines to supply the demand, but could sell many times more than they were willing to deliver to Washington.

Mr. REEVES. Well, he didn't tell you that the car which he is selling for \$2,100 is a brand new model, and has no relation to the one selling last year for \$1,100. The cars they had last year were ones that they had difficulty in selling, and they have started in with a new model.

Mr. RAINEY. They may have changed their model, but the statement shows that there is a tremendous demand for the 1919 Studebaker car.

Mr. REEVES. I think that is true.

Mr. RAINEY. It can not be supplied though it is \$1,000 more.

Mr. REEVES. I do not think you ought to take the city of Washington, or the District of Columbia, as an example, because the conditions are different.

The CHAIRMAN. Of course, you sell more cars here than in any other city in the world in proportion to the population. A lot of those fellows that wear these bars, leaves, and eagles up here are buying new cars. I never saw so many in my life.

Mr. REEVES. You can't get along in Washington without one.

The CHAIRMAN. The lieutenant colonels are buying them at a pretty rapid rate, and that makes the sales larger here than elsewhere, and I do not blame them. If I had nothing else to do than what they are doing, I would buy a new car. I am not criticizing them. I think they are doing right.

Mr. REEVES. If you took your motor cars out of the city of Washington, your street car lines would break down.

The CHAIRMAN. I am congratulating you gentlemen on selling them, and these people on buying, as the Government is getting the little tax.

Mr. REEVES. They are going to continue to buy them.

Mr. GREEN. Who is making all these motor trucks? Down at Newport News the other day I was told that very many are coming in and being shipped out very rapidly.

Mr. REEVES. It is said that the Army needs 50,000 motor trucks for every million of men on the other side. These standard trucks are being made in different plants in different parts of the country, one part in one plant and another part in another plant, and they are assembled, and a man is paid so much for assembling. I think the price is \$550 for this assemblage of a 5-ton truck.

Mr. GREEN. Isn't this enormous demand for Government work more than making up for the loss in the sales of pleasure cars.

Mr. REEVES. I think it is with a great many of those big concerns that have the equipment to take on that kind of work, but you must bear in mind that most all the motor car companies in the business do what they call an assembling business; that is, they buy their axles, motors, bodies, and other things from specialists.

Mr. GREEN. That is the way these Government trucks are put together.

Mr. REEVES. Yes; but the passenger car manufacturers are not being given any of the truck business; none of them.

Mr. GREEN. What concerns do make these trucks for the Government, do you know?

Mr. REEVES. Truck concerns.

Mr. FAIRCHILD. Don't the Packard Co. make trucks?

Mr. REEVES. They make one of those, and I believe they are making some of those assembled trucks. I think there are about 500 concerns, like the Sterling, Service, Gramm, the Rochester concern, Selden—concerns like that—and Kissel out in Wisconsin, which have orders for trucks.

Mr. O'SHAUNESSY. What is the life of one of those trucks?

Mr. REEVES. It is a difficult thing to say, depending on their service.

Mr. O'SHAUNESSY. I was interested in your statement this afternoon that there are 50,000 required for every million men.

Mr. REEVES. That is the statement made by some of the Army officers. You must bear in mind, gentlemen, that the truck business, which is to take the place of the passenger-car business to some extent, has up to this time a very small part of the productive capacity of the plants. The passenger cars will always do a bigger business because more individuals want to use cars. The truck business will never be as big as the passenger-car business.

The CHAIRMAN. What, or who, is the General Motors Co.?

Mr. REEVES. It is a corporation in New York that owns five or six of the very big companies—the Cadillac, Buick, Oldsmobile, Oakland, and the General Motors Truck Co., and two or three parts and accessories companies. The General Motors Co. made 85 per cent of the passenger cars made last year.

Mr. LONGWORTH. I notice in your written statement, which you read, in two places you use the expression that this tax was a burden. In one case you call it a burden on the industry, and in another case you referred to the additional expenses of manufacture of which this is a part, this tax is a part, but you have said in answer to a number of questions that this tax has invariably been passed on. How do you reconcile those two statements?

Mr. REEVES. The tax puts up increased sales resistance and puts more work on the seller.

Mr. LONGWORTH. But you use the word "expense," "additional expenses," of which this tax is a part. Now, you have asserted, in answer to questions, that that is passed on.

Mr. REEVES. It is part of the cost.

Mr. LONGWORTH. How is it if somebody else pays it?

Mr. REEVES. It is the amount you have to get out.

Mr. LONGWORTH. It is not an expense of manufacture. How can a tax that you pass to a consumer be an expense of manufacturing?

Mr. REEVES. You might say, then, that the insurance fees that you pay on your factory is not an expense, but it has to be included in the cost.

Mr. LONGWORTH. You pay those.

Mr. REEVES. But you pass it on and make it a part of the selling price, plus the percentage which you are entitled to.

Mr. LONGWORTH. I do not follow your reasoning. I will recall to you what you said before the Senate Finance Committee last year:

The 5 per cent tax can not generally be passed with any success to the consumer, because of the impossibility of advancing prices on a falling market. If attempted—and some may attempt it—it will decrease demand, and, of course, the volume of business on which profits depend.

Now, wasn't there a falling market at the time when you said that?

Mr. REEVES. I think the market had fallen. The proof is that they have not sold the number of cars.

Mr. LONGWORTH. But the prices received are higher.

Mr. REEVES. That is so.

Mr. LONGWORTH. Do you call that a falling market?

Mr. REEVES. A falling market is when there is a falling off in the demand for the product.

Mr. LONGWORTH. You said it would be difficult to pass the tax on and said somebody might attempt it. Didn't everybody attempt it?

Mr. REEVES. Yes, sir.

Mr. LONGWORTH. Now, don't you on all deals for automobiles put in the war tax as a part of the expense?

Mr. REEVES. Yes, sir.

Mr. LONGWORTH. So that you do not contend for a moment that this tax is an expense?

Mr. REEVES. We do contend that it is to be gotten from the consumer.

Mr. LONGWORTH. Precisely.

Mr. REEVES. And it doesn't make any difference if it is put in there as a separate item or put in there as a part of the expense of the cost. In simple articles, like tooth powder, they just put it in the price of the article, and raise it 2 or 3 cents, more than the amount of the tax paid, but here is an article of big unit, which is more like a man buys a home. It costs more, and he looks a long time at the price before he pays it.

Mr. LONGWORTH. Why did you a year ago say it would be practically impossible to pass this tax on to the consumer?

Mr. REEVES. That was the whole atmosphere at that time. The motor-car business had gone out very much, sales had fallen off, and there was a fear that you could not sell to the productive capacities of the various plants, and if the Studebaker Co. now was not engaged in war work their prices for automobiles would be much higher.

Mr. LONGWORTH. Isn't it a fact, that while this bill was being considered in Congress that the automobile prices were raised?

Mr. REEVES. I do not recall, but that is not improbable.

Mr. LONGWORTH. That is what you call a falling market?

Mr. REEVES. But they were not selling cars.

Mr. LONGWORTH. Prices had gone up on a number of standard cars 20 and more per cent at the time that you said you could not pass on 5 per cent on a falling market.

Mr. REEVES. Isn't it a fact in the case of the Packard that they had brought—

Mr. LONGWORTH (interposing). I have a number in mind.

Mr. REEVES (continuing). Brought out a car at a low price, and found that the cost was such that they had to increase it?

Mr. LONGWORTH. That is what you call a falling market, that could not absorb a 5 per cent increase?

Mr. REEVES. The falling market and the price of cars are two things.

Mr. LONGWORTH. I may be wrong, but I think the price has something to do with it.

Mr. REEVES. On a falling market, instead of being able to market 2,000 cars, I can only market 1,000 cars. I must have higher prices to offset the losses on selling a less number of cars.

Mr. LONGWORTH. Where you raise the price, do you call that a falling market?

Mr. REEVES. That does not necessarily follow. You might raise the price on a rising market.

Mr. LONGWORTH. Let me ask you another question: We are getting very impatient with gentlemen who come here and say that these taxes are taxes and expenses on their business, taxes on gross receipts. It has been the invariable rule that they have passed them on without a single exception, so we do not take very much stock in that sort of argument; I will be frank with you on that. Let me ask you another question. I suppose it is true, as I have heard stated—I do not know of my own knowledge—but I suppose it is true that 60 per cent of the steel which is absolutely necessary in the manufacture of war munitions is used in the manufacture of pleasure automobiles. Don't you think that the product should be cut down to some extent?

Mr. REEVES. I think that in a case of that sort the Government should take what steel is needed without question. If there is any left over, let them have it for automobiles.

Mr. LONGWORTH. In answer to Mr. Garner you said it was inadvisable to curtail the production of pleasure automobiles. If they are taking 60 per cent of a war necessity, don't you think it would be advisable to do that?

Mr. REEVES. I do not think there would be any question about that. It would be very bad to cut down the number of passenger cars, but if the Government needs the steel they should take it.

Mr. LONGWORTH. I think you said specifically to Mr. Garner we ought not under any circumstances to cut it down.

Mr. REEVES. I did not say under any circumstances.

Mr. LONGWORTH. I observe that you gave a list of things necessary in the manufacture of automobiles, which have very largely increased in price. I presume they have increased very much more in price. Among them aluminum castings which has increased 50 per cent, leather which has increased 30 per cent, steel which has increased 400 per cent. Now tungsten steel is an absolute necessity in the manufacture of aeroplane motors, isn't it? Therefore if there is a demand continuous and rising for pleasure automobiles, don't you think it would diminish the available supply and increase the cost to the Government of a war necessity?

Mr. REEVES. I think the spirit was when we were over to the War Industries Board, not long ago, that the War Industries Board should indicate their needs for steel. They said they would be obliged to take great quantities of it, and the attitude of the manufacturers was that you should take all the steel you need, and if there was any left over we may be able to get it, and if there is not we won't.

Mr. DICKINSON. What proportion of the automobiles manufactured are pleasure cars?

Mr. REEVES. I think the gentlemen figured out about 90 per cent of the motor vehicles made in the country are passenger vehicles, and about 10 per cent are trucks. I think this year that will vary some. I think the number of trucks will run up.

Mr. DICKINSON. Ten per cent of the cars are what you call pleasure cars?

Mr. REEVES. No; 90 per cent.

Mr. DICKINSON. That is what I thought; and then I thought you said the other way. Now, you have about 800,000 men engaged in this industry.

Mr. REEVES. In all angles of the industry; yes, sir.

Mr. DICKINSON. Now, if the number of pleasure cars manufactured were stopped in a measure, couldn't a fair per cent of these men be released for the purpose of war machines, aeroplanes, and things of that kind?

Mr. REEVES. No question about it; and they are working on that now.

Mr. DICKINSON. They are all engaged in the construction and manufacture of 90 per cent pleasure cars that are purely pleasure cars.

Mr. REEVES. We call them passenger cars.

Mr. DICKINSON. Well, passenger cars, partly used for pleasure and partly for business.

Mr. REEVES. Many for utility.

Mr. DICKINSON. When you say pleasure cars you mean passenger cars?

Mr. REEVES. Yes, sir. Any other questions, Mr. Chairman?

Mr. O'SHAUNESSY. Prof. Sprague, the other day, submitted an idea to tax employers \$10 a month for chauffeurs that they employ. Are there any statistics or figures upon the number of chauffeurs employed?

Mr. REEVES. They are registered in every city in the country.

Mr. O'SHAUNESSY. Could you furnish that to the committee?

Mr. REEVES. I would be very glad to.

Mr. O'SHAUNESSY. That is, he suggested from \$10 to \$50 a month.

Mr. REEVES. That is more than some of them get.

Mr. SLOAN. You spoke about trucks and pleasure cars, pleasure cars being 90 per cent. Would you want to divide them into passenger cars that are simply utility cars and then the other cars that may be more properly called pleasure cars?

Mr. REEVES. You can see that this blue print shows that of the passenger cars investigated in Livingston County 73½ per cent were used by the farmers as a necessary part of the equipment of their farms. Such motor cars are bound to be used for a certain amount of pleasure. That is bound to be. But all of these cars that you see in the city of Washington are registered as pleasure cars or passenger cars, yet everyone is on a useful errand. Nobody rides on the street cars if he can help it.

Mr. SLOAN. "Pleasure" as used there is not a scientific term.

Mr. REEVES. It is a wrong term, and it does an injustice to the great industry. In this country there are 2,340,000 cars which sold for less than \$500; 556,000 which sold from \$500 to \$750; and 956,000 cars which sold between \$750 and \$1,000; 3,700,000 are in use which sold for less than \$1,000, but we are judged unfortunately by the Packard and such cars which catch the eye as they go by.

We forget that Henry Ford made 781,000 last year, half of the automobiles registered in this country, and as Senator Simmons says, "Nobody ever rides in a Ford for pleasure." Above \$3,000 there are only 69,000 cars, and a very small percentage of the cars in the country are above \$1,000.

Mr. SLOAN. I think that answers my question.

Mr. REEVES. We ought to keep in mind in connection with this passenger-car business that in the last five years the buggy business of the country fell from 1,250,000 horse-drawn buggies until it is now less than 250,000, and the buggy's place has been taken by the motor car, and we forget many times that the motor car serves its most useful purpose not in the city, where they have trolley cars but in the country, where time should be conserved. The greatest increase in the registration of motor cars last year was in the State of Florida, and the year before was in Oklahoma, where it had increased by 119 per cent; and the big increases in States—which figures I will be glad to give you—are in the States of North and South Carolina, Georgia, Arkansas, where the farmer has been getting a sufficient amount of money to enable him to make use of the motor car.

Mr. MOORE. What State shows the largest percentage of use per capita?

Mr. REEVES. Iowa.

Mr. MOORE. What percentage?

Mr. REEVES. One car for every six.

Mr. MOORE. Mr. Reeves, if we had to depend on the street cars in the city of Washington just now to get employees back and forth to their work the war work would be extremely impeded, would it not?

Mr. REEVES. I think so.

Mr. MOORE. You have studied the situation. What would be the effect of closing down on the automobiles in the city of Washington?

Mr. REEVES. I think it would break down your street car system entirely.

Mr. MOORE. Have you looked into it sufficiently to know that you can defend that statement?

Mr. REEVES. I think I can show the number of cars used every day and the additional passengers that the street cars would have to haul if we discontinued the use of motor cars.

Mr. MOORE. The cars are undoubtedly very crowded during the work hour.

Mr. REEVES. And the peak is where the automobile could take care of it. The jitneys are used at the peak hours.

Mr. MOORE. The peak in the morning is about 9 o'clock?

Mr. REEVES. From 8.30 until 9.30, and in the middle of the day they are very crowded, and in the afternoon.

Mr. MOORE. Do you know how many cars are in use in the District of Columbia—how many registered?

Mr. REEVES. I haven't the exact figures. I am convinced that what they ought to have in Washington on the streets are bus lines during this war period, at any rate, to enable people to get around the city.

Thank you very much, gentlemen.

Mr. MOORE. If Members of Congress had to depend on the street cars here, they would not get through with their business.

**STATEMENT OF HON. WILLIAM E. COX, A REPRESENTATIVE  
IN CONGRESS FROM INDIANA.**

Mr. Cox. Mr. Chairman and gentlemen of the committee, to myself it seems presumptuous that I should appear before a committee which all its life has been developed along economic lines. Some of you are members of this committee to-day that were members of the committee when the Payne-Aldrich bill was passed. The vast majority who are members of the committee were members of the committee when the so-called Underwood bill was passed. So you have all had vast and varied experience on the question of taxation.

I do not come before you, gentlemen, with any panacea whatever. I have no cure-all for the aches and ills of the Government, but in casting about for some subject to be taxed, it has struck me very forcibly that the automobile industry itself is a thing that should bear considerable of a burden of taxation. I have no enmity against the automobile whatever. I own myself a little Dodge machine from which my wife and little girl get a tremendous amount of pleasure. But I know, gentlemen, there are two things in this country outside of the income tax and the excess-profits tax which in my opinion could bear a tax better than the automobile itself can bear. I recognize, and I think every member of this committee recognizes, that the automobile is both a necessity and a luxury. If I am willing or if I persist in enjoying the luxuries of life when this world-wide war is on, I feel that I ought to be compelled to pay the bill.

I was very much struck with what I saw in a paper recently that a gentleman from Massachusetts proposed to put a tax on gasoline. I will discuss that. I notice here a flat tax on automobiles, and I want to say to each member of the committee that I do not think that there is a single idea in the bill that is mine. It is a Senate proposition, as I understand, introduced in the Senate last year, which the conferees between the two bodies failed to agree upon. The principles set out in the bill are substantially the Senate proposition. From my investigation in the Internal Revenue Department, I do not think that it is practicable. I doubt very much whether or not it could be administered. So I am going to discuss in the brief time allotted to me the principle of taxing automobiles on a different basis entirely.

I asked Mr. Roper to prepare some data for me, and on his behalf I have to state to the committee that the data that I have from him is not authentic—that is, that it is not absolutely accurate. It is as authentic and accurate as he could give it under present conditions.

Now, with your permission, I will read a part of his letter and at this point I will insert the whole of it in my statement, with your permission.

(The statement is as follows.)

Complying with your instructions, I have endeavored to determine the number of passenger automobiles and motorcycles in use in the United States for the purpose of estimating the tax that would be collected under H. R. 12310, introduced by Representative Cox.

I have called upon the various automobile agencies in the city, including the American Automobile Association and the National Automobile Chamber of Commerce, and I find there is no accurate data available upon which to estimate the tax proposed under the above bill. In order to make an accurate estimate it would be

necessary to determine the number of cars of each make in use and the average cost. I find that such data has never been compiled and is not available. Even with such information, it would be hard to make an estimate based upon the retail selling price of the different makes for the reason that prices available are as of December 1, 1917, and owing to unusual conditions created by the war, all prices have been subject to numerous advances.

However, a rough estimate is made based upon statements and data furnished by the American Automobile Association and the National Automobile Chamber of Commerce.

Statistics compiled by the automobile industries show that there were approximately 4,000,000 passenger automobiles and 280,000 motorcycles in use in the United States on January 1, 1918.

It is shown that cars are divided into six classes according to retail prices, and upon that basis a rough estimate of the proposed tax is shown as follows:

280,000 motorcycles, at average tax of \$5.....	\$1,400,000
1,200,000 passenger cars, not over \$500, at average tax of \$10.....	12,000,000
800,000 passenger cars, between \$500 and \$750, at average tax of \$20..	16,000,000
800,000 passenger cars, between \$750 and \$1,000, at average tax of \$30.	16,000,000
600,000 passenger cars, between \$1,000 and \$2,000, at average tax of \$60.	36,000,000
400,000 passenger cars, between \$2,000 and \$3,000, at average tax of \$100.....	40,000,000
200,000 passenger cars, over \$3,000, at average tax of \$175.....	35,000,000
<hr/>	
4,280,000	156,400,000

The above estimate is based upon cars in use on January 1, 1918. Of course, there will be a considerable increase in the cars in use by July 1, 1918, even after allowing for the cars which have gone out of use since the first of the year. It will be noted that the greatest number of cars, or about 70 per cent, come within the class below \$1,000, which seems to agree very well with all available data. The higher priced cars are divided into three classes, as follows: Fifteen per cent between \$1,000 and \$2,000, 10 per cent between \$2,000 and \$3,000, and 5 per cent between \$3,000 and \$5,000.

It would seem, in accordance with your suggestion, that a more staple basis for computing the tax would be to use for a basis the horsepower of a car, rather than the retail selling price. It is shown by available data that the average horsepower of a car is 25 horsepower. It has been suggested by you that a tax of 60 cents per horsepower be levied up to and including 25 horsepower, \$1.20 per horsepower up to and including 30 horsepower, and \$2.40 per horsepower for each horsepower over 30 horsepower. The tax estimated on this basis would be as follows:

280,000 motorcycles, average tax \$5.....	\$1,400,000
2,000,000 cars, 25 horsepower, average tax \$15.....	30,000,000
1,200,000 cars, 25 to 30 horsepower, average tax \$36.....	43,200,000
800,000 cars, over 30 horsepower, average tax \$96.....	76,800,000
<hr/>	
4,280,000 Total.....	151,400,000

You have also suggested that the tax be based upon a flat rate of 50 or 60 cents per horsepower. Using the average rate of 25 horsepower for the total number of cars in use the tax would be estimated as follows, not including motorcycles: 25 horsepower, at 50 cents, makes an average tax of \$12.50; 25 horsepower, at 60 cents, makes an average tax of \$15; 4,000,000 cars, average tax, \$12.50, \$50,000,000; 4,000,000 cars, average tax \$15, \$60,000,000.

The data available also shows that the percentage of cars in use is governed by horsepower, as shown below: 50 per cent under 23 horsepower, 20 per cent between 23 and 28 horsepower, 15 per cent between 28 and 33 horsepower, 10 per cent between 33 and 40 horsepower, 5 per cent over 40 horsepower.

Taking all the information at hand, it is hard to arrive at a fair equitable and staple basis upon which to base this tax. The prices of cars have been subject to so many changes in the past few years that it will be hard to make the tax anywhere near uniform. While the horsepower basis would be staple and uniform, it must be understood that in the case of a great many makes of cars the horsepower is low and the price is high, and vice versa. However, in general the price of a car increases with the horsepower, except in cases where the cars are equipped with limousine sedan, landaulet, coupé, coupelet, and special bodies.

I want to state that the bill which I have introduced undertook to put a tax upon the automobile based upon its retail price.

I asked Mr. Roper to figure on a horsepower basis, and he informs me, and I think that is true on reflection, that most of the States impose a tax upon automobiles based upon horsepower, and not upon the selling price of the machine.

The CHAIRMAN. That is a graduated tax?

Mr. Cox. Yes. Then I asked him to figure out for me a 50-cent tax on each horsepower without any graduation about it. He estimates on 4,000,000 cars at \$12.50 per car \$50,000,000, and on 4,000,000 cars on a 60-cent flat basis \$60,000,000. So there is not much difference between imposing a tax upon the selling price of the car as outlined in my bill and the tax based upon the horsepower, a difference of only about \$5,000,000. But I want to repeat, in my opinion, after talking with Mr. Roper, the question of administration comes in, and I think it would be very difficult to administer it on a flat tax rate.

Now, gentlemen, I am almost willing to take the position that there are too many cars in this country, entirely so. I had the Bureau of Mines furnish data on the question of gasoline, and the Trades Commission, and I am not going to say that we are fast approaching a shortage in gasoline, but we are driving into it with breakneck speed. I think the committee is aware of the fact that we are short on leather and that all the steel is going to the Army. Now, I do not know that this would be a popular tax, but I do not know that this committee cares whether it would be or not. I take the position, gentlemen, that a man who wants to have an automobile in times of war ought to pay for it and never whimper while he is doing it. I go up and down the Avenue here, and you see hundreds of automobiles parked in front of hotels and the various war industries, charging from \$2 to \$3 an hour. Every one of those men, in my opinion, ought to be in the war or producing something that would support the war.

Now, if they persist in running their automobiles, either as a taxicab or otherwise, let them pay the bill. In my opinion, the tax ought to be framed up along this line, that if a man wants to run his automobile for pleasure, let him pay the tax, but if a man don't want to pay the tax and is willing to garage his machine during the war, let him do that. So my idea would be to frame up a bill along the lines that every passenger car that is run and operated for pleasure should have a Government tax upon it, or its owner or operator should have a Government receipt in his pocket showing that he has paid for the pleasure ride.

The CHAIRMAN. How much does your little Dodge pay?

Mr. Cox. It is 32 horsepower, and I think it pays about \$18 or \$20.

The CHAIRMAN. How much does the Longworth Packard pay?

Mr. Cox. I do not know what horsepower it is.

Mr. LONGWORTH. It isn't that much, I think.

Mr. DICKINSON. You are speaking about gasoline. The more car used the more gasoline is used.

Mr. Cox. Absolutely true.

Mr. DICKINSON. Now, referring to the tax that we were discussing, would you tax a car or the use of the car, or both.

Mr. Cox. Very likely tax both. It would be results that I would be after.

Mr. DICKINSON. Well, now, when you speak about the extent this gasoline is used, what about a tax on gasoline?

Mr. Cox. I incidentally touched upon that a moment ago, Judge. What I saw in the paper was that the gentleman from Massachusetts thought we ought to tax gasoline 25 cents. I think we ought to have two considerations in mind when levying a tax. We should levy it primarily for the purpose of raising a revenue. That is the first and foremost consideration with the committee. But if in the raising of revenue at the same time we can bring about economy in the way of conserving these resources, we ought to do it, in order to save war material. A tax on the use of the automobile would bring an economy and at the same time help conserve the resources of this country in the way of gasoline, crude oil, etc., and I would rather raise it that way than under the man's proposition from Massachusetts, for two or three reasons. In the first place, I think a graduated tax on the horsepower of an automobile would bring in more revenue into the Treasury of the United States, and I think ultimately such a tax would bring about economy in the use of these natural resources. While the other proposition, putting a tax directly on gasoline, I doubt very much whether that would bring very much revenue, especially if the tax is very high. I would gladly and willingly support it.

Mr. DICKINSON. You speak about pleasure cars. To the extent that the cars were used for business, that would be a tax on business.

Mr. Cox. But if I had the writing of the bill, gentlemen, I would not give any man any loophole on this case at all. If a doctor owned a pleasure car that he could take the family out riding in, I would not let him escape by saying that it is a business car and not a pleasure car. I would put the tax right on him.

Mr. MOORE. You wouldn't curtail the manufacture of cars?

Mr. Cox. That is what I am driving at. No; I would not for more reasons than one.

Mr. MOORE. That is what the gentleman from Massachusetts suggested.

Mr. Cox. I would not. I would let the manufacturers make automobiles as much as they could under present conditions in order to keep those men employed until the time comes that the man thus engaged in making automobiles could be shifted to various points and places for the manufacture of war materials. We will have to come to that, but until we get to that point, let the men in these organizations work right along, and then I would let the man who wanted to buy a machine buy it if he wants it, if he will pay the tax on it.

Mr. MOORE. If we should put a tax on a machine, so as to practically put it out of business and stop manufacture, then we would be killing the goose that laid the golden egg.

Mr. Cox. I can not conceive of any man, even owning a Ford, refusing to run his machine, and I can't conceive of any man owning a machine costing from \$3,000 to \$5,000 refusing to pay the tax, even if it is \$150 to \$175.

Mr. DIXON. Would you repeal the manufacturers' tax?

Mr. Cox. There is one thing, I would not increase the tax on the manufacturer.

Now, I don't know, here's an idea that occurred to me. It is crude, it is not developed in my mind at all, but now supposing there is legislation passed here to tax the manufacturer, but sup-

posing the committee should report a bill to impose a tax on automobiles that are sold after the bill becomes a law. Now, of course, if that tax is put on the manufacturer, he is going to shift it onto the consumer. There is no use of denying that. It is foolish to try to convince an intelligent man that that is not true, but here comes a man who buys a machine and the bill becomes a law, and there is a tax on it which he is compelled to pay. But many machines were bought a month before the bill becomes a law. It looks to me like the way around that could be avoided by providing a separate tax on all the machines that are now in use or will be bought and put in use between now and the date of this law going into effect, along some of these lines that I have discussed. Let it apply to all machines. I think it would be constitutional, perfectly legal. You would collect revenue on machines already bought, then for another class of machines that were sold after the bill becomes a law, you could levy a tax on the machine or the manufacturer.

Mr. OLDFIELD. You would favor a tax based on horsepower. Have you considered particularly applying it to owners of machines of different horsepower, five or six years ago?

Mr. COX. No, I have not; but, in my opinion, in the framing up of a bill, it could probably be framed in such a way that it would take care of that horsepower through the depreciation of the machine, so many per cent per year.

Mr. OLDFIELD. Have you figured out in your own mind how you would differentiate whether a car is used for pleasure or business? We all agree that many cars are used jointly for business and pleasure, and I should like to know if you have figured out any way in which that use can be differentiated.

Mr. COX. My little car is sometimes used as a pleasure car and sometimes as a business car.

Mr. MOORE. Your bill does not propose to differentiate. It proposes levying a tax on the car wherever found of any kind?

Mr. COX. But I am getting away from the bill which I introduced because, as I said, the Internal Revenue Department says it was not capable of being administered.

Mr. MOORE. This is the first word, first real suggestion we have had as to how we might increase the revenue, and I would not care to see you go until you tell us how you would put it into effect.

Mr. COX. My ideas are crude. If I tried to tell you how to differentiate between pleasure and business cars, I should be getting into deep water. My little car is most all the time used for pleasure, part of the time for business. When it runs out to our farm, it goes on a business proposition.

Mr. OLDFIELD. I was interested in your argument. I understood you to say that you would tax cars whether for business or pleasure.

Mr. COX. Absolutely.

The CHAIRMAN. You have, no doubt, read the President's message, and read his views in regard to a special tax on luxuries. You have suggested that these automobiles are luxuries.

Mr. COX. They are necessities and luxuries, Mr. Chairman.

The CHAIRMAN. The idea was that there would be restriction. Instead of putting a reasonable tax on luxuries so as to raise a reasonable amount of revenue, the price would go high and they

would not buy, say for instance, a new automobile, and they would have that money. The tax would cause restrictions on the articles, and they would have that much more money to put into bonds, and thrift stamps. Didn't you catch that as the President's idea on taxing luxuries?

Mr. COX. Surely, I did.

The CHAIRMAN. If you remove the tax from the manufacture of automobiles, don't you induce people to take their money and buy automobiles, but if you put a tax on automobiles and other luxuries, and on the fellow that has already gotten his, don't you necessarily compel him to take his money out of his pocket and spend his money in keeping it up, when he could put it in thrift stamps, whereas if you put it on the manufactured article, say a tax of \$250 on a Cadillac, the fellow before he bought that would say, "I will have to pay \$250 more on this," and he decides whether to risk it or not. He considers whether he is willing to pay this extra \$250, and may decide that it is more than it is worth, as he would have to pay \$3,000 or \$3,100 besides, and he might put that \$3,100 into liberty bonds and help the Government. Don't you think that it was the President's idea that the war tax should be on the manufacturer of luxuries before the fellow gets it so as to keep him from getting it?

Mr. COX. If we are able to draw a clear line of distinction between what are luxuries on the one hand and necessities on the other, I would answer yes. I do not classify the automobile as a luxury at all. It is both a luxury and a necessity.

The CHAIRMAN. I thought you put it in the luxury class?

Mr. COX. A luxury and a necessity.

The CHAIRMAN. To anybody who had money to drive an automobile, it would be a luxury.

Mr. COX. There are millions of instances where he is using his passenger car as a necessity, but I suppose he can use it as a luxury.

Mr. OLDFIELD. You don't think Pierce-Arrow cars and Packards are necessities?

Mr. COX. I do not know where to draw the line.

The CHAIRMAN. The only line that has been drawn is between the Ford and the other cars. The Ford is not a luxury, and the other cars are. Now, Mr. Cox, I believe with the exception of one case and possibly two in the history of the Government this suggestion which is made by others, who are very wise men, of putting a tax on the thing in the consumer's hand, in the owner's hand, with the exception of one or two, it is the first time in the history of the Government that has been suggested. Now, if you put a tax on the automobile in the hands of the owner, let us pursue it further and tax all luxuries, similar luxuries in the hands of the owner, not the manufacturer, but in the hands of the owner.

Mr. COX. I will go right with you.

The CHAIRMAN. All right, let's take——

Mr. COX (interposing). Let us take diamonds.

The CHAIRMAN (continuing). Yes, diamond rings costing \$300 or \$400, brooches, scarf pins. They are about as useless as automobiles.

Mr. MOORE. And a few packages of cigarettes.

The CHAIRMAN. And we get a tax from them, or the use of them, and pianos and organs, because they can be done without during the war. Now, if you do that, you would get practically as much tax as

you would out of the automobiles for the reason that in the month of March on those three luxuries, or necessities as some people may claim, we collected \$2,039,000, while on automobiles we collected only about \$2,589,000. Now, I am not fixed in my mind that that would not be a good thing. What would you say of going that far? If you do not think that we should do so, why start out on the automobile?

Mr. COX. I will answer you in a minute. If it is necessary to raise \$2,000,000,000 as I am informed over and above the excess profits and income tax, I would say go to it, and tax every one of those luxuries in every home in the United States.

The CHAIRMAN. You are not really, on the idea of thrift and economy, in favor of repealing the manufacturers' tax?

Mr. COX. No.

The CHAIRMAN. Because that is the real thing that tends to make him give it up. He knows that he will have to pay it before he buys it.

Mr. COX. But, as I said a moment ago, the manufacturers' tax would be put on the man that buys the machine, but the day before the bill became a law, the tax was on the manufacturer. Here is a man that bought a machine from the same man and he doesn't have to pay any tax.

The CHAIRMAN. But in order to avoid the tax, they will hesitate before they rush and buy. There is something in your proposition.

Mr. COX. I am serious in this for the reason of raising revenue, but secondly I do think that something ought to be done to economize along these essential lines.

The CHAIRMAN. What do you think of the tax on chauffeurs?

Mr. COX. Oh, I introduced a bill for that last December.

The CHAIRMAN. Prof. Sprague suggested that.

Mr. COX. I do not know what he proposes. I do not know how well the bill was written, but I introduced a bill to that effect. And why shouldn't we put a tax on them, when men like Herbert Hoover disposed of his big car and bought a little car and runs it himself.

The CHAIRMAN. Dr. Sprague suggested putting a tax of 25 cents a gallon on gasoline. What do you say to that?

Mr. COX. As a second alternative proposition to the proposition of taxing the horsepower of automobiles, I would urgently support it. I do not think you would get the revenue out of that that you would out of taxing the horsepower of automobiles, but I do think you would get economy in the things we have to economize in.

The CHAIRMAN. That is what, I think, Mr. White suggested. If you tax horsepower, here is, say, a man who has paid \$400 or \$500 for an old 40-horsepower automobile, that may have originally cost \$2,000, and here is another man that has a 40-horsepower car that is worth \$4,000 or \$5,000. Do you think it is right to make the little fellow pay as much as the other one who has the \$4,000 car?

Mr. COX. I will answer that by saying that it might be taken care of along the lines of depreciation in value. Another way that might be taken care of would be that if he did not want to pay on the horsepower, he could garage his car.

The CHAIRMAN. But if a man had a \$4,000 machine he would be able to pay and you would shut up the little fellow.

Mr. COX. Not under the plan outlined by Mr. Hoover. Under that plan Mr. Fairchild would pay \$2.40 per horsepower, while I would pay about 50 cents.

Mr. GARNER. You could levy a very heavy tax, say from \$50 to \$250, according to the value of automobiles, and somewhat restrict the purchase of them by the people in the future. But a mere 3 per cent, such as is levied now does not tend to restrict it whatever. So you have a double purpose there, to get revenue, and tend to restrict labor and material that is going into these pleasure cars. But how would you tax a chauffeur?

Mr. COX. Under a license.

Mr. GARNER. Do you mean that every man who has a chauffeur would have to have a Federal license?

Mr. COX. Absolutely. And I was told by a man in the Federal Trades Commission, a man that I regard as the best political economist in this city, that there are upwards of 500,000 licensed chauffeurs in the United States.

Mr. GARNER. But suppose the Constitution did not permit us to provide a license for a man in an occupation. How would you get around it?

Mr. COX. With all due deference to you, I am not going to enter into a constitutional argument.

Mr. GARNER. I was just bringing that to your attention because it has been suggested by very good lawyers—Mr. Hull called my attention to the fact the other evening that the Supreme Court has decided in one case, not about the license but about the question of levying a tax on chauffeurs.

Mr. COX. The Supreme Court does not stand very much in the way of a war measure.

Mr. HALL. The question might arise as to the tax on the owner with respect to the individual that he had in his employ. If you put a license tax on the chauffeur himself, that might be all right.

Mr. COX. I think I would do as Senator Simmons suggests, vote for the proposition and consider its constitutionality afterwards.

Mr. GARNER. You would levy a good large tax on gasoline?

Mr. COX. I would. I am going to quit in a minute. In response to a part of your question, Mr. Garner, if I can make myself plain, I think that all these men that are working in automobile factories ought to be kept at work as much as they possibly can until they are ready to be shifted into war work.

The CHAIRMAN. You believe that about every industry.

Mr. COX. Yes.

The CHAIRMAN. Keep everybody to work.

Mr. COX. Until they can be shifted. That is all I have to say.

Mr. SLOAN. Do you not think that if you desire to curtail the manufacture of the high-priced pleasure cars, the basis for your taxation should be the value, their retail cost rather than the horsepower, because the large expense is not in the horsepower arrangement, but in the equipment otherwise.

Mr. COX. That was my first idea, but in talking to two or three men down here at the Internal Revenue Department, that are pretty well advised, they thought that that would be rather hard to administer, to put the tax upon the value of the machine, because it varies so often, while the horsepower never varies. A machine that is made with 32 horsepower or a 60 horsepower to-day, ten years ago was the same.

Mr. SLOAN. The method of determining the horsepower differs in different States, does it not?

Mr. COX. It may be.

Mr. MOORE. Indiana has a good motor car record. I see it has about one car to every fifteen people in the State.

Mr. DIXON. It is limited in one respect only.

Mr. MOORE. These may be high priced or low priced.

Mr. COX. I do not know.

Mr. MOORE. Suppose you were to make a practically prohibitive tax on gasoline, and was to put a tax on chauffeurs and put a direct tax that you propose on the car, wouldn't the effect of all that be to prejudice the small owner who could not bear the prohibitive tax and force him to scrap his car in favor of the well-to-do car owner who could stand it?

Mr. COX. I would not be in favor of doubling up all of those taxes. If you put a tax on the automobile or its use, I would not tax gasoline.

Mr. MOORE. I understood you to say you were in favor of a high tax on gasoline.

Mr. COX. As a secondary proposition, following the proposition of taxing horsepower of machines.

Mr. MOORE. Suppose there is a man in your State who says, "If you are going to put a tax of 25 cents a gallon on gasoline, a tax on the car, and a tax for the chauffeur, I am going to put my car in the garage."

Mr. COX. That is just what he ought to do.

Mr. MOORE. The fellow is going to be at a decided disadvantage compared with the well-to-do man who can keep running his car.

Mr. COX. I am told that we are wonderfully short of rubber—I do not know whether I ought to say that or not—in the trenches of France to-day. We haven't enough rubber to make the masks.

Mr. MOORE. You know very well the argument goes over the country now that the automobile is not only a help to good roads, but it is a help, a benefit, to the farmer; bringing the farm to the city. You state that the automobile is a necessity and a luxury. It may be used to-day for joy riding but used to-morrow in business. It might be used by a farmer to send to town to bring the doctor back for his wife or children. You certainly would not deprive a man of the right to use his car by an excessive taxation.

Mr. COX. Now, Mr. Moore, my observation has been out in Indiana that the man who owns a little Ford or a Dodge is as much able to own and operate that as the man is who owns and operates a Packard.

The CHAIRMAN. How much horsepower has this little Ford?

Mr. COX. Twenty-eight.

Mr. MOORE. Twenty-two.

Mr. COX. The Dodge, I think, is 32.

Mr. MOORE. Moreover, if we were to put that small fellow out of business—make him throw his car into the scrap heap—we would get no revenue.

Mr. COX. To put him out of business voluntarily under the plan I have suggested, taking the horsepower, his tax would not be more than \$12 or \$15. That is not a high tax and he would pay that by the price of half a hog. If he does not want to pay it, he can garage it.

Mr. MOORE. If he garages it and does not use it, he would have to pay the tax just the same.

Mr. Cox. No; if anything is done along this line, it should be done along the line that it shall only apply to a person who uses his car, and the man who is willing to garage the car and thereby economize in gasoline and in rubber and in leather, let him garage it without paying a tax.

Mr. MOORE. Then, if I have a small car and want to save the tax, I can put it in the garage until the war is over. But we have to pay a garage rent.

Mr. Cox. We can carry out these questions indefinitely. You live in the great city of Philadelphia. In most of the cities such as we know, we have our garages in the rear of our lot.

Mr. MOORE. In looking over the statistics, I find that we are not burdened with automobiles in Pennsylvania. We have 360,000 cars in Pennsylvania.

Mr. Cox. Indiana?

Mr. MOORE. Indiana has 192,000. Iowa—that is the State that is supposed to have a great number of cars—has 254,000 cars. So the farming State of Iowa has substantially as many cars as the great industrial and populous State of Pennsylvania. If so, the city man hasn't any advantage over the country man.

Mr. Cox. Except in the price of cars.

Mr. MOORE. So, in the proportion of population, the average poor man of the country has the advantage over the city man.

Mr. GREEN. Under your plan, the owner of a small car would pay only a small tax in comparison with the owner of a large car.

Mr. Cox. It would be only \$12.50 while the tax on the owner of the large car might be \$150.

Mr. MOORE. Indiana had 1 car in 1917 to every 15 of the population, Pennsylvania 1 car to every 27 of the population, and Iowa and Nebraska in 1917 had 1 car to every 5. So that the great State of Pennsylvania has no large amount of joy riding.

The CHAIRMAN. Of course, you would apply this same tax to the carriage and pleasure horses?

Mr. Cox. I do not believe I would, Mr. Chairman.

The CHAIRMAN. They are used for pleasure. You know we did that once.

Mr. Cox. I recollect that we did, but if you go out on the country roads and see the thousands upon thousands of cars all wearing out rubber, you would say that they ought to be taxed.

The CHAIRMAN. The Government can commandeer as much rubber and gasoline as it needs. Much obliged, Mr. Cox.

Mr. Hedges, we will be glad to hear from you now.

#### STATEMENT OF HON. JOB E. HEDGES, NEW YORK CITY.

The CHAIRMAN. Whom do you represent?

Mr. HEDGES. The Association of Life Insurance Presidents.

I have had prepared, if the committee please, just on a single sheet, a skeleton analysis of the life insurance business of the United States, and that is the single point on which I shall address myself.

I take it, if the committee pleases, that the problem of the committee and the problem of anyone who approaches the subject, is sentimentally the same, and that is a common purpose to make this country efficient in the war, and to help contribute, through the

machinery of this committee, the means and at the same time do it in such a way, as has been reiterated here so often, that there will be a general feeling of entire equality of contribution. No one can appreciate more keenly than I, after listening to some of the suggestions that have been made, that the last deduction is always left to the committee, and whatever theories may be advanced, the responsibility of it is left entirely to the committee, which has to be the superman in the way of knowledge, so I shall not attempt, even with my own limitations, to give any general advice to this committee.

I want to propose myself to the subject of a ruling of the Treasury Department which denies the fact that insurance reserves are capital. And just by way of preliminary, there are some 46,300,000 insurance policies in existence in this country, representing \$24,500,000,000 of assets. I take it that 50 per cent of all the citizenry of the country have directly or indirectly, through a community of interests, even where their policies are duplicated, contributed of their savings and the home cohesion of effort toward the creation of this fund. I take it that these companies, differing in many particulars from other business, go directly to the warp and woof of the whole civic life of the country.

There would be a number of inequalities which would creep into operations of the business of the country. I do not raise those. In the proximity of the submarine, it is not essential. I take it our main problem is to furnish the men who will fight the war, the money which will supply them with necessities, and further than that, what to my mind—and I am not a sentimentalist—is most important, the morale behind that money and those soldiers that make a common cohesive country. And in my judgment anything that Congress could do which left out of consideration the final cementing into a single cohesive affirmative force of the spiritual thought of the country, plus its material thought, would be a drag on the process of the war.

Therefore I do not come asking exemptions, nor do I come asking exceptions. I do not come asking any differentiation or anything of that kind, nor ask this committee to change its policy. I do not and could not be brought to do it.

The main point here is the question of whether the organization of these insurance companies and mutual organizations, whether these great funds are bearing their proper proportion in dollars toward the expenses of this Government. Therefore, to insure accuracy, knowing exactly how annoying it is to have something read to you, when the record will inform you later, I will say that my brief notes are only a half page in length, and I hope you will bear with me for a very brief period.

I believe that as a part of the civic life in this country the insurance companies contribute not only materially, but substantially in morale, and I would by way of illustration call an insurance company a partnership, I should say, of all its members, where some of the dividends declared are that freedom of effort and abandon, against the mere necessity of support of a man's succeeding family which frees his mind and makes his efforts an absolute asset to the country. It is therefore not academic to say that life insurance in this country is an institution that is founded upon scientific principles, and that it performs a highly important social and economic service, and

that economic service, as well as the social service, is the atmosphere in which I ask this committee to consider the main point on which I will dwell, and what I am saying is important to fix the deduction that I hope to draw.

Its economic function is to meet in some degree the pecuniary loss due to untimely death. Its social function is to promote patriotism, which goes at once to the function of the government and brings in direct contrast the theory of government which this war is opposing. It is not fantastic to say that most of the new theories that we have gotten from the other side and subconsciously advocated here of a concentration of authority so that the State shall do everything is antipodal of the theory where the State shall express through its functionaries in government the will of the average opinion of the average citizens. Therefore, my own belief is wherever we militate against or derogate from the initial moral responsibility of a citizen, we therefore lose the moral force, the moral responsibility, and it is not a governmental question speaking for the country at large, and it is that very thought to the contrary which marks the difference between these contending people on the other side of the water and ourselves, and that is not an academic proposition, on reflection, either.

The importance of insurance in its private aspect is that it provides a means by which every man may testify by personal sacrifice his wish to make certain provision for his dependents. Not a daily press goes out but what every citizen is directed, as well as argued with to conserve his own physical resources, his financial resources, and his mental resources for the benefit of the Government. That we put in the comprehensive words, "thrift" and "save." There is no agency which has led up to this more carefully than the requirements of the life insurance business. The response that the country is getting now is largely from habits gained through the necessities of self-protection, as exemplified by this very insurance.

It is thus at once one of the greatest incentives to and manifestations of individual thrift which modern civilization has developed. The importance of life insurance in its public aspect is that it relieves the Government from the cost of maintaining the widows and orphans whose future support has been provided thereby. Making again a contrast work of the agencies to clarify the inequalities of citizenship and social life in this country, when they find one Government on the other side of the waters leading to that kind of conditions which made a decree to handle the affairs of the world, ourselves included.

It is needless to say that thousands of men die every day who leave no other estate than their life insurance, and this insurance, in cases where it is sufficient to make adequate provision for their dependents, at least serves to tide them over until they can attain a self-sustaining status.

The principle of life insurance received the most effective indorsement from this Government when it went into the insurance business, and as it well might, where the contributions furnished come through the payment of premiums to meet the cost of insurance from the soldiers and sailors. The United States assumes all the expenses of administration and the entire burden of the war hazard plus the added unnatural losses that otherwise would fall upon a company.

because that company itself has to predicate its existence upon a scientific computation of length of life of people of certain ages under certain conditions, and it is entirely proper that the Government should do that, but while the Government is doing it there are in existence a few million of policies without any restrictions in them whatever, so that when these losses come back and come on these companies this very reserve which I will ask you gentlemen in a moment to consider as a part of the capital of these companies will be depleted in an unknown ratio for conditions not assumed, although in August, 1914, the companies could well take precaution, and did, and provided for certain additions to premiums, and yet in the Army no one knows how many there may be outside of the more recently insured who bear policies which will reverse that rate. That is a thing at least to be taken into consideration.

The soldiers and sailors, as I said, furnish the funds and without the aid of any governmental subsidy, and relying solely upon private support and the mathematical principles which make life insurance possible, the life insurance companies have established what has come properly to be regarded as a national institution. This institution consists in a system of voluntary cooperation by policyholders for their mutual protection, of which the companies are merely the administrative agencies. All life insurance is inherently mutual in its character. Its object is insurance so nearly as possible at cost to the insured. The character of the organization of the company affording the insurance is practically of no consequence.

In round figures, 87 per cent of the level premium or legal reserve life insurance which is in force is written on the mutual or participating plan. Not all of this insurance is carried by mutual companies. About 60 per cent of the insurance in stock companies is participating insurance. The mutual, or participating, plan of insurance involves the deposit by the policyholder annually in advance of the estimated cost of the insurance for the ensuing year, with the obligation on the part of the company to refund to him any excess over and above the cost of the insurance as ascertained from the company's actual experience. Nonparticipating insurance, which is furnished by stock companies, and constitutes only about 13 per cent of the amount outstanding, differs from participating insurance only in respect to this readjustment of premiums upon the basis of the year's experience. The company in this form of insurance makes a more exact estimate of the probable cost of the insurance (any deficiency in which, in case of adverse experience, is supplied out of stockholders' funds). The aim and the result under either plan is insurance so near as humanly possible at cost to the insured.

But one of the anachronisms of business which are sometimes new to me, we use words we don't know what they mean till they are adopted into statutes and judicial decisions. When these companies contribute more than is necessary for the year, for the requirements of their business of that year, based on their scientific computations, what is not used is turned back, which is called a dividend. The law governing incomes provided for that and also made a deduction and it is called a dividend. It doesn't happen to be a dividend but happens to be a return, but has a very great value in computing.

The CHAIRMAN. The law or statutes read dividends as "returns." The public call it dividends.

Mr. HEDGES. Exactly, because when they give in their money in the beginning they figure that is what they were willing to stake on the life insurance.

The CHAIRMAN. Perhaps one reason for that common understanding of the term of dividends is on account of what the agents tell them. "Look, our dividends are so and so." These fellows have got that sentiment scattered among the people.

Mr. HEDGE. Yes, sir; and Mr. Chairman, in the administration through the States it is a part of their common policy, to do that. It is a system of nomenclature, though it is a little Axtec.

Statistics for the year 1916 show that only nine stock life insurance companies, the aggregate capital and surplus of which amounted to \$5,157,726, earned and paid to stockholders dividends in excess of the minimum rate authorized by the excess-profits tax law (Title II of the revenue act of Oct. 3, 1917). Such dividends amounted to \$436,373 and the average rate per cent of dividends to capital invested in the business was 8.45 per cent. Only three of these companies, whose combined dividends amounted to \$106,915, exceeded the maximum rate of 9 per cent recognized by the act as exempt from excess profits.

As I have already indicated, the funds which support private life insurance are contributed by the policyholders. The ordinary premium (with which you are familiar) is at a fixed level rate for a definite period or for the period of the policyholder's whole life.

That is, a man could insure himself if he could at one instance of time put up enough money which at the regularly authorized rates and interest added to it, at his death, would bring that amount of money named in the policy.

This premium is derived by a process of commutation from the so-called net single premium, which is the present value of the future benefit payable under the policy at the death of the insured. To put it another way, this net single premium is the mathematical equivalent of the benefit under the table of mortality and at the rate of interest assumed. It is thus the capital sum which is technically called the reserve, required to furnish the corresponding insurance under a paid-up policy.

Since the payment in advance of the relatively large amount necessary to provide for whole life insurance would generally prove burdensome, this single net premium has, in practice, been commuted into equal annual payments distributed over the period of the life of the person insured, or over some specific period such as 10, 15, or 20 years in the case of limited payment policies. Under this level premium plan of insurance, however, the same reserve must be accumulated by degrees. Accordingly, after deducting the policyholders' share of the current death cost, the balance of the annual premium as set aside to be accumulated at interest as the reserve to the credit of the policyholder.

Therefore, these reserves or these surpluses by whatever specific phrase they are denominated, naturally have been taken over in their administration by the various States having jurisdiction. In other words, these States say in substance, We recognize this business. It is a good thing. It is a substantial thing, but it is so important and it is so desperately necessary that the man who takes out a policy shall know that at the conclusion of his life his beneficiary will receive

the full value. That unlike most any other business, the State in its rightful authority says you shall invest only in this or that security only here or there as we judge it. There are exemptions in the statutes, of course, for Federal bonds and State and municipal bonds, but primarily and absolutely and finally the handling of this money in its investment for ultimate securities is made a matter of State regulation.

Now, it also happens that in the computation of the interest required from the original sums on which this theory of this policy is based is handled by a rate of interest, we will say,  $3\frac{1}{2}$  per cent. These funds, on the average, yield 4,  $4\frac{1}{2}$ , or a little over. Therefore, there is a margin of 1 per cent. But in the very computation and under the very theory on which each State permits the continuance of business and the amassing of capital and this building up of reserves is contemplated and included the rate of interest computed as a mathematical necessity by the companies. Therefore, in intentment, that interest or whatever these funds bear, is just as much a part of the principal as the indication of the bond from which the coupon is cut, because without it the mathematical certainty and theory of the policy vanishes.

The aggregate of these reserves which are thus contributed by the policyholders constitutes the principal item in the capital of a life insurance company. In a mutual company the reserve is the only capital until a surplus or contingency reserve to meet unexpected losses can be accumulated from savings in expenses or favorable mortality experience. The capital of a stock company includes, in addition to the reserves and surplus, the capital stock which merely affords a further guarantee for the payment of the outstanding insurance.

Every gentleman on this committee who holds a policy of old-line insurance is a part proprietor of such company. If the company is a mutual one, the policyholders are the only proprietors. If it be a stock company, their interests preponderate.

As I have just indicated, the life insurance companies do not earn excess profits. As a matter of fact, they are, under the State insurance laws, absolutely incapable of excess profits. The character of the securities in which their capital and surplus funds may lawfully be invested is strictly limited and defined by statute. These securities include only Federal, State, and municipal bonds, corporate bonds secured by mortgages upon real estate or adequate collateral, real estate bonds, and mortgages with ample margin for security, and such real estate as may be acquired for the reasonable accommodation of their home or branch offices or bought in on foreclosure of mortgages to avoid loss. Generally speaking, they are not permitted to invest in or hold corporate stock or other speculative securities. Safety, not profit, is the aim; and the average rate of return upon the aggregate of these investments is low. During the 25 years since 1893, this average rate has been less than 5 per cent.

In other words, the one business that can be brought before you gentlemen that doesn't permit of profiteering, were it desired, and can not take advantage of the war in increase of rates is life insurance, because they have not raised their rates. They have no option over their securities. They may buy when the market lowers on their securities; they have to see that they are kept up.

Mr. CAREW. You say they haven't raised their rates?

Mr. HEDGE. Not on the old rates. They have made a new policy for the war purposes.

Mr. CAREW. Of course, they charge more for policies with the war risk?

Mr. HEDGE. Yes; but the great bulk of their business was written before the war began.

Mr. DICKINSON. Your new policies will have some raise in them?

Mr. HEDGE. Only the war risk.

Mr. DICKINSON. That is the soldiers?

Mr. HEDGE. That is the soldiers. That is the companies have not taken advantage of the war as such, but they have added a surplus, added an amount for war risk.

Mr. DICKINSON. But by reason of the war coming, on account of certain policies which they did not anticipate, soldiers going across holding these policies and losses are coming, will not insurance companies in their new contracts hereafter raise somewhat their rates?

Mr. HEDGE. They can't.

Mr. DICKINSON. When they issue new policies?

Mr. HEDGE. When they issue new policies, quite so; but those will be necessarily a very small fraction.

Mr. GARNER. The Government is quite a competitor with you now?

Mr. HEDGE. A very substantial competitor on war risks, and what I want is not for the Government to add another effort to it and make the burdens unduly heavy in other instances.

Mr. MOORE. Let us get that clear, please. If I applied for insurance 10 years ago and had not in any way incurred war risk and would again apply, the rate for me now would be the same during the war as it was before the war?

Mr. HEDGE. Not if you are going abroad in the war now. You would be charged an added premium on account of it, but you would collect your other policy and you would continue to pay the same rate on the other policy, because there was no provision against war.

Mr. MOORE. You made a broad statement that rates had not been advanced.

Mr. HEDGE. Your correction is quite correct, sir. The rates on the general run of policies has not been increased. It is only on the new policies issued since the war was declared.

Mr. HAWLEY. Does that apply to the policies outside of for soldiers?

Mr. HEDGE. No, sir.

Mr. MOORE. Suppose we leave the war risk out altogether.

Mr. HEDGE. Yes.

Mr. MOORE. Would the rates for me at a given age be the same now as they were before the war?

Mr. HEDGE. They would be exactly on the same theory as before the war.

Mr. MOORE. And we would have exactly the same rate so far as I am concerned since I do not involve a war risk.

Mr. HEDGE. No, sir. That is right.

Mr. STERLING. How does a company determine whether a man is going to ask for war insurance?

Mr. HEDGE. The question is asked directly.

Mr. MOORE. If he goes to war without knowledge of the company he runs the risk of invalidating the policy, doesn't he?

Mr. HEDGE. I take it so. This policy would be issued with other restrictions with regard to the probabilities of the insured going to war. The question will be asked, the age would be considered involving the liability to draft, and further than that the so-called line of insurance or the amount allowed to the individual man would be limited though he perhaps has an entire lack of intention to go to war.

Mr. MOORE. Mr. Hedge made a statement that there was no intention to raise rates.

Mr. HEDGE. I was talking about general insurance.

Mr. MOORE. Rates have been increased so far as war risks are concerned?

Mr. HEDGES. Only.

Mr. MOORE. But so far as risks in civil life there has been no increase on account of age and life as they apply now except as to war risk?

Mr. HEDGES. No, sir.

Mr. STERLING. Suppose a man is of draft age, between 21 and 31, he says in his application he is not liable to military service, do you lessen the amount of the policy on that account?

Mr. DUNHAM. I am not an underwriter. I don't know the precise treatment which a company would accord that particular man. If he isn't liable to draft he may be ineligible to the insurance by reason of that same physical, if it be a physical, defect.

Mr. STERLING. Leaving out his word, would you just take his word for it and put in the policy in case he violated his policy the insurance is void?

Mr. HEDGES. As a matter of fact most of the companies put in a provision if the insured goes into the war there shall be an extra premium for that purpose.

Mr. SLOAN. Why did, prior to the war, some of the companies have this provision and others didn't say anything about it?

Mr. HEDGES. Some of the companies maintain an old war-time clause. He has to put them all on the same plan as regards the war risk.

Mr. SLOAN. Did some of the companies waive that?

Mr. DUNHAM. Yes, sir.

Mr. GARNER. I want to ask you this question: The Treasury Department, if I understood it, has ruled that where a man's policy matures we will say this year, a policy of \$25,000 taken out on the old plan 20 years ago, and where he dies, that income of that policy is subject to the income tax. Do you think that ruling is justifiable under the present law?

Mr. DUNHAM. If you please, sir, in the first place I think your reference to the rule is not quite exact. The Treasury Department holds and the law as a matter of fact provides that a refund to a living policyholder of any amount more than he paid by way of premium is considered an income and is taxable as such, but up to that amount it is not income. It is a return of capital.

Mr. THEO. W. BLACKBURN, of Omaha, Nebr. The policy as issued does generally contain a restriction against war service, and the provision of the policy is that in event of death while in active service or in the Army and Navy the surrender value, the reserve of the premiums paid are returned, but it doesn't void the policy. This

contract is that the man's premium will be returned if he is called after he takes this policy or his surrender value is given to him or his reserve is paid to him, according to the terms of the contract.

Mr. SLOAN. There is quite a difference, is there not, where the old policy taken years before war was declared, some of them having no war-risk reservation, and some of them having war-risk reservation. Now those that didn't have the war-risk reservation go right on and pay out as if they died natural deaths, the same as though they died outside of the service, and others take advantage of the war risk if they see fit?

Mr. BLACKBURN. And pay the reserve on the policy.

Mr. SLOAN. They diminish the amount on account of the increased risk?

Mr. BLACKBURN. Yes, sir.

Mr. DUNHAM. Unless they waive that right, and a large number of the companies have done so in order to equalize all of their old policies.

Mr. BLACKBURN. Eighty per cent of all the policies in force are incontestable for any cause, but not 80 per cent of all the other policies issued since we have become at war.

Mr. MOORE. Does it void an ordinary civil-life policy to go up in a flying machine?

Mr. BLACKBURN. It would not if it is an incontestable policy, but the companies now as a rule protect themselves by a restriction with reference to submarines and aviation very generally.

Mr. MOORE. A man had better inquire as to restrictions in his policies before he goes up in an aeroplane?

Mr. BLACKBURN. I should advise him to; yes, sir.

Mr. HEDGES. If you will look on that sheet I gave you, you will see on the left side of the lower half of the page the ruling of the Treasury Department we seek to controvert. "Legal reserves not capital because the net additions to reserves required by law are not taxed." Therefore, the theory is somewhere, somehow there gets into that fund some money that hasn't borne its part toward the contribution of Government expenses. If you will look right opposite that for the reasons we have set forth, we hold that that is not logical or consistent, and you will see just ahead of that we have put the definition of capital—

The CHAIRMAN (interposing). What net additions to legal reserve are taxed and subject to income tax?

Mr. HEDGES. Mr. Kitchin, if you will look into that second subdivision of the second main definition:

Legal reserve is surplus, and surplus we hold is part of the invested capital under definition of statute.

And up to the top of that page.

Net addition to reserve is not the income from the reserve. It is the difference between the value of the outstanding insurance at the beginning and at the close of the year. You may have a negative quantity academically resulting in legal reserve transferred to free surplus, called gain from reserves, which is taxable as income.

It merely anticipates the deduction of the same amount as part of the payment of death benefits, matured endowments, or surrender value.

It is made up of additions from renewal premiums, and first-year premiums, plus interest on the reserve at assumed rate (3½ per cent). Less reserve on policies terminated during the year by payment of death benefits, matured endowments, surrender

In other words, before this net addition to reserve occurs from a mechanical advantage and ease of doing business, they take a period of time from January 1 to December 31, and suppose if that is worked in the multiplication and duplication it could be done every 60 or 90 days. As a matter of absolute ultimate conception, that thing occurs every second of time, as a result of new premiums coming in and others going out, but they take a fiscal year as the unit of time to determine this thing. This addition, therefore, is made at the end of the year and is carried tentatively for the purpose of computation. And this other part, the receipt, results in a transfer from free surplus to gainful reserve and that is taxable. In other words, that has already been taxed, but the theory of the Treasury Department—I can see how they rule it. They look through these things. They find that bonds not exempted as State or municipal bonds, the incomes from them as such means subject to income tax, but due to destruction of business during these 12 months in a fiscal year, they do get in there in just the same way it is thought they are made theoretically, and a part of them might bear tax.

Therefore, insurance companies are presented with this dilemma. We pay our income tax. There is no discussion made about it. None over here. No argument is made, or suggestion even as to the rate of that. That is in the good judgment of this committee and the Congress based on the necessities of the Government. Now, it isn't our fault that we can't earn an excess profit. We are compelled to do business in a certain way. Our funds are segregated. Morally those funds are pledged with a trust just as much as any kind of trust fund can be. Not as a matter of so-called bookkeeping with each individual, but they are pledged as a trust for a specific thing with the option to remove with officials of the company. Certainly, so far as inherent advantage to the company comes and everybody must bear his suggestion as to that, if any burden is imposed on it, when you talk about loans and real estate, buying of securities, loans on mortgages, developments, they are naturally the best of plans. It temporarily affects the holding of other bonds, the loans on the policies secured by these surpluses, the company has borne a burden which it should, sometimes quite to its advantage, which is more than made up by any question of alteration to any condition, or involved in new plans of an income tax and war-profits tax. Therefore, I submit to the wisdom of the committee that section 2, an amendment to the act of October 3, 1917: Section 207, paragraph A, subdivision A, after the words "paid in or earned surplus," that there shall be added these words, "including the reserves required by law to be accumulated and maintained by life-insurance companies."

The CHAIRMAN. Let's see, Mr. Hedges; your argument is very interesting and instructive. Let's see if I understand how they are taxed.

Mr. HEDGES. In other words, we don't go to the point where we would be in the war-profits tax.

The CHAIRMAN. All mutual companies, here is what they do with their income, as I understand it, from premiums and all other sources. First, out of that they pay their expenses, including salaries and taxes?

Mr. HEDGES. And provision for death losses during the current year.

The CHAIRMAN. And second, all claims, death claims, endowments, and surrender taxes or values?

Mr. HEDGES. Yes, sir.

The CHAIRMAN. Third, the legal reserve, what the law requires you to carry as a legal reserve?

Mr. HEDGES. Yes, sir.

The CHAIRMAN. Fourth, dividends or returns of premiums. After all of that those four items are paid out of your gross income from all sources, then you have a surplus. Now, take that surplus, that you carry to what you call a contingent reserve?

Mr. HEDGES. Whole contingent reserve to meet conditions which might arise.

The CHAIRMAN. You can do what you please with that?

Mr. HEDGES. Oh, no; that is carried by the same statutory conservatism that the reserve is carried with.

The CHAIRMAN. It is not set aside. That is for your general business?

Mr. HEDGES. Yes; but it is investment.

The CHAIRMAN. And you can invest that as you see fit?

Mr. HEDGES. Oh, no.

The CHAIRMAN. In that contingent reserve controlled by the statute of a State exactly like legal reserve is controlled?

Mr. HEDGES. Absolutely. You might just as well use the word "reserve" and think of them both at the same time.

The CHAIRMAN. Is that true in all States?

Mr. HEDGES. Yes, sir.

The CHAIRMAN. I might have had a different idea of it. I thought the law absolutely controlled your investment of your legal reserve and that which was required to be carried as legal reserve, but as to the contingent reserve you used it yourself, you had a free hand.

Mr. HEDGES. Your mathematics may be very good, your actuaries may be very wise, and your presidents very cunning, but we won't even take a final chance on your theory of full protection through a reserve. This is just a boot.

The CHAIRMAN. In thinking about contingent reserve and legal reserve you can think about them as one?

Mr. HEDGES. You can think about reserve.

Mr. MOORE. Just good measure?

Mr. HEDGES. Good measure is a good definition.

Mr. GARNER. In other words, if I understand you, take the State of New York—in the State of New York you can only invest your funds in certain securities outlined by the statutes of New York?

Mr. HEDGES. Exactly.

Mr. GARNER. And outside of that you can't place any class of securities?

Mr. HEDGES. You can buy office furniture.

Mr. DUNHAM. You can't own them. If you own them you have to get rid of them.

The CHAIRMAN. In levying this tax you say you have a contingent reserve; you separate that on your books?

Mr. HEDGES. Oh, yes, sir. It has to be kept that way.

The CHAIRMAN. You say you have a contingent reserve of \$5,000,000; you have a legal reserve of, say, \$50,000,000. Your net income, that is, the income after deducting the four items in the four

classes which I have mentioned, your expenses, salaries, taxes, legal reserves, dividends returns, then when you have a surplus at all, a net income, say you have a net income of that of \$2,000,000, say. Now, how does the Treasury Department hold in the excess-profits tax there? What does it hold is your capital invested under the statutes for the purpose of deduction?

Mr. HEDGES. It tries to hold the income on the investment other than those specifically exempted by the statute and calls that their net addition to reserve, whereas the net addition, as a matter of fact, is the business at the end of the year compared with the business at the beginning of the year. In other words, you can't, Mr. Kitchin, take and segregate that feature of it.

The CHAIRMAN. This contingent reserve of five million, legal reserve of \$50,000,000 and your net profit there, or suppose—supposing it \$2,000,000—they would only allow you a deduction of say—before the war, prewar period—a deduction of only \$5,000,000?

Mr. DUNHAM. A deduction of 9 per cent on the two million.

The CHAIRMAN. Four hundred thousand dollars on the \$2,000,000 and you pay this excess-profits tax on the \$1,600,000?

Mr. HEDGES. Yes, sir.

The CHAIRMAN. Now, I can't exactly understand the ruling. I will ask what it means, "plus legal reserves net additions to which are subject to the income tax." I can't understand that. I want you to explain it. I have understood it to be just as you said awhile ago.

Mr. DUNHAM. Did you ever hear of the advice or response of the mother given to her daughter, who asked: "Mother, may I go out to swim?" "Yes, my darling daughter, hang your clothes on the hickory limb, but don't go near the water." There is no such thing as legal reserves in net additions. There is no such thing.

The CHAIRMAN. They undoubtedly had in their minds in talking with insurance men these representatives of insurance men within the last two years—

Mr. HEDGES (interposing). The business of the company is to look for a thing that will bring in income.

The CHAIRMAN. That is our business now.

Mr. HEDGES. Yes; they stretch themselves. They find among these reserves some 3½, 4, 4½ per cent bonds; they find State and municipal bonds, but they are found in other bonds not specifically referred to.

The CHAIRMAN. Other securities?

Mr. HEDGES. Yes.

The CHAIRMAN. Not exempted from tax?

Mr. HEDGES. Yes, and they don't figure out that those securities masticated for a year with all the others help to make up the general income.

The CHAIRMAN. You contend that the Treasury Department ought to consider not only the \$5,000,000 contingent reserve, and so written on your books, but also the \$50,000,000 legal reserve?

Mr. HEDGES. Yes, sir. I endeavored to ascertain the meaning of that rule from the Treasury Department as soon as it came out, and finally reached Dr. Adams, who told me that if I substitute the word

“other” for the word “legal” it would more nearly express the word intended.

Mr. SLOAN. Let me ask you a question. You concede there is no excess-profits tax, especially as applied to mutual life insurance companies. Do you intend to include also these stock companies?

Mr. HEDGES. There are very few of them that would. The stock companies with which I am familiar, the same rules would apply. It is the capital with which they do business.

Mr. SLOAN. Isn't it true that some of these stock companies that are not mutualizing—I understand that many of them are mutualizing—that a stock company may have an excess profit even under your theory?

Mr. HEDGES. I take it that is possible.

Mr. SLOAN. Now, there are many of these companies.

Mr. HEDGES. Mr. Blackburn knows more about that than I do. But the argument that I wanted to produce was that it applied to the stock companies the same as to the mutual companies.

Mr. SLOAN. Yes; I got the drift of your contentions.

Mr. MOORE. Mr. Hedges, I have heard you on many occasions when you brought good cheer to your audience. I would like to know whether, at the close of this brilliant argument of yours, you can tell us where we can get revenue up to \$8,000,000,000 to run this Government?

Mr. HEDGES. I haven't any suggestion, Mr. Moore. I haven't been able to keep up all my payments on the Government bonds I bought.

Mr. MOORE. We didn't intend to get it out of you, but wanted your suggestion.

Mr. GARNER. The difference, Mr. Hedges, in the program under the present law and what you are proposing now and the suggestions you are bringing, would do what? What would the Treasury lose by adopting the suggestions you make?

Mr. HEDGES. I couldn't answer that question, sir.

Mr. GARNER. Our object here is to get some money, and so many exceptions are—

Mr. HEDGES. I assume what would happen; it is a silly thing to mention it, but the motive will not be misunderstood; the effect on these reserves and the effect on the companies and their policy-holders would have to be tested somewhere in court.

Mr. LONGWORTH. I was going to ask the same question Mr. Garner asked. Do any of you gentlemen know how much excess-profits tax has been paid?

Mr. DUNHAM. I don't believe there are any figures in the country on that subject, Mr. Longworth. The ruling of the Treasury Department was probably not accepted by the companies, and none was paid, as an excess-profits tax.

Mr. STERLING. I would like to ask a question. I wish you would tell us just what constitutes an old line insurance company, what constitutes its assets? Where does it get it?

Mr. DUNHAM. The income of the insurance company consists of the premium income and the return from investments.

Mr. STERLING. That constitutes its income?

Mr. DUNHAM. Yes, sir.

Mr. STERLING. Now, what it has left at the end of the year, after paying death losses and surrender value and matured endowments, and so forth, what it has left at the end of the year constitutes net income?

Mr. DUNHAM. Do you mean to include in the other items the additions to reserve?

Mr. STERLING. No; it wouldn't include anything except what you have mentioned. Your gross income is made up of premiums and interest on your investments, and you pay during the year death losses and surrender values.

Mr. DUNHAM. And matured endowments.

Mr. STERLING. And what you have left at the end of the year, after paying that out, do you call that a net income for the year?

Mr. DUNHAM. No; an addition to the net reserve also comes out.

Mr. STERLING. Now, what do you mean by an addition to the net reserve?

Mr. DUNHAM. The net reserve is the difference between the reserve at the beginning of the year and the reserve at the end of the year.

Mr. STERLING. Does the law we passed last year allow you to take that out?

Mr. DUNHAM. Yes, sir.

Mr. STERLING. It does?

Mr. DUNHAM. Yes, sir.

Mr. STERLING. Then I don't know what this gentleman, Mr. Hedges, is complaining about.

Mr. DUNHAM. He is complaining about the excess-profits tax—

Mr. HEDGES. We do not complain about the income tax; but we do complain about the excess profits tax.

Mr. STERLING. It is inherently capital?

Mr. DUNHAM. Yes, sir.

Mr. STERLING. And you use it as a part of the capital when you come to claim exemptions in estimating your profits? Is that it?

Mr. DUNHAM. That is substantially it. Not only these additions, but the net reserve itself we can claim. We begin with a reserve at the beginning of the year of \$50,000,000, and we place during the year \$5,000,000, so at the end of the year we have \$55,000,000.

Mr. STERLING. And that is the capital you are allowed?

Mr. DUNHAM. Yes, sir.

Mr. STERLING. Now, in the illustration you have made, the \$55,000,000, it would make a difference of \$55,000,000 in your exemption?

Mr. DUNHAM. No, sir—

Mr. STERLING. Unless you would deplete your exemption.

Mr. DUNHAM. Yes; it would make a difference of \$55,000,000 which was compared with the net income, for the purpose of estimating the tax.

Mr. STERLING. I get your idea. Would that make much difference to the old line insurance companies?

Mr. DUNHAM. In some companies it would make a great deal of difference and in some not any; depending on the contingency reserve.

Mr. STERLING. Would it make enough difference to hazard their resources to meet obligations to their policyholders?

Mr. DUNHAM. Yes; particularly with reference to our war losses in prospect; it would make a difference, not to wipe out their reserves,

but to impair them. And it would extend over the entire history of the company until it had become a new company through many new lines.

Mr. STERLING. What company do you represent?

Mr. DUNHAM. I represent the Association of Life Insurance Companies.

Mr. STERLING. Any particular company?

Mr. DUNHAM. Our association has 29 companies, having 50 per cent, or thereabouts, of the volume of old-line insurance business in the United States.

Mr. STERLING. Are you familiar with the operation of any particular old-line company—one of the leading old-line companies, take the Mutual Life—are you familiar with that?

Mr. DUNHAM. The Mutual Life of New York?

Mr. STERLING. Yes.

Mr. DUNHAM. Not with the figures, but in a general way and on general principles I am.

Mr. STERLING. Are you acquainted in particular with any old-line company? What I am trying to get at is this: I would like to have you illustrate, if you can, by taking some old-line company and illustrate to us how much difference it will make between the taxes you pay under the law as it is now and the amendments which Mr. Hedges suggests.

Mr. DUNHAM. I suggest you take the Equitable; it has an income tax of \$98,000. I don't know what the taxable income is.

Mr. STERLING. Has it an excess-profits tax?

Mr. DUNHAM. That I don't know, because of the fact that they did not return under the ruling. But the Equitable is credited in this tabulation with surplus to policy holders of \$91,000,000, which is the amount that the Treasury ruling would allow as the basis of the computation of the 9 per cent, to compare with the taxable income, instead of its assets, consisting of capital reserve and surplus, the capital being \$100,000 and surplus \$576,000,000. Now, the surplus to policyholders of the Equitable as compared with the total of assets is larger than some other companies; take, for example, the Metropolitan.

Mr. STERLING. Going back to that, as I understand it, the department has construed the law so as to require a tax on the surplus—

Mr. DUNHAM. On this \$91,000,000.

Mr. STERLING. Plus the \$100,000 capital?

Mr. DUNHAM. That is in there. The surplus to the policyholders is included in the \$91,000,000.

Mr. STERLING. Let me see; the department says that that company is exempt on 9 per cent of \$91,000,000 and \$100,000, does it?

Mr. DUNHAM. Yes, sir.

Mr. STERLING. And the company wants 9 per cent on that, and also the \$576,000,000?

Mr. DUNHAM. The \$576,000,000 includes the \$91,000,000.

Mr. STERLING. Well, it would make some little difference, wouldn't it, in the exemptions? I don't think we would get much tax out of the insurance companies on that theory.

Mr. DUNHAM. You will get all the income tax; the question is, excess profits.

The CHAIRMAN. Mr. Dunham, this is true, that the company should be allowed to count their legal reserve as a part of their surplus; none of that would pay a cent of income tax?

Mr. DUNHAM. That is true, I have no doubt.

The CHAIRMAN. The question we have talked about before, Mr. Hedges, is the question whether insurance companies should be taxed at all.

Mr. HEDGES. Yes; the question is whether we shall—

The CHAIRMAN (interrupting). If your contention is proper, we get practically no excess-profits tax as a matter of policy or justice or right, but rather to some of us it is a question of whether we shall have any excess-profits tax on insurance companies.

Mr. HEDGES. Well, if you do that it is not the fault of the insurance companies. It is a question of policy or business or regulations, and outside of any question of equities at all it would be a disturbing of business and capital, and everything else, and I don't think it is justifiable. It has to be done by way of a general principle, anyway.

Mr. STERLING. What do you think of this to get some tax: You know now the tax doesn't reach the man who has his money loaned on mortgages, or anything of that kind, because the exemption is greater than the rate of interest. Now, give insurance some bulk exemption and then fix some rate of taxation, 2 or 3 or 4 per cent. Don't call it an excess-profits tax; call it a tax in lieu of an excess-profits tax; that is, fix some rate on their investments?

Mr. HUGHES. I don't know how that would work out.

Mr. STERLING. The same as you would with a capitalist. He loans his money out and doesn't pay anything in taxes. I think a good many of the committee thinks he ought to pay something. The man who earns a salary of \$10,000 has to pay something, and the man who has his money loaned and gets \$10,000 should pay something, it seems to me. What do you think of a tax in lieu of that excess-profits tax?

Mr. HEDGES. There is a tax now of that kind.

Mr. DUNHAM. A tax on new business.

Mr. STERLING. In the revenue law?

Mr. DUNHAM. Yes, sir; 8 cents on new business issued.

The CHAIRMAN. A stamp tax?

Mr. DUNHAM. Yes; that is probably larger than the income tax.

Mr. STERLING. Is it?

Mr. DUNHAM. Yes; I have the figures here for practically five months on 26 of our companies, and the 8-cent tax on new business for those five months is \$100,000 more than the income tax for the whole year 1916.

Mr. MOORE. What are the figures?

Mr. DUNHAM. The income tax is \$476,000 for 12 months for the business of the year 1917 paid this year; for the 5 months covered by the tax on new business the tax is \$574,000.

The CHAIRMAN. Of course, some insurance companies pay no tax at all.

Mr. DUNHAM. I have two zeros here.

The CHAIRMAN. For instance, you find some companies that carry very little in contingent reserve and carry it back.

Mr. HEDGES. You will find 23 out of the 26 there.

Mr. DUNHAM. And the largest paid \$136,000 for income tax.

The CHAIRMAN. Take the Metropolitan, how much income tax does it pay?

Mr. DUNHAM. \$132,000.

The CHAIRMAN. It does a business of how much? The total assets are how much?

Mr. DUNHAM. \$704,000,000.

The CHAIRMAN. You see, they pay practically no income tax. You say they pay more stamp tax?

Mr. DUNHAM. Their stamp tax is \$129,000.

Mr. GARNER. A tax like Mr. Sterling suggested would get into the Treasury a good deal of money. The one he suggested based upon the same principle that you would tax a man who had \$10,000 from interest on notes, 6 per cent, say, basing that on the same principle that you tax insurance companies on their investments and you would get a good deal of money.

Mr. STERLING. Give the insurance companies an exemption.

Mr. GARNER. Suppose, on these investments of millions of dollars, they paid 4 per cent; if you paid 4 per cent on all you get in you would pay right smart of taxes.

Mr. HEDGES. Yes; right smart of taxes, and you go right to the function of these reserves while you are doing it.

The CHAIRMAN. What I understood Judge Sterling was, that in addition to that income tax rate, say 6 per cent, we make a corporation income tax of 6 per cent, but in lieu of an excess-profits tax add on 1 or 2 more per cent income and not tax excess profits. That is section 209.

Mr. HEDGES. You mean, add an income tax to that?

The CHAIRMAN. Yes; add a little to the income tax and not have an excess profits tax.

Mr. DUNHAM. We are assuming the income tax is to be increased.

The CHAIRMAN. I think your presumption is about right. We regret to do it, but I suppose the business men and corporations recognize that we must have larger revenue from taxation, and perhaps larger still as the expenditures of the war increase and inevitably will increase. We are going to try to get the money as equitably as we can and with the least burden to business and to the people.

Mr. HEDGES. It was with entire deliberation that I didn't say anything about an increase in the income tax. You gentlemen have that problem. We wanted to get the other position logically before you if we can, and then what we have to pay we have to pay.

The CHAIRMAN. I had occasion to look into this when the excess-profits tax of 1917 was up, and the one we did pass in March, 1917, and then there were some of the larger companies paid nothing and some of the others \$200,000 or \$300,000; and some that had \$5,000,000 or \$6,000,000 paid none and some of the little companies paid more.

Mr. STERLING. I wonder whether Mr. Dunham would do this for the committee—

Mr. MOORE. Mr. Dunham, you are not yet officially on the record; are you the Mr. Dunham who was formerly with the State Insurance Commission of the State of New York?

Mr. DUNHAM. Yes, sir; formerly with the State Insurance Commission of New York, Frederick G. Dunham.

Mr. STERLING. Would you have the data on which you can compute for the committee what the tax would be if we would impose,

say, a 3 per cent rate on the income which these insurance companies derive from their investments?

Mr. DUNHAM. Yes, sir.

Mr. STERLING. You could tell what their investments are and their income?

Mr. DUNHAM. Yes, sir; we have that.

Mr. STERLING. And how much tax would a 3 per cent rate produce from the income on their investments?

Mr. GARNER. How would it compare with the excess profits levied under the present law?

Mr. DUNHAM. I couldn't give you that.

Mr. STERLING. You will do that?

Mr. DUNHAM. Yes, sir.

The CHAIRMAN. Mr. Dunham, I want to ask you a question I have asked a great many insurance companies: In mutual companies the policyholders are considered the stockholders?

Mr. DUNHAM. Yes, sir; they are the proprietors. There is no other holder of stock.

The CHAIRMAN. Now, when you get from them all the expenses, including the tax, and everything else, the salaries, and all the expenses to maintain their company and settle all claims, death claims, matured endowments, etc., and then out of that income carry all to the legal reserve that the law requires, and who does the balance of that money belong to?

Mr. DUNHAM. To the policyholders.

The CHAIRMAN. Now, if you would pay your stockholders, after paying all the expenses, salaries, and all claims, death losses, matured endowments, and everything else, and after what the law requires is to go to the legal reserve, if you paid your stockholders the balance, which really belongs to them in return of dividends, you wouldn't have to pay any taxes at all?

Mr. DUNHAM. If we returned it all?

The CHAIRMAN. You wouldn't have to pay any taxes?

Mr. DUNHAM. That is so, but—

The CHAIRMAN. Doesn't that money belong to them, in good morals?

Mr. DUNHAM. No, sir; if you mean in hand, no, sir.

The CHAIRMAN. Why doesn't it? You have enough to pay all expenses, and you have enough to protect them in their legal reserve; now, why?

Mr. DUNHAM. Mr. Kitchin, since the interposition of the United States in the war there has been a horizontal decrease in the value of the assets in which these companies—in the securities in which they have their funds invested, of from 8 to 10 per cent, and that decrease has to be taken up in this surplus. If there were no increase, when that occurs at the end of the year, the company's reserve is impaired.

The CHAIRMAN. In other words, you continue it as an additional reserve?

Mr. DUNHAM. An additional guaranty.

Mr. HEDGES. Something to boot.

Mr. DUNHAM. A margin which as good business men would not allow them to reduce more than they had to reduce.

The CHAIRMAN. I might suggest to the insurance companies that the more they return to their policyholders the less tax they will have to pay.

Mr. DUNHAM. That is true, but the difference to the individual policyholder would not be great, because the amount per policy would be slight, but the difference in the solvency of the company would be enormous, and it is these surplus funds which will meet this war loss for which we have no premium whatever and because of that the companies will withhold the utmost of dividends for the good of the whole company.

The CHAIRMAN. Now, in the State of New York, in this reserve contingent, could you loan to the Bethlehem Steel Works—the Bethlehem Co.—could you loan to them out of this reserve contingent?

Mr. DUNHAM. We could loan on a mortgage.

The CHAIRMAN. On a mortgage?

Mr. DUNHAM. On a mortgage, or on a bond adequately secured by collateral. And the collateral in New York could not comprise more than one-third of the security.

Mr. GARNER. That is all fixed by the statute of New York?

Mr. DUNHAM. Yes, sir.

The CHAIRMAN. Just so it is adequately secured?

Mr. DUNHAM. Yes, sir.

Mr. MOORE. Are the words "adequately secured" the words the statute uses?

Mr. DUNHAM. Yes, sir.

The CHAIRMAN. And you can't use any of this contingent reserve?

Mr. DUNHAM. No, sir; mortgages must be secured by real estate, and you may not loan more than 50 per cent of the value of the property on which it is loaned, and the collateral, as I have explained. It is all subject to the supervision of the superintendent of insurance.

Mr. SLOAN. Will you also state from the figures you have the amount contributed by these various organizations to the Government, whether by way of income tax, stamp tax—the amount they contribute to the Federal tax funds?

Mr. DUNHAM. Yes, sir. And I may include also other items that it seems are illuminating?

Mr. SLOAN. Yes; so far as I am concerned.

The CHAIRMAN. Mr. Dunham, how about any regulation as to what banks that you can deposit these reserves; deposit the money of the insurance companies?

Mr. DUNHAM. No; there is only a strict provision and supervision of the relative amount of money on deposit in banks to their investment; that is, an inordinate amount of money on deposit would be subject to immediate criticism and order.

Mr. MOORE. Your connection with the insurance department of New York?

Mr. DUNHAM. Special deputy superintendent of the State of New York.

Mr. MOORE. How long?

Mr. DUNHAM. Seven years.

Mr. MOORE. And now are you connected officially?

Mr. DUNHAM. I am the attorney for the Association of Life Insurance Presidents.

The CHAIRMAN. We are glad to have had you gentlemen before us. The discussion has been very helpful.

The CHAIRMAN. Gentlemen, both your statements have been very instructive to the committee, I am sure. I know they have been to me.

Mr. MARTIN. Thank you.

The CHAIRMAN. I am glad you came.

**STATEMENT OF MR. THOMAS W. BLACKBURN, SECRETARY  
AMERICAN LIFE CONVENTION, OMAHA, NEBR.**

The CHAIRMAN. Please state to the reporter, so that we may have it, your full name and whom you represent.

Mr. BLACKBURN. Thomas W. Blackburn, Omaha, Nebr. I am secretary of the American Life Convention. My remarks will be very brief, because I think you have gone quite extensively over this matter.

The American Life Convention is an organization of 111 legal life insurance companies in 34 States, all but 1 west of New Jersey. I represent what are more generally referred to as the younger companies, the western and southern companies.

About 95 of these are stock companies, and the remainder are mutual companies. We come, Mr. Chairman and gentlemen, from a section of the Union that is loyal, as every other section of the Union is loyal to-day, and we come to-day to say that we want to pay our share of the taxes, and if they must be increased we are ready to pay our share of the increase without any murmuring.

Mr. MOORE. That is the patriotic section of the country which sent Mr. Sloan to Congress, is it not?

Mr. BLACKBURN. I do not live in Mr. Sloan's district, but he is insisting that we send him to the Senate.

Mr. SLOAN. And I hope you will do that.

Mr. BLACKBURN. He has intimated to me that it would please him to be called Senator.

Mr. MOORE. With this interesting prelude, which I hope is satisfactory to Mr. Sloan—

Mr. SLOAN. It meets with my unanimous approval.

Mr. MOORE (continuing). Mr. Chairman, we will proceed.

Mr. BLACKBURN. I am not intending to discuss in detail any part of the subject that is here. I did want to say, however, that the capital stock of life insurance companies is merely a guarantee fund and that it must be maintained. A company whose capital stock becomes impaired, in most of the States is called to account and required to repair itself: so that the capital that is put up by the stockholders or the insurance companies is put there to stay, and put there as a guarantee that the company will carry out its contracts. A very large number of the stock companies, but not all by any means, write nonparticipating insurance, and they have a paid in surplus—it is required in many of the States to be paid in and is very generally paid, whether it is required or not—that is an additional guarantee that the nonparticipating contract can be carried out, and the difference between the nonparticipating and the participating company is simply that the nonparticipating company pays no dividends, and our capital and surplus is used to guarantee the payment of our obligations as they may mature.

The thing I wanted to say, which is not quite clear to the committee, I am afraid, is that this capital and the surplus of that capital must be invested in exactly the same way that reserves are invested, with very slight modifications. For example, in one State that I think of, the surplus and capital may be invested in drainage bonds, bonds that are secured by the property where the drainage district is; but with the exception of an occasional side issue of that sort, inserted by some legislator for specific conditions, the capital stock of the company and its surplus must be invested in exactly the same form of securities as the reserves, and must be carried so, and in Nebraska, as Mr. Sloan well knows, every stock life insurance company is obliged to deposit \$100,000 of the securities that are stipulated in the law, before it can enter upon the doing of business in the State.

In Iowa and Indiana, in Texas and Missouri, and in several of the other States, not only does the law require that the capital and the paid-in surplus shall be deposited with the insurance commissioner or some other governmental official, but the reserves on all the policies must also be deposited. In other States that is optional. In some States there is no such requirement at all. But the point I am trying to make is that we are restricted in all these forms of investment, both as to capital and as to surplus.

I do not think there is anything else that I need to add to what Mr. Hedges has said. I believe that a more equitable method of levying the tax upon life insurance companies can be devised, and possibly this committee will in its wisdom discover a more equitable method. Just at this time I am not prepared to make any suggestion along that line, but only wish to add in closing that we are expecting the tax to be raised, and expecting to pay it, although such a thing as excess profits of life insurance companies, in time of war, is unthinkable.

Mr. STERLING. Have the life insurance companies bought a good many Liberty bonds?

Mr. BLACKBURN. Yes, sir; a great many of them. I think the average of purchases by the companies I represent is 5 per cent of their assets. I think that is a higher average rate than will be found anywhere else. I know of some little companies in the American Life Convention that have 10 per cent of their total assets in bonds, although in the same territory where they have made this investment they are earning from 6 to 8 per cent on their regular investments.

Mr. STERLING. Have some of the old-line companies withdrawn their investments from farm mortgages? I understood some of them are refusing now to lend money on mortgage.

Mr. BLACKBURN. I think not. Some companies, and I think the Southland Life Insurance Co. is one of them, possibly, have discontinued their loan departments, and that company is putting all of its premium, as it comes in, into Liberty bonds.

Mr. DICKINSON. You say that the capital of a life insurance company is merely a guaranty for the payment of its obligations and it can not be impaired. I am not sure that that is your exact language.

Mr. BLACKBURN. Yes.

Mr. DICKINSON. What would you say about the capital stock of a bank? Would you consider that a guaranty? That is not permitted to be impaired.

Mr. BLACKBURN. No. They could liquidate the company and take down their capital. They can pay off their depositors and they can take their money, but we can not pay off our policyholders.

Mr. DICKINSON. But the capital of a bank is a guaranty fund?

Mr. BLACKBURN. Yes.

Mr. DICKINSON. And undoubtedly it is not to be impaired?

Mr. BLACKBURN. Yes.

Mr. DICKINSON. But in the one case, the bank can wind up its business.

Mr. BLACKBURN. Yes; and in the other case a liquidation would require a reinsurance of all our business, or a continuation of the business until every obligation was paid; and inasmuch as the Mutual Life Insurance Co., for instance, recently paid a policy holder who was 96 years of age and who carried the first policy issued, 72 years ago, it would be a long process.

Mr. DICKINSON. A bank can wind up more quickly than an insurance company.

Mr. BLACKBURN. Yes.

Mr. GARNER. Would you mind, if it is not too much trouble, putting in your record your theory of taxing insurance companies, so that we might get a basis upon which we might levy a tax so that it might be equitable and easy to understand?

Mr. BLACKBURN. Probably later I might do that. I would not like to do it on my feet.

Mr. GARNER. I say, later, do it? I realize there is quite a difference between the new companies in the West and South and the old line companies in the East.

Mr. BLACKBURN. There is quite a difference between the ordinary commercial institution and a life insurance company, too.

Mr. GARNER. Yes, I understand that; but I think there is quite a difference, especially as regards the excess profits tax, under the present law, as applicable to the old line companies and to the new companies. Now I would like you, representing the 111 companies you speak of, to give us some idea of what you think we should use as a basis in levying the tax, representing the companies that you represent.

Mr. CRISP. Did you say all your companies were old-line companies?

Mr. BLACKBURN. Not all of them.

Mr. CRISP. The companies that were recently organized are required to have their stock full paid?

Mr. BLACKBURN. Yes; that was particularly for the reason that they might have a guarantee back of their contracts, in order to be able to compete with the older and established companies, which already had their funds intact.

Mr. GARNER. A good many of these stock companies have combined, absorbed each other, within the last three or four years, have they not?

Mr. BLACKBURN. Not a great number, but a considerable number.

Mr. GARNER. Does that tend to make them stronger?

Mr. BLACKBURN. Absolutely; that is the purpose.

Mr. CRISP. Have there been many new companies organized in the last few years?

Mr. BLACKBURN. Not very many. Half a dozen would probably cover it.

Mr. CRISP. There are practically none at all being organized now?

Mr. SLOAN. The different States fix the amounts of the dividends that these companies can distribute among their stockholders?

Mr. BLACKBURN. Not necessarily.

Mr. SLOAN. They do not?

Mr. BLACKBURN. No, sir.

Mr. SLOAN. They do in a great many cases.

Mr. BLACKBURN. No; I do not believe there is any State that fixes that absolutely by law. The charters of a number of companies fix it, and the by-laws in other instances, and the conditions upon which—for instance, in one case a company was permitted to change over from the mutual to the stock plan, and fix not only the percentage that they would be allowed to pay on the capital, but the salaries they would be allowed to pay to the officers.

Mr. SLOAN. What is the tendency toward mutualization or toward stock companies now, generally, in the insurance business?

Mr. BLACKBURN. Well, in the vicinity of New York City there seems to be a tendency to mutualize, but elsewhere the stock companies are outnumbering the mutual companies.

Mr. MOORE. I understood you to say that the companies which you represent were expecting that they would have to pay more taxes next year?

Mr. BLACKBURN. Yes.

Mr. MOORE. I am glad that you are anticipating that fact.

Mr. BLACKBURN. Yes; I think I could say they are willing to, too under the circumstances.

Mr. MOORE. Your only reason for appearing here to-day is to endeavor to obtain some correction of the law, which you think is unequal as it bears on insurance companies now?

Mr. BLACKBURN. Yes, that is all.

Mr. MOORE. So that you are not appealing for any reduction in the rate of taxation or in the aggregate?

Mr. BLACKBURN. No, sir.

Mr. MOORE. The President told us lately that it would be absolutely necessary for us to raise more revenue for 1919 to carry on this war, and Mr. Secretary McAdoo has indicated that we must raise at least eight billions by taxation. Now, can you make any suggestion as to where we may go for new sources of revenue?

Mr. BLACKBURN. No; I am not in a position to make any suggestion as to that. I expect you to go to the life insurance companies for some of it. I would suggest, however, that you do not increase the policy tax, which is now a very heavy draft upon the resources of the companies and comes out of the first year's premiums where the heaviest expense is sustained, and whatever, of course, should be made under the present stock year should be made under the income tax provision.

Mr. MOORE. Leaving aside your obligations to the various States in which these various companies do business, would you indicate just what taxes you pay now to the Federal Government?

Mr. BLACKBURN. Yes; I have a memorandum of that. First, we pay the net income tax upon corporations.

Mr. MOORE. That is the corporation tax?

Mr. BLACKBURN. Yes.

Mr. MOORE. Do you think that could stand any increase so far as insurance companies are concerned?

Mr. BLACKBURN. Well, Mr. Moore, I feel as if the companies I represent are expecting that will be advanced.

Mr. MOORE. That is the corporation tax. Now, what is the next one?

Mr. BLACKBURN. The next one is on the stock companies, the capital tax of 50 cents per thousand above \$99,000.

Mr. MOORE. What comment would you have to make on that, if we found it necessary to make an advance there?

Mr. BLACKBURN. That is a comparatively trifling item. I think all of the stock insurance companies in the United States pay not exceeding perhaps \$200,000 on that 50 cents tax.

Mr. MOORE. That would not help us very much in the matter of raising eight billions.

Mr. BLACKBURN. No; it would not help you very much so far as the life insurance companies are concerned, although I note in Mr. Roper's report that it amounts to a considerable sum for corporations generally.

Mr. MOORE. I am asking you to get at those that will bear least heavily on your companies, if we find it necessary to increase the tax.

Mr. BLACKBURN. Oh, yes. Next is the 8-cent tax on the policies. That is a very heavy, burdensome tax.

Mr. MOORE. That is the new business tax you refer to here?

Mr. BLACKBURN. Yes; the new business tax.

Mr. MOORE. That bears very heavily.

Mr. BLACKBURN. Yes; very heavily. That amounts to \$8 on a thousand dollar policy, and on the average life insurance company the first premium is \$30; so that you can see there, there is about 2½ per cent of that first premium. Out of that first premium the companies I represent, being on what is known as the preliminary term form of valuation, pay the commission to the agents; they pay usually about \$5 for medical examination and \$2 for inspection, and then a percentage tax to the State of all the way from 1 to 3 per cent, according to the State they are doing business in.

Mr. MOORE. I wanted to keep away from the States altogether.

Mr. BLACKBURN. I mentioned that to show what a heavy tax that is, because it means \$8 on a thousand dollars, and the average premium is \$30.

Mr. MOORE. Is that against the company or the policy?

Mr. BLACKBURN. The companies very generally have assumed that on the theory that it was an emergency tax and might be eliminated shortly. I do not think that the companies ought to pay it, because I do not think they can afford to pay it, myself.

Mr. MOORE. Is it one of the reasons for the company assuming the tax, to encourage business?

Mr. BLACKBURN. Yes; and of course the participating companies must pay it.

Mr. MOORE. If the committee should deal with this tax in the new bill, what would you say as to increasing or decreasing that tax?

Mr. BLACKBURN. We are willing to stand it as it is, because we feel that we have to, but any increase would be very, very burdensome, and particularly upon the young companies, because the ratio

of their new business to their total volume of business is so much larger than it is in the old companies.

Mr. MOORE. Would you rather have an increase in the corporation tax than in this one?

Mr. BLACKBURN. We certainly would.

Mr. MOORE. That is what I am getting at. Now, the next item of tax?

Mr. BLACKBURN. I have estimated that the tax of 8 cents probably produces \$3,200,000 annually. Then we have the war-stamp tax, and the postal rates, and the 10 per cent surplus tax, as the other people have, and that is all.

Mr. MOORE. Have you any comment on any one of these items, presuming that the committee should raise any one of them or all of them?

Mr. BLACKBURN. No; I believe not. We have not gone into that, because we felt that so far as that tax was concerned we ought to pay what the others pay.

Mr. MOORE. You could best have the corporation tax raised and next the new-business tax? Those are the ones you have enumerated.

Mr. BLACKBURN. Yes. I have purposely omitted the excess-profits tax, because I think there are no insurance companies that are caught by the excess-profits tax, and very few of the younger companies would be caught.

**STATEMENT OF MR. EDWARD M. MARTIN, OF OMAHA, NEBR., REPRESENTING THE MUTUAL ASSESSMENT LIFE COMPANIES.**

The CHAIRMAN. State what company or association you represent and your name in full.

Mr. MARTIN. Edward M. Martin, of Omaha, Nebr.; my company is the Guaranty Life Insurance Association of Omaha, and I represent the Illinois Bankers' Life Association of Monmouth, Ill., and the Life Association of Des Moines, Iowa, and about 20 other smaller companies. Those are the three largest assessment life companies. There are about 20 smaller life companies situated throughout the country, but largely in the North and East, although there are some in the South.

I want to say that I listened with interest this morning to the various inquiries of the chairman from men who appeared here, as to what suggestions they had, if any, as to how this tax should be raised. I will endeavor to show this committee very briefly that our class of companies should be classified with the exemption pertaining to fraternal societies, mutual savings banks, etc., and then I will gladly show the committee how we think you could fix a tax which I firmly believe will net the Government at least double what we are paying now.

Primarily, though, I want to discuss the subject, first, of why I believe that we should properly be classed as exempt. The mutual life associations are an entirely different branch of insurance from the kinds of insurance to which you have just listened, represented by Mr. Hedges and Mr. Blackburn. We have practically 250,000 citizens in this country carrying our insurance and approximately \$350,000,000 of protective insurance in force in this country—a very

small item, as you will see, compared with the old line legal reserve companies.

The corporation excise tax law of August 5, 1909, subjected corporations to annually pay a special excise tax equivalent to 1 per cent upon the entire net income over and above \$5,000, with a proviso that fraternal beneficiary societies, domestic building and loan associations, mutual savings banks, and similar corporations should be exempt when and because no part of their net income inured to the benefit of any private stockholder or individual.

The income tax law of October 3, 1913, in addition to the normal tax, levied an additional graduated tax upon individuals and corporations, and by the provisions of section 33, fraternal beneficiary societies, building and loan associations, mutual savings banks, and kindred institutions were exempt, practically as provided in the law of 1909.

The income tax law of September 8, 1916, in section 10, part 11, of Title 1, provided for a tax of 2 per cent upon the net income of corporations. Section 11 (a) of said Title 11, provides that there shall not be taxed under this title, any income received by mutual savings banks without capital stock; fraternal beneficiary societies operating under the lodge system; domestic building and loan associations and cooperative banks without capital stock; and mutual organizations of local character the income of which consists of assessments and dues collected from its members; and other associations, no part of the net income of which inures to the benefit of any private stockholder or individual.

Now, I want to say to this committee, primarily, that we gather from those words, repeated time and time again in practically 14 subdivisions, that you intend to exclude from the operation of the 1916 tax any corporation having an income no part of which inured to the benefit of any stockholder, individual, or member. We have never been represented before this committee before. There are not many of our associations, and a number of them down East, the smaller ones, partake of the nature of fraternal societies; that is, they insure just Masons, or just those in certain kinds of business, such as railroad men, for instance.

In our section of the country we have a general business assessment life association. My company takes in 23 States, including the District of Columbia here, and we insure men the same as the mutual legal reserve companies; that is, we take anyone.

We have felt all along that in the first place we were really included in the list of exemptions by the Ways and Means Committee—by Congress; and, secondly, we have felt that we had no net income upon which to pay any tax, and generally speaking, that is true; but the policy tax is now levied and collected from us, and that brings us before this committee.

Our associations have not any capital stock, have not any net income which inures to the benefit of any individual or policyholder, and plan of the mutual benefit life associations is identical with that of the fraternal associations, except that we have no lodge system. My company has \$92,000,000 of insurance in force in these various States, and the demand for the insurance is increasing daily. We are furnishing the business man and the farmer the same kind of

insurance that a man gets in the fraternal society, minus the lodge system.

Mr. MOORE. How large an amount do you insure for?

Mr. MARTIN. We issue policies from \$1,000 to \$10,000. That is not true of most of the other associations. Most of them run only from \$1,000 to \$2,000.

Mr. SLOAN. And your funds are raised by assessment?

Mr. MARTIN. Yes. I will explain that afterwards.

Mr. SLOAN. Preceding or following the death?

Mr. MARTIN. No; prior. Our policyholder pays his dues quarterly, annually, or semiannually, and upon lapse his contract terminates. He can not borrow from the association a dollar; he can not surrender his policy and receive any reserve; and when he lapses there is no extended insurance. In other words, there is no element of profit or saving to the member himself. Our members must die before there is any obligation on the part of the association, and that money is paid to the beneficiaries. We are in what we term the pure life insurance business—pure protection. We furnish no surrender values, no loan values, no extended values. Our insurance runs from year to year, and the man pays during that year and—

Mr. CRISP. Is there any difference in conditions in the States?

Mr. MARTIN. There are some States that do not permit us to operate in them.

Mr. HAWLEY. Is that because of the schedule of rates?

Mr. MARTIN. Yes. I will come to the rates in a moment. Some of the Government departments hold that our rates are inadequate, and others are beginning to hold that they are a little too high. To illustrate, we say that the experience of all life-insurance companies in the United States shows that their loss for death purposes only is an amount equal to 70 per cent of the expectancy. No well regulated life-insurance company has more than 70 per cent on the 100 per cent of the expected mortality. We collect on that basis of 70 per cent, and the amount our policy holder pays, with 5 per cent compound interest, carries that loss.

Mr. MOORE. Your companies are much different from the old-line companies, and somewhat different from what we understand in the East to be mutual companies?

Mr. MARTIN. Yes.

Mr. MOORE. I wish you would explain just how a man becomes a member and how he obtains his policy, and in what proportion.

Mr. MARTIN. He obtains his policy by making regular application the same as to a legal reserve company. He pays no extra dues or membership dues or anything of that kind. He pays his premium quarterly or annually or semiannually.

Mr. CRISP. Are the premiums fixed, or do you have extra assessments?

Mr. MARTIN. No; we say: "Mr. Chairman, you are aged 40. We will charge you \$19.50 per thousand." This reserve fund that we have accumulated and are accumulating from year to year is a guarantee that that contract will be fulfilled. Should that reserve fund become depleted, we have the reserved right to assess, to ask him for a larger premium, or for more premiums.

Mr. MOORE. Then your funds for the payment of the death benefits are derived from premiums which come in substantially in the same form as the policy holders pay their premiums in any other company?

Mr. MARTIN. Exactly.

Mr. MOORE. It is not a system of dues?

Mr. MARTIN. No, it is not.

Mr. MOORE. And you have an age table?

Mr. MARTIN. Yes.

Mr. MARTIN. It is quite clear from an examination of these laws that Congress did not intend to tax corporations or associations having no net income which inures to the benefit of any private stockholder of individual, and that we were not included in this list of 14 exemptions in the 1916 law.

Mr. MOORE. Do you not have central headquarters and officers under salary and use your paraphernalia for insurance purposes?

Mr. MARTIN. Yes.

Mr. SLOAN. Are they paid out of the premium?

Mr. MARTIN. Out of the premium.

Mr. MOORE. And some allowance is made out of that for the expenses?

Mr. MARTIN. For the expenses.

In construing these laws, the Federal courts have held that there is no specific exemption in the income-tax laws in favor of mutual assessment life associations, other than fraternal beneficiary societies, operating under the lodge system, and our redress, therefore, lies with the Congress.

Mutual assessment life associations have no capital stock, no shareholders; and have not net income which inures to the benefit of any stockholder, policyholder, member, or individual. The plan of mutual assessment life associations is identical with fraternal beneficiary societies except that we have no lodge system. The policyholder or member of a mutual assessment life association can derive no profit whatever from, and has no interest in, the income of the association. He pays his premiums or assessments upon a quarterly, semiannual, or annual basis, and upon lapse his contract terminates and he has no extended insurance, loan, or surrender value or reserve to his credit. He can not borrow from the association upon his policy while it is in force and can receive no consideration whatever upon its termination either by lapse or surrender, as all payments he has made are for the sole purpose of enabling the association to make payment of a death benefit to his beneficiary.

Not only are the above facts apparent from the articles of incorporation, by-laws, and policies of mutual assessment life associations, but the statutes of many of the States governing these associations specifically prohibit us from making any return, giving credit, or passing any consideration to the insured. Owing to the fact that there are comparatively few mutual assessment life associations that our collections for expense purposes are limited, and that it was generally believed that we were exempt under the income tax laws to the same extent as fraternal and savings banks, these associations have not been represented before this committee when the laws were prepared.

In view of these facts it must be apparent that the framers of our present income tax laws overlooked mutual assessment life associations, and it should only be necessary to mention the wrong to obtain an adequate remedy. In the preparation of the list of proper exemp-

tions, the only logical and equitable course to pursue is to include mutual assessment life associations with the societies, banks, and associations above mentioned.

The laws above mentioned, after failing to properly classify and exempt us, provide that the accumulations and additions to our reserve funds, which are actually deposited with State departments, pursuant to law, may be deposited.

The requirement that these funds be actually deposited with State departments is not a proper test of honesty of management or of solvency. All associations would gladly deposit these accumulations were they permitted to do so. The laws of Illinois do not provide for the deposit of securities by our associations, while the laws of Iowa require such deposit to be made. Of two associations exactly similar in plan, with like incomes from the same sources and like expenses, the one located in Illinois must return a part of its income for taxation, while the Iowa association does not.

The Iowa law requires our Iowa company to invest in mortgages, municipal bonds, liberty bonds, etc., and deposit them with the State department. The Illinois law requires those funds to be invested in the same manner, but makes no provision for their being deposited with the State department. Therefore the Illinois association can not legally deduct from its income the reserve that is created in the same manner as the Iowa reserve is created, because the Illinois statutes do not cover deposit of securities with the State department. Some departments will not permit insurance companies to deposit their securities. They have not any safety deposit vaults, they have not any clerks and they do not permit that to be done, while the State of Iowa requires the insurance companies to deposit every dollar of their securities, and our State is the same. So we invest our securities in farm mortgages. We have a law specifying the kind of securities in which we can invest. We have to invest the securities and deposit them. Under the present law that may be deducted in Iowa, while the Illinois company, doing the same thing, can not deduct.

Mr. MOORE. Could your Iowa company, being authorized under the laws of Iowa, do business in Illinois?

Mr. MARTIN. Oh, yes.

Mr. MOORE. Would you not have to make a deposit of securities there and qualify before the insurance committee of the State?

Mr. MARTIN. No.

Mr. MOORE. You would not have to make a deposit in any of the other States?

Mr. MARTIN. No, because we deposit our securities in our own State?

Mr. MOORE. You say you invest very largely in farm mortgages?

Mr. MARTIN. Practically 80 per cent of our investments are farm mortgages.

Mr. MOORE. The recovery would be slow if you had a sudden call for funds in that instance?

Mr. MARTIN. That is true, and that is the reason we obtain a larger refund interest than the average company, because we are not called upon for anything except death losses. We have no loans to pay; a man can not surrender his policy and ask for a loan; he has nothing but a death benefit. Therefore we are apt to get a larger rate.

Mr. MOORE. You have indicated you have no capital, but you do have these accumulations on which you are prepared to pay losses. In the event of an epidemic you would therefore have trouble, would you not?

Mr. MARTIN. In the event of an epidemic we would have our investment and reserve of two and a half millions with our particular company.

Mr. COLLIER. You have the power to assess members?

Mr. MARTIN. We have the right to assess members.

Mr. COLLIER. I would like to know just what your regulations are before you can assess a member.

Mr. MARTIN. Our articles and by-laws provide that we can not collect more from a member than the amount specified in his policy unless our reserves are exhausted.

Mr. COLLIER. And in the case Mr. Moore supposed, where you had an epidemic, and you could not realize on your farm mortgages, you could come in then and make a special or extra assessment on your members?

Mr. MARTIN. Well, that is hardly a contingency that we have figured on or thought of, but the class of securities we take should be readily salable.

Mr. COLLIER. I am not attacking your securities in any way.

Mr. MARTIN. I mean the farm mortgages should be readily saleable and should be readily convertible into cash. We have been in business 17 years and have never had a foreclosure and never had but one payment past due, and that was in the case of a widow who had a mortgage and wrote she was on a wedding trip to Honolulu and had not sent it in.

Mr. DICKINSON. The State of Iowa requires certain securities to be deposited.

Mr. MARTIN. Yes, sir.

Mr. COLLIER. Is your headquarters in Iowa?

Mr. MARTIN. One of the three companies I represent has its headquarters in Des Moines.

Mr. DICKINSON. But you do not have to deposit the securities except in one State and then certify that those securities are deposited?

Mr. MARTIN. To the other States, exactly. Every year we have to get a certificate from our insurance committee and send it to the 22 other States, certifying that our association has so many securities, describing them rather generally, and, of course, attached to them is a minute exhibit that we prepare ourselves, giving the name and the legal description of the property, of every farm mortgage and its appraised value and the rate of interest, and the insurance commissioner certifies that we have those securities on deposit for the sole purpose of carrying out our contracts.

Mr. MOORE. Under the law of the State of Illinois you are required to put up \$20,000 in securities?

Mr. MARTIN. Oh, we are glad to do that.

Mr. MOORE. It makes no difference as to the others, you have got to have that fund?

Mr. MARTIN. Yes; we would be glad to have \$100,000 of our securities in Illinois, and in all the States we do business in.

Mr. MOORE. I was not questioning your method of doing business, but merely trying to ascertain the difference in your method of doing business and the method of the other insurance companies which are taxed.

Mr. MARTIN. The laws of the State of Nebraska and the laws of certain States in which we do business require us to have a certain reserve. If we did have a legal reserve we would have to give cash surrender values, etc., but the law in each State says that the reserve you do have you must invest in this or that, and our Nebraska law is very specific as to how we must invest our securities; and then it says you must deposit all those with the State department and they are all out of our control. There is not any way on earth, in fact, in which we can use those securities except to replace them with another, unless the company needs that money to pay death losses. In other words, it is a reserve guarded by the State, cared for by the State, and the kind of securities are prescribed by the State.

Mr. HAWLEY. That money can not be used for the business?

Mr. MARTIN. Absolutely not. Of the \$40 we collect from the chairman, for instance, as an annual premium or a quarterly or other assessment, a certain per cent of that is available for expenses, \$5, we will say. The other \$35 goes right in the reserve; it must be invested, and there it must remain, in the custody of our State department. That \$5 we have for expense purposes.

I say that with that class of associations, then, in all good conscience and logic, we should be named as exempt among these 14 items in the 1916 law, but we have not any profit or net income, any more than a savings bank, nor any more than a fraternal company. I do not want to hide under the skirts of the fraternal or a savings bank, or a building and loan association, but I am saying we are in that particular class that has the approval of Congress in being exempt from all these laws. We should have been, in the first place, and we would have been in there had we been represented. In the second place, the law now governs us. We do not pay any net income; we do not have any net income upon which to pay a tax, but the law now discriminates between a company in Illinois and a company in Iowa, because of an Iowa State law over which the company has no control. Next year the Iowa Legislature may repeal its deposit law and Illinois may enact one; then the Iowa company must take out its securities, and in Illinois they will be required to put them in the State Department. Then the conditions would be reversed, and the Iowa company would pay a tax and the Illinois company would not.

Mr. MOORE. Has there been a ruling by the department in your case?

Mr. MARTIN. Yes. The law is very plain, and the ruling has been practically in the words of the statute.

Mr. MOORE. And you have been held for the 8 per cent under the business tax?

Mr. MARTIN. I am coming to that now.

Mr. MOORE. And that is what you object to?

Mr. MARTIN. Yes; and also on behalf of the Illinois company paying on their reserve income, because they can not deposit it with the department.

Mr. MOORE. Is your company like the companies for which Mr. Black appeared?

Mr. MARTIN. Yes; the Illinois company is in its net additions, because Congress does not recognize the net addition to the reserve unless it is a deposit with the State Department and the Illinois company can not deposit their securities there.

Mr. MOORE. I am speaking of the majority of the companies you referred to.

Mr. MARTIN. In the majority that is not true.

Mr. MOORE. Are they held for a corporation tax?

Mr. MARTIN. No.

Mr. MOORE. Under those circumstances you are held only for the 8 per cent on new business. The other taxes to which Mr. Black referred are not charged up against your companies except in the Illinois case.

Mr. MARTIN. That is all. But I am illustrating the unfortunate case of the Illinois company, due solely to a law over which they have no control.

Mr. MOORE. What is the total risk of your companies?

Mr. MARTIN. Three hundred and fifty million.

Mr. MOORE. For which policies are written and passed out to members?

Mr. MARTIN. Yes. We have policies ranging from \$1,000 to \$10,000. We have been in the insurance business 16 years, operating in 23 States, and we have that amount of insurance in force.

Mr. MOORE. I am going to ask you the same question I put to Mr. Black and other gentlemen representing insurance concerns, whether you can make any suggestion, in view of the large business that is done by these companies, as to how we can respond to the President's call, as detailed to us by Secretary McAdoo, for \$8,000,000,000 additional revenue.

Mr. MARTIN. I am glad you mentioned that. I was just coming to that. There is a serious question as to whether we are liable for the policy tax. We are paying it, but our company and the larger companies have filed a claim for refund on Form 46.

Mr. SLOAN. How much is that tax?

Mr. MARTIN. Eighty cents a thousand; 8 cents a hundred. We do not issue any policy less than \$1,000. Every \$10,000 policy—of which we sell a great many—pays \$8 policy tax.

Mr. MOORE. You have paid that?

Mr. MARTIN. We have paid that and filed a claim for refund.

Mr. MOORE. Would you mind stating the amount?

Mr. MARTIN. On our policy tax we have paid \$3,800 up to the first of this month. Our policy tax runs \$600 a month.

Mr. MOORE. In lieu of that you are going to make some suggestion?

Mr. MARTIN. Yes. The reason I say there is a controversy about the policy which undoubtedly can not be decided by the courts prior to the enactment of this law is this, that in the income-tax law of October 3, 1917, Congress says that this tax of 80 cents a thousand shall be levied on policies, but in section 504 of this act, in title 5, it says: "All associations exempt from taxation under title 1 of the 1916 act shall be exempt from the payment of the tax." Under title 1 of the 1916 act we are exempt; we do not have to file any returns.

Mr. MOORE. Because of what language are you exempt?

Mr. MARTIN. Because section 504 levying this policy tax says all associations exempt under title 1 of the 1916 law shall not be liable for the policy tax.

Mr. MOORE. Do you claim you come under that title?

Mr. MARTIN. Under title 1, yes. So there is a serious question whether we are liable for the policy tax at all or not, but we are paying it and putting in a claim for refund. Eliminating the policy tax we are not paying any tax on our net income, because we have not any. With the burden of the State taxes we are just about able to play even. We have a certain restricted amount for expenses. We can not use more than the \$4 out of the \$40 you pay; we can not under any circumstances touch that \$36. That must go into the reserve. That is a contract between you and ourselves, in our policy, in our articles, in our by-laws, in the State law. We have just the \$4 to carry on our companies. Now, everything must be paid out of that \$4, that 10 or 12 per cent of the gross premium. We must pay our State taxes and expenses of management.

Mr. MOORE. May I ask what those State taxes amount to?

Mr. MARTIN. Our company paid \$22,500 in State taxes.

Mr. MOORE. On what pretense were they levied?

Mr. MARTIN. I declare I wish you would ask the legislature that. We pay all the way from 1 per cent on the gross premiums to 2½ per cent. My recollection is that Texas is the greatest offender. It is an utterly absurd and illogical tax. Notwithstanding that 95 per cent of the money we get from Texas is put into the reserve fund, yet Texas levies a tax. That is true of a few other States, but not very many.

Now, our contention is, briefly, that we should be classed with the 14 classes subject to exemption in the 1916 law; then the policy tax would not affect us, nor any of these taxes affect us, and I think from the wording of the other sections it was intended that we should be so classed. Second, I contend that it is extremely doubtful whether we are liable for the policy tax. If we are liable for it, it is entirely, and I say it honestly and fairly, too burdensome. We can not pay it. In the third place, I say that associations of our kind ought to pay a tax, and neither myself nor the boards of directors of these three associations would permit us to come here and have this hearing without offering to pay a tax, and we want to pay a tax just as large as we possibly can because we know what burdens the American people are bearing. But with our class of insurance, and I leave it to you gentlemen to say whether other classes should be treated the same, you should tax on the amount we collect for expense purposes. If we collect from the chairman \$40 and put \$36 of that amount into a reserve, that remains in the reserve, in the case of our State, with the State Department, and we ought to pay a tax based on the other \$4, because that is the money we will expend for salaries and to agents and for advertising and all the multifarious things that go to make up the insurance business.

Mr. COLLIER. What did it cost you per thousand to do business last year?

Mr. MARTIN. I can not answer that. Our expense collections are approximately 12 per cent gross of the premium.

Mr. COLLIER. You said \$4; you meant 10 per cent, then?

Mr. MARTIN. Yes; it is a little more; it is 12 per cent, I would say, of our gross premiums for expenses.

Mr. COLLIER. Do you not have a paid-up policy of any kind?

Mr. MARTIN. Never.

Mr. COLLIER. For instance, some of the fraternal companies do at the age of 70 years; but if a man has been in a company and paid for 40 years he has lost everything?

Mr. MARTIN. You speak of a paid-up policy at 70 years. We have a provision in our policy that when a man arrives at 70 and by reason of old age or infirmity is not able to carry his premiums, we begin to pay him the death loss in 10 equal annual installments, and he pays the premiums during that period.

Mr. COLLIER. In other words, they pay him his policy in installments?

Mr. MARTIN. Yes; so much a year. Our plan provides, and our policies require us to turn into our reserve any increased expense, but notwithstanding that provision and notwithstanding the hope we have had for years that at the end of some year we might have some money in our expense fund to turn over to our reserve, we think we ought to pay a tax. I will be glad to offer a short amendment which will cover our views.

It is now uncertain whether we are properly classified, or it is uncertain whether we should pay the policy tax or not. I say we ought to pay a tax on the gross collections, for expense, and I say now it ought to be 1 per cent; out of every \$100 we collect from that source let us pay \$1 to the Government, and in the case of my company it would mean between \$500,000 and \$600,000 a year now, and as our business increases it will be more, and not taking into account the policy tax it would then net the Government three times the amount that is now being paid by assessment levy fixed on the company.

Mr. SLOAN. How would it compare with the present tax?

Mr. MARTIN. My amendment would have that tax based on what they collect for expenses, and it would be a tax that would net the Government more than it is now getting.

The CHAIRMAN. Suppose you present such an amendment and state how much taxes you think we could get with such an amendment.

Mr. MARTIN. I could do that in five or six lines.

The CHAIRMAN. And estimate the amount of tax, based upon the gross receipts in all of the companies, which it would produce?

Mr. MARTIN. I would be glad to do that with reference to our company.

The CHAIRMAN. I thought you meant for all companies.

Mr. MARTIN. I said I did not know what the committee will do with the other class of companies, but any theory of taxing insurance companies of all kinds and classes is based on the amounts they collect for expense purposes.

Mr. SLOAN. Suppose we adopt your views about this policy tax, and you suggest 1 per cent of your expense account, how much money has your company loaned out on farm mortgages?

Mr. MARTIN. Two million dollars.

Mr. SLOAN. That draws 6 per cent?

Mr. MARTIN. We have earned more than 6 per cent since our organization.

Mr. SLOAN. Why not put a little tax on the income from that?

Mr. MARTIN. For the reason that the \$40 we collect from you per annum is required to be invested, and the compound interest on that from year to year.

Mr. SLOAN. You have that \$36 out?

Mr. MARTIN. Yes; but the \$36 is not enough. The \$36 does not begin to cover the cost of insurance. It is the \$36 plus the accumulations we can get on that.

Mr. SLOAN. That money you have got invested is property that is bringing in an income; it is an unearned income, the same as with the individual who loans out his money and draws back 6 per cent. I think we ought to get a tax on that income.

Mr. MARTIN. Unquestionably.

Mr. SLOAN. Not an excess-profits tax, because it would not amount to an excess profit, but would it not be fair to your company to pay some tax on the interest you derive from your investment?

Mr. MARTIN. That would leave some doubt as to our ability to carry out the policy to meet our contracts.

Mr. SLOAN. You have the power to assess in case your fund becomes exhausted. It must be taken into consideration that this committee is not levying taxes because it likes to do it. It is doing it because it has got to have the money for the Government. Would you think it a fair proposition that you should pay some taxes?

Mr. MARTIN. I wish I could answer that in the affirmative, but I can not, because we need every dollar of that for the accumulations to carry out the contracts.

Mr. HAWLEY. If they began levying extra assessments their business would go to pieces very soon.

Mr. MARTIN. We can not levy an extra assessment; we are absolutely limited as to the amount we can collect from our own members. We have 45,000 policyholders—more than that—and we have a solemn agreement in every one of those contracts that we will not collect one penny more than the amount designated in the contract until our reserves are gone. So we can not collect any part of this policy tax from our present members, not one dollar. Now, I will put for your information in the hearings the entire amount of money we can collect from our members only for expense purposes, which should be taxed. Do not allow us any deduction even if our expenses eat up every dollar, but make us resort to some economy and save that 1 per cent, and we will do it.

Mr. DICKINSON. You include salaries as a part of the expenses upon which you levy?

Mr. MARTIN. Yes, sir. Another thing is that we have 11 men from our home office in the service of the Government, and we are paying those men the difference between the salaries and what the Government pays them. The only part of the premium that we have any control over or any right to use, I say, ought to be taxed, and I will suggest an amendment that will cover that.

Mr. MOORE. Do you pay the State taxes out of that \$4?

Mr. MARTIN. Yes.

Mr. COLLIER. You have only one kind of policy that you issue?

Mr. MARTIN. We have a 10-year term and an ordinary life policy.

Mr. COLLIER. Would you object to filing with the committee a schedule of the rates?

Mr. MARTIN. I would be glad to do so.

Mr. COLLIER. What are the rates of your company now in case a soldier in France should be killed; what have you in your policies as to the war?

Mr. MARTIN. Prior to the enactment of the war-risk bill by Congress we charged \$25 per year per thousand. Upon the enactment of that law we suggest now to our men, and require them, in fact, to take Government insurance. We do not keep our policies in force when they leave this country. We do not consider service in this country as war service, but we consider a man surrenders his policy, no matter how long he has had it, when he goes to France, and we return to him the entire amount he has paid. We have done that with men who have had insurance for eight or nine years. We have one man who had his policy nine years, and he wrote and said he was going to take Government insurance. We told him to send in his policy and we would return every dollar he paid. We came to this conclusion, that no matter how much we might want to do so, we could not assume that extra hazard owing to our low rates, and we also figured that any amount we would charge would practically confiscate the policy. So we ask our men to take Government insurance, but in spite of that \$25 charge we have about 80 policy-holders who insist on keeping our insurance and paying the \$25.

Mr. SLOAN. Will you give a statement showing what taxes might be collected under the policy you propose?

Mr. MARTIN. I am going to submit that amendment and hand it to the clerk.

The CHAIRMAN. Base your estimates on what you are receiving under the present system.

Mr. MARTIN. Some of the organizations that I represent as an officer of the largest of the companies may object or criticize my statement to this committee, but I am here to say that we want to pay a tax, and I think this theory of mine is equitable and fair and it is easily ascertainable.

Mr. MOORE. You are going to submit a plan in connection with your statement?

Mr. MARTIN. I will.

Mr. SLOAN. How much do you pay to the State?

Mr. MARTIN. We pay to the State \$22,000.

The CHAIRMAN. How much do you pay now to the Federal Government?

Mr. MARTIN. We do not pay anything but the policy tax.

The CHAIRMAN. You want to be relieved of the policy tax and then pay the 1 per cent tax?

Mr. MARTIN. One per cent of our entire expense collections.

The CHAIRMAN. And that would be about \$400,000 or \$500,000?

Mr. MARTIN. For my company it would be between \$500,000 and \$600,000, and for our class of companies it will double the amount the Government gets.

Mr. MOORE. The class of taxation you suggest would pay more?

Mr. MARTIN. We all understand that, and would be willing to do it.

Mr. MOORE. You think it would be fairer?

Mr. MARTIN. Yes, sir; and it is easier to ascertain.

(Thereupon, at 5.40 o'clock p. m., the committee adjourned until to-morrow, Thursday, June 13, 1918, at 10 o'clock a. m.)

# REVENUE BILL.

---

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Thursday, June 13, 1918.*

The Committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Carew, White, Moore, Green, Sloan, Longworth, Fairchild, Sterling, Martin, Hawley, and Treadway.

## STATEMENT OF DR. JUR. JAK. A. SCHWARZMANN, REPRESENTING SCHWARZENBACH, HÜBER & CO., NEW YORK, N. Y.

The CHAIRMAN. Give your full name to the committee, and your address and business, your occupation, and whom you represent.

Mr. SCHWARZMANN. Dr. Jak. A. Schwarzmann, of the Schwarzenbach & Hüber Co., New York.

The CHAIRMAN. All right; proceed.

Mr. SCHWARZMANN. Mr. Chairman and gentlemen, I thank you very much for the privilege of appearing before your committee. Although I was given authority by the Silk Association of America to speak in their behalf, I prefer to talk about a few general topics, especially for the reason as there at the present time is not very much to say about the silk industry, as we are up against a very much more important problem at the present time, and that is curtailment of our industry; but nevertheless, I shall be ready at the end to answer any questions so far as the silk industry is concerned, and so far as I can do it. We certainly recognize the necessity of heavier taxes, and we fully trust that this committee and Congress, generally, will give us a just law, and that is all any business can expect.

I decided to call your attention to a few points of the present income and excess-profits tax law which should and we hope will be eliminated, because they are partly unjust and partly unworkable. Above all, I suggest that the basis of prewar earnings should be eliminated, and in place thereof straight extension created, the way this committee has already done in their first proposition of the present law. I suggest this for the simple reason because our prewar earnings were abnormal. We borrowed the principle of prewar earnings from England, like different other principles. England put up an excess-profits tax which taxed heavily the profits above prewar earnings. They took 50, 60, and even 80 per cent. We thought the principle could be well applied to our prewar earn-

ings, but forgot to compare our prewar earnings with nonprewar earnings. As I said, they were abnormal.

I propose to represent the Schwarzenbach-Huber, Co., the biggest silk manufacturers in the United States, and probably the biggest manufacturers in the world. We have factories in Switzerland and Italy. Our prewar standard was 1.9 per cent. We have tried in 1911 and 1912, and had small earnings in 1913 which put the average to 1.9, without deducting the losses of 1911 and 1912. Now, I have already, last year, worked out a table which I took the privilege to lay before you. Senator Simmons in the Senate has already made use of this table. I ask you to kindly give your attention to a few explanations. You see a line here, X-Y. This line is the normal line, or the minimum earning line. Now, I have read in previous articles of the hearings that you are very anxious to get good authorities for the figures. These tables are taken from Babson, and I have no other authority, but I think Babson is sufficient authority. He is the recognized statistician in the whole United States. I may mention that Bradstreet's charts and Babson's charts agree.

The CHAIRMAN. What are those red marks up there; what is that red space "United States, X-Y"?

Mr. SCHWARZMANN. X-Y is the normal or minimum earning line.

The CHAIRMAN. The 1916 red marks and "The United States"; what does that mean?

Mr. SCHWARZMANN. I will just explain it. Now, I have only for the United States, England, and France. You will see that the name is below, of the respective countries, on the chart.

Mr. STERLING. You mean Canada and England?

Mr. SCHWARZMANN. No; the United States, England, and France. The name is below the chart.

Mr. STERLING. Oh, yes.

Mr. SCHWARZMANN. England had an average earning in the prewar period of 13.3 per cent in connection with this chart. The United States has average earnings of the minimum returns on the money invested, which they state as either 5 or 6 per cent.

Now, in order to explain the injustice of taxing in accordance with the prewar earnings, I had to state average earnings for the present time—for the war. I took 25 per cent. I may mention that if I take 25 per cent; this is only relative applied to each country the same way. It is not an absolute figure, and therefore, as a statistician, it must be correct.

Now, you see England taxes the two best years out of three years, whereas the United States taxes the three years of prewar earnings. You see now the space above the black field in England is very small. These are the earnings above the prewar earnings—the earnings which are taxed. These earnings are taxed with 80 per cent.

Now, the United States. You see that the field is much larger. I may mention that the black lines—the black fields—are both the line X-Y. The black fields below these lines are just balancing. In other words, we have above all just a minimum reserve. What is above this black line is business prosperity and what is below is business depression.

We have figured out—at least, it has been stated so in the Senate—that our present taxes run up to, in the average, about 32 per

cent. In other words, we tax about 32 per cent of this red square, whereas England taxes 80 per cent of the red square. You will easily see that 32 per cent here may nearly reach 80 per cent of England, because England covers with 80 per cent of present excess-profit taxes a much smaller area than the United States covers with only 32 per cent. I have worked it out graphically, to explain it a little bit better. You may see here these are the prewar earnings, The United States has very small prewar earnings—the black field above these black lines—and therefore we take for the United States 25 per cent of present average earnings, too. Therefore they have very large war profits—we call it war profits, although they are not all war profits. They are partly just normal returns, which they were not before, and partly they are war profits.

England has a much smaller area of war profits. Now, here is France, too. Here in England we have very little of war profits left, and a very large area of prewar earnings. I have figured it out in a table. I assume now, at the present, that the average application of the present law is 32 per cent. Also I can not control that. I take as authority the statement in the Senate when the law passed.

Mr. GARNER. You make it 38 per cent here, do you?

Mr. SCHWARZMANN. Yes. I will explain you these figures, after a while. We would assume the prewar earnings not as an exemption but simply as a reduction. I will explain this afterwards. I compare only England and the United States, for the simple reason because the present law, which after all is not as bad as it has been made by the newspapers, and ridiculed by the newspapers, because this present law has always been compared with England, and all the newspapers now for a whole year cried that you have let off here easily the corporations, and that England taxes 80 per cent. They never took into consideration that the prewar earnings were more than two and a half times bigger in England than they were in the United States, which is a fact that certainly must be considered. I have tried to approach different papers, but without result, possibly on account of the bad English I speak.

The CHAIRMAN. Do you know what the average profit was on capital invested in Great Britain before the war—whether it was 10 per cent or 12½ per cent?

Mr. SCHWARZMANN. I went down to Boston and we tried to check that up. You know, these tables are exactly the Babson tables, and we found you can take just about one little square that you see here for 1 per cent; that is, one little square represents about 1 per cent.

The CHAIRMAN. I do not exactly understand that.

Mr. GARNER. He contends, if I understand him, that the prewar profits—that is, profits for 1911, 1912, and 1913—in England were a great deal more on the capital invested than they were in the United States—some two and a half times as much.

Mr. SCHWARZMANN. Yes; two and a half times as much.

Mr. GARNER. That is his contention.

The CHAIRMAN. I know your contention. I want to see about the facts. Take iron and steel in Great Britain. What percentage of profits were they making?

Mr. SCHWARZMANN. Babson takes all the English industries.

The CHAIRMAN. I wanted to see if you investigated this from the standpoint of actual facts and were not taking this from somebody else.

Mr. SCHWARZMANN. Yes.

The CHAIRMAN. Have you investigated how much the profits which the iron and steel industry were making were in Great Britain for the three prewar years?

Mr. SCHWARZMANN. No; I have not investigated. I took these charts because they were for everything.

The CHAIRMAN. So that you do not know whether they were making 5, 6, or 10 per cent?

Mr. SCHWARZMANN. No; I do not. But these figures were made up from actual results.

The CHAIRMAN. Yes; he ought to give the figures on the charts.

Mr. SCHWARZMANN. I may be able to get all these figures together yet. It was an awfully short time for me to prepare these matters.

Mr. GREEN. If I understand correctly, these charts may be, if I may use the term, translated into figures?

Mr. SCHWARZMANN. Yes.

Mr. GREEN. That is very easily done.

Mr. SCHWARZMANN. That is very easily done. They are not specified in figures. That is, I can, of course, find out all steel earnings in England, or what the actual returns were, or other things, or other kinds of returns. That is to be found out. That chart is a composite block of all these facts.

Mr. GARNER. Who is Mr. Babson?

Mr. SCHWARZMANN. Babson is the foremost statistician of the United States.

Mr. GARNER. At the present time?

Mr. SCHWARZMANN. At the present time he holds a Government position in the Bureau of Public Information. He is the chairman of a certain branch.

Mr. GARNER. I wanted to attract your attention to this answer. The whole matter depends upon the figures of Mr. Babson, here. You have depended upon Mr. Babson?

Mr. SCHWARZMANN. Entirely.

Mr. GARNER. Now, the question is as to the accuracy with which Mr. Babson has given the information on this subject.

Mr. SCHWARZMANN. Yes.

Mr. GARNER. You claim that he is the foremost statistician in the United States?

Mr. SCHWARZMANN. Yes.

Mr. GARNER. And he is now holding a Government position?

Mr. SCHWARZMANN. Yes.

Mr. GARNER. In the line of his work?

Mr. SCHWARZMANN. In the line of his work; as a return for his accuracy in all his statistical work.

Mr. GARNER. And you say that his reports agree with Bradstreet.

Mr. SCHWARZMANN. Agree with Bradstreet's, all in all. I mean there are small differences, but not to amount to anything.

Mr. FAIRCHILD. Babson, I think, is generally recognized as being the foremost statistician of this country.

Mr. GARNER. That is what I was directing the chairman's attention to, that this whole thing is based on the accuracy with which Babson makes his reports.

Mr. FAIRCHILD. This man comes before us this morning, however, to represent the silk industry, and it seems to me that he might confine himself to the particular line of development that he represents.

Mr. GREEN. This statement that the gentleman has just been making is to myself quite interesting with respect to the prewar earnings.

Mr. GARNER. If his statement is correct, that in England the prewar earnings on capital were two and a half times what they were in America, then I do think it is quite important, if you are going to take England's methods as a basis on which we might levy war-profits taxes, to determine the accuracy of the facts which he has just given us.

The CHAIRMAN. The average percentage of profits in Great Britain in 1911, 1912, and 1913; and then we want to compare them with the average profits of this country. I will state to you that before the Federal Trade Relations Board some time ago charts were shown in several leading industries, which showed in the neighborhood of 11 per cent—iron and steel, rubber, the brewing industry, and several others, and that Dr. Adams and Kramer, the advisory board on the excess-profits tax, thought it would run up about 12 per cent; that those figures were rather low. They took those figures from the London Economist. Now, it is easy to take the Times, and take the iron and steel industry, or the rubber industry, and different industries, and for those three years ascertain the profits in England from the industries, and then compare them. If Great Britain was making 12½ per cent in the iron and steel industry and we were making only 6 per cent, then I know exactly the condition.

Mr. SCHWARZMANN. Yes.

The CHAIRMAN. If Mr. Green is satisfied with the chart and these figures, all right, but I would rather have the figures.

Mr. SCHWARZMANN. Yes.

The CHAIRMAN. You have not gone into the figures?

Mr. SCHWARZMANN. No.

Mr. GREEN. The chairman is mistaken about by being satisfied.

The CHAIRMAN. I will take it back, then. What was the percentage of profit in the silk industry in the prewar years, taking the last three years?

Mr. SCHWARZMANN. Well, take our concern. We are a corporation of over \$8,500,000 invested. We had returns on the average for 1912 and 1913 of 1.9 per cent; not quite 2 per cent.

The CHAIRMAN. Do you know Mr. Jenney of South Manchester?

Mr. SCHWARZMANN. I know him very well.

The CHAIRMAN. Do you represent him?

Mr. SCHWARZMANN. I have been asked by the silk industry to represent them, but there is very little at the present time to say for the silk industry.

The CHAIRMAN. I know Mr. Jenney. I know him very well. My recollection is that when he was down before this committee protesting against any reduction in the tariff, he stated that the silk in-

dustry had been in a very prosperous condition, and was then in a very prosperous condition.

Mr. SCHWARZMANN. Yes.

The CHAIRMAN. But that if we reduced the tariff he would be ruined; and that was in the latter part of 1913. It was in 1913, so that he evidently had a very successful business in 1911 and 1912. It was more than 1.9 per cent.

Mr. SCHWARZMANN. We had a good business in 1913; but in 1913, especially in New Jersey, in the silk business, and in the northern part of the United States, we had strikes, and the industry in the United States had to bear the brunt of these strikes.

The CHAIRMAN. That was the Paterson strike?

Mr. SCHWARZMANN. Yes; all over New Jersey. Now, I do not believe in any such statement—that an industry is ruined so easily. It will always find its way, and the silk industry will find its way.

The CHAIRMAN. What percentage of profit are these companies you are representing making. If we can get at that we will see how it hurts your business. We can take the present standpoint and the prewar standpoint, and see the difference. I understand the concerns you are representing were making 1.9 per cent in the prewar period?

Mr. SCHWARZMANN. No; that is only our concern.

The CHAIRMAN. Your concern?

Mr. SCHWARZMANN. Yes.

The CHAIRMAN. What is your concern? I understood you represented the industry.

Mr. SCHWARZMANN. I have been asked by these others to represent them, but my intention was to talk of the present law; what I think would be wrong; and I thought that was understood this way.

The CHAIRMAN. What is your particular industry?

Mr. SCHWARZMANN. The silk industry.

The CHAIRMAN. What is your corporation?

Mr. SCHWARZMANN. Schwarzmann, Huber & Co.

The CHAIRMAN. You say their percentage of profit was what?

Mr. SCHWARZMANN. 1.9 per cent; not quite 2 per cent.

The CHAIRMAN. 1.9 per cent? Now, say last year—1917—what was their percentage of profit?

Mr. SCHWARZMANN. I could not tell you exactly the percentage, but I can tell you that we went in our excess-profits tax up to the 35 per cent rate. That means that we had returns from between 20 to 25 per cent.

The CHAIRMAN. I do not think it is too high for that if the other industries are making more.

Mr. SCHWARZMANN. Oh, yes; I should say except for the three years, 1911, 1912, and 1913, we would find that we had returns of about 9 or 10 per cent.

Mr. GARNER. You had that low rate on account of the strikes, is not that it?

Mr. SCHWARZMANN. Yes. Now, there are industries who show that if we take a straight rate there will be these premiums in efficiency. We consider ourselves as an efficient concern. Nevertheless, we had no prewar earnings.

May I just call your attention to one other point, and that is, I would wish instead of only a portion of the prewar earnings a real exemption is created. You know that this question was brought up before the Treasury Department after the law had passed.

The CHAIRMAN. What kind of exemption?

Mr. SCHWARZMANN. The low rate is 7, and the maximum 9 per cent should be exempted; but the Treasury Department did not treat it as an exemption, but simply as a deduction; but yet it was taken into computation as soon as you have arrived at the higher rate, and I have figured this out that it makes an additional return for the Treasury Department of on the average 6 per cent; in the maximum 9 per cent, if a corporation earns above 41 per cent. Then you give the Treasury Department a maximum additional return of 9 per cent. Now, I will simply put in the record our claim of abatement that we filed with respect to these simply creating a deduction instead of an exemption.

The CHAIRMAN. Very well.

Mr. SCHWARZMANN. That was Treasury Decision No. 2.602, which said that if a concern has a higher exemption than the first 50 per cent of the capital invested, the difference, the balance between 50 per cent and the exemption, could be taken in the following bracket. That was before our presentation of the case in the Treasury Department.

I may call your attention to the fact that this decision applies only to corporations with \$50,000 or less capital invested, or partnerships with \$100,000 or less capital invested, because every corporation with less than \$50,000 capital and every partnership with less than \$100,000 capital invested has always an exemption, which is in every case smaller than the first 50 per cent of the capital invested, so that this does not influence any corporation above \$50,000. I will simply put that in the record. I wish it would be there.

The CHAIRMAN. It will be put in the record.

(The matter referred to is here printed in full in the record as follows:)

NEW YORK, May 23, 1918.

Hon. D. C. ROPER,

*Commissioner of Internal Revenue,*

*Treasury Department, Washington, D. C.*

SIR: With our excess-profits tax return we filed a claim of abatement on the grounds that the Treasury Department treats the prewar earnings as a mere "deduction" instead of an "exemption" as intended by Congress. We herewith state the reasons why this Treasury decision is not in accordance with the law itself and its intention:

1. The genesis of the law shows that, beyond doubt, an exemption was intended above which only the excess-profits tax should become applicable, to wit:

(a) The original House bill provides an exemption of 8 per cent.

(b) The original Senate bill proposes a minimum exemption of 6 per cent, which was successively amended to a limited exemption of from 6 to 10 per cent.

These propositions define the war profits as the difference between the total net income and the average prewar earnings and only such war-excess profits were intended to be taxed.

(c) The Bankhead amendment, as the predecessor of the present section 201, exempts 8 per cent and gradually taxes above this exemption.

(d) The final bill, as proposed by the conference committee and passed by Congress, provides an exemption of from 7 to 9 per cent.

2. In commending this conference proposal for passage, Hon. F. L. Simmons states:

"In arriving at the taxable income the taxpayer is allowed to deduct from his net income his average net income for the prewar period but not to be less than

7 per cent or more than 9 per cent, plus, in case of a corporation, \$3,000 or of an individual or partnership, \$6,000. (Cf. Congressional Record, p. 8698.)

Thus, it is clearly stated that only the excess profits above the prewar earnings are subjected to the war excess-profits tax.

Further on in his oral explanation of the law in the Senate, Hon. F. L. Simmons speaks of these prewar earnings as of an exemption. (Cf. Congressional Record, p. 8691, second column, fourteenth line from the bottom.)

3. The excess-profits-tax law, in fact, represents a copy of the English law, to which it always refers. The English law is based on the exemption of the prewar earnings and taxes the excess above such prewar earnings.

4. The law itself states that its intention is to tax only the excess profits above normal or prewar earnings. Hence, its name "war excess-profits tax."

5. That the application of the tax to the prewar earnings can not be intended as shown by the anomaly created if applied to such prewar earnings, to wit:

It creates a tax system which eventually omits the lower rates and begins with the higher or even the highest rate. Such system is a slap in the face of every taxation principle.

6. Treasury Decision 2602 is in contradiction to section 209, where a business having only a nominal capital invested receives an exemption of \$3,000—respectively \$6,000—and only the excess of it is taxable at 8 per cent.

In consideration of all the reasons we uphold our claim of abatement, filed with our excess-profits tax return, and beg to ask for a decision and refund accordingly.

Very truly, yours,

THE SCHWARZENBACH HUBER CO.

Mr. SCHWARZMANN. Now, I wish to be understood that I do not speak against a prewar standard, because we want to be let off easier, the straight rate can be 8 or 9 or 10 per cent, but we are up against two kinds of unsatisfied corporation people. The fellow who has large prewar earnings can not see why the other fellow should not get the same treatment he has. The one who has less than 50 per cent can not see why he is given 9. So that a straight rate would work out best, in my opinion.

Mr. GARNER. Suppose we had a double clause in there; suppose we made a tax fixed on the prewar earnings, or an excess-profits tax, and then you levied an excess-profits tax and we should put a clause in the bill that no interest should be less than the war-profits tax—less than the excess-profits tax—then you would do nobody an injustice, and you would get them all?

Mr. SCHWARZMANN. Yes.

Mr. GARNER. That is the kind that has been suggested, I believe.

Mr. SCHWARZMANN. I have a few special points which I have suggested already, in the brief of last year, that the unearned income should be taxed heavier, and this was a protest in a letter from Mr. McAdoo to the chairman. There are two kinds of unearned income—dividends and the interest on bonds. The bonds up to the present time, in the present law, have such a position that they shall be taken care of better. Every income in the present tax law is subject to the excess-profits tax and to the income tax, except the interest on bonds. Bonds of the corporations do not pay any tax. They are deducted before you ascertain your net income, and they are not subjected to the excess-profits tax of section 209, of 8 per cent. In other words, interest on bonds is the only income which is not subjected to this principle: That every income has to pay the excess-profits tax and the income tax.

Mr. GREEN. You understand that above \$5,000, if the corporation owns bonds, except of the first series, which were exempt from all,

taxes whatever, they will have to include the interest from the bonds in their receipts in order to ascertain the amount of excess profits?

Mr. SCHWARZMANN. Yes; and especially in the case of the individual, if the interest on bonds gets down to the individual; that is, the unearned income of the individual should be taxed. Now, in connection with that I want to call your attention to one injustice of the law, and I think that I can state it best by a case which I know of, a case where a man had invested in gilt-edged railroad shares. His wife got sick and had to go through an operation for appendicitis, and he had to have that money. He had to sell his shares in order to get the money.

The shares went down about one-half on the value for which he bought them. He was not allowed to deduct such a loss. He lost about \$500 when he sold the shares, but he was not allowed to deduct this loss, because there were no gains from which he could deduct it. Your law at the present time means that such losses on financial transactions can only be deducted from gains in the same transaction, and not from any other income. I thought that it was a big injustice, and that losses should be allowed to be deducted from the income.

The CHAIRMAN. In other words, if I made as a lawyer—to get your point—\$50,000, or as a merchant if I made \$50,000 in business, if I should lose it gambling—

Mr. SCHWARZMANN. You always take the extreme.

The CHAIRMAN. If I should lose \$45,000 of it gambling—

Mr. SCHWARZMANN. Yes.

The CHAIRMAN. If I would take out my \$45,000 and come on to Washington, or if I took \$45,000 of it and burned it up—just threw it away—and would only have \$5,000; is that your proposition?

Mr. SCHWARZMANN. It is the extreme of the proposition.

The CHAIRMAN. But if you have a proposition you have to go to both extremes, because you will have cases of that kind.

Mr. SCHWARZMANN. I think there are always ways and means to take care of extremes.

The CHAIRMAN. Your suggestion, I will say, is, and will continue to be, under the consideration of the committee. There is something about it that perhaps needs a limit on it.

Mr. SCHWARZMANN. If one is a professional gambler, then, he probably has earnings, too; he has net gains, and he can deduct his losses from these net gains. But if he is just a man who invests his good, earned money in gilt-edged bonds, as we call them, or in shares, and he is forced to sell, although he would keep them and wait until they are up again in price, but he is forced to sell them and has a certain loss, he simply can not deduct it.

Mr. SLOAN. Incomes represent what men get in a lawful way and not in an unlawful way, like gambling or things of that description.

The CHAIRMAN. Well, a man may play the stock market. Very genteel gentlemen play the stock market, and that is gambling.

Mr. SCHWARZMANN. Now, I will ask you just please to hear one more point. I can work out, I think, one from experience to take into consideration the experience under the present law. I do not know whether somebody is compiling figures from which you can learn, or from what source you learn, the income. In other words, it would be good to find out what earnings we have from, and what

capital invested from, ten to twenty, from twenty to thirty, from thirty to forty, and so on—each individual income—brought against all the returns in the individual income tax. I came down here with the intention of offering my services to compile such figures, but I have heard that it is already under way.

The CHAIRMAN. Is there any other suggestion, Mr. Schwarzmann?

Mr. GREEN. I want to ask a question or two with reference to these charts now. I said something about the charts being easily translatable, but I meant if we had a key, without which we can not unlock them. If you will kindly take in your hand this chart, similar to this one I hold. I will ask you some questions in relation to it.

In the first place, who prepared this chart?

Mr. SCHWARZMANN. I prepared them, myself—I mean, my statistical office. I simply work them out.

Mr. GREEN. You prepared them from Mr. Babson's statistics?

Mr. SCHWARZMANN. Yes. This is the exact translation of what you see here.

Mr. GREEN. This chart, which, so that we can get it identified in the record, I might speak of as the Schwarzmann chart, is a translation of the Babson prosperity chart?

Mr. SCHWARZMANN. Yes; a translation without the lines.

Mr. GREEN. Let us see if I have really got the features of it. Under the heading of "The United States," and the side heading, "Prewar earnings," I find them marked as 6 per cent.

Mr. SCHWARZMANN. Yes.

Mr. GREEN. Does that mean that the average prewar earnings of the corporations in the United States were that?

Mr. SCHWARZMANN. Corporate bonds, shares, and everything counted together. It is the minimum return of the capital invested. That is what I have from Babson's chart.

Mr. GREEN. I am speaking simply of corporations subject to the United States profits tax, or as to which the excess-profits tax applies. Does that mean that their average earnings were 6 per cent?

Mr. SCHWARZMANN. It means the income of the whole country; from the money invested of the whole country.

Mr. GREEN. The income of the whole country?

Mr. SCHWARZMANN. Yes.

Mr. HAWLEY. Do you mean minimum return or average return?

Mr. SCHWARZMANN. The average return.

Mr. GREEN. Now, above this 6 per cent, under the side heading of "War profits," I find a block of blues and whites together, marked "19 per cent."

Mr. SCHWARZMANN. Yes.

Mr. GREEN. Just exactly what is that?

Mr. SCHWARZMANN. I took, to make a comparison between the United States and England, as average returns for both countries, 25 per cent. We have to figure on equal returns from both countries, if you want to make a comparison.

Mr. GREEN. Yes; you mean—

Mr. SCHWARZMANN. Nineteen per cent is the balance left from 25 per cent, if I have 6 per cent prewar earnings; 6 and 19 are 25.

Mr. GREEN. Yes; I see. I made a little error in my question as to what the figures applied to, but you have straightened it out. Now,

the average tax in the United States you have marked as 38 per cent?

Mr. SCHWARZMANN. Yes.

Mr. GREEN. Do you mean that as 38 per cent of the whole earnings?

Mr. SCHWARZMANN. Of the whole earnings; because, in putting up our excess-profits tax and income tax—especially for the excess-profits tax—we took all the earnings into consideration, even the prewar earnings, notwithstanding the exemption.

Mr. GREEN. Under the heading "England" and the subheading "Prewar earnings," I find that marked as 13.3.

Mr. SCHWARZMANN. Yes.

Mr. GREEN. The prewar earnings in England, then, were larger than in the United States?

Mr. SCHWARZMANN. Two and a half times as large, nearly.

Mr. GREEN. It would be nearly two and one-sixth.

Mr. SCHWARZMANN. Well, this has given very good measure. It is between 5 and 6.

Mr. GREEN. Yes. You mean that the earnings are invested capital?

Mr. SCHWARZMANN. Yes.

Mr. GREEN. That seems to several members of the committee to be a very large return.

Mr. SCHWARZMANN. Which, the 13.3?

Mr. GREEN. Some of us did not suppose that the earnings were so large as 13 per cent.

Mr. SCHWARZMANN. Of England?

Mr. GREEN. Yes.

Mr. SCHWARZMANN. I took that Babson's chart. I told you in the beginning that Babson is my authority in these matters. That is an exact translation of these cards [indicating].

Mr. GREEN. What would you say that the average earnings of England since the war are? Do the charts show that?

Mr. SCHWARZMANN. Yes; we have to take, to make a comparison, 25 per cent, all in all; prewar earnings plus war earnings.

Mr. GREEN. What per cent, then, do you say on invested capital England is getting now?

Mr. SCHWARZMANN. Twenty-five per cent, too, like in the United States. We can not make a comparison if we do not take the present earnings, now.

Mr. LONGWORTH. If the increase since the war in England has been only 13 per cent, how can they raise over a billion dollars excess-profits tax?

Mr. SCHWARZMANN. I want to hear your question. I did not hear.

Mr. LONGWORTH. You say they have gone up from 13 to 25 per cent?

Mr. SCHWARZMANN. Yes; about one-half.

Mr. LONGWORTH. Just about one-half.

Mr. SCHWARZMANN. Yes.

Mr. LONGWORTH. England got over a billion dollars last year?

Mr. SCHWARZMANN. Yes.

Mr. LONGWORTH. That was from a tax on the excess profits?

Mr. SCHWARZMANN. Yes, sir; about 8 per cent of about one-half. That would presuppose about three and a half billions of dollars of total earnings. It takes 80 per cent of half of it.

Mr. GARNER. They are taking 80 per cent, in England, of the war profits?

Mr. SCHWARZMANN. Yes.

Mr. GARNER. And that amounts to a little over a billion dollars?

Mr. SCHWARZMANN. Yes.

Mr. GREEN. Then, in any event, this 85 per cent that is levied by England, according to these charts, is levied on a much smaller percentage of the earnings than our taxes?

Mr. SCHWARZMANN. Yes; that is the idea. Therefore we could with a smaller percentage get a bigger return.

Mr. GREEN. A comparison of percentages, then, does not give any indication of how heavily the tax bears—a comparison of percentages between the two countries; that is, I mean the same statement, that one is 80 per cent and the other is only an average of 38 per cent?

Mr. SCHWARZMANN. No; it does not mean anything. It simply means a comparison. But that is the only way in which statistics can work. Statistics do not really work in figures; it works in comparisons and relative proportions. You will see that England really levies a heavier tax than the United States, because that green space is bigger in England than in the United States (indicating on chart).

Mr. GREEN. But not as much bigger as would be indicated by the difference between 38 and 80 per cent?

Mr. SCHWARZMANN. No. Therefore, I say, if we in the United States would levy an average tax of 46½ per cent, we would get exactly the same returns as England gets.

Mr. GREEN. That is just what I was coming to.

Mr. SCHWARZMANN. Yes; 46½ per cent.

Mr. STERLING. May I ask you one or two questions?

Mr. SCHWARZMANN. Yes, sir.

Mr. STERLING. Is your company a manufacturing concern?

Mr. SCHWARZMANN. Yes.

Mr. STERLING. You make silks?

Mr. SCHWARZMANN. Yes.

Mr. STERLING. Where are you located?

Mr. SCHWARZMANN. We are a New Jersey concern. We have mill units, and a unit, you understand, is a complex of parts. We have one in Bayonne, one in Hackensack, one in Altoona, Pa., one in Columbia, one in Hollidaysburg, and one in Juniata, Pa.

Mr. STERLING. They are all mills of the one company?

Mr. SCHWARZMANN. Yes; that is of the Schwarzenbach & Hüber Co. Then we have six mills in Switzerland, five mills in France, and three mills in Italy.

Mr. STERLING. Before the war did you have any connections with Germany?

Mr. SCHWARZMANN. Yes; we had mills there, which we simply had to give up. The Government took them over.

Mr. STERLING. Those foreign mills, did you own them yourselves, or just buy the output?

Mr. SCHWARZMANN. We are a parent concern. There is a parent concern called the Oktiengesellschaft für Unternchinungen der Textilindustrie. That means "corporation for enterprises in the textile industry." That is in Switzerland. They are the holding concern

of this concern here and of the concern in Switzerland and in France and in Italy and before the war broke out of the concern in Germany.

Mr. STERLING. All of these units in America, are they subsidiary companies?

Mr. SCHWARZMANN. No; we are units for ourselves—we work for ourselves; but I mean that the shares are all held by the Swiss concern.

Mr. STERLING. Do you handle any silks except those made by your own factories?

Mr. SCHWARZMANN. No.

Mr. STERLING. How much capital have you invested here?

Mr. SCHWARZMANN. We have invested here \$8,500,000.

Mr. STERLING. Here?

Mr. SCHWARZMANN. Yes.

Mr. STERLING. How much tax did you pay under the law of 1917—the Federal tax, I mean?

Mr. SCHWARZMANN. The Federal tax?

Mr. STERLING. Yes.

Mr. SCHWARZMANN. We have a fiscal year different from the calendar year, so that we get returns up to now only for the first four months of 1917. Our fiscal year starts May 1 and runs to April 30.

Mr. STERLING. Then take it from May 1, 1917, to May 1, 1918. Have you made returns on that?

Mr. SCHWARZMANN. No; not yet. We have the time until the end of this month.

Mr. STERLING. How is that?

Mr. SCHWARZMANN. We have the time until the end of this month. We have 60 days after the closing of the fiscal year.

Mr. STERLING. Can you give the committee some idea of what it will be?

Mr. SCHWARZMANN. I can give you an idea of the first four months of 1917. You simply have about to triplicate it, and you will find the exact figures.

Mr. STERLING. What were your earnings for these four months?

Mr. SCHWARZMANN. For these four months our earnings were about \$600,000.

Mr. STERLING. Your net earnings?

Mr. SCHWARZMANN. Our net earnings.

Mr. STERLING. How much tax did you pay?

Mr. SCHWARZMANN. We paid about \$75,000 excess-profits and income tax.

Mr. STERLING. Then for the year it would be about \$525,000?

Mr. SCHWARZMANN. For the year we figured it would be about half a million dollars.

Mr. GREEN. I want to go a little further with reference to the key to the Babson chart. Will you please take the Babson chart for a moment? Now, on this Babson chart I find certain portions in deep black, and the remainder in small sections. Turning to the top of the Babson chart, I find that these deep-black parts thereon sometimes project above and sometimes below a certain line, and turning to the left-hand column marked "1905." I find certain percentage figures, and I find that this line that I have been speaking of

coincides with the 4 per cent figure. Does it mean that that line is the line of 4 per cent profit?

Mr. SCHWARZMANN. You see a line running through each chart and this line is the money rate, and these percentages here are just indicating the money rate. I took this chart exactly from Babson but could not bring this out, that is all. It has nothing to do with this matter, at all. It is simply the money rate; these black line that run through each chart.

Mr. GREEN. Then this heavy-black part, which projects above here a certain amount, what does that mean?

Mr. SCHWARZMANN. That means that it is prosperity—above the normal.

Mr. GREEN. Is it expressed in returns, in capital, or in dollars, or in what?

Mr. SCHWARZMANN. Well, of course, you will see very easily by just counting each one of these squares for 1 per cent; we have figured it out and it covers nearly exactly 1 per cent for each square or the returns. It is the returns in percentages.

Mr. GREEN. When this heavy black part goes below the line, what does that mean?

Mr. SCHWARZMANN. That means a depression; that our business loses.

Mr. GREEN. Yes. Well, in 1911 and 1912 in the part marked "United States," I find that some of the deep black part is below the line, and also there is quite a depression marked in 1914 and in the early part of 1915.

Mr. SCHWARZMANN. Yes; that is when the war broke out. You see this black line which I drew through the whole chart, that is the prewar period; and you see where in 1914 there is for each month a square. I mean, you take for this, here in 1914, you see where the war starts, that is general business depression, in the first of August, 1914.

Mr. GREEN. But when we turn to England, we find that in 1911 the deep black is somewhat above the line.

Mr. SCHWARZMANN. Yes.

Mr. GREEN. And very largely above the line in 1912 and 1913.

Mr. SCHWARZMANN. Yes. Therefore, they had much larger earnings. It was a condition of prosperity.

Mr. GREEN. I do not get just how you translate that into figures of per cent upon capital. I understood you to say that each square represented approximately 1 per cent.

Mr. SCHWARZMANN. Yes.

Mr. GREEN. Of the returns upon invested capital?

Mr. SCHWARZMANN. Yes; of all capital invested.

Mr. GREEN. What does this part in red mean [indicating]?

Mr. SCHWARZMANN. Well, I took it for the present earnings—that is, for 1913—myself, or had it done by my office. This indicates 25 per cent earnings.

Mr. GREEN. Those blocks represent 25 per cent?

Mr. SCHWARZMANN. Yes; from the line here up to the top of the red line, this represents 25 per cent earnings. You will see it is all only relative.

Mr. MOORE. Then the red lines are hypothetical?

Mr. SCHWARZMANN. Yes; they are hypothetical; exactly. If the Chairman wishes, I can bring more exact figures for your committee.

Mr. HAWLEY. This line from which you make the black indications of profit or loss, is that the line of no earnings or of average earnings?

Mr. SCHWARZMANN. Of minimum normal earnings.

Mr. HAWLEY. Now, in this quadrilateral ruling, the squares in the horizontal direction are month to month?

Mr. SCHWARZMANN. Month to month.

Mr. HAWLEY. Then the squares in the perpendicular direction each indicate 1 per cent of earnings?

Mr. SCHWARZMANN. One per cent.

Mr. HAWLEY. So I am taking a line here on the base line, the normal earnings and count 15 to the top. That means 15 per cent above the normal?

Mr. SCHWARZMANN. Yes; but you have to add 5 which makes it 20 per cent.

Mr. HAWLEY. So if one of these black spots extends, for instance, 15 points or squares above this normal line, that would mean a gain of 20 per cent?

Mr. SCHWARZMANN. Yes.

Mr. HAWLEY. And if it extended 15 squares below the line it would be 10 per cent less?

Mr. STERLING. Mr. Schwarzmann, your tax is a little less than 30 per cent of your net earnings?

Mr. SCHWARZMANN. Yes.

Mr. STERLING. Well, now, you were increasing the price of silks when the law was passed?

Mr. SCHWARZMANN. We not only did not increase the price, but we had to go down with the silks.

Mr. STERLING. The tax did not require a reduction in the price, did it?

Mr. SCHWARZMANN. But the situation in the market required it. We had overproduction.

Mr. STERLING. Had overproduction?

Mr. SCHWARZMANN. Yes.

Mr. STERLING. Was the demand lessened when the war began?

Mr. SCHWARZMANN. Yes. When the war began, especially I mean, the whole market was down, but I mean to say along about 1917 the price went down. 1916, probably, was the best year, and from January, 1917, the price was very, very low, although raw silk went up.

Mr. STERLING. That is what you handle; that is what you make?

Mr. SCHWARZMANN. We buy raw silk and manufacture finished silk.

Mr. STERLING. What do you mean by raw silk?

Mr. SCHWARZMANN. Silk which we import from Japan in the raw state.

Mr. HAWLEY. In the cocoon?

Mr. SCHWARZMANN. No.

Mr. HAWLEY. In the thread?

Mr. SCHWARZMANN. Yes.

Mr. STERLING. Then, didn't you increase the price of your output at all?

Mr. SCHWARZMANN. We increased the price in 1916, because the demand was very great.

Mr. STERLING. And you still have those prices?

Mr. SCHWARZMANN. Oh, yes; we have normal prices now, but there is now the question of curtailment. We know that we are probably placed in the semiessential, although our concern has contracts—we manufacture neckerchiefs for the Navy and manufacture parachutes for shooting stars, or whatever it is.

Mr. MOORE. Are your mills all running now?

Mr. SCHWARZMANN. Yes.

Mr. MOORE. Your competition comes principally from Japan, does it not?

Mr. SCHWARZMANN. It will come. It is on the way.

Mr. MOORE. Are you protected against Japan in any way now?

Mr. SCHWARZMANN. No.

Mr. MOORE. What kind of goods?

Mr. SCHWARZMANN. Finished silk.

Mr. MOORE. I am speaking of silk—the Japanese silks are coming into this country?

Mr. SCHWARZMANN. Yes.

Mr. MOORE. Hasn't the demand for silk increased this year; I mean for fashions?

Mr. SCHWARZMANN. Of course, the demand for silk has increased according to the fact that cotton and wool are mostly used for Government uses. Therefore, it will never be possible to put silk in the list of nonessentials.

Mr. MOORE. I think it is fair to you to state that the question is being raised that silk is more of a luxury than an essential, and that some advices have come from some of the members of the committee that silks might be put in the nonessential class. Silks are sold very largely to those who follow the fashions. I suppose your designs are shaped very largely to satisfy the popular taste?

Mr. SCHWARZMANN. Yes. My opinion is that silk never will be placed on the nonessentials. It will be placed on the semiessentials. It is a fact to-day that you can buy for \$5 a bigger shirt waist of silk than you can buy one of cotton and the shirt waist of silk will wear twice as long, and the more the Government uses cotton and wool the more silk will be essential. It will never go on the nonessentials; it will be semiessential, and we will probably have to curtail production.

Mr. MOORE. Then you would account for the increased demand for silk in the fact that the Government is rather encouraging the use of cotton and woolen goods and that gives you a larger field?

Mr. SCHWARZMANN. The Government is using cotton and woolen goods for their own purposes, so it is natural that people have finally got to go to silk. Silk is not an expensive article to-day any more.

Mr. HALL. Did I understand you to say that the average corporate earnings in this country on capital were between 5 and 6 per cent before the war.

Mr. SCHWARZMANN. Yes.

Mr. HALL. Now, in getting at that basis of earnings was taken the capital stock at its par value or the capital stock at its market value, of the actual capital invested?

Mr. SCHWARZMANN. The answer is that there is no question that the real capital invested was the basis.

Mr. HALL. The capital originally invested or the value of the assets at the time?

Mr. SCHWARZMANN. I do not think the value of the assets, but the capital originally invested.

Mr. HALL. Does that include good will, which is often included in this country, not so much in England?

Mr. SCHWARZMANN. That is not included.

Mr. HALL. For instance, a great many experienced capitalists include good will, and publish a statement of earnings with respect to good will as well as the actual capital. The firm of Woolworth & Co. includes \$50,000,000 of good will, and publishes its statement of earnings on that basis as well as the basis of actual capital. All of those items are included, are they not?

Mr. SCHWARZMANN. You can capitalize good will only if you pay for it, and only for 20 per cent of the capital.

Mr. HALL. The estimates that you speak of are based on the elimination of this class of items?

Mr. SCHWARZMANN. Not so long as there was payment for the good will.

Mr. HALL. During the prewar period in this country often a great many big capitalized concerns were going through recapitalization and in the hands of receivers, not that they were insolvent, but simply going through reorganization, and then there were a great many that were temporarily embarrassed, but not insolvent, highly capitalized concerns, and the aggregate of insolvent businesses themselves going through reorganization, those in receivers' hands for other purposes when they were not insolvent, that capital amounted to a great deal. Was that capital included in this general average?

Mr. SCHWARZMANN. Of course.

Mr. FAIRCHILD. Mr. Schwarzmann, tell me, if silks have gone down what happened to make silk shirts to-day approximately twice what they were a year ago?

Mr. SCHWARZMANN. I don't believe that they cost twice as much as they did a year ago, except where the retailer, maybe, where the retailer is making a profit. If you have paid twice as much as before the war, that's very reasonable, because raw silk is at least twice as high as before the war, and our manufacturing costs have increased, wages have increased, and have approached nearly a 100 per cent over the prewar standard.

Mr. FAIRCHILD. Does the advance in price include the advance in raw silk, and not the profit?

Mr. SCHWARZMANN. You have to take into consideration the advance in raw silk, but it is not that so much which makes the market, but the demand.

Mr. SLOAN. You import large amount of raw silk, and other concerns, do they not?

Mr. SCHWARZMANN. About 80 per cent of the raw silk is imported from Japan.

Mr. SLOAN. And there is considerable silk imported in a more or less finished condition?

Mr. SCHWARZMANN. Yes; from Japan, again.

Mr. SLOAN. Silk, raw, and in a more or less finished condition, is imported into this country, and has been for the last 12 months?

Mr. SCHWARZMANN. Yes; very much silk in the semifinished, but I may say even in the finished state, has been imported from Japan.

Mr. SLOAN. And that is increasing constantly?

Mr. SCHWARZMANN. Yes.

Mr. SLOAN. Wouldn't you state to the committee that that is a very fruitful source of revenue to the Government to help make a part of that \$8,000,000,000, if you put a respectable duty on it, of course?

Mr. SCHWARZMANN. There is no question about the Silk Association of America desiring that manufactured silk should be very much increased in its duty because we can not produce against the Japanese silk. We simply can not compete, and sooner or later we will have to come before you and ask for an increased tariff.

Mr. SLOAN. I was not referring to that part of it, but especially to bringing in revenue into the Treasury. It could comfortably bring in a large sum to the Government.

Mr. SCHWARZMANN. Yes; there simply would be no objection at all if it be made a source of revenue.

The CHAIRMAN. What is a sufficient protection to you and allow us to get sufficient revenue at the same time? What rate would you say ought to be imposed upon finished silk—25 per cent?

Mr. SCHWARZMANN. The increase, or the total amount?

The CHAIRMAN. I mean the total amount.

Mr. SCHWARZMANN. It is now 45 per cent.

The CHAIRMAN. Forty-five per cent is not enough?

Mr. SCHWARZMANN. No; by no means.

The CHAIRMAN. We have 45 per cent now. How much revenue did we get last year from all the importations of silk at 45 per cent?

Mr. SCHWARZMANN. Mr. Chairman, I could not answer that.

The CHAIRMAN. You really do not know whether the importations of silk in amounts, not in value—because everything has gone up in value—you do not know whether the importation of silk has increased last year over 1913 and 1914?

Mr. SCHWARZMANN. Yes; I know that.

The CHAIRMAN. You would say increasing the import tax on silk, say 25 per cent additional on the dollar? We could get revenue from that?

Mr. SCHWARZMANN. Oh, yes.

The CHAIRMAN. Then, we could, if you paid 25 per cent more on the silk that we make here, we could get \$10,000,000 more, couldn't we?

Mr. SCHWARZMANN. Yes.

The CHAIRMAN. And still leave you in the same situation you are now in, with the same percentage of protection you now have, 45 per cent?

Mr. SCHWARZMANN. Of course, if you increase the rate on raw silk, and the rate on finished goods was the same, we would be in the same point as we have been before. We are not protected against the importation of finished goods.

The CHAIRMAN. If we levied 10 per cent advance on raw silk, would we get more revenue than if we levied 100 per cent on the imported finished product?

Mr. SCHWARZMANN. Yes. We imported \$300,000,000 worth of raw silk.

The CHAIRMAN. The real source of revenue, as far as silk importations are concerned, would be on the raw silk?

Mr. SCHWARZMANN. On the raw silk, and then eventually a consumption tax on the finished silk. If, for instance, every silk transaction from the raw silk product to the manufactured you charge, say, 1 per cent, to be put on the bill in stamps from the revenue office, and then from the manufacturer to the wholesaler, and 1 per cent from the wholesaler to the retailer, which leaves out the jobber, and 1 per cent from the jobber to the retailer, and then to the consumer 1 per cent. That, of course, would eliminate the jobber, probably.

The CHAIRMAN. Would you favor that proposition?

Mr. SCHWARZMANN. Well, I think that would be a good solution.

Mr. MOORE. Are you getting raw silk from any other country than Japan?

Mr. SCHWARZMANN. We get raw silk from China in small percentage. We got some last year from Italy.

Mr. MOORE. Can you give us a comparison of the cost of the production of raw silk in Japan and in the United States?

Mr. SCHWARZMANN. We have no raw silk in the United States.

Mr. MOORE. You have no means of comparison?

Mr. SCHWARZMANN. No; but we can find the difference between the raw silk production and the finished, and as between here and Japan.

Mr. MOORE. You have the difference between the cost of production here and in Japan?

Mr. SCHWARZMANN. Yes.

Mr. MOORE. How great a difference is that, referring to the finished product?

Mr. SCHWARZMANN. Well, we have to figure that we pay about three times as high wages here in the United States as they pay in Japan.

Mr. MOORE. If you had a protective tariff duty which covered that difference of three times the cost of wages, you would not adopt Mr. Kitchin's proposition to increase the duty?

Mr. SCHWARZMAN. Certainly not.

Mr. MOORE. That is the whole question, that you are unable to compete with Japanese cheap labor and that was the method of protection that you suggested?

Mr. SCHWARZMAN. Yes: I tried to work out a certain system of protection for silk goods, according to different countries. We will have to compete after the war with Switzerland again, with France, Italy, and with Germany eventually, with Japan, and with China.

Mr. MOORE. You are willing that the prices shall go up in the United States, and that the prices shall keep up if you are able to meet the foreign competition?

Mr. SCHWARZMAN. Yes.

Mr. LONGWORTH. I would like to go back to the question which Mr. Hall asked you. I understood you to say that you figured this 15 per cent return, in England, the prewar return, on the actual invested capital at par?

Mr. SCHWARZMAN. Yes.

Mr. LONGWORTH. Well, now, what do you mean by actual invested capital? Do you mean in going concerns? You include real estate, bonds, and everything?

Mr. SCHWARZMAN. Everything; that is supposed to include everything.

Mr. LONGWORTH. Textile works?

Mr. SCHWARZMAN. Everything.

Mr. LONGWORTH. What industries in England before the war were making as much as 50 per cent?

Mr. SCHWARZMAN. I could not tell that.

Mr. LONGWORTH. There must have been a very large number making 50 or 100 per cent to bring up that average so high.

Mr. SCHWARZMANN. As I said, I am perfectly willing to get these figures together for the committee.

Mr. LONGWORTH. I wish you would, because it seems to me inconceivable that there could have been an average return for three years before the war.

Mr. SCHWARZMANN. It was not for three years; it was only for two years. England takes its two best years.

Mr. LONGWORTH. I wish you would bring those.

Mr. SCHWARZMANN. I certainly will do that.

Mr. GREEN. I would be glad also if you would give us the additional figures.

Mr. SCHWARZMANN. I will work out the whole system so that everybody can understand it.

Mr. HALL. Referring to Mr. Moore's question about the Japanese labor costs, Japanese labor in the silk industry, will turn out a greater amount of the finished product than the American labor, will it not?

Mr. SCHWARZMANN. Very probably, because they have now much bigger looms on which they can make bigger pieces. The output probably will be increased compared to the United States output, too. We have to compete in every respect with Japan.

Mr. HALL. I understand; but you say, I understand you, that a common laborer there will turn out a larger amount of a given product than an American laborer doing the same work.

Mr. SCHWARZMANN. Not the man himself, but the mechanical means and the facilities there are above the standard of ours. They have power looms which they can operate with one man and turn out a larger quantity.

Mr. HALL. We have them, too.

Mr. SCHWARZMANN. But we only have the single-power looms. They have the big-power looms.

Mr. HALL. Why don't we have them?

Mr. SCHWARZMANN. Well, I can only state the fact that we haven't them. That is one of our problems—to keep up with the other nations with the machinery which we use.

Mr. MOORE. You mean by that that their mechanical efficiency is superior to ours?

Mr. SCHWARZMANN. I mean it has started in, and if we do not keep up in these respects, it will within a short time be bigger.

Mr. MOORE. But you do not say that their individual efficiency is more than ours?

Mr. SCHWARZMANN. No; and I wish to say that our product in itself is better than the Japanese product; I mean the product which is beginning to compete against our product of what they call the same quality.

Mr. MOORE. Their most efficient workmen obtain a wage three or four times less than ours?

Mr. SCHWARZMANN. Yes.

Mr. GARNER. Mr. Schwarzmann; you surprise me when you say that the Americans are not so efficient in machinery as the Japanese. I thought the American people were superior in machinery to any people in the world.

Mr. SCHWARZMANN. Japan has, since the silk industry became the main industry in Japan, developed machines, and we do not know every detail, but it is well known in the silk industry that Japan has been turning out pretty large machines.

Mr. GARNER. But in the course of time, the American manufacturer of silk will be able to devise machinery quite as efficient as the Japanese.

Mr. SCHWARZMANN. I hope better ones even. This country will always keep up.

The CHAIRMAN. I understand you—I want to get the facts—Japan has been since the war, especially since we entered the war, competing with us more intensely than theretofore, and is shipping in more finished products in competition with the American finished products, than ever before, and in your own case they have competed in the last two years more largely than ever before. Now, going back to the prewar profits again, do you remember what percentage of profits your company made in 1910, say?

Mr. SCHWARZMANN. Well, 1910 was a good year, perhaps about 10 per cent.

The CHAIRMAN. And then 1911, 1912, and 1913, about 2 per cent?

Mr. SCHWARZMANN. In 1911 and 1912 a loss, in 1913 about 6 per cent, not quite 6.

The CHAIRMAN. The average during those three years?

Mr. SCHWARZMANN. About 1.9 per cent.

The CHAIRMAN. And I believe—what did you say your profits were the last year—25 or 35 per cent?

Mr. SCHWARZMANN. In the 25-per-cent limit, about.

The CHAIRMAN. So Japan has not hurt you very much, if you have increased your profits from the prewar period up to last year from 2 per cent along in 1910, 10 per cent when you now have a larger competition than ever before with Japan, and they are shipping in more goods in competition with you, and you are now making 25 to 30 per cent. Do you want to tell this committee that Japan is hurting you more than ever this last year since we have entered the war? How is it if she has hurt you that you have made more profit?

Mr. SCHWARZMANN. This competition of Japan is coming, and has started in, and just as I stated this fact, in order to prevent it we started in making contracts with these Japanese people and buying goods from them.

The CHAIRMAN. So you are causing Japan to import these goods?

Mr. SCHWARZMANN. No; if they come in, we buy them in the market; but they don't put them in the market.

The CHAIRMAN. So, then, you have made money by the Japanese bringing in their importations?

Mr. SCHWARZMANN. Of course, we are not attacking this proposition to make a loss.

The CHAIRMAN. You really do not mean to say that Japan has hurt you?

Mr. SCHWARZMANN. No; not yet; but it is simply coming. We see it every day it is increasing.

The CHAIRMAN. It is increasing from time to time and your profits are increasing from year to year?

Mr. SCHWARZMANN. Now, to be correct, our profits were less in 1917 than they were in 1916, and our profits will be less in 1918 than they were in 1917.

The CHAIRMAN. They were more in 1917 than in 1916?

Mr. SCHWARZMANN. No.

The CHAIRMAN. What taxes did you pay in 1916? What was the income that you swore to before the collector of internal revenue in your return for 1916—calendar year 1915-16?

Mr. SCHWARZMANN. We have no calendar year.

The CHAIRMAN. Your fiscal year 1916, then?

Mr. SCHWARZMANN. I guess about \$2,500,000.

The CHAIRMAN. How much in 1917?

Mr. SCHWARZMANN. Not quite \$2,000,000, I guess.

The CHAIRMAN. You are not sure of that?

Mr. SCHWARZMANN. I am sure that it was less than \$2,000,000.

The CHAIRMAN. More than \$2,000,000 in 1916?

Mr. SCHWARZMANN. Yes; two and a half.

The CHAIRMAN. What is the name of your company?

Mr. SCHWARZMANN. Schwarzenbach, Huber & Co., 470 Fourth Avenue, New York City.

The CHAIRMAN. Just how much in dollars and cents do you think Japan imported into this country in 1917, finished and semifinished product, outside of the raw silk?

Mr. SCHWARZMANN. I could not tell that exactly. I know that the raw silk was around \$300,000,000.

The CHAIRMAN. You think they shipped about \$300,000,000 in 1917 of the finished product?

Mr. SCHWARZMANN. No, no; raw silk.

The CHAIRMAN. One hundred and sixty million dollars in raw silk. That is what you shipped in 1917. How much of the finished product do you think was shipped in?

Mr. SCHWARZMANN. I do not think it would be one-tenth of that; hardly one-tenth.

The CHAIRMAN. Something like one-tenth; it would be \$16,000,000. How much was the total finished product of the United States of the silk industry—of the silk industry of the United States? Something over \$500,000,000, wasn't it?

Mr. SCHWARZMANN. No; I guess between \$400,000,000 and \$450,000,000.

The CHAIRMAN. My understanding is a little more than \$500,000,000. But shipping in less than \$16,000,000 into a country that possesses \$450,000,000, does it strike you as being much competition?

Mr. SCHWARZMANN. I say not for the present. I mean it will come in the future, that is all.

Mr. MOORE. When did the silk industry start in the United States?

Mr. SCHWARZMANN. I think about 1880.

Mr. MOORE. Well, it was introduced here as a Japanese proposition at the Centennial Exposition in 1876, and I remember having seen the loom there the first time.

Mr. SCHWARZMANN. And then the Europeans came over here and settled in 1883. We were the first ones.

Mr. MOORE. I wan to ask, in view of Mr. Kitchin's questions, whether if we had complete free trade in silk and silk products, and the Japanese silk came in this market as they pleased, whether it would be possible at all to maintain the silk industry in the United States?

Mr. SCHWARZMANN. I don't think so.

Mr. MOORE. Do you think that anybody would attempt to manufacture silk here if the Japanese had the right to come into our markets?

Mr. SCHWARZMANN. I think they would not, and the Japanese instead of importing raw silk would manufacture it over there.

Mr. MOORE. And then we would have the Japanese cheap labor to provide us with silk in the United States. Isn't that a fact? Could any American manufacturer stand up against that—against the Japanese manufacturer if he had the right to come into the American market free?

Mr. SCHWARZMANN. No.

Mr. STERLING. Mr. Schwarzmann, has your company any competitors in the manufacture of silk?

Mr. SCHWARZMANN. Oh, yes.

Mr. STERLING. To what extent?

Mr. SCHWARZMANN. I stated that the silk products in the United States were around \$500,000,000. Of that we manufacture about \$60,000,000.

Mr. LONGWORTH. Do you compete indirectly with Cheney?

Mr. SCHWARZMANN. Yes; but he makes ribbons and velvets, which we do not.

Mr. STERLING. You make about one-fifth of the silk in this country?

Mr. SCHWARZMANN. \$60,000,000 out of \$500,000,000.

Mr. STERLING. About one-eighth.

Mr. SCHWARZMANN. About one-thirtieth.

Mr. LONGWORTH. About one-seventh or one-eighth.

Mr. SCHWARZMANN. \$16,000,000 against \$500,000,000.

Mr. LONGWORTH. But you said \$60,000,000.

Mr. SCHWARZMANN. \$16,000,000.

Mr. STERLING. I thought you said \$60,000,000.

Mr. SCHWARZMANN. No; \$16,000,000.

Mr. HAWLEY. Are these charts to go into the record?

The CHAIRMAN. I do not think so. You would have to get the consent of the joint committee of the House and Senate.

Mr. HALL. You could put in those charts that are made by Mr. Schwarzman himself, but not the other.

The CHAIRMAN. We will now hear Dr. Lindsay.

**STATEMENT OF PROF. SAMUEL McCUNE LINDSAY, COLUMBIA UNIVERSITY, NEW YORK CITY.**

Prof. LINDSAY. I represent here particularly a small volunteer committee known as the Committee on War Charity and Social Work, which was organized a little over a year ago in Pittsburgh, after the convention which was held there, the National Conference of Charities and Correction, which was a meeting of about 4,000 representatives chiefly of the charitable organizations of the country, both public and private, at which the matter was taken up of the protection of the standards of charitable work during the war. Anxiety and apprehension was felt as to the feasibility of charitable institutions carrying on their work during the war, and meeting the new problems that the war brought to them.

The CHAIRMAN. Are you an official of the Government in any way?

Prof. LINDSAY. I am here now in a volunteer capacity with the Treasury Department, as adviser of Mr. Love, Assistant Secretary, in matters pertaining to war-risk insurance.

The CHAIRMAN. You are one of the dollar-a-year men, I suppose?

Prof. LINDSAY. Yes; I haven't received the dollar yet; I haven't completed the year.

Mr. MOORE. After you get it we will get a revenue tax on it.

Prof. LINDSAY. I am not asking that it be exempted.

This little committee was organized to see what could be done to protect the standards of charity and educational work during the war. It is composed at the present time of 29 persons, including a number of college presidents and a number of persons interested in all sorts of charitable and educational work. The president of Harvard University, Dr. Lowe; the President of Yale University, Dr. Hadley; the president emeritus of Harvard University, Dr. Elliott; the president of Columbia University, the president of the University of North Carolina, Dr. Graham; the president of Wake Forest College, North Carolina, Dr. Toteat, and the presidents of a number of other institutions, and also a number of other gentlemen assigned with the Red Cross work—Cornelius N. Bliss, Dr. Devine, Homer Foss, and others who are now in France. These gentlemen associated themselves together to see what could be done to maintain the standards of social work, to see if these institutions could adopt the work to the present needs, and it is on behalf of that committee particularly that I am here to-day to ask your consideration for these institutions, the higher educational institutions of the country and the charitable institutions of the country.

In regard to the real estate tax, you have already made a generous and wide provision for the financial support of these institutions by providing in the war revenue act of last October for the exemption of the income tax on gifts and contributions on the part of any individual up to the extent of 15 per cent of his otherwise taxable income. The operations of that provision have been very beneficial and helpful. Now, we want to ask you if you won't make provision for the permanent support of these institutions by exempting from the Federal estate tax the bequests and legacies to these institutions; that is, bequests to educational institutions and hospitals. That is one type of institution that has been particularly in need of support and help

from the Government. They are doing a tremendously increased work under difficulties that are greater than ever. Also bequests and legacies to other institutions and to religious institutions.

Mr. MOORE. Are you trying to distinguish between contributions, gifts, and legacies?

Prof. LINDSAY. Yes; I am now asking for your consideration of an amendment.

Mr. MOORE. It seemed to me when we passed this amendment in which you are interested, this paragraph 9, section 1201, that it covered your point.

Prof. LINDSAY. No; that was only an exemption with respect to income tax on contributions and gifts. It did not cover in any way a tax on a legacy and a bequest or devise.

Mr. STERLING. An inheritance tax.

Prof. LINDSAY. It did not affect title 9. In other words, the proposition I am now discussing would affect title 9 of the real estate tax. That is, in other words, what you have now is an estate transfer tax. That is, it is a tax on which the rate has been increased, and is now a heavy tax. It is true that an institution is not necessarily affected directly by that tax; that is, the tax is not a tax upon the net estate, the only exemption now being the expenses of administration, funeral expenses, and the exemption of \$50,000—that is, it applies only to estates in excess of \$50,000—and on the net estate without any other deductions the tax is levied.

Now, that operates in two ways to affect the institutions whose interests I am discussing. A good many institutions are residuary beneficiaries; that is, an estate is left and a man provides for his family and his relatives, and he leaves his residuary estate in part or in whole to an educational institution or to a hospital.

Mr. LONGWORTH. I was going to ask you about that. Could you say roughly what proportion?

Prof. LINDSAY. There are no data at all.

Mr. LONGWORTH. Isn't it rather rare? It is the exception rather than the rule. Usually a specific sum is left.

Prof. LINDSAY. I have had the most diverse opinions from lawyers, who draw a great many wills. Some lawyers tell me that their experience has been almost invariably that a man takes care of his family and his relatives and the specific things that he wants to look out for, and he knows there is something left, but he does not know how much it is, and he divides that amount among charities and educational institutions he is interested in. On the other hand, I have equally eminent lawyers who have a large business in drawing wills say it is precisely the opposite, that men will make specific bequests for their colleges or their universities or the charities they are interested in, and then because the amount of the residuary estate is uncertain they leave it to the immediate family. There are no data, so far as I am able to discover, but in either event I want to point out that the collection of these facts is a matter which does not encourage bequests to educational and charitable institutions, and often operate as a direct reduction. If the bequest is not a direct one but is a part of the residuary estate, the tax is paid out of the residuary

estate, and therefore it reduces the amount of the residuary estate, and it reduces the amount of the tax to the charitable institution.

Mr. DIXON. The direct tax is not affected if the legacy is not paid out of the residuary estate?

Prof. LINDSAY. You are not affected if it is not, no; unless the estate is not large enough to pay the tax, in which case the direct tax largely is reduced proportionately depending on the terms of the will.

But what I want to especially invite your attention to at this time is the general effect of this as a matter of public policy upon bequests and legacies to charitable and educational institutions. All of our educational institutions are under the stress of war conditions. They have been giving men without stint to the public service, the military service, and the civil service, and their revenues have been cut off, their income has been reduced, and they have been under a very great strain.

These, gentlemen, are not profit-making institutions. These are institutions not for profit, but to make ends meet they have had to economize in every possible way to reduce their forces, double up on their work, and their only hope—I know of a number of institutions I can cite whose only hope is that they will be able to go along temporarily and have their deficits made up by the bequests and legacies. Now, anything that you do or the Government does in its taxation policy, any infliction of a tax that will discourage, that will work a very serious harm, and it will mean that we will have to depart from our traditional policy in this country, which has been to encourage and build up the support of these institutions by private benevolence, and we will have to face the problem of going over to a larger extent to Government support. Therefore, it seems to me that it is a wise public policy for the Government to refrain from taxing these bequests and legacies directly or indirectly in order that it may encourage and stimulate the disposition of private wealth in that direction, to maintain these institutions upon their present standards and to increase those standards of efficiency.

I would like to read a number of extracts from a letter that I think has been sent perhaps to some members of the committee by the president of a small college, which, I think, states the situation very well indeed.

It happens to be a man who has been president of Bates College in Maine for a great many years, President George C. Chase. He has been president of Bates College for 24 years.

(The letter is as follows:)

LEWISTON, ME., *March 30, 1918.*

HON. F. M. SIMMONS,

*Chairman Senate Finance Committee, Washington, D. C.*

DEAR SIR: I am president of Bates College, an institution loyal to the core in the great struggle for humanity in which our Government is now engaged. The trustees, the faculty, and the students of Bates are ready as individuals to sacrifice and to suffer for the success of the great cause to which our people have committed themselves. They are in full sympathy with the general provisions of the Federal State-tax law, but they believe it to be of utmost importance that this be amended through the adoption of House bill 9223 or Senate bill 3730.

The patrons of Bates with rare exceptions are people of limited means. Her students are the sons and daughters of working people—farmers, mechanics, artisans, teachers, ministers with small salaries, clerks, and professional men of scanty incomes. A large percentage of her students are working their own

way unaided by parents or friends. Many of them are boarding themselves in these strenuous times at a cost of less than \$2 per week. They are earnest in purpose and equal in natural ability and power of application to any body of students in our country. Forty-three out of each 100 or about 2,000 living graduates of Bates are educators. Their rank and usefulness are indicated by the following facts: Eighty-one Bates graduates have filled positions in universities and colleges. More than this number have won distinction as State, city, and district superintendents, and as principals of important secondary schools. Among the higher institutions to which Bates has contributed teachers are Albion, Amherst, Amherst Agricultural, Armour Institute, Bates, Bishop, Brown University, Carleton, Colgate University, Connecticut Agricultural, Cooper Institute, Cornell University, Dartmouth, Denison University, Drury, Fairmount, Grant University, Harvard University, Hillsdale, James Millikin, Keuka, Knox, Miami, Middlebury, Massachusetts Institute of Technology, Northwestern University, Norwich University, Oahu (Hawaii), Pennsylvania State, Princeton University, Pomona, Redfields, Reed, Shaw University, Mount Holyoke, Syracuse University, University of California, Tufts, University of Colorado, University of Illinois, University of Iowa, University of Maine, University of Montana, University of Utah, Washington State College, University of Wisconsin, Western Reserve University, William Jewell, Williams, Worcester Polytechnic Institute, Yale University, Yankton.

In authorship, on the bench, in legislation, in journalism, law, medicine, and engineering, Bates has distinguished representatives; while nearly the entire body of her alumni have proved themselves pure, earnest, useful citizens, ready for every good word and work and making happier and better the communities in which they have lived. More than 200 Bates men are now in the service of their country on land or sea and the number is increasing every week. So intense and prevailing is the patriotic spirit of Bates students that but for the restraining advice judiciously given by president and faculty there would now be scarcely a young man left in the college.

The present endowment of Bates is sadly inadequate for her work, and in the 24 years in which I have been president a serious annual deficit has been averted only by special contributions, Bates has gained the confidence of such judicious givers as have become acquainted with her work and is annually receiving bequests that while in no instances large prove that her work for our country is appreciated.

The adoption unamended of the Federal estate-tax law would threaten her very existence.

Owing to the increased cost for maintenance and upkeep of her work and the withdrawal of young men to enter the service of their country, her friends are now making an effort almost desperate to avert the withdrawal during the current financial year of between \$30,000 and \$40,000 from her endowment.

I can not believe that when your committee take into consideration the facts that I am stating, they will permit our institution and other colleges struggling with like difficulties to be deprived of any part of the means that good men and women wish to place at our disposal through carefully considered bequests. Nor need I emphasize the fact that from the beginning of our national history it has been the settled policy of our Government to promote that higher education afforded by our colleges and universities which is the chief source and inspiration of that general education for our people absolutely necessary to the maintenance of free institutions.

I am, with great respect,  
Sincerely, yours,

GEORGE C. CHASE.

In other words, Bates has been supplying public-school teachers, and college teachers. Most of them are, probably, public-school teachers.

Mr. LONGWORTH. May I interrupt at that point. Evidently Bates has never been a beneficiary of a residuary estate, because he speaks of large bequests.

Prof. LINDSAY. Bequests may be from a residuary estate.

Mr. LONGWORTH. That may be, but when he speaks of receiving bequests, they would probably not be residuary estates.

Prof. LINDSAY. They might be a share of a residuary estate; but, in any event, if they are direct bequests the effect of this tax upon the net estate, not exempting such bequests, is to discourage those bequests or to make it impossible for people to make such bequests. In other words, the situation that is confronting Bates—and I have no special interest in this institution, I simply cite this as typical of the small college everywhere—is that she will have to take out of her endowment \$30,000 or \$40,000 to keep it going.

Mr. HULL. Of course, I take it that every citizen in the country desires to cooperate in every feasible way in the support, development, and maintenance of education, as well as in other lines of charitable, eleemosynary, and fraternal institutions and organizations. Now, we found that among other things that between \$15,000,000 and \$20,000,000, on one ground or another, had become totally exempt from taxation in this country. Now, with the issuance of Federal bonds under war conditions we have from \$30,000,000 to \$40,000,000 more of that class of property free from normal Federal tax, and exempt from the State, county, and municipal taxation in the future, so that we are rolling up a tremendous portion of our national wealth and shielding it from any substantial amount of tax levy. Don't you think the question of corporate policy comes in there and raises the further question as to whether it is feasible to continue indiscriminate exemption, or whether it would not be feasible to propose a small tax levy on this immense volume of property that is getting under the protection of tax exemption in this country?

Prof. LINDSAY. Of course, the large amount of invested capital in educational and charitable institutions that is exempt is exempt from property tax only from local taxation. That does not affect Federal taxation in any way. It ought not to be added, it seems to me, in fairness to the issue of liberty bonds. It is not in the same class of exempt property.

Mr. HULL. Of course, now, all the property owned by the State, county, and municipality that is exempt from any kind of Federal taxation is exempt mainly from State and local taxation, and the same is true as to property owned by Federal Government. Now, the income tax, for instance, in every one of the tax laws of the State and the Federal Government, most of those start in with exemptions and end with exemptions of some kind or other. They keep increasing all the time. Some are not as meritorious as others. For instance, in some of the States they decided, as a matter of public policy, that it would be well not to exempt completely all kinds of property that goes to fraternal organization or educational or charitable institutions in every sense, but that a small rate, not the usual graduated rate, but a small rate, might be imposed to keep it within the plan of taxation.

Prof. LINDSAY. Of course, if there was any great public interest to be subserved by keeping the whole net estate on the books, so to speak, but making a preferential rate for educational institutions, that would be some help. It is only a question of how far you want to go. I can not see, however, how that would in any way facilitate Government taxing these resources to the utmost, in view of its need, any more than the exemption now of \$50,000. Congress has

said—I do not know what it intended by it—but Congress has said that an estate tax shall apply only to estates in excess of \$50,000. It applies primarily in the interests of the family of the estate where the net estate does not exceed \$50,000.

Mr. HULL. Now, there is one other consideration in that connection. In looking through the inheritance or the estate-tax burden on the country, we have considered the amount of State levies in connection with the proposed Federal levy. We found that the States, as a rule, had exempted all these national sources. Then the Federal Government proposed to take the double amount the States were levying without exemption. The result was that when you considered the burden, the taxpayers under these State and Federal bonds were getting a 50 per cent reduction in the amount that was proposed, and the others who were beneficiaries of the estate.

Prof. LINDSAY. I should like very much if you will allow me, to put into the record a statement that was prepared sometime ago—about a year ago—of the practice of the States with respect to inheritance taxes, which, of course, is similar in general application and practice. Of the 48 States, there are 34 States, I believe, that now have an inheritance tax, or State transfer tax of some sort, and which exempts bequests and legacies to charitable institutions. There are certain States that have such a tax which are not exempt. And there are 9 that do not have such a tax.

Mr. MOORE. Doctor, have you any figures showing the aggregate amount of contributions actually made within a year under this section 1201?

Prof. LINDSAY. No; I have not. We are looking forward with great interest to the returns of the first year under the law, in the Bureau of Internal Revenue.

Mr. MOORE. In view of your connection with the Treasury Department in an honorary capacity, I have to ask you to have some sympathy for this committee when you come with a request for what is a reduction of taxation. The Secretary of the Treasury, with whom you are cooperating, has asked for \$8,000,000,000, which is more than we were asked for last year. That was approved by the President and I presume by Dr. Rowe, with whom you are cooperating and who understands all about it, so that our problem is rather to find means not of reducing but of increasing.

Prof. LINDSAY. I should like to suggest that I have been working with the Department of the Treasury, as to whether it would not be possible to at least consider increasing the estate taxes sufficiently to cover whatever is estimated to be the loss through the exemption, and perhaps even to raise more revenue from that source. It seems to me that an estate tax is a reasonable source of revenue.

Mr. MOORE. It is not entirely possible that we should increase the taxes as suggested by the Secretary of the Treasury by making allowances in the nature of reductions as we go along this year.

Mr. CRISP. A man in the selective-service law is not allowed to say how he shall serve the Government. He is drafted. He is put into the Army. With that in view, will you state why should a philanthropist be allowed to say that his money should go to certain institutions rather than that he should be subject to the tax laws of the Government, and the proceeds of the taxes on these estates paid into the

Treasury and be appropriated by the constitutional authority of the Government—Congress?

Prof. LINDSAY. It does not seem to me that it is giving the man any particular opportunity.

Mr. CRISP. That is what it is. If a man is allowed to escape taxation, no other citizen is allowed to avoid a duty. We recognize that they are performing a function that the Congress has the authority to say how they shall serve.

Prof. LINDSAY. There is no question about it, sir, but it is a question whether the Government or Congress wishes to assume the full responsibility for the distribution of this money. It can take all a man's estate that it wishes, but it would then have to care for these institutions by public appropriation.

Mr. CRISP. I have not seen any disposition on the part of Congress to avoid assuming this responsibility.

Prof. LINDSAY. If Congress wants to change its policy—it has been the traditional policy since the beginning of this Government of having a large part of our charitable work contributed by private means.

Mr. CRISP. But what if the demands in France were more pressing than the needs of the charitable institutions?

Prof. LINDSAY. That is the question Mr. Moore asked. In reply to that, my personal feeling would be that you must get as much revenue or more revenue from this source in view of our present necessity than you have in the past, and the way to do that is to increase the rate upon the net estate, after subtracting these bequests.

Mr. CRISP. Every one who has come here has stated that the other fellow ought to be taxed, and has been able to suggest ways of taxing others, but hoping to go out of the door free of tax himself.

Prof. LINDSAY. I am not asking any benefit for an individual or a profit-making institution. I am asking for a benefit that shall accrue to institutions which are doing public work. If they can not be supported by private wealth they will have to be discontinued altogether or supported by the Government.

Mr. CRISP. I am not questioning the patriotism of colleges or educational institutions, but as one member of the committee I see face to face the question of raising \$2 for 1919 as against \$1 for 1918, and I do not see how we are going to double taxes by increasing the exemptions or releasing from taxation those whom we now hold. We have got to find sources of taxation, and it may be necessary to cut down some of the exemptions it may have made, due to conditions in France. That is the vital question.

The CHAIRMAN. Do you think that the 15 per cent exemption in the income tax with respect to religious, educational, and charitable institutions is a wise provision and sufficient?

Prof. LINDSAY. I think that is a very wise provision, and I think it is sufficient. We haven't any statistics. We haven't the report of this year. We do not know how much the gifts were and how much that exemption amounted to. But I have seen some little feature of it, that it was operated to raise the standard of giving on the part of private philanthropy. In other words, I think when the exemption was somewhere near 10 per cent, that it was 15 per cent—it is nearer 15 per cent to-day—there were a great many people who felt that it was a sort of Government standard that says that they shall give away 15 per cent of their income for philanthropic purposes.

Mr. MOORE. Their tithe?

Prof. LINDSAY. Their tithe.

The CHAIRMAN. Don't you think that that is a sufficient exemption for that purpose?

Prof. LINDSAY. Yes; I think so, so far as the income tax is concerned.

The CHAIRMAN. We will have some gentlemen before us later on who will ask total exemption.

Prof. LINDSAY. I think 15 per cent is a fair exemption.

The CHAIRMAN. That is about \$2,000,000, if we were to give that.

Prof. LINDSAY. I have known of some individual cases where they were able to give more than 15 per cent, and they felt that they were discriminated against somewhat, but I think it is fair.

Mr. MOORE. Is it a fact that under this exemption now provided for by law a man can leave it to a college?

Prof. LINDSAY. You mean the income-tax exemption?

Mr. MOORE. Yes. Suppose a wealthy man in Philadelphia or New York wants to leave \$100,000 to his university in Philadelphia or to Columbia University, under this law he could leave that money flat—that is to say, it would be received in full by the institution where, if it were taxable, of course, there would be a heavy reduction in the inheritance tax and the institution would get less than it does now?

Prof. LINDSAY. You are speaking about section 1201?

Mr. MOORE. I am inclined to think that a man would rather give that to an institution now as provided for in section 1201 rather than leave it in his will, because they would get it all this way and get the full revenue.

Prof. LINDSAY. It might operate in some such way.

The CHAIRMAN. You understand in the present law there is no tax on legacies or devises, but it is a tax just like the State, county, and municipal tax on the whole net estate.

Prof. LINDSAY. Out of the whole net estate.

The CHAIRMAN. In other words, if I owe the State in which I live \$5,000 in taxes, that is a debt, first priority on my whole estate, as if I owed you \$5,000. This tax operates just like that. The proposition is this, as I understand it: If I bequeath to my widow and children \$250,000 and to the university, say Columbia University, \$250,000, you wish the \$250,000 that I give to the university to be relieved from taxation, while my wife and children have to pay taxes. Do you think that the Government ought to be more lenient to the university and other institutions of the kind than to a person's own wife and children?

Prof. LINDSAY. I do not think, Mr. Chairman, that it would work quite that way.

The CHAIRMAN. And if we raise so much by inheritance tax and relieve the Columbia University of this tax on \$250,000, and make the wife and children pay a larger inheritance tax, where is the justice of that?

Prof. LINDSAY. Now, the rate would be raised by this amount, which is a graduated tax, and the rate is dependent on the amount of the net estate. You lower the rate by so much as you take out of the estate.

The CHAIRMAN. But to get the amount which we desire to raise from inheritance taxes, if we relieve these gifts to these institutions, wouldn't we have to raise the tax which our wives and other beneficiaries would have to pay?

Prof. LINDSAY. If you increase the rate and make good the loss, that would apply to that part of the estate that pays the tax. But direct bequests to your wife and children do not have to pay taxes any more than the like bequests to the university.

The CHAIRMAN. But if you relieve the university—if you relieve this gift to the university of the tax—and there are only \$250,000 left, my wife and children would have to pay the whole tax assessed against the whole estate?

Prof. LINDSAY. Yes.

The CHAIRMAN. And it would double their tax?

Prof. LINDSAY. It would double their tax.

The CHAIRMAN. Just take it from a moral standpoint, do you think that is right? Don't you think that Congress does enough when it puts your institution upon the same equality with a man's wife and children and other beneficiaries?

Prof. LINDSAY. I think that you and I, when we draw a will, would make provision to take care of our family, and we haven't any business making bequests to Columbia University or any other institutions until we have provided for our family.

The CHAIRMAN. You know of a great many wills being made by testators that turn out that the estate did not have sufficient funds to pay specific and pecuniary legacies.

Prof. LINDSAY. Yes.

The CHAIRMAN. It has occurred to me also that during this war wouldn't it be better for the Government to have that tax itself to use in the winning of this war, rather than letting the individual when he makes his will and dies, letting him say to whom he shall give money?

Prof. LINDSAY. Of course, the Government has got to have money which it needs to win this war. There would be no difference of opinion on that subject. If that means taking every dollar of private wealth, every dollar of private income, and every dollar that would go to charitable or educational institutions, it will have to do it. But, now, remember, if we do not support these institutions and put them out of business, they can not be rebuilt in a day. The war will be over some day and it is a question whether we ought not to make sure whether we have exhausted every other resource before taxing these institutions which are doing semipublic work.

The CHAIRMAN. And do you really believe that making this tax apply to the whole estate would cut off any bequests and devisees to the institutions?

Prof. LINDSAY. I am afraid it will, and it will reduce many. May I be permitted to state another case similar to the one that you cited a moment ago, in which it works the other way? Sometimes there are cases where a bequest of a certain amount—say, \$250,000—is paid to one or more individuals, and a residuary bequest is made to Columbia University, or to another college, and that institution therefore pays a tax not only upon the amount that was left to it but upon the

\$250,000 at whatever the Government imposes that was left to the widow or children.

The CHAIRMAN. But in the majority of cases the legacies are specific.

Prof. LINDSAY. That was the question of Mr. Longworth a few moments ago; but there is a difference of opinion on it. I have been trying to get information, and I found that the authorities are equally divided.

Mr. LONGWORTH. Did they bring your attention to any case where a substantial bequest came from the residuary estate?

Prof. LINDSAY. Here is a very novel case that I have in the last will and testament of Ludwig Dreyfus, who died in March this year and left a very large estate. I would like to refer to the terms of that estate. I have a memorandum about it. It will take but a moment. It answers one or two of the questions that have been put by the chairman.

Mr. CRISP. Did you hear that a man in New York had contributed \$25,000 to the Mitchell campaign fund and then claimed exemption on the ground that it was a contribution to charity?

Prof. LINDSAY. I had not heard of that.

Mr. MOORE. Wouldn't that be a contribution to charity, politically speaking?

Prof. LINDSAY. I suppose so.

Mr. CRISP. There is a record to that effect in the internal-revenue office in New York, third district.

Prof. LINDSAY. Was it allowed?

Mr. CRISP. No; not for a moment.

Prof. LINDSAY. I have here a brief statement which I would like to submit for the record, if I may.

(The statement is as follows:)

SUPPLEMENTARY STATEMENT OF JUNE 13, 1918.

The way of the taxgatherer is necessarily hard, but wealth is no slacker in this war. It is cheerfully bearing the heavy burdens that recent revenue legislation has placed upon it. It is the part of political wisdom, however, to consider well the implications of every tax, the far-reaching and indirect effects of a tax upon the social structure of the body politic. From that point of view the new Federal estate tax, a graduated transfer tax, imposed by the act of September 8, 1916, upon the entire net estate in excess of \$50,000 of decedents dying after that date, and the rates of which were doubled by two subsequent amendatory acts of March 3, 1917, and October 3, 1917, is unwise, onerous, and highly disadvantageous in its effect upon legacies and bequests to charitable, educational, and religious institutions. It contradicts the wiser policy enunciated in the income tax provisions of the great war revenue act of October 3, 1917, in which gifts and contributions for such purposes were made deductible and therefore tax free up to 15 per cent of the individual's otherwise taxable income. It is un-American and contradicts the previous tax policy of the Federal Government and that of 34 State governments which have inheritance taxes from which such bequests and legacies are exempt. It should be amended at once by Congress at this session, exempting all such bequests and legacies from any tax burden whatsoever. Several bills are pending in the House and Senate, notably the Hollis-Rainey bill introduced in both houses of Congress, to accomplish this purpose.

The estate tax is not a direct tax upon bequests and legacies, but it operates to discourage leaving private wealth for public purposes more than a direct tax upon such gifts would do. Although the college, hospital, or institution receiving such a bequest may not have to pay the tax the estate must pay the tax upon the amount of such gift, and the amount of wealth the testator

has to give to his family or for public purposes is therefore reduced by the amount of the tax. If, however, as is frequently the case, the bequest for education, philanthropy, or religion is made as a proportionate share of the residuary estate after the testator has made provision for his family and dependents, then the tax not only reduces the gift for a public purpose by the amount of the rate of the tax applied to the principal of the gift, but by an amount determined by the increased rate which the entire estate must bear applied to the bequests for private purposes in addition to those for public purposes. With as heavy a tax as is now imposed by the rates of the Federal law, plus the added State inheritance and transfer taxes in some jurisdictions, many gifts to hospitals, colleges, and other public purposes, now more needed than ever, may well be wiped out altogether.

It would be much more in the public interest if a direct exemption of all bequests and legacies for public purposes, whether made directly or as a part of a residue of an estate, should serve to encourage and stimulate such gifts at a time when our colleges, hospitals, charitable and religious institutions are called upon to meet new burdens occasioned by the war. There is not a college in the land that has not poured out its all in men and treasure in the service of the country and is not striving with diminished resources to meet the new demands for men trained to fight the Nation's battles at the front and at home, and for trained leadership in the social reconstruction that must soon come after the military victories are won.

Some are carrying deficits as heavy war debts; some are paying them from unrestricted endowments, intended for use in perpetuity; and all are hoping to increase their service and recoup their present losses largely through bequests and legacies to come from that true American generosity that has been so characteristic of the transfer of American fortunes from one generation to another. It would be shortsighted folly, indeed, if we allowed a new taxation policy to discourage, hinder, or destroy this fine American tradition. Hospitals and charitable institutions generally are, if anything, worse off than the colleges. They must meet new and heavy additional demands in caring for broken and disrupted homes and in supplementing the work of the Government in caring for the invalided by the fortunes of war, as well as those injuries by disease or bullets on the battle field.

What objection can there be to the prompt correction by Congress, through amendment of the war-revenue acts, of what would seem almost to have been an oversight in the first place? There has been no valid objection offered. Some have said that during the war the Government needs all the money it can get. This is no reason for impoverishing public services which the Government itself is asking to have carried on with unabated vigor and which in large part would have to be subsidized from the Public Treasury if private resources fail or become inadequate. Besides, the limits of available revenue resources have not yet been reached. Even the estate tax could be revised to yield more revenue with the exemption asked for than it yields now without the exemption, and in ways that would not produce the unfortunate social consequences we have just pointed out.

Others have said that to allow a specific exemption for bequests to religious, literary, charitable, and educational institutions would result in allowing such institutions an exemption not allowed the decedent's wife or children, and why should these institutions have an exemption which is refused to one's wife and children? In the first place, the theory upon which the tax is levied is that it is a tax upon surplus private wealth and that the wife and children are taken care of in the general exemption of \$50,000 or of entire estates when less than that amount. Second, if the Government takes only that part of the surplus over \$50,000 as represented by the varying rate of the tax, say, 10 per cent in the case of a net estate of a certain amount, is there not a greater reason for influencing the disposition of the other 90 per cent of the surplus by offering the inducement of the tax exemption for that part which goes voluntarily to a public purpose as compared with that part which goes to the wife and children or other private use over and above the \$50,000 net exemption? Third, a single illustration will suffice to show that, as a matter of fact, the exemption of bequests for public purposes would operate in most cases as a benefit to the wife and children; indeed, solely for their benefit, when the bequests for public purposes were direct bequests, and the wife and children had a residuary interest, and proportionately for their benefit when the institutional legatees and the wife and children were coresiduary legatees. The late Ludwig

Dreyfuss, of New York, died recently, leaving an estate of several million dollars, some of which goes at once and nearly all of which goes eventually to charity. To his wife he left his personal effects and \$25,000, and to several nieces and other relatives four \$5,000 bequests, and one of \$3,000.

He then left approximately \$31,000 in direct bequests to some 25 public institutions, including several hospitals, and some social enterprises of a national character such as the National Child Labor Committee, chartered by special act of Congress. The remainder of his estate, amounting to several million dollars, is devised to his executors and trustees named in trust for the benefit of his wife for and during her life and upon her death to be distributed to some 30 charities, including 10 hospitals, with the exception of \$220,000, which goes to 19 nephews and nieces in shares of \$10,000 each in all but three cases, in which the share is \$20,000 each. The United Hebrew Charities of New York will be the largest single beneficiary under this will. If bequests to charities were exempt from the tax, the wife's life interest would be greatly increased, and more than 30 charitable institutions would benefit by their share of the tax on their proportion of the residuary estate when distributed.

Many other illustrations could be given where the residuary estate goes largely to public purposes. In the newspapers a few days ago there was the report that the will of the late Mrs. Margaret E. Zimmerman was admitted to probate and bequeathed over \$800,000 to religious and charitable organizations in New York and a residue of several millions to St. Michael's Protestant Episcopal Church. The act to provide ways and means to meet war expenditures, approved June 30, 1898 (the Spanish War revenue act), as originally enacted, contained no exemption of gifts to charities, but this defect was remedied by the amending act of March 2, 1901. Later, by the act of June 27, 1902, the Congress provided that the Secretary of the Treasury should refund all taxes which had been paid upon bequests or legacies of this character under the terms of the original act of 1898. In this way all taxes levied under the act mentioned, upon property passing for religious, literary, charitable, educational, and other similar uses, were repealed.

Congress should take similar action now and exempt, without delay, from the operation of the Federal estate-tax law legacies and bequests to educational, philanthropic, and religious institutions. To urge this is not to ask a favor, but rather to assure the continuance of a characteristic American public policy, the results of which have been beneficent in the extreme and greatly to the credit and advantage of the American people.

**Mr. SLOAN.** Then in that case there are many times as many specific bequests to the charitable institutions as there are in the residuary estate.

**Prof. LINDSAY.** Only in the first institution. The total specific bequests aggregate about \$250,000 and the residuary to be distributed among institutions I have estimated to be something like \$10,000,000. The value of the estate is not known.

**Mr. SLOAN.** The will said the specific bequests were about 30 times the other. There was only one residuary, I believe.

**Prof. LINDSAY.** I think in the first instance, in the first distribution, all of them were specific bequests, including a few private ones, and some 25 public institutions. After the first distribution was made the whole of the residuary estate not distributed, the income goes to the wife during life and on her death the entire residuary estate terminates and is distributed among the various institutions.

**Mr. SLOAN.** How many are included in the residuary estate? I may not have understood it correctly.

**Prof. LINDSAY.** Thirty, including 10 hospitals and 19 nephews and nieces.

**Mr. SLOAN.** Is that in the residuum?

**Prof. LINDSAY.** Yes.

**Mr. SLOAN.** How many in the first distribution?

**Prof. LINDSAY.** The same number, 11; 25 public institutions, and this included the wife specifically—31 all together.

The CHAIRMAN. You read in that paper that \$50,000 exemption was for the wife and children. Of course, you are not exactly correct in that case. That \$50,000 exemption is as much for other beneficiaries under the will as it is for the wife and children.

Prof. LINDSAY. Of course, it might appear that there was no wife and children.

The CHAIRMAN. It operates entirely to the advantage of the legatees and devisees under the will.

Prof. LINDSAY. Of course, in case there were no heirs—direct heirs—it would operate as a benefit to the institutions just the same; but the theory upon which that exemption is included in the law is undoubtedly to protect the wife and children.

The CHAIRMAN. It is a simple exemption, like everybody's else; it inures to everybody under the will. Do you know of any State in the Union that taxes transfers of estates to inheritance on the net estate that exempts from such a tax charitable institutions or educational institutions?

Prof. LINDSAY. I am not sure, Mr. Chairman, that I know of any instances of a tax exactly similar to this. This is a new form of tax in this country. It has not been used heretofore prior to 1916, when it was first enacted by the Federal Government, and I do not think it has been used by any State.

The CHAIRMAN. I think Rhode Island has used it.

Prof. LINDSAY. I have, however, a carefully prepared statement of the various State tax laws, which I will ask to submit in the record.

The CHAIRMAN. Most of them are specific legacies?

Prof. LINDSAY. Most of them are on specific legacies. Some of them exempt.

The CHAIRMAN. Giving the preference at all times to the family?

Prof. LINDSAY. Thirty-four exempt and 7 or 9 do not.

Mr. Chairman, if I may be permitted to include in the record a brief statement explaining and making an argument for this exemption, it is embodied in a bill which was introduced in the House by Mr. Rainey and in the Senate by Mr. Hollis, independent of the hearing on this.

The CHAIRMAN. All right.

(The statement follows:)

**LEGACIES AND BEQUESTS FOR EDUCATIONAL, CHARITABLE, RELIGIOUS, AND PUBLIC PURPOSES SHOULD BE FREE FROM ANY BURDEN OF THE FEDERAL ESTATE TAX.**

[A statement by Samuel McCune Lindsay, professor of social legislation, Columbia University, addressed to the Senate Finance Committee and the House Ways and Means Committee, on behalf of the committee on war charity and social work, Mar. 6, 1918.]

*To the Senate Finance Committee and the House Ways and Means Committee:*

There has been referred to you a bill "To amend the war-revenue act in relation to taxation of legacies and inheritances, and for other purposes," said bill having been introduced in the House by the Hon. Henry T. Rainey of Illinois, H. R. 9223, and in the Senate by Senator Henry F. Hollis of New Hampshire, S. 3730. There is also before the Ways and Means Committee another bill for the same purpose introduced in the House by Hon. Edward W. Pou of North Carolina, H. R. 8751. These proposals seek to amend the existing Federal estate tax law, so that in determining the value of the net estate of residents

and nonresidents of the United States for the purpose of the tax there shall be deducted from the value of the gross estate, in addition to the present allowable deductions, "all bequests, legacies, devises, or gifts to the United States or to any State, or to any political division thereof, for exclusively public purposes, and all bequests, legacies, devises, or gifts for uses of a religious, literary, charitable, or educational character or for the encouragement of art, or to societies for the prevention of cruelty to children or for the prevention of cruelty to animals."

One of the proposals also authorizes and directs the Secretary of the Treasury to refund, under appropriate rules and regulations, as was done under a Spanish war revenue act, the taxes collected upon that portion of net estates which represents bequests, legacies, etc., of the character described.

#### HISTORY OF TAXATION OF LEGACIES AND BEQUESTS.

In both particulars the proposals follow good precedents. The act of June 27, 1902, amended the act of June 30, 1898, "To provide ways and means to meet war expenditures," which was the Spanish war revenue act, and, as originally enacted, contained no exemption of gifts to educational, charitable, and religious institutions, but was amended by an act of March 2, 1901, entitled "An act to amend an act entitled 'An act to provide ways and means to meet war expenditures, and for other purposes, approved, June 13, 1898, and to reduce taxation thereunder'" (U. S. Stat. L., vol. 31, chap. 806). This act exempted "all bequests or legacies for uses of a religious, literary, charitable, or educational character or for the encouragement of art, or legacies or bequests to societies for the prevention of cruelty to children, including all bequests or legacies of such character on which the tax imposed had not been paid or collected on the 1st day of March, 1901." An act of June 27, 1902, gave further relief by providing for the refund of the taxes collected under the act of 1898.

Little use has been made by the Federal Government of this surce of revenue—that is, of a tax on estates or inheritances in general. Throughout our history such taxation has been resorted to by the Federal Government only as a war measure and at other times has been left to the States, which have made extensive use of inheritance or estate transfer taxes. Prior to the Civil War practically the only Federal inheritance or estate taxes were the stamp duties imposed by the stamp act of July 6, 1797, somewhat similar to the original English legacy duty, which was repealed before the act had been in operation four years. The war-revenue act of July 1, 1862, imposed a graduated legacy tax, and an act of July 30, 1864, increased the rates and supplemented the legacy tax by a succession tax on real estate. Apparently no exemption of legacies for charitable and public uses was made by either of these acts nor by a supplementary act of July 13, 1866, none of which seems to have been rigidly enforced or yielded returns that indicated that they were generally observed. They were repealed by the act of July 14, 1870. The Spanish War revenue act, which later exempted legacies for charitable and public uses as noted above, was repealed as far as the section imposing a tax on legacies and distributive shares on personal property in concerned by the act of April 12, 1902.

No further experiment in this direction or use of taxation of legacies and bequests was resorted to by the Federal Government until the revenue act of September 8, 1916, which imposed a graduated estate tax on estates in excess of \$50,000, of those who died on or after September 9, 1916. The rates imposed in this act were increased 50 per cent by the act of March 3, 1917, made applicable to estates of those who died on or after March 3, 1917, and again increased by the act of October 3, 1917, to double the rates of the act of September 8, 1916.

#### OBJECT OF THIS PROPOSAL.

To relieve legacies and bequests for public purposes and for uses of a religious, charitable, and educational character from the burden of taxation under the revenue acts of 1916 and 1917 and to remedy a defect in this legislation similar to that which Congress recognized in the legislation of 1898 and remedied in the legislation of 1901 and 1902, the bills herein referred to have been introduced. The remedies herein proposed are identical with those which have already received Congressional sanction, and if enacted will make the policy of the Federal Government consistent with our traditional American policy

with respect to taxation which never has sought deliberately to reduce the benefits of legacies and bequests for charitable and public uses.

The policy proposed is also consistent with that followed in the legislation of 34 States and 1 territorial possession<sup>1</sup> which have inheritance tax laws, and in which bequests for educational, charitable, and other public purposes are exempted in whole or in part from their operation. Five States, the District of Columbia, and Alaska have no inheritance tax laws, and only nine States<sup>2</sup> do not make the exemption which we here request.

#### THE PRINCIPLE RELIED UPON.

The Government should avoid taking by compulsion even a small fraction of private wealth voluntarily devoted to a public use. Otherwise it merely transfers to the public purposes of taxation money already devoted to a public purpose, or penalizes generosity by taxing a gift, which is universally recognized as repugnant to sound policies of taxation.

Congress recognized the justice of the exemption herein proposed in another way with respect to the income tax in the revenue laws of 1916 and 1917.

President Nicholas Murray Butler, of Columbia University, in his annual report for 1917, has very well described this precedent as follows:

"The Congress of the United States, in drafting the war-revenue act, has wisely provided that contributions or gifts actually made within a given year to corporations or associations organized and operated exclusively for religious, charitable, scientific, or educational purposes, no part of the net income of which inures to the benefit of any private stockholder or individual, to an amount not in excess of 15 per centum of the taxpayer's taxable net income as computed without the benefit of this provision, shall be allowable as a deduction from taxable income for that year. This is a clear and satisfactory recognition of the principle that private money contributed for public purposes shall not be taxed, at least up to the limit fixed in the statute. Complete recognition of this principle would require that private money given for public purposes should be exempt from taxation no matter what relation its amount may bear to the giver's taxable income. The limitation set by the Congress is probably due to a fear that if full recognition were given just now to this undoubtedly sound principle the Government might suffer loss through its abuse by unscrupulous persons.

"While recognizing this sound principle, so far as it related to gifts, the Congress in the same war-revenue act violated it by imposing an onerous and highly disadvantageous tax upon legacies, and bequests to charitable, educational, and religious institutions. \* \* \* The amount which the Government will receive in revenue from these provisions, if they are kept upon the statute book, will be very small in comparison with the grave damage thereby inflicted upon the educational, philanthropic, and religious institutions of the country.

"It would be, indeed, disastrous if the many and far-reaching changes that are to accompany the war and the new forms of taxation which the war will compel, took such a form as to imperil the effectiveness and even the existence of the great philanthropic and educational institutions of the country. It is the well-established tradition of American life that all possible encouragement shall be given to those individuals and groups of individuals who labor to aid the spiritual and intellectual life of the Nation, or to relieve suffering and want, by building up and maintaining institutions of religion, of philanthropy, and education. \* \* \* As a result of this wise and far-sighted policy, there have been built up in the United States, without public tax, a great group of religious, philanthropic, and educational undertakings that are the glory of the country and the envy of other nations. To institutions of this kind there has been for nearly a century past a constant flow of private benefactions. Legacies and bequests made to them are, as a rule, free from the usual transfer and inheritance taxes, on the principle that these legacies and bequests represent private moneys transferred to public uses. If the effect of taxing gifts, legacies,

<sup>1</sup> Arkansas, California, Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Rhode Island, South Dakota, Tennessee, Texas, Vermont, Virginia, Washington, West Virginia, Wisconsin, and Hawaii.

<sup>2</sup> Arizona, Georgia, Maryland, Montana, Nebraska, Nevada, Pennsylvania, Utah, and Wyoming.

and bequests of this kind were to dry up the streams of benefaction by which so much of all that is best in the United States has heretofore been fertilized and strengthened, the result would be lamentable in the extreme."

#### HOW THE PRESENT LAW OPERATES.

The estate tax provisions of the revenue laws of 1916 and 1917 require the executor of every estate of every resident decedent whose gross estate exceeds in value \$60,000, or whose net estate, as defined in the law, has any value in excess of the specific exemption of \$50,000, to file a tentative return within one year after the decedent's death.

The tax based on the net estate is due one year after the decedent's death and is subject to a discount of 5 per cent per annum if paid prior to that time, and if not paid within 90 days thereafter is subject to an addition of 10 per cent interest per annum on the tax from the time of the decedent's death. This requirement often adds a further burden to the tax when the executor is forced to sell securities or property under disadvantageous market conditions to get the money to pay the tax unless the estate has ample liquid assets. This fact alone operates to discourage benefactions for public uses because testators do not wish to run the risk of having their residuary estate wiped out, especially if it goes to their immediate family, or bequests to the immediate family possibly reduced because the residuary estate is not sufficient to pay the tax. A benefaction made specifically for an educational, charitable, religious, or other public use, must now be included in the net estate upon which the tax is imposed. Whether it suffers any reduction thereby will depend upon whether the residuary estate is sufficiently large to take care of the tax. If the benefaction is not made specifically to the educational, charitable or religious institution, but, as is frequently the case, the institution or public use is one of several residuary legatees among whom the entire residuary estate is to be divided, share and share alike, then, of course, it is reduced not only by the amount of the tax upon its share of the residuary estate but must bear also its proportionate share of the tax upon the whole net estate. In any event the net result is certainly to discourage all such benefactions because of the uncertainty of the amount and incidence of the tax with respect to such benefactions. It is likewise certain that a provision to exempt such benefactions by not including them in the net estate subject to the tax would operate to encourage and stimulate benefactions being made directly to educational, charitable, and religious institutions.

#### A SUMMARY AND A PARALLEL.

##### SPANISH WAR TAX LEVIED.

The act of June 13, 1898, entitled "An act to provide ways and means to meet war expenditures" (the Spanish War revenue act), levied a legacy tax but made no exemption of property passing to public uses until amended by the act of March 2, 1901.

##### EUROPEAN WAR TAX LEVIED.

The act of September 8, 1916, entitled "An act to increase the revenue and for other purposes," imposed a graduated estate tax on net estates over \$50,000, and made no exemption of property passing to public uses. It was amended by the act of March 3, 1917, increasing each of the rates of the estate tax 50 per cent, but again making no such exemptions, and it was further amended by the act of October 3, 1917, entitled "An act to provide revenue to defray war expenses and for other purposes," again increasing the rates of the tax, making them double those of the original tax but again making no exemption of bequests and legacies for educational, charitable, and religious purposes.

##### EXEMPTION PROVIDED.

The act of March 2, 1901, exempted "all bequests or legacies for uses of a religious, literary, charitable, or edu-

##### EXEMPTION PROVIDED.

The Hollis-Rainey bills, S. 3730 and H. R. 9223, introduced January 24, 1918, in the House and February 5,

cational character, or for the encouragement of art or legacies or bequests to societies for the prevention of cruelty to children, including all bequests or legacies of such character on which the tax imposed had not been paid or collected on the 1st day of March, 1901."

1918, in the Senate, proposes to make such exemption in the following language: "That for the purpose of the tax the value of the net estate shall be determined (a) in the case of a resident by deducting from the value of the gross estate \* \* \* all bequests, legacies, devices, or gifts to the United States or to any State, or to any political division thereof, for exclusively public purposes, and all bequests, legacies, devises, or gifts for uses of a religious, literary, charitable, or educational character, or for the encouragement of art, or to societies for the prevention of cruelty to children or for the prevention of cruelty to animals."

## REFUND AUTHORIZED.

The act of June 27, 1902, provided "that the Secretary of the Treasury, under appropriate rules and regulations to be prescribed by him, be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the corporations, associations, societies, or individuals as trustees or executors, such sums of money as have been paid by them as taxes upon bequests or legacies for uses of a religious, literary, charitable, or educational character, or for the encouragement of art, or legacies or bequests to societies for the prevention of cruelty to children under the provisions of section 29 of the act entitled 'An act to provide ways and means to meet war expenditures, and for other purposes, approved June 13, 1898, and to reduce taxation thereunder.'" (U. S. Stat. L., vol. 32, ch. 1160.)

## REFUND AUTHORIZED.

It provides also that "the Secretary of the Treasury, under appropriate rules and regulations to be prescribed by him, be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the corporations, associations, societies, or individuals as trustees or executors, such sums of money as have been paid by them as taxation upon bequests or legacies for uses of a religious, literary, charitable, or educational character, or for the encouragement of art, or legacies or bequests to societies for the prevention of cruelty to children, or for the prevention of cruelty to animals under the provisions of," etc. (the appropriate section of the acts of Sept. 8, 1916, Mar. 3, 1917, and Oct. 3, 1917).

The Pou bill, H. R. 8751, introduced January 16, 1918, provides for such exemption in analogous language for the estate of residents and nonresidents, but does not provide any refund of taxes already collected.

## NOT A TAX-DODGING PROPOSAL.

Whatever loss the exemption would cost the Government can be more than made good by additional taxes which may fall directly or indirectly upon the persons or property of the very persons who benefit by the exemption. The exemption is not only necessary in order to give educational, charitable, and religious institutions the support which the Government can give them by this means, but is based on sound public policy. The rates of the estate tax might be raised sufficiently to meet all of the loss incurred by the exemption and the higher rates would be accepted by the public all the more cheerfully because of a feeling that the Government had recognized fundamental justice in refraining from taking by compulsion any part of that which an individual had already contributed to a public use. The flow of benefactions to public uses would not be half so likely to be discouraged or dried up if the exemption were granted and the rates of the estate tax again substantially increased in amount.

The benefit to be derived by the Government by the imposition and collection of this tax would be many times offset by the disadvantages to the public of crippling and preventing the growth of these genuinely public and characteristically American institutions.

It is a mistake to speak of one of these institutions as wealthy because the amount it holds in trust is relatively large. That only means that the public obligations of service which it has to meet are larger still. The endowments of an institution for education, philanthropy, or religion are in no wise to be compared with the capital holdings of business organizations for profit.

PRESENT NEEDS URGENT.

It will take a generation for the colleges and universities to recover from their present adversity. They will need all the help they can get from future bequests to take care of the debts they must accumulate during the war and to restore them to their former condition of efficiency. In addition to this the country will need their help and look to them for new leadership in training men for the new tasks of Government in the reconstruction that must come after the war.

Aside from some provision for the higher education and training of officers for the Army and Navy, some provision for schools for the Indians as special wards of the Nation, a few land grants to the States for common schools, and colleges of agriculture and mechanical arts, and very recently some Federal aid to the States in the matter of vocational training and agricultural education, the Federal Government has borne no share of the expense of schools, colleges, and universities. The State governments, likewise, have carried only a part of the public expenditure for public schools and a still smaller proportion of that for all the various forms of higher education and technical training provided by institutions other than the common schools.

If it were proposed to abandon our traditional policy of leaving to private benevolence the chief support of higher education, the main reliance of hospitals and charitable institutions, and the only hope for the encouragement of art, and for governments to assume these obligations, then there might something be said in favor of refusing the exemption herein requested of bequests for educational, charitable, religious, and public uses.

Even those who might regard the direct maintenance of such institutions as no constitutional function of the Federal Government would admit that the Government should at least refrain from putting any burden on them.

The needs of hospitals, of charitable and relief organizations of all kinds, of religious institutions, and of other organizations engaged in works of humanity and mercy are probably no less urgent than those of institutions strictly educational in character. Only the latter have been deprived of certain definite sources of revenue and support from tuition fees received from their students in proportion as they have patriotically vied with one another in urging their students and faculties alike to give themselves freely in the military and civil service of their country. The burden upon all alike—upon education, charitable relief, and the ministry of religion—is a new and increased burden by reason of the war. The need for the service which these institutions alone can render, apart from anything that the Government may or can do itself, is such now—and will be so much greater in the future, when we enter upon the work of reconstruction after the war—that no wise government can afford to ignore their call for help or to refuse them every just means of encouragement and support.

Mr. LONGWORTH. Is that what you are advocating—the substance of that bill?

Prof. LINDSAY. The same thing is embodied in another bill, introduced by Mr. Pou, and the same thing with respect to legacies for art purposes in the bill introduced by Mr. Moore.

Mr. CRISP. I happen to have a brief here that I am interested in. In one of the old English cases, Lord Linder held that a home for lost dogs was a charitable institution. Of course, under the proposition here, such an institution would be exempt from taxation.

Prof. LINDSAY. Well, if it were held to be a charitable institution in this country, under our laws, it would be exempt not from taxation but from taxation upon the bequests to that institution.

Mr. CRISP. Societies for the protection of vivisection are held to be a charity, and I understand it has been held that a fund for woman suffrage is a charity.

Prof. LINDSAY. I am afraid that would come under the same heading as the Mitchell case.

Mr. CRISP. Charity is a broad word, and it looks as if we would lose a great deal of revenue that we did not contemplate losing.

The CHAIRMAN. Just a word, again. Referring to the \$50,000 exemption, one of the main purposes was to leave it to the States to tax, and for the most of the estates the State takes care of that, and you do not want to drown the Federal courts with all of these little cases. That is one of the main reasons.

Prof. LINDSAY. Yes.

Mr. SLOAN. Have you figured out how much revenue this Government would lose by putting in operation such a proposed amendment as you suggest?

Prof. LINDSAY. No; as I said in answer to another question earlier this morning, we have no official data yet. This tax is a new tax. It has only operated on the estates of decedents after September 16, and the returns are not in yet. I asked a few weeks ago for the returns from the Internal Revenue Bureau, but they are not made up yet, for the first year of operation.

Mr. SLOAN. Could you probably obtain those figures so as to find out what it would be?

Prof. LINDSAY. I presume that I can obtain the results of the tax of the first year, and perhaps for the second year, after you doubled the rates.

Mr. DICKINSON. Doctor, are you leaving a list of the laws of the several States?

Prof. LINDSAY. Yes.

The CHAIRMAN. Just append that to your remarks.

Mr. RAINEY. I do not remember that you covered the question on the effect of the earnings of colleges caused by the war, and the enlistment of students, and what effect that has on the revenue.

Prof. LINDSAY. I referred to that very incidentally a moment ago. I presume, gentlemen, that you are all more or less familiar with those effects. So far as the higher educational institutions go, the effect of the war upon attendance and therefore upon revenue that comes from tuition fees of students has been very great. It varies with different departments and with different schools, different classes and different institutions. In law schools the reduction has been at least 50 per cent and it looks as though by another year that many law schools would have to close up.

Mr. RAINEY. In tuition fees?

Prof. LINDSAY. In reduction of the number of students and, of course, that means a reduction of tuition fees. One of the colleges, Hobart College, has closed up, gone out of business, and turned its buildings over for use as a hospital, and the president of the institution has offered his services as a volunteer laborer in one of the departments of the Government, whether the Food Administration or not, I do not remember.

Mr. DICKINSON. Are not a great many of the students of these various colleges all over the country going into the service, and thereby avoiding the necessity of the expenditure of so much money during the war?

Prof. LINDSAY. Yes; except that there are new problems of education all the time. The more training the men have to have, new departments of service, the greater burden that is being put upon these institutions. If they had the resources to go on, they could enlist, and could train them in special new work—and there is a great deal of work in the training of men for a great many kinds of work—and the reason for maintaining the institutions that they may be able to maintain an effective plant to continue the work of higher education in the training of teachers, etc., after the war. You can't build a plan of that sort overnight. You can not recruit an efficient and effective college faculty in a short time. It is a long, slow passing, and that is going to cost a great deal more in labor, time, and money to rehabilitate them after the war. There is plenty of work that they can do, even when they can't have the normal number of students on account of the draft.

The CHAIRMAN. Gentlemen, we will return at a quarter to 2.

(Thereupon the committee took a recess at 12.30 p. m. until 1.45 p. m.)

(The State laws referred to are as follows:)

#### PREVIOUS FEDERAL ESTATE-TAX LEGISLATION AND EXEMPTIONS.

United States: The Spanish War Federal inheritance-tax act of June 13, 1898, as originally enacted, contained no exemption of charities.

This defect was partly remedied by the amending act of March 2, 1901, which exempted all "bequests or legacies for uses of a religious, literary, charitable, or educational character, or for the encouragement of art or legacies or bequests to societies for the prevention of cruelty to children, including all bequests or legacies of such character on which the tax imposed had not been paid or collected on the 1st day of March, 1901."

And by the act of June 27, 1902, it was provided that the Secretary of the Treasury should refund all taxes which had been paid upon bequests or legacies of this character under the act of 1898, thus repealing all taxes under the Spanish War Federal inheritance-tax act upon property passing for the religious, literary, charitable, educational, and other uses described.

Income-tax exemption: The existing Federal income-tax law recognizes the propriety of exempting from its operation the income of educational and charitable institutions. It contains, among others, the following provision: "There shall not be taxed under this title any income received by any \* \* \* corporation or association organized and operated exclusively for religious, charitable, scientific, or educational purposes no part of the net income of which inures to the benefit of any private stockholder or individual." (Act of Sept. 8, 1916, sec. 11.)

The original income-tax law of 1913 contained a similar provision, as did the act of August 27, 1894, section 32.

The corporation excise-tax law of August 5, 1909, section 38, provided a similar exemption.

#### SUMMARY OF EXISTING STATE LEGISLATION IN REFERENCE TO EXEMPTION OF BEQUESTS, ETC., FOR EDUCATIONAL, CHARITABLE, AND OTHER PUBLIC PURPOSES FROM INHERITANCE TAXATION.

I. The following States have no inheritance-tax laws: Alabama, Florida, Mississippi, New Mexico, South Carolina (5); and there are none in the Territory of Alaska and District of Columbia (2)—7.

II. The following States exempt bequests for educational, charitable, and other public purposes, in whole or in part, from the operation of their inherit-

ance-tax laws: Arkansas, California, Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Rhode Island, South Dakota, Tennessee, Texas, Vermont, Virginia, Washington, West Virginia, Wisconsin (34); Hawaii also exempts such bequests (1)—35.

III. The following States do not provide for such exemption: Arizona, Georgia, Maryland, Montana, Nebraska, Nevada, Pennsylvania, Utah, Wyoming—9.

#### IV. Summary:

Jurisdictions in which there are no inheritance-tax laws.....	7
Jurisdictions in which bequests for these purposes are exempted.....	35
Total .....	42
Jurisdictions in which such bequests are not exempted.....	9
Total .....	51

Arkansas exempts "all property transferred in good faith to societies, corporations, and institutions now or hereafter exempted by law from taxes, or to any public corporation or to any society, corporation, institution, or association of persons engaged in or devoted to any charitable, benevolent, educational, public, or other like work (pecuniary profit not being its object or purpose), or to any person, society, corporation, institution, or association of persons in trust for or to be devoted to any charitable, benevolent, educational, or public purpose by reason whereof any such person or corporation shall become beneficially entitled in possession or expectancy to any such property or to the income thereof." (Laws of 1915, ch. 189.)

California the same as Arkansas. (Laws of 1911, ch. 395, sec. 4.)

Colorado exempts "all transfers of property to the State of Colorado, or to any county, city, town, or other municipality, or for the use of public libraries, for religious or charitable purposes exclusively, or for schools and colleges not for profit: *Provided, however,* That the same be situated within this State or the property be limited for use within this State." (Laws of 1913, ch. 136, sec. 4.)

Connecticut exempts "all property passing to or in trust for the benefit of any corporation or institution located in this State which receives State aid, or for the use of a municipal corporation for public purposes within this State, and all gifts of paintings, pictures, books, engravings, bronzes, curios, bric-a-brac, arms and armor, and collections of articles of public interest passing to any corporation or institution located in this State for preservation and free exhibition for public benefit." (Act of 1915, ch. 332.)

Delaware exempts "any property, estate, or interest therein passing to or for the use or in trust for, charitable, educational, or religious societies or institutions, or cities or towns for public improvement, or to school districts or library commissions." (Laws of 1909, ch. 225, sec. 1.)

Idaho the same as Arkansas. (Idaho Revised Codes, title 10, ch. 5, sec. 1877.)

Illinois exempts "beneficial interests of any property or income therefrom" passing "to or for the use of any hospital, religious, educational, Bible, missionary, tract, scientific, benevolent, or charitable purpose, or to any trustee, bishop, or minister of any church or religious denomination, held and used exclusively for the religious, educational, or charitable uses and purposes of such church or religious denomination, institution, or corporation, by grant, gift, bequest, or otherwise." (Act of June 14, 1909, sec. 28.)

Indiana exempts "all property transferred to municipal corporations within the State for strictly county, town, or municipal purposes, or to the bishop, rector, pastor, trustee, board of trustees, or governing body of any educational or religious institution, who shall use the property so transferred solely for religious, charitable, or educational purposes within the State, or to corporations of this State organized under its laws solely for religious, charitable, or educational purposes, which shall use the property so transferred exclusively for the purpose of their organization within the State." (Laws of 1913, ch. 47, sec. 4.)

Iowa exempts property passing "to educational and religious societies or institutions, public libraries, and public art galleries within this State and open to the free use of the public"; "to or for hospitals within this State open to the public and not operated for gain, or to societies within this State organized for purposes of public charity, including cemetery associations, but not including

societies maintained by fees, dues, or assessments in whose benefits the public may not share"; "to a municipal or political corporation within this State for a purely public purpose." (Laws of 1911, ch. 68, sec. 2.)

Kansas exempts property passing "to or for the use of literary, educational, scientific, religious, benevolent, and charitable societies or institutions: *Provided*, Such use entitles the property so passing to be exempt from taxation;" and property passing "to or for the use of the State, a county, or a municipality for public purposes." (Laws of 1915, ch. 357.)

Kentucky exempts "property of any amount bequeathed or transferred to any municipal corporation within this State for public purposes, to institutions of purely public charity, to institutions of education not used or employed for gain by any person or corporation and the income of which is devoted solely to the cause of education; to public libraries; or to any person or persons, society, corporation, institution, or association in trust for any of the purposes above mentioned." (Laws of 1916, ch. 26.)

Louisiana exempts "any legacy or other donation mortis causa to or in favor of any educational, religious, or charitable institutions." (Laws of 1912, ch. 42.)

Maine exempts property passing "to or for the use of any educational, charitable, religious, or benevolent institution in this State, the property of which is by law exempt from taxation." (Me. Rev. Stat., ch. 8, sec. 69, as amended by Laws of 1911, ch. 163.)

Massachusetts exempts property passing "to or for the use of charitable, educational, or religious societies or institutions, the property of which is by the laws of this Commonwealth exempt from taxation, or for or upon trust for any charitable purposes, to be carried out within this Commonwealth, or to or for the use of the Commonwealth or any city or town within this Commonwealth for public purposes." (Laws of 1916, ch. 268.)

Michigan exempts property passing "to persons or corporations exempt by law from taxation on real or personal property." (Laws of 1909, ch. 188, as amended by Laws of 1903, ch. 195.)

This includes "religious, charitable, and similar institutions and organizations of a domestic character." (See Instructions issued by auditor general in 1907, quoted in Blakemore and Bancroft on Inheritance Taxes, p. 636.)

Minnesota exempts "all property transferred to municipal corporations within the State for strictly county, town, or municipal purposes." (Laws of 1911, ch. 209.)

And, by a subsequent act, "property of the clear value of \$2,500 transferred to a public hospital, academy, college, university, seminary of learning, church, or institution of purely public charity within this State." (Laws of 1911, ch. 372.)

Under this act any charitable bequest in excess of twenty-five hundred dollars was taxable at 5 per cent as the primary rate, subject to certain increases determined by amount, but by chapter 455 of the Laws of 1913 the primary rate upon such bequests was reduced to 2 per cent, and under the general provisions of the statute of 1911 the primary rate was subject to a progressive increase reaching three times the primary rate upon all gifts in excess of \$100,000.

Missouri exempts "property conveyed for some educational, charitable, or religious purposes exclusively." (Rev. Stat. of 1909, ch. 2, art. 14, sec. 309.)

New Hampshire exempts property passing "to or for the use of educational, religious, cemetery, or other institutions, societies, or associations of public charity in this State, or for or upon trust for any charitable purpose in the State, or for the care of cemetery lots, or to a city or town in this State for public purposes." (Laws of 1915, ch. 106.)

New Jersey exempts "property passing to churches, hospitals, and orphan asylums, public libraries, Bible and tract societies, religious, benevolent, and charitable institutions and organizations, organized under the laws of this State, or operating solely within this State." (Laws of 1914, ch. 151.)

New York by the law of 1911 exempts "Any property devised or bequeathed for religious ceremonies, observances or commemorative services of or for the deceased donor, or to any person who is a bishop or to any religious, educational, charitable, missionary, benevolent, hospital, or infirmary corporation, wherever incorporated, including corporations organized exclusively for Bible or tract purpose \* \* \* also personal property other than money or securities bequeathed to a corporation or association wherever incorporated or located, organized exclusively for the moral or mental improvement of men or women or for scientific, literary, library, patriotic, cemetery, or historical purposes or for the enforcement of laws relating to children or animals or for

two or more of such purposes and used exclusively for carrying out one or more such purposes. But no such corporation or association shall be entitled to such exemption if any officer, member, or employee thereof shall receive or may be lawfully entitled to receive any pecuniary profit from the operations thereof except reasonable compensation for services in effecting one or more of such purposes or as proper beneficiaries of its strictly charitable purposes; or if the organization thereof for any such avowed purpose be a guise or pretense for directly or indirectly making any other pecuniary profit for such corporation or association or for any of its members or employees or if it be not in good faith organized or conducted exclusively for one or more of such purposes." (Act of 1911, ch. 732.)

And in 1913 added the following exemption: "Exemption of certain personal property. A transfer of pictures, statuary, works of art, antiques, books, manuscripts, or other similar personal property shall be exempted from and not subject to the provisions of this article if within two years after such transfer the person to whom such transfer is made shall present the same to the State, or to a municipal corporation of the State for educational, scientific, literary, library, or historical purposes, and if the tax thereon shall have been theretofore paid the amount thereof shall be refunded in accordance with the provisions of this article." (Laws of 1913, ch. 639.)

North Carolina by act of 1911 (ch. 46, sec. 6) placed property passing for religious, charitable, or educational purposes in the exempt class with husband and wife, but by the Revised Law of 1913 (ch. 201) husband and wife were placed in the 1 per cent class and the charitable exemption seems to have been omitted.

North Dakota exempts "all bequests and devises of property within this State when the same is for one of the following charitable purposes, namely, the relief of aged, indigent, and poor, maintenance of sick or maimed or for the support or education of orphans or indigent children." (Laws of 1913, ch. 185, sec. 24.)

Ohio exempts property passing "to the State of Ohio under the intestate laws of the State, or embraced in a bequest, devise, transfer, or conveyance to, or for the use of the State of Ohio, or to or for the use of a municipal corporation or other political subdivision thereof for exclusively public purposes, or public institutions of learning, or to or for the use of an institution in this State for purpose only of public charity or other exclusively public purposes \* \* \* while used exclusively for any of such purposes." (Ohio General Code of 1910, sec. 5332.)

Oklahoma exempts all transfers "made in good faith for religious, charitable, or educational purposes and uses." (Laws of 1915, ch. 162, sec. 4.)

Oregon exempts "devises, bequests, legacies, and gifts to benevolent, charitable, or educational institutions incorporated within this State and actually engaged in this State in carrying out the objects and purposes for which so incorporated, or to any person or persons to be held in trust for any such institution in lieu thereof." (Act of 1905, ch. 178, sec. 1.)

Rhode Island exempts "all property or interests transferred to any corporation, association, or institution, located in Rhode Island, which is exempt from taxation by charter or under the laws of this State, or to any corporation, association, or institution, located outside of this State, which if located within this State would be exempt as aforesaid, or to any person in trust for the same, or to any city or town in this State for public purposes." (Laws of 1916, ch. 1339.)

South Dakota exempts "all property transferred to municipal corporations within the State for strictly county, town, or municipal purposes; also \* \* \* property of the clear value of \$2,500 transferred to a public hospital, academy, college, university, seminary of learning, church, or institution of purely charity within this State." (Laws of 1915, ch. 217.)

Tennessee exempts all property passing "to any religious, charitable, scientific, literary, or educational institution." (Laws of 1903, ch. 561.)

Note.—This exemption has been held to violate the Tennessee constitution—In re Speed, not yet reported.

Texas exempts property passing to "any public corporation or charitable, educational, or religious organization within this State when such bequest, gift, or devise is to be used for charitable, educational, or religious purposes within this State." (Laws of 1907, ch. 21, sec. 1.)

Vermont exempts property passing to a "bishop in his ecclesiastical capacity for religious uses within this State, or a city or town for cemetery purposes";

and also property passing to "every charitable, educational, or religious society or institution \* \* \* created and existing under and by virtue of the laws of this State and having its principal office herein." (Statutes of 1906, ch. 38, sec. 822, as amended by Laws of 1908, ch. 31, and Laws of 1910, ch. 55.)

Virginia exempts property passing where the "bequest or devise is exclusively for State, county, municipal, benevolent, charitable, educational, or religious purposes." (Virginia Code, sec. 44, as amended by Laws of 1910, ch. 148.)

Washington, same as North Dakota. (Laws of 1901, ch. 55, as amended by Laws of 1905, ch. 93.)

West Virginia exempts "all property transferred to a person or corporation in trust or use solely for educational, literary, scientific, religious, or charitable purposes, or to the State or any county or municipal corporation thereof for public purposes, provided the property so transferred is used for the purposes herein mentioned in this State." (Act of Aug. 8, 1904, as amended by act of Feb. 22, 1907, and ch. 63 of the acts of 1909.)

Wisconsin exempts property passing to "county, town, or municipal corporations within the State, for strictly county, town, or municipal purposes, and corporations of this State organized under its laws solely for religious, charitable, or educational purposes, which shall use the property so transferred exclusively for the purposes of their organization within the State." (Statutes of Wisconsin, sec. 1087-1.)

Hawaii, the same as Arkansas. (Laws of 1905, No. 102 as amended by Laws of 1909, act 147.)

#### AFTER RECESS.

The committee met at 1.45 o'clock p. m., pursuant to the taking of recess.

The CHAIRMAN. The next gentleman on the program is Mr. Graham.

#### STATEMENT OF MR. GEORGE M. GRAHAM, CHAIRMAN NATIONAL AUTOMOBILE CHAMBER OF COMMERCE MOTOR TRUCK COMMITTEE, 7 EAST FORTY-SECOND STREET, NEW YORK CITY.

The CHAIRMAN. Mr. Graham, who do you represent; what is your business and occupation?

Mr. GRAHAM. I will have to give sort of a dual answer to that, Mr. Chairman. My only immediate connection is with the sales management of the Pierce Arrow Motor Car Co.; I reside in Washington as chairman of a committee representing the entire National Automobile Chamber of Commerce. We have a great many activities more or less related to the war, and we have found it convenient to have this committee here.

Our proposition I would like you to distinguish in your mind entirely from the passenger car presentation which you heard yesterday. We feel that the elements involved are different, and it is for that reason that we have made a separate presentation. We wish, rather, to define our utility at this time than to make any protest in respect to such taxes as you may see fit to levy on this industry. We feel that it has not always been clearly understood that the motor truck is essentially a utility vehicle. We would like to demonstrate that fact to-day, and the brief presentation that I will make to-day is a matter entirely of establishing that status. We feel that the truck is not only an instrument of high commercial utility at this time, but that in respect to its ability to handle production and to move finished products it has a considerable relation to the winning of the war. We have no idea of the viewpoint of the committee. We are

not in opposition to anything; we do not know what you plan to do; we do not know whether you consider the present tax of 3 per cent. which we now pay and which we pass on to the consumer, should be retained; whether that tax should be increased, or whether under a new classification you might find it wise and proper and expedient to eliminate that tax altogether, we do not know; we do not want to attempt to direct.

The CHAIRMAN. We do not know yet ourselves. We have had these public hearings for gentlemen to express their views of the justice or injustice or equality or inequality of the present provisions of the law and to offer any suggestions as to further methods of raising revenue. These hearings are simply for our information and guidance in rewriting or writing another revenue bill. I presume that the present law will form the basis of our new revenue bill; but we are glad to have any suggestions as to the modification or amendment or approval of any of the provisions of existing law or any other suggestions.

Mr. GRAHAM. On that basis, Mr. Chairman, we are on very sound ground, because we merely wish to present to you points of information which we think you would be glad to have before you in your deliberations, in order that you may most equitably adjust this matter at issue, and this is to be understood entirely as a presentation designed to establish to you the utility status of the motor truck as distinguished from the passenger automobile. In other words, we are not particularly concerned in a rate or percentage of tax. We are very much concerned in our classification and our status. We think it is entirely fit that an industry which has taken such a prominent place in the vital, important transportation systems of the country should be rated with transportation systems.

The CHAIRMAN. I am somewhat in sympathy with that conclusion.

Mr. GRAHAM. I am glad to hear you say that. If it becomes determined by you gentlemen that your sole function is to raise revenue and in carrying out that policy it becomes necessary without any distinction to tax luxuries and necessities alike, we shall welcome that tax, or at least we shall not be disturbed by that tax in any way. But if, on the other hand, with the experience of the preceding bill in mind, you gentlemen have the thought that the tax bill might be more scientifically drawn, if you should believe with or be influenced by the expressed viewpoint of the President and the Secretary of the Treasury that taxes should bear most heavily on luxuries, we should like to submit to you gentlemen that motor trucks can by no stretch of the imagination be brought into a classification of luxuries, and that upon a basis of taxing luxuries we are either exempt, for which we do not ask, or that our tax certainly should be rated with the minimum taxes to be placed.

The CHAIRMAN. In other words, as I understand the proposition, that it is the desire of you and others who hold your views, that if we are going to tax automobile trucks and passenger cars we ought to make the same distinction as between freight rates and passenger rates. The present rate for passengers is 8 per cent and the rate on freight is 3 per cent, and the committee recognizes that freights are absolute necessities and that the other tax is to be borne by the individual man and not by the consumers generally.

Mr. GRAHAM. Of course you understand, Mr. Chairman, that my position is a little bit delicate in this respect, in that in our chamber we are affiliated with manufacturers of passenger cars and that our interests and theirs are to a very material extent identical.

Mr. GARNER. You also realize that you can not make as strong an argument for the pleasure automobile as for the truck?

Mr. GRAHAM. We are perfectly glad to accept that, Mr. Garner. I have noticed during the hearings with great interest the varying viewpoints of you gentlemen. There seemed quite a division in your minds as to the utility of the passenger car. There did exist the idea that passenger cars did discharge a very important utility function in Washington at this time in giving rapid communication, at a time when the transportation facilities are entirely inadequate. Nevertheless there was, on the other hand, a feeling that not all passenger-car use is utilitarian; that a great measure of it is purely for diversion, and there did exist that difference, which, as a matter of fairness and justice, we are ready to recognize—that the one vehicle is used both ways. That must be admitted. But also I think you gentlemen will agree with me that the motor truck is used exclusively as a utility. It can not be used as anything else. It is not an ornament; it is certainly not a medium for diversion; it is absolutely a freight-carrying medium of delivery.

Mr. DICKINSON. Your idea would be that a tax on trucks would be somewhat of a tax on commerce, too?

Mr. GRAHAM. We are already bearing such a tax. All freight carried by trucks pays its 3 per cent. The distinction between ourselves and other freight-carrying mediums as contained in the present law is this: That while equally with either freight-carrying mediums, such as the railroads or steamships, the users of motor trucks pay 3 per cent on said freight; the motor truck is also taxed in itself, whereas there is no such tax on railroad engines or on a freight car or on a steamboat.

The CHAIRMAN. Of course, the freight that is taxable hauled by motor trucks is infinitely small compared to the other freight?

Mr. GRAHAM. The only consideration is the principle at issue, and I would like to make very clear to you that we are more concerned in establishing this principle and in getting recognition for this principle—that the motor truck has taken its place among the great transportation agencies of the country—than we are in any immediate question as to what shall be levied on us. We think there should be a distinction and a classification that would put us with what are exclusively recognized as freight-carrying mediums.

If I seem a little bit concerned about that it may seem to you gentlemen that I am pressing here the obvious; you may say we all know that. I may seem a little anxious to say ours is a utility problem. I would like to recall to you gentlemen, without any criticism than in a spirit of good-natured protest, that in the previous bill motor trucks went along with what are concededly nonessentials, or, at least, not as essential as a motor truck. We were classed with phonographs, jewelry, with chewing gum, and perfumes. I submit that that is hardly a fair estimate of what the truck is doing at this time in a very great, vital, national need—transportation. If you gentlemen, in your various deliberations, will examine into the causes that

may retard the rapid and efficient entry of our country into the war I think you will trace back a great percentage of our troubles to transportation. It is quickly in the memory of us all what almost had a tragic effect last winter, when there were ships' bottoms in New York Harbor crowded with cargo for the war zone, and in order to get the coal to move those ships it was found necessary to stop production of other manufactured staples so that the transportation could be free to get the coal to the seacoast and move those ships. That is an instance of where transportation blocked the program. All our difficulties relating to coal, the difficulties we now face, and that we probably will feel heavily next winter, if you trace them, are based mainly on transportation. The steel shortage is, in large measure, we are told by the War Industries Board, a condition that grows out of a shortage of pig iron and coke, and if we ask why those are not available when there is so much in the ground, we get the answer that the difficulty is to transport them.

Mr. GARNER. In other words, your argument, in a nutshell, is that you want Congress to recognize the motor truck as a physical mode of transportation and to be treated as such, and you do not want it to be put upon the same plane with pleasure automobiles?

Mr. GRAHAM. If you had stopped there, without the reference to the passenger cars, I would have agreed with you.

Mr. GARNER. You admitted that.

Mr. GRAHAM. I volunteered that; it is not an admission. I said they were two different factors and should be differently treated.

Mr. GARNER. You do not care to be pressed on the advisability of levying a tax on the pleasure automobile?

Mr. GRAHAM. For a perfectly honest reason, and not for a reason that spares the revenue, because we believe at this time any medium of transportation, whether transportation afforded to freight or to passengers, comprises a necessity. We believe that; but we do feel that no matter how much you may disagree with us as to what measure a passenger car is used for pleasure or for business, certainly you ought to be with us on the proposition that the whole value of the motor truck is 100 per cent a utility measure.

Mr. GARNER. I think you are correct in that.

Mr. STERLING. There was a gentleman that distinguished between gasoline for joy riding and for useful purposes. Do you think that is feasible?

Mr. GRAHAM. I think it is entirely unfeasible. You might put the man on his honor; you might put him on his oath, but I do not see any other way. I do not see how you can check up on the use of your own personal car, unless you are willing truthfully to make a statement that a certain percentage of this time this car has been used for a vehicle purpose and a certain time for a pleasure use. I do not hardly see how that could be worked out.

In the matter of transportation, I should like you gentlemen to bear with me to let me tell you what has been its growth and how vital is the service it can render. There are three mediums of transportation—railroad, boat, and over the highways. Over the highways, of course, means motor trucks. Merchants and manufacturers despairing of getting rapid transportation by rail, through no fault of the railroads because the normal business growth and the enor-

mous demands of the war have overtaxed the railroads and have overtaxed the boats. Of the three elements available only one element has not yet had the possibilities exhausted or even approached, and over the roads are constantly going an increasing amount of tonnage of freight. For example, 6,000 war trucks have been sent from middle western towns to the seaboard for delivery to the United States Government over the road, all carrying capacity tonnage of various articles for which the Government desired transportation. The point of interest in that is that it proves perfectly that an overland traffic by truck is vital, that it is bound to come as transportation needs increase.

Mr. HAWLEY. Do you know what was the amount of tonnage over the highways for the last year?

Mr. GRAHAM. I can estimate the amount of tonnage carried by these trucks, but I can not give these figures for the year. I do not know of any means to get at that. These 6,000 trucks carried from 2 to 5 tons each, from Detroit and middle western cities to New York and to Baltimore.

As I said, I can show the tendency, but I don't know the figures, and I am frank to say those figures would be small in comparison with the railroads and steamboats. This is a development that is just getting started now, and it is a development born out of the necessity of the present situation. For instance, if the railroads had not been overtaxed with transportation and if the steamboats had not been overwhelmed with transportation there would not have been this much transportation over the highways. It is more expensive, of course; that must be admitted. These costs will be constantly reduced, but at the present time it is not as economical as shipment by rail or water. But when you have no means of shipment by rail or water, and when you have hundreds of hands idle waiting for materials, with an immense overhead charge going on, and you are obliged to move materials to your plant by truck it is a great convenience.

Mr. DICKINSON. Wasn't this entire shipping corporation—the Emergency Fleet Corporation—recently moved to Philadelphia from Washington by trucks?

Mr. GRAHAM. Yes; that was a very remarkable example of what can be done. When the new chief, Mr. Schwab, came into the shipping operations, he found it necessary, on account of the housing conditions, to remove the whole thing to Philadelphia, and it was moved on trucks and went over the roads in a few hours.

Mr. GARNER. Mr. Graham, won't the future use of the trucks be more potential in accordance with the use they can make of the roads, and isn't it a matter of local taxation?

Mr. GRAHAM. It is a matter of the condition of the roads, but I don't think that will retard it.

Mr. GARNER. You don't think it will retard it?

Mr. GRAHAM. I am glad to have you raise that point, because I would like to enlist your good offices now in an effort to improve the roads, and to effect a means for the permanent improvement of the roads.

The CHAIRMAN. When the trucks are doing so much damage to the roads, should they not be compelled to contribute a part of the upkeep?

Mr. GRAHAM. We think so. We would welcome that. We think we are rational in saying that the traffic over the highways offers the relief that must be had in the future for the traffic over the railways.

Mr. DICKINSON. When the Government, State and Federal, have to take care of the roads like they do of the rivers and of the railroads, dredge out the rivers and repair the roadbeds to carry freight, that will be taken care of.

Mr. GRAHAM. We would like to see that. We think that will come. We have tried to be economical in our use of the roads. One of our most recent accomplishments in that direction is the establishment of the return-load system. The return-load system is this: That if I have a 5-ton truck running from Washington to Baltimore with a load, when it gets to Baltimore it shall not return to Washington empty. An empty truck damages the road. So we have established the return-load system, and we are working with different civic bodies in the different cities and towns, and the effort is that if you, sir, have a load to go from Washington to Baltimore, and my truck is in Washington to return to Baltimore, you shall use it and my truck shall not be sent back empty.

Mr. DICKINSON. That is the same principle as the railroads have; they use the cars traveling from one part of the country to the other on different roads, so that they will not have long hauls empty; and the boats that go from one point to another.

Mr. GRAHAM. That is absolutely true. We have also striven to put the trucks at the terminals where there is congestion. The congestion of materials at the terminals is perhaps the most potent reason for delays; it is at the terminals where the materials pile up, and it is our plan and purpose to relieve that as much as possible. As far as possible we are advocating the use of trucks in short hauls in distances of 50 miles or under.

Mr. STERLING. How do the rates compare with the railroads?

Mr. GRAHAM. More expensive. I am not pleading that it will compare with the railroads or steamboats in cost, but that it will relieve matters greatly.

Mr. GARNER. In the matter of freight, the larger portion of the cost is in the handling of it?

Mr. GRAHAM. Yes, sir.

Mr. GARNER. I mean on the railroads.

Mr. GRAHAM. Yes, sir.

Mr. GARNER. Now, if you have a system of freight carrying where it is taken from the railroads to the consumer or user, or from the producer to the consumer, instead of taking it to the railroad and putting it in the freight house and then having it taken and loaded, and when it gets to its destination having it unloaded and put in another freight house, and perhaps handled several times, and put in several freight houses, now, if you pick that up and deliver it direct, can't you deliver it just as cheaply?

Mr. GRAHAM. If you are asking about a from-door-to-door delivery, yes.

Mr. GARNER. That same statement I saw made about the Shipping Board. The story as I read it was that the cost of delivering from here to Philadelphia was smaller; in considering what the cost would be of handling it was less than it would be to ship by rail.

Mr. GRAHAM. Yes, sir. And in that handling there must be added a very considerable breakage in handling and in transit and from one road to another. If you pick that up and deliver it direct you very largely eliminate that breakage. The United States has recently established its transport division in connection with the Council of National Defense. Also, as an arm of the military service, we have a transport service, which is established by order No. 38, which recognizes the motor as an arm of the military service and bunches the maintenance of the trucks of the Military Establishment under one department.

Now, gentlemen, I would like to show you that these are the signs of the times; they show a tendency. The United States Chamber of Commerce at its recent meeting in Chicago appointed a committee to be known as the motor-truck committee, whose function will be to stimulate this business; the Department of Agriculture is interesting itself in the use of the truck for the movement of food; the Fourth Assistant Postmaster General is doing the same thing. I would like to show you how important that is. It gives to the farmer the advantage of the handling of his produce at a time when he can't get farm hands; the truck gives the farmer an essential and rapid and seasonable movement of his produce to market; that is absolutely essential. If he can not move his produce and crops to market rapidly and at the time when it is ready and necessary to move it, it will spoil on his hands and large quantities of foodstuffs will go to waste. If it is possible for him to move this produce by truck, it will lead to the development of lands not now being used and to lands suitable for the cultivation of fruits and the development of fruit lands.

Mr. HAWLEY. Don't the dairy associations now use the truck very largely in moving their product?

Mr. GRAHAM. Yes, sir. And that movement is retarded in some quarters by poor roads, and if those food products could get to town more readily it would very greatly affect the cost of food.

Mr. LONGWORTH. Do you know how much tax is paid by the trucks of this country?

Mr. GRAHAM. Yes; I know how much tax is paid by the whole industry, but I can't separate it into truck tax and the tax on pleasure or passenger cars. The tax for the whole industry for six months was \$15,000,000. Now, that did not classify motor trucks, or passenger cars, but our own figures indicate that perhaps \$2,500,000 of that was paid on trucks. I am frank to say that is only an approximation.

Mr. LONGWORTH. We estimated to collect \$2,000,000 on automobiles.

Mr. GRAHAM. These are the figures. I got them yesterday.

Mr. LONGWORTH. Do you know, Mr. Chairman, how much is paid?

The CHAIRMAN. We collected in March about \$2,500,000.

Mr. LONGWORTH. The trucks are smaller in number than the passenger cars.

Mr. GRAHAM. Yes; but the unit is higher.

Mr. LONGWORTH. Do you think it would run up to \$4,000,000?

Mr. GRAHAM. You came in a little late. I am not disputing this tax. We think this has a great future.

Mr. LONGWORTH. You don't want it raised?

Mr. GRAHAM. Yes; providing other necessities are raised also. We would like to be sure of our neighbors. We want to be classed as a necessity. We are frank to say that we will pass this tax along.

Mr. LONGWORTH. Would you class it as a necessity for the purpose of the tax?

Mr. GRAHAM. Yes, sir; for instance, I can't see the reason for going to a farmer and taxing him on his truck when his wooden wagon does not bear a tax. I think it is on the same basis, or ought to be on the same basis, as a steamboat or a railroad engine. Of course, they carry much more than we do, but that doesn't alter the principle in any sense.

The CHAIRMAN. Do you make the same percentage of profits on a truck that you sell for \$2,000 as you do on a passenger car that you sell for \$2,000?

Mr. GRAHAM. I should think as much, Mr. Chairman, for a reason which I will explain. The selling cost on trucks is greater than on passenger cars; that is because the resistance is greater. The number sold proves that. The expenditure for a passenger car is an expenditure for the whole family, and everybody wants one. The truck is a new feature in our national life, and we have had to do a great deal of exploitation work; for instance, we have had to create a market by reaching organizations, and by different kinds of advertising campaigns. I should think this, as an advertising campaign or advertising proposition, if you say, "Here is a car, give me the table of your costs; and here is a truck, give me the table of your costs," the profits should not be as much. Our company introduced this truck in 1911, and I am frank to tell you we never turned a dollar of profit for three years. Now, answering your question, Is it reasonable that we should distribute over a period of seven years our profits? The selling cost is more—

The CHAIRMAN. The selling cost is more?

Mr. GRAHAM. Yes; because everybody wants a passenger car. Some people believe a truck costs more than the horse; but that is now past.

Mr. GARNER. When you get the truck business established, do you think it will be as profitable?

Mr. GRAHAM. It will be more profitable.

Mr. GARNER. Let me ask you this question: You are interested in trucks. Isn't the time coming when the Government shall have to undertake to regulate the use of and have the charge of trucks to protect the highways of the country?

Mr. GRAHAM. That is true, unless the Government shall have an officer whose business it shall be to have charge of the roads, a Cabinet officer, or otherwise designated, to build roads as they do in France.

Mr. GARNER. At the present time the States control the roads?

Mr. GRAHAM. Yes, sir.

Mr. GARNER. It would be hard to control the roads, but the Government might limit the number of tons which a truck might haul.

Mr. GRAHAM. Let me answer in this way: The Constitution did not interfere with the taking over of the railroads; it was the proper thing to do. I think the taking over of the highways would be equally a constitutional matter. Let me direct your attention to

this: Suppose the submarine ravages should increase on our eastern coast; we know it is a very serious thing. Some of the manufacturers have not been able to get their oil, and they will not have it. Now, if we had a series of highways from New York to Florida under Federal control and supervision, it would take the place of the inland waterways, which we have not got, and it would be very useful, especially to us, in moving supplies. I think your question leads to a very good point.

Mr. GARNER. Right there I want to suggest, that in answer to my question you have made a suggestion that one of my colleagues on the committee, and who is not here now, is very much interested in; the matter of inland waterways.

Mr. GRAHAM. Mr. Moore is one of my very good friends. We belong to the same club, and the Philadelphians admire him and his work, and the people of Pennsylvania admire him and his work. But, in spite of his work for the waterways, he would not be so narrow as to say that he would limit the means of transportation on the coast to inland waterways.

Mr. TREADWAY. Let me ask you if the State highways, and the State authorities, have tried to estimate the amount of damage done by the Army trucks?

Mr. GRAHAM. There have been efforts to make such estimates.

Mr. TREADWAY. That is, the exact amount?

Mr. GRAHAM. Yes; but it is different in different States. I have seen figures that indicate \$300 a mile, and I have seen some figures that indicate \$5,000 a mile.

Mr. TREADWAY. In my State \$10,000 or \$11,000 is the estimated price for the construction of a road, so if the damage was \$5,000 it would be 50 per cent of the value destroyed by Government use.

Mr. GRAHAM. Yes, sir.

Mr. LONGWORTH. That depends on the soil. In your State you have a good soil; in my State it is a rather poor soil.

Mr. TREADWAY. Yes.

Mr. GRAHAM. Then it would be a question of the upkeep and maintenance of the roads.

Mr. TREADWAY. There is a question I would like to ask this gentleman, Mr. Chairman, which hasn't a direct bearing on revenue.

The CHAIRMAN. Proceed.

Mr. TREADWAY. I would like to ask him if the various associations throughout the country have taken any action looking to the Federal repair of the State roads?

Mr. GRAHAM. Yes, sir; that is our platform. We believe there never will be proper protection and upkeep and maintenance of the roads until there is Federal control and maintenance.

Mr. TREADWAY. You are advocating Federal highways. I understood from what passed between you and Mr. Garner?

Mr. GRAHAM. Yes, sir.

Mr. TREADWAY. I am asking particularly with reference to the upkeep by the Federal Government of the State roads.

Mr. GRAHAM. Federal building of roads and Federal upkeep would be ideal. We think the United States should repair the roads. We do not believe there will be any adequate and proper road building in this country until it is developed and done under the supervi-

sion of the Federal Government. The control of the roads is so different in different States. In some States it is in the township. The township can't be blamed for not building a certain bridge which would cost \$5,000 if it hasn't the money; and without the building of that bridge you will not have a good road, and so it nullifies the whole road. In some States it is in the counties, and the county commissioners, or similar officers, have control of it. In some of the States it is the States themselves.

Our policy is this, and we are entirely unselfish at this time; but we think as a war measure it would be an invaluable thing to facilitate delivery over the roads, and as a prime essential of that the roads would have to be in good repair. In France they are paying much attention to road making and maintenance, and have been. The men who come back from France tell us that they are in good shape, and in some cases run clear to the line. It is essential and a prime necessity. That we would have here in this country if there was any centralized authority over the roads.

Mr. TREADWAY. Hasn't there been some action taken by the association? Isn't there a bill of some kind before the Congress at this time?

Mr. GRAHAM. Yes; there is such a bill. The associations recognize this, that if we help to break down the roads we should help to repair them; but it can't be done until it is done by Government policy.

Now, Mr. Chairman, I have kept you overlong. I had not intended to take so much of your time. It has been largely the result of these questions and the discussion. We consider that every truck in use at this time discharges an obligation to the country and is an asset. We believe it puts the merchant nearer his market; we believe it puts the farmer nearer his consumer; we believe it helps to make up the depleted man power of the country; we believe in making up the war orders it is a very great essential. The contractor with the order for war materials who uses a truck to carry his materials to the place of the building of his plant has an advantage; he delivers the material to himself and he delivers his product. Every one of the 400,000 trucks in this country, and they are increasing every year, helps to prevent production piling up; they distribute it from the source.

We feel that it is virtually a war instrument. We feel that if it is your judgment that it ought to be taxed, that is ought to be taxed in company with necessities. At every point they have proved that they are a utility, and can not be considered anything but a utility, and we submit to you this request, and only this one request, that in your deliberations and in your preparation of this bill, that you shall have only one thought relative to us, and that is the one thought relative to necessities, and that the motor truck should bear its burdens.

Mr. TREADWAY. What do you consider the proper method of assessment—the horsepower or the weight?

Mr. GRAHAM. The trucks are not graded according to horsepower.

Mr. TREADWAY. They are in the same relationship as passenger cars?

Mr. GRAHAM. No; that isn't true. A 30-horsepower motor would be a very high-powered truck. They are not rated the same. I thank you, Mr. Chairman and gentlemen.

**STATEMENT OF MR. EDGAR GILBERT, 61 BROADWAY, NEW YORK CITY, MANAGER OF THE LYSTER CHEMICAL WORKS.**

Mr. GILBERT. Mr. Chairman and gentlemen, my address is 61 Broadway, New York City, and I am the general manager of the Lyster Chemical Works.

The CHAIRMAN. Do you appear just for that company, or for the industry?

Mr. GILBERT. I appear in a general way, although the proposition affects our company directly. I simply wanted to call your attention to what appears to have been an omission in the last revenue bill.

Mr. TREADWAY. Will you explain what the Lyster Chemical Co. is?

Mr. GILBERT. The Lyster Chemical Co. manufactures products from the distillation of wood—creosote products in general. We are, I believe, the only one in America along our line. In the section on excess-profits tax, the first division is relative to tangible property, real estate, actual cash, and other property of that nature; the second division is relative to patents and copyrights; and the third division is relative to general intangible property, good will, trade-marks, and so forth.

The question has arisen in regard to the invested capital in secret processes, and I wish to bring to your attention the identity of the patent and the secret process, so far as utilization and capitalization go, on these two standpoints: First, with reference to the inventor; and second, with reference to his assignees. The inventor makes a discovery—produces an invention. Now, the statutes embodied in the patent law recognize the right of the inventor to protection in the enjoyment of his invention, and that right may be covered through the Patent Office by protection for a specific number of years, or it may be—since it is not obligatory upon him—a protection through a maintenance of secrecy in regard to his invention. In the case of a machine—and I might say that we might distinguish the classes of patents to the machine or apparatus patent, and to the process patent. It is the process patent which I have particular reference to. The process patent is of such a nature very frequently that when it is disclosed it makes it very difficult to protect the inventor. I might cite an illustration that is old and familiar to all of us, that of the nitration of cotton.

Now, we will go back to the time when nitrocellulose was first introduced: it is an unknown thing; and we will assume it was to be used in his marketed product, because it had no use as nitrocellulose, but in a solvent form it was used as a nitrocellulate. Now, the inventor, if he discloses it to the world, he discloses at once the nature of his patent and of his process. But he maintains his secret and patents it and puts his nitrocellulose in another product, such as celluloid. Now, if he patents that he has no means of protecting himself against infringements, because nitrocellulose appears on the market and someone is producing it, but it would be difficult to know that it had not been produced by some other patent. In that case the inventor would naturally keep secret the nature of his invention and find a market for it in the finished form of some other product. Now, there is an illustration of that recently, in the act of Congress

in recognizing the inventor of this substance we have known as Garabed, and recognizing in the inventor the right of protection. The nature of the thing may be such that protection can be afforded neither by a patent nor by a secret process, because the disclosure would cut short the presentation of the product. So I think the right of protection is so well established that it is only a step to say that the patent and the secret process are identical from the inventor's point of view. He takes whatever course seems to give him the greatest security.

Now, about his assignee. The inventor discovers a process for doing a certain work. In one case he patents it and in another case he keeps it secret. Now, he sells to a corporation for a certain consideration and then that becomes an item of invested capital for the corporation. Now, in the last bill secret processes were not mentioned at all, and my point simply is that in the redraft of the new bill that secret processes should be classified as such, because they form, in the chemical industry especially, a considerable item in the assets of the corporation.

Mr. LONGWORTH. You mean they are as marketable as good will?

Mr. GILBERT. They are identical in the market, as to their use, and the capital invested is dependent entirely upon them for returns. I had this matter up with Mr. Roper's committee for rulings, and they felt that it was proper, they were identical, but they had no power to reach it, they thought, to reach a secret process, to classify it; it had to go into the patent processes.

Mr. GARNER. Isn't there a principle of Government involved there? You want to put secret processes on the same plane as patent processes?

Mr. GILBERT. Yes, sir.

Mr. GARNER. Patent processes become eventually the property of the Government and go to the Government?

Mr. GILBERT. Yes, sir.

Mr. GARNER. The secret process belongs to the inventor?

Mr. GILBERT. Yes, sir.

Mr. GARNER. Now, should the Government give the secret inventor the same rights and the same protection as it does the man who gives his patent up at the end of 17 years?

Mr. GILBERT. The inventor has his protection. We will assume that it is an invention of his, and he gives it to the public at the end of 17 years by a disclosure of his patent in order to have during the 17 years the protection of the Government.

Mr. GARNER. But the man who wants to patent a secret process and wants to sell it and have it recognized as a valid property to be transferred and upon which an exemption of excess profits or income should be based, should he have the same consideration as the man who is willing to give up his process at the end of 17 years to the Government?

Mr. GILBERT. He doesn't give it up without value. He gives it up for the protection he has had for the 17 years.

Mr. GARNER. And your secret man has no protection?

Mr. GILBERT. No, sir; if anyone gets into his factory and finds out about his process, or if his employee would give it out, he has no protection. And he would seek the Patent Office immediately, every-

one would, if he could have the protection; but the process that is kept secret, and the nature of it is such that the Patent Office can't give him the protection he needs.

For instance, here is a process that is invented to bring out a secret process. The inventor is a poor man; he discloses his patent through the Patent Office, and the patent, to protect him, should be properly filed in foreign countries; but he can't afford it, and in Germany or in Japan, where men are ingenious, they take his product, and they begin to manufacture under it, and the product comes back to this country in competition with his. Now, he is a man of limited means, and he can't trace his patent to foreign countries, and he does not get the protection he ought to have here. So the man who is making a process has only the protection we aim to give him through the patent law. But to the man who has had a patent for 17 years, we say to him, "Here, Mr. Inventor, for 17 years you have had the benefit of this; now, you give it to the public." He doesn't give it to the public; he gets that 17 years of protection. I think the two should be identical, so far as capitalization goes.

The CHAIRMAN. What is the amount of capital invested in your company exclusive of your secret process?

Mr. GILBERT. In our particular company—we are a relatively small company and do a relatively small business. It happens that a large part of our work and our success, when we shall have become successful in a large way, will be due to this process, which we have worked out in 12 years.

The CHAIRMAN. The answer to the question I asked is this: How much did you claim before the Commissioner of Internal Revenue you should have deducted as the value of your secret process?

Mr. GILBERT. In our case, I believe \$200,000, and our entire process is \$240,000. We are not complaining of the tax.

The CHAIRMAN. It was put in at that before January 1, 1918?

Mr. GILBERT. Yes, sir.

Mr. FAIRCHILD. Where are your works?

Mr. GILBERT. In Massachusetts, just east of Boston.

#### STATEMENT OF MR. MASSEY HOLMES, KANSAS CITY, MO., REPRESENTING THE CENTRAL COAL & COKE CO. AND THE LUMBER INDUSTRIES.

The CHAIRMAN. Mr. Holmes, I see that you and Mr. Hagerman are of the same city and represent the same company, and your arguments will be along the same line?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. In order to save time, will it be agreeable to you to represent both of you, and speak for both?

Mr. HOLMES. Entirely so, inasmuch as he isn't even here.

The CHAIRMAN. We ask that in order to save time, and in your case it is entirely agreeable under the circumstances. You may proceed.

Mr. HOLMES. My name is Massey Holmes, and I am representing the Southern Pine Association and also the National Lumber Manufacturers' Association. The Southern Pine Association, as many of you doubtless know, and as especially the chairman knows, is an

important industry of the South, and the National Association includes that and other associations of the Northwest and North. We are not asking to have any tax reduced for these industries. We are encouraged, however, by the words of the President, as published recently, when he said that there are some great inequalities in the excess-profits tax, and we are appealing to your committee to correct those inequalities, as doubtless other industries have appealed to you. We are asking for a correction of those inequalities as regards the lumber industry, because that is the one we are most familiar with and the one we represent.

I want to make one or two illustrations of the things that might happen and that do happen under the present law, relative to the appreciation of invested capital. For example, Company A had a paid-up capital stock of \$500,000 and with that they bought a piece of timberland many years ago that has appreciated, let us say, to \$2,000,000, for purposes of illustration. An identical piece of timberland lying alongside of it is not bought from its then owner until 15 years later.

And then it is bought by Company B for \$2,000,000. And then the excess-profits tax is put on. Then these two pieces of property, although they are in our illustration precisely the same, and they are devoted to exactly the same purpose, and have exactly the same capital and produce the same income—the income is exactly the same, yet they are taxed unequally. That may happen and does happen under this law.

Another thing that may happen and does happen under this law. A invests his capital in a piece of timberland; so does B. Let them again be equal. Just before the excess-profits tax takes effect A sells his, for any reason you may please; B does not. Then when the excess-profits tax is imposed, again they are taxed unequally, although through the entire time they have been equal—

The CHAIRMAN. Take that last illustration: take a concrete example.

Mr. HOLMES. Yes; let us take a concrete example.

The CHAIRMAN. A buys timberland for \$500,000 that appreciated to be worth \$2,000,000, just before the excess-profits tax is passed. A, just before the excess-profits tax is passed sells his land for \$2,000,000, and puts his money into some other business. B has a piece of land worth the same price; B doesn't sell; he has bought the same as A; just because A has sold and has very much larger amount of invested capital, that is the factor in determining the excess-profits tax, and he pays more than B, who has not sold. Is that your—

Mr. HOLMES (interrupting). Unless B is so fortunate as to be a wildcatter and watered his stock, and that he issued \$2,000,000 of stock for that which was worth only \$500,000, then he would be entitled to deduct the \$2,000,000.

Mr. LONGWORTH. In your illustration it is perfectly true that the amount of profit they both have is the same?

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. One has made as much money as the other?

Mr. HOLMES. They have; and both are devoting the capital to the business of producing an income.

Mr. LONGWORTH. And A, on an original investment of \$500,000. has made a profit of \$1,500,000. Ought he not to pay a rate on his income?

Mr. HOLMES. On the income or excess profits?

Mr. LONGWORTH. Excess profits.

Mr. HOLMES. No; I say not.

Mr. LONGWORTH. That is just what excess profits on invested capital means.

Mr. HOLMES. No; the law says it is based on income derived from the business. The excess-profits law is a tax on the income, and that income is derived from the value of the property.

Mr. LONGWORTH. Yes; but it is based on the amount of invested capital.

Mr. HOLMES. So is all tax based on capital.

Mr. LONGWORTH. But you couldn't have an excess-profits tax based on invested capital if you didn't have a greater tax for the man who had made a greater profit than for the man who has made a lesser profit.

Mr. HOLMES. That is because you are speaking of taxing the man who has, as you say, made the greater profit before he realized his income and made the profit. What I say is that the factor should be the same under identical circumstances, and if in your business you are devoting to producing and income of \$100,000 assets no greater than I am devoting to producing \$100,000, you and I should be taxed accordingly on that.

Mr. LONGWORTH. No matter how much capital was put in originally?

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. I can't reconcile that with an excess-profits tax. I am not arguing that an excess-profits tax is based just on that, and that alone, but if we have that, and it is calculated on that basis, necessarily the amount actually invested must determine what the excess profit is.

Mr. HOLMES. Of course that is true, if you mean by an excess-profits tax a tax placed upon what you originally put in rather than a tax upon what you have got now and are devoting to an income. But the law is not so framed, Mr. Longworth; it is not so based.

Mr. LONGWORTH. No; I know it is. It is the amount you put in. Let me see if I entirely understand you. Say A's investment was originally \$500,000.

Mr. HOLMES. Yes.

Mr. LONGWORTH. B's \$1,000,000.

Mr. HOLMES. At the same time?

Mr. LONGWORTH. No; they both are the same now, and the income is the same!

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. And you say that A, whose property cost him only half as much as B's, should pay the same tax!

Mr. HOLMES. He should pay the same tax on an income of the same amount on the same capital. And the source which produced the capital that is being taxed is purely accidental.

Mr. LONGWORTH. Then if A's original investment was \$500,000 and B's investment was \$2,000,000 that they both should pay the same tax!

Mr. HOLMES. Yes; on an income of the same amount from that property; that is just what I say, because the law does not make a distinction between an individual—

Mr. LONGWORTH (interrupting). Then your sole test is the capital?

Mr. HOLMES. Yes; that produces the income. That is withdrawn from other revenue-producing sources while it is producing that; and it is the property which is producing the income in each particular case; and the source from which you derive the property, whether by inheritance or gift, or accumulation, or in any other way, should not affect the result, where the income is the same from the property. Where the income is the same on a property valued the same, I think the property should be taxed the same, and not that, because by mere accident, it has the difference that you sold and I didn't.

Mr. LONGWORTH. Let us reduce that to an example.

Mr. HOLMES. Very well.

Mr. LONGWORTH. A is getting \$100,000 a year on an investment of \$500,000; in other words, he is getting 20 per cent on his invested capital.

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. B has put in \$2,000,000, for which he is producing \$100,000. So he is getting 5 per cent.

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. Now, do you think under an excess-profits tax a man getting 20 per cent should not be taxed at a higher rate than the man who is getting 5 per cent?

Mr. HOLMES. He is getting the same percentage. He is getting the same income, based on the amount devoted to his business.

Mr. LONGWORTH. Yes; but he hasn't done anything to produce it.

Mr. HOLMES. Well, if you like, concede that for the argument.

Mr. LONGWORTH. Now, how can you have an excess-profits tax unless you tax the man who gets four times as much at a higher rate than you do the man who gets only one-fourth as much as he does?

Mr. HOLMES. The situations are identical—

Mr. LONGWORTH. How can you have an excess-profits tax unless it is a tax whereby you tax a man who gets four times as much as another man at a higher rate?

Mr. HOLMES. Because the situations are identical, when they have property invested in equal amounts.

Mr. LONGWORTH. I know, but A's gain has been in value without any effort on his part?

Mr. HOLMES. Yes; I concede that for the sake of the argument. I don't think that is entirely true, but I know what you mean by unearned increment.

Mr. LONGWORTH. He has made a good profit on his investment?

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. At the same time he is drawing 20 per cent on his investment.

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. But B has not been so forward-looking, as some people would say.

Mr. HOLMES. No; he bought after the rise.

Mr. LONGWORTH. And he is getting 5 per cent?

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. Now, do you think he should pay just as much?

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. Then we differ.

Mr. HOLMES. Yes; evidently.

Mr. GARNER. You want to base it, instead of capital invested, you want to base it on value?

Mr. HOLMES. Yes, sir.

Mr. GARNER. Let me ask you—that disturbs the committee very much—who is going to determine the value of the \$500,000 worth of timber that you claim is worth \$2,000,000?

Mr. HOLMES. You are getting a little ahead of me, Mr. Garner, but theoretically it is claimed it is worth \$2,000,000.

Mr. GARNER. We are getting a basis for this tax. If you base it on the capital invested you can ascertain that, we have been trying to value the railroads; we have spent already twenty odd millions of dollars to value them, and we haven't got anywhere.

Mr. HOLMES. No.

Mr. GARNER. Now, if the Treasury Department has got to go out and value every piece of property, where would we get to?

Mr. HOLMES. On that hypothesis you probably wouldn't get anywhere for a good while. But you doubtless know that because of the income-tax law all of these timber companies have had to determine the value of their property as of March 1, 1913; that was the date the income-tax law took effect. The Treasury Department hasn't got our value at all. The Government goes into the matters of value for the corporation-stock tax. It goes into the timber values because, as is familiar to you, because the value of the stumpage at the time it was cut is so much, and that it is entirely proper to base the tax, not on the value now, or on the unearned increment, but approximately January 1, 1914, which is practically the same as March, 1913, for taxing purposes. I think it is entirely proper for the values of January, 1914, to be taken.

Mr. GARNER. Yes; that is in the lumber business?

Mr. HOLMES. Yes; and the coal business.

Mr. GARNER. It isn't with the railroad business and it isn't with any other kind of business. Now, do you want to put the lumber business and the coal business in a specific class and take the values of them at the time, and then the capital invested as to others?

Mr. HOLMES. No; we do not. We do not ask anything except what is general. I say it has already been determined as to the lumber and coal.

Mr. GARNER. It hasn't been determined as to the others.

Mr. HOLMES. Hasn't it? Hasn't it, as to the Federal corporation-stock tax, been determined?

The CHAIRMAN. No; you are mistaken as to the method of that.

Mr. LONGWORTH. Let me give you another illustration: A five years ago buys a piece of property for \$500,000 and it is now worth \$2,000,000 and produces \$100,000. B buys a similar piece of property for \$300,000 and it is now worth \$2,000,000, which is bringing in \$3,000. A's property is bringing him 20 per cent and B's is bringing

him 1½ per cent. Now, shouldn't A be taxed much higher than B? That is an excess-profits tax.

Mr. HOLMES. I wish I could find out what you mean by an excess-profits tax. The law doesn't tell me what it means.

Mr. LONGWORTH. It is based on the returns from capital and an arbitrary plan fixed by Congress. It is assumed that a profit in excess of 8 per cent on invested capital is an excess profit, and it is so taxed, and how else can you base it when it is an excess-profits tax? The only other way is the English way, where the tax is the difference between what you make now and three years ago.

Mr. HOLMES. The difference is, what is capital?

Mr. LONGWORTH. Your proposition is that it is purely income.

The CHAIRMAN. Let me see. In January, 1913, you buy a piece of property, or timber, for \$500,000, which is worth \$2,000,000 now.

Mr. HOLMES. Yes.

The CHAIRMAN. What is your capital invested?

Mr. HOLMES. \$2,000,000 is my capital invested.

The CHAIRMAN. No; but you invested \$500,000; you made an increase of \$1,500,000. Suppose you want the Government now to let you have a deduction of what you put in, \$500,000; should you come in and pay the Government on the \$1,500,000 increase?

Mr. HOLMES. No, sir.

The CHAIRMAN. Wouldn't that look fairer?

Mr. HOLMES. It would look fairer that way.

The CHAIRMAN. I have talked with a great many lumbermen, and they have said they would rather have it this way. You have \$1,500,000 profit in your case, haven't you, if you pay \$500,000 for it and it is now worth \$2,000,000; or if you should incorporate and put in a mill and put it in at \$2,000,000, you have actually made a clear profit on the \$500,000 invested of \$1,500,000?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. You have made that?

Mr. HOLMES. If you sell it you have made it.

The CHAIRMAN. If you put in \$2,000,000 as the basis of the capital invested, why shouldn't you pay the Government a tax on the difference between the \$500,000 and the \$2,000,000? If you have it your way you escape an excess-profits tax on \$1,500,000, which you made without turning a finger.

Mr. LONGWORTH. Let me put another illustration. A buys a piece of property for \$1,000,000 and that property appreciates to \$2,000,000, and that brings in \$100,000 a year. B buys a similar piece of property and it depreciates \$1,000,000 and brings in a profit of \$100,000 a year. A is getting a profit not only on the money invested, but a large return. B not only made a loss, but is getting a very small return for the amount invested. Wouldn't the logic of your position be that you would have a tax on losses?

Mr. HOLMES. No; not if I—

Mr. LONGWORTH. They have to pay the same.

Mr. HOLMES. Because the incomes are the same.

Mr. LONGWORTH. Surely; but the investment of the one shows a profit and the investment of the other shows a loss.

Mr. HOLMES. On paper.

Mr. LONGWORTH. Would you advocate putting an excess-profits tax on losses?

Mr. HOLMES. No, not on losses; but it seems this excess-profits tax is a tax on incomes.

Mr. LONGWORTH. Well, as a pure income tax, don't you consider the capital invested at all?

Mr. HOLMES. Yes; but it is only a factor in computing tax. It is the same thing—that is, the tax is the same thing with an equal income. The phrase "capital invested" is only for the purpose of determining the amount.

Mr. LONGWORTH. What is invested capital? Is it the amount invested, or the amount determined by some one at the time of taxing?

Mr. HOLMES. I say the latter.

Mr. LONGWORTH. Then it isn't the amount invested?

Mr. HOLMES. Yes, sir.

Mr. LONGWORTH. But I have invested it.

Mr. HOLMES. Somebody might have died and left it to you. You are excluding that.

Mr. LONGWORTH. That is not excluded in excess-profits tax, if somebody dies and leaves it to me. But I have invested it.

Mr. HOLMES. Suppose a corporation was a beneficiary to a large extent; wouldn't that be capital?

Mr. LONGWORTH. Your proposition is that it isn't the amount that is invested.

Mr. HOLMES. That he originally puts in.

Mr. LONGWORTH. That the sole question as to whether an excess-profits tax should be put in is the amount that the assessor determines it is worth?

Mr. HOLMES. Yes; that it is the value that is in the business which produces an income that is subject to the tax irrespective of the accident of how you got the property, whether by inheritance or gift, or otherwise.

Mr. LONGWORTH. You are rejecting the whole principle of investment?

Mr. HOLMES. No; I think not; because you take the wildcatter who got \$500,000 worth of property and issued \$2,000,000 of stock on it; that appreciated and became worth \$2,000,000.

Mr. LONGWORTH. According to your reasoning no timber land would ever pay an excess-profits tax, no matter how much money it made?

Mr. HOLMES. Yes; when the owner realizes his income from the cutting and manufacturing the lumber.

Mr. GARNER. But you wouldn't get it from the property?

Mr. HOLMES. Yes; because he has the property.

Mr. LONGWORTH. Who puts the value on the property?

Mr. HOLMES. The Treasury Department, I suppose.

Mr. LONGWORTH. Do you suppose they would put a value on it by which you would get 20 per cent?

Mr. HOLMES. I have no idea what they would put on it.

Mr. LONGWORTH. Suppose they put an honest value on it; do you think land is ever assessed at a 20 per cent basis?

Mr. HOLMES. Timber and coal is, because it is put on in assessing the income of the corporations.

Mr. LONGWORTH. Do you mean to say—what would they put on a property that would net you \$100,000! \$2,000,000?

Mr. HOLMES. They would put a value on what it was earning at the time, not taking the market value, but the value of the physical property.

Mr. LONGWORTH. Of course, I understand what you are getting at, that the excess-profits tax must be based on the present value of the property, notwithstanding the amount invested?

Mr. HOLMES. Originally; yes, sir.

Mr. LONGWORTH. To do that you destroy capital invested?

Mr. HOLMES. You do not, because there are cases, under subdivision 2, as mentioned by the chairman, where they are largely over-capitalized. Now, my contention is simply this, that if a given corpus, or property, is devoted to a business which produces an income which is taxed, whether in the name of an excess-profits tax or war tax or normal tax, the income is the only thing taxed under each of those three. If the income is the same, and if the corpus, or property, which produces that income is the same, the tax ought to be the same.

Mr. LONGWORTH. Notwithstanding the man who pays the tax made an original investment, or not?

Mr. HOLMES. Yes; no matter whether somebody died and left him the money, or how he got it.

Mr. GARNER. We never could get that law to work; that is wholly impractical.

Mr. HOLMES. Do you think so?

Mr. GARNER. Throughout the United States it would be. It might not be in the lumber and coal business. But so far as the income is concerned, it wouldn't make any difference about the value of the property, but the income of the property. That is your contention?

Mr. HOLMES. Yes, sir.

Mr. GARNER. But you must arrive at the amount of invested capital.

Mr. HOLMES. Yes, sir.

Mr. GARNER. And we had to make some rule, and in making that rule we said the amount invested, the capital invested. Now, if you had said the property, it would devolve on the Treasury to value the property.

Mr. HOLMES. I think the Treasury Department is going to have as much trouble with this; they are not going to escape under this law the finding of the value of the property. Take the case I mentioned to Mr. Kitchin, of the man who has \$500,000 worth of property and issues \$2,000,000 of stock, and that appreciates to \$2,000,000, that has to be determined whether it is true in fact or not, and they determine that that corporation has an invested capital of \$2,000,000.

Mr. GARNER. Have you a concrete example of that kind in mind that you can cite to the Treasury Department?

Mr. HOLMES. No; I haven't any.

Mr. GARNER. You don't think the Treasury Department will come to that conclusion?

Mr. HOLMES. How can it help it? I am not evading, but I want to stick to the illustration I made. My illustration was that he forms a corporation for \$2,000,000, and he has timberland then worth \$500,000 that he puts in, and it appreciates on January 1, 1914, to \$2,000,000.

Mr. HOLMES. No question about that. If, on the other hand, that corporation had exchanged \$500,000, not for property but for cash, and with that \$500,000 cash bought some piece of timberland, and it had appreciated, it would have invested capital of only \$500,000, while this neighbor corporation would have had \$2,000,000 on the same property.

Mr. GARNER. Where, under the present law, you are letting the fellow that issued this \$2,000,000 stock escape.

Mr. HOLMES. You are encouraging it.

Mr. GARNER. And I agree probably in the instance it is wrong; but is that any reason why we should let you escape, because the other fellow got away, and not have you pay a tax on the part of the capital paid in?

Mr. HOLMES. No; I think you put it harshly in speaking of letting me escape. I do not want to do that. What I want to do is to find the proper test to apply to invested capital, if there is such a thing.

Mr. GARNER. It is a difficult thing.

Mr. HOLMES. The capital which produces the incomes that you tax. May I read into the record a suggested amendment to those first three paragraphs? It is rather short.

(The proposed amendment is as follows:)

For that part of subdivision (a) of section 207 which precedes "Provided," substitute the following:

(a) In the case of a corporation or partnership—

1. The actual cash value of the property of the corporation or partnership as of January 1, 1914. If such property was acquired prior to January 1, 1914, or if such property was acquired on or after January 1, 1914, the actual cost thereof if acquired for money, or the actual cash value thereof at the time of acquisition if acquired for property or for stock or shares in said corporation or partnership; and

2. Paid in or earned surplus and undivided profits acquired on or after January 1, 1914, and used or employed in the business, exclusive of undivided profits earned during the taxable year.

The CHAIRMAN. Do you know of some representative lumber interest? Give me one concrete case.

Mr. HOLMES. I can not from absolutely personal knowledge, but from reliable hearsay I heard of a man who had to sell out timber holdings just before the excess-profits tax law became effective. I have forgotten the figures, but here is the same illustration: He sold out for \$2,000,000, whereas he had only put in \$500,000. That \$2,000,000 he put into another business. Now, unquestionably, in his new business he may have an invested capital of \$2,000,000. If he had not sold out, under the law as it now stands he would have an invested capital of only \$500,000. It seems to us wrong, unequal, and rather un-American to tax that man in two different ways, because, as what happened to be the accident of having to convert timberland into cash rather than holding onto it a little bit longer.

The CHAIRMAN. In converting it into cash he made \$1,500,000, which was subject to income tax. If he had a business of buying and selling timber, he would have had to pay an excess profits on that also.

Mr. HOLMES. I do not follow that.

The CHAIRMAN. The man that did not sell out escapes the paying of that income tax on a \$1,500,000.

Mr. HOLMES. Yes; because it is not realized.

The CHAIRMAN. That is the reason he keeps it just as it was—the reason why he did not sell it.

Mr. HOLMES. Probably.

The CHAIRMAN. Another reason that the fellow would keep that capital down to \$500,000 instead of \$2,000,000 is to escape the payment of the capital-stock tax.

Mr. HOLMES. Yes.

Mr. GARNER. You get them both ways there.

The CHAIRMAN. The capital-stock tax was enacted into law before the excess-profits tax. It's to the interest of a corporation to cut its capital down as low as possible for the purpose of the capital-stock tax. As soon as the excess-profits tax became a law and the tax was based upon the amount of invested capital, it became advisable for the corporation to put its capital up as high as possible. You may not happen to be caught. Couldn't an individual, according to your construction of the law, having an investment in timber of \$500,000, if it is worth \$2,000,000, incorporate and sell it to the corporation for \$2,000,000, and thereby secure an invested capital of \$2,000,000?

Mr. HOLMES. Now?

The CHAIRMAN. Yes.

Mr. HOLMES. Undoubtedly, if it was worth \$2,000,000.

The CHAIRMAN. Well, how is he hurt now?

Mr. HOLMES. He has got, then, to go through the form of incorporating.

The CHAIRMAN. The other fellow went through the form of selling, and incorporating some other business. When you look at the statutes there is nothing like the inequality which at first blushed you thought there was.

Mr. GARNER. You get him one way or the other.

Mr. HOLMES. You get him going and coming. I know that; but is there any reason for taxing people unequally who are in the same condition, or the same situation? That is what we protest against.

The CHAIRMAN. Now, Mr. Longworth gave you some examples. I want to take your own examples and see if there is some unequal taxation, even if this section 207 was not in the law. The House conferees have opposed that going into the law. The Senate insisted on it, and they had to yield on some things, and we yielded on others, and we yielded on that.

Mr. HOLMES. In subdivision 2?

The CHAIRMAN. Yes. Now, take your own illustration. You said here is A who bought years ago timber and put \$500,000 in it. That is now worth \$2,000,000. Here is another, B, who comes along and buys right across the road the same number of feet and the same quantity of timber for \$2,000,000. Now, you say that B has a deduction of, say, 8 per cent on \$2,000,000, while A has only a deduction on \$500,000.

Mr. HOLMES. That is true, isn't it?

The CHAIRMAN. That is true, but here you ignore the fact that A has \$1,500,000 over and above the other man. A has never paid out of his pocket but \$500,000. B is out of his pocket \$2,000,000, four times as much as A. Why should B not have four times the deduction? A escapes the taxation on this \$1,500,000. There is not much injustice in that, is there?

Mr. HOLMES. I think so.

Mr. LONGWORTH. May I add that A is getting 20 per cent net and B is only getting 5 per cent.

Mr. HOLMES. Suppose A by the sweat of his brow has amassed that \$500,000 by toil, while B has a rich uncle who has left him what he possessed?

The CHAIRMAN. Suppose A had been left his money by a rich old aunt, and put it in timber and sat there and made \$1,500,000. Suppose B had by the sweat of his brow made \$2,000,000. You see it works both ways. I am going to pursue that a little further.

Mr. HOLMES. The deduction must be based on invested capital.

The CHAIRMAN. There are objections to that form of base, but it seemed about the wisest way. B put in four times as much actual cash from his pocket as A did, and A has already got \$1,500,000 to his credit over and above B, so why should not B have four times the deduction. He has four times more money invested. Your man has put in one-fourth as much as B and has an unearned profit of \$1,500,000, on which he escapes taxation. I just ask you this, is it unfair in that case to permit B to have four times as much deducted as A when he has got four times the actual cash invested.

Mr. HOLMES. I think so, because the \$500,000 and the \$2,000,000 timberlands are now worth the same amount.

The CHAIRMAN. Your man has escaped taxation on \$1,500,000. You put another case. You said B had a \$500,000 interest in timber and sold it for \$2,000,000 to a lumber concern. That lumber concern has received an 8 per cent deduction on the \$2,000,000. But B bought his timber the same time that A did, and at the same price. He holds it and begins to operate. Well, now, both make the same; both make \$200,000, we will say. Now A will pay more taxes than B for the reason that B will have a greater deduction. He will have an 8 per cent deduction on \$2,000,000 while A will have an 8 per cent deduction on \$500,000. We will turn them both into corporation and they both make \$200,000. A will pay \$50,000; B will pay, say, \$25,000. Your \$500,000 concern pays \$50,000 excess profits. Let us see what is left. A has 30 per cent after paying the \$50,000; 30 per cent net profit. That is in addition to the \$1,500,000 he has made; 30 per cent net profit. While B and his corporation that only pays \$25,000, on account of the big deduction, because it has more capital, only has left 8.7 per cent. Do you see anything unfair about that?

Mr. GARNER. Then your 30 per cent is to pay his income tax.

The CHAIRMAN. The man you complain about has only left in that operation on his actual capital 8.7 per cent, while A, that you want to help, has 30 per cent left after paying the tax. What do you think about that?

Mr. HOLMES. It seems to me that it is unfair.

The CHAIRMAN. You are presenting A.

Mr. HOLMES. Well, I got confused with A and B, they change sides so.

The CHAIRMAN. A is the \$500,000 fellow.

Mr. LONGWORTH. He has made the big profit.

The CHAIRMAN. A is your man. Now, if you gentlemen represent A, like the 23 men here, and most of the audience, and the case to

be just as you put it and as I put it, do you think there was much injustice done?

Mr. HOLMES. I should under this law, because it seems you are justifying an unequal tax on A.

The CHAIRMAN. And not an equal tax. A is still ahead. He has 30 per cent clear profit upon his capital invested left. You must get it clear in your mind that this excess-profits tax is based upon capital actually invested, that the deduction is based upon that.

Mr. HOLMES. I understand that pretty clearly.

The CHAIRMAN. Well, now, if that is going to be the method of deduction, there is no remedy for A.

Mr. HOLMES. Yes; if you are going to stick to that method it will result in these inequalities that I have mentioned.

The CHAIRMAN. Do you think there are inequalities?

Mr. HOLMES. Yes; I think so, obviously.

Mr. LONGWORTH. The purpose of the tax is to get at people who have made profits, because by virtue of the profit he becomes liable to the tax.

Mr. HOLMES. You want to tax them higher on the same income because in previous years they have made a profit?

Mr. LONGWORTH. Because the tax is based on the excess profits.

The CHAIRMAN. If you invest \$1,000,000 and get \$20,000 or 2 per cent, and I invest \$1,000,000 and get \$50,000, don't you think that I am as able to pay \$20,000 excess-profits tax as you are with \$1,000,000 invested, making 2 per cent, or \$20,000?

Mr. HOLMES. You are going a little fast for me.

The CHAIRMAN. Am I not in as good a position to pay over excess-profits tax?

Mr. HOLMES. Yes.

The CHAIRMAN. That is this case.

Mr. HOLMES. It seems that we mean the same thing as invested capital.

The CHAIRMAN. I understood you wanted to deduct the value of the assets.

Mr. HOLMES. Yes, sir.

The CHAIRMAN. That sounds good, if you can consider your assets your capital invested. If I am in a concern that pays me 10 per cent the property is worth dollar for dollar, isn't it?

Mr. HOLMES. Yes.

The CHAIRMAN. If it pays me 20 per cent, the assets would make the property worth \$200, wouldn't it?

Mr. HOLMES. That depends on the kind of business, of course.

The CHAIRMAN. Take it as a double proposition.

Mr. HOLMES. Well, I don't know.

Mr. GARNER. Take the lumber business.

The CHAIRMAN. Then, if I had a regular investment that would pay me 10 per cent on what I put in, \$10 on every \$100, and pays it regularly, in a few years it would be worth dollar for dollar, wouldn't it?

Mr. HOLMES. Yes, sir. Let us concede that, anyway.

The CHAIRMAN. Now, if it pays \$20 on every \$100, and continues to do so in the course of business, it would be worth \$200.

Mr. HOLMES. Yes.

The CHAIRMAN. And if it goes up to \$50 a year on every \$100, that property is worth \$500,000 instead of \$100,000.

Mr. HOLMES. That seems to be correct arithmetic; certainly.

The CHAIRMAN. Now, then, how would you ever get an excess-profits tax on the value of the assets?

Mr. LONGWORTH. You never would get it.

The CHAIRMAN. If the profits had put up the assets, so that the stock is paying 8, 9, or 10 per cent, you would never get excess profits. I have considered that very carefully, because it was presented to us very ably by men from different sections of the United States, and when we began to analyze it we found that we were going to have an 8, 9, or 10 per cent exemption, and we would never collect a cent of money, because as the profits went up the assets went up.

Mr. LONGWORTH. You are presenting to this committee a proposition which entails the loss of revenue amounting to \$1,500,000,000 during the present year of the war and a great deal more during the coming year.

Mr. HOLMES. Have you the time to explain why it would? Because there would be nothing under the excess profits?

Mr. LONGWORTH. Nothing under your system, at least on invested capital.

The CHAIRMAN. If you made invested capital the present value of your assets.

Mr. HOLMES. I was not advocating that.

Mr. LONGWORTH. I was advocating the value on January 1, 1914.

The CHAIRMAN. You can put in the value at January 1, 1914?

Mr. HOLMES. No; only in the event that you issued stock on your property.

The CHAIRMAN. Yes; if you got this \$500,000 of timber you could incorporate and put it over into the corporation as \$2,000,000 prior to January 1, 1914.

Mr. HOLMES. If you had been lucky enough to do so.

Mr. LONGWORTH. The effect of it is the same. You could transfer it.

Mr. HOLMES. And eliminate any appreciation after that.

Mr. GREEN. Have you made a study of tax systems generally, or only with reference to your particular line of business?

Mr. HOLMES. Only that and coal. I have also some coal companies for which I am counsel, who are interested.

Mr. GREEN. I was going to say that if you had you would have discovered that no tax upon any kind of property could be levied without disclosing a great many inequalities in working it.

Mr. HOLMES. The income tax doesn't do it, does it?

Mr. GREEN. Oh, yes; it has hundreds of them. It would take the rest of the afternoon to explain them.

Mr. HOLMES. There is just one more thought, another thing that I believe it would be worth your serious consideration, to see whether it might not be helpful in encouraging production in these times of abnormal cost. What I particularly had in mind as an illustration, in the development of coal property as an example, the cost is two or three times what it was 2 or 3 years ago. If that is to be treated as capital investment, this abnormal cost of developing the thing, would it not tend to discourage people from going in for the development of such properties? Doubtless this principle will apply to others

at a time when we so greatly need production of all kinds, and so greatly need coal, whereas if there could be devised a system for allowing the company to take the amount of cost over the normal cost of developing that property, and charge that excess cost against operations, against earnings, for a reasonable period of years—the ideal, of course, for the duration of the war—I wish you would think that point over, because I think there may be something in it.

The CHAIRMAN. There may be something in it.

Mr. OLDFIELD. Isn't that the argument of the mining fraternity?

Mr. HOLMES. I think so, but I am not able to answer for their proposition at all.

The CHAIRMAN. That is a hazardous business. There is something in that. Have you got a brief there, a written argument?

Mr. HOLMES. No; not really.

The CHAIRMAN. If you have not stated the last point as clearly as you want, you may write out a statement and add it and make it more explicit, if you wish.

(The statement follows.)

#### PROPOSITION.

In these times of abnormally high labor and material costs of development work, for example the sinking of coal shafts, if the total cost thereof must be treated as capital expenditures, is extremely hazardous, because when prices fall again the resulting revenue will be inadequate to yield a proper return on such high investment. This is likely to discourage development in these times when the need for production is greatest.

#### SUGGESTION.

Would it not be well for this committee to consider permitting, by legislation, the amount by which such development cost is found to be abnormal to be charged as approved operating expenses during a reasonable period of years, say, three or four? The ideal period would be, of course, for the duration of the war; but since that can not be known, the Treasury Department must ultimately determine some fair period.

#### STATEMENT OF MR. TEMPLE CHAPMAN, ZINC AND LEAD MINER, JOPLIN, MO.

The CHAIRMAN. What companies do you represent, Mr. Chapman?

Mr. CHAPMAN. Mr. Chairman, I am here as a delegate from the industry in the Joplin district, appointed by the association of mine operators there.

The CHAIRMAN. Now, Mr. Chapman, have you got your argument in your mind, and would you prefer to get through with it before the committee asks questions?

Mr. CHAPMAN. Yes. There is just one point, very briefly, that I would like to state. Mr. Thompson, from Oklahoma, is here, and I hope that he can have a few minutes another day.

The CHAIRMAN. We will try to give it to him.

Mr. CHAPMAN. The Joplin mining district is producing about half the zinc of this country, and the zinc is going into war use to some extent. The district is an important factor in zinc production as a whole, but unlike some of the great copper mines of the West, owning great beds of ore in fee, the zinc body of ore in the corner of

Oklahoma is divided up into more than a hundred parcels, Indian leases, limited in their term by the Government and owned by 100 different operating companies. So, while we are a big factor as a whole we are weak individually.

While the district as a whole has lasted 50 years, and is likely to last 50 years, the individual companies are limited by the Government in the term of the lease and in the size of their ore bed, each company owning only a small portion, 20 to 40 acres of the whole mass of ore. For this reason a tax, we feel, needs to be considered as against the brief life of the individual mines. The compilations which we have made for the advisory board of the Treasury Department of one hundred and seventy-odd mines shows that the average life of these mines for the past 20 years has been  $2\frac{1}{2}$  years.

Mr. TREADWAY. What do you mean by the life?

Mr. CHAPMAN. From the time the mine is opened until it is exhausted. The productive life of each mine has averaged two and one-half years. For this reason it seems that we have to make an exorbitant profit of 40 per cent per annum in order to get back what we have put in.

That is the meat of my statement. The exemption before charging excess-profits tax as I understand it is meant to be a liberal allowance against an industry in general, but against this zinc-mining industry, with short-term leases of small ore bodies, it is necessary for the average mine to earn 40 per cent to get back what it puts in. Some mines get it back in less time than others.

Mr. GARNER. May I ask a question?

Mr. CHAPMAN. Certainly.

Mr. GARNER. Does the same principle, the same conditions exist with all mining companies besides zinc mines?

Mr. CHAPMAN. The same principle, but different in degree.

Mr. GARNER. Just what I am getting at is, suppose that the committee should take your viewpoint and give you larger exemption or depreciation advantage under the law in the way of excess profits. Suppose we gave you 15 per cent on account of the conditions that you have just outlined. How do you suppose the other mining industries of this country would take it? What do you suppose they would say to the Senate committee in reference to this discrimination in favor of zinc mining as against them? Would all of them come in and have to be treated as a whole, the whole mining industry?

Mr. CHAPMAN. I left Joplin with one point of view, but after listening to the discussions here I have come to the view that the main point is to raise revenue for the war.

Mr. GARNER. We do not want to do anybody an injustice, and I have been very much impressed with the character of the business of the oil and mining industry. It is different from a banking institution, an established business which goes on for years and years. I should go far toward giving you exemption, but I am undetermined. But if we exempt you without exempting other mining industries I am wondering what they will say over at the other end.

Mr. STERLING. It seems to me that you might get it by reducing your cost of operations.

Mr. CHAPMAN. Operating costs?

Mr. STERLING. No; you say on account of the short life of a mine can you compute the cost of production in such a way that there will be only apparent profit?

Mr. CHAPMAN. To some extent by correct accounting, and I would like to touch on that point.

Of course, all mining is regarded as a wasting industry. I do not need to go into what you know, no doubt, better than I do. As a stockholder in Utah Copper at the time it was brought to my attention, a director of that company impressed it upon me that it was a good investment, because the mine would run for 50 years, and no matter what happened, Utah Copper would produce at a profit. I find in my zinc mining, which I went into on my own account, that it is a great deal like hunting quail. You find that you have to fire a great many shots to kill one quail; and I have had to sink a good many holes to get zinc.

Mr. LONGWORTH. At what price is there a profit in zinc?

Mr. CHAPMAN. At the present price it just a little more than pays the cost of production; on the average, the cost of producing the ore is about equal to the return.

Mr. LONGWORTH. What is it?

Mr. CHAPMAN. About \$45 a ton for zinc concentrates.

Mr. LONGWORTH. What is that on a pound of zinc?

Mr. CHAPMAN. Just over 2 cents.

Mr. LONGWORTH. Two cents?

Mr. CHAPMAN. Yes.

Mr. LONGWORTH. How high has zinc been during this war?

Mr. CHAPMAN. Up to \$35 a ton of zinc concentrates. I speak of the ore and not of the metal.

Mr. LONGWORTH. I speak of the price of zinc; what I suppose you call spelter.

Mr. CHAPMAN. Spelter is the metal.

Mr. LONGWORTH. That is the metal?

Mr. CHAPMAN. Yes.

Mr. LONGWORTH. At what price of spelter is it profitable for you to mine?

Mr. CHAPMAN. At present, about 7 cents.

Mr. LONGWORTH. You have a profit at 7 cents?

Mr. CHAPMAN. Seven cents is about equal to the cost of production.

Mr. LONGWORTH. How high has zinc been during the war?

Mr. CHAPMAN. Zinc metal went to 25 cents a pound.

Mr. LONGWORTH. When was that?

Mr. CHAPMAN. That was for certain fancy grades of metal that we do not make.

Mr. LONGWORTH. At the time that Germany invaded Belgium and took all the zinc mines there, there was an immediate and tremendous rise?

Mr. CHAPMAN. Yes; Germany had half of the zinc of the world, and we were called upon to supply her place to France and England, and the high price of ore was the necessary stimulus which has perhaps somewhat overdone this.

Mr. LONGWORTH. When zinc was at 25 cents a pound, was there a profit in it?

Mr. CHAPMAN. There was a very handsome profit in it, and it gave a great stimulus to zinc mining.

Mr. LONGWORTH. If you can produce at a profit when the price is 7 cents, of course, you are going to have a great profit when it is at 25 cents.

Mr. CHAPMAN. Of course, that stimulus having done its work, has not returned to us. We have now come to that point, because of that stimulus, where we can provide England and France with the metal at a moderate price.

Mr. LONGWORTH. Do you think zinc is about normal now, at 7 cents—fairly normal?

Mr. CHAPMAN. We think from the production it is falling rapidly, and we are questioning whether it has reached bottom, or will go lower. It is below what it costs to produce it, now. That is, the cost is about double almost everywhere, and the price is about one-half, as against the prewar price.

Mr. LONGWORTH. I understood you to say that at 7 cents you made a good profit.

Mr. CHAPMAN. No; I say, at that, it is just equal to the cost of production. We make no profit now on the bulk of our production.

These gentlemen spoke of the relation of zinc to other products and of our asking an exemption, and on that point—because it is an industry making an important metal, and one-half of the American output is in such a peculiar position as against the position in the mining industry as a whole—I personally see no way to protect us from a tax that would be confiscatory of capital except by noting, in the making of a ruling of this law, some point to see that the tax is a tax on our profits and not a tax on that part of the earnings which must be treated as a sinking fund for the return of capital; and I willingly grant that we are asking a difficult point to say you should make an exception in a general revenue law to protect one rather small industry because of its peculiar position.

I merely wish to make the point before this Ways and Means Committee that this peculiar situation does exist; that the zinc industry has an average life of only two and a half years per unit, and that the normal business profit does not permit that wasting industry to get back what you put in, because what you put in a shaft and in drilling holes, etc., is worth nothing after you take out your ore body.

Mr. TREADWAY. In regard to this two and a half years' duration or life of a mine, that is a very short life for a business. Does that average exist because you get some mines that are worthless and work out in short order—that is, you might strike a little vein and mine that, and then your mine is over, and it is a poor mine—and others run along for a period of 50 years?

Mr. CHAPMAN. Other mines; yes.

Mr. TREADWAY. Yes; other mines.

Mr. CHAPMAN. Not other zinc mines.

Mr. TREADWAY. But are there enough to practically deceive people into wanting to mine it and then have the mine play out—I do not use the right terms, perhaps?

Mr. CHAPMAN. The mining industry has been exceedingly profitable as a whole, and especially the zinc mining in our field, because of the war.

Mr. TREADWAY. It was so before the war?

Mr. CHAPMAN. But because of the war zinc mining made exceptional profits.

Mr. LONGWORTH. It ran along about 5 cents a pound before the war?

Mr. CHAPMAN. Yes.

Mr. LONGWORTH. And then it suddenly shot up to 25 cents.

Mr. CHAPMAN. Yes.

Mr. LONGWORTH. And how long did it stay there?

Mr. CHAPMAN. Not long.

Mr. LONGWORTH. It came down slowly?

Mr. CHAPMAN. It came down gradually, but steeply. [Laughter.] It is not making money now.

Mr. LONGWORTH. But it has for a good many years made money at 5 cents a pound?

Mr. CHAPMAN. Yes.

Mr. LONGWORTH. And it was up around 20 cents for three or four years?

Mr. CHAPMAN. Yes; pretty nearly.

Mr. LONGWORTH. So that there has been a pretty nice little profit there; purely a war profit; selling munitions to the allies?

Mr. CHAPMAN. Quite true. The only point we make is tax the profits but do not tax our capital, which we want just a fair show to get back.

Mr. TREADWAY. As to those mines we spoke of that have a very short length of life, it must be a very short length of life to reduce your average to two and a half years for the entire product.

Mr. CHAPMAN. Our entire field is peculiarly our own. Of course, these copper mines make a great war production.

Mr. TREADWAY. What is the longest life of any mine in that immediate vicinity to your personal knowledge?

Mr. CHAPMAN. Five years is a very exceptional mine there; to get a profit out of any mine for five years is exceptional.

Mr. TREADWAY. There are mines running there now that have been in use at least five years?

Mr. CHAPMAN. Yes; I know one mine that has been in use for 10 years.

Now, I have taken all the time I asked for. I have here a compilation showing investment and earnings of these mines that we were asked to prepare for the advisory board, and I would be glad to leave this as evidence in my statement if you wish.

Mr. TREADWAY. Neither Mr. Garner nor Mr. Moore is present. They usually ask the witnesses certain questions of a certain nature, and I will ask you those questions.

Can you offer any suggestions to add to the country's revenue, in your line of business, by taxation?

Mr. CHAPMAN. I noticed that that was the better part of anyone appearing before you, and it seems to me, as a stockholder in several other mining companies and as a worker in my field, that our industry has been very profitable, and can well afford to pay a very high tax, and I should say, from what I hear of taxes being paid in my field and elsewhere, that we can pay more tax than we have in the past.

Mr. TREADWAY. Of the same nature of taxation, only at an increased rate?

Mr. CHAPMAN. Of the same nature of taxation; yes. Certain rulings have been made by the Advisory Board of the Treasury Department over specific cases, in our field, which go far to protect the point I have made—the short life of the mine—and it seems to me that those should be confirmed; and both they and the War Industries Board have sent men out into our field to personally investigate the points I have touched upon, and they are the evidence that I would submit to your committee to back up my statements; and to answer your question further, barring only the protection of return of investment spread over reasonable part of the year, I should say we should pay more taxes. The number of years that return of investment is guarded I think needs investigation, because our industry is different from the mining industry as a whole.

Mr. HAWLEY. Taking into consideration the readjustment you suggest, would the amount received if this readjustment was made be greater than the amount paid by you under the present law?

Mr. TREADWAY. Do not the rulings you speak of by the Treasury Department bring about the condition to which Mr. Hawley has referred? You have gotten satisfactory rulings establishing certain readjustments, have you not?

Mr. CHAPMAN. Yes; they have been satisfactory. I do not know but that in some cases they have gone too far, and have answered adversely the point you make, that there might be more taxes paid.

Mr. HAWLEY. More taxes under the present law, you mean, than under the readjustments you suggest?

Mr. CHAPMAN. I mean that the readjustments should be so guarded that they will not lessen the total tax. I do not claim that they should lessen the total tax.

Mr. HAWLEY. Would they not probably increase it?

Mr. CHAPMAN. I have not facts enough to answer properly your question.

Mr. TREADWAY. Mr. Chairman, I would like to make one observation in this connection. Mr. Chapman is one of the few witnesses who has been willing to say that his industry ought to receive a higher tax, and that they would be willing to pay a higher tax; and I want to make this personal observation, that I think that is very largely the result of the fact that Mr. Chapman owns property near down where I live, and the atmosphere is such that his honesty is above reproach.

The CHAIRMAN. Is there any other point that you desire to make, Mr. Chapman?

Mr. CHAPMAN. Nothing more, Mr. Chairman. Shall I leave this compilation with you?

The CHAIRMAN. Yes; we will be glad if you will make it a part of your remarks.

(The matter referred to is here printed in full in the record, as follows:)

#### JOPLIN-MIAMI MINING DISTRICT.

#### INVESTMENT AND EARNINGS OF 176 MINES REPRESENTATIVE OF THE ZINC INDUSTRY.

A committee was chosen by the Missouri-Oklahoma Zinc Mine Operators' Association to present data pertaining to the earnings of zinc mines to the Treasury Department at Washington.

The aim of this committee has been to gather information from all mines in this district which have been productive during the past 20 years, especially those mines which have completed their record and have been mined out and abandoned, to tabulate the facts thus gathered, and to make a truly representative statement of the investment made and the profits and losses resulting therefrom.

The figures herewith submitted are not represented as being exact statements from the books of the various mines; some of the companies for whose reports we have asked had gone out of business and have no accessible records, but we have been able to obtain from their former owners statements of the capital invested and the profits and losses made, which were certified to as being substantially correct, and the committee believe, from their own experience, that the aggregate of these statements constitutes a very accurate view of the history of the district.

This list does not include the thousands of prospects which were drilled and developed during the past 20 years and which failed to become productive mines, but which, nevertheless, have absorbed several million dollars of capital and were a necessary charge upon the mining industry.

The following pages will show in detail the name and location of each mine, the amount of capital invested, the years during which the property was operated, the amount of net profit or loss, and the final disposition of the plant.

There is also given a summary of these figures wherein the aggregate and average investments, times of productivity, and profits and losses are shown separately for Missouri and Oklahoma and the entire district.

In conclusion the committee wishes to draw attention to the fact that the results shown antedate the recent advances in all mining costs; because of these advances the capital investment now required to develop and equip a mine is vastly greater than the average investment here shown.

At the present time—April, 1918—the zinc-ore market is very depressed and about two-thirds of all the mills in the district are shut down, because they can not be operated at a profit.

Respectfully submitted.

L. C. CHURCH, *Chairman*,  
P. B. BUTLER,  
TEMPLE CHAPMAN,  
T. J. FRANKS,  
W. B. SHACKLEFORD,  
J. F. ROBINSON,  
VICTOR RAKOWSKY,  
*Committee.*

## REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Friday, June 14, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Garner, Dickinson, Oldfield, Crisp, Helvering, White, Moore, Green, Sloan, Longworth, Fairfield, Sterling, Martin, Hawley, and Treadway.

### STATEMENT OF MR. H. E. WEST, OF WEST & HAZLETT, OIL PRODUCERS, INDEPENDENCE, KANS.

The CHAIRMAN. Mr. West, give your full name and residence and your business or occupation and whom you represent in appearing before the committee.

Mr. WEST. H. E. West, Independence, Kans. I represent West & Hazlett, oil producers, Kansas, Oklahoma, and Wyoming.

Mr. Chairman, the subject I want to discuss is the question of income and excess profits, largely on sales of oil property. We have two classes of producers; one of them is the conservative man who buys property after it is partially or completely developed, and the other is the prospector. The prospector goes out and tries to find a property. Sometimes he is successful and sometimes he is unsuccessful. When he is successful and finds a property—as a rule he is a man of limited means, and especially in Wyoming he is liable to be anywhere from 20 to 50 miles from a railroad or pipe-line. It requires a larger capital than the average prospector has. He develops his property as far as he can and then he wants to sell it. There are always purchasers for properties at a good, reasonable price. He is offered a price for his property—for illustration, we will say, \$100,000 more than his cost of production; but he has probably been looking for it for a lifetime, and possibly will not find it but once in a lifetime. Under the present law he has to pay from 40 to 60 per cent of that amount in income and excess profits.

The CHAIRMAN. Mr. West, you are referring to a man who is in the business of buying and selling such property?

Mr. WEST. No; I just explained to you that he is the man who is the developer, and very essential to the oil business.

The CHAIRMAN. But that is his business?

Mr. WEST. That is largely his business. Sometimes he stops, but when he stops another man takes it up and goes ahead.

The CHAIRMAN. Of course, if it is not his business or trade to find and develop and sell—

Mr. WEST (interposing). Well, that is his business, certainly. Very few men ever quit until they go broke.

The CHAIRMAN. If that is his business, of course, he would be chargeable with an excess-profits tax, but if he simply made a sale now and then and that was not his business, then of course it would be different. For instance, I am not in the business of buying and selling farms. If I were I would be chargeable with an excess-profits tax if I made enough so that there was an excess; but if I just sold a farm I happened to own and was not in that business, I would be chargeable with no excess-profits tax.

Mr. WEST. Well, we may assume that these men are in that business. These men go ahead and develop the property and they are very essential to the business in order to keep up the production; but a man comes along and offers one of these men a profit of \$100,000. Well, that is a big profit. It looks like a big year's work, even though we take the excess-profits tax off; but he feels that it is more than his share and that he should not pay that kind of a tax where such an income comes to him once in a lifetime, possibly; and he feels that he should not pay the same tax that a man pays who has a fixed income on an investment in stocks, bonds, or real estate which brings him \$100,000 a year.

The CHAIRMAN. How do you differentiate between the man who is in the business of prospecting for oil or lead or zinc or any other mineral and happens to make a profit, perhaps, once in 10 years from a farmer or a merchant or a man in any other business who has been working perhaps all his life without making any profit, and then happens to have a very good year and makes a large profit?

Mr. WEST. I have not reached my point yet.

The CHAIRMAN. Can you differentiate between the two?

Mr. WEST. I do not think you can; no, sir; but that is not the point I am trying to make.

The CHAIRMAN. I see a great difference, or, at least, I think I do, in the oil and zinc and lead business—

Mr. WEST (interposing). It is very hazardous.

The CHAIRMAN (continuing). On account of the hazard and on account of the short life of the well, say, or the mine, but I do not see very much difference in the proposition you have just advanced.

Mr. WEST. I have not reached my point yet.

The CHAIRMAN. All right; go ahead.

Mr. WEST. He refuses to sell the property on account of the excess profit or income tax. If he can go along, he goes along in a very slow way, because his funds are very largely exhausted; and if he can, here is what he does, which defeats the purpose of the tax—understand, I have not come here to ask relief, because we are willing to carry the burden.

The CHAIRMAN. Do not get the impression that the committee does not want to hear these propositions from you and others about the mineral interests, oil, lead, zinc, etc., because it is an intricate question. It is a difficult question for us to decide, and we want experienced men like you to come before us and explain the situation and raise any objection or make any suggestions in reference to the present law. We feel that perhaps some kind of remedy is necessary.

Mr. WEST. There are some things that should be remedied. He to sell his property—I want to try to get this plain before it must be developed. Before the income tax law was sold the property, and the man or the corporation would v. He is a wildcatter or a prospector and wants to go on

and move on and make another fortune. That is what is in his mind. Of course, he does not always make it, but that is what he wants to do. He can not do that, or he reasons that he can not do that, because \$50,000 or \$60,000 is more than he feels his share of the taxation ought to be. Therefore he stops on that property and seeks a man or a corporation that has money. He says to them, "You pay me for the development"—he has probably drilled one hole or possibly had money enough to drill five holes, and he says to them, "You pay me for the development I have done here, and I will make some kind of an arrangement with you (which arrangement I consider perfectly legitimate), whereby I have a percentage in the property and you take it over and you have a controlling interest."

These trades are usually made at 30 per cent and 70 per cent, or 40 per cent and 60 per cent, or 50 per cent and 50 per cent, according to the value of the property, a \$1 consideration and return of the expense that has been incurred up to the time that this transaction takes place. The corporation or the man of means moves on to the property and he goes along and develops it. The property is developed, but the Government has not received a cent, and if there could be some adjustment or some arrangement made so that this tax could be reduced on sales which cause an income, it would be a benefit. Where a man has an income coming in, he can not help himself, but I do not know of any way of forcing him to sell, and if he does not sell, he does not pay the income tax, and this is retarding our business very materially, with no profit to the Government.

I have not a remedy to offer, but I have studied whether it would be practicable or not to possibly have a commission or a board with authority to act or with authority to thoroughly investigate that these men could go before and iron out their differences and make it a kind of trade. It does not look just as businesslike as it might for the Government to go into the swapping business, but from what I could hear yesterday and from what I know, our Government needs all the money we can get, and if the tax is so high it defeats its own purpose, it should be remedied so that it would bring in whatever it might produce. Under present conditions the tax is just the same as an import duty on goods that is so high that there are no goods imported. This law has stopped the sale of big properties absolutely. I do not know of a property of any importance whatever that has sold since the law was enacted. It has resulted in all of it going into these trades I am telling you about, and I do not see any way to prevent it. Now these men would be willing to pay 15 or 20 per cent, which would help out quite a little.

Mr. MOORE. On what?

Mr. WEST. On the sale price, whatever it might be. It might be \$100,000, it might be \$500,000, and I know of one \$2,000,000 sale that was defeated.

Mr. MOORE. Your point is that the Government gets no revenue now by reason of these arrangements made by the prospector?

Mr. WEST. Yes, sir; absolutely, and the arrangements are legitimate.

Mr. MOORE. There would be a return, however, if there was an actual sale?

Mr. WEST. Certainly, there would be a return then.

Mr. MOORE. But those actual sales are now postponed by these deals you refer to?

Mr. WEST. Absolutely.

Mr. MOORE. And therefore the law is defeated?

Mr. WEST. It is defeated of its purpose; yes, sir. There have not been any transactions carried on that are unlawful at all.

Mr. MOORE. No; I get your point, but still there is a running to cover on the part of the prospectors.

Mr. WEST. Well, here is the proposition: I know two young men—

Mr. MOORE. I do not mean that offensively, you understand.

Mr. WEST. I understand that. I am trying to get this before you just as plain as I know how.

Mr. MOORE. There is no sale this year and there is no sale next year, and no prospect of a sale for some time to come.

Mr. WEST. No, sir. Until the situation is changed there will not be any sales.

Mr. MOORE. And these continuing deals are made to avoid the possibility of being caught when the sale comes.

Mr. WEST. No; that does not relieve them from the sales. These transactions are made to develop the property. The prospector is usually a man of limited means and he must have capital, especially in Wyoming. Being from 20 to 40 miles from a railroad or pipeline means a big investment before a man can realize on his property.

Mr. MOORE. Assuming we wanted to have him go ahead with his business negotiations and produce all the oil he could, and with the knowledge that he is staving off in the manner you have described the question of taxation, your remedy would be the appointment of a commission to inquire into these business transactions?

Mr. WEST. No, sir; I consider the business transactions perfectly legitimate.

Mr. MOORE. It is not quite clear how any revenue would be derived by an inquiry of that kind unless, of course, there was fraud.

Mr. WEST. If there was a commission that the buyer and the seller could appear before and meet on some common ground, the seller representing his side and the buyer, of course, would not have a great deal to say, but if there was a commission where the seller could go and state his case to good, fair men—

Mr. MOORE (interposing). Would a tax on oil remedy the situation?

Mr. WEST. No; not in the least.

Mr. MARTIN. You mean a production tax of so much?

Mr. MOORE. Yes; that has been suggested.

Mr. WEST. That would not have any bearing on the point I am trying to make clear before you.

Mr. MOORE. I would like to know what provision of the existing law you are now referring to.

Mr. WEST. Excess profits.

Mr. MOORE. Is it the excess-profits clause?

Mr. WEST. I judge so. My attorney knows much more about the law than I do.

Mr. MOORE. Of course, if there are no excess profits, there would be no revenue.

Mr. WEST. That is the idea. That is what I am trying to get plain before you, that these sales are not made on account of what the producer or the prospector considers is an—

Mr. MOORE (interposing). Then what is the difficulty, a fictitious value in such sales as are made?

Mr. WEST. No; it is all legitimate, absolutely. There is no fictitious value, but the sale is not made. If the tax on profits made on sales was reduced, then the sales would be made and would bring quite a few million dollars to the Treasury, but at 40 or 60 per cent the man is not that patriotic and will not make the sale and therefore the law defeats its own purpose.

Mr. MOORE. Your point is that under the present law we not only fail to get revenue, but the business itself is also impeded?

Mr. WEST. Yes, sir; retarded.

Mr. MOORE. I wish you could suggest some remedy for that.

Mr. GREEN. As I understand you, there are practically no sales now.

Mr. WEST. No big sales; no, sir. There are perhaps some \$20,000 or \$30,000 leases, or maybe a little prospector at some place may sell, but I do not know of a \$100,000 sale that has been made. Of course, I am not conversant all over the territory.

Mr. GREEN. You spoke of a per cent at which you thought sales would be made?

Mr. WEST. Yes, sir.

Mr. GREEN. What was that?

Mr. WEST. I said 15 or 20 per cent. That is merely a suggestion, but I have talked with these people and I am one of them.

Mr. GREEN. Suppose we should provide that the rate should not exceed 30 per cent, and appoint a commission to make a reasonable allowance in cases where that seems to bear too hard, what would you think of such a plan as that?

Mr. GREEN. I believe it would be very acceptable, sir. That is along the line I had in view. The producer feels there is a difference between making \$100,000 in one year, which possibly in our business is a lifetime, and a man who has an income from securities of \$100,000 that comes to him annually.

Mr. GREEN. You think it is very difficult, then, to fix a rate that would apply equitably in all cases or possibly as between almost any two cases you could select?

Mr. WEST. Yes, sir; I think it is a difficult matter. Taxation is a very hard problem to work out at all times.

Mr. GREEN. But in your branch of business it seems to be especially difficult.

Mr. WEST. In our business there are some who could pay more than others on account of the cost they have been put to, you see. A man sometimes makes a find comparatively easily, whereas the other man has worked 15 years to make his find.

Mr. GREEN. As you say, it is a very difficult matter to make any tax law work out equitably; in fact, I consider it is absolutely impossible in even the simplest kind of matter, but in the case of your business it seems especially difficult.

Mr. WEST. It is very difficult.

Mr. GREEN. Some man will go in with an investment of a few thousand dollars and in a month or so make perhaps \$100,000.

Mr. WEST. Yes, sir.

Mr. GREEN. Another man may spend a good many thousand dollars and work a good many years before he makes one dollar.

Mr. WEST. Yes, sir. Now, there is one other matter I wanted to explain to you gentlemen. Before this law was enacted a great many men, following their line of business, purchased property.

They would have \$50,000 or \$100,000 of the purchase price and they would go to the banker and probably borrow three or four hundred thousand dollars. They would have about 25 per cent of the purchase price, and they pledged their oil as security for the debt. The income tax law regards oil production as an income and allows him an interest charge, but in that case takes from 40 to 60 per cent of the money he has pledged to his banker to pay off his obligation, and that is going to bankrupt a good many men in our business, especially if the tax is still increased, because the supply is depleted very largely in two or three years and he can not pay the obligations he made before the law went into effect.

Mr. GREEN. You think there should be a depreciation allowance?

Mr. WEST. There should be some way a man could pay his obligations. After the obligation is paid, if it is necessary, take it all but running expenses to whip Germany; but it is going to financially ruin a great many men who are caught in that situation. If a man borrows money after the law is enacted, of course he knows what he is doing; but he borrowed this money and probably put up all he had of his own resources, and then a law is enacted that takes from 40 to 60 per cent of the money that he was going to pay his obligation with in taxes, and his property is depleted at a rate so that the remainder will never pay the obligation.

Mr. MARTIN. Does not that same thing apply to all other business where they borrow money? Does it not apply to the farmer?

Mr. WEST. Well, it applies to the farmer, but he borrows in small amounts and the percentage is not nearly so great. I do not know that there can be any remedy for this. I just wanted to place it before the committee for its consideration. I am not offering a remedy.

Mr. GREEN. I do not know how it may be with the farmers in Mr. Martin's State, but in my State none of them are ever subjected to a 40 or 60 per cent tax.

Mr. WEST. Well, that is what our people would be subject to and it is bound to bankrupt the producer.

Mr. MARTIN. I do not mean the farmer particularly, but any other business.

Mr. WEST. The larger the sum the greater the tax and, therefore, as I consider it, the greater the burden.

Mr. GREEN. The peculiarity of your business, as I understand it, is that if a man makes anything he generally makes a great big profit.

Mr. WEST. Yes, sir.

Mr. GREEN. And therefore pays the very highest tax?

Mr. WEST. That is the idea. You are either making money or going behind very fast.

Mr. MOORE. It is hardly comparable to the farming business, because that depends largely upon a man's labor.

Mr. WEST. I think we are in a different class.

Mr. MOORE. Your business is speculative?

Mr. WEST. Very.

Mr. MOORE. It is more of a gamble. If you make a strike, you strike heavily, but you may not strike at all, and then you lose your overhead?

Mr. WEST. Yes, sir.

**STATEMENT OF MR. EARL C. SAMS, 354 FOURTH AVENUE, NEW YORK CITY.**

Mr. SAMS. Mr. Chairman, I am here representing the J. C. Penney Co., as president of the J. C. Penney Co.

Mr. MOORE. What is their business?

Mr. SAMS. Operating chain stores.

Mr. MOORE. Groceries or general merchandise?

Mr. SAMS. General merchandise, not including groceries. They are sort of department stores in a small way, I should say, in the small towns of the West. I am not here exactly to suggest a plan to remedy our situation, but merely to show you the position we occupy. It will be necessary for me probably to take just a little of your time in order to explain our organization, but I will be just as brief as I can. About 15 years ago our business was started as a partnership affair in a little town of Wyoming, three partners being equally interested in the business. We were successful for a time and after a number of years we had profits enough to open another store and we took one of the partners from the store and another gentleman, making still a partnership of three in this branch store.

I merely mention this to show you how the business is handed down from one to another store. Then after a time the profit on this store was sufficient so that we opened another store, each time being a partnership of three people. That went on for a number of years, until finally our partnerships became so scattered, there being a partnership of three people in each particular store, that we found it necessary to incorporate in order that we might have a central control of the business; but not in any sense to distribute the profits in any different way other than they had been distributed in the partnership. It was merely an affiliation, I should say, of partnerships. We are now operating 197 stores, doing a business last year of nearly \$15,000,000.

Mr. MOORE. In how many cities?

Mr. SAMS. In 197 cities.

Mr. MOORE. You only have one store in a city like New York, for instance?

Mr. SAMS. Yes; we are operating in over 25 Western States. We are a Utah corporation.

Mr. RAINEY. You are operating in the small towns?

Mr. SAMS. Yes; towns from three to ten thousand, some of them larger. We have a few towns of 25,000 or 40,000. Now the proposition I want to leave with you is that while we are a corporation yet we are really a series of partnerships, because we are not a joint-stock company, each three men in each particular class or in each particular store only shares in the profits or losses of that particular store.

Mr. RAINEY. Are they always the same three men?

Mr. SAMS. No; we probably have over 100 different men, and any two men may not own stock in the same two stores.

Mr. RAINEY. And in the combination of stores there would probably be 100 stockholders?

Mr. SAMS. About 150 I should judge, approximately.

Mr. RAINEY. You are incorporated?

Mr. SAMS. We are now incorporated, yes, sir. We have been for the past four years, I think.

Mr. RAINEY. But you locate three of these men in each town?

Mr. SAMS. Yes, sir.

Mr. RAINEY. And they actually live there?

Mr. SAMS. Well, not always. One of them lives there and the other two may or not. They may live at some other town.

Mr. RAINEY. And the profits of that particular store are divided among those three men?

Mr. SAMS. Among those three men only. The particular stockholders in the particular store participate in the profits of the particular store.

Mr. RAINEY. The company does not participate in the profits?

Mr. SAMS. No; we are just an affiliation of partnerships just to have a central control. We have a central control over each of the stores as a matter of credit.

Mr. RAINEY. Do the board of directors own stock in all of the stores?

Mr. SAMS. No, sir; they do not.

Mr. RAINEY. They are paid salaries, I presume?

Mr. SAMS. Yes, sir. The board of directors are all stockholders in maybe one or several of the stores, and each of them owns stock.

Mr. RAINEY. If there is a store operated in one town which loses money, those three men lose the money?

Mr. SAMS. Yes, sir.

Mr. RAINEY. And if they make a lot of money, those three men make the money?

Mr. SAMS. Yes, sir.

Mr. STERLING. Is the stock limited to those three men?

Mr. SAMS. In case of failure, of course, any stockholder in any of the series of stores would be liable.

Mr. STERLING. But you say all the profits go to the three men in that particular store.

Mr. SAMS. That is right; yes, sir.

Mr. STERLING. Can not some outside stockholder have stock in that particular store and share in the profits?

Mr. SAMS. You mean could one of those three men sell his stock?

Mr. STERLING. Yes; or could some outsider originally have some of the stock? Is the stock limited to the three men in the particular store?

Mr. SAMS. Well, no; I do not know that it is limited, although none of the stock could be sold to any outsider without being first offered for sale to the three owning that particular class of stock.

Mr. STERLING. You are one of the three original men who started the business?

Mr. SAMS. Yes, sir; I might say that, although not exactly in a strict sense.

Mr. STERLING. Do you not have stock in all the stores?

Mr. SAMS. No, sir; I do not. No one man has stock in all the stores.

Mr. STERLING. Does one man have stock in more than one store?

Mr. SAMS. Yes, sir; he can have stock in from one to as many as he wants.

Mr. STERLING. Then the profits are not limited to the three men who run the store?

Mr. SAMS. Yes, sir.

Mr. STERLING. Suppose some outsider had stock in it, would he not get a share of the profits?

Mr. SAMS. He could not have that stock.

Mr. STERLING. You say that the profits of any store are limited to the three men who operate that store?

Mr. SAMS. Yes, sir.

Mr. STERLING. And still you say a man could have stock in several stores?

Mr. SAMS. Well, I will explain how that might be. For instance, we might have one store and A, B, and C might own the store and they might make sufficient capital so that they could start another store. The two men owning stock in that store would take a man—ours is a sort of cooperative plan in order to interest young men as they come along and give them a share in the business—and two men owning the stock in that store would take one of the men who had been working in this particular store and they would take their profits and open another store, lending this third man, who had been an employee of this first store, sufficient money to capitalize his one-third interest. Then they would start this other store. No one man in these different stores can sell his stock without first offering it for sale to the coowners of that particular store.

Mr. RAINEY. Then if they bought it there would be only two men interested?

Mr. SAMS. In case some man wanted to sell; yes, sir.

Mr. RAINEY. And you have stores operated sometimes with only two men?

Mr. SAMS. Well, it might come to that, but we have not as yet. Oh, yes; that could be, and I think in one or two instances, perhaps, that has been true.

Mr. RAINEY. And this group of three people are incorporated?

Mr. SAMS. Each of them is an incorporation in themselves; that is, they are associations or a branch of the J. C. Penney Co.

Mr. RAINEY. I mean incorporated under the laws of any State?

Mr. SAMS. No; they are all under the laws of Utah. There is only one corporation, the J. C. Penney Co.

Mr. RAINEY. What is your proposition, a proposition of cooperative buying?

Mr. SAMS. Well, yes; that is the plan, the assemblage of these different concerns, as a matter of credit, with only one organization, though. I want to leave it clear with you that we are not each separately incorporated. We are only one corporation, and I do not think there is another corporation in existence like ours.

The CHAIRMAN. Does the J. C. Penney Co. sell to each one of these stores?

Mr. SAMS. No, sir; they do not.

The CHAIRMAN. The managers of each one of these stores can buy wherever they want to without conferring with the board of directors?

Mr. SAMS. They can do that if they want to, but we have a central buying organization.

The CHAIRMAN. That is what I am getting at.

Mr. SAMS. But they have that privilege, of course.

The CHAIRMAN. But the J. C. Penney Co. has a central store?

Mr. SAMS. Not a central store, a central office only. Our distribution is made direct.

The CHAIRMAN. You do the purchasing at the central organization for all of these stores?

Mr. SAMS. Yes, sir.

The CHAIRMAN. And distribute the supplies?

Mr. SAMS. Yes, sir.

The CHAIRMAN. Does this central organization get any commissions for selling?

Mr. SAMS. Absolutely none; no, sir. These buyers are employed by the different stores and paid a salary from each store.

The CHAIRMAN. How many members constitute your board of directors?

Mr. SAMS. Nine.

The CHAIRMAN. They do not personally superintend or manage any one of the stores, but they have the general management of all the stores?

Mr. SAMS. Yes, sir; I would say that, at the present time.

The CHAIRMAN. Are their salaries increased according to the profits of all the stores?

Mr. SAMS. No, sir. They are all just paid a reasonable salary as a whole, regardless of their earnings.

The CHAIRMAN. Have the directors a little stock in all the stores?

Mr. SAMS. No, sir.

The CHAIRMAN. Where do they come in for their profits?

Mr. SAMS. They are just like a third member in any of these stores, except they receive a salary.

Mr. RAINEY. How are the salaries paid, by assessing all the stores?

Mr. SAMS. Yes, sir.

Mr. RAINEY. Are assessments made for any other purpose than paying salaries?

Mr. SAMS. That is all, and the general running of our central office, clerical work, and things of that kind.

The CHAIRMAN. Well, take one of your directors, the one director who has more interest in all the stores, how many stores is he interested in?

Mr. SAMS. I should judge, possibly, and this would be approximate, 100 of these stores; that is, the largest stockholder. The second one I think would probably own stock in about 50, and I might add that the largest holder of this stock is a director, but he does not draw any salary at all. He simply draws his living expenses; that is, up to the present time.

The next point I want to make is that in our particular way of being organized we are simply an association together of a number of partnerships, each third man arranged in that particular class, one class having nothing to do with the other so far as earning power is concerned, one store might make \$6,000 and another store might make \$12,000, and that would make no difference because the man who only made \$6,000 would not share in the \$12,000. So, strictly speaking, we are not a stock corporation. Now as to being taxed, we have been considered as being a corporation, which we are in one sense, and naturally our taxation has been multiplied; I mean, the amount we have had to pay has been very much larger, due to that way of doing. Last year we paid on a net profit of about \$1,700,000, and we paid \$850,000 taxes.

Mr. DIXON. Federal taxes?

Mr. SAMS. That included the taxes; Federal taxes; yes, sir.

The CHAIRMAN. Your net income was how much?

Mr. SAMS. About a million seven hundred thousand dollars.

The CHAIRMAN. And you paid how much?

Mr. SAMS. \$647,000.

The CHAIRMAN. You made about 100 per cent profit on the investment?

Mr. SAMS. But here is what I want to leave with you. For instance, one of our stores that made \$6,000 on a capital and surplus of \$12,000 pays \$3,000 taxes, because we have got to assess each one of these concerns on a basis of what it applies as a whole.

The CHAIRMAN. You have some that pay 200 per cent?

Mr. SAMS. Not quite so much, but a hundred; yes. But the man who had only made 25 per cent has to pay just the same as the man that made more because of our peculiar way of doing business. If we had some store that made 150 per cent there would be no objection to letting him pay on the basis of what his capital and surplus was.

The CHAIRMAN. When they take you as a whole why do not you nine directors then distribute that tax equitably among your 197 stores?

Mr. SAMS. Do you not see that it could hardly be done, for the reason that with your taxes up higher there would be no good ones.

The CHAIRMAN. Could not you adjust it according to the profits each store made?

Mr. SAMS. I do not see how you could do it.

The CHAIRMAN. Could not you nine directors do it as well as the law could do it for you or as the Treasury Department could do it?

Mr. SAMS. What I am arguing is that we have a capital and surplus in each individual store. If you will let us figure our taxes from that we would gladly do it.

The CHAIRMAN. You can do any figuring you want in the organization.

Mr. SAMS. We can if you will let us, but we are not permitted to do that.

The CHAIRMAN. How much less taxes would you pay if they taxed each store?

Mr. SAMS. Possibly it would cost 25 per cent or 30 per cent, or it might be 35 as an average. It might cost some stores more than they are paying now, and it might cost some stores a great deal less, according to the profits that the particular store makes.

The CHAIRMAN. In other words, your point is for us to so write the law that each store would pay its pro rata part?

Mr. SAMS. Yes, sir.

The CHAIRMAN. Why can not you nine directors do that under your charter, and if your charter would not give you the right, why can not you go to Utah and have your charter changed so as to give the nine directors the power to do that?

Mr. SAMS. I do not see how we could figure taxes that way, because we are assessed as a whole.

The CHAIRMAN. You could do it as easily as we could.

Mr. SAMS. I do not think you quite grasp the idea.

The CHAIRMAN. You want to get out of paying the taxes?

Mr. SAMS. I am perfectly willing to pay, but I do not want the little stores to pay more than their share.

The CHAIRMAN. Well, you nine directors could adjust it with the little fellow. You can do it as easily as we can. If it is a matter of adjustment and not of the rate of taxation you can do it better than we can, because you keep up with it better. You nine directors do nothing else the whole 365 days of the year, and these gentlemen here have other matters to adjust.

Mr. SAMS. I do not want to take up your valuable time, unnecessarily.

The CHAIRMAN. Your statement has been very interesting and it is very progressive. It is a new industry and really a tribute to young men like yourself, and I believe that it is a good thing to get young men into a plan like that.

Mr. SAMS. What we do not like to do is to tax this young fellow that is just getting a start, who has possibly borrowed money to enable him to capitalize that particular store, and we do not like to tax him so large a percentage.

Mr. RAINEY. You pay the taxes for the whole number?

Mr. SAMS. Yes, sir.

Mr. RAINEY. And you apportion them?

Mr. SAMS. Yes, sir.

Mr. RAINEY. If you do not like to have the little fellow pay so much, why do you make him pay so much?

Mr. SAMS. That is what I am asking you to let us do, to take capital and surplus of each store and let them pay.

Mr. RAINEY. "A" store on the same capital makes \$10,000; "B" on the same capital makes \$5,000, and why could not you say that "A" should pay twice as much as "B"?

Mr. SAMS. If you take "A" and "B" and add their taxes together and figure their taxes, it will figure out differently.

Mr. RAINEY. I know, but that is between the Government and your corporation; but between your corporation and your members you could adjust taxes in your best judgment, and if under your charter you could not do that you could go to the Utah authorities and get them to amend your charter so that you can make an equitable rate in adjusting taxes.

Mr. SAMS. You mean to go to Utah to get a charter, so that each store could pay on the basis of what the investment amounts to?

Mr. RAINEY. I say, you could do that.

Mr. GREEN. Is not your real point that your concern would not pay but about half as much taxes under your plan as under this bill? You would have something like half a million dollars exemptions for each one of your corporations. How many did you say you have?

Mr. SAMS. One hundred and ninety-seven. I want to ask you a question. I have tried to explain our plan. But each of those is separately capitalized and has a separate capital and surplus and separately owned by two or three stockholders. Are they not entitled to pay taxes on the basis of their investment if they only share in the profits and losses of that particular store?

Mr. STERLING. The corporation is one organization. They do not own these subsidiaries. Just tell the committee how you suggest to fix it.

Mr. SAMS. I have suggested; I have tried to make it clear.

Mr. STERLING. Have you any way by which it may be apportioned among the various stores without reducing your taxes any?

Mr. SAMS. I would not be so much interested in doing that if I could not reduce them to a certain extent. (Laughter.)

Mr. MOORE. What we are asked to do this year is to get two dollars for what we got one dollar last year. It is not our fault; the President has told us that he needs a great deal more money.

Mr. SAMS. I understand that. You are perfectly welcome to it.

Mr. MOORE. The Secretary has indicated that he wants \$8,000,000,000, and it makes it pretty difficult to talk about reductions in any instance.

The CHAIRMAN. I am going to suggest something that I know never occurred to the members of your organization. If you had the law like you want it you would have an exemption of \$591,000. You had not thought you would make that by your proposal?

Mr. SAMS. I have not figured it out.

The CHAIRMAN. You have got 197 stores and you want us to treat, so far as taxes are concerned, each store as a separate corporation. As one corporation, as it is now, you only have a \$3,000 exemption, but with 197 stores treated each as separate corporations you would have \$3,000 exemption for each, and with 197 stores that would amount to \$590,000. That is the first pop out of the box what you would make.

Mr. SAMS. No. We suggest we are competing with other small corporations or individual owners, and should we not be as much entitled to that as our competitor would be, inasmuch as we would be only operating in this particular store with a capital and surplus of a certain amount, and the particular stockholders only share in the profits and losses of that particular store; why should we pay more taxes on that capital and surplus than our competitor?

The CHAIRMAN. In other words, your concern is large enough to have 197 times as much capital and buy at wholesale 197 times as much as your competitors, and when your competitor buys \$10,000 worth you buy \$1,970,000 worth and you can get your goods a great deal cheaper, and your overhead charges are a great deal cheaper.

Mr. SAMS. How would our overhead be cheaper?

The CHAIRMAN. And you would have a great advantage over those other stores if you were large enough to have 197 competing against that one, with your capital 150 or 200 times greater. Now you want to exempt 197 times more than that man, although your corporation, one end of it, is 197 times stronger?

Mr. SAMS. How do you figure that they will get 197 times more than the other fellow gets?

The CHAIRMAN. That man who is competing with you only has \$3,000 exemption, while you have \$591,000 exemption.

Mr. SAMS. Oh, no; we would have only \$3,000.

The CHAIRMAN. No; your concern and your nine directors have an interest not only in that one store; they have an interest in 50 or 60 stores.

Mr. SAMS. Some might have that much and some might not have any interest.

The CHAIRMAN. With this force of nine men you would have an interest in a hundred of these stores.

Mr. SAMS. But here is the real point I want to leave with you.

The CHAIRMAN. I want to get the real point. (Laughter.)

Mr. RAINEY. You have a system of cooperative buying, and these various stores are simply distributing agencies. In other words, you are competitors of the mail-order houses. The mail-order houses buy at a certain point and then they distribute through the mails, paying very large transportation charges in that way. With your cooperative system of buying you buy where you can buy the cheapest and in the largest quantities, and your transportation charges are the cheapest because you send that freight entirely in carload lots to several points of distribution and then you simply distribute there through the three stockholders who are there, who are sharing those profits, and your company is responsible for the losses any one of these little stores may suffer, and therefore you get unlimited credit. I think ultimately you are the real and only competitors for the mail-order houses in this country. I think you have a scheme that beats them all to pieces.

Mr. SAMS. Then I will ask you to put us on the basis of mail-order houses.

The CHAIRMAN. In the case of these three so-called partners in the store, say in the store at Olney, Ill., with \$20,000 capital, do you so arrange that each one of those three must have the same amount of stock?

Mr. SAMS. Yes, sir; in all cases.

The CHAIRMAN. Then it is plain that this gentleman that has a stock in a hundred has a hundred times more stock than the little fellow?

Mr. SAMS. That is, one director.

The CHAIRMAN. If he has got stock in 50 stores, he has got fifty times more interest in the business than one of these other fellows?

Mr. SAMS. That is only natural, because that has made our plans possible, because that man could take some young man out of a store and lend him the money to start a store and capitalize a particular store.

Mr. TREADWAY. Under the same name?

Mr. SAMS. Yes, sir; the J. C. Penney Co. Another thing, we are paying taxes on the basis of actual inventory, which is our capital and surplus. We have not any good will in that, or any trade-marks, or patent rights, or anything of that kind, as the mail-order houses have, with whom we compete. Our tax is based absolutely on the actual dollars and cents, and they are all actual cost inventory, and we go up against any mail-order house, say one that has \$30,000,000 in there that is exempt. Our earning power and earning capacity has never been capitalized. Am I clear on that?

Mr. GREEN. The law strictly interpreted would not allow that, but possibly you meant they have sold their good will to a corporation and capitalized it in that way, so that I think that is true with reference to mail-order houses, and there is no way now for us to prevent that. We would stop that, however, if we could.

Mr. SAMS. Do you think it is fair that a corporation of our kind of two and a half million capital and surplus should pay a profits tax of \$1,000,000 when some other corporation has got \$30,000,000 in there that they have never put into it?

Mr. GREEN. I will say that so far as I am concerned I am very much in favor of Congress taxing the sales of mail-order houses.

Mr. SAMS. On sales? I would not support that.

Mr. GREEN. That would not reach you.

Mr. SAMS. Yes, it would, just the same.

The CHAIRMAN. How would it reach you?

Mr. SAMS. You mean on sales?

The CHAIRMAN. On gross sales of mail-order houses.

Mr. SAMS. That would simply go to the consumer.

Mr. RAINEY. Everything goes to the consumer.

Mr. SAMS. That would go directly.

Mr. GREEN. The mail-order house has to compete with the local merchant. He may get more orders by cutting a little under the local man, but if you levy a tax on all gross sales of merchandise it would not inevitably go to the consumer if we levy a tax on the gross sales of the mail-order house, and if the mail-order house keeps up its business it will have to keep up its old rates. Therefore the tax does not necessarily come out of the consumer in that case.

Mr. SAMS. I want to suggest that it seems to me that the plan would be to take the three years prior to the war and to figure up and say so much percentage of profit is made on the capital and investment, and I am perfectly willing to give all above that. Let us make the same as we could in prewar years upon our investment and the Government can have all the rest of it, and then take part of that if they want to.

Mr. GREEN. We have to make these rates apply to everybody. That might work out fairly in some cases. Some of the Standard Oil companies were making about 100 per cent before the war, or making a little over 100 per cent, say 125 per cent, after the war. They have practically no tax to pay under that plan; but here is a corporation that made nothing before the war. Its business now does not have anything in particular to do with war business; it is not a munitions plant; but by reason of the general prosperity of manufacturing it has now succeeded in making a 25 per cent profit. Under your plan this corporation only making a 25 per cent profit would have to pay a big tax, while the one to-day making 125 per cent would not have to pay any.

Mr. SAMS. Go back to four years; if they have not made anything in four years, go back to five years.

Mr. GREEN. That does not follow at all. This corporation is just getting started.

Mr. LONGWORTH. What is the difference with your corporation before the war and since?

Mr. SAMS. Fifteen per cent more since the war. That is due to the general prosperity of the country.

Mr. LONGWORTH. And you are willing to give the Government all that you made over that?

Mr. SAMS. Absolutely.

Mr. RAINEY. Before the war what was the percentage?

Mr. SAMS. That I could not tell you; I do not know.

The CHAIRMAN. What is your actual capital invested?

Mr. SAMS. Our actual capital invested last year was \$2,300,000; that includes capital and surplus.

The CHAIRMAN. That is what they are taxing you on?

Mr. SAMS. Yes, sir.

The CHAIRMAN. They are permitting you to deduct that amount?

Mr. SAMS. An exemption of that amount.

The CHAIRMAN. That includes the capital and all these things?

Mr. SAMS. That includes everything. I do not think it is fair. I think we are entitled to figure each one of them, because they are separate and distinct in themselves and the men owning that particular stock in each one shares in the losses the same as our competitors do, and I can not help feeling that we are entitled to the same consideration as any other man in the town in which we may be operating. I do not think there is anything else, gentlemen.

The next is Mr. W. F. Meyer. (No response.)

Mr. A. H. Van Gorder. (No response.)

Mr. William T. Phillips. (No response.)

Mr. A. R. Bruncker. (No response.)

The CHAIRMAN. Mr. Eder, we will hear you next.

Mr. GREEN. While you are waiting, I should like to read a portion of a letter. I understand the committee welcomes suggestions, and this may tend to relieve the tedium somewhat. In the letter which I received the party suggests that there seems to be a decided movement towards hitting excess profits and he makes this suggestion in order to raise the \$8,000,000,000 necessary:

Permit me to suggest a way to raise a large part of it. Place a tax of 75 to 80 per cent on all surgeons' fees for operations that run above \$200. They now range from \$250 to \$1,500 when they are treating smaller fry, and I assume as many thousand among the wealthy class. Now, why not, if a surgeon can charge from \$250 up for 20 to 45 minutes work and get away with it, who is there that ought to be taxed in the war? If that is not excess profits then there is no such animal. If the committee does not give this class a good hard jolt then they ought to have a hard job telling why some other taxes have been put on.

The CHAIRMAN. Then we will hear from a surgeon if there is one present. [Laughter.]

#### STATEMENT OF MR. P. J. EDER, SECRETARY, MERCANTILE BANK OF AMERICAS.

The CHAIRMAN. Please give your full name, business, and occupation.

Mr. EDER. Phanor J. Eder. I am a member of the New York Bar and have been admitted to practice in one or two South American countries, specializing in foreign laws. I appear here as secretary of the Mercantile Bank of the Americas, incorporated. It is a new organization having companies in foreign countries for the purpose of fostering foreign trade, that engage in banking in foreign countries. We have organized a number of subsidiary corporations, all incorporated in the United States for the purpose of banking, especially in South America. We have subsidiary banks of the Mercantile Bank of Americas in Peru, with branches at other cities; we have organized the American Mercantile Bank at Caracas and branches at other towns. We have organized the Mercantile Bank of Brazil and branches are now being organized in cities in northern Brazil. We have organized the American Mercantile Bank of Colombia and have branches in various cities in Colombia.

We also have an interest in the National Bank of Nicaragua, which operates in four cities in Nicaragua, and banks with which we are connected operating in Ecuador, and in other cities in Central

America, and in Venezuela, and we act as representatives or agents in several other South American countries. We also have a direct branch in Paris and one in Barcelona, Spain.

Mr. DICKINSON. What is the total number of foreign banks where you have branches?

Mr. EDER. The total number of them is 22, so that we are in a position to judge pretty carefully as to the necessities of American foreign trade. I am here to advocate not merely something that affects our own interests, but something that will affect the interests of all American corporations operating in foreign countries. It is something that the more I have thought upon the more vital it has seemed to me to be. My plan will have general application to all foreign countries, but I shall confine myself as far as specific instances are concerned to South America, with which I am best acquainted.

Now, the proposal is that income derived by American corporations from sources abroad—from operations entirely abroad—or from investments entirely abroad, be either exempted altogether from income and excess-profits taxes or at least that some preferential rate be given. Now, it may appear that I am asking you gentlemen who are engaged in this question of increasing revenues to diminish revenues, but an examination of the subject has convinced me and I think, if you will follow me carefully, it will convince you gentlemen, that if we continue to impose a heavy income tax, and especially a heavy excess-profits tax on American corporations operating abroad, our sources of revenue, not only the national revenue, but the State revenue, are going to be diminished, because the first effect will be that these corporations will be compelled to give up their American charters and will be compelled to seek incorporation in foreign jurisdictions, naturally in the place where they are doing business, and in that way this Government is going to lose that revenue from those corporations.

The States are going to lose the revenue from them that they now derive from the organizations in the license fees and taxes, and we are going to lose a great deal of control over the corporations. That is practical, hard, business from the standpoint of taxation.

From the standpoint of American foreign trade the consequences are far greater. It would be a tremendous loss of prestige to the United States, to our foreign trade, if these companies had to give up their American charters. It is our patriotic desire to see the American flag waving from American merchantmen in every port in the world. It should be our patriotic desire to see American corporations waving the American charters in every country in the world. I have prepared a memorandum here which I respectfully request permission to refer to.

The CHAIRMAN. You can file that with your remarks.

Mr. EDER. It is somewhat better written than my remarks will be; I am not so good on speaking as I am on writing, perhaps, and if you will allow me to refresh my recollection by looking to this I will be able to point out one of two things. Our tax system in the past has always been very careful and very considerate of foreign trade. Now, when the corporation income tax was first imposed there was a 1 per cent tax imposed and then a 2 per cent tax. That was such a comparatively slight matter that it had no effect on our foreign trade at all, but when with the press of other business last year before your

committee and other committees, Congress did what on the surface appeared to be a very slight thing, the driving of American corporations out of the country was apparently lost sight of and no particular regard was had—and I believe it is one of the first instances in the history of the country—as to foreign trade. I do not need to dwell upon the fact to you gentlemen that the laws of this country have been discouraging foreign trade in many ways. There is no doubt that the Government is going in every way to try to stimulate foreign trade. It has always been the policy of the Government to stimulate foreign trade, and I have no doubt that it will always continue to be the policy of the Government to do so.

One of the incidental ways in which the tax law affects the foreign trade may be lost sight of in the urgency of more important items before a committee. I want to call your attention to one feature that especially hits our bank. At present the matter has not been taken up by our directors and I suppose at first sight they will give scant sympathy to any idea of giving up American charters in the corporations operating abroad, but if we are compelled to pay over a very large part of our surplus earning, say, that we derive from our bank in Peru, which is our bank which has been longest in operation and which is now beginning to be more profitable than others—if we are compelled to pay over to the United States Government a large part of our net profits we will be unable to save up the surplus there. That will have a double effect. In the first place, if we have to pay very heavy taxes when our competitors, the local banks, down there are not paying any excess taxes at all to the United States, if we are subject to this double taxation, the local tax that we and our competitors down there have to meet, and in addition we, and not they, have to meet very heavy taxes at home, we will be in a position where we can not compete with those native banks, or banks of European countries. Secondly, we will be compelled, if we do make a profit, to turn the greater part of it over to the United States Government and we will be unable to build up a surplus and that will put us in a disadvantageous position as against our competitors who are building up their resources by putting their surplus back into the business. That same idea of not being able to build up a surplus applies not merely to banks, but to all American corporations operating abroad.

As you gentlemen know, a great deal of our pioneer work in South America has been due to western and southern farmers who have gone out of the country into Mexico, Central America, into South America, operating small plantations or ranches or mines. The way they have been able to do it is this: They have been known to be men of good character and ability at home. They will go down and find some small property which appears capable of developing. They will go back home and tell their friends and they will raise a small amount of money sufficient to develop it. Out of the earnings of American skilled industry and that little amount of capital put into those plantations or into those mines, some very valuable properties have been built up. This could not be done if these concerns—they have to be incorporated in order to take in their friends at home—had to pay over to the United States a large part of their surplus; they would then be at a standstill. The same thing applies to American trading organizations abroad which have no capital invested in tangible property but which maintain trading

organizations and have capital loaned out to the county. They will be unable to compete with their neighbors and they will be driven out of America.

There are only two ways out of the situation that I can see; one for them is to give up their American charters, and in that way they would very readily avoid taxation.

The CHAIRMAN. You have a bank in Brazil, I believe?

Mr. EDER. Yes.

The CHAIRMAN. What is the Brazilian property tax there?

Mr. EDER. The franchise tax for our operations, or the property tax?

The CHAIRMAN. All the taxes.

Mr. EDER. It is 8 per cent on our capital; that is the franchise tax paid once every 10 years, when we first begin.

The CHAIRMAN. Suppose your branch has a million dollars, how much would you have to pay a year in Brazil?

Mr. EDER. I do not know. I do not think the annual corporation taxes are heavy. We have to pay a municipal tax, and we have to pay stamp taxes, and they amount, I should say—we have not been in operation over a year and I have not got the complete returns yet—I should say they would amount to about \$20,000 or \$30,000. Of course those taxes are met by all the banks there.

The CHAIRMAN. How about an income tax?

Mr. EDER. They have no income tax.

The CHAIRMAN. No excess profits tax?

Mr. EDER. No excess profits tax.

The CHAIRMAN. You have one in Paris?

Mr. EDER. Yes. There we would have to pay excess profits taxes.

The CHAIRMAN. Do you know in dollars and cents the rate of the excess profits tax in France?

Mr. EDER. No, I do not; I think it is 25 per cent.

The CHAIRMAN. Has it been based on what you were doing before the war?

Mr. EDER. Yes; the French and English taxes are based on conditions before the war.

The CHAIRMAN. What about those banks which started after the war? Do they charge 25 per cent now? Because they had no prewar business? What is the fact about that?

Mr. EDER. I think it is 25 per cent straight.

Mr. GREEN. I think there is an allowance made on sales under the English law in case there was no prewar business.

The CHAIRMAN. But the prewar business is 25 per cent on the difference of what the concern had made during the prewar period and what is being made in the war period?

Mr. EDER. I think so.

The CHAIRMAN. France also has a direct income tax?

Mr. EDER. Yes, sir.

The CHAIRMAN. Do you know what that is?

Mr. EDER. No; I do not.

The CHAIRMAN. Would not this satisfy you, if we were to make any change, to simply allow you to deduct on your income-tax return and excess-profits tax return in America the amount you have to pay on that business in a foreign country?

Mr. EDER. That would go some way. That would avoid the element of double taxation. I do not think it would prevent all these corporations migrating from the United States if there was a heavy excess-profits tax imposed on them.

The CHAIRMAN. In France they pay 25 per cent excess-profits tax and they have an income tax, whatever it is. Suppose you have to pay a large excess profits or income tax on the same business, it would be pretty hard; but if you were permitted to deduct the 25 per cent excess profits and the regular income tax in France, that would be a considerable help, would it not?

Mr. EDER. No; I do not think that would meet the situation. I have presented the figures here in my statement. I understand that that is the case now, that in making our returns we simply return the net income received in this country after a deduction of the foreign taxes. I have worked out a case here, and I believe it to be an actual case, of a corporation in England, deriving income exclusively from business transacted and capital invested in that country. Under the English law that corporation will be assessed a tax of 80 per cent of its profits in excess of the exemption allowed. In addition to this tax, the income of the corporation from sources in foreign countries will be returned for tax in the United States, and an excess-profits tax as high as 60 per cent may be assessed on such income in the United States. These taxes are exclusive of income taxes, which may be assessed in both countries.

Mr. LONGWORTH. Is your proposition to abolish the tax that will be laid on American capital invested in foreign countries?

Mr. EDER. No; I do not think it is necessary to go as far as that. I would abolish the excess-profits tax entirely, and I would leave a small income tax.

Mr. LONGWORTH. Do you know of any other country that has that system?

Mr. EDER. I do not know that this point has ever been brought up anywhere, but the more I think of it the more it seems to be vital to the stimulation of our foreign trade.

Mr. OLDFIELD. Are the English and French banks in Brazil required by their governments to pay excess-profits and income taxes? They are competitors of yours in Brazil.

Mr. EDER. In Brazil, yes; they have to pay an excess-profits tax at home, but the local banks do not, and our competitor in Brazil which is making the greatest strides is the Portuguese bank there. That Portuguese bank has cut into the business of the English banks very much.

Mr. OLDFIELD. The French and English banks are up against the same proposition that you are?

Mr. EDER. Yes; but we have the local banks and the Spanish and Portuguese banks to contend with, and we have the German banks, which are not paying taxes at home.

Mr. OLDFIELD. I thought they might have worked it out in some way. The reason the German banks are not paying taxes is because they can not get the money to the German Government.

Mr. EDER. They are not imposing a very heavy income tax at home, and the Germans have always had a very keen eye for foreign trade.

The CHAIRMAN. This matter was considered very carefully and fully in 1916, but you have suggested a different phase which I think would require some consideration.

Mr. EDER. Yes; a tax of 2 per cent is not going to drive any corporation to give up its American charter. A tax of 6 per cent might drive some.

The CHAIRMAN. A year ago this question came up in Parliament as to whether the English Government should permit them to deduct the taxes which were imposed in foreign countries in the same business, and it was decided that they should not have a deduction.

Mr. EDER. I suppose they did not feel that English corporations would be driven out of England. Now this is a fact. It is not merely a supposition that they will be driven out, because I know of several corporations that have already given up their American charter, and I know of several other corporations that are very seriously considering it.

Mr. OLDFIELD. Banking corporations?

Mr. EDER. No; other corporations.

Mr. MOORE. Is not that due largely to shipping conditions?

Mr. EDER. I do not think that has anything to do with it.

Mr. OLDFIELD. You know of cases where they have given up their charter?

Mr. EDER. I know of several cases where South Americans or Cubans who otherwise would have incorporated in the United States have failed to incorporate here. You see, we derive a great deal of revenue from American corporations also in which there are no American interests. A great many Cuban companies have come up to the United States to incorporate in the United States for the sake of getting better credit facilities. We are deriving a revenue from those at the present time. I know of one company in Cuba in which there are mixed Cuban and American interests. They have had to pay in this past year an excess-profits tax amounting to \$28 a share. The Cuban stockholders are insisting with the American stockholders that the American charter be given up and that the company be re-incorporated in Cuba.

Mr. DICKINSON. Is that a banking institution?

Mr. EDER. No; it is a mercantile institution.

Mr. GREEN. If this were applied to corporate investments we would naturally be asked to have it apply to individual investments.

Mr. EDER. No; because the individual is taxed on his returns from the corporation. You are going to get your taxes from the dividends on these American corporations. That is another thing. If they go out of the country, you will not get the tax on the dividends.

The CHAIRMAN. If they declare the dividends, they will get it; but suppose the company does not declare dividends?

Mr. EDER. There is that danger, but you will still get some dividends.

The CHAIRMAN. Great Britain is now discussing in Parliament this very question. It does seem that if other countries make the deductions which I suggested that it would be almost a practical necessity for us to make a like reduction to put our traders on an equality with their competitors. We are watching the action of other countries in this regard.

Mr. EDER. Perhaps that would not be sufficient, because I am thinking of South America. Our competition there is among the natives, too. It would help, but it might not go the whole way, and it would not remove the danger of corporations removing their charter from the United States and avoiding payment of all taxes.

Mr. GREEN. I refer to cases like this; where an American has a large investment in Canadian lands and is getting a revenue from that. He is taxed on income and excess profits and is taxed also in Canada if he has enough income and excess profits. If we remove the tax on corporate investments we probably will be asked to remove the tax on individual investments in the same way.

Mr. EDER. I think that in the long run it would be a splendid policy to do so. I think that the development of our industries abroad is the one greatest factor in developing our foreign trade, and the developing of the foreign trade of this country is a bank measure. We have control of these American citizens here; we will not have the control of these corporations if they leave the country.

Mr. LONGWORTH. Why should you distinguish between the excess-profits tax and the income tax? What difference does it make to me whether I pay an excess-profit or an income tax in Cuba or in Utah? Ought not I pay as much in the one case as in the other?

Mr. EDER. I think the individual should.

Mr. LONGWORTH. Suppose I have a corporation?

Mr. EDER. No.

Mr. LONGWORTH. You think not?

Mr. EDER. No; because in one case, as a practical matter, you leave the United States and incorporate in Cuba.

Mr. LONGWORTH. How about corporations which have investments both here and abroad?

Mr. EDER. I would exempt the income which they derive from foreign sources from excess-profits taxes.

Mr. LONGWORTH. You think it would be wise to exempt the Bethlehem Steel Co. from the profits it makes on its mines in Cuba, as a broad, general proposition?

Mr. EDER. Yes; because otherwise they will incorporate their holdings in Cuba, and then you will not get the revenue which they derive from the Cuban holdings.

Mr. STERLING. There are a good many American industries that have plants in Canada. It might very materially affect the revenue if you adopted that plan. Is there any reason why we should adopt your plan in South America and not apply the same rule to the American concerns who have industries in Canada? Does not the same reasoning apply to both?

Mr. EDER. Perhaps it is more necessary to foster American banking than it is to foster manufacturing by Americans abroad. These plants that you have in mind are manufacturing corporations; they are not trading concerns. They are in a measure competing with American manufacturers, while American banks are helping American manufacturers.

Mr. STERLING. Who do you represent? What is the name?

Mr. EDER. The Mercantile Bank of the Americas.

Mr. STERLING. Is it a single institution?

Mr. EDER. It is a single institution which holds stock in a number

of corporations. We incorporate a company for each separate where we are banking.

Mr. STERLING. Under the laws of that country?

Mr. EDER. No; under the laws of the United States. If we incorporated under the laws of that country, we could not call ourselves an American bank. We want to wave our charter and say we are an American bank.

Mr. STERLING. Have you a bank in this country?

Mr. EDER. Yes.

Mr. STERLING. Do you have separate charters for the banks in the other countries?

Mr. EDER. Only in the case of Paris and Barcelona, where we have established a branch of our New York bank.

Mr. STERLING. Will these foreign countries allow you to do business without a charter from the local government?

Mr. EDER. We have to get a local franchise and pay local taxes. We can not go in there, except in a few South American countries where there are no banking laws, without getting governmental authority.

Mr. LONGWORTH. One of those corporations is the American International Corporation. If we adopted your suggestion we would exempt that corporation.

Mr. EDER. You are not getting any tax in this country from foreign investments from the American International Corporation to-day. Its earnings are being made here in New York. Its investments occasionally in South America are done by making loans in South America to corporations there or carrying out contracts down there. It has no permanent business in South America.

Mr. LONGWORTH. It has only begun.

Mr. EDER. The International Banking Corporation is an institution which is fairly closely connected with the American International; it has no connection in South America and has not attempted to.

Mr. LONGWORTH. It is closely associated with the National City Bank?

Mr. EDER. It has branches of the New York bank.

Mr. OLDFIELD. But that has nothing to do with the International Corporation?

Mr. EDER. They are closely connected with some financial interests and closely identical with it.

Mr. RAINEY. When you establish a branch bank there the bank here owns absolutely that bank?

Mr. EDER. Yes.

Mr. RAINEY. Your bank owns absolutely the whole institution?

Mr. EDER. The whole institutions in Paris and Barcelona.

Mr. RAINEY. Then they return to you their profits?

Mr. EDER. Yes.

Mr. RAINEY. And those profits will become part of those of the parent bank here?

Mr. EDER. No. Our help, if you gentlemen will let us, will be to promote those branches, permitting them to apply their surplus and capital and resources so as to be able to continue what we are immodest enough to relinquish our valuable work on behalf of the American Government.

Mr. RAINEY. Under the present system all their profits increase your profits in the foreign bank and are taxed just as other local banks in the country are taxed?

Mr. EDER. Perhaps that would not be sufficient, because I am thinking of South America. Our competition there is among the natives, too. It would help, but it might not go the whole way, and it would not remove the danger of corporations removing their charter from the United States and avoiding payment of all taxes.

Mr. GREEN. I refer to cases like this, where an American has a large investment in Canadian lands and is getting a revenue from that. He is taxed on income and excess profits and is taxed also in Canada if he has enough income and excess profits. If we remove the tax on corporate investments we probably will be asked to remove the tax on individual investments in the same way.

Mr. EDER. I think that in the long run it would be a splendid policy to do so. I think that the development of our industries abroad is the one greatest factor in developing our foreign trade, and the developing of the foreign trade of this country is a bank measure. We have control of these American citizens here; we will not have the control of these corporations if they leave the country.

Mr. LONGWORTH. Why should you distinguish between the excess-profits tax and the income tax? What difference does it make to me whether I pay an excess-profit or an income tax in Cuba or in Utah? Ought not I pay as much in the one case as in the other?

Mr. EDER. I think the individual should.

Mr. LONGWORTH. Suppose I have a corporation?

Mr. EDER. No.

Mr. LONGWORTH. You think not?

Mr. EDER. No; because in one case, as a practical matter, you leave the United States and incorporate in Cuba.

Mr. LONGWORTH. How about corporations which have investments both here and abroad?

Mr. EDER. I would exempt the income which they derive from foreign sources from excess-profits taxes.

Mr. LONGWORTH. You think it would be wise to exempt the Bethlehem Steel Co. from the profits it makes on its mines in Cuba, as a broad, general proposition?

Mr. EDER. Yes; because otherwise they will incorporate their holdings in Cuba, and then you will not get the revenue which they derive from the Cuban holdings.

Mr. STERLING. There are a good many American industries that have plants in Canada. It might very materially affect the revenue if you adopted that plan. Is there any reason why we should adopt your plan in South America and not apply the same rule to the American concerns who have industries in Canada? Does not the same reasoning apply to both?

Mr. EDER. Perhaps it is more necessary to foster American banking than it is to foster manufacturing by Americans abroad. These plants that you have in mind are manufacturing corporations; they are not trading concerns. They are in a measure competing with American manufacturers, while American banks are helping American manufacturers.

Mr. STERLING. Who do you represent? What is the name?

Mr. EDER. The Mercantile Bank of the Americas.

Mr. STERLING. Is it a single institution?

Mr. EDER. It is a single institution which holds stock in a number of other corporations. We incorporate a company for each separate country where we are banking.

Mr. STERLING. Under the laws of that country?

Mr. EDER. No; under the laws of the United States. If we incorporated under the laws of that country, we could not call ourselves an American bank. We want to wave our charter and say we are an American bank.

Mr. STERLING. Have you a bank in this country?

Mr. EDER. Yes.

Mr. STERLING. Do you have separate charters for the banks in the other countries?

Mr. EDER. Only in the case of Paris and Barcelona, where we have established a branch of our New York bank.

Mr. STERLING. Will these foreign countries allow you to do business without a charter from the local government?

Mr. EDER. We have to get a local franchise and pay local taxes. We can not go in there, except in a few South American countries where there are no banking laws, without getting governmental authority.

Mr. LONGWORTH. One of those corporations is the American International Corporation. If we adopted your suggestion we would exempt that corporation.

Mr. EDER. You are not getting any tax in this country from foreign investments from the American International Corporation to-day. Its earnings are being made here in New York. Its investments occasionally in South America are done by making loans in South America to corporations there or carrying out contracts down there. It has no permanent business in South America.

Mr. LONGWORTH. It has only begun.

Mr. EDER. The International Banking Corporation is an institution which is fairly closely connected with the American International; it has no connection in South America and has not attempted to.

Mr. LONGWORTH. It is closely associated with the National City Bank?

Mr. EDER. It has branches of the New York bank.

Mr. OLDFIELD. But that has nothing to do with the International Corporation?

Mr. EDER. They are closely connected with some financial interests and closely identical with it.

Mr. RAINEY. When you establish a branch bank there the bank here owns absolutely that bank?

Mr. EDER. Yes.

Mr. RAINEY. Your bank owns absolutely the whole institution?

Mr. EDER. The whole institutions in Paris and Barcelona.

Mr. RAINEY. Then they return to you their profits?

Mr. EDER. Yes.

Mr. RAINEY. And those profits will become part of those of the parent bank here?

Mr. EDER. No. Our help, if you gentlemen will let us, will be to promote those branches, permitting them to apply their surplus and capital and resources so as to be able to continue what we are immodest enough to relinquish our valuable work on behalf of the American Government.

Mr. RAINEY. Under the present system all their profits increase your profits in the foreign bank and are taxed just as other local banks in the country are taxed?

Mr. EDER. Yes.

Mr. RAINEY. Do you want the law as to those branch banks owned absolutely by the parent bank to take the burden off of its income and excess profits?

Mr. EDER. I think so.

Mr. RAINEY. The other banks you establish have independent stockholders entirely?

Mr. EDER. Some of them have; some of them have native interests.

Mr. RAINEY. Do you carry on a school by your bank, educating your men in the conduct of banking business and trade conditions?

Mr. EDER. Not to the same extent as the National City Bank does. We are not nearly such a large organization.

Mr. RAINEY. A number of those banks have schools through the summer and select men and educate them along commercial and banking lines.

Mr. EDER. We have not grown as fast as that.

Mr. MOORE. Is the Mercantile Bank of the Americas the result of a propaganda carried on some time ago by the National City Bank?

Mr. EDER. No; we have no connection with the National City Bank. Our stockholders are various, owning throughout the country.

Mr. MOORE. The National City Bank was urging the creation of close associations with South America, and I was wondering whether your organization was an outgrowth of that agitation.

Mr. EDER. In a measure, yes; although I do not think the National City Bank were pioneers in that agitation. There were a great many other people advocating that long before the National City Bank did.

Mr. MOORE. How old is your bank?

Mr. EDER. We were incorporated in 1915.

Mr. MOORE. Were you interested in the passage of the so-called exports bill?

Mr. EDER. Yes. We did not take any part in the propaganda at all, but we were interested in seeing it go through.

Mr. MOORE. The purpose of that bill was to increase these foreign incomes.

Mr. EDER. Yes.

Mr. MOORE. Who is the president of the Mercantile Bank of the Americas?

Mr. EDER. Mr. James Brown, of Brown Bros. & Co.

Mr. MOORE. That is a New York concern?

Mr. EDER. A New York banking concern.

Mr. MOORE. You are the secretary of the bank?

Mr. EDER. Secretary of the bank and a member of the subsidiary corporations.

Mr. TREADWAY. What is the capitalization?

Mr. EDER. Two and a half million dollars and a surplus of \$625,000.

Mr. MOORE. Is Mr. Vanderlip a director?

Mr. EDER. No, sir; he is connected with the National City Bank.

Mr. MOORE. He is not associated with you?

Mr. EDER. Not in any way. We have no interest at all with the National City Bank.

Mr. MOORE. Is there any rivalry between his bank and yours?

Mr. EDER. I think so; to a certain extent.

Mr. TREADWAY. You are actual competitors in the field for foreign financial business?

Mr. EDER. We have not entered the same countries except in one country in South America. Their field of operations is in countries where we have not entered and, except in one country, they have not entered where we have.

Mr. MOORE. There is no working agreement between you?

Mr. EDER. None.

Mr. MOORE. I would like to ask you as to your own experience.

Mr. EDER. I have only recently become connected with the bank. I have been a lawyer specializing in American-Latin law in New York City and in South America. I have offices in one or two of the principal cities of South America.

Mr. MOORE. And speak Spanish?

Mr. EDER. Yes, sir.

Mr. MOORE. Have you had any consular or diplomatic associations?

Mr. EDER. Not for the United States Government. My father was an American consul in South America and my brother was, and I was appointed vice consul of the Republic of Colombia in New York.

Mr. MOORE. You regard South America as a fruitful field for American enterprise?

Mr. EDER. I certainly do.

Mr. MOORE. That is the basis of your business?

Mr. EDER. Yes, sir. That is the basis of our organization.

Mr. STERLING. Do the American owners own all the stock of the Mercantile Bank of the Americas?

Mr. EDER. Absolutely. Among the outside stockholders are the Anglo-London-Paris National Bank of San Francisco, the Hibernian Trust Co. of New Orleans, and the National Shawmut Bank of Boston, and we have New York stockholders. There is only one in New York, the Guarantee Trust Co.

Mr. MOORE. Tell us as to the relative influence of England, Germany and the United States in financial matters in South America.

Mr. EDER. The United States in the past and until very recently has had no banking influence at all in South America. We have been handicapped for that reason, and only in very recent years have we had any American banking institutions in South America at all.

Mr. MOORE. Most of the foreign business has been done through Germany and England?

Mr. EDER. Yes.

Mr. MOORE. How do they stand relatively now?

Mr. EDER. The English banks are still far predominant. The German banks have suffered by being placed on the black list, but they are still managing to do business.

Mr. MOORE. They have intermarried pretty actively in South America and they still retain that influence?

Mr. EDER. Yes.

Mr. MOORE. Do all your branch banks in foreign countries have the same amount of capital?

Mr. EDER. No. Some have \$500,000 capital, and one of them has \$300,000.

Mr. HAWLEY. All have \$500,000?

Mr. EDER. Except one, which has \$300,000.

MEMORANDUM IN REGARD TO TAXATION UNDER INCOME AND EXCESS-PROFITS TAX  
LAWS OF INCOME RECEIVED BY AMERICAN CORPORATIONS FROM FOREIGN BUSINESS.WAYS AND MEANS COMMITTEE,  
*House of Representatives.*

The purpose of this memorandum is to present to your committee certain features of the existing income and excess-profits tax laws which have received little notice, but which are exceedingly important and have a far-reaching bearing upon business transacted by American corporations in foreign countries. Public attention has been largely focussed upon what I may call the vertical lines of the present tax laws, by which I mean the extension of rates upward upon income taxed. The horizontal incidence of these tax laws, by which I mean the area affected, has received far less consideration.

Under the present law corporations are subject to both excess-profits and income tax upon income derived from business done in foreign countries, as well as upon income received from business done in the United States. No differentiation between these two classes of income is made either as to the rates at which they are taxed or otherwise. My purpose in appearing before you and in presenting this brief memorandum is to urge that income received by American corporations from business done in foreign countries should be relieved from excess-profits tax as well as from income tax, or if your committee is unwilling to recommend full exemption as to such income, that it should at least be taxed at a substantially lower rate than income received from sources within the United States.

At the present time these taxes are assessed regardless of the fact that the corporation may be paying a very high income and excess profits tax under the authority of the taxing laws of the country in which the American corporation is doing business and derives its profits. In this way, the income of an American corporation is assessed twice on its profits, which are derived solely from business transacted or capital invested in a foreign country.

If we take for example an American corporation having a branch in Great Britain and deriving income exclusively from business transacted and capital invested in that country, that corporation, under the English law, will be assessed a tax of 80 per cent of its profits in excess of the exemption allowed. In addition to this tax, the income of the corporation from sources in foreign countries will be returned for tax in the United States and an excess profits tax as high as 60 per cent may be assessed on such income within the United States. These taxes are exclusive of income taxes which may be assessed in both countries.

Take, for instance, an American corporation which has net profits from its business in England of \$90,000 for the year ending December 31, 1918. Assuming that its deduction on account of prewar earnings is \$34,000, it will be subject to a tax of 80 per cent on the difference between \$90,000 and \$34,000, or \$56,000. With the English tax off, this would leave the American corporation a net income from its business transacted in Great Britain of \$42,500. If the profits of the corporation from all sources within and without the United States were sufficient to place it in the class of corporations required to pay an excess profits tax of 60 per cent, the amount, net, derived from its business in Great Britain would therefore be reduced 60 per cent, leaving the net amount after payment of excess profits taxes both in the United States and Great Britain, 40 per cent of \$45,200, or \$18,080. Similarly, American corporations doing business in any other countries in which an excess profits tax is assessed on income derived from business transacted in such countries, would be affected proportionately to the rates of tax effective in such countries.

There are many American corporations whose business is largely transacted in foreign countries, such corporations merely maintaining an office in the United States for the purpose of the distribution and sale of their products. There are also many American corporations which merely have their executive offices in the United States and maintain no selling agencies and do no business whatever in the United States. Under the present law, the entire profits of such corporations are subject to excess profits tax. It is highly advisable that these corporations should remain under the jurisdiction of the laws of the United States, but it will not be possible for them to do so if their profits outside of the United States are subjected to our excess profits tax.

While the fact of double taxation in itself is not one that has received the sympathy of lawgivers, it is nevertheless a factor to be taken into consideration. The natural place of taxation, it should also be borne in mind, is the place where the operations of a corporation are carried on, or at the situs of its tangible property. It is these operations and this property which enjoy the benefits that theoretically are correlated to the burdens of taxation, and these operations and this property which are accorded the security of the law. The Government of the United States, in the case of a cor-

poration whose business is entirely transacted abroad, furnishes the corporation little that it can not dispense with.

The European war has given to American business interests an unprecedented opportunity for expansion into foreign fields, and it is obviously for the interest of the country that such expansion should be fostered and encouraged in every legitimate way. It is also desirable that this expansion should be effected through the natural growth and development of existing organizations and that American business should not be forced to assume the risk and expense of creating new organizations in foreign countries under unfamiliar and possibly disadvantageous foreign laws.

The present tax laws, however, have the effect of very seriously hampering this natural growth and development and tend to induce reorganization of foreign business under foreign laws through the creation of corporate bodies under such foreign laws for the purpose of transacting foreign business. For example, I have in mind one company whose plant is located in Brazil and whose entire income is derived from business there carried on. This company is, however, organized under the laws of one of the United States and is, therefore, subject to excess profits tax as well as to income tax, upon its entire net income. Inasmuch as such income may be subject to excess profits tax at a rate as high as 60 per cent, the company is obviously at a disadvantage as compared with local concerns in Brazil not subject to this heavy taxation. The temptation to reincorporate the business under the laws of Brazil, thus escaping Federal excess profits and income taxes is almost irresistible. If such reincorporation were to take place, however, the State under the laws of which the present company is incorporated would lose the revenue which it now derives from annual franchise taxes and fees paid into the State treasury by the corporation. There are many American corporations similarly situated which do all, or a substantial portion, of their business in foreign countries. If these companies are to be taxed at the heavy rates now in force, or at the higher rates which it is generally expected will prevail in the future, it is inevitable that there will be a very general movement toward organizing new companies under foreign laws to carry on such foreign business, with a consequent serious loss of revenue to the various States under the laws of which the companies are now organized.

On the other hand, if the present companies so situated are relieved from excess profits tax upon their income from foreign sources, they will not be compelled to disrupt the existing organizations. Even if such income from foreign business be not totally exempted from tax, it should, at least, be taxed at a substantially lower rate, which should be moderate enough to permit American corporations to conduct their foreign business upon a fair basis of competition with foreign corporations. In this way, State revenue would not be impaired and the United States would still receive considerable revenue from such income, which it will lose entirely if the present rates are continued, or higher rates are imposed upon such income.

For our present purpose, companies having investments or doing business abroad, but incorporated in the United States, may be divided into three classes:

1. Corporations in which there are no American interests at all, but whose stockholders for various reasons have sought incorporation in the United States.
2. Corporations in which there are both American and foreign interests (i. e., native, or local, interests) in the field of operations.
3. Corporations in which the stockholders are entirely American.

It is practically certain that corporations of the first class; that is, where there are no American interests, will seek a foreign jurisdiction for their corporate head office and give up their American charters if they are subjected to the heavy tax in the United States.

In the second class of corporations, if the foreign interests are in control, the same results will follow and the American charters be given up. Even if American interests are in numerical control, exceedingly strong pressure will be brought to bear upon them to transfer their charters to the jurisdiction where they are operating.

One instance in point which I have had called to my attention, is the case of an American corporation all of whose business is transacted in Cuba. This company will be compelled to pay an excess profits tax to the United States amounting approximately to \$28 a share. The Cuban stockholders are now insisting that the company be reincorporated in Cuba in order that this heavy burden shall not be placed upon their holdings. In this case, as in many others, the American charter may be given up with little or no inconvenience to the company, heavy taxation in the United States avoided, and the foreign stockholders satisfied.

In the third class of companies, namely, where Americans are the sole stockholders in corporations operating abroad, there may be some reluctance, on account of sentimental reasons, to giving up the American charter, but unquestionably a great many corporations in order to meet competition, and not primarily by reason of a desire to avoid payment of taxes at home, will be driven to give up their American charters.

In all the above cases the result would be harmful to the best interests of the United States. Loss of prestige to United States commerce and industry would ensue by the fact of American corporations reincorporating abroad. Loss of connections with home offices in the United States would entail a certain loss of that closeness of touch which is a material factor in fostering foreign trade, and finally there would be a loss of revenue both to the National Government and to the State governments.

It may be urged that if the exemption I am advocating is granted, the loss of revenue to the United States Government would ensue nevertheless. In answer to this it might be said that while a heavy income tax would drive out a great many corporations, a few might still be willing to maintain their American charters for the sake of the prestige they might thus obtain, for the additional security that may be gained where operating in undeveloped or politically unstable countries, and possibly for the sake of obtaining better credit in the United States.

Furthermore, it must be borne in mind that revenue is derived by the United States Government not merely from income and excess profits taxes paid directly by the corporation, but also from the dividends when received by the individual stockholders. At the present time nonresident foreign stockholders in American companies receiving dividends have to pay the income tax, and large numbers of American stockholders have to pay a surtax. Both of these sources of revenue would be wholly or partially swept away if the corporations transferred their charters to foreign countries. The foreign shareholders would, of course, not be subject to tax, there being no dividends paid in this country from which the tax could be withheld, and no corporate bodies here to do the withholding. In the case of American stockholders, there might be a strong inducement to defer the payment of large dividends until some time in the future, when it might be thought taxes would be materially lower in this country.

From the point of view of the National Government, it seems clear that it is of advantage that the power to regulate the carrying on of business in foreign countries should be preserved. Such power of regulation and control, of course, can be exercised where the foreign business is done through American corporations, but it will be lost if the foreign business is conducted through foreign corporations not subject to the jurisdiction of the United States.

From the point of view of the State governments, the loss of revenue is perhaps an even more important factor to be taken into consideration. A considerable part of the revenues of some States is derived from organization and annual license fees paid by corporations transacting business abroad. This source of income would be swept away if corporations give up their present charters to seek a legal domicile abroad, and there are nothing but objections instead of inducements in the way of new corporations being organized. The States are not in the same position as the Federal Government to readily obtain new sources of revenue to replace such a loss.

Moreover, under the present excess-profits tax law income received by an American corporation from business in foreign countries may bear a disproportionate burden. This results from the fact that the excess-profits tax is measured and determined by the relation between the entire net income of the corporation and its entire invested capital. From this it will be seen that the amount of tax which the income from foreign sources will have to bear will not depend upon the capital invested in foreign countries. Thus, a company with a relatively large investment in a foreign country and a small amount of capital invested in the United States may be subjected to excess-profits tax at a very high rate upon its income from foreign business, even though the actual return upon its foreign investment is comparatively small.

This feature of invested capital does not, of course, apply to the income tax, but in other respects the same considerations that apply in the case of excess-profits tax are present with respect to the income tax. If the income tax is to remain at the present rate of 6 per cent upon corporations, it would probably not, in itself, be so onerous as to compel a removal in all cases. It would be safer, nevertheless, to reduce the rate to 2 per cent. If, however, the income-tax rate upon corporations is to be increased, and such increase is to be made applicable to income received from foreign business, then the effect will be the same as in the case of excess-profits tax. The higher the rate becomes the greater will be the inducement to remove.

To what extent this removal will affect American capital invested in foreign countries would be very difficult to estimate. Hundreds of millions of dollars now invested by corporations chartered under the laws of the United States will be transferred to corporations chartered under foreign countries. In fact, it is said that some corporations have already given up their American charters and others are preparing to do so in the very near future.

It seems clear that by giving up its American charter, or by incorporating its foreign business in a foreign country, nearly every corporation now assessed an excess-profits tax on its income derived from business transactions outside of the United States may avoid the assessment of the tax. It is also evident that in corporations in which for-

foreign capital is invested, such procedure will be required by those representing the foreign capital. The result will be that the United States will not only not receive revenue on account of excess-profits tax, but will drive from the United States the executive offices, and incidentally, the control of these corporations.

If American business is to expand, it is of course essential that American corporations should be able to compete favorably with foreign concerns in the field of foreign business, and this, perhaps, constitutes the most important reason for exempting income of American corporations from foreign sources or at least subjecting such income to only a light tax. The present law results in a very serious discrimination against American corporations doing business in foreign fields as compared with competing foreign concerns, and this alone should be sufficient to show the wisdom of favorable treatment with respect to income derived from such sources. Taken in connection with the other factors mentioned above it is in every way desirable that such favorable treatment should be given.

The policy of the United States has always been to promote to the greatest degree possible its foreign trade. From the early days of the Republic the tax laws have generally embodied provisions favorable to the development of international commerce. The recent income and excess-profits tax laws through inadvertence have departed from this policy.

The following instances of governmental policy in the past, designed to further export trade, may be given:

Internal revenue tax on wines and liquors and customs duties on imported goods have been rebated upon the export of the articles.

Railroads, with the approval of the Interstate Commerce Commission and, I believe, of Congress, have always given preferential rates to through shipments for export. This preference continued until February of this year, when the necessity for restricting traffic on the railroads in order to better transport war materials impelled a temporary change.

The object of these measures was obviously to enable American goods to compete on favorable terms in foreign markets with goods of other countries.

A like policy should be applied with regard to the exported dollar. Capital abroad should, as a matter of policy and for the furtherance of trade, be enabled to compete with the invested capital of other creditor nations and with local capital.

The most important single factor in promoting foreign trade (after the production of goods in this country cheaply and efficiently so as to intrinsically compete with goods of other countries) is investment abroad, either in properties or in trade organizations. It has become an axiom that "Trade follows the invested dollar."

Now, if as a result of the laws at home an American corporation operating abroad has to pay a very high tax in comparison with its neighbors and competitors, it will be obviously placed in a disadvantageous position. It will have to take into consideration in marketing its goods a margin for taxation far greater than its competitor; it will, of course, have to pay the same local tax as its competitors, and, in addition, will be faced by the heavy taxes which it has to pay to the United States Government. The result will often be to drive it out of the market.

Another way, not at first sight so obvious, in which American corporations are placed at a disadvantage by heavy home taxes, is that they are unable to build up any surplus. If the larger part of their net income is paid over to the Government they can enlarge their business, not out of profits, but only by increasing their capital. In normal times it has always been difficult to obtain capital even for sound investments in foreign countries. At the present time it is generally impossible. Apart from the condition of our money markets, in the majority of cases the capital issues committee does not approve of the increase of capital of corporations operating abroad. Such corporations, therefore, if levied on for income or excess-profits taxes, so that they have no surplus to reinvest, are forced to see themselves standing still while their neighbors may be making heavy improvements, enlarging their plants out of earnings, and putting themselves in position to drive the American corporation out of business.

At this time all countries are looking to the development of their foreign trade. All of the European countries and Great Britain are planning to render aid to their industries to increase foreign business. The United States in various ways is likewise redoubling its efforts to promote foreign trade and to place our industries on an equal basis, at least, with foreign competitors.

Commercial representatives of the Government are to be sent to foreign countries to advise in matters of foreign trade. Congress has just passed a law—the Webb law—permitting combinations to engage in export trade, in order to more effectively and economically place our products in foreign countries, and to better enable our manufacturers and producers to meet foreign competition, and there is now pending in Congress a bill providing for registration under a national trade-mark, which is intended

to insure standard of quality and prevent fraud and deception in American goods. All of the foregoing are for the purpose of extending our foreign trade and making a market for our products abroad. The cost of production and sale of our goods has been one of the great drawbacks in our foreign trade and is what we are now striving to reduce to meet foreign competition.

If American corporations are to be taxed 60 per cent, or more, on the income which they derive solely from their foreign branches, they will not be able to cope with their foreign competitors and all of the advantages which may have been gained by the efforts of Congress and this Government, to assist in extending our foreign trade, will be nullified. It may readily be seen that it is not possible for manufacturers and producers to meet the prices of those of a foreign country which do not have to give up a large part of their profits in taxes. As a consequence, inability to meet the prices of foreign competitors means a serious loss in foreign business and a decrease in our trade balance.

Our trade balance for the last fiscal year was \$3,634,450,905, or eight times that for the fiscal year ending June 30, 1914. As is well known, this remarkable increase is due to the extraordinary conditions brought about by the war and can not be expected to continue. Our hope, however, is to retain it if possible and every effort should be exerted to accomplish that end. The revenue derived from taxation might be decreased to some extent by this change in the law, but the loss will be insignificant compared with the loss in our foreign trade if the high excess-profits tax is retained on foreign profits, and the consequent decrease in the revenues from taxation derived from domestic profits incidental to foreign trade.

In another respect the present income-tax law discriminates against American corporations in favor of foreign corporations. Subdivision (e) of section 13 of the income-tax law requires a withholding of tax at the source upon income derived from interest upon bonds or similar obligations of domestic corporations by non-resident foreign corporations not engaged in business in the United States. This provision has been held by the Treasury Department to apply to the 2 per cent normal tax under the act of September 8, 1916, and to the 4 per cent war income tax imposed upon corporations by section 4 of the act of October 3, 1917, so that a nonresident foreign corporation receiving interest upon bonds of domestic corporations is subject to withholding of tax at the source at the rate of 6 per cent.

Where, however, the interest is paid to the foreign corporation upon bonds of a domestic corporation containing a tax-free covenant in the usual form, the domestic corporation is required by the covenant to assume payment of the full 6 per cent tax. Thus, the foreign corporation receives interest at the full face amount of the coupons and is relieved of paying any tax thereon because the tax is withheld at the source and paid by the domestic corporation. This, of course, in itself, compels the American debtor corporation to pay the tax for the foreign corporation. But the discrimination does not stop here. An American corporation, holding as an investment bonds of another American corporation, is not subject to withholding of tax at the source. Consequently, the American corporation holding the bonds receives the full face amount of the interest thereon; but it must include this interest in its income tax return, and must pay the income tax of 6 per cent thereon, so that the actual return upon its investment is the face amount of the interest less the tax. But the non-resident foreign corporation holding similar bonds, because of the tax-free covenant, receives the full face amount of interest and pays no tax thereon because the tax is paid at the source of the debtor corporation. The result of this is to favor nonresident foreign corporations investing in bonds containing the tax-free covenant, as compared with American corporations holding similar bonds. This inequality might easily be removed by limiting the withholding requirements of section 13 (e) to bonds which do not contain the tax-free covenant, or if it is thought that this would result in loss of revenue by reason of the fact that foreign corporations receiving interest upon such bonds might fail to make return thereof and pay the tax thereon, the same result could be reached by requiring nonresident foreign corporations to appoint an agent in this country to whom interest upon such bonds of American corporations would be required to be paid, and by imposing upon such agent the obligation to withhold the tax and pay the same to the Government. This would result in relieving the debtor corporation from any obligation under the tax-free covenant to assume payment of the tax for the foreign corporation, and would at the same time fully protect the Government.

Another minor injustice in the present excess-profits tax might be pointed out.

A fair return on capital invested at home is not a fair return for capital invested abroad.

Under the present excess-profits tax law, corporations are allowed to enjoy an income of 7 to 9 per cent upon their invested capital before the incident of the excess-

profits tax. There can be little doubt that this furnishes a just basis in the case of corporations organized for purely domestic purposes; 7 to 9 per cent may be a fair return in invested corporate capital for business in the United States, in the vast majority of cases. But in regard to operations abroad, especially in Latin-American countries, or other undeveloped lands, a return of 9 per cent is not commensurate with the far greater risk involved in such an investment and with the greater difficulties of management and control.

The difficulty of obtaining information sufficiently accurate for an honest tax return would be obviated if the proposed exemption is enacted into law. Corporations which operate properties abroad, especially in remoter districts, encounter great difficulty at the present time in obtaining the necessary reports and inventories in time to incorporate them in the annual returns required of them. These corporations, the records will undoubtedly show, almost invariably ask for extensions of time, and often after obtaining the extensions are unable to secure the information in time. Smaller corporations, such as small mining and plantation companies, which can not afford to maintain an elaborate organization with high-priced accountants and managers, are often hard put to it, even if ample time be given, to obtain the information. Native employees and managers are often employed and they frequently can not be made to understand or to comply with the instructions given to them.

Furthermore, it is not practicable for the United States revenue authorities to check up the reports furnished from abroad. All that can be done is to check up the returns with the books, papers, and accounts kept at the corporation's offices in this country. It is, of course, obvious that books of accounts may be kept at the foreign offices which do not tally with the books and records in the United States. A door to fraud is thus opened wide, with scarcely any possibility of detection. Honest corporations make their returns to the best of their ability, but dishonest corporations escape taxation. Such a premium on dishonesty should be removed.

Income and excess profits taxation on income from sources outside of the United States is in a measure a tax on exports and therefore falls within the policy of the constitutional provision prohibiting taxes on exports.

It is not claimed, of course, that such taxation is in violation of the constitutional provision, but the indirect result of the tax is to place a burden on export trade which produces the same disastrous effect as would a direct tax on exports.

A fundamental purpose of every law enacted in the United States should be to encourage and increase our export business, and no better opportunity to aid in this direction was ever offered Congress than the amendment of the tax law, at this time, to exempt the income of corporations derived from foreign sources.

Respectfully submitted.

PHANOR J. EDER,

*Of the New York Bar, Secretary of Mercantile Bank of the Americas (Inc.),  
38 Pine Street, New York City.*

### STATEMENT OF BARRY MOHUN, WASHINGTON, D. C.

The CHAIRMAN. Mr. Mohun, we will have to adjourn and go to the House at 5 minutes to 12. You have 10 minutes, and we will let you go right on immediately after we convene after recess.

Mr. MOHUN. It may be that I shall be able to finish what I have to say in 10 minutes. I appear on behalf of the Magnolia Petroleum Co.; I am its Washington attorney. The head offices are in Dallas, Tex. It is a production and refining company. It produces oil in Oklahoma, Kansas, some in Texas, and in Mexico. It has refineries in Beaumont, Corsicana, and Fort Worth.

Before taking up specifically the subject of oil leases I desire to first make a few remarks on the subject of depletion depreciation, and obsolescence. Under the law allowances for each of these items have been for the return of capital. Obviously, under an income tax law there is no purpose to tax capital as such, so that the taxpayer is entitled under the law to a return on his capital investment. Of course, in the event of a sale the capital comes back before there can be any profit or income. If he gets more than his capital back his balance is profit or income; if he gets less, it is loss.

To illustrate, a corporation erects an office building, we will say, in this city at a cost of a million dollars. We will assume the life of the building is 20 years. The corporation is entitled each year to deduct from its income from that building, assuming that that is its only business, \$50,000. Now, at the end of 20 years it has received \$1,000,000 return of capital. You may call it depreciation, obsolescence, or anything you wish, but it is returned capital. If it sells the building after the expiration of 20 years it is all profit. If it sells at less than a million dollars it sustains a loss to which it is entitled to credit.

In this illustration I had presupposed that the sixteenth amendment had been passed prior to the consummation of this transaction, and the point is right there on the sixteenth amendment that we are most concerned with, and it is because of that point that I have asked the privilege of addressing you gentlemen this morning. The Magnolia Petroleum Co. prior to March 1, 1913, which was the date of the promulgation of the sixteenth amendment, purchased leases, and as a result, as I very respectfully submit, of an erroneous construction of the act of September 8, 1916, the company has been placed at a very serious disadvantage as respects other owners of property. On this point, that it was not the purpose of Congress to impose a tax on accretions in value, or appreciation in value, which occurred prior to March 1, 1913, I have the authority of the chairman of this committee.

When Mr. Walter E. Kelly, of New York, appeared here last Saturday the chairman stated:

The CHAIRMAN. They all had notice that after March 1, 1913, an income tax was constitutional and that in all probability one would be passed, and March 1, 1913, was put in because a person might have purchased property long before there was any constitutional power in Congress to levy an income tax. Take lumber, for instance. A person might have purchased lumber at 50 cents a thousand in 1899 and 1900, and on March 1, 1913, it had appreciated in value to \$5. They had no right to put an income tax on that appreciation before March 1, 1913, because there was no constitutional power to levy any income tax. So the committee provided that they could take the fair valuation of the property, say of lumber, oil, or coal, as of March 1, 1913, when Congress did have the right to levy an income tax.

Mr. KELLY. The intent being to fix a fair valuation on the capital existing as of that time.

The CHAIRMAN. Yes.

It is my conviction it was the purpose of Congress to do just as has been clearly stated in the quotation from the remarks of the chairman on Saturday, to take the value as of March 1, 1913, and regard it as the capital assets to be returned.

That this was the intent and purpose of Congress is, I believe, clearly evidenced by the provisions of section 10, subdivision a of the act of September 8, 1916, which is as follows:

For the purpose of ascertaining the gain derived or loss sustained from the sale or other disposition by a corporation, joint-stock company or association, or insurance company, of property, real, personal, or mixed, acquired before March first, nineteen hundred and thirteen, the fair market price or value of such property as of March first, nineteen hundred and thirteen, shall be the basis for determining the amount of such gain derived or loss sustained.

By section 12, subdivision a, paragraph second, it is provided in respect of reductions from gross income:

Second. All losses actually sustained and charged off within the year and not compensated by insurance or otherwise, including a reasonable allowance for the exhaustion, wear and tear of property arising out of its use or employment in the business

or trade; (a) in the case of oil and gas wells a reasonable allowance for actual reduction in flow and production to be ascertained not by the flush flow, but by the settled production or regular flow: *Provided*, That when the allowance authorized in (a) and (b) shall equal the capital originally invested, or in case of purchase made prior to March first, nineteen hundred and thirteen, the fair market value as of that date, no further allowance shall be made.

As Mr. Kelly pointed out, it was probably because of the use of that word "purchase" that the internal-revenue officials excluded lessees. It must be remembered that we purchase leases, but the point is, as we contend, that the value of all property as of March 1, 1913, must be returned to the taxpayer.

As to the construction which is placed upon it by the Internal Revenue Bureau, it is shown in article 170 of Regulations 33, revised, pages 83 and 84.

The CHAIRMAN. We will now take a recess until 1.30 o'clock p. m. (Thereupon, at 11.55 p. m., a recess was taken until 1.30 o'clock.)

---

AFTER RECESS.

STATEMENT OF MR. BARRY MOHUN—Continued.

The CHAIRMAN. You may proceed, Mr. Mohun.

Mr. MOHUN. Mr. Chairman and gentlemen, before the recess I attempted to point out that depreciation, depletion, obsolescence, wear, and tear, and like terms used in the taxing statute mean return of capital, and further, that it was the purpose of Congress, as evidenced by the acts of September 8, 1916, and October 3, 1917, to take the value as of March 1, 1913, as the starting point, to the end that that would represent the capital assets which all taxpayers were entitled to have returned to them, just as though the property had been bought for cash on that date for that sum. It was surely not intended that there should be gross discriminations as a result of the return of capital. As I showed, by section 12, subdivision (a), second paragraph, Congress provided a particular method of ascertaining return of capital in the case of oil wells, as therein provided. It is there called depletion, but, nevertheless, it is return of capital. It is there provided, as I mentioned this morning, that the depletion in the case of oil wells shall be measured not by the flush flow, but by the settled production, etc. Then this proviso is added:

That when the allowance authorized in (a) and (b) shall equal the capital originally invested, or in case of purchase made prior to March 1, 1913, the fair market value as of that date, no further allowance shall be made.

The bureau has construed that provision, which puts a limitation on the amount of return of capital in the case of oil wells, gas wells, and mines, as though that one property alone was to have the value as of March 1, 1913, ascribed to it. I have referred several times to the ruling of the bureau but I have not given the citation. It is contained in article 170 of regulations No. 33, revised, and it is there provided:

For the purpose of determining the amount of capital to be returned through annual deductions, operators may be divided into two classes.

And this is all under the subhead of oil and gas properties.

(a) Operators who own the fee, and (b) operators who own a lease or leases. In the case of the operating fee owner, the amount returnable through depletion deductions is the fair market value of the property (exclusive of the cost of physical property) as of March 1, 1913, if acquired prior to that date.

Then there are certain other provisions which do not bear here. It then goes on to provide that:

In the case of a lessee, the capital thus to be returned is the amount paid in cash or its equivalent as a bonus or otherwise by the lessee for the lease.

There is the discrimination. The paragraph of the law to which I have referred, section 12, subdivision (a), second paragraph, has been construed by the Internal Revenue Bureau as follows:

First, that it has no application to leases, and, second, that it was the purpose of Congress to allow return of capital as of March 1, 1913, only in the case of fee owners of oil, or gas wells, and of mines, and not in the cases of either owners or lessees of other kinds of property. Return of capital, rules the bureau, in all other cases shall be on the basis of cost, although purchased prior to March 1, 1913.

I can illustrate the discrimination resulting from this, I think, very easily. Corporation A, in 1910, purchased for \$100,000 the fee of oil lands, which were worth on March 1, 1913, \$1,000,000. From its gross income it may make depletion deductions to the extent of \$1,000,000 as the amount of capital to be returned, that being its value on March 1, 1913. That is the law as construed in the regulations. This corporation, which paid \$100,000 in 1910 for the fee of oil land, which land was worth \$1,000,000 on March 1, 1913, is entitled to obtain the return of capital of \$1,000,000.

The CHAIRMAN. Before any income tax shall be paid at all?

Mr. MOHUN. Not before; no. It is pro rated over the life of the wells, assuming that the wells will last a certain number of years. The regulations of the bureau, to which I have just adverted, provide a method by which that depletion, as it is called, is spread over the life of production, and that corporation gets back \$1,000,000 before it pays any taxes. Now, suppose they produce for a period of 10 years and produce \$10,000,000 worth of oil—

The CHAIRMAN (interposing). Suppose that one million dollar concern should make a net profit of \$200,000?

Mr. MOHUN. You mean in one year?

The CHAIRMAN. Yes.

Mr. MOHUN. And we will further assume that the life of the wells there has been 10 years.

The CHAIRMAN. Does the department now make that estimate?

Mr. MOHUN. Yes, sir. If the life of the wells was assumed to be 10 years, they would allow, out of the \$200,000, \$100,000 to be deducted and on the other \$100,000 they pay the tax.

The CHAIRMAN. They have made regulations by which they have estimated the life of those wells?

Mr. MOHUN. Yes, sir. It is in the case of the fee owner that they allow that. They call it depletion, but, of course, it is return of capital. Now, we will take corporation B, which in 1910 paid a price of \$100,000 for a lease of oil lands. As you gentlemen know, the oil business is conducted with leases; I suppose there are less

than 5 per cent of fee owners. Leases are dealt in the same as in any other piece of property that changes hands readily. Corporation B, in 1910, paid \$100,000 for a lease of oil lands, which lease, we will assume, was worth \$1,000,000 on March 1, 1913. Here is where the discrimination comes in. The bureau says to the owner, "You deduct from your income during the life of these wells \$1,000,000, the value as of March 1, 1913," and says to the lessee, "You deduct \$100,000 and not another cent." The result is, of course, that the lessee pays a tax on \$900,000 more, and these oil taxes, many times, run into the 60 per cent bracket under the excess-profits tax law, and under this illustration they would have to pay a tax of \$540,000. The case which I have put before you is an exact one and there is not a particle of exaggeration or inaccuracy about it.

The CHAIRMAN. You mean both bought at the same time?

Mr. MOHUN. Yes; one bought the fee and the other bought a lease.

The CHAIRMAN. One bought a lease and put \$100,000 in the lease. Are not most of the leases made in such a way as to provide for the payment of a royalty each year?

Mr. MOHUN. Yes. The royalty in the country usually runs one-eighth, but when you get into good oil fields the bonus runs very high. However, the royalty basis will remain the same, usually, as I stated, one-eighth, but if it is a very rich territory a cash sum is paid in addition.

The CHAIRMAN. Let me see if I catch your point. A buys oil property in 1910 in fee; on January 1, 1913, it is worth \$1,000,000 and he can go out and sell it for \$1,000,000. B, in 1910, leases an oil property and pays \$100,000 for the lease.

Mr. MOHUN. That is right.

The CHAIRMAN. And on January 1, 1913, that lease is worth \$1,000,000?

Mr. MOHUN. Yes, sir.

The CHAIRMAN. What would the property be worth, then? If the lease is worth \$1,000,000, what would the whole property be worth? The whole property might be worth \$5,000,000, might it not?

Mr. STERLING. But the lease is about all of the property, as I understand it, the lease is the only property that this man B has.

Mr. MOHUN. That is right.

Mr. STERLING. He did not buy the fee.

Mr. MOHUN. No; but, of course, they do use the surface.

The CHAIRMAN. The owner of the fee is going to get a certain part of the profits, or whether they make profits or not he is going to get a certain payment in the shape of a royalty every year?

Mr. MOHUN. Surely; he gets his one-eighth.

The CHAIRMAN. And that is worth something. Would it not depend largely on how much the owner of the fee is going to get from this lessee as to what the fee is worth?

Mr. MOHUN. What the owner is to get—you mean as royalties?

The CHAIRMAN. Yes. In other words, if I lease a piece of property for \$1,000 a year and pay \$100 a year, that lease is worth considerably more than if I had paid the other \$900.

Mr. MOHUN. Surely, but in the oil business, the returns to an owner, where he leases his land, are on a percentage basis. The more oil produced, the more the owner gets.

Mr. STERLING. And he is taxed separately.

Mr. MOHUN. Yes.

Mr. MOORE. In any case does the Government make these leases?

Mr. MOHUN. There are instances, I understand, yes; but that is not so as to the Magnolia Petroleum Co.

Mr. GREEN. Even when they get a lease the owner may be paying considerable taxes also?

Mr. MOHUN. On his income?

Mr. GREEN. Yes.

Mr. MOHUN. That is true, and I think that question is right to the point. It seems to me that the criterion is what the man has and what it was worth on March 1, 1913. If the owner of the property has made a lease on it which is very advantageous to the lessee, that reduces, of course, the value of what the man had on March 1, 1913, whether it be a lease, an encumbrance, or otherwise. That is what I should think would be the criterion and what I think was really meant. But that would be the result in the case which I put, and that has been the result in our case. We made a great many leases prior to March 1, 1913, and the territory has proven to be very good. Those wells were very splendid and had a market value greatly in excess of what we paid for them, yet we may only obtain depletion, as it is called—we can not really obtain depletion at all, but return of capital on the basis of what we paid for them, and they might have been bought 50 or 75 years ago.

Further than that, under this law, if a corporation bought a piece of real estate 50 years ago in Washington and paid \$5,000 for it—it might be the corner up here where the American Security & Trust Co. is located, and that might be its business, and it is worth \$5,000,000 to-day, but the bureau would only allow them a return of capital on the basis of \$5,000, but if they sold it the bureau would say "Then take into consideration your value on March 1, 1913," which shows the utter fallacy of their position. The reason they take that position is that they say the statute commands it, and where property is sold it is the value as of March 1, 1913, without regard to whether there has been a profit or a loss, but because Congress in this instance said that the depletion or return of capital, in the cases of oil property, which is different from others, and laid down particular rules for the ascertainment of return of capital in those cases, but took the precaution to say that in no instance shall that return of capital exceed the value on March 1, 1913, the bureau said it is only the owners of property who can get that value on March 1, 1913.

The CHAIRMAN. Have you copies of any of these leases for oil lands?

Mr. MOHUN. I think I have some in my office.

The CHAIRMAN. What are the terms of those oil leases?

Mr. MOHUN. They usually provide for the payment of a royalty of one-eighth, but I think in the case of the Osage leases, referred to the other day, the Government has obtained a royalty of one-sixth.

The CHAIRMAN. You say they pay a royalty of one-eighth?

Mr. MOHUN. That is the usual royalty, one-eighth.

The CHAIRMAN. One-eighth of the income of the flow?

Mr. MOHUN. Yes, sir; but usually there are other provisions to the effect that a well must be brought in within, say, a year or 18 months, or otherwise the lease will be forfeited.

The CHAIRMAN. So you do not pay anything down for the lease, as a rule?

Mr. MOHUN. I would not like to say as a rule.

The CHAIRMAN. But you can say as to your companies, can you not?

Mr. MOHUN. I do not know exactly, but I know that leases do sell at very high premiums.

The CHAIRMAN. I know that is the fact if you get a lease from Bill Jones, and then sell that lease to me.

Mr. MOHUN. Yes, sir.

The CHAIRMAN. I want to know about the original lease. Is it usually one-eighth of the net income of a well or one-eighth of the oil that comes from a well?

Mr. MOHUN. The latter.

The CHAIRMAN. One-eighth of the gross production?

Mr. MOHUN. Yes, sir. It goes into a tank, and from the tank into the pipe line. The owner never sees the oil, but just gets a check for it.

The CHAIRMAN. The owner gets a check for whatever oil is produced, while the other fellow pays for the development?

Mr. MOHUN. Yes, sir.

Mr. STERLING. Let me ask you a question or two, if I may. I am not quite clear as to what you are driving at. The owner paid \$100,000 in 1910, and in 1913 his property is worth \$1,000,000, and the lessee paid in 1910, \$100,000 for the lease.

Mr. MOHUN. But not on the same property?

Mr. STERLING. No; of course not. The lessee bought a lease in 1910 and paid \$100,000 for it. Now, his lease is worth \$1,000,000 on the 1st of March, 1913. How does the department compute taxes on those two incomes and what difference does it make?

Mr. MOHUN. That puts the question very clearly. I would say, first, that the excess profits tax depends on the manner in which the income is calculated. In the first instance it says to the owner in fee, you will have a production from this property, we will assume, for 10 years, and that the property was worth \$1,000,000 on March 1, 1913, and you can take one-tenth of that oil and deduct it from your income and not pay any tax on it each year.

Mr. STERLING. No; I do not think that is so. Of course, the question arises in computing his exemptions.

Mr. MOHUN. His deductions?

Mr. STERLING. Yes. Well, now, how much is he exempted?

Mr. MOHUN. In the case I put before you?

Mr. STERLING. Yes—the owner.

Mr. MOHUN. \$100,000, on the assumption that it lasted 10 years.

Mr. STERLING. Let us say he has earned 9 per cent or more. What do you compute the 9 per cent on to get his exemptions—on the \$100,000 he paid for it, or on the \$1,000,000 that it is worth on the 1st of March?

Mr. MOHUN. No; you compute that on the net income of the year.

Mr. STERLING. I am getting at the excess profits tax.

Mr. MOHUN. I understand.

Mr. STERLING. He is entitled to an exemption of 9 per cent on his capital?

Mr. MOHUN. Yes, sir.

Mr. STERLING. What do they consider his capital, \$100,000 or \$1,000,000?

Mr. MOHUN. In this instance?

Mr. STERLING. Yes.

Mr. MOHUN. I should think they would consider it \$1,000,000.

Mr. HAWLEY. Have you any actual instances where the department has passed on it, in the case of the owner in fee, and considered his capital invested as \$1,000,000?

Mr. MOHUN. I have no individual rulings here as to that.

Mr. STERLING. I think you are mistaken about how they compute that. I think they compute his capital at \$100,000. If a new purchaser had bought it—

Mr. MOHUN (interposing). Of course, they compute his capital as \$100,000 in 1910, but that is not the point, though.

Mr. STERLING. I think the point is to get at the exemptions, to show whether or not there is a discrimination against the lessee or owner in fee.

Mr. GREEN. You are speaking more particularly of the depletion allowance, are you not?

Mr. MOHUN. Yes, sir.

Mr. STERLING. He is entitled to an exemption of 9 per cent on his capital before you begin to compute any excess profits tax, and they regard, in the lessee's case, the capital just the same as they would in the owner's case, and they would allow him 9 per cent on his capital. If they said \$100,000 was the capital in the case of the owner, if he bought it in 1910, they would certainly say that the capital of the lessee was \$100,000.

Mr. MOHUN. There would be no discrimination there at all, no; but I made no reference to invested capital. I was careful to use the word "capital" and the words "capital assets," and not to use the words "invested capital," so as to distinguish between the two, and I had no reference, primarily, to the excess-profits tax. As to the invested capital of a corporation, whether it is put into a lease or into freehold, there is no discrimination at all, but there is a discrimination in the production under the income-tax law, and in arriving at the net income which is subject to the tax. The first case which I quoted had nothing to do with the invested capital at all. Where \$100,000 was invested in the fee, in arriving at the deductions from the gross income under the income-tax law, the bureau will allow, in a case where we will assume that one-tenth of the production has been over a period of 10 years, a deduction each year of \$100,000, and in the other case they will allow a total deduction of \$100,000. In other words, the value on March 1, 1913, is taken in one instance at \$1,000,000, and is allowed to the fee owner, and in the other instance it is disallowed, and they take only his cost.

Mr. STERLING. In the case of the lessee.

Mr. MOHUN. Yes, sir.

Mr. STERLING. Are you recommending that only 10 per cent be deducted in each case or that all of it be deducted in the lessee's case?

Mr. MOHUN. My recommendation is to put them all on the same basis.

Mr. STERLING. You do not care which?

Mr. MOHUN. Well, I do; yes, indeed. I think the value on March 1, 1913, is the only fair way.  
 effec.  
 or othe.

Mr. STERLING. If you were on this committee and had the responsibility of raising all this money I presume you would feel that you ought to equalize them, but equalize them by making the man who pays less pay the greater amount.

Mr. MOHUN. I appreciate the wisdom of that, I think, and I fully agree with it, but in this instance we would have a case similar to that which the chairman of this committee has stated, and in which the Supreme Court—although not having the question directly before it—rendered a decision within the last two or three weeks showing, and even intimating, that the plan I referred to, of taxing accretion and enhancement in value prior to March 1, 1913, would contravene the Constitution.

I have prepared a somewhat elaborate brief which I think would convince any court that the manner in which they have treated this company in refusing to allow return of capital as the value on March 1, 1913, was unauthorized, and, as I say, I think I can convince any court of that fact. This corporation realized its rights, but is loath to sue the Government for taxes in these tremendously serious days of war. I have never heard of a company that has gone out of its way, as this company has, to meet the desires of the Fuel Administration and every department of the Government. It has said, "We will gladly comply with every regulation you make, and we want to know what your wishes are and we will meet them." We felt we would come here and frankly tell you gentlemen the situation. I had had considerable experience in a number of corporations and I have never yet found any spirit or desire to evade the law so far as taxes were concerned. They have all said, "We want to pay our fair part, but no more, and I think that is right and that it is honest."

Mr. GARNER. You are complaining more about the administration of the law than about the law itself.

Mr. MOHUN. Exactly.

Mr. GARNER. We do not administer the law and it is almost impossible to write a law and direct in all instances how it shall be administered.

Mr. MOHUN. I appreciate that, but I really think it might have been made a little plainer. The framers of this law took the precaution to point out in the case of oil wells that the owners of the wells should not get more than the value as of March 1, 1913, but that has been used by the bureau to say that they are the only people who shall have the value as of March 1, 1913, and that the owners of all other property shall not get more than the cost.

I was called upon very unexpectedly in this matter, and I have drafted, along the lines of the suggestions that the gentleman just made, an amendment.

Mr. MOORE. Where does it appear?

Mr. MOHUN. At the end of subdivision A of section 10 of the act of September 8, 1916.

Mr. MOORE. The act of 1916?

Mr. MOHUN. Yes, sir; I can find it for you quickly. It is at the end of subdivision A of section 10 of the act of September 8, 1916.

Mr. MOORE. At the end of section 10 or section 12?

Mr. MOHUN. At the end of section 10.

Mr. GARNER. Of the act of 1916?

Mr. MOHUN. Yes, sir; the act of 1916.

Mr. MOORE. That is not the reduction clause.

Mr. MOHUN. No, sir.

Mr. MOORE. That is the corporation paragraph.

Mr. MOHUN. Yes, sir; that is the corporation paragraph. As I have said, this has been thrust upon me rather hurriedly.

Mr. MOORE. I want to hear it read, but I want to hear it in connection with the act.

Mr. MOHUN. I would like to read it into my remarks, and then, with the chairman's permission, I would like to go over it pretty carefully. I would like to have an opportunity to look over it.

The CHAIRMAN. You will have that opportunity.

Mr. MOHUN. As you will see, the last paragraph in subdivision A relates to the case of a sale.

Mr. MOORE. Where does it come in?

Mr. MOHUN. It comes in at the end of paragraph A of section 10.

Mr. MOORE. It will be a subdivision of section 10?

Mr. MOHUN. Yes, sir.

Mr. GARNER. You want to add a new paragraph B.

Mr. MOHUN. No, sir; there is already a paragraph B, but there is an unnumbered paragraph.

Mr. MOORE. I want you to locate it properly. Do you want it to follow subsection B?

Mr. MOHUN. It should go just ahead of subsection B.

Mr. GARNER. We will call it subsection A-1.

Mr. MOHUN. I think that is a good idea. The amendment I propose to add at the end of subdivision A of section 10 of the act of September 8, 1916, reads as follows:

Under the provisions of the act of September 8, 1916, entitled "An act to increase the revenue, and for other purposes," and the act approved October 3, 1917, entitled "An act to provide revenue to defray war expenses, and for other purposes," and under this act, that for the purpose of ascertaining the amount to be allowed a corporation, joint-stock company or association or insurance company as return of capital invested in property, real, personal, or mixed, prior to March 1, 1913, the fair market price or value of such property as of that date shall be the basis thereof.

That was written last night.

Mr. MOORE. I do not want to ask you so broad a question as this, but wherein does that differ from the existing law?

Mr. MOHUN. It does not. I feel that that provision is in there now, but it is not recognized.

Mr. MOORE. In other words, that is the existing law?

Mr. MOHUN. Yes, sir.

Mr. GREEN. You want to fix it so that the revenue authorities can not get around it?

Mr. MOHUN. Yes, sir; exactly.

Mr. MOORE. Then your grievance is not against the law as it was enacted and as it was approved by this committee, but your grievance is against the interpretation placed upon the law by the department?

Mr. MOHUN. Yes, sir. I feel that any court would sustain the view that I am presenting now.

Mr. MOORE. Evidently, the department interpreted the law so as to bring in more money than your amendment, strictly interpreted, would bring in.

Mr. MOHUN. Yes, sir; exactly. Of course, I want to be entirely candid about the matter, and I am not only seeking by this amend-

ment to prevent the continuation of such discrimination as has taken place in the past under the law that has been enacted, but I am asking it under the act of 1916 and under the act of 1917, in order that those matters may be adjusted in accordance with this provision.

Mr. MOORE. I appreciate your purpose in attempting to correct the law with a view to having it properly interpreted by the department, but I bring to your attention the fact that the effect of your amendment would be to reduce the revenue, and that brings up to us a very serious question.

Mr. DIXON. Have you filed any claim for a refund of taxes?

Mr. MOHUN. No, sir; we have two years in which to do that.

Mr. MOORE. Do you intend to make any suggestions as to how we may increase the revenues from the oil business? Is there any equitable system that you could suggest by which we could raise more money from the oil business next year?

Mr. MOHUN. I am not in the oil business, and I have the most superficial knowledge of it.

Mr. MOORE. I do not want to embarrass you at all, but you gentlemen who come before the committee should clearly understand the problem that confronts us. I presume, of course, that the committee would be glad to amend the law with a view to correcting errors that may be found in it, but you should bear in mind that there is staring us in the face the problem of raising \$8,000,000,000 next year, as against \$4,000,000,000 last year, by taxation.

Mr. MOHUN. I am sure from what I know of this company, and my slight knowledge of other companies, that there is no objection to an increase in the rates of taxation, but it does seem unfair to discriminate against us.

Mr. GARNER. What you are suggesting is that we write into the law an interpretation of the law as you understand it to be now?

Mr. MOHUN. Yes, sir.

Mr. GARNER. You have nothing to suggest in reference to rates of taxation?

Mr. MOHUN. No, sir.

Mr. GARNER. You simply want the law construed as you believe it ought to be construed at the present time.

Mr. MOHUN. Yes, sir.

Mr. SLOAN. Did you say that the rate of taxation on the people you represent would be reduced by this?

Mr. MOHUN. Yes, sir; it would simply put us on the same footing with others.

Mr. SLOAN. Your suggestions are for reducing the taxes rather than for the purpose of increasing them?

Mr. MOHUN. Yes, sir; but they have no objection to an increase of the rates of taxation.

Mr. MOORE. The question might also be raised of whether, if this amendment were adopted, the department would go on and interpret the law as heretofore. They might do that even if that amendment were adopted.

Mr. MOHUN. Yes, sir.

Mr. STERLING. Your desire in suggesting this amendment is to equalize the cases of A and B by reducing A's taxes, is it not?

Mr. MOHUN. That is the effect of it.

Mr. STERLING. Can you draw an amendment and put it in these hearings that would equalize A and B by increasing B's taxes up to the amount paid by A?

Mr. MOHUN. I am glad you mentioned that, because I am now satisfied that I did not make myself clear. If an amendment to that effect should be added to this bill, it would mean that we would be taxing the income of B which accrued to him years before there was a sixteenth amendment to the Constitution authorizing an income tax. You would be putting him back a year and taxing his income prior to March 1, 1916, while you would not be taxing the income of the other party prior to that time.

Mr. STERLING. This suggested amendment equalizes them by reducing the tax of one to the level of the tax of the other. Then, why not increase the rate so that both would have to pay more taxes?

Mr. MOHUN. I think that would be fair, and I do not think there would be any objection to it. We are always glad to do our share, but we object to a discrimination, especially when Congress did not mean it, and we do not want to assume it.

Mr. MOORE. Is not the oil business generally more prosperous this year than last year?

Mr. MOHUN. Yes, sir.

Mr. MOORE. The war has probably had a great deal to do with that, has it not?

Mr. MOHUN. Yes, sir.

Mr. GREEN. Will you answer another question in which you are probably interested, and about which you may be able to give some information: Does your company ship through pipe lines?

Mr. MOHUN. We own pipe lines.

Mr. GREEN. There has recently been an increase in freight rates, of about 25 per cent by railroads, but that does not affect pipe lines, as I understand it.

Mr. MOHUN. You are beyond my depth there.

Mr. GREEN. You can not give us any information about that?

Mr. MOHUN. No, sir; I would be glad if I could.

Mr. RAINEY. Has there not been an increase in the output of oil wells since the war started?

Mr. MOHUN. Yes, sir; I think there has been, but not as great as the increase in the demand and consumption has been.

Mr. RAINEY. And there has also been an increase in the value of the products?

Mr. MOHUN. Yes, sir.

Mr. RAINEY. We are face to face with a proposition here which requires us to draw a bill to raise \$8,000,000,000 in revenue. We have received numerous suggestions since we started these hearings, and if we followed them all we would not be getting any money at all, but would probably lose \$2,000,000,000 of the amount that we are already getting. Have you or any oil organizations any suggestions to make as to how we can raise this money by reducing the taxes?

Mr. MOHUN. I understand that Judge Shea, of Texas, is here.

Mr. WHITE. He is from Tulsa, Okla.

Mr. MOHUN. I am not speaking for him, but I know that he represents the oil producers' association.

Mr. RAINEY. Has he a proposition by which we can get more money out of the oil business or one by which we can get it out of somebody else?

Mr. MOHUN. That I can not say.

Mr. GARNER. If you wrote into the law a provision of this kind, and then increased the income taxes and increased the excess-profits taxes, you would pay more taxes.

Mr. MOHUN. Yes, sir.

Mr. GARNER. And you are willing to do that?

Mr. MOHUN. Absolutely.

Mr. GARNER. As I understand it, you want to be treated like everybody else?

Mr. MOHUN. That is all.

Mr. GARNER. And you have no complaint to make about the rate?

Mr. MOHUN. We have no complaint to make about that.

Mr. GARNER. But you object to the construction of it?

Mr. MOHUN. Yes, sir. I thank you, gentlemen.

**STATEMENT OF MR. FREDERICK C. DURANT, 228 SOUTH NINETEENTH STREET, PHILADELPHIA, PA.**

Mr. DURANT. Mr. Chairman, in view of what I have read in the papers and listened to, my appearance here is simply for the purpose of suggesting how we may bring a very much larger revenue to the United States than we are at present getting.

Mr. GARNER. Will you state whom you represent here?

Mr. DURANT. No one in particular; but I believe there are many people who think as I do, that the Government is not getting what it ought to get out of the people of the United States.

Mr. MOORE. You come from Philadelphia?

Mr. DURANT. Yes, sir.

Mr. MOORE. You were formerly engaged in the business of refining sugar, were you not?

Mr. DURANT. Yes, sir; a good many years ago; but I am still familiar with it.

Mr. MOORE. You still have some interest in sugar refining?

Mr. DURANT. None whatever.

Mr. MOORE. You are practically retired now?

Mr. DURANT. Yes, sir.

Mr. MOORE. You have given a good deal of thought to the subject of taxation?

Mr. DURANT. In a way, yes, sir; and I still keep in touch with business generally. You were asking me a question, Mr. Congressman.

Mr. GARNER. No; I simply wanted to know whom you represented.

Mr. DURANT. In the first place, I believe, and there are many others in the United States who believe as I do, that no one has the right to claim citizenship who does not pay taxes to the United States Government. I also believe that a differential tax, excess-profits tax, or excess-income tax, or whatever you want to call it, upon excess income is a proper and just tax. However, in order to meet the question of getting the increased revenue needed, I have outlined two radical views, or perhaps they are radical, inasmuch as they have not been adopted heretofore. One is to impose a tax on the gross production or consumption of the United States.

Mr. SLOAN. Permit me to interrupt you a moment. Awhile ago you made the remarkable statement that no one should be a citizen of the United States unless he paid taxes to the United States.

Mr. DURANT. I meant direct or indirect.

Mr. SLOAN. For instance, children are citizens of the United States.

Mr. DURANT. Not until they become of age.

Mr. SLOAN. They are not citizens until they become of age?

Mr. DURANT. They are citizens, of course, in a sense—

Mr. SLOAN (interposing). You referred to franchise rather than citizenship, did you not?

Mr. DURANT. Yes, sir; except to this extent, that if you have children, you have five times the interest in the fact that they contribute their share—

Mr. SLOAN (interposing). The point I made was that you stated they should not be citizens of the United States unless they paid taxes. Did you mean voters?

Mr. DURANT. In that case I referred to manhood. That is to say, a man has no right to hold up his head in the community and say that he is doing his share as long as he is not paying anything.

Mr. MOORE. You mean every full-grown American who is enjoying the privileges of the country?

Mr. DURANT. That is exactly what I mean.

Mr. SLOAN. You meant voters?

Mr. DURANT. I meant so long as he is enjoying the privileges of the country. Now, I also contemplate a system whereby every resident of this country, but not a citizen of the United States, shall contribute through some source. It is estimated that the gross turnover in this country is about \$40,000,000,000. Now, suppose we start at the mine—

Mr. SLOAN (interposing). Did you say that the gross turn over was \$40,000,000,000?

Mr. DURANT. Yes, sir; that is the estimated turnover.

Mr. SLOAN. It was estimated at \$49,000,000,000 by somebody.

Mr. DURANT. Of course, it is all a guess. I am simply taking that estimate which was made by somebody else. Personally I believe it is much larger than that. Now, slipping away from that for the moment, the clearing house statement of last year from 184 clearing houses in the United States gave a total of over \$320,000,000,000. Now, if there are \$320,000,000,000 going through the clearing houses, that would seem to me to represent a larger percentage than this \$40,000,000,000. In other words, it would be as \$40,000,000,000 is to \$320,000,000,000, which is the amount the clearing houses reported—

Mr. SLOAN (interposing). You are counting revolutions instead of wheels, are you not?

Mr. DURANT. It is a part of the same thing. Suppose we start with the mining proposition, and take ore out of the ground. The owner of that ore would pay, according to my suggestion, along the lines I have laid down, we will say, 1 per cent on the gross receipts that he gets for his ore. He sells that ore to the manufacturer of pig iron, who, in turn, pays a tax. We will say that the ore man gets \$1,000,000 for his product, and the pig iron man, having put it through some processes of manufacture, will get, we will say, \$1,250,000. He pays a tax of 1 per cent on the pig iron, and passes it on to the steel man who makes steel ingots from it, on the sale of which he pays a tax of 1 per cent.

And so it would go on through all of the processes until there would be a tax of 8 or 9 per cent collected by imposing a tax of 1 per cent on it as it goes on through the different processes. If you dropped back from that product to rock that is taken out of a quarry for the purpose of making road ballast; you would collect only 1 per cent upon that product, because it would go from the quarry to the road that was ballasted, and the only step taken would be that of transportation. It would be the same way with various other things. For instance, take wheat. The farmer would pay a tax of 1 per cent on the sale of his wheat; the miller would pay a tax of 1 per cent, and if there was any man between the miller and the wholesale dealer, he would pay a tax of 1 per cent. The wholesale grocer, presumably, would get it next, and he would pay the third tax of 1 per cent, while the retail grocer would pay the fourth tax of 1 per cent. That would be the end of it until it got into the form of the bread and pastry, and the man selling that would be the fifth one to pay a tax of 1 per cent.

Mr. HAWLEY. Finally, of course, all those taxes would be paid by the ultimate consumer.

Mr. DURANT. You can not collect it any other way, except in the tax that you have at the present time—that is to say, the excess-profits tax and the tax on individual incomes. But there is no other tax imposed that is not paid by the consumer. The revenue collected at the ports on imports are paid by the consumers. All of those taxes are taxes on consumption. There is no way in the world to prevent the passing of it on to the consumer. He may be a farmer or he may be a banker, but he pays the tax on the article he uses, if it is taxed. It seems to me that at this time, considering the crisis that the country is in, and the fact that an enormous amount of revenue is required, you must put aside all picayune questions, personal, professional, or anything else, and make it so that everybody will pay a just and equitable tax. We have been having Red Cross drives and these other things to which the people have been encouraged to contribute. Why not try to encourage the people of the United States to pay their just share of the taxes? I assume that there would be on the turnover an average of about 5 per cent, although my idea is that it would be less than that. On a turnover of \$40,000,000,000 you could collect \$2,000,000,000 from that source alone. It is a tax that would be easy of collection, and if you wanted more revenue you could simply double the rate by adding 1 per cent. If you wanted still more revenue, you could double it again. It would become an overhead charge in every man's business. If a man's turnover in his business is such that the tax 1 per cent would amount to \$10,000 a year, that \$10,000 per year would be just the same as if he employed a superintendent at \$10,000 a year. That is to say, it would become an overhead charge. There would be no friction about that. I have talked with merchants about it, and they all agree to that proposition.

Mr. MOORE. How would you put that scheme into operation?

Mr. DURANT. I would promptly license everybody in the United States. Everybody who transacted any sort of business would be required to have a United States Government license.

Mr. MOORE. You would apply that to small stores as well as to the large department stores?

Mr. DURANT. I would apply it to everybody. It would be applied to every branch of business, because you could not make any exceptions. It would have to be universal and would have to apply to every line of business.

Mr. MOORE. But it would hardly reach the man who is employed by a rolling mill and receiving wages.

Mr. DURANT. Why would it not reach him? He has got to consume stuff. It would come from him, also.

Mr. MOORE. Would you require him to take out a license?

Mr. DURANT. No, sir; not if he was receiving a salary.

Mr. MOORE. How would you check him up?

Mr. DURANT. If he was a wage earner, he would not be a trading person, and he would not be selling anything except his time. That has been the law in the past.

Mr. MOORE. Then we would diverge at that point. You would require the man doing a small tobacco business to take a license, but the wage earner, who might derive the same amount of income, would not be required to take a license. You would have to have another sort of machinery to reach him.

Mr. DURANT. He pays an overhead charge under this tax of 5 per cent, or whatever it is, on this turnover.

Mr. MOORE. When you came to put your plan into practice, how would you actually get the money out of his pocket for the Government's needs, or what would you apportion against him?

Mr. DURANT. It would be on whatever he buys. He would pay the overhead charges on whatever he bought.

Mr. MOORE. Then, the rolling mill wage earner would pay through somebody from whom he made his purchases?

Mr. DURANT. Yes, sir.

Mr. MOORE. That would be an indirect revenue, so far as he was concerned.

Mr. DURANT. Absolutely.

Mr. MOORE. Then we would not be able to check him up.

Mr. DURANT. Suppose you take this proposition: Suppose you have two wage earners, both getting \$1,200 a year, and we will suppose that they have exactly the same number in their families to support and that all the conditions are the same, except that in one instance the man and his wife and children are economical and save \$200 a year. The other man has paid his taxes on his \$1,200.

Mr. MOORE. You spoke of passing the tax along to everybody so that every full-grown citizen, man, woman, and child would pay his or her share, but would put a direct tax on every man in business.

Mr. DURANT. But the man in business is not going to pay that tax. That is going to be an overhead charge on his business, just as much as his capital.

Mr. MOORE. As a matter of fact, doesn't the rolling mill man or the street car conductor pay his share under the present system, taking your line of reasoning?

Mr. DURANT. He pays a certain amount.

Mr. MOORE. He buys from a store in Washington or John Wanamaker's in Philadelphia, or from a store in New York City, and they pay the tax, but the individual doesn't know that he pays any tax.

Mr. DURANT. No.

Mr. MOORE. Except that he pays higher prices.

Mr. DURANT. We say what we don't know doesn't hurt us.

Mr. MOORE. That is the point where I thought your scheme fell down, because you do not trace revenue to its source in every case.

Mr. GARNER. If I understand your proposition, it is to levy a tax on sales.

Mr. DURANT. Absolutely on the gross sales.

Mr. GARNER. It makes no difference what a man sells, on what he sells he pays 1 per cent.

Mr. DURANT. Assuming that to be the rate.

Mr. GARNER. Assuming that to be the rate, and if a man sold a horse, he would pay 1 per cent on the gross sale, and if a man sells a million dollars' worth it would still be 1 per cent on that, and on down the list—what is known as a consumption tax.

Mr. DURANT. Absolutely, and another way of figuring around the same proposition is this, that to-day you have taxes on various commodities—you take your theater tickets, you have a tax on all amusements of all kinds. Now, on the other hand, take the transfer of stock. A man buys \$2 at a theater, which is the highest price they have—of course it scales down—he pays 20 cents, whereas if a man buys \$100 worth of stock he pays only 2 cents. That is not equitable.

Mr. GREEN. Isn't one a luxury and the other not?

Mr. DURANT. Buying stock is a luxury.

Mr. GREEN. Buying stock is a luxury?

Mr. DURANT. Absolutely; because if he has the money to pay for it and keep it it is a luxury. Take this trading in stocks, stock exchanges. If you were to tax those, you would derive from that source alone many billions.

Mr. GREEN. I am not saying that we ought not to advance the tax on stock of the wealthy. But let me call your attention to another question along the line of Mr. Moore's question. Here is a man with a wife and, say, 8 or 10 children. He consumes a certain number of pounds of coffee a year and tea. Here is a bachelor millionaire who does not consume more than one-tenth the amount the first man and his family consume. The first man I mention is a section hand and has just about enough to exist on. Now, under your system, the section hand would be paying ten times as much taxes, indirectly, as the bachelor millionaire. Do you think that is fair?

Mr. DURANT. No; I don't agree with you. I think I can convince you and the other gentlemen that is not the way it works.

Mr. GREEN. Your plan is not at all new. It was put in force in the Civil War, when they had a tax on gross sales on nearly everything.

The CHAIRMAN. It was a tax on gross sales of 3 per cent, but not on the manufacturers' sales. It was not as the present system.

Mr. GREEN. There was a tax on sugar and a tax on petroleum, tax on oil and certain refined products, etc.

The CHAIRMAN. About 300 or 400 articles were taxed 3 per cent to 5 per cent on the manufacturers' sales, like we tax the automobile exactly.

Mr. DURANT. Take the proposition of your poor \$800 man. I guess that is pretty low under the present wage scale.

Mr. GREEN. That section hand would not get that.

Mr. DURANT. Wouldn't he? I thought Mr. McAdoo had changed it so that he would get that.

Mr. GREEN. Perhaps, now.

Mr. DURANT. I had rather gathered that was the case, but then I had not followed it very closely. But the point is, as compared to the millionaire that you speak of, the section hand buys his food and clothes and there is nothing left of his \$600—or whatever the figure is. That is equivalent to \$38 a year tax to Uncle Sam under the present conditions. That same man is contributing to the war the same as the millionaire. In taking with laboring men, I have not talked to any who were not willing to contribute their share of taxes if the wealthy pay proportionately more, and the wealthy man is bound to do that because if he spends \$50,000 on his extravagances, he will be paying as much in proportion as the \$600 man on his necessities.

Mr. MOORE. Mr. Durant, pardon me, that brings up the point that Mr. Green endeavored to bring to your attention, that the section hand with his children under the consumption tax system would be obliged to pay indirectly on his children and his wife and himself, while the millionaire, who consumes no more than the section hand, would pay only a small proportion. In other words, the section hand would be paying nine times more on the consumption-tax plan. What have you to answer to that?

Mr. DURANT. He would be paying nine times more on account of his wife and eight children. That is his misfortune to have these children, or his blessing, whichever way you want to look at it.

Mr. MOORE. I can see another answer which I thought you would make. The millionaire is probably maintaining 30 or 40 servants, who can consume a little more than he can; and it comes to more than the one man consumption.

Mr. DURANT. Yes.

Mr. MOORE. He sometimes has a house full of servants.

Mr. STERLING. I would like to ask a question. To-day, Mr. Durant, you say that the transactions going through the clearing house are \$320,000,000,000.

Mr. DURANT. \$320,000,000,000 was the statement of last year, ending June 30, 1917.

Mr. STERLING. That represents all the business transactions of the country excepting those where cash is paid, and excepting those where a check is given and it is cashed at the same bank at which it is drawn?

Mr. DURANT. Yes; and I think it also excepts the United States—transactions of the Government. I do not think that they go into these figures; I think many of them do not.

Mr. STERLING. You figure that your plan would produce \$2,000,000,000, but you think that \$320,000,000,000 go through the clearing house. Suppose you put 1 per cent on that. That would be \$3,200,000,000.

Mr. DURANT. I am coming back to that. I have two plans to offer—one to increase the present line, and one a new one.

Mr. STERLING. Have you any data as to what per cent of the business transactions of the country go through the clearing house?

Mr. DURANT. What per cent of the business?

Mr. STERLING. Yes, sir.

Mr. DURANT. One of the plans which I have suggested here along the line of increasing income to the United States, is to tax all deposits in banks, of every kind. I am going to answer your question now about the tax on deposits that go through the banks of every nature, and exempting from those transactions or transfers that may take place from one bank to another, if the amount is exactly the same in the second bank and subject to the same signature. In other words, as a matter of commercial convenience, it may be desired to transfer \$50,000 from the First National Bank and to deposit it in the Second National Bank for the purposes of paying out. The total bank deposits in the United States in June, 1917, were \$26,289,785,000.14, which, I believe, in talking with various bankers and trust company officers, and others, had a 5 per cent daily turnover. In other words, the turnover in banks in a large city where there is a great deal of business, as in New York, Philadelphia, Washington, or Baltimore, will average 10 per cent of the deposit accounts daily; that is, the checks against that bank—against their own deposits—will amount to 10 per cent. Now, taking the trust companies, savings banks, and other institutions, which run much less, I find the savings funds run anywhere from 3 per cent up to 4 per cent. Taking them as a steady proposition, and estimating a 5 per cent daily turnover, you would get \$1,300,000,000 as a daily proposition, or \$390,000,000,000 in the year. If you put a tax of one-tenth of 1 per cent on that, you will get \$319,000,000 on that proposition.

Mr. STERLING. Daily?

Mr. DURANT. Yearly.

Mr. DIXON. You have conferred with a number of bankers. How many approve your proposition?

Mr. DURANT. I can not say that any have disapproved or approved it. One banker emphatically disapproved it on the grounds that it would possibly disturb the banking arrangements of the country, the moment we tried to adopt things of that character.

Mr. DIXON. Would you make the man that owns the money in the bank pay it?

Mr. DURANT. My theory is to make the man that owns the money pay it. Assume that in this country to-day we have a large percentage of the people whose wages or salaries are \$1,000 or more, and they are depositors in some institution.

Mr. DIXON. Then a man if he put his money in his own vault would not pay the tax, but the man who deposits his money in the bank.

Mr. DURANT. The amount of tax would not keep a man from depositing. A man would just as soon take his telephone out of his house as he would bother with taking \$10,000 or \$50,000 from his bank and putting it into a perfectly safe place, and then have to go to that vault and get money and pay it out in preference to paying the tax. Certainly the method of a 2-cent stamp on a check is not equitable, because then the poor man draws perhaps 100 checks of a total valuation we will say, of \$1,200, and the other man draws 100 checks of perhaps of a total valuation of \$1,000,000, and he pays the same tax. Supposing a man has an income of \$100,000 a year and spends \$50,000 on the pleasures of life. If he requires \$50,000 to be spent on pleasure, he pays a tax on his \$50,000. There are two kinds

of investors—one man who will take it and put it in an investment and put aside the stock in a safe deposit vault, and draw the income and pay his income tax to the Government, while the other investor is a quick investor. He likes to play it in the stock market. He likes to turn it over, and every time he turns it over, he pays Uncle Sam for the privilege, not this picayune 2 cents on \$100,000, which represents one-fiftieth of 1 per cent, and this investor does not mind paying the tax. It is a simple matter to the man who is playing the stock market. He is the man that ought to pay.

Mr. FAIRCHILD. What per cent of men with incomes carry a bank account of the general public.

Mr. DURANT. Perhaps this will answer it as nearly as I can answer it. I am giving you data entirely from the records of the Treasury Department report. This gives the number of depositors in the national banks. I am not speaking of savings banks. On June 30, 1910, the number of depositors was 8,048,000. On May 1, 1916, it had increased to 14,288,000 and on March 5, 1917, to 15,738,000. Now, a comparison with the number of people in the United States, therefore, will show the percentage of depositors in the bank, which to my mind shows a healthy increase in business, and a healthy tendency on the part of the poorer people. I do not recall the savings banks deposits at the moment.

Mr. SLOAN. Do you think your plan of taxation would encourage that very healthful increase?

Mr. DURANT. I most certainly do, sir, because, in the first place, the rate of tax is only one-tenth of 1 per cent. We will assume that the \$1,000 man puts all his money in the bank.

Mr. FAIRCHILD. But if he doesn't he has no tax to pay. This discriminates against a man who puts his money in the bank, in favor of the man that doesn't.

Mr. DURANT. The amount of the tax is so small and the inconvenience of taking the money to a safe deposit vault is so great that it will not affect bank deposits.

Mr. HAWLEY. The original safe deposit vault is known as the old stocking.

Mr. DURANT. Those were the days when you could safely put it in the clock and find it later. I have had checks out upon a bank that failed. Inside of 48 hours the checks were back home. As long as the bank was safe they were not cashed. Those conditions do not exist in the city. The conditions in the city are such that the people put their money in the banks. I have the report of the Western Savings Bank of Philadelphia, Fifth and Walnut, isn't it?

Mr. MOORE. That is the Philadelphia.

Mr. DURANT. I have the report of that.

Mr. MOORE. The Western is on Tenth Street.

Mr. DURANT. It is the Philadelphia. They give a very fine analysis, and it corresponds generally, I find, with the classes of depositors from other banks, and they have increased from year to year, nationalities and employments, and everything of that kind. It is really a very interesting document from an economic point of view to study the nationalities that are putting their money in that institution, and the conditions under which it has been increasing. Those people are not going to change because they have to pay a tax.

Mr. FAIRCHILD. Would this tax apply to savings-banks depositors?

Mr. DURANT. My plan is that it should apply to the depositors. In other words, I would make every bank subject to the United States Government, whereby they kept track of that proposition, private banks as well as savings banks.

Mr. HAWLEY. Would you apply it to the Postal Savings System?

Mr. DURANT. To answer that question I would like to say that all I am trying to do, gentlemen, is to put out what I believe to be a fundamentally good foundation to our superstructure. As to the details, you would want to be very careful on that point. I would not say yes or no.

Mr. HAWLEY. If you do not, you will allow to escape taxation much money held by foreigners.

Mr. DURANT. I am willing to say that I am a blank on the policy. It should be studied out as to whether it is a good policy from an economic point of view.

The CHAIRMAN. Your idea is to have no more income tax or excess-profits tax, but to substitute your proposition for the income and excess-profits tax?

Mr. DURANT. That is not my idea. My idea, if you want to come to an ultimate decision, is that after this war ends, which will be when we win it, as pray God we may, these questions of taxation will take care of themselves. Those that are fundamentally right will stay, and those that are not will go. We are facing a condition that we will have to meet. That answers your question to a certain extent, and I am not proposing any radical method of doing away with taxation, and came here simply to suggest certain well-defined forms whereby you could increase your taxes. I have read every report of these sessions here, and I have yet to find anybody who has advanced any theory of collecting revenue that there was not underlying a current that it would be to his benefit to do it. If it was to be on imports, it was a charming thought, but behind it was the thought that it was a protection to some business industry. I have been here only yesterday and to-day, but I have read them all, and I have not heard anyone who has come here and told you how you can collect it, putting aside all questions of policy toward any class of people.

The CHAIRMAN. In addition to the income tax and excess-profits tax you would enact this proposition of yours?

Mr. DURANT. Absolutely, sir. The point is not to decrease your revenue, but to raise your \$8,000,000,000. It is ridiculous to put a tax of one-fiftieth of 1 per cent on an absolute luxury. I am not opposing stock speculation, but I am opposing such a tax for the simple reason that I am opposed to a 2-cent stamp tax. There is no logic or reason in such a proposition.

Mr. DICKINSON. Under this recent law, there is no tax on checks.

Mr. DURANT. No; I know that.

Mr. DICKINSON. And if there is to be in the law that will be written it is very probable that we would increase the size of the tax according to the amount of the check.

Mr. DURANT. That is what I would suggest, take one-tenth of 1 per cent, or one-fifth of 1 per cent of what the amount is. I would take one-tenth in figuring out transactions, but as between a buyer and a lender, I come to one of you gentlemen, and I want to borrow \$5,000 or \$10,000. You are going to charge me 5 per cent as interest. I

hand you this check which is taxed one-tenth of 1 per cent. Now, you are not going to loan me that unless I pay it. I need the money and so I agree to pay it. Now, I say, "Will you kindly draw me five checks which I can pass out to where I owe the money?" Now, to that extent I save that one-tenth, but the amount of that is not big enough to take into calculation, except as it is a benefit to that class that we all feel kindly disposed to.

As to the bachelor that Mr. Green mentioned, if he pays a consumption tax on \$50,000, if that is all the money that he is spending on that proposition, and then he has the other in the bank, he will have to pay his tax on the money in the bank also.

Mr. GREEN. But if he spends his \$50,000, he would spend it on luxuries, whereas a poor man has to spend his for the absolute necessities of life, for which he is only getting enough. Indeed a good many Government employees are complaining that they are not getting enough now to supply themselves with the necessities of life.

Mr. DURANT. I can answer that question. They are going to get enough to take care of themselves, and there are certain people in the United States, like myself, who are going to see that they get enough. There is a rational end to the proposition as well as an irrational one. If one puts it on the ground that he can not afford to pay the tax, then give him enough. Don't try to pauperize him on that ground, or on the ground that he can not pay his taxes because he is too poor.

Mr. GREEN. What would be the advantage to the Government if it was required to pay a man \$100 more and then tax him \$100?

Mr. DURANT. You are speaking of Government employees. I am speaking of outsiders. I have been dealing with outsiders altogether. They seem to have taken pretty good care of the Government end of it by making exemptions. There is no equity in that.

Mr. GREEN. To what exemptions do you refer?

Mr. DURANT. I refer to any exemptions.

Mr. GREEN. What ones?

Mr. DURANT. Exemptions of office salaries or anything else of Supreme Court judges.

Mr. GREEN. What salaries are exempt?

Mr. DURANT. Those below \$6,000.

Mr. GREEN. Those below pay income taxes.

Mr. DURANT. Yes.

Mr. GREEN. Excess profits taxes are those above \$6,000.

Mr. DURANT. I may be wrong.

Mr. MOORE. You may be referring to something like salaries of the President and judges of the Supreme Court.

Mr. STERLING. There is exemption of \$1,000 for a single man and \$2,000 for a married man. Isn't that what you are referring to?

Mr. DURANT. No.

Mr. CRISP. The only Federal employees who pay the income tax are Congressmen and Senators.

Mr. MOORE. The only exceptions, as Judge Crisp remarked, are the Members of Congress, who have taxed themselves excess profits.

Mr. DURANT. The point that I made is to point out the possibilities of getting every dollar increase of income.

Mr. SLOAN. Let me ask you, Mr. Durant, has this plan of yours ever been put into operation substantially by any country that has it in operation now, or is it an entirely new field?

Mr. DURANT. I must plead guilty of not having a sufficient knowledge of economics to answer the question with positiveness. My impression is that there is something like this in operation in Germany.

Mr. SLOAN. In Germany?

Mr. DURANT. One of the few things in Germany worth while.

Mr. SLOAN. That would not be a strong recommendation at this time

Mr. DURANT. No; but there were many things in that country that if this country had followed it would not have been a bad thing.

Mr. SLOAN. Yes; we are trying to make arrangements to follow their army.

Mr. DURANT. I represent the eighth generation, so that I am not pro-German.

Mr. SLOAN. I did not mean that it was necessary to have a precedent. I wanted to know if it had been done.

Mr. DURANT. I believe that is the case with regard to Germany. I have only heard that that is the case.

Mr. HAWLEY. In taxing bank deposits would you leave the tax on the total deposit made by any person during the year or on the balance to his credit at a given time in the year or on the average daily, weekly, or monthly balance?

Mr. DURANT. I have only had one banker put to me the advisability, if the thing was enacted, of taxing deposits as they appear in the bank, rather than as the money is drawn out. My suggestion was to tax the money as it is taken out and not as it is put in. There might be good reasons for one as against the other, but the point I make is the simplicity in its collection, as the tax would be paid to the United States Government every month, so that there would be a constant flow of money coming into the Government monthly rather than sporadically.

Mr. HAWLEY. Would that be made by the bank?

Mr. DURANT. Supposing I drew from the bank in one month \$500, and the tax is one-tenth of 1 per cent, which would be 50 cents, which would be the tax. Supposing you draw from the bank \$5,000, the tax would be \$5. At the end of the month, the bank wherever you deposited, would render the balance on hand, and it would show in my case a tax of 50 cents and in your case \$5 less than the balance on the check book.

And on the question of this exchange of accounts. If a concern was to take its money from a bank for the purpose of placing it in another bank, it would have to so arrange that the bank would take care of this transfer if they were not going to collect the tax so that the second bank would collect the tax. In other words, the check would be drawn for transferring accounts. It would be a tax on every deposit excepting the two forms that I have named.

Mr. MOORE. Then you would have the heaviest part of the tax on that part of the transfer which is merely a formality rather than on the real contract and agreement. That means that the mere formality of paying would be the basis of taxation?

Mr. DURANT. Yes; because that is the greatest item in the thing. So that you have a contract for \$100,000, the tax would be collected from the \$100,000; I do not know just what you mean. I am not talking for taking off any of the tax on documents. I am offering as a suggestion on the document tax that it is a perfectly absurd tax

of one-fiftieth of 1 per cent on the transfer of \$100,000, because if you figure that out, figure the channels that are paying it, the ones who are interested, as Mr. Green was saying, the millionaire bachelor, he is the one who is paying this little picayune tax of one-fiftieth of 1 per cent.

Mr. SLOAN. What would you do in the case of overdrafts?

Mr. DURANT. In the case of the overdrafts the bank has to be responsible, if they allow it.

The CHAIRMAN. Does any other gentleman desire to ask any other questions?

Mr. STERLING. I want to get at the results of your idea. How much did you say one-tenth of 1 per cent on bank deposits would produce?

Mr. DURANT. It would produce \$390,000,000, assuming that the turnover is, as I have stated, estimated at 5 per cent daily.

Mr. STERLING. You would produce that each year?

Mr. DURANT. \$303,000,000 or \$304,000,000 in a year.

Mr. STERLING. Now, you say there are \$26,000,000,000 on deposit?

Mr. DURANT. Yes, sir; in the year 1917.

Mr. STERLING. Well, could you not tax deposits in on a certain day?

Mr. DURANT. No, sir. I am not taxing deposits. It is estimated in the banks.

Mr. STERLING. You would tax deposits as they are put in?

Mr. DURANT. No; one man suggested taxing them as they were put in. I would suggest taxing the bank deposits as they are withdrawn.

Mr. STERLING. Supposing a man made a deposit in the bank and the banker would set apart from that deposit one-tenth of 1 per cent, how much would it amount to in a year? That is, do you know how much one-tenth of all the deposits in the banks are in a year? You gave what was in in one day.

Mr. DURANT. I do not know that I could answer to that, that I would be willing to try to answer that without further investigation, because I have dealt with it from the point of view of taxing that which is tangible, and that which I have figured out.

Mr. STERLING. You are not taking State banks into consideration at all?

Mr. DURANT. Yes; the Treasury gives their figures. The Treasury gives, for instance, a total of 27,923, of which only 6,004 are national banks.

Mr. STERLING. I think your idea of taxing national-bank deposits would not be a bad idea except for one thing. You are very much mistaken that it would not keep a lot of deposits out of banks. It would keep a great deal of money out of banks.

Mr. DURANT. There is only one gentleman who has taken that position.

Mr. STERLING. You say that \$320,000,000,000 pass through the clearing house in a year, don't you?

Mr. DURANT. \$303,000,000,000 through 184 clearing houses last year. As reported by the Treasury Department, 184 clearing houses reported \$303,998,000,000.

Mr. STERLING. Now, have you any idea of the per cent of the business transactions of the country which go through the clearing house?

Mr. DURANT. No, I have not; except in this way. It was rather interesting to me, these figures of the clearing house. I got these figures subsequent to making up mine, and it is rather interesting that my figures on the proposition were \$390,000,000,000.

Mr. STERLING. Everything, that is, cash transactions through the banks, and everything else?

Mr. DURANT. The transactions through the clearing house are not as much as through the banks.

Mr. STERLING. I wondered what per cent it was? As to the \$303,000,000,000, we know they are transactions which have taken place in the country during the year.

Mr. DURANT. Absolutely unquestioned.

Mr. STERLING. That would produce \$3,000,000,000 at 1 per cent?

Mr. DURANT. Yes, at 1 per cent; but when you get into 1 per cent, you are getting into what you claim yourself would be a disposition on the part of the larger institutions and others to save that 1 per cent, but when you get down to the approximate sum of one-tenth of 1 per cent there is not enough to make any difference.

Mr. STERLING. Wasn't it your idea to tax the transactions that went through the clearing house? It wouldn't make any difference whether it was in the bank or not. If you paid cash you would have to pay 1 per cent.

Mr. DURANT. You are running two features into one. One of these that I put forth is the consumption tax of 1 per cent on the gross business, wherever it lights, or wherever it falls. That has nothing to do with the bank tax at all.

Mr. STERLING. I understand that. I am speaking about this one tax on business transactions. I am not running them together. I am just trying to get some idea of the amount you would produce. There is no doubt that it would produce revenue.

Mr. DURANT. The consumption tax would produce \$2,000,000,000.

Mr. STERLING. You know that it would produce \$3,000,000,000 just on the transactions that go through the clearing house. You tax all of them and it certainly would be more than \$3,000,000,000 if the clearing house transactions made \$3,000,000,000, which, with what the others paid, would certainly be four or five billions, that is, with 1 per cent on transaction.

Mr. DURANT. But when you are speaking of clearing house transactions, a certain proportion would not be taxed. Suppose a corporation pays out \$100,000 and pays it from one bank to another. That goes through the clearing house.

Mr. STERLING. There would be some of that.

Mr. DURANT. You see the inaccuracy of trying to arrive at the figures by using the clearing-house proposition as to what is the total volume of business. It only helps you to a limited extent if you take it as a basis of what you are going to get on the one-tenth tax on the banking proposition.

I would be very glad, if you care to have me do it, to put what memoranda I have in a little better shape and send it in. The main point is that I desired to appear before the committee on the matter of increasing revenue.

The CHAIRMAN. You are one of the very few that have suggested how to raise the tax.

Mr. DIXON. If I had \$1,000 in my local bank, I would be taxed \$1.

Mr. DURANT. You would be if you drew it out.

Mr. DIXON. Then, I pay my local merchant \$1,000, and he deposits it and pays \$1,000 to the wholesaler, and when he draws it out he pays \$1, and when the wholesaler draws it and pays it to the manufacturer, he pays \$1 tax, and when he pays it to his employees he pays another \$1. Have you estimated the total amount that would be collected from that tax?

Mr. DURANT. The only thing that we have got to go by are the figures which I gave as the 5 per cent turnover each day, and in my figures we arrived at \$390,000,000,000 annually, against the clearing house figures of \$303,000,000,000. This difference can be made up by taking into consideration the fact that a large volume of business does not go through the clearing house at all. No living man could tell you what that business is.

Mr. DIXON. When I pay my local merchant \$1,000 with a check, supposing, instead of depositing it, he sends it to the wholesaler, and then he indorses it and sends it to the manufacturer, there is no tax on the \$1,000 except when I draw it.

Mr. DURANT. That would be the result, but the question would be whether it would pay him to take the chance of holding out the check, and, besides, he would want to deposit the check to complete the record of his transaction.

Mr. GARNER. What proportion of the taxes for running the Government would you collect from consumption tax and what from income?

Mr. DURANT. I would prefer not to express an opinion about that, except as I did a few moments ago, if the war lasts a year longer—if the war lasts two or three years longer—I think the gentlemen on this committee, or men of the same caliber, might be better able to judge what taxes to take off than we are to-day. I think the question of the simplicity of the collection of the tax is the thing to be considered to-day.

Mr. GARNER. In the beginning you stated, and your testimony has shown, that you have given the matter of taxation considerable study, and I was just wondering if you would be willing to express your opinion as to how in ordinary times, not in war times, but in ordinary transactions of Government business, this revenue should be collected—how much from income and how much from consumption tax?

Mr. DURANT. I believe that everybody should pay a consumption tax, and thus contribute their share to the maintenance of the Government. I also believe that any incomes that may be determined to be too large or exorbitant should from that point on pay as they are now doing—a pro rata increase as the income increases.

Mr. GARNER. Do you believe in the theory of dissipating large fortunes by taxation?

Mr. DURANT. Do you think the word "dissipating" is just what you mean? "Dissipating" as is used in such an offensive way.

Mr. GARNER. Do you believe in decreasing the large fortunes of this country by methods of taxation?

Mr. DURANT. I do to a great extent; yes.

Mr. GARNER. That is done in two ways, if I understand it. The most direct way is by the inheritance tax.

Mr. DURANT. That is the most direct way.

Mr. GARNER. And the other is to take the incomes and cut down the earnings by having a graduated income tax, so that a man won't be able to accumulate such tremendous fortunes.

Mr. DURANT. Yes.

Mr. GARNER. And you believe in that theory of taxation?

Mr. DURANT. Yes.

Mr. CRISP. A moment ago I stated that Congressmen—Senators and Representatives—were the only ones of the Federal officials that paid the tax. I had reference to the excess-profits tax. That statement is literally true. State, county, and the municipal officials do not pay any tax, either income or excess-profits tax, under the existing law. I have introduced a bill, and it is now before this committee, requiring all State, county, and municipal officials, if they have sufficient income, to pay the tax, both income and excess-profits tax, and I hope when this bill comes out it will be included in it.

Mr. DURANT. My theory is that everybody should pay; that there should be no exemptions of any kind whatever.

Mr. SLOAN. Judge Crisp, the other countries of Europe do not include official salaries in income or excess-profits taxes.

Mr. CRISP. I could not answer that question.

Mr. SLOAN. Some of them do not.

Mr. CRISP. Whether they do or not, I see no reason why a man in this country that has an income from any source then holding office should pay a tax and a man who is holding office does not pay a tax. I think he ought to pay it.

Mr. DURANT. I think so, too; absolutely.

The CHAIRMAN. I want to say that the House agrees with that, too. These exceptions of salaries were not put in by the House. It was finally agreed in conference.

#### STATEMENT OF MR. E. L. HOWE, SECRETARY OF THE NATIONAL RETAIL DRY GOODS ASSOCIATION, NEW YORK CITY.

Mr. HOWE. I am secretary of the National Retail Dry Goods Association of New York City, representing about 600 retailers of dry goods and department stores. I am mentioned on the program as an attorney. I am unfortunately not an attorney, just a dry goods man, a merchant, of about 25 years' experience. We are appearing not to ask for any relief from taxation. We are appearing to give some of our views in connection with the framing of a tax bill, and I think that the basis that I have to suggest will convince the members of the committee that we appreciate the fact that they have to raise increased revenue, and that this suggestion makes that possible.

These stores I speak for are willing and glad to contribute all of their income that is necessary, and all of it if necessary without any question.

There are a few inequalities in the present tax bill that I would like to call your attention to, and I think that my good faith in making these suggestions and presenting the remedy is the answer to the question of our good faith.

Our first recommendation is that the present bills be repealed and one bill written which will make the entire question comprehensive and simple to understand to the average business man. That is one of the difficulties we have.

The CHAIRMAN. That will be done.

Mr. HOWE. My suggestion, gentlemen, is this, that we find a new basis in determining the excess war profits that will thoroughly differentiate between normal prewar profits and profits that have resulted from the production of war supplies, or any business that has been directly accelerated by the war. The present bill is, in our opinion, unnecessarily complicated, and does not successfully make this differentiation.

The theory behind the present plan of taxation, as I understand it, is, in so far as possible, not to disturb the normal prewar profits except as to normal tax, but is to take such proportion of that income as is derived exclusively from war production as is found necessary. Now, for the purpose of providing an example, it would seem to us a sound basis to tax what I would call war profits, not necessarily excess war profits, but war profits. I desire to present the following plan: Eliminate prewar profits from special taxation at the present time, except as to normal tax. Second, to determine prewar profits, eliminate capital as a basis of business. Take, for example, a period of five years or more if it is deemed necessary to get a fair average, beginning, say, with 1909 to 1913, and estimate the average normal net income for a corporation, partnership, or individual upon the following basis: Obtain the average net income for the prewar income by taking, not the percentage, but the volume of net income for a number of years and divide it by the number of years, and obtain the average in that way in volume, not percentage, subject only to the normal tax levy going back sufficiently far to get a fair average, and then draw a line at the average prewar income, and take all the rest above that as a war profit.

Provision should be made in this connection, in our opinion, for proper exemption allowance for capital increase in the taxable year over the prewar average. That is, if a man employed \$500,000 capital over the prewar average, provide an exemption on that, or 5 or 6 per cent. This exemption should not be in excess of the average return of the average capital invested in the prewar period, and in no event to exceed 10 per cent.

These two channels will give you great elasticity. You may increase your present rates on war profits, you may take 60 or 80 per cent, or you may decide to take it all, all of the war profits, and then subject your prewar or normal profits only to the normal tax on income. You can increase your normal tax, but your normal tax base is not changed. This gives business a stable base on which they can determine.

That base is a little different from the English law. I am not entirely familiar with it, but the English law tries to get rid of the profit in the prewar period. I am very sure that the stores of the country—I can not speak for other business—will accept this base. If you find you have to get a larger amount of revenue, we would still have the definite base to operate upon.

Now, I have figured out some examples of how this will work out. These figures are only estimates. They are not accurate. I will

say that we did not figure this out until we had determined what seemed a fair base. We did not know how it would work out. We figured on an 80 per cent basis of the war profits. That could be made 90 per cent or 100 per cent—take all of it. It will take care of the increases, if it is necessary to increase.

Here is a concern that sells \$240,000 a year. It has an invested capital—I am assuming these figures—of \$60,000, and a net income of \$18,000. Now, on the present basis of figuring, including the normal tax, they would pay \$4,153.80, and under the plan I suggest they would pay slightly less, including normal tax, \$3,920. If you wish to make that more, it is a question of bringing it up a little higher. That is only an example.

Mr. STERLING. The first one was where there was no additional capital put in?

Mr. HOWE. It provided for additional capital. It provided for \$40,000 capital, in 1913, and increasing it in 1918 to \$60,000, because their business increased from \$160,000, on which they had an exemption of \$2,000 on that increased capital.

The next is a larger business of \$2,400,000. On the basis of the present law, it would pay a tax, including the normal tax, of \$46,614, and under the method that I am suggesting, \$39,200.

The third is a business of \$9,600,000, on which they figure on the present basis a tax of \$188,000,048, and under the new method \$166,800.

That would appear that I was arguing for a smaller tax. I am not. I am only arguing for a base on which Congress can regulate the percentage.

If I may say in that connection, that I think at least it is the general understanding that it is the purpose to obtain from the war profits as large a proportion as possible. I have taken these figures—and I am sure of their accuracy, though they may be approximate—on the Steel Corporation. The Steel Corporation has a present estimated capital of, I think, \$880,000,000, and the present estimated sales, \$5,000,000,000, and their present estimated net income is \$500,000,000, the prewar net income, \$100,000,000, and the present \$500,000,000. The estimate of their increased capital investment is \$380,000,000, upon which they get a 10-per cent exemption. Taking 80 per cent of their income from war profits, they would pay, with a normal tax of 6 per cent, \$295,000,000. At present they are paying \$233,000,000. It works on larger businesses a little differently, and particularly those that have grown particularly during the war period.

Now, the stores are not manufacturing war goods. They are not in the war business. If they have grown since the prewar period, it has been largely because of a normal growth, and though it has also had a certain amount, I will agree, of indirect growth by reason of the war, it has not been of any great or appreciable amount, so that they can hardly be classified as making excess war profits.

Mr. GARNER. Then why are you calling them war profits?

Mr. HOWE. I am calling them that because made during the war, where everybody has to contribute.

Mr. GARNER. You would have two taxes, what is known as the war excess-profits tax and the excess-profits tax?

Mr. HOWE. No; a war-profits tax.

Mr. GARNER. And the basis would be upon prewar earnings?

Mr. HOWE. Yes.

Mr. GARNER. Suppose you should take this kind of a tax; suppose you allowed him 8 per cent on his investment, and then take 80 per cent.

Mr. HOWE. And 8 per cent exemption on what?

Mr. GARNER. Eight per cent on his business.

Mr. HOWE. On the volume?

Mr. GARNER. On his capital.

Mr. HOWE. The basis is the only difference.

Mr. GARNER. You want it on the basis of prewar earnings; but suppose Congress desired not to base it upon prewar earnings, but upon capital invested, and allow him 8 per cent on his investment, and then take 80 per cent of his profits.

Mr. HOWE. Well, that would take very nearly all of his profits.

Mr. GARNER. Wouldn't it do the same thing if you levied the rate high enough, taking as the basis his prewar profits? My first thought in this connection is to take war profits, and if possible, take all of that before you commence to take very substantially from the normal profits.

Now, many industries have undergone a great increase. Many industries have doubled and tripled and quadrupled. The normal store business has not done so; but they have increased 20 to 30 or 40 per cent, practically a normal growth, so that it seems to me unfair to take from them in the same proportion as from businesses that have been greatly benefited by war production.

Now, in separating these it seems to me that the stores should give in proportion, and they are perfectly willing to, but they do feel that those that have been benefited so greatly should also give in proportion to their benefits.

Mr. GARNER. Suppose, according to the theory of some economists, we should say this, that while this war is going on we propose to maintain all businesses and suppose we say that we will allow a business to make 8 per cent, and anything over that we will take 80 per cent of, regardless of how much they made before the war, looking solely to what their business has been during the war; we will let them have that 8 per cent profit, and anything over that we will take 80 per cent of it.

Mr. HOWE. My main criticism would be as to your rate of allowance, then. The Government, if I am correctly informed, has been granting, on the cost-plus basis, 10 per cent of volume. There is quite some difference between 8 per cent on the investment and 10 per cent of volume.

Mr. GARNER. But Congress has not been doing that; that has been the executive branch of the Government. And Congress has gone so far as to put into the appropriation bills the provision that it can not be done in the future.

Mr. HOWE. But 8 per cent is not sufficient. I would not want to say what it should be, I could not say what it should be; but as a matter of fact the investment is hazardous. There are depreciations from mark-downs from the prices they expected to get when they bought merchandise, and from one cause and another there will be very great losses. They run from 5 to 6, 7, and 8 per cent of the total volume of business from depreciations; so that it is not a

staple business that can be estimated on in advance; with any accuracy, in other words. There is a certain element of hazard all the time.

The CHAIRMAN. If I understood you right, if a man, B, say, was making during these five prewar years, say \$50,000, and after the war he was making \$75,000, there is a difference of \$25,000, and you would tax the \$25,000?

Mr. HOWE. The war profit, and at whatever rate you determine.

The CHAIRMAN. You would not tax the \$50,000?

Mr. HOWE. Yes; the normal tax.

The CHAIRMAN. And you would have no excess-profits tax at all?

Mr. HOWE. No excess-profits tax.

The CHAIRMAN. But if B, in the same business, with the same capital made before the war \$25,000, just half as much as A, he was just half as prosperous as A, and he now makes the same as A makes, namely, \$75,000, you would tax him on \$50,000?

Mr. HOWE. On \$50,000.

The CHAIRMAN. You would let the more prosperous man, the one more able to pay the tax, pay less tax than the other?

Mr. HOWE. I would not quite say that.

The CHAIRMAN. Would you not say, if A was making \$50,000 on the same capital before the war, and B on the same capital was making \$25,000 before the war, that A was a great deal more successful and able to pay the tax than B?

Mr. HOWE. That is hardly the theory we work upon.

The CHAIRMAN. I know it is not the theory you work upon, but it is a practical illustration of your theory.

Mr. HOWE. You mean two men engaged in the same line of business?

The CHAIRMAN. The same line of business.

Mr. HOWE. It is possible and probable that the war may have had something to do with that man's increased prosperity. We have to assume so. In other words, I can not quite see why we should put a premium on inefficiency and allow that man to escape because before the war he was not able to handle his business so efficiently as his neighbor. I would say that by giving that consideration we were putting a premium on inefficiency.

The CHAIRMAN. All right; let us take this case: A had been in business for years and years in the prewar period, and before that—an old established concern. B had just started in business, maybe in 1913, a year before the prewar period. Do you think that B could be just as efficient and able in handling that business and that B would make just as much profit as an old established concern?

Mr. HOWE. No, Mr. Chairman; I had thought of that situation. It seems to me that that is a thing that is very difficult to handle in a bill, and I was going to suggest—it has probably been under consideration—that these apparent inequalities of that sort would be individual cases that would have to be decided by a committee who would weigh them.

The CHAIRMAN. Let me tell you of some individual cases your theory would operate on. Ford, who made, I have forgotten how much, but several millions, before this prewar period, and practically the same amount after the war began, would pay nothing because he was making 80 or 90 per cent before the war and a little less than that since the war.

The Utah Copper Co., which made a tremendous profit before the war and made tremendous profits after the war, would, on the new capital put in, making not quite as much as it did before, pay nothing. In other words, your theory would cause an escape from taxation to the amount of \$550,000,000 in about 150 corporations in the United States.

Mr. HOWE. No; I would not say that.

The CHAIRMAN. I would say it.

Mr. GARNER. That is what it would do.

Mr. HOWE. Yes; I catch the point, but that is not making what is called an excess war profit, certainly. If a man made a large profit before the war, why not take that in the income tax or a normal tax? Would it not be much simpler to take those cases on a graduated normal tax?

The CHAIRMAN. The normal is just one feature of a tax. You mean a graduated income tax.

Mr. HOWE. Well, a graduated income tax. Would not that be simpler than trying to reach those by a necessarily complicated war profits and excess profits taxes?

The CHAIRMAN. I see, really, no application of an excess profits tax or an excess war profits tax, except that sometimes, in a few cases, it is difficult to tell how much capital was invested. Those cases are very rare.

Mr. HOWE. Yes; they are, of course.

The CHAIRMAN. Of course there must be some discretion also with the Secretary of the Treasury.

Mr. HOWE. Yes.

The CHAIRMAN. It would work out the inequalities which must exist, and because of that a section, 210, was inserted in the present law for that purpose.

Mr. HOWE. Yes; but, Mr. Chairman, now you have to raise, as I understand it, practically somewhere near \$8,000,000,000 in taxation.

The CHAIRMAN. Yes.

Mr. HOWE. That, we will say, is double the amount raised during the present year.

The CHAIRMAN. Yes.

Mr. HOWE. That means that on the present basis of figuring you are not going, in some cases, to take all of the war profits of war producing corporations, but you are going to eat in very heavily into the peace income of any war producing corporations, companies, and partnerships. You see that is inevitable. Now, I say you should take, if necessary, all of your extra war profits, but as to your prewar war profits, hold those in reserve. If the war goes on four or five years longer, we may have to raise four or five billion dollars more; whereas, when that is once eaten up you can not raise much more taxation from business.

The CHAIRMAN. You made a suggestion a while ago that we should distinguish between those companies or corporations or individuals making money direct out of the war and those that make it indirect, like merchants and stores, so that there would be a just distinction. Those that are making it direct out of the war must be only those who have contracts with the Government or subcontracts with the contractors with the Government.

Mr. HOWE. To a certain extent. Of course those that are surrounding these war industries—the cities—are getting a return from the money that comes into that city.

The CHAIRMAN. So are the merchants of Chicago and so on, and so are the merchants here, and all the retail merchants throughout the country.

Mr. HOWE. No, that is not true. There are cities that are getting practically no reflection from that at all.

Mr. GARNER. That is indirect.

Mr. HOWE. That is indirect.

The CHAIRMAN. The only distinction you can make between direct and indirect war profits is between those that have contracts with the Government and those who have subcontracts and those who have not. I think there is something in that suggestion of yours. I have thought about it often, and it may be that if we can work it out practically we could make that distinction.

Mr. HOWE. I have very hurriedly worked that out. We have not the figures to apply it to other corporations. You gentlemen have the figures for those corporations, so that this is more or less a matter of mathematics.

The CHAIRMAN. Now, I want to ask you this general question: Do you think that the retail merchants throughout the United States, whom you represent, big and little—

Mr. HOWE. I do. I represent both sides.

The CHAIRMAN. I say, both big and little—

Mr. HOWE. Yes.

The CHAIRMAN (continuing). Would pay less taxes under the theory which you wish us to adopt than they would pay under the present theory which is already enacted into law?

Mr. HOWE. I think that depends, Mr. Chairman, entirely upon the rate which you place on. It seems to me that that is a matter entirely in the hands of Congress and a matter of mathematics.

The CHAIRMAN. You mean the rate?

Mr. HOWE. You mean—

The CHAIRMAN. 8, 10, 15, 20, 40, 60, or 80 per cent?

Mr. HOWE. I guess I do not get your question. You mean under the same rate I suggest?

The CHAIRMAN. As under the present method.

Mr. HOWE. I guess I do not follow you.

Mr. GARNER. He differentiates between what you would do, put a rate on all the profits, and what he would do. He would levy only on the war profits.

Mr. HOWE. On the war profits?

Mr. GARNER. Under the present system we do not differentiate between the war profits and general profits, whereas your scheme would only levy a tax on excess and war profits.

The CHAIRMAN. What is before the war, and—

Mr. HOWE. I say, that is a matter of rate; whether you take 50 or 100 per cent of those profits. I would say that would determine, and I would say if you took 80 per cent of it—

The CHAIRMAN. Take the rate, under the present law?

Mr. HOWE. You mean on my method, there? I have got to take a very large figure, so that I have taken 80 per cent for that purpose.

The CHAIRMAN. Suppose you are goint to apply any rate, now, 80 per cent on all the profits made before the war—during the prewar period—and the profits made after the war or during the war, or 80 per cent upon the excess profits—that is, upon the profits made in excess of 8 per cent; now, which do you think the retail merchants generally would pay more under?

Mr. HOWE. I doubt if I could answer that offhand. It is quite complicated. My opinion would be, I am afraid, of little value on that.

The CHAIRMAN. Let me get at it in this way.

Mr. HOWE. Yes.

The CHAIRMAN. About how much do you think, as a rule, the retail merchants whom you represent made before the war—during the prewar period of five years?

Mr. HOWE. You mean, now, the net income?

The CHAIRMAN. Yes.

Mr. HOWE. I would say it would average between 6 and 7½ per cent upon the net sales—the net volume.

The CHAIRMAN. What do you think it would average now?

Mr. HOWE. Not very much less. It varies. In some cases it would be 8 or 8½ per cent; but I would hardly call it 8 per cent. I would say it would vary not very much, or from 6 to 6½ per cent.

The CHAIRMAN. I would say they would pay considerably less under your theory than under the—

Mr. HOWE. Yes; that can be regulated by going back a little more in getting your prewar average. If five years does not get that, you can go back 10 years. That will lower your average prewar profit. The thought I am trying to suggest is a basis so that it has sufficient elasticity to accomplish what you want to arrive at.

Mr. STERLING. Your idea is to get away from the difficulty of defining the word "capital," is it not?

Mr. HOWE. That is one of the ideas. I had several of the things it eliminates that I just wanted to call your attention to. It would eliminate the inequalities between corporations and partnerships relative to a taxation of income, if I understand; the inequality between large and small businesses in the same line, occasioned by large and other businesses, by the inclusion of real estate in capital. We find many stores lease their property, and others own their real estate and get the exemption of from 7 to 9 per cent upon real estate; and it would eliminate that. It would be a very simple elimination. I do not think that there is any inequality in that. Also the one where there is a large amount of borrowed capital. Pardon me; I did not catch your question.

Mr. STERLING. I say I do not see any inequality in that. Where a business man owns a small business house, he is entitled to a lease, and the other fellow pays the rent to the landlord, so that there is no inequality of burden there.

Mr. HOWE. He has the exemption. For example, assume that I am doing a business of from five to six million of dollars, and its working capital apart from its real estate will be \$1,250,000. They have a real estate investment of a million to a million and a quarter. They get a full exemption upon the two to two and three-quarter millions, of which one-half is their real estate.

Another house, next door, leases its property and has to pay its rent. It has a million and a quarter investment and is doing the same amount of business, and it may make the same amount of money, but it loses the exemption.

Mr. STERLING. It does not give the fellow who owns his property any advantage over the other fellow, because the other fellow has to pay rent, anyhow, and the other fellow gets the value of his capital in his exemption.

Here is a man with real estate. He pays that into his own business and it comes back as a credit to his account. He has that capital. He ought to get some benefit from it.

Mr. HOWE. It reduces the rate of profit upon capital invested. I am just going to ask, when I finish, that Mr. Wrizley, who is here, may say a word. That is a thing that he is particularly well posted upon, and I am going to ask you whether you would be willing to hear Mr. Wrizley for a few minutes.

The CHAIRMAN. How long will it take him? You had better finish now.

Mr. WRIZLEY. I do not want to take Mr. Howe's time, but just to illustrate his testimony.

The CHAIRMAN. Suppose you yield to Mr. Wrizley, then?

Mr. HOWE. Very well.

#### STATEMENT OF MR. MAURICE WRIZLEY, REPRESENTING JORDAN, MARSH & CO.

The CHAIRMAN. Whom do you represent and what business are you in?

Mr. WRIZLEY. A department store in Boston; Jordan, Marsh & Co.

The real estate phase of it is this, that if the capital invested in real estate is the same amount as the capital invested in the business—that is, 50 per cent in real estate and 50 per cent in merchandise—the percentage of earnings on the capital invested in the case of the one owning real estate is very much less than it is in the case of one owning only its merchandise. In other words, a corporation may earn, without owning real estate, at the rate of 25 per cent on its capital invested. If it owns its real estate, that percentage of earning may be cut down to anywhere between 12 and 15 per cent. So that when you get into the percentage on capital invested under the present law you bring a greater tax on the individual doing the same business under the same conditions, on the one who only owns his merchandise, as against the one who owns both.

The CHAIRMAN. Can you give a concrete example that you have in Boston, there?

Mr. WRIZLEY. I am very sorry, Mr. Chairman, but I had the figures and failed to bring them here. I did not expect that you would ask the question.

The CHAIRMAN. That is a matter of deduction only.

Mr. WRIZLEY. It works out in this way. I think I might properly cite this, for example. These figures may not be correct in percentages [consulting memorandum].

The capital invested in a business without owning real estate, say, is \$60,000. If the sales are \$240,000 and its net income is \$18,000 and its percentage on its capital invested is 30 per cent, it would pay

a tax of \$4,153.80 under the present law—that is, the total tax, normal and excess profits tax.

If the capital invested is doubled by reason of the real estate being of the same value, and all the other figures are equal, the earning percentage on the capital invested is reduced from 30 per cent to somewhere between 15 and 18 per cent, it may be; I can not give just the figures, but that is the idea of it. So that when you are going through and figuring the tax you are figuring the tax on the basis of a 30 per cent earning in capital in one case, and on the basis of a 15 to 18 per cent earning in the other case. The idea is this: That real estate earns 6 per cent, we will say—possibly can only earn 6 per cent—in the dry-goods business, and the dry-goods business itself may earn anywhere from 20 or 30 to 35 or 40 per cent, and by having the capital equal, you have to average or divide the 25 or the 25.5 or the 30.5, and it brings the ratio down or brings the percentage on capital invested down, so that you bring it down in entirely another bracket of your income return.

The CHAIRMAN. You mean that the fellow who rents has that disadvantage over the fellow that owns?

Mr. WRIZLEY. Yes.

The CHAIRMAN. Let us analyze that. You and myself start out in the same business, I on one side of the street and you on the other. We will start out with \$100,000 each. If I were in Boston I would say \$1,000,000 each, but down in my country I say \$100,000. I put \$30,000 in a building. You do not; you rent your building on the other side of the street for \$1,800. That would be about what you would get. About 6 per cent, you say it would earn?

Mr. WRIZLEY. Yes.

The CHAIRMAN. Now, I have \$30,000 tied up in a building and only \$70,000 to do business with—to go out and buy goods and discount my bills—while you have \$100,000 to do business with. You think I could do a better business by keeping my whole \$100,000 in merchandise, turning it over every two or three months, as you do, than by owning a building in which I have invested \$30,000 which I can not turn over more than once a year; and you say I can make more money by using that \$30,000 in buying merchandise, so that I can turn that over three or four times a year?

Mr. WRIZLEY. Yes.

The CHAIRMAN. Another thing, you have your deduction from your income of \$1,800. I have no deduction from my rent, at all. The only deduction I get is that if they do value my building at \$30,000 I have under this law, if I was making in any business before the war 7 per cent, a deduction of 7 per cent; or if I was making 9 per cent before the war, I have a 9 per cent deduction; or, for new business, I have an 8 per cent deduction; and that is the only practical way it works, is it not?

Mr. WRIZLEY. That may be so, Mr. Chairman.

The CHAIRMAN. I know it is so.

Mr. WRIZLEY. But if you invested in the real estate for investment purposes, real estate as a general thing does not pay but the same rate as another business.

The CHAIRMAN. But you leave out the difference between my deduction and the capital and your deduction and the \$1,800 rent.

Mr. MOORE. Let me ask a question which I think will probably help. Is it customary to tie up your \$30,000 in real estate? Would you not get that money back by mortgage on the real estate, or in some other form, and use it in your business? In other words, would Jordan, Marsh & Co., if their building was worth a million dollars, let the million dollars stand in the real estate, or would they borrow on the real estate that million dollars and utilize it in their business?

The CHAIRMAN. They would have to pay the interest on it, though.

Mr. WRIZLEY. They would have that privilege.

Mr. MOORE. Would not that equalize the situation with that of the man across the street?

Mr. WRIZLEY. I think it would.

The CHAIRMAN. Just one minute. Whom do you represent?

Mr. WRIZLEY. Jordan, Marsh & Co., Boston.

The CHAIRMAN. Oh, Jordan, Marsh & Co.? I did not catch the name of the firm before. I think I analyzed your proposition before. I think they rent their building?

Mr. WRIZLEY. We do.

The CHAIRMAN. And I think you have a competitor who owns a building there?

Mr. WRIZLEY. No; We have not any competitor right near us that owns a building. We say that there are——

The CHAIRMAN. I think we had that up before us.

Mr. WRIZLEY. I would not say we had any in the same city, but in other cities.

The CHAIRMAN. In other cities?

Mr. WRIZLEY. Yes.

Mr. MOORE. Jordan, Marsh & Co. are substantially the same as Marshall Field in Chicago or John Wanamaker in Philadelphia?

Mr. WRIZLEY. Relatively so.

Mr. MOORE. It is a big house.

Mr. WRIZLEY. Yes; it is a big house.

The CHAIRMAN. I just recall during the conference getting a copy of a letter——

Mr. WRIZLEY. I think I wrote it for you.

The CHAIRMAN. Yes; I recall it now. We did consider that pretty thoroughly, the very proposition you advance. But when you come to analyze it you will find that it is going to equalize itself.

Mr. WRIZLEY. Of course, that percentage does seem to us as being an inequality.

The CHAIRMAN. It equalizes itself, when you think of it.

Mr. WRIZLEY. I am not so sure.

The CHAIRMAN. I am sure.

Mr. WRIZLEY. Another thing I wanted to present on the figures of this plan was this: It has been said, and I have heard you say it here, asking about Henry Ford, what the earnings of Henry Ford's company are to-day and what they were during the prewar period; but if Henry Ford had increased his earnings in the taxable year over the average earnings in the prewar period, if he had increased them at all, our plan was that he would be taxed the normal tax on his prewar earnings and 80 per cent of the increased earnings over that period, and the allowance for capital which is proposed, that is for increased capital, during that period is fixed not at the earning value or relative value of earnings to business done, but is fixed at a

rate similar to an investment at 6 or 10 per cent instead of at the earning rate of 30 per cent.

The point I wanted to bring out clearly is this, that earnings in the dry goods business may not in percentage increase at all over the prewar period; it may be that our earnings may fall a little less than during the prewar period. We are up against it. We are up against it in the labor situation. The Government is competing with us.

The CHAIRMAN. Surely.

Mr. WRIZLEY. And in a great many other ways we are up against it. But this is the point: If we are making more money to-day than we did in the prewar period we want to pay the Government all that it needs to carry-on the war business; and the 80 per cent of the profits taken from us, if necessary, we are willing to give it.

Mr. Hull knows that a good many of the corporations and partnerships—firms—which are represented by the association are giving to-day, under the present law, 100 per cent of all their earnings over that period.

Now, we submit that if that is so it is not quite fair to allow the other man who has had three years to recoup, large surplus, on which to-day he is getting a tremendous exemption which relieves him of paying in the same proportion his excess or war-profits tax.

The Steel Corporation, according to the figures as I make them out—I think the figures were something over \$230,000,000 in total—after paying out their total tax to the Government still have left in their treasury somewhat over a hundred million dollars over the earnings of the prewar period.

The CHAIRMAN. They have left over about three times as much.

Mr. WRIZLEY. That is the point. Now, the present law is taking away from the majority of the retail stores to-day what you propose to take if necessary under a new bill, and that is to say, 80 per cent of all war profits. We do not come and ask that these war profits in our case shall be reduced. We come and say to you that we want to pay our just proportion of them as the other fellow, but we do not want the man who has had three years of war in which to earn tremendous surpluses and to pile up capital, to get the 9 per cent exemption on it, to have him get the advantage out of this proposition, while we, who are in the peace business and are getting indirectly a little war business, are paying a great deal more.

The CHAIRMAN. Well, to correct that, a graduated excess-profits tax would get that, unless you get in one of the high brackets.

Mr. WRIZLEY. Well, of course, you know how it is; Jordan, Marsh & Co. are capitalized conservatively. We have no good will in our capitalization—

The CHAIRMAN. Now, let us see about the so-called war profits of the mercantile business. Of course you might have made just as much if we had had no war, because prosperity comes and large profits come without any war. What percentage of profit did you make on your capital invested during the prewar years, say the three years before the war, 1911, 1912, and 1913? What percentage did you make on your investment, 5, 6, 7, 8, 9, or 10 per cent?

Mr. WRIZLEY. On the capital invested?

The CHAIRMAN. Yes.

Mr. WRIZLEY. I can not give you the exact figures, but put it somewhere between 25 and 30 per cent.

The CHAIRMAN. Somewhere between 25 and 30 per cent?

Mr. WRIZLEY. Yes, on our capital as allowed under the law.

The CHAIRMAN. That is for the prewar period?

Mr. WRIZLEY. For the prewar period, and about the same now.

The CHAIRMAN. About the same now?

Mr. WRIZLEY. There is no difference in that.

The CHAIRMAN. But in volume you have made considerably more during the war?

Mr. WRIZLEY. Well, more—

The CHAIRMAN. That is, you have made really more profit in dollars and cents?

Mr. WRIZLEY. Yes; but that does not increase the rate. The rate may be the same, but we may make more money.

The CHAIRMAN. You made 25 or 30 per cent before the war and you have made 25 or 30 per cent since the war. Have you had any more capital invested since the war?

Mr. WRIZLEY. Yes. We leave in our business all the capital necessary to run the business. The idea is to have as much capital as is necessary. We do not borrow any money. We have and keep the capital that is necessary. This year we bought liberty bonds. Now, do not misunderstand. Under the prewar plan—under this plan—if we made, let us say, \$300,000 more profit, we would pay a tax first of all on the prewar income, a normal tax.

The CHAIRMAN. That is the regular income tax that applies to everybody?

Mr. WRIZLEY. Now we are talking about the excess-profits tax.

The CHAIRMAN. Everybody else that does that does it in the same way as you do.

Mr. WRIZLEY. I am just taking our own case. Then we pay 80 per cent of that \$300,000, which is \$240,000. Now, if we have increased our capital to get some of that additional profit, if we have increased our capital, say—

The CHAIRMAN. Say to \$500,000; 8 per cent of that would be \$40,000.

Mr. WRIZLEY. \$40,000. Instead of taking—

The CHAIRMAN. You would take \$40,000 from the \$500,000, and then take 80 per cent of what was left?

Mr. WRIZLEY. No; we would take 10 per cent of that \$40,000, if it is only \$40,000 we have had—

The CHAIRMAN. No; I say suppose you had a capital of \$500,000; 8 per cent of that is \$40,000, and you would deduct that from the \$500,000, and what was left you would take 80 per cent of?

Mr. WRIZLEY. Yes; that is right. That is where Mr. Ford pays some tax.

Now, just one more thing and I am through. Suppose that Jordan, Marsh & Co., instead of making the same profit—that is, the same percentage—on its business to-day as in the prewar period, made to-day 1 per cent more. That 1 per cent on business is a considerable factor that you must consider. And suppose that it is \$100,000; 80 per cent of \$100,000 is \$80,000, which we pay to the Government, and you are trying to reach profiteers, and if profiteers are making

10 per cent as against  $7\frac{1}{2}$  per cent, you are reaching 80 per cent of that additional  $2\frac{1}{2}$  per cent, and that is our point.

The CHAIRMAN. Now, another point. Of course you know more about your business than anybody else, and I am not going to ask you a thing about your business, what you have made or what you have got in it, at all. I am going to ask you this, because I know you are acquainted with it. In your particular case, would your company pay more taxes to the Government to help win the war, under the system which is now in vogue and on the statute books or under the system or on the basis which you now propose?

Mr. WRIZLEY. Mr. Chairman, I can not answer that question because we have not applied any rates to this. We have simply offered a basis which is subject to your approval as a basis for such application of rates. If you want to change the rate of normal tax from 6 to 12, do so. If you want to raise from 80 to 90 or 100 in the other case, do it. We do not come and ask for any decrease of tax. We come and suggest a basis which we think is fair.

Now, what will the basis do which we suggest? It will eliminate the question which was brought out a few days ago by Mr. Palmer of New York when he cited a capitalization of \$500,000 and a \$500,000 borrowed money as against the other fellow whose capital is all paid in. It would eliminate the question as between the partnership and the corporation as to the income that is paid in one case on the personal income tax of the person, as against the dividends paid by the stockholder. Those are two things that it does eliminate, right there. It eliminates the question I brought up, of the real estate, whether or not it is a right assumption that real estate is a proper capital item to be considered in the excess profits figuring or not? It eliminates that. And it seems to me that it gets down to a basis, where I think you can reach almost anything you want in the nature of taxation by adjusting those rates.

The CHAIRMAN. Do not understand that we do not think there is some merit in your proposition. I see very clearly there is merit in it.

Mr. WRIZLEY. I came here two days ago and have attended for two days in order to get the mind of the committee, to see what I could suggest, and we worked out these figures we have suggested here, in the meantime.

The CHAIRMAN. Will you have gathered together all of these propositions and put them with your remarks?

Mr. WRIZLEY. Yes.

Mr. GARNER. I tried a while ago to draw your attention to a specific rate. For instance, take a prewar period and levy a tax of 80 per cent of war profits in excess of the average profit of the prewar period—80 per cent. Then take the other system of 80 per cent on the capital invested and excess-profits tax of 80 per cent on what is left. Now, which would you pay the most under?

Mr. WRIZLEY. I did not get that question.

Mr. GARNER. That is a question that has been asked.

Mr. WRIZLEY. That question was not asked me.

Mr. GARNER. Let me ask you, under which one of these plans would your firm pay the greatest amount to the Government—80 per cent on your profits, based on the prewar period, or 8 per cent on the capital invested and 80 per cent on the excess profits?

Mr. WRIZLEY. It would pay the most on the plan of 8 per cent on the capital invested and 80 per cent on the excess.

Mr. GARNER. That is the answer I wanted to get.

Mr. WRIZLEY. A very much greater figure. It would double the tax; and to-day we are paying 100 per cent on the war profits.

Mr. MOORE. If the chairman would permit, I would like to ask Mr. Howe one question.

The CHAIRMAN. Very well.

#### ADDITIONAL STATEMENT OF MR. E. L. HOWE.

Mr. MOORE. You represent a large number of dry goods houses?

Mr. HOWE. About 600, of all sizes.

Mr. MOORE. I understood you to intimate that many of them were not making war profits?

Mr. HOWE. Yes; that is, direct war profits.

Mr. MOORE. You say they are doing a normal business?

Mr. HOWE. Yes, sir.

Mr. MOORE. Is it not a fact that in the dry goods trade, as in others, all prices have advanced since the war?

Mr. HOWE. Yes.

Mr. MOORE. Could not that be clearly interpreted as meaning that those stores were showing more profits?

Mr. HOWE. Not necessarily. The costs of operating have increased materially, and the number of transactions has decreased. It has been only the increase in the prices which has permitted them to even make anything like a normal profit.

Mr. MOORE. You spoke of the risk which was involved in the business, from its very nature. You referred to stocking up with goods—

Mr. HOWE. With merchandise.

Mr. MOORE. It is perfectly patent to any one who purchases at this time that commodities like shoes and hats and clothing and underwear are undergoing great changes in price.

Mr. HOWE. Yes.

Mr. MOORE. And such commodities are found in retail dry goods stores, and I wondered just how you could reconcile that fact with the statement made that in many instances war profits were not being made by the people you represent.

Mr. HOWE. Because, Mr. Congressman, those extra profits, if there are any—I do not know that there are—are not made by the retailer. As a matter of fact, they are not made by the retail merchant. The retailer is paying from 25 per cent to 100 per cent higher for the merchandise that he gets.

Mr. MOORE. You mean the prices that he pays are going up just as his prices are going up to those to whom he sells?

Mr. HOWE. As a matter of fact, I think they are going up this year faster than he can adjust his retail prices.

Mr. MOORE. Will you show how you account for that price going up to the retailer?

Mr. HOWE. Because the producer and all those who are handling the goods are taking advanced prices. I will not say positively that they are advanced profits, but they are taking advanced prices, and by the time they get to the retailer, who is the distributor, they are very high.

Mr. MOORE. Does the cost of material and the cost of wages have anything to do with it?

Mr. HOWE. The cost of material and wages and everything they handle. Everything the retailer uses has increased in price.

Mr. MOORE. It has been suggested—I am not making the suggestion—that prices have advanced even to a point where something has been added to the taxes.

Mr. HOWE. Well, the net result which the revenue department has, showing the net income of the concerns, of course, will be the definite answer to that. Of course in 1915 I will say there was some appreciation of merchandise from which they derived some extra profit. Since then I think there has been very little profit. I think it has been very little, compared with a good normal profit based on what he has had to pay for his goods, as a rule. Take a woolen or cotton garment that might sell in the ordinary dry goods store. We all know that the price of raw cotton has gone up, and the price of wool has gone up. The Government has stepped in and commandeered wool. We all know, also, that the price of labor has gone up in the factories manufacturing cotton or wool; but there seems to be a difference of opinion as to whether the manufacturer or the jobber has not added to his increased war cost something in addition which we might, if we could trace it, ascertain to be an excess war profit.

Mr. HOUSE. Of course I am not posted as to the manufacturer and jobber, but I know that at the prices at which the goods are coming to the retailer there are being very decided advances. Whether they are all just or not I am not in position to say.

Mr. MOORE. When shoes that sold for \$5 a pair two years ago are sold now for \$12 to \$14 a pair, we know that some one must be making something somewhere along the line, or the cost of labor and of raw material must have gone up so extensively as to account for it.

Mr. HOWE. I am very sure that the retailer is not getting it, except that I say there might be a variation of one-half or 1 per cent fluctuation; but nothing of special moment; and this year I believe, if anything, will show an increase.

Mr. MOORE. You know our problem sufficiently to know that we have got to raise money?

Mr. HOWE. Yes; I appreciate that.

Mr. MOORE. And we have got to get it from the jobber and the retailer and everybody else.

DIERS—Hear Revenue Bill—Spool 115.

Mr. HOWE. Yes. I suggest that this gives you an elastic basis by which you can put on a rate that will raise the amount that is necessary to be raised.

You spoke of wool. We were informed that there was a large supply of woolen cloths in the hands of some jobbers and some manufacturers. Now just about this time that the retailer is going into the market to order his fall garments made up. We were fearful that, coming in with that small supply, they would bid the price up, so that we put in a complaint to Mr. Brookings, of the War Industries Board, and a request to take an inventory of those goods and see that they were properly distributed and that the price should not be bid up artificially. I only cite that as an instance of what we are doing to prevent these prices being raised very high.

Mr. MOORE. I am not putting this question any more to you in the dry goods trade than to the market man who has been getting higher prices for farm produce; I am putting the inquiry more with a view of having you know that we have got to raise money from all these sources, and ought to get it from those who are getting war profits, and as you have indicated that some of your people have not been making war profits but have been making only the normal profits, I wanted to put this question of higher prices up to you.

Mr. HOWE. Yes; as I say, by going back far enough in the prewar period you can get a fair prewar average, and by having that amount fixed it enables you, whether they are war profits or normal profits, to take such portion as you deem best; although in the main, with very few exceptions, the retailers are not making other than indirect war profits.

Mr. MOORE. You do not mean those who are making profits now? Of course every one receives the best protection that the country has to give and is equally interested in the war and should bear a proportion of its burdens.

Mr. HOWE. Absolutely; yes, sir.

Mr. SLOAN. The Government has not laid its hand on the retailers of the lines you represent, to keep down their prices?

Mr. HOWE. Not to my knowledge. There is some talk of it in the cotton situation.

Mr. SLOAN. There is talk of it, but cotton has not been commandeered, nor its price fixed in any way. It has not been even taxed.

Mr. HOWE. Not that I know of.

Mr. SLOAN. And referring to the suggestion of the gentleman from Philadelphia, farm products have been taken hold of, including wool, and wheat and meat, and have been controlled by the Government?

Mr. HOWE. Yes.

Mr. SLOAN. So that they have been controlled at the point of production, but along the lines of trade they have not been interfered with?

Mr. HOWE. Food, as I understand, is controlled practically through the wholesaler, the middleman in the matter, rather than at the point of production.

Mr. SLOAN. Food?

Mr. HOWE. Yes. That is my understanding.

Mr. SLOAN. Wheat has not been.

Mr. HOWE. Eliminating wheat; wheat has been treated separately.

Mr. SLOAN. And wool is not controlled in that way?

Mr. HOWE. Wool is practically commandeered—all the wool—for the Government use; so that there is very little wool for the civilian's use.

Mr. SLOAN. Do you know any reason why wool should be commandeered and cotton not?

Mr. HOWE. As I understand it, the Government has said that they needed all the wool to supply the needs of the Army and the Navy, the fighting forces.

Mr. SLOAN. But not the cotton?

Mr. HOWE. Cotton I have not so understood. In fact, our association has recommended to the War Industries Board a thorough investigation of the cotton situation all the way through. That involves the influence on the retail prices.

Mr. SLOAN. If it was now done, do you not think it would be a fruitful source of raising some revenue—so much on a bale, for instance?

Mr. HOWE. I do not know that I am qualified to pass an opinion on that. I believe everybody should sustain their proper share of the taxation, and we are perfectly willing to; only we would like to see it on as equitable a basis as possible. Is there anything else, Mr. Chairman?

The CHAIRMAN. No, sir.

Mr. HOWE. Shall I leave these examples with you?

The CHAIRMAN. Yes; let them go in the record.

(The matter referred to is here printed in full in the record, as follows:)

EXAMPLE 1.

PRESENT LAW.

Small store, sales, \$240,000.

1918: Capital invested, \$60,000; sales, \$240,000; net income, \$18,000; per cent on capital, 30 per cent.

**STATEMENT OF MR. H. T. CUMMINGS, OF ROCHESTER, N. Y.,  
REPRESENTING THE NATIONAL ASSOCIATION OF MANU-  
FACTURERS OF FLAVORING SYRUPS.**

Mr. CUMMINGS. I represent the National Association of Manufacturers of Flavoring Syrups, an association made up of most of the largest manufacturers in this particular industry—the soda-water industry.

In availing ourselves of the opportunity to talk to you about the soda-water industry, we want particularly to call your attention to section 313 of the present revenue bill, which states that all prepared syrups and extracts intended for use in the manufacture or preparation of beverages, commonly known as soda fountains, bottling establishments and other similar places, are taxed, with the schedule with which you are familiar.

We understand that it is the intention of the administration to levy now higher taxes on so-called luxuries and semiluxuries. Assuming that we are so classed, let us say in the beginning that we are able and we are willing to assume an additional tax burden, and that our only purpose in coming here is to make an effort to have that burden so levied that it will not jeopardize the industry to an extent where it will fail to be revenue producing at all. At the present time the industry is already struggling under handicaps which before the war would have been considered insurmountable. In the first place sugar, our raw material, without which we can not hope to exist, has been tremendously curtailed. Those of us who were in business preceding last November are restricted to 80 per cent of our usual requirements. Those of us who went into the business following November 1 and preceding April 1 of this year are on a 50 per cent basis, and those who went into the business after April 1 are not permitted to have any sugar at all. Now, obviously, it is impossible for us to extend our business, and it is next to impossible even to retain the volume that we already have.

Mr. SLOAN. Has not the business been increased by the decrease in the use of ardent spirits?

Mr. CUMMINGS. Unquestionably it has been encouraged, but it has been impossible for us to meet that encouragement and that demand because of this limitation in the use of sugar. We depend upon the volume of sugar, and when they say that we are limited to so much sugar, it means that our volume is limited to that extent.

In addition to this handicap, like many others, we have been up against a very serious labor situation, and with us that is peculiar—that when these fruit crops come throughout the country, if we can not handle them when they come, we lose them, and shortage of labor means delay, and delay in handling fruit crops means loss.

In that connection, the freight-situation has been a handicap, in that many of us depend upon distant markets to get perishable supplies. The delay in getting those supplies to us results sometimes in tremendous losses.

The embargoes recently placed upon a great many imported articles have deprived us of raw materials upon which we depended in the past and which we are now struggling to find substitutes for.

Were this an industry in which the margin of profit in the past had been very large, these difficulties could not command much of our

attention; but the reverse is true. This is an inc. \$720,000  
 is very keen competition, and that competition has 480,000  
 margin of profit, and such a narrow margin that the 240,000  
 industry is not A No. 1, and that any severe shock, due 80,000  
 or any further restriction placed upon us will very likely 000  
 a breakdown.

Mr. SLOAN. Do you not raise your prices like these other bus-  
 institutions?

Mr. CUMMINGS. We do; but we believe there is a limit to that  
 sibility of raising prices.

We do not refer to these hardships in a spirit of criticism, because  
 we know they are inevitable, and we expect them, but we feel that  
 in your consideration of levying additional taxes you should be  
 familiar with these facts, in order that your efforts may not be carried  
 to an extreme where it will break the industry down. We would  
 make a point that in the breaking down of the soda-water industry  
 we would be facing a serious calamity. Far from being a nonessential  
 business, there are in this country 110,000 establishments engaged in  
 this business.

The CHAIRMAN. Engaged in the manufacture of sirups?

Mr. CUMMINGS. Not in the manufacture alone. I just meant to  
 say, that includes the soda fountains, it includes the manufacturers  
 and the bottling establishments. The soda fountains are quite  
 generally through the country in connection with drug stores, and it  
 has come to be true quite generally that these drug stores depend  
 for their revenues upon the soda fountain.

In these 110,000 establishments we may assume that there are  
 400,000 persons engaged, and receiving their living from this particu-  
 lar work.

Mr. MOORE. Are you including the drug stores in your 110,000  
 establishments?

Mr. CUMMINGS. I have attempted to include only those employ-  
 of the drug store who were engaged in the soda-fountain end of the  
 drug store.

Mr. MOORE. But are you including the drug stores in your 110,000  
 establishments?

Mr. CUMMINGS. If they have soda fountains; yes, sir. Moreover,  
 there are a great many agricultural communities in the country  
 which depend upon us to take their product. This is particularly  
 true of the fruit-raising States, such as Louisiana, Maryland, Dela-  
 ware, New York, California, Oregon, etc., and particularly those  
 States raising small fruits.

Mr. HAWLEY. What is the value of the fruit products you buy in  
 the course of a year?

Mr. CUMMINGS. I am not able to say.

Mr. HAWLEY. The total income?

Mr. CUMMINGS. I am not able to say. In addition to this there are  
 a great many manufacturing industries which depend upon us quite  
 largely for their business; you take the manufacturers of containers  
 whom we patronize very extensively, or the manufacturing chemists  
 etc.

We estimate that the capital invested in this industry is about  
 \$4,250,000. Aside from the revenue collected under the present  
 law, we pay on every gallon of extract we use a revenue to the Govern-

**STATEMENT OF** number of gallons; we pay a cent per pound on **REPRESENTING** about 135,000 tons of sugar annually. In addition **FACTURE** income taxes, and the excess-profits taxes if we are fortunate enough to have to pay them, and so forth, will bring the total

Mr. Ge up to a good many million dollars in the course of a year. factant perhaps more important than the fact mentioned are the facts largt soda water makes a wholesome and a needed substitute for induor. It is an established fact that sugar will take the place of alcohol and answer the desire of the man who has had liquor and has been deprived of it.

The **CHAIRMAN**. You are going to boost the price of sugar, now.

Mr. **SLOAN**. It takes the place, but does it satisfy?

Mr. **CUMMINGS**. I think that is debatable.

Mr. **MOORE**. In other words, has it the "authority," to use the professional joker's expression?

Mr. **CUMMINGS**. I think it is debatable whether it takes the place, but it will take the place in time. It may have to. It is even more firmly established than soda water that is pure and clean has a real nutritious value. Every glass of soda water served over the counter contains from 1 to 1½ ounces of sugar, and besides this it contains the fats and other nutritious substances put in through the sirup.

Perhaps the chiefest example of this is the experience we are now having with the cantonments. It is true we are shipping carload after carload of these bottled goods to cantonments and in the vicinity of cantonments.

Mr. **SLOAN**. They stop the shipping of that across the seas, didn't they?

Mr. **CUMMINGS**. The Y. M. C. A. has been buying for some time considerable quantities to ship to our troops in France.

The **CHAIRMAN**. Do you know how much the production of Coca-Cola sirup has increased or fallen off since October 3, 1917?

Mr. **CUMMINGS**. I don't know about Coca-Cola.

The **CHAIRMAN**. What do you say generally as to sirup? Has the production fallen off or increased?

Mr. **CUMMINGS**. I think that the production has fallen off; not quite to the extent we have been curtailed on sugar. It certainly hasn't increased, and the reason why it hasn't fallen off is because some of us have found some substitute that can take the place of sugar.

The **CHAIRMAN**. It would have increased in a greater rate had it not been for the sugar shortage, wouldn't it?

Mr. **CUMMINGS**. Yes, sir. So, in conclusion, I simply want to urge that you consider first of all in just how far this soda-water industry can be considered nonessential, and secondly, that you bear in mind that it is not in position to stand any severe increase in taxation. With those two suggestions I want to recommend that section 313 be changed so as to tax sirup and extracts if sold for not more than \$1.30 per gallon 6 cents a gallon instead of 5 cents, as at present; if sold for more than \$1.30 and not more than \$2, 9 cents instead of 8 cents per gallon; if sold for more than \$2 and not more than \$3, 12 cents instead of 10 cents per gallon.

The **CHAIRMAN**. This specific tax of so much per gallon, wouldn't it be better to put a gross tax of 4 per cent, or a percentage on the gross sales?

Mr. CUMMINGS. I think not, so far as we have had experience with this tax since last October. It seems to have been equitable amongst the various manufacturers and those engaged in the industry, and it has been easy of collection, and while we have no idea of just how much—

The CHAIRMAN (interposing). It is just as easy of collection. You have got to know how many gallons to get the tax; you have got to know how many gallons are sold and what it is worth, and the other basis would be, if you have a percentage on the gross amount sold, and you get that information now.

Mr. CUMMINGS. I think one objection to that feature would be this, that there are some of us making what we know as a single-strength sirup; that is, sirup which is diluted with water; there are others of us who are making a concentration of sirup—a sirup first diluted with sugar sirup and then with water; there are others of us who come within this tax who are making a concentrated extract which, when added to a sugar sirup, produces the sirup used at the fountain.

Mr. GARNER. If you levy a flat-rate tax on the gross sale of all soft drinks, wouldn't that be an equitable tax?

Mr. CUMMINGS. You mean at soda fountains?

Mr. GARNER. Anywhere.

Mr. CUMMINGS. I think it would be an equitable tax, but I think the burden of levying such a tax would be so tremendous that the net result would be much less than it is right now.

Mr. GARNER. Burden on the Government to collect it or burden on the people to pay it?

Mr. CUMMINGS. I mean a burden on the Government to collect it, because you have got to get every little Greek confectioner throughout the country, and those fellows have a faculty of getting away with those things.

Mr. GARNER. You say there are 110,000 establishments selling soft drinks in this country.

Mr. CUMMINGS. Yes, sir.

Mr. GARNER. Employing 400,000 people.

Mr. CUMMINGS. Yes, sir.

Mr. GARDNER. In which they sell \$250,000,000 worth of stuff a year.

Mr. CUMMINGS. No. I said the investments in the industry were about \$250,000,000 a year.

Mr. GARNER. What are the gross sales?

Mr. CUMMINGS. I don't know that.

Mr. GARNER. You think it is essential that these 400,000 people engaged in the sale of soft drinks, should continue in that occupation throughout the war.

Mr. CUMMINGS. No, I don't think it is absolutely essential.

Mr. GARNER. You think it is more essential that they should continue in that occupation than in some other occupation throughout the war?

Mr. CUMMINGS. I think for the time being that is true if we have reached the crisis where it is worth while to take and break down an industry of this size, all right.

Mr. GARNER. Are you willing to admit the premise we ought to levy as much tax against this industry as it can stand and continue?

Mr. CUMMINGS. Yes, sir.

Mr. GARNER. If we levy that tax, naturally there would be a reduction in the number of plants and number of people employed, wouldn't there?

Mr. CUMMINGS. I think there would be a tendency in that direction.

Mr. GARNER. If we levy a rate of tax that would get the largest amounts of revenue into the Treasury—there is a rate of taxation on any kind of business you can levy a little higher and you get less revenue, and levy it a little lower and you get less revenue.

Mr. CUMMINGS. Yes, sir.

Mr. GARNER. You are willing to admit that Congress ought to levy a tax on this business that will get the largest amount of revenue in the Treasury.

Mr. CUMMINGS. Yes, sir.

The CHAIRMAN. They tell me—I don't drink very much at soda fountains—that after we levy this tax on a glass of soda water, a glass of soda water at a fountain at 5 cents, the usual price, would be increased to 10 cents; some others sold at 10 cents would be increased to 15; and some from 15 to 25—in other words, while we levy a tax of about one-twelfth of 1 per cent on the 5 cents—did that generally prevail?

Mr. CUMMINGS. I wouldn't say that it did generally; but I would say this, that where it did prevail there were probably adequate reasons for it, because the added tax that had to be passed on was the slightest advance that man would have to stand. The sugar we were buying before the war for 4 cents is now costing us possibly 7 cents.

The CHAIRMAN. I know; but I am speaking about since October 3.

Mr. CUMMINGS. I wouldn't be willing to admit that advance you speak of as exact since October 3.

The CHAIRMAN. I have had several letters, and I have made some inquiries down here.

Mr. GARNER. It has done that at several places in Washington.

The CHAIRMAN. For instance, Coca-Cola, that always sold for 5 cents, they tell me you have to pay 10 cents now.

Mr. CUMMINGS. I don't know that in the case of Coca-Cola that much increase is justified; but I know that everything that goes into the business has been increased, and it has to be passed along. Take the one item of benzoate of soda. We paid 25 cents per pound before the war, and the price has been \$7.50 since the war. Now it is over \$3.

The CHAIRMAN. Can you calculate how many glasses of soda water this benzoate of soda would make?

Mr. CUMMINGS. No; it goes a long ways.

The CHAIRMAN. Would it amount to one-tenth of a cent a glass?

Mr. CUMMINGS. I don't think that it would.

The CHAIRMAN. Some of these consumers of soda water are complaining that when a glass of soda water increases one-fifth of 1 per cent they proceed to add on 5 cents.

Mr. CUMMINGS. I think that a certain amount of those advances is a necessity.

The CHAIRMAN. I am not criticizing that; I am asking you if it is justified.

Mr. GARNER. I want to ask you about this. Do you class Bevo as a soft drink that is now being manufactured by parties that used to manufacture beer? What do you think about that?

Mr. CUMMINGS. I am not in a position to say very much about them, because they haven't been classed with the association I am in and the business I am in, but I think generally they would be classed as soft drinks.

Mr. GARNER. You wouldn't advocate a different tax on them from soda water, being the same class of business.

Mr. CUMMINGS. It is classed as such.

The CHAIRMAN. Do soda fountains sell this Bevo?

Mr. CUMMINGS. It isn't mostly sold there. It is sold at stores.

The CHAIRMAN. They used to call it "near beer" or "nigh beer" down in my country.

Mr. GARNER. They say it looks like beer and tastes like beer, but when it gets into your stomach it hasn't got any authority. That is what some one said about it.

Mr. MOORE. Before you resume, while on the question of tax, what would you say of passing the tax on direct to the consumer?

Mr. CUMMINGS. I would say the difficulty of collecting the tax would be so great that the net result would probably be less than if you leave it where it is.

The CHAIRMAN. You intimated a great many of the hundred and ten thousand establishments are in drug stores?

Mr. CUMMINGS. Yes, sir.

Mr. MOORE. I suppose the main portion of them are in drug stores.

Mr. CUMMINGS. Yes, sir.

Mr. MOORE. Would it be difficult to collect a tax of 1 cent a glass when you have the drug stores located?

Mr. CUMMINGS. I think it would be difficult to feel sure at all that you are getting the tax; yes. And another thing, you are confronted there with the fact that you have a tremendous variation in the selling price of soda water. You get in New York—they are selling a glass of soda water for 2 cents. In another place it goes as high as 15 cents.

Mr. MOORE. Can you give any idea of the number of glasses of soda water consumed in a great city like New York?

Mr. CUMMINGS. No; I can't. But we have estimated that we have used approximately 135,000 tons of sugar a year and that each glass of soda water represents from one ounce to one and one-half ounces of sugar and it is a matter of computation of getting that into glasses.

Mr. MOORE. If a small tax was levied it would raise a very large amount of revenue especially in the present times. Business hasn't been so very productive, I understand, up till this recent hot spell, and due to conditions you described; but it has been increased recently?

Mr. CUMMINGS. Yes, sir.

Mr. MOORE. There is much greater demand for soft drinks in the last two months than before?

Mr. CUMMINGS. Yes, sir; it is a very seasonable business.

And just to finish the statement I was making there that we advocate a tax if sold for more than \$3 and not more than \$4 a gallon, 18 cents instead of 15; and if sold for more than \$4 and not more than \$5, a tax of 25 cents. You will notice these taxes are recommended by the gentlemen who appeared here on June 10, the bottling association.

Mr. GARNER. Let me ask you a question in line with Mr. Moore's statement. Suppose it is possible for the Government to levy a direct tax on each person that buys a glass of soda, suppose you require every person that buys a glass of soda to have a 1-cent ticket, stamped 1 cent for each glass he drinks. Would that interfere with your business?

Mr. CUMMINGS. No; I think not.

Mr. GARNER. Just like going into a moving picture show or anything like that. First, it would tend to keep the man from putting it up from 5 cents to 10 cents to pay the tax because the consumer would know how much he was paying and it would bring to his attention the fact that he was paying a tax when he drank this soda water.

Mr. CUMMINGS. It would have that advantage; but even then, I think that man can get away and avoid the tax just as moving pictures are doing to-day.

Mr. GARNER. Oh, yes; they cheat the Government in every way they can. But when you make a penalty for cheating the Government on that tax and catch a few of them I imagine they would pay it.

Mr. HAWLEY. A tax like that would bring in \$135,000,000.

Mr. GARNER. I think a person that wants a glass of soda water ought to be willing to pay 1 cent.

Mr. MOORE. You might do it as is done in moving-picture shows, put 1 cent on every 10 cents.

Mr. CUMMINGS. Very often the tax for a ticket is 25 cents, the man who buys it, where the tax really is only 1 to 2 cents.

Mr. MOORE. In all well systematized businesses you get a check, so that the checking system. I assume if such a system were established it would tend to regulate the business.

The CHAIRMAN. I imagine the Government would want a provision in the act if we should adopt this method of requiring a license from all who sell; if it doesn't cost but 35 cents a year, so they would have them registered, and men would be afraid to go in the business anywhere unless they had a license.

Mr. CUMMINGS. I am perfectly willing to admit a direct tax has some merit, but I can't help but feel you can get just as much revenue by levying it direct on the manufacturers, and it would be much easier of collection.

Mr. HAWLEY. In the tax arrangement you suggested there, how much would that increase the taxes over what you now pay per year, all such industries now pay per year?

Mr. CUMMINGS. I don't know as any of us have had any return on what the industry is paying under this present tax, but it would increase it, I would say, about 30 or 40 per cent.

Mr. HAWLEY. On the rates you suggest?

Mr. CUMMINGS. Yes, sir; because you see it gradually slides higher.

#### STATEMENT OF MR. A. B. BRUNKER.

Mr. MOORE. Give the name of the company you represent.

Mr. BRUNKER. Liquid Carbonic Co., with the main plant in Chicago, and branch plants in about 12 different cities in the country.

Mr. Chairman, I happen to be in a rather curious position, and responsible for one of the so-called nonessentials, and at the same

time laboring for a dollar a year for the Government here for the past month or two, acting as more or less of an executioner for industries of this kind. It therefore puts me in a position to comment on the situation from both sides in a way that most people would not be able to do.

Mr. MOORE. What particular Government agency are you connected with?

Mr. BRUNKER. Under Mr. Baruch, on the War Industries Board. Under something that I am not in any way connected with; that is, with chemicals that have to do with explosives. I am viewing with a great deal of alarm all of the tendencies to create a wide gap between calling off on one hand of the so-called nonessentials without providing the necessary war essentials which is the theory of the thing to keep the organizations as far as possible together where their organization involved and equipment involved are capable of turning over to war essentials. I feel that the situation is tending along lines which, rather than helping the war situation, will perhaps precipitate a business crises with all of the ramifications of these so-called non-essentials to the extent where we may very easily defeat our own purpose. And while this industry is like any other, it has been the custom of the many hearings at which I have been present—they come down with a flag in each hand and talk about the number of sons they have in the service, which is old stuff these days, and at the same time we can bear down on these particular industries in the way of taxes, etc., until we involve a panic and not help the war situation at all. I have not come here to argue whether the tax should be high or low, but it is a fact that the tendency has been for a month or two past, since we have realized the critical situation created by these two German drives, to get a little panicky and a little bit hysterical, to get to bearing down on these so-called nonessentials which will carry them down 60 or 70 per cent in many instances and put a lot of them out of existence entirely.

The CHAIRMAN. Don't you believe a soft drink to a soldier is just as essential as a cigarette?

Mr. BRUNKER. We can imagine in a war situation where clothing itself is not essential in life.

The CHAIRMAN. I know that there are millions and millions of cigarettes used and several brands of smoking tobacco sold to soldiers. It looks like a soft drink might be as essential as a cigarette?

Mr. BRUNKER. Certain forms of soft drinks use up certain acids that are put into munitions.

The CHAIRMAN. Why not commandeer those altogether and stop it?

Mr. BRUNKER. That is what we are trying to do.

Mr. MOORE. You are a mining engineer, are you not?

Mr. BRUNKER. Yes, sir.

Mr. MOORE. And a graduate of the University of Pennsylvania?

Mr. BRUNKER. Yes, sir.

Mr. MOORE. Now located in Chicago?

Mr. BRUNKER. Yes, sir. The other side of the question of non-essentials is this: When we get into a consideration of moving picture films, which involve the same sort of chemical that gun cotton and high explosives involve and consider on one hand whether by saving a few chemicals we are to cut off the entertainment of a Nation of 108,000,000 people, we have a serious problem to consider. The

Judge Advocate General of the Army in considering whether three or four hundred athletes in the professional baseball field are more needed in an Army of millions of men than the out-door amusement of hundreds of thousands of people per month is under the same mental strain as the war industries problem. We have a tremendous demand for these soft drinks and we are utterly unable to meet that demand due to 80 per cent tax on sugar for all old established concerns and 50 per cent for those beginning operation which has been pointed out in the last speaker's testimony, and absolutely cutting off any expansion whatever for any concern starting up after April 1. Now you have the question of increasing the tax on buying goods up to a point where it will bring a revenue to the Government without putting the industry still further under the water. I can very easily gain from my close contact with the sugar situation—I know we had 26,000,000 pounds of sugar going down to the bottom of the sea here a week or two ago by the lovely (?) attention of these German submarines outside New York harbor and off the eastern coast. There is going to be a bearing down and still further curtailment to this particular industry in the immediate future.

Mr. GARNER. But Congress in considering the theory of taxation that it will take one kind of business and levy a tax on that that will bring in the most revenue, it must consider the nature of the business. The tax this year may be a little too high and next year a little too low. What I was trying to point out was whether this industry was willing to put itself as a class on record where it is willing to be taxed to get the greatest amount of revenue for the Treasury and I was very glad to hear the gentleman say he was willing to that, representing the large number of people that he does.

Mr. BRUNKER. Don't think without any violent patriotism we want to go the limit. We are defeating our own purpose by putting too great a burden on these people. The sugar curtailment alone was 80 per cent last year.

Mr. GARNER. That wouldn't be a tax for revenue only, that would be a tax to destroy a business.

Mr. BRUNKER. Absolutely.

Mr. GARNER. I have no desire whatever to do that, but this is a character of business that ought to be taxed and in arriving at that we ought not to put it so high as to kill the business, but whether I would agree with you as to the rate which should be levied is different.

The CHAIRMAN. What have you to say to Mr. Garner's suggestion that when the consumer buys a glass of soda water, if it costs 5 cents to put on a cent, and if it costs 10 cents to put on 2 cents? What do you think of that?

Mr. BRUNKER. The point has always existed in the mind of us that considered it that, considering the large foreign class engaged in it and the low type involved, etc., it has always been considered by the people who are the principal factors in these concerns that the difficulty and expense would more than offset any gain and the surest way to get it was at the source.

The CHAIRMAN. That is what the moving-picture people said, the people wouldn't go and pay the penny or 3 cents or 4 cents, and wouldn't pay to collect the money, it would cost us twice as much to collect it as we would get. It has turned out that there has been more attendance of these moving-picture shows and nobody has

refused to go because he had to pay a penny or two pennies extra, and the Government has collected even more than we anticipated.

Mr. BRUNKER. Yes.

The CHAIRMAN. Don't you suppose the tax on the soft-drink business, like Mr. Garner suggested, would turn out somewhat like the moving-picture shows?

Mr. BRUNKER. It has impressed us as a tremendous burden upon the group of industries, and most particularly carbonic agencies, in collecting this tax, as it comes in in small dribblets, and turn it into the Government.

The CHAIRMAN. You wouldn't have anything to do with it.

Mr. BRUNKER. We would be very glad to be relieved of that burden, if it accomplishes all purposes—if it is advantageous to do it.

The CHAIRMAN. Don't you think that would be the best way—that we would get more money that way without hurting the industry?

Mr. BRUNKER. I think it would have many advantages. If we are wrong in our presumption of last year that it would involve such tremendous detail and cost so much money—

Mr. GARNER (interposing). Suppose we consult the administrators of the law, the Treasury officials, and suggest it to them, and they would suggest this tax, would you have any objection to it?

Mr. BRUNKER. I would not. But I feel sure (it is not up to me to speak for the Treasury Department) you have also a very large question involved here in the bottle industry where a tax would have to be imposed on those sales, under stamp tax.

The CHAIRMAN. No. We would have a license for every fellow who is going to sell, and he has got to collect that 1 cent or 2 cents or whatever it is going to be.

Mr. BRUNKER. What would you do on a bottle of coca-cola?

The CHAIRMAN. The same way.

Mr. BRUNKER. I am a little fearful about the machinery involved in getting it.

The CHAIRMAN. It wouldn't be any more difficult than the moving-picture show business?

Mr. BRUNKER. Yes; it would. Yes; I think it would be a very different problem.

Mr. MOORE. You take a Greek who runs an establishment downtown and sells by the bottle; he would be required to take out a license.

Mr. BRUNKER. Yes, sir.

Mr. MOORE. That would necessitate his checking up on his returns?

Mr. BRUNKER. Yes, sir.

Mr. MOORE. My thought is that if we did require an administration of this kind up there it would improve the business standards.

Mr. BRUNKER. There is plenty of room for improvement; but I think when you put this up to the Treasury Department they will interpose objections to the handling of it in that way.

Mr. MOORE. It would be much simpler, of course, in the case of Ogram's drug store down here on Pennsylvania Avenue, where the cash register is going all day, to check it up.

Mr. BRUNKER. I think that you, having been a resident of the larger cities mostly, have a different idea of the way the business is handled.

Mr. SLOAN. As a matter of fact, aren't the tax-paying people, little and big and everybody, paying readily? Hasn't it been the surprise that they are paying as liberally as they are, rather than objecting for the reasons conjured up by the people who have been heard in these hearings? I haven't seen any evidence of delay in paying taxes, or reporting taxes, or effort to evade taxes, either as to the amount or the paying of it.

Mr. BRUNKER. I know these things we have had to do with, as a fundamental principle, it is the surest way and the quickest way and the thing involving the least expense in the way of detailed machinery to go as nearly to the source as you can. We try in all this war, in our efforts to regulate war industries and nonessential war industries, to get as near the source as we can, because of the great amount of machinery in checking it out at the other end.

Mr. SLOAN. That is true in times of peace, but I think now in the war we will get along without evasion; even these Greeks, I think, will be prompt in paying the taxes that the Government will impose.

Mr. BRUNKER. I don't think it is the evading, but the gathering together of the machinery will take a tremendous effort, and one that will be more and more difficult. And let me say this, that the 400,000 people who dispense these drinks, there is no particular business that can adapt women to the business better than to this industry; so it isn't a question of having masculine help for this purpose.

Mr. MARTIN. Will you tell me why there is such a shortage of sugar in the country?

Mr. BRUNKER. Yes; the difficulty can be explained very briefly. The present shortage is due to attempting to accumulate a sufficient quantity of sugar to amply guarantee this season's packing and canning industry. The reason why that shortage has suddenly become acute is the fact that a certain amount of shipping was allocated to bring sugar into the country; since the first German drive started and the tonnage we had for transports was not sufficient, a large part of that we had for sugar had to be diverted.

Mr. MARTIN. There is a lot of sugar in Cuba?

Mr. BRUNKER. Yes, sir.

Mr. MARTIN. And the problem is to get the bottoms to get it over here?

Mr. BRUNKER. Yes, sir; and then the beet crop in the West. They are planting out there to make more in war crops, and in other things, and that makes some shortage.

Mr. MARTIN. Do you know what the tonnage is now in sugar in Cuba?

Mr. BRUNKER. I couldn't give you that; no.

Mr. MARTIN. Something like a million tons?

Mr. BRUNKER. Yes; I think so. And it is mostly a question of tonnage, as you say, and when they put down here a thousand tons at a time it doesn't help much.

Mr. MARTIN. They bring in about two or three thousand tons a month?

Mr. BRUNKER. Yes, I think that is it. There is an improved optimistic feeling in the committee of the Council of National Defense, if I may assume to speak for them, in the increased amount coming, due to the pressure of the department, and there will be more of an increase.

The CHAIRMAN. Isn't it a fact that sugar has been maintained at a more stable price than any other food product?

Mr. BRUNKER. I think that is an artificially maintained price. It would have gone to any price, if it had not been controlled.

The CHAIRMAN. I can't get much of that, but it is about the cheapest thing I can get.

Mr. BRUNKER. It never has been clear to me, in my dealings with this question, why, with our 100,000,000 population, with the present situation as to sugar in England and Italy and France, why we do not reduce somewhat the per capita use of sugar before we get to the crisis and have to—more of a crisis than we have already reached.

The CHAIRMAN. The gentleman who preceded you said we used about 135,000 tons of sugar in this country in the soft-drink business.

Mr. BRUNKER. Yes, sir.

The CHAIRMAN. About one-fifth of the tonnage of consumption in the United States?

Mr. BRUNKER. No; I think the total consumption last year was 4,400,000 tons.

Mr. MOORE. Mr. Chairman, may I have permission to extend two letters in the record?

The CHAIRMAN. Without objection they may be extended.

There was no objection.

(The letters filed by Mr. Moore are as follows:)

HON. J. HAMPTON MOORE,

*House of Representatives, Washington, D. C.*

DEAR MR. MOORE: This evening's paper contains a report of an argument made by Mr. Ballard before the Ways and Means Committee as to the excess-profits tax on the underlying street railway companies comprising the system of the Rapid Transit Co. of Philadelphia.

On behalf of the following companies whom we represent, viz:

The Philadelphia City Pass. R. W.

The Philadelphia & Darby R. R.

The Thirteenth and Fifteenth Streets P. R. W. Co.

The Germantown Pass. R. W. Co.

The Green & Coates St. P. W. R. Co.

The Fairmount Park & Haddington P. R. W. Co.

The Hestonville, Mantua & Fairmount P. R. W. Co.,

we desire to call attention to the following facts:

The original street railway companies of Philadelphia were pioneer enterprises in a new field. The men who subscribed the capital to build them were encouraged to take the risk by grants of liberal franchises. They took the risk and built the railways, and owing to the fact that they proved to be a convenience to the public, and that there was a rapid growth of the city to which the building of railways contributed, they increased in value over the original investment. When public convenience demanded large systems instead of separate small roads new corporations were formed which leased the smaller roads under leases substantially similar to each other, and which in effect turned over to the operating company the entire business of operating the road in return for a fixed annual sum per share to the stockholders of the underlying companies, representing a fair income on the then value of their shares. This in some cases was paid directly to the stockholders, and in others to the underlying corporations to be distributed to the stockholders, but it could neither be increased or diminished by profitable or unprofitable operation. In every case the operating company assumed all obligations of the underlying company, which went out of business for every purpose except the mere maintenance of a corporate existence, the expenses of maintaining which were paid by the operating company.

The stocks of these underlying companies became practically securities in the nature of bonds or ground rents having no element of business risk, and no possibility of assessment or diminution of income, and as such they have been for many years dealt with on the market and are now held by estates, charities, and individual investors as permanent and safe investments. There is really but one business of

operating street railways in Philadelphia, and that is carried on by the Philadelphia Rapid Transit Co. The underlying companies do not also carry on this business and are not even in the position of holding companies since they do not share in the profit and loss.

In any amendment of the tax laws the burden of paying the tax should not be imposed on the underlying companies in relief of the Philadelphia Rapid Transit Co. This would be to interfere with the contract between the underlying companies and the Philadelphia Rapid Transit Co., which Congress could not do. The true remedy is to so frame the law that there should not be double taxation on the same business. The stockholders of the underlying companies should, of course, pay an income tax on their receipts, and this they would do in any event under the income-tax law. But on the one business of operating the street railway lines of Philadelphia there should be but one tax, viz, the one paid by the Philadelphia Rapid Transit Co. The underlying companies are practically out of business. The amounts per share paid to their stockholders do not represent profits from operation nor have they been affected by the war. The business is an entire one, conducted by one company, and to tax it on excess profits and then tax the underlying companies for also carrying on the same business is a result which we do not believe the framers of the original act contemplated.

The remedy is, we submit, to provide that where a company was formed before 1913 to carry on a single business by the leasing of other companies which were kept alive solely for the purpose of preserving the franchises and of distributing a fixed sum to their stockholders, the business, so far as the excess-profits tax is concerned, should be considered one business, subject to but one excess-profits tax, to be paid by the operating company.

We would esteem it a favor if you would bring these facts to the attention of the committee. It would give us pleasure to present our views orally if the committee desire to hear them and will fix a time.

Yours, truly,

PRICHARD, SAUL, BAYARD & EVANS,  
Per FRANK P. PRICHARD.

PHILADELPHIA, June 12, 1918.

HON. J. HAMPTON MOORE,  
Washington, D. C.

MY DEAR SIR: I see in this morning's newspapers that Ellis Ames Ballard, Esq., of our bar, appeared before a committee of Congress, of which you are a member, and urged that the Philadelphia Rapid Transit Co., of this city, be relieved by legislation of the payment of the "excess-profits tax" as provided by the act of October 3, 1917, which has been assessed against each of the underlying railways companies of this city, for which the Philadelphia Rapid Transit Co., as lessee, is liable. His suggestion was, as I read it, that such "excess-profits tax" be levied in some way directly upon the stockholders of the underlying railway companies. Regarding this I feel that Mr. Ballard should have urged rather that the stockholders of such companies ought not to be subject to any such tax, since they have no excess profits.

You are probably aware that the underlying street railways here were built in years 1857 and 1859 by persons long since deceased, that the stock held by them has been sold and resold many times, and the present holders, with possibly a few exceptions, have paid such prices for the stock that the income derived therefrom is not more than 5 per cent. I can instance my own case. I am the owner of stock in two of the underlying companies; one, the Fourth & Eighth Street line, for which I paid over \$100 a share, on which I receive \$5.25 a year; the other, the Thirteenth & Fifteenth Street line, for which I paid, say, \$250 a share, on which I receive a dividend of \$12 a year.

Therefore I submit that no additional tax should be placed on the underlying stockholders.

Very truly, yours,

JOSHUA R. MORGAN.

And thereupon, at 5 o'clock and 10 minutes, the committee adjourned until Saturday, June 15, 1918, at 10 o'clock a. m.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Saturday, June 15, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Garner, Dickinson, Oldfield, Crisp, Helvering, White, Moore, Green, Sloan, Fairchild, Sterling, Martin, Hawley, Treadway, and Kitchin.

## STATEMENT OF MR. MARION DORIAN, REPRESENTING THE COLUMBIA PHONOGRAPH CO.

The CHAIRMAN. Please state your full name and your business.

Mr. DORIAN. Marion Dorian, representing the Columbia Phonograph Co., with my offices in the Woolworth Building, New York, City.

The CHAIRMAN. All right, sir; proceed.

Mr. DORIAN. I have been associated with that one company for 21 years. Previous to that I practiced law in this city. I only want to state that to qualify.

You gentlemen, like myself, will probably remember in your boyhood days playing taddy. We used to take a portion of a broomstick and whittle off both ends of it and put it on the ground and knock it around—I have played it in this city—and that has happened to some of the industries of to-day, my own included. They are whittling it at both ends.

We are taxing the industries very heavily by way of income tax, corporation tax, and excess-profits tax, and in our case the gross sales tax. We are curtailing their operations. The Fuel Board and the War Trade Board have requested—and the request is tantamount to an order, as we of course understand—that we curtail our industry at least 30 per cent, with the intimation that they may perhaps be forced to ask us to increase that curtailment. They have even mentioned as high as 50 per cent. We are curtailed in the matter of transportation. We can not get it. We are using at this time, at enormous additional expense and at great inconvenience and with great handicap to the operations of my company, motor trucks to convey our products to near-by points. Our factory is located in Bridgeport, Conn. We have to ship where we can by these motor trucks to such near-by points as New York and Boston, and from there try to get transshipment.

We use in the manufacture of talking machine records, that is, the disk form of records, large quantities of imported gums and shellac. We have had the supply of shellac curtailed and we can not find any substitute.

Mr. MOORE. Where do those articles come from?

Mr. DORIAN. The shellac and gums such as we use come principally from Ceylon and Singapore.

Mr. MOORE. What kind of gum is that?

Mr. DORIAN. The copal gum. We use that as binder, and the shellac we use as a surface for the records.

Many people are under the impression that these records are of vulcanized form, or some form, of rubber. There is no rubber whatever in them. The disk is made principally of a combination of clays, gums, and the shellac surface. We use the shellac as the only substance that we can find that will give us a surface with the hardness, the resiliency, and the smoothness, and the talking machine manufacturers of the country have spent large sums of money and a long time trying to find some substitute of domestic origin. It has been an absolute failure.

Those are some of the conditions under which this industry of mine are operating to-day. We are whittling it at both ends, and if that process continues long enough, just what happened to our taddies in the old days will happen to the industries; in other words, they will get down to a point where they are not of any service whatever. I want to suggest that thought to you gentlemen. Not that I feel that it is not already in your minds, but I want to suggest it in regard to this particular industry on which I have spent so many years of my young life. We have loyally and cheerfully and heartily met all the demands that could be laid upon us or any other American institution. We expect to do that to the end, and we do not claim any credit for that, or assert it as a virtue, because if we were not so disposed we would have to do it anyhow; we recognize that. But we feel that in coming before you gentlemen we can be sure that any reasonable argument, any logical argument, which we can present to you will have full and fair consideration.

Now, under the present law we are taxed 3 per cent upon our gross sales, and that is a tremendous burden to this industry, and I am here to urge you gentlemen that if in the framing of the new measure there is a possibility of omitting that tax, it be done. Of course, your answer will be, "You will pass it on to the consumer." True; and there is no other way it can be; but there is a limit, commercially, to what can be done in that direction.

Mr. MOORE. I have wondered, hearing other gentlemen make that same argument, why the manufacturer complains of this direct tax, this consumption tax, when he admits that it is passed on to the consumer. Wherein does he suffer if he does not pay it?

Mr. DORIAN. He does not suffer in the direct effect upon his pocket as to that particular sale; but anything of that kind which is imposed upon the handling of commercial transactions to-day—particularly to-day—is an additional handicap to the operations of that concern.

Mr. MOORE. I have regarded it as though he, the manufacturer, were merely the collecting agent of the Government for that 3 per cent, as in your case, for instance, where, since the levy of the tax, he adds to his price and takes it back from the consumer.

Mr. DORIAN. He does more than that.

Mr. MOORE. Is he really acting, "under the rose," as the agent of the Government in collecting that 3 per cent?

Mr. DORIAN. He is acting as the agent and the collector for the Government; and more than that, he immediately pays it to the Government and takes his chances of being reimbursed, and in many cases he is not.

Mr. MOORE. That again brings up the question, Wherein does he suffer except for the clerical labor, the bookkeeping, that may be necessary for him to collect and remit the tax?

Mr. DORIAN. If you raise the price of your product at any stage, whether it be due to the tax or any other cause—and we have many other causes which affect the price; in other words, we are paying now for materials, which are indispensable to us, 500 per cent more than we did before the war.

Mr. MOORE. Let me put it this way. Suppose that the records which you have been selling for \$1 prior to the passage of the law now sell for \$1.03, the 3 cents being set apart by you to be paid to the Government; wherein does the manufacturer suffer on that arrangement?

Mr. DORIAN. Let me state right at that point, if you will, that you can not pass on that 3 cents as an exact amount, because under the conditions of doing business of to-day—I am speaking of the manufacturer—he has got to take into consideration the middleman or jobber and the retailer or ultimate consumer. He has got to arrange that increased price so as to take care of all those intermediate discounts or profits.

Mr. MOORE. That is a matter of definition of business only, is it not?

Mr. DORIAN. It is a matter of doing business itself—the process of doing business.

Mr. MOORE. But it is in relation to your own people—your own employees?

Mr. DORIAN. We will put on that price, that tax; we will notify the trade of the tax, and that in consequence of the tax they must pay for it; but when we notified the trade of that increase, when we increased the price we also stated that in consequence of the increased cost in accounting for and collecting that tax, the increased cost of material, and the increased cost of labor—in fact, all these other costs—we would be compelled to raise the price of our product. We had not raised it before, notwithstanding all these increased expenses to us, exclusive of the tax. At that point we had to raise the price or quit, in plain English.

Mr. FAIRCHILD. Is it not a fact that the industry you represent is one of the most successful in the country?

Mr. DORIAN. I am glad you asked me that question, because I can answer truthfully that that is not true as to the industry as a whole. There may be some instances.

Mr. FAIRCHILD. I had in mind the Victor machine, because I am more familiar with the process of operation of the Victor than with that of the Graphophone Co.

Mr. DORIAN. During last summer, when I was selected by my company to look after its war revenue, I met that question from Members of the House and from many Senators, and you give me the opportunity to say something which will interest you gentlemen, and which it will give me pleasure to say.

The talking-machine industry, the talking machine as an art, is distinctly an American institution, and had its birth right in this city, and the gentlemen who were instrumental in giving it a start in life were stenographers, and a number of them were official reporters of the House of Representatives of the United States, and it had a long and a hard struggle, and it has only recently, within a few years, emerged onto solid ground.

The industry gives employment directly and indirectly to at least 50,000 to 75,000 people, and if you assume that each of those has a few members only in the family, the employment to the population in the United States must run into hundreds of thousands of people who are dependent on this industry for their livelihood.

The company which I represent has had its branches in Europe. I spent 10 years in Europe in the service of the company—five years making my headquarters in Paris, and five years in London—traveling all over Europe in the interval in the interests of our company. The Germans and the French, and latterly the English and the Swiss, have copied the American models, and due to the inequalities of the patent laws of those countries, we were more or less helpless. Now the industry is in strong competition, or was prior to the war, with the German, Swiss, and French and English manufacturerers, and when this war is over there will be a flood of German machines, Swiss machines, and French machines coming into this market and into the export countries.

Mr. FAIRCHILD. Of course you can not judge as to what will happen as to German industries after the war, as to the entrance of their products into this country.

Mr. DORIAN. We can look at it as a possibility, unless there should be some conditions that would act against it. I meant to say, by that, that the patent situation had so changed in the last few years that we have not the monopoly we had.

Mr. FAIRCHILD. I am thoroughly familiar with these developments of other industries abroad and in this country; and how do you differentiate between your industry and the hundreds of other industries that have had their birth in this country. Of course this country has been the place of birth of every factor of development of industrial importance that you can think of.

Mr. DORIAN. That is true.

Mr. FAIRCHILD. It is the great inventive field of the world. The telegraph, the telephone, the talking machine, the writing machine, the flying machine, for instance, are all inventions that have had their origin here in the United States, and Germany has never originated anything of importance; it has simply copied things produced in this country.

Mr. DORIAN. That is true.

Mr. FAIRCHILD. Now, I should like to know in what your industry differs from other industries in the specialty line, of which there are a great many.

Mr. DORIAN. If I get your thought correctly, you are speaking of such specialties as typewriters and adding machines, and our industry is not in that class at all. It is a musical instrument, and it appeals—

Mr. FAIRCHILD. And cash registers. I know well, and you know yourself, because you say you have been abroad 10 years, that there

is a very large line of development that is being employed in the northern countries of Europe, and wherein does your industry differ from those industries and wherein should you be entitled to special consideration?

Mr. DORIAN. I will tell you, Congressman, a number of reasons why our particular product should have consideration at the hands of this committee. As I have just stated, it is not a utility; it is not an office appliance; it is not an office fixture; it is a musical instrument, and it is a musical instrument par excellence for this reason: You take a piano or an organ, or any instrument requiring skill to operate or play it, years of study, years of practice, are necessary.

There are thousands and perhaps hundreds of thousands of pianos in homes in this and other countries to-day which are mute simply because there is no member of the family who can perform on them who can operate them. A talking machine, on the other hand, can be operated by a child 5 years, 4 years, 3 years of age just as well as by an adult.

Mr. GARNER. Do you class your business as one of the essential or one of the nonessential industries?

Mr. DORIAN. We have filed an argument with the War Industries Board in which we have set up the argument that it is really an essential at this time.

Mr. GARNER. An essential industry at this time?

Mr. DORIAN. During war times; yes, sir.

Mr. GARNER. Then, if you class it as an essential industry, of course there would be no object in such a taxation as is calculated to restrict it during this war?

Mr. DORIAN. Yes.

Mr. GARNER. And that is the reason I wanted to know in just what classification you desired to be put. I would like to hear some argument from you as to why it should be classed as essential at this time. I am frank to say to you as one member of the committee that I do not think it is an essential industry.

Mr. TREADWAY. May I ask you, Mr. Garner, if you do not also refer to a possible definition of what luxury may be?

Mr. GARNER. Yes; and especially do I consider that the question demands that as to how far we shall go to restrict industry, labor, and material not essential to the war, that they may be put into the industries essential for the conduct of the war.

Mr. TREADWAY. If it is not an essential industry, would it not be classified within the scope of the President's address, where he refers to luxuries?

Mr. GARNER. I am inclined to think so, and I, for one, can not see where the talking machine is an essential industry either in time of war or peace.

Mr. DORIAN. Now, if you gentlemen will indulge me a few minutes and let me tell it to you, I will do it, and it will not burden you, and I think it will interest you also.

Mr. MOORE. Do not forget, while on that question, that it is essential in the Army camps.

Mr. DORIAN. We have filed with the War Industries Board an argument, and we have given the board these facts.

The talking machine for a number of years—five years at least—has been very extensively used in the public schools of the land in

instructing the youth of the land in the rudiments of music, in gems of English literature, in history, in folk songs. It has been used in recreation rooms of the schools in drilling the children with the aid of music in calisthenics, in marching, in drilling, and all that sort of thing, and we have filed with that board a letter from the Commissioner of Education of the United States here at Washington, in which he mentions all of these points and urges the continued use of this instrument throughout the country and says that the limit of its potentiality in that respect is beyond conception.

I have filed similar letters from the commissioner of education of the State of Massachusetts, from the commissioner of education of the State of New Jersey, and from a number of other educators of national and in some cases international repute, from all over the country; one from Missouri and one from Pennsylvania.

The Young Men's Christian Association have given us a letter which I have also submitted to the board, in which they say that any interference with their use of the talking machine and talking methods in their uplift work and in their entertainment work in cantonments and in the camps and in the trenches would be a great calamity.

Mr. SLOAN. Do you mean to say that taxes should be cut down especially on this instrument.

Mr. DORIAN. I am talking about it as an essential industry, in response to Congressman Garner's question. The Knights of Columbus are using and propose to use an enormous number of these machines, and they have a large number in use, for a very simple reason, because of their portability.

The playing piano or organ or any other instrument which has to be transported, which is bulky, is not adapted to these needs. A soldier will take one of these talking machines and a bunch of records and sling them over his shoulder and carry them into the trenches; and they do it; and when they leave the trench they will leave everything else, but they will take that talking machine with them.

Mr. GARNER. Could you tell me the number of men engaged in the industry in the manufacture of these instruments?

Mr. DORIAN. I could not. I could tell you how many we have.

Mr. GARNER. Could you approximate it?

Mr. DORIAN. I was saying here a few moments ago that the people who are directly or indirectly supported by this industry must run into the hundreds of thousands.

Mr. GARNER. In our own country.

Mr. DORIAN. Yes.

Mr. GARNER. Engaged in the industry?

Mr. DORIAN. Engaged in the industry or engaged in the sale of the product of the industry. In normal times we would have a factory force of 3,000 people. At the present time our force is about 4,500.

Mr. GARNER. Has it increased very materially in the last few years?

Mr. DORIAN. It has, yes, sir; not due to the war. If that is your idea of it, I will say we have no direct benefit from the war. Indirectly, I should say we had.

Mr. GARNER. In the last 10 years has it not materially increased—this industry?

Mr. DORIAN. It has had a natural growth.

Mr. GARNER. And it must be a prosperous business.

Mr. DORIAN. It will be if you do not continue whittling that taddy away.

Mr. GARNER. How much does the industry spend in advertising in a year?

Mr. DORIAN. I could not give you those figures. I would not attempt to give you even an approximation, because I might mislead you. I know our company spends hundreds of thousands of dollars.

Mr. GARNER. Hundreds of thousands worth in advertising?

Mr. DORIAN. We can not get along without it.

Mr. GARNER. Of course, it is not necessary to advertise your goods so far as the cantonments are concerned.

Mr. DORIAN. We do not.

Mr. GARNER. Because probably the Y. M. C. A. and the Knights of Columbus and other similar organizations will take all the machines necessary for their cantonments and the soldiers; but your advertisement goes more to the general public?

Mr. DORIAN. Yes.

Mr. GARNER. If the Government could just take your advertising and use it for war purposes, in the Treasury, do you not think that would be a fair division?

Mr. DORIAN. We have given the Government a good proportion of our advertising for war purposes, and for Red Cross purposes. May I ask you gentlemen to indulge me just a moment, and after that I will answer just as many questions as I am able to?

Mr. TREADWAY. May I ask you one question?

Mr. DORIAN. Yes, sir.

Mr. TREADWAY. It is this. You were speaking about the use of talking machines in cantonments and among the soldiers?

Mr. DORIAN. Yes.

Mr. TREADWAY. Can you tell me what percentage of your business is represented by that business at the present time?

Mr. DORIAN. I could not, because we do not handle that business direct.

Mr. TREADWAY. Do you not think that is pretty essential in your argument that you should be favored either through the priorities board or through taxation, as to what part of your business goes to the Army, or any division of it, at this time?

Mr. DORIAN. I could probably secure data on that subject and submit them to this body.

Mr. TREADWAY. I should think that the whole argument would be based on that feature, if I may suggest.

Mr. DORIAN. The use of the machine is so generally known that I had not thought it necessary to prepare anything of that kind. Let me finish, along the line of essentials.

The talking-machine record of to-day is 75 per cent patriotic; that it is to say, it is composed of patriotic selections, either songs, marches, or military airs, and in that way the talking industry is doing a wonderful work, because music is considered the fourth essential in human life. I believe food comes first, shelter next, raiment next, and then music. The effect of music is just as pronounced upon the human body and the human intellect as food itself. All of you gentlemen know the effect of music upon you. Now, the talking machine industry is doing a wonderful work in that way, and it is not doing it entirely from selfish motives, because they could put

out other classes of music; but we need that sort of thing now, not only the soldiers but the people at home, those who have sons and husbands and brothers away; they need the uplifting influence of that music, so that the talking machine in that direction is doing a wonderful thing.

It is doing something else. Its records are doing a tremendous amount of Americanization work in this country to-day. Its records and machines are being used in factories where there is a very large foreign element employed, men, women, and children. One series of records which have been manufactured by us and which are being used by the Safety First League has on the surface of the record—and they reproduce it in the factories—rules for safety. On the other side of the record there may be some national air or hymn or some address.

We sent the first recording expedition to France, and we secured a record by Gen. Pershing. We did that. You gentlemen have heard of it. It was an expensive and difficult proposition. We got the record, and it is being distributed in this country, and our company does not get one cent out of that proposition. On the other side of the record there is a patriotic address by Mr. Gerard. Now, there is a class of work which the talking machine is doing. And what I say as applicable to our company is equally applicable to the other talking-machine companies. I do not represent any of them. I come here solely on behalf of our company.

The influence of music is recognized. This instrument and this record are educators, and if you are putting a tax on them you are taxing an educational feature. I do not think that that should be done. I submit it to you gentlemen as a clean-cut proposition.

Mr. MOORE. For one, I am willing to concede everything you say about the talking machine being an educator and about its influence upon the public being for good, but you know what we are doing here as a committee.

Mr. DORIAN. Absolutely.

Mr. MOORE. We are endeavoring to raise additional revenue for the Government.

Mr. DORIAN. Yes.

Mr. MOORE. And we have got to raise a great deal more for 1919 than we have raised for 1918.

Mr. DORIAN. And for 1920 more than for 1919.

Mr. MOORE. You have heard me say that to other witnesses.

Mr. DORIAN. Exactly.

Mr. MOORE. That is our whole point. Supposing we grant everything you say in regard to the elevating qualities of the graphophone or of any other instrument of that kind which dispenses music and disseminates information, how are we going to raise more money for industries like yours without unduly embarrassing them? It is not a question of reduced revenue with us. It is a question of increased revenue, and your argument, up to date, while very interesting as to the benefits of the graphophone, has not helped us a particle, as I can see, as to the raising of more money.

Mr. DORIAN. I am absolutely in accord with you, Congressman. I had reached a point where I was trying to show this committee that this industry instead of being singled out, as it has been in the minds

of some people, as a target, should be given special consideration. Now, our company will never raise an objection to any tax upon its profits.

Mr. MOORE. Do you argue for a reduction of the taxation?

Mr. DORIAN. Yes, a reduction of this gross sales tax.

Mr. MOORE. What would you have taken off?

Mr. DORIAN. I would argue to have it all taken off, because you are impeding an industry, you are handicapping it, you are shackling that industry.

Mr. MOORE. If we took that tax off your industry we would have to put it on some other industry. What would you suggest?

Mr. DORIAN. You do not necessarily have to do that, if I have correctly understood the situation. You are going to increase your income tax and your excess-profits tax, and make adequate provision for that in that way.

Mr. MOORE. Do you intend to submit an amendment to the existing law?

Mr. DORIAN. No; I do not, Mr. Moore.

Mr. MOORE. For our consideration?

Mr. DORIAN. No; I do not. I was simply making this argument.

Mr. MOORE. Let me ask you, has the Government requisitioned any of your machinery or working force?

Mr. DORIAN. No; it has not, for a simple reason.

Mr. MOORE. Has it done so in the case of the Victor or any other company?

Mr. DORIAN. I understand it has, in the case of the Victor. The condition is different there. Early last year I personally saw the War Industries Board and placed our entire plant at its disposition, and gave them specifications as to what our equipment was. They carefully went over it and they said that we had very little machinery there which the Government could use. We have repeated that offer a number of times. We have solicited some classes of work which we could do for the Government, or some subcontract work which we could do.

Mr. MOORE. But up to date no connection has been made?

Mr. DORIAN. We have submitted several models of specially constructed articles which might be used. We have done that upon request.

Mr. MOORE. Does that have reference to special articles or some special parts?

Mr. DORIAN. It was a special motor, a motor of precision, that I have in mind, which I understood was to be used in connection with airplane work.

Mr. MOORE. Answering Mr. Garner, I understood you to say that in normal times you would have on your pay roll about 3,000 people at your establishment in Connecticut, and that at this time you have about 4,500, an increase of 1,500 people.

Mr. DORIAN. Yes.

Mr. MOORE. Are they all skilled mechanics?

Mr. DORIAN. They are not. A large proportion of them are female employees.

Mr. MOORE. My recollection is that the point in regard to the Victor Co. was that they had skilled employees who were capable of making special parts, and therefore the Government requisitioned them and also their plant.

Mr. DORIAN. The Victor Co. had a large plant there devoted exclusively to cabinetwork—woodwork. We have no such department in our factory.

Mr. MOORE. You make machines only?

Mr. DORIAN. We make machines and records, and our cabinetwork is made in outside factories. We have a number of cabinet factories all over the country that make our cabinets for us, so that we have no such equipment as that in our factory in Bridgeport.

We have released a great many employees for military service, and for war-industry service, and have replaced them wherever possible with female help.

Mr. MOORE. Have you lost any men due to the fact that others were paying higher wages than you?

Mr. DORIAN. We have lost a great many that way.

Mr. MOORE. Did you lose them to the Government or to rival concerns?

Mr. DORIAN. Well, both. Bridgeport, you know, is a munitions center.

Mr. MOORE. Yes.

Mr. DORIAN. And we have lost a great many of them here; and we have great difficulty to keep just skilled clerical help, for the same reason.

Mr. MOORE. You would be willing to do Government work if the Government could find any suitable to your plant?

Mr. DORIAN. We expect to do some; and if the curtailment, the whittling at this end of our industry were replaced by something of this kind that would enable us to keep our organization going, keep our plant running, I do not think even if we were injured we would make any complaint.

Mr. GARNER. You have not whittled it off at the end since the war began. You say you have increased it 33½ per cent.

Mr. DORIAN. We have curtailed our output 30 per cent.

Mr. GARNER. How did you increase your number of employees 33½ per cent?

Mr. DORIAN. Now, you see, that is not a fair way to take my answer. I began by saying that the Government was now curtailing us, and you were taxing us. I am speaking of now.

Mr. GARNER. Yes.

Mr. DORIAN. If that curtailment continues to such an extent as is indicated by the War Board and is made 60 per cent, we will not have but 40 or 60 per cent of employees; we will not have half of that number.

Mr. GARNER. I was not fortunate enough to be in here when you began your statement.

Mr. DORIAN. I thought perhaps you had not caught that idea, or that I had not expressed it clearly.

Mr. GARNER. As I understood, you told Mr. Moore you in normal times employed 3,000 people.

Mr. DORIAN. Three thousand people.

Mr. GARNER. And at present you were employing 4,500. Now, my deduction from those statements was that you had not curtailed your business up to this time.

Mr. DORIAN. That is true. This curtailment of 30 per cent has been worked out, I should say, within the last 30 days.

Mr. GARNER. By the War Industries Board?

Mr. DORIAN. No; we anticipated them. They suggested we might have to do it.

Mr. GARNER. A 10 per cent tax did not curtail your business?

Mr. DORIAN. No; that was——

Mr. GARNER. Would a 30 per cent tax curtail your business?

Mr. DORIAN. I think it would.

Mr. GARNER. So far as I know, no tax levied by this Government has ever decreased the production of any article, outside of oleo-margarine, the tax on which was not levied for revenue but for prohibitive purposes, and I have heard this same story—not questioning your motives, but your judgment—in each instance, from the automobile people, and from other persons coming along, objecting, saying, "If you tax us it will decrease our business, and we can not get along," and afterwards it has been shown that it has increased instead of decreased their business. Now, we levied this tax last October.

Mr. DORIAN. Yes.

Mr. GARNER. And since that time you have increased your business until the War Industries Board had to come in and say to you, "This is a nonessential industry, and we in our power are going to decrease your production and transfer the labor and material into another channel." Is not that a fact?

Mr. DORIAN. They have not put it in that form, at all. They have said to us that it is a question of transportation. We asked them the direct question, "Is it a matter of labor?" They said, "No, it is purely a question of transportation."

Mr. GARNER. Anyway, they are taking up your business as one of those that is not essential to the conduct of the war, and therefore they are restricting your output in order to save the transportation for something that is more essential; is not that a fact?

Mr. DORIAN. That is the theory of it, yes.

Mr. STERLING. Mr. Dorian, does your company manufacture anything but the graphophone?

Mr. DORIAN. It manufactures what is known as the dictaphone; that is a dictating machine.

Mr. STERLING. The graphophone and the dictaphone?

Mr. DORIAN. That is all; and the records.

Mr. STERLING. And the records. Now, what tax did your company pay on the gross sales last year?

Mr. DORIAN. Under the existing law?

Mr. STERLING. Yes. What did you pay this last year?

Mr. DORIAN. We have estimated, Congressman, that it would run around three-quarters of a million for the year; that is on the gross sales.

Mr. STERLING. That is under the law that was passed last year?

Mr. DORIAN. Yes.

Mr. STERLING. Do you know what the entire music business paid?

Mr. DORIAN. I do not, no, sir. I understand that under that section of the law they estimated a revenue of \$7,000,000.

Mr. STERLING. \$7,000,000?

Mr. DORIAN. Yes; that was the estimate.

Mr. STERLING. Do you think that the fact that a good many of your instruments are used in the Army is any reason why the tax should be curtailed?

Mr. DORIAN. I put that forward as an argument that the industry is an essential industry, and I put it forward as an argument why the industry should have consideration. I will say this, that this argument is advanced in entire good faith. Now, as Congressman Garner may say, my judgment may be very faulty, very defective, and that of course is possible. We feel that with the curtailment of output, the possible shutting off entirely of raw material, and the heavy burden of taxation, we are going to be up against it.

Now, Congressman Moore has said you have got to raise large sums of money. You certainly have, and the industries of the country recognize the fact. They are loyally supporting you in that, and the bulk of that must come from industries. Now, if you render it impossible for the industries to produce the revenue for you, you are not going to get it. There is the whole proposition, as I see it.

Mr. STERLING. Does the Government buy these instruments for the Army, or do the Red Cross and the Y. M. C. A. and the Knights of Columbus and a number of other charitable organizations buy them? They are bought for the Government out of money contributed by the people, and by people who are able to pay it—is not that true?

Mr. DORIAN. Presumably that is true; yes. In that way you have contributed, and I have contributed, and every gentleman on this committee has contributed toward the purchase of those instruments.

Mr. STERLING. Did you sell more machines or manufacture more machines last year than you did the year before?

Mr. DORIAN. Last year, 1917?

Mr. STERLING. Yes.

Mr. DORIAN. We did; yes.

Mr. STERLING. So that the 3 per cent tax on gross sales has not hurt your business any, as yet.

Mr. DORIAN. I am not talking about that. I have not made myself clear to you gentlemen.

Mr. STERLING. I am just asking for information.

Mr. DORIAN. No; it has not.

Mr. STERLING. How high can we put the tax on those instruments without curtailing production?

Mr. DORIAN. I think you have got it as high now as you can put it, and I suggest that as an alternative to you gentlemen.

Mr. STERLING. Production has increased now, under this 3 per cent tax. Do you not think we could make it 5 or 6 per cent and still not hurt the business?

Mr. DORIAN. No; I do not.

Mr. STERLING. And not throw any people out of employment, and not reduce your sales any?

Mr. DORIAN. I will just illustrate my view in this way. We heard something her the other day about the excess profits of surgeons, which suggests a smile to me. You can put a patient on the operating table, perhaps, and operate on him, look at him and you think he is getting along fine, and then you look at him again, and he is dead under the operation. Now, you can try anything that you gentlemen in your wisdom determine to, but you may kill your patient. That is the thought I would put before the committee.

Mr. STERLING. I will tell you how I feel about it personally, and it is not because I want to tax your industry.

Mr. DORIAN. Yes.

Mr. STERLING. I feel we ought to put the highest rate on musical instruments that we can, in order to get the most revenue from it.

Mr. DORIAN. Let me ask you why—

Mr. STERLING. This is a problem we have got to solve.

Mr. DORIAN. And I want to help you. That is my object in appearing before you, of course, and it would be unbelievable that I would not be actuated by interest in my own company.

Let me put this suggestion before you gentlemen. You have got to raise revenue; that is certain. And you have got to raise a lot of it; that is certain. And before we get to the end of it, you have got to raise more. Now, why has there been in the minds of the legislative body the need to select this industry—to discriminate against this industry? That question was up last summer when we were discussing the matter before the Senate Finance Committee.

Mr. STERLING. In what way did we discriminate against the industry?

Mr. DORIAN. We feel that a few industries are selected. Why not tax them all? If you are going to pick out one or two—

Mr. STERLING. All of what?

Mr. DORIAN. All industries.

Mr. STERLING. Now in what way do we discriminate against them?

Mr. DORIAN. We feel a few industries are protected. Why not tax them all if you are going to pick out a few?

Mr. STERLING. All of what?

Mr. DORIAN. All of the industries.

Mr. STERLING. You say yourself it is a class of industry that should be taxed. I think you should discriminate in favor of those essentials that come first, like food, shelter, clothing, because we have them as essentials, even if we concede your classification is right, and certainly we ought to give the other three preference with regard to taxation.

Mr. DORIAN. Let me suggest this proposition: If your minds run in that channel, that if you find you must make this tax, then you leave it just as low as possible because if we find—

Mr. STERLING (interposing). I don't care whether you call it as low as possible or as high as possible, I am willing for you to say we should make it as low as possible in order to make it produce the most revenue, or as high as possible to make it produce the most revenue. I think that is the point we have arrived at. We have got to find out what rate will produce the most revenue. If you can help us on that, I think we will appreciate it.

Mr. DORIAN. It seems to me that is a simple proposition. If 3 per cent, the present tax, is, in your judgment, too low, you think 5 per cent will produce the necessary revenue, you must put it 5 per cent and let the industries survive if they can. It seems to me that 5 per cent as an alternative to my proposition would be the limit that this industry can stand as a tax.

Mr. STERLING. You think it would?

Mr. DORIAN. I think it would.

Mr. TREADWAY. That is your opinion based on what? You have given us no basis.

Mr. DORIAN. I have given you what we estimate would be our payment on gross sales during the present year, if the present rate continues.

Mr. TREADWAY. Where are we going to get the tax?

Mr. DORIAN. The normal tax, the corporation tax, the excess profits tax. We are quite willing you should make the tax on the profits as far as your wisdom dictates. What we want to prevent is anything that will further jeopardize the existence of the industry. Curtailment, lack of raw material, lack of labor, lack of transportation constitute a menace at this time.

Mr. TREADWAY. Don't all of those things you bring up apply to every industry to-day outside of your importations of shellac from Japan—lack of labor, lack of material, all of those arguments apply to every industry in the United States to-day. Why should we discriminate in favor of your industry?

Mr. DORIAN. I wouldn't so regard it as a discrimination in our favor. We are now selected as one of the few industries to be taxed by this special taxation.

Mr. FAIRCHILD. Practically, every industry in the country is making the same complaint that you are making, complaints of overtaxation. You complain that you are overtaxed. The same complaint that you make is made by a great many other manufacturers of other articles also.

Mr. DORIAN. Yes.

Mr. FAIRCHILD. What we have got to do is to increase taxation and not reduce taxation.

Mr. DORIAN. I recognize that you gentlemen have one tremendous problem, and the country recognizes that, and the country recognizes that you are going to do the best with it that you can.

I am here, as many other gentlemen have been here, to tell you what they think they know about their own industries. On taxation as a general proposition I profess ignorance. I am not a student of taxation. But it does seem to me that if you have had this same line of argument from every line of industry, there must be some germ of truth in it, because I can tell you that I would not come here at the behest of my company, or any other company, and make these statements to you, if I didn't feel them to be true, and I presume these other gentlemen who have come here and made similar statements to you are just as high principled in that respect as I am.

Mr. FAIRCHILD. If you think your industry is overtaxed, will you indicate to the committee what industries are undertaxed?

Mr. DORIAN. No; I am not here to plead my industry, and say put it on him. That has been done, and the minds of some of you gentlemen in Congress and in the Senate have been poisoned by that kind of argument. I know it to be a fact that during last summer the same argument was first presented, but not by the talking machine industry, but by other lines of musical instruments, suggesting that the talking machine industry was the great prosperous one, and I have found in my talks with Members of Congress and Senators that that idea has been lodged. Well, leave it there if it is there. I certainly wouldn't stand here before you and say, "Leave me alone and put it on him"; no. You gentlemen are in better position than I to find out where it ought to go, and if you think it could go on our industry, put it there. We are going to loyally and heartily, and in all energy possible, support you in anything that you do. We just hope that we survive.

Mr. SLOAN. Taxation is relatively the same as everything else in this country. The inquiry is for you to say yours is too high or too low, so that the proper thing may be done. I think it is for you to say that yours is too low relative to others, or too high, and insist upon showing us what ones are too low relative to yours.

Mr. DORIAN. I am not in position to do that. You have had gentlemen here before you and they gave you just that sort of hint, and you are probably pretty well fixed in that regard. I am not able to do that.

Mr. SLOAN. Would you object to telling us what profits your company made last year?

Mr. DORIAN. I wouldn't have any objection in the world, and I should do it immediately if I could. I will undertake to furnish that to the committee.

Mr. SLOAN. Can you furnish us an estimate?

Mr. DORIAN. I can not.

Mr. FAIRCHILD. Do you know about the profits of your rival company, the Victor?

Mr. DORIAN. I don't know. According to reports, they are enormous. I have no means of knowing how accurate they are, or how large they are. I can say this, that our company made no such profits as that.

Mr. FAIRCHILD. Your line is considered as being one of the most prosperous and successful in the whole country. And it now has a great prosperous future before it.

Mr. DORIAN. It has a prosperous future before it, yes; but it has been through many periods of quite the reverse. But it is prosperous to this extent, that it is doing an immense volume of business, but it is not making a tremendous profit on that business.

Mr. TREADWAY. Some of that prosperity is due to war orders, is it not?

Mr. DORIAN. We have no war orders.

Mr. TREADWAY. You supply the training camps, and so on.

Mr. DORIAN. Yes.

Mr. TREADWAY. So there is really a distinct war profit in your business.

Mr. DORIAN. Absolutely so.

I thank you gentlemen for hearing me.

**STATEMENT OF MR. EUGENE C. BROKMEYER, GENERAL ATTORNEY FOR THE NATIONAL ASSOCIATION OF RETAIL DRUGGIST.**

Mr. BROKMEYER. To save the time and patience of the members of your committee, I have prepared a statement which I will read with your permission.

The CHAIRMAN. All right, sir.

Mr. BROKMEYER (reading):

NATIONAL ASSOCIATION OF RETAIL DRUGGISTS,  
Washington, D. C., June 15, 1918

The WAYS AND MEANS COMMITTEE,

House of Representatives.

GENTLEMEN: The National Association of Retail Druggists, on behalf of the 50,000 druggists of the United States, respectfully submits the following for your careful consideration:

The pharmacists of the country yield to no class of citizens in their general desire and purpose to make every possible sacrifice which may contribute to winning the war. No industry or profession has thus far made greater sacrifices. It should and must be conceded that this is no time to plead special interests or private concern. The National Association of Retail Druggists does not appear before you, through its official and legal representatives, with any such end in view.

This association does appear for the purpose of impressing upon you the effect of proposed legislation upon the public welfare. If its contentions are not correct, so far as the public welfare is concerned, this association neither asks nor expects its representations to receive consideration at your hands.

According to official announcement, it is proposed to tax incomes, excess profits, and luxuries in the new revenue bill receiving your attention. Doubling of existing taxation of these subjects has been suggested. Before asking for a hearing by your honorable committee, the general attorney of this association inquired whether "luxuries" should be understood to include medicines. He was informed that presumably "luxuries" would include medicines, because luxuries and propriety tax preparations were treated and taxed alike in the revenue act of 1917.

This association contended that "the poor man's medicine" was not a luxury in 1917, and it so contends in 1918. The Congress of the United States decided that "the poor man's medicine" was not a luxury in 1914, when it struck from the revenue bill the proposed tax on proprietary medicines. The fact that more revenue is needed by the Government in 1918 than was required by it in 1914 does not make "the poor man's medicine" a luxury. If it is the purpose of Congress in making additional tax levies to place the increased burdens on those best able to bear them, "the poor man's medicine" should not and can not logically or justly be placed in the category of luxuries. The hundreds of thousands of citizens of moderate or reduced circumstances, who can not afford to employ a physician every time they suffer from minor ailments, or even from those more serious, and who depend entirely upon household or stock remedies accessible and obtainable in the average drug store at nominal prices, have a much larger and more important interest in the cost of these preparations than the retail druggist. What is more, they are deeply interested in the remedial or curative value of the preparations, whereas the druggist is not so much concerned in that respect. It may surprise your committee to learn that more than 50 per cent of the prescriptions presented to the largest chain of drug stores in the United States last year called for proprietary preparations. This is the estimate of reputable physicians as to their value to the public.

Mr. MOORE. You mean to apply that to all medicines used; patent medicines were prescribed to the extent of 50 per cent?

Mr. BROKMEYER. Yes, sir.

Mr. RAINEY. Are these medicines that are prescribed those that are advertised in the papers, and known as patent medicines?

Mr. BROKMEYER. The term "patent medicine" is very much misunderstood—all proprietary medicine. May I call your attention to this in that respect. In the revenue act of 1917 which taxes proprietary prescriptions, the language is so broad and the construction of it by the Treasury Department is so broad that it goes far beyond what is conceived and believed to be the usual patent medicines. Every preparation prepared by retail druggists in accordance with his own private formula, every tincture, however simple, every label which states its virtues, all of these are included in the proprietary tax of 1917, so that the general impression of the patent medicine, as the Member just stated, the ones that advertise are not the only ones. I may mention this that Senator Simmons, in his majority report last year, justified a tax of 2½ per cent on proprietary medicines from the theory that they were patent medicines, and the proprietor enjoyed a monopoly, which is not a fact, because all patent medicines are not patented. There are only 1 or 2 per cent of proprietary medicines that are really patented.

Mr. SLOAN. What is true about them?

Mr. BROKMEYER. They are proprietary medicines, and their proprietor enjoys protection by a trade-mark, but while that is true it so happens in proprietary medicines you have a dozen and sometimes a score of cures or remedies for, say, colds, of one thing and another, and they enter into competition with one another, so they do not enjoy the monopoly that Senator Simmons thinks they do.

Mr. MOORE. A physician writes a prescription for a cough medicine, a medicine we call proprietary medicine.

Mr. BROKMEYER. Yes, sir.

la Mr. MOORE. And the patient takes that prescription down to Mr. Stone's store and obtains a bottle of some well-known compound.

dis Mr. BROKMEYER. Prepared medicine.

d Mr. MOORE. That is the practice, you say, to the extent of 50 per cent of prescriptions written by the physicians in the United States?

Mr. BROKMEYER. Yes, sir.

Mr. MOORE. I don't care to mention the name of any particular patent medicine, but let us take any one of those regularly advertised. Is it the habit of practicing physicians to the extent of 50 per cent of them to give a patient a prescription for that particular bottle of medicine that requires no compounding on the part of Mr. Stone in his store?

Mr. BROKMEYER. The testimony of Mr. Liggett, as the head of a chain of 156 drug stores in this country, before the Senate Finance Subcommittee last year, was to the effect that 50 per cent of the prescriptions presented to his stores during that year by reputable physicians called for proprietary preparations, or stock preparations, known as "nonsecret remedies," found on the shelves of the average druggist.

Mr. MOORE. That is a surprising statement. Let me follow it up by this inquiry. Do the particular proprietary medicines thus prescribed by physicians and sold over the counter of Mr. Stone's store, or any other drug store, escape the taxation by reason of a prescription?

Mr. BROKMEYER. They do not. It is caught by the 2½ per cent tax on the manufacturer's selling price, and that is a point that I desire to present here.

Mr. MOORE. I thought you were making the point of the possibility of escape on patent medicines that are prescribed by physicians.

Mr. BROKMEYER. No; they do not escape. They are taxed—the manufacturer's tax applies to those preparations at the time of manufacture.

Mr. HAWLEY. Is the 50 per cent of proprietary medicines prescribed by physicians in their prescriptions for their patients—are those the proprietary medicines we find generally in the country press, or are they those advertised in the trade journals?

Mr. BROKMEYER. In the main, those advertised in the trade journals.

Mr. MOORE. What is your opinion as to the accuracy of Mr. Liggett's statement?

Mr. BROKMEYER. From such inquiry as I have made from druggists in various parts of the country, it is correct.

Mr. MOORE. I see Mr. Stone sitting there by you. Will you verify those statements, Mr. Stone?

Mr. STONE. I will to this extent: What he means by this is that a prescription that has been very popular this last winter, the bulk of the prescription is a compound made by Park, Davis & Co. A great many prescriptions will prescribe that by itself, and a great many of them will add a grain of codene to it, and I think Mr. Liggett is classing those with his figures of 50 per cent. The formula is published on the label by the manufacturer, and it is what we term in pharmacy a nonsecret preparation.

Mr. MOORE. The physician might add for the purpose of that prescription the use of what is in that bottle with something added thereto.

Mr. STONE. Probably sometimes adds thereto.

Mr. MOORE. Generally you would confirm that statement that physicians are in the habit of prescribing 50 per cent of proprietary medicines?

Mr. STONE. What we term in pharmacy business as nonsecret medicines.

Mr. STERLING. Does the tax curtail the sale of these proprietary medicines?

Mr. STONE. I should say it would.

Mr. STERLING. Has it done it in the last year?

Mr. STONE. We haven't noticed it yet for the reason that there is a great increase in population in the city. I am speaking of the District of Columbia. I am on Pennsylvania Avenue in a transient location, where we are more or less affected by the coming and going of people.

Mr. STERLING. You say it is largely increased?

Mr. STONE. Yes, sir; in volume. The cost has doubled and trebled in many cases.

Mr. STERLING. What do manufacturers tell you about business generally over the country; has it increased or decreased on proprietary medicines?

Mr. STONE. I don't know that I could answer you. I am not in touch with manufacturers of proprietary medicines. We get our drugs from jobbing houses here.

Mr. STERLING. What do jobbing houses tell you?

Mr. STONE. They are affected just like the rest of us—increased cost and output.

Mr. STERLING. Do they tell you they are selling more or less proprietary medicines than before?

Mr. STONE. Most of them are selling more on account of increased population.

Mr. STERLING. Jobbers throughout the country. You don't buy only through jobbers here in Washington, do you?

Mr. STONE. Very largely. We personally belong to a druggists' wholesale association here, and we buy principally through that corporation.

Mr. SLOAN. Who has been paying that tax on proprietary medicines, yourself, or who?

Mr. STONE. We have had to shoulder a great deal of it. We can not increase our prices according to the way it is increased to us.

Mr. SLOAN. Have you increased the price on proprietary medicines, or on prescriptions which call for these proprietary medicines?

Mr. STONE. We have had to increase it.

Mr. SLOAN. Well, I was just trying to find out whether you did or not. What per cent did you increase it?

Mr. STONE. We do not increase it to the percentage that the wholesaler charges us, or the manufacturer.

Mr. SLOAN. They increase it higher than the Government tax amounts to?

Mr. STONE. Take the drug, permanganate of potash. Before the war we bought it for 18 cents a pound, and to-day we—

Mr. SLOAN (interposing). That is a specialty that the great demand for powder manufacture brought about.

Mr. WHITE. You said 18 cents a pound before the war?

Mr. STONE. To-day we are paying over \$5 a pound for it. Take, for instance, quinine. We paid 27 cents an ounce before the war, and to-day we are paying 83 cents. We can not increase the price for an ounce in proportion for the reason they used to buy it by the ounce, and to-day they buy it by pills.

Mr. WHITE. When you were increasing your price, did you take into account the Government tax?

Mr. STONE. No, sir; we only increased our price because the price has increased against us. We have never increased our price unless the price—

Mr. WHITE (interposing). Did you take into account the Government tax at all in increasing your price?

Mr. STONE. No, sir; except in so far as it is added on such preparations as alcohol.

Mr. STERLING. That tax is imposed on the manufacturer, isn't it?

Mr. STONE. He pays the direct tax.

Mr. BROKMEYER. In reply to that inquiry, I must say that the druggists find that they can not pass that tax on to the consumer as well as the manufacturer can to the druggist, because the prices have been established for years, and the people have been accustomed to buy at those prices, and the effect is a reduction in sales. The margin of profit at the average drug store is very small, between 1 and 10 per cent. It is a penny business, you might say, one of infinite detail.

Mr. SLOAN. Even the manufacturers' increase due to the tax is very small compared to the increase due to the general demands on articles like potash and all these other matters, independent of that.

Mr. BROKMEYER. If you will pardon the suggestion right there, perhaps it might be more correct to say that the cost in raw materials from 1 to 1,000 per cent or more has been one of the big factors in the production.

Mr. SLOAN. The tax has not been one of the things that increased your prices?

Mr. BROKMEYER. Except the fact that it accumulates. Don't understand that if it is the purpose of your honorable committee to apply a tax of this sort, or increase taxation generally so that it will affect the retail merchant generally, we will cheerfully subscribe to that. But if that is not the case we contend that there should be a differentiation between drugs and medicines and luxuries, and we gladly subscribe to the fact that you increase the tax on luxuries and

we handle them in great amounts, and we must continue to advocate that a great taxation must be levied on all luxuries.

Mr. SLOAN. What do you call luxuries?

Mr. BROKMEYER. In the drug store we are willing to concede that everything should be comprehended in the definition luxuries except essential drugs and medicines which should include perhaps tooth paste, tooth brushes, and dental articles.

Mr. HAWLEY. Do you call soap a luxury?

Mr. BROKMEYER. Not unless it should be castile soap. Generally speaking, such as is used for the bath and things of that sort I would not regard soap as a luxury. But drugs and medicines are virtuous. Don't misunderstand me. I am not leading anything for any fake medicines, and right here, if you gentlemen will indulge me, I will state that as best proof that there is a misunderstanding as to what is patent medicines all I have to do is to refer you to the last report of the Bureau of Chemistry. Dr. Alsberg claims that the statute passed in 1908 has enabled the Department of Agriculture through his bureau to eliminate a very great per cent of the fake medicines that have been on the market. That is his claim. And in addition the Post Office Department has eliminated a large part of these fake houses by putting fraud orders on them and stopping them from using the mails. And besides that, the Treasury Department has reached a lot of them through the black list as alcoholic compounds, and so that we no longer hear of the old patent medicines, if we look into them, as we used to. So in the statement of this subject of proprietary medicines I will ask you gentlemen to bear in mind that proprietary medicines as such, including worthy and meritorious preparations prepared by local druggists, such as tinctures, are different from the old fake remedies that were advertised long ago.

Now, I will resume my written statement [reading]:

The general demand for proprietary preparations is perhaps best shown by the stocks carried in not only the 50,000 drug stores of the country but the 150,000 general stores in rural districts and the thousands of wagon peddlers who serve rural communities. "The poor man's medicine," therefore, is entitled to and deserves careful consideration when it comes to taxing it the same as luxuries, such as cosmetics, perfumery, and similar articles.

It is frequently overlooked that in the rural communities every rural store carries a stock of drugs, and the rural communities are dependent in a large measure upon the general stores for these remedies.

Mr. STERLING. How are we to tell which of these patent medicines are fraudulent and which are virtuous?

Mr. BROKMEYER. As I said before, the chief of the United States Bureau of Chemistry claims most of the frauds have been eliminated, and the black list of the Treasury Department will tell you which are alcoholic compounds, and the Post Office Department has prevented their being mailed by issuance of fraud orders [reading]:

Confining your attention solely to the consideration of the public welfare further, the revenue act of 1917, against the protest of this association, increased the tax on distilled spirits used for medicinal purposes, thereby further adding to the cost of "the poor man's medicine." If it is proposed to again increase the tax on alcohol for medicinal purposes, this association again respectfully records its protest, on the ground that the effect of such increased taxation together with any increase in the tax on proprietary preparations and the increased cost of raw materials will be to place "the poor man's medicine" beyond the reach of the consuming public, either

as to its selling price, or as to the possibility of a continuance of its manufacture and sale. As pointed out to this committee last year, alcohol is and must be generally used as a solvent, or preservative, or because of its therapeutic value, in the manufacture of medicinal preparations, or the compounding of physicians' prescriptions, so that any increase in the tax on medicinal alcohol must add to the cost of both the poor and the rich man's medicine.

Your honorable committee may well consider how long the public is to be able to obtain necessary drugs and medicines for the preservation of health and life. It is no exaggeration to say that drug stores are closing every day in many sections of the country. Their operation has been made impossible by a number of causes. These include shortage of help, the result of the draft; increase in the salaries of drug clerks and shorter hours of work; advances in the cost of supplies ranging from 100 to 1,000 per cent; a serious curtailment of necessary supplies in the way of so-called "non-essentials," etc.

In short, this association repeats: The question here involved is simply whether or not the people shall continue to be able to obtain drugs and medicines necessary to the preservation of health and life. The retail druggists, who are closest to the people when it comes to the compounding and dispensing of drugs and medicines and who therefore are in the best position to judge the situation, respectfully give warning in all seriousness and sincerity that the public welfare is seriously menaced, so far as the pharmaceutical service indispensable to its needs is concerned.

This is neither the time nor place to advert to the policy of the Government respecting drugs and medicines in an administrative way, except so far as the administrative and legislative policies together may affect the public welfare. Suffice it to say that only recently drugs and medicines have been omitted from the list of articles receiving preferential consideration in the supply of coal and coke and raw materials and the transportation thereof. This association has too much respect for the intelligence of your honorable committee to undertake to argue that ships, aircraft, food, clothing, and the like are more essential to the public welfare than drugs and medicines, or more important considerations in the winning of the war.

For the foregoing and other reasons, which this association will not present lest they consume too much of your valuable time, it is earnestly requested that "the poor man's medicine" be spared from additional taxation and not be treated in the same manner as luxuries.

I may say in connection with the draft there has been unwittingly and unintentionally on the part of the Government a discrimination against pharmacists. The Government has wisely exempted the medical profession and divinity students and horse-doctor students, exempted them from the draft to the extent they are placed in deferred classes, with the result that the coming supply of doctors and horse doctors and ministers and dentists is properly cared for and anticipated; but no such provision has been made with respect to pharmacists, with the result we are being caught at both ends. The draft is taking the drug clerks on the one hand and we have no supply for the future in the way of students. The problem with the druggist to-day is all that he can do to keep his store open. At some stores they are having prescription hours, 8 to 12 in the morning and 4 to 6 in the evening, and so on. That is a pretty serious problem. In the large cities there may well be a curtailment of the number, but if it continues, we are going to come to the point that when you retire at night you may be confronted with an unexpected illness, and you may not be able to get a prescription filled when necessary, and it may be too late when you get it after running around for a while.

In that connection, gentlemen, the Government in its wisdom last winter, when Secretary McAdoo's attention was called to it, had the priority list to include drugs and medicines, placing them in the same class with munitions of war, clothing and food, coal, etc. He did that unhesitatingly. Dr. Garfield, appreciating the need of drugs, excepted drug stores from his suspension order. On the other hand,

drugs and medicines have been omitted on the recent priority list, and we don't see where the druggist is going to get his drugs. Those propositions are putting the retail drug stores in such a position that some of the drug stores are feeling indifferent to it, because there is no profit in it. I am surely and sincerely apprehensive as to the final outcome.

I thank you for your consideration.

**STATEMENT OF MR. HENNEN JENNINGS, CONSULTING ENGINEER OF THE UNITED STATES BUREAU OF MINES.**

Mr. JENNINGS. I have a written statement here that I would like to read [reading]:

Gentlemen, I am asking a hearing from your committee on the following grounds: I am a consulting engineer to the Bureau of Mines, with nominal salary, in connection with the gold industry.

I was requested by the Director of the Bureau of Mines to make inquiry as to the effect of the present economic conditions and new taxation on the gold industry. I returned from my trip to California on December 12 and made an informal preliminary report on December 22, and shortly after embodied my views in an article on the "Gold industry and gold standard," which was published by me in May, with the approval of the Bureau of Mines.

In my visit to Montana and California I met some of the most prominent men connected with the gold-mining industry, many of whom were members of the California Metal Producers' Association. This association has requested the Bureau of Mines to have me appear before you and have communicated with you on the subject, presumably because they approve of the views I have given in my published article. That article was written as a public duty and not in the interest of any corporation or group of individuals.

Mr. Callbreath, who was to have appeared before your committee this morning, is, on account of ill health, unable to be present, and he has informed me that your committee wished me to give my views as to the gold industry and taxation at the time allotted to him.

I have been connected in different capacities with gold mining—between 30 and 40 years—in California, Venezuela, South Africa, England, and Montana and have examined mines in Mexico and Alaska and am conversant with difficulties and cost of producing gold.

I have given much time and thought to the article on "The gold industry and gold standard," which I believe contains much that is pertinent to your inquiry and which I beg to put in evidence.

My aim is to show that the gold industry differs from all other industries in that it is impossible for it to obtain any excess profit during this war period; but, on the contrary, it is proportionately burdened as the price of other commodities used in its obtainment advance and as long as the integrity of the gold standard is maintained by this and other countries.

The advantages of upholding the gold standard should and does rest with the countries that produce the most gold and hold the greatest reserves. We hold the greatest reserves. Great Britain and her colonies and dependencies produce 62.6 per cent of the gold of the world; the United States, second, with 19.3 per cent, while within the territories of the central powers less than 1 per cent is mined.

The production of the gold of the world was at about a standstill for some years before the war. It is now on the down grade. Our liberty bonds are pledges in gold. How can they be redeemed or faith and belief in them kept up if gold outputs are allowed to dwindle, while the bonds multiply manyfold?

Gold is no mere luxury; it is a necessity for the credit and financial unity and strength of the allied countries.

It is thus vital that gold mining should be encouraged as far as possible and burdened as little.

To make clearer my views I ask the privilege of referring to my pamphlet and giving you some figures and reading some passages.

Mr. JENNINGS. In the early part of the pamphlet I have, I endeavored to give some general history of gold output, and I make the statement "that the trading value of gold has been stabilized by history in that no superabundance was ever obtainable, and it has always been necessary to extend labor and intelligence to an extent largely commensurate to the borrowing value of the gold obtained." It will be seen that the mining and the search of gold has extended two, three, or four hundred years before the era of Christianity.

An interesting statement is the comparative modernness of great productions of coal, as also other outputs of minerals. The early records of gold mining throughout the world, and before the discovery of America, and from that time for 424 years, efforts have been made to obtain, and with some success, the total amount of gold produced, and it has been given by statisticians as about \$16,000,000,000, of which nearly 50 per cent has been mined since 1894, or as much as in all the other 400 years previously.

The gold mining has more or less pioneered the other mines of the world, and the modernness of mining can be appreciated by the statement that the output of gold during the last 18 or 20 years, and copper 15 and petroleum 11, have equaled all that we know of since the beginning of 1800; and probably the output of mines in the last 20 or 30 years of the world of all the fundamental minerals—that is to say, iron, coal, copper, petroleum—has been greater than all the records of history. This has resulted in the great modern activities of all industries, because mining has produced the requirements and the raw materials that has aided man by science and discovery and invention to manufacture force. It has been a power for the service of man equal to between two and three billion men's muscular work. I make this little preface to show you the part that gold and mining has played in the industrial world. You will find these statistics regarding gold production on page 5, in which all of the industries of the world producing gold are given from 1912 to 1916, and the universality of gold mining is shown and its limitations are suggested.

I have already spoken of the gold output of the warring nations. The greatest gold fields of the world at the present time are the Witwatersrand Mines in South Africa. The tabulated statement is interesting in showing the cost and yield and dividend. It shows that although this is the greatest gold mine in the world and has cheap labor and coal in proximity the dividends from these producing mines do not amount to over 22 per cent of the whole output. Therefore the margin of profit is not so very great in the greatest gold mine in the world.

I also show the yield in mining costs, on page 12 of the different gold mines of this country, and on page 10 show the production of gold in the United States by States for the years 1914, 1915, 1916, and 1917. It will be seen that the great production of gold has not been from the phenomenally rich mines per ton, but from the ones of moderate yield and comparatively low grade, such as the Homestake mine, which is one of our greatest mines in South Dakota, and the Alaskan Treadwell group of mines. The lowest cost of mining in the world is the Alaska gold and Alaska jewel mines. All the figures are given in the pamphlet.

I would like to read this passage:

"As labor and supplies go up, so must the cost of winning gold be increased, and the purchasing power of gold decrease. An index as to the decreasing purchasing power of gold is obtained by noting some of the increases in costs of supplies used in its obtainment, some of which are given in the table below.

"The advance in cost of hydroelectric power has been small. The cost of coal and petroleum varies in different localities, but where necessary to use for power seriously advances the cost of operations."

In this I show that only an advance (in California, this is), an advance that at the time of 20 per cent in the cost of labor. It has gone up 10 per cent more. The increase in the labor is accounted for on account of the inability of the low-grade mines to pay high wages on the small margin of profit, and it has resulted in California and in Alaska in the best men going away from the gold mines and seeking employment in copper and other mines where they can get higher wages. Steel in California has gone from 40 to 200 per cent; manganese, 170 per cent; explosives, 75 per cent; machinery, etc., 75 per cent; and miscellaneous 10 to 200 per cent.

The operators also feared that the Government might consider gold a luxury and rule against it in obtaining supplies. Therefore they were nervous on this ground; but I believe, if you take the broad view that I do, that gold is not a luxury. It should be encouraged in its production and no such ruling made against it. The trouble of it is how it can be helped in any very great way. Gold has a fixed price. It is the one thing that is fixed, being the standard of value. It is so many grains an ounce. A troy of gold has a value of \$20 and some fraction.

Mr. RAINEY. What fixes the value of gold?

Mr. JENNINGS. That has been fixed by international agreement and custom.

Mr. RAINEY. I think it was fixed by an act of law in England.

Mr. JENNINGS. Yes; I have forgotten how far it does go back to, but the exchange of gold, its value is based on its gold content, gold content of the coin, so many grains, so many grams.

Mr. RAINEY. How is that international agreement evidenced?

Mr. JENNINGS. The coinage in the different countries is known to the other countries, and it is all regulated on the basis of weight or purity of gold in the coin.

Mr. RAINEY. Isn't it all based on the price England is ready to pay at any time—the Bank of England—in the act referred to.

Mr. JENNINGS. That may be. We have made our dollar (I have forgotten it; it was many years ago) on so many grains of gold.

Mr. RAINEY. Right in that connection, leading up to something, we recognize you as an authority on monetary standards. Do you think gold is going to be the standard of value when the war is over in the world?

Mr. JENNINGS. What other standard can we get better?

Mr. RAINEY. I am leading up to another standard. And you think it is to the interest of the allied nations to maintain gold as the standard because they have got 90 per cent of the gold production of the world in their bounds?

Mr. JENNINGS. Yes, sir.

Mr. RAINEY. What is it that gives gold its money value? The fact that it is valuable in the arts, the fact that it is valuable as jewelry, and desirable on those accounts has given it its value from almost the beginning of time, hasn't it?

Mr. JENNINGS. That gives it its stress value.

Mr. RAINEY. It has been always the precious metal of the world

Mr. JENNINGS. Yes, sir.

Mr. RAINEY. How much is an ounce of it worth?

Mr. JENNINGS. \$20 and a fraction. I have forgotten.

Mr. RAINEY. Now, certainly in the world there has developed a precious metal, valuable in the arts, more valuable in the arts than gold, more valuable than gold or any other metal in chemistry, which is worth per ounce, we will say, eight or nine times as much as gold. Is not that metal now the precious metal of the world?

Mr. JENNINGS. It is more precious; yes, sir.

Mr. RAINEY. Do you know what the value of iridium is now?

Mr. JENNINGS. No; it changes so rapidly.

Mr. RAINEY. It can't change in this country any more, because we have placed a value on iridium of \$170 an ounce.

Mr. JENNINGS. Iridium is found in connection with platinum. That is \$105 an ounce.

Mr. RAINEY. We have just placed \$105 the value per ounce on platinum.

Mr. JENNINGS. Yes, sir.

Mr. RAINEY. Do you know what the value of palladium is per ounce?

Mr. JENNINGS. No, sir.

Mr. RAINEY. We have just placed a value of \$130 an ounce on that. They are worth more than gold now. They are the precious metals in the world. We can't fight wars without them. They are used in so many wars that that gives them, inasmuch as this is a world war, a still added value. I want to present this question to you for your consideration. I don't know whether you will be able to answer it now, but you will be in the record. Germany controlled nearly all the world's supply of platinum, palladium, and iridium until 1901, and until the war broke out she was the controller of the American supply which came from the Ural Mountains, and so on until the outbreak of this war. It doesn't exist any more. Russia produced 80 per cent of these metals which are the most precious metals in the world, and Germany controls the supply in the Ural Mountains. If, after the war is over, Germany should still continue to be a large manufacturing country and still retain control of these three precious metals and should monopolize these metals—one of which is worth over nine times as much as gold, and the cheapest of them, platinum, which is worth over five times as much as gold, what effect would it have upon the gold standard in the world?

Mr. JENNINGS. In the first place, I don't think simply the preciousness of gold makes its utility of the standard. Overpreciousness makes it impracticable and overpreciousness is the trouble with platinum and iridium. There isn't enough to act as trading counters.

Mr. RAINEY. The Russians have never developed the Ural Mountain supply as the Germans will develop it.

Mr. JENNINGS. No; it is a very small amount in quantity compared to gold the output of gold throughout the world. The universality of gold as shown in this table shows that it is appreciated as to its reasonableness, and in this table it is shown that gold is mined in 60 different countries. Therefore, its universality and its not over preciousness is in its favor.

Mr. RAINEY. It has always been the most precious metal in the world until the last two or three years?

Mr. JENNINGS. No; platinum has always kept even with gold—at least, as a rule.

Mr. RAINEY. But we never realized its value as we do now.

Mr. JENNINGS. We need it for special purposes, I grant you, but it isn't simply precious.

Mr. RAINEY. Do you know about the world's supply of platinum—the world's stores of platinum?

Mr. JENNINGS. My memory is not clear on that. It is comparatively a small number of ounces. I shouldn't think it would amount to—I don't like to guess, but it is very small compared to gold. I can get you an accurate figure from the bureau any time you like, but I have an idea somewhere in the neighborhood of 100,000 ounces.

Mr. SLOAN. Platinum became valuable largely when electricity and lighting came into vogue, did it not?

Mr. JENNINGS. Yes; it has been used for a good many purposes. We are using it in the production also of nitrogen.

Mr. SLOAN. For the last half century platinum has run almost parallel with gold—its value?

Mr. JENNINGS. Yes, sir.

Mr. SLOAN. But this is true, in urging its use for a good many purposes. It don't burnish like gold, it is not as desirable for the vision as gold, and it yields to certain acids (anything that has lead in it), so that it may be lost in a very short time?

Mr. JENNINGS. It is really more valuable in arts now, for electrical purposes, and chemical purposes, and in laboratories—and it is very useful.

Mr. SLOAN. It has an element of preciousness in not being in quantity enough to make it bulky.

Mr. JENNINGS. Yes, sir. I have tried to make the point in this little booklet of showing you money, the basis of money is faith; there is no reality to money beyond an inducement to workers to produce. The production of the worker. Gold has, by its very history, extending over so many years, and being regarded as the counter of value by the human race, has inbred a belief in its value. It has been supported in that belief very curiously by almost the constant difficulty of attainment that nature has demanded for her gold, efforts from man equivalent to the value man has placed upon gold as a trading counter. Therefore its great reality is the basis of work of hand and brain to get it. You just read some of our prospectuses of sanguine gold miners, and you would think that gold would flood the world, but it hasn't.

Mr. SLOAN. It is more generally distributed the world over than any other important metal.

Mr. JENNINGS. Its broad distribution, that is given on this page here, on pages 5 and 6.

Mr. SLOAN. Do you know any important section of the globe where the existence of gold has been excluded by careful research?

Mr. JENNINGS. No, sir; I do not at the moment

Mr. SLOAN. It is found in every State in the Union, is it not?

Mr. JENNINGS. In small quantities. Platinum, unfortunately, we produce but very little of it. We have some platinum in connection with our dredging operations in California. It is obtained in cleaning up the gold, but I think it is but a very small per cent. And the other places that it is found is Colombia, in South America, and it is more encouraging there than any place outside of Russia. Russia, as has been stated, is the great supplier of platinum.

Mr. SLOAN. Yes; in the Ural Mountains, but the very limited bounds of production or area of platinum would exclude it being a standard for the world, wouldn't it?

Mr. JENNINGS. Yes, sir.

Mr. SLOAN. And its value would also exclude its feasibility of being handled.

Mr. JENNINGS. Yes, sir.

Mr. SLOAN. And it must have some weight—some general indestructible weight, and pass in the laboratory. Platinum will stand more heat. It will yield to the fumes quicker than gold. Isn't that true?

Mr. JENNINGS. Yes; it is quite indestructible, as a whole.

Mr. SLOAN. Yes; I quite agree with you about its general indestructibility.

Mr. RAINEY. The world's production of gold in 1916, from your interesting compilation here, page 6, amounts to \$457,000,000.

Mr. JENNINGS. Yes.

Mr. RAINEY. The world's production of platinum, 89,000 ounces.

Mr. JENNINGS. Eighty-nine is it?

Mr. RAINEY. Yes; 89 ounces. At the present value of platinum that would be worth nearly \$100,000,000.

Mr. JENNINGS. Yes.

Mr. RAINEY. Therefore before the war, that is on the basis or 1916 output, and the present platinum value, the value of gold mined in the world is only four times the value of platinum mined in the world, so the difference isn't so great after all in value.

Mr. JENNINGS. You say 100,000 ounces?

Mr. RAINEY. No; roughly it is worth \$100,000,000 at the present time.

Mr. JENNINGS. Isn't it \$10,000,000?

Mr. RAINEY. The world's production of platinum is about 90,000 ounces.

Mr. JENNINGS. It is \$10,000,000, I think.

Mr. RAINEY. I am just guessing at this.

Mr. JENNINGS. Figures are getting so colossal these days it would be very easy to get them wrong. I think I am prepared to come to the point you wish me to come to, as to the taxation of gold.

Mr. RAINEY. Yes; it is about \$10,000,000. I was mistaken.

The excess war profits tax has been somewhat of a puzzle to many of the operators. The crux of the whole matter is how rightly to determine the rate per cent earned on the invested capital; that is, the result of dividing the net income by 1 per cent of the capital.

If the rate obtained is between 7 and 9 per cent there is no tax to be paid. If above 10 per cent it progressively mounts until a taxation of 60 per cent of all net profits can be imposed.

Difficulties at once arise in the interpretation of what is invested capital and what net income, and what are the legal deductions from ordinary income allowable before net income is ascertained. Invested capital may have an inflated showing in some system of accounts kept, while in others it may be over conservative in order to provide against the exhaustion of the mine.

The interpretation of the returns and the bookkeeping of a gold-mining corporation becomes a most serious matter. It would seem from a reading of the law that a premium is placed on making a showing of high or inflated capitalization; also that large outputs and high yearly incomes are so penalized, and especially with low capitalization, that it would become a temptation to decrease outputs and take two or three times the usual length of time for mining the gold, as when once mined all hope for further profit of working is gone.

To illustrate, let us assume an invested capital of \$1,000,000 and a net income of \$1,000,000 in sight in the ground and with little hope of more, but which may be taken out in one or more years. What is the proper course for the management to recommend to its shareholders? If it is taken out in one year the rate is 100 per cent and the company must pay the Government \$479,400. If in five years, the rate is 20 per cent and the company would have to pay a tax equal to \$23,900 by 5, or \$119,500. If in 10 years, the rate is 10 per cent and the company would have to pay a tax equal to \$1,400 by 10, or \$14,000.

Should a small group of miners or prospectors form a small company of, say \$10,000 to \$100,000 capital, and expend the entire capital, but strike it rich and take out as net profit an amount equal or more than the capital put in, in such case, would not they be obliged to turn over to the Government nearly half of their profits? And under such conditions is not the search for new gold discovery greatly discouraged by the tax?

It is the writer's view that the elimination of all excess-profit taxes on gold mining and the encouraging of maximum outputs might in reality bring in greater revenue to the Government than the tax, for larger dividends paid to shareholders would mean greater revenue from individuals.

Those are the main points that I want to show you in connection with gold, the necessity for it, mining production in order to stabilize your credit which has been pledged on the gold basis.

Mr. OLDFIELD. How much with respect to the curtailment of production do you estimate the present tax of the law?

Mr. JENNINGS. It is very difficult what to say. There are so many factors in it. It depends on the locality.

Mr. OLDFIELD. Would that be involved in placer mines?

Mr. JENNINGS. Yes, sir; in all classes of mines. Some of them are just on the verge of profit, and some of them are making liberal profits. So gold mining, no matter how rich it is; as I hope I have shown, can't make an excess profit during this war. It must make a loss during the period compared to what existed before the war. And that is the reverse of most any other commodity.

I think there is this difference: If we could do, which is a very difficult matter, you want to raise revenue, and I appreciate that, but you also want to get the maximum amount for your revenue you raise. If under present conditions; the real standard is the difficulty of obtaining gold, and we are having inflation of values which the governor (which is a governor) is not sensitive but it takes time to adjust, it will in the end lower issues of gold \$2 certificates where we ought to be issuing them for \$1 for prices that existed before the war. And as we get back that lower price, so automatically will the gold mines be encouraged to go on. They will be shriveled up and stopped if the price is advanced beyond certain limits. If prices go up that way, we are pledging our credit unnecessarily. If we could bring lower prices in certificates and gold—I think it is not only a simple matter of one or two gold corporations, but it is a matter of great public concern demanding the thought of our best financiers—this gold production and gold standard.

Mr. OLDFIELD. I think your argument is quite convincing with reference to prospecting, but this committee would have to have the right to take for granted the patriotism of mining operators not to curtail production.

Mr. JENNINGS. If you appeal to them on patriotic ground I think they would respond and they would also respond readily. In some cases that I know they would rather jog along with hardly any profit in order to hold together their organization they have at the present time in the business. It is a public-spirited thing to do, but certain conditions come about that you must shut down when you are at an absolute loss. You can't continue it. And there are a good many mines on that ragged edge now, and it takes all of the allurements for new mining of gold with the advanced cost, and I think gold mining ought to be recognized as a necessity for stabilizing our credit and given its place in the freighting of its necessities. And it doesn't make as much demand on railroads as many other things because the product of the mines is very concentrated and supplies getting in are small comparatively, especially if you can use hydroelectric power and do away with coal. And I think a ruling as to its necessity, its usefulness as an upholder of credit, should be established. I really think those cases might come. I don't oppose the taking off of ordinary taxes from gold mining at all—the ordinary taxes. I think it is just that they should pay, but they are not getting an excess profit, and therefore the excess profits tax on gold is illogical, and by stimulating gold I do not think that the individual who holds gold-mining stock and obtains dividends should have any preferential action in his favor whatever. The individual should be treated as all others. It is simply the industry itself. The corporation or group of people that are working the gold mines should not be taxed for something they do not get. They don't get excess profits by the war and it is not possible for them to do it.

Mr. RAINEY. I find that the world's production of crude platinum for the back years, prior to the war, is 313,529 ounces, of which Germany produced 300,000 ounces.

Mr. JENNINGS. Of platinum?

Mr. RAINEY. Yes, sir. At the present prices, prewar production of platinum would amount to something like \$34,000,000. I don't find any data here as to the world production of irridium, which is worth much more than platinum, nearly twice as much. In other words, at the present prices, and prewar production, the production of platinum amounts to about one-eleventh of the value of gold production in the world. That is about the ratio.

Mr. JENNINGS. Yes.

Mr. RAINEY. And if gold is valuable on account of its preciousness and value, it occurs to me that irridium, palladium, and platinum might make a desirable monetary metal after the war on account of its value and scarcity; and if irridium is worth 9 times as much as gold, if Germany should make gold a secondary metal, as we used to have silver the secondary metal, the ratio would only be there about 1 to 9 in order to make platinum the precious metal and give gold the ratio of silver we used to have when it was 16 to 1. So I think that question is worthy of your consideration to make a study of the standards.

Mr. JENNINGS. Yes, I will look into that question further. But it isn't simply the question of preciousness of gold that I am urging at all. For instance, if you want simply the preciousness of material, we have diamonds which per weight is so much more precious than iridium, and yet you wouldn't think of diamonds as a standard.

Mr. RAINEY. It wouldn't be desirable as a medium of exchange because of the difficulty of handling and coining it.

Mr. JENNINGS. Yes. What we want is a medium of exchange. The great usefulness of gold exchange seems to me is that it is understood in so many different parts of the world, and the difficulty of obtainment is big, and it is taken in one country and another on the basis of the weight and purity, owing to the certificate of coinage, simply on the weight and purity. But its ductility makes it easy of coinage. It is much easier to coin than platinum. The difficulty of platinum is it would not be as easy to coin as gold and it has a great many qualities of appealing to mankind as a counter of exchange that has taken place so many hundreds of years. Of course; I think we can not ignore that the precedence of history has given a preference to gold.

Mr. RAINEY. Ductility of platinum depends on the amount of iridium you put in it. It is just as ductile as gold before you put in iridium and palladium. You have made a very interesting statement.

Mr. SLOAN. Mr. Shorthill, a resident of York, Nebr., secretary of the Farmers' Cooperative Elevator Association of the Northwest, desires to submit a provision to the proposed bill preventing a profit of mutual selling and buying associations to the extent that such profits are returned to the members, not, however, to exempt any part held as undistributed at the end of the year and necessary to meet the immediate prospective expenses of the association's business, and he asks to include the statement in the record. He is obliged to leave.

(The statement referred to will be supplied later.)

The CHAIRMAN. All right; let it go in.

(Whereupon at 12.30 p. m. the committee adjourned until Monday, June 17, 10 a. m.)

COMMITTEE ON WAYS AND MEANS.

HOUSE OF REPRESENTATIVES.

SIXTY-FIFTH CONGRESS, SECOND SESSION.

CLAUDE KITCHIN, North Carolina, *Chairman.*

HENRY T. RAINEY, Illinois.

LINCOLN DIXON, Indiana.

CORDELL HULL, Tennessee.

JOHN N. GARNER, Texas.

JAMES W. COLLIER, Mississippi.

CLEMENT C. DICKINSON, Missouri.

WILLIAM A. OLDFIELD, Arkansas.

CHARLES R. CRISP, Georgia.

GUY T. HELVERING, Kansas.

GEORGE F. O'SHAUNESSY, Rhode Island.

JOHN F. CAREW, New York.

GEORGE WHITE, Ohio.

JOSEPH W. FORDNEY, Michigan.

J. HAMPTON MOORE, Pennsylvania.

WILLIAM R. GREEN, Iowa.

CHARLES H. SLOAN, Nebraska.

NICHOLAS LONGWORTH, Ohio.

GEORGE W. FAIRCHILD, New York.

JOHN A. STERLING, Illinois.

WHITMELL P. MARTIN, Louisiana.

WILLIS C. HAWLEY, Oregon.

ALLEN T. TREADWAY, Massachusetts.

JOHN B. WALKER, *Clerk.*

## REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Monday, June 17, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Garner, Dickinson, Oldfield, Crisp, Helvering, O'Shaunessy, White, Moore, Green, Sloan, Longworth, Sterling, Martin, Hawley and Treadway.

### STATEMENT OF MR. FREDERICK JENNINGS, OF BOSTON, MASS.

Mr. JENNINGS. I represent what is known as the Expressmen's League of Boston. The Expressmen's League is made up of about 200 members. They are the owners of various express lines that run from Boston to various points in New England. Some of the express companies are corporations and some are owned by individuals.

Mr. GARNER. There are 200 different firms, corporations, or organizations that handle express business out of Boston?

Mr. JENNINGS. Yes, sir. Boston is probably the only place in the United States that has a similar condition of affairs.

Mr. GARNER. I was about to say that that is something new to me.

Mr. JENNINGS. It was my experience recently to try to find a similar condition and I was unable to do so. I want to say at the outset that we do not come here to-day to object to any tax; on the contrary, we have been working with the Internal Revenue Office at Washington and Boston with a view to collecting the tax. From our experience, however, we believe we know of two ways to levy a tax without increasing any burden. One way is to increase the rate of the parcel post. I imagine that the members of this committee have probably heard of this suggestion before, but we want to present it to you from our standpoint. You may well imagine that the introduction of the parcel-post system caused a great hardship to the express companies, but we do not place it on that basis. When the parcel-post system was inaugurated, or just prior thereto, it cost 64 cents to send a bundle from Boston to a point within the 150-mile limit; that is, a bundle weighing 5 pounds. To-day you may send a bundle weighing 5 pounds within that same limit for 9 cents.

Mr. GARNER. Would it interfere with your argument if I asked you a question?

Mr. JENNINGS. Not in the slightest.

Mr. GARNER. You are not opposing the parcel post as a policy of government, are you?

Mr. JENNINGS. No, indeed.

Mr. GARNER. Well, that brings us to another basis. What is your idea about the Government charging the cost of transporting the articles that go through the mail? Should they charge less or try to get the actual cost of the transportation?

Mr. JENNINGS. They should make the parcel-post end of the Postal Service bear its share of the burden.

Mr. GARNER. You agree to the theory, then, that the Post Office Department ought not to be a money-making institution?

Mr. JENNINGS. Yes; I agree to that.

Mr. GARNER. And that each piece of mail, as nearly as possible, should pay its way, the cost of handling it and transporting it from one point to another.

Mr. JENNINGS. That is right.

Mr. GARNER. If the parcel post is based on that system and if it is paying its way, what criticism would you have to make of the rates?

Mr. JENNINGS. I should say that as the Government has seen fit to raise the letter rate, a rate that affects every individual in the country—

Mr. GARNER (interposing.) But let us get back to the original premise. It costs the Post Office Department \$320,000,000 a year to run its business. The parcel-post rates, let us assume for the sake of the argument, are based on the cost of transportation; that is, the cost of handling the parcel-post business and the transportation of it. If that is true, then why should we make the rates higher? I anticipate that you are going to say that the letter-rate postage more than pays its way, but on the second-class matter we are losing from \$70,000,000 to \$80,000,000 a year, and if we could raise that rate we would be able to cut the letter postage to one cent, but my information is, and I would like to know whether you have any information on that subject, that the parcel-post rates are based upon, as nearly as possible, the actual cost of transportation.

Mr. JENNINGS. I think I can perhaps answer that—

The CHAIRMAN (interposing). And makes a little profit?

Mr. GARNER. I do not know exactly about that.

Mr. JENNINGS. We will assume that when this rate was fixed at 5 cents it was a fair and reasonable rate; no one denies that it was a fair and reasonable rate, but everybody knows that since that rate was fixed the cost of doing everything has increased and yet not one cent has been added to the parcel-post rate.

The CHAIRMAN. They pay the railroads no more for hauling the parcel-post matter than they did before.

Mr. JENNINGS. The cost of everything, as I understand it, in connection with every kind of business, has increased.

The CHAIRMAN. But the Government has contracts with the railroads for hauling it at so much, and they have the salaries of the postal clerks, the rural carriers, the postmasters, and the clerks in the post offices.

Mr. JENNINGS. I understand, but there are demands being made every day to increase those salaries. I understand further, although I may be wrong, that the purpose of this hearing is to find a way to get money.

The CHAIRMAN. That is right.

Mr. GARNER. In that connection I want to say, as one member of the committee, that it was not the purpose of this committee, in adjusting or undertaking to adjust the second-class mail matter, to raise revenue, but it was more its purpose to have it adjusted upon the proper basis of what they should contribute to the Post Office Department for hauling their business. We did put an additional 1 cent on the letter postage for the purpose of getting additional revenue, but we will probably fail in that because the increase in salaries that has been put into the post-office bill since the passage of the last revenue bill will probably absorb the entire increase obtained from the 1-cent postage. But it is rather anomalous that to-day we have a number of gentlemen appearing here advocating the taking off, the reduction, or readjustment of the rates on second-class matter, and you are appearing now asking that the rate on fourth-class matter, or parcel-post matter be increased.

Mr. JENNINGS. Of course, I am not here to say what your policy should be.

Mr. GARNER. I understand that.

Mr. JENNINGS. I assume you are here to find ways for raising money. Now, if that rate of 5 cents was a reasonable rate when you started and everything has increased since then, it can not be said that it is a reasonable rate to-day. Your chairman has said that you have contracts with the railroads, and that your expenses have not increased, but for some reason you have seen fit to increase the letter rate in order to pay expenses.

Mr. GARNER. No; we increased that rate primarily, at the time we passed the law, for the purpose of raising revenue, but since the passage of the revenue bill there have been these increases in salaries to which I have referred and which will probably absorb all of the increased revenue that will be obtained from that source. I would like to have you submit later, if you are not prepared to do it now, a brief statement showing whether, in your judgment, the present rates on parcel-post matter are such as to result in that matter paying its way, because my idea of the theory of the Post Office Department has been that each piece of mail should pay its way, that is, the cost of transporting it and the cost of handling it, and that the Post Office Department should not in any way be a money-making or a money-losing institution.

Mr. JENNINGS. If this committee has adopted the policy of not using the Postal Service for raising revenue, I have nothing further to say on that point, but if, on the contrary, you have already increased the letter rate for the purpose of raising revenue, then I say that you should increase the parcel-post rate.

Who is affected by the parcel-post rate? It is the person who uses it. Now, we can eliminate for the minute all the mail-order houses and take the individual who sends by the parcel post. He should not be allowed to send a parcel for less than a reasonable rate, and if you fixed that rate under previous conditions it should now be changed. Take the analogy of a tax for street betterments. If a man has a sidewalk or a sewer passing by his house, no gentleman here would say that the cost of that should go into the general tax levy, but that the man who receives the benefit should pay the cost of it. Therefore, gentlemen, it seems to me that I am driven to the first proposition, that if you are going to use the Postal Service to get revenue,

then there is an opportunity, because there is one thing that has not been touched yet. To send a bundle by express between these same points that I have spoken of, the same kind of a bundle, would cost between 20 and 25 cents, and yet you send by parcel post the same bundle for 9 cents, and still you have not touched it, have not touched the rate for some years, in fact, never have touched it. It strikes me, gentlemen, that there is one place where you can get revenue and lots of it, and still not do any injustice.

Now, some gentlemen might say that we want to be competitors of the express companies; we want to have the rates so fixed that they will send by parcel post, so that the Government will have the inside track. All right, but see the difference between 9 cents and 20 cents. You could double your rate and still get all the business and still make the man who sends the parcel pay the cost.

Mr. WHITE. Have express rates increased?

Mr. JENNINGS. Slightly. The effect of the parcel post has been to drive expressmen out of business; that is what has happened.

Now, gentlemen, I want to take up the second proposition, and that is in regard to the tax now in effect upon the parcel-post rates. You will recollect that the parcel-post section of the revenue act says that there shall be a tax of 1 cent for each 25 cents or fraction thereof, but that there shall be no tax under 25 cents; but when you come to the express law—and so far we have been able to stand up under it, and, you understand, gentlemen, we do not pay the tax; we do not pay it—you say 1 cent for each 20 cents or fraction thereof, and say nothing about a minimum. Just look at that. Every package—not every package, but a large percentage of the packages—sent by parcel post, by reason of the decreased rate, carry a rate under 25 cents. Think of it. Think of the number that are sent under 25 cents and which do not pay one cent of tax. But the minute you send a parcel by express the tax attaches immediately. In other words, there is a discrimination, and there can not be any two ways about that. There is a discrimination between the parcel post and the express companies.

Mr. GARNER. Did you appear before the Finance Committee of the Senate when the last revenue bill was under consideration?

Mr. JENNINGS. I did not.

Mr. GARNER. Do you know anything about the history of this particular provision in the bill?

Mr. JENNINGS. I understand from hearsay only that there was a discussion of this; that it was put in and taken out somewhere. But I think if I can satisfy you gentlemen that there is a discrimination you will remove it. What is going to be the effect if you remove the discrimination? If you do justice to the express companies, what is your committee going to do? You are going to raise thousands and thousands of dollars simply by removing the discrimination. When you send an article by freight it has a tax on it of 3 per cent of the charge.

Now, I want to say right here, gentlemen, that I think this act can be worded differently, so that you can remove lots of the difficulties. We have been for months trying to find out what a terminal meant. The law says over regular routes between fixed terminals. Now, if you will just use the word "locality" instead of terminal it will take away a lot of the difficulties. A man says, "I do not have a termi-

nal. I carry my goods to my barn, and I do not have a terminal." That is not what it means, gentlemen; it means locality. In New York City the retail trade says, "We are not collecting any tax," and here we have been collecting \$10,000 a month in Boston—perhaps more; and in New York not a dollar. Why? They have taken the act and say, "We have no terminal; we go here and everywhere." They come to us and say, "We carry the bundles from the merchants to the houses of the customers, the houses of the consignees; we do not have any terminals." That is not what it means, but they are taking advantage of it.

Mr. MOORE. Are you going to suggest an amendment to the act?

Mr. JENNINGS. Well, I would suggest a change in that word. My main purpose in coming to Washington is to remove the discrimination which I have shown exists.

Mr. MOORE. May I ask you one or two questions about your business?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. The Government has recently taken over the large express companies—the Adams, the United States, and others—has it not?

Mr. JENNINGS. I had not known that; I understood there was talk of it, but whether they have actually done it or not, I do not know.

Mr. MOORE. I understand they have been taken over, but your companies have not been taken over.

Mr. JENNINGS. No, sir.

Mr. MOORE. You say you represent 200 express companies running out of Boston?

Mr. JENNINGS. Yes, sir; to different points in New England.

Mr. MOORE. That is an unusual condition, like unto which there is no other example in the United States?

Mr. JENNINGS. No.

Mr. MOORE. How large are those companies?

Mr. JENNINGS. Various sizes; they operate by the use of large trucks.

Mr. MOORE. Are they privately owned, or are they incorporated?

Mr. JENNINGS. They are made up of corporations and individuals.

Mr. MOORE. Individuals who have united into one association, which you represent?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. Just how do they operate—by motor trucks?

Mr. JENNINGS. They operate in all ways. For instance, in going to Portland they would collect the articles in Boston, put the goods in a freight car, and deliver them the next morning in Portland.

Mr. MOORE. They use the Boston & Maine road, do they?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. They use the railroads?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. They have a joint arrangement by which they do that?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. Does the Jordan & Marsh Co.—that being your largest company in Boston and taking that as a sample department store—use your companies?

Mr. JENNINGS. Yes, sir; a great deal.

Mr. MOORE. Or do they use the parcel post?

Mr. JENNINGS. They will use the express companies for near-by places; they will send out, we will say, by one company 200 or 300 bundles a day, and they take them at a special rate. The rate averages about 12½ cents.

Mr. MOORE. If they use your companies do they obtain an advantage over the parcel post?

Mr. JENNINGS. Yes; I should say so.

Mr. MOORE. If the parcel-post rates are lower than the rates of your companies this query arises: Why do they not use the parcel post altogether?

Mr. JENNINGS. The rate is now lower, but they do not use it because they have this rate which is so small—we will say, 10 or 12½ cents—and they would rather have one man to deal with, and the man comes and gets the goods; if they use the parcel post they must take the goods to the post office, and that extra expense, the difference between 9 cents and 12 cents—

Mr. MOORE (interposing). Then, in order to have that handling of the goods, which they do not obtain through the post office, they would prefer to pay the extra rates that your express companies charge than to use the parcel post?

Mr. JENNINGS. Well, they do use them to a certain extent, but they also use the parcel post for more distant points; that is, our companies that run to Portland, to Springfield, and to Worcester are the ones that are hard hit by the parcel post.

Mr. MOORE. You have spoken of certain disadvantages which you say your companies suffer, but the question naturally arises: Why do your companies continue to live and do business if the parcel post gives such decided advantages to the shippers, as you have indicated?

Mr. JENNINGS. The answer is that many have not lived, but those that have lived do a different class of business to make up the deficit, namely, trunks and the goods of householders, bringing them into Boston.

Mr. MOORE. Then your companies hold their business by reason of the fact that they can carry packages which the parcel post will not carry?

Mr. JENNINGS. Oh, yes, indeed.

Mr. MOORE. And that they also come to a store and make a complete transfer without rehandling?

Mr. JENNINGS. That is it.

Mr. MOORE. Which would be necessary if the parcel post were used?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. That is your point, is it?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. As to these inequalities, you say that under the revenue law everything which you carry is taxable up to 20 cents?

Mr. JENNINGS. Everything, whether it is 20 cents or over or less, no matter what it is.

Mr. MOORE. And there is an exemption on what is carried by the parcel post up to 25 cents.

Mr. JENNINGS. Exactly.

Mr. MOORE. And you set that out as a discrimination against your companies?

Mr. JENNINGS. That is right.

Mr. MOORE. Have you made any calculation as to what additional revenue would be produced if we attempted to equalize those conditions?

Mr. JENNINGS. No; I have not. I have not the information at hand and I imagine your guess would be as good as mine. But if you acted upon my suggestion every bundle that is carried by the parcel post and carries a rate of less than 25 cents would be taxed at 1 cent.

Mr. MOORE. That is, less than 25 cents.

Mr. JENNINGS. Yes; if you removed the discrimination and made all bundles bear the same tax.

Mr. MOORE. I understood you to say that under the law now—and I think that is the fact—the tax does not go on unless the parcel-post rate is above 20 cents?

Mr. JENNINGS. Twenty-five cents.

Mr. MOORE. That is the fact?

Mr. JENNINGS. Yes, sir.

Mr. MOORE. But everything you accept for express carriage is taxed up to 20 cents?

Mr. JENNINGS. Yes; and over. Now, to illustrate—

Mr. MOORE (interposing.) Then your contention is that you do not escape anywhere, while the Government does?

Mr. JENNINGS. Yes, sir; that is right.

Mr. GARNER. Suppose we levied a percentage tax on the gross receipts from each package, carried either by the parcel post or by the express companies, that would be a fair tax, would it not?

Mr. JENNINGS. It would be fine. That brings up another point: You can see the tremendous amount of bookkeeping the expressmen have to do. For illustration, they carry a bundle and charge 10 cents; that is, for a bundle of a certain size; if it is twice that size it is 20 cents, or if it is three times that size it is 30 cents. Now, in keeping their books they must keep an account of the bundles, as they carry them, and you can see the tremendous amount of bookkeeping that is made necessary.

Mr. HAWLEY. Are deliveries made by your company to near-by points more expeditiously than those made by the parcel post?

Mr. JENNINGS. Well, I think so; I may be a little proud in saying that, but I think so.

Mr. SLOAN. Do your companies take the place, to a large extent, of the railroads on short hauls; that is, reasonably light commodities?

Mr. JENNINGS. Do they take the place of the railroads?

Mr. SLOAN. Yes.

Mr. JENNINGS. Yes; I would say so.

Mr. SLOAN. Then they are becoming a distinctive factor in distribution, especially in New England, on short-haul freight, as well as on what we used to call light express articles?

Mr. JENNINGS. They take both classes, and I should say as to that that they are taking the places of the railroads, because they take the entire transit.

Mr. SLOAN. Is not that one of the growing features of transportation right now—that the express companies are carrying light commodities outside of the railroads?

Mr. JENNINGS. I should say so; although I must say this, that the nature of the business carried on by the express companies of Bos-

ton has not changed; they have done this for years, and this league must be 20 or 30 years old.

Mr. SLOAN. But it is extending throughout New England, is it not?

Mr. JENNINGS. I could not say that. My information is that it is carried now as it always has been for years back. Now, gentlemen, I do not want to take any more of your time; but I do want to make this clear: That to-day every bundle that goes by express is taxed and there is no tax, until it gets to 25 cents, on the parcel post. If you take a bundle for 10 cents by express it costs 1 cent; if you take it for 20 cents it costs 2 cents; but if you send it by parcel post it costs nothing.

Mr. SLOAN. Your business is between the merchants and the homes, while the parcel-post business is between post office and post office.

Mr. JENNINGS. Yes, sir.

The CHAIRMAN. Has the business of your companies fallen off—that is, the volume of it? Have you found any decrease in business since this tax went into effect?

Mr. JENNINGS. Has the rate decreased?

The CHAIRMAN. Has your volume of business decreased?

Mr. JENNINGS. Oh, yes, sir; some companies have gone out of business.

The CHAIRMAN. Since the tax was imposed or since the parcel post was established?

Mr. JENNINGS. Since the parcel post and also since the tax.

The CHAIRMAN. Would you mind appending to your remarks a statement showing the volume of business of these express companies, say, in the month of September and in the month of May?

Mr. JENNINGS. I would like to do that very much, but I know of no way to get at that. Here are 200 express companies, some of them with 5 teams and some of them with 10 teams, all keeping their books in their own way. They make no reports to the State or to the Government, and there is no record that they would keep of it.

The CHAIRMAN. Are they not required to make returns to the Interstate Commerce Commission?

Mr. JENNINGS. No; some of them may that go out of the State; but the great bulk of them do not.

The CHAIRMAN. Most of them carry on their business within the State?

Mr. JENNINGS. Yes, sir.

The CHAIRMAN. My question was whether the volume of business of these express companies had largely increased?

Mr. JENNINGS. That is not so, not with us, at least. So, gentlemen, in closing, I want to say this: That if you increase the parcel-post rates to a point below the express rates, the Government will still get all the business, and the man who uses the parcel post will pay for it, as he should. In the next place, if you remove the discrimination which is now so unjust and tax the transportation of all bundles alike, whether they are carried by the Government or by private individuals, you will then increase your revenue and give everyone a fair show. Furthermore, if you want to make that 20 cents to everybody, instead of 20 cents and 25 cents, you would have something that would be easier to handle and still further reduce the discrimination.

Mr. MOORE. I suppose no package is carried at a rate less than 5 or 10 cents.

Mr. JENNINGS. Eight cents, where they have a large volume of business, and that is the lowest rate I know of.

The CHAIRMAN. Your real opposition, or the opposition of your companies, is not so much to the tax, but to the parcel-post system, is it not?

Mr. JENNINGS. To no tax on parcel post and the tax on express rates.

The CHAIRMAN. Your real opposition is to the parcel-post system, which really competes with the business of your companies?

Mr. JENNINGS. No.

Mr. SLOAN. If we did not have a parcel-post system you would not be here complaining at all?

Mr. JENNINGS. No.

Mr. SLOAN. What you are complaining about is that the parcel post is about to put you out of business, and that when we do levy a tax against you and your business we discriminate in favor of the parcel post as against your business?

Mr. JENNINGS. That is right.

The CHAIRMAN. What is the average charge for parcels that are transported by your express companies.

Mr. JENNINGS. In doing business with the department stores I would say from 12 to 12½ cents.

The CHAIRMAN. I mean, in general.

Mr. JENNINGS. In general the rate would probably be—of course, it would depend on the size; but the general rate would be 20 cents, I should say.

The CHAIRMAN. Do you mean to say that the average fee of the express companies is about 20 cents?

Mr. JENNINGS. They are in two classes. Those that are carried for merchants and large department stores I should say would average 12½ cents.

The CHAIRMAN. And the other would average about 20 cents?

Mr. JENNINGS. Yes, sir.

The CHAIRMAN. So you would take a parcel from a merchant and charge 12½ cents?

Mr. JENNINGS. Yes, sir.

The CHAIRMAN. And you would send it off by the railroads, as you do sometimes over the Boston & Maine Railroad?

Mr. JENNINGS. Sometimes, yes.

The CHAIRMAN. And a pound would cost 20 cents.

Mr. JENNINGS. Not by the railroads?

The CHAIRMAN. I mean, you would charge 20 cents?

Mr. JENNINGS. It would depend on who is the sender, no matter how it goes; the sender being a department store the rate would be cheaper.

The CHAIRMAN. Leaving out the first class you mentioned and the second class you mentioned, you would carry a pound, say, for 50 miles, and charge at least 20 cents.

Mr. JENNINGS. Yes, sir.

The CHAIRMAN. While the post office charges 5 cents for that?

Mr. JENNINGS. Yes, sir.

The CHAIRMAN. If the difference between 5 cents and 20 cents has not hurt you gentlemen, how can there be any difference between 1 cent and no charge at all? How can that so greatly affect you as to threaten the existence of the business?

Mr. JENNINGS. We have now reached the point where it is being equalized—that is, it has reached its level—they are sending certain goods by the parcel post and certain goods by express. Now, then, this tax comes in and makes another inducement to take business away from us and apparently without any reason.

Mr. SLOAN. Would you be willing to have this apparent discrimination removed and have the parcel post limit of weight removed—it is 50 pounds now, is it not?

Mr. JENNINGS. I think it is 75 now.

Mr. SLOAN. Would you be willing to have that removed from the parcel post so that they would come in competition with you on the heavier articles?

Mr. JENNINGS. If you could fix the rate. Of course, everything you do, every burden you add hurts; that is all. But I do not want this committee to understand that I am here objecting to the parcel post, because I am not. I simply suggest to you that if you see fit to raise the rate, you will still get all the business and not hurt anyone.

Mr. GARNER. When you say you are not objecting to the parcel post, are you not really mistaken about that? I asked you whether or not the business of the Post Office Department ought to be based on the idea of each parcel paying its way and you said it should. If the parcel-post rates are based upon that theory, that each parcel shall pay its way as nearly as possible—it is impossible to get to it absolutely correct—and those rates will put you out of business, you would be compelled to object to the parcel-post system or else go out of business.

Mr. JENNINGS. There would be no other alternative, but you have also stated that the additional rate placed on letter mail was for the purpose of raising revenue.

Mr. GARNER. Yes; we did that for the purpose of getting more revenue.

Mr. JENNINGS. All right. If you do that, why can not you do the same as to parcel post—use that for the purpose of getting revenue—and still get the business?

Mr. GARNER. Outside of war times, the Post Office Department is used simply for the convenience of the people. Now, if the rates applied to parcel-post packages were sufficient to cover the cost of handling them, and that would put you out of business—

Mr. JENNINGS (interposing). Then we would go. That is all there is to it, and we would have no complaint to make.

**STATEMENT OF MR. J. W. SHORTHILL, REPRESENTING THE NATIONAL ORGANIZATION OF FARMERS' COOPERATIVE ASSOCIATIONS, OMAHA, NEBR.**

Mr. SLOAN. Give your full name and present address.

Mr. SHORTHILL. My name is J. W. Shorthill, of Omaha, Nebr.

Mr. SLOAN. What is your business?

Mr. SHORTHILL. I am secretary-treasurer of the National Organization of Farmers' Cooperative Associations, a national federation of State councils of farmers' grain dealers.

Mr. SLOAN. Are you also holding a position under the Government at this time?

Mr. SHORTHILL. I am connected with the Food Administration's grain corporation. I am a member of the board of directors.

Mr. GARNER. Where are the headquarters of that corporation—in Washington?

Mr. SHORTHILL. At 42 Broadway, New York.

Mr. GARNER. And your temporary residence is in New York?

Mr. SHORTHILL. No, sir; I am residing in Omaha.

Mr. GARNER. I thought that, being a director of the corporation, your temporary residence might be in New York.

Mr. SHORTHILL. No, sir; I am just the same as any other director; my residence might be up there or it might not be.

I will not take up your time to explain the purposes of this organization, of the organizations which I represent, their objects, or the cause of their organization. I will simply state that the purpose at the beginning of the entire organization was to operate on a cooperative basis for the purpose of establishing and maintaining competition in the markets and in the handling of the commodities that are being handled. I am not appearing before your committee for the purpose of making any objection to this legislation, but only for the purpose of asking that some points which have been obscure be cleared up, so that the law will be applied uniformly, and so there will be no question as to what it means regarding those points. The suggestions which I am offering to the committee are following out exactly the rulings of the Commissioner of Internal Revenue that are followed by the collectors in my home State, but we find that on some of the points there has been very much variation and dispute, due to the fact that two different constructions may be put on the same provisions of the law. I have prepared an amendment, in which the language may not be just what it ought to be, but in which I believe the idea is so clearly set forth that it can not be mistaken or misinterpreted.

Mr. MOORE. Where does it come in?

Mr. SHORTHILL. I am basing my statement on Document No. 379 which contains the law of September 8, 1916, and I refer to that law on page 15.

Mr. MOORE. What section?

Mr. SHORTHILL. Paragraph 4 of the section designated 11. I understand that the purpose of Congress in passing this legislation was to exempt those institutions which were organized to operate not for profit, and it is following out that spirit of the law that I wish to speak.

Mr. MOORE. This is an exemption from income tax.

Mr. SHORTHILL. Yes, sir; exemption from income tax.

Mr. MOORE. Let me read paragraph 11:

Farmers', fruit growers', or like association, organized and operated as a sales agent for the purpose of marketing the products of its members and turning back to them the proceeds of sales, less the necessary selling expenses, on the basis of the quantity of produce furnished by them.

That is one of the elements not to be taxed under that income-tax clause.

Mr. SHORTHILL. Yes, sir; the intent obviously being to deal with cooperative organizations, the basic feature or definition of which is contained in turning back the proceeds of sales, less the necessary selling expenses. That is the basis of the cooperative organizations. The first fault we have found in the administration of this clause is in that it applies only to sales for members and not to purchases. The Commissioner of Internal Revenue has stretched it just sufficiently to cover its application to purchases for members, and the enforcement of it has been made in that spirit. So we believe that that point should be cleared up.

Mr. MOORE. Let us understand that, if a farmers' fruit growers' or like association, acting as a sales agent for the farmer, sells his products and deducts the selling expenses, there is no tax.

Mr. SHORTHILL. Yes, sir; that is true.

Mr. MOORE. And your contention is that that does not apply to purchases which, perhaps, are excluded?

Mr. SHORTHILL. Yes, sir; it is formed quite often to handle commodities which are purchased for its members, as well as for handling products sold for them.

Mr. MOORE. Your opinion is that where such an association purchases for its members there should be no tax?

Mr. SHORTHILL. That the law should be applied in the same way as in regard to sales made for members.

Mr. MOORE. Suppose they purchased coal and coke, household commodities, or something of that kind, would you still insist that there should be no tax?

Mr. SHORTHILL. Yes, sir; and that is the principle embodied in the State laws recognizing cooperative companies in many of our leading States.

Mr. MOORE. What has the department held as to that?

Mr. SHORTHILL. They have held that those returns which actually came from the business transacted for members and that were actually paid back to the members on the basis of the business transacted were not subject to tax under this law.

Mr. MOORE. Now, just what has the department held in regard to that?

Mr. SHORTHILL. The department has held that the same rule should apply in regard to purchases as applies in regard to sales. In other words, the department has held just the thing which I am suggesting should be included here.

Mr. MOORE. That there should be no tax?

Mr. SHORTHILL. Yes, sir. If the committee should desire a copy of the decision or ruling on that question, I would be glad to furnish it.

Mr. MOORE. They have held your way both ways?

Mr. SHORTHILL. Yes, sir; but it has not been uniformly applied in all the States. Some of the collectors have objected to this construction of it. Another construction which has been placed on this paragraph is this, that unless every penny of the surplus accumulated be returned to the members this cooperative company is not exempt from taxes on anything.

Mr. GARNER. That is what I wanted to ask you about: What are the assets of this association?

Mr. SHORTHILL. They are just the same as those of any other corporation. They are simply organized under the ordinary corporation laws, and they have assets just the same as other corporations. They have capital stock, to begin with, and then, if there is any increase, or if there is the creation of a surplus fund, or if there is any addition to it it becomes a part of the surplus fund, just as in the case of any other corporation.

Mr. GARNER. In other words, this corporation has a capital stock?

Mr. SHORTHILL. Yes, sir.

Mr. GARNER. And it accumulates a surplus fund or undivided profit?

Mr. SHORTHILL. In some cases it does and in some cases it does not.

Mr. GARNER. You surprised me when you said that some collectors in the various States ignored, or, rather, did not adhere to the rulings of the Chief of the Bureau of Internal Revenue. I did not know that any subsidiary officers ignored the rulings of their superiors.

Mr. SHORTHILL. I do not know that they have ignored them, but, in some way or other this matter has not become uniformly applied. It may be because the question has not been taken up in those particular States.

Mr. GARNER. Have you called to the attention of Mr. Roper the fact that some of the collectors are not carrying out his instructions as to how the law should be applied?

Mr. SHORTHILL. In those cases where it has come to my attention I have; but my contention is this, that this Commissioner of Internal Revenue might make one application of this law and another commissioner might make another application of it. We hope that the spirit of this law will be continued after this war is over, and that we will still have taxes on incomes and excess profits. We want to know whether our cooperative concerns are going to be placed into the class of concerns which are taxed on excess profits and which set out to make excess profits and large incomes. It is the purpose of our corporations to operate upon a more reasonable margin of income, and then at the end of the time to distribute it back to the members.

Mr. STERLING. What are your organizations handling mostly—grain?

Mr. SHORTHILL. They were primarily organized to handle grain, but many of them handle coal, and that works in very conveniently, especially in connection with the handling of grain. Some of them handle binder twine, and they handle a great number of other commodities. For instance, in the State of Illinois and in Iowa they handle a great amount of tile.

Mr. STERLING. The grain associations of Illinois sell stock to their members?

Mr. SHORTHILL. Yes, sir.

Mr. STERLING. They do not simply handle the grain of members of the organizations, but they buy grain from nonmembers. Now, as to the profits derived from sales and purchases made for outsiders, would not they be subject to this law just the same as the profits of individuals or other corporations?

Mr. SHORTHILL. I have not gotten to that point, but that is one of the things I wanted to talk about. You will understand that all of these companies for which I speak are operating as cooperative companies purely, and we want this law made so plain that there can be no question as to the sort of companies that it will apply to, and so that they will know exactly where they are at.

Mr. GARNER. But you do not ask that a corporation be exempt from such taxes as Judge Sterling has referred to?

Mr. SHORTHILL. No, sir; and I expect to make that plain. I will be very glad to leave with the committee the amendment that I suggest and that I have written out.

Mr. MOORE. Suppose you read it now.

Mr. SHORTHILL. While it does not affect our interests in any way, we do not see any reason why you should have the word "farmer" in that section. We do not see why any company of people should not have the same privileges that a company of farmers has if they are operating on the same principle.

Mr. TREADWAY. Would not the cooperative principle be abused to the extent that it would seriously affect the revenues, if the corporation scheme was carried out to the extent of exempting the returns from taxation or from certain forms of taxation? Would it not be true that people all the way down the line would get up some form of cooperative association, and, if that were done, where would our revenue come from?

Mr. SHORTHILL. The revenue would be at exactly the same place as it would be if you did not make any provision for this at all, because, if no provision is made, those cooperative concerns will proceed to operate much more closely to the market, and they will be placed in a much more dangerous situation as to the future success of their business and also as to the success of their competitors.

Mr. TREADWAY. You speak of the competitors of the cooperative organizations.

Mr. SHORTHILL. They have competition at almost every place where they operate.

Mr. TREADWAY. With other cooperative organizations?

Mr. SHORTHILL. With other corporations and individuals. So we would say, instead of saying "farmers"—

Mr. MOORE (interposing). Do you maintain stores or warehouses?

Mr. SHORTHILL. Our organization is purely a grain-dealers' organization.

Mr. MOORE. Do you maintain elevators?

Mr. SHORTHILL. Yes, sir.

Mr. MOORE. You do maintain elevators?

Mr. SHORTHILL. In the grain business, yes, sir; just the same as any other business institution.

Mr. MOORE. As to the general supplies that you buy and sell, do you have warehouses or storehouses for them?

Mr. SHORTHILL. That depends entirely on what the local conditions are. If the local conditions in any line of business are such as I have mentioned, including coal, live stock, twine, tile, or something of that sort, are such that the needs of the community are not properly and promptly served, then a company may go into that line of business.

Mr. MOORE. A cooperative store in the ordinary sense of the word means a warehouse or storehouse where goods are held in bulk for distribution?

Mr. SHORTHILL. Yes, sir.

Mr. MOORE. They are purchased in large quantities and held for distribution according to the needs of the members. I understand that the organization known as the Nonpartisan League has something of that kind in Minnesota.

Mr. SHORTHILL. Yes, sir.

Mr. MOORE. Does that league have any connection with the organization for which you speak?

Mr. SHORTHILL. No, sir.

Mr. MOORE. That is an independent organization?

Mr. SHORTHILL. An independent organization; yes, sir.

Mr. MOORE. Is it a competitor of yours?

Mr. SHORTHILL. Not necessarily.

Mr. MOORE. Is it not competing with you for members in the State of Nebraska now?

Mr. SHORTHILL. Well, no, sir. It is not working along the same lines. Its membership is purely along political lines, and we have nothing to do with politics. This is simply a business proposition.

Mr. MOORE. Your organization has no connection in any way with the Nonpartisan League?

Mr. SHORTHILL. None whatever.

Mr. MOORE. I asked you the question in regard to warehouses, because if you maintain warehouses, storehouses, or places for the deposit of large quantities of goods to be distributed according to the needs of the members I think the committee would like to know about that.

Mr. SHORTHILL. Yes, sir; grain is handled in that way, coal is handled in that way, and all of the commodities handled for the members of our organization are handled in the same way, or just as any other merchants would handle them.

Mr. MOORE. That is, an association will buy large quantities of coal and stock up for the coming winter?

Mr. SHORTHILL. Just the same as any other dealer would do.

Mr. MOORE. And as grain comes in you put it in your elevators and hold it until it is distributed?

Mr. SHORTHILL. That is the only way it can be done practically.

Mr. MOORE. A part of the business of your association is the storing of goods and the holding of them?

Mr. SHORTHILL. Yes, sir.

Mr. MOORE. They purchase very large quantities and hold them until the time for distribution comes?

Mr. SHORTHILL. Yes, sir; it is generally done in that way. That is the only way that the grain business can be handled, and it is the only practicable way in which the coal business can be handled.

Mr. GARNER. The principal object of the organizations that you speak for is to see that the farmer gets a fair price for his product, especially where there are no competitive conditions in a community?

Mr. SHORTHILL. Yes, sir.

Mr. GARNER. I can understand, of course, why you have to have capital stock, a surplus, and probably undivided profits, but, as a matter of fact, you never pay dividends on your stock?

Mr. SHORTHILL. Yes, sir; we hold that the stockholder is entitled to interest on that money just the same as a banker is entitled to interest on the money that he lends, but we are not asking, if you please, that the dividend on the stock be exempted from this tax. We say that that is income, and on that the tax will have to be paid by the person receiving it.

Mr. GARNER. But you do not make what is known as an excess profit?

Mr. SHORTHILL. No, sir; and the very object of these companies is to prevent a thing of that kind being done.

Mr. GARNER. Your idea now in seeking this exemption, or, rather, a definition of the various companies that are exempted under the present law, is to have unanimity of opinion among the collectors in regard to this provision?

Mr. SHORTHILL. Yes, sir; and not only in this administration, but under any other administration when we get on a normal basis again. Let me say just briefly, going back several years, when the grain market or the grain business, for instance, in a large portion of the country, was in the hands of what are known as the line elevator people, and they are still operating, that one company would control elevators along a certain line of railroad, and when they got control of a sufficient number of those elevators, almost invariably the market became lower than it ought to have been. Now, when the farmers in that community combined together to handle their own grain, they frequently did it in a way that was ruinous to the business. At that time there was no such thing as what is now known as the cooperative company. When they attempted to handle that grain just as near the market as they dared to, the result was a ruinous one; it was ruinous to themselves and also to the elevators. The result in a great many cases was that both of them were put out of business. Now, the cooperative idea would still bring to the farmer in handling his grain a reasonable margin that would be sufficient to take care of the handling cost at any time, and then whatever surplus should be made could be distributed back to the members. That was an advantage to the farmers and also an advantage to the competitors at that point, and would give them a chance to live also. That is the cooperative idea, and we are simply suggesting that the same principle be applied to all the transactions, whether of buying or selling, but that it ought to be confined strictly and only to the extent to which the cooperative principle is applied, and that it should go no further. Now, I will read my suggested amendment. Beginning with section 11 and coupling its introductory paragraph of the section, it would read like this:

Cooperative society, association, or corporation when such income or any portion of it is actually returned in cash to the members of such society, association, or corporation as a part of the purchase price paid by its members, or as a part of the sale price received for its members for any commodity or commodities sold to or sold for such members, after adding to the purchase price of any commodity or commodities bought for, or deducting from the sale price of any commodity or commodities sold for such members, the actual cost of handling the same, but in no case shall any exemption under this paragraph exceed the total amount of such cash return.

Now, it is my suggestion that no cooperative company ought to be exempt from taxation unless that return is actually made to its members, and, more than that, actually made in cash, but that it ought to be applicable to the extent that the return is made. Now, the question was suggested here by the gentleman from Illinois that companies handle business for people other than their members.

We are confronted with this question in operating those companies: At a point in the interior of the country what are you going to do? What sort of attitude would you be placed in under the laws of this country if you organized a company for this purpose and refused to handle business for nonmembers in the community? You might place yourself under a legal liability by doing a thing of that sort. You would be handicapping your operations, also, by operating in that way, and would be making yourself unpopular in that community. So that, if it is not illegal, perhaps, it would, at least, not be good business to organize an association and set out to handle business for members only and nobody else. That has been tried repeatedly and has failed. Now, the thing to be guarded in connection with a matter of this kind is to see that the law is so framed that no part of the profits made from the business of nonmembers can be used to pay the handling costs of business handled for members. Your cooperative plan would be entirely safe if that were done, and at the same time you would be treating your competitor fairly.

Mr. TREADWAY. Why do you restrict your membership?

Mr. SHORTHILL. We do not restrict our membership.

Mr. TREADWAY. You say that certain favors would be shown to the members, and that they should be extended to outsiders as well. Why do not the outsiders join?

Mr. SHORTHILL. It is just for the same reason that you have never been able to organize anything that everybody will come into.

Mr. TREADWAY. I was applying it to the community. I did not mean that a hundred million people would come in.

Mr. SHORTHILL. We have never been able to do that in a single community that I know of.

Mr. SLOAN. There are always a good many people in a community who do not desire to belong to any organization?

Mr. SHORTHILL. Yes, sir. There are a great many people who do not desire to shoulder the responsibilities involved. Wherever there is an advantage to be gained, there is a responsibility involved, and there are always people who are unwilling to shoulder that responsibility.

Mr. MOORE. I like the cooperative idea and always have liked it, but since we are sitting here for the particular purpose of trying to raise revenue, I will put this proposition before you as a representative of farmers: If those line companies to which you referred that operated elevators along the line of railroads did a large business, they would pay corporation taxes, income taxes, and such other taxes as might be imposed upon corporations and earners of profits, would they not?

Mr. SHORTHILL. Yes, sir.

Mr. MOORE. Now, if these cooperative societies erect elevators and transact all of the grain business along the railroads, under the law we could get no corporation tax from them, and we would get no in-

come tax from them under this paragraph, and, hence, the Government would be out on that transaction, would it not?

Mr. SHORTHILL. You have overlooked a fact that I have just stated.

Mr. MOORE. I want to help the cooperative societies and I want to help the farmers, and the question I am asking with respect to raising revenues is a pretty blunt one. By exempting the cooperative societies, which have gradually put the line companies out of business, will prevent the Government from getting any revenue from that source, will it not?

Mr. SHORTHILL. I was about to say that you overlooked a thing that I suggested, and that is that the competitor is not being put out of business under the cooperative plan. If, however, this law does not exempt the cooperative companies, then the cooperative companies are going to find a way to operate without profit, because that is what they set out to do, and, consequently, the only thing they could do would be to buy right at the market, like they did before the cooperative idea came in. In that way, they would destroy their own profits, destroy the profits of the competitor, and the Government would get no revenue out of either one of them.

Mr. MOORE. That is not a very pleasant outlook for us, since the Secretary of the Treasury calls on us to produce \$8,000,000,000 in revenue.

Mr. SHORTHILL. On the other hand, if you exempt the cooperative companies on the returns which the cooperative companies make to their individual members, the income of that individual member is, of course, subject to tax, and the competitor of the cooperative company would be permitted to operate at a greater margin of profit, and so they would have a larger margin of profit on which to pay income and excess-profits taxes.

Mr. MOORE. If that is true, we relinquish our hold upon the income tax and excess-profits tax so far as the cooperative company is concerned, and hold it on the individual who gets a return from the cooperative company or society. That is about all there is left of it. It works out that way, so far as I can see. Now, I want to ask you this: If we should consider favorably your suggestion in this regard, have you any suggestions to make as to how we can raise the additional revenue required in view of the facts that have been presented?

Mr. SHORTHILL. You would simply be getting it from another source.

Mr. MOORE. Can you suggest any other means?

Mr. SHORTHILL. That is all I can say, acting for a number of cooperative organizations.

Mr. MOORE. It would come from the man who became a jobber in the grain later on, perhaps, or from the man who assumed the grain in some form or other, such as the flour man, the baker, to be paid finally by the consumer of the bread. I bring that to your attention in all fairness, because if you have any suggestions to offer along that line, it seems to me that we should have the benefit of them.

Mr. SHORTHILL. I do not think of any except those that I have suggested. I can see how you could get more revenue by recognizing the cooperative plan than by not recognizing it.

Mr. MOORE. Do the line companies continue in business, notwithstanding the competition of the cooperative societies you represent?

Mr. SHORTHILL. Yes, sir; they are still in business.

Mr. MOORE. Are they doing a fairly good business?

Mr. SHORTHILL. That depends upon the conditions in the community.

Mr. MOORE. Do they compete with you in the same communities?

Mr. SHORTHILL. Where their competition in business is fair and open, they get a reasonable share of the business.

Mr. MOORE. In view of the tax situation, don't you really think that it would be an advantage to have them in operation, unless they have some railroad preference, or something of that kind?

Mr. SHORTHILL. Well, you still have the advantage of that tax.

Mr. MOORE. I imagine you would say that to a man you wanted to keep in the cooperative society, that he would have some advantage by joining the cooperative society, rather than by doing his business through the line companies. You would say that to him, would you not?

Mr. SHORTHILL. Certainly; because the purpose of this concern is to operate without profit, in order to maintain actual competition at that point.

Mr. MOORE. I commend you for that as a business proposition, because that is an appeal in the interest of the farmer; there is no doubt about that. But the tax trouble still remains, and I thought it only fair to call it to your attention.

Mr. SHORTHILL. May I ask whether one of the two primary purposes of the legislation is not to derive as much of this income as possible from excess profits, through incomes, and has not it been the policy of this law to exempt those institutions that were operated without profit? Was not that the object of it?

Mr. MOORE. If you could make enough by way of returns to your members to enable us to recover in income taxes, I should say your question was answered. Whether that is a fact or not, I do not know, but I question whether we could get enough by way of income taxes out of the members of this society to repay us for the loss.

Mr. SHORTHILL. People are going to do the natural thing; they are very much alike. If this is placed back, if the exemption as to the cooperative concerns were removed, then the operator of that cooperative concern would not have the same incentive as an inducement to transact business with that concern that he would have to continue to deal with that cooperative concern; that is, if he knew that all he would get would be what was due him on the transaction at the time the transaction was made. If the only thing that a cooperative concern could do to get business was to pay more money than the other fellow, that would mean ruination for both of them, because that has always been the result of that, and there would not be any revenue to the Government from either source under that sort of an arrangement.

I have suggested that this amendment should include all cooperative concerns, that it should apply to buying for members as well as to selling for them, and that it should apply on the actual cash returns only after deducting the actual cost of handling the commodity.

I want to close by making it plainer and stating what it should not apply to. According to my idea it should not apply to dividends paid on stock. Practically all of these corporations pay a dividend on stock and they should pay an income tax on that dividend, and

they ought not to ask any exemption along that line, but pay on exactly the same basis as any other corporation. If they make any additions to surplus, that should be taxed. It has always been very difficult to properly finance a concern of this kind, so that they have naturally placed in their surplus fund yearly a great accumulation of money, in order to have sufficient capital with which to enlarge their business, the same as other business concerns have done. If they place that to their surplus, it belongs to the stock and it can not belong anywhere else, and it should be taxed. If they do business with any outsider, and they get any income from business with an outsider, as profit to that corporation, it should be taxed, the same as in any other corporation; that business should be handled the same as the business of any other corporation and should be taxed for income and excess profits, the same as the business of any other corporation.

Mr. STERLING. You apply those statements simply to cooperative organizations?

Mr. SHORTHILL. Yes, sir.

Mr. STERLING. You would not apply them to a corporation doing business under the old method?

Mr. SHORTHILL. Certainly not. A great many of the States, within the past four or five years, have passed cooperative laws, recognizing this cooperative idea, and this is the basis on which those laws have been founded.

Mr. GARNER. What States have recognized the cooperative plan?

Mr. SHORTHILL. Colorado, Kansas, Nebraska, Minnesota, Iowa, Illinois, Indiana, and I think that for some years Massachusetts and New York.

Mr. GARNER. Has Illinois recognized it by statute?

Mr. SHORTHILL. Yes, sir.

Mr. STERLING. In Illinois we have a great many farm grange associations, too.

Mr. SHORTHILL. Yes, sir.

Mr. STERLING. I live right in the heart of the corn country and they buy a great deal of corn.

Mr. SHORTHILL. And a great many of those grain organizations have fallen into the hands of a few people and are operated for excessive profits, the same as any other corporation is operated, and they should be taxed as any other corporation, and under this amendment they will be taxed until they get down and do business on the basis which they were intended to do business.

Mr. HAWLEY. Is it your contention that the amount you distribute back to your members is not the income of the corporation but the income of the individual members?

Mr. SHORTHILL. Yes; that it is in no sense the income of the corporation but is a part of the purchase price, and that whatever is returned on that basis is the balance of the purchase price, or sales price, whichever the case may be.

Mr. HAWLEY. And that the amount returned to each member is the member's income and not the corporation's income?

Mr. SHORTHILL. Yes. It is a part of the purchase price of the product that was handled for him.

Mr. GREEN. Is it determined on the basis of the amount which the company has handled for that particular party?

Mr. SHORTHILL. Yes, sir. If John Jones has marketed 1,000 bushels of wheat, and John Brown has marketed 2,000 bushels of wheat, John Brown will get twice the return that John Jones will get, if they are both members of the organization.

Mr. STERLING. That is, if it is sold at the same price?

Mr. SHORTHILL. Well, it is to be handled as an average proposition; and it is impossible to handle the grain business in any other way.

Mr. STERLING. You take it out in my country. The farmers in a certain community will organize what they call a farmers' elevator. They buy grain at the market price, or claim to; I think they claim sometimes that they pay a little more—maybe a cent more—than their competitor who is running an elevator on his own account. They buy the grain of their members, and they buy the grain of other farmers, too; if they make a profit on it they put it into the treasury, and it goes in as one fund, and it is distributed to the stockholders at the end of the year. That is the way the farmers operate out there.

Mr. SHORTHILL. That is on the basis of the stock that each member holds?

Mr. STERLING. Yes; on the basis of the stock, and not on the basis of the amount of grain sold to the company at all.

Mr. SHORTHILL. We are not asking anything for a company of that kind; they are just the same as any other corporation and should be taxed on exactly the same basis. I may say that in the State of Illinois they would not have a large number of companies coming under this law, as they would have in some of the other States, because the law has not been on the books so long, and there is some question about the legality of the change under the law; but there are some companies in your State that operate on the cooperative plan.

Mr. HELVERING. I want to ask you a question. A man rents my place in Kansas; he belongs to one of these associations and, of course, I do not. Last year he sold something like 3,000 bushels of wheat, and two-fifths of that wheat was mine. On my wheat, of course, I got no rebate, because I was not a member of the association or a stockholder in it, but on his wheat, of course, he received a profit, a dividend, or a repayment, or whatever you might call it, of 1 or 2 cents a bushel. What I want to ask you is this: Is the money that would have come to me, had I been a member, given in proportion to him, or is that the profit of the company?

Mr. SHORTHILL. That is the profit of the company, and it is subject to taxation, the same as the profits of any corporation; that belongs to the stock, and when it is divided up it must be divided up among the owners.

Mr. HELVERING. What I was trying to get at was, whether or not you wanted to give him a profit on my sales.

Mr. SHORTHILL. No, sir; that is the very point we are aiming against.

Mr. HELVERING. Does your amendment reach that point?

Mr. SHORTHILL. Yes, sir.

Mr. HELVERING. I agree with you generally that the man who simply receives back the return for his grain should not be taxed, but I do not want him to get the advantage of my sale or anybody else's sale, because we do not belong to the association, and not pay a tax on that at all.

Mr. SHORTHILL. I do not think there is very much doubt about the legal phase of that. I think that any return that is received from transactions with people outside of the membership is simply profit to that corporation and must be distributed on the basis of the stock holdings of the stockholders.

Mr. HELVERING. I judge that possibly 50 per cent of the grain that was handled by the association to which I refer was grain that did not belong to the members of the association.

Mr. SHORTHILL. Yes; that quite often happens.

Mr. SLOAN. And that would bear an income or excess-profits tax?

Mr. SHORTHILL. Yes, sir.

Mr. SLOAN. Let me ask you this: Is it or is it not a fact that the purpose in organizing these cooperative societies throughout the Northwest was to improve the marketing of grain and bring about a general level in regard to the prices obtained by the producers themselves?

Mr. SHORTHILL. Oh, certainly; that was the object, and that object has been attained.

Mr. SLOAN. Is it not a fact that among the grain dealers of the Northwest have included a very large number of the increases of those who have become income-tax payers in the United States?

Mr. SHORTHILL. I do not know that I quite catch your question.

Mr. SLOAN. In other words, have not the farmers furnished the larger portion of the increase in numbers of those paying income taxes than any other people in the United States?

Mr. SHORTHILL. I have no information on that, Mr. Sloan, and I can not say, although I think I did see a statement along that line a few days ago, but I do not recall just what it was. The essence of this all is that these concerns, which were started for the purpose of having the interest of their membership or the people they are supposed to be organized for at heart, want to operate on a cooperative plan and want to operate with a profit on that particular line of business, and whether under this legislation if they operate on this cooperative plan and accumulate a surplus which is to be returned back to their members as a part of the purchase price, whether concerns of this kind are going to be placed by this law in the same class as the profiteers. That is the essence of the thing.

Mr. GARNER. Under your amendment you contend that those associations that have fallen into the hands of a few people and which are used more for profit than they are for the use of the association should pay as profiteers?

Mr. SHORTHILL. Absolutely, the same as anybody else—any individual.

Mr. GARNER. You have been dealing with the Internal Revenue Bureau somewhat in this matter, I take it?

Mr. SHORTHILL. Yes, sir.

Mr. GARNER. Would it not be advisable for you to talk to Mr. Roper or those who construe this law and see if you can not get an opinion as to the effect of your amendment; that is, whether your amendment would have the result that you believe it would have?

Mr. SHORTHILL. That is exactly the procedure of the enforcement of the law at the present time, the amendment which I have here to offer.

Mr. SLOAN. You have discussed this matter with Mr. Roper; have you not?

Mr. SHORTHILL. Yes, sir.

Mr. SLOAN. And the authorities under him?

Mr. SHORTHILL. Yes, sir.

Mr. SLOAN. Along these lines?

Mr. SHORTHILL. Yes, sir.

Mr. GARNER. I was trying to get at their construction, if possible, of the language of your amendment, as it would apply if we placed it in the new law.

Mr. SHORTHILL. It will be the same as the law has been applied in my home State, but we secured that application only after the very closest relation with the collector in that State and the very closest work with him, and the same thing would evidently have to be done in every State in order to get uniform application. It is a new thing, and a great many rulings would have to be made by the commission in order to clarify the law in all its applications.

Mr. HELVERING. What Mr. Garner was trying to get at was this: Will your amendment clarify the situation if it is adopted in this law?

Mr. SHORTHILL. Yes; I think so.

Mr. GARNER. Your thinking so would not be quite as conclusive as if the present Commissioner of Internal Revenue and those advising him should think so themselves.

Mr. SHORTHILL. No; certainly not.

Mr. GARNER. That is what I am trying to get them to do, if possible.

Mr. SHORTHILL. Certainly. Had this not come on quite so quickly we would have cooperated with, and were prepared to cooperate with, the Commissioner of Internal Revenue in making suggestions to this committee as to how this ought to be framed, but there was not time to do that.

Mr. SLOAN. Will you submit your amendment to Mr. Roper and the authorities under him, in order to meet Mr. Garner's suggestion?

Mr. SHORTHILL. Certainly, but I do not see how any other construction than I have suggested can be placed on it.

Mr. GARNER. We sometimes pass a provision here on which we do not think any other construction can be placed than the one we had in mind, but it very often turns out differently.

Mr. SHORTHILL. I realize that, and I will be very glad to work with the commissioner.

I thank you very much for your attention and kindness.

#### STATEMENT OF MR. HANK REID, CHICAGO, ILL.

Mr. REID. I am the publisher of the Shepherds Journal, a sheep and wool paper published in Chicago. I might say in passing that of the three sheep and wool papers published for farmers this is the only one that is not to any extent influenced by the figures of the so-called Wool Trust.

Mr. MOORE. You are independent?

Mr. REID. I am absolutely independent; yes.

I know that the Ways and Means Committee has been importuned, individually, to put a tax on dogs, and that could be made, in my

opinion, a method for raising a reasonable amount of revenue, and it would have the indirect effect of reducing the number of dogs in many communities, like New England and the old South. In New England we have very few sheep and the people up there tell us that it is simply because of stray dogs that are owned by the foreign element in the manufacturing towns. These foreigners are irresponsible; they do not own property, and it takes them some time to be absorbed by our institutions. You gentlemen on this committee who come from the old South know that in the more sparsely settled districts, among the poorer white people, they have a lot of dogs.

Mr. MOORE. I do not think that only the foreigners own dogs. There is a tremendous number of very strong pro-dog Americans up my way.

Mr. REID. Permit me to say that I am a good friend of a good dog; I am particularly talking about cur dogs and irresponsible dogs owned by irresponsible people.

The CHAIRMAN. You are talking about sheep-killing dogs?

Mr. REID. Yes. I have dogs on my own farm and I would not be without them for anything. Any man who has been out in the West—and by the West I mean the range country—knows that it is utterly impossible to raise sheep without a dog. If I were married—and unfortunately I am not—and lived in the old South, I would not want to leave my wife and children alone without a dog. Do not misunderstand me for a minute, because I believe that a dog has a very valuable place in agriculture. In the old South the Biological Survey tells me, where the negro element overbalances the white element, as it does in many of our old Southern States, that every negro has from 8 to 20 dogs, and that that is true of a good many of the poorer white people.

Now, it is not a very healthy thing or a very desirable thing for a man to go in these communities and shoot his neighbor's dogs; it might be dangerous, because his neighbor might be a better shot than he is. Then, in our factory towns we have a certain irresponsible foreign element that has lots of dogs. If you gentlemen representing the Government on the Ways and Means Committee saw fit to put a tax on dogs, every man having a good dog would not object to paying a tax, say, of two or three dollars. The cost of the collection of that tax should not be over 40 or 50 cents, and if it were collected in the same way that the income tax is collected it would be a rather simple thing. If such a tax were imposed upon all dogs and a penalty written in the statute for not reporting on all dogs owned by various people, the result would be that every irresponsible foreigner and every irresponsible negro would get rid of their dogs automatically. If they had to pay a tax of two or three dollars on 10 or 20 dogs they could not afford to keep them and they would get rid of them.

Mr. TREADWAY. Is not that a licensing feature that belongs to the States?

Mr. REID. There is a State license in almost every State, but the law is very seldom enforced. The only State, I think, that enforces its dog law is the State of New York.

Mr. TREADWAY. We have a law in Massachusetts which is enforced.

Mr. REID. Yes.

Mr. MOORE. And Pennsylvania has a very good dog law.

Mr. REID. Pennsylvania has a good law; but I think it is one of the newer laws.

Mr. MOORE. I call your attention to the fact that a dog, and the wayward dog, is not altogether the property of the foreign element. There are a great many dogs owned by Americans who insist upon keeping those dogs. I have found that out since this question was raised, which was some time ago, and I have had quite a heavy correspondence on the subject. The Pomeranian dog is not owned by irresponsible foreigners.

Mr. REID. No.

Mr. MOORE. A good many collies and other good types of dogs would not come under your characterization.

Mr. REID. No; but they would be useful dogs. I do not believe that any American or any responsible foreigner either, for that matter, would object to paying a small dog tax on useful farm dogs and house dogs. If a woman wants to have a lap dog rather than children, and many of them do, that is her business. But there is no reason at all why in these times there should be over 100,000,000 dogs in this country, and twenty to thirty millions of them such pests in certain sections of the country that you can not raise live stock.

Mr. MOORE. Have you figures showing that we have 100,000,000 dogs in this country?

Mr. REID. I can get you such figures officially from the Biological Survey.

Mr. MOORE. You have been studying this from the standpoint of the preservation of sheep?

Mr. REID. Yes, sir; but I made the statement also that I believed in having a good collie or some other proper sort of a dog on the farm.

Mr. MOORE. If we had 100,000,000 dogs and imposed a tax of \$1 upon every dog we would be receiving \$100,000,000 every year.

Mr. REID. Yes; less the cost of collection.

Mr. MOORE. And by the imposition of such a tax we would get rid of a great many dogs and thus increase the sheep supply, from your point of view, but I would like to ask you how we are going to apply a Federal tax, or should apply it, as against dogs? What would you do about the administration of it?

Mr. REID. I should think that it would be necessary to make the tax larger than \$1 because I would imagine, without being an expert of tax collections, that it would cost the Government in the neighborhood of 40 or 50 cents to collect that tax, to send out notices, to take care of the bookkeeping, and things like that. I think that in 90 per cent of the cases you will get returns, because the average man does not care to monkey very much with the Federal Government, while in the State Government, where you have a State law, unless the people are unusually wide awake, politics enters into the matter, just as much in the North as in the South, and your local man does not want to go around and trouble his friends and neighbors in such matters, while if a man gets a notice, as he does in connection with his income tax, that he must make a return as to his dogs to the Federal Government, under a penalty, he will make that return and will not dare omit to make it.

In my own business experience I have figured that it costs me from 15 to 20 cents to write a letter, less the cost of the postage:

that is the absolute mechanical handling of that letter, and I believe in the average business man's office you can figure it will cost about that. To send out forms, to attend to the bookkeeping, and things of that kind, in connection with the collection of such a dog tax I believe it would cost anywhere from 40 to 50 cents, but I believe that would amply cover the cost. Therefore, I think we should have a larger tax than \$1.

Mr. MOORE. You are proposing that we shall get rid of the domestic dog by raising revenue upon him?

Mr. REID. Yes; the useless domestic dog. Please do not misunderstand me in that.

Mr. MOORE. Suppose we accept as wise your suggestion and we attempt to decrease the number of dogs for the purpose of increasing the number of sheep.

Mr. REID. Yes, sir.

Mr. MOORE. And if we took this matter out of the hands of the States would not the Government be obliged to establish a retinue of officers, inspectors, dog catchers, and dog pounds that would make it unprofitable rather than profitable?

Mr. REID. They do not have to do that with the income tax and they do not have to do it as to the personal-property tax.

Mr. MOORE. Suppose we were after the dog that belonged to the irresponsible foreigner, the one you have referred to, or to the 20 dogs belonging to the southern negro, and we gave them a Federal notice that they were to come forward and pay a tax on their dogs, the irresponsible foreigner \$1 or \$3, according to the dog tax, and the colored man or women \$60 or \$80, according to the tax in that case, do you not think the Government would lose in each instance in attempting to get at those taxes?

Mr. REID. I think these people would kill a lot of their own dogs; they would turn them loose on the community, and in special sections in New England that I can think of, and in the South, the Government might have to appoint a few men, and it would be better to have several men operate in a few communities under the United States deputy marshal to do that work, but I do not think that would have very general application.

Mr. MOORE. We could get some revenue out of the lap dog; there is no question about that, because no doubt those ladies would pay whatever tax might be imposed, but it seems to me there might be great difficulty in collecting the tax from the people you have mentioned. While your purpose is commendable from my point of view, and I am in sympathy with you in the idea of protecting the sheep industry of the United States, I am not clear as to how, by a Federal tax, we can reach the stray dog. You could probably reach them by a pound system and making provision to kill them, but whether we could get rid of them by putting a tax on them, which we could not collect, I do not know.

Mr. SLOAN. Perhaps the result could be accomplished by providing an open season for dogs, so that anyone after a particular date would have the right to slay any unmuzzled or uncollared dog he might encounter. That might have a salutary effect, and do you not think we might be able to get a good deal of revenue from the meat supply?

Mr. REID. I was not speaking for the frankfurter industry in this, as has been suggested; but I do not seriously think that everyone ought to have the right to lie around with a gun killing his neighbor's property, because in some States dogs are constitutionally property.

Mr. SLOAN. That would not involve going upon the premises, but it could be done wherever the dog might be found, on the public highway or on the public domain. Don't you think that would have the result many times of decimating the dogs?

Mr. REID. I think it would have, but I would prefer, if I may make such a suggestion, that the thing should be done indirectly through some duly constituted officer. The United States marshal in his district could, if necessary, I think, constitutionally give some of his powers to State officials. I think that could be worked out in some legal way. Besides, I could anticipate a lot of confusion and trouble arising from the indiscriminate shooting of dogs.

A valuable dog might happen to get away from his owner, or lose his collar, and be killed, and you would hate to have that occur. A young dog or puppy might, for instance, slip his collar and run around, but not, however be doing any mischief. I think that if you sent an ordinarily responsible person a notice through the postman that he would have to pay a certain tax on his dogs, it would be sufficient and it could be easily done. Especially in the rural districts that could be handled through the postman very well, and a report could be made by the postman. The postman could be used in that way just as they have been used in turning in reports on German spies. That is something that we had never before conceived of postmen doing, but they have done it and done it well. Some method could be devised by which a man could be notified that within 30 days he would have to pay a tax on his dogs. I think that provision in the law and such a provision as that in the notice would be adequate. I think that in certain localities in New England, the old South, and in the West, perhaps, it might be necessary to have the Biological Survey, the United States deputy marshal, or some other duly constituted and experienced authority sent to the communities to take care of the dogs that nobody claimed. However, I do not think that very much of that would have to be done.

Mr. STERLING. Has the new Illinois dog law been effectively applied?

Mr. REID. Yes. It is a feature of the new Illinois dog-tax law that a man must keep his dogs on his own premises between sunset and sunrise. Very few dogs will kill sheep in the daytime. They prefer to get them at night. A young dog will sometimes chase sheep in the daytime in a spirit of play, but if that sheep happens to be pregnant it does just as much harm as if the dog killed her. So I think that, as a rule, sheep-killing dogs can be taken care of during the day if it is difficult for them to get out at night. That law has been very effective in every community where the local sentiment was favorable; but if you happen to be the only man in a neighborhood who is trying to raise sheep, and that frequently occurs, and your neighbors are cotton farmers, grain farmers, or, if you move into a newly settled section in the Southwest, where your neighbors are for the most part irresponsible lumbermen, or, if you are in the South, where they are more or less irresponsible Crack-

ers, the local sentiment would not sustain you in that regard. That is true in the State of Minnesota, where I have a farm, and it is true in many other States. You would have trouble right here, and, therefore, you must have something more than local sentiment to go with you and sustain you. I believe at this time, when so much depends upon the wool supply and when we are not sure of our supply, everything possible should be done to safeguard it. It is commonly stated and understood that Japan has purchased the raw-wool supply of South Africa for many years to come. It is pretty generally understood that Germany purchased the American wool supply and is hanging on to it. When you realize that we only raise about 60 per cent of our own wool consumption under the best of conditions, and that we will not be able to import wool because of shipping conditions—

Mr. MOORE (interposing). Do we raise as much as 60 per cent of our wool consumption?

Mr. REID. Yes, sir; in ordinary prewar times.

Mr. MOORE. We raised 60 per cent of our supply?

Mr. REID. Yes, sir.

Mr. MOORE. What is your estimate of the effect, prior to the war or at the present time, of the destruction of sheep by dogs?

Mr. REID. It is not so much a question of the actual destruction as it is the fact that after a man has had such an experience as that in a community he does not do it any more. Men who have had that experience do not try it again. I have known of a number of isolated cases that would be very sensational if I stated them to the committee, covering the experience of men in the New England States, the Southern States, and certain Western States. For instance, in some of those States you might go to a man and say, "Why do you not raise sheep? You have a farm here that is covered with weeds; your son is in the Army; the hired man has been drafted; and, of course, everything connected with the farm is very expensive. Why not go ahead and raise sheep?"

Well, that man would not see the joke of paying fifty or sixty dollars per rod to put up a dog-proof fence to protect his sheep. You can fence out dogs, but the average farmer can not see the joke of buying five or six hundred dollars worth of fence, although, as I say, that is an effective method. You can fence out dogs, although you can not fence out live-stock diseases; but it would cost that farmer five or six hundred dollars to fence out the dogs. He would be willing to pay five or six hundred dollars for sheep. You might tell him what advantage he would have in the fact that one man can handle 70 sheep with as much daily work as would be involved in handling two dairy cows. After you have given him that argument he will say, "I got started with that once, and the dogs came to my place and ruined my flock so that I lost all the value of it. I have had that experience once, and I will not try it again." That is something you can not advocate in those districts and get away with it.

Mr. MOORE. Mr. Reid, I think it is fair to say to you that this matter has been before the committee heretofore. The committee had it under consideration last year but did not get very far with it, and I am afraid that it would be a very difficult matter to get it through the House, constituted as it is, the Members representing various sections of the country that are more or less interested in dogs. It

seems to be the impression that it is a State proposition, and that it would be too difficult to administer as a Federal proposition. Of course, I do not want to influence your argument.

Mr. SLOAN. We have the sheep problem in our State, and our authorities out there distinctly believe it is more a Federal proposition than a State proposition, and that it can be better handled along the lines you suggest through the National arm than through the State arm. Up there in the sheep communities they would rather have the Federal Government administer it, because they feel sure that the Federal Government would be active in the matter, while the State government is rather slothful in putting such things into effect.

Mr. REID. I think it is to a certain extent a Federal proposition. We are in a big war, and, as I testified in the early days before the Senate Agricultural Committee, if the time should come when we would have the same weather conditions that we had a year ago at that time we would be close to a famine period. We came down here to raise Ned with Mr. Hoover's regulations concerning live stock, which we wrote a letter to the President about. We were a whole lot closer to famine conditions in this country at that time than we believed was possible. Labor was in bad shape, and also the shipping situation, and had we not had splendid weather over the greater part of the farming country we might by now have been in a very bad shape. We have had lots of good weather in all of the States, except in parts of the Southwestern States and California, and if it continues we will have a big crop. But I do not think we should rely wholly upon that, because next year we might face a serious situation again. Now, if we can realize \$200,000,000 on a proposition of this kind, which I really think can be done, I believe it will be worth the while of the Ways and Means Committee to consider it seriously, because that would be almost three times as much as the regular appropriation for the Department of Agriculture.

Mr. SLOAN. I would like for you to state to the committee something about how the regular sheep-killing dog acts. He is not satisfied with killing simply for his own consumption, but is it not a fact that he goes through the flock destroying one after another in many cases until he destroys as many as 25 or 30 sheep?

Mr. REID. They do not kill the sheep outright so much. As a rule, a number of dogs, three or four, perhaps, go together. Except in certain isolated instances, where you have a particularly bad dog, they go together. Three or four dogs, as a rule, will go together and run the sheep around and worry them, and, of course, in the case of pregnant ewes that alone destroys their usefulness. Then, in addition, they will bite the sheep, generally on the neck or flanks, so that the sheep may bleed to death or die from exhaustion. They do that rather than kill the sheep outright. If a panther, or animal of that sort, attacks a sheep, he kills the sheep outright, sometimes by breaking the sheep's neck. A dog, however, does not act that way, but a dog seems to take a delight in biting the sheep.

Mr. SLOAN. I know of a case in my own community where one of those dogs killed 10 sheep in one night.

Mr. GARNER. I want to ask you a question aside from the testimony that you are giving now: You are a publisher, as I understand it?

Mr. REID. I am the publisher of a farm paper.

Mr. GARNER. Have you a copy of it with you?

Mr. REID. I have.

Mr. GARNER. How much circulation have you?

Mr. REID. I do not like to talk circulation when I have not much to talk about. I have not over 10,000 subscribers.

Mr. GARNER. That paper circulates throughout the United States, does it not? Your publication is *The Shepherd's Journal*, and it goes more to people who raise sheep than to any other class of people?

Mr. REID. Yes, sir; it goes all over the country, except to New England and the old South, because, unfortunately, we do not have sheep in either New England or the old South.

Mr. GARNER. It goes wherever they raise sheep.

Mr. REID. Yes, sir. We have more circulation in the State of New York and the State of California than any other two States in the country.

Mr. GARNER. You publish your paper at Chicago?

Mr. REID. Yes, sir.

Mr. GARNER. Last year we enacted what is known as the zone system legislation. That legislation applies what is known as the zone system to second-class matter.

Mr. REID. Yes, sir.

Mr. GARNER. What have you to say, if anything, in regard to that law?

Mr. REID. That law costs me about seven times as much as I have previously paid the Government, and I will not be able, unless I raise my subscription rates, to get more revenue from it. When the law was first passed I was inclined to come down here and ask that something be done with the gentlemen who were responsible for it. I was inclined to want them put in the front-line trenches, but the more I looked into the thing and considered how it would work out in the way of breaking up that clique of magazines and other publications in New York City, and some other cities, I was convinced that, purely from the publisher's standpoint, it would be a good thing. I wrote a letter to Senator Lewis, who is one of my Senators, opposing the zone system at the start. However, I would rather pay a flat rate, no matter how much it was. I do not want the Government to give me anything, and I am willing to pay my way. In the last few months, particularly since I testified against the packers here, the attitude of a number of magazines and the general attitude of things has been such that I think it would be a good idea to distribute it so that it will operate a little more equitably over parts of the country where we have as many American people as we have in the downtown New York district.

Mr. GARNER. You do agree to the proposition that your publication should pay its way through the United States mail?

Mr. REID. Yes, sir; certainly.

Mr. GARNER. That was the theory that Congress had when it enacted that law, and I am glad to know that there is one publisher who has a considerable circulation throughout the United States who agrees with that theory. At the present rate, probably less than 40 per cent of the cost of transmitting second-class matter through the mail is being collected by the Government, and yet we have consider-

able complaint lodged with this committee by publishers, most of them living in New York City.

Mr. REID. Theoretically you could put up a good argument by saying that as it is a national country you should have a flat rate, and possibly, eventually, if that argument is a good argument, the Government will apply a flat rate. For me, that rate would run about 7 cents per pound instead of 1 cent, in the way my circulation is being distributed. It would be better for me to pay that flat rate of 7 cents per pound than to go through with the red tape involved in this system. We are faced with the situation that a man really ought to make a certain amount of money from his subscription list, rather than charge everything to advertising and nothing to circulation. That theory, I think, is fundamentally vicious.

The CHAIRMAN. Have you a copy of your journal?

Mr. REID. Yes; here it is.

The CHAIRMAN. I think you would pay about  $3\frac{1}{2}$  cents more.

Mr. REID. I have not figured out the advertising end of it. It will run about 40 per cent advertising.

The CHAIRMAN. How far is your average circulation from the place of publication? Is it 500 miles or 300 miles?

Mr. REID. Well, Wyoming is the greatest sheep-raising State in the Union, and my paper circulates in New York and Pennsylvania.

The CHAIRMAN. Would it average 500 miles?

Mr. REID. Some of it is a thousand miles away. I think it would average about 500 miles.

The CHAIRMAN. Then your rate would be about 3 cents more?

Mr. GARNER. You think that that is a just tax, and you are willing to pay your proportionate part of the expense of running the Post Office Department?

Mr. REID. Yes, sir.

Mr. MOORE. Do you have any advantage as a publisher by being in Chicago as against a publisher in New York?

Mr. REID. No, sir; not with my publication, but if I were publishing a popular magazine, I undoubtedly would have an advantage because the popular magazine would be circulated among the population quite generally. For instance, quite a percentage of the circulation would be in the States of Wisconsin, Nebraska, Ohio, and Iowa. I would say that the publisher of a popular magazine at Chicago would have an advantage. I would not have an advantage, because those States are sheep-feeder States rather than sheep-raising States, and the sheep-raising States are farther away from me, either east or west.

Mr. MOORE. If you published the paper called the Farm Journal, would you rather publish it under the zone system in Philadelphia, where it is published?

Mr. REID. I do not like to answer for another man's business, but I would say, offhand, that I would prefer Chicago or St. Louis.

Mr. STONAN. Do dogs attack Angora goats to any extent?

Mr. REID. Not more than once, if it is a good sized goat.

Mr. DICKINSON. Do you think that a dog tax law could be administered better by the Federal Government than if the law were enacted by the States?

Mr. REID. As our friend, Grover Cleveland, said, we are facing a condition and not a theory. Now, theoretically the State should administer their laws, and in the administration of the law our law agencies should not allow local politics to intervene, but the fact remains that they do. We have had 20, 30, or 40 years of this condition, especially during the last 10 or 15 years. The New England section, the larger part of the old South, and a part of the Middle West have been driven out of the sheep business very largely by dogs. So you can see that State administration of that problem has failed.

Mr. DICKINSON. It may be that those States have not enacted such laws.

Mr. REID. In certain States dogs are property. I would not care to do this. I own a farm in Minnesota, for instance, and I would not care to shoot my neighbors' dogs.

Mr. DICKINSON. In my State there is a great deal of interest in this question of the Federal taxation of dogs. I might mention as an illustration that my State senator has been recommending it and urging it upon the Ways and Means Committee. When I put the question to them of why do they not enact a State law, they speak about the difficulty of it, and they want the Federal Government to take it up. The sheep industry is increasing in my section, and as it does increase interest in this question of the taxation of dogs increases.

Mr. REID. Yes, sir. Dr. Fisher and Dr. Nelson, of the Biological Survey, made the suggestion to me some time ago when I was before the Senate committee—and it is really a fact that it would be just as much a revenue producer, taking it from the purely scientific and agricultural standpoint—and by that I do not mean this high-brow so-called agriculture, but I am speaking from the farmer's standpoint—as I say, it would produce just as much revenue to place this tax on cats as well as dogs. There have been over 3,000,000 useful birds killed annually in New York State by cats.

Mr. MOORE. Suppose you take up the conservation feature before you get through. For instance, how much does the dog consume, and how much would be saved for human consumption if the dogs were eliminated?

Mr. REID. I think it would be safe to say that a dog would eat a pound of meat per week very easily. You can not feed a dog on bones alone, and I think that the average dog will eat as much as an ordinary child 8 or 10 years old.

Mr. MOORE. The supply of meat for human consumption could be increased a good deal by reducing the number of dogs?

Mr. REID. Yes, sir; I think so; and that has been taken up in England. It has also been done in France. It is not an entirely new thing.

Mr. SLOAN. Is it not a fact that dogs constitute one of the worst problems in connection with the eradication of hog cholera?

Mr. REID. Yes, sir; and also in connection with the foot-and-mouth disease. They carry human diseases, and cats do also. If you gentlemen want to raise four or five million dollars, I believe you can do it by taxing both dogs and cats.

Mr. DICKINSON. How much tax would you suggest on dogs?

Mr. REID. I would suggest \$1.50, anticipating a cost of 50 cents in the collection of the tax.

Mr. OLDFIELD. How many dogs are there in the country?

Mr. REID. I have been told, in rough figures, that there are over 100,000,000, and about the same number of cats.

Mr. STERLING. Would it not be better to have a graduated tax on dogs, say, of \$1 on the first dog, \$2 on the second dog, \$5 on the third dog, etc.?

Mr. REID. I do not know about that. For instance, I know a doctor in Chicago, who is one of the best surgeons in the country. About the only pleasure or vacation he has is to go out on his farm with his dogs. He has five or six dogs, and he derives a great deal of pleasure from taking those dogs out on the farm and hunting. I do not see why he should be penalized because he has those dogs. I know of instances out West where a man will have 8 or 10 collie dogs, and they will handle forty or fifty thousand sheep with four or five men, and those dogs will do more work than 20 or 30 men could possibly do. I do not want to make it too punitive. I would make it reasonable and go after it. I believe the dog has a useful place in agriculture.

Mr. TREADWAY. Mr. Chairman, I think it is worth noting that we have at last found a source of revenue. We have sat here for several days and it has been pretty hard to find one.

Mr. REID. I believe, seriously, you could raise between three and four hundred million dollars net and between five hundred and five hundred and fifty million dollars gross by a tax on dogs and cats, and I think, after you once got it going, it would not be hard to collect.

Mr. GREEN. Where did you say you come from?

Mr. REID. I originally came from California, but I am now a resident of Chicago.

Mr. GREEN. Are there any more people out there who are not asking to have any of the rates taken off their own business? If there are we would like to see them, because I think you are the first man who has been before the committee who has taken that position.

Mr. REID. I want to pay my proportionate share of taxation, both in and out of war times, gentlemen.

(The committee thereupon took a recess until 1.30 o'clock p. m.)

AFTER RECESS.

#### STATEMENT OF MR. HANK REID—Resumed.

The CHAIRMAN. Now, Mr. Reid, we are going to hear you on a tax on wool shoddy.

Mr. REID. At the start of this proposition, I advocated a tax on shoddy not wholly as a question of revenue, but as a question of getting at something that lots of us have tried to get at through a pure-fabric law, which it does not seem possible to get; and, inasmuch as that law would be a very technical thing and it would take a long time to enforce and it would have to have a Supreme Court decision, it might be half a decade before we got anywhere with it. I would like to bring this to your attention at the start: At the present time raw wool from the farmer is selling for 60 cents a pound; and cotton, if I am correctly informed, is selling at 30 cents a pound; in other words, that is what the farmer gets for his raw material in the United States.

The ordinary suit, according to Hart, Shaffner & Marx, weighs 5 pounds, including everything, and an ordinary man's overcoat weighs 8 pounds. Now, if the farmer gets 60 cents a pound, that is \$3 for his raw material on a \$40 suit, which is about the average price to-day; and he gets \$4.80 on an overcoat, assuming it is all new, virgin wool of the best quality. Now, if it were cotton he would get, of course, half of that, which would be \$1.50 for the raw material in a suit and \$2.40 for the raw material in an overcoat. That is what the farmer gets, so you can see that the farmer is not getting rich quick in selling clothing material to the ultimate consumer. And, assuming that there is 100 per cent waste, which the manufacturers claim—which is not true—then, you would simply double your prices, which again would not amount to much. You would have \$6 on an all-wool suit, \$9.60 on an all-wool overcoat, \$3 on an all-cotton suit, and \$4.80 on an all-cotton overcoat.

Now, of course, that is very apparent; but here is the point: In our Army uniforms, that went with the first contingent, there was a national scandal, and that was due to the use of shoddy. The shoddy manufacturers came here and they made different claims to the War Industries Board—the details of which we do not need to go into—and they were practically allowed to do anything they pleased; and, if you gentlemen care to go into the details of that, I refer you to Gen. Pershing's report on the subject. I have not been permitted to see the report; but I know, of course, in a general way, what is in the report, because that is a matter of public information, which has been given out. If you care for the details, that report will give you the information.

Mr. MOORE. Will you give the substance of it?

Mr. DICKINSON. What report is that?

Mr. REID. Gen. Pershing's report on the uniforms of the first contingent of men who went to France.

Mr. MOORE. Give the substance of it in your own language.

Mr. REID. The substance of it is—and I might go further than that and say that the Bureau of Standards, after Gen. Pershing made a very bitter complaint on the uniforms, which were greatly inferior to the German uniforms, which are the best uniforms in Europe. I regret to say, and also inferior to the French and English uniforms, the Bureau of Standards was asked to verify that conclusion, and unofficially I was told that they found that this shoddy would not even hold—they claimed warmth for shoddy—that it had air spaces in it; that it was not warm; that in any kind of breeze or any kind of mist, even, it was saturated with moisture or cold, if it were chilly.

The CHAIRMAN. Do you know what manufacturers chiefly furnished these shoddy clothes?

Mr. REID. I could find out. It is all a matter of record. The pleas made by the manufacturers, the same as made to the members of the Ways and Means Committee and to Congress for a long time, were that shoddy was a poor man's cloth; that we did not have enough new wool in the country to make clothes for the people; that the manufacturers could not supply uniforms in proper time, and a lot of other things like that, and I am rather satisfied, with what I have heard about Gen. Pershing's report, that none of those things were true. Our uniform was an absolute failure. The first rain those men

got into, they would not hold water, and they were not warm. There is no tensile strength in shoddy. The first time a man went into a trench in training and got wet, if a man reached down and grabbed him by the shoulder to help him out the shoulder came out of the uniform, and that, of course, is just as applicable now as it was then.

Mr. LONGWORTH. Is that the contract that the Eisenmanns had?

Mr. REID. I would not like to say yes or no to that.

Mr. DIXON. What is the price of those shoddy overcoats as compared with the overcoats that they are now getting under this recent legislation?

Mr. REID. I could not tell you the difference in the price of the uniform, but I know that in the department stores of Chicago, Philadelphia, and Boston, where I made personal investigations, the shoddy material sells for just as much or just a fraction less than good clothing. That is the real vicious part of it. If you could buy shoddy materials at a very cheap price, there might be some argument for it, although I think—

The CHAIRMAN (interposing). Can you tell a suit of clothes made out of shoddy?

Mr. REID. It can be told; yes.

The CHAIRMAN. I mean can you tell just by looking at it?

Mr. REID. I could not tell by a chemical test, but I could tell if I wanted to destroy the suit by pulling on it, because if it is all wool it will not react, or if it is all-wool shoddy. People say you dilute wool with cotton, which is bunk, because new virgin cotton has three times the tensile strength that wool has, and it would be mighty good adulteration. The Bureau of Standards recommended unofficially, I believe, if the United States uniforms had been made of pure virgin wool of a sufficient length of fiber to make good clothing, which would be more than 2 inches—that is for the outside—and had the inside been made of virgin cotton, that they would have had a lighter and a better uniform and one that would have lasted under all conditions and had very great tensile strength and warmth and every desirable quality in a uniform; and what we need to do not only in our Army contracts, which I suppose we will have now, but what we need for the clothing for the ordinary man, is the use of virgin wool and virgin cotton, rather than the use of shoddies and other substitutes to debase the standard.

Apparently, not a very large quantity of shoddy is used; but it has been said that certain manufacturers, including some of those ordinarily included in the American Woolen Trust, go ahead and make, for example, a Leicester wool or Lincoln wool, or some other course, strong-fiber wool and run that through in their woolen mills, and they run this shoddy which has been manufactured into a condition that is something similar to wood pulp, and the fiber from rags and old shoddy has no tensile strength; it can not have, because that has all been taken out of it by previous use, and the result is that when that gets into cloth, they make that into woolens and felt it and size it together, which practically means that they glue it together, and produce something that chemically or technically or from a legal standpoint is all wool, but from a clothing standpoint is very poor cloth, and I would say broadly and boldly that the use of shoddy in clothing of any kind ought to be absolutely prevented.

Now, as a method of raising revenue, we import just now only four or five million pounds a year of shoddy, and we use at home from different sources about 62,000,000 pounds.

Mr. MOORE. What is the import?

Mr. REID. We imported last year four million six hundred thousand and odd pounds of shoddy rags.

Mr. MOORE. And how much local shoddy?

Mr. REID. I should not say last year, because this is the census of 1914. You see this is the five-year census. In 1914 we used 62,000,000 pounds of shoddy in woolen manufacture. Now, that just meant that every pound of that went into some poor man's clothing.

Mr. MOORE. Is not England using most of its shoddy now?

Mr. REID. Yes; but, of course, that is a little different proposition. They are handicapped by transportation, and they use it in blankets and felting, and do not use it in their uniforms.

Mr. MOORE. I asked that with reference to imports.

Mr. REID. Yes; I presume England is very largely using it at present. During the war we will not see any very large imports of shoddy; but I believe that if we had an excise tax of 33½ per cent or 36 cents per pound on shoddy in this country and an import tax of the same kind, it would make a very big difference and would raise some revenue.

The ordinary workman in prewar times buys a suit for \$15 or \$20.

Mr. MOORE. What amount of domestic shoddy is used compared with all wool, in domestic use?

Mr. REID. That is rather involved.

Mr. MOORE. Is it going to be more during the war?

Mr. REID. Yes; it has been going up steadily; in fact, the manufacturers advise all over the country that we should not be any less patriotic than our soldiers; that the Government sanctions the use of shoddy and wool substitutes in the uniforms, and therefore as patriotic citizens we should be perfectly willing to pay the same price for inferior clothing which we would be, of course, if there was any necessity for it. Then they give the rottenest uniforms ever manufactured in the history of the world, and then take what little wool they ever had in our so-called all-wool clothing and sell it to us greatly in advance of prewar prices, which does not seem to me necessary.

Mr. MOORE. If you could make a comparison of the use of shoddy with that of domestic wool at the present time, it would be informative upon that line.

Mr. LONGWORTH. How do they keep the price of shoddy as high as they do; is that by a combination or what?

Mr. REID. I was going to say that looking at it from the standpoint of a laboring man, if he goes and buys a \$20 suit which is all wool, so called, that means it is about 90 per cent shoddy generally and about 10 per cent new wool, and he goes ahead and pays say \$20 for that suit, and he buys three or four of those in a year. They are never warm, they are never comfortable, and they are never worth \$20, and he could better afford to buy an all-wool and an all-cotton suit; that is, new virgin cotton for the linings. There is where the big distinction is to be made, in the use of virgin material which has the necessary qualities. He could buy such a suit for \$40

and that would last at least two years, and he would then be paying \$40 instead of \$160 for his clothing.

The reason I lay emphasis on this and bring it up at this time is the great probability that if this war continues for a few more years, which we hope will not happen, we will have to have standard clothing. They claim the German people are using paper clothing and all kinds of fabrics, and in England to-day it is bad form for a man to buy a new suit. He is wearing out all his old clothes and putting the rest of his money into different forms of bonds and paying taxes and doing other things for his country, and if we get to a point over here that we will need to tax the ordinary man to that extent, and if we do establish a standard on clothing, which many textile experts think necessary, we ought to in some way restrict the use of shoddy.

The revenue we would get from it probably would not amount in the United States in prewar times to more than eight or ten million dollars a year, with a 33 per cent tax, and would not amount to more than a couple of million dollars on our imports. We have also got to consider that when the war ends we are going to have all kinds of things dumped on us, and I think there is every possible argument in favor of putting a tax as a revenue measure on a thing of this kind, particularly when everything tends toward the standardization of clothing and the elimination of waste. It would be much better if a man could buy one good suit for \$40 that would last for two years and put the rest of his money into liberty bonds than it would be to wear this inferior stuff.

Wool manufacturers years ago, when schedule K was on the job, divided wool into three classes, and the trouble with that is the manufacturer beat the game. Without going into an argument on schedule K, the manufacturer uses a kind of wool and a class of shoddy that he never dreamed of using 10 or 15 years ago. He uses more and more every year, and the standard in men's clothing and the standard in women's clothing is being steadily debased, and the honest manufacturer has got to face that situation and that is a competition that we have all the way through.

As I said at the start, the great trouble is that the poor people in the poor sections of the country and the people who are thronging together in our big cities go to some of these big department stores and they pay honest prices for fraudulent articles. They do not know any better and the Government affords them no protection, and the way things stand to-day, the possibility of passing a pure-fabric law is very remote; and at this time, while it might look like just a drop in the bucket, I believe it would be a statesmanlike thing to do, and it would ultimately result in the use of raw cotton and raw wool in our fabrics.

When our stuff comes from abroad, you gentlemen who believe thoroughly in free trade used to put a slight tax on oils and some of those things, and the argument has always been that we should take the tax off of the poor man's garments. Well, that is very true, but we should not take it off of shoddy materials.

There ought to be a prohibitive tax placed on inferior materials of that kind, and let the honest, clean materials, let the honest and clean manufactures from other countries, as well as the raw materials, come in, and let us tax out this other stuff that has no honest

reason for existence. There are plenty of other places in manufacture of raw waste, where it could be sold for honest purposes and at honest prices, while the tax could be so handled as to make it prohibitive in clothing.

With regard to statistics, I have gathered together enough statistics so that I could talk figures here all the afternoon, but you probably do not want me to do that. However, if you gentlemen want me to give you figures, I can give them.

The CHAIRMAN. With respect to statistics, what proportion of clothing is now being made out of shoddy?

Mr. REID. Well, I think that about 90 per cent of the cloths which are sold ordinarily as woolens, rather than worsteds, are debased to a greater or less extent by the use of shoddy. That would be about 40 per cent of men's clothing.

The CHAIRMAN. You mean that 40 per cent of the men's clothing is made out of shoddy?

Mr. REID. Practically so.

The CHAIRMAN. How about women's clothing?

Mr. REID. I think women's clothing would show a less proportion, because in the case of a woman's skirt you must have more wool in it.

The CHAIRMAN. And your idea is to tax this shoddy so high that it would be taxed out of existence, so far as men's clothing is concerned?

Mr. REID. So far as clothing for men and women is concerned.

The CHAIRMAN. If about 40 per cent of our clothing is made out of shoddy now, and if we should tax out of existence that raw material, and men's clothing must be made out of virgin wool, would not a suit which is now worth \$40 be worth \$100?

Mr. REID. I think not.

The CHAIRMAN. Would not the demand for woollen clothing be so much out of proportion to the supply of it that they necessarily would have to increase the price considerably?

Mr. REID. That would adjust itself in this way: That if you are ordinarily in the habit of buying four suits a year, and using, roughly, 8 yards of cloth for each—let me say that these are not very accurate figures; it used to be figured years ago that it took 7 yards of cloth to make a woman's dress, but it would take a bold man to figure what it would take now; but we will assume that it would take about 8 yards of cloth for an ordinary man's suit. If he buys four suits in a year, as he does now ordinarily if he is an ordinary laboring man, that, of course, would be 32 yards of material in a year. Now, if he bought one all-wool and all-cotton suit, wool for the outside and cotton for the inside finish, as recommended by the Bureau of Standards as an ideal uniform combination, that would be only 8 yards of material; and in the course of a year we would catch up with ourselves in good shape. There might be a temporary shortage; but you are using 8 yards of stuff that would last you two years, instead of 32 yards each year. So that in the long run you would use just as much in the manufacture of your 8 suits as you would originally in the manufacture of your one suit. I imagine for the time being it might cause some embarrassment.

The CHAIRMAN. Well, do the manufacturers who are sincere and honest in the manufacture of their product estimate the difference in

the life of a virgin wool suit of clothes and a shoddy suit of clothes as two years?

Mr. REID. I think they do; yes. I will say, in favor of some of our manufacturers, that there are a good many manufacturers in Boston, Philadelphia, and other places who came down here to the War Industries Board and asked them, For goodness sake, for the love of Mike, and everything else, not to use that kind of material, especially for the soldiers; that the uniforms would be no good; that the clothing made from such material never was any good and never would be. It is not necessarily a universal practice to use shoddy. Worsted goods are generally in pretty good shape. We have had a lot of camouflage on this subject, however, because ordinary purchasers have insisted that cotton goods should not be mixed with the wool, because it adulterated the wool. As a matter of fact, the really vicious thing is placing on the market so-called women's garments in which shoddy and other substitutes are used.

Mr. O'SHAUNESSY. I did not quite understand your statement about the mixture.

Mr. REID. I said there was a lot of camouflage about it, and that lots of people said that cotton was an adulterant of wool. As a matter of fact, in virgin wool and virgin cotton, you have an ideal garment.

Mr. O'SHAUNESSY. What do you call that?

Mr. REID. I would have the outside of virgin wool, and the inside of virgin cotton.

Mr. O'SHAUNESSY. Well, that is with regard to the method of manufacture. I asked, What would you call it?

Mr. REID. I would just call it an all-wool suit with a cotton lining.

Mr. O'SHAUNESSY. And what is your definition of shoddy?

Mr. REID. That would be a pretty complex proposition; but shoddy is, roughly, rags and wool waste, and all kinds of wool which has been previously used.

Mr. O'SHAUNESSY. What I wanted to get at was this: There is no virgin wool in it, is there?

Mr. REID. A certain amount of virgin wool is put on the machine so that the shoddy will hold together in the manufacture of so-called all wool, which is very poor stuff. The distinction was between virgin wool and shoddy wool.

Mr. HAWLEY. In your estimate of the number of pounds of wool in a suit of clothes, you based that on the scoured contents and not on the raw contents, did you?

Mr. REID. Yes. An ordinary suit weighs 5 pounds as you pick it up and purchase it—exactly.

Mr. HAWLEY. And the scoured contents are only about one-third of the raw contents of the wool?

Mr. REID. Well, I would not agree to that. I think the scoured content is a little less than 50 per cent. It would depend on the character of the wool. That is a very involved subject. Our manufacturers years and years ago used to claim that it took 4 pounds of wool in the grease to make one pound of scoured wool. Perhaps that was true then; it is not true with our present methods of manufacture; you do not lose more than about 50 per cent of the wool in the grease. But with wool selling at 60 cents a pound to-day, if you lost 5 pounds in the manufacture, you would have only \$6 worth of raw

material which goes into your suit. Now, there is a great deal of difference between this \$6 worth of raw material and the shoddy which goes into the suit. And if you give the manufacturer 100 per cent profit, the jobber 100 per cent, and the retailer 100 per cent, it makes only about \$40.

The CHAIRMAN. If you have finished, Mr. Reid, we will hear the next witness.

Mr. Glass, representing the Newspaper Publishers' Association, will appear before the committee Friday instead of to-day. We will hear Mr. Phillips, of the bottlers' association.

Mr. PHILLIPS. With the permission of the chairman, I would like to introduce Mr. Carr, of our association.

The CHAIRMAN. Will he speak for the association, instead of you?

Mr. PHILLIPS. Yes, sir.

The CHAIRMAN. Then we will be glad to hear him. What is your full name, Mr. Carr?

**STATEMENT OF MR. FRANK P. CARR, REPRESENTING AMERICAN BOTTLETS' PROTECTIVE ASSOCIATION AND PENNSYLVANIA BOTTLETS' PROTECTIVE ASSOCIATION.**

Mr. CARR. Frank P. Carr; residence, Philadelphia, Pa.

The CHAIRMAN. And what business are you in?

Mr. CARR. I am engaged in the bottling business; I am a practical bottler.

The CHAIRMAN. Whom do you represent?

Mr. CARR. The American Bottlers' Protective Association. I am here, not for the purpose of combating any tax or revenue that might be put upon us, but rather to help if we can; and to call the attention of the committee to the fact that some of the conditions that prevailed when this original bill was drafted and went into effect have materially changed in our line, in the way of sugar, labor, gas, and the like.

We furnish to the public what is called a 5-cent drink; and the tax that was placed upon our business has been entirely absorbed by the bottling trade—that is, by the manufacturer—without placing it upon the public at all. So, under those circumstances, while I, speaking for those engaged in the business, am ready and willing, and would be too glad, to assume any burden that might be placed upon us, at the same time we would like the consideration of the committee, before any final arrangement as to a scale is arrived at, of a brief which we have had prepared in our behalf and which we would like to present to the committee.

The CHAIRMAN. All right.

Mr. CARR. And if the committee cares to have Mr. Phillips make a further statement, I will be glad to have him follow me.

The CHAIRMAN. Does your brief cover the whole subject?

Mr. CARR. Yes, sir.

The CHAIRMAN. Then that will be sufficient. We will have that printed.

Mr. CARR. Would you care to hear Mr. Phillips further? He is the secretary of our association. Of course, I am only a practical bottler. He might be able to enlighten you further.

Mr. MOORE. I should like to ask Mr. Carr a question before he leaves. Are you the president of the National Association of Bottlers?

Mr. CARR. No; I am president of the Pennsylvania association.

Mr. MOORE. There is a national association, is there not?

Mr. CARR. There is a national association, of which Mr. Phillips is secretary. My being here to-day is on account of the absence of Mr. Wagner, who is the national president; and as he was unable to be here I am speaking in his place.

Mr. MOORE. You speak more particularly for the Pennsylvania association, do you?

Mr. CARR. Yes, sir.

Mr. MOORE. What would you say as to the suggestion made here a day or two ago, as to passing the increased tax on to the consumer?

Mr. CARR. Well, I suppose eventually whatever arrangement would be made the tax would have to be placed upon the consumer anyhow, because our business has been taxed up to the very limit. What I mean by that is that we have absorbed that tax; and of course if the additional tax should be placed on our business, we would naturally have to make an increase in our prices.

Mr. MOORE. As that question would naturally arise, I would like to get the Pennsylvania view of it. I would like to know how you stand on the proposition of putting a direct tax on the glass in the soda-water fountain, or drug store, or grocery store, or wherever it may be sold.

Mr. CARR. Eventually that would be what would have to be done, because the bottler could not stand any further tax, in my judgment.

Mr. MOORE. I have here a suggestion from Chicago; I presume other gentlemen on the committee have also received it. It is with regard to the price of beer; that is not your commodity?

Mr. CARR. No.

Mr. MOORE. Although it might apply also to Bevo, or some of those other near-beer preparations, as well as to soft drinks like soda water.

Mr. CARR. And sarsaparilla, ginger ale, etc.

Mr. MOORE. Yes; sarsaparilla and the phosphates, and things of that kind. The suggestion was that the prices should be fixed at 10 cents retail.

Mr. CARR. A glass?

Mr. MOORE. Yes; so that it might be made to cover any increased tax that Congress imposed on the business. At present we tax the bottler.

Mr. CARR. Yes, sir.

Mr. MOORE. That is, the manufacturer pays the tax and he has absorbed it. Now, the proposition is that we might help the manufacturer by letting him increase his price, and then levy a tax per glass to be checked up at the drug store or at the point where the soda water is served. What would you say to that if it came as a last resort?

Mr. CARR. Well, I do not know that a 10-cent drink would be practicable among the class of people with whom we do business.

Mr. MOORE. No; I mean it has been suggested here that the retail price should be raised to 10 cents a glass, instead of 5 cents as at present.

Mr. CARR. I think that would operate against us in the sales.

Mr. MOORE. Well, you are being handicapped by the lack of sugar, are you not?

Mr. CARR. Very much so.

Mr. MOORE. And you can not produce as much soda water as there is demand for, as I understand.

Mr. CARR. That is very true. But, of course, we feel that these conditions will last only during war times; and if in the meantime we should go out of business we would be in a very bad position when the war ended.

Mr. MOORE. Yes. Of course, we would hope that the tax would be taken off when the war ended and normal conditions were restored. It would take time, but it would be the hope of Congress, I assume, to take the tax off as soon as the war is over.

Mr. CARR. Well, in the city of Philadelphia, for instance, there is an additional population of over 200,000 who have come there within the last year. And we can not begin to give the service we should on account of lack of sugar and lack of help. In our line of business, where men could be obtained for from \$14 to \$16 a week they are now asking for \$28 or \$30, making it physically impossible to serve them, with the prices not being raised against the public; with the prices at the original figure, it is a physical impossibility to meet those conditions. So that what we want to do, as I say, is just to drift along until the conditions change; and, of course, our business would still be with us.

Mr. MOORE. In the brief you have submitted have you made any suggestions as to a change in the present law?

Mr. CARR. There has been a suggestion; yes, sir.

Mr. MOORE. If that is discussed, I will not ask you for an answer as to that.

Mr. PHILLIPS. That is discussed in the brief submitted.

Mr. GARNER. I want to ask Mr. Carr a few questions before Mr. Philipps takes the stand, Mr. Moore, if you are through.

Mr. MOORE. I only wanted to get from Mr. Carr a statement as to whether they had made any suggestions for a change in the law.

Mr. CARR. I believe the brief covers that.

Mr. MOORE. All right.

Mr. GARNER. Mr. Carr, your complaint is that your business now is taxed to the limit if the business is expected to absorb the tax and not pass it on to the consumer?

Mr. CARR. At the present time; yes, sir.

Mr. GARNER. Suppose Congress should decide to levy a tax to be paid by the consumer; to illustrate, suppose the bill should require each man who bought a 5-cent glass of soda water or ginger ale, or whatever it might be, to give you the 5 cents and at the same time furnish a stamp from the Government at 1 cent.

Mr. CARR. Well, of course, that would create another condition. We find now that it is a physical impossibility to get labor; and the stamp end of the arrangement would add to our burden rather than that of the consumer.

Mr. GARNER. In what way would it add to your burden?

Mr. CARR. We would have to supply the labor to take care of those stamps.

Mr. GARNER. Would it require a great deal more labor to receive a 5-cent piece and a stamp at the same time than it would to receive a 5-cent piece?

Mr. CARR. You understand that we sell to the trade, and they in turn sell to the consumer.

Mr. GARNER. I am not talking about taxing you. I am talking about taxing the man who buys the drink and not you. You would have nothing to do with the tax at all.

Mr. CARR. I thought we would, when you spoke of the stamp.

Mr. GARNER. You would not have any occasion to raise your price; you would not have any occasion to absorb it; but each individual who buys a soft drink would 1-cent tax for each 5-cent drink he buys. What would you think of that?

Mr. CARR. And the man who sells that individual a drink would collect that stamp?

Mr. GARNER. Yes.

Mr. CARR. Well, of course, our business would remain the same; there would be no reason for our attempting to raise prices or do anything else.

Mr. GARNER. You would have no objection to a tax of that kind, would you?

Mr. CARR. Under those circumstances we would have no objection to working it out that way.

**STATEMENT OF MR. WILLIAM T. PHILLIPS, SECRETARY AMERICAN BOTTLERS' PROTECTIVE ASSOCIATION, NEW YORK CITY.**

The CHAIRMAN. Mr. Phillips, please state your full name.

Mr. PHILLIPS. William T. Phillips.

The CHAIRMAN. Where is your home?

Mr. PHILLIPS. New York City. I am secretary of the American Bottlers' Protective Association. We have made suggestions for a slight raise in the present tax in the brief which has been submitted by us. The figures given there are about all the additional burden the industry could stand; and we would like to have your consideration of that brief.

We presume you gentlemen are familiar with the fact that the bottling business is a small business. The great majority of the manufacturers represent a very small capital.

Mr. GARNER. Suppose we take the tax entirely off of you as a manufacturer and place it on the consumer, as I just illustrated to Mr. Carr, what would you say about that?

Mr. PHILLIPS. I think that would be an ideal condition.

Mr. GARNER. That would give us between \$30,000,000 and \$50,000,000, whereas under the present system we get only an insignificant portion of that.

Mr. LONGWORTH. I suppose this is probably the only tax in the entire revenue bill that has not been passed on.

Mr. GARNER. Probably it is; and if we are taxing that industry, I see no reason why we should not place it where the retailer would not have an opportunity of increasing the price, under the pretense that he is paying a war tax, and at the same time draw to the attention of the man who is buying that drink that he is really paying a

tax, and in addition—which is more important by a great deal—we would in this way produce more revenue for the Government.

Mr. PHILLIPS. Yes. And I may say in relation to that, as Mr. Carr has told you, that the business has practically absorbed all of the taxes it can stand; and at the same time we must preserve a ratio between the selling price and the price at which the dealer buys it, because he must pay the expenses of icing it and handling it; but if he can pass the tax on to the ultimate consumer, that would be a good solution.

Mr. GARNER. Suppose we had a law of the character I have just spoken of, and you were to walk into a drug store and say, "I want to buy a glass of soda," or Coca-Cola, or whatever it might be, and the man would go to serve you; you would first hand him a 5-cent piece, and then you would hand him a stamp printed by the Treasury Department amounting to 1 cent.

Mr. PHILLIPS. That is an arrangement that would relieve the bottler of all responsibility and increase the revenues of the Government.

Mr. GARNER. Yes; by 1,000 per cent.

Mr. MOORE. You would not have anything to do with it, as I understand.

Mr. STERLING. Why not place it on both? He says he can stand a little more.

Mr. PHILLIPS. We could stand just about what we have got now; we could absorb that. It must be remembered that everything the bottler uses at the present time is taxed; there is a war tax on everything. We are reduced or curtailed on our sugar supply; we are facing another cut of, perhaps, 50 per cent; and our business is simply trying to keep afloat until the war is over, and we ask you gentlemen not to sink the ship.

**STATEMENT OF MR. WILLIAM B. HATFIELD, BROOKLYN, N. Y.  
REPRESENTING AMERICAN BOTTLETS' PROTECTIVE ASSOCIATION.**

Mr. HATFIELD. There is a revenue tax on sugar of 1 cent a pound and that amounts to a tax on soda water.

The CHAIRMAN. Please state your full name, your residence, and occupation.

Mr. HATFIELD. William B. Hatfield. I am a practical bottler, of Brooklyn, N. Y., and have been for 30 years.

Mr. PHILLIPS. He is a member of our committee of the American Bottlers' Protective Association.

Mr. GARNER. Undoubtedly, as you say, Mr. Hatfield, the cost of manufacturing soda water has gone up, as the cost of everything else has.

Mr. HATFIELD. Yes, sir.

Mr. GARNER. And I am suggesting a method by which the Government could get at least \$50,000,000 revenue, and yet you gentlemen would have to contend with nothing except the rise in the prices of material that goes into the manufacture of your product. Congress can not undertake to control that, of course.

Mr. HATFIELD. No.

Mr. GARNER. But that would obviate the necessity of your being here; it would only be a question then of how much the voting population of the United States would take revenge on Congress for taxing those drinks. [Laughter.]

Mr. HATFIELD. I do not think they would.

Mr. GARNER. I do not think so, either.

Mr. HATFIELD. I do not think so; the retail prices of cigars have all gone up.

Mr. GARNER. I think a great many people would be very glad if we would adopt some kind of taxation to keep their children from the soda fountains—at least, to some extent.

Mr. HATFIELD. They have accepted the tax on moving pictures very gracefully.

Mr. GARNER. They have accepted the tax on moving pictures, and they will accept this.

Mr. HATFIELD. If you will only let it stand as it is and put the tax on the consumer I think you will find it will work more satisfactorily, and at the same time you will get more revenue. I know that we can not stand any more tax in the city of New York to-day in the soda-water business. I am not a millionaire. I have spent 30 years in the business, and I have made \$2,000 or \$3,000 a year. Now, there is no man in the city of New York, outside of one or two big concerns, that is making any more than I do. It is not a large industry. You gentlemen may look at it in the light of a few of these great big concerns that sell sirups. But there is no concern in the city of New York, where there are 400 bottlers, that is making much money, outside of those few big sirup concerns I spoke of. You can see that when the industry is divided up among 400 bottlers in New York it is a small industry as to each individual concern. And you can see where we have to pay an increased cost on everything we use; everything we use is taxed. Sugar is the biggest material the bottlers use; and my little tax on sugar of 1 cent a pound cost me \$800 last year. Now you can see the amount of sugar that is used in the industry. That is the first item taxed. Now come the extracts; we are taxed on them under the revenue law. Next comes the gas; we are taxed on that. Everything we use is now taxed. Mr. Bruckner explained that here last year.

Mr. GARNER. But the suggestion I made would relieve you.

Mr. HATFIELD. Yes; I think it would be a very good thing if that could be put into effect.

The CHAIRMAN. Are you gentlemen not putting all of this tax up to the people to whom you sell?

Mr. HATFIELD. No, sir; the industry absorbs it.

The CHAIRMAN. What do you manufacture?

Mr. HATFIELD. Soda water and ginger ale.

The CHAIRMAN. Ginger ale; all right; how much were you getting last May for ginger ale?

Mr. HATFIELD. For 2 dozen bottles, 50 cents.

The CHAIRMAN. Two dozen bottles for 50 cents; you were getting a little more than some of the men who appeared before the committee last October.

Mr. HATFIELD. We are telling the honest facts.

The CHAIRMAN. Now, what are you getting for it?

Mr. HATFIELD. Sixty cents.

The CHAIRMAN. Well, what do you add on the 10 cents for?

Mr. HATFIELD. The principal item of increase was labor.

The CHAIRMAN. And sugar?

Mr. HATFIELD. The price of sugar is being controlled. If sugar was not controlled there would not be the volume of soda water there is to-day; we could not buy sugar.

The CHAIRMAN. But you put that extra 10 cents on the price principally on account of material?

Mr. HATFIELD. No; principally on account of the price of labor. You see, at the time we were getting 50 cents we were paying 8 cents for sugar; now we are paying 7½ cents on account of the control by the Food Administration. If it was not for that control we would have to pay 25 cents for sugar.

The CHAIRMAN. And you are passing that on to the retailer?

Mr. HATFIELD. Yes, sir.

The CHAIRMAN. You are passing that on to the retailer; and they tell me that the retailer has added from 200 to 1,000 per cent to the consumer's price.

Mr. HATFIELD. I do not think that is correct.

The CHAIRMAN. In some cases soda fountains do that. Take Coca-Cola, for instance.

Mr. HATFIELD. Yes, sir; but the average price of soda water in the territory of New York City at retail is 5 cents a drink. I am speaking now about a situation that I know about.

The CHAIRMAN. Have you cut down the quantity in the bottle?

Mr. HATFIELD. No, sir; the quantity has remained the same. It would cost an enormous amount of money to change the size of the bottle.

The CHAIRMAN. Well, the case that you sell to the retailer for 60 cents contains 24 glasses, does it?

Mr. HATFIELD. Yes, sir.

The CHAIRMAN. And the retailer gets \$1.20 for what he pays you 60 cents for?

Mr. HATFIELD. Yes, sir.

The CHAIRMAN. So that if there is any increased price charged to the consumer it is the retailer who does it and not you?

Mr. HATFIELD. Yes, sir.

The CHAIRMAN. And the retailer makes, selling it at 5 cents a glass, 100 per cent profit?

Mr. HATFIELD. Instead of 70 cents, he gets 60 cents profit.

The CHAIRMAN. In other words, he pays you 60 cents and sells it for \$1.20, thereby getting 100 per cent profit?

Mr. HATFIELD. Yes, sir.

The CHAIRMAN. So that the retailer could stand a little tax, could he not?

Mr. HATFIELD. I think he could.

The CHAIRMAN. All right. Is there any gentleman present who was on the program for Saturday who failed to appear then?

Mr. HAWLEY. Mr. Chairman, before we adjourn, Representative Reavis wanted to be heard this afternoon.

The CHAIRMAN. I understand Representative Reavis is not in his office this afternoon.

We will adjourn until to-morrow morning at 10.30.

(The brief submitted by Mr. Phillips is here printed in full, as follows:)

WASHINGTON, D. C., June 17, 1918.

WAYS AND MEANS COMMITTEE,  
*House of Representatives.*

DEAR SIR: The American Bottlers' Protective Association of the United States, with a membership of State and local organizations of manufacturers of carbonated beverages in New York, Massachusetts, Connecticut, Tennessee, Maryland, Illinois, Pennsylvania, Iowa, Wisconsin, Kansas, Missouri, Minnesota, Nebraska, Texas, Arkansas, Indiana, Ohio, South Dakota, Kentucky, and Michigan—30 associations in all—presents for the consideration of your honorable committee the following recommendations with reference to the proposed war-revenue measure of 1918:

Realizing the need of the Government for funds to carry the present great struggle for human liberty to a successful conclusion, the carbonated beverage industry, already decimated by the wisdom of the United States Food Administration and taxed by the present revenue law, is willing to assume still further burdens of taxation.

It is therefore recommended to your committee that section 313, subsection (a), of the present war-revenue measure be changed, for the purposes of the new law, to read as follows:

"Sec. 313. There shall be levied, assessed, collected, and paid (a) upon all prepared sirups or extracts (intended for use in the manufacture or production of beverages, commonly known as soft drinks, by soda fountains, bottling establishments, and other similar places) sold by the manufacturer, producer, or importer thereof, if sold for not more than \$1.30 per gallon, a tax of 0 cents per gallon; if sold for more than \$1.30 and less than \$2 per gallon, a tax of 9 cents per gallon; if sold for more than \$2 and not more than \$3 per gallon, a tax of 12 cents per gallon; if sold for more than \$3 and not more than \$4 per gallon, a tax of 18 cents per gallon; if sold for more than \$4 per gallon, a tax of 22 cents per gallon."

It is further recommended that for the purposes of the new act, subsection (c) of section 313, be rewritten as follows:

"(c) Upon all natural, table, or spring waters sold by the producer, botler, or importer thereof, in bottles or other closed containers, at over 5 cents a gallon a tax of 1 cent per gallon, and on all such waters sold for and over 10 cents per gallon, a tax of 2 cents per gallon."

It is further recommended that the tax upon carbonic acid gas sold in drums and other containers (intended for use in the manufacture or production of carbonated water or other drinks) sold by the manufacturer or importer thereof be placed at 6 cents, instead of 5 cents as provided in the present measure.

In presenting the foregoing the fact is urged upon your honorable committee that the carbonated beverage industry has been one of the hardest pressed by war conditions; that the recommendations heretofore presented represent about all the additional burdens the industry can stand; that bottled carbonated beverages are made essential by reason of popular demand, and furthermore they are the only article of food, refreshment, and comfort, the price of which has not been advanced almost beyond the reach of the average wage earner.

The bottler to-day is fighting for his life, we leave his fate in your hands, trusting in your wisdom, fairness, and justice.

Respectfully submitted,

AMERICAN BOTTLERS' PROTECTIVE ASSOCIATION OF THE UNITED STATES,  
WM. T. PHILLIPS, *Secretary.*  
WM. B. HATFIELD,  
FRANK P. CARR.

(Thereupon, at 2.30 p. m., the committee adjourned until Tuesday, June 18, 1918, at 10.30 o'clock a. m.)

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Tuesday, June 18, 1918.*

The committee met at 10.30 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, O'Shaunessy, White, Moore, Green, Sloan, Longworth, Sterling, Martin, Hawley, and Treadway.

## STATEMENT OF MR. STEPHEN FARELLY, GENERAL MANAGER AMERICAN NEWS CO., NEW YORK, N. Y.

The CHAIRMAN. Give your full name and address and state whom you represent.

Mr. FARELLY. My name is Stephen Farelly, my residence New York, and I represent the American News Co.

The CHAIRMAN. Are you a publisher yourself?

Mr. FARELLY. No, sir; we publish nothing. We act as distributing agents for from four or five hundred different publishers. We distribute their entire products, except the single copies that go to individual readers on subscription. Our postage bill that we paid the department last year was \$464,000. That shows something of the extent to which we use the mails. It represents about 20 per cent of our total shipments.

Mr. GARNER. How much does it represent?

Mr. FARELLY. It represents about 20 per cent of our total shipments.

Mr. GARNER. Going by post?

Mr. FARELLY. Yes, sir.

Mr. GARNER. For which you paid something over \$400,000?

Mr. FARELLY. We paid last year \$464,000. We use the mails to distant points and to the suburban sections of the leading cities. We have distributing houses in 63 different cities of the country to which we send quantities of the publications by freight, and from there they are sent by express or mail to smaller places. The trouble with us in carrying out the law as it is now prepared and as it is to be put into effect after July 1 is this: That we make up packages ranging from 10 to 50 pounds that may contain from 20, 30, to 40 different publications, on which we would have different rates of postage. For instance, one magazine has, we will say, 27 per cent of advertising and the remainder reading matter, and it weighs, we will say, about 6 ounces. Another one, we will say, contains 42 per cent of advertising matter and 58 per cent of literary matter and another one, we

will say, has 17 per cent of advertising matter and the remainder reading matter. All of those publications will be going into the same package.

Now, when we have to multiply that by 15 or 20 publications, you can see the perplexing difficulty that will be caused, if it is not an impossibility, and the enormous amount of expense involved in figuring out the various rates of postage on those various packages, as well as the difficulty we will have in satisfying the Post Office Department that they contain just that amount of advertising matter and just that amount of reading matter. If we were to deliver them to the post office and they were to attempt to verify our statements, a great additional amount of labor would be required. The receiver of second-class matter in the New York City post office requested the department to furnish additional help, and they proposed to let him have three or four men to handle that matter, but, as a matter of fact, it will take more than 40 men to handle it. We ship from 5 to 20 tons per day, and one day recently we shipped 22 tons in several hundred packages.

Now, if we comply with this law, and, of course, we are bound to do it, it will involve this enormously expensive process of tabulating the contents of each package separately, and of each magazine separately, going to make up the grand total, and then the post-office officials who will have to check over it. That will involve a tremendous amount of labor and the employment of a great many additional men. Those are some of the practical obstacles in the way. Then, again, if we are to comply with this law, I would like to learn what is the disposition of this committee in regard to foreign publications. We have been handling a great many foreign publications, such as the London Times, Punch, the Graphic, Manchester Guardian, and a number of other publications. Now, if we are required to conform to this law in regard to these publications, then the sales in this country will not be sufficient to justify the expense that would be incurred in making the necessary statement required in the case of the domestic publisher.

Mr. MOORE. Have you discussed that matter with the postal officials?

Mr. FARELly. I have discussed it with Mr. Burleson, with Mr. Koons, and with the Third Assistant Postmaster General, and they have said that they would try to make it as easy for us as possible.

Mr. MOORE. Is not that, as well as the other general propositions you raise, a question of administration purely?

Mr. FARELly. Well, the question of foreign publications involves Canadian publications also. For instance, there is a large number of publications coming from Toronto and Montreal. As I have said, there is a large number of English publications coming in. We receive them by every incoming steamer from London. Of course, it is a question of whether or not this committee would consider that as one of the matters for its administration.

Mr. MOORE. I know how vast that problem is. I have some knowledge of it, and I can understand what your problem is, but I was wondering while you were making your introductory statement whether that apportionment of the advertising and literary matter would not be made before the publication came into your hands. Would not that apportionment be made in the office of the publication?

Mr. FARELly. Each publication is required to state in print in its sheet the percentage of advertising and the percentage of reading matter, but each publication carries a different percentage of reading matter, and that percentage varies with every issue of the same publication, and then the rate varies with the different zones, each zone having a different rate.

Mr. MOORE. Would the Postmaster General expect you to make that accounting, or would he require it to be made in the office of the publication?

Mr. FARELly. The publisher furnishes that information to us, but we have to put all of those different publications up into packages containing many different publications, each publication having a different rate of postage. If the Government should require us to mail each one separately, it would require on the part of the Government the handling of 40 pieces of mail instead of one package.

Mr. MOORE. Do not the regulations that have been issued by the Postmaster General cover that point?

Mr. FARELly. They cover it only in a general way, but specifically we would have to carry it out as I have suggested. Then, if the Government were to attempt to check our statement or verify our statement, it would involve enormous expense to the Government.

Mr. MOORE. It would be a matter of additional labor and of additional accounting, would it not? That is the difficulty, is it not?

Mr. FARELly. Yes, sir; that is the chief difficulty.

Mr. MOORE. Which you think would be put upon the American News Co. rather than upon the publishers?

Mr. FARELly. The publishers' proposition is that of handling single copies of the publications, and that is really quite simple. He distributes single copies of the publication to individual subscribers, and that is quite a simple matter, but when we have to assemble four or five hundred different publications, carrying different percentages of advertising matter and reading matter, it is a very different proposition. It will involve for us an amount of work that will make it very nearly unworkable, so much so that I can not think that those who framed the bill thought of that situation.

Mr. MOORE. That is a serious problem, but the question is whether or not it is one that lies between yourself and the Postmaster General, and whether, considering the vastness of your business, it is a matter that should be adjusted by postal regulation rather than by law.

Mr. FARELly. I presume it is within the discretion of the Postmaster General to make a liberal ruling, and I believe that in the exercise of his discretion he can make a ruling practically setting aside the direction of Congress.

Mr. MOORE. Is your distribution made altogether from your New York headquarters?

Mr. FARELly. No, sir; we distribute from all of our different distributing centers, of which we have some 63, in every city of any size in this country. Nearly every city of any size in this country is a distributing center, and we distribute to that center usually by freight, which is lower in cost, of course, than mail.

Mr. MOORE. Have you a distributing center at Chicago?

Mr. FARELly. Yes, sir.

Mr. MOORE. How far west do you distribute matter?

Mr. FARELly. We go as far west as Portland, Oreg., Seattle, San Francisco, Los Angeles, and San Diego.

Mr. MOORE. Do you ship there in bulk?

Mr. FARELLY. Yes, sir; we ship there in bulk.

Mr. MOORE. Taking an eastern publication, for instance, you would send it by freight to Portland?

Mr. FARELLY. Yes, sir.

Mr. MOORE. And it would be distributed from that point?

Mr. FARELLY. Yes, sir.

Mr. MOORE. You said that one day recently you shipped as much as 22 tons of publications. Just how many motor trucks or vehicles would that require?

Mr. FARELLY. Well, we generally put a load of about 5 tons on a truck. The distance is not great, and the hauling is level. Our motor trucks carry 5 tons or more.

Mr. MOORE. Where you make through shipments, do you send them by express or by freight?

Mr. FARELLY. Usually by freight. All of these bulk shipments to our distributing points are made by freight, except on the Pacific coast, where they are made by mail at the present rate.

Mr. MOORE. Do you make shipments of the Ladies Home Journal and the Saturday Evening Post?

Mr. FARELLY. Yes, sir; we make large shipments for what we call trade sales.

Mr. MOORE. Are those shipments made direct from Philadelphia?

Mr. FARELLY. Yes, sir; they are made direct from Philadelphia.

Mr. MOORE. Except, I suppose, such as you would probably distribute around New York?

Mr. FARELLY. Yes, sir.

Mr. MOORE. We provided in this law for the distribution of publications from any post office. Does not that tend to relieve the situation somewhat with regard to eastern publications?

Mr. FARELLY. It does somewhat with regard to the distribution, but it does not overcome in any way the great labor and expense involved in the separation and tabulation of these varying percentages of advertising matter and reading matter.

Mr. MOORE. The old law provided for or required shipments to be made from the point of publication.

Mr. FARELLY. No, sir; it was just the same as the present law. It is the same as the law has been for all time, or for the last 30 or 40 years. We have shipped to Chicago by freight, and we have sent that matter by mail from St. Louis, Cincinnati, and other points.

Mr. MOORE. My recollection is that it was complained at the time we were considering this law that it would be a hardship if we required distribution to be made, so far as the zones were concerned, only from the post office of publication. I am referring, of course, to postal matter and not to freight matter.

Mr. FARELLY. Well, that has been the rule in the past. There has been no change in that respect, as I understand the law, and our postmaster has made the same interpretation of it; that is, that it continues as it has been for the last 30 or 40 years.

Mr. MOORE. I think the committee would be glad to have you state whether in the handling of these bulk packages we could aid in any way, or have aided in any way, by providing for distribution in bulk in unbroken packages, as it were, from any post office.

MR. FARELLY. This unquestionably continues the same privilege that we have had in the past, and it does not hamper in any way that part of it. That is a great advantage over the ruling that they could only be shipped from the office of publication. If we were compelled to pay the eighth zone rates on shipments from New York, it would be a great hardship.

MR. MOORE. To what extent do you use parcel post?

MR. FARELLY. Very little, or scarcely at all. In fact, we do not use it at all for second-class matter.

MR. MOORE. You handle other business besides that of distributing newspapers and magazines, do you not?

MR. FARELLY. We have two other departments, a book department and a stationery department, which do quite a large business.

MR. MOORE. Do you use the parcel post much in those departments?

MR. FARELLY. Yes, sir; to a great extent, in the stationery department especially, and, also, in the book department.

MR. MOORE. How does that service work as compared with the express service?

MR. FARELLY. Well, for short distances it is less usually than the cost of the express service.

MR. MOORE. We had some testimony a day or two ago concerning express companies at Boston that complained that the parcel post had a decided advantage over them in the local trade going out from the city of Boston.

MR. FARELLY. I think that is correct. I think that on local shipments for a short-distance haul, the parcel post has the advantage. I think that is true of second-class matter and I do not know that it is even eligible to the parcel-post rate.

MR. GARNER. Yes, it is.

MR. FARELLY. We do not use it for that purpose.

MR. GARNER. You do not use it because of the fact that it costs you a great deal more money on second-class matter to send it by parcel post than under the present system?

MR. FARELLY. Yes, sir.

MR. GARNER. When this system goes into effect, you will have to pay more money than you have to pay now to the Post Office Department?

MR. FARELLY. If it goes into effect, it seems to me that it would be so difficult of enforcement that it would drive a great deal of business out of the post office, and, instead of paying \$464,000 a year, I do not think we would pay half that amount to the Post Office Department.

MR. GARNER. How would you handle your publication?

MR. FARELLY. We could utilize motor trucks and trolley cars to suburban sections. We would use that service for all the local sections. The operation of this law will bear heaviest upon the citizens of the smaller villages. As to the larger cities, we can cover them without the use of the mails. Now, there is a great misapprehension as to the cost of handling second-class mail matter. A few weeks ago Mr. Koons said that it costs \$3.60 to bring second-class mail matter from New York to Washington. We have a distributing point here at Washington, and we ship matter by freight here at a cost of only 40 cents.

Mr. GARNER. Per hundred pounds?

Mr. FARELly. Yes, sir; per hundred pounds. The department claims that it costs \$8 to ship matter from New York to the Pacific coast. The department says that it costs the Government \$3.60 per hundred to ship matter from New York to Washington, and they claim it costs \$8 per hundred to ship it to the Pacific coast. We can make those shipments to the Pacific coast in carload lots at a cost of \$2.85 per hundred. The blue tag-system of the Post Office Department means really a slower service than freight. We can ship a carload of freight from here to San Francisco and make as good time, or better, than it makes under the blue-tag system of the Post Office Department.

Mr. STERLING. By slow freight?

Mr. FARELly. Yes, sir. The Post Office Department uses slow freight and frequently makes better time. For instance, those shipments get to Kansas City ahead of the mail shipments, because the mail involves so much transshipment.

For instance, mail shipments under the yellow-tag system will go from here to Pittsburgh, where it may be transferred to freight and carried to St. Louis, and at St. Louis it will again be transferred to the mails. There would be involved three separate handlings of this second-class matter, involving much delay to the shipments and much confusion in regard to false consignments. It frequently happens that a consignment from here to San Francisco is separated in the cars, and you will find that a part of your shipment will reach San Francisco one day, or, perhaps, three or four days, and sometimes a week before the second consignment arrives, which for a publication with a stated date of issue is very confusing. Sometimes a package consigned to San Francisco goes to Portland, Oreg., that confusion resulting from the three separate handlings of the matter. It has always been a curious proposition to me, and I have thought a great deal about it and have discussed it a great many times during the last 40 years, and that is how the Government can claim such an enormous expense in the handling of second-class matter, as against the rate that we have by freight. I trust that the committee will consider very carefully the matter of deferring action under this law until such time as a newly amended bill may be presented.

My thought was that it ought to be some flat rate, instead of taking certain pages of a publication at one rate and certain pages of the same publication at another rate, which would be very confusing. Let the publishers pay the Government revenue in the form of a revenue tax on advertising, and let the publications go through at 1 cent per pound. If they pay a certain percentage on their receipts from advertising, the Government would secure its revenue from the publishers in a manner that would be entirely fair and equitable, because then the tax would go where it belonged.

Mr. MOORE. Do you advocate a tax on advertising?

Mr. FARELly. That, it seems to me, would be the equitable way of levying it.

Mr. MOORE. As you know, we will have to raise more revenue than we did last year.

Mr. FARELly. You could raise unlimited revenue there, it seems to me, according to the publishers' incomes.

Mr. MOORE. Do you think that would be the equitable way of doing it?

Mr. FARELLY. That has always struck me as the proper thing to do.

Mr. MOORE. What would you say to a tax on circulation?

Mr. FARELLY. A tax on circulation would be very indefinite. Some of the publications have a very small circulation, and I do not think that would be based upon a real sound principle, but a tax on income or net revenue would be perfectly equitable and easily adjusted. Again, there is another proposition that was submitted to the Post Office Department at the time when Charles Emory Smith was the Postmaster General. It was estimated at that time that if the rate were continued at 1 cent per pound, with the provision that each package was required to pay at least 1 cent, it would mean \$34,000,000 of additional revenue. I have in my pocket here a sample of second-class mail matter weighing 1 ounce. You can distribute 16 of these pieces of mail throughout the United States, in 16 different States, all for 1 cent, or if it weighs 2 ounces, you can distribute 8 of them for 1 cent, and, of course, that costs the Government an enormous amount of money. Now, if you were to provide for a minimum charge of 1 cent on each package being sent at the pound rate, it would yield, according to the statistics, \$30,000,000 of additional revenue.

Mr. MOORE. How would you compare that with sending through the mail this publication, the Railway Age, which weighs about 1 pound?

Mr. FARELLY. Yes, sir; it weighs about a pound; but they have a very large percentage of advertising.

Mr. MOORE. Would they pay less on that publication, as compared with the one you have referred to?

Mr. FARELLY. No, sir; that publication weighs a pound, and the Government can afford to carry those publications weighing a pound at that rate.

Mr. MOORE. This publication has a large percentage of advertising?

Mr. FARELLY. Yes, sir; and if you tax them on their income from advertising, it would be entirely fair and equitable. That is the most logical thing to do. I would like to refer again to the foreign publication. If it is contemplated that they will be required to conform to the rules laid down for the enforcement of this law after July 1, or be barred from the mails of this country, it is a question whether they would take the trouble to do it. The aggregate business in foreign publications is quite large. Canada has quite a number of publications coming into this country, especially from Toronto and Montreal. We handle many London publications, such as the London Times, Punch, Sketch, etc., and also the Manchester Guardian, and other papers. They come here in considerable quantities, and we would like to know what the disposition of this committee would be with regard to foreign publications.

Mr. MOORE. Do you know whether any foreign Governments tax American publications?

Mr. FARELLY. They do not. They carry them in Canada at the second-class rate when they are registered as entitled to that privilege. The Canadian postage is one-quarter of a cent per pound on second-class matter. As a war measure, they have reduced postage rates instead of increasing them.

Mr. MOORE. Are you familiar with the conditions in France?

Mr. FARELLY. No, sir; I am not familiar with the conditions there.

Mr. MOORE. It has been said that France does tax our publications.

Mr. FARELLY. I think that is a mistake.

Mr. MOORE. I do not think it is.

Mr. SLOAN. At what rate are Canadian publications carried in the United States?

Mr. FARELLY. They are carried by mail free for delivery here. Our Government gets nothing from those publications shipped by mail from Canada here.

Mr. SLOAN. Publications issued in Canada would be carried to any point in the United States for one-fourth of a cent a pound?

Mr. FARELLY. Yes, sir; the Canadian Government gets that. We do it for nothing.

Mr. SLOAN. A Canadian publication would be carried from Canada, or from the point of publication, to any point in the United States for a quarter of a cent per pound?

Mr. FARELLY. Yes, sir; that being the rate in their own country, and the same rate would prevail on this side according to the postal agreement. As I have already stated, the enforcement of this law at this time will mean great confusion. Of course, the Post Office Department has the best disposition in the world, and Mr. Burleson has said that they would make it easy for us, but they do not realize what we are up against. They do not realize it.

Mr. MOORE. I suppose you have about as large a problem as anybody in the United States in this connection.

Mr. FARELLY. Larger.

Mr. MOORE. No one concern probably has so much involved in it as yours.

Mr. FARELLY. No one concern; no sir. The individual publisher's proposition is very simple. Take the Curtis publications, for instance, the Ladies Home Journal and the Saturday Evening Post; they are forced to raise their rates. You are probably aware that the Saturday Evening Post is going to cost 10 cents a copy in order to meet these increased cost conditions, because that is where the publishers are up against quite a serious proposition.

Mr. SLOAN. They are increasing in size?

Mr. FARELLY. Scarcely, and I have seen no indications of that. It costs 7 or 8 cents to make the Saturday Evening Post and it has been selling for 5 cents a copy.

Mr. MOORE. In these war times is not that about the only step they can take?

Mr. FARELLY. It is a perfectly reasonable one.

Mr. MOORE. Because prices are going up in all other directions. The admission price to moving pictures, the price of a glass of soda water, the price of groceries and the price of all other commodities have gone up, so why should not the price of newspapers go up?

Mr. FARELLY. Nearly all the magazines have increased their rates to some extent.

Mr. MOORE. We are dealing here solely with a war measure.

Mr. FARELLY. But I believe these increased rates will prevail after the war. I think the increased expense connected with these magazines will prevail after the war, because the labor proposition is a serious one in connection with the business.

Mr. SLOAN. The increased tax to be placed on the publications you have been speaking about, for the fiscal year 1919, beginning the 1st of July, would be how much a pound; that is, under the law that is about to take effect?

Mr. FARELly. Well, it would be very difficult to form an estimate, because the estimate must be based on quantities.

Mr. SLOAN. It is just so much a pound, is it not?

Mr. FARELly. Within certain zones; yes; but there are eight different zones.

Mr. SLOAN. As I understand it, for distant carriage they use freight instead of the mail.

Mr. FARELly. Yes; for sending publications great distances they use freight, although for sending small parcels they use the mails.

Mr. SLOAN. The rate on reading matter is just a quarter of a cent.

Mr. FARELly. Yes; a quarter of a cent increase, a cent and a quarter for reading matter in all the zones at the present time, but the advertising rate bears a different rate in each of the zones. That is why its application is such a serious matter for us, and it will force us out of the mails to a large extent.

Mr. SLOAN. This increased carriage charge would not warrant the doubling of the price of the publication, would it?

Mr. FARELly. No; not strictly speaking; it would not warrant that.

Mr. SLOAN. Have you any definite opinion as to how much the Government actually loses every year in the carriage of this second-class matter? We have heard various statements from various sources, but have you an opinion that you would like to give the committee on this point?

Mr. FARELly. I have followed the matter with a great deal of care for 30 or more years and have appeared before the Post Office Committee of the House many times. Their estimate is that the cost from New York to Washington is \$3.65 per hundred, while we ship for 40 cents. Mr. Koons, who appeared for the Post Office Department, said that it cost \$8 per hundred pounds to ship to the Pacific coast, while we can ship for \$2.85.

Mr. SLOAN. That is just the carriage?

Mr. FARELly. Yes.

Mr. SLOAN. I was speaking by and large of the whole system, and that is what I wanted to get your opinion on, if you have one. An isolated shipment between New York and Washington might indicate something, but it might be a small part of the whole problem.

Mr. FARELly. It is a most serious problem and one well worth considering.

Mr. SLOAN. Suppose you take the whole postal problem of the United States. You perhaps have as good a view as anybody in private life. In your opinion how much does the Government lose on second-class matter in a year?

Mr. FARELly. It would be very difficult to say. There is one thing the Government does not take into account, I have found, and that is the profit they can make on the short hauls. For instance, we will send a package by mail at a loss to the Government, the rate being 1 cent a pound, and it is clear they can not ship at that rate. They in turn ship to surrounding territory at that same rate and take in the short hauls.

Mr. SLOAN. I notice you analyze it, but I was speaking synthetically of the whole matter. What is your opinion as to this class of matter, as to how much, if anything, the Government loses per annum in carrying this second-class stuff?

Mr. FARELly. I would put it far below the estimate.

Mr. SLOAN. How far below?

Mr. FARELly. It is only an estimate at best. I went into that very elaborately some years ago when Mr. Wanamaker was Postmaster General.

Mr. SLOAN. I was opposed to a change in this law in the beginning, but now that we have it, we ought to stay with it, unless you can show a good reason for discarding it.

Mr. FARELly. The operation of the law in distinguishing between two classes of matter I think is a mistake as a revenue-producing proposition. A tax upon the total revenue of the product itself, the total income or profit or income from advertising would seem to me the most equitable way to meet that proposition, because the present method is so nearly inoperative that it would lead to endless confusion, and would certainly interfere seriously with many small publishers, who could not stand the additional charges put upon them.

Mr. SLOAN. Could you tell us how much the Government actually loses on carrying this second-class matter every year? I have heard it stated that the loss was anywhere from \$70,000,000 to \$90,000,000.

Mr. FARELly. They claim from \$30,000,000 to \$40,000,000.

Mr. SLOAN. I have heard it stated higher than that. What is your estimate?

Mr. FARELly. The reports are that they charge up all the deficit to the second-class matter; it is a mistake to so charge it, but they attribute all of the deficit to the second-class matter.

Mr. SLOAN. I do not care about those reports. You are here now, and I would like to know what you think about the loss.

Mr. FARELly. I think it is far below what they estimate, if you do not ignore the benefit to first-class matter, and I think it has been clearly demonstrated that there is a benefit to first-class matter. From 1872 the postal rate on magazines was 3 cents and on weekly papers it was 2 cents a pound. The development of reading matter, first-class reading matter, in the 10 years following was enormous, from 1872 to 1882, and it added enormously to the revenue of the first-class mail. That was so to such an extent that the department concluded it would reduce the rate from 2 cents on the weeklies and 3 cents on the magazines to 1 cent for the purpose of encouraging the dissemination of literature that brought revenue through the first-class mail.

Mr. SLOAN. I am quite familiar with those arguments, but what I wanted to find out was whether you accept the basis that the Post Office Department uses and consider the second-class mail carriage by itself, not interrelated with these other matters that you suggest. They say it has been the source of a loss to the extent, sometimes, of \$70,000,000 or \$90,000,000 a year. Now, how far are they incorrect? You assume a basis that they do not, but leaving out these philosophical suggestions that come up about spreading literature, intelligence, and all of that, what would you estimate the loss to be?

Mr. FARELly. If we were to estimate from our own business relations with the department, we could form a pretty close estimate,

but the department charges what they claim to be all of their overhead expenses. Now, that means the whole administration of the department in Washington and of the department throughout the country. That being so we could not form any estimate as to how far economies could be established in those departments in order to reduce their estimates. If they estimate \$3 from New York to Washington, and we pay only 40 cents, the remainder is for overhead charges, and we have no way in the world of estimating how far they could economize to reduce those overhead charges.

Mr. SLOAN. Then you have no opinion as to whether or not their estimate of the loss is correct or incorrect?

Mr. FARELLE. I am confident it is far overestimated.

Mr. SLOAN. How much overestimated, because we would like to know how much we are losing.

Mr. FARELLE. I look upon it as at least double.

Mr. SLOAN. Then, that would fix the loss at how much per annum?

Mr. FARELLE. The expenditures over receipts I estimate to be anywhere from \$15,000,000 to \$20,000,000.

Mr. SLOAN. That is your estimate?

Mr. FARELLE. That is my estimate. The rural free delivery costs nearly \$40,000,000, and from that they get no return whatever. It has been said to me here that every department ought to bear the expense of conducting its own business.

Mr. GREEN. Do you not know that the rural free delivery had greatly increased the first-class postage by causing so much more of that matter to go to the rural districts?

Mr. FARELLE. I think that is unquestionably correct, but I do not think it covers any \$40,000,000.

Mr. GREEN. Did I understand you to say that it only costs you 40 cents to send your matter from New York to Chicago?

Mr. FARELLE. No; from New York to Washington.

Mr. GREEN. What is the express rate?

Mr. FARELLE. The express rate is from 75 cents to \$1, but the claim of the Post Office Department, or at least Mr. Koons stated, that it cost the Government over \$3—\$3.65 I think it was—to bring it from New York to Washington.

Mr. STERLING. You mean from Washington to San Francisco?

Mr. FARELLE. No; from New York to Washington. They claim that from Washington to San Francisco it costs \$8, while we can ship it there for \$2.85.

Mr. STERLING. By freight?

Mr. FARELLE. Yes; and our freight reaches there before the mail by this blue-tag system of three separate handlings.

Mr. STERLING. The publishers of second-class matter send their publications by freight to distant post offices and have them distributed there.

Mr. FARELLE. The Post Office Department?

Mr. STERLING. No; the publishers; they send their second-class matter by freight to the distant post offices.

Mr. FARELLE. I do not think to any extent; I think nearly all will go through the channels of our post offices, and a great deal of the business of the news companies is carried on in that way.

Mr. STERLING. You say you do it, but take the magazine publishers in your city, or take the Curtis publications. They do not leave Philadelphia through the post office, do they?

Mr. FARELLY. Almost entirely.

Mr. STERLING. All of them?

Mr. FARELLY. Not all, but most of them.

Mr. STERLING. Take those you send to Chicago; do they go through the post office? Do you deliver them to the post office there?

Mr. FARELLY. I am not entirely sure in regard to the Curtis publications, because they have an enormous number of individual subscribers, and a great percentage of their circulation is through individual subscriptions, and I am quite confident they go through the mail. However, those that are for distribution through their sales agents are shipped to Chicago in the same way we ship, and they are there distributed by local agents?

Mr. STERLING. You send them by freight?

Mr. FARELLY. Yes, sir.

Mr. STERLING. Do you handle them?

Mr. FARELLY. To some extent, but not to the same extent we do the others.

Mr. STERLING. What publications do you handle?

Mr. FARELLY. Well, we supply the news departments; we have no subscription department; of some 40,000 to be supplied about 8,000 receive all of their supplies through the mail, and the remainder goes by freight and express.

Mr. STERLING. What publications do you send out to these news agents through your organization?

Mr. FARELLY. Well, all of the Butterick publications, Everybody's Magazine, Harper's Magazine, Scribner's, McClure's, etc.

Mr. STERLING. In sending them to Chicago, you send them by freight, do you?

Mr. FARELLY. Yes, sir.

Mr. STERLING. Whether they are for the news stands or whether they are for the individual subscribers?

Mr. FARELLY. They are all for news stands; we have no individual subscribers to whom we ship in that manner.

Mr. STERLING. You did that before the law was changed last year?

Mr. FARELLY. We have always done that.

Mr. STERLING. Both before and since the law went into effect.

Mr. FARELLY. Yes, sir.

Mr. STERLING. In that way those publications that do business through subscribers get the benefit of the 1-cent rate?

Mr. FARELLY. Well, they are shipped from the office of publication at 1 cent a pound, regardless of the distance. Take Harper & Bros., they send to all their subscribers direct from New York, and to any distance, at 1 cent.

Mr. STERLING. Under this new law, when the zone system goes into effect the first of the month, what will they do with reference to the publications that go to individual subscribers?

Mr. FARELLY. That really will not concern us, because they must regulate that in accordance with the provisions of the law. They must report to the Post Office Department what proportion of the magazine is subject to the advertising rates, and the zone to which it goes; they must report back to the department and pay the postage accordingly.

Mr. STERLING. Could they not send the publications to San Francisco by freight or express and deliver them to the San Francisco post office and have them sent out to the individual subscribers?

Mr. FARELLY. They could, and they will doubtless avail themselves of that after the law is in force.

Mr. STERLING. They have done it under the law? They are doing it now, are they not?

Mr. FARELLY. No; there is no necessity for it at the present time, because it is carried for 1 cent from the office of publication to any distance.

Mr. STERLING. But they will do that after this law goes into effect?

Mr. FARELLY. I think they will be compelled to do it.

Mr. STERLING. And in that way they will get the low rate, that is, the near zone rate?

Mr. FARELLY. Yes.

Mr. STERLING. That will not be any great hardship on them, will it?

Mr. FARELLY. Well, it depends on how far they ship from here and what proportion of advertising they carry, and no two will carry the same amount of advertising.

Mr. STERLING. You complain about charging the advertising expense at one rate and the literature at another. Is it not a very simple matter to take a magazine, weigh it, and then apportion the weight between the advertising part and the literary part? Would it not be a very simple matter to just take one volume and do that and then multiply it by the number of volumes that are published?

Mr. FARELLY. That is a very simple matter, yes, but when you do that for, perhaps, 20 or 30 different publications it is another thing, each having a different rate of postage and carrying a different amount of advertising and reading matter. Then, again, those quantities will change from month to month. One will carry 20 per cent of advertising, another 30, another 50, and so on, so that to do as you suggest would be very difficult indeed.

Mr. STERLING. You put a number of these publications into one package, do you not?

Mr. FARELLY. Yes, sir.

Mr. STERLING. Say there are a dozen of them in one package. You know just how many separate pieces there are of each publication so that it would not be a very difficult matter to determine the amount of advertising contained in a dozen pieces of one publication, how much literature, and so on, and just by figuring on those different things you get at the whole proposition.

Mr. FARELLY. If we could get at the proposition in that way, we might feel quite happy over the prospects, but the trouble is that these things change every month, and no two magazines represent the same proposition, and we have over 400 different magazines to deal with.

Mr. STERLING. You say these things change every month. You mean by that that the amount of space used for advertising and literature changes in the various magazines?

Mr. FARELLY. Yes, sir. If we could make a general scale that would be applicable to every magazine and say that it was so much for each magazine it would simplify the matter, but no magazine is the same in any two months.

Mr. STERLING. But they prescribe a certain amount of space for advertising and a certain amount for literature, do they not?

Mr. FARELLY. I never knew one of them not to take all of the advertising they could get.

Mr. STERLING. And only a change in business conditions would justify a change, which does not come very often.

Mr. FARELly. I can not recall any magazine that ever refused any advertising.

Mr. STERLING. Let us suppose that this month 50 per cent of the space in a magazine is advertising and 50 per cent is literature, and that next month they raise it to 60 per cent. That is not a very difficult problem, is it?

Mr. FARELly. If that were the only thing, it would not be a difficult problem, but we have 400 of them and each have a different rate.

Mr. STERLING. If you are going to make the volume of business the determining factor, that is another matter.

Mr. FARELly. But you can not escape the fact that a great many of these publications will be put in different packages and that they will all carry a different rate, and that if the Government is to be expected to go into each separate package to determine the rate it is going to add enormously to the expense of the Government. It would be necessary to estimate the cost of each publication and make up a list of the contents of the package and say that it contains so many pages of advertising and so many pages of reading matter, and all of that would add immensely to the cost of doing business as well as to the cost of mailing.

Mr. STERLING. If you handed me a magazine, how long would it take me to estimate the amount of advertising in that magazine?

Mr. FARELly. It would take you a long time.

Mr. STERLING. I beg your pardon; it would take me but a very few minutes.

Mr. FARELly. It would take you a long time if it were applicable to the various zones, but if it were only a proposition of getting at the percentage of advertising in the magazine, you could do it in a very few minutes, but when the magazines differ and various amounts are contained in them, then it becomes a serious proposition.

Mr. STERLING. That is all done by a zone scale. You just take your percentage of advertising, you have your zone scale before you and glance at it in order to determine that.

Mr. FARELly. But what is the Government going to do when it gets to the packages? Is it going to open them all and verify the statements that have been made?

Mr. STERLING. That is not necessary. They do not open them now, do they?

Mr. FARELly. Not generally; no.

Mr. STERLING. You take a country newspaper. They take the publisher's word for it nine times out of ten, although every once in a while they will weigh it.

Mr. FARELly. But it is so easily verified at the present time, for instance, as to weight, and they always verify the weight of the matter we send.

Mr. STERLING. Now, another question on another line. How many publications do you handle?

Mr. FARELly. More than 400 different publications.

Mr. STERLING. And you handle the entire output of those publishers?

Mr. FARELly. Not those that go to single subscribers, but as to those that are sold by news agents we are supposed to handle the entire edition.

Mr. STERLING. How many of those publications have increased their advertising space in the last year?

Mr. FARELLY. Well, I am not familiar with the extent of all their advertising.

Mr. STERLING. All of them have increased their advertising space in the last year, have they not?

Mr. FARELLY. A great many have decreased the advertising space in the last six months, or at least since the war began.

Mr. STERLING. Have not a great many of them increased their advertising space by at least 25 per cent?

Mr. FARELLY. I think there are only a few that have reached anything like that.

Mr. STERLING. You heard Mr. Koons's testimony before this committee last year, or read it, and heard his testimony before the Senate committee, or read it, did you not?

Mr. FARELLY. I heard it.

Mr. STERLING. Did you hear him testify that some of these magazines have greatly increased their advertising space?

Mr. FARELLY. Yes.

Mr. STERLING. And their income from advertising is probably a great deal more—that is, the increased income is a great deal more than their increased postage rate would be under that law?

Mr. FARELLY. I doubt whether they have increased to that extent.

Mr. STERLING. Those that have not increased their advertising space have increased their advertising rates, have they not?

Mr. FARELLY. I think not; it would kill off many of them if they did that.

Mr. STERLING. But some of them have increased their advertising rates, have they not?

Mr. FARELLY. Very few.

Mr. STERLING. Have any of them increased their subscription rates?

Mr. FARELLY. Very few.

Mr. STERLING. But some of them have?

Mr. FARELLY. Yes. Some of them have had to increase their subscription rates because the cost of making up the magazines has so greatly increased over the cost of a few years ago.

Mr. STERLING. Do you come here in the interest of your company alone, or do you come here at the instance of the publishers?

Mr. FARELLY. I have had no interview with the publishers whatever concerning it. I represent no one publisher. I speak with regard to the general proposition of the tax upon these two sections as being an unwise method of raising revenue from post-office transactions.

Mr. STERLING. What would you say of abolishing the zone system and making it a flat rate, to increase the flat rate so that they will have to pay just what it costs the Government to carry it.

Mr. FARELLY. That would simplify matters immensely.

Mr. STERLING. Would you recommend that?

Mr. FARELLY. My preference would be for the flat rate, decidedly.

Mr. STERLING. Even though it multiplied the rates two or three times?

Mr. FARELLY. Well, I think that if the rates were multiplied two or three times it would certainly result in a good many of the weaker

publications going out of business, and that others would have to increase their advertising rates in order to justify it; or charge the increase to the readers, the consumers; I believe the consumers would finally pay the increase in rates in the course of time.

Mr. STERLING. Do you not think it would be a good thing for the country if a good many of these publications did cease to exist?

Mr. FARELLY. I have heard that question argued, the statement being made that the existence of so many magazines destroys the taste for reading books, but if I could have time enough to show you the character of the books now being offered to the public I think you would agree that the magazines have performed a good service if they destroy a taste for the reading of those books.

Mr. STERLING. Do you not really believe that the country would be better off if a great many of these so-called magazines were abolished?

Mr. FARELLY. If you had the right sort of discrimination, doubtless that might be so, that it would be better if a good many publications that are now being placed before the public were abolished. But the company I represent is not at liberty to discriminate against them. We carry on the transactions of a news company and are not at liberty to discriminate between the good ones and those that are otherwise. We are not censors of the press.

Mr. STERLING. The really meritorious publications would survive an increased rate. would they not?

Mr. FARELLY. Well, unfortunately, some of the meritorious ones are the first to fall by the wayside.

Mr. STERLING. What are they? Name some of them.

Mr. FARELLY. Well, take Harper's, Scribner's, and magazines of that sort.

Mr. STERLING. Do you think that an increased rate would stop Harper's?

Mr. FARELLY. No; I do not think it would stop them.

Mr. STERLING. Name some of those very meritorious publications that you think would be destroyed by an increased rate. I wish you would name some of them.

Mr. FARELLY. I think they are principally the trade publications, and I would not be justified in naming them.

Mr. STERLING. Take some of the so-called popular magazines. Would it affect the Literary Digest? Would it stop the Literary Digest?

Mr. FARELLY. To have the flat rate increased?

Mr. STERLING. Yes.

Mr. FARELLY. No; I do not think it would.

Mr. STERLING. The Scientific American?

Mr. FARELLY. No; I do not think it would.

Mr. STERLING. The Review of Reviews?

Mr. FARELLY. No.

Mr. STERLING. But you think the publications that it would injure would be the technical journals?

Mr. FARELLY. They would unquestionably be injured.

Mr. STERLING. The trade journals?

Mr. FARELLY. Yes, sir.

Mr. STERLING. How about the farm papers?

Mr. FARELLY. Well, the farm papers are an expense to the Government because of their free delivery in the counties.

Mr. STERLING. Would many of the meritorious farm papers be put out of business by increasing the rate to the point where they would pay for their distribution?

Mr. FARELTY. We really know very little about the expense of the farm papers. They are limited almost entirely to subscribers and advertisements, and very few of those papers are sold by news agents, and very little would come within our knowledge as to their circulation.

Mr. GREEN. Either I did not understand you or else you must not understand the situation. Are you speaking of farm papers?

Mr. FARELTY. Farm papers; yes.

Mr. GREEN. I am afraid you do not understand that situation thoroughly, because some of their subscription prices are only 50 cents a year?

Mr. FARELTY. Yes; and sometimes they are only 25 cents a year. However, they do not come within the scope of our business, and, therefore, we know very little of their circulation or what they live upon, but we presume it is advertising.

Mr. GREEN. And they make immense profits out of it.

Mr. FARELTY. I presume that is true of some of them. I made the suggestion earlier in the day that a tax upon receipts from advertising would be the simplest and most equitable that could be imposed and that no one could find fault with that.

Mr. GREEN. Perhaps no one could properly find fault with it, but our experience is that no matter what law we enact, there are always people who will find fault with it.

Mr. FARELTY. You will always find somebody who finds fault with any enactment you may make, unquestionably, but if you were to put a tax upon receipts from advertising matter, and have it apply to all of the popular publications, some of which carry 50 per cent, the revenue of the Government would be largely from those publications. A flat rate would be something that could be clearly understood and the publishers could make their rates accordingly, and their subscription rates and their advertising rates would be based upon the flat rate that had been established.

Mr. GREEN. But would not that tend to develop the long hauls, which are so expensive to the Government? If you can do something that will have a tendency to supply the people in the same way, and yet, in a measure, decrease these long hauls, that would surely effect a saving for the Government, would it not?

Mr. FARELTY. To be sure, but as I have already stated, I am not willing to justify their claim for the expense of these long hauls. They claim it costs \$8 to ship to San Francisco, whereas we can ship, in the same length of time, for \$2.80.

Mr. GREEN. But it does cost more for a long haul than for a short haul?

Mr. FARELTY. Unquestionably.

Mr. GREEN. And, therefore, if we can devise some plan whereby the people would be equally well served, and at the same time have a tendency to cut down on these long hauls, we would make a saving for the Government?

Mr. FARELTY. If you took no account of the educational features of these magazines and left them entirely out of the question, then the zone system would be logical, but the zone system must be taken

into consideration as bearing on the whole project and not on one section of it.

Mr. GREEN. Is not a magazine or periodical just as educational if it is published in Chicago as if it is published in New York or Boston, where all the intellect is supposed to exist.

Mr. STERLING. Most of them are published in Philadelphia.

Mr. FARELLY. Boston was the literary center of the previous generation; it gradually went to Philadelphia, but finally centered in New York.

Mr. MOORE. Most good things started in Philadelphia, did they not?

Mr. FARELLY. Well, they came from Boston to Philadelphia.

Mr. MOORE. And some of them migrated westward?

Mr. FARELLY. Yes. It seems to me that it is the simplest proposition in the world to have one rate and have it adjusted on the whole product. It is the separation of these that I come here to complain about, and suggest that we ought to have some relief from this separation of the two parts.

Mr. MOORE. Have you actually recommended the postponement of the law?

Mr. FARELLY. You might prepare a new law in such a way that the present law, going into effect July 1, might be entirely proper, but it might be so seriously changed that it would embarrass the publishers very much.

Mr. MOORE. But, in all fairness, that law was passed on October 3, 1917, and the publishers have been fairly well advised about it.

Mr. FARELLY. They are no better off than they were in October last year.

Mr. MOORE. I suppose the conditions are the same, and that they simply felt that they could not or would not meet the conditions. The Post Office Department has formulated its regulations, which, as I understand it, have been placed in the hands of the publishers.

Mr. FARELLY. Yes, sir; they have been in our hands for a long time.

Mr. MOORE. But that does not remove the basis for your suggestion that there should be some postponement of the operation of the law?

Mr. FARELLY. No, sir.

Mr. MOORE. Suppose there was a postponement of it, or that the carrying out of that provision of the law was deferred until, say, three months or six months later, would you be in any better position in respect to it?

Mr. FARELLY. That would not relieve the situation in the slightest degree. The only point is that under the provisions of the revenue law you might arrive at some flat rate, either a zone rate for the whole publication or a flat rate per pound.

Mr. MOORE. The magazines and newspapers do not agree on that. You are probably aware of the fact that they do not agree on the establishment of a flat rate. I brought that before the House myself, and got quite a large vote on it, but it was not successful.

Mr. FARELLY. It is best for the publisher——

Mr. MOORE (interposing). The difficulty of it is that you can not get the publishers of the magazines and newspapers to agree on that proposition. What would have been satisfactory to the magazines was not satisfactory to the newspapers.

Mr. FARELly. Yes, sir.

Mr. MOORE. Mr. Sterling asked you a number of questions, which induces me to ask you to restate the proportion of business that you do by mail, independently of that done by freight or express?

Mr. FARELly. About 20 per cent by mail. About one-fifth of our shipments are made by mail at the present time.

Mr. MOORE. You use the post office only to the extent of about 20 per cent of your entire business?

Mr. FARELly. Yes, sir. Now, in carrying out the present law, there will be great confusion because of the constant change in the publications having one rate to-day and being changed next month, or with the next issue to another rate. The administration of that will be a very troublesome and expensive proposition.

Mr. MOORE. Have you any suggestions to make as to how the law might be amended to meet those conditions?

Mr. FARELly. Not with the present wording of the zone system provisions relative to advertising and the different rates. I do not see any way by which that could be done. A flat rate on the whole product is the only way that I can suggest.

Mr. MOORE. We are confronted with the President's message demanding increased revenue, and Mr. McAdoo estimates that \$8,000,000,000 must be raised by taxation.

Mr. FARELly. Well, there are two ways to raise it. It can be raised by taxing advertising or by making a minimum charge of 1 cent on each package, which would increase the revenue \$30,000,000.

Mr. MOORE. I am sure that some of us are obliged to you for making the suggestion. A tax of that kind was resisted last year.

Mr. FARELly. Yes, sir. The farm journals also objected to that because they do not weigh a pound; but in no event would that represent more than 12 cents to a subscriber.

Mr. MOORE. Of course, the advertising could be readily traced.

Mr. FARELly. Yes, sir; very simply traced.

Mr. MOORE. And it would facilitate distribution?

Mr. FARELly. It would not interfere in any way with distribution. The distribution could be made at a flat rate by taxing the advertising, and you would be placing the burden where it belongs. My proposition would be to start by deferring the operation of this law until such time as a new bill could be framed, and perhaps you might be able to devise some much simpler method of raising additional revenue for the Post Office Department.

Mr. GREEN. How much revenue do you think could probably be raised from a tax on advertising?

Mr. FARELly. That would really be a guess or estimate not based on any knowledge. Some of the larger ones would yield large revenue, while some of the smaller ones are almost eaten out of existence.

Mr. GREEN. Your plan would be to levy a flat percentage tax on the advertising rates?

Mr. FARELly. Yes, sir.

Mr. GREEN. At 1, 2, 3, or 4 per cent, or whatever rate was agreed upon?

Mr. FARELly. Yes, sir; you had better place it where it belongs. Place it on the man who makes the profits or revenues from that source.

Mr. SLOAN. You mentioned the fact that the center of these great publications is in New York and along the Atlantic coast. Is not that very largely due to the fact that publishers have had for a number of years past the advantage of a flat pound rate which carried their products from New York to San Francisco, and to all intermediate points, for 1 cent per pound?

Mr. FARELLY. That is true, but it likewise applies to every city in this country. In San Francisco the problem is the same thing. Their publications have had a greatly increased circulation during the past three or four years, because the Government ships them through to the eastern country on the 1-cent rate.

Mr. SLOAN. And the two cities that seem to prosper most, one being San Francisco and the other New York, have been the ones that published at great distance from their subscribers, and have had their product carried at a flat rate throughout the country.

Mr. FARELLY. Yes, sir.

Mr. SLOAN. Do you not think that if a flat rate for the transportation of other articles of manufacture were established, it would shift the manufacturing in the East to the middle part of the country?

Mr. FARELLY. It has always been maintained that the Post Office Department was not a commercial proposition, and it was never thought that it would handle second-class matter at the same rate at which merchandise was handled. The mails were established for the benefit of the people at large.

Mr. SLOAN. But when you make the advertising feature a parasite upon the literary portion, it becomes an entirely different proposition.

Mr. FARELLY. Well, let the advertiser pay for it.

Mr. SLOAN. The advertising is purely a business proposition. It actually seeks to obtain dollars, and not to give information.

Mr. FARELLY. That is a commercial proposition, and it would be perfectly reasonable to make it pay accordingly. It is a perfectly legitimate proposition to increase the revenues from that source, but as to the zone system applying to second class matter, I do not think that is a fair proposition. For instance, on the zone line, when you go over the Covington Bridge to the other side of the river, Covington gets it cheaper than Cincinnati does.

Mr. SLOAN. That is one of those arbitrary conditions that must be fixed in all business, and in your operations, no doubt, there are certain points beyond which you charge an increased rate.

Mr. FARELLY. Yes, sir; that is correct, as applied to general merchandise. It applies entirely to general merchandise, and if the Post Office Department were conducted as a mercantile proposition it would be entirely justified in having it, also.

Mr. SLOAN. But where business enters and treats it as a mercantile proposition, why should they not bear the expense?

Mr. FARELLY. If you are referring to advertising, from which they are deriving their large revenue, I say let them pay accordingly. Of course, the poor man would be lower in advertising, and he ought not to be taxed under the zone system.

Mr. SLOAN. He has an exemption.

Mr. FARELLY. Five per cent is exempt. While most publishers are opposed to any increase of rates, yet, logically, if an increase could be made on some uniform plan covering the whole proposition, all of them would be treated alike. It is under this present zone

system of separating the two things that the confusion will arise. So far as we are concerned, we are utilizing motor trucks and trolley systems to quite an extent, and we will have to increase that service very largely if the zone system goes into effect.

Mr. SLOAN. The more you do that the less the Government will lose.

Mr. FARELLY. That may be.

Mr. SLOAN. If you go ahead and ship or transport those publications and do not give them to the Government, the Government will save that much of its loss.

Mr. FARELLY. I understand that the Government's system of arranging transportation rates is based on a certain measurement made at certain times, and that they ship under that agreement any quantity delivered to them, whether 1 ton or 5 tons.

Mr. GARNER. Do you believe that second-class mail matter ought to pay its way through the post office or mails?

Mr. FARELLY. I certainly do not. I think it is the greatest aid that the Government has for raising revenue from the first-class matter.

Mr. GARNER. Then, there would be no possible opportunity for a person who believed that it ought to pay its way through the mails to come to an agreement with you as to what method we should adopt with that end in view?

Mr. FARELLY. As I have stated, a tax on advertising would be the most equitable way, coupled with a flat rate.

Mr. GARNER. Here, for instance, is a magazine printed in New York, and it is sent through the mail to San Francisco. It contains 80 per cent of advertising—

Mr. FARELLY (interposing.) Yes, sir; in some instances.

Mr. GARNER. Now, that is a commercial business, and why should it not pay the same rate to the post office that a pair of shoes, or a pair of pantaloons, or any other commercial article would pay?

Mr. FARELLY. It would pay, if you taxed its rates of advertising.

Mr. GARNER. What do you mean by taxing its rates of advertising?

Mr. FARELLY. The large advertiser would pay to the Government a certain percentage of his gross receipts. If they were 80 per cent, he would pay more than the man whose advertising receipts were 12 per cent.

Mr. GARNER. Under our present Parcels Post System, a certain rate is paid on articles sent to San Francisco, but he would pay a different rate from New York to Washington. Your proposition is to have one identical rate for second-class matter from New York to Washington and from New York to San Francisco?

Mr. FARELLY. I think that would be the proper thing.

Mr. GARNER. You are contending that the same rate should apply from New York to San Francisco as from New York to Washington?

Mr. FARELLY. I have just remarked that I think the Postal Department has been considered as something entirely separate from any commercial proposition.

Mr. GARNER. Do you use the Parcels Post System?

Mr. FARELLY. Not for second-class matter, but for merchandise. We ship bound books and stationery to a very large extent by parcel post. That is not included in the amount I said we had paid on account of second-class matter.

Mr. GARNER. Then you contend that the charge for first, third, and fourth class matter should be such as to make up for the loss that the Government sustains in carrying second-class matter?

Mr. FARELLY. I would not make that statement,

Mr. GARNER. You said a moment ago that you did not think that second-class matter ought to be required to pay its way through the mails. If it does not pay its way through the mails, and you do not levy sufficient taxes or make a sufficient charge for carrying other classes of mail, then the loss must be met out of the Treasury.

Mr. FARELLY. But first-class matter does not pay its way. You charge 3 cents for carrying a letter to Baltimore and you send a letter to San Francisco for 3 cents. Now, either Baltimore is being robbed or San Francisco ought to pay more, if each item is to pay its proportion of the cost. Second-class matter, just the same as letters, has always been carried for the benefit of the people and for the encouragement of education. That has been true at all times. In 1878, a member of the Committee on Post Offices suggested that second-class matter be carried free because of the benefit derived from it by the first-class mail and the great advantage that it gave to the country. The man residing in the eighth zone should have the same advantage as the man living in the first zone. He is a citizen of this country and is entitled to all of the privileges that the Post Office Department can afford to him. The man in New York is entitled to no more in that regard than the man in San Francisco.

Mr. GARNER. But first-class mail matter pays its way.

Mr. FARELLY. It more than pays its way, but not pro rata.

Mr. GARNER. Then, you are willing to apply the same policy in regard to second-class matter by levying a flat rate?

Mr. FARELLY. That would be logical.

Mr. GARNER. Then, we would have to levy about 7 cents per pound, whereas we are now levying 1 cent per pound.

Mr. FARELLY. I am sure that it does not cost anything like that.

Mr. GARNER. Now, if you can convince the committee of that fact, you will be performing a very valuable service, because there has been considerable controversy in the country as to what it does cost. The best evidence we have is that the cost is 7 cents per pound.

The CHAIRMAN. I think it is between 8 and 9 cents.

Mr. GARNER. I do not think anybody who has made the investigation has put it at less than 7 cents per pound. Now, according to your statement, you would levy a sufficient rate to pay its way through the mail, just as first-class matter pays its way. Would you be willing to pay a rate of 7 cents per pound?

Mr. FARELLY. No, sir; because the publications would lose the benefit of the encouragement that has been given them for the general dissemination of literature.

Mr. GARNER. I understood you to say that you would put second-class mail matter and first-class matter on the same basis.

Mr. FARELLY. I think you have misunderstood me. I said that the flat rate, as it applies in this country, would apply logically to second-class matter.

Mr. GARNER. You contended, I think, that first-class matter and second-class matter were similar mail matter and should be on the same basis. Now, as first-class matter pays its way, don't you

think that second-class matter ought to pay its way? I am asking you what you think about the theory of the post office, and whether first-class matter and second-class matter should not be put on the same basis?

Mr. FARELLY. It would destroy totally the educational benefits and advantages of our leading publications. If you are going to ignore all of those considerations, and say, "We do not care an iota for the man in the more remote sections of the country, but will make him pay the full cost of transportation," if you are going to ignore the man in the village, then you would put it on a commercial basis. Now, you would do that, and yet you spend \$40,000,000 for rural free delivery.

Mr. GARNER. The trouble with your argument is that the people in the villages are not complaining. They are not the ones who are complaining at the increased rates.

Mr. FARELLY. But they will complain.

Mr. GARNER. They may. It is the people who are doing the publishing in the centers of Philadelphia, New York and Boston who are doing the complaining about this rate; it is not the people who are getting these magazines and whose subscription prices are going to be increased.

Mr. FARELLY. But why do the publishers complain? I am not a publisher, but I know that they are complaining because they are going to lose their subscribers in your territory, in Texas, because the people can not afford to pay this increased rate and they will drop their subscriptions, because 25 cents means something to a man living in a small town.

Mr. O'SHAUNESSY. How do you know they are going to drop them?

Mr. FARELLY. Because of the economies that they will have to practice.

Mr. O'SHAUNESSY. That is mere speculation.

Mr. FARELLY. Yes, sir; but it has always followed that whenever the rates have been largely increased the circulation drops off.

Mr. O'SHAUNESSY. It seems to me that wherever the price has been increased in recent years the consumption has increased.

Mr. FARELLY. I beg your pardon.

Mr. O'SHAUNESSY. And that it has largely increased.

Mr. FARELLY. No; that is not the case. When magazines that formerly retailed for 15 cents increased their rate to 20 cents, their distribution fell off to a very great extent.

Mr. O'SHAUNESSY. Mr. Sterling calls my attention to the fact—I was not here when the gentleman made his statement—that the man who appeared in behalf of the Graphophone stated that those sales had not fallen off, but that the consumption of those things had increased in spite of the increased rates that had been put upon them.

Mr. STERLING. The sale of cigars has not fallen off, has it?

Mr. FARELLY. I would not be capable of answering that.

Mr. STERLING. I do not think you will find it has.

Mr. FARELLY. But I think that the circulation of magazines that have increased their prices from 15 cents to 20 cents has shrunken very heavily.

Mr. GREEN. Is it not true that some of them, even though they have increased their price, have also largely increased their circula-

tion, like the Independent? The Independent formerly sold for \$1.50 and now the price is \$4 and it has a much larger circulation.

Mr. FARELLY. I am not aware that that has been the result with regard to many of the magazines that have increased their prices, although it may be true that some of the magazines, although they have increased their prices, have a larger circulation than they had 10 years ago; that may be true of the Independent, that it has a far greater circulation than it had 10 years ago.

Mr. GREEN. Some think that because the quality of some of these magazines has somewhat deteriorated that possibly that had something to do with the falling off of their circulation as well as their increase in price.

Mr. FARELLY. If a magazine deteriorates in quality I think it would be fair to assume that the circulation would deteriorate to the same extent.

Mr. GREEN. You spoke a short time ago about our being the best read people in the world. Do you refer to quantity or quality?

Mr. FARELLY. Quality. I have heard that from well-educated Englishmen. They said we had facilities here for good literature to an extent that is not known anywhere in the world.

Mr. GREEN. But are they right? Is it not a fact that the sales of books are not in proportion to the sales of books in other countries and is not that particularly true of late years?

Mr. FARELLY. I think that the sale of books is less than in some of the other countries, because so much of the high literary talent has been turned into periodical channels, because the Government has encouraged these periodicals and enabled them to be placed in the hands of the poorer classes, and the farmers, who can not afford to pay \$1.50 for a book.

Mr. GREEN. Do you call the talent that is employed by these cheap magazines high literary talent because it is expensive?

Mr. FARELLY. It is usually paid for according to its merit.

Mr. GREEN. Oh, no; paid for according to the sales, but that does not necessarily mean that it is paid for according to its merit.

Mr. FARELLY. Well, the average public is supposed to be the judge of what it considers worth reading.

Mr. GREEN. These sex problem stories now seem to sell very well. Do you mean to say that they represent the work of high literary talent?

Mr. FARELLY. No; and if we had a proper censorship of the press they might not be published.

Mr. MOORE. And do not imagine, please, that all members of the committee are reading them.

Mr. FARELLY. Of course, they have a temporary vogue, but the real magazines, which last from year to year, are of a higher class.

Mr. O'SHAUNESSY. I want to ask you a few questions. You would tax these magazines according to advertising?

Mr. FARELLY. According to their receipts from advertising.

Mr. O'SHAUNESSY. Do you calculate that the price of the magazines would advance under the taxation system?

Mr. FARELLY. It need not, because it does not refer in any way to the revenue from sales.

Mr. O'SHAUNESSY. If we put an advertising tax, we will say, on a magazine which has a lot of advertising, and paying advertising,

do you believe that the magazine would not advance its price in spite of its very large revenue from advertising?

Mr. FARELLY. It might.

Mr. O'SHAUNESSY. But you think it would be so prosperous that it need not advance its price?

Mr. FARELLY. That is correct.

Mr. O'SHAUNESSY. At the same time, you would save, under that system, the magazine that was not doing so well in an advertising way?

Mr. FARELLY. Exactly.

Mr. O'SHAUNESSY. It is your opinion that a large amount of revenue would be derived from that advertising, a much larger amount than we contemplate would be received under the proposed system?

Mr. FARELLY. It seems to me you might easily arrive at a tax which would yield a larger sum.

Mr. O'SHAUNESSY. In addition to that you would increase the rate from 1 cent a pound, so as to bring up the revenues from the country newspapers.

Mr. FARELLY. No; I think you might well afford to continue that rate of 1 cent per pound.

Mr. O'SHAUNESSY. But suppose we did. Everybody is supposed to help along in the war and stand for increased taxation, and you said it would only cost the subscribers 12 cents a year—is that right?

Mr. FARELLY. At the outside it would only cost that additional amount. That was based on 1 cent for each delivery, each package delivered, if it weighed less than a pound.

Mr. O'SHAUNESSY. And you said that would bring in a revenue of \$30,000,000.

Mr. FARELLY. The department estimated \$34,000,000 some years ago.

Mr. OLDFIELD. You were talking a while ago about the complaint of the publishers. Do you not think that the real complaint of the publishers is that they fear they are going to lose the subsidy from the Government which they have been enjoying for a good many years?

Mr. FARELLY. I claim there is no subsidy in behalf of the publishers, but that it is more likely there is a subsidy in favor of the man who receives the benefit of the rural free delivery, which is costing \$40,000,000 a year, and from which the Government gets no return.

Mr. OLDFIELD. Do you not think it would be better for that man to pay a higher rate for the magazines and let the money go into the Treasury rather than to even subsidize that man, especially in these war times?

Mr. FARELLY. I think the man in the country ought to be encouraged to the utmost to receive his reading matter at the least possible expense.

Mr. OLDFIELD. I want to call your attention to the fact that I am getting a great many letters from all parts of the country saying this: That we are paying uncomplainingly the 3 cents letter postage and we think that the publishers ought to at least pay something approximating what it costs to carry their product in the mail. That is what they are saying. I dare say that if it became necessary for them to increase their rates on the magazines, that the people

who would have to pay those increased rates would do so gladly, especially during the war.

Mr. FARELLY. It may be that these complaints that you receive from your constituents in the country voice the sentiments of the farm journals, the owners of which come in direct contact with the people there.

Mr. OLDFIELD. But the farm journals are not representing the farmers in this instance at all.

Mr. FARELLY. But they have been a great factor in shaping public opinion there for a great many years. I was going to show you a sample of a publication that goes through as a second-class periodical. We deliver 16 of those [indicating] all over this country for 1 cent, and that is what I alluded to as a periodical that should pay 1 cent for each delivery, and instead of getting 1 cent you would get 16 cents for delivering that matter.

The CHAIRMAN. You say they pay 1 cent for delivering 16 of them all over the United States?

Mr. FARELLY. Yes; each one weighs an ounce, so that the 16 weigh 1 pound.

The CHAIRMAN. What do you call that?

Mr. FARELLY. That is a periodical published in Philadelphia by a Philadelphia society.

Mr. SLOAN. Does it go through your establishment?

Mr. FARELLY. No; it does not in any way.

Mr. MOORE. In other words, that is sent by the Government into Arizona, California, New Mexico, or 16 other points west of the Mississippi River for 1 cent?

Mr. FARELLY. Yes.

Mr. MOORE. And for that we must have this tremendous overhead?

Mr. FARELLY. Yes, sir.

Mr. MOORE. Would not that, to a certain extent, account for the disparity referred to a little while ago in the Government's cost of carrying the mail and your freight cost?

Mr. FARELLY. Certainly; it has a direct bearing on it.

Mr. MOORE. May I ask you as to one or two farm publications without naming any one of them. A large farm publication is issued from my city. I have been informed that its circulation has been falling off due to the war. Have you heard anything of that kind?

Mr. FARELLY. A very small proportion of that goes through our hands, and I would not be able to form any judgment. That is almost entirely a subscription proposition.

Mr. MOORE. Now, as to the Saturday Evening Post and the Ladies Home Journal. Has public announcement been made of the fact that the retail price is to be increased?

Mr. FARELLY. Yes; that the retail price is to be 10 cents.

Mr. MOORE. That the price is to go up from 5 cents to 10 cents?

Mr. FARELLY. Yes; in anticipation of the increased cost of the product.

Mr. MOORE. Under the new law?

Mr. FARELLY. It has cost for years a great deal more than they have received; it has cost 5, 6, or 7 cents, whereas it retails for 5 cents.

Mr. MOORE. I asked that for Mr. Sterling's benefit.

Mr. STERLING. I did not hear the question.

Mr. MOORE. Mr. Farelly announced before you began questioning him that the price of the Saturday Evening Post was to go up from 5 to 10 cents.

Mr. HAWLEY. What will be the yearly subscription to the Saturday Evening Post?

Mr. FARELLY. I think it is put up to \$3 a year or \$3.50 under the increased rate. Very many publications carrying large advertising could afford to give away their product, because the advertising receipts would cover the whole cost of production and would yield a profit. The Saturday Evening Post has cost a great deal more to produce than they have received through subscriptions and of course they have a large revenue from their advertisements. A certain publisher came to me several years ago and asked me if I could not arrange to give away several thousand of one edition of a daily paper. I reasoned with him that the cost of distribution was very considerable and that he would not gain anything by that; that it would cost more than a good part of the retail price to distribute it, and therefore he abandoned the thought. Now, if you were to tax the advertisements, the publications that have this large revenue could afford to pay it.

Mr. SLOAN. Do I understand that the Curtis Publishing Co., who publish the Saturday Evening Post, has issued the Saturday Evening Post at a loss for years and yet never saw fit to raise the price until it became a question of the Government getting a little something out of it?

Mr. FARELLY. Why should they, when they have had such a large revenue—

Mr. SLOAN (continuing). Is not that a serious charge to bring against a great publication in war times?

Mr. FARELLY. On the contrary, they have had such a large revenue from advertising for years that there was no necessity for increasing the rate to the readers, because the more readers they have the more advertising they will secure.

Mr. SLOAN. Would they not at this time be willing to contribute a little something to the Government which has been so generous to them?

Mr. FARELLY. They have contributed enormously to the Government. The Saturday Evening Post has shown in some instances 1,000 letters in reply to a single advertisement, which would mean \$30 from each of the 1,000 advertisements, or perhaps a great deal more. Recently a man came to me to distribute a certain article he had advertised, and in the course of one week he received several hundred applications for this article.

Mr. SLOAN. The same conditions have existed all this time up until the present, when the Government is liable to get a little money from it, and then, just at this particular time, they put the increased charge upon the public.

Mr. FARELLY. Naturally; the publisher could not afford to pay it all himself. For instance, several magazines have increased their price within the past 12 months from 15 cents to 20 cents, because they could not afford to even pay the increased cost of production.

Mr. SLOAN. Do you not think this publication you are speaking of could stand a little part of that burden without immediately shifting it to their readers?

Mr. FARELLY. I really do not know their financial condition. They are reputed to be wealthy, and that is all I know about it.

Mr. STERLING. Do you say the Saturday Evening Post has been published at a loss for years?

Mr. FARELLY. Not at a loss in revenue, but in the mere cost of the product.

Mr. STERLING. You mean to say that the subscription price did not pay the entire cost and they complained because they did not have the advertising net?

Mr. FARELLY. Unless they had large advertising, they could not afford to publish that vast amount of matter for 5 cents.

Mr. STERLING. But counting their revenue from advertising and from the subscription price, they make a large profit?

Mr. FARELLY. They are alleged to do so, and I presume they do.

Mr. STERLING. You say you ship to San Francisco for \$3.65?

Mr. FARELLY. \$2.80.

Mr. STERLING. And it costs the Government about \$8?

Mr. FARELLY. That is what is claimed.

Mr. STERLING. Suppose in shipping your stuff to San Francisco, you had to put a man on the car, throw it out in little packages at every station between here and San Francisco; you would not then get that rate, would you? You would have to pay about 8 cents a pound, the same as the Government?

Mr. FARELLY. The Government proposition is totally different from ours in that particular.

Mr. STERLING. If the Government just put its mail up in packages and shipped it to a certain point on the freight train, so that they did not have to have any man on the car and the agents at the various depots where it was shipped took care of it, then the Government could ship mail as cheap as you ship freight, could it not?

Mr. FARELLY. They should be able to do so under the same conditions. It is a public rate established by traffic regulations. We enjoy no special privilege in that particular.

Mr. HAWLEY. Are you given priority in transportation when you ship publications by freight?

Mr. FARELLY. No; we are not.

Mr. HAWLEY. You take your chances on that?

Mr. FARELLY. Yes.

Mr. LONGWORTH. As a broad, general proposition, do you think second-class mail ought to pay its way?

Mr. FARELLY. No; I do not.

Mr. LONGWORTH. How far short should it come of paying its way?

Mr. FARELLY. Well, that would be scarcely a fair proposition for me to answer, because it would be an estimate based upon no real facts.

Mr. LONGWORTH. Of course, from a purely educational standpoint the Government ought not to charge these publications anything.

Mr. FARELLY. We had some very intelligent men in the Postal Department from 1872 to 1880 or 1885, and in 1872 the rate was 3 cents on magazines and 2 cents on newspapers, and it went on for 10 years, and then they found that the rate was a barrier to the growth in the country outside and the rate was reduced from 3 cents and 2 cents to 1 cent in 1885, and from 1885 to the present time it has been 1 cent a pound and has brought enormously increased revenue to

the first-class mail. That was clearly shown to the satisfaction of the Government, and whenever an attempt was made to raise the rate that argument was brought out and clearly established.

Mr. LONGWORTH. Is it not the logic of your proposition that second-class mail ought not to pay any rates whatever?

Mr. FARELLY. By no means. I think it should be considered in its educational sense as well as being privileged matter over ordinary merchandise. I do not think it ought to be treated as pens, inks, and papers, or groceries and hardware. I do not think it ought to be treated in that way, because the facilities of the post office are always for the benefit of the people.

Mr. LONGWORTH. If you do not think it ought to pay its way entirely, how much of its way ought it to pay?

Mr. FARELLY. That would be a vague guess, not based on any facts. You could easily reduce the cost, and instead of thirty or forty or sixty million dollars reduce it down to twenty or thirty million dollars, and you would get more than that compensation from your increased revenue from first-class mail.

Mr. LONGWORTH. Precisely; and if you carried them free, it would be of even greater benefit to the first-class mail?

Mr. FARELLY. Well, that is the educational feature.

Mr. LONGWORTH. Exactly, and I say the logic of your position is that it would pay the Government to carry second-class mail free of any charge whatever.

Mr. FARELLY. I think it would pay the Government. You can not colonize Alaska or the great Northwest or the Hawaiian Islands unless you give those people some encouragement and give them the opportunities they had in their home towns. If you are going to penalize them because they have gone to these outlying districts then they will not go. It has been shown and demonstrated clearly that whenever you put the facilities of the mails at their disposal it has increased the population and encouraged emigration to those sections.

Mr. LONGWORTH. Well, that was exactly my first question, whether you did not think the Government ought to carry second class mail free?

Mr. FARELLY. Yes; it is going to the extreme, but even then I think it would be good public policy and for the benefit of the great mass of the people. For instance, take Canada: Canada goes down to a quarter of a cent, and why? Because of the vastness of their territory. They go up to the Alaskan border for one quarter of a cent from Montreal, and that does not begin to pay one-third or one-fourth of the real transportation rates, but that is done for the benefit of the people in those remote sections of Canada.

Mr. LONGWORTH. Your general proposition includes both the educational side and the advertising side?

Mr. FARELLY. That is right. I think the educational side should be considered by the Government without question. The advertising matter is a little different proposition. The benefit of the Government is from the increase in first-class matter and beyond that, if the Government feels they ought to have revenue from that particular product, the logical thing would be to tax the advertising.

Mr. STERLING. Our education is of two kinds, there is the meritorious education, and there is very harmful education. Do you not think that if the Government carried magazines free that would

greatly multiply these fake magazines, these cheap and harmful magazines? Do you not think it would have that effect?

Mr. FARELLY. Well, it is like the story of the tares and the wheat growing together; you can not very well separate them.

Mr. STERLING. Do you not think the fake publications would crowd out a good many of the meritorious publications?

Mr. FARELLY. No; I do not think so for a moment. The meritorious publications have the greater vogue at these distant points. The great sale of these so-called flashy magazines is in quite a limited territory, in the great cities. The distant points are more apt to patronize what we would call the more respectable magazines.

Mr. STERLING. Well, a great many of the magazines published in the East go out to Illinois.

Mr. FARELLY. Well, Chicago is a great center of publication, and there are other growing cities out in that section.

Mr. O'SHAUNESSY. You are paying a tribute, then, to the dwellers in the country towns and on the farms?

Mr. FARELLY. I think that is true, without question.

Mr. O'SHAUNESSY. That they are the people who enjoy decent literature?

Mr. FARELLY. I think that is true, beyond question.

Mr. O'SHAUNESSY. And the impure literature and the trashy literature is consumed by the people in the large cities?

Mr. FARELLY. Absolutely. These flashy magazines have very few, if any, subscriptions, and the publications that have subscription lists are those that go to the farmer and the country districts all over the United States.

Mr. O'SHAUNESSY. I think that is a very important contribution to the hearings.

Mr. FARELLY. The flashy magazines are sold principally in the large cities and they do not claim to have any large subscription lists, and therefore they are relying upon the news dealers to sell them, principally in the populous centers.

Mr. MOORE. I think your statement is borne out from the fact that a great deal of intellectuality comes from the country and develops here in the Capitol, and especially in the Halls of Congress; but since you have been asked some questions from the corn belt about some publications published in my city, I want to ask you if it is not a fact that the Curtis Publishing Co. pays extensively in the matter of corporation and income taxes?

Mr. FARELLY. Unquestionably, and their products go to the rural districts all over this country, and they certainly can not be classed other than as very high grade publications.

Mr. MOORE. Adverting to this prospective increase in the retail price of their publications, do you see anything more unfair in the Ladies' Home Journal or the Saturday Evening Post raising its retail price than you see unfair in the gentleman who reads these highly illuminating and literary productions out in Nebraska or in Kansas raising the price of his corn or wheat from \$1 to \$2.50 per bushel?

Mr. GREEN. Well, you can not raise the price of wheat, because that is fixed.

Mr. FARELLY. I do not see any reason why he is not entitled to increased rates.

Mr. MOORE. If it is fair for the farmer to get \$2.50 a bushel for wheat that he formerly got \$1 a bushel for, is it not fair for the publisher to ask 10 cents for a publication that he was selling to the farmer for 5 cents?

Mr. FARELly. I think that is clearly so.

Mr. SLOAN. Let me amend your question by also including cotton?

Mr. MOORE. Yes; I will include cotton as one of those things that ought to bear a fair proportion of the tax along with the manufactories and the industries generally.

Mr. FARELly. As to the dissemination of literature of the nigher class as against the flashy kind, we all know that the publications of Mr. Curtis are high-class publications and they go to every hamlet in this land, and the yellow magazine and the so-called flashy literature does not reach those points because they do not subscribe for them. They do subscribe for the Saturday Evening Post and the Ladies Home Journal because they are high-class, intellectual products.

Mr. STERLING. You say that the Curtis corporation pays a very large income tax?

Mr. FARELly. I believe they do.

Mr. STERLING. And an excess-profits tax. If that is a fact, do you not think they could well afford to pay the Government what it costs to carry their publications?

Mr. FARELly. The readers in these hamlets are the ones who suffer in the end by these increased rates.

Mr. STERLING. Then, they ought not to raise the price if they are making such an immense profit.

Mr. MOORE. It has to do that to enable the employces of the publishing company to get enough pay to buy bread.

Mr. FARELly. The cost of production has enormously increased. Take our news company, for instance, the cost of labor there has about doubled, and it is hard to secure at any price.

Mr. STERLING. Now, one other question following Mr. Moore's suggestion, even at \$2.50 a bushel for wheat, the farmers are not paying a very heavy income tax, are they? They are barely paying expenses and can not pay an income tax because they do not make enough even at that price?

Mr. FARELly. That is my understanding.

Mr. GREEN. How large a percentage of the total output of the Saturday Evening Post is carried through the mail?

Mr. FARELly. As a rough estimate, I should say 75 or 80 per cent.

Mr. GREEN. Of course, your knowledge about that is better than mine.

Mr. FARELly. My knowledge of the conditions with reference to the Saturday Evening Post and the Ladies' Home Journal is not based on exact information.

Mr. GREEN. I was under the impression that it was sold more by the news stands.

Mr. FARELly. Oh, not at all. The largest outlet is through subscriptions.

Mr. SLOAN. But a few of the Ladies' Home Journals and Saturday Evening Posts are kept and read in Philadelphia, as I understand.

Mr. FARELly. To be sure, quite a large quantity.

Mr. SLOAN. And there are some others, I understand, who do not read those high-class publications?

Mr. MOORE. Since the increase in shipbuilding over there, a great many folks have moved in from Nebraska.

Mr. SLOAN. Oh, no; we are busy raising wheat for the feeding of the cities—at a fixed price.

Mr. RAINEY. Mr. Farelly, your position is that second-class mail feeds the first-class mail by producing a number of additional letters?

Mr. FARELLY. Yes, sir.

Mr. RAINEY. To the extent, you think, of paying the expenses of carrying second-class mail through to destination?

Mr. FARELLY. Well, that would really be an estimate based upon impression rather than upon any facts. The facts have been shown to the department here, and there is a vast revenue from first-class mail coming from advertising matter in the leading periodicals.

Mr. RAINEY. Are you familiar with the recent attempt of the advertisers in the Saturday Evening Post to find out how many replies advertisers got to their advertisements in one particular issue?

Mr. FARELLY. I know something of that kind was attempted, but I do not know the result.

Mr. RAINEY. Well, I will tell you what the result was. There were 118 advertisers in that particular issue of the Saturday Evening Post, and 83 of them replied and 35 of them did not. They wrote to each one of them asking how many letters they got that week in response to their advertisements, and assuming that only one-half of them replied, they received 10,000 answers, and assuming that the other half who did not reply received the same number of answers, then that week the advertisements in the Saturday Evening Post brought a total of 20,000 replies. The Government lost that week in carrying the Saturday Evening Post through the mails \$70,000 on that one issue. Now, assuming it cost nothing at all to carry the 20,000 replies through the mail, the Government received, then, \$400 on those replies, and that is assuming that every 2-cent stamp they bought—and of course we are not figuring on 3 cents, because 1 cent goes to the Treasury—was a clear profit to the Government and that it cost nothing at all to carry and deliver those replies, that leaves a loss of \$69,600 on that one issue.

Mr. FARELLY. The Government bases its cost of transportation to include what they term all of their overhead charges. I do not think that that is a fair calculation of the cost of the transaction, when we know that the transportation represents a very small matter.

Mr. RAINEY. According to these figures, the total loss would be \$70,000, and if you deduct \$400, that leaves a net loss of \$69,600.

Mr. MOORE. Where do those figures come from?

Mr. RAINEY. Those figures are published by the One-Cent Postage Association, which is anxious to make advertising matter pay its own way through the mail in order that they can get 1-cent postage.

You say it sometimes happens that advertisers receive as many as 1,000 answers to an advertisement?

Mr. FARELLY. Yes, sir.

Mr. RAINEY. And it costs 1,000 cents to carry those answers through the mail, does it not?

Mr. FARELLY. Yes, sir.

r. RAINEY. Those 1,000 answers represented a profit of 1,000 s, did they not?

r. FARELly. Yes, sir.

r. RAINEY. Now, this issue of the Saturday Evening Post went through the mail at a loss of \$70,000 to the Government, without getting the profit from the answers that might come in. Now, let me figure them on your basis, at 1,000 answers for each advertisement. There were 118 advertisements which would mean 118,000, and 1000 cents is the amount that would be realized on account of the 118,000 advertisements that week. Now, your estimate of the 10 answers is a big one, of course, and nobody else ever put it that low. According to these figures, it would require 7,000,000 replies on the advertisements to pay this loss of \$70,000 in carrying the publication through the mail.

r. FARELly. I never for a moment thought that anyone would maintain that the increased revenue from first-class matter would cover off the alleged cost of transporting it.

r. RAINEY. It only covers the minimum cost. According to my own theory, each advertisement induces 1,000 letters, and that would cover less than one-sixth of the loss.

r. FARELly. The statement of the loss is based on the theory Mr. Koons stated before the Senate committee. It includes all the overhead charge, and not just the cost of the transaction at all. When I say that we could do so much better by transporting independently of the mails, and 80 per cent of our product is shipped at less than the mail rate—

r. RAINEY (interposing). How do you transport it?

r. FARELly. By freight.

r. RAINEY. You haul it to the depot and load it on a freight car?

r. FARELly. Yes, sir.

r. RAINEY. And then it is carried, we will say, to Chicago?

r. FARELly. Yes, sir.

r. RAINEY. And then it is delivered in Chicago to one address, not?

r. FARELly. Yes, sir; in the instance of Chicago. In the large city it goes to one address.

r. FARELly. If you send by freight 20,000 magazines to Chicago, you would load them on a truck, carry them to the depot, and load them on a freight car; then they would be carried to Chicago, unloaded, and delivered to one person?

r. FARELly. Yes, sir.

r. RAINEY. And in addition to what you pay for freight, you pay for delivery at Chicago to that one person.

r. FARELly. Yes, sir.

r. RAINEY. If the Government were handling these 20,000 publications through the post office, they would simply be delivered at the post office, and the Post Office Department would have to deliver them if they all went to Chicago, to 20,000 different addresses. Do you think that your method of estimating the matter is fair?

r. FARELly. Well, I do not claim that the Government could do it at the same rate, but there is a vast difference between the two

r. RAINEY. Each magazine would have to be handled separately at the post office. It would have to be stamped when it was mailed at the post office, and then when it was delivered in Chicago.

Mr. FARELLY. Yes, sir; it is a totally different proposition.

Mr. RAINEY. Of course it is a different proposition from carrying it by freight. It costs much more.

Mr. FARELLY. The disparagement is entirely too great between the postal transportation cost and the estimated cost to the Government for what they term the overhead charges.

Mr. RAINEY. You say that the farm papers will suffer on account of the establishment of the zone system?

Mr. FARELLY. I really know very little or nothing about the farm papers.

Mr. RAINEY. You do not think they could increase their advertising rates?

Mr. FARELLY. I think it would be a hazardous undertaking.

Mr. RAINEY. Let me read you a statement from one of the principal farm papers, the Prairie Farmer. I received this statement through the mail headed "Important notice:"

Prairie Farmer's big increase in circulation and the added expense of publication calls for an adjustment of our live-stock advertising rates. Beginning June 15, the yearly rate will be increased from an average of \$2.80 to \$3.85 an inch per insertion.

From that it would appear that the Prairie Farmer is proceeding upon the theory that the country is so prosperous and that they are selling so many more papers than ever before, that they can increase their advertising rates \$1 per inch.

Mr. FARELLY. That is perfectly logical and natural.

Mr. RAINEY. You also think that it is perfectly logical and natural that the Government should continue to carry it through the mail at the present negligible rate which results in a loss?

Mr. FARELLY. If they encourage the farmer, and if the farmer derives benefit from reading that paper he is entitled to it. Your rural free-delivery system is based upon that theory of benefiting the farmer, and why not benefit him by this rate?

Mr. RAINEY. Then, according to your theory, the Post Office Department should be conducted altogether as an eleemosynary institution?

Mr. FARELLY. The citizens of the country should be benefited by the Government to that extent, call it eleemosynary if you will.

Mr. RAINEY. Why should not the farmers' product be carried to its destination by the Government at a tremendous loss to the Government also?

Mr. FARELLY. That is a different proposition entirely.

Mr. RAINEY. Would it not benefit the farmer a good deal more to have the Government carry a bushel of wheat from his farm to the primary market at a tremendous loss to the Government than it would be to have the Government carry the Prairie Farmer to him at a tremendous loss to the Government?

Mr. FARELLY. Well, that is an economic proposition.

Mr. STERLING. It would help the consumer, too.

Mr. RAINEY. Yes, that might help the consumer somewhat, too.

Mr. FARELLY. That is an economic proposition that I would not be prepared to discuss.

Mr. RAINEY. If the Government is being conducted as an eleemosynary institution for the purpose of assisting the farmers in the transportation of mail matter, why should not the Government assist them in carrying their products free?

Mr. FARELTY. If you were to operate the Post Office Department as a commercial proposition, just the same as a business institution dealing in merchandise that would be logical, but it is being conducted for an entirely different purpose than carrying merchandise.

Mr. RAINEY. But these farm journals and these other papers are conducted at a profit to their owners, are they not?

Mr. FARELTY. Almost entirely from their advertising revenue. The subscriptions are very low. Some of them are as low as 25 cents, and many of them are 50 cents. Their great revenue does not come from their subscriptions but from advertising. If they paid a portion of their profits to the Government for carrying that matter—

Mr. RAINEY (interposing). Some of those farm papers are being distributed at almost less than the cost of the paper that goes into them.

Mr. FARELTY. Yes, sir.

Mr. RAINEY. Simply because they can charge those high advertising rates.

Mr. FARELTY. Yes, sir.

Mr. RAINEY. Then, if the Government carries them through the mail at a negligible rate—

Mr. FARELTY (interposing). As I suggested before, you should tax their advertising income.

Mr. RAINEY. Would not your farm paper and other papers be taxed on their advertising income if they were required to pay zone rates on their advertisements?

Mr. FARELTY. But that does not place their subscribers on an equal footing, and they are entitled to be placed on an equal footing, whether they live in zone 1, zone 2, zone 3, or zone 8. They are entitled to the same privileges from the Government. If the chief revenue of the publisher is from advertising, let him pay a tax on his advertising.

Mr. RAINEY. Why not require him to pay a zone rate on it?

Mr. FARELTY. That does not cover it. If you let them go at the same rate to the different zones—

Mr. RAINEY (interposing). Would they not make the advertisers pay it?

Mr. FARELTY. The great revenue should come from the advertising.

Mr. RAINEY. That is where the tax is, and if the greatest revenue is from the advertisements—

Mr. FARELTY (interposing). You are now putting it on the circulation, under the zone system.

Mr. RAINEY. That is because the farther it is carried the greater the cost.

Mr. FARELTY. And right there you abandon the whole system or theory of the Government in conducting the Post Office Department up to the present time.

Mr. RAINEY. Second-class mail matter paid for itself until they got this 1-cent rate. It was paying for itself in the early eighties.

Mr. FARELTY. Notwithstanding your enormous deficit on account of rural delivery, there has been an excess of revenues in the past few years. Second-class matter has not prevented you from having a surplus in the postal revenues during the past few years. That has

been the case, notwithstanding the expenditure of \$40,000,000 for rural free delivery, but that is ignored by the committee entirely.

Mr. RAINEY. Is it your argument that we should abandon rural free delivery?

Mr. FARELTY. If each department had to pay its own way, you would have to abandon that.

Mr. RAINEY. Does the farmer derive one dollar of profit on account of having a letter box in front of his house for the purpose of having mail delivered to him?

Mr. FARELTY. No, sir; but the Government is bringing the mail to him.

Mr. RAINEY. Whatever he sends from his farm is on the other basis, and pays its own way.

Mr. FARELTY. Yes, sir.

Mr. RAINEY. Whether he sends it by parcels post or freight.

Mr. FARELTY. Yes, sir; but I have never thought that second-class mail matter should be considered on the same basis as merchandise. The theory of the post office is that it is for the thorough dissemination of proper literature.

Mr. RAINEY. When a farm journal can increase its advertising rates \$1 per inch, don't you think it ought to be on a basis of paying for itself when it goes through the mail?

Mr. FARELTY. Let them pay it through an income tax on their advertising. That is the only logical way to do it.

Mr. RAINEY. How would you do it—through an income from advertising?

Mr. FARELTY. Each man would certify his total from advertising, his total receipts from advertising, and you could impose a certain tax according to his rate of income.

Mr. RAINEY. You think that would be fair?

Mr. FARELTY. It would be fair, yes; and I do not think it could be fairer.

Mr. RAINEY. An inch of advertising in the Saturday Evening Post might bring a hundred times the result that an inch of advertising would bring in another magazine?

Mr. FARELTY. I heard Mr. Curtis state before a committee of the House some few years ago—he was asked what his rate was for advertising, and he said \$8 an agate line. That was startling to some members of the committee, but he said it was cheap at that; and when you look at the size of his page and consider what that means, it is not at all startling.

Mr. RAINEY. For the colored advertisement on his back page he gets \$11,000 a week.

Mr. FARELTY. But he pays an income tax and his company pays a tax.

Mr. RAINEY. On every colored advertisement in his paper he gets \$10,000 a page a week and for every advertisement that is partly colored in his paper he gets \$9,000 a week, and we carry that paper through the mails at a loss of \$70,000 a week, and yet you do not think he ought to pay for it.

Mr. FARELTY. I have suggested that the advertising ought to pay in accordance with the revenue received from the advertising.

Mr. RAINEY. You say that there are executive difficulties which the publishers would encounter and the department itself would

encounter in figuring up the postage on each publication and on each magazine.

Mr. FARELLY. That is true.

Mr. RAINEY. You are aware of the fact that the Post Office Department does not see any executive difficulties in the way and is not asking for sympathy from interested publishers?

Mr. FARELLY. They do see many difficulties. For instance, I have talked with Mr. Koons, and he kindly consented to do everything he could, and I have also talked to Mr. Burleson.

Mr. RAINEY. Are you appearing in behalf of the Post Office Department for the purpose of having those executive difficulties eliminated?

Mr. FARELLY. Not in the least.

Mr. RAINEY. You are appearing in behalf of the publishers?

Mr. FARELLY. Yes, sir. The executive difficulties of the department and our own are exactly the same.

Mr. RAINEY. Let me suggest a very simple way by which the Post Office Department can do it. I do not know how they are doing it, but they could require every magazine and every newspaper to say, "This magazine contains 65 per cent advertising and weighs — ounces."

Mr. FARELLY. They do that now.

Mr. RAINEY. You say they do that now?

Mr. FARELLY. Yes, sir; they are requiring all magazines to print that on one of the first four pages of the publication.

Mr. RAINEY. I did not know what they were doing.

Mr. FARELLY. The new law provides that they must print on one of the first four pages of the publication the total percentage of advertising and reading matter in each issue. But the difficulty arises when you have 30 or 40 different publications in the same parcel and those publications having a different percentage of advertising and reading matter. One may have 17 per cent, another 20 per cent, another 33 per cent, another 40 per cent, and so on. Then there may be a difference in the weight of the publications, one weighing, probably, 1 ounce and another 14 ounces. So that the clerical labor involved in figuring that out for each shipment is enormous.

Mr. O'SHAUNESSY. You say that all of that goes into one package?

Mr. FARELLY. Yes, sir.

Mr. O'SHAUNESSY. Is that package labeled as to its contents?

Mr. FARELLY. No, sir.

Mr. O'SHAUNESSY. Where does that statement go about the advertising?

Mr. FARELLY. That would have to be put on the outside of the package.

Mr. O'SHAUNESSY. You would have to put it on the outside of a package?

Mr. FARELLY. Yes, sir.

Mr. O'SHAUNESSY. Then you would have, in some cases, ten or fifteen labels.

Mr. FARELLY. Well, we would figure up in pencil, or otherwise, the percentage in one publication, which might be 17 per cent, another 27 per cent, and so on. As I say, the clerical labor involved would be enormous.

Mr. O'SHAUNESSY. Would you have one label or many labels?

Mr. FARELLY. One label, but a set of figures showing the total contents.

Mr. O'SHAUNESSY. You would have to increase the number of clerks to do that?

Mr. FARELLY. There is no doubt about that at all.

Mr. O'SHAUNESSY. Are you going to do that?

Mr. FARELLY. We are bound to do it. We could not possibly do it without a great increase in the labor element.

Mr. O'SHAUNESSY. Do you think it will be possible for the Post Office Department to do all of that?

Mr. FARELLY. It will be next to impossible, and it will delay, to a great extent, the shipments of the mail. The man who receives it said that they offered to give him three or four more clerks, but he says it will require at least forty men, and even then it will delay the mail for a considerable time. I think it all could be met by making a flat rate on the whole thing and charge it to the advertising. I think the flat rate is the only logical manner of dealing with it.

Mr. RAINEY. The present system has resulted in the magazines and the press being located almost entirely in the eastern States.

Mr. FARELLY. No; there is a very large number of publications issued now in Chicago and San Francisco.

Mr. RAINEY. But the number is negligible as compared with the publications in the East.

Mr. FARELLY. Comparatively small; yes.

Mr. RAINEY. And all of the publishers are complaining that these rates are going to make a sectional press. Do you think it can be more sectional than it is now in the matter of the magazines and national newspapers published, as they are, east of the Allegheny Mountains?

Mr. FARELLY. Commerce of that kind, like all other matters of trade, seeks the most economical lines. Now, if a publisher finds that it costs him too much to transship his publication in sending it all over the United States, he must find a central point.

Mr. RAINEY. Let us discuss that economic line. Where are the paper mills located?

Mr. FARELLY. More of them in the eastern section.

Mr. RAINEY. Most of them are located near the points where these magazines are published?

Mr. FARELLY. Most of them; yes.

Mr. RAINEY. Therefore the situation is this: These magazines have the advantage of getting their paper almost next door to their publishing houses, and they bring it, at a very small cost, to their publishing houses; then they fill it with ink and put into it these expensive advertisements for which they get, at least, the Saturday Evening Post, \$11,000 a week for some pages, and then they ask the Government to transport it, at a loss of from \$80,000,000 to \$90,000,000 a year, all over the United States. That is the situation exactly, and yet when we are face to face with the proposition of raising, by new and abnormal means, \$8,000,000,000 in taxes, nearly all of them direct taxes on the people of this country, the magazine and newspaper publishers have the courage and the nerve to come before this committee and ask that their publications, their product, shall still be transported at a loss to the Government of \$90,000,000 a year. Is not that the situation in brief?

Mr. FARELly. I claim that they were never willing to admit that they wanted it done free. They claim that the benefit to the country is such that we should avoid this sectional distribution which would occur if this zone system were enforced.

Mr. RAINEY. To avoid the sectional issue proposition, which we have before us now and which we have had before us for the last 40 years.

Mr. FARELly. Well, it is gradually disappearing. The publishing business in Chicago is forging to the front to an enormous degree.

Mr. RAINEY. They will forge to the front more rapidly if they make these magazines pay a part of the expense of going through the mail.

Mr. FARELly. It will simplify the method rather than defeat it if you provide legislation which will not make one part carry one rate and another another rate. That is a most confusing thing.

Mr. RAINEY. I am looking at it from the viewpoint of a legislator who is anxious to protect the Treasury of the United States and to abolish this subsidy to the newspapers, while you are looking at it from the standpoint of a publisher who still wants his subsidy.

Mr. FARELly. I beg your pardon.

Mr. RAINEY. Which viewpoint do you think is correct?

Mr. FARELly. I do not represent any publisher.

Mr. RAINEY. What interest have you in the Publishers' Auxiliary Association?

Mr. FARELly. None whatever.

Mr. RAINEY. What have you had to do with these induced letters of which the Members of Congress have received thousands?

Mr. FARELly. I never heard anything about them except what I have heard before the committee; I never heard of them from any other source.

Mr. RAINEY. We receive letters daily. I have hundreds of them, and resolutions adopted by women's clubs, by little colleges, and by commercial organizations all over the United States. I have them here and I am going to produce them when the proper gentleman makes his appearance. Every one of them is worded exactly alike.

Mr. FARELly. I have never seen one of them.

Mr. RAINEY. All of them contain this particular clause:

Any restrictions or attack upon the freedom of circulation of these great national channels is destructive of opportunity to those remote from cities of publication and therefore unfairly discriminating against a large body of American womanhood and childhood; be it therefore resolved that we most earnestly protest against this hasty, extortionate, and destructive amendment, and demand its repeal at this session of Congress.

Now, we get those letters from women's clubs in various States. I have them here from nearly every State.

Mr. FARELly. That would seem to indicate that they were instigated by one source.

Mr. RAINEY. And every one is mailed from New York. How do you account for that?

Mr. FARELly. It looks very suspicious.

Mr. RAINEY. It looks suspicious that somebody in New York is circularizing the country and is bringing about, in the interest of this subsidy for newspapers and magazines, these induced letters, every one of them exactly alike. Do you think that sort of thing ought to have any weight with conscientious legislators who are interested only in discharging their duty to the country?

Mr. FARELLY. I don't think they represent public opinion. I can't say that it does represent public opinion, because as you say—

Mr. RAINEY (interposing). I am glad there is something in connection with this program of these people who benefit by this graft that you don't approve of.

Mr. FARELLY. These people from Cleveland, Mr. Burroughs, who brings figures with reference to 1 cent postage, I have always questioned his figures. They don't show authority. I don't think it arrives at that extent. My whole thought is not to reduce your revenue in any way, shape, or manner, but in some way of getting a larger revenue by equalizing the handling of the matter with the Post Office Department. The Post Office Department is very consistent, and promises to give us every facility for passing the law.

Mr. O'SHAUNESSY. Want to get it where they can get the most money?

Mr. FARELLY. Yes; we know we have got to have the most money.

Mr. MOORE. Before you go. Do you confirm the figures which Mr. Rainey has used in connection with the cost of distribution of one issue of a publication like the Saturday Evening Post? Have you any knowledge as to that?

Mr. FARELLY. No.

Mr. MOORE. He has indicated that there is a loss of \$70,000 on the issue of one publication, and has quoted figures from a pamphlet issued by a 1 cent postage society. Do you know whether those figures are confirmed by the Post Office Department?

Mr. FARELLY. I doubt very much if those figures could be confirmed, those figures produced by Mr. Burroughs, of Cleveland; I have met him and heard his argument.

Mr. MOORE. You have already indicated in your statement that there was a very great disparity between Government cost of transportation through the post office and the cost of transportation by freight, indicating that perhaps there was a very large overhead of Government cost which was not accounted for when the comparisons were made.

Mr. FARELLY. That is absolutely the condition.

Mr. MOORE. But you have no means of confirming the rather startling figures which Mr. Rainey has used in his questions?

Mr. FARELLY. I don't think they bear the statistics of the Post Office Department.

Mr. RAINEY. They are not any more startling than the figures you have stated.

Mr. FARELLY. If you consider it on the basis that the first-class increase justifies the expense of carrying the whole second-class matter, that applies to this whole country. No effort is made at all to economize on that point. I have never heard of any on the part of the Government.

Mr. RAINEY. Do you know of any magazine that maintains its pre-subsidy period of literary excellence except—do you know of any?

Mr. FARELLY. Well, I think the number of high-class magazines to-day is larger than ever before.

Mr. RAINEY. What are they?

Mr. FARELLY. Many of them existed for a number of years.

Mr. RAINEY. What are the high-class magazines?

Mr. FARELly. Take a thing like Popular Mechanics, published in Chicago. It is a very high-class publication.

Mr. RAINEY. Is that a literary publication?

Mr. FARELly. It is largely scientific literature. It is highly educational.

Mr. RAINEY. I am talking about literary. Which one of these that are pre-subsidy standards of literary excellence?

Mr. FARELly. That would mean before 1885, and there are none of those left except those old ones like Harpers, Century, and so on. The cheap ones have come in since. The Ladies' Home Journal was brought up under the present system.

Mr. RAINEY. The cheaper class was all brought into being by the 1-cent rate.

Mr. FARELly. Yes.

Mr. RAINEY. Some of the better class have been able to survive the competition of the cheap class?

Mr. FARELly. Nearly all of them.

Mr. RAINEY. What has become of Harper's?

Mr. FARELly. It has had a varied history, and I think finally discontinued. I don't think it was ever a paying business. The magazine continues. The North American Review and the Atlantic Monthly continue.

Mr. RAINEY. Harper's Magazine failed sometime ago, didn't it?

Mr. FARELly. The house failed, but I think the magazine was always a profitable business. Harper & Bro. failed, but I think the magazine was profitable. I think the weekly was not.

Mr. RAINEY. You think these other magazines, with the North American Review which you admit maintains the presubsidy literary excellence, are maintained to-day?

Mr. FARELly. I think the Century is equal to its best.

Mr. RAINEY. I wish I could agree with you.

Mr. FARELly. It is a matter of opinion, to be sure. These other magazines are deserving of encouragement, such magazines as Everybodys and McClures and several other publications that tend to furnish entertainment as well as education.

Mr. RAINEY. Those are the muck-raking papers that invented the term "graft"?

Mr. FARELly. I didn't know the term "graft" was applied to them.

Mr. RAINEY. They invented it and when we apply it to them they object to it.

Mr. FARELly. I don't blame them for objecting to that.

Mr. MOORE. Isn't Theodore Roosevelt the one that started the terms muck raking and graft?

Mr. FARELly. I don't know.

Mr. MOORE. Isn't the term graft as old as the Bible itself?

Mr. FARELly. I don't know.

Mr. DICKINSON. The suggestion has been made that the Saturday Evening Post charges 10 cents instead of 5 cents.

Mr. FARELly. They have so announced.

Mr. DICKINSON. Was that increase for the purpose of meeting the increased circulation or to enable them to get an additional profit to meet the increase of rates, or both?

Mr. FARELly. I think it is largely to meet the tax and to meet the increased cost of production, labor, and material. Everything that

enters into that publication has been increased very largely. And in addition to those increases already, then to have these postal rates added to them, I think that is the reason they raised the price.

Mr. DICKINSON. Do you think they would not have raised the price of their magazine if it had not been for the tax?

Mr. FARELLY. I do not know how far they could have borne the increased cost of material, but they said the postal rate was the last straw.

Mr. DICKINSON. Is it your judgment by raising the price from 5 to 10 cents that they will be able to pay this tax and get the same net income?

Mr. FARELLY. That is, of course, problematic. You can't feel sure they will not suffer a reduction in circulation, and in suffering a reduction in circulation they must suffer a reduction in advertising rates.

Mr. CRISP. What do you say as to the increase from 5 to 10 cents? What per cent of the increase is tax and what per cent the other elements entering into it?

Mr. FARELLY. Really I am not sufficiently familiar with the publishing business, with the mechanical cost as well as the artistic and literary cost of the articles, to form any opinion as to what percentage was based upon those two items.

The CHAIRMAN. You are the president of the American News Agency?

Mr. FARELLY. I am general manager.

The CHAIRMAN. You publish no magazines or periodicals?

Mr. FARELLY. None whatever.

The CHAIRMAN. But you handle the periodicals and papers and magazines published by others?

Mr. FARELLY. By others.

The CHAIRMAN. You pay the same rate of postage to the Government that the publishers do, do you not?

Mr. FARELLY. Exactly.

The CHAIRMAN. And so your financial interest in the zone postal rates is the same that the publisher's interest is?

Mr. FARELLY. Largely the same.

The CHAIRMAN. You have been before several committees for the last 15 or 20 years, haven't you?

Mr. FARELLY. More or less.

The CHAIRMAN. Protesting against the increase in second-class postage, which is perfectly all right. I do not undertake to criticize that.

Mr. FARELLY. Yes.

The CHAIRMAN. You also appeared before the Overstreet Commission, didn't you?

Mr. FARELLY. Yes, sir.

The CHAIRMAN. You appeared before about three commissions, exclusive of the Hughes Commission, did you?

Mr. FARELLY. I think so.

The CHAIRMAN. You appeared before the Hughes Commission?

Mr. FARELLY. No.

The CHAIRMAN. You did not?

Mr. FARELLY. No.

The CHAIRMAN. Your company did or sent a representative, did it not?

Mr. FARELLY. No; we were not invited. I read all of the proceedings with care after they were finished. I recall two recommendations of the Hughes committee based upon no part of the evidence, as I recall it, that the flat rate be increased from 1 to 2 cents. But that was based upon no argument made before them.

The CHAIRMAN. Did you read all of the evidence?

Mr. FARELLY. I don't know that I read every line of it. It is voluminous.

The CHAIRMAN. They had hearings in New York for a month or longer.

Mr. FARELLY. Longer than that I think.

The CHAIRMAN. And then in Washington. Publishers of periodicals and weekly and daily papers of all kinds were present. They had attorneys, did they not?

Mr. FARELLY. Yes; I recall that.

The CHAIRMAN. And the Hughes Commission was composed of Justice Hughes and President Lowell, of Harvard College, and Mr. Wheeler, who was at that time president of the Chamber of Commerce in Chicago, was it not?

Mr. FARELLY. Yes, sir.

The CHAIRMAN. After all the hearings and the evidence it took them some time to render their decision. They did render a decision, saying that it cost the Government on an average to transport the second-class postal matter about 5½ cents a pound, did they not?

Mr. FARELLY. Something like that.

The CHAIRMAN. And they recommended as a step in the right direction an increase of 100 per cent in the postal rates—that is, from 1 to 2 cents—did they not? The department experts estimated the overhead charges, letter carriers, postmasters, and clerks, and other charges except the transportation and the handling through transportation charges, at 4 cents a pound, did they not?

Mr. FARELLY. I do not recall that figure.

The CHAIRMAN. That is they testified before us, Mr. Stewart and Mr. Koons, last session. Of course if the figures of the Hughes Commission are in any way correct and if the overhead charges of 4 cents a pound made by the experts of the department is in any way correct, Mr. Rainey's figures about the Saturday Evening Post were not so far wrong, were they? In fact, they were below the mark as the figures I have given you, but I want to ask you a few questions for my own information. I see in all of this propaganda and protest against the zone system, for its repeal or modification or suspension, it is continually asserted that this zone-rate act passed at the last session will really destroy magazine reading in this country. Do you believe that?

Mr. FARELLY. It will curtail it to quite an extent. I don't look for a total destruction of it by any means. It will seriously interfere with it.

The CHAIRMAN. I want to read a list of magazines and periodicals and I want you to tell me which ones of these in your judgment, because I presume you handle most of them, will be destroyed or will suspend operations by virtue of the zone postal-rate provision of the present law. The American Agriculturist—when I get to one you think it is going to destroy its circulation and make it cease publication, stop me.

Mr. FARELLY. You might not read them. I don't think there is one that it will stop. The American Agriculturist, their revenue is almost entirely from advertising. We have a quantity of the papers. It is a farm paper.

The CHAIRMAN. Agriculturists will go right ahead, won't they?

Mr. FARELLY. Largely.

The CHAIRMAN. The American Boy.

Mr. FARELLY. I don't see any reason why that shouldn't go ahead.

The CHAIRMAN. You just stop me when I get to one you think won't go ahead.

Mr. FARELLY. I am afraid you are wasting your time.

The CHAIRMAN. You wait. You handle these and you understand the publishers and their situation about as well as we do. The Century, Christian Herald, Collier's Weekly, Cosmopolitan, Country Gentleman, Country Life, Country Side, Current Opinion, Every Week, Farm and Fireside.

Mr. FARELLY. Every Week is already discontinued.
