Mr. POST. I have no recollection of this having originated in my office at all. When you spoke of it on yesterday, I was looking forward with some interest to seeing it, because it is of a different type, and is of a different manner of composition, and is a different form of slip from that used by us. Of course we have a great mass of printing done for our office, and I would not, offhand—but I will say that we have a scrapbook containing everything that has been printed—so I would not offhand wish to pass upon that proposition, though I am absolutely certain, or as nearly so as I can be of anything which has not been checked up, that, in the absence of my scrapbook and a definite checking up of this list, it never came from our office at all. I know of no slip of this kind being used. This type is not the kind of type it is generally set up in or that is used in printing offices in which matter is set up for us. Therefore, I feel perfectly certain in saying to you that that slip did not originate in my office.

Mr. RAINEY. Other Members of Congress received it, and it was sent from New York.

Mr. POST. Well, I wish to state that even though I have your own testimony that it came to you from New York, I am reasonably certain that it did not originate in or come from my office.

Mr. RAINEY. Well, you want the opportunity of changing that statement if necessary when you look at your scrapbook, do you?

Mr. POST. I will look at the matter in my scrapbook and confirm it, but in the meantime I will stand on my statement. Have you the envelope in which this clipping came to you?

Mr. RAINEY. Yes.

Mr. POST. Might I see that?

Mr. RAINEY. Yes; here it is.

Mr. POST. This bears the hall-mark of Hale Publishing Co., 3550 Vista Avenue, St. Louis, Mo., and is an envelope made of brown paper. We have never sent out any matter from our office in brown envelopes, and I can now make quite positive that assurance heretofore given you that that clipping never came from us. But that is a mere detail.

Mr. RAINEY. But you do reproduce these letterheads?

Mr. POST. We never reproduced that, and I am absolutely positive on that point.

Mr. RAINEY. Do you know Mrs. Holland Louise Johnson?

Mr. POST. I would have to have a little more definite identification in order to answer that question.

Mr. RAINEY. She is the head of the Woman's Federation of Clubs.

Mr. POST. Oh, she is the editor of the Woman's Federation Journal or magazine.

Mr. RAINEY. I believe that is it.

Mr. POST. I am familiar with the name, but have never met the lady, to my knowledge.

Mr. RAINEY. Have you seen her recently?

Mr. POST. No, sir.

Mr. RAINEY. She denies most vigorously that she ever gave you the right, or that anybody else ever gave you the right, to copy the letterheads of their club and send out resolutions thereon.

Mr. POST. We have correspondence that will cover that point completely, sir.

Mr. RAINEY. Would you mind sending that to me?

Mr. POST. No, sir.

Mr. RAINEY. She denies it very positively.

Mr. POST. It is my recollection that we have a letter from Mrs. Johnson on that very point.

Mr. RAINEY. Mrs. Holland Louise Johnson.

Mr. POST. All right. We will make a memorandum of that.

The CHAIRMAN. Does any other gentleman want to ask Mr. Post any questions?

Mr. POST. May I point out to Congressman Rainey, in order to make my answer complete and not to appear to be raising a small point, that the general Federation of Woman's Clubs, at its convention, adopted resolutions concerning the zone law and asking for its repeal, and that the action of the federation is the best evidence of its principles, thoughts, and acts.

Mr. FORDNEY. What prompted the women's clubs to send in these requests to Congressmen asking them to repeal this provision in the second-class mail law?

Mr. Post. Because of the enormously destructive effect of the postal zone law upon the homes and citizens and citizenship of this country, and the progress of this country.

Mr. FORDNEY. Were they not prompted to do that by the magazine owners?

Mr. Post. No, sir. They were given information on this subject, and advice as to how to make their views, after they had formed them, effective.

Mr. FORDNEY. Is it not true that many of the magazine writers have written these people and requested them to write their Congressman asking him to repeal this law?

Mr. Post. I do not know. I can not answer that question on the basis of exact information, but inasmuch as many of the prominent writers—in fact, I should say the most of the prominent writers of this country—are in touch with social, civic, and economic progress, and are positive of the destructiveness of this zone system of postage rates, I have no doubt they have written people, pointing out its destructive effects, and asking them to study the matter, form their opinions thereon, and then express them.

Mr. FORDNEY. Mr. Post, I have received letters from women's clubs and individuals, sending me clippings from magazines in which they were requested to write their Congressman and ask him to repeal that provision of the law.

Mr. Post. Exactly; and providing information of the destructive effects of this postal-zone law, upon which they could form an intelligent opinion. If they did not form an opinion unfavorable to the zone law there was absolutely no power in the world that could compel them to write to you or to any other Congressman to that effect. In fact, they would write to the contrary.

Mr. FORDNEY. Isn't it true that they were prompted to write simply and solely because of the information given and the requests made, and that they knew nothing about the subject at all, except what they received from the magazines?

Mr. Post. The letters that you and other Congressmen have received are the best evidence on the point that they have read the arguments on the postal-zone system, and have formed the conviction that—

Mr. FORDNEY (interposing). That does not answer my question. Isn't it true that they were prompted to write these letters solely by reason of the receipt of the articles or the information obtained from those magazines?

Mr. Post. I should say no, unless you mean that they could not write unless they had received information on the subject. Of course, if they had received no information on the subject they could neither form an opinion thereon nor write letters to a Congressman expressing that opinion. This is merely a public matter conducted in a public manner, and is a subject very seriously affecting the public welfare, as I see it, and I can not conceive of any objection to information being given to the public thereon.

Mr. FORDNEY. How would the average subscriber to a magazine know what the rates of postage were unless the magazine informed him thereof?

Mr. Post. I think that is perfectly correct. Unless there were some means of informing the public of a matter of public interest,

the public would not know anything at all about it. But, in order to meet your point, or the point that I see you have in mind, and in a direct manner, I will ask you the question, do you believe, Mr. Fordney, or are you suggesting, that the publishers have no right to publish in their magazines—

Mr. FORDNEY (interposing). I am not questioning your right—

Mr. POST (continuing.) Matters of great public interest, and of informing the public of the true situation thereon?

Mr. FORDNEY. You are like an eight-day clock, you seem to have been wound up and it takes you all day to go through the process of unwinding in the making of your answers.

Mr. POST. Your questions require complete and elaborate answers, and I am trying to answer them comprehensively, and will certainly make every effort to do so as far as I may be permitted to do so.

Mr. FORDNEY. But you can answer my questions without making a speech in connection with your answers.

Mr. POST. These questions you have been propounding are not questions that may be answered yes or no. I am sure that your court practice will tell you that.

Mr. FORDNEY. You have the right to say whatever you have the mind to say in your own magazine.

Mr. POST. For the information of others.

Mr. FORDNEY. But in the way these articles are written they are misleading. I do not say they are written by you, because I do not ever remember receiving anything through the mails or seeing anything in the magazines that I could identify with you. But—

Mr. POST (interposing). I will say that I have written two letters to Congressmen, signed by my name, and you have probably received them.

Mr. GARNER. You do not mean to say that those articles were for the purpose of conveying correct information, do you, Mr. Fordney?

Mr. FORDNEY. Well, I do not know that I would say that.

Mr. GARNER. I will say that I have heard nobody suggest that to the committee.

Mr. FORDNEY. What I want to say to these gentlemen is this: I am open-minded in this matter. I voted for the rate in the new law imposed upon second-class mail—

Mr. POST (interposing). You mean the zone system?

Mr. FORDNEY. Yes, sir. So that Mr. Kitchin, the chairman, is not altogether to blame for this law, for there are other members who voted for it.

Mr. POST. Mr. Kitchin has never been regarded as wholly responsible for the law. We realize that it is the action of the committee first and then of Congress afterwards.

Mr. FORDNEY. I want to accept my full share of responsibility. It seemed to me to be, so far as I had information, a fair and proper rate of postage under all the circumstances, but I am open to conviction, and will be glad to hear whether some more equitable method might be adopted. But I do want to tell you, Mr. Post, that these articles you have written have prejudiced me. It is an unfair method to apply to attempt to influence the constituency of Members of Congress in that manner. A Congressman who has any back-

bone resents it. You might influence weak-kneed politicians, who would do anything to get back into Congress—

Mr. POST (interposing). I want to say, Mr. Congressman, that I think that an unfair characterization of the men who voted against the zone law.

Mr. FORDNEY (continuing). But you can not influence a man of honest convictions by any such intimidations. He will consider this matter purely from the standpoint of right and justice and the needs of the Government for more revenue. You do not influence him by such propaganda as you have conducted.

Mr. POST. It is perfectly true that each and every Congressman will consider this thing from all standpoints and do what he thinks is right and proper. But I think it an unfair characterization of the Members and Senators who are opposed to the zone system and the zone law, as well as an unfair characterization of any American citizen who may change his opinion or form an opinion unfavorable to this postal zone law, to call him a weak-kneed politician.

Mr. FORDNEY. I do not think it improper to so characterize any man intimidated by your propaganda. And I think your methods are unfair.

Mr. POST. Do I understand you to state that any man in public life who opposes this zone law is a weak-kneed politician?

Mr. FORDNEY. Oh, no; I did not say that.

Mr. GARNER. No, indeed; Mr. Fordney did not say that at all.

Mr. POST. He said the only people who could be influenced were weak-kneed politicians, and I regarded that as a rather remarkable statement and unfair reflection upon those people who might, after very carefully considering all the details of this matter, either change their minds to a point unfavorable to the zone system, or those people who had not made up their minds and should reach a conclusion unfavorable to it.

Mr. FORDNEY. It is easy to change weak-kneed politicians, but when you get at a man who has some judgment, and a mind of his own, he doesn't care whether he comes back to Congress or not. He is going to look at this matter purely from the standpoint of the fairness or unfairness of it, or the right or wrong of it, uninfluenced by any side issues or selfish interests of a few who might be affected thereby.

The CHAIRMAN. Mr. Post, I understood Mr. Fordney to mean that you were sending these letters out in order to try to influence those who voted for the zone system and that you were not interested in sending them to the other Members of Congress because they were not opposed to your view of the matter.

Mr. POST. I beg pardon, then. I understood that Mr. Fordney was speaking of articles published in the magazines on that point and as saying that any Congressman or other person who would be influenced thereby was a weak-kneed politician. Considering that a very unjust reflection upon any Congressman who might change his mind in view of the receipt of additional information or in view of having given the matter further consideration, and therefore arriving, most properly as we see it, at a different conclusion, and I thought that his characterization of such men, whether in private or public life, was a very unjust reflection; and in that view I am sure you gentlemen will agree with me.

Mr. FORDNEY. No. I was talking about your method of reaching Members of Congress that you want to reach as being unfair; that your action in proceeding in any such manner through the magazines and the press of the country and the circular-letter propaganda was unfair and not expressive of any real sentiment of the people.

Mr. POST. In order to make that point perfectly clear in the minds of this committee, I will point out exactly the method which we used in informing the public of the law and the effect thereof. These articles you have spoken of in the magazines are public, open to the public as you have read them, and the readers are requested to read them carefully and form an opinion on the subject, and after having formed an opinion to express that opinion to their Member of Congress. I contend that it is a perfectly legitimate and ordinary proceeding, and the one that is to—

Mr. FORDNEY (interposing). Mr. Post, I have received three letters, with these clippings inclosed, opposing any reduction in the rate fixed by this law on second-class matter to one that I have received the other way.

Mr. POST. Well, that shows the situation, and in proof of my contention that this is a fair and open and legitimate undertaking, and that where people receive the data and do not agree with us they will so express themselves.

Mr. FORDNEY. It has the opposite effect, as I stated.

Mr. POST. Well, that is the effect upon you and upon some others, and still there are many others who see it as we do.

Mr. FORDNEY. Any man who is big enough to be a Member of Congress will not permit himself to be influenced by such things against what he thinks is just and equitable and right.

Mr. POST. That is extremely proper; it is what I would expect of you and of any other man in either branch of Congress.

Mr. FORDNEY. I want to say that no open-minded man, no fair man, no honest man will let some individual or some few individuals working together misdirect him and turn him away from what he thinks is right.

Mr. POST. That is properly correct and absolutely undeniable. As I understand it, individual Congressmen, as well as Congress as a whole, are very much interested in what the opinion of the country is on the momentous questions of the day or those questions that are likely to become the momentous questions of the day.

Mr. FORDNEY. Many of these requests that I have received are wholly misleading, misrepresent the situation, and do not state the facts as to the law.

Mr. POST. That is an opinion subject to argument.

Mr. FORDNEY. That is not an opinion, but a fact. I know what the law is, and I know what the statements contained in the magazines are.

Mr. POST. I think we are wholly within the law in publishing these articles; and more than that, that we are thoroughly within the custom of the times in going to the people with matters of public interest.

Mr. FORDNEY. It is within the law but it is absolutely unfair to misstate the facts to the public.

Mr. POST. Oh, absolutely. And as that is a very serious matter I suppose you will now proceed to point out the misstatement of facts

which, as you contend, have been made. In that way we can take them up as they arise and discuss them and get into very definite form the true situation.

Mr. FORDNEY. I just wanted you to know that these things are not proper.

Mr. POST. Very well, we want to know anything that is improper. And having heard that statement I now ask that you give me some of the misstatements of facts that you allege have been made, and we will discuss them in detail.

Mr. FORDNEY. The real meaning of the law and the amount of postage imposed on second-class mail matter are misstated in many of these articles.

Mr. POST. Will you just point out such misstatements, please sir, so we may discuss the matter and get directly to the point?

Mr. FORDNEY. I have thrown them into the waste basket.

Mr. POST. You say they are misstatements, and as that is a very serious matter and one which should be cleared up I would be glad to have you point them out so that we may take them up and discuss them in detail.

Mr. FORDNEY. The misstatements were as to amount of increase in postage and penalties imposed upon publishers in connection with second-class mail matter.

Mr. POST. That is taken from your war revenue act itself, and if you will quote those figures that you contend have been misstated I will be glad to discuss them in detail.

Mr. MOORE. Mr. Post, you have stood the fire of Mr. Rainey and Mr. FORDNEY, and will have to stand another fire before you get through, so I want to ask you, briefly, a few questions before Mr. Kitchen begins: Have you done anything in this propaganda matter that is unlawful?

Mr. POST. Absolutely not.

Mr. MOORE. You think you have kept entirely within the law in the statements made through the circulars put out and the magazines printed?

Mr. POST. Yes, sir; and as to that I will lay my books before you for your investigation and consideration.

Mr. MOORE. In view of Mr. Fordney's questions to you this morning, and Mr. Rainey's of yesterday afternoon. I want to ask you this question: In your judgment, and that of all the publishers you represent, do you feel that you have the right to approach Members of Congress and to approach their constituents upon public questions?

Mr. POST. Absolutely. Congressmen represent the people of the United States, both collectively and individually by district.

Mr. FORDNEY. Do you know of anybody who has a different opinion?

Mr. POST. I do not.

Mr. MOORE. Have you gone about your work in such a way as to put Congressmen upon notice that you were establishing such a propaganda and that Members of Congress might be prepared for it?

Mr. POST. Absolutely. Everything has been open and above-board.

Mr. MOORE. I want to say that I have received many of these circulars, coming from all sections of the country, and have received them from as far northwest as Seattle, Wash., and from the

southwest as far as San Diego, Cal., and that I have laid them aside, as I do in dozens of other instances, treating them as propaganda upon questions as to which I must form my judgment. They have influenced me, and they have no doubt influenced certain other Members of Congress, in this, that they have appeared to be one-sided.

And I suppose that is the question, Mr. Post, that you will have to settle with this committee before you get through. But along the line of conducting a propaganda, I want to ask you do you know of any other large institutions, or large movements, that have brought their purposes to the attention of Congress by sending out circulars, by inducing boards of trade and chambers of commerce and meetings of farmers and labor unions to send messages down to Washington with a view to influencing Members of Congress?

Mr. Post. Yes, sir. There is an organization known as the National One Cent Letter League, an association which for years has been doing that very same thing—sending form letters out to be copied and mailed to Congressmen.

Mr. Moore. I admit I have received circulars from that league, which states the other side of your proposition, and I have laid them aside, just as I have laid your circulars aside, as bearing upon a matter the right of which I must determine according to my own judgment when the time comes.

Mr. Post. A very right and proper action, I take it, beyond question.

Mr. Moore. Do you know of other organizations that do the same thing you do?

Mr. Post. Yes, sir.

Mr. Moore. But perhaps not doing it so well.

Mr. Post. I thank you.

Mr. Moore. Have you heard of the American Federation of Labor?

Mr. Post. Yes, sir.

Mr. Moore. Do you know of it sending letters into districts of Members of Congress and starting fires burning under Members of Congress?

Mr. Post. Yes, sir; and not only that, but by publishing arguments in its own papers to reach them.

Mr. Moore. Have you ever heard of farmers' granges and alliances and leagues and other organizations that have sent out letters from Washington headquarters and from skyscrapers in New York to bucolic constituencies in order to form and concentrate public opinion on matters in which they were interested?

Mr. Post. Yes, sir.

Mr. Moore. Isn't it strange that the horny-handed son of toil should be so active, both here in Washington and from New York headquarters and other places in the Union, in telling Members of Congress how to vote on questions affecting them?

Mr. Post. No; that is the only way they can disseminate information as to their views. There must be headquarters somewhere, and there must be an organization, and there must be somebody in charge of that organization, and then that somebody must be actively at work collecting data, putting it into form, and seeing that it is given the proper publicity.

Mr. MOORE. And they take brainy men like yourself to head such organizations?

Mr. POST. I do not wish to accept that characterization.

Mr. MOORE. Have you ever heard of prohibition propaganda?

Mr. POST. Yes, sir.

Mr. MOORE. Have you observed its influence upon votes in Congress and the various trick votes recently pulled off?

Mr. POST. I have for many years noticed the work that it has done and other organizations have done.

Mr. MOORE. Do you know where that propaganda starts, and to what extent bills are made for salaries, postage, automobile rides for constituents of Members of Congress, and letter writing, circularizing, newspaper advertising, and so on?

Mr. POST. I do not know the details, but I know they have headquarters for propaganda.

Mr. MOORE. You have not seen their books of accounts?

Mr. POST. No, sir.

Mr. MOORE. They have not been brought forward at the request of any Member of Congress for the scrutiny of Members of Congress?

Mr. POST. Not to my knowledge.

Mr. MOORE. Have you ever heard of any liquor leagues that were at work suggesting that prohibition of the liquor traffic is not beneficial?

Mr. POST. Yes, sir.

Mr. MOORE. The men established in the liquor trade have had their headquarters and have circularized the country in order to keep the liquor business going?

Mr. POST. Yes, sir.

Mr. MOORE. And their books have not been checked over, have they?

Mr. POST. No, sir.

Mr. MOORE. Well, with this statement I will turn you over to the tender mercies of the chairman of this committee.

Mr. LONGWORTH. Mr. Post, do you think from a broad national standpoint we would be justified in raising the rate of first-class mail and not raising it on second class?

Mr. POST. As you are considering a revenue measure purely, the publishers do not care what means are adopted for raising war revenues in the face of the tremendous national and international emergency, provided it be a flat and even rate with all interests in the same class as their own. That I think answers the question as to first-class mail or any other class of mail.

Mr. LONGWORTH. It would not be fair not to make an increase of some kind on second-class mail?

Mr. POST. We are not protesting against an increase in postage, or a tax as you might call it, but protesting against this discriminatory tax or substantially discriminatory tax, as it really is by no matter what name you call it, against advertising in national periodicals and exempting advertising in periodicals of local circulation.

Mr. LONGWORTH. It is not the increase to which you are objecting but the particular manner of applying the increase, which you think discriminatory?

Mr. POST. Yes, sir. I am glad you made that statement.

Mr. MOORE. Do you remember that when President Wilson made his address to Congress on the last revenue proposition that he charged that a lobby existed and that perhaps those who opposed it were influenced?

Mr. POST. I recall his speech on the subject.

Mr. MOORE. Do you know whether that had any application to publishers or to the work you were doing?

Mr. POST. I have no reason to think that it had any application to the publishers, because there has never been any ground upon which such accusation could be based.

Mr. MOORE. Why do you think the President made such a statement in his address? It is rather unusual for a President to make such a statement, isn't it?

Mr. POST. I do not know, and I would think myself far afield to speculate on that.

Mr. MOORE. You do not think it was intended to reflect upon publishers?

Mr. POST. No, sir; I do not.

Mr. MOORE. The publishers stand in fairly well with the President of the United States at the present time, do they not?

Mr. POST. I certainly hope so.

Mr. MOORE. They are promoting everything that he is in favor of, are they not?

Mr. POST. They are doing more than any other single instrument in favor of prosecuting this war to victory. I have in front of me at this moment a copy of the Ladies Home Journal, for July. This periodical has been held up in Congress as one of the worst offenders against the interests of the United States. This periodical has been anathematized on the floor of Congress, and held up before the public as being almost a graft proposition and as a magazine that should be penalized. I have before me the July number—

Mr. RAINEY (interposing). How was that held up did you say?

Mr. POST. I might say almost as a graft proposition.

Mr. RAINEY. Who held that up as a graft proposition?

Mr. POST. My recollection is that this magazine and the justly celebrated Iron Age were distinctly named in Congress last year as particular exemplars of all of the evils of this postal system, and as definite reasons why this postal system that has been in effect should be changed to the zone system. Now, gentlemen of the committee, on the first page of this Ladies Home Journal for the month of July is a picture of 114 men of the Fifth Company, at Fort Sheridan, Ill. This is the officers' training camp. This is a magazine that goes on the newstands all over this country, and into other countries, and does its work in stimulating the patriotic spirit, and does a great work in an educational and patriotic sense.

Mr. GARNER. Do you intend to say that that is put in as purely a patriotic proposition?

Mr. POST. Absolutely.

Mr. GARNER. And not as a commercial proposition at all?

Mr. POST. No, sir; absolutely not.

Mr. GARNER. I differ with you. The owners of that magazine know that this country is fired with war and therefore from a commercial standpoint that picture is beneficial to them.

Mr. POST. It is beneficial to the country.

Mr. GARNER. It is beneficial to them also. I agree with you that it is beneficial to the country, and it is also beneficial to them. But if you say it is a purely patriotic picture, published from a purely patriotic standpoint, then that is not true. That is a commercial proposition, because they know it is a picture that appeals to everybody in this country.

Mr. POST. If you will permit me for a moment to say something of the details of that proposition I will try to explain it to you: Before this war started what were the characteristic pictures on the front cover of any of the great magazines?

Mr. GARNER. They were all the thought of the day.

Mr. POST. No, sir. There was a baby playing with a kitten, or playing with a puppy, something that touched the sentiment of the home; or, there was a pretty girl—

Mr. GARNER (interposing). Yes, sir; because the whole country was at peace and they were appealing to the minds of the people. Now, the country is at war and they are appealing to the minds of a people at war.

Mr. POST. There are times when they must appeal to the country and appeal to the patriotic thought. They could carry other pictures on their front page, but they are rendering a very high and patriotic service. Is there one single thing that could be shown to the people that would make a greater appeal to patriotic thought on the part of the people of the country than to have such a picture as this on such a prominent magazine on the newstands all over the country? The Government is paying hundreds of thousands of dollars to print special stuff of this very kind and character and put it out, and yet this magazine is giving up its front page to it and putting it out all over the country.

Mr. GARNER. I agree with you that that is a fine way to reach the people, but when you say that this is a purely patriotic matter, published from a patriotic standpoint with the intention to help the country, I think you are mistaken. I think it is a commercial proposition as well.

Mr. POST. Well, I think I may say there must be a cover, and that the publishers of the Ladies Home Journal are very patriotically adorning this valuable space with pictures that will appeal to patriotic sentiment. I think we are really talking without any difference in our opinion of the subject.

On the first page of the Ladies Home Journal, July number, there is a very excellent picture of the Capitol, and inside the paragraph you will find—

Mr. GARNER (interposing). What is opposite that?

Mr. POST. Welch's grape juice; not gin, white or black, but grape juice. You can not advertise bourbon or rye or scotch in this publication. I do not know whether that is an argument for or against repeal of the zone rates of postage, but I am merely stating the fact that this publication does not accept liquor advertisements, fraudulent advertisements of any kind, etc. It is like a genuine club to get your advertisement into this publication.

They put you through the sieve before you are permitted to put an advertisement in this publication, and the fact that it is in here is a guaranty that it is a product of quality.

Mr. RAINEY. Isn't there some law about liquor advertisements?

Mr. POST. Yes; but this magazine barred liquor advertisements before there was any law, State or national, touching the subject. The publishers of this magazine threw out advertisements of that kind years ago.

The CHAIRMAN. Do you know what the Curtis Publishing Co. gets for that page, such as is covered in that issue by Welch's grape juice advertisement?

Mr. POST. No, sir. I have their advertising card, but not here, and can not tell you.

The CHAIRMAN. They get \$6,000 a page or \$9,000 for advertising in colors, so I have been told.

Mr. POST. In that respect I would have to speak from recollection, but you are probably correct.

Mr. MOORE. And it is worth it, is it not?

Mr. POST. Oh, yes. An advertiser pays so much for each thousand of circulation, whether that circulation be 10,000 or 100,000 or 500,000 or 2,000,000 copies. He pays pro rata for each thousand of circulation.

Mr. OLDFIELD. Don't you think the fact of their getting either \$6,000 or \$9,000 for one page of advertising helps the Ladies Home Journal or the Saturday Evening Post so that they will be able to pay the Government what it costs the Government to carry their publications through the mail?

Mr. POST. That is not the point at issue. It is not so much the question of ability to pay, as it is the public service rendered. If it were merely a question of ability to pay I have no doubt that John D. Rockefeller could afford to pay \$10 for each and every one of his private letters that he sends through the mail, but that has nothing to do with the propriety of charging \$10 for each letter.

Mr. GARNER. Then, that involves the Government. You say that ability to pay has nothing to do with it?

Mr. POST. I do not think it is a question of ability to pay, but service rendered—service given the people.

Mr. GARNER. You do not go on the theory of taxation advocated by some economic writers, that those best able to pay should be required to pay the most to support the Government?

Mr. POST. No; because I suppose the cost of this war could be borne by 50 families in the United States without decreasing their living expenses one iota, if that were the idea to be followed in financing the war.

Mr. GARNER. No, sir. And I understood you on yesterday to advocate an excess-profits tax, but not to favor a graduated tax. If there is to be a graduated excess-profits or graduated income tax, the point would be that the men most able to pay should pay the most.

Mr. POST. I think I can quote myself almost verbatim, and I said that in the income tax and the excess-profits tax the Government had at the present, or so far, the best instrument that had been put into legislative enactment for the collection of it. But I did not say it was the best method.

Mr. GARNER. And speaking for the publishers, you suggested that method as the way to get more money out of the publishers if the committee saw fit to do it. I will ask you, as the representative of the publishers' association, do you indorse the graduated income tax or the graduated excess-profits tax?

Mr. POST. I do.

Mr. GARNER. You do indorse the proposition that those best able to pay should pay?

Mr. POST. No, sir; you are asking a specific example, and I say that that is the best method adopted by Congress for raising money up to this time. That as a revenue raising instrument you have there the best plan that has gone into any revenue raising problem. I do not think the committee cares to go into my beliefs on economic questions, but I will say I believe there is a better plan which might be adopted, but this is the best plan and most basic plan so far adopted, but not the real basic plan. But I think that would be going a little afar afield, for me to enter into a detailed discussion of that subject.

Mr. GARNER. We are anxious to get the basic manner of handling this matter, the best method of raising the money. If you have that superior knowledge that you speak of you ought, as a duty to the country and especially a duty to this committee, to give us the benefit of that information.

Mr. POST. There are others better prepared to give it than me, as flattering as your references might be taken.

Mr. LONGWORTH. I have a grave suspicion that you are a single taxer. How about that?

Mr. POST. I have heard that name before, but do not think it amounts to much. There are a whole lot of people who believe in taxes on speculation, to force such money into production; but I do not even know of a single taxer.

But I want to say in answer to Judge Garner's question, and I am speaking purely as an individual and not as a representative of the publishers, since you have asked me my economic belief, that you will find them set forth very fully and ably in a hearing recently had in which Hon. William Kent and Judge Ralston presented the case.

Mr. GARNER. You believe in the theory that they presented?

Mr. POST. I think that is the basic proposition; but that is going far afield in this hearing.

Mr. GARNER. Mr. Kitchin wants to conclude this examination, and therefore I will not detain you longer, but I want to say to you that I asked my clerk to check up as far as he could the letters I had received in response to the propaganda you have started, and the letters you have been sending out, and that four out of five, where I have written to the correspondents and asked the direct question whether they thought you ought to pay your way through the mails or whether they thought you ought not to pay your way and be given an opportunity to send your stuff through the mails at less than cost and the Government pay the balance, have written back and said no, and some of them wrote back and withdrew their letter altogether. I tell you that the great majority of these have replied that they were in favor of publications paying their way. That is the reason I asked you on yesterday whether you were willing to pay what it cost after ascertaining what the cost is. If we ascertain to your satisfaction the cost I want to know whether or not your association, speaking through you, would agree that that cost should be levied against second-class matter? I understood you to say you did favor that.

Mr. POST. I want to quote my answer exactly, because we are dealing with very specific quantities and subjects on both sides, because

you said if I would agree to that proposition you would pledge the members of the Ways and Means Committee to recommend the enactment of that kind of a law. I said I would agree to it provided it was decided that the United States Post Office Department is a commercial institution instead of a social service and a social function for the benefit of the people of this country; that if that was to be the principle guiding your action, then we would abide absolutely by the decision of a commission going thoroughly into the matter and settling the cost of the service.

Mr. GARNER. Congress represents the American people, and if Congress, not a commission, decides that it is a commercial transaction, and then a commission passes upon what Congress does through the representatives of the people, that it is a commercial transaction, and a commission then investigates and finds you are not paying your way through the mails, and ascertains what it would cost, I understand that you would be willing to pay that cost?

Mr. POST. It seems to me that that would be putting the legislative cart before the horse. I think legislation should come after investigation, but it would seem that you are proposing legislation first and investigation afterwards. At the present time there is no data upon which Congress can decide other than the Hughes report and the Overstreet report.

Mr. GARNER. I can decide right off.

Mr. POST. Well, if you will permit me to say so, I think that is guesswork, with all due respect to you.

Mr. GARNER. I do not think there is a man in Congress who can not decide whether the Postal Department of the Government is a social organization or a commercial organization.

Mr. POST. Well, that is a matter of opinion about which men may differ and do differ, I have no doubt.

Mr. GARNER. Well, that being a matter of opinion, and Congress having expressed itself that the Postal Department is a commercial business and ought to be run upon such lines, then having decided that you are putting your mail through there as a commercial proposition, are you willing to pay the cost?

Mr. POST. I think that Congress expressed itself when it adopted the postal-zone law, and we are opposing the postal-zone law as absolutely unsound legislation.

Mr. GARNER. That is all right; but I am asking in event of Congress having declared that the Post Office Department is a commercial proposition?

Mr. POST. On what basis do you want me to agree to pay what you call cost? On the basis of a thorough investigation?

Mr. GARNER. It makes no difference.

Mr. POST. But it does make a very great difference.

Mr. GARNER. Suppose it is decided to appoint a commission, and that that commission investigates the matter and finds out you are to pay a certain amount, are you willing to pay it?

Mr. POST. You are asking me will I accept the opinion of Congress not based upon an investigation, as God-like and not to be changed; and I want to say—

Mr. GARNER (interposing). You will not answer me, I see. I want to say that you with your thousands of readers can not convince the

people that you ought to have something for less than the Government pays for it.

Mr. POST. We are not getting something for less than the Government pays for it.

Mr. GARNER. But I asked you about that and you declined to answer.

Mr. POST. I have tried to answer you specifically and positively, and I will try to do it again: Let it be once decided whether the United States post office is a social function as a service to the people as its primary principle of action, or whether it is to be run on commercial lines, and we will abide by a decision based upon this principle; but until we get these two diametrically opposite principles decided we can not agree in advance to accept any legislation on the basis of cost.

Mr. DICKINSON. You claim that second-class mail is not carried at a loss?

Mr. POST. That is our belief, and based upon inferences and figures furnished by the Post Office Department itself.

Mr. DICKINSON. Let me ask you another question: Do you believe the first-class mail brings a profit to the Government?

Mr. POST. The Post Office Department states that it does, and I accept that statement without question.

Mr. DICKINSON. You are willing to accept the statement of the Post Office Department that carrying first-class mail brings a profit?

Mr. POST. Yes; I will accept that. I do not want to even quibble about it.

Mr. DICKINSON. You understand as compared with the over \$300,000,000 collected by the Post Office Department from carrying first and second class mail that there is a very small profit; I believe it is said to be about \$12,000,000 and—

Mr. POST (interposing). I do not follow the figures exactly.

Mr. DICKINSON. Anyhow, the receipts are very little more than the expenses.

Mr. POST. One cent a pound is about \$12,000,000, I believe; I believe that is the amount.

Mr. DICKINSON. If as a matter of fact letter mail brings a considerable profit do you believe that that profit ought to be used to make up the loss for carrying second-class mail because of the peculiar benefits that the public gets from reading second-class mail?

Mr. POST. Mr. Congressman, I do not believe that first-class mail should pay a profit. I believe that first-class mail is just as much a social service and as invaluable to the country as second-class mail.

Mr. DICKINSON. Do you believe it ought to be carried simply at cost?

Mr. POST. Do you mean first-class mail?

Mr. DICKINSON. Yes.

Mr. POST. I certainly do. I should say it should be carried at less than cost, but I am speaking personally, the same as the Agricultural Department is a total deficit but conducted in the interests of the people.

Mr. DICKINSON. I am inclined to believe with you that as far as possible there ought to be no especial profits in conducting the Post Office Department, and that the Government ought to carry first and second class mail both at as low a rate as reasonably possible, but

I am disposed to think that first-class mail ought not to yield a large profit in order to make up for large losses from second-class mail, and I am not disposed to agree with your thought that second-class mail is not losing the Government a very considerable amount in its handling.

Mr. Post. Mr. Congressman, I do not believe that the means of communication between sections of the country should be based upon its cost, or communication between minds should exist on the basis of whether it pays a profit or breaks even in the matter of cost. It is too valuable a social asset to be measured in terms of profit and loss.

Mr. GARNER. I gather from your argument on yesterday and what you have just stated here that you think the post office should be run just as the War Department, or the Navy Department, or the Department of the Judiciary, or other departments of the Government are run; that the cost thereof should be paid out of the Treasury, and that we should consider the Post Office Department as a public necessity?

Mr. Post. Mr. Congressman, in answer to your question, if you ask me do I support that kind of legislation for to-day or to-morrow, I will say no. But I believe that is the natural trend of the postal functions. But it will not come in your day or mine, though I do believe this country will see the day, as will other countries, when the postal service of communicating intelligence from one section of the country to another and from one mind to another will be absolutely free, just as to-day we have absolutely free highways, with no tollgates, because the same proposition affects them both.

Mr. RAINEY. This latest addition to the literature of the country, this little pamphlet entitled "Readers Defense League Hand Book," when did it first make its debut?

Mr. Post. I could not give you the exact date off-hand, but probably about March. I would have to refer to the files if you wish me to give you the exact date, but it was somewhere in March, or possibly February, or at any rate along about that period.

Mr. RAINEY. I would like to have the exact period put into the record, and you might furnish it to the clerk. You say this date is "All tending to the repeal of the destructive 50 to 900 per cent second-class zone postage act that will destroy our national press?"

Mr. Post. Yes, sir; that is on the book.

Mr. RAINEY. Your position is that we increased the postage on second-class matter from 50 to 900 per cent?

Mr. Post. That is on the book.

Mr. RAINEY. Your statement in reference to that reminds me of an occasion when I made a Democratic speech in Vermont before an audience almost as unsympathetic as your audience here.

Mr. Post. I hope not, Mr. Congressman.

Mr. RAINEY. After the election I received a letter from a citizen up there congratulating me upon the effect of my speech. He said I had increased the vote 100 per cent. Of course, I was glad to hear that, because I knew it was a good speech; but then when he said that before I made the speech the Democratic vote in that township was one and that after I made it the vote was two the situation seemed a little different.

Mr. Post. Mr. Congressman, you evidently have some inside information as to what member of this committee has changed his opinion.

Mr. RAINEY. Your doctrine of percentages does not amount to much if you commence with nothing.

Mr. POST. It amounts to a great deal. If we had only one member of the Ways and Means Committee before and now have two that is a pretty large and substantial increase.

Mr. STERLING. He is speaking about the percentage of increase on this second-class postage.

Mr. RAINEY. I increased the vote in Vermont 100 per cent as the result of my speech, but when you consider the fact that I only started with one and wound up with two it did not amount to much. Now, if we have increased this second-class postage but haven't got any higher than that it doesn't amount to much.

Mr. POST. Well, the number of people in Vermont would make it amount to a great deal.

Mr. MOORE. We haven't had the size of Mr. Rainey's audience as yet.

Mr. POST. No, sir.

The CHAIRMAN. I would now like to ask you a few questions, Mr. Post?

Mr. POST. All right.

The CHAIRMAN. You sent out some letters?

Mr. POST. Yes, sir.

The CHAIRMAN. You sent this letter out, didn't you?

Mr. POST. Yes, sir; this came from my office.

The CHAIRMAN. In a letter to Mrs. A. R. Johnson, of Texas, under date of June 12, 1918, you used this language:

Chairman Kitchen is claiming that a very erroneous impression is given by the fact that the Postmaster General states it only costs one-half a cent a pound for railway transportation on periodicals.

Do you state that is a fact, that the Postmaster General says it only costs one-half cent a pound?

Mr. POST. On the basis of 4,000 carloads that I read you about on yesterday.

The CHAIRMAN. Oh, no. You said nothing about 4,000 carloads in the letter.

Mr. POST. Well, that is in the Postmaster General's report.

The CHAIRMAN. You state that in the letter, don't you, which I have read?

Mr. POST. That is in my letter.

The CHAIRMAN. And that is not a fact, is it? If you ever said it only cost one-half a cent to transport mail you knew when you wrote this letter that it only referred to magazines published not more frequently than twice a month, and that the Postmaster General referred to freight transportation and not to transportation of periodicals through the mails? You knew that it was what it cost sending them by freight, and that he is not allowed under the law or the regulations to transport the Saturday Evening Post, or Collier's, or any magazine that is printed more frequently than twice a month, by freight. But you did not tell that to the lady to whom your letter was addressed, did you?

Mr. POST. Let me read you the quotation in the Postmaster General's report, which is the best evidence.

The CHAIRMAN. All right.

Mr. Post. On page 18 of the Postmaster General's report for the year 1918 he says:

The total shipments of periodicals by freight during the fiscal year consisted of 4,367 carloads, weighing 127,298,781 pounds, at a cost of \$686,608.75.

The particular part of the quotation and which he emphasizes is as to the total shipments of periodicals by freight.

The CHAIRMAN. You didn't tell this lady, when you wrote her that the Postmaster General said specifically that it didn't cost but one-half a cent a pound to transport periodicals; that he was referring to magazines shipped by freight, did you?

Mr. Post. I used the language of the Postmaster General's report.

The CHAIRMAN. No; you didn't. No such language is in the Postmaster General's report to which you refer.

Mr. Post. He doesn't qualify it. He says the total shipments of periodicals.

The CHAIRMAN. He says "by freight," and you knew or ought to have known when you wrote that letter. The Postmaster General referred to, and so declared, shipments of certain magazines "by freight." He used that term. You know as well as I do that you can not carry by freight any periodicals published more frequently than twice a month, don't you; that the Post Office Department does not and can not under the regulation carry by freight trains periodicals like the Saturday Evening Post or Collier's Weekly?

Mr. Post. The Postmaster General's statement is the basis for my letter.

The CHAIRMAN. Just answer me. Didn't you know when you wrote this letter that the department did not and could not carry under the regulations of the Post Office Department any periodical published more frequently than twice a month?

Mr. Post. I based my statement upon the report of the Postmaster General.

The CHAIRMAN. Answer my question.

Mr. Post. The Postmaster General himself doesn't qualify the statement. His statement is "The total shipment of periodicals."

The CHAIRMAN. We will get to what his statement was presently. You can answer this plain question: When you wrote this lady on June 12, 1918, didn't you know under the rules and regulations of the Post Office Department they could not transport any periodicals that were published more frequently than twice a month?

Mr. Post. I only knew what the Postmaster General's report states, that it referred to shipments of all matter. He doesn't qualify it.

The CHAIRMAN. We will get to that and show by the report itself that you are now misquoting him and the report. I ask you again, didn't you know on June 12, 1918, when you wrote to this lady in Texas, that under the post office regulations you could not transport by freight periodicals published more frequently than twice a month?

Mr. Post. I only know what the Postmaster General's report stated. He does not qualify it at all.

The CHAIRMAN. The Postmaster General did qualify it, and you know it—

Mr. Post (interposing). He says—

The CHAIRMAN (continuing). Wait a minute. You are an intelligent man. I will tell you why you don't answer my question, because

you did know the Postmaster General could not transport by freight periodicals published more frequently than twice a month, such as Saturday Evening Post, Collier's Weekly, and hundreds of other periodicals.

Mr. POST. I will tell you, Chairman Kitchin, that——

The CHAIRMAN (interposing). You can answer that question.

Mr. POST. In order not to have even the appearance of quibbling, Mr. Chairman, I will say that I did not know of that particular regulation, but——

The CHAIRMAN (interposing). Why couldn't you answer that before——

Mr. POST (interposing). Will you please let me finish my answer?

The CHAIRMAN. You were trying to make an impression upon this lady, who apparently was fighting Mr. Blanton because he favored the zone rate——

Mr. POST (interposing). Let me answer——

The CHAIRMAN (continuing). And to make her believe that the Postmaster General had actually said that it did not cost but half a cent to transport periodicals, when you knew as a matter of fact that the Postmaster General never said and never had intimated that he referred to anything except shipments by freight, and then a small portion of periodicals, only what we call magazines.

Mr. POST. I have it here.

The CHAIRMAN. Here is what you said, and I am going to read you exactly what the Postmaster General said. You know that you invited Mr. Fordney to quote any misstatements of fact that you have made. I am going to accept your challenge from now on during the next hour.

Mr. POST. All right; it is still open.

The CHAIRMAN. Here is what you said that the Postmaster General said:

By the fact that the Postmaster General states it only costs one half a cent for railroad transportation on periodicals. \* \* \*

Now, you never limited it to monthly magazines, or you never limited it to periodicals of once a week or twice a week, or to shipments by freight. That lady thought, and she so wrote Mr. Blanton, that it did not cost the Government but one-half a cent a pound, and she was a subscriber to the Saturday Evening Post, to transport the Saturday Evening Post to her place, when Mr. Blanton told her it cost more than 6 cents to do it. You misled that woman in making a statement that was absolutely untrue. You did it in ignorance or by design, which?

Mr. POST. No, sir; I still say that the Postmaster General made no qualification in his report, and if I misled anybody it was his fault.

The CHAIRMAN. Your letter was not only misleading, but I think I will show you that you did what you tried to do, to make an impression on the woman's mind to the contrary of the actual facts. Mr. Blanton was claiming it costs from 6 cents to 8 cents a pound to transport the Saturday Evening Post to Texas, and you wrote saying it only cost a half a cent a pound, and she sent your letter to Mr. Blanton to prove it. Now, since you have said positively several times that the Postmaster General made no qualification in his reports, let us see what the Postmaster General said and compare it with what

you said he said. Look at page 18 of his report for 1917. He starts out with—

The freight shipments of periodicals during the fiscal year moving over all rail routes consisted of 4,297 cars, with a total weight of 125,499,419 pounds, or average weight per car of 29,206 pounds. The transportation cost, consisting of freight, cartage, and unloading charges, was \$678,784.51. The freight shipment of periodicals over steamer routes for the four months ending June 30, 1917, consisting of 70 carloads, weighing 1,799,362 pounds, at a total transportation cost of \$7,824.24.

The total shipments of periodicals by freight during the fiscal year therefore consisted of 4,367 carloads, weighing 127,298,781 pounds, at a cost of \$636,608.75.

So this makes about half a cent a pound. You see and the committee will see that you misquoted the Postmaster General to this lady, as you have several times this morning to the committee. You wrote her that "the Postmaster General states that it costs only one-half a cent a pound for railway transportation on periodicals." The report shows the Postmaster General never stated any such thing. You never intimated to her that what he did say and refer to was, "freight shipment of periodicals"—only a small per cent of total periodicals hauled by the Government—and that he was in no way referring to periodicals and magazines shipped through the regular mails being nine-tenths of the periodicals and papers handled by the Government.

Do you now contend that what you wrote this lady in the letter here and what the Postmaster General said in his report mean the same thing.

Mr. Post. Absolutely; if they can ship some magazines at half a cent a pound they can ship all magazines at half a cent a pound.

The CHAIRMAN. You do not mean that. You can not mean to say that the statement that you made and the statement that the Postmaster General made mean the same thing.

Mr. Post. I have made it as explicit as I can, Mr. Chairman.

The CHAIRMAN. You think that means the same thing?

Mr. Post. Yes.

The CHAIRMAN. There is not a man on earth that has any intelligence at all that will believe, or think, or can think, that they mean the same thing. I believe you are a little excited.

Mr. Post. I know with the committee or with many people anyone who feels that the zone postal system is unjust, they are not regarded as intelligent men, and as one that so believes, I will have to accept your criticism.

The CHAIRMAN. No; I do not think you are not intelligent, but I think you are either not intelligently giving thought to what you say, or you are excited or uncandid; I prefer to believe you are excited about it.

Mr. Post. I should like to take up this report, if I might, and make my comments on the point.

The CHAIRMAN. All right.

Mr. Post. In the Postmaster General's report, beginning on page 17, he is dealing with shipments of periodical matter by fast freight, and all the way through he speaks of periodicals, not making the distinctions you make between weekly and monthly and bimonthly.

The CHAIRMAN. Is the Saturday Evening Post a periodical?

Mr. Post. Yes, sir.

The CHAIRMAN. The department can not or does not send it by freight. You can only send by freight periodicals that are published not more frequently than twice a month.

Mr. Post. Yes.

The CHAIRMAN. That is, you can send twice-a-month or once-a-month or once-in-three-months publications; but you did not put in "freight" in your letter, and you did not tell her that what was sent by freight was only about 10 per cent of the total weight of magazines, periodicals, or papers hauled by the Government, and that nine-tenths were sent by regular mail, just like she receives her copy of the Saturday Evening Post.

Mr. Post. What can be done with certain classes of magazines at half a cent a pound can be done with others at half a cent a pound; and if they can take some at half a cent a pound, they can take others.

The CHAIRMAN. They can not take the Saturday Evening Post or other periodicals published more frequently than twice a month.

Mr. Post. By a postal regulation it is possible to change that. It is not necessary to have a congressional enactment to change that.

The CHAIRMAN. Congress could authorize, or possibly the department could by regulation send daily newspapers or weekly periodicals from one end of the country to the other by fast or slow freight; but what publisher would patronize the department, or who would subscribe to periodicals or papers so transported?

You represent the magazines?

Mr. Post. Yes, sir.

The CHAIRMAN. And you represent these magazines that are published not more frequently than twice a month?

Mr. Post. I represent all those, within our membership, which are a matter of record.

The CHAIRMAN. How can this zone system possibly affect those magazines or other periodicals if as you say they and all other periodicals can be sent at half a cent a pound. If you are correct when the zone rate goes into effect, from 2 to 10 cents per pound on the advertising portions the publishers can send on their own account by fast freight without going through the department, their periodicals and magazines at half a cent. With a 50 per cent portion devoted to reading matter and 50 per cent devoted to advertising the total in the farther zone would be about 5½ cents, wouldn't it?

Mr. Post. Yes.

The CHAIRMAN. Now, if you think they can be carried even for 1 cent a pound by freight, and handled all right, and the publishers are willing to ship by freight, what are you objecting to this zone system for, so far as these magazines and periodicals are concerned? Why do you not use freight, and carry it at half a cent?

And another thing, why do you not use the freight now? You could use the freight now and save that half cent, if you are correct.

Mr. Post. Magazines use freight or express or the post office according to the business economies or business principles that apply in any business, or the facility of distribution. That is a question for the answer to which I would have to refer you to the details.

The CHAIRMAN. Right in this letter, that attempts by misstatements of facts to prejudice the lady against Mr. Blanton, did you mention the word "freight" in here? Have you got a word there to intimate to her that you mean or the Postmaster General meant the small proportion of magazines that went by "freight shipments"?

Mr. Post. The letter itself is the best evidence, and I do not recollect it verbatim or on that point; but they can deliver other magazines at half a cent.

Mr. KITCHIN. No; it does not mention "freight," and you left her under the impression, and it was your intention to leave her under the impression, that the Government carried and could carry periodicals of all kinds through the regular mails at half a cent a pound.

Mr. POST. They can carry all magazines at half a cent a pound if they can carry any.

The CHAIRMAN. You know that is impossible. Now, you remember that these freight hauls are not over very long distances, because if very long distances it would take too long to get there.

Mr. POST. There is nothing in the report that mentions the distance, sir.

The CHAIRMAN. I know; I am just telling you the fact now, looking at your letter there. And there is nothing in the report that in any way sustains what you have wrote and many statements you have made to the committee as to what the report stated.

Mr. POST. I want to tell you that the Post Office, as mentioned in that letter from Postmaster General Coons yesterday, has undoubted information concerning postal matters that it can place before you which it refuses to us. We think that that position is absolutely unsound; that there is no reason for regarding these costs figures as untrue.

The CHAIRMAN. I will get it all, if we get time enough. Now, you said this in your letter to this lady in Texas:

Congressman Blanton, of Texas, voted for this postal-zone law, a law that will compel every reader of magazines in Texas to pay, approximately, from five to seven times more for postage on his magazine in Texas than will be paid by readers living in Northern and Eastern States.

You say that is true?

Mr. POST. Yes, sir.

The CHAIRMAN. Let us see if it is true.

Mr. POST. I will take—

The CHAIRMAN. No; I want to ask you my question and let you explain in your answer, and let us see if it is true.

Mr. POST. All right.

The CHAIRMAN. Then, if a magazine published in New York City is sent to a subscriber in Texas, it will cost him from five to seven times more for postage than it will cost a person living in Boston, if sent to him?

Mr. POST. It depends on where the magazine is published you are speaking of now.

The CHAIRMAN. I am saying it is published in New York, now. Here is your periodical. Have you a copy of your letter containing the names of the magazine publishers whom you represent?

Mr. POST. I have the letterhead here.

The CHAIRMAN. All right; you have the names of the magazines and periodicals you represent on the back of the letter.

Mr. POST. I have it here [indicating].

The CHAIRMAN. Look at the periodicals or magazines published by your association. There are some 40 or 50 in the first bracket, the names of which are given there. Name one on which a single person in Texas—not only that lives in the sixth and seventh zones, but living in the eighth zone—would have to pay from five to seven times more postage than a person in Boston would pay on the same magazine sent to him in Boston.

Mr. POST. I will name the Ladies' Home Journal.

The CHAIRMAN. There it is, right there [indicating magazine]. Of course, this is published in Philadelphia, but it answers as well as if published in New York.

Mr. POST. I have better evidence than that.

The CHAIRMAN. How much would it pay in postage if published in New York under the zone-system rate when sent to a subscriber in Boston.

Mr. POST. Boston is just in the zone where the increase on advertising matter is 200 per cent.

The CHAIRMAN. It is in the third zone?

Mr. STERLING. You mean from Philadelphia to Boston, do you not, Mr. Chairman?

The CHAIRMAN. No; I am taking this as if published in New York, since he gave that periodical or magazine as illustrative of his statement. That is in the third zone. That periodical contains about 50 per cent advertising and about 50 per cent reading matter?

Mr. GARNER. Between 45 and 50 per cent.

Mr. POST. All right.

The CHAIRMAN. The zone rate when it goes into full effect on the advertising portion is 3 cents in that zone and the advertising portion being 50 per cent, the rate is  $1\frac{1}{2}$  cents. On the reading matter there is a flat  $1\frac{1}{2}$  cents and 50 per cent being reading matter, the rate on the Journal is three-fourths of a cent, or a total postage charge of  $2\frac{1}{4}$  cents for transportation and delivery to reader in Boston.

Mr. POST. I assume your figures are correct. I do not question them.

The CHAIRMAN. You said it was from five to seven times more that the reader in Texas would pay on his magazine than the reader in the eastern or northern States, that is, in Boston.

Mr. POST. Yes.

The CHAIRMAN. Five times  $2\frac{1}{4}$ . [After making calculation.] It is  $11\frac{1}{4}$ . Now, do you not know that under this postal zone rate, when it goes into full effect, that the postage on no magazine published in the United States will be as high as  $11\frac{1}{4}$  cents from New York to Texas or from any point in the United States to any other point. Don't you know it?

Mr. POST. Let me tell you—

The CHAIRMAN. No, answer this, now; do you not know that it will not be even as much as 6 cents? Figure it up, and you will not get it to 6 cents.

Mr. POST. We are talking about increases.

The CHAIRMAN. I am talking about what you wrote and the misrepresentations you made to this body.

Mr. POST. I get the point you make there, and I am answering, and I have the figures. The Ladies Home Journal is a publication whose figures I have. One pound and 4 ounces per copy is the average weight of it. Published in Philadelphia, it is sent to the sixth and seventh zones; Texas is in the sixth and seventh zones.

The CHAIRMAN. Let us call it the seventh, which is better for your proposition.

Mr. POST. Call it the seventh zone, then. It means that on their advertising—

The CHAIRMAN. It is  $4\frac{1}{2}$  on the advertising, and take your three-quarters for your half reading matter; that is  $5\frac{1}{4}$ .

Mr. POST. The increase is 600 per cent—600 times—in the sixth zone, and 800 per cent in the seventh zone, 8 times in the seventh zone.

The CHAIRMAN. No, sir. Have you ever read this zone rate provision?

Mr. POST. I have, sir.

The CHAIRMAN. The zone rate only applies to the advertising portion.

Mr. POST. Yes.

The CHAIRMAN. And the flat rate of increase, after it goes into operation—it is increased half a cent—and that applies a flat rate of  $1\frac{1}{2}$  cents to all zones on the reading portion.

Mr. POST. I am just getting the books here with the accurate data on that.

The CHAIRMAN. The Ladies Home Journal in going to Texas goes in the sixth and seventh zones, according to what you said, and the difference in postage charges will be less than half what you wrote this lady.

Mr. POST. On what weight are you basing the Ladies Home Journal?

The CHAIRMAN. I am taking it at 50 per cent advertising and 50 per cent reading—

Mr. POST. No; what is the weight you are taking of the publication?

The CHAIRMAN. A pound.

Mr. POST. It is over a pound.

The CHAIRMAN. Take it at 2 pounds or any number of pounds and ounces; it is the same thing, because the rate is on the pound, not on the copy.

Mr. LONGWORTH. Is that the saverage?

Mr. GARNER. Yes; between 45 and 50 per cent; 1.4 pounds is the average weight of the Ladies Home Journal, so Mr. Post says.

The CHAIRMAN. Now, your Ladies Home Journal, even in the seventh zone, sent to Texas, could not possibly, under the law, with 50 per cent advertising and 50 per cent reading-matter proportion, cost over  $5\frac{1}{2}$  cents; while in a Northern State, in the eighth, the farthest zone, it could not possibly cost over  $5\frac{1}{2}$  cents per pound; from New York to Boston or from Philadelphia to Boston, it would cost 2 $\frac{1}{2}$ .

Mr. POST. Or in Connecticut or Rhode Island or in portions of other States—New Jersey.

The CHAIRMAN. It is not more than from 2 to 3—not as high as 3 times as much: is not that a fact? Yet you wrote this lady it would be from 5 to 7 times as much.

Mr. POST. I disagree with you. From the present rates, Mr. Chairman, it is not.

The CHAIRMAN. I am going to make you agree to this, because the law is too plain. What is the seventh zone rate? Nine cents, is it not, on the advertising portion of the paper or magazine?

Mr. POST. Ten cents on advertising matter.

The CHAIRMAN. Not in the seventh zone.

Mr. POST. No; it is 9 cents.

The CHAIRMAN. Nine cents; that is what I said. Half of this pound, now, is advertising matter. How much would that pay? It would pay  $4\frac{1}{2}$  cents, would it not?

Mr. POST. Wait a moment until I check up your figures.

The CHAIRMAN. All right. You will get that. Half of that pound is advertising matter, is it not, and half of 9 is  $4\frac{1}{2}$ .

Mr. POST. Half of 9 is  $4\frac{1}{2}$ ; yes, sir.

The CHAIRMAN. Now, it is  $1\frac{1}{2}$  for the reading matter, is it not?

Mr. POST. One and one-half for the reading matter.

The CHAIRMAN. All right. Now, half of that pound is reading matter. That is three-quarters of a cent, is it not? You know that, do you not?

Mr. POST. I am trying to answer you. I am not as good at arithmetic as you are, and you have a pad on which you are figuring in front of you.

The CHAIRMAN. All right. The rate on half the other 50 per cent or of the paper or magazine, that is, on the one-half pound reading matter is three-quarters of a cent. Add together the  $4\frac{1}{2}$  and the three-quarters. That makes  $5\frac{1}{4}$ , does it not?

Mr. LONGWORTH. There is no doubt about that.

Mr. POST. There is no doubt about that arithmetic.

The CHAIRMAN. That is the amount of postage the Ladies' Home Journal in the seventh zone in Texas would pay, and this lady to whom you wrote is in the seventh zone.

Mr. POST. That is five and a quarter times more than it is paying now.

The CHAIRMAN. But you wrote the new zone provision would make a person living in Texas pay five to seven times as much as a person living in a Northern or Eastern State, and not that it would pay  $5\frac{1}{4}$  times as much as it is now paying.

Mr. POST. Are you taking  $1\frac{1}{4}$  pounds for the magazine?

The CHAIRMAN. There are 12 issues of the magazine. The rate is not according to the copy but according to the pound.

Mr. POST. My recollection is that in that letter I am speaking of per copy.

The CHAIRMAN. No; you wanted her to believe that the subscriber would have to pay the increased postage and the postage is on the pound, no matter what the copy weighed.

Mr. POST. The average weight is  $1\frac{1}{4}$  pounds for the Ladies' Home Journal.

The CHAIRMAN. Very well; it will be the same proportion, making no difference what a copy weighs. The rate is on the pound. If a copy weighs two pounds the postage will just be twice as high from New York to Boston and from New York to Texas, respectively, as if it weighed one pound.

Mr. POST. The weight will be the same, but the average on the Ladies' Home Journal is more than a pound.

The CHAIRMAN. But the proportion is the same?

Mr. POST. I do not think we will disagree on the proportion.

The CHAIRMAN. If the Ladies Home Journal weighs a pound and a quarter, in Texas it will go at the same rate per pound as if it weighed under or over a pound.

Mr. POST. No; it will cost more to send to Texas if it weighs a pound and a quarter than if it weighs a pound.

The CHAIRMAN. It will also cost more when sent to Boston when it weighs a pound and a quarter instead of a pound, but in either case the per pound cost will be the same. No; you were simply

trying to prejudice this lady against her Congressman by attempting to make believe that, though living in the South—in Texas—he was voting for a law that operated, as you claimed, to the disadvantage of the South and to the advantage of the North. Here is what you said:

Congressman Blanton, of Texas, voted for this postal zone law, a law that will compel every reader of magazines in Texas to pay, approximately, from five to seven times more for postage on his magazines in Texas than will be paid by readers living in Northern and Eastern States.

Mr. POST. Yes, but——

The CHAIRMAN. Is not Boston in Massachusetts?

Mr. POST. Boston is in Massachusetts.

The CHAIRMAN. You can answer that readily, now, without any explanation. Is not Boston in a Northern and Eastern State?

Mr. POST. It is; but the great bulk of Massachusetts is in the zone where it goes at the cheapest rate. There is an area there, including a portion of New York, Vermont, New Hampshire, Rhode Island, Connecticut, New Jersey, and Pennsylvania and those portions are in that zone.

The CHAIRMAN. You told this lady that the people living in those States and reading magazines published in the Northern States, would pay from one-fifth to one-seventh only as much as a lady, or a lady reader, in Texas would have to pay; that is, that the Texas lady would pay from five to seven times more than the northern lady.

Mr. POST. That is true of one living in Connecticut and these States I have named.

The CHAIRMAN. I am asking now if that be true—Boston is in the third zone?

Mr. POST. Yes, sir.

The CHAIRMAN. Now, the publication is composed of 50 per cent advertising and 50 per cent reading matter. That would be  $1\frac{1}{2}$  cents for the advertising and three-quarters of a cent for the reading matter, which would be  $2\frac{1}{4}$  cents. That is what the person in Boston, living in a Northern State, would have to pay;  $2\frac{1}{4}$  cents a pound. The lady in Texas to whom you wrote would have to pay  $5\frac{1}{2}$  cents. But you deliberately wrote to her, to prejudice her against Mr. Blanton, that it would cost her from five to seven times more than it would cost the reader in Boston. Now, that is not true, is it?

Mr. POST. The major portion of Massachusetts is in the zone where no increase occurs—Boston is—and a very small section of Massachusetts is just outside.

The CHAIRMAN. Well, let us take your Ladies Home Journal published in Philadelphia. What zone would Portland, Me., be in?

Mr. POST. I can tell you in a second.

The CHAIRMAN. I will tell you right now: if you send it by mail from Philadelphia to Boston or to a city 10 or 20 miles from Philadelphia, or a publication from New York to Boston or to right across the river in New Jersey, only a few miles from New York, then the lady in Texas would not pay from five to seven times more than one in Boston or New Jersey or in any northern city, and you ought to have known that when you wrote this letter. She wouldn't pay three times as much postage, even if you charged the increased postage to her.

Mr. POST. That is one of the peculiarities of this zone matter. It is perfectly possible for a publication in St. Louis to be in one zone and pay one rate and another in another section of St. Louis to be another zone and pay another rate, just across the river.

The CHAIRMAN. When you wrote this lady in Texas did you know that it would not cost her, living in the seventh zone, for the Ladies Home Journal, over 5½ cents postage a pound, even if you charged her the increased postage?

Mr. POST. I know——

The CHAIRMAN. Did you know that?

Mr. POST. I know these figures are true here.

The CHAIRMAN. I know, but did you know that it would not cost this lady in Texas for the Ladies' Home Journal more than 5½ cents a pound?

Mr. POST. Those are my figures. It is rather difficult to go over the details of my arithmetic so long ago, but the calculation was based upon the Ladies' Home Journal, with an average weight of 1 pound and 4 ounces per copy, which was their official statement to me.

The CHAIRMAN. It makes no difference what it weighs per copy.

Mr. POST. But you are computing these figures, as you have done, on the pound, and I am computing on the copy.

The CHAIRMAN. The law does not compute it on the copy, but on the pound. You will not admit it, because you say you have not got the time for arithmetic. I want to tell you that that was absolutely untrue, and it would not be three times instead of as much as five to seven times more, as you wrote her. It would not be two and a half times as much instead of from five to seven times.

Now, either by design or by ignorance—and I will say it was by ignorance—you did not calculate that very accurately when you wrote her. In fact, you left that calculation to somebody else in the office, didn't you?

Mr. POST. That would be no excuse for——

The CHAIRMAN. And you misled that woman by a clear misstatement of fact in the hope she would oppose Blanton for it. Did you dictate it?

Mr. POST. I can not say, but I was responsible for those letters.

The CHAIRMAN. I can not think that a man of your standing would dictate such a letter so full of misstatements and deceptions to that lady.

Mr. POST. I assume all the responsibility for the office.

The CHAIRMAN. The letter states that you did dictate it, but I can not conceive of a man of your character and standing dictating such a letter except through ignorance. And if you are so ignorant as to this proposition in this letter, I do not think you are intelligent enough to inform this committee or Congress what kind of a rate and what kind of second-class postal provisions to write into a new bill.

Mr. POST. Congressman, I will have to leave it to you—and gentlemen—as to whether I am ignorant or not. I might refer, almost, to Congressman Rainey on that.

The CHAIRMAN. I notice you said in the letter that Washington and Lincoln had condemned the postal-zone system for which Congressman Blanton voted.

Mr. POST. Yes, sir.

The CHAIRMAN. Will you quote anything that Mr. Lincoln ever said relative to the zone system? Now I have taken a little pains to look at the debates and to look at the reports of the Postmaster General, during Mr. Lincoln's term, and to look at the message of Lincoln and many of his utterances, and I have been unable to find that he ever mentioned a zone system. I have been unable to find that George Washington ever mentioned a zone system. They were both, in their time, perhaps, in favor of decreasing the then existing high rate, because it was very, very high at that time, many times higher than the provision which is in the present law.

Mr. POST. And on a zone basis.

The CHAIRMAN. Yes. Now, will you tell me where I can find that Lincoln ever uttered a word in condemnation of a zone system, or ever made a reference to the zone postal system.

Mr. POST. I do not know the title of the volume in which that could be done, but it was President Lincoln; and he signed the bill abolishing the zone system, the very strongest evidence of his condemnation of the zone system.

The CHAIRMAN. Didn't Mr. Wilson sign the bill establishing the zone system?

Mr. POST. Because it went through under the cloak of your war-revenue measure and as an emergency measure.

The CHAIRMAN. Did not Mr. Wilson sign this measure? Now, in the bill that Mr. Lincoln signed, there is what you call the second-class postal system. There are pages after pages relative to the Post Office system, to the appropriations for the Post Office Department and its operation only one little provision containing the newspaper and magazine proposition. He no more condemned a zone system by signing such a bill than Mr. Wilson approved the zone system by signing the same act.

Mr. POST. It does not take a very long statute to abolish a zone system.

The CHAIRMAN. When you wrote to that lady that Lincoln and Washington had condemned the zone system, did you not intend to leave the impression upon her mind that Lincoln and Washington had specifically denounced the zone system, and that Blanton was voting contrary to Lincoln's and Washington's expressed position? Now, you did, did you not?

Mr. POST. President Lincoln abolished the zone system, which is the best evidence of his opinion of the zone system.

The CHAIRMAN. He no more abolished the zone system than he approved of everything else in the bill. If he abolished the zone system because he signed that general Post Office appropriation bill that covered hundreds of other matters in it, then Mr. Wilson approved the zone system provision in the present law, because he signed that with hundreds of other matters in it, did he not?

Mr. POST. President Wilson signed a law establishing the zone system in which appropriations are made, and it was an emergency matter which he had sent to Congress. It was a war-revenue measure.

The CHAIRMAN. And so it was proper for Mr. Lincoln to sign that bill. If he had not, the Post Office Department would have to cease operation, because that bill appropriated the money to maintain it. Is that the only reason you had for saying that Mr. Lincoln had denounced this zone system?

Mr. POST. I think that is the very best and most fundamental reason.

The CHAIRMAN. That is the only connection you ever heard Mr. Lincoln had with the zone system, that in 1863 he signed that bill?

Mr. POST. I think that is sufficient, and fundamental.

The CHAIRMAN. But you did not tell this lady that he signed a bill that included hundreds of other items and also included the 1863 postal appropriation—you told her nothing about the bill but that Mr. Lincoln had denounced the zone system which Blanton voted for.

Mr. POST. I did not tell that lady all that postal history, no, sir; and there are many other things that I did not mention of that minute character.

The CHAIRMAN. Are your magazines, and your periodicals willing now to write into the law the very postal provision which was contained in the act which Abraham Lincoln signed?

Mr. POST. That legislation of 1863 was but just a step in the progress of postal evolution.

The CHAIRMAN. If Abraham Lincoln showed that he condemned the postal zone system because he signed that bill, then he condemned any further decrease of postal rates, did he not, because the act of 1863 was what Lincoln approved?

Mr. POST. Simply speaking of the postal zones, it seems to me that is what lawyers sometimes call a non sequitur.

Now, I am going to take up a matter that is pretty interesting to me and to Congress. Here is a letter that was written by you to a publisher. This letter was written confidentially, and I have torn out the name of the publisher to whom you addressed it [indicating and showing letter to Mr. Post].

Mr. POST. I do not think it is a confidential letter.

The CHAIRMAN. You certainly did not want me or any Member of Congress to get hold of it, or the public to get hold of it, because an intelligent man like you would not have written this letter for the public eye—

Mr. POST. I would not like to have an inference go into the record that the portion of that letter which you have torn out was marked "confidential," or "secret," or anything like that. I want to say that our files are as open as our financial records.

The CHAIRMAN. I am the only Member of Congress that seems to have been able to get hold of this kind of letters.

Mr. POST. If you had sent to me I would have been very glad to send you one.

The CHAIRMAN. You sent the other letters to which Mr. Rainey referred to to everybody. You only sent this letter to the members of your publishers' association. I am going to read some of it, and I will say that it is a letter in which you are asking for money to wage a big campaign for the repeal of the zone system and to bring pressure to bear on Congress. I will put into the record of the hearing the entire letter.

Mr. POST. I remember that letter, now. It was to an agricultural publication.

The CHAIRMAN. Well, you wrote to other publishers, too. You made a statement in regard to the postage rates in Canada?

Mr. POST. Yes.

The CHAIRMAN. You said that under the postal laws of Canada one could send a paper or magazine anywhere in the Dominion for a quarter of a cent a pound. Here is the best post-office authority in Great Britain—in Europe—on postal matter and postage rates. This book is by Mr. A. D. Smith, who was for years under secretary of post office department in Great Britain. This has an introduction by the Right Hon. Herbert Samuel, postmaster general of Great Britain in 1910–1914, 1995–1916. This was published in 1917. Some people wonder why Canada has that low rate of one quarter of a cent a pound. Let me read what Mr. Smith says in his book about it:

In well-informed quarters it is held that, in general, the leniency shown to newspapers is not due solely to the acceptance by Parliament of the arguments usually advanced in their favor—

Just the argument you made yesterday—

plausible and convincing as they are to many minds, but has also been dictated by fear of the political power wielded by them, or, what is the same thing, as a result of direct pressure at Ottawa by the newspaper proprietors, based on their influence with the electors, or the chiefs of parties, and exercised in their own interests.

Now, he used this term "pressure," which was brought to bear on the legislature at Ottawa, as you used it in speaking of the necessity of bringing pressure to bear on Congress.

Mr. POST. That is merely an individual opinion.

Mr. GARNER. It is high authority.

The CHAIRMAN. It is pretty high authority in Canada and in England, anyway. Now, I am going to read parts of your letter—

Mr. POST. Are you going to discuss the Canadian situation?

The CHAIRMAN. No; I am going to read your letter. You had read this book, had you not?

Mr. POST. No, sir; I had not. I have read the Canadian Postal Guide.

The CHAIRMAN. Let us see if you are not trying to bring pressure to bear on this Congress and writing for money contributions from publishers to help do it.

Mr. POST. Unquestionably we are trying to bring pressure to bear on this postal matter.

The CHAIRMAN. You do not have to bring pressure to bear on this committee. All you have to do is to inform us if we are not already properly informed.

Mr. POST. You have been informed and it has not altered your views.

The CHAIRMAN. I am now going to read you portions of this letter and ask you questions about them.

Mr. POST. I think it might be well to put in that whole letter.

The CHAIRMAN. The letter is as follows:

[Publishers' Advisory Board, 300 Fifth Avenue, New York City. Telephone, 1738 Gramercy. Charles Johnson Post, director. Periodical Publishers' Association, Associated Business Papers (Inc.), American Association of Medical Publications, Agricultural Publishers' Association, Association of Religious Press, Allied Printing Trades Council, Authors' League of America (Inc.)]

MARCH 13, 1918.

GENTLEMEN: You are, no doubt, familiar with the work of the Publishers' Advisory Board. Bulletins have been sent you from time to time through the Agricultural Publishers' Association and otherwise.

You will find herewith a copy of our Bulletin No. 8, showing general plan of campaign now being carried on to acquaint the public with the facts relating to second-class postage matter. Pressure must be brought upon Congress to induce our law-makers to repeal this iniquitous postal "rider."

The results are already apparent in Washington. A broad background or foundation of popular opinion is being created; and the increasing weight of this influence is being brought to bear upon Congress; our committees are in close contact with public officials and Members of Congress; and the efforts of all the publishing factors, including the labor unions and the authors, are being coordinated. The Publishers' Advisory Board is in its nature the general staff of this campaign.

The farmers of America are interested, and the farm papers must recognize that this is the entering wedge to post-office legislation that is going to be disastrous to us all. Sixteen hundred papers went out of existence in 1917, and the whole printing industry was greatly affected by the increased cost of paper. It is difficult to conceive of a more unjust and destructive law than that embraced in the "rider" referred to. We must kill it or be maimed or killed by it.

A great campaign is being carried on by the Publishers' Advisory Board. Already liberal subscriptions have come in from magazines, trade papers, religious papers, business papers, and a goodly number of farm papers. There are still quite a few papers that have not contributed. It should be universally supported, because the benefits to be derived accrue to all farm papers.

The present postal law must be repealed. It contains the very worst features of either a zone or a horizontal increase. It is the opening wedge to other restrictive measures—measures that will put the press of the country under the thumb of irresponsible oppressions and postal rates can shift with every Congress.

The magazines, the trade papers, the religious papers, etc., all have contributed liberally. The work is for the benefit of all periodicals, and you are now asked to do your share. You are asked to help. Will you do it? Your proportion has been estimated at \$150. You may pay it in installments or by check in full, as you prefer.

Very truly, yours,

PUBLISHERS' ADVISORY BOARD.  
C. P. POST, *Director*.

The CHAIRMAN. In this letter you say:

Pressure must be brought upon Congress to induce our law makers to repeal this iniquitous "rider." The results are already apparent in Washington.

This was March 13, 1917. Now I want to ask you, what was the source of your information as to the results being apparent in Washington?

Mr. POST. The correspondence we knew was arriving in the offices of the Congressmen.

The CHAIRMAN. In the offices of the Congressmen. Does not your office here in Washington keep you informed about that?

Mr. POST. No, not unless we want specific information.

The CHAIRMAN. Name one Congressman who wrote you that he had changed his views on the postal zone provision in the present act, or that he was going to change his vote? Name one, now, that wrote you. You said you wrote that on the strength of what you knew as to Congressmen.

Mr. POST. I can not name any single one.

The CHAIRMAN. No; you can not name one.

Mr. POST. But you know as well as I know that when matters of great public interest begin to arise throughout the country, it has its effect upon legislation, because legislation shapes itself in response to the wants and opinions of the country at large. That was the basis, that there was a tremendous weight of popular opinion arising in this country, and that is still rising, and that was the basis on which that statement was made.

The CHAIRMAN. All right; so that you had no direct information from any Congressman or from anybody, that any Congressman had changed his views?

Mr. POST. We have a number. I do not want to be misunderstood.

The CHAIRMAN. Name one. You were trying to get this \$150 from this little agricultural paper. You asked him to send you \$150. You told him that the results of your campaign were apparent in Washington. If they were not, you intentionally or in ignorance were getting it under false pretenses unless the results were apparent. Now, I ask you to name one single Member of Congress that anybody informed you had changed his opinion with reference to this postal zone matter.

Mr. POST. That statement was not based upon that premise. It was based upon public opinion.

The CHAIRMAN. When you wrote this man for \$150 to wage the campaign to have this provision repealed, and told him the results were already apparent in Washington, why, you had no evidence of the "apparent results," did you?

Mr. POST. When public opinion arises it has its reflection in the acts and opinions of Congressmen.

The CHAIRMAN. All right. Then who told you that any Congressman had changed his opinion or was going to change his opinion or his vote?

Mr. POST. No one has told us that a Congressman changed his opinion. As public opinion rises——

The CHAIRMAN. You would find that out from general rumor in the air or from newspapers?

Mr. POST. From the historical evidence we know that when public opinion rises——

The CHAIRMAN. I am not talking about historical evidence. You got this from public opinion in the air, did you? Now, name one Congressman that you learned had changed his opinion.

Mr. POST. I did not say that one Congressman had changed his opinion.

The CHAIRMAN. Then you did not refer in your letter to any Congressmen. Did it refer to the administration?

Mr. POST. No; it was not based upon that, at all.

The CHAIRMAN. Then what was the truth; that you wrote this fellow in order to get his \$150, saying how effective your campaign was? What evidence did you have?

Mr. POST. The number of resolutions that important bodies throughout every State in the country were adopting; the amount of discussion that was arising showed that it was having an effect.

The CHAIRMAN. Did you ever have any reply from any of those important bodies, or chambers of commerce or others, naming any Members of Congress who wrote them or had intimated to them that they were going to change their opinions or their votes on the zone system?

Mr. POST. I think my files—I am speaking purely from recollection—contain several letters of that kind.

The CHAIRMAN. Do you remember the name of any Member of Congress being mentioned in these letters?

Mr. POST. I do not think that would be a fair question, even if I had the information at my finger tips, because there is a confidential letter in my files——

The CHAIRMAN. No; you can not leave it there, because you wrote this publisher that it was apparently the results of your efforts in

Washington; and now you say you have had letters from these correspondents, who sent letters and petitions to Congressmen, saying that Members had changed their positions, but you will not give the names of those Members of Congress. It is only fair to those who have not changed their minds to give the names of those who have, because an innocent Member may be under suspicion of instability of opinion. Unless you identify the ones who have changed their opinions you will reflect on the whole body.

Mr. POST. I did not do that on that premise at all. I did not base it or state it on that premise or that statement, at all. Do you wish information as to that letter, because I can bring it to you, Mr. Chairman, on that letter.

The CHAIRMAN. On what letter?

Mr. POST. On that letter [indicating].

The CHAIRMAN. No; I do not wish information on it. I have it in my hand. The fact is when you wrote us that letter that the results were apparent in Washington, nobody had told you or written you that any Member of Congress had changed his position and you had no evidence in the world that it was apparent, or that your campaign or efforts of any kind had affected any Member of Congress. Now let us go a little further.

Mr. POST. I wish to say that that inference of yours is not correct, to my way of thinking.

The CHAIRMAN (reading):

A broad background, or foundation of popular opinion is being created, and so forth.

That is what you mean?

Mr. POST. That is what I meant, as far as it went. I would like to have you read the rest of it, where you said "and so forth."

The CHAIRMAN. I will read it. [Reading:]

You will find herewith a copy of our Bulletin No. 8, showing a general plan of campaign now being carried on to acquaint the public with the facts relating to second-class postage matter; pressure must be brought upon Congress to induce our lawmakers to repeal this iniquitous postal "rider."

So that you now do admit that pressure must be brought to bear on Congressmen?

Mr. POST. Pressure is continually being brought on Congress by Republicans and Democrats and Socialists and every other party.

The CHAIRMAN. But you did not say that to this man. You said that "pressure must be brought upon Congress," as it had been brought upon the Ottawa Legislature.

Mr. POST. Of course, I disagree to the sinister action that the author of that book attributes to the publishers. That is, I would not say that it was true as to Ottawa or not, but the statements I have made as to Canada rest upon the Canadian Postal Guide.

The CHAIRMAN. Here is one of the most important parts of this letter, it seems to me [reading]:

Our committees are in close contact with public officials and Members of Congress.

All right. Now, name a Member of Congress with which your committee was in close contact on March 13, 1918, with respect to the postal zone rates? Name him.

Mr. POST. I have a file in New York containing all of the correspondence with Congressmen and Senators, and I shall be very glad to place that entirely at your disposition, because it can not be deemed

confidential, being from public officials, dealing with a great public matter.

The CHAIRMAN. Did you mean you were simply writing to Congressmen, when you used that language? You say you are "in close contact."

Mr. POST. I mean wrote to them, with the exceptions I made yesterday.

The CHAIRMAN. You said on yesterday that you had only talked with Mr. Gordon and Mr. Crosser about repeal of the zone system.

Mr. POST. Mr. Gordon is not one, although we have a mutual admiration for Tom Johnson.

The CHAIRMAN. Do you mean to say that you have never talked to anybody but Mr. Gordon and Mr. Crosser with respect to this repeal of the postal zone system?

Mr. POST. I mentioned Mr. Keating, who was a personal friend. But that was personal.

The CHAIRMAN. With the exception of those three Congressmen you mean to tell this committee that you have never had any conversation with any Member of Congress in regard to the repeal of the postal zone system?

Mr. POST. I can answer that with absolute certainty; no. I know, challenging my recollection for the period since January.

The CHAIRMAN. Since January?

Mr. POST. Since January.

The CHAIRMAN. Yes.

Mr. POST. I have not the slightest recollection of even having met any Congressmen except those named. Now, it is possible that in the purely incidental travel on trains I may have met Congressmen; but I do not think I have even met them.

The CHAIRMAN. Did any representative of your board or any agent of your board or of your office ever tell you that he had talked with Members of Congress about this?

Mr. POST. Yes.

The CHAIRMAN. They have told you?

Mr. POST. Oh, yes.

The CHAIRMAN. All right.

Mr. POST. We had a committee that came down perfectly open and called upon you, sir.

The CHAIRMAN. All right; now we are going to get down to another important matter. You admit that by saying that you were in "close contact" with Members of Congress, you meant writing to them and having replies from them?

Mr. POST. Yes.

The CHAIRMAN. Now, of course, you are one of the smartest men ever called before this committee, and I am going to let you explain this. You said:

Our committees are in close contact with public officials and Members of Congress.

What public officials outside of Members of Congress had you had letters from?

Mr. POST. Not letters. I will tell you, I came down here on one special trip to see George Creel, chairman of the Public Information Bureau.

The CHAIRMAN. George Creel?

Mr. Post. Yes.

The CHAIRMAN. You saw him?

Mr. Post. Yes; and asked him his opinion on this matter.

The CHAIRMAN. How long ago?

Mr. Post. That was this year.

The CHAIRMAN. How long ago?

Mr. Post. I think that was in the neighborhood of three or four months ago. I have been so many places that it is rather difficult to charge my memory.

The CHAIRMAN. Was it not about the 1st of May that you had this conversation with George Creel?

Mr. Post. No; I think it was far earlier than that.

The CHAIRMAN. What did George Creel tell you? You were in close contact with this one public official. What did he tell you?

Mr. Post. I think, Mr. Chairman, while I see absolutely nothing of a confidential character in the conversation with Mr. Creel, that Mr. Creel is perfectly available, and in view of the fact that he is a responsible public official in high place, he had better be asked that himself.

The CHAIRMAN. I am a friend of Mr. Creel. You must not leave the imputation that he told you something that he ought not to have told you.

Mr. Post. Mr. Creel did not believe it a good thing.

The CHAIRMAN. You wrote this letter to get money from this publisher, and told him that you were in close contact with public officials. Of course, if no officials of the United States had told you that it could be or ought to be repealed or given you some hope to believe that he would help you, then it would appear you would have been getting something under false pretences from this publisher, because you were trying to make him believe that you were having some influence with these public officials and bringing about results; and if they had told you no, you ought to have written him, "I have tried to get in close contact with public officials, but haven't succeeded yet."

Mr. Post. That is a rather sinister interpretation of a perfectly harmless and usual phrase.

The CHAIRMAN. You do not know what public officials you were in close contact with about this postal zone system?

Mr. Post. I have named one.

The CHAIRMAN. You have just named one. Did you want this man to infer that you had seen only one public official, one who had no influence whatever in the matter—that is, one not even in a branch of the service connected in any way with this postal rate provision?

Mr. Post. Mr. Chairman, I do not know that I am entirely proper in referring to matters of a purely family character. I might say I think you will understand that reference.

(At this point Mr. Post made statements which, at his request and consent of the committee, was not reported by the stenographer.)

The CHAIRMAN. From your conversations with the officials of the Government mentioned, here in Washington, you felt justified in writing this publisher a letter that you were in close contact with public officials.

Mr. Post. I certainly felt justified. It was perfectly harmless

The CHAIRMAN. That is all right. You say here "We must kill it or be maimed or killed by it."

Mr. POST. I think that is correct.

The CHAIRMAN. You continue, "The postal law must be repealed."

Mr. POST. That is our belief, not only of ourselves, but others.

The CHAIRMAN (reading from the letter):

The magazines, the trade papers, the religious papers, etc., all have contributed liberally. The work is for the benefit of all periodicals, and you are now asked to add your share. You are asked to help. Will you do it? Your proportion has been estimated at \$150. You may pay it in installments or by check in full as you prefer.

Do you remember whether he paid the \$150 or not?

Mr. POST. I do not. I should judge from your comments that he probably did not.

The CHAIRMAN. He would have paid up if he had felt you were telling the truth, which no doubt you thought you were.

Mr. POST. That is just an ordinary letter of solicitation and the amount there computed was by the agricultural publications.

The CHAIRMAN. Do you know how much the Literary Digest paid?

Mr. POST. No, sir; none of those. I did not come in contact with that.

The CHAIRMAN. They did contribute?

Mr. POST. I assume so.

The CHAIRMAN. And the Metropolitan contributed?

Mr. POST. I assume so.

The CHAIRMAN. Collier's Weekly?

Mr. POST. I assume so.

The CHAIRMAN. Leslie's?

Mr. POST. I assume so.

The CHAIRMAN. Practically all these periodicals on the printed list on the back of your letter paper.

Mr. POST. I think that is a fair estimate, but a thing I have no knowledge of.

The CHAIRMAN. And you assessed them according to their ability to pay, or did you assess them according to the circulation of the periodical?

Mr. POST. I have already said that I had nothing at all to do with that.

The CHAIRMAN. Who is the man that manages the money part?

Mr. POST. That is Mr. Neal. He is treasurer of the organization, of the Publishers' Advisory Board. He can give you much fuller information.

The CHAIRMAN. I understand he wishes to appear.

Mr. POST. I simply check the accounts, as I told you yesterday.

The CHAIRMAN. Did the religious papers contribute very liberally?

Mr. POST. I have no knowledge of that.

The CHAIRMAN. You do not include in religious papers those which are maintained by religious organizations, and from which no profit inures to individuals?

Mr. POST. That class of papers are practically negligible.

The CHAIRMAN. Did the Christian Herald, which seem to be pretty active in this matter, contribute anything?

Mr. POST. I presume so; I have no direct knowledge.

The CHAIRMAN. I notice later that you wrote to Mr. Keys, of Frankfort, Kans., in which letter you use this expression: "Congressman Helvering's statement, therefore, is utterly disproved. I am inclosing a handbook with some publications, and I will suggest that you treat Helvering's correspondence," etc—that is one of your letters?

Mr. POST. Yes; I assume so. I notice that it is on my letterhead.

The CHAIRMAN. And you wrote Mr. Helvering in which is postscripted "I am inclosing a copy of my letter to your correspondent as you request. There is no doubt that we shall hear from this correspondent." You really were trying to build a fire under Mr. Helvering; to bulldoze him and intimidate him into changing his vote on this postal matter.

Mr. POST. Yes; that can apply to Republicans against Democrats, or Democrats against Republicans, or Socialists against them all.

The CHAIRMAN. That is true, isn't it?

Mr. POST. That is part of the ordinary propaganda of individuals.

The CHAIRMAN. Now, I am going to come to this little book or pamphlet, which you have been sending out.

Mr. POST. I should like to state in connection with the Committee on Public Information that one of the things that we wanted from them was the amount of advertising that had been given by the publications absolutely free and without charge. That is one of the facts.

The CHAIRMAN. Now, you send thousands of this little book all over the country?

Mr. POST. We had about 30,000 of them printed, so they could not go very far.

The CHAIRMAN. "These are the facts"—you said that practically on every page. You sent them out as facts.

Mr. POST. Yes, sir.

The CHAIRMAN. And you wanted the people to believe that what was said in here were facts.

Mr. POST. That is correct, sir.

The CHAIRMAN. Now, on the very first page, the very first sentence—let us see whether there is any truth in your statement. You use this expression, I will say to the committee, about three times on practically every page: "Congress has passed a law increasing by 50 to 900 per cent the postage on periodicals." Didn't you know when you wrote it that that was not true?

Mr. POST. No, sir; I did not know, and do not now.

The CHAIRMAN. Name one magazine on which such increase in postage amounts from 50 to 900 per cent. That per cent. It is from 1 cent to 10 cents per pound, isn't it?

Mr. POST. It has increased it on all.

The CHAIRMAN. But an increase from 50 to 900 per cent, you said, which is an increase on the magazine or periodical from 1 cent to 10 cents per pound?

Mr. POST. We make the same distinction as the law made.

The CHAIRMAN. You did not tell in these pages that you made that distinction.

Mr. POST. Publications that consist almost entirely of advertising will be increased 900 per cent. The law does that in the seventh zone where the rate is 9 cents and in the eighth zone where it is 10 cents.

Mr. GREEN. Nine hundred per cent is impossible with those figures.

The CHAIRMAN. I think I will get the gentleman to admit that this was an intentional deception.

Mr. POST. Take the trade magazines——

The CHAIRMAN (interposing). Trade journals, you mean. Take the Ladies' Home Journal. Suppose, now, that the fellow that gets this pamphlet that you sent out was a subscriber of the Ladies' Home Journal. Didn't you tell that subscriber that his postage on that has been increased from 50 to 900 per cent, which is from 1 cent to 10 cents per pound?

Mr. POST. Nine hundred per cent does not apply to the Ladies' Home Journal, but I represent the trades publications as well, and they are publications that carry an enormous amount of advertising. That is their function, and those publications do carry such rates.

The CHAIRMAN. Name one. You can't—for not one in the United States would pay that much increase.

Mr. POST. I did not say 10 per cent, I said 900 per cent.

The CHAIRMAN. "Increasing by 50 to 900 per cent the postage on periodicals," which is an increase from 1 to 10 cents.

Mr. POST. The flat rates were a cent and a half, and those were increased to 10 cents a pound, which is 900 per cent increase.

The CHAIRMAN. But you didn't want the people to know the whole truth and you withheld from them what was the truth, that the rate in the act is a flat rate, regardless of zone, of 1½ cents on the reading matter and only the advertising portion at the zone rate—not for the whole periodical—in the last zone, it would be 10 cents. For instance, if one of these periodicals has 50 per cent of its columns or pages reading matter and 50 advertising matter, the total postage in the seventh zone is 5½ cents and the total increase is 4½ cents, an increase of only 4½ cents, and in the eighth or farthest zone—of 1,800 miles and over—the total postage would be only 5½ cents, or a total increase of 4½ cents. But you desired and intended to leave the impression on the reader that the postage on his periodical would be increased from 1 cent to 10 cents per pound, which is the same as an increase of from 50 to 900 per cent.

Mr. POST. If I had wanted——

The CHAIRMAN (interposing). I know what you wanted.

Mr. POST (continuing). If I had wanted to deceive the public as to the facts, I would not have published the law in the booklet.

The CHAIRMAN. But you desired them to take your construction of the law.

Mr. POST. Well, we have a right to give our construction of the law.

The CHAIRMAN. Do you think a man is going to read this book and the statute in the back of it and study out its construction?

Mr. POST. The same as the rest of the books.

The CHAIRMAN. Why don't you mention one of the magazines or periodicals that you represent, one on the list on the back of your letter, that would have such an increase?

Mr. POST. The law itself raised the rates to 10 cents a pound, which is 900 per cent increase by law.

The CHAIRMAN. Then you might have said, "See law on page so-and-so." The law made no such raise on the postage of any periodical or magazine in the United States.

Mr. POST. I gave an index on page 52, which is a cross index.

The CHAIRMAN. Anyway, you stated here what was not a fact, didn't you?

Mr. POST. We disagree as to facts.

The CHAIRMAN. You stated in the booklet also that it would destroy magazine reading and destroy magazines—those mentioned here on the back of your letter—American Agriculturist, American Boy, American Magazine, the Christian Herald, etc., 50 or 60 of them. Name one of those that this zone rate is going to destroy.

Mr. POST. If I knew—and I probably have the best opportunity for securing confidential information in regard to magazines—if I knew the name of a single publication that was tottering under this law and about to go out of business, I would have absolutely no right to mention it and put that magazine at the mercy of its competitors.

The CHAIRMAN. We had a gentleman on the stand the other day acquainted with all these publications protesting against the zone system.

Mr. POST. What gentleman do you mean, Mr. Farrelly?

The CHAIRMAN. Yes; he is the biggest handler of papers and the magazines you represent in the United States.

Mr. POST. He does not represent the Publishers' Advisory Board.

The CHAIRMAN. Oh, I know; but he handles more than any other man in the United States.

Mr. POST. As a jobber.

The CHAIRMAN. I asked him specifically about each of them, and he said, "No; it would not destroy them; they could take it out of their advertisers." I am going to come to that before I get through.

Mr. POST. I venture to say that Mr. Farrelly, if he knew of a magazine that was facing failure as a result of this legislation, he would regard it as confidential information, and would not publish it.

The CHAIRMAN. But he said not one of them would be destroyed. Has a single one of these magazines gone out of business because of this law?

Mr. POST. I would not attempt to answer a question like that.

The CHAIRMAN. No; you saw the experience of Mr. Meredith yesterday in dealing with such a subject with respect to agricultural papers?

Mr. POST. No; simply I do not know. I think the best thing to do on that point would be to call these publishers who have gone out of business and interrogate them particularly.

The CHAIRMAN. Mr. Meredith thought he knew of several that had gone out of business, but as was shown, he was mistaken in several instances.

Mr. POST. I think that list still stands.

The CHAIRMAN. They have not.

Mr. POST. Here is a simple side light that I offer as evidence on that point, without making myself responsible for it. Brownell's Dairy Farmer sent a letter to the cooperating committee for farm papers, Agricultural Publishers' Association, Chicago, Ill.

The CHAIRMAN. What paper?

Mr. POST. Brownell's Dairy Farmer. In his statement he says:

It is with much regret that I inform you of the inability of this publication to take part in the commendable plan to offer free advertising space to the liberty loan and Red Cross campaigns.

The reason is that this publication is no longer to be issued. Our last issue came out on April 1 of last year and bore President Wilson's war proclamation on the first page. Following that there came the announcement that Representative Kitchin was promoting a bill to create a zone system of second-class postage, that if passed would put this publication entirely out of business.

The CHAIRMAN. When did he go out of business?

Mr. POST. April 1, of last year.

The CHAIRMAN. Let me tell you right there that that fellow is trying to deceive you and the public. Mr. Kitchin had never called the committee, nor had the committee even been elected, nor had he discussed the matter of revenue legislation with any Member of Congress. This postal legislation was never discussed with or by Mr. Kitchin until April 15 or 20. Congress had not yet been called together. We did not meet until April 2. On April 1, 1917, when you say that publication ceased business neither Mr. Kitchin nor any Member of Congress had considered or discussed a revenue bill, and the postal zone system had not been mentioned by or to him.

Mr. POST. I am offering this as a statement of—

The CHAIRMAN. I am just impeaching your witness.

Mr. POST. You impeach all of our witnesses, Mr. Chairman.

The CHAIRMAN. I say that the man who gave you that letter tried to deceive the public.

Mr. POST. I am offering it because you did not—

The CHAIRMAN (interposing). I am telling you why you did not use that letter because you knew that it was not true.

Mr. POST. Now, this has nothing to do with publications going out of business. If I may simply introduce this statement, I should like to do so.

The CHAIRMAN. I am trying to say that there has been a propaganda not of information, but a propaganda of intentional deception, and I think I am going to convince you to-day. This Brownell letter is an evidence of it.

Mr. POST. Mr. Chairman, you asked me to name a publication that had gone out of business on account of this law.

The CHAIRMAN. And you mention this Brownell paper, this dairy farm paper, when it went out of business before the zone system was ever mentioned by or to me, before Congress had even convened.

Mr. POST. I would like to complete my answer on that, and offer the statement of the paper itself as to why it went out of business.

The CHAIRMAN. But I was not criticising you for it, but do advise you not to be deceived any more by magazines attributing the cause of their going out of business to the zone system.

Mr. POST. I would like to offer this as an answer and insert the answer in the record.

The CHAIRMAN. You may put it in the record.

Mr. POST (reading):

We decided that we could not take a chance on Representative Kitchin, and so decided to stop the publication until we were assured that the bill would not pass. It did pass, and so our publication died a quick death—after 8 years of fairly profitable existence—instead of lingering through the summer months.

We have no complaint to make and no regrets to offer—except that we can not now respond to that call to donate our advertising space to the Government in this time of need. Sometimes we wonder at the wisdom of a taxation measure so unjust and so unreasonable that it taxes out of existence a property capable of yielding its small share of tax money if it had been allowed to exist—not to mention that proposed

ability and willingness to help in the campaign to raise funds for the campaign without thought of compensation.

Very respectfully, yours,

(Signed) BROWNELL'S DAIRY FARMER,  
GEORGE H. BROWNELL,  
*Publisher.*

The CHAIRMAN. Now, Mr. Post, I know you do not indorse this.

Mr. POST. I simply offer it as the statement of the paper itself.

The CHAIRMAN. I want to show you that that man is willing to lend himself to deception, and newspaper men and magazine men ought to frown down on that. They ought always to be messengers of truth instead of falsehood. It is impossible for his statement to be the truth when he says that his publication ceased operation on April 1, 1917, or any time in April, because Representative Kitchin was promoting a bill to create a postal zone system.

Mr. GARNER. He said he was lingering, anyway.

The CHAIRMAN. Now, I am going to show how the fellow deceived you and got you to deceive the public, unintentionally it may be, because you would not do it intentionally—

Mr. STERLING (interposing). I do not think it is necessary to repeat that quite so often, Mr. Chairman.

The CHAIRMAN. Congress had not then met, April 1, 1917. It convened on April 2, 1917, yet on March 5 he says the paper stopped on April 1, 1917, because Mr. Kitchin was working for the zone system. As to the zone system, as to increasing any rate, it had not been discussed by me or anyone to me. I never had a letter about it. Members of the committee had not even been named, no discussion of a revenue bill of any kind had been discussed by anyone.

Mr. POST. I wish you would make it plain for the record that you are speaking about this letter.

The CHAIRMAN. Yes.

Mr. POST. Because I have introduced the letter from the man that has stated his reasons for discontinuing.

The CHAIRMAN. I am speaking about a man by the name of George H. Brownell, the headlines on whose letter states that he is the editor of Brownell's Dairy Farmer.

The reason that I make these remarks to you is that I want to warn you not to be misled by every interested fellow that writes you, and if you had been cautious with respect to getting the facts and truth you would not have issued this booklet or written some of these letters I have before me.

Let us go a little bit further. You say in this booklet:

This remarkable and destructive legislation was thus jammed through by Congressman Claude Kitchin, of North Carolina, chiefly assisted by Congressman Rainey, of Illinois.

Mr. POST. I think that is the statement of a historical fact.

The CHAIRMAN. You refer to this postal zone provision in the present law?

Mr. POST. Are you still reading from the first page?

The CHAIRMAN. Yes.

Mr. POST. I lost my place.

The CHAIRMAN. Down about the middle of the third paragraph. Now, as to the statement that I chiefly assisted by Congressman Rainey jammed this through. My conduct and Mr. Rainey's, with

respect to the provision going into the act, are only known by the 10 conferees—5 on the part of the Senate and 5 on the part of the House—and the clerks that were present during the conference, Mr. Walker, Mr. McCoy, who is present, Mr. Beeman, and, I believe, Mr. Wright. As you know, the provision that is now in the law was not the provision which this committee recommended, or which the House passed, before the bill reached the Senate. Now, which one of the 10 conferees or clerks that I have mentioned ever told you that Mr. Rainey or myself, or both, even favored, as an original proposition, this provision before the conference committee?

Mr. Post. None of them. The Congressional Record shows the vigor with which you and Congressman Rainey defended this zone system. You were the chairman of the Ways and Means Committee, and we could certainly infer that you took an active part.

The CHAIRMAN. Did you have the right to mislead the people and make them think that we jammed this legislation through Congress, when you did not know the action of the House and the Senate in the conference or what took place in the conference? Don't you know that the record will show that Mr. Rainey and myself, when such a proposition was suggested, were against separating advertising portion from reading portion and we favored, as this committee did, a zone rate as it passed the House, which made a rate graduated according to the zones for the whole entire paper, without separating advertising from the reading matter? And don't you know, as a fact, and didn't the papers so state at the time, that the House conferees were standing on their original proposition? And don't you know, as a further fact, that this proposition that is now in the law was suggested by the Senate conferees as a compromise? If you desired to state the truth about the business, didn't you know that we resisted this provision in the bill for as much as two days and finally the House conferees accepted it? Mr. Moore, Mr. Fordney, Mr. Rainey, and Mr. Dixon, all present here, were on the conference committee. You didn't know the true facts.

Mr. Post. You have asked a number of questions as to facts, and the only answer I can give is a blanket answer, as it was a blanket question. The record of yourself and Mr. Rainey, I think, is the very best evidence on the point of your enthusiastic championing of the law as it is in the statute books. The Senate have twice, as my understanding and recollection is, defeated the postal zone system in two forms, and after this legislation, this postal zone system initiated in the House, or in the committee here, and went to the conference committee where it succeeded in establishing itself in the revenue act of 1917, and so it has passed. I think it is a historical fact that your position as chairman of the Ways and Means Committee, and Congressman Rainey's position as senior member of the Ways and Means Committee made you avowed champions of the postal zone, and it is a fair inference and a fair fact that the responsibility of that legislation rests with the House leaders.

The CHAIRMAN. I do not care, Mr. Rainey and the other members of the committee do not care, but why didn't you tell your readers that that is what you gathered, that because I was chairman of the Ways and Means Committee, and Mr. Rainey was the ranking Democratic member—Mr. Fordney is the ranking Republican—that we jammed it through. If we did any jamming, and jammed it through

the conference, where were those five senatorial conferees; if we jammed it through the House, where were the 435 other Members of the House; where was the Senate all this time of jamming?

Mr. POST. I think I am paying a tribute to your skill and your ability, sir.

The CHAIRMAN. Now, the fact is that neither Mr. Rainey nor myself ever initiated the bill that is on the books.

Mr. POST. I did not say initiated, sir.

The CHAIRMAN. That proposition came over from the Senate conferees, and we opposed it at first until we saw that that was the only thing we could get to increase the grossly low postage rates on second-class mail matter. We preferred the proposition which the House bill contained. While preferring the House's original proposition, I think this is a most wise provision, and while, as I stated the other day, I am not the real father of the specific provision now in the act, I will adopt it as one of my offspring, esteem it as an adopted son of mine. I think there is a good deal of merit in the proposition of separating the reading portion, which causes one to subscribe and is for his benefit, and the commercial advertising portion.

Will you give me that Ladies Home Journal? I am coming back to your booklet in a few minutes. You see this advertising page there of the Columbia Grafonola. Tear that page off and let the Columbia Grafonola concern send that out through the mails, or print the page just as it appears in that periodical, same print, same size, same everything, and it would cost the Grafonola Co. a rate of from 8 to 14 cents a pound to send it through the mail, but attach it to the periodical, just bind it between the covers of the Ladies Home Journal or other paper or magazine and it goes at 1 cent a pound. Now, don't you think that the papers and periodicals ought to pay more postage than 1 cent per pound on such advertisements when they send it out that way, on or between their covers? Ought not the commercial advertising portion pay more than the reading portion?

Mr. POST. Are you asking me about taxing advertising? That is one of the things I suggested.

The CHAIRMAN. No; here is an advertisement of Welch's grape juice. When one knows the facts, then he will see in the large advertising business of papers and periodicals the motive behind the magazines and periodicals in this fight against the zone system. It is in the interest of their advertisements and advertisers. Take this Welch's grape juice advertisement in this same paper. If you were to take this and tear it off and send out thousands and hundreds of thousands of copies, it would cost 16 cents a pound, by single copies, but if you sent them in bulk a pound or more it would cost 8 cents a pound. But the very minute you attach that page to the Ladies' Home Journal, that same sheet or page goes through the mails, is handled on the train, and delivered to each man's door in the city or in the rural delivery at a postage rate of 1 cent per pound.

Now, while the act imposes a flat rate, regardless of zones on the reading portion, that which the subscriber wants—1½ cents a pound—it was thought that the advertising portion, inserted for the commercial use of the periodical and the advertiser, that were sent out this way, should pay an increased zone rate. The advertisers under the zone-system rates will still be able to send through the mails

more than 50 per cent cheaper than if detached from a paper or periodical and sent separately.

Now, what is your proposition? You propose, if this zone system remains—and I believe that it is going to remain—that, when it goes into effect, instead of charging the increased cost of postage back to the rich advertisers, which the spirit of the law says you should do, to charge it up to the innocent subscribers.

Mr. Post. Because you can not charge it up to the advertisers.

The CHAIRMAN. Oh, yes, you can. If the Ladies Home Journal, for instance, would increase its advertising rates 3 to 5 per cent, leaving the subscription price just like it is, it would more than compensate the increased postal cost. Instead of doing that, you say to your subscriber that he has got to pay the whole increased postage cost. The increased cost of the postage of the Journal to the subscriber for the reading matter will be 3 cents a year, and yet you have sent out your literature saying that it will be necessary to increase the subscription price from 50 cents to a dollar.

Mr. Post. You mean the increase is 3 cents a copy?

The CHAIRMAN. It is 12 pounds a year.

Mr. Post. What is the increase per copy?

The CHAIRMAN. And we have figured it on a basis of 50 per cent reading matter and 50 per cent advertising matter, that would be one-fourth cent a pound or copy, as a copy averages 1 pound, and being a monthly it is 12 pounds a year. For the 12 pounds the increase is only 3 cents to a subscriber a year.

Mr. Post. Per copy?

The CHAIRMAN. No, I am talking about the year, 3 cents a year. I want this to be plainly understood by the public, and it is going to be plainly understood by Congress, that the paper or magazine, like the Ladies Home Journal, which for one page of advertising charges \$6,000, and for one of these outside wrappers advertisements, that page there [indicating] I understand, though I won't be absolutely sure, charges \$9,000 an issue, insist that they are going to put on the subscriber from 50 cents to a dollar a year to cover the increased cost of sending out these advertisements throughout the country and relieve the advertiser of all increased postage, while the spirit of the law only imposes upon the subscriber for such periodical 3 cents a year.

Mr. Post. You can not say it will cost 3 cents. It will be more in some zones and less in others.

The CHAIRMAN. You do not understand. You never read the law as to the flat rate on reading matter.

Mr. Post. You can not separate reading matter from advertising.

The CHAIRMAN. You don't separate it physically, but you can in your proportion of charges. I can tell you why you don't separate it. Take this 40 or 50 pages and tear it from your reading matter and print it with the same wrappers and send it through the mail and it will cost those advertisers at least 8 cents a pound to do it.

Mr. Post. And where is the revenue for the publication—

The CHAIRMAN. Twice as much as under our zone rate under the present provision, but just pin it in here to the reading matter of the magazine and it goes at 1 cent throughout the length and breadth of the land under the proposition of Mr. Post and the publishers.

Mr. POST. Why not pass a law prohibiting advertising in periodicals?

The CHAIRMAN. Here is an example to bring to the attention of the country—we can not to the country, as the press will not take it to the country—but to Congress. Here is the Metallurgical and Chemical Engineering Magazine.

Mr. POST. To facilitate the matter, Mr. Neal, secretary of the Business Papers (Inc.), is here and is prepared to speak on all business publications.

The CHAIRMAN. I am going to bring it up in this connection, and show what a fraud is being perpetrated upon the people under the old law which Mr. Post favors.

Mr. POST. Might it not be well for Mr. Neal to be heard?

The CHAIRMAN. Just wait. I hold here the Buffalo Foundry & Machine Co. catalogue. It weighs 1 pound and contains 64 pages of advertising. To send that out through the mails it would cost 8 cents, as it would go third class as a catalogue. They were paying 8 cents a pound to send it through the mails, and some shrewd fellow on this engineering magazine no doubt went to the foundry people and said, "You are sending out that catalogue through the mails and it is costing you 8 cents a pound. Now, they have a law on the statute books which the publishers of newspapers and magazines had put on in 1885, which says that if you put it within the covers of my magazine, which contains a little reading matter, it will go for 1 cent a pound. You will thus save 7 cents. In other words, by sending it as it is you will have to pay 7 cents more than if you would let us include it within our covers. You can afford to pay us half of your saving on postage." Of course, the fellow saw the point at once and made a contract and took his catalogue bodily and put it right between the covers and sent it in that shape, every line, every word, at 1 cent per pound.

Mr. GARNER. Not only that magazine, but others.

The CHAIRMAN. I want the public and the committee to see it. Here is the original catalogue as it was sent out at 8 cents per pound by the foundry company. Here it is within the covers of the Metallurgical and Chemical Engineering Magazine, the same identical catalogue. It saves 7 cents on every pound and robs the Government of 7 cents on every pound. Any other periodical or magazine can do the same thing under Mr. Post's old law.

Mr. POST. You don't think it is a good thing to have advertising distributed?

The CHAIRMAN. I think it is a good thing to prevent fraud on taxpayers through the mails.

Now, here, again, is a catalogue of Maurice & Knight, acid-proof stone work. If they were to send it singly like this through the mails it would cost at least 14 cents a pound to do it because this weighs about an ounce or an ounce and a half. They were sending it. But this shrewd magazine publisher went to them, no doubt, and showed how they could save money and the publishers make money by incorporating their catalogue in the magazine. It is a good deal larger than the page of the magazine, so the magazine publishers cut the edges down and put a blue streak around it. Here is the original catalogue and here is the catalogue as it appears within the covers of the magazine. But the law of the flat rates, without zones, which

my friend, Mr. Post, so much favors, permits just such frauds. Do you indorse, and do the publishers you represent indorse that conduct upon the part of this honorable member of your association?

Mr. POST. The Publishers' Advisory Board indorses the function of advertising absolutely as one of the greatest economic forces for the additional production of wealth that has ever been devised.

Mr. GARNER. Do you indorse this particular practice as exhibited here?

Mr. POST. I indorse advertising.

The CHAIRMAN. Do you indorse this specific thing? If Bill Jones went into Tom Smith's stable and stole his horse, you would not indorse that?

Mr. POST. You are describing a felony. Is the act you described a felony or was it done under the law and regulations?

Mr. GARNER. Do you indorse that particular action?

The CHAIRMAN. Do you indorse that action or do you indorse a law that will permit that to be done which I have just shown to the committee?

Mr. POST. I think that the legislation stands for it. You have made a comparison with a felony and asked if I condemn advertising on the ground that it is a felony.

Mr. GARNER. Do you indorse this particular method of advertising?

Mr. POST. I would not pass an opinion upon this particular action.

Mr. GARNER. But do you—

Mr. POST (interposing). Let me make my answer complete. It is only fair. The question that you are asking involves two factors. One is the fundamental economic value of advertising in its basis. The other question is the function and advantage of advertising in trade papers. Trade papers are a distinct and separate class of publications. They are publications that serve a highly technical and important field which I could not classify and discuss in detail. We have Mr. Jesse Neal, the executive secretary of the Business Papers, (Inc.), who can discuss that.

The CHAIRMAN. You do yourself great injustice in evading such questions.

Mr. POST. I never uphold specific instances, but ask whether it makes any difference in the principles involved.

The CHAIRMAN. I want to call attention to the charge made against Mr. Rainey and myself, which, if you really insist on, you must make more emphatically against the President and against Mr. McAdoo.

Mr. POST. Are we finished with the subject of advertising? I thought there were some questions.

The CHAIRMAN. I have been trying to get you to answer, and you never will answer.

Mr. POST. You have illustrated with the Ladies' Home Journal the question of advertising, and asked why do not the publishers pass it on to the advertisers instead of the readers. They can not by reason of trade conditions, and the competitive discriminatory conditions that are raised by this law. The relation between the advertisers and the publishers is the relation of service, but throughout the long years of the growth of periodicals and advertising there

has come a fixed ratio between the price that the advertiser pays for service, and that unity of service may be a thousand copies or a hundred thousand copies. But whatever it is, it is a fixed amount. Now, you can not go to the advertiser and increase the price of the advertising in that periodical without showing him where you are going to increase the service, and the contrary is true, that as the service falls the price deceases.

The CHAIRMAN. You think that is a good answer from your standpoint?

Mr. Post. It is not complete. Now, then, this law puts a tax, or whatever you choose to call it, on periodicals of national circulation, and exempts periodicals of local or comparatively small circulation from any impost whatsoever on their advertising pages, and a discrimination comes in in this law in favor of the periodical having a local circulation. If it is attempted to raise the price on advertising, he can offer a given unit of circulation cheaper, and impost free, to advertisers in his publication than can a publication of general circulation if he attempts to pass that advertising charge on to his advertisers. That is the reason that it can not be done.

The CHAIRMAN. Mr. Post, the whole thing is that when the zone rates go into effect the cost of the paper to the subscriber, on your theory, will be increased, the cost of getting out and shipping the paper, whether to the advertiser or to the subscriber?

Mr. Post. The cost of production, the cost of paper?

The CHAIRMAN. This law will add another cost to your paper.

Mr. Post. This law would add another cost, just as any tax levied on anything adds to the cost.

The CHAIRMAN. If print paper goes up from \$3.10 to \$5.10, that will be a cost, and that will be added to your paper?

Mr. Post. That is added to the paper of local circulation as well as the paper of national circulation.

The CHAIRMAN. If labor goes up from \$4 to \$8?

Mr. Post. That is a flat increase over the whole field of publication.

The CHAIRMAN. That is an increase in the cost. We will call it a tax—which it is not—but call it a tax. If we tax your paper, it is an increased cost.

Mr. Post. Yes; but you tax one one rate and some another rate.

The CHAIRMAN. Here is what I want to know: If the newspapers and magazines can increase their prices to the advertisers because of the increased cost of print paper and of materials which they just add on, why can they not pass on as an increased price to advertisers the increase cost by reason of the tax?

Mr. Post. They can if you will tax all classes of advertising, all classes of publications, on the same basis, and not put a discriminatory tax on papers of large circulation in favor of papers of small circulation.

The CHAIRMAN. You refer, of course, to the county-free circulation. That has been the law since 1850, I believe, and nobody has asked to have it changed,

Mr. Post. Nor do we. I believe absolutely in the free-in-the-county circulation.

The CHAIRMAN. But still you pay a cent now, and they pay nothing in the counties.

Mr. POST. Yes, sir. Every argument in favor of free-in-the-county circulation, which I indorse, is true of cheap postage for other classes.

The CHAIRMAN. Let me read another statement in your booklet: "In order to appreciate what this 50 to 900 cent per increase in periodical and newspaper postage means, you have only to compare it with the 15 per cent increase in freight rates that was the subject of much careful deliberation by the Interstate Commerce Commission, and then rejected because of the vicious chain of disorganization and increasing costs with which it would saddle the country, and that was only 15 per cent."

Now, Mr. McAdoo and the President have increased the freight and passenger rates more than 15 per cent.

Mr. POST. Yes, sir; war emergency.

The CHAIRMAN. The war was on; they had taken charge of the railroads three months before you prepared this booklet. Now they have increased in passenger and freight rates more than that. Was that a vicious thing?

Mr. POST. This was written before those increases were made by the Government.

The CHAIRMAN. All right, then; but they were not sent out before, if they were written before.

Mr. POST. They were sent out as soon as they came off the press.

The CHAIRMAN. But you are stating here that if the Interstate Commerce Commission had increased the rate 15 per cent after full investigation it would have been vicious. But you say that if the President and Mr. McAdoo have increased it 25 per cent, why it is all right. Where is your consistency?

Mr. POST. I will admit cheerfully that, speaking for myself alone, I am a considerable admirer of the President, if that is what you want me to go on record for.

The CHAIRMAN. I believe that on the second page you said that this would destroy these magazines: "It means the end of the home reading circle, inasmuch as it carries a death sentence to the majority of American magazines."

Mr. POST. What page?

The CHAIRMAN. Second page. Must we believe that it will destroy and be the death blow to a single one of the magazines that you represent?

Mr. POST. You are not quoting my words, those were written by Rex Beach.

The CHAIRMAN. "These are the facts." Those are your words, aren't they?

Mr. POST. Oh, yes. I did not wish to be understood as not regarding Mr. Beach's article as sound.

The CHAIRMAN. You did put that in, and at the end of Mr. Beach's article—I know he has been deceived like you have about the facts in these matters—you added, "These are the facts." Well, you know now that they are not facts, don't you?

Mr. POST. No, sir.

The CHAIRMAN. Do you believe that this zone system, and this zone provision of the present law will destroy a great number of the magazines in this country?

Mr. POST. I have said that I do not know the percentage of the magazines that will be destroyed. That magazines will be destroyed is without question.

The CHAIRMAN. You do not know the percentage of magazines that will be destroyed. Isn't this pamphlet that you sent out to inform the public deceiving the public by putting in what Mr. Beach said, to wit, "that it would destroy the magazines," and then end by saying, "These are the facts."

Mr. POST. Mr. Beach might have said it, and I might be in the minority.

The CHAIRMAN. Do you know of any that would be destroyed?

Mr. POST. I stated I could not mention any.

The CHAIRMAN. Do you know of any—you need not mention them—that is on your list there which you represent?

Mr. POST. I do, sir.

The CHAIRMAN. How many will be destroyed?

Mr. POST. I do not think I could answer that question for the same reason.

Mr. GARNER. How many in that list, you need not give the names?

The CHAIRMAN. There are 60 or 70 in the list. How many do you know will be destroyed? You need not mention the names?

Mr. POST. Well, I know that some will. I could not make an estimate, a detailed estimate of that character, but I think the facts will speak for themselves before the zone law is in full operation.

The CHAIRMAN. I think you wrote this humorously, of course, from what you testified this morning, "That means you. It is well that you should know and meet the facts." That was put in as a piece of humor?

Mr. POST. Which page?

The CHAIRMAN. On the second page.

Mr. POST. That is Mr. Beach's own article.

The CHAIRMAN. Do you indorse it?

Mr. POST. I indorse the whole article. I could not write half as cleverly or forcibly as he does.

The CHAIRMAN. Here is a thing which I thought you would indorse. It is not true. "No longer will magazines and periodicals sell for the same price in the West and the South as in the East, for the war revenue bill increases the postal rate no less than 900 per cent for those western and southern sections of the United States," and you have just been shown that it could not possibly increase 5 cents. Take the Ladies' Home Journal, the Metropolitan, or the Cosmopolitan, or the Saturday Evening Post, or the North American Review. On not one of those magazines could the increase possibly be as much as 5 cents, and yet people read here that it is going to increase no less than 900 per cent for those sections. Could you say, "These are the facts."

Mr. POST. Yes, sir.

The CHAIRMAN. But you know they are not the facts—no way near the facts.

Mr. POST. I have a telegram, just received from one of the members of our organization; a telegram to this effect:

Have just seen Butterick's announcement increase in price Delineator, basis new postal zone rate. Eastern, one year, \$1.50; two years, \$2. Middle West and South, \$1.75; two years, \$2.50. Far West, one year, \$2; two years, \$3.

Mr. GARNER. That is not 900 per cent.

The CHAIRMAN. Of course, that is not 900 per cent. Wire back to the Butterick Publishing Co., and tell them that the reading matter for their magazine for which they are going to increase the price from \$1.50 to \$2 has only been increased by the law 3 cents a year, and that the other increase in postage is what the advertisers should pay under the law, and the reader should not be obliged to pay. Why should all the increase of the Delineator be put on the subscribers and none on the advertisers?

Mr. POST. I have just explained why, because you can not tax them equally.

The CHAIRMAN. According to the telegram the subscriber in the far West has got to pay Butterick Co. \$1 increase, but he would only have to pay 4 cents increase under the law as to reading matter, the subscribers' part of the magazine, and yet they are going to make the reader pay 96 cents for the advertising portions of the paper, which the advertisers like Welch's Grape Juice Co., R. J. Reynolds Tobacco Co., American Tobacco Co., automobile manufacturers, etc., put in. The advertisers ought to pay that increase, as the law intended.

Mr. POST. The law may have intended that the advertiser should pay it, but it was so drawn that only the advertising departments of the national papers are affected and the locals go free.

The CHAIRMAN. If they put such an injustice on the subscribers by making them pay the increased cost properly payable by the advertisers, you will have to increase your rates to the subscribers of course, and they will have to bear the burden. But your magazine and not the law will put this burden on them.

Mr. POST. The conditions are such that that is the only thing to be done.

The CHAIRMAN. The Butterick Publishing Co., or any other publishing company, that increases the rates to subscribers ought not to be surprised if their old subscribers resent the injustice by dropping their publication.

Mr. POST. It will. It will make a tremendous difference in the circulation, and that is why it will make a difference in advertising returns.

The CHAIRMAN. Can you come back at 2.30?

Mr. POST. Yes.

Mr. OLDFIELD. I submit a letter for printing in the record.

The CHAIRMAN. Without objection, the letter will be printed. There is no objection.

The letter is as follows:

FURTH, ARK., June 7, 1918.

HON. SAMUEL M. TAYLOR, M. C.,  
Washington, D. C.

DEAR SIR: We understand that publishers having become convinced that they can not possibly secure repeal of recent zone advance in the mailing rates of their high-priced advertising pages are now urging the public to write Congressmen, asking for a postponement of the enforcement of the legislation until one year after the war. Such action as that would simply defeat the legislation completely. We users of letter postage have been loyally paying our war tax on same since November last, and we have a right to ask that publishers shall with equal loyalty begin to pay a larger proportion of the cost of distributing their magazines.

We ask that you as our Representative in Congress use your efforts to prevent the repeal of any of the legislation adopted at the last session and to also oppose the postponement of the enforcement of that legislation beyond July 1, 1918.

We, the undersigned, most respectfully submit this petition.

C. W. PENICK (and others).

(Thereupon the committee, at 1 p. m., took a recess.)

---

AFTER RECESS.

(The committee reassembled at 2.30 o'clock p. m., pursuant to recess.)

The CHAIRMAN. The committee will come to order. You have two gentlemen, I believe, that want to go on now, Mr. Post. You will come on later.

Mr. POST. Mr. Chairman, I would like to introduce Mr. Matthew Woll, who is representing the American Federation of Labor here. Mr. Woll is the president of the International Allied Printing Trades Association, the International Labor Press of America, and the International Photo Engravers Union.

The CHAIRMAN. Proceed, Mr. Woll.

**STATEMENT OF MR. MATTHEW WOLL, REPRESENTING THE  
AMERICAN FEDERATION OF LABOR.**

Mr. WOLL. I was greatly interested in the discussion which took place on this subject between the committee and the representatives of the periodicals and publications.

Let me say that I am representing the American Federation of Labor, the labor publications, and the printing trades organizations here, and I am not representing the interests of the publishers in any way whatsoever.

We are deeply and vitally concerned in this question of postage rates. We are interested from the standpoint of labor and trade-union publications; we are interested from the standpoint of the producers of printed matter; we are interested from the standpoint of the readers. We have given this subject of postage rates years of consideration. It is not a new matter with us. We have appeared on this question before the Hughes Commission and others. Unfortunately we were denied the opportunity of being heard by the Ways and Means Committee in the framing and the drafting of the present revenue law dealing with this subject.

The CHAIRMAN. Now, wait one minute. Did you ever ask to be heard? Every newspaper man and every magazine publisher was asked to come, and several did come. They did have a hearing before members of the committee, a subcommittee.

Mr. WOLL. Of Ways and Means?

The CHAIRMAN. Yes; every man that wanted to be heard.

Mr. WOLL. We had no knowledge of it.

The CHAIRMAN. You did not ask, but I am not criticizing you for not asking, for this reason, we did say that we were not going to have a public hearing, but every man that applied to have a hearing we heard him in that subcommittee, and I recall very well that the Curtis Publishing Co. was heard. Two of the gentlemen were there,

and Mr. Moore and myself gave them all the time they asked. And as my friend Mr. Dunn knows he came down and had all the opportunity in the world to talk.

Mr. WOLL. Of course we had no connection with any of the publishers on the subject, and hence we had no knowledge or information of it.

The CHAIRMAN. I did not want it to go into your speech unchallenged that you were barred or refused.

Mr. WOLL. I will say there that we had no knowledge of it, and I am sorry we did not.

The CHAIRMAN. That is all right, of course.

Mr. WOLL. We did, however, have information that the Senate committee, the Senate Finance Committee, dealing with this subject, would hear us, and I am not going to burden this committee with the reading of the brief that was prepared by Mr. Samuel Gompers and myself on this subject, but I will ask leave to introduce that and make it a part of the proceedings here, because whatever was said before the Senate Finance Committee on this subject is applicable at this hearing to-day and is emphasized more strongly.

The CHAIRMAN. Very well; you may put it in.

(The paper referred to follows:)

AMERICAN FEDERATION OF LABOR OPPOSED TO ANY INCREASE ON SECOND-CLASS POSTAGE.

The American Federation of Labor is opposed to any increase whatever on second-class postage.

*To all organized labor:*

An immediate protest against the proposed increase in postage rates on second-class matter and against the application of the "zone system" should be immediately directed to every Congressman and Senator. Every central labor union, State federation of labor, and all affiliated unions should immediately voice their protest against this menacing proposal.

Action, to be effective, must be had at once. Respond to the appeal without delay. Act now.

Faternally, yours,

SAML. GOMPERS,  
*President American Federation of Labor.*

ARGUMENT AGAINST POSTAL SECTION OF THE WAR-REVENUE BILL MADE BEFORE THE SENATE FINANCE COMMITTEE MAY 15, 1917, BY SAMUEL GOMPERS AND MATTHEW WOLL.

Organized labor is in full accord with the principles of the sound economic policy laid down by the Ways and Means Committee, that the present generation should bear a fair and equitable portion of the burden of financing the war. Organized labor, however, dissents from and emphatically protests against the legislative approval of a number of provisions contained in this bill. Organized labor holds that every individual, concern, or institution should be required to pay its just proportion of war taxes. This should be done by increasing the income and inheritance taxes, a tax upon profits and land values. Organized labor holds that it is wrong, socially and economically, to tax the very sources and opportunities of employment. It believes that the rewards of industries and of industrial activity rather than the essential factors of production should be taxed for the conduct of the war.

That section to which particular exception is taken relates to the proposed increase of postage rates on second-class mail, applying the principles of the zone system as a method of computing the charges. The enactment of these proposals into law spells disaster and ruin to the labor press of this country, and will seriously hamper, retard, and to a very large extent completely destroy that part of the public press which is sympathetic to the appeals and needs of the working men and women of our Nation. The increased postage on second-class mail and the zone method of charging, as proposed, will create a condition wherein only those publications which are supported and financed by large combinations of wealth can survive. Such a condition would

be deplorable; it would lead to the exclusive control of the means of information by a small coterie of men of wealth, who would ultimately be afforded the opportunity of dominating the minds of the people of our country.

Unquestionably there are some persons who would desire and who would rejoice if some of the existing publications were forced out of existence. This is a matter of individual inclination, discretion, or judgment, determined by motives good, bad, or indifferent. Legislation intended to direct the activities and control of the destinies of a free people must be free from any taint of individual indiscretion or prompted by motives of vengeance or unfair advantage to one class over another. While the proposed increase of postage rate on second-class mail is unquestionably prompted by the highest motives of loyalty and patriotism, nevertheless the enforcement of this legislation will suppress a very large part of the public press and almost completely annihilate that part which pleads the workers' cause for an improved condition of life and work.

We have in this country the labor-union press, representing over 275 weekly and monthly publications, with a circulation approximating over 1,500,000 copies. These publications during their entire period of existence have done much to enlighten workers of our country upon all issues having confronted the American people from time to time. These publications have become indispensable to the welfare of the Nation and have performed a public service that can never be estimated or calculated upon a monetary standard.

All of these publications have carried out their mission with little or no profit whatever to the owners of these publications. Indeed, many are produced at a loss and are only enabled to live by the voluntary contributions of members of trade-unions.

While it is true that publications not for profit maintained by and in the interest of labor organizations, are not included in the most vicious provisions of this bill, it is also true that many of the labor papers do not come within the exemption, and it is these publications that would be entirely destroyed. We protest against the method of reasoning that would accept a few large financial and profitable publications as a standard and in order to decrease their margin of profit completely destroy that part of the public press so essential to the welfare of the working men and women of our country.

To increase postage rates of second-class mail matter in a permanent form under the guise of a war-revenue measure is an unwarranted interference with the processes of the publishing business, and if put into effect many publications can not and will not survive.

The proposed increase in postage rates will in many cases require a very much higher payment of postage than the total income netted by many of the publishers. The only equitable method of taxing the publishing industry is to tax incomes and profits. By that method no excessive burden will be placed on any one publication, freedom of the press will remain unimpaired, and the industry may continue without forcing anyone out of business. In other words, we hold it wrong to place a prohibitive tax upon the processes of the elaborately constructed and delicately adjusted printing industry. We favor taxing the results of that industry obtained under conditions that have come to be recognized natural and normal conditions of production.

However serious the proposition to increase postage rates from 1 to 2 cents may prove in actual application, most of the publications able to survive under the first proposal are doomed to failure by the proposal to increase still further the rate of postage in applying the zone method of charging. The proposed charges under this system are not only unjust but the system is grossly discriminatory in that it penalizes the readers in the distant zones. It would be equally fair and sound to determine the postage rates by a zone system of all first-class mail. The fact that the Ways and Means Committee found such a system unjust and undesirable to first-class mail is in itself sufficient ground to condemn its application to the second-class mail. Why should that part of the public situated in distant zones be penalized by a higher tax than those more closely situated to the printing and publishing centers. There can be no justification whatever for a charge of 6 cents being placed upon one class of citizens in one State and 1 cent upon citizens of another State.

A more effective aid to sectionalism might be conceived but it would be difficult to devise and apply.

The monthly and weekly magazines and newspapers with a national circulation have served the nation as great exchanges of thought and feeling. They have proven powerful agencies in substituting a national for a sectional sentiment.

The proposed zone system would again bring into vogue the feeling of sectionalism. The burden of expense of the publishing industry is already staggeringly heavy upon periodicals of all sorts, including daily newspapers.

The cost of publication has risen enormously partly, in the general increase of all materials, and especially because of the great increase in the price of paper. The additional imposts of the high postage undoubtedly will prove a last straw. The circulation of magazines and newspapers which are now national would again be restricted to sections and zones. Under the zone system no continental medium of national sentiment could exist for the crystallization of national opinion.

Under the proposed zone system a number of publishers would be undoubtedly compelled to change their publication offices to the center of zones of their publications in order to minimize their charge of distribution. Many of the present-day publishers do not own the printing establishments in which their publications are printed. Such a removal would logically lead to the destruction of many of the commercial printing offices in the country and many others would be compelled to remove their establishments to different localities. This would compel thousands and thousands of working men and women to dispose of their homes and to break ties of friendship and social bonds in order to follow the trade unjustly diverted and restricted by the enactment of these unjust proposals of taxation.

No one more fully appreciates the seriousness of the conditions that this proposed legislation will establish than do the workers themselves. No one will be compelled suffer more.

To increase the postage on second-class mail and to employ the zone methods of charging will not only destroy the labor press, but will have a far-reaching and detrimental effect on the manifold business relationships involved in the printing and closely related industries. The great educational white way of our periodical literature is builded upon the wood pulp molded through the various processes of manufacture of steel and iron and the labor of hundreds of thousands of working men and women. Whatever legislation will reduce the demand and lessen the opportunities for printing matter necessarily will reduce the demand for the services of labor engaged in the production of the materials and machinery entering into the manufacture of printed matter. Thus the men engaged in the lumber camps, in pulp factories and paper mills, in mines and machine shops, and in the transportation occupations will be proportionately affected to their great detriment.

Thousands of workers indirectly dependent upon the printing industry will be forced out of employment. While the several divisions indirectly affected run into many tens of thousands, in the great divisions of the printing trades the number of workmen runs into the hundreds of thousands. We refer to the great printing and publishing trades—trades which turn the wood-pulp paper into periodicals, newspapers, books, etc. The number of persons in this Nation who to-day are earning their shelter, apparel, and substance (not including office or clerical forces) in the great printing and publishing industry is over 400,000. If the counting rooms and general office forces are included, the total number (not including the owners and publishers) will reach close to 500,000. If we total the people who would be affected by this legislation, which will force a shrinkage of approximately 50 per cent or over, counting from lumber cruisers to publication counting rooms, we will find the total to be not less than 700,000, probably 800,000. And, mark you, this total does not include the wives and children dependent upon the vast army of men employed in the printing industries. If they are counted, the figures must be doubled, probably tripled. It is this vast army of people—men, women, and children—who will be affected by this proposed harsh, discriminating, and therefore unjust, legislation.

Stress, no doubt, may be laid on the assertion that the cost involved in handling second-class mail is more than 1 cent per pound. To ascertain what second-class mail costs has been found to be a puzzling proposition. Many have tried to solve the problem and all have failed. It is admitted, officially and otherwise, that the tremendous development of every branch of the postal business has been due, primarily and principally, to the increased circulation and influence of newspapers, periodicals, etc., brought about by reduced postage rates. But even if the cost involved should be declared more than 1 cent per pound, it would not be good policy for Congress to increase it, because to increase it would cause much reading matter to be placed out of reach of many who are now receiving the benefits of it. The charge for carrying second-class mail was intentionally fixed low in order to encourage the dissemination of information of educational value to the people.

In harmony with this sound and judicious policy, Congress has deliberately established a low rate with the expressed design of encouraging and aiding the distribution of recognized means and agencies of public information. It is not a matter of favor, but of approved judgment. It is not for the publishers, but for the people.

In this connection we direct your attention to that portion of the Penrose-Overstreet Commission's report relating to the effect that an increase of postal rates upon second-class matter would have upon educational features involved, which reads as follows: "Even if it should be found that second-class matter was being carried at a distinct loss, that loss would be entirely justified by the educational value of the periodical press. From the beginning of the Republic it had been the policy of Congress to foster and assist the dissemination of information and intelligence among the people. Next to the great public-school systems maintained by the States, the newspaper and periodical are the chief agency of social progress and enlightenment. So far from this being a subsidy to the publisher, the advantage of the low postage rate had been passed on to the subscriber, in the form of a better periodical and a more efficient service. Any substantial increase in the postal rates, while for the time being bearing heavily upon the publisher, must eventually fall upon the subscriber, either in the form of an increased price for his reading matter or of a deterioration in the quality of that matter."

As a matter of fact, the proposed increase upon second-class mail would not be a tax upon publication but would be a direct tax upon knowledge.

We protest most emphatically to adding this restriction and heavy burden upon one of the principal agencies of social progress and enlightenment of our people.

To increase the postage rates on second-class matter and to apply the zone methods of charging would simply bring ruin to the printing and publishing industry and throw hundreds of thousands of workers out of employment. The harmful effects would bring far-reaching wreck and ruin to the homes and lives of hundreds of thousands of workers and their families, and in the end would fail to accomplish the very purpose the Ways and Means Committee intended for this taxation.

The people of this country to day no more expect a revenue from the Government's Postal Service than they expect from the Agricultural, Interior, or other service departments. The people want service, not revenues from any Federal service department. The publishers one and all should be required to contribute their just share of taxes to the conduct of the war. The men and women employed in the printing and closely related trades welcome the opportunity of bearing their just share of the burdens arising out of the war. The profits of the printing industry should be taxed and, if need be, entirely confiscated, and the income of the men in the industry should likewise be justly and properly taxed. However, their means of employment should remain unimpaired. Neither should the arbitrary taxing power of Congress be invoked to curtail the liberty and independence of the press, which is an inheritance from the fathers, or to cripple the publishing enterprises and bankrupt those engaged in this calling.

We heartily concur and fully approve of the attitude expressed by the President of these United States, Hon. Woodrow Wilson, who, while governor of New Jersey, pronounced the following:

"A tax upon the business of the many widely circulated magazines and periodicals would be a tax upon their means of living and performing their functions. They obtain their circulation by their direct appeal to the popular thought. Their circulation attracts advertisers. Their advertisements enable them to pay their writers and to enlarge their enterprise and influence.

"This proposed new postal rate would be a direct tax, and a very serious one, upon the formation and expression of opinion—its most deliberate formation and expressions—just at a time when opinion is concerning itself most actively and effectively with the deepest problems of our political and social life. To make such a change, whatever its intentions in the minds of those who propose it, would be to attack and embarrass the free process of opinion."

Labor's voice is raised in earnest plea for what it considers itself competent to speak upon and with the hope that you will aid in maintaining for us our present conditions, which we esteem necessary for our welfare and the welfare of those dependent upon us.

Mr. WOLL. I also wish to introduce a resolution adopted by the American Federation of Labor on this subject, November 12 to 24, 1917, at their convention in Buffalo.

(The paper referred to follows.)

ANNUAL CONVENTION AMERICAN FEDERATION OF LABOR, BUFFALO, N. Y., NOVEMBER 12-24, 1917.

Whereas the Congress of the United States in the enactment of the war-revenue law has placed an unwarranted tax on all publications, both in the volume of advertising, reading matter, and profit by means of an increased postage rate and the application of a zone system; and

Whereas the new system and rate of second-class postage constitutes a special or super-tax on newspapers and magazines in addition to the large number of general taxes that publishers will pay in common with other industries; and

Whereas the enforcement of this new system of postal rates on second-class matter will destroy thousands of newspapers, business papers, farm papers, medical papers, religious papers, agricultural papers, labor papers, and national periodicals, thus crippling or destroying many of the printing shops in the country dependent on publications for their existence and throwing out of work many thousands of compositors, stereotypers, electrotypers, photo-engravers, pressmen, feeders, binders, mailers, and other workers employed in the printing and manufacturing of the publications of the United States; and

Whereas the public press, and more especially the labor press, is the bulwark of our liberty and freedom, a great source of education, information, and recreation to millions of men and women, and the only means through which the Government can send its messages to the farmer, housewife, manufacturer, merchant, mechanic, and the great army of workers; and

Whereas the publishing industry is one that does not profit under war conditions, but on the contrary is burdened with unusual financial obligations: Therefore, be it

*Resolved*, That in the opinion of this convention, Congress should not have altered the system of rates on second-class postage; that the system of rates provided are not a legitimate war tax, in that they are merely a destructive charge against a fundamental operation of a great and invaluable industry; that it will not raise revenue, but actually destroy business from which the Government seeks revenue; that the system of taxes proposed are burdensome to the public press and will result in decreased publicity and materially and unwisely curtail the publications of our country: Be it further

*Resolved*, That Congress be urged to amend the existing war-revenue law by eliminating that section dealing with second-class postage, and that this subject be then dealt with by Congress as a separate and distinctive matter viewed from the standpoint of service rather than for war revenue; that we tender to the printing trades-unions and to the press of the United States our aid and assistance in any way that it can be effective in securing for them justice and fair dealing: Be it further

*Resolved*, That copies of these resolutions be sent to President Woodrow Wilson, Postmaster General Burleson, to all members of the President's Cabinet, and to all Members of Congress.

Mr. WOLL. The convention of the American Federation of Labor, which recently adjourned, which met in St. Paul, gave further consideration to this question upon a resolution introduced by five international printing trades unions, the International Typographical Union, the International Printing Pressmen's Union, the International Stereotypers' Union, the International Electrotypers' Union, the International Bookbinders' Union, and the International Photo-Engravers' Union. I want to read this resolution, because it gives the reasons of our viewpoint on this subject:

Whereas the new postal law effective July 1, 1918, especially hampers and embarrasses the public and labor press of America in the dissemination of news at a time when information regarding the progress of the war, the activities of the workers, and the participation of American troops in the war is most vitally important to citizens in every part of the United States; and

Whereas there are few families who have no member of their family or relative in war service to whom the most important information of the day is news regarding the events of the war; and

Whereas the tendency of the zone provision of the new law will be to create zones of thought destructive to a national unity and act as a stimulant to the promotion of sectionalism which will result in the limitation and circumscription of the interchange of expressions of public opinion and thought throughout the United States, and will tend to encourage the development of a sentiment inimicable to the purpose of the Government in zones largely alien in thought; and

Whereas the radical change involved in the zone law will establish oppressive and destructive methods in the delivery of publications and with the establishment of six postal zones will involve inconvenience and delays to both publications and Postal Service by the creation of 18 instead of 3 weighings now in vogue; and

Whereas over 600 publications in the United States have already suspended publication and many other are facing an almost unbearable burden; and

Whereas the enforcement of these sections of the law will affect detrimentally many of the 31,000 printing shops in this country, throw out of work thousands upon thousands of men and women employed in the printing industry, and deprive millions of men and women, boys and girls of their source of education, information, and recreation by enormously restricting their reading matter and penalizing those distantly situated from the source of the production of reading matter; and

Whereas Canada and Great Britain in dealing with postal matters, international and otherwise, have deliberately and carefully exempted publications from higher rates of postage during the war, to preserve the widest spread and most accessible means of stimulating patriotism and education in patriotic self-sacrifice during the war; and

Whereas the United States Government has guaranteed the owners of railroads and steamships that they shall suffer no financial loss because of Government control; it is, therefore

*Resolved*, That the American Federation of Labor in convention assembled hereby protests against the enactment and the enforcement of the war-revenue law, relating to the zone system, and increase of postage on second-class mail. That we consider the resulting development of sectionalism and the creation of zones of thought so dangerous a menace to our national unity and effectiveness as to justify war emergency action. That we view the system of rates provided in the war-revenue law not a legitimate war tax, but as a destructive charge against the fundamental operations of a great and valuable industry; that we urge immediate repeal of these sections because they will not increase revenue but destroy business from which the Government seeks revenue, and that we demand that profits and incomes of publishers be taxed instead, and, if need be, that all profits be taken over by the Government; and further

*Resolved*, That we tender to the printing trades unions and to the press of the United States our aid and assistance in any way that we can in securing for them justice and fair dealing by the withholding the enforcement of these sections of the war-revenue law, and by their entire elimination, so that this subject may be dealt with by Congress from the standpoint of service rather than for war revenue; and further

*Resolved*, That copies of these resolutions be sent immediately to President Woodrow Wilson, Postmaster General Burleson, to all Members of Congress, and to all affiliated unions, with the request that the voice of labor in this matter be given immediate and prompt consideration and attention.

The committee concurs in the resolution as amended and recommends its adoption.

The report of the committee was adopted.

Your committee considers the threatened situation outlined in resolution No. 123 so serious that it recommends that the executive council be instructed to make an effort to bring about a congressional investigation of the Post Office Department, which shall establish the cost of carrying the various classes of mail, the approximate increase in first-class mail attributable to second class, and shall charge to the proper departments, at least as bookkeeping items, the cost of service under franking privileges; this investigation also to include a thorough-going study of wage and working conditions of all classes of employees under the Post Office Department.

The committee makes this recommendation because Postmaster General Burleson and a number of Congressmen insist on approaching the problem from the standpoint of profit rather than of service to the public, and the facts at issue should be established beyond contravention. But your committee believes that the Postal Service is primarily a public service, essential to our existence and development as a nation, and should no more be asked to be self-sustaining than the Department of Justice, Agriculture, of the Army or Navy, or any other of the Federal departments. Any consideration of the Post Office Department as a source of revenue is based on a fundamental misconception of its functions.

Delegate Gayner discussed the question.

The report of the committee was adopted.

Those in brief are the reasons prompting the attitude of the American Federation of Labor on the subject. We believe first of all that the publishing industry, as every other industry, should be required to bear its just burden of taxation for the purposes of carrying on

the war. We feel, however, that the enactment of the war revenue law, so far as it relates to second-class matter, is not a war tax measure. We believe that it would be a destructive charge upon the proceeds of production; that if the publishing industry is to pay its just and full share it ought to be based on incomes or profits, if necessary. We are not defending the profits in any way of the publishers. We say take them all if necessary to carry on the war.

The CHAIRMAN. Do you regard the increases of President Wilson and Secretary McAdoo of passenger rates as a tax? Has it ever been called a tax? How do you call the increase in the rate which newspapers must pay for their poundage a tax?

Mr. WOLL. The presumption of this legislation is that it is a war revenue act.

The CHAIRMAN. No; it is not. It is expressly stated in the bill presented to Congress, and the terms of it show that it is not a war tax. It does not end with the war, and that part of the increase in charges provided by law does not have to be turned over by the Post Office Department to conduct the war.

Mr. WOLL. That is the very reason for our objection to it.

The CHAIRMAN. The increase in the rate charge is on the ground that the rate charge is about one-eighth of the cost to the Government for the service rendered the publications and the publishers.

Mr. WOLL. Then we answer you in this way, sir, that if it is based upon the assumption that the Post Office Department ought to be on a self-sustaining basis, or that the rate for the carrying of second-class postage ought to be higher because it is being carried at a loss to the Government, that they ought to be predicated upon an investigation of that subject purely and simply.

The CHAIRMAN. How many times has this been investigated now?

Mr. WOLL. It has been investigated a number of times.

The CHAIRMAN. By whom?

Mr. WOLL. It has been investigated last by the Hughes Commission.

The CHAIRMAN. Hasn't it been investigated here by the experts of the department since the Hughes Commission twice, and haven't the men who have given a life study to it, men who have been under all administrations—that is, under the McKinley administration, under the Roosevelt administration, under the Taft administration, under the Wilson administration, and are now in the Post Office Department; these experts whose business it is to ascertain the best they can with all the data at hand the cost of the service, and haven't they made their report twice since the Hughes Commission?

Mr. WOLL. And do they find that the findings of the Hughes Commission are ill founded?

The CHAIRMAN.—They find that the Hughes Commission was practically right in declaring that the cost of transporting—the transportation cost of second-class mail matter was 5½ cents. I say 5½ cents.

Mr. WOLL. The Hughes Commission recommended 2 cents.

The CHAIRMAN. The Hughes Commission found the fact as a fact that it cost 5½ cents to transport it, and said they were not finding, because they did not have sufficient data to render a decision upon it, the overhead expense charge.

Mr. WOLL. They recommended 2 cents.

The CHAIRMAN. Yes; the Hughes Commission recommended 4 cents and not a publisher in the United States, none of these people that you represent, are willing to go to 2 cents, and that was a fight against it. The fight against it was for 2 cents. That was what Mr. Hitchcock and Mr. Taft recommended, a law in accordance with the decision of the recommendation of the Hughes Commission.

Mr. WOLL. I recollect well, and your statement is absolutely correct, that we did fight even that recommendation.

The CHAIRMAN. How many more times do you want an investigation when practically every investigation for the last 25 years has covered the same ground and come to the same conclusion that the Government is losing an enormous amount of money in transporting and delivering the second-class matter?

Mr. WOLL. Our position is now, as it was then—

The CHAIRMAN (interposing). Have you ever read fully—I have never seen one man yet who has—I believe I am the only man foolish enough to read it all—I want to ask you have you ever read the report of the Hughes Commission in full and all the evidence they took?

Mr. WOLL. Yes; I read it at that time.

The CHAIRMAN. How long did it take you to read it?

Mr. WOLL. That is quite difficult for me to say now.

The CHAIRMAN. I will tell you, it would take you a week or two weeks or three weeks to read it. Here is their report.

Mr. WOLL. Yes; I have a copy of that.

The CHAIRMAN. Now the evidence that they took—I read it all, and I want to say to you and to the committee and to these other publishers that there has been investigations since the Hughes Commission, and experts have been working on the subject to see—to get it down to a scientific proposition, the exact relation between the different classes of mail as to costs, and they have gotten it just as near a basis as an outside investigating committee could if it worked for the next hundred years.

Mr. WOLL. No; their investigation has disclosed—

The CHAIRMAN (interposing). Let me put it in the record right there now. Here is what they find—and it is not very contrary to the Hughes Commission; in fact, it is in conformity with the Hughes Commission so far as the findings of facts of the Hughes Commission—that is, they find practically the same costs with respect to transportation. Here are the findings. Here is Mr. Koon's testimony before the Senate committee May 1, on page 80. The first cost to the Government in the first, second, and third zones is 5.44 cents a pound, or \$5.44 a hundred; for the fourth zone, \$6.35 a hundred pounds; in the fifth zone, \$7.76 a hundred; in the sixth zone, \$9.18 a hundred; in the 7th zone, \$11 a hundred; and in the eighth zone, \$12.62 a hundred. This includes, for all zones, a flat cost of overhead and general post-office expense charges of \$3.86 per 100 pounds.

The Hughes Commission found that the transportation cost was 5½ cents. Little economies have been effected—it found really it was 6 cents, but 5½ cents it averaged, and they suggested then some little economies by which it might be reduced so that the cost would not amount to but a fraction over 5 cents.

In addition to this the Post Office experts, acting under the direction of Congress, went into all the facts and data with respect to the

weighing and separation of the mails into different classes under the act of 1907, and from that data and other data they gathered after several months of arduous and painstaking work, they found that it cost the Government 9 cents a pound to handle and deliver and haul the second-class mail matter. Now how many more investigations do you want? This was in 1909. And experts—some of the same—in the department have been investigating and ascertaining the costs every year since.

Mr. WOLL. Let me say, of course, to derive a conclusion as to the particular cost of one class of service as distinguished from another can only be found by arbitrary figures. We know positively that there has been no scientific rule yet devised by which can be distinguished the cost of delivery of the first and second from the various other classes of mail. But however that may be—

The CHAIRMAN (interposing). How do you know that? Have you ever been in the Post Office Department connected with any of this statistical and data work?

Mr. WOLL. No, sir.

The CHAIRMAN. As to the cost, the expenses of the Post Office Department, overhead charges, and all the expenses?

Mr. WOLL. No, I have not; but it is reasonable to suppose—

The CHAIRMAN (interposing). And why do you say and why does your Federation of Labor say that these costs that have been worked out by the department are all wrong—that there is no foundation for them? I want to see what testimony you have on that.

Now, do you know the poundage that they haul of first-class mail?

Mr. WOLL. Am I in a position to answer that definitely?

The CHAIRMAN. Do you know the poundage of first-class mail, the poundage hauled for the last year, say?

Mr. WOLL. Do I know the figures? No.

The CHAIRMAN. Do you know anything, approximately, as to the figures?

Mr. WOLL. No.

The CHAIRMAN. You never thought about that, did you?

Mr. WOLL. Yes, I have.

The CHAIRMAN. Do you know, approximately, anywhere in the neighborhood of the amount of pounds hauled in the third class?

Mr. WOLL. I haven't those figures in mind; no.

The CHAIRMAN. Have you ever studied those figures?

Mr. WOLL. Certainly I have.

The CHAIRMAN. Do you know how much more the Government pays the railroads and other transportation companies for hauling a pound of first-class mail than for a pound of second-class mail?

Mr. WOLL. I can not answer you to-day, no; because I haven't the information with me.

The CHAIRMAN. You can answer me by denying it pays the same thing. Now, here is a pound of letters that pays on the 2-cent basis—I am not talking about a war tax on that—a 2-cent basis, and on that basis a pound of letters pays between 82 cents and a dollar a pound. A pound of your second-class mails pays the Government 1 cent, yet the Government pays the railroad and the transportation companies identically the same amount for hauling a pound of letters that it does for hauling—and no more—a pound of papers.

Mr. WOLL. Of course, you don't mean to have me believe though that the delivery of those letters addressed to different addresses does not cost more than to deliver just one publication to one address?

The CHAIRMAN. I say the transportation does not cost any more.

Mr. WOLL. But the matter of distributing that matter is what costs.

The CHAIRMAN. And the transportation does not cost now under the space basis quite as much a pound for letters as for papers, because a pound of papers or magazines takes up two or three times more room than letters.

Mr. WOLL. But the sorting of the mail, the distributing of it, the carrying of it—the transportation is a very small item.

The CHAIRMAN. Do you admit then that they can not find out the transportation cost?

Mr. WOLL. I am speaking of the general distribution cost.

The CHAIRMAN. Wait now. I am getting down to the transportation cost.

Mr. GARNER. May I interrupt there a moment? Suppose we take a recess for 30 minutes to go to the House and vote.

The CHAIRMAN. We will take a recess then for 30 minutes.

(Whereupon the committee took a recess for 30 minutes.)

The CHAIRMAN. I think when we adjourned I was asking you about the transportation cost.

Mr. WOLL. Yes, sir.

The CHAIRMAN. Several Postmasters General, on the advice of their experts, even before the Hughes Commission investigation, stated in their reports that it cost  $5\frac{1}{2}$  to 6 cents to transport a pound of second-class mail matter. The Hughes Commission found that it cost at least  $5\frac{1}{2}$  cents, though there were some economies that could be instituted that would reduce the cost to a fraction possibly over 5 cents. The experts in the department here estimate that it will cost between 4 and 5 cents now on the space basis—in the neighborhood of 5 cents a pound. Now, you do not doubt the reasonableness of that estimate, do you—the transportation cost?

Mr. WOLL. Assuming that to be correct, and assuming that we are not doubting those figures, then the Hughes Commission upon that investigation concludes that the rate should be but 2 cents per pound.

The CHAIRMAN. Yes; they recommend that it should be 2 cents a pound as a step in the right direction.

Mr. WOLL. Yes, sir.

The CHAIRMAN. And they said also that that was far below the cost of transporting and delivering, or even transporting the second-class mail matter, but that if you put rates high enough to cover the total cost it would be too injurious as a first step to the publishers. I agree with them.

Mr. WOLL. Which conclusion I believe the committee did not follow in its recommendation to Congress when they enacted this law.

The CHAIRMAN. Yes; we knew, or felt, after a full investigation of the facts, that the publishers and newspapers generally could stand the rate, and in order to make it so that they could adjust their business to the new rates we gave them four years—that is, three years after July 1, 1918, which would make it practically from the passage of the bill three years and eight months—permitting the rate to go into effect one-fourth each year, and we felt that there was not a publisher that could not try and adjust his business to that gradual

rate, and unless I have a good deal more evidence than I have here since we passed the bill and at this hearing I think we can do so now.

Mr. WOLL. Well, it is evident, though, that the committee here, while taking the figures of the Hughes Commission as true, not disputing those, has failed to recognize the validity of other recommendations contained in that report and in its superior judgment believes that the Hughes Commission erred in saying that the rate of 2 cents was sufficiently high.

The CHAIRMAN. At that time, to put it at once, yes.

Mr. WOLL. Of course we feel that the conditions at the present time are accentuated; that the business conditions at that time were much better; that the publications at that time could have stood 2 cents or perhaps 3 cents better than they can stand anything to-day under the various conditions confronting industry.

The CHAIRMAN. Of course you have not heard the evidence before us, but every newspaper man that came before us admitted that they made more money in 1917, the very year in which this zone system was discussed and considered and enacted into law than ever before. We were particular in asking each one that appeared before us, and while they hesitated a good deal over it, we finally got out of them that they were making more money than they ever did before, and some of them I will say were making 100 per cent more. Some of them did make in 1917 100 per cent more than they did in 1914.

Mr. WOLL. I shall be very much interested to receive that testimony, because we know from the conditions of employment that those figures can not be verified very readily.

The CHAIRMAN. That they can be?

Mr. WOLL. Can not be.

The CHAIRMAN. Suppose you are the owner of a paper. You kept up with its business. You came before us and we would ask you this question, "Did you make more money in 1917; did you return more net income on your publications than you did in 1914, or 1915, or 1916, or 1911, or 1912?" And you would say, "Yes," we ought to believe you then, ought we not?

Mr. WOLL. I should think you ought to.

The CHAIRMAN. That is what these fellows told us.

Mr. WOLL. I shall be very glad to get that evidence, if it is going to be a matter of record.

The CHAIRMAN. It is a matter of record.

Mr. WOLL. Then I want to thank the committee for being helpful to these printing trades.

The CHAIRMAN. You will find it, and if you think you can get more wages out of these newspaper gentlemen for the printers, and generally, there might be some way that you could find their increasing income from an investigation of the income returns; that is a way that you could find out.

Mr. RAINEY. Somebody ought to get it out of them. They don't want to give it to the Government.

The CHAIRMAN. We have asked two or three large publishers, after they admitted they were making more money than they were before the war, to file their returns, net income returns for 1914, 1915, 1916, and 1917, and they said they would do it if the other fellow would.

Mr. WOLL. But I presume your committee has also considered this fact: That while it may be true that some publishers have been making more money this last year than in previous years, that the percentage of those making these large profits during the last year is very small in comparison with the great numbers of publishers—

The CHAIRMAN (interrupting). That is what they told us; they appeared here for their associations and each witness said, "Now, while my paper is making more than before, the other paper is not." And we asked them to bring in that other paper and magazine and let them testify before us and not let us have it second-hand; so when they came before us and we asked them about their business that was about to be broken down, they said they were making more.

Mr. WOLL. I presume some of them would have hard work getting here, but all of them thought they would be represented.

The CHAIRMAN. One of them we questioned said he was representing 500 or 600 papers and we asked him to name one of them that is about to go under by reason of this zone system, and to name one that isn't making more money than before the war, and he admitted that he couldn't.

Mr. WOLL. I can readily understand why a man would not answer that he is about to go out of business, because the last thing a man would want to admit is that he is going under.

The CHAIRMAN. According to Mr. Post a majority of them are going, according to the pamphlet he has issued, and according to the articles I see in the magazines; practically all of them. I haven't read a magazine that had articles protesting against this zone system that didn't say it was going out of business; so I don't see, if they admit they are going to be destroyed, I don't see why a man should refuse or think it was anything out of the way to say which magazines are going out.

Mr. WOLL. Well, I can readily understand why they do not. And whether your committee recommends this change or not, the results later will show whether it is right or not, and then the burden will fall where it rightly belongs.

The CHAIRMAN. Exactly. That is absolutely true. I think you will admit that the transportation cost has been figured out pretty accurately, and we will put it at 4 cents a pound—and it is more—or between 4 and 5; now, don't you think the overhead charges and the general post-office expenses with respect to second-class mail matter would be at least 1 cent? The post-office experts calculate it at 3.86—that is, \$3.86 a hundred pounds will represent the overhead charges and general post-office expenses, as it relates to the second-class mail matter. Would you be sure that it would be at least 1 cent a pound?

Mr. WOLL. I couldn't state positively that it was 1 cent a pound, but I do know that the Hughes Commission which investigated this matter, and upon which the Postmaster General laid great stress—

The CHAIRMAN (interrupting). I am going to further examine Mr. Post in regard to his testimony on the Hughes Commission. I have a great many quotations before me from the Hughes Commission. I think a great many pages from the Hughes Commission report have not been read.

Mr. WOLL. Nevertheless, the recommendations are very brief, summing up on the findings. I take it if this committee lays great stress on the Hughes Commission it ought to follow some of the recommendations in that report.

The CHAIRMAN. By the way, since the Hughes Commission reported, the annual loss to the Government on account of hauling and delivering second-class postal matter has increased \$20,000,000 annually; so we can take that into consideration, too.

Mr. WOLL. Well, our position has been that that matter ought to be thoroughly investigated. The Hughes Commission was 10 years ago.

The CHAIRMAN. Yes; but they have been investigating and keeping up with it; they have experts whose only business is to do that, and they are paid well, and they have no financial interest in not having it correct; they are working for the Government, and wouldn't you rather prefer to take their disinterested conclusions, than an interested conclusion?

Mr. WOLL. I haven't yet found that the department has been disinterested entirely in the subject matter. It has been my observation and viewpoint that the post-office authorities have been trying to place the Post Office Department on a self-sustaining basis; that is, to have those who use this department pay for it. We do not agree with them in that.

The CHAIRMAN. You don't think it ought to be self-sustaining?

Mr. WOLL. No; because the public profits by it.

The CHAIRMAN. Do you think the letter postage ought to pay its own way through the mails, ought to pay for the cost of handling itself?

Mr. WOLL. I presume if this committee's logic is correct, then, as applying the zone rate to the advertising pages, then everything ought to be on a zone basis.

The CHAIRMAN. You really think that a letter, where there is no special privilege at all; where everybody, whether he is in the newspaper business, or the manufacturing business, or the legal or medical profession, or any kind of business or occupation that can use the first-class mail privileges on exact terms of equality, you think in logic that is just like the third-class mail business, or the second-class business, or the fourth-class business, that there ought not to be any zones in either one? That there ought not to be zones for second-class matter, although that is a business for the handling of the mail of the publishers and where they make money out of it; that is, the publisher that publishes the New York Times, or the Literary Digest, or the Saturday Evening Post, and they are publishing them for the money they can make out of them, that it is not like the fellow who makes hats and shoes? They use the second-class mail for the purpose of transporting their goods from one part of the country to the other for private profits, and you say there is no difference between that kind of mail and the mailing of letters that applies to very kind of business and no favoritism at all in that!

Mr. WOLL. I can't agree with you that a second-class mail service is entirely for the benefit of the publishers. It is my viewpoint that the second-class mail and its cheap delivery is for the benefit of the public, in the dissemination of news and knowledge.

The CHAIRMAN. You spoke of the dissemination of news a while ago. I think it was in your resolution. You spoke about its being necessary for a mother to know about her son who is in the war.

Mr. WOLL. Yes, sir.

The CHAIRMAN. Does it take any zone system or absence of a zone system to find out about that? If she lives in Texas does she have to take a paper from Philadelphia to find out about that? Isn't there a home paper that tells her the news every day?

Mr. WOLL. Yes; I suppose through the news distributing agencies she can get that news in her home papers every day.

The CHAIRMAN. Yes; in North Carolina I don't have to take a paper in New York to find out the news from the front. I live about 50 miles from a city where there is a large daily, and I get it every morning it is published, about 9 o'clock. I don't have to get a paper from New York or New Orleans to tell me the news; that is telegraphed to my home paper, and I get it as soon as the fellows get it in New York or San Francisco.

Mr. WOLL. Yes, sir.

The CHAIRMAN. So you don't need to abolish the zone system to have a flat rate to get the news to the people, do you?

Mr. WOLL. I agree with you that so far as that character of news is concerned that is true. The local papers may get that because of the news character of the dispatch that gives it.

The CHAIRMAN. You represent the laboring man, you say?

Mr. WOLL. Yes, sir.

The CHAIRMAN. Don't you think it will do them as much good to get butter and eggs and cheese and meat through the mails at cost or below cost as it will to get the Literary Digest or the Ladies Home Journal? Now, if we are going to let the Ladies Home Journal—

Mr. WOLL (interrupting). Why single out the Ladies Home Journal?

The CHAIRMAN. Don't you think it will do them fully and equally as much good to let the Government take the transportation of their butter and eggs at cost or below cost, and yet you do not protest against that, and we charge from 5 cents to 12 cents a pound, according to the zone it goes to, to transport that butter and eggs and cheese, and hats and clothes and shoes. Now, is that right? And I ask you would it do him more good to have the Government transport and deliver these things at cost or below cost than to deliver and transport the Ladies Home Journal?

Mr. WOLL. Well, you are asking me—

The CHAIRMAN. I am asking you a pretty hard question.

Mr. WOLL. Yes; but we are not dealing with that subject, are we?

The CHAIRMAN. No; but you asserted that it did the people good, and the laboring people, to have these papers get to their homes free of cost.

Mr. WOLL. I might draw the same parallel with the public-school system. We are asking them to assume—

The CHAIRMAN (interrupting). The public-school system is for everybody.

Mr. STERLING. Nobody is making any money out of it.

Mr. WOLL. I differ with you.

The CHAIRMAN. Nobody is making any money out of the public-school system. The second-class mail matter is for the purpose of giving rates to the publishers who make profits on business—

Mr. WOLL. I don't see the difference.

The CHAIRMAN. You don't see the difference. Let us see if you can see this: Suppose the Government would transport free automobiles anywhere in the United States, and made every other vehicle and every other article pay the full cost of transportation; wouldn't you call that a subsidy to the automobile dealers?

Mr. WOLL. Yes; I would.

The CHAIRMAN. Yes; you would.

Mr. WOLL. But I wouldn't call the question of literature the same thing, though.

The CHAIRMAN. Let us see if you wouldn't. The Bible is pretty good literature; don't you think it is pretty good?

Mr. WOLL. Well—

The CHAIRMAN. Well, don't you believe in the Bible?

Mr. WOLL. Do I believe in the Bible?

The CHAIRMAN. Yes.

Mr. WOLL. I don't know that that is pertinent to this issue.

The CHAIRMAN. All right. Do you think it is good literature?

Mr. WOLL. It is good literature.

The CHAIRMAN. Why haven't you in your association protested against the postal rate on Bibles, which is under the zone system? The present postal provision puts on the Bible a charge of from 5 to .12 cents a pound, dependent upon the zone. Now, if you gentlemen really wish this in the interest of literature—and I am going to mention some other books—if you really want this in the interest of literature and the spread of intelligence and Christianity, why haven't you opposed the zone system for the Bible?

Mr. WOLL. Perhaps we will, since you have called our attention to it.

The CHAIRMAN. Why haven't you done it?

Mr. WOLL. Let me understand my position clearly here.

The CHAIRMAN. All right.

Mr. WOLL. It is my understanding that this hearing here is for the purpose of laying these viewpoints before the committee and for the committee to hear it. I take it from your remarks that it is the purpose of the committee to substantiate your arguments and view of the law as it is.

The CHAIRMAN. No. You said that the law was not sound. I am asking you if it is not to the interest of the laboring man and his family to have the newspapers and news and literature go to the people at 1 cent a pound. Now, if that is true, why haven't these publishers worked to have the Bible go to the people on the same rate as the Saturday Evening Post?

Mr. WOLL. Because we have failed to do so are we to be condemned?

The CHAIRMAN. The laboring people you represent have families of little children going to school?

Mr. WOLL. Yes, sir.

The CHAIRMAN. And if they want to get a spelling book or an arithmetic, and you must admit that has a tendency to make the children more intelligent; and yet when that goes to the child, the publisher or the child or someone must pay from 5 cents to 12 cents so send it

through the mail, dependent upon the zone, and no laboring men's association, or publishers association or newspaper men's association has ever asked or appeared before Congress demanding that Congress should abolish the zone system for the textbooks for the children of the United States, nor have they asked Congress to abolish the zone system for the transportation of the Bible throughout the country, and yet you men say you want a flat rate for the Saturday Evening Post and the Ladies' Home Journal.

Mr. WOLL. Well, it may be true that we have not urged objections to the zone system as applied to textbooks, but it is true that organized labor has exercised in every State an effort to procure in every State the free textbook for the child.

The CHAIRMAN. Yes; for the State to buy it. But when the State has to haul it through the mails it has to pay the zone system of postage from 5 to 12 cents a pound. Why don't you oppose the zone system on the Bible and textbooks? Take the history of our country, which has much to do with the intelligence of the people; the law charges for the transportation of such literature from 5 to 12 cents per pound, according to the zone to which they are transported, and yet send these magazines at 1 cent from Philadelphia to San Francisco, at a cost to the Government of about 18 or 19 cents. I am calling that to your attention and want you to think about it, and at night, when you are sitting down by yourself, think whether you are really consistent, and is the spreading of intelligence among the people the real reason you want the flat rate, or is it the interest of the publishers that causes you to demand the flat rate?

Mr. WOLL. The last question I can answer you immediately. I want to answer the last question immediately.

The CHAIRMAN. All right.

Mr. WOLL. That our position is not in the interests of the publishers.

The CHAIRMAN. You said in the interest of the general public?

Mr. WOLL. Yes, sir. In the interests of the general public, and the spread of intelligence. And I will also give this matter consideration—that since you claim it is for the interests of the spreading of intelligence that the zone system should be removed from the Bible and textbooks, that you, as chairman of this committee, have failed to remove it.

The CHAIRMAN. Did you understand me to say that I favored the removing of it? I am in favor of it as it is. I asked you why you didn't protest and ask to have it removed? I am in favor of it as it is to-day. So far as I know the newspapers are in favor of it; so far as I know you and your association are in favor of it. Let me call another thing to your attention: Were you in favor of—I know your organizations did go on record in favor of the parcel post system?

Mr. WOLL. Yes, sir.

The CHAIRMAN. Why should you charge a man for transporting his meat and bread from 5 to 12 cents a pound, to send them through the mail; and why are you in favor of that if you are not in favor of the zone system?

Mr. WOLL. I think it would be well to first understand that the second class postal matter, the industry has been developed upon that particular rating, as we understand that rating to-day.

The CHAIRMAN. And that is the reason the committee three or four years ago thought it ought to be changed.

Mr. WOLL. And yet you have not followed the recommendations of the Hughes Commission. We believe this introduction of the zone system to-day to be very detrimental; we believe if the policy of the Government is to be changed, and if the delivery of second-class mail is to be placed on an actual cost basis, that it ought to be done then on a flat basis, and not on the zone basis.

The CHAIRMAN. In other words, you think that the Saturday Evening Post, that would cost the Government from 15 to 18 cents to haul it and deliver it to its subscriber in San Francisco, to transport it from Philadelphia and deliver it to its subscriber in San Francisco, should pay only 1 cent, or 2 cents, and have a flat rate, like the Hughes Commission recommended, and that the man who is living within 50 miles, or 25 miles, from Philadelphia should pay the same, when it costs the Government eight times more to transport it to San Francisco?

Mr. WOLL. I think in the interests of the general public it is well worth it; yes, sir.

The CHAIRMAN. Now, do you think it would be right instead of, say, 2 cents, to charge newspapers whose average haul is under 300 miles, and only charge magazines such as the Ladies Home Journal and the Saturday Evening Post, whose average haul is 1,200 miles, 2 cents?

Mr. WOLL. Do I believe it fair?

The CHAIRMAN. Yes; to charge the newspapers 2 cents, and charge the Ladies Home Journal and the Saturday Evening Post and Collier's Weekly, and these other magazines only 2 cents, when the average haul of the newspapers is only about 300 miles, when the average haul of the magazines is 1,200 miles?

Mr. WOLL. Yes; I think it would be right, in the interests of the general public.

The CHAIRMAN. In the interests of the general public?

Mr. WOLL. Yes, sir.

The CHAIRMAN. Has your organization ever asked for the flat rate on meat and bread and eatables generally, and on the things you drink and wear?

Mr. WOLL. Not to my knowledge.

The CHAIRMAN. Do the express companies give a flat rate anywhere in the United States?

Mr. WOLL. They do not.

The CHAIRMAN. Is there any transportation company in the United States that gives a flat rate?

Mr. WOLL. I don't understand they do.

The CHAIRMAN. Does the telephone company give a flat rate?

Mr. WOLL. No, sir.

The CHAIRMAN. They have a zone rate?

Mr. WOLL. Yes, sir.

The CHAIRMAN. Doesn't the telegraph company have a zone rate, a distance rate?

Mr. WOLL. Yes, sir.

The CHAIRMAN. Don't the railroad companies have a zone rate for everything?

Mr. WOLL. Yes, sir.

The CHAIRMAN. You think the post office should have a flat rate for newspapers and magazines; you are willing we have a zone rate

for parcel post and for the Bible and textbooks, and for all these things; you have not objected to the zone rate; and yet you claim that for the business of publishers of magazines and newspapers there should be one flat rate?

Mr. WOLL. I do not claim that in the interest of the publishers.

The CHAIRMAN. I know; but you believe the publishers ought to have it in the interests of the public?

Mr. WOLL. Yes sir; but I want you to have the matter right, because I am not appearing for the publishers; and if your attitude is correct as to the zone system, it applies to the first-class mail as well.

The CHAIRMAN. I wanted to convert you to the right idea. That is the reason I am asking you these questions.

Mr. WOLL. I am afraid you are not going to be able to do it.

The CHAIRMAN. Does any other gentleman want to ask any questions?

Mr. WOLL. I would like to be allowed to finish my statement.

The CHAIRMAN. I thought you were through when I began to ask questions.

Mr. WOLL. No; I was not quite through.

Mr. STERLING. Do you say the publishers ought to, when this zone rate goes into effect, charge more of the subscribers living at a far distance than they do of those living near by?

Mr. WOLL. I didn't get your question.

Mr. STERLING. Do you think a publisher ought to charge a subscriber more living in San Francisco than he does one living here for a magazine published here?

Mr. WOLL. If I was adopting the logic of the chairman of your committee I would say they should charge more.

Mr. STERLING. But you don't adopt it?

Mr. WOLL. No, sir.

Mr. STERLING. The publishers can equalize it by charging more of the subscribers living farther distant than they do of those closer by?

Mr. WOLL. Yes, sir. But if the logic of equity is to prevail there should be equal charges to all subscribers and to all publishers.

Mr. STERLING. Aren't you throwing the burden on somebody else when you want a flat rate?

Mr. WOLL. Throwing it generally on the people of the country.

Mr. STERLING. Those who live nearer the place where the magazines are published do not get any benefit of it?

Mr. WOLL. I take it, the general public should pay it.

Mr. STERLING. If these publishers want a flat rate to their subscribers, nobody will prevent them from making it.

The CHAIRMAN. The law makes it for reading matter.

Mr. STERLING. Yes; the law makes a flat rate for reading matter now. But the Government for hauling this manufactured product, this advertising matter, why shouldn't it charge more for a long haul than for a short haul, as is done in every other business?

Mr. WOLL. Then, if that be true, the publisher, by the same logic, should be permitted to charge the subscriber more.

Mr. STERLING. He can do so, if he wants to; I don't see why he couldn't. He pays more for everything else if he lives far distant from the place of its manufacture.

Mr. WOLL. I suppose if the industry had been developed along those lines the publisher would not object, but the public, having received that consideration, certainly are now entitled to maintain it.

Mr. STERLING. Are you one of those that think that the zone rate system will denationalize the country?

Mr. WOLL. I think it will, to a certain extent; yes, sir.

Mr. STERLING. Don't you know that the people in the far West and in the Central West get the news just as quick as the people do in the East?

Mr. WOLL. Yes; they do some things.

Mr. STERLING. I mean matters of national importance; matters that tend to shape and frame sentiment on national questions. Don't you think they get it out there just as soon as they do in New York?

Mr. WOLL. Some of it they do. But when you speak of important events, if you speak of the news carried over the Associated Press wires, yes.

Mr. STERLING. Don't you know that everything that happens in the White House, everything the President says and does of importance; everything that happens in Congress, and every speech that is made by a public man on questions of importance; don't you know that those things, and everything that happens in the European war is read in my State as quick as it is here, except the difference of an hour's time?

Mr. WOLL. I suppose they are; but it is the importance that is placed on events by writers of eminence that are not transported as they should be.

Mr. STERLING. If a great speech is made by a man in public life, in which the public generally is interested, it is published there at the same time it is here.

Mr. WOLL. Of course, that is true; but it is not the speeches of the public men only that dominate public opinion.

Mr. STERLING. It isn't only that, but I think you gentlemen who represent the magazines——

Mr. WOLL (interrupting). I beg your pardon, but I am not representing the magazines.

Mr. STERLING. Well, I will not include you. But I think some of these gentlemen give more weight to the importance of the articles written by magazine writers than they are entitled to. I think there are some good ones, but I know there is more bunk in these magazine articles——

Mr. WOLL (interrupting). Let me say that I have read some of the Congressional Record, and I think there is a good deal of bunk in that.

Mr. STERLING. I will accept the Congressional Record.

Mr. SLOAN. I will not accept the Congressional Record. The Congressional Record is the most widely read publication in the United States, and it does not deserve such criticism.

Mr. WOLL. I say it contains a great deal of bunk.

Mr. SLOAN. You know it does not, under the rules of the House.

Mr. WOLL. It may be introduced in a parliamentary fashion, but everything introduced in a parliamentary fashion is not——

Mr. SLOAN (interrupting). You termed it "bunk."

Mr. WOLL. When "bunk" is used by one of the members of your committee I think I have a right to use it.

Mr. SLOAN. You are addressing Members of the House in this committee. There are a great many slurs thrown at the Congressional Record, sometimes by respectable people, but I resent it.

Mr. WOLL. Then I think the same respect should be shown to the men who appear here.

Mr. STERLING. I did not say that in respect to you. Answer my question, if you will.

Mr. WOLL. I don't remember what your question was.

Mr. STERLING. Don't you think there is a vast amount of bunk published in the magazines?

Mr. WOLL. I shall not answer that, and use the term "bunk," because objection has been taken to it. I will say in my opinion there is matter published that I do not read; that is not of sufficient interest to me for me to read; whether it is of importance I do not care to say; I do not care to put myself in the position of a censor; that is as far as I care to say. I say there is a lot published in the magazines that I do not care to read.

Mr. STERLING. Which magazines will be affected most by the zone system? The meritorious magazines, or the light, chaffy ones, by this increased rate?

Mr. WOLL. Now you are again asking me to classify those that are meritorious and those that are without merit, and I am not going to place myself in the position of censoring the press. I do know that some of the cheapest magazines are entertaining, and some good thoughts can be extracted from the cheapest literature.

Mr. STERLING. You will agree that some are good and some are not much good?

Mr. WOLL. Yes, sir.

Mr. STERLING. Now, I am asking you which will be affected most by this increased rate?

Mr. WOLL. My opinion is that those that have good financial backing will survive, and those that have not good financial backing will not survive; and some of those that have not good financial backing and are of the cheaper class are very good.

Mr. STERLING. Do you think it would be a good thing if the magazines were discontinued, some of them?

Mr. WOLL. No; I don't think so, at all.

Mr. STERLING. Do you think the more the better?

Mr. WOLL. I don't think you could have too much literature.

Mr. STERLING. Regardless of the character?

Mr. WOLL. I think the public will discriminate in its reading matter, and will buy those they desire.

Mr. STERLING. If the public discriminates in its reading matter, why is it that the poor magazine is likely to survive and the good one likely to be discontinued?

Mr. WOLL. You state that as a fact?

Mr. STERLING. You stated that.

Mr. WOLL. No; I didn't say that.

Mr. STERLING. You say that large ones with the money behind them will survive.

Mr. WOLL. I said those with money behind them will be likely to survive.

Mr. STERLING. Regardless of merits?

Mr. WOLL. Regardless of merits; yes, sir.

Mr. STERLING. Now, why is it, if the public discriminates in its reading matter that the good ones will not survive?

Mr. WOLL. I don't see the relation between your last question and this one.

Mr. STERLING. Can you answer it?

Mr. WOLL. No; I can't; not the way you have stated it.

The CHAIRMAN. Does any other gentleman want to ask a question?

Mr. WOLL. I would like to finish my statement.

The CHAIRMAN. All right; I thought you had finished. You may proceed.

Mr. WOLL. We say this that the publishing industry—that the great mass of people receive their main education to-day from publications, and through reading the publications; it takes in all characters of literature; the business has been built up on the basis of the present rates. Your committee proposes now to alter the same, which places in jeopardy many of these publications which have been developed and built up on the existing conditions. We think that is all wrong. We think the general public, by general taxation, ought to help pay for the general second-class mail delivery.

Mr. LONGWORTH. You didn't state that proposition exactly right.

Mr. WOLL. If you will state it better for me I will be very much obliged.

Mr. LONGWORTH. You say, "Your committee proposes to do so and so."

Mr. WOLL. It has done it.

Mr. LONGWORTH. It has established the rate; as a matter of fact, Congress has established this, has enacted the law, and the President has signed the law, and it is in force.

Mr. WOLL. No; but I recall very distinctly this morning, in the session this morning, when Mr. Kitchin was investigating Mr. Post, when the question came up of Mr. Kitchin and Mr. Rainey having forced through this bill, then Mr. Kitchin said, "These conferees met, and your committee wanted to extend the zone rate matter to extend to the reading as well as to the advertising pages, and there was difficulty for us to reach a compromise, but by doing away with the zone idea on the reading pages as well as the magazine pages"—

The CHAIRMAN. The chairman didn't say that.

Mr. WOLL. If I am mistaken on that; that is my impression.

The CHAIRMAN. You put it a little strong.

Mr. LONGWORTH. Whether that be true or not—

The CHAIRMAN (interrupting). I said we insisted on no separation so far as the zone system was concerned, as between the reading and the advertising.

Mr. WOLL. And only as a compromise—

The CHAIRMAN (interrupting). As a compromise we accepted this proposition that is now in the law, as the Senate would not accept ours.

Mr. WOLL. So it was upon the insistence of this committee that the compromise was agreed upon.

The CHAIRMAN. It was agreed upon by the conferees.

Mr. LONGWORTH. The point is, when you say this committee is proposing to do something, you state the situation inaccurately. The fact is that Congress has enacted this law.

Mr. WOLL. Yes; that is true.

Mr. LONGWORTH. And the President has signed it, and it is now a law!

Mr. WOLL. Yes, sir.

Mr. LONGWORTH. So your proposition is not to combat something we are proposing to do, but it is something we have done, and you are trying to have it undone.

Mr. WOLL. Yes, sir; but the law is not yet operative. It will become operative July 1.

Mr. LONGWORTH. You hardly think Congress will change it now, in time not to have it become operative?

Mr. WOLL. Not by July 1, which is Monday; but we hope it will by the end of July.

Mr. STERLING. How many labor publications are there in this country?

Mr. WOLL. Approximately 275. Of course, that includes in the neighborhood of 75 trade journals and international trade journals which are not affected by this law, because they are not published for profit.

Mr. STERLING. How many will be affected? You say there are about 75 that will be affected?

Mr. WOLL. No; about 200 will be affected, and about 75 that will not be affected.

Mr. STERLING. That 275 includes trade journals?

Mr. WOLL. Yes, sir; they are labor journals, trade journals that are not published for profit, and that will not be affected; 200 of these will be affected by this law. They have no financial backing at all, and the danger is greater to them than to any others.

Mr. FORDNEY. Pardon me. If I understood you, when you read your resolution you make a demand of Congress that it repeal this law, and that it do so and so, and not a request.

Mr. WOLL. I don't remember the form of the resolution; it may be it was a demand.

Mr. FORDNEY. Don't you think it would have been much more gracious to have made a request?

Mr. WOLL. It might have been more courteous.

Mr. FORDNEY. And isn't it a little unusual for one man to make a demand that another man shall agree with his views?

Mr. WOLL. Well, if you feel that that is of essential importance in the phraseology of the resolution—

Mr. FORDNEY. I think it is very important indeed.

Mr. WOLL. You think it might have changed your frame of mind?

Mr. FORDNEY. No; but you should not demand that I change my viewpoint.

Mr. WOLL. I take it, as a citizen, and you as members of this committee, Congressmen, being the representatives of the people, I, being a citizen, have a right to ask of the representatives of the people and the people have a right to demand, certain action.

Mr. FORDNEY. They certainly have a right to ask it, but instead of making a demand shouldn't it generally come in the form of a request?

Mr. WOLL. Conceding that it might have been more courteous to make it in the form of a request, in substance I can't see any difference.

Mr. FORDNEY. Well, I do.

The CHAIRMAN. Have you finished your statement?

Mr. WOLL. No; I haven't. I stated that we believe that the industry, having been built on the basis that the general public ought to contribute to the distribution of second-class matter, the distribu-

tion of literature to the public generally, we believe it ought to be maintained. If, however, Congress is going to change its attitude—and it evidently is from the attitude of the committee here—then it ought to be on the cost of the service given. If Congress is going to follow that course, then it ought also to follow the Hughes Commission recommendations and do away with the zone system, because we believe that is dangerous and is not for the benefit of the public generally. I have here the final recommendations of the Hughes Commission, and it may be interesting to read them, especially so far as they relate to the zone system.

The CHAIRMAN. We have all read them. Suppose you just put them in the record.

Mr. WOLL. I will do that; I will put them in the record.

The CHAIRMAN. I read them last year in my speech on the zone system. You may put them in the record, and in that way more people will get to see them.

(The recommendations referred to are as follows:)

#### FINDINGS AS TO COST.

Summarizing our conclusions and responding to that portion of the joint resolution of March 4, 1911, which directed the commission "to make a finding of what the cost of transporting and handling different classes of such second-class mail matter is to the Government," we report—

That the evidence submitted does not justify a finding of the total cost of transporting and handling the different classes of second-class mail matter.

That there is no evidence upon which a finding can be made as to the cost for the services above mentioned of other subdivisions of second-class mail—that is, of the different sorts of newspapers and periodicals.

The policy of zone rates was pursued in the earlier history of our post office and has been given up in favor of a uniform rate in view of the larger interest of the Nation as a whole. It would seem to the commission to be entirely impracticable to attempt to establish a system of zone rates for second-class matter.

Any attempt, therefore, to establish differential rates for newspapers and periodicals mailed by publishers, proportional to the service rendered, would fall so far short of its purpose as to leave unjustified the complications of an elaborate schedule, with its attendant inconveniences. Progress in the post office, with respect both to economy in administration and to public convenience, leads away from a variety of differential charges to uniform rates and broad classifications.

In short, our conclusion is that if a rate were established commensurate with the present estimate of cost it would dislocate this part of the service and produce such entirely new conditions that a new computation of cost would be necessary, in the light of which alone could it be determined whether the rate furnished the desired correspondence between income and outlay as to this sort of mail. And it follows that, if for the reasons stated a rate equivalent to the cost estimated under present conditions can not be regarded as satisfying the requirement, the suggestion of another rate which would fairly meet and not exceed the outlays of the Government must necessarily rest on conjecture.

We are therefore of opinion that as the Government has no monopoly of second-class matter, and in view of the changes which inevitably would follow if rates were greatly increased, it is impossible to report with any satisfactory approach to accuracy what charge for the different classes of second-class mail would "meet and reimburse the Government for the expense" which it incurs in their transportation and handling.

#### DIFFERENT KINDS OF SECOND-CLASS MAIL.

The first question that arises in regard to the rate is whether any discrimination should be made between different kinds of second-class matter. The plan proposed of charging a special rate for the portions of magazines devoted to advertisements seems open to grave practical objections. The amount of space given to advertising is no criterion of the educational value of a magazine.

The commission is further of the opinion that it would be a mistake to discriminate between newspapers and magazines or other periodicals. So far as educational value

is concerned, no satisfactory distinction can be made. And we have no basis for the conclusion that the comparative cost of transporting and handling would justify a difference in rate.

We conclude, therefore, that whatever increase be made should apply alike to newspapers and periodicals admitted to the second class, and that it is impracticable in the case of newspapers to charge a higher rate for space given to advertisements. It has been suggested that the proportion of this space should be limited for all second-class matter, but the true definition of such matter is that which is devoted primarily to the dissemination of news and of current literature and instruction, and we are not convinced that this can be measured by an arbitrary standard of the proportion of space given to advertisement.

#### CONCLUSIONS AS TO RATES.

Accordingly, we recommend the following rates for second-class mail:

1. The rate of 2 cents a pound on copies mailed by publishers to subscribers, to news agents, and as sample copies, and by news agents to their subscribers or to other news agents.

2. The rate of 1 cent for each 4 ounces for copies mailed by other than publishers and news agents; that is, the present transient rate.

3. The present free-in-county privilege retained, but not extended.

Further, as we have said, the department should maintain an adequate cost system, so that the effect of the new rates may be closely observed and a proper basis may be secured for the consideration of any future proposals.

Mr. WOLL. That is our attitude on this subject matter. We believe that the second-class matter through the Post Office Department ought to be predicated on the idea of giving service to the people. That does not follow the viewpoint of your chairman that second-class postage is a privilege to the publishers. If there is a subsidy involved, it is a subsidy to the publishers generally. This morning you said, "Why can't you put it on the advertiser"? We know what the result would be. It will not be placed on the advertiser. It will be on the publisher; but if it is the intent to have the advertiser pay it, why not make a flat rate, and then it will be passed on to the advertiser under the system now in vogue.

Mr. SLOAN. In your publications isn't it true that your percentage of reading matter is much greater than your percentage of advertising matter—in your publications generally?

Mr. WOLL. In the official journals of trade unions large numbers of pages are devoted entirely to reading matter. In our daily papers they run about the same as the daily press.

Mr. SLOAN. Then, as a matter of fact, if your reading matter were carried at a flat rate of one and one-half, you would not suffer relatively as much as some of the other magazines.

Mr. WOLL. I have mentioned the fact that so far as the trade union journals are concerned they will not be affected at all, because they come under the classification "not for profit."

Mr. SLOAN. How many of those are there?

Mr. WOLL. I should judge 75 or 80 trade-union journals. But the others will. It is true their suffering will not be as great, because they are not financially supported like the other papers are.

Mr. TREADWAY. You recognize the fact that when the zone system goes into operation it will mean large revenue to the Government?

Mr. WOLL. I don't know just what the revenue will be, judging from the adverse conditions now confronting the publishing industry, many publications having gone out of the business. We know, with wages increasing, the cost of everything going into the business rising, with this new added burden on July 1, this additional cost, it

will affect many more; what percentage it will affect I do not know, but we are fearful of the result; we are deeply concerned.

Mr. TREADWAY. Admitting that it will increase the revenue, that is our object, and if it will increase the revenue, if you agree with me in the assumption that in placing this zone system on the second-class matter to increase the receipts, what would you suggest if the zone system were taken away? What do you suggest to take the place of the zone system, to produce the revenue to meet the President's demand?

Mr. WOLL. Our proposition is, that revenue should be derived principally from incomes and profits, as a general proposition. Now, if your committee feels there must be an additional revenue from industry, and from the second-class postage, then I believe it would be much better to place a rate, not upon the zone system, the geographical proposition, but on a flat-rate system, because that will give the subscriber to the publication some chance, in the far away zones. I think it will work out much better in that way. I may be mistaken about that. I know very little about the bookkeeping end of the publishing business. But I do know that if it is made on a flat rate, it will make very little opportunity for the publisher to bring up the prices as he would in the different zones.

Mr. TREADWAY. Now, do I understand you that it is demonstrated that the Government has been losing money on second-class postage? I believe your colleague yesterday did not admit that. But if it is a fact that the Government has been losing money, and wants to get even—that is, if it wants the receipts even with the expenses—you would suggest adding as much for a short haul as the zone system adds for a long haul?

Mr. WOLL. Yes, sir.

Mr. TREADWAY. So, if it is costing to send one of those publications from Philadelphia to San Francisco 15 cents, you would say to add that same price to send it from Philadelphia to New York?

Mr. WOLL. I certainly would, because if your committee says that we shall go on the zone system, then they can readily say to the subscriber, "the Government says I must pay so much to send out this magazine, therefore, I must increase it to you."

The CHAIRMAN. If you increase it 5 cents they will say the same thing.

Mr. WOLL. Yes; I presume they would do the same thing. I presume they will make the subscriber pay; no question about that.

The CHAIRMAN. All right, if that is all.

Mr. WOLL. Just one other point. You will readily appreciate the effect that will have on the workers in the printing industry, if the results follow as we believe they will follow.

The CHAIRMAN. Let me make this suggestion, if I may: Allay your fears about the laboring man. We wrote a bill, the Senate and the House, taxing hundreds of different articles, and every manufacturer protested that it would ruin, not only him, but if the tax were put on, it would be ruinous to the country and throw labor out of employment, and they had a great many laboring people writing to us, insisting that the manufacturing business would be broken up and they be thrown out of employment.

Mr. WOLL. Yes.

The CHAIRMAN. Now, they had fighting it a great many honest representatives of the laboring men. Now we proceeded to levy that tax; we had to do it to get the money to help win this war, and there isn't one of those industries that has closed up, but they are employing more labor to-day, and paying higher wages than ever before, and that is the way it will be with these magazines.

Mr. WOLL. Let me say, then, that it is not a question of fear for the future. I know what it is now. I represent the photoengravers; that is, I am employed in that particular branch. Let me say that we have practically 10 per cent of unemployment now, despite the fact that 12 per cent have entered the service.

The CHAIRMAN. Representing what?

Mr. WOLL. The photoengravers.

The CHAIRMAN. Do you attribute that to this law?

Mr. WOLL. Oh, no; because the law is not operative yet. I attribute it to the general conditions prevailing, and it is our viewpoint that to add this additional burden to them is a great danger.

The CHAIRMAN. Do you know a time in the history of your life since you have been able to read and recollect, that that condition did not exist in some industries? Take the most prosperous years, you will find in some industries a part of labor unemployed, some industry having a hard time; you will find that condition every year in some industries in this history of this country.

Mr. WOLL. Yes; but we are dealing with legislation affecting an industry, and it is our opinion—

The CHAIRMAN (interrupting). We put no tax on the things you represent.

Mr. WOLL. I couldn't say that.

The CHAIRMAN. But on the gentlemen who employ you.

Mr. WOLL. But we are a part of the printing industry.

The CHAIRMAN. We have not put any tax on you, or thrown you out of employment, have we?

Mr. WOLL. Oh, no; this comes from the general adverse conditions in the printing industry; now, to add this additional burden is the thing we fear.

The CHAIRMAN. Have you talked with these publishers? You have been here a day or two; has any one of these men told you that they have been printing less pages for their magazines this last year than they did the year before, or that they are publishing less pages of magazines now, since February, up to now, than they did last year?

Mr. WOLL. I can honestly answer you that question, and that is, I have not asked them, and they have not told me.

The CHAIRMAN. You have not asked them and they have not told you?

Mr. WOLL. I heard the statements they made here.

The CHAIRMAN. And no representative of the magazines has said to you that they have published less?

Mr. WOLL. They have not. I heard them when they were here.

Mr. FORDNEY. I just want to say to you, my friend, if you are speaking of the employment of labor in the city of Chicago, in the lumber camps and saw mills on the Pacific Coast, the Government has detailed 10,000 soldiers, and has distributed them among the lumber camps and the saw mills in order to get a full supply of labor, and they are asking for 10,000 more men; in the South it is exactly the same

way. On the Pacific coast I was familiar with wages prior to the war, and I am now, and in the lumber camps and saw mills before the war \$2, \$3 per day was the customary wages on an average; to-day wages range from \$5 to \$8 per day in the lumber camps and saw mills, not skilled labor, ordinary labor. In the South wages have doubled, and still there is a scarcity of men.

Mr. WOLL. Yes.

Mr. FORDNEY. In the saw mill they are unable to get the number of men required.

Mr. WOLL. Yes.

Mr. FORDNEY. In the foundries of the country, and in every industry I know anything about, there is a great scarcity of men; how does it happen that in the city of Chicago alone there is a surplus of unemployed labor?

Mr. WOLL. Perhaps the labor department can advise you about that. There is not a shortage that you speak of in that fashion at all. Let us also advise you, then, that there is at present being considered in Chicago by the trade union leaders the advisability of calling an unemployed convention in that city because of the large number of the unemployed. If the conditions are in the West and South as you have described, and if they are in Chicago as I have described, then there is something fundamentally and radically wrong.

Mr. FORDNEY. I know what I say is true.

Mr. WOLL. I know what I say of Chicago is true.

Mr. FORDNEY. I know that we are unable to get men to ship the lumber in the South, although now we can get the cars; this time of year ago there were no cars, and now we can get the cars and there is a scarcity of labor. A man testified before the committee the other day that the reason we have not sent fighting planes abroad was because we have not had the spruce suitable to build airplanes. I know in Michigan we are unable to get labor enough; in Michigan, where I live, labor never was so scarce; on the farms, farm labor is getting \$2.50 to \$4 a day right in Michigan; the like was never heard of before. Now, it is very strange to me that there should happen to be in Chicago the condition you speak of. I am not disrupting your understanding of it. Either you or I may be wrong, and both be honest in our opinion. I do not understand why there is such a scarcity of labor when mechanics are earning in my home town \$9 and \$10 a day for running a machine; the like of it was never heard of before, and only about half of the employees to be obtained that are required. And that is true wherever I have heard from, and I have made many inquiries.

Mr. WOLL. Of course, I can't answer as to the condition you describe as existing in the Northwest and South, but I want to reaffirm what I stated about Chicago, that some of the trade-union leaders and officers have in the last week been considering bringing about an unemployed convention, because of the great number of unemployed there. Now, if there is so much scarcity of labor in the regions you describe, and so much unemployment as I say there is in Chicago, there is something radically wrong.

Mr. FORDNEY. If the printers are out of employment—it may be true that in the printing line business has fallen off to that extent that there is a surplus of labor there; but they can find employment in another channel.

Mr. WOLL. The unfortunate feature of that is, that the younger men are retained in employment, and the older men are laid off.

Mr. FORDNEY. The younger men are now employed in France.

Mr. WOLL. I am not speaking of the younger men who are of age to be in the service. I am speaking of men as around 35 as being young men. But the man of 50 and over is hardly able to turn his labor into the various channels you speak of.

#### STATEMENT OF MR. CHARLES JOHNSON POST—Resumed.

Mr. POST. I am ready to resume, Mr. Chairman, and in resuming I would just like to say that I have received a very important communication that I would like to read to the committee.

The CHAIRMAN. Very well, sir.

Mr. POST. This is dated:

WASHINGTON, D. C., June 27, 1918.

Mr. ALLEN H. RICHARDSON,  
Publishers' Advisory Board,  
200 Fifth Avenue, New York, N. Y.

DEAR SIR: In answer to your letter, I beg to say I prefer not to accept a retainer to appear before legislative committees upon matters of public policy, as in such matters, if I have anything to say, I desire to speak only as a citizen.

I have no hesitation in saying that I regard the zone system of postal rates for newspapers and periodicals coming under the definition of second-class mail matter as ill-advised. The Commission on Second-Class Mail Matter, appointed in 1911, of which I was a member, considered this question, and reported unanimously against the zone system. We said in that report:

"The policy of zone rates was pursued in the earlier history of our post office and has been given up in favor of a uniform rate, in view of the larger interests of the Nation as a whole. It would seem to the commission to be entirely impracticable to attempt to establish a system of zone rates for second-class matter. Progress in the post office, with respect both to economy in administration and to public convenience, leads away from a variety of differential charges to uniform rates and broad classifications."

In my judgment the zone system for second-class mail matter is unjust to the publishers and unjust to the public. It not only imposes upon the publisher the additional rates upon a sectional basis, but it makes necessary the added expense for the necessary zone classifications at a time when every economy in production and distribution is most important. It introduces a complicated postal system, to the very great inconvenience of the publisher and the public when there should be a constant effort toward greater simplicity. There is no more reason for a zone system of rates for newspapers and magazines than for letters. Newspapers and magazines are admitted to the second-class postal rates on the well-established policy of encouraging the dissemination of intelligence, but a zone system is a barrier to this dissemination. If it is important that newspapers and magazines should be circulated, it is equally important that there should not be sectional divisions to impede their general circulation throughout the entire country.

We are proud at this moment of our united purpose, but if we are to continue as a people to cherish united purposes and to maintain our essential unity as a Nation we must foster the influences that promote unity. The greatest of these influences, perhaps, is the spread of intelligence diffused by newspapers and periodical literature. Abuses in connection with second-class mail matter will not be cured by a zone system of rates. That will hurt the good no less than the bad, and perhaps some of the best sort of periodical literature will be hit the hardest.

We do not want to promote sectionalism, and one country means that in our correspondence and in the diffusion of necessary intelligence we should have a uniform postal rate for the entire country. The widest and freest interchange is the soundest public policy.

I hope that Congress will repeal the provision for the zone system, which is decidedly a looking-backward and walking-backward measure.

Very sincerely, yours,

CHARLES E. HUGHES.

That is the chairman of the Hughes Postal Commission which made its report, which has been so widely quoted by this committee and by the chairman in the examination of the gentleman just preceding.

The CHAIRMAN. Now I would say to you that we would much prefer to have Mr. Hughes down here, so that we can ask him about his views, and we can show him some facts and situations that have transpired since the Hughes Commission made its report instead of simply having his hasty telegraphic views. So we would be glad to hear him if you can induce him to come.

Mr. POST. We did our best, Mr. Chairman, to get Mr. Hughes to come, and that was covered in the first paragraph of his letter, that he speaks as a citizen, and his experience and investigation in postal matters that have been so widely quoted by this committee would seem to give his words, I should think, weight on this occasion.

The CHAIRMAN. You are the first one that quoted it, and every other man has quoted it who was against the zone system. The report declared that the zone system was impracticable. We have demonstrated that the zone system is practicable since they reported. We had no parcel post zone system, and the men that fought the parcel post zone system—and they had men down here in Washington and they had men all over the United States fighting it—used the same arguments that Mr. Hughes used—or made the same assertions that he made, and the same assertions that his commission made. They said it was impracticable; it could not be worked, and it would be wrong and unjust to this section or that; and would destroy the merchant in the country or small town; that it would only serve the interests of the big catalogue houses; that it would especially destroy the hardware merchants in the country and smaller towns and cities. It hasn't hurt any of them so far as we have understood. We have had years of demonstration of the practicability of the workings and operations of a zone system, and we have it also as to books, as to bibles, literary books, histories, textbooks for schools and professions, etc. No one is now complaining about its operation. When the Hughes Commission made its report in 1911—seven years ago—we would have thought that it was impracticable to have a zone system for transporting through the mails textbooks or books of history or literature, or any other kinds of books, or other articles of commerce. Mr. Hughes hasn't had time since the Hughes' Commission Report to keep up with the progress of postal developments, especially the zone system. He hasn't had time to give it full thought and consideration. He has been too busy a man to do that. When he gave consideration to the costs of transporting the second-class mail he had nothing else to do. He was acting for the Government in the capacity of an investigating committee.

Mr. POST. The figures, Mr. Chairman, may have changed in the interim.

Mr. GREEN. Right there, in connection with the chairman's remark, was it from that letter you were reading a statement that there was no reason to apply the zone system to second-class matter that would not also apply to letters?

Mr. POST. Yes, sir.

Mr. GREEN. Well, now, that statement alone shows that when Mr. Hughes wrote that letter he surely was not giving hardly any thought to the subject at all. That statement is simply absolutely ridiculous.

Mr. POST. I hope the record will show that it is the committee which regards Mr. Hughes's views on postal matters as ridiculous, and not myself.

Mr. GREEN. I have the greatest respect for Mr. Hughes' judgment, but certainly he would not adhere to that for a moment if he were here before this committee, when we call his attention to the fact distance has very little to do with the cost of running a letter or postal card through the mails, but it has a great deal to do with the cost of putting heavier articles through the mail. I wish to answer the questions raised by the chairman and yourself in that connection, in regard to the Hughes's letter.

You will note that Mr. Hughes in that letter is not discussing the details of figures. It is perfectly possible and freely admitted on my part that figures change from year to year, possibly even from month to month. It is of no consequence, but the principles of postal functioning, postal administration in relation to the matters under discussion have not changed, and Mr. Hughes has written that letter on the basis of the fundamental principles of postal function and service to the people and not on the bills of cost.

The CHAIRMAN. Now let us go back to your pamphlet here.

Mr. POST. Mr. Chairman, might I for one moment—just for the purpose of clearing the record—there were certain questions that were asked of Mr. Woll which involved publishers, and Mr. Woll, as a representative of labor, was not in a position to answer, and I should like very much to reply to those.

Mr. Chairman, you asked Mr. Woll something to the effect why had the publishers not appeared and asked that Bibles, as good literature, be made accessible to the public? I wish to state as a representative of the publishers that I do believe that Bibles and any other good literature should be made widely and easily accessible to the public and that the Bible is a matter of public information, public communication of high importance to this country, and should be entitled to second-class rates when it goes to the readers. When it is shipped in bulk to a bookseller as merchandise it is merchandise pure and simple and not a means of communication.

The CHAIRMAN. None of you ever before this minute even expressed approval of sending Bibles through the mails at a cost lower than parcel-post rates. When you send papers and communications to the paper sellers and the magazine sellers, don't you send them at the low 1-cent rate?

Mr. POST. Oh, those go by express.

The CHAIRMAN. They go by express when you can send them cheaper than 1-cent a pound, and when the express rate is more than 1 cent a pound you send them at the Government rate at a loss to the Government and a gain to the publishers or news dealers?

Mr. POST. Oh, no.

The CHAIRMAN. Of course you do.

Mr. POST. It is a means of communication. We maintain that the post office is a means of public information.

The CHAIRMAN. I never heard of your claiming that a Bible should go at 1 cent flat rate until to-day, and that was after I called your attention to it and you saw that you couldn't be consistent otherwise.

Now, let us return to your booklet here. Turn to the fifth page.  
Mr. POST. There were other questions that were raised that only publishers could answer.

The CHAIRMAN. I would like to get a line on this now. You can refer to that later.

Now turn to page 5. On page 4 is a map. We had finished page 3. On page 3 you say this:

Therefore this 50 to 900 per cent periodical postage increase law discriminates most viciously and unfairly against the Western States from Ohio to the Pacific coast.

I think you are willing to concede that there is no 50 to 900 per cent in that to be shown.

Mr. POST. The law for the increases on magazines is in those proportions.

The CHAIRMAN. Now, we have shown that you absolutely misstated that; in spite of the plain letter of the law and illustration here before you, you still misstate it.

Mr. POST. If we were speaking of the advertising, say 100 to 900 per cent, but we are speaking of both reading matter and advertising.

The CHAIRMAN. And there is no such increase on both. Well, on page 5 you make this statement, at the bottom of the page:

Express companies pay dividends and carry cheaper through same zones than post offices.

Did you think that was true when you put that in that book?

Mr. POST. Yes, sir; the express companies pay dividends and they carry through the same zones and their own rates show that they carry cheaper than the Post Office Department rates under this law.

The CHAIRMAN. Let us see. I think I will show you that that was a very clear and it would appear deliberate misstatement of the facts.

You have here on top of page 5, the left-hand side, above the rates given, these words: "Low express rates per pound on perishable foods." Opposite that and above an alleged postal-zone rate you have: "High U. S. Government rate per pound on clean, neat periodicals." You didn't say "clean, neat advertising portions of periodicals," did you, but the periodical itself?

Mr. POST. You can not separate the advertising from the reading matter. They are a unit.

The CHAIRMAN. You have said that a dozen times, but the law has separated them.

Mr. POST. The law has separated them for the purpose of discriminatory postal rates.

The CHAIRMAN. Everybody knows that you can count the number of pages which are given to advertisements and you can count the number of pages that are given to reading matter, and that is the division.

Now, let us see if you have stated the facts about it in here. In this table of comparisons of rates you say that from Wisconsin to New York City the Wells, Fargo Co. will carry a pound of butter or chickens or honey for 3.9 cents a pound, while the Government is going to charge in this postal-zone rate for "clean, neat periodicals" 6 cents per pound. Didn't you know that that was not true?

Mr. POST. That simply quotes the rate from the law that is provided there.

The CHAIRMAN. Will you name one periodical that will have to pay as much as 6 cents per pound from Wisconsin to New York?

Now, this morning you evaded everything I asked, and I had to screw out every question from you as though I had a gimlet in your back and tongue.

Mr. POST. Mr. Chairman, I answered every question the moment I had an opportunity, and continued my answer as long as you would permit me. [Laughter.]

The CHAIRMAN. I say, name one periodical in New York City that will have to pay 6 cents when this zone rate goes into effect, going from New York to Milwaukee, Wis., for instance.

Mr. POST. The trade magazines, which are almost entirely advertising, are those that are affected by that.

The CHAIRMAN. Name one.

Mr. POST. Every pound of advertising pays that rate in every magazine that is carried.

The CHAIRMAN. You decline to name because you can't name a magazine or even a trade journal on which the postage will be 6 cents for that distance under the zone-system rate; there is not one. Take the Ladies' Home Journal—

Mr. POST (interposing). We are comparing rates.

The CHAIRMAN. I am comparing exactly what you have compared here, by the pound, and that is what you have in your booklet.

Mr. POST. Yes, sir; rates.

The CHAIRMAN. Now, take the Ladies' Home Journal, that is your illustration, with 50-50 per cent advertising and reading portions.

Mr. POST (interposing). I didn't make illustration of the Ladies' Home Journal.

The CHAIRMAN. Isn't that a clean, neat periodical, or is it a dirty, filthy, obscene periodical?

Mr. POST. Mr. Chairman, I wish to point out—

The CHAIRMAN (interposing). You can answer my question very easily.

Mr. POST. I will answer your question, Mr. Chairman, if you will let me finish my answer. I shall be very glad to.

The CHAIRMAN. Is the Ladies' Home Journal a neat, clean periodical?

Mr. POST. Yes, sir; but it is not, of course—you have raised the illustration of the Ladies' Home Journal.

The CHAIRMAN. You gave to-day the Ladies' Home Journal as an illustration. You admit, then, that you meant by these rates only trade journals?

Mr. POST. Oh, no.

The CHAIRMAN. Then why didn't you tell the public in the booklet what you did mean and why don't you tell us?

Mr. POST. I have specifically stated the kind of magazines and exactly what was meant. I wish to state that you have taken these two headings entirely and absolutely out of their connection, for if you will read the paragraph down at the bottom of the page—

The CHAIRMAN (interposing). I read that. I am going to show you the deception in it.

Mr. POST. Mr. Chairman, if I may finish my answer, that is the only request I make, and I make that perfectly respectfully.

The CHAIRMAN. All right.

Mr. POST. At the bottom of page 4 is the paragraph:

Advertising page postage cost only is quoted—for the advertising pages make possible the periodicals. Reading pages have been increased 50 per cent flat.

The CHAIRMAN. Yes; and that has absolutely no meaning in connection with page 5 and the table of comparison. Did you give your readers anything in this table, any notice that you simply meant trade journals and advertising rates in them? And didn't you know, too, that when you put that table in that the Government did not transport the advertisements separate from the reading matter? It all went in together as one periodical.

Mr. Post. I have described that statement accurately, in that I have said at the bottom of page 4: "Advertising page postage cost only is quoted." So that every figure in that table applies only to advertising pages and nothing more.

The CHAIRMAN. You didn't say that on that page, did you?

Mr. Post. I have said that, sir, as close as it is possible to set the composition in the preceding paragraph.

The CHAIRMAN. Did you put that in thinking that anybody, with your explanation there, would believe from the way you put these figures in, and from the headlines you put to the table, that you just simply meant that advertising portions would pay six cents and 10 cents and 9 cents, the figures you give?

Mr. Post. Let me explain how a magazine is made up.

The CHAIRMAN. I understand that.

Mr. Post. No; you don't understand, or that question would not occur. May I give you the information?

The CHAIRMAN. The way a magazine is made up has nothing to do with the subject we are discussing. I will make you admit, then, if you will admit the truth—and I think you will when you see it—that you have not given the rates correctly and that you have deceived the readers of this book by your Wells-Fargo and Government rates. Didn't you intend for your readers to understand that you could get—that the Wells, Fargo Express Co. would send 1 pound, 1 single pound, of honey from Wisconsin to New York City and deliver it to the purchaser at 3.9 cents?

Mr. Post. I meant exactly what was stated there, sir. It speaks for itself.

The CHAIRMAN. And it speaks just as I have said. And did you not—

Mr. Post (interposing). Mr. Chairman, will you permit me to answer the question in full, and I will be very glad to proceed to the next one?

The CHAIRMAN. Didn't you mean to have the readers to understand that the Wells, Fargo Co. would take 1 single pound of butter like the Government would take 1 single magazine, or 1 single pound of chicken, and send that to New York from Ohio for 2½ cents just as this table shows? Isn't that what you intended the readers of this to believe?

Mr. Post. I have not been able to answer the preceding question yet.

The CHAIRMAN. Answer these pertinent questions and then you can answer any other as you please. I asked you if that was not what you intended the readers to believe, that the express companies would do that?

Mr. Post. I wish to answer the preceding question in regard to where you stated, did I put this at the bottom of the page—or in substance that—in order that these column headings would appear

at the top? I wish to state that the way in which manuscripts are set in type, paged in pamphlets, books, magazines, or otherwise, is on this basis, that the matter is sent to the compositor, who sets it up and returns you what is known as a galley proof, with the thing all in a long slip, which you are probably familiar with; that you then give an order on it, an O. K., and he pages them up, and this is his paging.

The CHAIRMAN. The bottom of the fourth page does not explain the headlines to the table or the table itself. I will say this: In my judgment—I may be wrong—but any man that would send that out in that shape with the headings up there, "High United States Government rate per pound on clean, neat periodicals," sent it out either in ignorance or to deceive somebody.

Mr. Post. I differ with you absolutely. There is absolutely nothing to indicate that.

The CHAIRMAN. You don't answer me about the Wells, Fargo Co.

Mr. Post. I am very willing to take up the next phase.

The CHAIRMAN. Do you mean to say that the Wells, Fargo Co. will send—and did you intend for the readers to believe that it will send—one single pound of butter from Ohio to New York City for 2½ cents and deliver it?

Mr. Post. No, sir.

The CHAIRMAN. Well, you said so in the booklet, page 5.

Mr. Post. And the post office will not.

The CHAIRMAN. I said the express company that you said will do it. The post office will send one pound of butter and deliver at parcel post rates.

Mr. Post. Mr. Chairman, I can not answer your question in your words. I can only answer your questions in my words and from the information I have at hand.

The CHAIRMAN. Let me tell you right now, Mr. Post, in my judgment and in the judgment of the committee—and I think the committee will bear me out—you have evaded every direct question I have asked you to-day. Now, you need not evade this. I propose to get the truth about these matters from you, if possible, if it takes all summer to do it, and the truth is you misstated facts from beginning to the end of your booklet, and no misstatements are more glaring than those contained in your table of comparison and your comments thereon.

Mr. Post. I am endeavoring to answer you.

The CHAIRMAN. You have before you your booklet. I ask you, did you intend for the readers of this document to understand by the figures you have given here and the headings you have made that the Wells, Fargo Co. would take one single pound of butter or chicken and send it from Ohio to New York City and deliver it to the consignee for the small sum of 2½ cents?

Mr. Post. I meant them to understand that that was the rate per pound, exactly as quoted.

The CHAIRMAN. You don't quote it that way. And do you think that the Wells, Fargo Co. would do that?

Mr. Post. I have their rates.

The CHAIRMAN. Will they do that?

Mr. Post. I have their rates, sir. It was compiled from their rates.

The CHAIRMAN. You say you have got their rates. Will the Wells, Fargo Co. take one single pound of butter and take it from Ohio to New York City and deliver it to the purchaser at his home in New York City for 2½ cents?

Mr. POST. It will carry it in certain units.

The CHAIRMAN. You put that table in and your comments on it for the purpose of deception, and you can't make anybody who has heard your testimony to-day believe otherwise.

Mr. SLOAN. Mr. Chairman, can not you get an answer to that question? The committee is entitled to it.

Mr. GREEN. It is as simple as can be.

The CHAIRMAN. We absolutely refuse to do it. Don't you know that the Government will take 1 pound through the mail, 1 pound of the Ladies' Home Journal—if it weighs a pound—or if it weighs more or less than a pound, it will do it—at the rate of per pound provided in the zone system provision and deliver it at the home of the subscriber?

Mr. POST. I am comparing rates per pound. If the answer you wish is that the express company deals in larger units, that is perfectly true.

The CHAIRMAN. I am not referring to units or larger units; but I ask you again, do you know or do you believe that the Wells Fargo Express Co. will take one single pound of butter and carry it from Ohio and deliver it to a purchaser of that one pound of butter in the city of New York for 2½ cents? Now, you can answer that.

Mr. POST. It will do that at that rate. I think the unit they take it in is higher than that.

The CHAIRMAN. Now, you do not want to tell the truth about it. That is the fact, isn't it?

Mr. POST. I am answering the question. I am saying that the unit—I don't know what the unit is, but I think it is 15 pounds of butter that they will take on that and deliver it.

The CHAIRMAN. If there was a judge trying a case and you were a witness—a judge of the most splendid temperament, of the greatest patience—he would either make you answer these questions direct or fine or jail you for contempt if you did not answer.

Mr. POST. I am endeavoring—as they are matters of great importance and great exactness—I am endeavoring to answer them with absolute exactness. I have stated that the unit for butter—

The CHAIRMAN. I didn't ask you for units of butter. You said nothing in your tables to comments about higher units of weight and in that was a pure deception.

Mr. POST. That is the important part of it.

The CHAIRMAN. You didn't say units in your booklet, and I am calling your attention to that fact and trying to show to this committee and to others here, and to the readers of these hearings, the deception that is contained in this document which you sent out to the public.

Mr. POST. I know that you believe that there is nothing good on our side and that it is all deception.

The CHAIRMAN. I can not make you answer it, and I will answer for you. You do know that the Wells Fargo Express Co. will not take one pound of butter from any place or city in Ohio, say, from Cincinnati, and carry it to the city of New York and deliver it to the

home of the purchaser of that pound of butter for 2½ cents. You know that is not true, and yet you put in your document which you sent out to the public that it would. You know another thing—

Mr. Post (interposing). "Per pound" is the phrase I used.

The CHAIRMAN. And you know that the express company will not take a single pound, or in bulk and deliver it in single pounds to the several purchasers at their homes, for a price as low as twice as high as the Government will magazines under the zone rate. And you know another thing, that from Seattle, Wash., to New York City the Wells Fargo Express Co. will not take one pound of fresh fish and carry it to New York City and deliver it to the fellow who purchases it for 7 cents, either, as you say it would in this pamphlet.

Mr. Post. The figure I have given there is from a fish that I had sent to me.

The CHAIRMAN. One pound of fish?

Mr. Post. No, the weight is given, the gross weight of 15 pounds, the fish packed in ice and all. It was sent at the rate of 7 cents a pound. That was the only point. There was no evasion in that.

The CHAIRMAN. Why I called your attention to the fish is, to show you the deception in the other rates. You put as to fish, now, from Seattle to Washington—because 7 cents would sound too unreasonable for one single pound of fish—nobody would believe that—as to fish from Seattle to New York City you put "15 pounds gross weight," and the very fact that you put 15 pounds for the fish from Seattle to New York and did not put a larger number of pounds than one pound for the other articles shows (that the man that got up that and sent it out intended to deceive the public and make them believe that it was transportation and delivery of one single pound.

Mr. Post. If I said "fish," fish varies so much in pounds that pounds mean nothing at all, so that when you say you can send fish for 7 cents it depends upon the size of the fish.

The CHAIRMAN. Anybody who would read that would understand that it costs 10 cents postage on the pound to send from New York City to Seattle a magazine, when the Saturday Evening Post, the Ladies' Home Journal, the Forum, the North American, the Metropolitan, McClures, Munsey's, and all that class of magazines could not possibly cost as much as 6 cents under the zone rates.

And you have got here from Arkansas to New York City 7 cents for "clean, neat periodicals." Well, it could not possibly be—not one of the periodicals or magazines you represent could possibly cost as much as 5 cents, but you wanted the readers in Arkansas to believe that they would be charged at least 7 cents.

Mr. Post. You are assuming that I represent every periodical.

The CHAIRMAN. Now here is another statement you made. You said:

This comparison of prices between the Wells, Fargo Express Co. and the proof that it charges from 20 to 35 per cent less for handling butter, cheese, eggs, fish, and farm products generally, than the post office charges for handling neat, easily handled newspapers and periodicals, points plainly to the guesswork character of this 50 to 900 per cent newspaper and periodical postage increase legislation.

Well now, you knew when you wrote that that there was not a word of truth in it. And let me show it so you can see it. Do you believe that the Wells, Fargo Express Co. would take 100 pounds of butter, each pound in a separate package, and put it all in one bulk like you

do your magazines, of 100 pounds, and send that 100 pounds from Ohio to New York City, and then take out each one of those one-pound packages and deliver it to the homes of Tom, Dick, and Harry, who purchased that one pound, one-fourth as cheap as the Government would do it under the zone system? Don't you know it would not do it one-fourth as cheap as will be done under this zone rate? Yet you tell the people in the pamphlet that the Wells, Fargo Co. would do that very thing for some 20 to 30 per cent cheaper.

Mr. Post. Yes, sir.

The CHAIRMAN. Now, Mr. Post, don't you know that that was put in there to deceive somebody; there is not a scintilla of truth in it.

Mr. Post. No, sir; it is a comparison of units and weights per pound.

The CHAIRMAN. You didn't say that, and you don't say that at all, and when you compare it with units and pounds it doesn't do what you say either. Suppose you take now 100 pounds of magazines, say the Ladies Home Journal, each weighing about a pound, addressed, say, to Atlanta, to 100 different people in Atlanta. The Government would take that to Atlanta. The bulk package will be carried to the post office and the post-office clerks will open it, take out each journal, assort them to the carriers and each one will be delivered from house to house to the several subscribers, under your zone rate, for less than 4 cents—for less than  $3\frac{1}{2}$  cents a pound package.

Do you mean to tell this committee, as you intended for the readers of your pamphlet to believe, that any express company in this country would take that hundred pounds at the rate of  $2\frac{1}{2}$  cents a pound and take it to Atlanta and go into the package and deliver each one of those separate pounds of butter to a hundred different people in the city for  $2\frac{1}{2}$  cents a pound? Now you can answer that question.

Mr. Post. If you will allow me——

The CHAIRMAN (interposing). Any man can answer that question yes or no, and a man that wants to tell the truth and be candid with this committee will answer it one way or the other. What do you say about that?

Mr. Post. Allow the express companies to compete with the post office in these fields as they most certainly will. It was only a few years ago that a company or corporation or group of responsible citizens of Chicago, I think it was, offered, if they were given the facilities, to give better service than the United States Post Office Department does, and at cheaper rates, and make a profit for the sockholders besides.

The CHAIRMAN. Well, I tell you, Mr. Post, it certainly does reflect upon your candor or sense of truth or intelligence to give that kind of an answer to a direct question which I asked you.

Mr. Post. I know, Mr. Chairman, that I have no reputation for intelligence in your mind.

The CHAIRMAN. I think I am taking too much time exposing the deceptions in this book.

Now I want the committee to listen to this bold audacious misstatement and deception. I am not going to say now who did it and whether it was intentional. I am going to let the public judge. Now this is another page. This is page 6 now. He says here that

the Wells Fargo Express Co. will collect this stuff and deliver at the homes, when he knows—and if you don't know it now you correct me—when he knows that no express company in the United States will take 100 pounds in bulk, containing 100 separate pound packages, and send it to a city, and then go into and take out each package and deliver it to the hundred several purchasers. They don't do that. They couldn't do it for 25 cents a pound. Yet he tells the readers of this that that is what the express company does do—will do.

Now one other thing—

Mr. POST (interposing). I thought you wished me to reply to that.

The CHAIRMAN. No; because you won't answer that or any other question like a candid man.

Mr. POST. Then do I understand that you refuse me the opportunity to answer these statements of facts?

The CHAIRMAN. No; I have given you every opportunity in the world. Didn't you do this?

Mr. POST. If you order 15 pounds of butter or 15 pounds of periodicals, the Post Office Department will charge you more under this law for the delivery of the 15 pounds of periodicals than for the 15 pounds of butter.

The CHAIRMAN. From where?

Mr. POST. From any point that you have in mind.

The CHAIRMAN. From any of these points?

Mr. POST. From any of these points.

The CHAIRMAN. That is not true. But that is not the way the Post Office delivers, and you know that the Post Office delivers two or three or four times cheaper, if you put 15 pounds of magazines in a bag, each magazine directed and addressed to 15 different individuals in the city, or wherever you send it to, than the express company, and you know the express company would not transport and deliver for 25 cents a pound in that way.

Mr. POST. No; there is a comparison of rates—

The CHAIRMAN (interposing). And you would have the public believe that this express company would take 15 pounds of Ladies Home Journals, 15 magazines, addressed to 15 different persons in my town, and deliver to each one at their homes a good deal cheaper than the Government would do it under the zone system? Do you believe that?

Mr. POST. Yes; I do. I have said right here what my belief is.

The CHAIRMAN. Well, I just want that in the record. No company has ever done that yet.

Mr. POST. It is the slack and the overhead of the Post Office that takes care of the second-class mail. That, I stated yesterday, is the theory of second-class mail.

The CHAIRMAN. Now take the Ladies Home Journal, that delivers this 15 magazines at Scotland Neck in one package but addressed to 15 different parties. Suppose they are addressed to 15 different parties on a rural route 10 miles from the town of Scotland Neck. Will the Wells, Fargo Express Co., or any other express company in this country, deliver those 15 magazines addressed to people on these rural routes, out in the country, to 15 different parties on those routes, for 2½ cents a pound? Will they do it for any price? And can they do it for any price? The Government will deliver them on the rural routes.

Mr. Post. When we are making a comparison of express-company rates with postal rates we are comparing express company rates where express service exists and where postal service exists. We are comparing like quantities.

Mr. GREEN. Mr. Post, is there any question you can answer directly?

Mr. Post. I am afraid that the only satisfactory answers I could make to the questions would be those that would concur with the views of the committee.

The CHAIRMAN. Did you let your readers understand that the Government in giving this great service to your magazines—and charging a little higher rate under this zone system—would carry these magazines 10 or 20 miles out into the country from the post office and deliver to the subscribers along the route, deliver to the homes of individuals in the town, and that no express company in the United States does that or can do that?

Mr. Post. What I stated was plainly set forth there, Mr. Chairman. I don't believe I could make any answer that would be satisfactory to the chairman or the committee on that, and it is fully set forth in the book.

The CHAIRMAN. Now this is the fourth paragraph from the bottom, page 6:

This is not the case. Publishers deliver periodicals to the post office, already sacked and routed for shipment, and in very many cases routed, sorted, and packed to the car; and the first act of the post office is merely to seal the car. Furthermore, the Wells Fargo ships by express in express; periodicals are shipped in freight cars by the Post Office.

Now you would have your readers believe that here is an express company shipping articles by fast trains at a good deal lower rate than the Government proposes, according to your misleading figures, to charge publishers under the zone system, and that the Government is going to ship periodicals by freight. Why didn't you tell them that it was only the magazines, as I suggested this morning, only the magazines and periodicals that were published not more frequently than twice a month which could be carried by freight; that they only composed 10 per cent of the total carriage of newspapers—the total haul of magazines and newspapers, and then only short distances? But you would have your readers believe that all of these periodicals are carried by freight.

Mr. Post. I don't know what question is involved in that. I would be willing to answer it if there was one.

The CHAIRMAN. Do you believe you stated facts?

Mr. Post. It seems to me, with all due respect to the chairman, that the witness is listening to characterizations rather than questions. The document speaks for itself.

The CHAIRMAN. No; I asked you if that was a fact.

Mr. Post. That is drawn from the Postmaster General's statement, to which I referred this morning.

The CHAIRMAN. I want to say for the Postmaster General right now that the Postmaster General never in his life made such a statement. It is not in print anywhere, and as I showed you in connection with the letter you sent to a lady in Texas, you misquoted the Postmaster General, and you had before you the Postmaster General's report and you read it yourself, and knew you were misquoting him when you wrote it.

Mr. Post. No, sir; I was quoting periodicals on that, and you are comparing periodicals with the bulk of mail, and I was speaking solely of periodicals.

The CHAIRMAN. Ninety per cent of papers and periodicals go by mail, 10 per cent by freight, yet you would have it appear here that it is all carried by freight.

Mr. Post. The great bulk of the magazines are monthly magazines, general periodicals, or monthly periodicals, comparatively few weeklies, and I was—

The CHAIRMAN (interposing). Gentlemen, I haven't time this afternoon to go through all of this booklet and show that upon every page, as I first made the statement this morning, there is a gross misstatement of the facts and a plain deception, whether intentional or not. In view of the answers and demeanor of the witness, I need not say. All who heard him know.

Before adjourning I want to ask you one other question about something which you state in the booklet which is not true. I want to turn to page 12. Then I want to refer to that map which you had this morning. Now listen, gentlemen. This is on page 12:

What President Wilson thought of the vicious zone system.

These are the words of Woodrow Wilson, President of the United States, when he was governor of New Jersey. Woodrow Wilson denounced the postal "zone" system for newspapers and periodicals when a former effort was made in Congress to enact a similar and equally vicious and destructive law.

I challenge you to find one word in that speech, extracts of which you quote here, that mentioned the zone system or denounced it. Don't you know that Woodrow Wilson never referred to the zone system; never denounced the zone system in that speech, and no zone system was in issue or in question at that time?

Mr. Post. I am speaking upon information furnished me, and that I understood was in regard to a law that was contemplated for the establishment of postal zones.

The CHAIRMAN. There was no zone system in issue. That was the Hughes Commission recommendation to which he refers, the increase to two cents flat rate, and yet you would have your readers believe—because the President is very popular throughout the country—that Woodrow Wilson had "denounced this vicious zone system," as you made your readers believe that George Washington and Abraham Lincoln denounced it, although upon challenge by me this morning you couldn't show where they ever said a word about it.

Mr. Post. The document speaks for itself, Mr. Chairman.

The CHAIRMAN. I haven't time to go through it now. I wish I had. If you can come next week I will go through every page of it.

Now, if you will turn to your map which you had this morning—is this it, pretending to show that immediately after the decrease of the rate of second-class postage matter in 1885 there was an increase in the receipts of the Post Office Department? [Exhibiting chart]. You said from such rate.

Now, Mr. Post, somebody else has imposed on you, or you are trying to impose on us and Congress. I am going to show you that this map as you have it and what you said in connection with it is about the biggest piece of deception that has been presented to the committee, and while you may be perfectly sincere in your statements yesterday, what you said as to the increase in postal receipts

immediately after and on account of the decrease in the postage rate on second-class mail matter in 1885 was absolutely unfounded, and you opinion that the decrease in postage rates on second-class mail matter in 1885 caused large increases which did not exist, is very unfounded.

Mr. POST. I wish to be very exact. I said these charts established a plain relationship.

The CHAIRMAN. Now let us turn to the Hughes Commission report, to page 62. Take the figures before 1885, the year in which this second-class postal rate was reduced from 2 cents to 1 cent on second-class matter.

Mr. POST. From 1879.

The CHAIRMAN. Yes, and you will find instead of the facts being as you said yesterday, that there was a larger increase of percentage of the poundage of second-class mail matter from 1879 to 1885 under the 2-cent rates than there was for the six years after 1885 under the 1-cent rate.

Mr. POST. Are we looking at the same charts, Mr. Chairman?

The CHAIRMAN. I am looking at page 62 of the Hughes Commission report, to show you that instead of the percentage of increase being larger after the decrease in rate was put into effect in 1885, it was a good deal smaller.

Mr. POST. Is that the map you have? [Indicating.]

The CHAIRMAN. I mean the map you had yesterday showing the increases.

Mr. POST. I am trying to identify the map, because that map was compiled from figures in the latest report of the Postmaster General. I am wondering if this is the map. We wish to be accurate.

The CHAIRMAN. I don't know. Didn't you introduce a map yesterday to show that after this second-class mail rate was reduced from 2 cents to 1 cent in 1885, there was a gradual increase in the receipts and returns from second-class mail to the Post Office Department?

Mr. POST. I think that is another map than the one you have taken here.

The CHAIRMAN. Well, that is what you had your map for.

Mr. POST. If we can both establish the map, we can speak on the same subject, because this map is taken from the Postmaster General's report of 1917, which dealt with the per capita revenues of the post office.

The CHAIRMAN. I have shown you by the Hughes report here, the figures they gave, that there was a less percentage of increase in the poundage of second-class mail matter for the six years after this reduced rate went into effect than for the six years before and therefore less receipts.

Mr. POST. Well, as the map is my guide and I am responsible for the n——

The CHAIRMAN (interposing). Now, then, here is the statistical abstract —

Mr. POST (interposing). Here is the one, I think. I think this one will probably give us a better comparison. It compares the amounts of postal receipts and deficits from 1885 to 1917.

The CHAIRMAN. Now, I will show you that the deficits began to increase in the Post Office Department the very year after this decreased rate went into effect.

Mr. Post. Then, if you will turn to this chart here [indicating] this is a comparison of postal revenues.

The CHAIRMAN. Here is the statistical abstract, showing the increase or decrease in deficits in the Post Office Department, of domestic mail—of course, foreign mail is left out—for the six years before and after reduction of the rate. Now, listen, Mr. Post. Instead of being what you said, for the six years preceding this reduction of the postal rate on second-class matter in 1885 the deficit in the Post Office Department on domestic mail averaged yearly \$14,600,000.

Mr. LONGWORTH. You mean the average per year?

The CHAIRMAN. Yes, for those six years preceding the reduction of the second-class postal rate it was \$14,600,000. For the six years immediately succeeding or following 1885 the reduction of the second-class postal rate, it averaged \$23,000,000, more than 70 per cent increase in deficit. So what you said, and your map, is really wrong and misleading.

Mr. Post. No, sir, Mr. Chairman. Will you please put the map in front of you so we can follow it together?

The CHAIRMAN. I don't care about the map. I know you put the map in to show an increase in revenue from second-class postage, and a decrease in postal deficits. You said there was an increase in revenue and decrease in deficits, and you said the map would show it.

Mr. Post. These figures are drawn from the Postmaster General's report of 1917, and are expressed in percentages compared with the expenditures.

The CHAIRMAN. Well, then, you have made your map wrong.

Mr. Post. There is an admitted deficit, sir. That is clearly shown, just exactly as you have stated it.

The CHAIRMAN. I have it right here before me in the statistical abstract, and I am going to give it to you.

In 1879 the amount of money collected was \$30,000,000. That had increased in 1885 to \$42,500,000.

Mr. Post. A deficit?

The CHAIRMAN. No; I am talking about the revenue now.

Mr. Post. The deficit was 14.95 for that year.

The CHAIRMAN. Now, from 1885 to 1890 it had increased from \$42,000,000 to \$60,000,000. That is the total revenue. This increase was from first-class mail, letters, cards, etc. There was an actual decrease in receipts from second-class mail matter—from papers and periodicals.

Mr. Post. The deficit was 8.15.

The CHAIRMAN. Wait a minute now. The deficit in 1885 was \$15,500,000. The next year it rose to \$16,500,000. The next year, 1887, to \$21,000,000; the next year, 1888, \$24,000,000; the next year, 1889, \$24,000,000; 1890, \$26,000,000; 1891, \$28,000,000; 1892, \$31,000,000; 1893, \$34,000,000 and 1895, \$38,000,000.

Now, then, your deficits instead of increasing, decreased after you cut down this rate. Now, on your second class—let me go back to the Hughes Commission report, page 62—

Mr. Post (interposing). But we are not comparing the same figures.

The CHAIRMAN. I am comparing like figures.

Mr. Post. I am quoting the same volumes expressed in terms of percentages.

The CHAIRMAN. I don't know about your volume and your percentages. I am just showing what the actual facts are, contrary to your map, and to what you said.

Mr. Post. Then the part of comparison has no bearing on the map, sir.

The CHAIRMAN. No; because your map is wrong, based on wrong figures and what you said was wrong.

Mr. Post. The map is drawn from exactly the same sources that you have before you, and is put into percentages for convenience.

The CHAIRMAN. Let's see what we have got for second-class mail matter, now. In 1885, when the rate was 2 cents, the Government collected \$2,021,000 from papers, periodicals, and magazines. The next year they collected only half that, because it fell off just exactly half. We had reduced it to 1 cent—from 2 cents to 1 cent. We collected only \$1,099,000.

In 1887 they collected only \$1,202,000; the next year, \$1,430,000; and it was six or seven years before it ever got—with business increasing all over the country—before it got back to the amount that we received under the old rate in 1885.

There are the facts, and yet in your statement you gave the facts as exactly contrary to that. Now, somebody has willfully misled you, and in return you have misled or tried to mislead many other people, no doubt.

Mr. Post. You have read those figures from the report, and they are in volumes.

The CHAIRMAN. I have read those last figures from the report of the Hughes commission, which is corroborated by the statistical abstract right before me.

Mr. Post. Quite correct. I should like to read the deficits in 1885.

The CHAIRMAN. Let me tell you another thing that you didn't know. You attributed whatever increase you could find to the second class, the reduction of second-class matter. Did you know that in that same year we reduced the letter postage from 3 cents to 2 cents for the same year, and that letter postage increased throughout the United States, and while the revenue from letter postage in two or three years began to increase, your revenue from second-class matter decreased?

Mr. Post. You will find those historical facts entered on this chart, sir [indicating].

The CHAIRMAN. I know they are historical facts, and you did not attribute that in your talk yesterday at all to the reduction in letter postage.

Mr. Post. The record will show what I said, that there was so close and so vital a relation between these curves of diminishing deficits and increasing poundage that it could not be ignored in postal legislation.

The CHAIRMAN. Now, Mr. Post, the fact is that the increase in the postage was only on account of the reduction of the letter postage after two or three years, while for those same years there was a decrease in the second-class postage.

I have a great many other matters touching the postal question to discuss with you or examine you on, but we have got to adjourn now. Could you come back at any time if I give you 24 hours' notice—any time next week or the week after?

Mr. POST. Barring physical accident, I can.

The CHAIRMAN. We will call you some time next week or week after next.

Mr. POST. There are others here who are prepared to speak Monday and Tuesday.

Mr. NEAL. It will be very difficult, indeed, for me to get back here after next Tuesday.

The CHAIRMAN. Can you come back the week after next, if you wish to be heard, or the latter part of next week?

Mr. NEAL. Well, I would be out of town and probably some distance from New York.

The CHAIRMAN. Well, we will let you give your testimony any time in the next two weeks you wish.

Mr. STERLING. Will your statement be lengthy?

Mr. NEAL. It will probably take about an hour and a half or two hours, and I do not think there would be much of any questioning, because you have covered practically all the points; but I believe the statement should be in the record.

Mr. FORDNEY. If the gentleman could not be here between now and Tuesday next, and it would be inconvenient for him to come thereafter, will you file a brief?

The CHAIRMAN. I would like to examine him myself.

Mr. NEAL. I am perfectly willing to file a brief, but I think it might be possibly of advantage to be here personally.

The CHAIRMAN. I think it would. I think you ought to be here. We are going to give the publishers all the time they want. We are going to hear them before we write this tax bill, and you can select any day except the 4th of July within the next two weeks and we will hear you, Mr. Neal. I will notify you, Mr. Post, or you can come any time in next two weeks you wish.

We are very much obliged to you, gentlemen, and we will adjourn now until 10 o'clock Monday morning.

(Whereupon, at 5.55 o'clock p. m., the committee adjourned until 10 o'clock Monday, July 1, 1918.)

ALLEN T. TREADWAY, Massachusetts.

JOHN E. WALKER, *Clerk.*

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
MONDAY, JULY 1, 1918.

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Oldfield, Crisp, Helvering, Fordney, Moore, Green, Sloan, Longworth, Fairchild, Sterling, Martin, Hawley, and Treadway.

The CHAIRMAN. I will have to be at the Capitol this morning, and Mr. Rainey will take charge of the hearing.

## STATEMENT OF MR. A. C. DUSTIN, ATTORNEY, REPRESENTING MANUFACTURING COMPANIES, CLEVELAND, OHIO.

Mr. RAINEY. State your name and address, and whom you represent.

Mr. DUSTIN. A. C. Dustin, Guardian Building, Cleveland, Ohio. While I am set down in the assignment here as appearing for manufacturing companies, I also appear for mining companies, particularly lessees.

I want to speak to a subdivision of section 207 of the war profits-tax law of 1917. Of course none of us know what form the bill will take, but on the assumption that in the bill somewhere, or in the new revenue bill, there will be a definition of invested capital, I want to call the committee's attention to the language of the bill as it now stands. The Supreme Court of the United States in several revenue cases recently handed down—that is, in three or four cases handed down, on May 20, of this year, and two cases on June 3, of this year—has had occasion to consider the line of demarkation between income and capital, and in all of those cases they hold that the tax laws of 1909 and 1913 found that point of demarkation to be the date when the law took effect; that is to say, in the case of law of 1909, it would be as of January 1, 1909, and in the case of the law of 1913 it would be as of March 1, 1913, so that the taxpayer who had acquired property prior to the effective date of the law was entitled to whatever value attached to his property on the day when the law became effective. In other words, there was no distinction between the value of his property which accrued by way of appreciation and the value which came from gains, profits, or anything similar to that. Now, the law of 1917 reads as follows:

As used in this title "invested capital" does not include stocks, bonds (other than obligations of the United States), or other assets, the income from which it is not subject to the tax imposed by this title nor money or other property borrowed, and means, subject to the above limitations:

(a) In the case of a corporation or partnership: (1) Actual cash paid in; (2) the actual cash value of tangible property paid in other than cash for stock or shares in

such corporation or partnership at the time of such payment (but in case such tangible property was paid in prior to January first, nineteen hundred and fourteen, the actual cash value of such property as of January first, nineteen hundred and fourteen, but in no case to exceed the par value of the original stock or shares specifically issued therefor).

It seems to me to be fair toward those concerns that were in this business prior to the effective date of the law—and I am not particular whether January 1, 1914, or March 1, 1913, is selected—that it should make a line of demarcation between the accumulations which have become capital and those subsequent accumulations which are gained in income, and I suggest that that paragraph might be amended so as to read:

(a) In the case of a corporation or partnership: (1) Actual cash paid in; (2) the actual cash value of tangible property, including mines and rights and interests therein, acquired for cash or for stock or shares in such corporation or partnership at the time of such acquisition (but in case such tangible property was acquired prior to January first, nineteen hundred and fourteen, the actual cash value of such property as of January first, nineteen hundred and fourteen); and (3) paid in or earned surplus, etc.

That is the only change I would make.

Mr. STERLING. I do not believe I understand your idea clearly.

Mr. DUSTIN. Suppose a partnership or a corporation acquired property, say, in the year 1900, and that they paid \$100,000 for that property and that that property was worth \$500,000 on March 1, 1913, or on January 1, 1914. Now, to my mind, that property should be valued as of January 1, 1914, at what it is worth.

Mr. STERLING. You think that the appreciation should be added?

Mr. DUSTIN. Whatever appreciation took place before the income tax law became effective belongs to the man just the same—

Mr. STERLING (interposing). No matter what the appreciation is due to?

Mr. DUSTIN. Yes, sir.

Mr. STERLING. Suppose it was due to the fact that the corporation had had a series of successful years; that it had not any additional capital invested; that there were no betterments or improvements made and no further investments in the enterprise, but that it was added simply by the development of good will. Suppose the earning power of the concern had developed so that you could, in basing values on the earning power, say that it was worth the amount represented by this appreciated value. Now, would you say in that case that the value ought to be taken as of March 1, 1914?

Mr. DUSTIN. My amendment does not go that far. I am dealing with tangible property. The good will, patent rights, etc., are taken care of in a subsequent paragraph of the bill, as it passed in 1917, and I have not suggested any change in that. That is all taken care of. That is a very long section, if you will remember.

Mr. STERLING. Then, under your idea, the increase due to appreciation—

Mr. DUSTIN (interposing). Is only in tangible property. I have this very case, which is an actual instance—

Mr. STERLING (interposing). Then it would have to be an addition of new capital?

Mr. DUSTIN. No, sir; not necessarily. It would be an addition to the property. For instance, I have this case of a mining company up in Michigan which acquired some wild lands 30 years ago at a cost of \$6 per acre. Ten or 15 years ago they discovered minerals

upon it and developed two large mines, and I understand that the income from those mines was something like \$1,000,000 last year, and they are paying taxes on it. The company has been a very close company, and they started that way, and they have never changed it on their books. That property has been entered on their books at \$6 per acre, although it was worth considerably more.

The value created by this new discovery prior to January 1, 1914, and whatever value attached to it, I think is just as much the company's property as though created in any other way. That is just what the Supreme Court said in a case recently decided. One of those cases was this: The Big Four Railroad Co. had some 10 years before the law of 1909 bought some stock in another railroad company; they held it until February, 1909, one month after the law took effect, and then sold it at a very considerable advance over the price paid. The question was how much of the price obtained for that property was income and how much was a mere realization of capital stock. The Government contended, on the one hand, that all they received for that property over and above the price paid some 10 years before the law took effect was income.

Mr. STERLING. That would not be a just claim?

Mr. DUSTIN. No, sir.

Mr. STERLING. What did the court say?

Mr. DUSTIN. The court said that the actual value of that property as of the date the law took effect, January 1, 1909, was capital, and that all subsequent increase to that was income. All the increase prior to that date was a part of the capital. That is what I contend for under this amendment. It may not be expressed as accurately as it should be, and it may be that some other language would express it better. If you take the actual value that the taxpayer had in his property—and I do not know what date you ought to take, whether March 1, 1913, or January 1, 1914, in applying this law—but whatever value fairly attaches to the property of the taxpayer on the date the law took effect should be his capital, and the net income he makes on that should be taxed.

Mr. GARNER. I will just put you on the stand and ask you how you would administer that law: How much would you value the Union Pacific Railroad Co. at as of that date?

Mr. DUSTIN. That, of course, would be a problem involving some serious investigation.

Mr. GARNER. I want to get at the value of the property in the United States upon which we are going to base excess-profits taxes as of January 1, 1914. You can readily see what kind of a job you would have.

Mr. DUSTIN. It is a considerable job.

Mr. GARNER. Get for me the value of the coal mines, of the Steel Corporation, and give me the value of municipal works, and of all kinds of property that was in existence at that time as the basis for levying an excess-profits tax. Now, you are going to take that as of a certain date. You are going to take the value of the property, and not the invested capital, and I want you, for the benefit of the country and for the benefit of the committee, to tell us how that should be done. Is it physically possible?

Mr. FORDNEY. That is an easy matter, and when you get through I want to show you how easy it is.

Mr. DUSTIN. I know that you have to do that now in a good many ways. They are doing it right over there in the Treasury Department to-day. Take, for instance, the case of the mines for depletion purposes, where they are held in fee: In those cases the Treasury Department holds that they take their value as of March 1, 1913. The mining companies' properties have been valued for taxation purposes by the States of Minnesota and Michigan—

Mr. FORDNEY (interposing). If the gentleman will permit me to interrupt him, I would like to explain to Mr. Garner just how that can be done now: Every corporation values its property and takes an inventory; every merchant, and everybody else in business, takes an inventory of their property every year. The valuation that Mr. Garner speaks about, that the Government would make, is a valuation on the part of the Government and not of the corporation or individual. Now, each corporation that you represent, each individual in business, and each merchant takes an account of his stock on hand and the amount of money made and the amount of business done. That is done at the end of each year. Whether it is their fiscal year or the calendar year, they put upon their books at that time the value of their property, and each man, each individual, each corporation, and each merchant this year will pay taxes upon that kind of valuation and not upon a valuation fixed by the Government.

Mr. GARNER. May I interrupt you right there?

Mr. FORDNEY. In a moment. It may be that the Government may dispute that valuation when they come to check up the reports, but they are accepting them now and on that basis each corporation is being taxed.

Mr. GARNER. Now, I will make one suggestion in regard to that: The Woolworth Co. has \$30,000,000 of invested capital; they carry on their books \$80,000,000, with \$50,000,000 representing good will—

Mr. FORDNEY (interposing). I am not speaking of good will.

Mr. GARNER. You are speaking of the invoiced values on their books, but there will be \$80,000,000 upon which they want an exemption, because they claim to have only \$30,000,000 of invested capital.

Mr. FORDNEY. I never contended that that should be carried on their books. That would not be just or equitable; but let me say for the benefit of the gentleman from Texas, that the Mitchell Bros.' case recently decided by the Supreme Court—and that is one of the cases you have referred to—

Mr. DUSTIN (interposing). Yes, sir; that is one of the cases.

Mr. FORDNEY. I have a copy of that decision on my desk. I was interested because a company in which I have some interest had the same matter up with the Commissioner of Internal Revenue, and our case was identical with the case of Mitchell Bros. I made an arrangement with Mr. Osborne, the then Commissioner of Internal Revenue, to settle our taxes upon the basis of the Mitchell Bros.' case, because it was identical in every respect. If the Government won out in that suit, we would pay the Government's claim, but if the Government did not win that suit, then the Government must accept that as a settlement, because our case was exactly like that of Mitchell Bros. Their case was this: The Mitchell Bros. had purchased some timberland at \$20 per acre, and when they put it in as part of their capital, they put it in at \$20 per acre, because that was the money

value of the property at that time. The lower court sustained them. The district court at Grand Rapids, Mich., sustained them, the court of appeals at Cincinnati sustained them, and the Supreme Court of the United States sustained the position of Mitchell Bros., and said that \$40 per acre was the actual capital.

Mr. GARNER. But if you had a law based upon capital and not value—

Mr. FORDNEY (interposing). The Supreme Court based the value of that land upon its value then, and not upon what they paid for it.

Mr. GARNER. The law had written into it "invested capital"—

Mr. FORDNEY (interposing). In the law of 1909 there was—

Mr. GARNER (interposing). That was under the law of 1909?

Mr. DUSTIN. Yes, sir; the statement of the Mitchell Bros.' case is exactly right.

Mr. STERLING. What law was that based on?

Mr. DUSTIN. The law of 1909. The same rule was followed in the Turrish case, which involved the law of 1913.

Mr. FORDNEY. of 1916?

Mr. DUSTIN. 1913.

Mr. FORDNEY. It dated back to January 1, 1913, which was the time the Supreme Court held that the income-tax law was constitutional, but it was under the act of 1916.

Mr. DUSTIN. No, sir; I was in one of those cases, and I am quite clear that the Turrish case was under the law of 1913. I am interested in the inequality of the thing, and that is all I care about. My clients can stand all the taxes that other people can stand. It is up to the committee, in view of business and business conditions, to levy a tax as big as they want to levy. All I am interested in is that it shall be levied with due regard to equality as nearly as you can.

I have a concrete case; I can not give the names of the parties but it is an actual case of one corporation that was incorporated a great many years ago on Wall Street. The stock was scattered throughout the country and very much inflated. It became prosperous through the years to come and earned out, so that it had property that fairly represented its stock. Right alongside that company is another company that was organized in a most conservative way and it has been very prosperous, and it has a very limited capital stock. The two companies, operating side by side, had practically the same kind of business, the same volume of business, and selling to people in the trade. One pays \$6,000,000 more taxes than the other; the conservative company pays on \$6,000,000 more capital than the other, based on your definition of invested capital. That is not right; it penalizes the man who has been conservative and rewards the man who has spread stock and sold it all over the country. The definition can just as well be made so that both will be treated with perfect equality; that is to say, if you start with a date, we can not have an income tax, probably, that goes back of March 1, 1913, when the sixteenth amendment was adopted, although it was adopted a few days before that, but it would encounter such constitutional objections that it would be unwise to have it apply before March 1, 1913.

It seems to me that any accumulation that I have as a result of my previous efforts and as a result of my skill is mine. If I bought property 10 years before that is worth ten times as much as I paid for it I am entitled to that appreciation. If, on the other hand, I

was foolish enough to make an investment and it has gone down, so that it is only worth one-tenth of what I paid for it, the Government should not allow me to make income on that foolish investment, yet that is exactly what the law does as it stands at present, but that is not right. The Government should not take the risk of my bad venture before March 1, 1913, nor should it take away the bargain, if I have succeeded, shown good judgment, and made some money from my previous investment.

Mr. FAIRCHILD. What suggestion have you to make as to invested capital?

Mr. DUSTIN. I will read that again. I think section 207 should read as follows:

That as used in this title the term "invested capital" for any year means the average invested capital for the year as defined and limited in this title, averaged monthly.

There is no change in that.

As used in this title "invested capital" does not include stocks, bonds (other than obligations of the United States), or other assets, the income from which is not subject to the tax imposed by this title nor money or other property borrowed, and means subject to the above limitations."

There is no change.

(a) In the case of a corporation or partnership: (1) Actual cash paid in.

There is no change down to there.

(2) The actual cash value of tangible property, including mines and rights and interests therein, acquired for cash or for stock or shares in such corporation or partnership at the time of such acquisition.

There is no particular change in that, except that I have put in the words "mines and rights" and I have used the words "acquired for cash" instead of "paid in." There is no particular change in that. The change is in the following:

But in case such tangible property was acquired prior to January 1, 1914, the actual cash value of such property as of January 1, 1914.

The original bill contained this:

In no case to exceed the par value of the original stock or shares specifically issued therefor.

Mr. FAIRCHILD. What about the question of copyrights and patents?

Mr. DUSTIN. That is taken care of by the latter part of the original paragraph as contained in the old law, and I would not suggest any departure from that.

Mr. FAIRCHILD. That you would not question?

Mr. DUSTIN. No; that was thrashed out, and, I assume, the reasons for drawing it in this particular form were sufficient for the committee that drafted the original bill, and I am not suggesting any change in it. I have one further suggestion to make.

Mr. STERLING. Before you go on with that suggestion let me ask you about the case stated by Mr. Fordney and the case you speak of. They were based on the laws—

Mr. DUSTIN (interposing). Of 1909 and 1913.

Mr. STERLING. How do they differ from the law of 1917?

Mr. DUSTIN. There were no excess profits and there was no occasion for defining invested capital at all.

Mr. STERLING. Did the taxpayer in those cases insist that—

Mr. DUSTIN (interposing). He insisted that a different value attached to his property as of the date the law took effect.

Mr. STERLING. He did not insist that it was what he paid for it?

Mr. DUSTIN. No; the Government insisted that, I know that Justice McReynolds asked Solicitor Davis, when he was arguing the case:

Do I understand the position of the Government to be this: That if I bought a farm 10 years before the law was passed and paid \$100 for it and it was worth on the date the law took effect \$1,000, and I sold it six months later for \$1,000, that the \$900 over the price I paid for it originally is income?

And Solicitor Davis said that was the Government's position, but the Supreme Court held against them, holding that whatever value attached to a man's property on the date the law took effect was his capital.

Mr. FAIRCHILD. As a corporation attorney you have had a great deal of trouble in determining what invested capital really means, have you not?

Mr. DUSTIN. No; not trouble, because the law is quite definite and clear, but great inequalities have resulted. We are not fighting the law. Nobody is going to bring a lawsuit on these things; these are not times when we want to bring a lawsuit attacking the Government's revenue, because it would not be very patriotic and we do not intend to do it, but we do feel that you gentlemen who are drafting a new bill ought to iron out these wrinkles as far as you can.

Mr. LONGWORTH. The real change is in the omission of the words "but in no case to exceed the par value of the original stock or shares specifically issued therefor"?

Mr. DUSTIN. Yes; and I have also included in "(2)" the words "including mines and rights and interests therein."

Mr. LONGWORTH. You have added those words?

Mr. DUSTIN. Yes; and also the words "acquired for cash or for stock or shares."

Mr. LONGWORTH. Does that mean anything different from the language contained in that section?

Mr. DUSTIN. I do not know that it does, except that this language will more accurately express it. The strange part of it is that when you get down to subdivision (b) we have pretty nearly what we ask for in the case of individuals:

In the case of an individual, (1) actual cash paid into the trade or business, and (2) the actual cash value of tangible property paid into the trade or business, other than cash, at the time of such payment (but in case such tangible property was paid in prior to January first, nineteen hundred and fourteen, the actual cash value of such property as of January first, nineteen hundred and fourteen).

They give it in the case of an individual.

Mr. LONGWORTH. And there they do not provide for the par value.

Mr. DUSTIN. But why should they do that? If a conservative man—and you must remember that corporations are organized—I suppose that more than half of the corporations in the United States are small family affairs or the combination of a few friends; they are small companies. The price at which they take in property has not anything to do with their business; they are not getting ready to float a lot of stock out on the market, and therefore they take it in frequently at a mere nominal amount.

I have one further suggestion and that is the question of whether borrowed money should be excluded from invested capital.

Mr. LONGWORTH. What are your views on that?

Mr. DUSTIN. I have drawn a paragraph regarding that:

*Provided, however, That money—*

Mr. LONGWORTH (interposing). Where would that come in?

Mr. DUSTIN. That would come in at some place in the middle of the paragraph, Mr. Longworth. I will submit a printed memorandum and put this all in. The paragraph as I would suggest it is:

*Provided, however, That money borrowed to the extent that the same is used and employed in the business may be computed as invested capital, in which event the interest paid thereon shall not be deducted from the gross amount of the income.*

Of course, we are all familiar with the large number of small companies, of limited capital, where every director and stockholder, in order to get borrowed money, goes to the bank and guarantees the company's note. To say that that man, just because he is not rich enough to do business on paid-in capital, shall take all that risk and have no benefit—

Mr. FORDNEY (interposing). Instead of allowing a corporation, as a part of its cost of production, the interest paid on the borrowed capital, you would permit it to use the borrowed money as capital?

Mr. DUSTIN. Yes; and not let them deduct their interest from the other. In other words, I can not see the difference between going out and borrowing money, putting it in the business, and making income upon which the Government imposes a tax, and properly so—I can not see the difference between that and paid-in capital. It is simply the difference between the poor man and the rich man.

Mr. LONGWORTH. You have evidently given a good deal of thought to this law. Have you any suggestion to make with regard to our provision for the distribution of accumulated surplus? I will call your attention to paragraph B of section 1211. Of course, that is, to some extent, affected by the decision of the Supreme Court in the Town case?

Mr. DUSTIN. I think, gentlemen, in view of these later decisions of June 3 and June 10, that the Town decision cuts no figure. I had occasion to advise a good many of my clients as to whether such a thing as a stock dividend could be declared to-day which would not be taxable as income, and I have said no, unless they declared it against accumulations existing prior to March 1, 1914, and that before they could do that they would have to distribute all subsequent surplus. While some people object very strongly to subdivision B, I do not think it is wrong.

The idea of subdivision B, and the other provisions, is to leave all the capital in the company that the company needs for its business, and when it gets to the point where it wants to divide out to its stockholders it has got to distribute the last earnings first.

Mr. LONGWORTH. Why could not a corporation legitimately distribute in 1917 a surplus earned in 1916?

Mr. DUSTIN. It could if the law permitted.

Mr. LONGWORTH. Do you see any reason why a corporation should not do that?

Mr. DUSTIN. I see no reason except that Uncle Sam wants the income from the individual stockholder. We are up against a pretty

hard proposition and we want all the revenue we can get. Personally it would be very much of an advantage to me if I could get from the companies in which I hold stock the old dividends before I got the latter ones, but I believe it is all right to make them pay the last dividends first.

Mr. LONGWORTH. Is it your personal opinion that a stock dividend ought to be considered as income?

Mr. DUSTIN. Yes. If a man gets something that represents earnings I do not know of any reason why he should not pay taxes on them. Of course, there is this to be said, that a stock dividend does cut down the value of the rest of the stock that a man holds. If the definition could be broadened so as to recognize that it would be no more than fair.

Mr. LONGWORTH. You mean that a provision should be put in that a stock dividend should not be regarded as income if thereby the value of that stock was depreciated?

Mr. DUSTIN. I do not think that would be inequitable, except to the extent that it actually operates as an overvaluation at the beginning of the year. I can illustrate my meaning best by an instance of this kind: Suppose a company on the 1st of January has \$100,000 of assets and of stock; during the year it makes \$100,000 in income, after paying its tax and everything. Now, at the end of the year the company will have \$200,000 worth of property and, presumably, the stock will be worth \$200,000. I can not see very much difference between giving a man a stock dividend of \$100,000 and giving him a cash dividend of \$100,000.

Mr. GREEN. Both depleting the assets?

Mr. DUSTIN. Yes.

Mr. FORDNEY. Suppose that is a return of capital.

Mr. DUSTIN. Well, they held in the Hornby case—are you referring to a stock dividend.

Mr. FORDNEY. That or a dividend of any kind, either in cash or in stock?

Mr. DUSTIN. They held in the Hornby case, decided on June 3, this year, at the same time the Turrish case was decided, that if a corporation even made a distribution of the proceeds of capital it was income to the stockholders and that they were taxable. That was a lumber case argued and decided with the Mitchell Bros. case.

Mr. FORDNEY. That is, the profit distributed was income?

Mr. DUSTIN. No; the capital itself.

Mr. FORDNEY. In the Hornby case there was \$3,000,000 distributed, was there not?

Mr. DUSTIN. I have forgotten the amount.

Mr. FORDNEY. The property sold for \$3,000,000, but on an investment of \$1,500,000?

Mr. DUSTIN. You are thinking of the Turrish case.

Mr. FORDNEY. I may be.

Mr. DUSTIN. In the Turrish case there was a liquidation of the corporation and it distributed its capital as a liquidating dividend in cancellation of the stock certificates. They held that was not a dividend to the extent that it had value on March 1, 1913, but that it was a mere return of capital. But in the Hornby case they had paid a very large dividend, perhaps 100 per cent, and a part of that dividend was the proceeds of timber they had sold and represented the value

of the timber as of March 1, 1913; it was a dividend distributed in due course of business and the Supreme Court held that a stockholder who got that received income and he had to pay a tax on it.

Mr. FORDNEY. In the first place, however, the stockholder is entitled to a return of capital without being taxed?

Mr. DUSTIN. Yes, sir. My idea about this invested capital theory of the law is that the law should recognize the value of a man's capital as of the date the law takes effect.

Mr. FORDNEY. Let me give you an illustration. I agree with you, but some of the gentlemen do not agree with me. Suppose that you and I, 20 years ago—20 years before this income-tax law was enacted—became the owners of a property and, for easy figuring, say, we put in \$100,000 apiece. It was a lumber operation, we will say, and all the money we took out of the business was what we must have to live on, a reasonable amount of salary, and that when we converted our timber into money we purchased more timber, because a sawmill is not worth anything without timber back of it. Last year, we will say, our property was worth \$1,000,000, although we only originally put in \$200,000 in capital, \$100,000 each. Some man comes along and offers us \$1,000,000 for our property; I decide to sell my half interest in that property, but you do not sell. The man who purchases my half interest pays \$500,000 for it and you originally invested \$100,000. How are you going to harmonize those two capitals in a taxing proposition or deductions under existing law? Your capital, which you did not sell at all, is \$100,000, but the capital of the man who purchased my half interest is \$500,000, and he, before paying a tax on income, gets a deduction of \$500,000 capital and you only get \$100,000, although your interests are identical and in the same property. That can not be justified under existing law, although that is the law.

Mr. DUSTIN. That is the law as it stands; yes.

Mr. LONGWORTH. Except one has made a larger profit than the other.

Mr. FORDNEY. Because he could have sold for a half million dollars and would not sell, but I decided to sell.

Mr. LONGWORTH. You made it, but the other fellow did not.

Mr. FORDNEY. He has it in property and that is what the man has who bought me out.

Mr. LONGWORTH. He has it in his books.

Mr. FORDNEY. This man comes and purchases my interest and pays a half million dollars, for which he got property, and he has identically the same property the other man has. What do you say about that?

Mr. DUSTIN. To my mind the best that can be done is to take the case of the man who did not sell and say that he should have his property fairly valued as of March 1, 1913, January 1, 1914, or some other date, and you, by selling your property for a half million dollars, have got to return as your income the difference between the price you got for your property and its value on March 1, 1913. That is the present law.

Mr. FORDNEY. That is the law of September 8, 1916?

Mr. DUSTIN. Yes, sir.

Mr. FORDNEY. But the act of October 3, 1917, does not define capital in that way?

Mr. DUSTIN. But you would have to pay your income tax.

Mr. FORDNEY. Oh, yes; I know that; on whatever my property earned on March 1, 1913.

Mr. DUSTIN. Yes; and whatever appreciation in value occurred.

Mr. FORDNEY. Should not the act of September 8, 1916, apply to all property the same as this act?

Mr. DUSTIN. I do not quite get your point.

Mr. FORDNEY. For instance, the act of September 8, 1916, permits you to put a value on your property as of March 1, 1913, and that is your capital invested?

Mr. DUSTIN. Yes, sir.

Mr. FORDNEY. The act of October 3, 1917, does not define property value in that way, as capital invested:

Mr. DUSTIN. No; it does not, and it should.

Mr. FORDNEY. But it ought to?

Mr. DUSTIN. Yes; and that is what my definition does.

Mr. FORDNEY. Permit me to go a little further for the benefit of my good friend from Ohio. I was not present when one gentleman made a statement on this point as you are making it, and Mr. Longworth took issue with him. I read it very carefully but I have forgotten the man's name. It was in No. 6 of the committee print and I think his name was Holmes. At any rate, Mr. Holmes contended exactly what we are contending. Suppose you purchased a piece of property 20 years ago and you sell it to-day and convert it into money at a certain sum. Whatever you get above the amount it cost you is profit; the Government permits you to prorate that profit from the time you purchased it to the time you sold it, and whatever it earned after March 1, 1913, is taxable income?

Mr. DUSTIN. Yes.

Mr. FORDNEY. Those are the two ways of handling it under the existing law, and I think that is a good law, fair, equitable, and just.

Mr. DUSTIN. Yes; that is correct, and in my amendment I design to carry into the war-profits provision of the law the same thing; that is to say, that invested capital should be adopted as of the status of things on March 1, 1913, or January 1, 1914. There is not enough difference between those two dates to cut any figure.

Mr. LONGWORTH. The gentleman referred to by Mr. Fordney argued that the value of the capital should be the value as of the date of the beginning of the tax.

Mr. DUSTIN. I do not see that.

Mr. LONGWORTH. Of course, under a system like that we would have no excess-profits tax at all!

Mr. DUSTIN. None whatever. I am interested in a company now—

Mr. LONGWORTH (interposing). We would not raise a cent by our present law under that definition!

Mr. DUSTIN. No. I am interested in a company whose property in normal times would probably be worth about twelve or fourteen million dollars; it could sell its property to-day for \$30,000,000, just because of these tremendous prices it is making; if you permitted us to value the property at \$30,000,000 and deduct 6 per cent on it the Government would not get anything, but that would not be right, I should say. You have got to select a date, but whether the date is a proper date is a matter of opinion.

Mr. LONGWORTH. Your proposition is a compromise between that extreme provision of the law which only allows you to deduct the amount paid in at the time?

Mr. DUSTIN. That, to my mind, is absolutely unjust.

Mr. LONGWORTH. You go half way?

Mr. DUSTIN. I say that in sales of property they shall account for all they receive above its value on March 1, 1913. Having adopted that in one case—and there is logic for it, because the sixteenth amendment took effect as of that date—why not adopt it as to all cases?

Mr. FORDNEY. I was not contending that you ought to take the value of the property as of before that date and not pay on what they earned from March 1, 1913, down to date, and I did not understand that Mr. Holmes took that position.

Mr. LONGWORTH. Yes; he took that position.

Mr. FORDNEY. I do not agree with him, because whatever the property earned after March 1, 1913, is taxable income.

Mr. DUSTIN. Yes; and the rate of taxation is a matter for you gentlemen; I am not going to discuss that. If you make it 60 per cent, 80 per cent, or any other per cent my clients will try to live under it.

Mr. LONGWORTH. I understand you to say that you think stock dividends should properly be considered as income?

Mr. DUSTIN. I should hate to see them taken out.

Mr. LONGWORTH. I have heard a great many lawyers disagree as to the exact effect of the Town case. As I understand the decision in the Town case, it was that Congress had not at that time said that stock dividends were income?

Mr. DUSTIN. Well, they said dividends, but they did not mention stock dividends.

Mr. LONGWORTH. Since then Congress has declared that stock dividends are income?

Mr. DUSTIN. Yes.

Mr. LONGWORTH. But the Supreme Court has decided that they can not be—

Mr. DUSTIN (interposing). I will set you right on that. When the Town case was decided we were very much interested in it because we had a company that was very desirous of declaring a stock dividend, but it could not do it because there was one man in the company that if they gave him a stock dividend he would have had to pay a tax amounting to a large sum of money simply for the privilege of holding two pieces of paper instead of one. We disagreed in the office as to the effect of the Town case, and we went so far as to take the opinion of former Justice Hughes, and he suggested that there was doubt about it and that we had better wait until these later decisions came out—these decisions of May 20 and June 3. Since those decisions have come out former Attorney General Wickersham has written an opinion, and some of us of lesser light have written opinions, to the effect that the question is now settled—at least, that the holding of the Supreme Court in these other cases is so clear that there is no doubt about the constitutionality of the law of 1916 and 1917.

Mr. LONGWORTH. You mean, in so far as it declares that a stock dividend is income?

Mr. DUSTIN. Yes. I have not heard a lawyer suggest since these late decisions that there is any doubt about the right of Congress to make those stock dividends income.

Mr. LONGWORTH. I did not know—because I have not followed those cases closely—that it was considered they had gone as far as that?

Mr. DUSTIN. Yes. There were eight or nine cases involved, and I happened to be in one of them. Those that involved the law of 1909 were decided on May 20 and those that involved the law of 1913 were decided June 3. Of course, the only question about the law of 1916 is whether it is constitutional, because it is perfectly clear in its terms, and in the light of the reasoning adopted by the Supreme Court in those cases there is no doubt about what the Supreme Court would say if that case goes up.

Mr. FAIRCHILD. Mr. Dustin, we will suppose that two men get stock dividends. One man sells his stock and gets cash for it, while the other man holds his stock; would there be any difference in the application of the tax law?

Mr. DUSTIN. I do not understand that there is any; there is none to-day.

Mr. FAIRCHILD. Under the case that Mr. Fordney recited a little while ago I should judge that there was a difference—that is, a difference as to whether the stock dividend that a man gets is taxable or not.

Mr. FORDNEY. Suppose a stock dividend is issued to them in place of a cash dividend. A cash dividend goes into the hands of the individual and pays an income tax; but if stock dividends have been issued and that stock were permitted to be used as capital in the corporation's deductions for excess-profits taxes there would be a difference between giving a stock dividend and a cash dividend, so far as a corporation is concerned.

Mr. DUSTIN. I do not quite get that.

Mr. FORDNEY. Suppose you and I are stockholders in a company, and a dividend is paid by our company, and I take mine in cash and you take yours as a stock dividend. Now, the stock of the company has been increased, and if the stock is considered as capital at its par value that would make a difference in the amount of deduction that the corporation would get.

Mr. DUSTIN. Not under the present law, and it should not be. That is not true under the present law, and that is one of the problems that our clients have been putting up to us. You can not get any more invested capital by increasing your capital stock. You can not do that.

Mr. FORDNEY. I have taken mine in cash, but the Government would lose its taxes on your stock if you were permitted, or the company were permitted, to use it as a part of its capital.

Mr. HULL. I would like to ask you some questions in reference to the stock-dividend feature. The power of Congress in dealing with the stock-dividend transactions really rests on the contention that because of the stock-dividend transaction it has a right to tax the profits and to tax the stockholder with respect to the undistributed profits of the corporation.

Mr. DUSTIN. Yes, sir.

Mr. HULL. And Congress, instead of undertaking to tax the stockholders with respect to those profits on any other basis prior to the stock-dividend stage, simply limits its taxes against them to whatever amount may at any time be transferred to capital and the new stock issued for it?

Mr. DUSTIN. Yes, sir.

Mr. HULL. Of course, if the doctrine which the court seems to have approved and which is laid down in the Hubbard case, Twelfth Wallace, which held, broadly, that Congress did have the power to tax the stockholder with respect to any undistributed profits of the corporation, is applied, that would follow. They seem to have approved that, and I take it that that is what you base your present view on with respect to the stock dividend situation?

Mr. DUSTIN. Yes, sir.

Mr. HULL. There has never been any question, at least in my mind, and seemingly none with the Supreme Court, especially when it was following the doctrine in the Hubbard case, that you could feasibly and fairly tax a stockholder with respect to profits that might have accrued while he holds and owns the stock.

Mr. DUSTIN. You could do it constitutionally; yes, sir.

Mr. HULL. And you could do it equitably.

Mr. DUSTIN. Well, I would not say that, because, in view of the large turnover in every corporation whose stocks are listed, there would be great difficulty in collecting the tax by the Treasury Department. I should think it would present an insurmountable obstacle. In 1864 and 1867, when the Civil War income-tax bill was passed, corporations were comparatively few in number, and there was no such condition as there is to-day. A man to-day buys 100 shares of stock and holds it for five days, while another man holds it for six months. The difficulty of collecting it—

Mr. HULL (interposing). I was coming to that point. What I am coming to now is this: We can take that class of permanent investors who buy their stock and hold it as a permanent investment, and they are taxed, not periodically or regularly, but they are taxed whenever a stock dividend happens to be declared. Take this other class of cases, in which a person will buy stock and hold it until its value has appreciated, say, 50 per cent by reason of the undistributed profits. He sells it to another person, and that person pays him 150 and gets it when the stock dividend is declared. Now, either the seller or the original holder and seller of that stock ought to pay a tax on the increased value of his stock, or the new purchaser ought to pay a tax on an amount equivalent to the amount of his profits.

Mr. DUSTIN. I do not know, and that is the reason why I answered Mr. Longworth as I did, that I thought the present method of the taxation of dividends, whether cash or stock, was the proper one. I would not want to say as to that. It would be a mistake, I think, to allow the large earnings of corporations to escape taxation. Now, we do get taxes from them to-day. We get excess-profits taxes and we get income taxes, and then we force distribution to the stockholders by providing a 10 per cent penalty if they do not make the distribution, and then we tax the stockholder.

Now, the method that you suggest of taxing these profits before they are distributed would be impossible, in my opinion, in view of the large number of companies in which those stocks are constantly

changing. There is a turnover in some companies in a year that is more than their entire capital stock. How you would ever get the earnings of companies and tax them against the stockholder, as a practical proposition, is beyond me. But, on the other hand, if you tax, or, rather, if you require every man to make a return of dividends and require the corporation to distribute the dividends, you will get all of the earnings or all of the taxes that the Government can fairly ask for. Of course, the corporation can only keep those earnings which it needs in its business, or, under another application of the law, it may invest them in Government bonds.

Mr. HULL. Under the English law they lay down the doctrine, first, that the question of whether a stock dividend transaction is taxable or not depends upon the nature of the transaction. They do tax, however, without controversy those transactions when they represent profits that have accrued while the stockholder owns the stock. Then they have, of course, a more detailed and more stable situation than we have. For instance, as well as I remember, they provide that stocks may be sold with the dividends or without the dividends, and that the purchaser will pay whatever taxes accrue if he purchases with the dividend. That is to say, either the purchaser or seller would be liable according to the particular state of facts, whether he buys or sells with the dividends or without the dividends. That is the accrual out of which the dividend may or may not be declared, but it seems to me that we have such a complicated situation that we can not establish a system of that kind that would be very equitable.

Mr. DUSTIN. I do not think so.

Mr. HULL. What would you think about the idea—and I am not expressing any views in what I am asking you from time to time—what would you think about a situation like this: If a normal tax of 8 per cent, for example, should be imposed on all individuals and a normal tax of 12 per cent on all corporations, and then insert a proviso that all amounts of profits distributed in cash to stockholders by corporations should only be subject to 8 per cent, while on the gains of the corporation, or, in other words, on whatever amount they saw fit to retain in the business, they should pay 4 per cent more than the amount of the normal tax paid by the individual on account of the profits distributed, as well as on any other individual increase?

Mr. DUSTIN. I do not think that would be at all unjust or unfair. In fact, I think we are prepared to go a long ways in this war to get money. The thing that we ought to do, and the thing that we must struggle to do, is to iron out the inequalities. I have no objection to the law as it stands to-day or any increase of it.

Mr. HULL. Right there, the matter that I think we are struggling with more than any other one thing is this: There have been a great many people coming in here to tell us, and there are a great many people in Congress who are constantly telling us, that we will have to raise \$4,000,000,000, \$5,000,000,000, or \$6,000,000,000 in taxes more than we have, and they say, "You can levy a 60 per cent flat rate, or a 70 per cent flat rate, or an 80 per cent flat rate." That kind of information is not worth much to us, because we have got the amounts

of profits that have been returned under the income-tax and excess profits tax law; but the main things we need to know—and that is where we need all the cooperation we can get—are technical suggestions that will enable us to work out and establish a basis for taxation to which we can apply the proper and fair amount of rate in levying taxes upon the different industries of the country in fair and equitable proportions, so far as the burden is concerned. An 80 per cent rate under the English law does not mean anything when you apply it to our law, so far as any exact comparison is concerned, because you must look at the basis.

Mr. DUSTIN. Yes, sir.

Mr. HULL. The great trouble we have—and it is what some of the public, and possibly some Members of Congress, but not members of this committee, overlook—is the great problem of working out a basis which will take care of exceptional capitalization conditions in computing the capital invested, and which will take care of the different income-producing factors in computing the taxable income and we do not get so many suggestions on that proposition as we do on the question of how much we can take and what rate we should levy, which suggestions are really of least value to us.

Mr. DUSTIN. Well, of course, I have no ideas with respect to rates. My clients who have sent me are very patriotic, and they are giving freely of their time and money. They do not make any suggestions as to rates. We will try to do business as well as we can and pay whatever rates are assessed; but of course there is a limit beyond which you can not go. That is to say, you can not discourage initiative and energy by making the taxes too large. The great difficulty is in reaching only those profits growing out of the war. If there was some way of getting hold of those profits—

Mr. LONGWORTH (interposing). Do you see any objection to having both systems?

Mr. DUSTIN. No, sir.

Mr. LONGWORTH. Both excess-profits taxes based on the invested capital and the prewar system of taxes?

Mr. DUSTIN. I do not know how you could get at a proper war-profits tax. I happen to be interested in a company that did not make 1 per cent in 1911, a little over 1 per cent in 1912, 25 per cent in 1913, about 35 per cent in 1914, about the same per cent in 1915, practically the same in 1916, and last year it dropped down and did not make one-half of its average in the previous four years.

Mr. LONGWORTH. That is a rather unusual case. As a rule, they jumped up from 1913. In that sense, that would not be war profits—

Mr. DUSTIN (interposing). It was hurt by the war. In 1917 the income fell over one-half. For the first six months of this year we have not made one cent, but are \$18,000 in the hole.

Mr. LONGWORTH. Such a corporation should not pay war-profits taxes, but it would come under this provision with regard to invested capital. There are other classes of corporations whose profits are due to nothing else but the war. That is the theory of the English system.

Mr. DUSTIN. Yes, sir; but the English system is pretty complicated when you attempt to apply it to the situation in this country. I do not know, I am sure—

Mr. LONGWORTH (interposing). We found it impossible to have the English system only, simply because of the fact that such a very

large number of rich and prosperous corporations would pay no taxes under it at all. They would pay no taxes under it, because they made as much before the war as after the war, and we could not justify that before the country. For instance, take the three leading examples—the Standard Oil Co., the American Tobacco Co., and the Ford Motor Co.—and they would not be reached under that system of taxation.

Mr. DUSTIN. I am not so sure about that, if you will analyze that one step farther, and when you remember that probably Mr. Rockefeller owns 51 per cent of the Standard Oil Co. and that his taxes readily go into the 60 per cent section. You would get a part of it, even if you did not get it from the company.

Mr. LONGWORTH. Yes, perhaps.

Mr. DUSTIN. And the same principle would apply to the Ford Motor Co.

Mr. LONGWORTH. That would not be convincing to the public at large. The little corporations that had been making very little before the war would have to pay the whole tax, while the Standard Oil Co. would not pay.

Mr. GREEN. We had a young man before us the other day who said that, notwithstanding the provisions of the present law, it would be very easy for corporations moderately capitalized to reorganize and go ahead upon the same basis, but in such a way as to decrease their taxes.

Mr. DUSTIN. I do not see how.

Mr. GREEN. We did not either. However, if there is a way, we want to find out about it.

Mr. DUSTIN. I think you have covered that in the present law which provides that a reorganized company, which is practically a reorganization of the old company, shall be treated for the purpose of being taxed on its business as the prior company.

Mr. FAIRCHILD. A company of \$200,000 capital has issued only \$100,000 in stock; it has been doing business for years, and has never paid any dividends, but it has gradually accumulated strength for itself, and is making 50 per cent on its stock: Now, if a man receives a 50 per cent stock dividend from that company and pays the tax, is he richer than before he got his dividend?

Mr. DUSTIN. He is not any richer. Under the present law he would have to pay taxes on whatever earnings were represented by his dividends to the extent of 1917, 1916, 1914, and back to March 1, 1913.

Mr. FAIRCHILD. As one who is interested, and as a man who has studied these matters, what is your judgment as to the justice of that?

Mr. DUSTIN. I do not see how you will practically deal with all of those situations. I have in mind a case of this kind, where a company has not a large capital, considering its property, and its stock is selling at nearly \$400 a share. It is very anxious to reduce the market value of its stock to \$100 per share for two reasons: The first is that it wants the people in the community where its plant is located to be interested in the company, so that it will get the benefit of the local color, and it also wants to get its employees to become stockholders. Of course you can not get many of the citizens or of the employees to buy stock at \$400 per share. There is something in

human nature that makes you want to see \$100 on the paper that you pay \$100 for. They tried to find some way by which they could increase their capital stock and provide for these things, but they have not been able to find it. If everybody was so disposed, or had as good reasons for this stock dividend as these people, there would not be any harm done, but you must apply the law to the general situation, and I am of the opinion that stock dividends and cash dividends should be equally taxed. That is my opinion.

Mr. FAIRCHILD. Could not a properly constituted board of equalization take some of the labors off the Ways and Means Committee?

Mr. DUSTIN. Yes, sir; and I have heard that discussed a good deal. If a paragraph could be drawn over there enlarging section 210, making the discretion of the Treasury Department broader than that which it now possesses to deal with special situations, I think it would be well. I have not studied it enough to make any suggestions along that line, but, undoubtedly, such a thing would be very helpful.

Mr. FAIRCHILD. There are bound to be a great many inequalities.

Mr. DUSTIN. Yes, sir; in any law that you can draw. As an instance of it, here was one man buying property at \$500,000 as against another man whose property on March 1, 1913, was worth only \$300,000. They are operating side by side under the same conditions, with one man getting the benefit of an invested capital larger than the other. I do not know of any way of eradicating inequalities of that kind. You can not revalue all of the property in the United States every year, and you must simply say to this man, "You paid \$500,000 for your property and we will treat it as actual cash invested, but as for property acquired prior to March 1, 1913, we will stop right short of that, and value your property as of that date, and that is all you can have for capital purposes, and anything you put in afterwards, of course, is new capital."

Mr. FAIRCHILD. Do you not think that with a board of equalizers, a great many of these inequalities might possibly be ironed out?

Mr. DUSTIN. Yes, sir. If you got men of the type or character of the men who are serving now on the Advisory Board, such a board would render valuable service. If you got men of the type who are now serving the Government at \$1 a year—men whose time is worth a great many thousand dollars a year—to serve the Government in this way, I think it would be a splendid thing, but I am afraid that when the war is over those people who have been here doing this work from a sense of patriotic duty will want to go back to their private affairs. A board like that could accomplish great good. Undoubtedly such a board could iron out a great many of the inequalities. I could stand here all day and tell you of inequalities that have been presented to me in one shape or another. Some of them could be cured or partially cured, but some could not be helped at all.

Mr. FORDNEY. Yes; if such men could be obtained, and there are plenty of them. I do not mean to discredit anybody, but if we had such a committee or board as that suggested, with power to discriminate between people and possibly to favor one as against another in saying how much the capital should be increased without taxation, you might run up against a proposition like this: On Friday, last, there was a case brought to my notice by a firm doing business in the State in which I live; they are in the shoe business,

and the board down there recommended that the tops of ladies' shoes should be changed; that they should be no longer than 6 inches; that the tops should be made of leather, etc., and that the button shoe should be eliminated. That is to say, no more buttons were to be put on shoes. That thing was run down, and it was found that a man on that board represented a company engaged in making eyelets for such shoes. The recommendation was made simply in the interest of his own company, which manufactured the machine for making eyelets. The company was not making the eyelets, but manufacturing the machines for making the eyelets. Now, they have done that, unless they have changed it—and they are certainly going to be drawn over the coals if they do not change it—as I say, that has been done, and that decision by that committee is absolutely in the interest of a concern that is manufacturing the machines that make the eyelets. For that reason they want to put the button-shoe men out of business.

Now, as I have said, I do not want to discredit anybody, because I do not know any of those people at all, but by putting power into the hands of individuals, or sets of individuals, instead of putting it into the law, you are likely to have difficulties of that kind.

Mr. DUSTIN. Yes, sir.

Mr. FORDNEY. Now, whether the relief would be of greater benefit to the general public than such discrimination would offset is a question, but those are things to be considered in writing this law, and I believe the safest way is to put the power into the law instead of into the hands of individuals.

Mr. HULL. Right on that point, the Treasury now is given unlimited discretion to make allowances for depreciation, for instance, in a reasonable amount. That is a discretion which might be abused, is it not, or it could be abused if they should depart from the right procedure?

Mr. DUSTIN. It could be abused.

Mr. HULL. In other words—

Mr. DUSTIN (interposing). I would not change that, though.

Mr. HULL. Yes, I agree with you. In other words, they are like any other responsible body of men, and they are not any more so than a court exercising judicial discretion. This board would be dealing with facts and establishing rules to govern certain sets of facts that might arise in these exceptional cases that you spoke of. They would not be any more likely to abuse that discretion while acting in that way than a court would be, if they get the right kind of men.

Mr. DUSTIN. No, sir. In the circumstance just mentioned the man seems to have been found out, and the harm that might have been done will undoubtedly be remedied. Of course you do not make a man any bigger or better by putting him in a Government office, and there are, undoubtedly, men going into office that ought not to be there. My experience with that board has been very good. I have found them very broad minded and disposed to do what is right.

Mr. HULL. Going back just a little, if we should take our provision for excess profits and apply the English rate of 80 per cent to that provision for 1919, it would give up toward \$4,000,000,000 in taxes instead of the one and a half billion dollars that we are getting under

our present schedule of rates. That illustrates very clearly the difference in the operation of our basis of taxation and the English basis, with the two sets of rates. If you have any suggestions to make along that line further than those you have offered, I should be very much interested in hearing them.

Mr. DUSTIN. I do not think I have any.

Mr. HULL. I find a large number of individual cases under the operation of the English law, and the cases of several industries, as well as of individuals, that must be dealt with by some discretionary authority in administering the law, unless you intend to administer it in a very grossly inequitable way, because the law can not lay down an arbitrary rule that will fit into all of the varying complicated and exceptional business conditions that arise, when you undertake to compute capital invested on the one hand and taxable profits on the other.

And I think it is the same way in this country, no matter which basis you take, whether the capital invested basis alone or the prewar standard of profit basis, because you will find a great many exceptional cases and individual cases in these different industries, and you will find quite a number of industries which will present factors other than those recognized by the law. Unless you aim to put much heavier burdens on many individuals and many industries than you do on others I can not see how you can avoid giving the broadest latitude to the administrative authorities the statute can give, of course depending on the selection of men who will exercise that discretion in a judicial and sound way rather than in an arbitrary and capricious way.

Mr. DUSTIN. I am surprised to hear the statement, Mr. Hull, that this tax is going to produce so little revenue as the amount you mentioned. I had supposed that the present law, in all its phases, would produce a revenue of at least \$3,000,000,000.

Mr. HULL. The excess-profits tax, I think, will run around \$1,500,000,000, or a little more. You see, our law is framed from 20 to 60 per cent, which would not average much more than 30 per cent.

Mr. DUSTIN. There is a tremendous amount coming in now from railroad fares, theaters, and everything of that kind, which will add tremendously to it.

Mr. LONGWORTH. The estimate runs a little short of \$4,000,000,000 from all taxes.

Mr. DUSTIN. I see.

Mr. HULL. I was only referring to the excess-profits tax, you understand?

Mr. DUSTIN. I see. With the consent of the committee I will have printed a very short memorandum that I have here and send it to the clerk, if I may. I thank you very much.

Mr. FORDNEY. If Congress should write into this law a definition of capital, the same as in the law of September 8, 1916, you think that would be a just and equitable provision as to the definition of capital?

Mr. DUSTIN. There is no definition of capital in the 1916 law; that is in the 1917 law, where it is invested capital.

Mr. FORDNEY. The act of September 8, 1916—

Mr. DUSTIN (interposing). Fixed the date for computation as March 1, 1913.

Mr. FORDNEY. The definition is now as you say, but if it were fixed as in the 1916 law you think that would be equitable and just, at least, where that can be applied, because it does not apply to all businesses. Of course, that law affects more the corporation whose raw materials are made up of minerals?

Mr. DUSTIN. It affects all. It affects the real estate man.

Mr. FORDNEY. Yes; I should have said that it affects more the miner, the lumberman, and the real estate dealer than other corporations, who buy their raw material to-day and convert it into the finished product.

Mr. DUSTIN. Yes. Of course, it affects those who were in business prior to March 1, 1913—those who started in business since—

Mr. FORDNEY (interposing). You think it would be well to write that provision into this law?

Mr. DUSTIN. It is in the present law. I do not believe I would change it.

Mr. HULL. That provision, of course, only relates to the computation of profits and has nothing to do with the computation of capital invested under the excess-profits law?

Mr. DUSTIN. No. I think that the date March 1, 1913—of course, it is purely a matter of opinion as to what date ought to be selected, but in view of the fact that everybody has been writing their books with reference to that date, I would not change it.

Mr. FORDNEY. Pardon me, Mr. Dustin, my friend from Tennessee, Mr. Hull, says that does not apply to excess profits.

Mr. HULL. To the capital invested computation.

Mr. DUSTIN. No; and that is why it ought to be in there.

Mr. FORDNEY. Suppose you were in the mining business. You have coal, iron, or some other mineral in the ground, and by a thorough test you know how many tons of ore you have in the ground. Thus the value of that property—the ore in the ground—can be fixed as the value on March 1, 1913, and you can use that in your cost of production?

Mr. DUSTIN. You can use it in depletion. As you mine the ore you ought to be permitted to take the value attaching to the ore, as it was there March 1, 1913.

Mr. FORDNEY. Both as to depletion and as to the cost of your production?

Mr. DUSTIN. Yes, sir.

Mr. FORDNEY. The difference between what your cost is to market it and what you get is the profit. If it is permitted to be used in your cost of production why is it not capital?

Mr. DUSTIN. It should be as of March 1, 1913, and that is what my amendment proposes to do.

Mr. FORDNEY. In computing your excess profits, and if it is permitted to be used as your cost of production, why is not all of the ore you own the capital on March 1, 1913?

Mr. DUSTIN. It should be, without reference to the amount of capital stock, if you happen to be a corporation, issued against it. I instanced that awhile ago by telling of a company that had bought land 20 years ago, longer ago than that, for \$6 an acre; they found two large mines and developed them, and I understand they produced a revenue of a large amount, hundreds of thousands of dollars, if not millions of dollars last year, and they paid taxes on it, and yet they

only had that property on their books at \$6 an acre. Of course, that is unfair; it is taking away from them what they had on March 1, 1913, a large part of their capital as of that date.

Mr. FORDNEY. Another illustration, if you please. Maybe I misunderstood Mr. Hull, but we will take lumbermen who have a sawmill and a large amount of timber back of their mill, which they purchased years ago. Now, you can take any sum per thousand feet for stumpage, and in the South it is generally \$5, that being fixed as the fair market price. Now, we will say that on the 1st of March, 1913, they had a certain amount of stumpage, which can easily be determined by competent men, for the purpose of figuring their excess profits, and that being so, why is not that stumpage capital at \$5 per thousand?

Mr. DUSTIN. It should be whatever it was worth on March 1, 1913.

Mr. FORDNEY. Is it not capital under the existing law?

Mr. DUSTIN. No; not necessarily.

Mr. FORDNEY. And would they not be permitted to use that as a part of their capital in their deductions?

Mr. DUSTIN. Oh, no; under section 207 there is no provision to over that.

Mr. FORDNEY. That is under the act of October 3, 1917?

Mr. DUSTIN. Yes.

Mr. FORDNEY. This other says real, personal, and mixed property, the law of September 8, 1916.

Mr. DUSTIN. Yes; that is dealing with income taxes only, where the law does not concern itself with the amount of capital you have but only the amount of your income.

Mr. LONGWORTH. That is an error that so many of our witnesses fall into, in not distinguishing between the excess profits and income tax.

Mr. DUSTIN. Whether March 1, 1913, is the best date or not is a matter of opinion. However, there is logic for taking that date, because you made lawful the assessment of an income tax at that time, and I am not quarreling with the selection of that date.

Mr. CRISP. That is why the committee took that date.

Mr. DUSTIN. Undoubtedly; I appreciate that. When they came to the invested capital, however, they departed entirely from the idea of assessing the value as of March 1, 1913, and said that you might have the cost, but, of course, that is ridiculous. Take the case of the lumberman you mentioned. Suppose the timber has been in his family for 30 years and he organizes a company and turns it over to the company. Now, it only cost his family \$1 per thousand, and on a strict interpretation of the law of 1917 \$1 is all he would be able to deduct, while it was really worth \$5 on March 1, 1913, so that you are simply taking \$4 per thousand of his capital. That is all there is about it.

Mr. FORDNEY. It is not fair, is it?

Mr. DUSTIN. No.

Mr. FORDNEY. That is not good law.

Mr. DUSTIN. It may be constitutional, but it is not the kind of a law you ought to write, because, to my mind, that is palpably inequitable, and it ought to be amended in the new law.

Mr. GREEN. Without regarding these extreme cases that have just been discussed, you realize, do you not, that it is impossible for us to write a law that would be perfectly fair to all of the numerous individual cases that arise?

Mr. DUSTIN. Undoubtedly.

Mr. GREEN. I saw a statement in a Supreme Court opinion the other day, when they were discussing the applicability of the law and whether it could be held to be constitutional, that a perfect tax law does not exist, never has and never will, but, of course, it is our duty, as you state, to try and iron out these inequalities as far as we can. You think, owing to the difficulty of establishing any general rule, or, rather, the impossibility of establishing any general rule, which would fit each individual case, whatever it might be, that it would be well to have some board with power to adjust exceptional cases?

Mr. DUSTIN. I do not see any other way of properly adjusting them. As I said before, I think that section 210 might be broadened so as to include the power to deal with exceptional cases, but if you intended by your previous observation that the present definition of invested capital should be allowed to stand, I think that an injustice exists in that definition itself. You are going back in some cases and taking the cost, and one man may have had an article for 50 years, but you have got to take some date, and injustices will follow from any date, but if we take January 1, 1914, as you did in section 207—I have no objection to that date, because that does not differ from March 1, 1913, enough to amount to anything, and I have not even suggested a change from that date, because I do not think there is very much difference.

Mr. GREEN. I did not intend to refer to that, Mr. Dustin. That is something that it is within our power to correct if it is wrong, because we can establish one date as easily as another. However, we ought to adopt the one which would be most fair and do the least inequity, and that the committee will endeavor to do.

With reference to this matter of boards and commissions, in my study of the English law I have found that they have two boards which endeavor to work out the inequalities which necessarily arise under that system.

Mr. FORDNEY. It would be easy for this committee as it seems to me—I do not know how it appears to the other gentlemen—to define by law a case of this kind, and this is a parallel case with all others: That if your father obtained valuable property a half century ago and 10 years ago gave it to you, your capital invested is nothing; consequently you have no capital, although you have a very valuable property. That is the inequality of the existing law.

Mr. DUSTIN. Yes, sir.

Mr. FORDNEY. It ought to be easy for this committee to correct that law.

Mr. DUSTIN. Yes; you ought to select a date before the unnatural valuations were given to property growing out of the war. Whether that date ought to be March 1, 1913, or January 1, 1914, does not make any difference, but it would not be proper to take January 1, 1917, because everything is up on a very high plane on account of the enormous earnings. Any date you take prior to the starting of the war is merely a matter of opinion. For that reason I did not suggest any change to January 1, 1914, because I did not think it cuts any figure. The war had not been started and there had not been any changes in value due to the war.

Mr. FORDNEY. Because of the fact that the courts have held that this law was constitutional from that date, or at that date, March 1, 1913, and all the incomes accumulated since that time have been subject to a corporation, or a corporation and income tax both, or an excess-profits tax, would it not seem that would be the most fair date that we could select in order to be just to the Government?

Mr. DUSTIN. Except this, that January 1, 1914, has been in operation partially during the past year and a lot of people have got their books written up and their inventories made on that basis, and I can not see any advantage in changing it from January 1, 1914, back to March 1, 1913.

Mr. FORDNEY. There is no very great or material difference between real values on March 1, 1913, and January 1, 1914.

Mr. DUSTIN. No; neither were influenced by the war, because nobody thought of the war at that time.

Mr. FORDNEY. Therefore any date after that time would be fair.

Mr. DUSTIN. Any date before the values had assumed an abnormal condition because of the war would be fair to everybody.

I thank you, gentlemen, very much.

Mr. SLOAN. A good deal of difficulty arises from the varying character of these corporations and business concerns not only in their organization but in the way they work out. Therefore do you not believe we can follow the same system and by a system of classification, worked out and stated in provisos, exceptions, and so on, based upon a careful investigation and classification of the tens of thousands of cases that are and have been before the Treasury Department—that a classification of these business concerns could be effected and written into the law which would give a great deal of flexibility and elasticity to the law in applying it to the very widely diversified character of corporations and businesses of the country called upon to respond to this demand for taxes.

Mr. DUSTIN. Do you mean that because the Treasury Department has been struggling very hard to iron out some of these inequalities that we might incorporate some of the regulations which have that purpose in mind?

Mr. SLOAN. Yes; and while these exceptional cases will differ, perhaps, one from another, it will be natural, as you know, for them to fall into general classes. It is like studying case law and evolving a principle from a very large number of cases instead of trying to apply cases to principles. Do you not think that could be done?

Mr. DUSTIN. It is possible, but it would be a pretty big job, if you undertook to classify business in that way.

Mr. SLOAN. That has been done in all of the States, and it has been worked out in that way.

Mr. DUSTIN. It is possible.

Mr. SLOAN. Do you not think that the experience of the last year would dictate that we keep as close to the present basic law as we can and rather work out modifications and classifications of it rather than to change the basic statements that you find there?

Mr. DUSTIN. My preference would be that the present law should be broadened, and if you need more money change the rate of taxation rather than to attempt to get an entirely new system of law. But I have not given the subject enough study to volunteer an opinion, and certainly would not, because you gentlemen have studied

it a great deal more than I have. I have looked at it from a lawyer's standpoint to find out what it meant, rather than to suggest new forms of raising revenue.

Mr. SLOAN. But the minute you see an objection, as a lawyer you immediately think about a remedy.

Mr. DUSTIN. Yes.

Mr. SLOAN. And thinking about that, and the experience you have apparently had would probably suggest——

Mr. DUSTIN (interposing). I have not studied it with reference to any further suggestions than the two I have mentioned here, or three, because I filed a suggestion the other day on the subject of the depletion of mineral properties, and then invested capital and the possibilities of allowing borrowed money to be treated as working in the business. It seemed to me that was something that ought to have been allowed.

Mr. SLOAN. Would you not suggest that the mining business, the oil business and so on, where small capital is invested, and where there is great hazard in the business, should fall into a class by themselves, and be treated somewhat differently from a business which might be called a stable business and conservative in its character.

Mr. DUSTIN. There are great difficulties in that. You might delegate that to a committee, but there would be great difficulties in putting that into law. For instance, I have clients who have iron mines where they will practically exhaust their mines in the next two or three years. Now, it is pretty hard on them, because there is a potential profit, under normal conditions, of a large sum, yet to-day they are handing over 50 per cent of it to Uncle Sam. Then you will find in every department of the iron business companies that will have enough ore to run from one year up to one hundred years. Now, if you begin to care for them and say that the fellow who has three years of ore is to be treated in one way while the fellow who has 50 years of ore is to be treated in another way, because he will outlast the war, you are going to get a law which will be pretty hard to administer, unless you delegate a very general power to some committee. I do not believe you can legislate on that.

Mr. SLOAN. They are selling their capital just as a farmer is selling his capital, unless he replenishes the fertility of his soil in every way, and in some cases it is more marked than in others, but where they are selling and rapidly disposing of the capital, as in the first instance, it seems to me they could be thrown into a class by themselves.

Mr. DUSTIN. That is possible.

Mr. SLOAN. The Government would also get what is coming to it, and that is why it occurs to me that a classification ought to be wrought out.

Mr. DUSTIN. I understand that there are certain mining industries, like zinc in Missouri and Oklahoma, where the operation runs only a very short period of time, and I should be afraid that if the Government presented legislation of that kind there might be very little inducement for new people to go in and take the risk. In the iron-mining business we are different. As a rule, our deposits are large enough to last 10 or 15 years. A man with only two or three years of war ahead of him—and, of course, there is nobody who would suggest that this tax should last very much longer than the war, but

with 7 or 10 years of life before him any man will keep right on mining notwithstanding the war and the fact that the chances of actual profits are not large, because while he is permitted his depletion, we do not give him back anything; that simply hands him back the money or value he had on March 1, 1913; he gets a portion of his profit, but his profit is not large as compared with what he would get under normal conditions, yet he is willing to stay because he is going to have eight or nine years life after the war is over.

Mr. SLOAN. As to some of the things you have been referring to, the Government, you must recognize, is losing a certain amount of income, because men will not sell at the present time on account of the tax that the Government immediately draws from them, and it would be so large in proportion to their profits that they are attempting to hold rather than sell.

Mr. DUSTIN. That is true of real estate to-day, and no man to-day with a big piece of real estate would sell it under existing law.

Mr. SLOAN. Do you not think that a classification there would be wise for the Government, not specially tempering it to the owner, but wise for the Government so as to induce and encourage free transfers.

Mr. DUSTIN. I presented a memorandum to the Senate committee, when this war profits law was before them and before it was passed, suggesting that an exception should be made in the case of real estate and that it should have a value fixed as of, say, January 1, 1917, pointing out that a man would not be so stupid as to sell a piece of real estate to-day and pay an income tax on the value over its value on March 1, 1913; he would not do it; he would find some other way to handle the thing; he would lease the real estate to somebody, or something of that kind, and give an option to purchase at some future date; in other words, the Government would not get any tax out of it, and that it was very foolish to pass the law in that way, but what I said did not sink in.

Mr. SLOAN. I think there is a great deal in your suggestion, but this is a matter of obtaining money and not a profit for any taxpayer, or anything of that kind; it is a question of having something that will encourage the payment of taxes.

Mr. DUSTIN. A dealer told me a few years ago that when the tariff on diamonds was, I think, 10 per cent, how much revenue Uncle Sam got, but that when the rate was put up to 40 or 50 per cent Uncle Sam did not get anything, because the diamonds were then smuggled.

Mr. SLOAN. In other words, the traffic would not bear any more than 10 per cent?

Mr. DUSTIN. No; the profit on smuggling was too great. It seems to me that is a thing we have got to look at in framing this legislation; it is money we are after, and if you make it too high you do not get the money and you defeat the very purpose you have in mind.

Mr. SLOAN. Your suggestion, then, would be not to make the valuation of real estate as far back as March 1, 1913, but some reasonable date that would encourage the free transfer of land?

Mr. DUSTIN. Yes. You take these operations in large cities where farms have been divided up into lots, as far back as 1914, and I know of several cases where they are absolutely making no sales at all.

STATEMENT OF MR. ROGER W. BABSON, OF WELLESLEY,  
MASS.

Mr. FORDNEY. Mr. Babson, what is your business or profession?

Mr. BABSON. I am a statistician and public accountant.

Mr. FORDNEY. Do you represent any particular industry?

Mr. BABSON. I represent my clients in general, manufacturers.

Mr. FORDNEY. You are an attorney?

Mr. BABSON. No; I am a statistician and accountant.

Mr. FORDNEY. What line of industry do you represent?

Mr. BABSON. We do work for all kinds of manufacturers, manufacturers in general; no definite line.

Mr. STERLING. What is your connection with the Department of Labor?

Mr. BABSON. I have been engaged since the first of the year in tabulating the surplus in shortage of labor for them. That is purely a voluntary affair, and I am not here representing the Department of Labor.

Mr. SLOAN. You are the Mr. Babson whose table Mr. Schwarzmann presented at some length here about 10 days ago?

Mr. BABSON. Yes, sir; I presume so, although I do not know Mr. Schwarzmann.

Mr. HAWLEY. You ought to get acquainted with him, because he spoke very highly of you.

Mr. BABSON. Thank you. The message I have to bring this morning is to get you men, if possible, to give greater consideration to good will, especially good will secured through advertising. In the work which we do for our clients, that appears to us as the great injustice of the present law. For instance, I have in mind a man who owns some asbestos land. This land was worth little or nothing. The question came up as to whether he should get an engineering expert to develop that land and take his chances on selling the product or whether he should get an advertising expert to create a demand for that product and then prepare to develop the property.

In the first place, if he takes the money and uses it and gives it to the engineer and lets him hire day laborers to work up that proposition, he can charge those expenses to invested capital and they are recognized by you as invested capital. If, however, he gets a publicity man and uses that money to develop a market for the product, then that is handled and treated by you on an entirely different basis.

Now, another illustration, a building is worth a certain sum. Additions to the value of that building, or that hotel, for instance, are made by employing carpenters and decorators. You allow that as invested capital, but adding to the value of that hotel by employing publicity men, you do not recognize as adding to the invested capital. My asbestos mine, so far as actual property goes, contains no more asbestos after it has been developed than before. The building contains no more bricks and mortar, and we do not see where a distinction should be made in the development of good will whether it be done by a publicity man or by a day laborer.

My plan is that you gentlemen judge industries according to their values rather than according to their costs.

Mr. FORDNEY. Will you permit me to interrupt you, or would you prefer to conclude first?

Mr. BABSON. I would rather have you interrupt me.

Mr. FORDNEY. Do you not think there is a difference in the value of the asbestos mine where you employ a large number of men to open it up and develop it and prove the value of the product in the ground and where you advertise the product of that mine not knowing what is in the ground?

Mr. BABSON. No, sir; I do not. I think there is where the whole thing is being approached from the wrong viewpoint, because the demand comes first. We must have the demand before we have business.

Mr. FORDNEY. Yes; but you have got to show that you have something before you can sell it, and your product in the mine, not knowing what is there until it is developed, it seems to me would be on an entirely different status where you advertise through the newspapers that you have got something that you can not show to anybody.

Mr. BABSON. There would be an engineer's report in the first place and, of course, the man would want to be sure there was something there before he started his advertising campaign; but my point is that you should not make a distinction, as I see it, between the man who develops good will through advertising, a hotel, for instance, and a man who develops good will through interior decoration.

Mr. FORDNEY. For instance, take a manufacturing company that goes out into the market by sending men out and interviewing the trade and hunting up customers and selling them goods. In that way they prove to their customers what their goods are and the value of them. The customer purchases the goods and knows that the value of the goods is according to representation. It costs that company a great deal of money to send men around the country and obtain trade in that way, whereas you claim that if they advertise through the medium of papers, they can use it as good will but they can not use it as good will—

Mr. BABSON (interposing). I should consider both as good will if it increased the value of the business.

Mr. STERLING. How would you estimate the value of good will?

Mr. BABSON. I would estimate the value of good will by what it would bring in the market; what the business would bring in the market.

Mr. STERLING. You would estimate its value on its earning power?

Mr. BABSON. No; not on its earning power. There is a distinction there. I would estimate its value on what it would earn without additional advertising or selling, so to speak; that is, its momentum. I used this illustration the other day. We have a certain train. It is being hauled by an engine. If the coupling should be pulled out and the engine should pull away, that train is going to travel a certain distance on the track by itself. Now that distance the train would travel without that engine is what I call the good will.

Mr. STERLING. How would you fix the value of it? How are you going to tell how far it would travel?

Mr. BABSON. The market price of the proposition. I think that could be appraised like anything else.

Mr. STERLING. Is it not true that the only possible way to get anything like the definite value of good will is through earning power? What do you think is a fair return on an investment now?

Mr. BABSON. Oh, I think it depends entirely on the character of the business.

Mr. STERLING. I mean what is money worth?

Mr. BABSON. It depends entirely on the value of the business, whether it is a newspaper business that is very largely good will and yet very valuable, or whether it is a railroad business, where the good will is of no consequence at all, because it has a monopoly. I mean to say, I think it might be anywhere from 6 to 40 per cent.

Mr. STERLING. What do you think would be a fair return to a newspaper man?

Mr. BABSON. I should say not less than 25 per cent.

Mr. STERLING. Are there very many making that?

Mr. BABSON. No; I should say not, by any means. On the other hand, it comes right back again to the question of whether you figure on capital invested or figure on value.

Mr. STERLING. Of course. Suppose you compute the value of property upon its earning power. Suppose it earns \$100,000 a year and say money is worth 10 per cent, how much would you value the property at on that basis?

Mr. BABSON. It would depend on the character of the business, absolutely.

Mr. STERLING. \$1,000,000, assuming it is worth 10 per cent.

Mr. BABSON. No; it is the character of the business.

Mr. STERLING. I am assuming it is worth 10 per cent, regardless of the character of the business. You would put his capital in that instance at \$1,000,000, would you not? Say he is entitled to earn 10 per cent and he earns \$100,000 and has \$500,000 invested, then the rest of it would be good will.

Mr. BABSON. No; I should not figure it in that way at all. I should figure the good will on the basis of what the business earns without these abnormal efforts.

Mr. STERLING. You can not figure what the business earns unless you have some standard by which to measure the value of the good will.

Mr. BABSON. I should say——

Mr. LONGWORTH. Mr. Babson, pardon me, there was a specific recommendation made here by Mr. Garrett, representing the New York Chamber of Commerce. He made a specific recommendation with reference to the value of good will. I will read his suggestion:

Section 207, subdivision (a) should be amended in such manner as to allow a fair method of valuing good will, patent rights, copyrights, etc., in cases where there have been no transfers thereof.

That is what you refer to?

Mr. BABSON. Yes.

Mr. LONGWORTH (reading):

It is suggested that such amendments should take the form of permitting the corporation a return on the amount of these items which have been carried as the value thereof on its books, provided such good will and other intangible items have, together with the tangible assets, during a period of three years, earned a return to the corporation at least equal to 8 per cent.

What have you to say as to that suggestion?

Mr. BABSON. I think it would be a great improvement on the present law.

Mr. STERLING. Suppose that was adopted, do you not know that you would not get a cent of excess profits, giving 8 per cent on invested capital?

Mr. BABSON. I should not say that.

Mr. LONGWORTH. Mr. Babson, it does figure out in that way. For instance, using the illustration given by Mr. Kitchin at that time, suppose you invest \$100,000, which is the amount actually invested, and it brings a return for three years of 40 per cent. Capitalizing at 8 per cent would represent a capital of \$500,000?

Mr. BABSON. Yes.

Mr. LONGWORTH. Now, if you were allowed in that case to deduct \$500,000, you have no excess profits under capital at all, because it is just 8 per cent, and there would be no excess-profits tax arising from it.

Mr. BABSON. I had not heard this suggestion read before, and if it shows no excess profits, I do not believe in it, that is all. I believe the Government has got to have money, but what I am fighting for or interested in is the fundamental principle that good will secured through educational work, whether through salesmen or through advertising or through any other means, is just as much an economic factor and is just as much a commodity as bricks or mortar or anything else.

Mr. LONGWORTH. The trouble about that is, as Mr. Sterling suggested, how you would frame that into line, and I read you the only definite suggestion we have had.

Mr. BABSON. I would like time to think that over and figure it out.

Mr. LONGWORTH. When reduced to its ultimate analysis it means there would be no excess-profits tax at all.

Mr. BABSON. Then I think we ought to have a chance to go at it in some other way. I had not heard this read before, as I told you.

Mr. RAINEY. Here is a concrete illustration. The R. J. Reynolds Tobacco Co. has put out a brand of cigarettes which they call the Camel cigarettes. Their advertising consists of the picture of a camel on the packages. They hold that copyrighted picture to be worth \$10,000,000 and have been offered that much for it, and could sell it for that amount. There is nothing to go except the picture and you could put any kind of cigarette in that package and the valuable thing is the picture, which they have copyrighted. Do you think that ought to be estimated at \$10,000,000?

Mr. BABSON. Yes, sir; I do. That is just what I was coming to. That is the distinction I would make. You suggest that the good will be determined by the earning capacity of the business.

Mr. LONGWORTH. Capitalized for a certain series of years.

Mr. BABSON. Yes.

Mr. LONGWORTH. That is this suggestion.

Mr. BABSON. My idea would be to have the good will determined by the salable price of the brand.

Mr. FORDNEY. Now, Mr. Babson, take another illustration. The law does not permit you to use as invested capital the increased value of your property. Suppose you purchased it 30 years ago, in figuring your excess-profits tax, the law will not permit you to use as the value of your property the increase in that value.

Mr. BABSON. It will if I have increased that——

Mr. FORDNEY. But you would——

Mr. BABSON. No; it will if I increase that value by the use of carpenters and painters.

Mr. FORDNEY. You put your money in 30 years ago, and it has increased in value, and you could get a higher price for it to-day because it is worth more money, yet the law does not permit you to use it as invested capital. Now, you would permit good will, no matter how it came, by advertising or otherwise, for instance, \$10,000,000 for this homely camel picture on a package of cigarettes made in black ink and put on there cheaply, and it did not cost anything to put it there——

Mr. BABSON. Oh, yes; it cost millions to put it there.

Mr. FORDNEY. Oh, gracious, no. Where did they get it?

Mr. BABSON. In the advertising.

Mr. FORDNEY. No; it just took on the market, just like Bull Durham.

Mr. BABSON. No; it took millions to get it that way, and if we are ever going to develop our foreign trade after this war, it is absolutely essential that we encourage the development of trade-marks.

Mr. FORDNEY. You would use as invested capital good will, no matter how obtained, and you would not use the increased value of the property?

Mr. BABSON. No; I did not say the latter.

Mr. FORDNEY. The law does not permit that. Would you change the law and permit it to be used?

Mr. BABSON. I would, as the previous speaker suggested; yes.

Mr. SLOAN. Mr. Babson, in any State of this Union do they allow good will to be taxed or considered as a part of the capital for any State purpose? You are a statistician.

Mr. BABSON. But I am not a lawyer.

Mr. SLOAN. But you are a statistician, and this is a matter of legal construction. It is a matter of knowledge that a statistician would have and a lawyer probably would not. That is why a western lawyer asks you the question. Is it not a fact that good will is neither taxed nor considered in the make-up of valuation for taxation in any State of this Union?

Mr. BABSON. I did not know that was so.

Mr. SLOAN. I understand it to be true, and I sought to verify it from you.

Mr. BABSON. What I mean by good will is the value of brands.

Mr. SLOAN. Now, just one other question: Is not another reason why you could not take into consideration this good-will matter the fact that while you spend money and have the cost which you might start out with, yet the evidence of that expenditure is so flimsy and hard to get at ordinarily that it would be an unsafe proposition to use in business concerns? Now, you spoke about the carpenter and the decorator who are employed to come and beautify or repair the building. You not only have the evidence on the books of what is spent in that regard, as you would in buying the good will according to your theory, but you have the tangible material there to prove itself; and, as a matter of evidence, is it not a rather unstable proposition for the Government to say to its taxpayers, "I am going to

let you have this means of defending the payment of large taxes," because if your theory was carried out undoubtedly the Government would lose a great deal of taxes that it would get if it did not extend the privilege you are asking.

Mr. BABSON. I do not think in the long run the Government would lose those taxes, because these brands are absolutely essential in the development of foreign trade.

Mr. SLOAN. But we hope this is not going to be "a very long run."

Mr. BABSON. Germany's great success in her South American trade—and I was sent to South America by Secretary McAdoo; I have been there three times studying this same proposition—and the great success of the German development of foreign trade has been in the use of brands and in the encouragement by the German Government of brands and good will, and what little success we have had there has been by the few concerns who have thus far established brands.

Mr. FORDNEY. Do you think the German brand in America hereafter will advertise German goods?

Mr. BABSON. No, I do not; but I think it will in South America.

Mr. FORDNEY. Do you not think we ought to put it upon everything made there and have upon everything imported where it is made?

Mr. BABSON. I think that would be a splendid idea.

Mr. LONGWORTH. Mr. Babson, I am with you so far as the tax in time of peace is concerned; in fact, I made very much the same sort of argument you are making against the excess-profits tax when first proposed as a revenue measure before the war started. I made very much that same point that you are making, that it tends to be a tax upon efficiency of production rather than upon volume of production.

Mr. BABSON. Absolutely.

Mr. LONGWORTH. But we are face to face with the raising of war revenue, and to follow out your conclusion to its last analysis you would have no excess-profits tax on such a corporation as you mention, because if you are going to value the good will at its market value or the return that it would make for a specific period of years, as this gentleman suggests, you come right down to the exemption and therefore there would be no excess-profits tax. Now, if this excess-profits tax is to be levied under this system of basing it on invested capital, which is defined to be the amount of capital put in the business, in order to raise the large amount of taxes necessary we can not permit the valuation of that property to be made at what would be its actual sale price at the time the tax is levied.

Mr. BABSON. The discussion of the problem thus far has been on the basis of earning capacity, and on the basis of earning capacity as suggested by these gentlemen and as suggested by the statement you have read your interpretation is correct, but my suggestion is based on the valuation of brands as such, and that would not cut down the profit to any such extent as you imagine.

Mr. LONGWORTH. It might be the major part of the value of that corporation.

Mr. BABSON. Then, if it does cut that way, it ought to be allowed to cut, and everybody raised proportionately to make up the money.

Mr. LONGWORTH. The moment you do that you exempt him from an excess-profits tax under the present system. The trouble is that

we have two systems to resort to for the collection of an excess-profits tax—one of them, our present method, where you have to base it on the present capital. Then you have the British method, where you base it on the difference between the prewar profits and the war profits. Now, if we undertake to include trade-marks, good will, and all that sort of thing, up to the point of their actual value, we destroy to that extent the revenue-producing power.

Mr. BABSON. If that is the just thing to do, what if we do?

Mr. LONGWORTH. We have to raise the revenue.

Mr. BABSON. Not unjustly.

Mr. LONGWORTH. It is a question of the exact justice of it, but as a matter of fact, if you allow a corporation such as Mr. Rainey indicated, the Camel brand of the American Tobacco Co., the main value of whose product is that brand, to pay a tax on the actual investment only—

Mr. BABSON (interposing). The brand, not the company.

Mr. LONGWORTH (continuing). Then you destroy the revenue-producing power of such a tax as this. When you are basing the tax on the first value of the whole property and not the amount of capital actually invested, it works an injustice, as I say; and I argued against it in time of peace, and I offered an amendment on the floor to strike out the excess-profits tax substantially in principle the same as this; but that was in time of peace, now we are at war. We have only this method to-day in the law of raising an excess-profits tax, and your proposition argues in favor of a great reduction of that, decreasing the revenue rather than increasing it. I will admit the injustice in time of peace.

Mr. BABSON. I admit that it would be a great reduction by treating everybody justly, but it would only mean the raising of the tax on everybody of 1 per cent, perhaps.

Mr. LONGWORTH. I wish you would figure it out and give us some illustration later as to the working of your proposition.

Mr. BABSON. On the value of brands?

Mr. LONGWORTH. Of letting brands be put in at the market value.

Mr. BABSON. For instance, in a newspaper like the New York World the value is not all represented by the earnings.

Mr. LONGWORTH. We are talking about the earnings, the revenue, based on the invested capital and the consequent excess profits. I wish you would think that over and see how that figures.

Mr. BABSON. That is on the basis of earnings? My suggestion is on the value of the brands.

Mr. LONGWORTH. I know, but who is going to value it? It figures out the same proposition. If you value it, you value it at the marketable value—what somebody would pay for it.

Mr. BABSON. I think there is a distinction. Concretely, my business is known as Babson's Reports. Now, I have a certain income at the present time as Babson's Reports. Now, I believe that if you could buy that business and change that name to Longworth's Reports, I believe that the income would drop off a certain amount to start with, with due respect to you.

Mr. LONGWORTH. It would be nothing.

Mr. BABSON. It would not be nothing. You probably would not lose more than 10 to 20 per cent at the outside. That is the good will of my business. That is the value of my brand. It is not the earnings of the business.

Mr. LONGWORTH. If it is only about 10 or 20 per cent of your total capital it would not make very much difference, but I am speaking of concerns whose trade-marks are worth a large proportion of the business; they may be worth all of it, or the cash may be comparatively negligible. If you are going to allow the trade-mark to be valued at an amount which somebody would pay, after all that always gets down to a question of earnings. This is the definite concrete proposition. Capitalize your good will at 8 per cent, we may say, or 10 per cent, or 15 per cent, or 20 per cent in every case, and the logical result is going to be a greatly diminished return from the excess-profits tax under this present system. I wish you would work that out and make definite illustrations as to just how much that would bring in.

Mr. BABSON. You believe that there is an injustice under the present system?

Mr. LONGWORTH. I assume that there is injustice.

Mr. BABSON. My point is that I have a hotel, and I spend money on interior decorations to get me more business, and I can put that money under invested capital, but if I spend it on newspaper advertising you don't let me put that in under invested capital. I feel that that is not only an injustice but it is a very shortsighted business policy for the United States Government.

Mr. LONGWORTH. But it does raise the revenue. As I say, I see the logic of your position, to get revenue in time of peace, and I will be with you as soon as the war is over and we do not have to have this war revenue in order to give every kind of encouragement to the development of business.

Mr. BABSON. You are a man who was foremost in getting us to prepare for war in time of peace; isn't it just as important for us to prepare for peace in time of war?

Mr. SLOAN. The question of war preparation is involved now.

Mr. LONGWORTH. Yes; and peace preparation now, in which money is necessary.

Mr. RAINEY. Are you through now, or if not can you come back at 2.30?

Mr. BABSON. Just as you wish.

Mr. LONGWORTH. I was hoping that Mr. Babson would give some more concrete illustrations.

Mr. BABSON. It simply depends on whether you are interested in this general system. If you have closed your minds—

Mr. LONGWORTH. It is a most interesting matter. We admit the unfairness in some cases. If you can make some suggestions as to making it a little more fair without losing a very large amount of revenue we would be very glad to have the suggestions.

(Thereupon, at 12.35 p. m., the committee took a recess until 2.30 p. m.)

## AFTER RECESS.

The committee met at 2.30 p. m. pursuant to adjournment.  
Mr. RAINEY. We will hear Mr. Bruckner.

## STATEMENT OF HON. HENRY BRUCKNER, NEW YORK CITY.

Mr. RAINEY. Give your name and occupation.

Mr. BRUCKNER. Henry Bruckner, New York City; manufacturer of mineral and soda waters.

Mr. MOORE. And formerly a Member of Congress.

Mr. BRUCKNER. You won't hold that against me, will you?

Mr. MOORE. Not at all; that is rather to your credit.

Mr. FAIRCHILD. Is it?

Mr. MOORE. We will admit it; Mr. Bruckner does not deny it.

Mr. BRUCKNER. I can't.

Mr. MOORE. I didn't think you would, even if you are working in other fields now.

Mr. BRUCKNER. I am vitally interested in this new revenue bill, inasmuch as it is proposed to tax the soft-stuff industry. From what I can gain informally from the members and others you propose a tax that is almost prohibitive. It has been suggested, as I understand it, that the tax is to be placed on the consumer; in other words, that the consumer is to pay the tax, and that glass is going to be taxed. I fail to understand or comprehend, I might say, how you are going to arrive at this tax or how it is going to be uniformly distributed. It seems to me that the proper method would be as the tax is now on the liquid drums; every manufacturer of soda water must use the liquid drum. The few that do not use them are reputable concerns who will pay the tax as they do now, on their output, at the rate, I believe, of 1 cent a gallon.

As I understand it, the tax is to be, or it has been suggested that the tax would be 1 cent on a 5-cent or a small bottle. There are now only two styles of bottles that I know of, the half pint, which is used in the café, and the quart bottle, which is used by the family. They both sell at about the same price. Of the small stuff, the half pint bottle, there are 2 dozen bottles in a case, and in the larger case, there are 1 dozen quarts. Now, then, if it is proposed to put a tax of 1 penny a glass the small case would be taxed 24 cents, and the large quarts, four times as much, would be taxed double the tax, and what is to prevent the unscrupulous dispenser from using the stamp as you propose? It was argued here last year when this same matter was before the committee, that a stamp tax did not seem to be the proper thing. I am only willing and anxious to discuss the matter with the members of the committee here.

Mr. FAIRCHILD. What is the present tax?

Mr. BRUCKNER. Five cents a pound on liquid gas and on the manufactured product 1 cent a gallon.

Mr. FAIRCHILD. How do you understand that the charge is to be made? What is your basis of information?

Mr. RAINEY. We have no advices here.

Mr. BRUCKNER. I have only read, Mr. Chairman, the hearings.

Mr. MOORE. I will say to you, Mr. Bruckner, for your information, that it has been suggested here several times when acid men have

appeared, that inasmuch as we have to raise twice as much revenue for 1919 as was raised for 1918, and would necessarily have to get more out of the bottling business that it might relieve the whole situation if the tax were put upon the glass and passed on to the consumer. It has been a suggestion only.

Mr. BRUCKNER. Is it the intention of the committee to tax the acid water men twice as much under the new bill as under the old?

Mr. MOORE. I do not think anybody can speak for the committee.

Mr. BRUCKNER. If it is the intention to raise twice the revenue under the new bill as under the old, to double the old bill—

Mr. MOORE (interposing). Not necessarily. Here is the situation. We have raised about \$12,000,000,000 for the year 1918 by taxes and loans. The President came to Congress a short time ago and made an address stating our war necessities and said in substance that we would have to have \$24,000,000,000 for the year ending June 30, 1919. That would be just double the amount raised for the present year. That is how the impression has gone about. Now, then, the Secretary of the Treasury has indicated that of the \$24,000,000,000 to be raised next year \$8,000,000,000 of it should be raised by taxation. Now, that means if we are to raise \$8,000,000,000 by taxation in 1919, and we raised only \$4,000,000,000 in 1918, we must get \$2 in 1919 for every one raised in 1918. That is the reason for the impression going abroad that we would have to have double taxation. It means that we have got to get \$2 next year for every one that we got last year.

Mr. BRUCKNER. I do not want to go on record as being opposed to having our industry taxed. I must admit that our industry must be classed as a nonessential. It is the soft drink business, and if you want to tax our industry twice the amount, why not tax it the same way as now instead of reaching it some other way?

Mr. MOORE. Just double the tax on the drums?

Mr. BRUCKNER. Yes.

Mr. MOORE. That is a question to be determined.

Mr. LONGWORTH. What is the price?

Mr. BRUCKNER. Five cents.

Mr. LONGWORTH. A 5-cent tax would be 100 per cent. What is the price of gas per pound?

Mr. BRUCKNER. Six cents.

Mr. LONGWORTH. It is practically 100 per cent tax.

Mr. BRUCKNER. Yes, but that is a fair way to reach the bottlers. Acid water is dispensed two ways, at the soda fountain and by the bottlers, sold to families. I am myself most interested in the bottlers' business, not the soda fountain business, but the soda fountain must use liquid gas to dispense its soda, and there is where you get the soda fountain man with the tax; that is where you get everybody.

Mr. MOORE. Since you left the halls of Congress to take up administrative work, you may not have followed matters as closely as you did before. Therefore I am going to report the situation as reported by the Internal Revenue office. They submitted a statement to us recently by which it appeared that there was collected on beverages which includes yours, in the month of April, 1916, \$350,887. Under the new war tax law which we are supposed to revise, it was estimated that we would collect for the year ending June 30, 1918, out of beverages \$2,582,000, and that we would be able under the present

law to collect for the year ending June 30, 1919, a total of about \$5,000,000. Now, then, that is under the existing law. If \$5,000,000 is a fair statement of the estimated receipts from beverages for the year 1919, that is to say the year ending June 30, 1919, we might expect to raise twice that much for the succeeding year, and the question is this, so far as I have seen it, and so far as we have been able to get it from witnesses who have appeared before us, shall we increase the tax on drums which would mean a tax against the producer of the carbonic acid gas, to raise that additional revenue, or shall we so arrange the tax as to pass it on to the consumer who buys it at the soda water fountain, or who buys it in the grocery store, railroad train, or wherever he gets it, and if we are going to adopt the second plan, which would be to pass it on to the consumer, how will we make the law enforceable to reach not only the well organized soda water fountain men, but the man who sells to the boy who drinks it out of the neck of the bottle?

Mr. BRUCKNER. The only fair way is the drum tax. Any other way it is going to cost money to collect from the small dealer. I do not think it will cost the Government anything to collect this way.

You know that the main ingredient in soda water is sugar. For the next six months the soda water business is limited to 50 per cent of the sugar it used last year.

Mr. MOORE. We have heard from other gentlemen who have come here on the soda water business, and most of them had rather taken the view of putting the tax on the consumer.

Mr. BRUCKNER. It will be all right, Mr. Moore, if you could enforce that, but I am practical enough to know that it will not be so.

Mr. MOORE. Understand I am not advocating it, because we have not discussed this in the committee at all yet. We are really fishing for information, and some of those gentlemen said that it would be helpful to have the tax passed along this way.

Mr. BRUCKNER. If a tax must be raised, the best way and the fairest way is to treat everybody uniformly. That is my idea in taxing the liquid drum. As I stated before, a great many people imagine that the small bottle, sold to the man at the ball game and in the picture show is all there is to the business. But there is another side. The family who consumes soda water from the quart bottle. That quart bottle has four times the content of the half pint bottle, and sells for only the double price, the half-pint bottle 5 cents, and the full quart bottle 10 cents.

Mr. MOORE. It would be a simple process, wouldn't it, to go into a Washington drug store and buy a drink of soda water, and get a check for 5 cents or 10 cents, whatever the price might be, just the normal price, and find that when the check is handed out to me it is marked 1 cent or 2 cents war tax, just like at the moving picture show.

Mr. BRUCKNER. Yes, but the moving-picture performance lasts 2 hours, the ball game lasts 2 hours, the theater several hours, but soda water in warm weather is consumed from 6 o'clock in the morning until 12 at night.

Mr. MOORE. You mean that a man who wanted five or six drinks would have to pay two or three times the taxes collected at the moving-picture show?

Mr. BRUCKNER. What I wanted to suggest is that charging that 1 penny on the small bottle, if it is going to be the same ratio on the large bottle, the large bottle will be taxed four times as much, because the contents are four times as much, but the bottle sells for only twice the amount. It requires only one cap and less washing, etc.

Mr. MOORE. With the fact in front of you that we have got to raise twice as much money for this year as for the last year, and may have to double the taxes, what would you say as a general proposition, so far as your trade is concerned; where shall we put it?

Mr. BRUCKNER. The fair way to levy the tax is on the liquid drum, the way you are taxing it now, and taxing it twice as much, if it must be 100 per cent. That is the only correct way.

Mr. MOORE. You would prefer it, then, the way we have it?

Mr. BRUCKNER. It is the only way to reach everybody. They can't get away, any man who bottles nonalcoholic drinks, such as Bevo. They are made with liquid gas.

Mr. MOORE. Would they pass it on? The complaint was that we would tax carbonic acid gas and the trade might not be able to stand it. You would have to pass the price along?

Mr. BRUCKNER. No question about it.

Mr. MOORE. Then, instead of the Government getting the 1 cent on the retail price, you would have to arrange it so that you would get the 1 cent?

Mr. BRUCKNER. That is all.

Mr. MOORE. We would have to get the money out of you?

Mr. BRUCKNER. Out of the liquid drum. I do not pay any tax, but the liquid drum pays a tax and I pay it to him. Under this law I do not pay any tax to the Government direct.

Mr. FAIRCHILD. Do not individuals make their own gas?

Mr. BRUCKNER. No, not that I know of.

Mr. FAIRCHILD. I understood that at one time the hotels in New York City were manufacturing the gas that they use.

Mr. BRUCKNER. I do not think so. If they do, the bill as it is now taxes them 1 cent a gallon on their product.

Mr. MOORE. Wasn't there a carbonic-acid gas machine a few years ago?

Mr. BRUCKNER. I do not think it is on the market now.

Mr. MOORE. Didn't they undertake to sell it to hotels?

Mr. BRUCKNER. At one time.

Mr. MOORE. Isn't it in business now?

Mr. BRUCKNER. I do not think so.

Mr. MOORE. I understood that there was a concern in New York that undertook to supply hotels with gas-making machinery so that they could make the gas themselves.

Mr. BRUCKNER. But if they do they must pay for the finished product a cent a gallon.

Mr. RAINEY. Anything else?

Mr. BRUCKNER. I wish that some of the committee would invite some questions.

Mr. RAINEY. Has there been any increase in the price of soft drinks?

Mr. BRUCKNER. Not after the tax was on. There was an increase in the price of bottles and boxes. They have increased 100 per cent, labor and everything else.

Mr. FORDNEY. I did not come in until after you had begin your argument. I remember you very well from last year. Do I understand you to say that if there is an increase on this business, any taxes put in this new law, that it should be on the carbonic-acid gas?

Mr. BRUCKNER. Yes.

Mr. FORDNEY. And then distributed in the same way as now?

Mr. BRUCKNER. Yes, I think so; I think that is the way. You would reach everybody and treat them fairly.

Mr. FORDNEY. But the manufacturer of the gas last year after this law became effective added to the price?

Mr. BRUCKNER. Yes; we paid them.

Mr. FORDNEY. Undoubtedly they would increase the price if we added more tax?

Mr. BRUCKNER. Yes; that is to be expected.

Mr. RAINEY. Has it now doubled to the consumer?

Mr. BRUCKNER. No; the price of the small soda of last year was 5 cents, and in the face of all this increase it is still selling at 5 cents.

Mr. FAIRCHILD. You wouldn't think it feasible to increase the price at the soda fountain from 5 cents to 6 cents?

Mr. BRUCKNER. Soda water has had a standard price, and the next price advance would be 10 cents, and that is out of the question.

What I am trying to bring out is that if there is going to be a tax on the consumer, if he pays a cent tax on a 5-cent bottle because the contents of the quart bottle is four times the half pint, I do not think it would be fair to charge 4 cents tax on that bottle because it goes into the family.

Mr. LONGWORTH. While you would say that it is not reasonable that you could increase the 5 cents to 6 cents, nevertheless a great many different industries made precisely the same argument to us and they have increased the price of a 5-cent cigar to 6 cents and 7 cents.

Mr. BRUCKNER. In the cigar store and confectionery store, but the greater amount goes to the café.

Mr. LONGWORTH. As I say, it may be inconvenient to the trade to increase the price to 6 and 7 cents, but it is possible because it has been done.

Mr. BRUCKNER. We do not want to evade.

Mr. LONGWORTH. I am not insinuating that you are. I am only saying that it is a possibility. It may be an improbability, but it is a possibility.

Mr. BRUCKNER. Anything is possible.

Mr. LONGWORTH (continuing). That the price may be raised to 6 cents.

Mr. BRUCKNER. But if you are going to raise our tax and you want to raise twice the amount, you ought to put it on this gas. We have got to pay the tax. We are not fighting that. That is the fair way to my mind, the practical way, and costs the Government little or nothing to collect.

Mr. FORDNEY. If we double the tax, which is passed on now, you will pay and the manufacturer will turn it into the Government?

Mr. BRUCKNER. That is it.

Mr. FAIRCHILD. And you will pass it on to the dispenser?

Mr. BRUCKNER. We must advance the price to him, because we can not stand another advance.

Mr. MOORE. Is there an association of bottlers in New York?

Mr. BRUCKNER. Yes; and throughout the country.

Mr. MOORE. There was a general association represented here. We also had representatives of the Pennsylvania association. I was wondering if you had been in conference with them or were just speaking for yourself.

Mr. BRUCKNER. They asked me to come here.

Mr. MOORE. You are speaking in a representative capacity?

Mr. BRUCKNER. Yes.

Mr. FORDNEY. I do not know of anything that I can ask to help the situation.

Mr. BRUCKNER. I thank you.

#### STATEMENT OF MORRIS L. ERNST, ATTORNEY, NEW YORK CITY.

Mr. RAINEY. State your name and your occupation.

Mr. ERNST. Morris L. Ernst, attorney, not representing any particular interest, New York City.

I would like to ask the consideration of the committee to a new tax. I represent no interest in connection with it whatever. I refer to a tax on the fee-charging employment office. The United States Government is now committed to the system of public employment office, and has made an appropriation in the sundry civil bill of \$7,000,000 and a million dollars has been spent in the last six months. In view of the President's proclamation of recent date beseeching employers to use the Federal system exclusively from August 1 on, it occurred to me that there would be an additional source of revenue in taxing the private employment business.

There is no definite estimate that I can find as to the number of such offices. In New York there are about 1,000 and in Illinois about 300. There are probably 10,000 of them all told. They are now for the most part established—licensed by the various States—the license fee being merely nominal to cover the expense of regulation.

Mr. MOORE. Have you studied the question from the standpoint of the Southern States, Mr. Ernst?

Mr. ERNST. I am familiar with it. I might say that I have been doing some special labor work in connection with the United States Shipping Board and for the New York State Defense Council. I understand that in the South and many of the localities, they have raised the license fees considerably during the last year or so.

Mr. MOORE. Take Georgia: Do you know what the license fee is there now?

Mr. ERNST. I do not, offhand. I have a list that was prepared up to 1916.

Mr. MOORE. Are you familiar with the recent legislation in Florida on that subject?

Mr. ERNST. I am familiar with it from the other angle. I have been instrumental in putting on the statute books of New York State a law under which the State of New York is doing a service. I am familiar with the Federal service to this extent that it is my opinion that we will not have priority of labor as long as we allow these employment offices to conduct their business. We can not really give priority to certain lines of industry because we have these private agencies that are running on their own account.

Moreover, these commercial agencies are producing constant labor turnovers. That is how they make their money, by frequent turnovers. I am familiar with the attempt of the State of Washington to wipe this out by legislation. That legislation was declared unconstitutional by the Supreme Court of the United States by a vote of 5 to 4.

Mr. MOORE. Are you connected with the Department of Labor in any way?

Mr. ERNST. I am called upon from time to time by the United States Shipping Board to go to certain shipyards in conjunction with their work, but I am not talking as an official.

Mr. MOORE. Are you connected with the United States Shipping Board?

Mr. ERNST. I am connected by just being called on when they want me.

Mr. MOORE. You are an attorney at law in the State of New York?

Mr. ERNST. Yes, sir.

Mr. MOORE. And you have been making a specialty of this business?

Mr. ERNST. Not in a legal sense, just for my own interest.

Mr. MOORE. I just wanted to establish your Government connection, because you have an interesting subject. What is your Government connection?

Mr. ERNST. I was asked by the New York State Defense Council to open up a clearing house for labor in the city of New York to connect up the 100 or more employment offices in the city of New York that are operating without any fee.

Mr. MOORE. Don't they pay a mercantile tax or some other tax in the State of New York?

Mr. ERNST. The agencies that charge a fee to employers or employees are licensed.

Mr. MOORE. And they pay for the license, which is in effect a tax?

Mr. ERNST. No; it is not a tax to the State. It is merely sufficient to pay the expense of regulation.

Mr. MOORE. In Pennsylvania they pay a very substantial license fee for the privilege of doing this business to which you refer.

Mr. ERNST. Now, as I understand the Pennsylvania law, though I am not positive, the amount of the fee is merely sufficient to cover the expense of regulation.

Mr. MOORE. And keep them under control, of course.

Mr. ERNST. It is not a tax, that is, if the amount exacted as a fee is more than the expense of regulation in New York it would be unconstitutional.

Mr. MOORE. In New York State?

Mr. ERNST. Yes, sir.

Mr. MOORE. I do not think that is the theory in Pennsylvania. It is a source of revenue.

Mr. ERNST. That is the theory in New York of the licensing power.

Mr. MOORE. What sort of a tax are you proposing, what sort of a Federal tax, that may help us in the matter of revenue?

Mr. ERNST. The amount involved is small in your total, but it seems to me that no matter what the amount is the remedial effect of controlling by tax, or limiting to some extent the private endeavors

running along side of the Federal employment offices, would be worth while?

Mr. MOORE. The Government is to spend money for the purpose of regulating the employment of labor to be used for any purpose on the farm, shipyards, wherever called.

Mr. ERNST. Of course, that would not be limited.

Mr. MOORE. Your suggestion comes from some authority, or is it your own?

Mr. ERNST. My own suggestion.

Mr. MOORE. Your suggestion is that we should now impose a tax on independent employment agencies in order that the Government may better control the distribution of labor. Is that about the size of it?

Mr. ERNST. That is, as far as my own personal opinion goes. I am in favor of the tax being a power to destroy.

Mr. MOORE. You would put them out of business during the war.

Mr. ERNST. I would always. They have done it in England. There is no private operating in England.

Mr. MOORE. I asked you about Florida a moment ago, because I have some information on the Florida situation and of the southern situation. Along the Gulf States there has been a heavy draft upon negro labor lately. Certain of those States have been passing laws, and I think Florida is one of them, putting a very high tax or license fee upon those who employ labor, those who come into the State for the purpose of taking labor away.

Mr. ERNST. I understand that the law applies where a man comes in to take labor out of a State, and that, of course, is different from exacting a license fee for the purpose of securing employment.

Mr. MOORE. If it was applied to a certain nationality, it would be called a padrone.

Mr. ERNST. A private employment can only be maintained at a profit by frequent turnovers.

Mr. LONGWORTH. You would not include household servants, domestic servants?

Mr. ERNST. I would include every employment office that operates for a fee, and would include charitable institutions. The charitable institutions are not operating for a profit, but still charge a fee. That has been charged on the old theory that what costs nothing is not considered of any value.

Mr. LONGWORTH. You would include domestic servants?

Mr. ERNST. I would include domestic servants, any employment agencies under the tax. The United States Government is committed to what England has had for 10 years, the national system of labor exchanges, as they call them there, and in time of war it seems rather folly where war demands are so essential, to maintain an independent group of 10,000 agencies to apply their business irrespective of the policy laid down by the United States Government.

Mr. FAIRCHILD. What is the method of Great Britain?

Mr. ERNST. Before the war it had 432 national employment exchanges, and since that time, according to the testimony of Sir Stevenson Kent, of the English labor commission, who was here, they have extended that to 2,000 in number, in a country twice the size of New York State, where we have in New York seven offices, which they have planned to increase to 40.

Mr. FORDNEY. What were they taxed in Great Britain?

Mr. ERNST. They were not taxed, as I understand it, but merely a Government order was issued, or a regulation, preventing any person from sending anybody to a job unless it was done by the O. K. of the chairman and on a card of the national labor exchange system. In other words, take the coppersmiths. The Government said that they wanted to control, more or less, where the coppersmiths would go, and I mention the coppersmiths because the survey in this country shows a shortage of about 1,000. In that way all the private agencies were discontinued. Even the Y. M. C. A.'s in England—and this is not a matter of record, so far as I know—must call up the Government office before they can send a man to a single industry, so that the Government can make sure that the men are being sent to the more essential industries.

Mr. FORDNEY. You believe, then, in concentrating these employment agencies and putting them all under the control of the Federal Government?

Mr. ERNST. Yes; it would do that. And I think it is within the province of this committee, indirectly to a great extent, to do that through the tax. Now, as to the amount, it is a matter of guesswork, and those with whom I have talked suggest anywhere from \$100 to \$5,000.

Mr. MOORE. What does the Shipping Board and the Emergency Fleet Corporation say about this?

Mr. ERNST. I have not spoken to any member of that board, except Mr. Charles D. Barnes, who is the head of the Federal and State employment service, and who has been in charge of the New York State service of the Shipping Board. He has expressed hearty approval as an individual.

Mr. MOORE. Is that due to the fact that there is a scarcity of men in his service, would you say?

Mr. ERNST. That approval?

Mr. MOORE. Yes.

Mr. ERNST. That approval is due fundamentally to the fact that the Federal system can not get very far and allow these agencies to come along, and for two or three dollars a man take men from their present employment.

Mr. MOORE. We have men to take care of the details of the connection between the employer and the employed in the shipping business—in the business of seamanship.

Mr. ERNST. As to seamanship itself I am not informed, but as to the man in the ship yards, of course, we know more about.

Mr. MOORE. If any such nefarious practice was going on, the shipping commissioner has authority to keep posted.

Mr. ERNST. Aside from the shanghaiing, or anything of that sort, by these commercial employment offices, in view of the appropriation by Congress to spend \$7,000,000, it occurred to me in the first instance in reading the President's proclamation that the Government should not be handicapped by having fee-charging offices in the way.

Mr. MOORE. What do you know about the labor attitude on this question, the attitude of organized labor, especially the unions like the Seamen's Union, and the American Federation of Labor?

Mr. ERNST. As well as I understand it, the American Federation of Labor, at their convention at Buffalo eight or nine months ago pronounced in a very lengthy resolution, with approval of the Federal employment service, and I do know as a fact that the unions for years have condemned these private employment agencies and padrones, and all sorts of fee-charging agencies. The movement is pretty general throughout the United States against that practice of taking a fee from the man who is out of work.

Mr. MOORE. A railroad contractor needs a lot of men for a piece of work in Ohio. He is unable to get labor in the vicinity. He goes into the Southern States and offers inducement to men to come to his employment, and he brings them up here. That creates discontent in the State. Is that one of the things that you want to correct?

Mr. ERNST. That is one of the things that we want to correct. If we had an adequate Federal system, the State where that contractor has his business will go to the Federal office and communicate with the Southern States and obtain his men.

Mr. MOORE. An individual or a concern owning large forests wants to put in a lot of lumber jacks. Advertisements are issued and solicitors are sent out in large cities are found, and a group of men is found to go forward into lumber camps. Would you stop that?

Mr. ERNST. I would not want to stop that, but I would want to have that done through the Federal Employment Service.

Mr. MOORE. How would you get the men?

Mr. ERNST. Let us assume that a plant in Pennsylvania needs some skilled hull makers in a shipyard plant. That is a particular instance that I am familiar with. They can't find them in the State of Pennsylvania, so the Federal office in Pennsylvania would get in communication with the New York office, and the New York State man, working in conjunction with the Pennsylvania man, would be sure that he is not taking some men from New York that are needed more there.

Mr. FORDNEY. That is what the Federal Government is doing now. It is seeking men and giving employment to them at shipyards, munition factories and other places over the country, and it is taking men away from corporations, individuals, and private industry. How would you remedy that? You are disapproving of the thing that the individual does now. I want to know how you are going to approve what the Federal Government is doing?

Mr. ERNST. That is a pretty good morsel that you have given me.

Mr. MOORE. In many instances the Government has granted larger wages than men got in private employment, and they put the private employer out of business.

Mr. ERNST. I am familiar with that, and I have followed the English experience with a system of leaving certificates.

Mr. FORDNEY. I have this from an Army officer, that the Government is offering as high as \$10 a day for eight hours' work at Camp Meigs, right here in town, and \$12 on Sunday, and that they took them away from the shipyard in Philadelphia where they were not getting such wages.

Mr. ERNST. The only solution of that is an adequate system of employment offices through which the people must be placed, so that

one branch may not be supplied with men at the expense of another branch.

Mr. FORDNEY. Let me tell you what will be the result, it seems to me. This is a new thing to me, but I suppose if you established federal employment agencies all over the country, you would have one head of that agency, wouldn't you?

Mr. ERNST. Yes, sir.

Mr. FORDNEY. Just exactly like we have one railway director general to-day. The operations of the railroads of the country are being directed by Mr. McAdoo, a man for whom I have very high regard, although I thought before that duty was put upon him that he had plenty to do for one man to manage the affairs of the Federal Government in getting money to carry on this war. There are 750 great railway systems in this country to-day. They had 750 well-trained and efficient general managers. Do you believe that any one can direct the management of all those railroads as well as the 750 were directing the management?

Mr. ERNST. I am not in a position to answer as to that. It seems to me that this Federal employment service can be very well managed by one man, and if we had 750 different men to handle the work it would create a chaos.

Mr. FORDNEY. It is the same principle. What would be your judgment as a business man, or an experienced man in law, or otherwise, as to the management of one man being as efficient as 750 well-skilled men?

Mr. ERNST. I would say that we are tending in this day to the one-man theory, and it is proving to be the correct theory.

Mr. FORDNEY. Do you approve of the Government ownership of railroads?

Mr. ERNST. I haven't any opinion on that.

Mr. FORDNEY. Well, that is one of the tendencies of one-man management.

Mr. ERNST. May I come back to my point that I fear is being lost?

Mr. FORDNEY. I did not want to get you away from that. I thought we were discussing that.

Mr. ERNST. The one principle I am discussing is to tax the private employment business so that it will not seriously interfere with the work of the Federal employment offices.

Mr. FORDNEY. I am not trying to get you away, but I want to get into the deepest water in your argument. We have a great many employment agencies all over the country at nearly every principal town where labor is employed in machine shops, foundries, glass factories, shipyards, on the farm. There is a scarcity of labor now, and there is a great struggle to obtain labor. I do know this that men in the North, where the labor scarcity was felt first, sent men into the South to get negroes and take them North, and they took them north in great numbers, by the thousand. The wages of the South were in no way compared with the wages of the North or the West. Wages are lower in the South. What would you do, would you stop that?

Mr. ERNST. I would, if I were in charge of an adequate Federal employment office.

Mr. FORDNEY. If you waited for the red tape to come through a Federal employment agency you would go out of business waiting for men. It takes so long to get the Government to act.

Mr. ERNST. Many concerns are going out of business, not waiting for men, but because they are being taken away from them.

Mr. FORDNEY. I will tell you what is taking men away, that is because they can get better wages somewhere else, or better opportunities.

Mr. ERNST. Or the men believe that they are getting better opportunities.

Mr. FORDNEY. But when a man is working for \$5 a day and someone comes along and offers him \$10 a day there isn't much doubt about that?

Mr. ERNST. But very generally the reports in the newspapers have overestimated the shortage of labor in this country, in my opinion.

Mr. FORDNEY. Are you an employer of labor?

Mr. ERNST. I have been. I was at a plant this morning, the Hog Island plant. They were turning away 1,000 men to whom they can not give work. I was with the shipyards men less than two weeks ago, and a half dozen made that statement that there was not the shortage of labor with them, except certain skilled labor.

Mr. MOORE. My information about Hog Island is that they are getting rid of men they do not want; sorting them; getting rid of those who are not efficient.

Mr. ERNST. Yes; in spite of that and on top of that there are numbers of men traveling around that section of the country looking for jobs.

Mr. MOORE. But they are not skilled men.

Mr. FORDNEY. Do you mean to say that a laboring man can not get employment if he wants it, anywhere?

Mr. ERNST. I say with considerable difficulty.

Mr. FORDNEY. Tell me where, in the name of God, there is a town in this country where there is a man who can not get a job if he wants it, and I will show you a white blackbird.

Mr. ERNST. There are many men out of work because they read in the newspapers every day that 20,000 men are needed here and others are needed there, and every time they read it they think they are worth more, and when he is offered a job, it does not come up to his expectations, and sometimes when men go after a job they will not get it because an employer who wants 100 men advertises that he needs a thousand, so that he can take his pick from the applicants.

Mr. FORDNEY. Do you know of an institution in this town—do you know of an institution in this country—that has got a sign up, "Labor not wanted?"

Mr. ERNST. Yes, sir. I went out to Pelham last Thursday and I saw a sign on one of the large cantonments that is still being built, "No more help wanted." I was at Hog Island shipyards and I saw 500 men turned away. When I was conducting a clearing house in New York City the jewelers had 400 or 500 skilled watchmakers and toolmakers ready to go into ammunition plants.

Mr. FORDNEY. Yes; if you take some men that want some special line of work, like men who want to go into the Army, but want it fixed so that they can get a soft job where there are no bullets; but you take a man that wants to work and will take any employment that is offered him, it is easy for him to find a place. On the Pacific coast the Government has sent 10,000 into the lumber camps, and the wages range from \$8 to \$10 a day for common labor. I know it,

because I am in business there, and we are paying that. We are running only about half our force and can not get more men from the Government, and you tell me that men are walking the streets looking for employment.

Mr. ERNST. In New York City, I can get figures to show that from five to fifteen thousand people are there looking for work. Some will not take the jobs that are offered because they do not come up to their expectations.

Mr. FORDNEY. If you are correct in your statement, it is the most surprising statement I have heard for months that there are men in this day who are willing to accept employment and can not get it.

Mr. MOORE. Won't it help you a little to know that over in the Senate they raised the House appropriation from \$1,000,000 to \$7,000,000 a few days ago in order to bring about a larger distribution of labor in the United States?

Mr. FORDNEY. I know there are a lot of strange things being done, but sifted out there is a whole lot of politics in that.

Mr. ERNST. May I close this point? That is about the full argument.

Mr. MOORE. Let me emphasize that fact. Mr. Fordney would like to know that Congress backed by the department has made an appropriation of \$7,000,000 to work up this labor situation with a view to acquiring more efficient distribution. Whether it is wise, I do not know. The department has said they wanted it, and while the House thought that \$1,000,000 was sufficient, the Senate wanted \$7,000,000, so this compromise was made at \$7,000,000. That is the usual compromise between the House and the Senate, when the Senate is backed up by the administration.

Mr. ERNST. I have not ax to grind on the subject at all, but it would seem to me strange to vote \$7,000,000 for a system which must be of little value if it is to be allowed to compete with the individual system.

Mr. MOORE. We were told that it was important to have this \$7,000,000.

Mr. ERNST. I believe it is.

Mr. DIXON. You are not interested in the amount of money to be raised, except to put these men out of business?

Mr. ERNST. It would produce \$5,000,000 or \$10,000,000 revenue, which, of course, is a comparatively small matter.

Mr. LONGWORTH. Don't you think it is going too far to tax out of business agencies supplying domestic help—household labor?

Mr. ERNST. I purposely would not tax anybody out of business.

Mr. LONGWORTH. There is a great deal in your proposition as to labor.

Mr. ERNST. The Federal Employment Agency would be in a position to handle the situation as to domestic help. That situation develops along with your plans for other help. For example, a great many domestic servants have left their service and gone to places where the munition plants are located. You can not separate the two.

One distinction that might be made would be between institutions that are not engaged in this business for profit, Y. M. C. A.s and Y. M. H. A.s, but they are charging a fee to employees on the old

notion that a free public school would not do, because if they did not pay for it, it would not be worth anything.

Incidentally it occurs to me that this list of occupations might be extended so as to provide considerably more. It struck me that auctioneers might be included.

Mr. MOORE. They pay State and local taxes?

Mr. ERNST. The same as a theater is licensed or a broker is licensed or a manufacturer of oleomargarine in paying a tax.

Mr. MOORE. Any other that you have thought of?

Mr. ERNST. Those are the two that have occurred to me.

Mr. MOORE. You suggested employment agencies, auctioneers.

Mr. ERNST. Those are the only ones that have occurred to me.

Mr. LONGWORTH. Book agents?

Mr. ERNST. Yes; for lawyers' benefit.

I have another proposition, if it can take a minute of your time, that I can not speak about with the same confidence as I have on this first point, but it will provide a tremendous means of revenue. Let me call it a tax on labor turnover. It is not in existence, so far as I know. It sounds pretty radical. Let us assume that every concern employing a hundred persons, or over, on the average, must make a return at the end of the year showing the monthly average number of employees of the plant. He must also make a return showing the total number of persons hired. Let us say that the average number of employees of a concern is 5,000 and the total number hired 20,000, not an unusual state of affairs. That will be a turnover of 400 per cent. What I had in mind was a tax along the following lines:

Supposing a man hires 20,000 people a year. When a man goes into the service, take that out of the 20,000. Allow him for deaths of his employees, and allow him in addition a margin of safety, say a turnover of 100 per cent, and then put a tax on that additional inexcusable turnover. I hope I have made myself clear. Let us assume that he has 5,000 employees, hires 20,000; 1,500 of them go into the service, and then allow him, because he has increased his plant, and for other reasons—allow him a turnover of 100 per cent of the 20,000, which would be 5,000, and which would be excusable in times like this, and there are still 12,500 hired for which there is no excuse.

Mr. DIXON. Who is to be the judge?

Mr. ERNST. The 100 per cent factor of safety would cover any reasonable amount, and after that you have a graduated tax. There are many concerns in this country that to-day have practically no turnover of labor, because they have figured out that it is important to find out why men are leaving. The usual way is to pay attention only to getting men into the shop, and keep hiring more help, regardless of why they are leaving. It is estimated that Mr. Ford, with his \$10,000,000 bonus, saved over \$2,000,000 by cutting down this turnover.

Mr. DIXON. But the employer himself may not be responsible; the men merely leave.

Mr. ERNST. And we have a condition where the Government is taking men away, but we have this fact to face that the employers are not troubled with this labor turnover who are giving consideration to this subject. The Winchester Arms Co., the Ford plant, and many others that are not paying as high as the Forst plant are not

losing their men, because they have made a study of the reason men leave. It costs an employer from \$5 to \$100 to lose a man. If you tax a man \$1 on a man, it would not be a large amount of what he is losing by having him go away. In order to make it fair allow a man 100 per cent turnover. He has to pay a tax.

Mr. FAIRCHILD. I am interested in manufacturing. I was told recently that we had one of the most up-to-date factories in the country, and we are doing everything we can for our laboring men. We have never had a strike, and we give them the highest wages, and do everything we can to please them. At the same time the general manager of one of the factories told me recently that out of 1,300 men whom he had employed, he had lost 1,000 this last year.

Mr. ERNST. I think he did very well.

Mr. FAIRCHILD. Your law certainly would not control men who think they can get better pay some other place.

Mr. ERNST. I should say that a concern such as yours should not be taxed. That turnover is not unreasonable. But how about the concern that hired—take the Ford plant in the old days, when they kept 23,000 men, and hired some 60,000 to 70,000 men a year.

Mr. FAIRCHILD. We have lost 23 per cent in one factory that went to war.

Mr. ERNST. That is a proper allowance. Let us allow war, death, and 100 per cent turnover, but above that if a plant continues to take on men and let them out, have a graduated tax.

Mr. FAIRCHILD. I can't see how the suggestion would have any effect on the individual man.

Mr. ERNST. It would have on the employer, and the employer by finding out why they are leaving, like the Stotson Co., has, would cut down the turnover. The amounts of the tax could not be passed on to the consumer, because he would be competing with a man in the same business, who has not the same turnover. He could not pass that on, because he is competing in the market without the tax.

Mr. FAIRCHILD. I should say that what you have is very intangible.

Mr. ERNST. I will put it in figures and give you a concrete case. Let us say, let us take the case of a man who employs on the average 5,000 people, and that his total hirings during the year were 20,000, and there are any number of employers who will do that. Now, under the tax law require every employer to make a return showing the average number of persons hired. From the total of 20,000 deduct those who have entered into the service of the United States, and 100 per cent turnover. If the average employment was 5,000, 100 per cent would be 5,000, 5,000 would enter the service, and there would be 2,500 more for deaths, etc., and that would leave 2,500 taxable persons.

As to the rates, I have no fixed opinion on that. Suppose on the 2,500 you collect a tax of \$1 on the first 500, \$2 on the next 500, and a graduated tax for the rest.

Mr. FAIRCHILD. He can not control his men, because they will go and they will come.

Mr. ERNST. I believe it is within his control. I thank you.

Mr. DIXON. Mr. Stewart.

**STATEMENT OF HON. GEORGE M. BOWERS, REPRESENTATIVE  
IN CONGRESS FROM WEST VIRGINIA.**

Mr. BOWERS. I want to introduce Hon. J. H. Stewart, commissioner of agriculture of the State of West Virginia, who wishes to offer a general plan on which we hope that some agreement can be reached whereby the income from the orchardists in our State will be taxed.

Orcharding in West Virginia, as we understand it, is a more advanced grade of farming. To cite an illustration, we have in the county in which I live some 200 operations. Of these, 35 are incorporations, and 165 are orchards owned, operated, and controlled by individuals. It is to some extent a new innovation in West Virginia. Orcharding commenced there, apples, some 20 years ago in a small way, and from time to time it has advanced until, with all due respect to the gentleman from Oregon, that county alone raises more apples than the entire State of Washington or the State of Oregon, not combined, but individually.

Mr. MOORE. Can you beat them on flavor?

Mr. BOWERS. Our quality is much better; their color is a little better.

Mr. TREADWAY. You don't include western Massachusetts, do you?

Mr. BOWERS. Western Massachusetts is not included.

Mr. HAWLEY. There must be something wrong with your claim.

Mr. BOWERS. We claim, and we have evidence to prove, that in the county of Berkeley, State of West Virginia, we raise more apples than the entire State of Oregon, and over in the county of Frederick, in Virginia, which joins our county and which is one of the two counties in the Valley of the Shenandoah, which is noted for fruit growing, they raise more apples than the entire State of Oregon.

Statistics show that in my county last year we raised something more than 400,000 barrels. If those barrels had been put in boxes, as they are in the States of Oregon and Washington, it would have made about 1,200,000 boxes. The statistics show that last year the State of Washington had, I think, about 968,000 boxes.

But this is the proposition, as I understand it: It takes an orchard at least 12 years to develop, and after that length of time some of these orchards have become lucrative and profitable. Now, as an illustration, a farmer may have 160 acres of high-grade land in the valley, and may, perhaps, have 20 acres in orchard. At the end of 12 years that 20 acres brings him in five times the income that the 140 acres used for ordinary agricultural purposes bring him.

Now, there must be a basis upon which taxation can be agreed upon. In reporting, as I understand it, an income tax in the past we have simply shown what has been received, and what has been expended, and the amount left has been subject to income tax. But in the meanwhile some of these properties—I know orchard properties in my county 20 years ago which sold for \$5 an acre, but after the orchards had been developed, that same proposition is worth \$100,000. Now, we simply wish to reach some conclusion upon which to base our reports as to excess-profits tax and income tax, and the committee has asked the commissioner of agriculture of the State of West Virginia, Hon. James H. Stewart, to some extent to represent them at this conference.

Mr. TREADWAY. May I ask a question? Do I understand you that it is the purpose of your organization to suggest an additional form of taxation that you do not now have?

Mr. BOWERS. We haven't any direct form at present.

Mr. TREADWAY. You pay excess profits?

Mr. BOWERS. We are simply being treated as agriculturists.

Mr. TREADWAY. You want to pay more money?

Mr. BOWERS. No; we don't want to pay more money. We are willing to pay our share, and we do not wish to evade our proportion. We are of the impression that if these properties can be valued upon which we receive a certain percentage as dividends, the excess profits over and above that amount would be subject to taxation.

Mr. TREADWAY. You want, in other words, a higher valuation of assets?

Mr. BOWERS. If the property is worth \$100,000 upon which as a bank we might receive an added per cent of dividends, the additional profits should be subject to an income tax.

Mr. MOORE. You spoke about its taking 12 years for an orchard to yield. Does that rule hold throughout the country?

Mr. BOWERS. I would not say that it holds in Washington or Oregon; in Washington especially. In Washington the development is by irrigation, and my understanding is that in Washington State and Oregon an orchard can become self-sustaining at the end of seven years.

Mr. MOORE. I heard it stated at five.

Mr. BOWERS. Seven is about right.

Mr. MOORE. It could be very early.

Mr. BOWERS. If I understand it, I think it is about seven years. If I am wrong, I hope some one will correct me.

Mr. MOORE. Do you mean 12 years from the time of planting the seeds to the fruitage of the tree?

Mr. STEWART. From the time of planting the tree.

Mr. BOWERS. Trees are planted one, two, or three years old.

Mr. MOORE. From the time of planting the tree to the time of bearing?

Mr. BOWERS. As the tree develops it is more expensive, not only for spraying purposes and everything of that kind, but the larger the tree the more spraying it requires.

Mr. MOORE. Well, I only wanted to get about the 12 years. It takes 12 years from the planting of the tree up to the time of bearing?

Mr. BOWERS. Well, no, not up to the time of bearing, but up to the time it becomes self-sustaining. Of course, at the end of 9 or 10 years there are a few apples on the trees.

Mr. GREEN. I think my friend Moore has not investigated the practice of apple growers or he would not count it that way, because they buy the trees from the nurseries when they are about two years old, do they not?

Mr. BOWERS. Well, two years old—sometimes a little over. I think about two years old, don't they, Mr. Miller?

Mr. W. H. MILLER. Yes; one and two years.

Mr. GREEN. They buy one or two year old trees and they estimate the time from the time they take that tree and set it out.

Mr. BOWERS. Yes; but understand that in a few instances peaches are planted between.

Mr. MOORE. I don't think you quite agree with my colleague, Mr. Green of Iowa, who indicated to me privately that they did not use seed at all. I think probably he is a little in error about that. We plant the apple seed to get the tree, but we cultivate it for two years before it is set out. That is about what you mean, isn't it?

Mr. BOWERS. That is it exactly.

Mr. HAWLEY. You plant the apple seed—usually the crab apple seed if you can get it—and then graft on to that at the end of the first season. That is one legitimate species of graft. (Laughter.)

Mr. BOWERS. Well, you are more familiar with that than I am.

Mr. DIXON. Mr. Stewart can probably explain that more satisfactorily.

Mr. BOWERS. But you understand the cost means from the date of the purchase of the land with which this orchard is commenced, started, up until the day of the development, and in those cases not including the time of the individual or of the property; and the only way that we feel that we can reach a conclusion as to the cost, of course, is by referring to some extent to our expenditures. A great many orchardists have not kept an account of them, because some of us never did believe that we would reach that period when there was a possibility of paying income tax.

Mr. MOORE. Mr. Bowers, I always thought you knew more about fish than you did about apples, but I am willing to leave it to you on the apple question.

Mr. BOWERS. Well, gentlemen, there are other gentlemen here more familiar with it than I am. I must confess that I have some knowledge of suckers, and since I have become a Member of Congress I have a better knowledge of lobsters. (Laughter.)

Mr. MOORE. We have found that out and can sympathize with you.

Mr. BOWERS. And, Mr. Moore, at some future time I would be very glad to discuss the subject of boll seal with you. That is the most delightful of all vocation. You know that because I have told you about it.

Mr. DIXON. We will hear Mr. Stewart now.

**STATEMENT OF MR. J. H. STEWART, CHARLESTON, W. VA., REPRESENTING THE EASTERN FRUIT GROWERS' ASSOCIATION.**

Mr. STEWART. Gentlemen, I am commissioner of agriculture and member of the Eastern Fruit Growers' Association. We have an association which banded itself together to look after the interests of the fruit grower, and they are from the States of Pennsylvania, Delaware, Maryland, Virginia, and West Virginia. I am a member of that association and have been asked to take a little time—your time—not so much to try to advise you and inform you but to ask of you.

We are out in the country growing fruit, principally peaches and apples and pears, and other fruit, and have not learned the refinements of technical taxation, and having heard rumors of what might be done in the way of excess-profits taxes, we have been fearful that in the exercise of that law we might suffer injuries not intended by this committee or by Congress.

You have been told by your fellow Member, Mr. Bowers, that it takes 12 years to bring an apple orchard in the East here up to profit-

able bearing. That is about correct. It depends upon the locality, soil, and variety of fruit. There are some places where a variety will bring a considerable crop in 7 or 8 years, while a different variety at a different place in the same State would not bear profitably before 14 or 15 years. Compare the York Imperial in the Potomac Valley, where they bear a crop in seven or eight years, with the Albemarle Pippin in Virginia, in the very circumscribed area that it grows properly.

The thing that we want to bring to your attention is this: We are not hoping or desiring to evade any taxation which we should pay or may be able to pay. We are more than willing to contribute our full part. Every time the State from which I come has been called upon for anything in behalf of this war we have met that demand, whether in money, men, or in anything else, but we have a lot of small corporations and individuals of limited means who have adopted the orchard business in the State and have invested their all, plus all they could borrow. Now, they have agreed with the banks and it is understood among them, whether a corporation, limited partnership, or individual, that when that orchard arrives at profit bearing and has what you might call a little killing, then those debts are to be paid. If the tax is placed on valuation, the low capitalization which was fixed by the amount originally put in, and not by the amount actually invested—that was the basis, then no part of this excess profits can be devoted to the payment of the debt, and the orchard will be driven out of business and probably driven into bankruptcy. It was for the purpose of evading that result, which I am sure this committee would not want after having its attention drawn to it, and in the second place fix a basis not upon the original valuation of the land or the original capitalization of the company, but upon the amount actually put in, including reasonable compensation for the supervision of the owner that we think fair. We believe that is fair, and we ask the committee in its deliberations among all the complex things which you have to consider—being masters of the subject—not to forget that these men are among those to whom those in authority in this country have called for at least one indispensable essential for success in this emergency in which we are all engaged.

Mr. MOORE. Have you prepared an amendment to the bill?

Mr. STEWART. I have a statement, a paper, which I would like to leave with the committee.

Mr. DIXON. If you leave it, it will be printed in the hearings.

Mr. STEWART. I want to committee to read it.

Mr. MOORE. I thought you might have in concrete form an amendment embodying what you have to suggest as to what you think ought to be done, and if you would read it, it would help the committee.

Mr. STEWART. I will ask Mr. Miller to read that for me—Mr. Harry Miller. It is a short paper and it will not take more than five or six minutes.

Mr. DIXON. Will be glad to to have him read it.

**STATEMENT OF MR. H. W. MILLER, PAWPAW, W. VA.**

Mr. MILLER. Gentlemen of the committee, I have been asked to make a short statement.

We, a committee of the Eastern Fruit Growers' Association, representing the fruit interests in five Eastern States, namely, Virginia, West Virginia, Pennsylvania, Maryland, and Delaware, with a production aggregating 20,000,000 bushels of apples and 5,000,000 bushels of peaches, ask you to consider our business interests regarding the proposed excess-profits tax measure to be enacted by Congress in the near future.

Orcharding is on a different footing from any other line of business, for the following reasons:

It requires about 10 years to bring an apple orchard into bearing and about 5 years for a peach orchard. During this time the owners lose the interest on their money and pay out all the expenses and get practically no return, yet pay their full share of all taxes assessed. If the apple orchard does not come into bearing until 11 or 12 years of age, this item often adds as much as 50 or 60 per cent to the investment with no return.

After the orchard is 10 or 11 years old, full crops may be expected every other year, with partial crops or total failures the off year. Thus you will note that the first 10 years is a period of cost without profit and the balance of the life of the orchard, usually 20 to 25 years, does not produce every year. Figuring the total life of the orchard (apple) at from 30 to 35 years, we find that not more than 60 per cent of the years are productive and the balance are an expense to the grower.

The orchard business does not run under contracts guaranteed by the Government or some responsible firm to net so much profit, but the bad years and attendant losses fall directly upon the producer. Hailstorms and freezes sometimes change the most favorable prospects into dismal failures in a few hours, and the orchardist can not insure against these things as the ordinary manufacturer can. No man could undertake a business as hazardous as the fruit business, which is idle 40 per cent of its life; on a basis as low as manufacturers, who take no such risks.

Many of our orchards are owned by small corporations, with capital running from \$10,000 to \$100,000, the capital stock having been held down low in order to make good dividends, and in many cases the owners working for nothing or on a very small salary. These corporations find themselves now in a very peculiar position. Owing to the rising cost of producing an orchard in recent years, they have exhausted their capital and have had to borrow large sums of money to bring their orchards into bearing, so that instead of watering the stock the plants have cost much more than the capitalization. If the excess-profits tax is laid on their small capitalization and no provision is made in the law to allow them to pay off their indebtedness first, they will only get a small part of their earnings to apply on their obligations, and will, therefore, be years in paying off their debts, leaving no chance to declare dividends on their stock.

Now, gentlemen, this refers more particularly to orchards planted in the last 10 years. Older orchards—Mr. Bowers says that his is one of the older orchards—pay very well. We don't intend to mis-

lead the committee by saying that they will not pay when they are matured, but those that are maturing now are at greater cost on account of the expenses due to the war than they would have been had the war not come on, and so we are just bringing this point to your attention.

Mr. GREEN. An orchard that is just maturing would not bring in anything, would it?

Mr. MILLER. Well, that is just the point I want to emphasize. If it makes a good killing this year, we want to know whether you are going to take a big share of the profits before we can pay the bills, or anything of that kind.

Many of these companies have borrowed from banks and individuals, promising to pay from their earnings when the orchard bore. If the excess tax is laid on their low capitalization and they are not allowed to use their bills payable as capital, it will make their tax bills altogether out of proportion to other corporations who have large capitalization and can, therefore, make plenty of money on a low dividend and escape excess taxation, too. This condition would destroy the selling value of the stock of the small corporations and also their credit and hurt the banks and others who have financed them.

The orchard man's surplus invested during the first 10 years of nonproduction is tied up in the orchard and must be gotten out during the balance of the orchard's lifetime or not at all. Overtaxation will take this surplus and the owner will never realize on it at all, while the manufacturer realizes on his investment as he goes along and is guaranteed against loss largely by his contracts. The orchards, if not permitted to make good profits after their owners have waited so long, will naturally be allowed to go out and we will find after the war that this great natural food supply will be very materially cut down just when the whole world will need it the most. We are informed that the orchards of France and Belgium have been destroyed by the German Army, and certainly think it would be wise to preserve ours, realizing that taxation will not stop when the war closes and an industry that requires 10 years to start can not be made over in time to produce either food or taxes when once abandoned. The Secretary of Agriculture has asked the farmer and fruit grower to produce everything possible to feed our people, our armies, and our allies. We think every orchardist has done his best to respond. Mr. Hoover has asked us all to save fats and grains by eating fruits and vegetables, and thereby allow our country to export the meat and grain for the Army. This is wise and we think should be continued, but we must realize that it is impossible to save that which we do not produce. It is a physical impossibility to feed our 100,000,000 people and our allies on bread and meat alone. We must use every filler it is possible to obtain and there is nothing better than fruit; it appears to us, therefore, that the Government ought to foster this industry. This food supply is already grown and does not even have to be planted, and will, we assure you, be pushed to the limit of its productive capacity, which can be made very large, if we are not, in our peculiar circumstances, made to suffer undue taxation.

We believe that if not overtaxed, this industry will enable our people to do much more to support the Government by buying bonds in the

future than it has up to this time. We ask you, therefore, not to kill the goose that lays the golden egg, but allow our business to live and produce many more golden eggs to support our people and the Government.

For the above reasons, we do not think our business should be subject to an extreme excess-profits tax in the good many years with no provision for the first 10 years of cost without profits and for the off years thereafter. We therefore ask that a clause be incorporated in the new law permitting agricultural and horticultural corporations to liquidate their obligations incurred within the last five years before they become liable to the excess-profits tax, provided no dividends are paid before that is done.

Mr. MOORE. Have you got something there in the form of an amendment to the bill that will cover the points you make?

Mr. MILLER. Well, we have got this suggestion.

Mr. MOORE. The suggestion is all right. I understand that, but I thought possibly you might have an amendment in such a form as to let us tie it up to the bill and be exactly what it is that you want.

Mr. MILLER. If you will permit us, we can submit that.

Mr. DIXON. Certainly, we will be glad to have you do it.

Mr. MOORE. It would simplify the whole matter to see just what you want, as applied to the law, if you are asking for an amendment of the existing law we will know just what it is you are driving at.

Mr. MILLER. (Reading:)

We further suggest and recommend that in view of the fact that the orchardist loses interest on his investment for 10 or 12 years, that this interest be credited to his capital account and that his excess profits be calculated on the basis of the original investment with interest added.

You understand that if the interest goes on for 10 or 12 years before he gets anything at all, it amounts very often to 50 or 60 per cent of the whole—sometimes 75 or 80 per cent, and if as at present, the corporation starts out with a capital stock of \$10,000, by the time it gets to bearing, and it has borrowed \$5,000, we are only permitted to pay our assessment on the \$10,000, leaving the \$5,000 to be paid afterwards.

Mr. DIXON. You get credit for the interest.

Mr. MILLER. For the interest, but not the original investment and a very material expense has been added to the cost of the plant which we could not help in the face of the war conditions.

We herewith attach a typical case of the small corporation in the orchard business.

A typical case is that of a corporation organized with \$10,000 capital, all paid in cash, the stockholders of which have been called on within the past five years to raise additional sums by loans to the extent of \$5,000 in order to bring the orchard up to production by reason of the enormous increase in cost of labor and material.

These loans remain unpaid and the stockholders have never received any dividends.

In the event of the net proceeds of the company for the year 1918, being, say, \$4,000, should not the company's indebtedness be paid off at least to some extent, before the Government computes the company's income for taxation for 1918?

This point not appearing clearly set forth in the existing law, it is asked that it be made so in the revenue bill now under consideration.

We believe the Government recognizes the fruit industry as an essential one, and to this end we feel it should have some degree of protection. It goes without saying that stockholders of companies who have indorsed their paper for years and get no protection, nor dividends, will soon become tired of the proposition and let the property go to sale, and take one loss for their final loss. This will occur if a reasonable measure of the profits derived from fruit sales are not permitted to go to the stockholders after they have waited for some times a period of 1 years without any revenue.

And again, if fruit growers are not allowed to have a good margin of profit on their investment, they will have no incentive to continue in the business if already interested, and certainly will not engage in it if they know in advance that they can get but interest rates on their investment. Fruit growing is a more hazardous and risky line of production than the growing of grain.

It requires years to bring an orchard up to a profitable bearing age. Even though successful in not having the various pests to contend with, or to kill the trees before they reach bearing age, the life of a peach tree is not more than 13 years and if a big crop at good prices is not had in this period, the grower comes out with a loss (cite statement attached).

Apples require from 10 to 14 years to come up to a profitable bearing age, the grower putting money and more money into the plant each year. This, with a reasonable sum for interest on his initial investment would show that he has doubled the original amount invested when the trees come up to bearing.

Should the grower be taxed on this business, which is an essential one during the war, to the limit that is proposed, he could not liquidate his long-standing indebtedness, the banks would lose confidence, and the grower, if not very strong financially, would be forced to abandon a proposition which he had spent much money in developing and devoted some of the best and most active years of his life in caring for, without receiving even his investment in return.

We urge that you allow interests of this nature an opportunity to first pay off their obligations, or a certain percentage of their indebtedness before making them liable for war-tax purposes. Last season (1917) our results were not as good as in 1916, the year before the United States entered the war. This shows that the war does not have the same effect on our efforts as it does upon coal, steel, ammunition, cotton, and other items directly necessary for war purposes. Aside from this, we are up against a labor shortage, increased wages—lavily increased—uncertain transportation facilities on a very perishable commodity, and lack of ice for the proper refrigerating of our fruit.

## STATEMENT.

[Company organized in 1910. Capital stock of \$30,000.]

Initial capital actually in the plant.....		\$30,000.00		
Bills payable owing as of Jan. 1, 1918.....		29,576.81		
Amount received from sales of fruit 1910-1917, inclusive.....		112,179.65		
		171,756.46		
Actual amount paid out for all purposes.....		92,847.27		
		78,909.19		
To this should be added amount at which camp, hardware, and live stock are carried in excess of their real value.....		3,000.00		
Also salary allowance to general manager and president, which was not paid to them for the period of 7 years.....		7,500.00		
And also an allowance of 6 per cent on the amount of capital stock invested for 7 years.....		12,600.00		
		102,009.19		
		102,009.19		
1910, no crop.	}	Expenses first 5 years.....	21,955.10	
1911, no crop.				
1912, crop.....				\$2,113.48
1913, crop.....				8,894.53
1914, crop.....				18,171.67
1915, crop.....				18,501.68
1916, crop.....				27,819.20
1917, crop.....	36,679.09	Expense.....	24,195.61	
		Expense.....	20,197.25	
		Expense.....	26,499.31	
		112,179.65	92,847.27	

In other words, we have lost in five seasons and profited in only two seasons and have a bills-payable account of \$29,576.81 yet unpaid, some of which has been carried with the original loaners since 1911.

The company has paid no salaries to officers, no dividends to stockholders, since its organization. We have cut out peach trees which have died, or were broken, to the value of several thousand dollars, which does not show on our books as a loss.

Several of the stockholders have indorsed the obligations of this company since its organization, without any protection whatever from the company, have received no salary, not even expense money actually expended in behalf of the company and solely in the interest of the company.

Mr. MOORE. How large an orchard will that \$10,000 company control?

Mr. MILLER. I think usually a \$10,000 corporation—well, they would run anywhere from 50 to 100 acres.

Mr. MOORE. About how many trees to the acre?

Mr. MILLER. From 30 to 40 trees to the acre, depending a little on how they are planted.

Mr. MOORE. I suppose you have it figured out as to the number of boxes of apples that can be taken off of an acre?

Mr. MILLER. Yes, sir. That depends, of course, a little on the variety and on the location. Are you asking for information on that line?

Mr. MOORE. Well, I have heard it figured out in other instances. I suppose it will enter into the general question of profits and of the importance of these deductions that you suggest. If you cared to

give to the committee an illustration of the production of a 40-acre farm such as might be controlled by a \$10,000 corporation in one year it might be helpful. I don't want to pry into your business, of course.

Mr. MILLER. We appreciate that, and we will do anything we can to enlighten the committee. We are not here to cover up anything.

Mr. MOORE. We would like to know about what one tree will produce and what the total number of trees in 1 acre produces.

Mr. MILLER. We would say on the average 100 barrels to the acre is a good crop; that is, after the trees are, say, 14 years old. Under that, anywhere from 10 to 25 barrels.

Mr. MOORE. Mr. Miller, how many States are represented here to-day?

Mr. MILLER. Five States, I believe, by this Eastern Fruit Growers' Association.

Mr. MOORE. This is the Eastern Fruit Growers' Association for which you gentlemen now are speaking?

Mr. MILLER. Yes, sir.

Mr. MOORE. That includes how many States?

Mr. MILLER. Five—Pennsylvania, Virginia, West Virginia, Maryland, and Delaware.

Mr. MOORE. Is New Jersey in?

Mr. MILLER. New Jersey is not in this.

Mr. MOORE. That includes Pennsylvania, Delaware, Maryland, Virginia, and West Virginia?

Mr. MILLER. Yes, sir.

Mr. MOORE. That includes a large peach-growing as well as a large apple-growing area?

Mr. MILLER. Yes, sir. I think you will find, Mr. Chairman, that these mature orchards that have come under this 10-year period of which we are speaking as having been loaded up a little bit on account of the war in increased cost, are more largely located in West Virginia, Virginia, Maryland, and Delaware than any other States.

Mr. LONGWORTH. What effect, if any, has the war had on prices?

Mr. MILLER. I am glad you asked that question, sir. I will say this much, that from 10 to 12 years ago—my father was in the orchard business before the Civil War, so we have seen a good deal of it—from 10 to 12 years ago a good barrel of apples would sell for \$3. To-day the same barrel will sell for from \$4 to \$4.25; in some cases, \$4.50. Now, 10 years ago we paid—12 years ago we paid 75 cents a day for our labor. To-day we pay whatever we can get. We are up against the coal mines that are paying \$10 or \$11 a day for labor.

Mr. LONGWORTH. In other words, the cost of production has gone up at a higher rate than your return?

Mr. MILLER. Yes, sir; the selling cost has gone up something like 73 per cent, and the production cost has gone up twice that much, so that in reality we are not as well off as we were 10 years ago. The war has not benefited us to the extent that it has some of the war material manufacturers or ammunition manufacturers or people of that kind.

Mr. MOORE. What is your State, Mr. Miller?

Mr. MILLER. West Virginia. I will say also, gentlemen, in 1913, that was before the war broke out—I am speaking just from my own experience—the peach crop sold for 75 cents per basket at the

station. That was a half-bushel basket, \$1.50 a bushel. In 1916 which was two years after the war had broken out in Europe, our crop sold for 68 cents. In 1917, which was last year, our crop averaged about 73½ or 74 cents per basket. So that you can judge, gentlemen, that we were better off five years ago than we are now, because the increased cost of production had not mounted up so quickly as it has now.

Mr. DIXON. How do you market your crop? Do you sell to wholesalers in the cities?

Mr. MILLER. Now we are attempting to sell direct to the consumer, if we can. That is in carload lots as far as possible, and that has been very successful in the last two years. Previous to that time we sold anywhere we could, and sometimes we made a good deal and sometimes we did not. The orchard business, the apple business, and the peach business are both carried on more largely now by exchanges, people banding together and selling through these exchanges.

Mr. DIXON. Did your corporation experience hardships under this law during these last years?

Mr. MILLER. Yes; the last three or four years.

Mr. BOWERS. I know of no better evidence of the cost of production than that last year, it was not a hard problem to buy barrels for 33 to 36 cents a barrel, and to-day you can't buy the same barrel for less than 75 cents a barrel. That gives you an evidence of the additional expense as compared with last year, and labor is nearly in the same proportion.

Mr. LONGWORTH. And you get \$4.25 a barrel?

Mr. BOWERS. Yes, sir.

Mr. LONGWORTH. How much did you get before?

Mr. BOWERS. Twelve years ago we got \$2 a barrel and last \$3 to \$3.75.

Mr. MILLER. Ten or twelve years ago we could sell the same barrel of apples for the same money.

Mr. BOWERS. Last year is the only time we have ever gotten anything like \$4 a barrel.

Mr. MOORE. It is evident that the retail price has gone up. I don't know whether you gentlemen who are growers are getting your share of it, but as apples and peaches are sold in the large cities there is ample evidence that they are charging pretty high prices. The price is certainly double what it was last year.

Mr. MILLER. What we intended to lay before the committee is that the relative ratios between cost and selling price have not been maintained.

Mr. LONGWORTH. Not so far as the producer is concerned, but Mr. Moore is speaking of the retail price, which has been very much higher.

Mr. MOORE. I was rather interested in Mr. Longworth's question, which was to the effect that the price per barrel had been advanced so moderately in view of the terrific increase in the retail price.

Mr. MILLER. We believe that there has been some profiteering between the producer and the consumer.

Mr. MOORE. Either you are not getting yours or somebody is getting theirs.

Mr. GREEN. Most of these orchards are carried on by corporations?

Mr. MILLER. Well, it depends a little on the locality. Now, in Butler County Mr. Bowers says that out of 200 concerns only 35 of them are corporations. But in Morgan and Hamshire and Mineral the reverse is the case. The proportion are little corporations that have banded themselves together and have cleared up a piece of land and started into the fruit business.

Mr. GREEN. These corporations, of course, charge up the cost of superintendent and interest and every item that is properly chargeable to carrying on the orchard?

Mr. MILLER. But they have exhausted their capital on account of the costs due to the war.

Mr. LONGWORTH. Do you know what the retail price of apples is in Washington to-day?

Mr. MILLER. I do not.

Mr. LONGWORTH. Do you know, Mr. Bowers?

Mr. BOWERS. I imagine about \$8 a barrel.

Mr. LONGWORTH. Not more than that?

Mr. BOWERS. Well, yes, the way you buy them, 3 for 10 cents and sometimes 5 cents a piece, 10 cents a piece. Of course it largely depends upon the character of the apple.

Mr. LONGWORTH. I mean your average apple, what would that sell for per barrel in any large city?

Mr. BOWERS. I couldn't say the average apple, because we have different varieties. For instance, the ordinary Ben Davis would probably bring in the fall, last year, \$3.25 a barrel.

Mr. LONGWORTH. That is your price?

Mr. BOWERS. That is our price.

Mr. LONGWORTH. What would you say that would retail for?

Mr. BOWERS. Well, I don't think that very many of the Ben Davis are found on the local market. The Ben Davis—we look upon the Ben Davis, so far as the producer is concerned, as a splendid apple, but as an eating apple we do not regard it very highly. The Ben Davis gets its value from the fact that it can be shipped across the Equator. In fact, it can be shipped anywhere.

Mr. HAWLEY. You can't consider the price of apples now on the local market, in connection with profits, because this is the end of the season.

Mr. BOWERS. Yes, exactly. Now, to give you an illustration, to-day if you had some very select yellow transparent apples and they were sent to some of the markets, I have no doubt they would sell in boxes for as much as \$3 a box, while in the fall the average Yorks and Bens, as we call them, would probably sell for \$4 or \$4.50 a barrel, or about \$1.50 a box. The price of apples is regulated, to some extent, upon the demand and depends upon the season also.

Mr. LONGWORTH. I was only trying to get a rough idea of the difference in the price to the producer and the selling price.

Mr. BOWERS. In the fall the producer who can get storage and is able to handle his apples to good advantage, possibly may have an opportunity to get a better price than those who are compelled to ship and sell direct from the orchards. Yet, strange to say, last fall the individual who made his sales direct from the orchard did better than those who stored them, except the individual who might have carried a few special varieties until the present time. Isn't that right, Mr. Miller?

Mr. MILLER. Quite right.

Mr. HAWLEY. Did you export many apples prior to the war?

Mr. MILLER. Yes, sir; we had quite a good export business.

Mr. HAWLEY. What proportion of your crops were exported?

Mr. MILLER. I can't say, sir, but a large proportion of the Yorks were.

Mr. HAWLEY. You are not able to export any this season?

Mr. MILLER. No.

Mr. HAWLEY. You have to depend on the local market entirely?

Mr. MILLER. Yes, sir.

Mr. HAWLEY. So it will be the same product with a diminished market?

Mr. MILLER. It seems so, yes, sir.

Mr. HAWLEY. Did you have any trouble in getting cars? Were you given priority in the shipment of your apples?

Mr. MILLER. We had a great deal of trouble in midwinter, when the coal shortage was so great. A number of our storage houses were embargoed, particularly at Winchester, some at Charleston and Berkeley Springs. I know there were embargoes for two or three weeks. They couldn't get cars out. The result was that they had two or three and some of them four weeks that season to sell apples in.

Mr. HAWLEY. Do you get priority orders for your apples?

Mr. MILLER. We tried to do that but were not successful last year.

Mr. HAWLEY. You had to take your chances ordinarily?

Mr. MILLER. We did last year, yes, with loss to those who happened to be caught in the embargo, because it just shortened the season to sell.

Mr. BOWERS. Apples are like everything else, there is a certain period when they ought to be sold, and by keeping them too long you lose frequently a great many of your apples.

Mr. DIXON. You can file any statement that you desire with the clerk, Mr. Miller.

Mr. MOORE. May I have one more word, Mr. Chairman? Who is the president of the Eastern Fruit Growers' Association?

Mr. MILLER. E. L. Cahill, Hancock, Md.

Mr. MOORE. You gentlemen have met and conferred over this general problem, have you?

Mr. MILLER. Yes, sir.

Mr. BOWERS. From what I have learned within the last few minutes my understanding is that about 80 per cent of the orchardists in the immediate locality here are virtually represented by individuals present to-day.

Mr. MOORE. I am very glad the gentlemen came, speaking for one member of the committee. I want to say, what has been said to a number of others—these gentlemen may not have heard it—that we are up against the problem of raising more revenue. It is not the fault of this committee. This committee had the notion—I think the majority of the members had the notion—that we would not be required to levy additional taxes for next year or prepare a bill for this session—before the close of this session—but the President came before Congress a short time ago and delivered a message in which he pointed out the necessities of the Government to further the war, and he and the Secretary of the Treasury have informed us that \$24,000,000,000 are needed for the year ending June 30, 1919. Of

course the farmers and fruit growers and manufacturers and all of us have got to participate in raising that revenue. The Secretary of the Treasury tells us that we must raise \$8,000,000,000 by taxation, which means, in effect, doubling the taxes of 1918. Now you gentlemen have made a suggestion with regard to the modification of the law, and I am going to ask you if you have any suggestion to make as to how we can raise this additional revenue without interfering with your business or without unduly oppressing the fruit growers for whom you speak.

Mr. MILLER. I will say this, gentlemen, we want to assure you that we are entirely loyal to the President and to the Congress, and we want to pay our full share. We are not asking so much for a modification of the present law as that we have a just basis to go on in the next law, in the new measure.

Mr. MOORE. You want credit allowances for certain payments, interest, etc., which is a fair proposition, as I assume the committee will consider.

Mr. MILLER. Then, our people did want, if they could be permitted, with bills that were incurred because of the rising costs due to the war, to pay some of that back before the taxation was assessed.

Mr. MOORE. Speaking for the minority, I want you gentlemen to know—and I suppose the majority members want you to know—coming from four or five States as you do that we are not seeking to impose any additional burdens on anybody, but it is absolutely necessary, with the request of the President and the Treasury Department, to get this money, that we ask for these suggestions as to how we can get the revenue.

Mr. MILLER. I think Mr. Stewart has some recommendations which you might consider.

Mr. BOWERS. In other words, we would like to have leave to submit any proposed amendment.

Mr. MILLER. There is one suggestion, gentlemen, I don't know whether it will meet with approval or not, because it hits a tender spot in lots of people's homes, but we are trying to raise sheep in West Virginia, in the mountains, and we have got thousands of cur dogs out there that just make it impossible in our section to raise sheep, because every time you get a flock ready the dogs get in and scare them away. I tried it two or three times myself, and I have got a farm of over 400 acres cleared and I had to abandon it. I would suggest that the committee put a tax of two or three dollars a head on every dog in the United States.

Mr. MOORE. Now, you are a farmer and I am glad you have made that suggestion. You are the first farmer that has done it.

Mr. LONGWORTH. We had another farmer here that did that.

Mr. MOORE. That suggestion of yours strikes a very responsive cord from a city like mine, the city of Philadelphia. We are preaching now the doctrine of increasing the sheep and increasing the meat supply by keeping the dog away from the sheep. We want more sheep and more wool and more meat, but the trouble has been in Congress heretofore that the farmer population through its very able, very earnest representatives, has not altogether approved of the proposition, because the farmer likes his dog. Now, if the farmer would come forward through his Representatives and say that we

ought to hold the dog in check in order to increase the number of sheep, I think we will get more votes on that question.

Mr. MILLER. I am glad to hear you say so. It is just this, gentlemen, I will just cite my own case. As I tell you, I have tried to raise sheep two or three times on my farm. I could keep 150 or 200 sheep along with the orchard, but the last flock I had, I waked up about 5 o'clock one morning and the dogs had been in the sheep, and I had to go and kill what I could, and the rest of them came back in two or three days and they tried it over again. They did that a number of times, and one time one old sheep—we didn't find him until the next day. He had run himself into a thorn bush so far that he could not pull out, and he was so scared that he wasn't fit for anything. And I think that we would destroy a consuming force when we get rid of the dog, and we would add an increased production by making it more favorable for the sheep, in our State at least.

I thank you, gentlemen.

Mr. STEWART. Mr. Chairman, just one word. The statement has gone around that an apple orchard would be profitable in five years. That statement has not been made in earnest anywhere that I know of in the East, except by a class of promoters who have bought low-priced land, planted it or promised to plant it to trees and bring it up to profit, and keep it and maintain it for the stock buyers, or the unit buyer, as the case may be, after five years. I have in mind a single concern that sold several million dollars of that sort of thing. I was sent there to examine into that thing and make a report on the conditions, etc. It has gone into bankruptcy and caused a great deal of trouble to the original promoters, some of whom were very honorable men but were misled by people they thought were telling the truth. Such a thing as that is impossible in the East. Most of the orchards are a bill of expense up until they are 12 years old, absolutely, and it is the purpose here of not destroying an industry, rather than the hope for any particular benefit to an individual member of this association. Now it is a fact, based upon careful investigation—information from the Department of Agriculture here—that peach planting in this country has ceased, except possibly a little sporadic planting in western New York and a little in Arkansas, and the same condition obtains practically for apple orchards, while the home orchards have gone out of business. It is almost an obsolete thing. Now if these men are faced with a losing business for an indefinite period, looking forward, they have lost credit, they have lost their investment, and it will discourage industry so that for 12 or 15 or 20 years we will practically have a very limited and meager supply of fruit in this country, which will be a great injury, financially and otherwise. What we really wanted here more was to get a proper basis of taxation, so that the owner would have credit for the original investment, fair compensation for his services, and the actual money put into the business—interest on it. If we get that, that is all we want.

I thank you.

Mr. DIXON. Is Mr. Goldman present, or are there any other representatives of the fruit growers who desire to be heard?

Mr. BOWERS. We have the secretary of the Virginia State Horticultural Society here. I would like to ask that a few minutes be given him.

Mr. GARNER. Mr. Bowers, while you are up, may I ask you a question?

Mr. BOWERS. Yes, sir; certainly.

Mr. GARNER. I come from a fruit country also, and if I understand the position of you gentlemen it is that it takes you 8 or 10 years to prepare your investment for a yield of revenue?

Mr. BOWERS. Yes, sir.

Mr. GARNER. And therefore in laying the basis of excess profit, that investment for the number of years ought to be taken into consideration?

Mr. BOWERS. I think so.

Mr. GARNER. I think there is something in that.

Mr. BOWERS. That is my view of the situation, and I think it meets the wishes of those present.

Mr. GARNER. The same question will come back to the question that Mr. Moore referred to. We are getting so much money out of you this year.

Mr. BOWERS. Yes, sir.

Mr. GARNER. Now, if you will tell us a way we can get twice that amount of money out of you next year without disturbing your business and laying a basis for disaster, as you suggest, why I am pretty sure the committee will adopt your method, but we have got to have twice the amount of money next year that we got out of you this year. Now, will you tell us how to get it?

Mr. BOWERS. I don't agree that that is the proper course to pursue. For instance, last year, and upon the basis of our returns of last year, we treated these properties, you understand, as virtually agricultural properties, and the expenses incurred—or defrayed, rather—were simply placed on one side of our ledger and the amount we received on the other side, and whatever the balance was was of course subjected to income tax and to a slight degree excess-profits tax only in a few instances. But as these orchards became more fully developed, notwithstanding our investment, if we could reach some basis by which we could receive fair remuneration on our investment and on our time and on the money invested, that is all we ask.

Mr. GARNER. Well, your argument only applies to excess taxation. It is not applying to income tax, is it?

Mr. BOWERS. Well, to some extent, in a few instances, to excess-profits tax.

Mr. GARNER. I mean, that is the only one the basis of investment can apply to. Of course, your income is net income, whether you made it 10 years ago or 100 years ago. I don't see how it is possible for the committee to give you any relief from paying the same income, based on the same principles as everybody else, but we can give you relief so far as excess profits are concerned, but I am just telling you that we have got to have twice as much money this year by taxation as we had last year. Now, if we don't get it out of you we have got to get it out of somebody else, and you gentlemen ought to assist, and if you are not willing to pay twice as much as you did last year, tell us where to get that surplus that we are not going to get out of you, over and above what we got last year. That is all I want you to do, to help us out here.

Mr. BOWERS. We are willing to help you, understand, but we don't exactly think we ought to contribute all of it.

Mr. DIXON. Now you may proceed, Mr. Massey.

**STATEMENT OF MR. W. P. MASSEY, SECRETARY OF THE VIRGINIA STATE HORTICULTURAL SOCIETY, WINCHESTER, VA.**

Mr. MASSEY. I am secretary of the Virginia State Horticultural Society, and I am representing the Virginia growers and am secretary of the National Apple Growers' Association, representing a good many States in the Union.

The gentleman has summed up exactly what we want, and we think we deserve it. Whether we can pay those taxes as they stand now this year and next year is a question which I doubt. If we have to pay them this year we will do it, but I doubt if you can look to us for anything else next year, because there won't be much left. What we want has been summed up very clearly. We simply want to consider as part of our capital invested the amount of money that we have spent in bringing up our orchards to a bearing state. We also think that the owner of the orchard should be allowed a reasonable compensation for the 10 or 12 years which he has devoted to this work. Ordinarily our orchardists do not consider that as an expense. They donate that work themselves, their wives and children, and in any other organization under the sun that is considered, as I understand it, legitimate expense. If we are allowed that, and if we are allowed out interest and what other expense we have been out, that is all we want. We don't want any special legislation; we don't want any favoritism, but we want what we consider to be fair and that is all. We are willing to pay all the tax we can, to shoulder our share of the burdens. We realize that they are large and heavy, but we simply think we ought to have an equal share with the other manufacturers in the country. And we are manufacturers the same as the maker of shoes or automobiles.

Mr. GARNER. Mr. Massey, nearly everybody that comes here is telling the same story—and I don't doubt but what there is a good deal of truth in it—that if you tax the people \$8,000,000,000 this year they won't be able to produce \$8,000,000,000 worth of taxes next year. But the country has got to have \$24,000,000,000 from July 1 this year to July 1 next year, to run this Government in this war, and the best economic opinion in this country is that the proportion should be \$8,000,000,000 in taxes and borrow from the people \$16,000,000,000. I doubt whether we can borrow the \$16,000,000,000. It is a right smart amount of money to go out and take up in 12 months. Now if you can't stand it and the manufacturers of other goods—as you term them—can't stand it, and we can't borrow it from the people, what are we going to do about it?

Mr. MASSEY. I think the apple growers' contention is that the manufacturers are much better able to stand this than we are. Now, when I am speaking of the apple growers, I am speaking of the nonproductive, not the productive orchards.

Mr. GARNER. Now I represent a farming country myself. My district is larger than your State.

Mr. LONGWORTH. It is mostly growing goats, isn't it?

Mr. GARNER. Well, we have a good deal of variety down there. The manufacturers come and tell us—and some of the leading magazines and newspapers of the country—that the farmers are getting rich. You and I know better than that.

Mr. MASSEY. Certainly.

Mr. GARNER. But the manufacturer believes that, and he believes he is bearing a disproportionate part of the burden of this taxation during this war, and if we undertake to go out and classify the farmer and give him a certain exemption, a certain classification, I am afraid you Republicans down in West Virginia will put us Democrats out of business. [Laughter.]

Mr. OLDFIELD. He is from Virginia.

Mr. GARNER. Well, I bow.

Mr. MOORE. If that is your purpose, God bless you, Mr. Massey. [Laughter.]

Mr. MASSEY. Well, that is all I have to say, unless there are some questions I can answer. If not, I thank you.

Mr. DIXON. That is all, I think.

Now we will hear you, Mr. Goldman.

**STATEMENT OF MR. CHARLES GOLDMAN, 41 PARK ROW,  
NEW YORK CITY.**

Mr. DIXON. Will you please state whom you represent, Mr. Goldman?

Mr. GOLDMAN. I represent the United Retail Jewelry Storekeepers' Association and the Diamond and Jewelry Merchants' Association.

Mr. LONGWORTH. Are either of your associations connected with the so-called Jewelers' Vigilance Committee?

Mr. GOLDMAN. I am happy to answer that they are not.

Mr. LONGWORTH. Have you ever at any time been connected with them?

Mr. GOLDMAN. I am happy to answer that in the same way.

The particular statement that we wish to make this afternoon is with reference to the tax upon loose stones, not with reference to the tax upon articles of jewelry manufactured, but particularly with reference to the tax upon stone cut, but unset.

Now, in the revenue act of October 3, 1917, no specific mention has been made of loose stones which are cut but unset, and therefore it requires a definition to determine whether under the terms "articles commonly or commercially known as jewelry"—which is the language of the revenue act—whether loose, unset stones were included within that term, and under Treasury Department ruling 2553, Commissioner of Internal Roper ruled as follows:

Precious stones cut but not set will be regarded as subject to tax when sold by the importer, or if cutting is done in the United States, when sold by the manufacturer or dealer for whom the cutting was done.

The result of that definition was to include loose stones within the terms "articles commonly or commercially known as jewelry," because the tax was imposed upon articles commonly or commercially known as jewelry, upon the importer, producer, or manufacturer. This definition holds the man that has the stones cut a producer of diamonds, and in the same way he would be taxed under that provision of the act which states that tax shall be borne by the importer, producer, or manufacturer of articles of jewelry.

In addition to the sales tax which is imposed upon those articles it was held that the floor tax would also be imposed upon those articles, upon the stocks in possession of the wholesale dealers. A very

considerable sum of money would have been produced in that way, but there followed a very forceful protest by the Jewelers' Vigilance Committee. This body contended that unset stones were not included in the phrase "commonly or commercially known as jewelry," and on November 1, 1917, as result of this protest, Treasury Department ruling No. 2573 was issued. This revoked ruling 2553, and on this particular subject provided as follows:

Precious and imitation stones, cut but not set, and parts of jewelry, including mountings, which require the addition of material or stones or other parts to become complete articles of jewelry, will be subject to tax when sold to the consumer.

Now that was directly in accordance with the suggestion of the Jewelers' Vigilance Committee, as appears in their brief which was submitted to the Commissioner of Internal Revenue, in which they use this language:

There is only one method by which the tax can be evaded, and that is by the separate purchases by consumers of unset stones and mountings or settings. This leak can be stopped by the adoption of the rule suggested by this committee that unset stones and unfinished mountings or unfinished jewelry shall be taxed as jewelry when sold to the consumer—there may be some question as to the strict legality of such a ruling, but the jewelry trade would welcome it and assist in its enforcement.

Now there undoubtedly was some question as to the strict legality of such a ruling but the persons affected by it did not protest it. The retailers did not protest it because they felt they would assist the Government by not protesting it, and I believe they felt that the time would come when they would be in a better position to protest it, when a new act would have to be framed.

Mr. LONGWORTH. Does the retailer pay that tax?

Mr. GOLDMAN. The retailer pays the tax. When he purchases a stone separately and a mounting separately from two separate producers of the respective articles and sells them together to a consumer he is obliged to pay the tax as a producer of the article. When he sells a loose stone and a loose mounting to the customer he is also required to pay the tax.

Mr. LONGWORTH. Does he pay the tax based on the price he pays?

Mr. GOLDMAN. No; the tax is based upon the price he sells it for. If the retailer sells the loose stone to a private person he pays the tax based upon the money which he receives, the sale price of that article.

Mr. LONGWORTH. How can you figure that that is the price upon which he pays?

Mr. GOLDMAN. Well, the language of the act is, "when sold by the producer." I think it is section 600-E.

Mr. LONGWORTH. That provides:

Upon any article commonly or commercially known as jewelry, whether real or imitation, sold by the manufacturer, producer or importer thereof, a tax equivalent to three per centum of the price for which so sold.

Now whom do you call the manufacturer of a cut stone? Is it the man who cuts it?

Mr. GOLDMAN. Well, the difficulty arose in this respect, because they contended that according to the ordinary terminology and according to legal definitions unset stones were not included as articles of jewelry, not real articles of jewelry. Of course an unset stone is not considered an article of jewelry. However, they did not want to have untaxed all the diamonds that were being sold in that way, and

so they framed this—it is a makeshift really—for the sake of including within the operation of this act the sales of such stones.

Now, they say when the article is sold by the producer, the importer, it is not subject to the tax. When loose stones under this ruling 2573 were sold by the importer of the stone it was not considered an article of jewelry.

Mr. LONGWORTH. You mean it was not considered an article of jewelry until actually sold to the consumer?

Mr. GOLDMAN. Until actually sold to the consumer. That is the effect of this ruling. In other words, it is one instance where sauce for the goose is not sauce for the gander.

Mr. LONGWORTH. The difference is only a technicality. It amounts to the same thing exactly.

Mr. GOLDMAN. The difference is this—I am going to illustrate as we get along further: The retailers have a very unusual sort of competition to contend with. There are thousands upon thousands of itinerant dealers, gentlemen that carry their stock of loose diamonds in their pockets. Of course diamonds are very compact and they can do that. Those are the gentlemen that, unfortunately, do not, in most cases, pay this tax. Now, as it is at present they are just about able occasionally to meet that competition by reducing the amount of their profits, but when they pay the taxes under such circumstances they pay it out of their own pockets, because they have to meet this competition. Now, it was not intended that this should come from the consumer, and I can show that if the tax is placed upon the importer when he sells it or upon the producer of the stone when he sells them, it will come to all subsequent hands with the tax already added. And in addition to that feature of it it will result in considerable economy to the Government because it would not require so much administrative expense to look after it. It simply means that instead of having countless thousands of retailers to keep after, they will have a limited number of importers or wholesalers, cutters of diamonds, to look after.

Mr. LONGWORTH. Whom do you call the retailer, the man who sells the cut stone?

Mr. GOLDMAN. To the consumer.

Mr. LONGWORTH. To the consumer, who is usually a private person?

Mr. GOLDMAN. Yes, sir. The term "consumer" is used in the ruling; and that is why I used the same term, although I know that, strictly speaking, such articles are not consumed by the public.

Mr. LONGWORTH. And those stones are not considered as jewelry until the retailer sells them?

Mr. GOLDMAN. Until the retailer sells to the ultimate customer, the man that is going to wear it—to the wearer.

Mr. GREEN. It seems to me it is not only a question of simplifying the matter a good deal, but that a great many escape taxation at present.

Mr. GOLDMAN. Well, it escapes taxation, because it is impossible to have eternal vigilance over the number of people that are affected by it.

I want to express the opinion of the assistants in the office of the third collector of internal revenue of New York, with whom I have had personal contact. They say this: They are on the trail of them,

but they can not get them. They are elusive. They can not locate them. They haven't got any particular place of business and it is hard to locate them.

Mr. MOORE. They must get these stones somewhere. Where do they get them?

Mr. GOLDMAN. They get them from the importer, from the cutter, or from a wholesale dealer. Those are the three sources.

Mr. MOORE. Then they sell them to jewelers?

Mr. GOLDMAN. No; these retailers that I am particularly speaking of sell to private persons.

Mr. MOORE. I am speaking of the man now that carries the stones around in his vest pocket.

Mr. GOLDMAN. They sell to the private person.

Mr. MOORE. I want to find out how we are going to reach that man.

Mr. GOLDMAN. Under the present law you don't reach him, because he evades it.

Mr. MOORE. He gets the stones somewhere and we ought to be able to trace them.

Mr. GOLDMAN. He gets the stones generally from the wholesale dealer, because he hasn't any credit to get them from the importer.

Let me explain another situation in the industry. The importer does not sell in small lots. The importer sells in very large quantities. So do the cutters. The only ones that sell to these perambulating merchants are the wholesale dealers in diamonds.

Mr. MOORE. Well, there are a good many of them, I suppose? There are a good many of that type of merchants?

Mr. GOLDMAN. They are numberless. It is impossible to form any conception of the number there are.

Mr. MOORE. Is it possible that any of the goods they carry around are stolen goods?

Mr. GOLDMAN. I don't know. I have never taken any interest in getting any information as to that aspect of it, but I suppose there is always that possibility, because you can't keep your eye on all of them.

Mr. MOORE. It is very hard to trace them; but when they produce those jewels and offer them to somebody, then you have got something in hand, and it is a question of tracing the history of it. Now where do they get them?

Mr. GOLDMAN. You have got something in hand if you know when he has made the sale, but there isn't any information as to when he has made that sale.

Mr. MOORE. I wouldn't want to buy a stone from itinerant merchants such as you referred to unless I knew where he got the stones.

Mr. GOLDMAN. But the character of people that buy from these itinerant merchants are not of the same caliber as your honorable self, sir.

Mr. MOORE. That may be. I thank you for the compliment.

Mr. GOLDMAN. That is so. They deal principally in the congested neighborhoods, the congested districts. They go to a man and say, "Here, I have got a ring here, Mr. So-and-so. It hasn't paid the war tax. It is 3 per cent; it may be more now. Here is an opportunity to save that."

Mr. MOORE. Now, you have a suggestion to cover that situation?

Mr. GOLDMAN. Yes, sir. I want to say in addition to the fact that under this ruling 2,573 that on the sales which were made by the importers, by the cutters, and by the wholesalers that they were not taxed, but that in itself is not the only thing. The floor tax was not imposed. Now, the floor tax, I am sure, would produce a very considerable amount of revenue if it had been imposed as was suggested by the first ruling. If it had been imposed, it would have produced a very great amount of revenue, because it would have been imposed upon the wholesale dealers, who are not producers of it, and there are millions and millions of dollars' worth of stones in the hands of just those dealers throughout this country.

Mr. MOORE. From which we are getting no revenue?

Mr. GOLDMAN. From which at present you are getting no revenue, except when it gets into the hands of the ultimate consumer, and it may not get there until the present emergency is passed.

I suggest that precious stones cut but not set should be subject to tax when sold by the importer, or if cutting is done in the United States, when sold by the manufacturer or dealer for whom the cutting was done. That is what we would term the first hand. There are two ways in which stones originate in this country. They are either imported into this country or else they are cut here by a few select firms who do that class of business. I am not prepared to give exact figures, but I am quite sure that the number of cutters number in the early hundreds throughout this country.

Mr. MOORE. When you refer to "cutter" your suggestion is we should reach him?

Mr. GOLDMAN. Yes, sir.

Mr. MOORE. Does that include the operation of setting the stone in the mounting?

Mr. GOLDMAN. No, sir.

Mr. MOORE. Now, wouldn't it be easier to get the revenue in that way, to catch the stone as it goes from the mounting? We are dealing only with the cutter. Don't you let the other go?

Mr. GOLDMAN. No, I am suggesting—as I will when I get along further—I would suggest that the same rule shall be applied with reference to mountings; that they also should be taxed by the person that produced them.

Mr. MOORE. That is what I say.

Mr. GOLDMAN. Yes. I will get to that in a moment. Of course, I emphasize the stone because that represents such a very great amount of money. The others do not. Where you have a ten or twenty dollar mounting you may have a \$600 stone in it, or sometimes even more.

Mr. MOORE. Well, there are two places where we can catch that floating stone. One is in the hands of the cutter, and the other is in the hands of the moulder.

Mr. GOLDMAN. Of the importer. There are two places where those stones originate in this country. One is in the hands of the importer who brings them into the country to cut. The other is the hands of the cutter who has them cut after they are imported into this country in the rough state. Now, I suggest for favorable consideration the proposition that I have just stated, for the reason that it will reduce evasions of law to a minimum, and I have gone into that subject so completely that I do not think I need to restate that the

evasions of law, of course, increase as the number of persons affected by it increase; and as I stated before, the number of importers and the number of cutters is very small, whereas the number of retailers—well, you can't count them. And another fact, the cutters and wholesalers are generally clustered in one small area, whereas the retailers are scattered far and wide over the entire country.

Mr. DIXON. Have you prepared an amendment to the bill?

Mr. GOLDMAN. I have it in here, yes, but I am afraid that it is not in as concrete a form as I would like to have it.

Mr. DIXON. Will you read it?

Mr. GOLDMAN. Yes, sir. [Reading:]

Precious stones, cut but not set, shall be subject to tax when sold by the importer, or if cutting is done in the United States, when sold by the manufacturer or dealer for whom the cutting was done.

Now, that is not original. I do not claim that that is original with me, but it is the exact language of the Treasury Department ruling No. 2553, which was the first ruling adopted by the Treasury Department.

Mr. DIXON. And afterwards overruled by a subsequent ruling?

Mr. GOLDMAN. Afterwards revoked by Treasury decision 2573.

Mr. GREEN. The only difficulty that I see about that—and that may not be any difficulty at all to one familiar with the jewelry trade like yourself, whereas I am entirely unfamiliar with it—would be when these cut stones were sold to somebody that was going to mount them and then sell the article—a ring, or a broach, or something of that kind. Now, when the article was sold, wouldn't it then be subject to a double tax—a tax on the whole article, both the stone and the mounting?

Mr. GOLDMAN. Well, my suggestion is that the stone should be taxed in the hands of the importer or producer. The mounting should be taxed in the hands of the manufacturer. Now, both the component parts of the jewelry are now taxed and it doesn't require an additional tax in order to get it all.

Mr. GREEN. So that the retailer would simply pass it along in the price?

Mr. GOLDMAN. Yes; with the tax already added to it.

Mr. GREEN. And not concern himself about the payment of it at all?

Mr. GOLDMAN. He wouldn't have to.

Mr. GREEN. When he bought something and paid the manufacturer, say, \$10 for it, that would include the tax which the manufacturer had already paid?

Mr. GOLDMAN. That is it. The manufacturer would have paid the tax and put it into that price—that \$10.

Mr. GREEN. And he could go ahead under ordinary rules of business?

Mr. GOLDMAN. Yes, sir.

Mr. LONGWORTH. Is there any difference in the case of pearls and in the case of cut stones? A pearl, I assume, is almost invariably sold unset. Of course, occasionally, they are sold in a necklace.

Mr. GOLDMAN. I think, from my limited personal experience in the field, that stones are generally sold unset by the importer or producer of the article—I mean the finisher of the article—but then it would come directly within this definition, because it would include

precious stones cut, but not set. Now, it may be desirable to use a more generic term than "cut," because it may include something like polishing, or something like that.

Mr. FAIRCHILD. What is the classification of the pearl? Is it a precious stone?

Mr. GOLDMAN. It is a precious stone. In fact, it may be a precious or imitation stone. Let that term be employed in order to cover it.

Mr. FAIRCHILD. What about imitation jewelry? Is that manufactured in this country—imitation stones? I mean scientific stones as they call them.

Mr. LONGWORTH. It is covered by our bill anyway.

Mr. GOLDMAN. It says whether real or imitation. Articles real or imitation are covered by the present act.

Now I suggest that it would reduce the evasions of the law, and I believe I have made that clear, because of the fact that it would reduce the number of person affected by the law, and accordingly the number of evasions. Now in addition to that it must be borne in mind that the tax will be received in larger sums. I personally have seen a retail jewelry store keeper come to the office of the collector of the third district in New York and pay a tax of 18 cents for a month. I think that the Government lost money on that particular transaction, because I am sure that the machinery necessary to collect that 18 cents was very very much more than the amount of tax that they received in that instance. Now that will be eliminated if the tax is imposed when the goods are sold, when the unset stones are sold. They are usually sold in large quantities by everyone excepting the retailer, everyone in the industry excepting the retailer.

Now it will reduce the cost of administering the law for the very same reason, because it will not require continual vigilance, eternal vigilance over such a larger number of people. It will simply require a vigilance over both the producer and the importer of the loose stones and the manufacturer of the article of jewelry.

Mr. GREEN. So that I may be sure that I understand you—when these stones get into the hands of the jeweler, the manufacturer as we commonly speak of him, who makes the brooches or the rings or whatever it may be—then the tax on the stone is paid by the man that sold it to him and is included in his bill?

Mr. GOLDMAN. Yes, sir.

Mr. GREEN. When the manufacturer makes up the article of jewelry, then he will have to pay a separate tax on the mounting?

Mr. GOLDMAN. That is right, sir.

Mr. GREEN. So that when we prepare this law we will have to prepare some kind of a system whereby the manufacturer would in such a case as that pay a separate tax on the mounting?

Mr. GOLDMAN. That is right, sir. And in connection with that I want to say that it has been necessary to so construe the present law.

Mr. GREEN. It has? I was not aware of that.

Mr. GOLDMAN. I will be glad to show that. Here is an article from the Jewelry Tax Primer. This is the revised Jewelry Primer of the war excise tax. I believe it is official, although this particular copy does not seem to be. It says here—

Prepared by the war revenue tax committee of the jewelers' vigilance committee.

No; I guess it is not official, but it represents an instance similar to the one you have referred to:

Where a mounting is set with diamonds or other precious or semiprecious stones or pearls or imitations thereof, and some part of the mounting remains to be finished, like the addition of one or more stones, if such an unfinished piece of jewelry is sold by the manufacturer, producer, or importer thereof to any one but a final consumer, is this a taxable sale of jewelry under the act of October 3, 1917?

Well, in this particular case the answer is no, because the person who finally added or causes to be added, missing stones or parts, becomes a manufacturer or producer of the finished article of jewelry and subject to the sales tax of 3 per cent, if and when he sells it. But here it says further—

Where a retailer or other dealer purchases emblem goods, gold knives, taxable watches, or other completed articles of jewelry upon which the vendor has paid the tax, and he afterwards has them mounted with precious or imitation precious stones, upon what part of such jewelry will the tax accrue when he sells it?

No further tax will be due upon that portion already tax paid, but the retailer or dealer will then be held accountable for the tax on the increased selling value of the articles in which such stones have been set.

I believe that is identical with the question propounded by you.

Mr. GREEN. You think there will be no difficulty about the administration of a law of that kind?

Mr. GOLDMAN. No, there has been no difficulty in administering under this provision.

Mr. GREEN. What about getting the tax from the itinerant vendor?

Mr. GOLDMAN. You will get it before him, because he hasn't the facilities for manufacturing such an article.

Mr. GREEN. They couldn't escape the tax under your plan, that is very true, because the tax would be paid before it gets to their hands.

Mr. GOLDMAN. Yes. And then it would equalize the conditions throughout the country—I mean throughout this retail industry.

Mr. GREEN. So that everybody would be on an equal basis.

Mr. GOLDMAN. Yes, sir. I think one point that will appeal to the members of this committee is my statement that it will produce greater revenue for the Government.

Mr. HAWLEY. How much more will it produce?

Mr. GOLDMAN. I am sorry, but I haven't any means of obtaining such figures. I went over to the Library and strived mightily trying to get some information on which I could base such an estimate, but I could not find any information that would be of any assistance to me.

The two points which have been heretofore raised are that there will be fewer evasions and the cost of administration will be less, which will show a clear way to increased revenue, and my argument is that directly there will be a substantial increase in the sum realized from such taxes by adopting my rule, the form suggested. Under the present law, as interpreted by Treasury decision 2573, the tax is imposed upon sales of precious stones only when made to the ultimate consumer. That is one point, of course, I want to drive home, that it is not taxed until some time later. All of these precious stones ought to be taxed in the hands of the importers or cutters or wholesale dealers, because they may not be disposed of to the consumer for some time to come—probably, as I said before, not until the present emergency has passed, and the revenue act is needed, as I say, for immediate revenue.

Mr. GREEN. You would then not wait for them to sell these stones, but tax them now?

Mr. GOLDMAN. In the same way that a floor tax was imposed on articles of jewelry in the hands of wholesale dealers by the present act, it is possible and fair to impose a similar floor tax upon the stores of goods in their possession now.

Mr. GREEN. I am glad to agree with you, that there is an instance for Mr. Garner—he is not present just now—where he might get some more taxes. [Laughter.]

Mr. LONGWORTH. The floor tax is  $1\frac{1}{2}$  per cent?

Mr. GOLDMAN. At present one-half of the sales tax. If it is going to be more than that, then I certainly urge as emphatically as I can the imposition of a tax that will result in the taxation at the first source, so that you will not be put in a position where a large tax will be paid by one retailer, and another retailer will get on without paying any tax at all. That may be possibly equalized somewhat by greater purchases on one hand, which the other man can not make, but if the tax is going to be very great or much greater than it is now, it will simply mean that the established retail dealers in this country will not be able to sustain it if this competition is continued, and the only way of eliminating that competition and putting them on a fair basis is to tax the article before it gets to either of them.

Mr. GREEN. Of course, in saying what I did, I was merely voicing my own opinion.

Mr. GOLDMAN. Now, with reference to mountings, while the gentleman that preceded me did not bring along with him any exhibit—it might have added to the enjoyment of the occasion if he had brought some apples with him—I have brought with me some mountings to illustrate what a mounting is composed of [exhibiting ring mounting]. This mounting, by the way, is a platinum mounting.

Mr. GREEN. Mr. Longworth has special designs on platinum mountings, and I might say the suggestion has considerably impressed some of the rest of us.

Mr. GOLDMAN. I want to show you these to illustrate that these are in the hands of retail dealers.

Mr. DIXON. I suggest that you stand over there by the table and describe those things so the stenographer can get it in the record.

Mr. GOLDMAN. These exhibits indicate that most of the mountings are manufactured before they get into the hands of the persons that set the stones into them, and by totally different persons, and the popular impression that the mountings are made by the same concerns that set the stones into them is not correct. In other words, we have a totally separate person, and it is likely to facilitate the tax if that will be remembered, that while on the one hand the man that produces the diamond or imports it is taxed, the man that produces these mountings, and they both sell them to the same person, the man that makes the completed article of jewelry, and they will come to him already with the tax added.

That, to some extent, answers your former question as to the production of these articles.

Mr. LONGWORTH. Are the stones in the mounting that you have there?

Mr. GOLDMAN. No, sir.

Mr. GREEN. Do the retail dealers do much of the inserting of the stones in the mountings?

Mr. GOLDMAN. Quite a considerable amount, and so do these itinerant dealers, as I have stated before. In fact, they carry all their stuff loose. They very seldom carry it mounted, and then after the stone is sold they recommend a particular form or style of mounting to the customer.

So the wording of the present act, it is suggested, should be followed with an amendment so that "jewelry" will be made extensive and broad enough to include mountings, settings, and such parts of the jewelry which we put in a position or condition to be formed into jewelry. Now, to explain that and to possibly meet some criticism at some future time, I want again to refer to these exhibits. It is possible that one concern will manufacture the top of this ring [showing]—this part of it; that another concern will manufacture the bottom part of the ring. It will be joined together by the person who puts them in condition to be used as jewelry. That is the time for it to be taxed, because it can not be used as jewelry when separated. You can not buy one-half of the ring. You have got to wait until it is a completed article as a ring, and when it is in condition to be used as jewelry, then it should be taxed. I suggest that, because in connection with the discussion before Commissioner Roper by the jewelers' vigilance committee that was one of their strong points, because they contended it was so difficult to put your finger on the points where parts of jewelry are subject to a tax, so as to prevent double taxation, and I suggest that this can be done by saying that it shall be taxed when it is in condition to receive the stone or to be used as jewelry by the addition of one or more parts.

Mr. FAIRCHILD. What class of jewelers comprise the jewelers' vigilance committee?

Mr. GOLDMAN. Well, they represent the wholesale dealers, the importers, and the cutters. They represent the very large concerns.

Mr. FAIRCHILD. They probably would not agree with your position?

Mr. GOLDMAN. They certainly will not.

Mr. LONGWORTH. None of the firms which constitute your membership are members of the Jewelers' Vigilance Committee?

Mr. GOLDMAN. No, sir.

Mr. FAIRCHILD. I understood you to say that your association was not, but I wanted to know whether any of the firms in your association were members.

Mr. GOLDMAN. No, sir; there is not one, I am pretty sure, because their interests are so conflicting that it would be like attempting to mix oil and water.

Now, of course, articles of jewelry which will be manufactured after the passage of the act, the proposed act, would be subject to the tax when sold by the manufacturer, in the same way as the present act now provides—that is, a complete article of jewelry aside from the stones, as for instance an ornamented watch case with the movement in it, or some other articles of jewelry that do not require the addition of stones.

As I said before, a floor tax should be placed upon stocks of precious stones set and unset in articles of jewelry and mountings ready to be set, in the hands of wholesale and retail dealers. Now it seems rather

unusual that I would suggest that a tax should be imposed upon members of our own association—that is, the retail jewelers—but in order that the tax law that I suggest should be properly imposed, that the Government will get all the revenue that it should get, it is necessary that a floor tax should be placed upon articles in the hands of retail jewelers as well as in the hands of wholesale jewelers, and that is the only way, of course, in which all of the articles will be subjected to the tax, because the stocks of unset stones in the hands of wholesale and retail dealers will be subject to the floor tax.

Mr. LONGWORTH. Would you see any objection to making the floor tax as high as the sale tax?

Mr. GOLDMAN. I certainly do. I see this objection to it, that the articles upon which the floor tax will be imposed will outlast the necessity for the tax. They will not be disposed of very likely before the necessity for the tax has passed.

Now with reference to the floor tax, as each article of goods is sold while the present emergency lasts, then and only then is it subject to the tax, but if you put as high a tax upon the stock of goods, you may be in a position where the necessity for the revenue will end in the course of a year, but the articles upon which the tax has been placed will outlast it by 10 years. That is the objection that I see to that.

Now I want to show in what respect all of the articles of jewelry, or the articles that go to the making of jewelry, will be subjected to the tax under this arrangement. The stock of unset stones in the hands of wholesale and retail dealers will be subjected to the floor tax, as will also the set stones and other articles of jewelry and parts of jewelry in their hands. The tax will be imposed upon loose stones when sold by the importer or by the dealer cutting them or causing them to be cut. Articles of jewelry manufactured after the passage of the act will be subject to the tax when sold by the manufacturer. Now in that way every article of jewelry will be subjected to the tax, and there will be a surprisingly few evasions.

Now, there is another thing that has been directed to the attention of members of this association—something that has never been in any act that I know of, and that is that pawnbrokers who have occasion to dispose of their unredeemed pledges do it by means of what are termed "auction sales" in our city, in the city of New York. I don't know what system they have, of course, throughout the country. I believe that is controlled, possibly, by local laws which may provide a method by which unredeemed pledges shall be disposed of by pawnbrokers. But it stands, I am sure, without question, that throughout the country in this way there is sold a huge quantity of stones and articles of jewelry. Now, it may be that these particular articles that are pledged a year ago, sometimes two years ago, sometimes three years ago, because they continued to make good by paying interest and are allowed to continue the pledge, that those articles had never been subjected to any tax, and it is suggested that some means be found to place a tax upon those articles. It is only fair that they also should bear the tax. Most of these auction sales are frequented by the same type of dealer that I referred to before, the type that carry the articles in their pockets, and even though they are subjected to tax at present, the collector for the third district of New York will bear me out that they are practically never paid. I mean that they

are subject to the tax in this way: If they buy an article at the pawn-broker sales and they are obliged to resell it, they should pay tax the upon is as the producer of the article of jewelry. But it is more honored in the breach than in the observance.

Mr. GREEN. Would this amount to any considerable sum, if a tax were imposed?

Mr. GOLDMAN. I suppose in our city alone probably in the neighborhood of \$1,000,000, or more, is disposed of in that way.

Mr. HAWLEY. How much of a tax would you suggest?

Mr. GOLDMAN. It is suggested to me that it is as much as \$5,000,000 in our city.

Mr. FAIRCHILD. I should think the sales would amount to more than \$1,000,000 in New York City.

Mr. GOLDMAN. \$5,000,000, these gentlemen suggest.

Mr. HAWLEY. How much tax do you say there should be on it?

Mr. GOLDMAN. I should say the same tax as on any other article of jewelry, to be fair to all concerned. I think throughout the country this is quite a sum; so far it has gone without being taxed. I think it should be.

Mr. LONGWORTH. Does your firm, on your association, deal in made-up jewelry?

Mr. GOLDMAN. Yes; which they have made up as such.

Mr. LONGWORTH. And second-hand jewelry? They buy jewelry, second-hand?

Mr. GOLDMAN. Yes; and every other jeweler does in this country, from Tiffany's to the most insignificant jeweler in the country.

Mr. LONGWORTH. Do you buy the settings, or do you make them up?

Mr. GOLDMAN. We buy the settings complete, invariably.

Mr. LONGWORTH. Then you don't buy the gold, do you?

Mr. GOLDMAN. For the purpose of manufacturing jewelry?

Mr. LONGWORTH. Yes?

Mr. GOLDMAN. No, sir. I don't think one-half of 1 per cent of the retailers do buy gold for that purpose.

Mr. LONGWORTH. Now, is there a regular line of trade that manufactures the settings?

Mr. GOLDMAN. I think I can best answer that by directing your attention to the advertisements in the Jewelers' Circular, which is chuck full of that sort of advertising. There is one [indicating].

Mr. LONGWORTH. What do they advertise?

Mr. GOLDMAN. They advertise the sale of signet rings, and I think I noticed some mountings.

Mr. LONGWORTH. What I am trying to get at is this: You want to make a piece of diamond jewelry; you own the diamond; do you buy a setting and put the diamond in?

Mr. GOLDMAN. Yes; even if the customer should require a peculiarly novel design, the design has to be sketched and brought to the manufacturer, and the manufacturer creates it.

Mr. LONGWORTH. And you are not in that business?

Mr. GOLDMAN. We are not in that business.

Mr. LONGWORTH. What is that business called?

Mr. GOLDMAN. He is called the manufacturing jeweler.

Mr. LONGWORTH. Now, he is the man that buys the material for the setting?

Mr. GOLDMAN. He is the man that buys the raw materials for the purpose of making them into settings. I want to say that it takes

quite extensive machinery to be able to send out these settings in a commercial manner, so that they can be sold commercially.

Mr. GREEN. So that the cost would not be prohibitive?

Mr. GOLDMAN. Yes, sir.

Mr. LONGWORTH. I take it men engaged in that business are members of your association?

Mr. GOLDMAN. Personally I think they are.

Mr. LONGWORTH. Do you know Mr. Rothschild?

Mr. GOLDMAN. I have never met the gentlemen.

Mr. LONGWORTH. We expected him here to-day.

Mr. GOLDMAN. I was so informed, and that made me all the more delighted to be here.

Mr. LONGWORTH. Do you know why he isn't here?

Mr. GOLDMAN. I don't want to be boastful and say that he isn't here because I am here; but I do think he wanted to know first what would be said.

Mr. LONGWORTH. Tiffany's are both manufacturers and retailers?

Mr. GOLDMAN. Oh, yes; they are manufacturers and buy stones in large quantities and set them up. They also cut diamonds.

Mr. LONGWORTH. When you buy settings for your jewelry, you buy them from the so-called manufacturing jeweler?

Mr. GOLDMAN. From the manufacturing jeweler.

Mr. LONGWORTH. And do you buy a certain amount of those settings?

Mr. GOLDMAN. The stock settings, like the octagon setting, we buy quantities at a time.

Mr. LONGWORTH. Some quantities at a time?

Mr. GOLDMAN. Yes; the jeweler may buy quantities at a time; not one for each individual sale, but he may have them on hand.

Mr. LONGWORTH. Platinum settings?

Mr. GOLDMAN. I want to withdraw the statement that that is platinum; I am now told it is white gold.

Mr. GREEN. For our information, what is white gold?

Mr. GOLDMAN. It is ordinary gold with some chemical added.

Mr. COHN. It is gold with some nickel added, and chemicals to change its color.

Mr. GREEN. An alloy?

Mr. GOLDMAN. I am informed it is an alloy—nickel—and chemicals added to give it the color.

Mr. LONGWORTH. Is that the same price as gold?

Mr. GOLDMAN. They say a trifle more.

Mr. LONGWORTH. How does that compare with the price of platinum?

Mr. GOLDMAN. About one-tenth less.

Mr. LONGWORTH. You say it is very difficult to buy platinum settings now?

Mr. GOLDMAN. Yes; it is hard to get them now.

Mr. LONGWORTH. Why is it difficult to get platinum settings?

Mr. COHN. It isn't in the market now. They can't sell any.

Mr. GOLDMAN. I understand you gentlemen are aware the Government is commandeering platinum in certain stages of manufacture—in certain processes of manufacture. I understand that up to some

process it is waived, but when it reaches that point the platinum is commandeered by the Government.

Mr. LONGWORTH. How recently was such a rule made?

Mr. GOLDMAN. Within the past five weeks, I think. Within the past five or six weeks, I am sure. My attention was called to it about a month ago.

Mr. LONGWORTH. That commandeering has gone to the extent only of platinum in the more or less raw state?

Mr. GOLDMAN. I don't think it even affects the industry generally, but they have picked out particular firms. That particular aspect of it has not concerned me, because my clients are not in that branch of the industry.

Mr. LONGWORTH. You don't know anything about platinum in—

Mr. GOLDMAN (interrupting). In its manufactured state I know nothing about it.

Mr. LONGWORTH. Your information goes only to platinum made up in the form of jewelry settings?

Mr. GOLDMAN. Yes, sir.

Mr. LONGWORTH. So that you are not informed as to the various rulings made by the Board of War Industries?

Mr. GOLDMAN. No; I know they are announced every week in the Jewelers' Circular, but I have not tried to inform myself. It is probable that the Jewelers' Circular for the past two months would give full information as to that.

Mr. LONGWORTH. Well, there has been no attempt yet to commandeer platinum in the form of jewelry?

Mr. GOLDMAN. I think there has been only in the process of manufacture, where the process of manufacture has not exceeded a certain stage; of course, that is just my recollection; I am not certain about that.

Mr. LONGWORTH. You couldn't speak, then, with knowledge of the platinum industry and its control?

Mr. GOLDMAN. No, sir; I can only cite you to the place where I get my information; that is the Jewelers' Circular, where I did notice the other forms of information set forth. I would like, if the committee will allow me, to leave this memorandum.

Mr. DIXON (presiding). You may leave that, and it will be printed in the hearings.

Mr. MOORE. Before you go, is your association an association wholly in New York?

Mr. GOLDMAN. Yes, sir.

Mr. MOORE. Is it a local association?

Mr. GOLDMAN. Yes, sir.

Mr. MOORE. You do not speak for the National Jewelers' Association?

Mr. GOLDMAN. No, sir; I certainly do not.

(The memorandum referred to by Mr. Goldman is as follows:)

MEMORANDUM ON JEWELRY TAX SUBMITTED BY JEWELRY AND DIAMOND MERCHANTS ASSOCIATION (INC.), UNITED RETAIL JEWELRY STOREKEEPERS ASSOCIATION (INC.), CHARLES GOLDMAN, COUNSEL.

STATEMENT.

In the revenue act of October 3, 1917, no specific mention is made of precious stones. The tax is imposed, in the language of section 600, subdivision e:

"Upon any article commonly or commercially known as jewelry, whether real or imitation, sold by the manufacturer, producer, or importer thereof \* \* \*."

It became necessary, therefore, that a definition be given to the term "commonly or commercially known as jewelry," in order to determine whether or not it was inclusive of unset precious stones.

Accordingly, on October 26, 1917, the Commissioner of Internal Revenue issued Treasury Department Ruling No. 2553, which, with relation to this phase of the act, provided as follows:

"Precious stones, cut but not set, will be regarded as subject to tax when sold by the importer or if cutting is done in the United States, when sold by the manufacturer or dealer for whom the cutting was done."

This ruling included within the term "articles commonly or commercially known as jewelry," all precious stones cut but not set. Accordingly the tax was imposed upon all sales of such stones made by the importer or producer and the wholesale dealers were subjected to the floor tax provided by section 602 of the act.

Then followed a most forceful protest by the Jewelers Vigilance Committee (Inc.), which body contended that unset stones were not to be included in the phrase "articles commonly or commercially known as jewelry."

On November 1, 1917, as a result of this protest Treasury Department Ruling No. 2553 was revoked and in its place Treasury Department Ruling No. 2573 was issued. On this subject this latter ruling, paragraph No. 3, provides in part as follows:

"Precious and imitation stones cut but not set, and parts of jewelry, including mountings which require the addition of material or stones or other parts, to become complete articles of jewelry, will be subject to tax when sold to the consumer."

This is in accordance with the suggestion of the Jewelers Vigilance Committee, (Inc.) (see brief of Jewelers Vigilance Committee submitted to Commissioner of Internal Revenue, point IV, subdivision 7, published in Jewelers Circular November 14, 1917, p. 83). In the same breath, however, this committee states "that there may be some question as to strict legality of such a ruling \* \* \*". It can not be doubted that there is some question as to the legality of such a ruling, in the face of the act itself. If unset stones are "articles commonly, or commercially known as jewelry" in the hands of the dealer selling to the consumer, why are they not such articles in the hands of the importer or producer?

The retailers, however, did not protest the legality of this ruling. They submitted to it although in innumerable instances it resulted in severe hardship to them.

It resulted also in loss of revenue to the Government for the reason that the great volume of sales made by importers and producers went untaxed, excepting for the small portion that found its way to the ultimate consumer, and for the further reason that the vast stores of unset stones in the hands of wholesale dealers escaped the floor tax. Now the retail jeweler urges that the proposed act should not continue the present rulings, but respectfully suggests that T. D. 2553 be made the model for the proposed revenue act upon precious stones cut but not set.

"Precious stones cut but not set should be subject to tax when sold by the importer, or if cutting is done in the United States, when sold by the manufacturer or dealer for whom the cutting was done."

This method of taxing loose stones is put forward for favorable consideration for the following reasons:

- (A) It will reduce evasions of the tax to a minimum.
- (B) It will reduce the cost of administering the law.
- (C) It will produce greater revenue for the Government.

The reasons advanced will be treated in the order above stated.

(A) *It will reduce evasions of the tax to a minimum.*—The number of evasions of law increases as the number of persons affected by it increases. Under the present act as administered the greatest possible number of persons are affected. Under the form of law here suggested the smallest number will be affected.

Under the present act and the rules formulated by the Treasury Department, the term "producer" as applied to articles of jewelry includes the retailer who sets precious stones in mountings. As practically every retailer throughout the country sets or causes to be set such precious stones in mountings, all these are affected by the act.

In contrast to this, if the tax is imposed upon loose stones "when sold by the importer or by the dealer who cuts such stones or causes them to be cut," the minimum number of persons will be affected thereby. In addition to the question of number of persons affected, the question of the character of such persons must be resolved in favor of the plan here urged. The cutters of precious stones are undoubtedly of higher commercial character than many of the retail jewelers for it is a fact, recognized in the industry, that many of the so-called retailers have no established position. They are commercial "pirates" of the industry. They are numerous, however; all of the larger cities reek with them and in the aggregate they accomplish a fair proportion of the sale of precious stones to consumers. Generally they have no

stores for the transaction of their business; their entire stock is carried about their persons. Those that have places of business have them in their homes on upper stories of buildings, most frequently without displaying any sign of their business. Great numbers of them sell precious stones as a side line to barbering, or to conducting restaurants, or to running pool parlors, etc. At present these illicit "retailers" with practically no exceptions, evade the payment of the tax.

This situation is real and not fancied, and it is serious. The collector for the third district of New York, who has had to cope with it will be able, it is believed, to attest to the numerous evasions by this class, and to the expense of detecting them. To emphasize the contrast, it is respectfully suggested that information be obtained from such collectors in whose districts large manufacturers of jewelry are located. From such information it can readily be determined whether the form of act proposed would not result in fewer evasions.

(B) *It will reduce the cost of administering the law.*—Under such an act as suggested herein the tax upon precious stones, cut but not set, will be imposed upon the importers and upon the cutters, and not upon the retail dealers, as at present.

Figures are not at hand, but even without them it is obvious that the number of importers of precious stones or the number of dealers cutting the rough stones after importation into this country, is very much less than the number of dealers selling such stones to the consumer, set or unset. The number of persons subject to the act being one of the greatest elements in the cost of administering a law of this character, it is apparent that in the form favored by this committee it would be very much less costly than the present act as administered under T. D. 2573. Also, the firms engaged in the importing and cutting branches of the industry are generally clustered together in a small area, whereas the retailers are scattered far and wide. This is another item resulting in economy of administration.

(C) *It will produce greater revenue for the Government.*—While the two points heretofore raised will of themselves show a clear way to increase revenue to the Government, by preventing evasions of payment and by reducing the cost of administration, it is proposed to show that directly a very substantial increase in the sum realized from such taxation will be effected by adopting the form of law suggested herein.

Under the present law, as interpreted by T. D. 2573, the tax is imposed upon sales of precious stones only when made to the ultimate consumer. This leaves entirely untaxed all of the precious stones in the hands of importers, cutters, and wholesale dealers, which will not be disposed of to the consumer for some time to come, probably not until the present emergency has passed.

The revenue act being needed for immediate revenue should, it is respectfully suggested, be so framed as to accomplish this result. As a matter of fact, with regard to "articles commonly or commercially known as jewelry" it is now so framed. It should also be administered in the same way with regard to unset precious stones, by far the largest single item in the industry.

In this way, also, the tax will be collected in larger payments, and the spectacle of vast, expensive legal machinery being set in motion to collect trifling sums in taxes will be eliminated.

As to mountings, settings, etc., the tax should be imposed on the manufacturer who produces them for use as jewelry.

T. D. 2573, under which the present revenue act is administered with relation to articles of jewelry, places mountings and parts of jewelry in the same class as unset precious and imitation stones. It provided as follows (subd. 3):

"Precious and imitation stones, cut but not set, and parts of jewelry, including mountings, which require the addition of materials or stones or other parts to become complete articles of jewelry, will be subject to tax when sold to the consumer."

The three reasons advanced in favor of placing the tax upon the importers and producers of unset stones, apply also, to favor the adoption of the rule indicated in the caption, that the tax upon mountings, settings, and parts of jewelry be imposed upon manufacturer or producer, who produces them in form to be used for jewelry.

The list of such parts of jewelry is not large and comprises mainly all forms of mountings and settings, not in themselves complete articles of jewelry, ornamental watch cases, etc.; metal watch bracelets, requiring the addition of movements or the bracelet parts to become complete metal watch bracelets.

Such a tax as here suggested upon mountings, together with the tax on unset stones hereinbefore proposed, would result in taxing all such articles just as soon as they entered the channels of commerce, and all subsequent dealers, and the consumer, will receive them with the tax added.

Articles of jewelry manufactured after the passage of the act should be taxed when sold by the manufacturer, producer, or importer.

This is the substance of the present act (sec. 600a), and it is respectfully recommended that this provision be continued in the proposed act.

A floor tax should be placed upon the stock of precious stones set and unset, articles of jewelry, and mountings ready to be set, in the hands of wholesale and retail dealers.

In order that none of the articles intended to be taxed should escape taxation, it is respectfully suggested that a floor tax be imposed upon precious stones, set and unset, and upon articles of jewelry and parts of jewelry which may be in the hands of wholesale and retail dealers. It is intended thereby that the floor tax shall be imposed upon precious stones set and unset in the hands of retail jewelers, as well as in the hands of wholesale dealers.

In this way all articles subject to the tax will be taxed. The stocks of unset stones in the hands of wholesale and retail dealers will be subject to the floor tax, as will also the set stones and other articles of jewelry and parts of jewelry in their hands. The tax will be imposed upon loose stones when sold by the importer or by the dealer cutting them or causing them to be cut. Articles of jewelry manufactured after the passage of the act will be subject to the tax when sold by the manufacturer.

*Pawnbroker sales or auctions.*—This phase of this memorandum relates to a question which does not appear to have been covered by the present act.

All unredeemed pledges in the hands of pawnbrokers are disposed of by them, generally by public auction. In this way great quantities of jewelry and precious stones are sold. Under the present act, such sales are not subject to the tax.

It is respectfully suggested that such sales be subjected to the tax.

Respectfully submitted.

JEWELRY AND DIAMOND MERCHANTS ASSOCIATION, (INC.).

UNITED RETAIL JEWELRY STORE KEEPERS ASSOCIATION, (INC.)

CHARLES GOLDMAN, *Counsel.*

JULY 1, 1918.

**STATEMENT OF MR. W. D. BROWN, OF WASHINGTON, D. C.,  
EDITOR OF THE R. F. D. NEWS.**

Mr. BROWN. Gentlemen of the committee, I am the attorney for the National Rural Letter Carriers' Association. I want to ask your consideration on behalf of the rural letter carrier in reference to a tax on motor vehicles. The present Congress has seen fit to relieve the condition of the rural letter carriers by giving them a substantial increase in their compensation, and we do not believe it would be just exactly fair now for Congress to take away a substantial part of that increase from the men who need it so badly, and who are the only class of Government employees who are required to furnish and maintain at their own expense all the vehicles necessary to the proper performance of their duties.

Mr. DIXON. That is on the theory that the committee is liable to put a tax on automobiles in the hands of the user?

Mr. BROWN. Yes, sir; in the hands of the user. Of course, I have no means of knowing what the purpose of the committee is. My appearance before you is based on newspaper reports.

I will say, Mr. Chairman, in the city delivery service, where there is a branch similar to the rural delivery service, namely, the mounted service, the Government pays the cost of that service, amounting in some cases to as much as \$1,000 a year for the vehicles. The rural carrier pays all the cost of his vehicle maintenance, and I ask, as the attorney for the National Rural Letter Carrier's Association, your favorable consideration of this class of Government employees.

Mr. MOORE. To what extent do the rural carriers own machines?

Mr. BROWN. I wouldn't be absolutely sure, Mr. Moore, but I would say at least 40 to 50 per cent now use motor vehicles. I have steadfastly urged the use of automobiles in rural deliveries, as a means of expediting the delivery of the mails; at this time, when labor is so scarce, and man power is at a premium, I have taken the stand that if rural carriers will take an automobile and cover their

routes in half to one-third the time they do in a horse-drawn vehicle, they can use the balance of the time in productive employment.

Mr. MOORE. How many rural carriers are there now?

Mr. BROWN. About 43,000.

Mr. MOORE. And about 40 per cent of them use automobiles?

Mr. BROWN. About 40 per cent; and perhaps 50 per cent. There are no statistics available on the subject.

Mr. MOORE. Isn't it a fact that when they buy a machine now they pay the tax on it?

Mr. BROWN. If there is a tax, they must pay it; yes, sir.

Mr. MOORE. There is a manufacturer's tax.

Mr. BROWN. They must pay it, of course.

Mr. MOORE. It has been shown here that the manufacturer passes that on to the purchaser of a machine.

Mr. BROWN. Well, I am not qualified to give testimony to that. I haven't bought a car.

Mr. MOORE. I think that can be accepted as a fact. What you object to is a direct tax on a machine owned by a free delivery carrier of the Government?

Mr. BROWN. Yes, sir.

Mr. MOORE. That is what you appear for?

Mr. BROWN. Yes, sir; the privately owned vehicle owned by the carrier. In the star-route service there is a law now that permits the Postmaster General to increase the pay of the star route carrier if he thinks the conditions warrant it; that was brought about by the conditions arising after the introduction of the parcel post; and with the mounted carrier of the city delivery service, the Government pays all his cost of vehicle, and naturally, if there is a direct tax on motor vehicles, naturally that would be considered a part of the mounted city carrier's cost of operation.

Mr. MOORE. Since the defeat of the pneumatic tube we are going to have more motor vehicles, but they will be Government owned, no doubt.

Mr. BROWN. If they are privately owned, the Government will pay the cost of upkeep to the owner.

Mr. MOORE. Let me ask you this, Mr. Brown: To what extent are the machines of rural carriers used for purposes other than the carrying of the mail?

Mr. BROWN. Well, to a limited extent they are used for other purposes. Not to a great extent, because the men, when they come in off of their routes, are engaged in other work where they can save any time by the use of motor vehicles, after they come in from their official routes, they are engaged in other work where the motor vehicles can't be used.

Mr. MOORE. I have been under the impression they used them for other purposes.

Mr. BROWN. They do in some cases, I am sure.

Mr. MOORE. That might have some bearing on their relief from taxation.

Mr. BROWN. Absolutely. But from my knowledge of the broad and general situation I would say the number of uses for the vehicle after the completion of the official day's work is so small as to be negligible.

I thank you, gentlemen, for the privilege of appearing before you.

**STATEMENT OF HON. A. J. SABATH, A REPRESENTATIVE FROM  
THE STATE OF ILLINOIS.**

Mr. SABATH. Mr. Chairman and gentlemen, I don't know whether I can add anything to what already has been stated, or give you any additional information; notwithstanding I feel it my duty to call your attention to a few facts before you start to frame the bill. There are a certain few men in this country who are always fearful that the common people and the laboring people, unless they are taxed, will not be patriotic, and they feel by imposing a tax they will make them very patriotic. Well, I don't find any objections on the part of the people of this country to paying a fair and reasonable tax. On the other hand, I believe that those people who are accumulating great profits, especially the last few years, due to the war, should pay their proportionate and just share of the taxes. I have, a year ago, heard the statement that there is a statement on the part of certain interests, in view of the fact that we were then considering a revenue through increasing the income tax, that they have started out to increase their profits to an amount that the income tax will amount to, so that it will not come out of any former profits, or profits that they make, and they have succeeded so that to-day their profits after the payment of the income tax is still greater than they were in prewar years. Now, I believe that these people, and these interests who are accumulating these tremendous sums of money should be taxed. I am not going to say that they should be taxed up to an amount whereby only \$50,000 should be left to them, but I believe in many instances, and where these things go into the millions—reaching a profit over \$1,000,000 they should be taxed up to 90 per cent. I believe when a man has \$90,000 left in these war times that is an amount that should suffice him.

In the last revenue tax you have provided an 8 per cent tax, an individual 8 per cent income tax; as I understand, really an occupational tax. Now, I find a large number of people who have large investments and are not obliged to work. Now, I think if you give this matter due consideration you will remedy that, to my mind, unfair tax, and tax all people alike, and especially those who do not earn their incomes and derive them from investments. I do not see why people who are obliged to work hard and earn their living and thereby perhaps have success to secure a larger income through hard work and application to their duties, should be taxed 8 per cent, and those who do nothing and derive their income from investments they have in real estate mortgages and other securities that are not taxed should be eliminated from this tax. Now, I think they should be eliminated and added together with additions on the income tax. I believe, also, that the country believes in an increased income tax, and I believe the income tax in conjunction with the excess-profits tax should be increased.

Now, I don't know whether you have read the report of the Federal Trade Commission that has been issued a few days ago.

Mr. MOORE. I was going to ask you whether you have reference to that when you speak of the interests that have not been taxed?

Mr. SABATH. Yes; and they have not reached one quarter of the interests that have accumulated tremendous sums, running into the millions. We have the industries going into the millions, and millions

of profits. You take the plate-glass industry and the glass industry, they are making millions and millions; and others, too. You take the Paper Trust, notwithstanding the fact of the agreement they have entered into with the Attorney General, they are raising the price again to the small consumer in a way that can be called nothing less than robbery. I have received letters from several foreign-language newspapers who are doing a splendid work of instilling patriotism into the minds of the people, and they are complaining bitterly at the prices they are obliged to pay. They say to them "You have agreed to fix the price at \$3.05," and they say, "Yes, we did, but we haven't any of that paper now, and if you want any you will have to pay more," and they make them pay \$3.75 and up.

Mr. GREEN. If a few of those gentlemen had been sent to jail for violating the law instead of being politely told not to do it again, it would have helped.

Mr. SABATH. I agree with you, too, but this—

Mr. MOORE (interrupting). Judge, that is true. You have referred to the Trade Commission report; and in that report there are some concerns from your own city, and others mentioned, and some of us have contended right along that the Attorney General's Department was available if anything was to be done to check up such improprieties as they might be guilty of; but we get no action.

Mr. SABATH. You know the condition. Due to this terrible war in which we are engaged, I presume the administration does not wish to create conditions whereby the big interests and the bankers of the United States will make the hue and cry that we are interfering with business.

Mr. MOORE. We will certainly make appropriations to prosecute, if there is any evidence.

Mr. SABATH. They are gathering the evidence, and I hope some of these people will be brought to time. You and I will not quarrel about these things. I feel the same as you do.

Mr. MOORE. I think they have the money to go ahead, if they have grounds for action.

Mr. SABATH. I presume the reason they are not going on and commencing these actions against these men is that there will be the hue and cry that the administration is interfering with business just now, and that it may cause conditions that will not be for the best interests of the Nation in view of these trying times that we are now having. But I hope in a short space of time the Department of Justice will reach it, and that every one of these, including the Steel Trust, as well as the Textile Trust—

Mr. MOORE. Anybody that is doing wrong and violating the law.

Mr. SABATH. Yes; the mere fact that the packers are located in Chicago, I wish to assure you that I do not ask that they be dealt with any differently than any other violaters of the law, or any other combination of men who are robbing the American people.

But in view of the conditions that exist, in view of the fact that we may not be able to stop it, I lay this matter before you, believing that we can easily by the revenue legislation at least impose a certain taxation upon them whereby they will perhaps come to their senses and realize that they can't do as they please, and that they can't retain all of that ill-gotten and unfairly accumulated profit.

Mr. MOORE. It would appear from the Federal Trade Commission's report that there has been certain covering in, in the way of padded salaries and things of that kind, that were intended to avoid it.

Mr. SABATH. All of these large industries, somehow or other, they preach patriotism, but when they can make excess profits they do so, and in view of the fact that we can't do so, I think we can by imposing heavy taxes up to 90 per cent thereby get it back from them.

Now, as to the excess-profits tax. I think the income tax is nicely graduated, and I believe, gentlemen, that you can't make a mistake if you follow the same system in the excess-profits tax and make it a real graduated excess-profits tax. I presume that that will receive your careful attention.

Now, I do not desire to take up a great deal of your time, but before I quit I desire to call your attention to one matter which I think should also receive you careful attention. We have in this country one or two companies, so-called trading stamp companies. They do not produce anything, but they do take away from the business man and from the consuming public millions each and every year, and I think that they should be eliminated. It is hard to reach it by direct legislation. Some States have already adopted a law precluding these companies to operate upon the public.

Mr. GREEN. I think it would be very easy to reach it by an indirect tax, and personally I have been in favor of such a tax for a long time.

Mr. SABATH. I think we should have a heavy tax on all those stamps, not only that they accumulate a great profit from all the ignorant people of the country and the business man, but in addition to that they bring about false prices, because when a business man is obliged to pay 3½ to 4 per cent on all the sales to a company that doesn't help to produce the merchandise, I think it is wrong, and by eliminating it—and you can eliminate it by a heavy tax—you reduce the necessities of life by 4 to 5 per cent, and you eliminate the waste. Now, some years ago I introduced a bill, and I have endeavored to secure action on it, and due to the conditions I have not succeeded, but I have promised some business men's organizations in Chicago and in Illinois that I will lay the matter before you gentlemen, and they feel that if it was laid before you properly, as it should be, that there would not be any question that they would receive favorable consideration. I regret exceedingly that I have not the time nor the ability to lay it before you as it should be laid before you, but I say to you that it is a nuisance and an imposition and an unnecessary expense upon each and every item that a people buy, whether in the line of eatables or in the line of articles that they are obliged to wear, and I think by imposing a heavy tax on these trading stamps it will eliminate the United Cigar Stores Co. from having a monopoly in the cigar and tobacco business, and it will eliminate the Green Trading Stamp Co. from making ten to I don't know how many millions of dollars a year, and it will take away the advantage from the large business man, the advantage they have over the small man, because the small butcher or the corner grocery or the small candy store can't use the stamps the same as the larger owners do. I hope you gentlemen will take this to heart, and when you reach that section of your bill you will not omit to put on a heavy tax on these trading stamps.

I presume you know more about the holding companies than I do, but it seems to me they have escaped taxation. I don't know whether there is a good, legal reason for it or not; but if there is no legal reason for it I think we ought to tax the holding companies the same as any other company; in fact, they should be taxed more than any other company. That is the last observation I want to make, and hoping I have not taken up your time unduly I thank you for your consideration.

I come from the second largest city in the United States, and the laboring people, whom I represent, are trying to do all they can to help the country, and they do not object to taxation, but they do point out that they are robbed every day in the year by these large interests, and they think they should be taxed according to the profits.

Mr. MOORE. How would you get at the trading-stamp proposition?

Mr. SABATH. By putting on a tax of 100 per cent on the trading stamp.

Mr. CRISP. You wouldn't raise much revenue that way.

Mr. SABATH. I will admit that it is not a revenue measure. You will put them out of business.

Mr. MOORE. They contend they encourage certain lines of manufacture, such as furniture, and other lines.

Mr. SABATH. They do not produce anything.

Mr. MOORE. Wouldn't that be absorbed by business already in existence?

Mr. SABATH. They are giving trading stamps, yes, and I mean to reach the United Cigar Stores as much as the Green Trading Stamp Co.; because I remember in years gone by a widow was maintaining a little cigar store or candy store, and the man who was crippled in a factory or shop, not being able to do any other work, with \$200 or \$300 he would establish a cigar and candy store. Now, it is impossible for these people to exist and compete against the United Cigar Stores, and they have eliminated the opportunity for these unfortunate people to make a living.

Mr. CRISP. Judge, isn't it a fact that these large companies use the trading stamps more than any other line of business?

Mr. SABATH. Yes, it is true, and you know human nature is human nature, and if they think when they get a few trading stamps they will get a present they go where they can get them; the little candy store and the little tobacco store can't give them out, and they are losing trade, and it is concentrated in the hands of a few men against the woman who used to make a fair living in that line of business.

(And thereupon the committee adjourned to meet Tuesday, July 2, 1918, at 10 o'clock a. m.)

# REVENUE BILL.

---

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
TUESDAY, JULY 2, 1918.

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Helvering, Moore, Sloan, Longworth, Fairchild, Sterling, Hawley, and Treadway.

Mr. COOPER. Mr. Chairman, I want to present to you Mr. J. W. Dawson, president of the K. and M. Railway Coal Shippers' Association of West Virginia, who wants to talk to you on excess coal profits.

## STATEMENT OF MR. J. W. DAWSON, PRESIDENT OF THE K. AND M. RAILWAY COAL SHIPPERS' ASSOCIATION OF WEST VIRGINIA, CHARLESTON, W. VA.

Mr. DAWSON. Gentlemen, Mr. Cooper states I want to talk on excess coal profits. I would like to make an explanation before doing that. I came to Washington on a different mission, not having any idea I would come before your committee while here. Therefore, I have not any exact, accurate figures or dates and I can not be expected to give the exact figures and dates for that reason, and I have not attempted to accumulate things of that kind since finding on Friday last I would be expected to be here to-day for the reason that I know you gentlemen have access to much more reliable and elaborate figures and data than I could hope to furnish. Another reason for my being here which I would like to explain is the interest I have in increasing the coal production of this country rather than assisting anyone to dodge taxation. My real object in being before you to-day is with the hope of doing something that will increase the production of coal in West Virginia and not with a view to lowering any taxes. I have no theory of taxation to advance or to oppose of any kind.

I would like to state to you at the outset that I have read very carefully the statement made to your committee by Congressman Slep, and I indorse and agree with all he said on that subject. He has evidently given the matter very careful consideration.

I would submit for the information of you gentlemen that a coal-producing concern can not fairly be taxed on the basis of its outstanding stocks and bonds, for the reason that some of the largest concerns, and possibly the smaller ones, are overcapitalized while others are greatly undercapitalized. Under existing conditions the basis of taxation should be capital actually in the business or its intrinsic worth at the time and on its net earnings after deducting

all expenses, if we are to tax corporations on their net earnings instead of individuals on their incomes.

If, therefore, my theory is correct, our problem is how to arrive at the net earnings of a coal-producing plant. Certainly not until after we have deducted from gross receipts all expenditures for things which have no substantial, intrinsic value after the coal has been produced, or not approximately as great a market value as before the production of the coal. For what then does the coal producer make expenditures which are not now but should be charged direct to the cost of coal and not to capital account? I submit the following: Tipples, buildings, power plants, machinery, pumps, cutting machines, haulage motors, fans, rails, ties, spikes, copper wire, entry driving, whether through rock or coal, inclines, shafts, and slopes. None of these articles has a perceptible value after the coal has been produced, for the reason that they nor any of them in normal times have a market value much in excess of the cost of salvage after they cease to produce coal.

I will give you an illustration to make my point clear. A number of gentlemen in our neighborhood about 14 years ago decided to go into the coal business, and did develop and operate a reasonably valuable coal property for a period of 12 years, during which time they expended some \$175,000 or \$200,000, principally in the things which I have enumerated. At the end of 12 years they concluded to sell their supposed assets, pay off their obligations, and go out of business. All of those assets, fixtures and equipment, sold for \$3,000. They stood on the books of the company at about \$175,000 or \$200,000. The stockholders were composed of the most practical and able men in our community, with plenty of money with which to do business. They ran along supposing they were breaking even or making a little money until they found they were not, and then closed out with a loss of the entire investment of about \$175,000, as I stated before. I have not asked for the exact figures, but I am intimately familiar with the plant and know I am not far wrong. Had the articles which I have mentioned, or the equipment which I have enumerated, been included in the cost of that coal as the money was expended, my opinion is the company would still be in business producing coal, and the stockholders would now be drawing small dividends instead of having sold coal for those 8 or 10 years at less than its actual, real cost.

I am advised that the Federal Trade Commission does not permit the things I have mentioned to be charged to the cost of coal, but they should be so charged if justice is to be done; or else a 10 or even 15 per cent depreciation charge should be deducted and included in the cost of coal before figuring the profit. The former plan, in my opinion, is preferable, for the reason that it may be necessary for many coal concerns to make much greater expenditures for such equipment in a given year than other coal companies are required to make.

I would submit for your consideration, gentlemen, that a coal plant, unlike a beef industry, a shoe factory, a cotton mill, a steel mill, or many other industries which are completed, ready to produce a given quantity of product by the investment of a fixed sum, after which the plant and good will usually increases in value almost indefinitely, enough to offset reasonable depreciation, whereas a coal

plant, like the human being, is never completed until it begins to shrink in value, which it does rapidly until worthless, and at an age when most other industries are the most valuable; or like an apple orchard, its past history has been that it has many lean years in which the profits are very small or none at all, compared with the few fat years during which reasonable profits are earned. If, therefore, you tax the few fat years on the same basis that you do an industry that makes a reasonable, fair profit year after year, you will place an unfair burden upon the coal industry which cripples it and prevents its producing the coal now needed.

Now, as to the alleged large profits and profiteering by the coal producers last year and this year, I have in mind what the Federal Trade Commission says about profits for 1917, and I take issue with them for the reasons which will follow, and I have filed with the Fuel Administration a protest against the last general reduction in the price of coal, contending that it tends to retard production when the additional tonnage is badly needed with which to lick the Kaiser. Notwithstanding the alleged large profits during 1917, many producers were required to reinvest all and more than the profits supposed to have been made to make repairs and betterments in order that tonnage might be kept up or increased. The stockholders drew no dividends and the production of coal after the expenditures was no greater than before.

I have in mind another illustration which I would like to give you. During the spring of 1917 a party of coal producers purchased one of the largest and best plants in our State at a price of \$600,000. The expected returns show that they will be required to pay taxes upon an earning of about \$200,000 or 33½ per cent for the year 1917, while those stockholders received no dividends and they have reinvested, since May, 1917, about \$300,000; and if we lick the Kaiser during the next 12 months, as we all hope, this company will not have made on its investment 15 per cent profit which the stockholders can ever get hold of, on account of the shrinkage in the value of the things for which \$300,000 was expended during the past 14 or 15 months.

To give you an idea of this shrinkage, previous to the war a mine car to be used in that mine could be purchased for \$45. To-day it is \$150. -Steel rails could be purchased for about \$35. To-day they are between \$75 and \$100. I have not recent quotations. A motor generator with which to convert the current from high to low tensions could be purchased for \$3,100. To-day it costs between \$5,000 and \$6,000. This concern can produce to-day, after expending this \$300,000, no greater tonnage than before, but had the money not been expended their tonnage would have decreased rather than increased.

I would suggest another illustration which I have in mind. A concern whose books will show that they earned about \$15,000 this year, I am pretty sure, has during the past two years been developed at a cost from \$150,000 to \$200,000. If peace is declared within the next 12 or 18 months, this company will actually have lost money rather than made it, on account of the shrinkage in its expenditures, and many other like cases might be cited.

Again, I would submit for your most careful consideration the fact that most of the coal producers of the United States who are now

charged with profiteering and with high profits made little or no net profits for the 8, 10, or 15 years previous to 1916, and if you throw their entire business for a period of 10 or 15 years into one compilation, including the war years, they will not have up to date made 8 per cent on their investment. That should be taken into consideration when determining what should be done with them at this time.

Another suggestion I have to make is that coal can not be produced without steel, without mine cars, without mine machinery, without copper wire, rails, etc., and none of those things can be produced without coal. I submit for your consideration the question, Is it fair and just and calculated to increase the production of coal to require the producers of that article to supply the producers of those other articles with coal at a profit of not to exceed 25 per cent, say, for argument, and permit the producers of those other commodities to charge the coal man a profit of 100 per cent or more?

Mr. GARNER. May I interrupt you there?

Mr. DAWSON. Certainly.

Mr. GARNER. Do you make that as a statement of fact?

Mr. DAWSON. Those are approximate figures. The theory of the statement is based upon facts.

Mr. GARNER. That would be very interesting if you could show that statement to be absolutely based upon fact.

Mr. DAWSON. I am. Take the case of the mine-car manufacturer who sells a car to-day for \$150 and who sold it before the war for \$45. I know enough about the manufacture of cars to know that that is a profit of 100 per cent.

Mr. GARNER. If we took all of that 100 per cent profit with the exception of 8 per cent, we would be getting some profit for the Government.

Mr. DAWSON. That is true; and if you take all that a coal operator earns except 8 per cent, he will not be a profiteer. But my contention, if you please, is that the coal operator should be permitted to make the same percentage of profit that any other important industry makes. Then let the Government take it, if it thinks best. I contend for that point generally for this reason, more than any other, that it is not in the interest of the coal operator, but in the interest of the United States and of democracy. All of us must concede that the quantity of any product is dependent very largely upon its possible or speculative profits.

If, therefore, you deprive the coal man of speculative profits, you deprive the country of a great tonnage, and I claim that a greater tonnage in the United States is of more importance than anything else that confronts us, not excepting wheat, shipyards, powder factories, or anything else. We can lick the Kaiser without any of those other things, but you can not lick the Kaiser without coal. That is an utter impossibility, and while we are doing a great deal to increase the production of practically every other thing needed, the production of coal is actually decreasing, which would not be true if you would permit the coal operators to do business on the same basis that you permit these other things to be done. I am not contending for any greater profits. I would not care if you passed a law to-morrow, if it were necessary to lick the Kaiser one day earlier, to confiscate every dollar in the United States, including

my own. I would not care a particle, but if you confiscate mine, let us confiscate the other fellow's.

Mr. GARNER. You were speaking of "we" just now, when you said that "we" permitted copper companies and steel companies to make more than coal companies. Now, you do not mean to say that the legislative branch of the Government does that?

Mr. DAWSON. No, sir; and I am glad that you give me the opportunity to make myself clear on that. When I say "we" I mean the people of the United States of America, one of whom I am, and not this committee.

Mr. GARNER. That is a matter which is entirely in the hands of the executive branch of the Government.

Mr. DAWSON. Yes, sir.

Mr. GARNER. And this committee in levying taxes can not anticipate what the executive branch of the Government is going to do in the matter you have referred to. The legislative branch must lay taxes with reference to certain rules of procedure, presuming that the executive branch of the Government will exercise a wise and patriotic judgment in the administration of its affairs.

Mr. DAWSON. I concede that fact, and I really question the wisdom or necessity of coming before your committee. I understand that the questions I am discussing are really determined by the Federal Trade Commission, but I have been lead to believe that possibly this committee could do something or intended to do something that might have a bearing on this question, and that is my only reason for coming before you. Just as it stands to-day, I appreciate the fact that I probably should be before the Federal Trade Commission, and, unless you care to hear me further, I will not—

Mr. RAINEY (interposing). We will be glad to hear any further statement you desire to make.

Mr. DAWSON. I am so much concerned, gentlemen, about the production of coal and its increase, that it has given me a great deal of anxiety, being, as I am, a very practical and well-informed coal man, who has inspected, selected, prospected, and developed three or four of the largest plants in Virginia and West Virginia, and who has spent the last nine months inspecting many of the various coal fields of the United States with a view to determining, if possible, what can be done to give us a supply of coal. I mention this, not to be talking about myself here, but to give you the idea that possibly I know what I am talking about. I am fully convinced that if the conditions which have prevailed during the past 12 or 15 months continue, the shortage of coal this winter will be greater than it was last winter, and I am fully convinced that, unless something is done to increase the production of coal, just in line with the activities in the production of other things, this shortage is going to delay our military activities, and that is going to cause the death of a whole lot of our boys unnecessarily. That is why I am here, really.

Mr. MOORE. May I interrupt you to ask a question?

Mr. DAWSON. Certainly.

Mr. MOORE. I agree thoroughly with that last statement of yours.

Mr. DAWSON. I am positive about that.

Mr. MOORE. I agree thoroughly with your statement about the production of coal and a possible scarcity of it during the coming winter,

and I want to ask you whether transportation has entered into that, also?

Mr. DAWSON. Transportation has more to do with it than any other one thing, or the lack of transportation.

Mr. MOORE. Yes; the lack of transportation. You stated that you relied very strongly upon tonnage, and that you regarded tonnage as the most important factor in the present war.

Mr. DAWSON. I do.

Mr. MOORE. Do you mean by that the tonnage that is represented by production or the tonnage represented by transportation?

Mr. DAWSON. I mean the aggregate tonnage of coal available for use by us and our allies. That is what I mean.

Mr. MOORE. Is there any shortage of production in mines like those in Virginia and West Virginia, or in Pennsylvania, or Illinois, or Indiana? Is there any real shortage of production?

Mr. DAWSON. You mean the possible production, I take it?

Mr. MOORE. Yes.

Mr. DAWSON. The mines in those States, and, in fact, of the United States, are capable to-day of producing all the coal that the United States and our allies need—that is, the mines physically can do it.

Mr. MOORE. In other words, we have got the coal?

Mr. DAWSON. Yes, sir; and we have got the development.

Mr. MOORE. Have we the power to produce all the coal necessary for our own purposes and for that of our allies? Can we produce it, or have we the labor to do it?

Mr. DAWSON. We can produce it if the operators are justified in making the necessary expenditures for the equipment and development necessary, and if the railroads can move the coal. I would like your permission to explain just what I mean by saying, "If the operators are permitted." You may take a coal mine that can, we will say, produce 1,000 tons of coal daily now, and that mine has quite an extensive internal development. Now, the production of that mine could be increased to 1,500 tons daily within a period of 60 days and without any more men if they should purchase 100 or 150 more mine cars, two or three more haulage motors, four or five cutting machines, etc.

Mr. MOORE. Whom is that up to, the miners or the Railroad Administration?

Mr. DAWSON. It is up to the owner of the mine to purchase those articles, but here is the situation that would confront him: If he purchased those articles to-day, he pays twice as much, or more, for them than he would have paid two years ago, and probably that much more than the cost of them six months after peace is declared. Therefore, if he expends \$100,000 in equipment with which to increase his production of coal with the same labor, he runs into a shrinkage in value of at least 50 per cent before he shall have gotten sufficient profits back to justify the investment; and if the conditions after the war are anything like they were previous to the war, the equipment will not be needed by him, and will be worthless on his hands.

Mr. MOORE. That puts it back on the producer himself. Now, when you say if the producer could go ahead—

Mr. DAWSON (interposing). If he were justified in going ahead.

Mr. MOORE. When you say that, you do not mean that there are any restrictions imposed upon the producer except the restrictions of the trade?

Mr. DAWSON. And those restrictions——

Mr. MOORE (interposing). You do not mean official restrictions.

Mr. DAWSON. No, sir; the only official restrictions I know of are in the direction of encouraging him to do that, and very recently, I would like to say, I happen to know, as other men connected with the coal industry know, that the Fuel Administration has been making extraordinary efforts to take care of the coal requirements of the country and to encourage the development of production, and I think they are going to do some good along that line. But that element of speculation which enters into every business man's mind when he goes to spend money is different in the coal industry from that in any other thing I know of. For instance, he does not know to-day at what price he will probably be selling coal 90 days from now. He does know that he is not permitted to take advantage of the price created by the law of supply and demand, but that the production or, rather, the price of everything that he purchased, is regulated by supply and demand. He therefore rests under a disadvantage in making those expenditures. All of those things which the coal men are purchasing now with the hope of increasing the production of coal, and which would increase the production of coal, should be charged to the cost of the coal, or the coal man should be permitted to charge war prices for coal, one or the other. I prefer the former method, because that would be absolute justice and nothing else.

Mr. RAINEY. What is your depreciation deduction?

Mr. DAWSON. It is not anything like in proportion with the depreciation of the plant, and is not greater than the depreciation that an ordinary manufacturing plant, which is a permanent thing, is permitted to have, as I understand it.

Mr. RAINEY. They have held this, with reference to the betterments that you are discussing, that such expenditures when capitalized, may be extinguished through annual depreciation deductions, which deductions will be computed upon the basis of the cost and probable life of the property.

Mr. DAWSON. Yes, sir; the probable life of the property, but that equipment which he proposes to purchase will not be needed by him or will not be useful to him during all the life of the property.

Mr. MOORE. You are a practical coal man and I am glad you came before the committee. I wish that some other strong men in the industries would adopt the same course. You can stand on your feet and answer questions that will help the committee materially. Before the war there was no great trouble in distributing coal throughout the country, so that the needs of the industries were met, was there?

Mr. DAWSON. Absolutely none, with a few rare exceptions of a few weeks at a time.

Mr. MOORE. We had never had, within your recollection, such a coal stress as we had last winter?

Mr. DAWSON. We had not.

Mr. MOORE. Now that was during the war. Since the war and the advent of these various official bodies that have come to regulate our war affairs, we have had considerable distress in the coal business.

Mr. DAWSON. We have.

Mr. MOORE. Take the city of Washington as an illustration. You are in the bituminous coal business altogether, are you not?

Mr. DAWSON. I am.

Mr. MOORE. Well, we have a lot of that in Pennsylvania as well as anthracite. Take a city like Washington last winter. We were without coal. There was plenty of coal around about us. Many of us were told there was no question at all about production; that we had plenty of coal up here in Cumberland, plenty of coal down in West Virginia and in Virginia and plenty of coal in Pennsylvania, but we could not get it. Now that was due, we were told, to lack of transportation facilities.

Mr. DAWSON. That was true.

Mr. MOORE. I want to ask you, as a practical coal man, whether in view of our necessities during the coming winter and in view of our experience during the past winter, there has been such improvement in the situation that we may expect to have more coal for the use of the people of the United States next winter than we had last winter?

Mr. DAWSON. We confront to-day a greater scarcity for this fall and winter than we experienced last year, unless something is done between now and frost to correct it.

Mr. MOORE. This would be the proper time to get the coal out and get it into the bins, would it not?

Mr. DAWSON. It would, and it should be gotten out.

Mr. MOORE. Are we getting the coal out in such quantity now as to warrant the belief that we will be kept warm during the coming winter in a city like Washington?

Mr. DAWSON. We are not.

Mr. MOORE. Now, what is the reason for it?

Mr. DAWSON. The reason for it is twofold. The direct reason for not getting out the capacity of the mines to-day is the inability to prevail upon the men to work with absolute regularity, first and second—

Mr. MOORE (interposing). That is a labor condition.

Mr. DAWSON. That is a labor condition, and I have no complaint to make against the coal miners. They are doing their duty just as consistently and constantly and patriotically as any other class of labor in the United States, I think. The other reason—

Mr. MOORE (interposing). We are appropriating billions of dollars here for all sorts of war purposes, for all sorts of purposes on the other side of the water, and I would like to know, from a practical coal man, whether any of this money is being so appropriated—

Mr. DAWSON. If you will pardon me just a moment; I had not finished.

Mr. MOORE. So that we may expect to get coal for the people of America during the coming winter?

Mr. DAWSON. I had not finished my question a while ago, and it might be that too much importance would be attached to the scarcity of labor if left in that shape.

Mr. GARNER. Let him finish his answer.

Mr. DAWSON. The greatest reason or the greatest cause for the shortage of coal tonnage in the United States to-day, up to this present moment, is the lack of transportation. Regardless of all other things you may do, we will not supply this country and our allies with coal unless it is transported, and transported as regularly and with the same dispatch that other things are transported not half so important.

Mr. MOORE. Does your coal go into New England, as a rule?

Mr. DAWSON. Not the coal of the particular membership of our association, but coal in the same part of the State does.

Mr. MOORE. Where does your coal go—abroad?

Mr. DAWSON. No; the bulk of our coal goes west of the Ohio, to the Great Lakes and into Michigan and Indiana and all through the Northwest.

Mr. MOORE. You ship more by rail than you do by water?

Mr. DAWSON. Oh, yes; five or six times as much.

Mr. MOORE. Do you ship much coal by way of Norfolk or Charleston?

Mr. DAWSON. Not at all. Of course, we go by Charleston, W. Va. Do you mean Charleston, W. Va., or Charleston, S. C.?

Mr. MOORE. Charleston, S. C.

Mr. DAWSON. No; our direct membership does not ship East, but coal from the same district on the opposite side of the river does go East, so the same conditions prevail as on coal that does go East.

Mr. MOORE. The Western people are crying for coal just as loudly as the people in New England.

Mr. DAWSON. Yes.

Mr. MOORE. So I think the illustration would apply either way. I want to find out if you are furnished with enough cars to carry the coal you are capable of producing.

Mr. DAWSON. We are not and have not been for 12 or 15 months except in short periods. Now, right there, if you will permit me, I would like to explain a theory I have which I will vouch for as being a fact about the car situation. The failure to remove coal is not the result of a shortage of cars. We have an ample quantity of coal cars in the United States to move the coal if they were equally distributed.

Mr. MOORE. You feel satisfied about that?

Mr. DAWSON. I know it.

Mr. MOORE. That is a very important statement.

Mr. DAWSON. I would like to say why and how I think I know it. I railroaded for 20 years and I have done everything on a railroad from pick and shovel to general superintendent.

Mr. MOORE. Then you ought to know.

Mr. DAWSON. And distributed cars for 12 or 15 years, and I am constantly watching car distribution; in fact, that is my principal business right now with the coal people. I will give you an illustration to make my point clear. You may take any given week and almost any given day since January 1, and you will find a certain coal district of the United States that is idle on account of lack of coal cars. You may look at another coal district on that same day and you will find more than enough coal cars standing idle, not used, than would have supplied that district. Now that is the point I have in mind.

Mr. MOORE. May I ask how you account for that, because that is a condition which, apparently, if corrected, would aid in the distribution of coal to the people who need it?

Mr. DAWSON. There has been a marked improvement in that respect within the last six months, I must say.

Mr. MOORE. Has it been due to favoritism in railroad management?

Mr. DAWSON. When?

Mr. MOORE. Getting right down to brass tacks, now.

Mr. DAWSON. It was largely due to favoritism in railroad management previous to the war, and largely due, also, to the fact that some railroads owned a great many more cars than they had actual use for, while other railroads owned fewer cars than they had actual use for. Therefore some districts would have a surplus of cars and others would have a shortage.

Mr. GARNER. You say there has been a marked improvement within the last six months?

Mr. DAWSON. There has been in the distribution of coal cars, in my opinion.

Mr. GARNER. You have not seen any exhibition of favoritism in the last six months?

Mr. DAWSON. I could not say "no" to that, but I do not believe it is the result of any intended favoritism on the part of any one who has a right to say yes or no about it. It is more the force of habit and custom, I think, than intended wrong.

Mr. GARNER. Mr. Moore was endeavoring, I imagine, to get from you a statement of what your opinion was as to the degree of efficiency with which the railroads are being run under Government management. Would you mind stating from your observation and your knowledge as to a railroad man as to the efficiency which the Government has been exhibiting in the management of the railroads?

Mr. DAWSON. The gentleman preceding you did not ask me that question.

Mr. MOORE. No; I did not ask you that question. The gentleman from Texas is fishing a little.

Mr. GARNER. I may be, but I know the ingenuity with which the gentleman from Pennsylvania gets at what he desires, and I will take upon myself the responsibility of asking you the question.

Mr. MOORE. Then ask it in your own way.

Mr. GARNER. Then I will ask you whether or not, in your judgment, considering the condition of the railroads at the time they were taken over by the Government, they are being run with equal efficiency so far as the coal situation is concerned, under Government ownership as compared with private ownership or control?

Mr. DAWSON. I think they are run with greater efficiency now than they were before they were taken over as to the handling of coal the country over, collectively.

Mr. GARNER. That is all.

Mr. MOORE. Now will you permit me to go on just a minute, Mr. Chairman?

Mr. RAINEY (acting chairman): Certainly.

Mr. MOORE. But you are still of the opinion, Mr. Dawson, that the next winter is going to be a hard one and that we will be worse off under present indications with respect to transportation, in the matter of the distribution of coal, than we were last winter?

Mr. DAWSON. Not worse off with respect to transportation, no, sir; worse off with respect to the shortage of coal or the possible shortage of coal.

Mr. MOORE. But you do not attribute that to your inability to produce the coal?

Mr. DAWSON. No.

Mr. MOORE. You can produce the coal?

Mr. DAWSON. Yes, sir.

Mr. MOORE. And you can produce enough coal, all operators included, to supply the wants of the people of America and of our allies in this war?

Mr. DAWSON. Yes, sir; by making—

Mr. MOORE (interposing). And if we are short of coal during the next winter it will be due to lack of transportation, will it not?

Mr. DAWSON. Lack of—

Mr. MOORE (interposing). We have no more cars this year, substantially, than we had last year.

Mr. DAWSON. It will be due partly to the lack of regular, uniform transportation from all the different fields alike.

Mr. MOORE. It is perfectly clear that if what you say is true—

Mr. DAWSON (continuing). And also there will be coupled the other situation, the lack of the district in which the cars happen to be spasmodically to produce a greater tonnage, which would be produced if those mines were justified in purchasing additional equipment which would enable them to load those cars more quickly when they do have them instead of having them left over.

Mr. MOORE. Exactly. There is not much of a quarrel between the gentleman from Texas, Mr. Garner, and myself on this point. You have indicated there has been something of an improvement in railroad management since the Government took over the railroads in that whereas one railroad company had a plethora of empty cars and another had a scarcity of them, there is now a more equal distribution of the cars.

Mr. DAWSON. Correct.

Mr. MOORE. But you have also stated that the prospects, even under this improved distribution of cars, are that during the coming winter, by reason of the lack of transportation facilities generally, we may be no better off than we were last winter.

Mr. DAWSON. Absolutely.

Mr. MOORE. Now, that is the point.

Mr. DAWSON. Coupled, however, with the failure of the mines to be better equipped. I do not want that to be overlooked.

Mr. MOORE. Then if the Government is in control of the railroads and of the cars and all our transportation facilities, it behooves the Government to get a move on itself if we are not to freeze next winter like we did last winter. That is the point.

Mr. CRISP. Mr. Dawson, may I ask you a question?

Mr. DAWSON. Certainly.

Mr. CRISP. In your opinion what will contribute most to the shortage of coal next winter, shortage in transportation or shortage in production of coal from the mines?

Mr. GARNER. Or want of equipment?

Mr. DAWSON. I do not think I could answer that question yes or no, because there would be no shortage in production if all the mines were permitted to operate every day.

Mr. CRISP. Is there any law prohibiting them from operating every day?

Mr. DAWSON. Not that I know of, except the law of supply and demand, which applies to coal cars.

Mr. CRISP. Then how can the Government regulate or relieve that situation if there is no law prohibiting it?

Mr. DAWSON. By seeing that every coal mine in the United States has a uniform car supply every day, no more nor less than they will or can load.

Mr. CRISP. What has this committee to do with that?

Mr. DAWSON. I did not raise the question. I do not know.

Mr. CRISP. Well the question is up, and Brother Moore was asking some questions, and I thought I would ask a few. I understood you to say—

Mr. DAWSON (interposing). I would like to answer that question a little differently, if you please, before leaving it. I think this committee is deeply interested in everything that affects our ability to lick the Kaiser one day earlier than it might be otherwise.

Mr. CRISP. I can speak for the whole committee and say, yes we are; but this committee has nothing to do with the operation of the railroads. They are entirely under the administration and control of the executive department. I would like to ask you another question. I am not a practical coal miner, and you are. You understand it and I do not. What per cent of the cost of operating a coal mine is the labor?

Mr. DAWSON. Well, figured on the present basis of charging off things to capital account and cost of the coal, I should say up to the spring of 1917 it would be about 60 or 65 per cent. That is a very vague guess, however, because I have never figured it accurately in that way. Since that time there have been such great changes in the amount paid labor that I am unable to answer for the reason that I have not been operating a coal mine since that time.

Mr. CRISP. I understood you to say, Mr. Dawson, that by increasing some of your machinery and your coal cars, the coal mines could put out 50 per cent more coal with the same labor and with this additional machinery. Am I correct in that?

Mr. DAWSON. I think I stated—

Mr. CRISP (interposing). I understood you to say 1,000 tons a day, and by putting in this machinery, 1,500 tons a day.

Mr. DAWSON. I said that; yes, sir.

Mr. CRISP. If that is true, as an economical, business proposition, if 66 per cent of it is labor, would it not pay the operators to put in this extra machinery and mine 50 per cent more coal per day.

Mr. DAWSON. I think you did not understand me fully. I did not say labor; I said laborers, or I intended to say that.

Mr. CRISP. I asked you what per cent was labor.

Mr. DAWSON. I meant as to the quantity of coal produced. The percentage of labor, if I understood you correctly, was 60 or 65 per cent; but my previous statement to the effect that 1,500 tons might be gotten out against 1,000 tons was not with the same amount of labor but with the same quantity of laborers. They would render more service and would get more money for that, and all that 65 cents would not be saved.

Mr. GARNER. You mine the coal by the ton?

Mr. DAWSON. Yes; most of it is piecework, but you would be able to get the cars around the mine more rapidly and each man would earn more money.

Mr. CRISP. As an economical proposition, would it not pay the coal operator better to have this machinery and get out 50 per cent more coal per day?

Mr. DAWSON. Not if that machinery costs him \$100,000 and two years from now would be needed at all and he saved only \$25,000 by purchasing it.

Mr. CRISP. What is the increased price you are getting for coal now compared with what you got before the war?

Mr. DAWSON. About \$1 to \$1.50 in some instances. It varies very much. There was no established price prior to the war.

Mr. CRISP. With this increased price, would not the increased output very soon cover any depreciation that might occur in the machinery when peace is established?

Mr. DAWSON. It would depend upon when it came about.

Mr. CRISP. I understand that.

Mr. DAWSON. That is all theoretical.

Mr. GARNER. If I understand the argument you have made, whether it be an argument based upon taxation or whether it be an executive duty of the Government, it is in substance this: That on account of the speculative feature connected with the war; that is the increased price of coal at present, the coal mine owners can not afford to increase their machinery and go to additional expense upon the theory that they are going to continue to have this increased cost at the present time or increased consumption by virtue of the war.

Mr. DAWSON. Consumption of equipment, you mean?

Mr. GARNER. Yes; and that is the principal reason why more coal is not produced.

Mr. DAWSON. No, sir; not the principal reason, but one of the reasons that enters into it.

Mr. GARNER. What is the principal reason?

Mr. DAWSON. The principal reason is the lack of uniform and adequate transportation.

Mr. GARNER. Well, if you had uniform and adequate transportation, you contend that they could not afford to arrange for this increased production on account of the speculative value of it?

Mr. DAWSON. No, I do not think I intended to say they could not afford to it if they had the transportation. If they had the transportation they might feel justified in doing it, but in the absence of knowing whether or not they would have the transportation and be in a position to earn more money with the equipment if they bought it, and the speculative feature and the possible shrinkage in value, all of that enters into their hesitancy about making the additional investment.

Mr. GARNER. Then, if you could by magic, as it were, arrange for an increased production of coal, you would, first, arrange for increased transportation?

Mr. DAWSON. Yes, sir.

Mr. GARNER. And, second, you would arrange for an increased cost of coal, or an increased price of coal, or more than the price at the present time?

Mr. DAWSON. No, sir; not for an increased cost of coal, but for a decreased cost of coal.

Mr. GARNER. How much are you getting now for it?

Mr. DAWSON. What I mean by that is this, that the larger the coal tonnage that a mine produces, the less it will cost to produce it.

Mr. GARNER. Would you put up the price of coal, or would you have the Fuel Administrator to make an increase in the price of coal to the miner?

Mr. DAWSON. Do you mean to the operator?

Mr. GARNER. Yes; to the operator.

Mr. DAWSON. I can not say that I am here to advocate any such theory as that.

Mr. GARNER. I am just asking you—

Mr. DAWSON (interposing). But I would like to qualify that by this proposition, that he be permitted to take advantage of competitive conditions in determining the price of coal, or that they should be enabled to purchase what they have to purchase at regulated prices within reason, or that they should be permitted to charge that equipment expenditure into the cost of coal during the war.

Mr. GARNER. Not being able to control the prices of the articles which they buy, then you would be compelled to let them charge into the price of coal the depreciation involved?

Mr. DAWSON. That is my contention.

Mr. GARNER. That would naturally increase the cost of coal?

Mr. DAWSON. No, sir; that would not increase the price of coal, but it would decrease the cost of coal production.

Mr. GARNER. It would increase the price of coal at the mouth of the mine?

Mr. DAWSON. Yes, sir; the cost of coal, but not the price of it.

Mr. OLDFIELD. Would it increase the cost of coal to the consumer?

Mr. DAWSON. No, sir; on my suggestion, it would not—

Mr. RAINEY (interposing). This is exactly what the department holds—

Mr. DAWSON (continuing). Or that is not my understanding.

Mr. RAINEY. The rule is that the deductions shall be made every year, computed upon the basis of the cost and probable life of the property.

Mr. DAWSON. Yes, sir; if you please, but you say the probable life of the property and I am discussing the probable usefulness of the equipment to its owner. Those mines are equipped to load to-day what coal the United States needs in peace time, but now they have to go ahead and spend, we will say, \$100,000, with which to equip the mines to produce an additional tonnage for war time. After we have peace that equipment is worthless, and they have lost \$100,000, because the equipment will be lying idle and they can not use it.

Mr. RAINEY. We are producing every year more and more coal. Is not that true?

Mr. DAWSON. Yes, sir.

Mr. RAINEY. And we produced more coal in 1917 than we had ever produced before?

Mr. DAWSON. Yes, sir; that is correct.

Mr. RAINEY. Commencing with the year 1900, our production of coal increased at a uniform rate each year until the war started?

Mr. DAWSON. I can not differ from you, because I am not positive. I do not remember.

Mr. RAINEY. Do you know how much coal was produced in 1900?

Mr. DAWSON. No, sir; I have not those figures.

Mr. RAINEY. There were 269,000,000 tons produced.

Mr. DAWSON. Yes, sir.

Mr. RAINEY. Do you know how much we produced in the succeeding years, as shown by the statistics?

Mr. DAWSON. I know how much, approximately, was produced in the last two years, but back of that I do not remember accurately.

Mr. RAINEY. Back of that we increased the production of coal 17,000,000 every year; that is, for every year over each preceding year, and the equipment of our railroads was increased so as to carry that much.

Mr. DAWSON. Did we do that in 1907?

Mr. RAINEY. Yes.

Mr. DAWSON. In 1908?

Mr. RAINEY. Yes; the production increased 17,000,000 tons every year. Do you know how much we increased our output in 1917 over prior years?

Mr. DAWSON. No, sir; I do not.

Mr. RAINEY. We increased it 64,000,000 tons. That was the additional strain put upon our railroads and equipment in 1917. Do you know how many cars it would take to carry 64,000,000 tons of coal?

Mr. DAWSON. No, sir; but I could tell by figuring it out.

Mr. RAINEY. I have figured it out. I want to show you that the question of the coal supply is largely a question of transportation.

Mr. DAWSON. It is, absolutely.

Mr. RAINEY. You are right about that, and I want to show you some startling results that I have obtained by figuring the matter up. Now, to show you how much 64,000,000 tons of coal is, and that is the additional amount that we were required to carry over our railroads in 1917—

Mr. DAWSON (interposing). You could divide it by 50.

Mr. RAINEY. I figure that coal cars are of varying lengths, from 32 to 41 feet, and I figure that there are more of the larger size than of the smaller size. I take 38 feet, therefore, as the average length of coal cars, and then I allow 3 feet space between cars which, I think, would be right. By doing that, I find that it would require three trains of cars extending across the continent, from New York to San Francisco, and back again from New York to St. Louis to carry that coal. It would require that much in the way of solid trains of cars to contain 64,000,000 tons of coal.

So that was the additional strain placed upon the railroads in 1917 over that of any prior year. That was the additional burden the railroads were called upon to carry, and it is no wonder that they fell down after winter set in, and winter commenced on the 8th day of December. But notwithstanding the failure and notwithstanding the coal shortage which occurred on account of the freezing weather of the winter of 1917 and 1918, they carried in 1917 enough additional coal over prior years to make, if loaded on coal cars a train like that I have mentioned, extending three and a half times across the continent. We have not been able to add materially to our supply of coal cars, have we?

Mr. DAWSON. No, sir.

Mr. RAINEY. Therefore, what you have outlined, or the conditions you have outlined and which you said would occur again this winter, are absolutely inevitable?

Mr. DAWSON. No, sir.

Mr. RAINEY. You think not?

Mr. DAWSON. No, sir.

Mr. RAINEY. Do you think that with the same supply of coal cars we can carry an adequate coal supply this winter by a proper distribution of cars?

Mr. DAWSON. I do.

Mr. RAINEY. You may be right, and I hope you are. Under the old system, a proper distribution of cars would be impossible as between rival railroads?

Mr. DAWSON. It would not be impossible, but it would be impracticable, because they would not do it.

Mr. RAINEY. That is as bad as being impossible. Under one control, we may accomplish the remarkable feat of distributing as much coal as we can produce this winter, and we can produce always as much as can be distributed?

Mr. DAWSON. Yes, sir; but not always as much as cars could be supplied for. There is a distinction there, because cars are supplied more to one district than another. That is not as bad as it used to be, though. I want to put that statement in the record.

Mr. GARNER. In other words, they have not reached perfection yet?

Mr. DAWSON. No, sir; but we are better off than we were six months ago in that respect.

Mr. RAINEY. No doubt you are correct about that.

Mr. OLDFIELD. Would it help the situation if the coal could be shipped to the nearest point? That is to say, if the people out in Indiana used coal mined in that section, and if points down South, or in the vicinity of Birmingham, were supplied from that field, would it not be better than shipping the coal across the country as they have been doing? For instance, they ship anthracite coal from the East away out into the West.

Mr. DAWSON. I am wondering if the chairman heard that question, because I am glad to have it asked. I will answer it by saying that you are exactly right. The Fuel Administration and the Railroad Administration have worked out that feature so that it is now in effect, or they are putting into effect that zone movement of coal. That zone movement of coal has relieved the railroad car movement, and that means an increased tonnage of coal to supply the market.

Mr. GARNER. That has been one good that the Government control of railroads has accomplished, so far as the movement of coal is concerned?

Mr. DAWSON. I do not know whether the Government control of railroads or the Fuel Administration worked it out, but it is a good thing. It would not be a good thing in peace times.

Mr. GARNER. It was worked out under Government control?

Mr. DAWSON. Yes, sir.

Mr. OLDFIELD. Why would it not be a good thing in peace times?

Mr. DAWSON. Because, under the present zoning system, at least, it would have a tendency to put some coal producers out of business.

It would put some coal producers out of business where there was overproduction and enable others to make vast profits.

Mr. RAINEY. You know more about coal production than I do, and I want to say that you are right about the falling off of production in 1907. In 1906 we produced 428,000,000 tons, in 1907, 420,000,000 tons, and in 1908 we produced 371,000,000 tons of coal, so that there was a falling off in 1908.

Mr. DAWSON. That is what I thought.

Mr. RAINEY. But we made it up afterwards by going back in 1910 to 447,000,000 tons.

Mr. DAWSON. Yes, sir.

Mr. RAINEY. In 1909 we produced 411,000,000 tons, but the average increase from 1900 to 1917 was, as I stated, 17,000,000 tons a year?

Mr. DAWSON. Yes, sir; that was the average.

Mr. RAINEY. But in those two years there was a falling off, so that we were both right.

Mr. MOORE. Are we mining any more coal relatively than we were at this time last year?

Mr. DAWSON. I am not informed as to that particular feature.

Mr. MOORE. I would like to know whether we are mining more?

Mr. DAWSON. It is my understanding that we are behind. Taking this year's production up to the present time as compared with last year's production, and we are something like between forty and sixty million tons behind.

Mr. MOORE. We are that much behind?

Mr. DAWSON. Yes, sir. I know that we were that much behind about six weeks ago, or something like that.

Mr. MOORE. I had reference to the quantity being produced to-day. A wise man would attempt to store up coal now for winter, would he not?

Mr. DAWSON. If he could get it.

Mr. MOORE. You have indicated the power to produce it.

Mr. DAWSON. But the man who wants to store up coal can not get it.

Mr. MOORE. Why not? If the Government is in control of it, they might induce the storing of coal at the present time when coal is "got-at-able." If they wait until November or December, when snow and ice are on the ground, we may be worse off than we were last year. The coal cars you have referred may then be clogging up the port of New York in the effort to get cargoes on the ships.

Mr. DIXON. Is it a fact that people are being urged to buy supplies of coal now?

Mr. DAWSON. That may be, but they can not get it.

Mr. DIXON. But they have been urged to get it?

Mr. DAWSON. Yes, sir.

Mr. MOORE. If they had more cars, more ships, and more barges to get coal out, they could get it to storage places for use next winter, could they not?

Mr. DAWSON. If we could handle the coal industry so that every mine could be operated every day that it wants to operate, and so that every miner could work every day that he wants to work, there would be no shortage of coal.

Mr. MOORE. But the miner does not work when the cars are not there?

Mr. DAWSON. No, sir.

Mr. MOORE. If the car is there, the miner works?

Mr. DAWSON. Not always.

Mr. MOORE. As a rule he does?

Mr. DAWSON. Yes, sir; as a rule. If the miner does not see a car he does not go to work, because there is nothing for him to do. If the car is there, he goes to work.

Mr. MOORE. If, in this working season when the miner is ready to work, cars were there in plentitude, we would have all the coal we want for next winter stored up by this time?

Mr. DAWSON. Yes, sir.

Mr. MOORE. Not to store up but enough to make us safe; and we would be in position to store it up now, if we could get it?

Mr. DAWSON. Yes. My position, gentlemen, the broader situation about this car proposition, is this, and I have contended for it for the last 18 months, and before a good many different people. The greatest trouble, in my estimation, with the shortage of coal in the United States is the habit of the human being to follow out an old practice, and that old practice by the railroads has been for the last 20 years to move every commodity off of them in preference to coal, and move coal last, if they could. That to a certain extent still enters into our transportation facilities, and I contend that considering what is confronting this country, and that coal is the most important thing on the face of the earth to-day, coal should be moved more promptly than fresh meat or wheat or anything else; and if you will do that, there will be no shortage of coal.

Mr. MOORE. If this Government appropriates \$12,000,000,000 for one year's war operations, and we are to appropriate twenty-four billions for next year's war operations, and we can give the Director of Railroads \$500,000,000 for the purpose of developing the railroads of the country under Government control, it would seem not an unreasonable proposition that the Government should put more cars on the railroads, and that it might put a few boats and barges on the canals and streams of the country to get coal out and move it for storage purposes at points where it will be needed for next winter's supply?

Mr. DAWSON. I want to make myself clear about that car situation. The Government does not need to put on any more coal cars to move this coal. It would be a good thing to put barges on the rivers to relieve the railroads, because that would not congest the railroads. The coal cars of this country to-day do not average serving the public, in the movement of coal, 1 hour out of the 24. If you purchase more coal cars it has a tendency to greater congestion at terminal points, and I question if as much coal will be moved. What we should do would be to move those coal cars an average of at least 50 to 75 miles a day instead of an average of only 18 to 20 miles a day, and you will have a surplus of coal.

Mr. MOORE. You have suggested the remedy.

Mr. RAINEY. You understand that the Government is putting barges on the rivers at the present time?

Mr. DAWSON. I did not know that.

Mr. RAINEY. Yes, they are; on the Mississippi River.

## REVENUE BILL.

Mr. DAWSON. There should be just as big shipyards for the building of barges and boats for use on the streams to haul coal as there are for seagoing ships.

Mr. RAINEY. Is it not true that the coal operators have been habitually asking for more coal cars than they needed, expecting the number to be cut down?

Mr. DAWSON. The operators ask for a larger number of cars than they need for the reason that they have no means of knowing definitely if they ask for 100 cars whether they will get 50 or 100 per cent of what they ask. They might get 20 when they did not need 10, and the fellow who needs 20 might get in the same proportion.

Just one last suggestion, which is right in line with what I have said, and that is my contention. I contend that every expenditure of a coal-producing concern during the war should be treated and regarded as being just as speculative and as temporary as the construction of a powder mill that you are going to dismantle after the war; and the owners of those plants, and the men who spend their money should be permitted to charge every dollar of that expense to cost, or they should be permitted to sell coal at war prices, one or the other. I prefer the former.

I thank you very much.

Mr. RAINEY. Mr. Crosser, do you desire to be heard now?

Mr. CROSSER. My name is down on the list, but the fact is that I made this appointment for a week ago in behalf of Mr. John Z. White, of Chicago. He has waited here that long, and I prefer to give way to him, in view of his patience in waiting as he has.

Mr. RAINEY. Mr. White will come in in your time, will he?

Mr. CROSSER. He will take my time.

### STATEMENT OF MR. JOHN Z. WHITE.

Mr. RAINEY. Please state your name and occupation, and what interest you represent, for the record.

Mr. WHITE. John Z. White; I represent the Henry George Association, with headquarters at Chicago. My occupation is extending the information that they have to the people of the United States, and occasionally swapping real estate. I wish to say, in the first place, that I am distinctly in favor of any form of taxation that may turn out to be necessary to provide the funds to carry on the struggle that we are engaged in for the purpose of exterminating the German military establishment. The only question is, what sort of taxation is most calculated to achieve that end.

Now, as illustrating the idea I wish to advance, I would relate an occurrence given to me at Spokane, Wash., not many weeks ago. It seems a man of some considerable importance at Spokane bought some thousands of acres of land in Alberta, across the line in Canada. He inquired as to the taxes on the property, as purchasers of land usually do. But they have a system in west Canada, or part of it, whereby they levy a surplus tax on unused land. The real estate agent, with that frankness for which they are noted, failed to inform the purchaser of this surplus tax.

Mr. SLOAN. That is, the real estate agents in Canada, you mean?

Mr. WHITE. Yes. I am engaged in that line of business in the United States, and I observe a similar frankness on the part of the

gentry here. They are good business men. I am not criticizing the men, but simply remark the characteristic, and eminently proper, illustrating the universal principle of caveat emptor. Our friend, when he discovered upon purchasing the property that he was up against a considerably increased bill over his anticipation, said that that was a Canadian swindle—"Canuck" was the word he used—and he would not be abused in that way; so that he bought some tractors and plowed up the land and planted wheat; and then he told it in Spokane joyously that he not only avoided the tax but made \$20,000 on his wheat crop.

The matter I wish to call the attention of you gentlemen to is the fact that this extra tax on land which made it a little greater burden to hold it vacant operated in this instance to extend the production of wheat, of which the world is very much in need at the present time, and that is the secret of the correct use of the taxing power. The power of taxation can be used in a way to check production. It can be used in a way to extend production. And that nation is strongest in the modern world whose productive power is greatest. You must make a shell in the shop before you can send it across no man's land to educate a German. Anything that operates to increase production operates to increase military power. A tax upon the value of land which makes it burdensome to hold it vacant operates precisely as it did in the case which I have just recited. Now, we can recite millions of cases of that kind, but one covers the whole matter.

The next proposition I shall call your attention to is that the first Secretary of the Treasury of the United States, Alexander Hamilton, in discussing the levying clauses of the Federal Constitution when it was up for consideration and adoption or rejection, several times, in somewhat different forms of words called attention to the fact that to get revenue you must tax land or commerce. You may call the tax by any one of 500 or 1,000 different names, but the result of the taxation will inevitably be a tax upon the value of land or a tax upon the things produced by human industry, for the simple reason that there are no other forms of property. We make buildings, machinery, vehicles, furniture, clothing, food. The land and products constitute all there is, and we are going to get all of our revenues, public and private, from one of these.

Mr. STERLING. Why one? Why not two?

Mr. WHITE. Hamilton, of course, pointed out that you might tax both. But all revenues come from one or the other of these.

Mr. STERLING. Is that true now?

Mr. WHITE. Every revenue we derive comes from one or the other of these.

Mr. STERLING. Oh, yes; but all revenue does not arise from one.

Mr. WHITE. I said from one or the other.

Mr. STERLING. That is true.

Mr. WHITE. I do not mean to say we must put all of our taxation one way, but the two forms of property constitute all the property there is. Now, it happens, according to the best accounts we have, that about one-half of all the property in the United States is land. For instance, I went over the tax reports of the State of Missouri some years ago, and I found there that the land was a little short of one-half of the total valuation, and in our institutions of learning and in general calculations it is customary in making estimates to

consider one-half of the property of the United States as land and the other half products. I believe that the statisticians generally agree to approximately that division.

Some of them put it a little up and some a little down. It is along in that neighborhood. If that is the case, the Government of the United States is failing to levy a tax upon one-half of all our property. They get a part of the revenue derived from land through the income tax. In our States over half of the local and State revenue is also derived from production, with the result that, in a broad approximation, while the land is worth one-half of all the property of the United States, it is bearing in the neighborhood of one-fourth of the taxes.

Now, I wish to call attention to the fact that we need all of the revenue we can get, and that putting a tax upon land operates to tax lands that are vacant and at the same time tends to stimulate the owners of such lands to bring them into use, and thereby extend production, out of which all taxes are paid; and any plan we can introduce at the present time to increase production is certainly advantageous, even in time of peace; and in time of national strain such as we are under at present it is a matter, it seems to me, of the very highest duty.

Let me call attention to one picture showing the practical operation, because it is only in the practical operation of these things that we are ultimately interested. To-day, with the harvest binder, one man can do in the harvest field what seven men used to be required to do with a McCormick reaper. When I was a boy on the farm we used to have one man driving the reaper, another man on the rake, and five men strung around the field on stations, binding. One man to-day does the work formerly done by those seven with the harvest binder, and the harvest binder does not cost as much in the shop as the old McCormick reaper cost then. We have saved labor in the shop in this relation. We have saved labor on the farm in this relation. Wheat was then 70 cents a bushel, and now they tell me it is something like \$2.50 a bushel. One man on the farm is paid about as much as we paid two when I was a boy. We seem to have enormously reduced the labor cost of producing wheat, but in some way or other the price of wheat has gone up, and we think a very definite explanation might possibly be furnished to us by the gentlemen who are supposed to be the intellectual leaders of our people, but some way or other it is not forthcoming; and I discover this fact.

My father bought land when I was a small boy at \$20 an acre. You can not buy that selfsame land to-day for \$250 an acre. We have very markedly reduced the labor cost of harvesting wheat, but we have raised the land cost of getting that wheat more than we have reduced the labor cost, with the result that the price of wheat must go up. If you went into the middle of Chicago, for instance, at that time you did business on land that was worth \$3 a front foot, in the center of the city. That selfsame land to-day is worth \$22 a front foot. Now, that is characteristic of all our industrial activities in varying degrees. We have by inventions, by improved adjustments, by wiser methods of administration, reduced labor costs, but at the same time we have increased land costs.

Now, this is brought about very largely by this kind of a development. One hundred years ago three-fourths of our people were farmers, very much in the same condition as they are in Russia

to-day. At the present time one-third of our people are farmers. That condition has been brought about by the introduction of farm machinery, because we have reduced the number of people necessary on farm lands.

Mr. SLOAN. May I interrupt you there just a moment?

Mr. WHITE. Yes, sir.

Mr. SLOAN. I was interested in your illustration concerning wheat. You are able to make that illustration only because we have these special war prices for wheat. Prior to the opening of the European war the 70 cents a bushel you speak of for wheat, of the olden time, was not very greatly increased in the prices for 1911, 1912, and 1913, except where affected by proximity to a market.

Mr. WHITE. I understood that the price had considerably advanced before the war broke out.

Mr. SLOAN. Not in those years. It advanced some, but not largely in excess of those figures you stated.

Mr. WHITE. I would not want to dispute on definite facts without looking up the record.

Mr. SLOAN. I am somewhat familiar with the prices of wheat in the various years; and of course it is now somewhere about three times as high as it was in July and August in the years 1911, 1912, and 1913.

Mr. WHITE. Yes; I remember that we used temporarily now and then to have dollar wheat, or perhaps running above a dollar. I do not know that it was permanent.

Mr. SLOAN. Yes; you would have dollar-wheat in Chicago, and an average price running, on farm prices, from 75 cents to 90 cents.

Mr. WHITE. The other grains have risen very considerably over the old-time prices in the same way and for the same temporary reasons; I mean before the war broke out.

Mr. SLOAN. Our differences were not so great.

Mr. WHITE. Certainly our papers have been filled for years with the advance in the cost of living.

Mr. SLOAN. That was a phenomenon that arose about 1912 and 1913, when certain political changes took place.

Mr. WHITE. The great advance in grain has been in recent years.

Mr. SLOAN. I do not dispute that, but in regard to your mention of grains, I wanted to have that correct. I am familiar with the prices of grain.

Mr. WHITE. I did not mean to say that the price of wheat before the war was \$2.50, or anything like that, but the same tendency is evident, the same in character only varying in degree that where we have been reducing labor costs prices have been going up.

Now, there must be some explanation for the rise in prices while we have economized in the cost of production. Now what I wish to call your attention to is the necessary development that goes on under present arrangements, and I do not wish to go into the abstract or the historical, only for a moment. Primitive man held land in common. Civilized man must have property in land. No man would put up the Metropolitan Tower in New York unless he can have title to the land on which it stands. But did primitive man surrender property in land for nothing or did he get something?

I think that the thing that civilized man has in place of the primitive right of land is the sovereign right of taxation, and just as

primitive man did not know how to use land, so civilized man has not yet learned how to use the taxing power, and I wish to call attention to the fact that this power must necessarily be utilized. As we increase the amount of land and reduce the members of men engaged in farming, we liberate an enormous part of the power of the United States. Liberating that power from the farming industry, we can now develop manufactures, and manufactures can be carried on in groups. We can cooperate and carry on manufactures to greater advantage if we are close together, and hence the city grows.

Now, someone will own the center of that city as it grows. We do not say that it will be the Duke of Westminster or the Duke of Buccleuch, but we do say that someone will own the center of the city, and that has developed in the city of Chicago until 10 families own the heart of the city, 5 families owning a small part, and the other 5 owning the greater part of the heart of the city. That development, in one form or another, is inevitable. It can not be disputed; it is an inevitable result of civilized life. We institute property in land by law. There follows the city. Someone owns the center of that city.

Now, I say these families get rich. I am not quarrelling with these families, at all. So I buy vacant land as near the center of the city as I can, and other people do the same, until over half of the building lots of the city of Chicago are vacant, and half of the remainder are very poorly improved. Our actual city is built on a very small fraction of the available area. We buy this land and hold it vacant; for a rise. A perfectly legitimate enterprise—under the law as it now stands.

Now, your part of the population continually comes from the country to the city, because of improved methods on the farms, and that population is met by artificially increased prices of land. To get revenue for that city, we continue to increasingly load their products by taxation. It is that artificially increased value of land and the load of taxation on products that bring pause to that city's growth, because further development can not be carried on profitably; and so our population has been running west for 100 years, until we are in the cactus and in the sage, and in the ice in Canada.

They are growing wheat 1,200 miles north of our border, or were a short time ago. The people can not produce as much in the cactus as they can within our corporate limits, and forcing our population out in that way is decreasing our social power, which is making the people of the United States less able to protect themselves, in case their power becomes necessary in exercise. Added to that, you enormously increase the transportation charge to get what little they do produce to market, over what that transportation charge would be if they were permitted to produce where the land is most valuable.

Now, our proposition is simply this, to permit the highest development of the commercial or cooperative process by making it profitable to put our valuable lands to use instead of making it profitable to hold them out of use. In other words, lay taxes in every way it is possible, to get money to defray those expenses, but at the same time levy those taxes in a way that will enable the people to produce the most possible out of that property out of which the tax can be drawn.

Mr. MOORE. Would not the producer then have to stand a larger share of the taxes than he does now?

Mr. WHITE. What is that?

Mr. MOORE. Would not your producer then have to stand a larger share of the taxation than now, if we separate him from the consumer?

Mr. WHITE. Separate him from the consumer?

Mr. MOORE. Yes.

Mr. WHITE. Why, we should tax the—

Mr. MOORE. The burden of your argument thus far, aside from the single tax, is that we should make more productive those lands and out of those derive more revenue.

Mr. WHITE. I say out of those a larger revenue could be derived.

Mr. MOORE. Then you are relieving the urban population and to that extent placing an increased taxation upon the rural population, are you not?

Mr. WHITE. No, I am asking you to tax city lands sufficiently to bring them into use.

Mr. MOORE. But with a view of driving people into the country for the purpose of making the land productive?

Mr. WHITE. No, this land is in the city the same as it is in the country.

Mr. MOORE. Yes, I understand; but you would not apply your agricultural production proposition to a city like New York or Philadelphia, or Chicago. That would be out in the outlying districts?

Mr. WHITE. We have a lot of land lying within the corporate limits of the city of Chicago which has heretofore produced wheat.

Mr. MOORE. It would be a negligible quantity, however, compared with the production outside?

Mr. WHITE. Yes. But that policy carried to the furthest possible development, that is, to make it unprofitable to hold valuable land out of use anywhere, would bring the production of wealth, wheat or whatever it might be, to the highest possible point.

Mr. MOORE. The question is whether that will help us very much now. I assume you are here to help us.

Mr. WHITE. You have here a source of revenue from which nothing is being derived, and from which a revenue can be derived right now.

Mr. MOORE. Let us see if you understand correctly our problem. We were obliged to raise \$12,000,000,000 for the year 1918. For the fiscal year ending June 30, 1919, the President has indicated that we need twenty-four billions, of which eight billion is to be raised by taxation. Those are the figures set by the Secretary of the Treasury, and our particular duty here to-day is to devise ways and means of raising that \$8,000,000,000, which is twice as much as we had to raise last year, from the body of the people. Now if your purpose is to help us—and I assume it is—just how, within the limits of the time, and considering the necessities of the war, are you to help us with this proposition of yours?

Mr. WHITE. The land value of the United States is half of the whole value—that is, of the whole property—according to ordinary reports. The United States Government directly is deriving no revenue from that source at all. There is part of its revenue that comes from that source through the income tax, but it does not touch vacant land. Vacant land gives no income.

That vacant land which constituted over half of the area, ordinarily, of the American city, is a source from which you can draw revenue.

Mr. MOORE. You will have to admit that the single tax, whether we agree with it or do not, is a revolutionary tax system, and it would require time to put it into operation.

Mr. WHITE. It requires some time—

Mr. MOORE. I do not mean revolutionary in a harsh sense. It would require a complete change of taxing conditions.

Mr. WHITE. No; I have not proposed that you alter your other property tax. If I were advocating the single tax—

Mr. MOORE. It would require a readjustment of the whole tax question as between the Federal Government and the States, which now tax real estate. All that would have to be taken into consideration.

Mr. WHITE. No; the legal gentlemen have pointed out repeatedly that there is a distinction between the privilege of ownership and the fact of ownership.

Mr. MOORE. Our problem being an immediate problem, and this problem of raising \$24,000,000 by taxation being urgent, owing to the fact of our boys being in the trenches, how could we get the time to put into operation the whole or part of the single-tax proposition, to be available for general use?

Mr. WHITE. I do not imagine it would be a difficult matter at all. In a great many of our States lands are separated from improvements on the assessment books. Take Colorado, Indiana, and New York as examples. In Rhode Island they separate real and personalty, intangible personalty, as well as assessment on lands.

Mr. MOORE. Would you now have this committee seriously recommend to Congress a Federal land tax—that is, for this war emergency?

Mr. WHITE. A Federal land tax based on the value of the privilege of land ownership, with a reasonable minimum exemption.

Mr. MOORE. Do you think that could be done, considering the constitutional rights of the States and other questions involved, in time to help us on our immediate problem?

Mr. WHITE. I think that the constitutional question is obviated by the presentation that Mr. Olmstead (?) made here the other day.

Mr. MOORE. Henry George is easily within the recollection of men now living.

Mr. WHITE. I knew him personally.

Mr. MOORE. The agitation of his theories has been going on for a number of years—several decades—now. It is not a new problem. Our problem is a new one, and a very urgent one. Now, can we stop at the present time to take over any concrete proposition that you might make that would be effective for the purpose of the war?

Mr. WHITE. The fact of the war is the only excuse for my being here. If this was peace times, I would say that until our idea had arrived at a considerable degree of local acceptance it had no place here.

Mr. MOORE. If we were going to start all over again in the United States and had a clean bill of health, a new piece of ground and no improvements upon it, I should say that we could possibly start out with the single-tax idea and make it operative; but in view of the improvements the hand of man has placed upon the land, I am not prepared now to state that you could make to us a suggestion which

would harmonize all these conditions so that we might get money out of the proposition so as to be of service during this war; but if you could do that, or if you could suggest in concrete form any amendment to the revenue bill, I would like you to do it, because I am interested in the single tax-proposition.

Mr. WHITE. Small holdings it would not be worth while to tax.

Mr. MOORE. Have you and the other gentlemen with you prepared any concrete proposition to submit to this committee in the nature of an amendment to the existing bill?

Mr. WHITE. I have not prepared such a proposition, because to do so would be useless unless we discovered some desire on the part of the committee to consider a detailed proposition.

Mr. MOORE. Backing up your theory with your argument, you make a strong argument; but the question is, Have you a practical suggestion to make that will be of use to us?

Mr. WHITE. We do not wish to afflict the committee with our lumber at all, but if the argument is at all acceptable we will be glad to present the matter.

Mr. MOORE. We have been here for three weeks trying to find out where we can get money.

Mr. WHITE. Yes.

Mr. MOORE. If you have got some money we can decently get from you for the purposes of the war, we are after it; that is stating it bluntly and coldly.

Mr. WHITE. That is right.

Mr. MOORE. How are we going to get this money by your system or by existing systems? If you can tell us——

Mr. WHITE. I have some vacant land in the city of Chicago. It has some value. I have been offered cash for its possession and the title. I am paying no tax to the Federal Government on that land.

Mr. TREADWAY. You are paying tax to the State, are you not?

Mr. WHITE. I am paying to the State.

Mr. TREADWAY. Does not that come right back to the constitutional question that Mr. Moore brought up? Can we include a Federal tax on land, in conformity with State rights?

Mr. WHITE. I do not know why not. The Constitution says no direct tax shall be levied unless it be distributed among the States according to population. That is the only limitation the Constitution places upon Congress in that direction.

Mr. MOORE. I wish your would write on a single sheet of paper an amendment to the existing law that would embody your ideas put in practice.

Mr. WHITE. I can attempt to do that if the committee desires anything of the sort.

Mr. MOORE. That is what the committee is here for.

Mr. WHITE. Now I am calling attention to the fact that I own vacant land in the city of Chicago and the Federal Government is getting no tax from it. I am getting no income from it. It is vacant. And what is true of my land is true of over half of the area of the city of Chicago.

Mr. STERLING. The Federal Government is not getting any tax from that which is not vacant, is it, either?

Mr. WHITE. No; except as it gets it through the income tax. The United States has property as much as all real property combined; according to the estimates.

Mr. MOORE. That is another matter. We hear constantly that our wealth in this country is \$250,000,000,000.

What we need now is not only to make up the \$12,000,000,000 we have already spent or provided for, but to make ready the \$24,000,000,000 we need next year, and, as I say, our floating money does not amount to more than six billions of dollars. I would like somebody to point out how we can lay our hands on this two hundred and fifty billions. This is too theoretical for our immediate necessities. This includes land, which is not wealth at all.

Mr. SLOAN. This land you speak about, unoccupied, is kept very largely for the purpose of sale and keeping in activity gentlemen who transfer real estate, is it not?

Mr. WHITE. Yes. I say I own some of it myself, and I bought it so that I could avoid activity.

Mr. SLOAN. Whenever that is sold it comes in to the Government, does it not, to some extent, in tax on profits—I am speaking of our general plan now—for every piece of that unoccupied land that is sold?

Mr. WHITE. Oh, yes; there is some slight tax in that case, on the transfer, you know.

Mr. SLOAN. Yes.

Mr. WHITE. But that is trivial. Here is half of the property of the whole country that is untaxed.

Mr. SLOAN. You mean half the area?

Mr. WHITE. I say that half of the entire property of the American people is land.

Mr. SLOAN. Oh; I thought you meant—

Mr. WHITE. But that land does not require industry in its production. Its value is the result of instituting private property in land. It is the result of a legal enactment. It is a necessary result of that.

Mr. SLOAN. Yes; and of the labor that has been put on it?

Mr. WHITE. The labor that has been put on it exists as improvements, not as land value.

Mr. SLOAN (continuing). By those who saw fit to go out and produce that others might live; and now the consumers in this country would like very much to turn the tax upon those who created it as producers.

Mr. WHITE. The value of land is not the result of production. The value of land is the result of two or more people wanting a piece of land, and thereby giving it an added value.

Mr. SLOAN. I assume if you were to buy it you would figure out how much was produced on it the year before or the year before that?

Mr. WHITE. I know land in the city of Chicago that so far as I know never produced anything. We know what the value of land is.

Mr. SLOAN. You pay taxes on it?

Mr. WHITE. I am paying taxes.

Mr. SLOAN. And you keep it for purposes of improving it?

Mr. WHITE. I keep it until the price goes up and I can sell it for more than I paid for it.

Mr. SLOAN. You have land in the city where a large percentage of the places with buildings are vacant? You have all the buildings needed in Chicago?

Mr. WHITE. Sometimes we have and sometimes we are short. We are building more every year.

Mr. SLOAN. A great deal of it is vacant now?

Mr. WHITE. Nothing around my part of the city is vacant.

Mr. SLOAN. One matter I want to call your attention to. Speaking about wheat values, from the Yearbook of the Department of Agriculture handed me by the clerk, I have the figures for seven years prior to 1914, the year that the European war broke out.

Mr. WHITE. Yes.

Mr. SLOAN. And the average price of wheat on the farm was 85½ cents a bushel for those seven years.

Mr. WHITE. Yes; and if you will go back to 1879 or 1880—along there—for the same number of years you may find a less value.

Mr. SLOAN. Well, in different places—I have not got it back that far, but it varies somewhat.

Mr. WHITE. The only point I wish to make in that is that while there was a decrease in the labor cost of production there was an increase of price. That fact requires an explanation, and the explanation is evidenced at once in the increased value of land; but, gentlemen, I did not wish to get into a discussion—

Mr. DIXON. Mr. Moore asked you about preparing suggestions for the bill in writing. Have you read Mr. Crosser's bill?

Mr. WHITE. I have read Crosser's bill.

Mr. DIXON. Does that meet your ideas?

Mr. WHITE. I hardly think that that is a wise plan, on account of the psychological attitude that it necessarily encounters, as that proposed by Mr. Ralston.

Mr. DIXON. It does not express your views fully?

Mr. WHITE. Not fully; no, sir.

Mr. CRISP. Is this your position, that we should levy a tax on unused and unimproved lands?

Mr. WHITE. If they will do that. I do not wish to limit my suggestions to that. I wish to say that if the committee considers that in this situation that is the better plan, we will be very much pleased to have them adopt any way of getting a tax on vacant land. I think it would be better to levy a tax on all lands above \$5,000 or \$10,000 holdings.

Mr. CRISP. From your argument I did not understand whether you were urging levying a tax on all lands or only on unused land, so as to make it get into production.

Mr. WHITE. That is the particular matter. But when you say "used land," I call your attention to the fact that half of that, taken in the city of Chicago, which is improved, is very poorly improved. You know if you will go and stand where Broadway opens on Battery Park in New York, on the westward there is one modern building, 14 stories high. On the east side of the street there are two blocks of little red brick buildings, two and two and a half stories high, about a hundred years old. You can say, technically, that that is improvement. The improvement is so slight that it is next door to being unused, and for that reason I think it would be better to levy a tax on the value of all lands above a certain small limit of holdings.

Mr. HAWLEY. Have you made any investigation as to how much could be raised for the Treasury under this plan?

Mr. WHITE. How much could be raised?

Mr. HAWLEY. Yes.

Mr. WHITE. I have not any definite plan, because it would depend on what rate the committee saw fit to impose. I would suggest the advisability of beginning with a small rate and advancing it, just as was proposed under the British budget—under the famous Lloyd-George budget. There they started with a low rate and raised the rate as circumstances seemed to warrant.

Mr. HAWLEY. I thought you possibly had in mind some initial rate.

Mr. WHITE. I would put on a rate of about one-half of 1 per cent on the valuation.

Mr. HAWLEY. And at the rate of one-half of 1 per cent on the valuation, how much would that raise for the Treasury?

Mr. WHITE. You could not tell with any definiteness about that until we had made a much more exhaustive examination than has been made anywhere.

Mr. SLOAN. If you have not made estimates on this, I think I have seen estimates of about how much the value of unoccupied land is in this country and the assessment talked about and discussed.

Mr. WHITE. I have seen a good many estimates. Thomas G. Sherman used to make estimates, and he is probably about as good an analytical statistician as we have ever had. He made certain estimates from the taxation of the State of Missouri, quoting the State auditor's report. I went through the tax records of the State of Missouri pretty exhaustively, personally, and I found that in reality those State auditor's figures would be subject to a considerable correction before they could be definitely used.

Mr. MOORE. A good many of us would not want to be governed by Missouri rules, anyway?

Mr. WHITE. Missouri is a very fine State. You have to show the members things down there, of course.

Mr. MOORE. You have been talking about land in Chicago which is held for investment and which might properly be taxed so that it would force its use, so as to be more productive. There are large tracts of land and holdings everywhere around about large cities that are so heavily taxed now that many of the holders would be glad to get rid of them, almost, to avoid the taxes. I have wondered whether you have given consideration to the fact that where you might place additional taxes on certain desirable pieces of property, there is so much undesirable property that it would not get anything.

Mr. WHITE. I have never examined the tax record of any city yet that I did not find certain parcels which were overtaxed. But although those facts exist, those facts are the exceptions and are not at all typical. Now, the point that I make from that is this, that our present process forces our people away from our valuable land to less valuable lands where they can not produce so much, and that decreases our social power, and the decrease is enormous. But as to your proposition of submitting a draft of some kind, if it is thought at all desirable on the part of the committee I shall be more than happy to comply.

Mr. MOORE. I thought it would strengthen your proposition, because while most of us have followed the Henry George theory for years and have watched such progress as has been made, there is nothing to show the committee in concrete form, that will show the

committee that by using this system or applying it in any way we can get more by it.

Mr. WHITE. We simply call attention to the fact that these values exist and are not being taxed. I have property, and the Government could tax it, and there is no reason that I know of why it should not. As my property is situated so is that of others. I give you a certain concrete illustration of the Spokane wheat man. I could give you a great many, but I wish to avoid wasting time.

Mr. FAIRCHILD. Have you ever been through any of the agricultural regions of the States?

Mr. WHITE. I have been in all the agricultural States except Florida.

Mr. FAIRCHILD. You know, then, that in New York State and Massachusetts and New Hampshire there are thousands of abandoned farms?

Mr. WHITE. Yes.

Mr. FAIRCHILD. Which have been left by their owners because those people were unable to get a livelihood from them?

Mr. WHITE. Yes; I have been through those regions, and examined them to some extent.

Mr. FAIRCHILD. How would this help those properties?

Mr. WHITE. The land assessed in New York amounts to ten times as much as the farm lands in the State of New York. Now, I did not limit my inquiry to farm lands. I wish to put in vogue practice of using the most valuable land there is, whether it is city or country. What people will do in actual production will depend entirely upon the demand of the country. If they want wheat, they will produce it, or whatever is wanted; if the opportunity is open to production, people will produce it; and the most valuable land we have is where the people ought to be because it is the most valuable and they can produce most at that point.

So far as the abandoned farms are concerned, I was down through the agricultural regions in Rhode Island, and the farmers told me right and left, "If we had a good electric line here so that we could get out what we produce without the enormous cost of hauling it over these hills by team, this land would be cultivated." That was the common language among those people.

Mr. STERLING. Why is this land vacant? Why is it not being cultivated now?

Mr. WHITE. I tried to explain that. I buy land in the city of Chicago and hold it a little above the market, for a rise.

Mr. STERLING. It is not cultivated because it does not pay to cultivate it?

Mr. WHITE. Exactly.

Mr. STERLING. Yes. Now, would you compel a man to cultivate land that does not pay?

Mr. WHITE. No; I would make it profitable for him to cultivate it. I would make it pay.

Mr. STERLING. By putting a tax on it?

Mr. WHITE. By making it unprofitable to hold it out of use.

Mr. STERLING. By taxing it?

Mr. WHITE. Yes.

Mr. STERLING. So that you would try to compel him to cultivate land on which he could not make any money, by putting a tax on it that would make him want to dispose of it, would you not?

Mr. WHITE. That statement, I think, does not cover all of the facts. The land that it does not pay to cultivate now it would pay to cultivate under a higher tax.

Mr. STERLING. How could he make any profit out of land by having a tax placed on it? Could he raise any more on it than he could before?

Mr. WHITE. Yes, he would raise more on it than before.

Mr. STERLING. Could you raise any more after you put this tax on it, than avoiding the tax, without any tax on it?

Mr. WHITE. If you permit a city to grow, its growth brings fuller cooperation, and—

Mr. STERLING. Why do you confine it to city land?

Mr. WHITE. Because that is where the matter pinches. You have the same situation elsewhere.

Mr. STERLING. You use that simply as an illustration?

Mr. WHITE. That illustrates the idea.

Mr. STERLING. You do not use that for the advantage of getting vacant town lots under cultivation?

Mr. WHITE. No; I want—

Mr. STERLING. You mean this land in the country that is not being cultivated?

Mr. WHITE. I mean all land in city and country that is not used.

Mr. STERLING. You agree that it is not being used because it does not pay to use it?

Mr. WHITE. Yes; under present conditions.

Mr. STERLING. What do you mean by "present conditions"?

Mr. WHITE. The present distribution of population and the present taxing system.

Mr. STERLING. How is it possible that the use of the land will not pay now, and if you would put an extra tax on that that is not being used, you would then get a man to go on it and make any money out of it?

Mr. WHITE. Here is a man that wants to rent my land in Chicago and use it for a truck garden. He wants an eight-year lease. I will not give him an eight-year lease because in the meantime I may want to sell it to a manufacturer or to a man who wants to put up residences; and I will not let a little truck-garden lease stand in the way of a sale. Now, if you put your tax high enough I will rent it, because that rent will pay my taxes, and so that land will be brought into use and made profitable. I can use it at a profit now, but the profit is so small that I would rather hold it out of use with the chance of making a larger profit.

Mr. STERLING. That might occur once in a million times; but is anyone wanting this unoccupied land in New York and in Chicago and in Virginia on eight-year leases?

Mr. WHITE. I do not know. I can not get acquainted with real estate affairs in every township on the United States.

Mr. STERLING. They would not take it for any length of time at any price, would they, simply because it will not pay to farm it? Now, do you not think that your proposition to make a man go on land and farm it when it would not pay him to do so, by imposing a tax on the land, is a perfectly ridiculous proposition?

Mr. WHITE. No; I think it is the only rational proposition in taxation relations; and I wish to emphasize that by calling your attention to this fact, that outside of British Columbia, British Columbia being the mountain Province, and the other three Provinces of Canada being prairie Provinces, the farmers pay nothing except on land valuation. They pay nothing in the way of taxes on their buildings, their stock, their tools, and all the rest of it; and they have had this tax in operation for years, and will not consent to a change back to the ancient system. Now, the people who have the most acquaintance with it from their familiarity with it, from its use among themselves, are its strongest advocates.

Mr. FAIRCHILD. I have a piece of property in the city of Buffalo, N. Y., of about 50 acres. That property is devoted to truck gardens. I lease it from year to year. The taxes are about three times what I get from it. How could I help that property of mine by increasing taxation?

Mr. WHITE. I would have to go into Buffalo as a whole in order to answer that. Your property may be peculiar. I have property in Chicago where I am paying taxes twice as much as I did 10 years ago, and the property is not worth as much as it was 10 years ago. Instances of that kind occur.

Mr. FAIRCHILD. This property of mine will not sell for half as much as it would 25 years ago.

Mr. WHITE. You find property, lots of it, in most cities, in that condition, but it is not typical of the whole town.

Mr. FAIRCHILD. But you are making a general rule that it must apply to all property.

Mr. WHITE. I am making a general rule. If it would not sell for half as much as it would 25 years ago, its assessed value would not be so much.

But, Mr. Chairman, I did not wish to use so much of the time of the committee, and if we had not tried to discuss theories so much, and if we had confined ourselves to the taxation proposition, we would not have occupied so much time.

Mr. RAINEY. Outside of Washington here there is a 250-acre tract purchased by George Washington and his associates upon the theory that it was going to increase in value, and it has been vacant ever since, and it is not worth now as much as George Washington paid for it.

Mr. WHITE. Yes; I can find lots of property in Chicago that will not sell for one-fourth what it was worth 35 or 40 years ago.

Mr. RAINEY. But that is not typical of the city. Just outside of the city of Washington I can find abundant farms, with railroads, the best in the country, running through there, and the best wagon roads, the best public highways, as good as any we have anywhere in the country, and electric roads running right through by them, that 100 years ago raised splendid crops, and those farms now have been taxed higher in order to build these beautiful highways, as fine as any in the land, and that land is not worth as much as it was in George Washington's day.

Mr. WHITE. Sure; I can find instances of that kind in every city in the country.

Mr. RAINEY. It always seemed to me that what that needed was to put more fertilizer on it rather than to make it pay more taxes.

Mr. MOORE. That land is right near a market, too.

Mr. WHITE. You know what happens to land. For instance, in Colorado they are assessing improvements at 15 per cent and land at 100 per cent, and as a consequence there is an increased amount of building operations. We have all kinds of illustrations. But detailed illustrations do not give us a fair view of the general situation. That is the objection to that line of investigation. I wish to thank you.

(At 12.40 o'clock p. m. the committee took a recess until 2.15 o'clock p. m.)

## AFTER RECESS.

Mr. RAINEY. Mr. Martin, do you desire to present someone to the committee?

Mr. MARTIN. Yes, sir.

**STATEMENT OF EDWARD B. MARTIN, VICE PRESIDENT OF THE UNITED BUSINESS MEN'S ASSOCIATION, PHILADELPHIA, PA.**

Mr. MOORE. You are an attorney at law?

Mr. MARTIN. I am also an attorney; but I want to introduce our attorney in this matter, Mr. C. Oscar Beasley, who will speak on the subject. I might say to the chairman that Mr. Beasley is conversant with the subject and won't take a very long period of time.

Mr. RAINEY. Thank you, Mr. Martin. Mr. Beasley.

**STATEMENT OF MR. C. OSCAR BEASLEY, ATTORNEY FOR THE UNITED BUSINESS MEN'S ASSOCIATION, PHILADELPHIA, PA.**

Mr. RAINEY. State your name and residence.

Mr. BEASLEY. C. Oscar Beasley, attorney at law, 1141 North Sixty-third Street, Philadelphia.

Mr. MOORE. You are acting in this instance for the United Business Men's Association?

Mr. BEASLEY. For the United Business Men's Association. Mr. Chairman and gentlemen of the committee, we have a peculiar situation in Philadelphia in regard to our transit problems, and perhaps that situation may obtain in other cities of the country. But in view of the very pressing character of the conditions that we are in in regard to this matter of taxation we thought it wise to ask the honor and privilege of appearing before you to suggest an amendment to this bill for our relief.

The United Businessmen's Association of Philadelphia is an association composed of 73 neighborhood and business associations scattered all over the city of Philadelphia. It is composed of merchants, manufacturers, business and professional men, and is entirely disinterested in the matter financially. We simply represent the interests of the citizens of Philadelphia and of the whole people of the city.

The city of Philadelphia recently voted to increase its indebtedness by \$63,000,000 for the purpose of constructing a high-speed

system of elevated railroads and subways, and also high-speed surface cars, in order to relieve the almost unspeakable congestion of traffic which we now have in the city, owing to the increase of industries and the increase of population resulting from that increase of industries in our city. There is now pending before the public service commission of Pennsylvania a lease between the city of Philadelphia and the Philadelphia Rapid Transit Co. for the operation of these new high-speed lines to be built and constructed and equipped by the city of Philadelphia. It has been generally admitted that a uniform system of operation would be better for our people than two opposing systems, and to that end offers were made to procure a lease between the city of Philadelphia and the Philadelphia Rapid Transit Co., which operates all the lines in our city under various leaseholds with underlying companies.

This lease now pending provides, among other things, that—

All taxes levied upon the capital stock, property, or franchises, or its debt and the interest thereon, its exercise of its franchise, gross receipts, net incomes, profits or dividends paid, and all taxes, licenses, assessments, and charges imposed upon any company whose property is owned by the company or is leased to or operated by it and which under the terms of its lease or operating agreement therefor the company is required to pay, and any and all contributions, however styled, which the company may at any time be lawfully required to contribute to any governmental agency except taxes due to the city on dividends, provision for which is made under item ( hereof.

In other words, any excess profits, war tax, or other tax imposed by the Federal Government upon any of the underlying companies of the Philadelphia Rapid Transit Co., or upon the Rapid Transit Co. itself, is, under this pending lease, assumed by the unified system; that is, practically by the city of Philadelphia.

Mr. MOORE. Has this lease been consummated?

Mr. BEASLEY. No, sir; it is now pending. There is great opposition to it, and we do not know whether the public service commission will approve it or disapprove it. We hope they will disapprove it, but, of course, they may approve it, as there are strong influences in favor of this lease. If it is approved, the city of Philadelphia would be in a position where it would be required to pay the taxes that under the present law are levied on these underlying companies. The reason for it is that the Philadelphia Rapid Transit Co., under its lease, assumes all taxes that may be levied in the future upon the lessor companies; that is to say, the lessor companies get their rental net, free of taxes, and therefore if this tax should be levied upon the underlying companies, as it is by this bill, and then should have to be paid by the Philadelphia Rapid Transit Co., the only result would be they would ask the public service commission to increase car fares in order to pay this excessive tax, which amounts to \$1,100,000 a year.

The ultimate proposition which we beg leave to present to your honorable committee is that; that it was the purpose of this revenue act to make the man who gets the revenue pay the tax. Unfortunately, probably 25 or 30 years ago the Philadelphia Rapid Transit Co., being in extremis, in order to get the lease of these underlying companies, and wipe out opposition in the city and secure the monopoly of transportation, for the purpose largely of efficiency of transportation as well as profit, made an agreement with all the then existing companies that had the franchises to operate the streets,

not only to pay them a fixed rate per annum which should not vary no matter how great or how small the business of the lessee company might be.

This rental or dividend to the underlying companies was fixed, and in addition to fixing that dividend, as stated a moment ago, the lease provided that the P. R. T. Co., the lessee company, should pay any taxes which should be levied in the future upon these underlying companies by any governmental agency whatever, and under this proposed lease now pending, and which we fear will be adopted, it provides that car fares in the city of Philadelphia shall be raised to pay all fixed charges and all taxes which may exist or be imposed upon the P. R. T. Co., or underlying companies, and therefore the people of Philadelphia have a vital interest in this taxation, because if it is imposed upon this company in the way it is provided for in the law the result would be that these underlying companies, who receive the income, would shove the tax on to somebody else, and that somebody else would shove it on to innocent people of Philadelphia by raising their car fares in order that these underlying companies may escape the taxation which your honorable Congress has imposed upon everybody else in the United States.

I know of no other instance where anybody in the United States has been able to escape the income tax and the excess-profits tax by contract, except in the case that we now have before you, and we are here to ask you to so amend this act that this tax will fall upon those underlying companies who receive the income, and not upon the P. R. T. Co.

Mr. RAINEY. We sympathize very much with the proposition, but the trouble is you made a contract with the original owners of these franchises, by which you agree to pay the taxes.

Mr. BEASLEY. Yes, sir.

Mr. RAINEY. And the language used, as has been brought out in these hearings, is very broad.

Mr. BEASLEY. That is exactly why we are here to offer an amendment.

Mr. RAINEY. We would be glad to hear it, as far as that is concerned. I would like to do what you want us to do if there is a constitutional provision.

Mr. BEASLEY. We understand that the question of abrogating a contract is a very delicate one, but in the last 10 or 12 years the Supreme Court of the United States, as well as supreme courts of the various States, have been holding that contracts relating to the public highways, which do not belong to the companies, and which are only allowed to be used by the State, and wherein the companies are only allowed by the State the usufruct for a public purpose, and not for private purposes, that those contracts are not the kind that are protected by the constitution. In this particular instance I have a very high authority which I wish to lay before the committee to show that an agreement by one party to pay the taxes of another is against public policy, and has been declared void for that reason by the appellate courts of several States. The particular case I have which is very much in point, is the case of *Dean v. Clark*, 80 Hun (New York Reports), page 80, decided in 1894 by the Court of Appeals of the State of New York. This case declared an agreement between parties by which one covenanted to pay the taxes that

might be levied upon the other void. The town of New Lebanon, Columbia County, N. Y., had under consideration voting to authorize a loan of \$100,000 to aid a railroad enterprise about to be constructed. The agreement between Dean and Clark read as follows:

Whereas, the said William A. Dean fears a tax may be levied upon the property appearing upon the said roll to pay the interest that shall fall due upon the town bonds, as well as the principal of the same:

Now, therefore, the condition of this obligation is such that if the said obligors shall save harmless and indemnify the said Dean from all payments he may make on account of any taxes levied upon the property appearing upon said assessment roll in any year, then this obligation shall be void, otherwise to remain in full force and effect.

Mr. RAINEY. In that connection is it your position that this line of authorities apply to such contracts as are made, and that the contracts are void?

Mr. BEASLEY. It is on the ground that any contract by one person to pay the taxes of another is against public policy.

Mr. RAINEY. And is void?

Mr. BEASLEY. Yes.

Mr. RAINEY. Then, if it is void, you need not ask us to do anything?

Mr. BEASLEY. We do not want you to put an unlawful thing in the act.

Mr. RAINEY. If you made a contract that is void, and it is not binding on either, your remedy is in the courts.

Mr. BEASLEY. We do not think if Congress recognizes that some of the courts have held them void that it should put an unlawful act in the tax.

Mr. RAINEY. We can not hold them void.

Mr. BEASLEY. We do not want you to, but want to word it so that the fellow who gets the income shall pay the tax. It really would be monstrous for the Congress of the United States to so word its law that anybody could escape it and pass it on to some one else. The whole theory is that a man who receives an excess income should part with some of it.

Mr. RAINEY. If your contract is void, that is what is going to happen, exactly.

Mr. BEASLEY. We do not think you ought to jeopardize the people of Philadelphia and put them to the trouble of going to the courts. That is what the Court of Appeals of New York has said, and that is what is in the books on taxation, that it is against public policy for one corporation to assume the public taxes of another.

Mr. GREEN. Did the court of appeals affirm that decision? That citation was from an inferior court.

Mr. BEASLEY. I am reading from the court of appeals.

Mr. GREEN. Hun. is not the court of appeals.

Mr. BEASLEY. It says "Court of Appeals, 80 Hun." I am quite sure it was the court of appeals.

Mr. GREEN. You know in New York the highest court is not the supreme court.

Mr. BEASLEY. I understand that.

Mr. GREEN. Hun. is a citation from the Supreme Court, but often those cases have gone to the court of appeals and have been affirmed without any further decision.

Mr. BEASLEY. I got this from an encyclopedia, and my impression was that it was the court of appeals.

Mr. GREEN. The probability is that the court of appeals has affirmed it, without writing a new opinion.

Mr. BEASLEY. Perhaps that may have been the case, sir.

Mr. RAINEY. Have you ever tested this in the courts of Pennsylvania?

Mr. BEASLEY. Unfortunately, our public service commission has only been in existence since 1913.

Mr. RAINEY. That would not keep you from testing it in the courts.

Mr. BEASLEY. Unless some concrete example should come up, or some actual attempt made to do something, you can not go into a court in our State, a taxpayer could not go into a court under our law, and test facts under our law. Only the city solicitor under our government can go into court on something that might affect the city. We have no way of getting at these directly, unless some concrete case arises.

Mr. RAINEY. You say a taxpayer can not complain in Pennsylvania?

Mr. BEASLEY. Not as to the legality of any contract. We could as between the city and the corporation.

Mr. RAINEY. This is between two corporations?

Mr. BEASLEY. Yes, sir.

Mr. GREEN. You could pay this tax, and then sue the other party to recover it, but I can see why you don't want to do that.

Mr. RAINEY. Suppose you refuse to pay the tax, and let the other parties go to court?

Mr. BEASLEY. That is the situation. The underlying companies paid the tax and intend to sue the P. R. T. Co. to recover the tax, but the people of Philadelphia do not want to be led to the decision of the courts in the matter of this kind, when we think we can get immediate relief.

Mr. MOORE. What are the facts as to the payment of the tax?

Mr. BEASLEY. Take the Union Traction, for instance.

Mr. MOORE. There are seven underlying companies?

Mr. BEASLEY. Twenty-seven of them.

Mr. MOORE. Twenty-seven?

Mr. BEASLEY. Yes, sir.

Mr. MOORE. Well, the firm of Prichard, Saul, Bayard, & Evans represent seven of them, apparently.

Mr. BEASLEY. Yes, sir. Now, the Citizens' Passenger Railway Co., gets 72.9 per cent per annum under this lease. That is the capital it is paid on.

Mr. RAINEY. You made a very bad contract.

Mr. BEASLEY. The Citizens' Passenger Railway Co. leased for 999 years without any provision for amortization.

Mr. RAINEY. That is worse.

Mr. BEASLEY. And this is fastened upon this new lease for 999 years, and in addition to that, Congress comes along and says that we must pay a tax.

Mr. RAINEY. That isn't our fault.

Mr. BEASLEY. This was done before the present Congress was in existence.

Ridge Avenue 42.8 per cent, and so on. In other words it is a monstrous situation to perpetuate, and we feel this way about it, to give you some idea—

Mr. MOORE (interposing). Before you do that, I want to get in at this point the facts with regard to the payment of the taxes for the last year. Did the underlying companies make that payment or the Philadelphia Traction Co.?

Mr. BEASLEY. The underlying companies made the payments.

Mr. MOORE. Made them direct to the revenue collector?

Mr. BEASLEY. Yes, sir.

Mr. MOORE. What was the total, do you remember, of all the companies?

Mr. BEASLEY. Well, it is \$1,100,000 per annum. It must have been something about, the Philadelphia Rapid Transit Co. pays \$230,000 and it must have been about \$700,000.

Mr. MOORE. I do not want to interfere with your argument at all, but the committee is fairly familiar with the situation, in view of the statement made here by Mr. Ballard. He was here on June 11, and made a statement and submitted two amendments. Subsequent to that Mr. Frank P. Prichard, whom you know very well, of the firm of Prichard, Saul, Bayard & Evans, filed a brief in the form of a letter, which is a part of the record, and I want to ask whether you have familiarized yourself with Mr. Ballard's argument and Mr. Prichard's letter?

Mr. BEASLEY. I have not seen Mr. Prichard's letter, but I know Mr. Ballard's argument is that the underlying companies distribute the tax on the Philadelphia Rapid Transit Co., and that is an onerous thing to put on the Philadelphia Rapid Transit Co., especially as it was not in existence when the contract was made.

Mr. MOORE. Who drew these leases?

Mr. BEASLEY. I think Mr. John G. Johnson.

Mr. MOORE. And they were drawn at a time when there was a grouping together of all the independent traction companies of Philadelphia with a view to perfecting a line looking toward efficiency?

Mr. BEASLEY. And getting a power to make extensions.

Mr. MOORE. And to give us a good service and a low fare?

Mr. BEASLEY. Yes, sir.

Mr. MOORE. And those contracts were made at that time in good faith so far as the contracting parties were concerned, and they did not apprehend that there would be a war and the Federal Government would impose taxes as we are imposing under the last revenue bill?

Mr. BEASLEY. No, sir.

Mr. MOORE. And the point is now to obtain relief if possible in the holding company of all these underlying companies who apparently are the beneficiaries of a law which was intended really to raise a tax. That is correct, isn't it?

Mr. BEASLEY. Absolutely correct.

Mr. GREEN. Before we go any further, I want to revise my statement a little when I said that you could pay this tax and then sue the other parties to recover it. I would want to reflect on that. That might be a position from which you can not escape. I will not say that that is a correct statement.

Mr. BEASLEY. We feel that it is a very complicated matter, and I will read an amendment suggesting a way out of it by amending this law.

Now, I want to say to the committee, that in addition to this rental of \$7,250,000 flat which goes to these underlying companies, the P. R. T. Co. assumed all their debts and the interest thereon, and in addition to that assumed all their municipal demands, so that the P. R. T. Co. pays in addition to assuming \$81,000,000 of the debt of these companies, this rental of \$7,250,000 a year, and their municipal charges which makes it \$10,000,000 a year.

Mr. MOORE. The P. R. T. Co. wanted that property, didn't they?

Mr. BEASLEY. They did, indeed; and it was somewhat of a squeeze as against the P. R. T. Co. at that time, but since then the population of the city has increased and the population in the last two years has paid some dividends, notwithstanding all these rents.

Mr. LONGWORTH. I do not know whether you stated it or not, but if you did not, what was the total capitalization—invested capital?

Mr. BEASLEY. It is \$53,000,000 to the underlying companies, out of which they get \$10,000,000 rent.

Mr. LONGWORTH. That is 20 per cent, practically?

Mr. BEASLEY. Yes, sir.

Mr. LONGWORTH. Now, did you say that there were some for which the rental was as high as 70 per cent?

Mr. BEASLEY. Yes, sir. The Citizens' Passenger Railway Co., 72.9 per cent per annum on the amount paid; the Thirteenth and Fifteenth Streets Passenger Railway Co., 71.7 per cent; the Ridge Avenue, 42.8 per cent; Green and Coates Streets, Philadelphia Passenger Railway Co., 40 per cent; and on down the list to the Philadelphia & Gray's Ferry Passenger Railway Co., 16 per cent. That is on the capital paid in.

Mr. LONGWORTH. That is the capital on which the tax is figured?

Mr. BEASLEY. Yes, sir.

Mr. LONGWORTH. That is what I mean, the invested capital in the definition of this act.

Mr. BEASLEY. I hold no brief for the Philadelphia Rapid Transit Co, but I have their report here, and it shows that they have squeezed out 5 per cent on the actual capital invested for the last two years, and if they have to pay the tax after paying 72 per cent to some of the underlying companies, it is hard, and it is harder, if you reflect that that tax will go back on the people of Philadelphia in the shape of higher car fares which must be imposed to meet these fixed charges.

Mr. LONGWORTH. What is the car fare?

Mr. BEASLEY. Five cents, with 8 cents for transfers at certain points. It averages a little more than 6 cents. We have an exchange ticket costing 8 cents.

Mr. MOORE. The discussion is on now for a 6-cent fare.

Mr. BEASLEY. An application has been made to raise it to a 6-cent flat fare.

Mr. RAINEY. They are raising it to 6 cents in many cities.

Mr. MOORE. Before you go on, this is perfectly fair—we are from the same city—

Mr. BEASLEY. Fortunately for me.

Mr. MOORE (continuing). Mr. Ballard was here representing the Philadelphia Traction Co. You are here representing the Volunteer Businessmen's Association of Philadelphia, and are not connected with either of the companies?

Mr. BEASLEY. No, sir.

Mr. MOORE. Mr. Prichard represented the underlying companies, or the leading companies, and in his letter he states this—I want to say this, because you ought to be in a position to answer it—

In every case the operating company assumed all obligations of the underlying company, which went out of business for every purpose except the mere maintenance of a corporate existence, the expenses of maintaining which were paid by the operating company.

I won't read the rest, except that he said that the stocks of these underlying companies have gone into estates and charitable organizations, and are held by individual investors as permanent and safe investments. Then he adds this: "In any amendment of the tax laws"—and we are here only to raise revenue—"the burden of paying the tax should not be imposed on the underlying companies in relief of the Philadelphia Rapid Transit Co." This would be to interfere with the contract between the underlying companies and the Philadelphia Rapid Transit Co., which Congress could not do. The true remedy is to so frame the law that there should not be double taxation on the same business. The stockholders of the underlying companies should, of course, pay an income tax on their receipts, and this they would do in any event under the income-tax law.

I thought it was fair to Mr. Prichard, and also to you to read that much of the Prichard letter, so that you would understand what his position is.

Mr. BEASLEY. I have this to say about that. In the first place those underlying companies hold the franchises for the streets, to operate cars on those streets, by charter rights from the State of Pennsylvania.

Mr. MOORE. But they still hold those franchises.

Mr. BEASLEY. They still hold them, and the Union Traction Co. and the Philadelphia Rapid Transit Co. operate those cars by reason of the charter they are still holding from the State of Pennsylvania.

Mr. MOORE. Take the Tenth and Eleventh Street line, which is the old Charles Ellis line, or the Lombard South or the Electric and Peoples. The franchises, the property itself incident to the franchise, is still with the underlying company?

Mr. BEASLEY. Unquestionably, through the public service commission, par excellence, of our city, The P. R. T. Co. could not operate a mile.

Mr. MOORE. Suppose the Philadelphia Rapid Transit Co., the holding company, should fail and go out of business.

Mr. BEASLEY. It would revert to them.

Mr. MOORE. They would simply resume; the property would be theirs?

Mr. BEASLEY. Yes; together with all the improvements that the P. R. T. has put upon it.

Mr. MOORE. That would revert to the underlying companies?

Mr. BEASLEY. That would revert to the underlying companies, the rolling stock, everything, including the Market Street elevated, which has been built by the P. R. T. Co. since this lease. The lease provided that it turns over a monopoly, and that a monopoly should be returned, which would include the subway, which cost \$22,000,000 out of its own capital, but under this lease if the P. R. T. Co. should be so overloaded by taxation or otherwise that it should fail in paying this excessive rental, all that property would revert to the underlying

companies. They are in a position of double-seated velvet. They are in the position of getting a contract for the purpose of choking us, and in the city of Philadelphia to perpetuate a piratical bargain wrung out of the circumstances and disasters of the time.

Mr. GREEN. They want their pound of flesh.

Mr. BEASLEY. Not only that but the knife and scales and the jury and executioner.

Mr. MOORE. They have got the bond.

Mr. BEASLEY. Shylock did not succeed with his bond. They found a way out, and I rejoice that there is still left, I think, for this Congress a way out.

Mr. RAINEY. You have got the active sympathy of this committee, and if you are the Portia of the occasion, go on.

Mr. BEASLEY. I do not know as I could do it as effectively as Portia, but I think I can open the door by which we can get justice.

Mr. LONGWORTH. Do I understand that in the failure of the leasing company to pay this rent to these systems, properties acquired since the lease, would go to the underlying companies?

Mr. BEASLEY. Yes, sir.

Mr. LONGWORTH. Do they share in relative proportion, or how is that done?

Mr. BEASLEY. They do say anything about that. They thought they could manage to eat after they got around the table.

Mr. LONGWORTH. They just get it.

Mr. BEASLEY. They just get it; it reverts as they call it in order to avoid this question of this contract between these companies. It does not concern Congress. Congress is concerned with somebody paying this tax, and concerned with levying the tax in such a way that it does not fall exclusively upon any portion of the population. You are concerned in levying it in such a way that it will not destroy any segment of the population. These are the only limitations upon you, as I understand it.

If you levy the tax on the underlying companies, you will bring the question of the contract up between the two companies, but if you levy this upon the individual stockholders of these underlying companies you will then escape the difficulty and let us out of the difficulty we are in in trying to do away with this contract. The lease that is now pending between the city and these companies describes the situation exactly when it says "that the operating company is to pay any and all contributions however styled, which the company may at any time be lawfully required to contribute to any Government agency"; so if a tax is levied so that it does not fall upon the underlying corporations as corporations, but upon the individual stockholders direct, the individual stockholders have no standing to come in under that contract; that contract is between two corporations. Therefore I have suggested this amendment and leave it with the wisdom of the committee.

Mr. RAINEY. Do you deduct as an expense in ascertaining the income the amount paid the underlying companies as a reimbursement for the taxes they are going to pay or have paid?

Mr. BEASLEY. Oh, yes; the P. R. T. Co., the present lessee must deduct all those expenses before they have any net profits. Their last report, which I have in my hand, says that after they had paid the expenses of operation—that is, wages, and deducting 15 per cent

for betterment and renewals—out of gross receipts, they had, on a 5-cent fare, \$12,000,000 net profit. Out of this, these underlying companies, with \$50,000,000 of capital, got nine-twelfths, and the P. R. T., with its \$48,000,000 capital, got three-twelfths. That is the way the income from operation is now divided under this lease, and I suggest that instead of levying this tax upon those underlying corporations that they be used as a yardstick only, and that the tax be actually paid as it were by the stockholders personally, and I beg to submit the following amendment:

Whenever any individual corporation or partnership—

Mr. LONGWORTH. Where does that amend?

Mr. BEASLEY. Section 205 of the act of October 3, 1917—

Whenever any individual, corporation, or partnership has, during or prior to the prewar period, leased its, his, or her property to or contracted with another individual, corporation, or partnership to carry or operate its trade or business, receiving under such lease or contract a fixed sum or a fixed percentage of the result of such operation, the tax herein imposed as well as the tax imposed under Title I of this act, shall be levied upon and paid by each stockholder of such corporation or member of such partnership or such individual so leasing or contracting its business, in the proportion that the holding or interest of such stockholder or member bears to the total tax herein levied and which is paid under said lease or agreement as hereinbefore set forth.

I do not know whether I have expressed it correctly or not. It is hastily written, but it embodies my thought that if the P. R. T. Co. should under this lease pay a million dollars of the taxes for these underlying companies and the stockholder of these underlying companies receives one-one hundredth of the total rent, he should pay one-one hundredth of the tax.

Mr. LONGWORTH. I do not think that would work out. I would have to digest that a little. You are amending the excess-profits tax law?

Mr. BEASLEY. Yes, sir.

Mr. LONGWORTH. You are not taking into account there all the return on capital invested of the individual stockholder.

Mr. BEASLEY. Well, I intended this to be in addition to whatever else he pays.

Mr. LONGWORTH. You are amending, as I say, the excess-profits tax section but you are amending it in a way that it will not work out under the system based on invested capital. You are imposing a flat income tax on the stockholder.

Mr. GREEN. If you will permit me a word there. While Mr. Longworth's objection is logical, so far as the constitutionality of the matter and power is concerned I do not think it would affect it at all. For example, we have now in the present act under the excess profits tax an 8 per cent tax on salaries of Congressmen. Some of them are not making any profit at all.

Mr. MOORE. I understand Mr. Beasley to be trying to apply it to these particular stockholders.

Mr. GREEN. So far as the constitutionality is concerned or the power of Congress to levy the tax it is all right.

Mr. LONGWORTH. Would not that make a substantial reduction in revenue?

Mr. BEASLEY. The idea is that the revenue shall remain the same, but instead of having the corporation as a corporation pay this tax in a lump, you will levy it on the stockholders as individuals.

Mr. LONGWORTH. One of those companies gets 70 per cent return?

Mr. BEASLEY. The Citizens Passenger Railway Co. gets 72.9 per cent.

Mr. LONGWORTH. Now, you get a deduction of 9 per cent, we will call it, and that leaves 63 per cent on which the tax is to be paid. Your theory is that as it is done now that tax paid by the underlying company is passed on to the leasing corporation?

Mr. BEASLEY. Yes, sir.

Mr. LONGWORTH. In your case it would be paid by the corporation and then assessed against the stockholders in the proportion in which they hold stock?

Mr. BEASLEY. You could have the underlying company as the source, and deduct it before the money goes to the stockholder.

Mr. LONGWORTH. Yes, under your theory you would collect the same amount of revenue.

Mr. BEASLEY. Yes.

Mr. FAIRCHILD. This would affect many corporations; this principle you complain of is involved in a great many holding companies.

Mr. BEASLEY. Only those companies that agree to pay somebody else's tax. I have tried to show where it would only apply to those cases where copartnerships or individuals or corporations make a lease of their whole business.

Mr. FAIRCHILD. But I know of industrial corporations that are operating minor corporations where they have been unable to acquire all of the stock and where the capitalization of all the minor companies would be almost below the annual earning capacities, and these corporations would have to pay a large tax because they could not get all the stock of the corporations.

Mr. BEASLEY. Do they contract to pay somebody else's taxes?

Mr. FAIRCHILD. They had to.

Mr. BEASLEY. You mean individuals?

Mr. FAIRCHILD. These holding companies own the minor companies except as to the stock interests which they are not able to get. Therefore, they can not eliminate the shares of those companies and have to pay taxes. There has been a great deal of complaint on the part of holding companies as to the injustice of what is apparently double taxation, and my idea was that the complaint that you Philadelphia people make would apply with equal force to a great many corporations.

Mr. MOORE. There is no double taxation here. It is the question of the enforcement of a contract which it is contended is against public policy.

Mr. FAIRCHILD. It is a question whether a stockholder of a minor corporation is getting a large profit.

Mr. MOORE. This is an entirely different situation. It is a case where taxes are being paid by underlying corporations, but are being refunded by the operating company under leases made a long time ago, and before any war conditions were thought of.

Mr. LONGWORTH. The real difficulty would be that Congress would amend that contract.

Mr. BEASLEY. That is just exactly what I hoped I would avoid. The contract is technically between the two corporations as corporate entities. Now, the stockholders of a corporation I need not tell you and the other members of this committee who are members of the

bar here, are not the corporation, and you can tax an individual stockholder without taxing the corporation as such.

Mr. LONGWORTH. But now, as the law stands to-day, the lessee company is paying the tax?

Mr. BEASLEY. The lessee company is paying the tax of the other companies; yes, sir.

Mr. LONGWORTH. Now, the effect of this would be to transfer that tax to the stockholders of the underlying companies?

Mr. BEASLEY. Where it ought to be.

Mr. LONGWORTH. Precisely, but it is a case of the Congress amending the contract.

Mr. BEASLEY. It is a case of the devil getting around the stump in an easy way, and that is what we want to do, because it is not the intention, as I understand it, of Congress to double-tax anyone, and that fact is that it was intended that the tax should be levied on the income of the underlying companies. I call your attention, if I may be allowed, to the way you have worded section 201 of the act of 1917:

SEC. 201. That in addition to the taxes under existing law and under this act, there shall be levied, assessed, collected, and paid for each taxable year on the income of every corporation, partnership, or individual, a tax, etc.

You word that tax as if you intended it to be paid by every corporation, and here is a situation where one corporation escapes, and you put a double tax upon the other corporation. That is not your intention as expressed in the act itself that any corporation should escape, and if you find through private contract or otherwise that somebody is trying to defeat the purpose of Congress by passing that tax along, why, I think it is your duty to interfere, and it does seem to me that if you tax a corporation, its business, you have a right to say that the tax so levied shall be paid by the individual and not by the corporation.

Mr. MOORE. If you read the second amendment proposed by Mr. Ballard, he incorporates an idea somewhat similar to that.

And the taxes assessed hereunder, as well as income taxes assessed under section 1 of Title I of this act, shall be deemed as not issuing out of any given property, but shall be assessed as a personal tax against persons and corporations liable therefor, computed upon the results of their total gains, profits, and income, less deductions, as provided for herein, and in reduction of the amount of surplus or undivided profits which the said person or corporation would otherwise have for said current year.

Mr. BEASLEY. The trouble about that amendment is that it puts the tax upon the corporation and it brings it under the lease. My amendment assesses the tax on the individual and thus does not bring it under the lease.

Mr. MOORE. That brings up the question of the number of stockholders. How many stockholders are there in the Philadelphia Rapid Transit Co.—the holding company?

Mr. BEASLEY. That seems to be in the box. We can not find out about that.

Mr. MOORE. How many stockholders would there be in one of the underlying companies like the Tenth and Eleventh?

Mr. BEASLEY. I saw a statement where there were 3,000 or 4,000 of them.

Mr. MOORE. Mr. Ballard said he estimated about 3,500 stockholders in the Philadelphia Rapid Transit Co. That is not a very large number, but if your plan was adopted and the taxes were to be put

upon the stockholders, it would be interesting at this time to know how many there were of them, if the stock was closely held.

Mr. BEASLEY. It is closely held. The trust companies hold a great deal of it for the original estates, some of the first people that started these roads. But even if they do hold them, they can not complain of paying the tax where they are getting a profit of 72 per cent.

Mr. MOORE. I am not arguing Mr. Prichard's case. He further says:

The stock of these underlying companies became practically securities in the nature of bonds or ground rent, having no element of business risk, and no possibility of assessment or diminution of income, and as such they have been for many years dealt with on the market, and are now held by estates, charities, and individual investors as permanent and safe investments.

Mr. BEASLEY. They had these for 999 years and they were all right as long as the cow stood there and there weren't too many milkers and the milk held out.

Mr. MOORE. How many were there of them?

Mr. BEASLEY. I think I can find that out for the committee. I imagine that there are not very many of them because the theory was this—we will take the Union Traction Co.

Mr. LONGWORTH. That lease was made by a lawyer who did not anticipate such taxes, but that contract was made and entered into by everybody with their eyes open. To do as you ask would let the Philadelphia Transit Co. out of its bargain.

Mr. BEASLEY. It is as fair to defeat these companies as it is for these companies to defeat Congress. These companies are defeating the purpose of this act.

Mr. LONGWORTH. We are getting the revenue.

Mr. BEASLEY. Well, yes; you are getting it, but you are not getting it in the way you intended to get it, and you are not getting it in the way you levied it. Are you going to allow a private subterfuge to defeat the public purpose of Congress?

Mr. LONGWORTH. Is it a private subterfuge when it is a contract made by two corporations?

Mr. BEASLEY. Yes; because it was intended to pass a public tax on to a part where the public authorities did not put it. I have just read you here from the Court of Appeals of New York a case where they declared such a contract to be against public policy.

Mr. LONGWORTH. Now, if the Pennsylvania courts had so held, there would be no necessity for Congress doing that.

Mr. BEASLEY. I assume that the courts do, but it is not always certain what the courts will do in our State at times.

Mr. LONGWORTH. If the courts do not act, you are asking Congress to act.

Mr. BEASLEY. We are asking you to put a tax on the man that gets the revenue. Surely, that is not wrong. We are asking you that you make the facts square with the intention of the act of Congress. The act of Congress says that corporations shall pay the tax, every corporation.

Mr. LONGWORTH. The corporation is paying the tax.

Mr. BEASLEY. No; only in appearance. We have come now, as I understand it, Mr. Chairman, to a time when we must deal with the real things of life. This camouflage and screen of the real thing

bar here, are not the corporation, and you can tax an individual stockholder without taxing the corporation as such.

Mr. LONGWORTH. But now, as the law stands to-day, the lessee company is paying the tax?

Mr. BEASLEY. The lessee company is paying the tax of the other companies; yes, sir.

Mr. LONGWORTH. Now, the effect of this would be to transfer that tax to the stockholders of the underlying companies?

Mr. BEASLEY. Where it ought to be.

Mr. LONGWORTH. Precisely, but it is a case of the Congress amending the contract.

Mr. BEASLEY. It is a case of the devil getting around the stump in an easy way, and that is what we want to do, because it is not the intention, as I understand it, of Congress to double-tax anyone, and that fact is that it was intended that the tax should be levied on the income of the underlying companies. I call your attention, if I may be allowed, to the way you have worded section 201 of the act of 1917:

SEC. 201. That in addition to the taxes under existing law and under this act, there shall be levied, assessed, collected, and paid for each taxable year on the income of every corporation, partnership, or individual, a tax, etc.

You word that tax as if you intended it to be paid by every corporation, and here is a situation where one corporation escapes, and you put a double tax upon the other corporation. That is not your intention as expressed in the act itself that any corporation should escape, and if you find through private contract or otherwise that somebody is trying to defeat the purpose of Congress by passing that tax along, why, I think it is your duty to interfere, and it does seem to me that if you tax a corporation, its business, you have a right to say that the tax so levied shall be paid by the individual and not by the corporation.

Mr. MOORE. If you read the second amendment proposed by Mr. Ballard, he incorporates an idea somewhat similar to that.

And the taxes assessed hereunder, as well as income taxes assessed under section 1 of Title I of this act, shall be deemed as not issuing out of any given property, but shall be assessed as a personal tax against persons and corporations liable therefor, computed upon the results of their total gains, profits, and income, less deductions, as provided for herein, and in reduction of the amount of surplus or undivided profits which the said person or corporation would otherwise have for said current year.

Mr. BEASLEY. The trouble about that amendment is that it puts the tax upon the corporation and it brings it under the lease. My amendment assesses the tax on the individual and thus does not bring it under the lease.

Mr. MOORE. That brings up the question of the number of stockholders. How many stockholders are there in the Philadelphia Rapid Transit Co.—the holding company?

Mr. BEASLEY. That seems to be in the box. We can not find out about that.

Mr. MOORE. How many stockholders would there be in one of the underlying companies like the Tenth and Eleventh?

Mr. BEASLEY. I saw a statement where there were 3,000 or 4,000 of them.

Mr. MOORE. Mr. Ballard said he estimated about 3,500 stockholders in the Philadelphia Rapid Transit Co. That is not a very large number, but if your plan was adopted and the taxes were to be put

upon the stockholders, it would be interesting at this time to know how many there were of them, if the stock was closely held.

Mr. BEASLEY. It is closely held. The trust companies hold a great deal of it for the original estates, some of the first people that started these roads. But even if they do hold them, they can not complain of paying the tax where they are getting a profit of 72 per cent.

Mr. MOORE. I am not arguing Mr. Prichard's case. He further says:

The stock of these underlying companies became practically securities in the nature of bonds or ground rent, having no element of business risk, and no possibility of assessment or diminution of income, and as such they have been for many years dealt with on the market, and are now held by estates, charities, and individual investors as permanent and safe investments.

Mr. BEASLEY. They had these for 999 years and they were all right as long as the cow stood there and there weren't too many milkers and the milk held out.

Mr. MOORE. How many were there of them?

Mr. BEASLEY. I think I can find that out for the committee. I imagine that there are not very many of them because the theory was this—we will take the Union Traction Co.

Mr. LONGWORTH. That lease was made by a lawyer who did not anticipate such taxes, but that contract was made and entered into by everybody with their eyes open. To do as you ask would let the Philadelphia Transit Co. out of its bargain.

Mr. BEASLEY. It is as fair to defeat these companies as it is for these companies to defeat Congress. These companies are defeating the purpose of this act.

Mr. LONGWORTH. We are getting the revenue.

Mr. BEASLEY. Well, yes; you are getting it, but you are not getting it in the way you intended to get it, and you are not getting it in the way you levied it. Are you going to allow a private subterfuge to defeat the public purpose of Congress?

Mr. LONGWORTH. Is it a private subterfuge when it is a contract made by two corporations?

Mr. BEASLEY. Yes; because it was intended to pass a public tax on to a part where the public authorities did not put it. I have just read you here from the Court of Appeals of New York a case where they declared such a contract to be against public policy.

Mr. LONGWORTH. Now, if the Pennsylvania courts had so held, there would be no necessity for Congress doing that.

Mr. BEASLEY. I assume that the courts do, but it is not always certain what the courts will do in our State at times.

Mr. LONGWORTH. If the courts do not act, you are asking Congress to act.

Mr. BEASLEY. We are asking you to put a tax on the man that gets the revenue. Surely, that is not wrong. We are asking you that you make the facts square with the intention of the act of Congress. The act of Congress says that corporations shall pay the tax, every corporation.

Mr. LONGWORTH. The corporation is paying the tax.

Mr. BEASLEY. No; only in appearance. We have come now, as we understand it, Mr. Chairman, to a time when we must deal with the real things of life. This camouflage and screen of the real thing

is passing away, and no more so than in the American Congress. You are doing now real things, and humanity is coming to its own, and we think that in a case like Philadelphia where there are 2,000,000 of people being preyed upon through the contracts of stock gamblers of 30 years ago, when we had no public service corporations to restrain them, and had no one to protect the people from their ravagings, you should help us, and we ask you to so change the law that we will be protected.

Mr. LONGWORTH. I will admit that Congress is a much more virtuous body than before.

Mr. MOORE. You want to modify that a little.

Mr. LONGWORTH. Since you came in?

Mr. MOORE. Yes.

Mr. LONGWORTH. But it is our function to relieve people of their bargains?

Mr. BEASLEY. I think it is your function to give relief to grievances. I think when Congress can do things to relieve people, and square things for them, you should do it. We present a square proposition which every man on the committee is satisfied is square and right.

Mr. LONGWORTH. Yes; but it is not the contract that was made.

Mr. BEASLEY. You speak about the contract, and we say it is against public policy, and we do not ask you to fight the contract, we ask you to make the individual stockholders pay the tax out of the profits they are getting.

Mr. GREEN. You think an excess profits tax should be paid by the party that gets the profits?

Mr. BEASLEY. Unquestionably.

Mr. GREEN. And if we impose it so that somebody who is not making anything out of it pays it it would be doing something quite contrary to the intent of Congress, and not in the best interests of the public.

Mr. BEASLEY. That is exactly what I think, and I think that the committee—I regret that I had to draw that amendment in such haste, that it is not in very good form.

Mr. GREEN. A little further right there. You gave a citation of a case, but you do not state what the argument was which was presented by the court's decision. But whatever it may have been, it seems to me that this part might well be urged that it ought not to be permitted to anyone by private contract to take away from the Government the power which the Government inherently has to place its tax where it can best be borne. Otherwise, if we carried this matter to extremes, we would probably find that contracts could be made so that the greater portion of the community would not have any taxes whatever imposed upon them.

Mr. BEASLEY. That is correct, sir.

Mr. GREEN. And another portion of the community, notwithstanding the wish of the Government to distribute these burdens equally and fairly, would have to pay the whole thing.

Mr. BEASLEY. That is the idea, and by putting a double tax on the other individual or corporation, you might ultimately take that corporation and thus lose one corporation from which you might have had a tax if you had been a little more fair and equitable.

Mr. GREEN. In this case there is no desire to place the tax upon the people of Philadelphia who use the street car system, although you claim that that will be the effect of it.

Mr. BEASLEY. Yes, sir.

Mr. GREEN. That was far from our intention.

Mr. BEASLEY. That is the reason we came here to have you relieve us of an apparent injustice, which is an injustice to the Philadelphia Rapid Transit Co. We do not wish that company destroyed, because it is the only transportation that we can rely upon for street car service.

Mr. LONGWORTH. Wouldn't the trouble be just as it is if we passed this legislation. We would be to that extent increasing the value of the stock of the Philadelphia Rapid Transit Co. We would buy their stock for them because they would be relieved of the payment of this tax?

Mr. BEASLEY. We have expected to have to pay that.

Mr. LONGWORTH. They agreed to pay that?

Mr. BEASLEY. Of course, they did; they signed the lease.

Mr. LONGWORTH. You buy one stock and bear the other.

Mr. BEASLEY. The Philadelphia Rapid Transit Co. needs a little buying, because it has 50 paid in and is selling at 26, and they need a little help because for 11 years they have had no dividends at all. It has only been for the last 2 years that they have paid even 5 per cent, and if they are burdened with this tax we fear that the property may be a loss.

Mr. LONGWORTH. That is controlled by the Widener-Ellis syndicate.

Mr. BEASLEY. Yes, sir; very largely.

Mr. OLDFIELD. Where is the public getting any benefit out of this?

Mr. BEASLEY. They will raise the street car fares.

Mr. OLDFIELD. We have no power to prevent the raising of the fare.

Mr. BEASLEY. But you have power to prevent exactions.

Mr. OLDFIELD. You have a public-service corporation that will prevent it.

Mr. BEASLEY. This lease that is now pending provides that car fare shall be raised in proportion to the taxes charged.

Mr. OLDFIELD. They will raise the car fare any time the public will stand for it.

Mr. BEASLEY. They may do so, but the car fare has to be raised.

Mr. OLDFIELD. Isn't it a contest between the two corporations?

Mr. BEASLEY. Between the Rapid Transit Co. and a number of underlying companies and the people.

Mr. OLDFIELD. One corporation has a contract with several other corporations.

Mr. BEASLEY. It is not a contest. There are existing contracts which provide that the lessee company is to pay the taxes of the underlying companies.

Mr. OLDFIELD. When was it written?

Mr. BEASLEY. About 15 years ago.

Mr. OLDFIELD. Have the Pennsylvania courts ever held—you spoke of the New York courts—ever held the contract void on account of being against public policy?

Mr. BEASLEY. It has never been before our courts. We have no cases on it. Of course, there have been contracts before the courts, but nothing of a public nature like this.

Mr. OLDFIELD. You have not had any lawsuits in the courts of Pennsylvania with regard to the validity of this contract?

Mr. BEASLEY. There were two decisions about taxation that were opposite in their character, but they did not involve this point, the point of one corporation agreeing to pay the taxes of another. In the case at bar here, we have one company getting the income and another paying the income tax, and all we are asking you to do is to make those people who are getting the excess profits pay the excess-profits tax, and our suggestion is that you will tax it so that the individual stockholders of the underlying companies will pay this tax. That lets out the corporation tax.

If you burden the corporation, then the Philadelphia Rapid Transit Co. would have to pay it, and we would get back just where we are now. That is the effect of Mr. Ballard's amendment. I fear if it is put in as he wants it, it would not relieve us.

I would like to leave with the committee some of these cards containing the amount of the dividends.

Mr. RAINEY. Has the Philadelphia Rapid Transit Co. paid the tax as yet?

Mr. BEASLEY. No, sir.

Mr. RAINEY. What is the status?

Mr. BEASLEY. I understand that the underlying companies are about to start a suit in the United States court to compel the Philadelphia Rapid Transit Co. to refund the taxes they have paid.

I want to thank the committee for your courtesy.

#### STATEMENT OF MR. H. L. SEAY, OF DALLAS, TEX.

Mr. RAINEY. Please state your name and whom you represent.

Mr. SEAY. H. L. Seay, of Dallas, Tex., and I represent the American Life Convention, an association of 111 life insurance companies in the United States. I happen to be president of that organization. The companies are mostly the younger companies in the East, and the companies of the West and South.

On the 12th of June the insurance interests were represented here by Mr. Dunham and Mr. Blackburn. At that hearing the one question presented was whether or not the reserves of the legal reserve life insurance companies should be regarded as invested capital. But during the discussion, while Mr. Blackburn was talking, he was requested to suggest some method of taxation that would iron out the angles that the argument showed existed in the present method of taxing insurance. I was here with Mr. Blackburn at that time, but inasmuch as I had nothing to offer, I did not appear personally, but immediately called a meeting of the executive committee of the American Life Convention to be held in St. Louis on the 22d of June. We held that meeting and after going into the question of the taxation of life insurance companies, it was decided to ask Congress to base that tax upon premium income. I immediately came to Washington and have been here several days awaiting an opportunity to present our view to your honorable committee. I would not have come had I not thought I had something constructive, and simply to

present to you something that would let you produce the income you desire from insurance companies in a very simple manner.

Mr. COLLIER. I believe your plan collects \$2 from insurance companies where one was collected last year.

Mr. SEAY. Under my plan, Mr. Collier, you could just figure what the insurance ought to be, then take the premium income and apply the percentage to that income and get what you think it ought to be. If you think it ought to be twice as much, then you can apply the higher percentage. Mr. Blackburn estimated that insurance companies paid during 1917 \$4,900,000, that is the life reserve life insurance companies.

Mr. LONGWORTH. The total income from all taxes from all insurance companies is only about \$6,000,000. We have had a great many hearings, and it seems to be all these insurance people speak about is the burdensome taxes. I observe that there are \$27,000,000,000 of life insurance now in force, and the total amount of taxes paid the Government is only \$6,000,000 a year, much lighter than in any other form of business.

Mr. SEAY. That is the liabilities of the insurance companies, not the assets.

Mr. LONGWORTH. It is the business.

Mr. SEAY. It is the business that we owe, what we have to pay in case of death, not the total assets of those companies. They have something like \$6,000,000,000. That money has to be loaned out, invested.

Mr. LONGWORTH. That is only one-tenth of 1 per cent of that amount; that is all the insurance companies pay.

Mr. SEAY. If you will look at the second item on the list that I have handed around you will find that the total premium income is \$985,000,000.

Mr. LONGWORTH. The total taxes from all insurance, life, fire, marine, and everything else, is the total sum of \$6,000,000.

Mr. SEAY. I thought it would be more, because we figured that last year there was about \$4,000,000,000 of ordinary life insurance written. The 8-cent tax on that would be \$3,200,000. If you take the 8 cents in that tax, it will be \$3,200,000, not taking anything at all for the income. We figured that the amount of income tax that should be received is something like \$1,500,000.

Mr. LONGWORTH. The total would be, according to the Treasury report, from all kinds of insurance under the present law, a trifle over \$6,000,000. It is the lowest tax, by all odds, of any industry in the United States.

Mr. SEAY. Understand I am not contending here, Mr. Longworth, that the taxes on insurance last year were excessive. My idea is that I want a simple method of computing the tax. If you will take the memorandum which I have furnished you, you will notice insurance companies are effected under the different sections of the law at present, and lawyers and accountants are necessary to make returns. It is very confusing. For instance, we are taxing a corporation under section 2, Title I. We figure that we ought to produce about \$1,500,000 a year, and we have a capital stock of 50 cents per one hundred thousand that is in excess of \$99,000, the same that all other corporations bear. Then we have the so-called excess-profits tax, but insurance really can have no excess profits. We will do well if

we get through this war without having our capital impaired. When the death losses come in from the front you are going to have a large number of companies that are not going to make any money, and a tax on them is going to be a gratuity on their part, rather than something that should be forced.

Mr. OLDFIELD. Haven't you increased rates on people who go to the front?

Mr. SEAY. On business going to the front, or business before the war you can not increase.

Mr. OLDFIELD. But since the war.

Mr. SEAY. Yes; but think of the enormous amount of business that is subject to this mortality already in force.

Mr. OLDFIELD. The Government is going to take that.

Mr. SEAY. They are taking all the new business, but none of the old business lapses, none whatever.

Mr. OLDFIELD. Are you compelling them to increase their premium?

Mr. SEAY. No; we have got to keep it under the same premium they have always carried it.

Mr. OLDFIELD. What percentage of the policies of life insurance companies did not have any war clause in them?

Mr. SEAY. I should say about 80 per cent did not have any war clause at all.

Mr. OLDFIELD. What percentage of those are of military age?

Mr. SEAY. It would be quite a good many of military age. Those that have the military clause waived it. I do not know of any company that has insisted on the old war clause. They are not writing business on new men going into the war, but on old policyholders they have waived the old war clause and are not asking additional premiums. In other words, the companies are carrying billions of dollars on men in the Army and in concentration camps without any extra premiums, and the mortality rate will be multiplied many times.

Mr. OLDFIELD. Do you know how many millions?

Mr. SEAY. No.

Mr. OLDFIELD. Those fellows that have gone are between 21 and 31, and most of those persons that have gone to war did not take out insurance at the time they were 21.

Mr. SEAY. A man increases his life insurance as he nears 30, that is true. He takes out the small policy at the younger age, and gradually increases. We have no way of knowing anything, because lots of times the parent may send in the premium and we do not know whether the boy is at home or where. He may be in the Army, in France, but if a soldier never went to France, the mortality of life insurance companies would be materially increased because of the anxiety produced, the worry they go through, the troubles that are produced by financial conditions which the war always affects. For instance, we have suicides through financial losses growing out of the war, suicides due to worry, and things of that sort.

Mr. OLDFIELD. But the Government has assumed the greater part of that burden?

Mr. SEAY. The Government has assumed the greater part of it, but it has not to a large extent relieved the companies from the millions it already had.

Mr. OLDFIELD. It is small expense to the policyholder.

Mr. SEAY. Yes, the Government takes into consideration no overhead expense, and if the premium is not sufficient to meet the mortality which the war will produce, it has a way of raising it by taxation. The companies have no such method, so we have got to conduct our business so that this \$27,000,000,000 of insurance in force will be met, and if it is not met, our resources are impaired, and the companies have got to boost up their resources. If it is a stock company, they have got to get in new capital to make up losses, and while the figures are big, imposing, the insurance companies are in a rather precarious condition if the mortality on the western front in Europe anywhere hits them very hard. While the figures are stupendous, at the same time there is an obligation behind us that we have got to meet, and those figures have been arrived at through a mathematical calculation to give us an income to meet normal demands.

Mr. HAWLEY. That was based on normal peace conditions?

Mr. SEAY. On normal peace conditions. In figuring out policy forms, making up tables of values, and rates, we did not think of the country being in war, or we would have put in a war clause. But I should say that about two-thirds now have no war clause.

Mr. OLDFIELD. When did you begin to put that in.

Mr. SEAY. Only when war was declared between the United States and Germany.

Mr. OLDFIELD. Not before that?

Mr. SEAY. No, sir. Some few companies already had it, and that, of course, applies only to those 21 to 31. A good many still write those in the limited classes 4 and 5, but none will write those in class 1. The Government has it all, all the new insurance on class 1.

Mr. OLDFIELD. Do you know the companies who had that clause in when the war broke out?

Mr. SEAY. No, sir; I can not give those, but I understand they all waived it. By my proposition in my appearance here is to call your attention to the fact that there is a lot of confusion and uncertainty about what the taxes of insurance companies are, and that no two companies make the same return, no two insurance counsel will advise the companies how to make the returns alike, and when the Government attempts to check up insurance companies's returns, they have got to have an expert accountant and a lawyer to go in together and work it out. I really believe that a tax based on the premium income is so simple that a child can calculate it and most any accountant can check it.

If you will look at the second item, you will see that the total premium income would be \$965,000.

Mr. LONGWORTH. On that one-half of 1 per cent we would raise as much as now on all the insurance together.

Mr. SEAY. That is just the proposition that I put up to you. If you want to raise the same amount in 1918 as in 1917, if you will look on page 3 you will see the whole matter tabulated out there. If you want to raise a greater income in 1918 than in 1917, placing the estimated premium income at \$1,000,000,000, one-half of 1 per cent would produce \$5,000,000,000; three-fourths of 1 per cent would produce \$7,500,000, and 1 per cent would produce \$10,000,000, and, gentlemen, I want to say that the insurance companies, I think, would be willing to see their taxes doubled, and would cheerfully

bear that enormous demand that is made upon them from this increased mortality. I can not see how they could stand a greater tax on their premium income than 1 per cent, which would produce \$10,000.

Mr. LONGWORTH. Why should a life insurance company object to that?

Mr. SEAY. I can not conceive of a company that would.

You now have a tax of 8 cents on the first \$100 of the first year's business. The bulk of the tax that you produce from insurance the first year is small. The insurance agent has an average commission of 55 per cent of the first year's business. You have got to pay your medical examination fee, which is never less than \$5, and an inspection report of \$1 to \$2. All this must come out of the first premium. If the first premium is \$100, you take out \$55 to the agent, \$10 to the doctor, and you take out \$2 for your inspection fee; then there is other expense you have got to charge off, some overhead on each policy, and you take away from the companies on this first year's business so much that you make them go in debt, or at least no more than come out even on it.

Mr. OLDFIELD. Would you rather have it 1 per cent than the way it is?

Mr. SEAY. That would bring in twice the revenue that you have been getting, and it would make it much simpler for us. We do not know whether we have filed correct reports, and the Government does not know. There is no other feature of this revenue act that is shrouded in the confusion that the insurance sections are. You have got so many different classes of business here, my suggestion is that you give the insurance a separate section. The way you have them now they are mixed up with every other kind of commercial endeavor, but if you give them a separate section and figure what may be called a flat premium income tax on a certain percentage, it will produce the revenue.

I have here an amendment that I would like to suggest, that you eliminate all reference to insurance companies and make a separate chapter. The amount of tax would be readily determined and mathematically correct, reading about as follows:

There shall be levied, assessed, and collected from each and every insurance and indemnity company, association, and society a tax of ——— per centum upon the gross premiums and assessments and installments thereof collected by such insurance and indemnity company, association, or society from its policyholders, members, or coinsurers during the calendar year beginning with the first day of January, nineteen hundred and eighteen, and ending December thirty-first, nineteen hundred and eighteen, and every year thereafter during the period within which war taxes are levied, assessed, and collected. This tax shall be in lieu of any and all other Federal tax paid by such insurance companies, indemnity companies, associations, and societies, and they shall not be required to pay taxes under any other section of this or any other act. Each company, association, and society shall make a return on or before the fifteenth day of each and every month of the gross amount of premiums and assessments received by it in cash, notes, or other obligations to pay during the month preceding, and with such return shall remit to the collector of internal revenue of the district in which the company, association, or society shall maintain its home or general office ——— per centum of the face amount of said premiums and assessments without any deduction whatsoever, excepting for policies or certificates canceled by the policyholders or by the company: *Provided, however,* That there shall be deducted from the tax payable hereunder all sums paid by said companies on the tax of 8 cents per hundred on all new business issued.

Mr. LONGWORTH. Repeal all the others?

Mr. SEAY. Yes.

Mr. LONGWORTH. Do you think that would be satisfactory?

Mr. SEAY. I think that would be satisfactory to all. I can not conceive of any company objecting to it.

Mr. LONGWORTH. I may be wrong, but I think that some companies objected very strongly to putting a tax on their annual premium. Don't you remember that?

Mr. COLLIER. How about endowment insurance, or insurance of great value?

Mr. SEAY. I do not know that that would make any difference. For instance, you take an 8-cent tax. You can see the inequitableness of that if you will take some companies that write almost exclusively what we term "term" business; that is, a policy running from 5 to 10 years. Now, the premium on that policy will average about \$12 a thousand, \$11 or \$12 a thousand. You take on a \$1,000 policy. You would pay 80 cents, then you take a company that is writing almost exclusively an endowment business, where the premium will be \$40 a thousand, that company is paying about 2 per cent this year, whereas another company that is writing term business is paying 7 or 8 per cent.

Mr. LONGWORTH. It sounds like a very simple effective plan, but my impression is that many insurance companies would not favor it.

Mr. SEAY. Why can they object to it?

Mr. LONGWORTH. I do not know enough about it to say.

Mr. SEAY. It puts everybody on the same basis. As it is now, the term companies are at a great disadvantage against a company writing endowment.

Mr. COLLIER. Let me ask you a question. How many companies do you represent?

Mr. SEAY. One hundred and eleven.

Mr. COLLIER. And you say they are confined largely to certain sections?

Mr. SEAY. In all sections, the younger companies of the East and the companies of the West and South. We have probably 4 or 5 in Texas, 11 or 12 in Nebraska, and Ohio, and we have got 5 or 6 in Ohio, 2 in Mississippi, and Dr. Simmons, vice president of the Pan American of New Orleans.

Mr. COLLIER. You have some in the East?

Mr. SEAY. Yes; four or five in Pennsylvania, and we have one in New York.

Mr. COLLIER. You do not represent all the old line companies?

Mr. SEAY. None of the New York companies. They are in what is known as the Presidents' Association. I do not know that I have ever talked with any official of any of those companies. I do not know how they would regard this, but I can not see where they could have any objection if they want to bear their just proportion of the taxes.

Mr. COLLIER. Your association is composed of companies doing all kinds of business?

Mr. SEAY. Yes, sir; every class, endowment or limited payment, or industrial, and everything else. There is no form of insurance they do not represent.

Mr. COLLIER. Your companies write the expensive as well as the term, the cheap insurance?

Mr. RAINEY. You have 20 minutes, and we have eight more gentlemen here, and we want to close up the hearings, and do not want to shut anybody out. Have you anything there that you could print?

Mr. SEAY. I would like to have this published that I have put in. I would like to read this resolution.

Mr. RAINEY. Then you can print the rest.

Mr. SEAY. (Reading:)

The executive committee of the American Life Convention, representing 111 legal reserve life insurance companies with home offices in 33 different States, hereby expresses its appreciation of the vigorous efforts of the Government to win the war with Germany and wishes to cooperate with the Government in every possible way for the accomplishment of the most complete military victory and for the establishment of a permanent peace.

The committee respectfully represents to the Government that in the matter of providing the necessary and extraordinary revenue required by the Government in meeting the expenses of the war, the companies representing the American Life Convention are ready and willing to accept their full share of the extra burdens of taxation made necessary by the exigencies of the war and stand ready to cooperate fully with any and all efforts of the Government in devising necessary revenue measures.

We venture the suggestion that taxes on life-insurance companies should be so levied as to insure the least trouble and expense to the Government in collecting the same, and the least confusion and difficulty to the companies in paying the same.

We further respectfully suggest that in lieu of all other Federal taxes on life-insurance companies there be levied a tax of a certain per cent on total annual premium income and that that said tax, instead of being made payable in one sum for one year, be made payable monthly as said premium income is received.

The secretary of the convention is hereby directed to furnish a copy of this action to the Ways and Means Committee of the House of Representatives, to the Finance Committee of the Senate, and to the Secretary of the Treasury.

Mr. HAWLEY. Do you mean to have your amendment apply to fraternal societies?

Mr. SEAY. I do not represent the fraternal on that. That is a matter purely with the committee.

Mr. HAWLEY. You have nothing of that in mind?

Mr. SEAY. I have nothing of that sort to offer. I do not know just how the fraternal are taxed on their assessment now. It seems to me that the fraternal are in this position that the assessment companies can always raise their rates. They provide in their contracts that if any unusual burden hits them, they can raise their rates. We have a level premium in our business, and if we have a heavy mortality, we have no way of meeting that except by putting new money into the business.

Mr. HAWLEY. It works out that when the fraternal raise their rates they lose new business. That would operate the same with them as with you.

Mr. SEAY. Yes, sir; if it gets to where we can not stand it, we have to raise rates on new business, but on business already in, we are helpless. On the other hand, if a fraternal company has a policy that has been running 10 years, they may jump it any time.

Mr. HAWLEY. But they would lose many members, and their income is lost?

Mr. SEAY. But take it in the case of policies that have been running a long time, if they raised the rates they make money by doing it.

Mr. HAWLEY. But the men who have paid for a long time will pay the increased rates, but the new ones will not pay the increased rates.

Mr. SEAY. I do not know that they have so much trouble with the new ones. You take a man that starts in with a fraternal society or any other society about 40 or 50 years of age, by the time he gets up to 60 his ability to earn money to meet his premium has probably been decreased, and, of course, the premium rates on the old men have been advanced.

Mr. HAWLEY. But he will not drop out.

Mr. SEAY. Yes; I think the experience has shown that he will.

Mr. HAWLEY. You are wrong in that. The experience has been that the older members who have reached a nonearning age remain and the young members drop out.

Mr. SEAY. In the Knights of Pythias, to which I belonged, they put men of 65 and above in a certain class and the old men dropped out.

Mr. HAWLEY. I have had experience of 24 years, and that has not been my experience.

Mr. SEAY. I do not know much about fraternal companies. I was a member of the Knights of Pythias, and I do know something of that experience.

I wish to thank you gentlemen for your patience and the courtesy you have extended me, and I wish to assure you that the insurance companies are not in any way trying to lessen the taxes that they will have to pay. We come with the proposition that we are willing to pay more, but we do ask you to relieve us of the uncertainty and the confusion that now attends the fixing of this tax, and put it on a premium income basis. I know that you gentlemen want us to pay, but let us pay it in a way that we can compute it easily, and so that the Government can check it up easily.

I thank you.

(The statement referred to is as follows:)

*Suggestions of taxation of life insurance companies presented to the Ways and Means Committee by Harry L. Seay, President of the American Life Convention.*

From figures furnished by the Spectator and the American Underwriter we have gathered the following statistics on 227 legal reserve life insurance companies in the United States on December 31, 1917, 227 being practically all the companies doing business in the United States:

Whole amount insurance in force.....	\$27, 973, 057, 673
Total premium income.....	965, 545, 988
New ordinary business written in 1917.....	3, 981, 347, 336

Life insurance companies are subject to the following Federal taxes:

1. As corporations, upon net income, section 10, title 1, act of September 8, 1916, and section 130, present act. The sum received from this source will approximate \$1,500,000.
2. A capital tax of 50 cents per \$1,000 of fair value of capital and surplus and undivided profits, excluding reserves and in excess of \$99,000. The sum received from this source will approximate \$200,000.
3. The so-called excess-profits tax, section 200, act of March 3, 1917. As there can only be war losses and no excess profits for insurance companies during the war, and as this section will have to be construed by the courts before companies can know their status thereunder, nothing has been received from this source.
4. A tax of 8 cents on each \$100 and fraction thereof of amount for which any life is insured after the passage of the present act. The sum received from this source will approximate \$3,200,000.
5. Tax of 10 per cent upon any surplus not distributed within six months. Impossible to ascertain what this will bring, but it will be very small. The total amount received from life insurance companies per annum under existing laws will approximate \$4,900,000.

Life insurance companies also have to bear the burden of added expenses produced by—

1. War stamp taxes.
2. Increase of postal rates.

The amount received from the last two items is large, but as the burden falls alike upon all, we offer no suggestions as to them.

Mr. RAINEY. We are compelled to close these hearings to-night, in order to get to work on this bill. It will take us several weeks to draw it. I want to find out how much time you gentlemen want. We are going to hear all of you.

We will hear first from any of these gentlemen who have any plans by which we can collect some money. [Laughter.]

**STATEMENT OF MR. J. WELLER LONG, SECRETARY-TREASURER OF THE AMERICAN SOCIETY OF EQUITY, THE NATIONAL UNION, MADISON, WIS.**

Mr. RAINEY. Give your residence and business, and what interests you represent, Mr. Long.

Mr. LONG. My name is J. Weller Long; residence, Madison, Wis.; secretary-treasurer of the American Society of Equity, the National Union, an organization of farmers.

In regard to raising income, I wish you would imagine yourselves off on the farm, where the farmers are working early and late, trying to produce enough food to supply our country here as well as the allies; that they are buying Liberty bonds, and savings stamps, and so on, sacrificing a great deal in the way of hard work and doing without things they would like very much to have. And, now, when it comes to loyalty, we do not believe there is anybody in this country more loyal than the farmers are, and that when we are asked we are responding to the call to buy Liberty bonds and to produce food, we want incomes taxed and profits taxed so as to meet their proportionate share of carrying on the expense of the war.

When we are sacrificing even more than a good living, we do not see why any loyal company, corporation or individual should have a large income over and above what they are living upon, and when it comes to equality among us Americans, why should anybody want an income in such a crisis as this?

Some of us believe in going so far as to tax incomes, the profits, 100 per cent. But our organization does not say that. Our organization says, "Tax over and above \$50,000." From the standpoint of patriotism, why should a man have \$50,000 income in such a crisis as this?

We do not want any corporation, company, or individual taxed so that it is going to interfere with the carrying on of his business, and if he has to invest \$25,000, or \$150,000, or \$500,000 to equip a plant that will be of no use to him after this war is over, we do not want him to lose that, but we do want the incomes and the profits taxed to help pay this war in preference to having men and women go hungry.

This organization stands for those principles. That is all I have to say.

Mr. RAINEY. We will now hear Mr. Star.

• STATEMENT OF MR. WESTERN STAR, FARMER, BALTIMORE, MD.

Mr. RAINEY. State your full name, residence, and occupation, Mr. Star.

Mr. STAR. My name is Western Star, and I am a farmer; Baltimore, Md.

My understanding is that this committee is sitting for the purpose of finding ways of getting revenue.

Mr. RAINEY. You are right. We have not found very many, however, yet.

Mr. STAR. If I could show you a way whereby you could get \$4,000,000,000 of annually increased revenue, without laying an additional penny of the burden upon production or consumption, I do not know whether this august body would snap at it or not.

Mr. LONGWORTH. We would.

Mr. STAR. But I have been told by the governors of more than one State that if I could show them how to raise a million more they would be glad to do it.

I want to state in a preliminary way one or two very simple fundamentals in order that my thought may be made clear and the philosophy on which I present my case may be understood.

As was told to you this morning by Mr. White, we have the highest of authority and conservative opinion for the belief that there are only two possible sources of public revenue: One is by taxing land and, as Hamilton stated, the other was "taxing commerce." I translate the word "commerce" into the word "labor," and those are the two only possible sources from which public revenue can be derived—land, which is opportunity; and labor, which is energy expended upon opportunity.

I see no objection in a time of emergency and stress to taxing both and getting all possible revenue from both. But our course in the past has been to take it almost entirely from the products of labor. Our taxation system, our entire revenue system, has been adapted for the protection of the monopolistic landowner, for the man who controls opportunity, without laying the burden at all upon him and taking practically all of our revenues from the products of labor.

There are two policies always at work in every nation: One is public policy and the other is private policy; and those two policies are in constant conflict with each other; and public policy seems to have been a kind of a composite photograph of conflicting private policy, and private policy, which seemed to be predominant, had its way.

You want some concrete propositions, and this morning my friend and colleague, Mr. White, was asked if he had any definite, concrete suggestions to make. You have had two bills pending before Congress, and whether they have been presented before this committee except in one instance, I am not prepared to say. There was one of them presented the other day. Either one of those will suit me, or a modification of either one of them will suit me. The claim is made that the Constitution, which requires that direct taxes should be laid in proportion to the population in the several States, is completely met by either one of those bills, because the values of land make naked opportunity in this country, and in all countries, a direct reflection of

the pressure of population, a direct reflection of the numerical population of the districts where the land exists. The land which we are holding out of use is opportunity. We want that opportunity brought into production. The highest test of the civilization of any country is its capacity to produce, and we, following older examples, have simply suppressed production; we have premiumized lack of production by penalizing production. There can be no production without access to opportunity. We propose to open opportunity.

The total annual production of wealth in the Republic to-day, the net increment of all annual production in the country has been estimated all the way from twenty-five to forty billion dollars a year. One-half of that production goes to-day into the hands of the man who collects the rent, because, roughly speaking, while it may differ and vary in different sections of the country, the value of the improvements upon land are not equal to the value of the land. The improvements in New York City do not begin to compare in value with the land on which they stand, and it does not make any difference whether it is a city or a vacant area owned by a railroad company along a land grant, or a strip of land reaching from New York City to Chicago, the man who has the right to control the use of that land has the right to determine the terms and conditions upon which the man who lives upon the land is there. I, as a farmer, when a man comes to me and asks me for a job, say, "Yes; I can give you a job; I can put you to work." And the first question is, "What are you going to pay me?" I have been in the habit of paying one-third of what he could earn. Of course, I say, "I will pay you the going wages of the community," which, up to four or five years ago, in my section, were \$25 a month, and I would not have a man on the place who could not earn \$60 for me, out of which I could pay him the \$25. I am operating a farm that is altogether too big for any one man to operate. Five hundred acres is more than any one man can cultivate. But not a man could work on that land and cultivate it except on my terms; and when I rented out my land and said, "You pay me one-half of all you can produce before you begin to enjoy the other half," I was simply enjoying and taking to my own profit the landlord's rights. And that applies to city lots, or strips of rights of way as well as to farm areas.

You, of course, are well aware that more than half the actual operating farmers and cultivators of the soil are tenant farmers or hired men—men who have not and can not get opportunity for themselves, under their own control, and they have to give away more than half of what they produce in order to enjoy the residuum of what is left.

Out of this annual increment of wealth checks in the form of rent are put into the pockets of the landlord. I do not propose now at this time to say we are going to take it all. But we will take such a proportion of it as can be an initiation of the program, and I want to say to you gentlemen that it is my confident and candid belief that there will not be one single penny of the enormous mass of the war debts that are being piled up in the world to-day ever paid unless you pay it out of this fund that I am speaking of.

This will result in satisfying every complaint that has been made before this body from the time it began to sit to this session. I have sat here day after day, and I have heard the automobile men and the

moving-picture men, and the insurance men, and the dry goods jobbers, and the coal men, and the representatives of almost every class of industry that is represented in our Republic come here and say, "We are willing for you to do just what you are doing now, but we can not stand any more."

The suggestion I make to you will relieve all those men, because they are operating industries in production. We will not lay a penny of tax on production; we take it off of production in so far as we establish this system. That is what we want to do, and we show you where that lies and where you can get it. The machinery to do that is already in existence; you do not have to change more than two letters in the law.

There are assessors in every county, in almost every town. Every piece of real estate in the country that is privately owned is reported, and it is in the books, and all you have got to do is to go there and accept it. You can make out of every collector in the United States a deputy Federal officer to report to the Secretary of the Treasury. We know what the rent is. The question of determination of what is the value of the piece of property is determined automatically by what anybody would be willing to pay for the right to use it for a period of time. We do not want anything that the man produces with his own labor. We simply want what the monopolist takes out of what he produces and puts in his pocket.

When the chairman of this committee raised on the floor of the House a year ago and said that they had "raked the country with a fine-toothed comb," or substantially that, to find possible sources of additional revenue, I smiled. He simply stepped over great big fat sheaves of bursting grain to pick up three or four rotten straw on the other side.

Here is this fund, which is the natural fund, created by the community, and, I believe, belonging to the community, and instead of taking the part of it that you need, you are going into the pockets of the washerwoman and the street car motorman and conductor and making him cough up out of his meager earnings.

I think that expresses my position. I think you get my point of view.

Mr. OLDFIELD. What would be the rate of levy of the tax?

Mr. STAR. Whatever you propose. If you want 2 per cent, or 10 per cent, say what you want, and take it.

Mr. OLDFIELD. What will 1 per cent yield?

Mr. STAR. One per cent will produce \$400,000,000.

Mr. OLDFIELD. And 10 per cent will produce \$4,000,000,000.

Mr. STAR. Yes. One point this committee wants to remember. That there is an identity between the political, the economic, and the ethical phases of this whole proposition, and no proposition can be politically sound that is morally wrong; no position can be economically true that is ethically false. I just want that understood, because that has got to be the key to the whole solution of this problem.

Mr. RAINEY. We will now hear Mr. Gores.

**STATEMENT OF MR. GUIDO GORES, ATTORNEY REPRESENTING  
STARR PIANO CO., CINCINNATI, OHIO.**

Mr. RAINEY. State your full name, whom you represent, and address.

Mr. GORES. My name is Guido Gores; I am attorney representing the Starr Piano Co., of Richmond, Ind.; address, Cincinnati, Ohio.

I want to take but a moment to speak regarding section 600 of the war excise tax act, which imposes 3 per cent tax upon sales of articles by manufacturers. I realize the time is very short, and I will come to the point immediately.

There is no idea of protesting against taxation, and the point is raised at this time rather in anticipation of increased taxes under this head, rather than the idea of an abolishment.

I wish to point out merely on behalf of the manufacturers who not only manufacture but in the course of their enterprise follow out their activities by becoming retailers, that there is somewhat of a very unjust effect in this tax as it is here put forth. I speak purely from the point of view of the manufacturer who is also a retailer. This tax he must pay upon his product as he sells it. The manufacturer who is enterprising enough to create retail outlets, as, for instance, the particular firm which I represent, has established some 30, or 40, or 50 retail stores and is compelled to pay a tax on the retail price of its goods, whereas its competitors, such as have not seen fit to go into the retail sale business, pay a tax upon merely the wholesale price. That is, tersely stated, the point I want to bring up—that there is no objection to taxation at all; it is merely the desire to call attention of the committee that a few words might create more of an equality.

I will give a concrete example: I represent a firm that has lately gone into the phonograph business and into the phonograph record business.

Mr. MOORE. Is that the Starr Piano Co.?

Mr. GORES. Yes, the Starr Piano Co. If it were merely speaking for this one company, I would not presume to take your time. But there must be others in the same situation. But, we will state our example: The Victor Co. sells all of its products to wholesalers and it is only taxed on the wholesale price; and the American Graphophone Co., I believe, sells only to the graphophone companies and pays tax on the wholesale price. This is an industry which has practically grown up to be in the hands of but a few, and of late years there are some of the minor manufacturers who are fighting their way through, and they are coming forth with their factories and making phonographs and records. It has been a task of tremendous expense, and the capital has gone in, and now, as we are about getting into the position of selling our records, and they are becoming known on the market and other phonograph manufacturers' products are becoming known on the market, the Government is coming in and levying a tax, and these manufacturers, in order to create outlets for their products, have been compelled to go into the retail business, because the public did not know these phonographs and records, and their producers have to go out and create their own retail stores. We find at this moment, after we have spent all this money and have a very hard road to travel, that we are to be placed under this 3 per cent

tax on a basis that is just approximately 100 per cent more than the fellows who can very much better stand it have to pay; for instance, the Victor Co., which represents perhaps the most conspicuous example of the ones enjoying the wholesale figure.

Mr. MOORE. The Victor Co. does not retail?

Mr. GORES. The Victor Co. does not retail. I am not attacking the Victor Co.

Mr. MOORE. Are you really complaining of double taxation in a case like this?

Mr. GORES. Not at all. This is really intended to be a tax on manufacturers and not a tax upon retailers. The law expressly exempted retailers from taxation, and it has created a flat tax of 1½ per cent on the jobbers. It was meant to be particularly a manufacturers' tax. Where we complain is that as manufacturers we have got to pay about double the rate because of the fact that in order to find an outlet for their products they have found it important to go into the retail business.

Mr. MOORE. Is your point that where a manufacturer retails his own goods, paying all his taxes as a manufacturer—excess profits, etc.—that he should be relieved because he retails, of the 3 per cent tax?

Mr. GORES. Not at all. He should be allowed to pay the 3 per cent tax on the wholesale price rather than on a retail price. Take, for example, a phonograph that the Victor Co. sends out to the public at \$500. It sells to its jobber at \$250, and the Victor Co. pays 3 per cent on \$250. We make a phonograph which we sell at \$500 to the public. We have got to pay a retail tax on \$500, whereas the Victor Co. gives to the public an instrument of similar character and pays 3 per cent on \$250.

Mr. STERLING. Can you not avoid that by simply charging up to the stores what would be the manufacturers' taxes?

Mr. GORES. Precisely. But under the law we are not allowed to.

Mr. STERLING. The law is plain. It literally says "at the price at which they are sold."

Mr. GORES. That brings me to a point that I fought out here last January, when the position of the Revenue Department was that if these concerns were separately incorporated, if all these retail stores operated under separate charter, that in that case, naturally the sale being to a separate legal entity, that, therefore, we could only be taxed on the basis of our sale from the manufacturer to our retail store, which was the wholesale price.

Mr. STERLING. It would be easy to make them separate entities, would it not?

Mr. GORES. I am going to answer that in just a moment. The regulations of the Treasury, under date of May, 1918, have gone so far as to say that wherever they find that a manufacturer creates a corporation merely to evade this tax in the manner you have just obviously outlined, the department will not accept that. They will say that the separate corporation is simply the agent of the manufacturer, and therefore the 3 per cent must attach on the retail sale price.

Mr. STERLING. We have fought all that out. We have been at it since the law was passed. We have no effect. I think their positions have been logically sound, and our positions have been logically sound. We have no complaint. Their ruling is the law.

But we feel that just a few words inserted in the new bill will probably meet that exigency.

Mr. DIXON. What is the amendment you suggest?

Mr. GORES. My amendment would be precisely this—the gentleman already foreshadowed it:

That where the manufacturer is also a retailer, that this tax of 3 per cent be computed—where he makes his own sales as a retailer—on the basis at which he wholesales his product to the trade.

There is not any one of these manufacturers who retails who does not also sell to the jobbers and to retail dealers. In our case, we do. There is nothing to be concealed; there is no administrative difficulty. The auditors can go to the books and find the legitimate price at which it is sold to the trade, and all we ask is that the tax be computed on the basis to our own retail departments that we sell to the jobbers and to the other retailers, so that we stand on something like an equal footing with the other fellows who do not see fit to go into the retail business.

Mr. HAWLEY. Suppose you make a piano, the wholesale price of which is \$500, and your competitor makes a piano the wholesale price of which is \$500. You retail your piano through your own stores at \$750. Do you think you ought to be relieved of paying a tax on the excess of \$250, and pay the same tax that the other manufacturer does on the \$500 price to the retail trade?

Mr. GORES. That states the proposition nakedly.

Mr. STERLING. Are there many different places of business that meet this same difficulty, or is it confined largely to the music interests?

Mr. GORES. I should say that it has been the fashion to have subsidiary corporations in great measure. I think practically nowadays we have just gone through a period that when a man who had an idea in business started a company, and we have had the proposition up to subdivide our property into corporations. But it is my belief that there are a great many who finds it very desirable to hold their business under one charter, and I suppose we would prefer to pay the full tax rather than create separate corporations.

Mr. STERLING. There are a great many manufacturers of candies that retail their goods, and I think very properly there should be a tax put on candy. As they have construed the law, the candy manufacturer would have to pay the tax on what he sells at retail?

Mr. GORES. Yes.

Mr. STERLING. At the retail price?

Mr. GORES. Yes. That is perfectly all right. If the manufacturer who also retails could not show any basis of a wholesaling traffic, why, then it would not be applicable.

Mr. STERLING. Well, he could do this: Let him deduct from his retail price what he customarily allows the retailer before you compute the tax?

Mr. GORES. That would unquestionably be a simple process.

Mr. STERLING. But you mean to say that in your business the retailer gets one-half of the retail price?

Mr. GORES. I believe this—I am not stating anything that is not generally known—that the prices on phonographs to dealers by the Victor Co., and I think our company and practically all of the companies, is something like what they call 40 and 10, a discount of a cent

and 10 per cent from the list price, which it goes to the public—that is the price on which the retailer operates.

Mr. DIXON. The retailer is not allowed to rebate any on that commission or profit to purchasers?

Mr. GORES. There has been desperate effort to prevent it.

Mr. OLDFIELD. Have you succeeded in preventing that?

Mr. GORES. We might say we are such very small potatoes in the game—I can not state for the Victor—but simply speaking for one independent concern, there has been very little difficulty in upholding the phonograph prices. It seems that the public has gotten used to Victor prices, and if they buy the other article they will buy it at about the same price.

Mr. DIXON. They take the agency away in case they find the dealer violates the agreement?

Mr. GORES. I think that price proposition was settled in the Supreme Court not so long ago, when the decision was rendered that after the manufacturer made the sale and had no further prospects of royalty or profits—that was the Macy case—and it was held that the price control was “busted,” and so it is purely a matter of expediency as the dealers see their own interests.

Mr. OLDFIELD. Do you know whether they still have those contracts and try to enforce them on the retailers?

Mr. GORES. I really do not know, but it would seem to me the obvious answer would be that they can not attempt it after that decision.

Mr. OLDFIELD. I know they can not, legally.

Mr. RAINEY. We will now hear Mr. McCall.

**STATEMENT OF MR. GEORGE McCALL, REPRESENTING THE WESTMORELAND COAL CO., PHILADELPHIA, PA.**

Mr. McCALL. I just want to say a few words in regard to the method of assessment of the excess-profits tax, and chiefly with regard to the method by which you deduct the cost of improvements or renewals, before you begin to compute the income. That has been the great source of dispute with all the tax collectors that come around: Whether something that you do to improve your property is an improvement or is merely a renewal.

In anticipation that the excess-profits tax, when you do come to compute incomes, is going to be a great deal higher this year than last year and not leave so much money over to do anything with, I just want to call the attention of you gentlemen to the fact that the progress in the coal business, the improvement in the coal business—in the mining part of it—is almost entirely for two purposes: One is to conserve the number of men and make the number of men that you have there do as much work as possible, and the other is a matter of safety.

The only way in which the coal miner will possibly have any money to spend on improvements and extensions of this character is going to be out of earnings, because it is out of the question to raise any fresh money, and I merely wanted to draw to your attention the importance of allowing a deduction for improvements and betterments before you begin to figure income on which you have to pay the excess-profits tax.

But we feel that just a few words inserted in the new bill will probably meet that exigency.

Mr. DIXON. What is the amendment you suggest?

Mr. GORES. My amendment would be precisely this—the gentleman already foreshadowed it:

That where the manufacturer is also a retailer, that this tax of 3 per cent be computed—where he makes his own sales as a retailer—on the basis at which he wholesales his product to the trade.

There is not any one of these manufacturers who retails who does not also sell to the jobbers and to retail dealers. In our case, we do. There is nothing to be concealed; there is no administrative difficulty. The auditors can go to the books and find the legitimate price at which it is sold to the trade, and all we ask is that the tax be computed on the basis to our own retail departments that we sell to the jobbers and to the other retailers, so that we stand on something like an equal footing with the other fellows who do not see fit to go into the retail business.

Mr. HAWLEY. Suppose you make a piano, the wholesale price of which is \$500, and your competitor makes a piano the wholesale price of which is \$500. You retail your piano through your own stores at \$750. Do you think you ought to be relieved of paying a tax on the excess of \$250, and pay the same tax that the other manufacturer does on the \$500 price to the retail trade?

Mr. GORES. That states the proposition nakedly.

Mr. STERLING. Are there many different places of business that meet this same difficulty, or is it confined largely to the music interests?

Mr. GORES. I should say that it has been the fashion to have subsidiary corporations in great measure. I think practically nowadays we have just gone through a period that when a man who had an idea in business started a company, and we have had the proposition up to subdivide our property into corporations. But it is my belief that there are a great many who finds it very desirable to hold their business under one charter, and I suppose we would prefer to pay the full tax rather than create separate corporations.

Mr. STERLING. There are a great many manufacturers of candies that retail their goods, and I think very properly there should be a tax put on candy. As they have construed the law, the candy manufacturer would have to pay the tax on what he sells at retail?

Mr. GORES. Yes.

Mr. STERLING. At the retail price?

Mr. GORES. Yes. That is perfectly all right. If the manufacturer who also retails could not show any basis of a wholesaling traffic, why, then it would not be applicable.

Mr. STERLING. Well, he could do this: Let him deduct from his retail price what he customarily allows the retailer before you compute the tax?

Mr. GORES. That would unquestionably be a simple process.

Mr. STERLING. But you mean to say that in your business the retailer gets one-half of the retail price?

Mr. GORES. I believe this—I am not stating anything that is not generally known—that the prices on phonographs to dealers by the Victor Co., and I think our company and practically all of the companies, is something like what they call 40 and 10, a discount of 10

and 10 per cent from the list price, which it goes to the public—that is the price on which the retailer operates.

Mr. DIXON. The retailer is not allowed to rebate any on that commission or profit to purchasers?

Mr. GORES. There has been desperate effort to prevent it.

Mr. OLDFIELD. Have you succeeded in preventing that?

Mr. GORES. We might say we are such very small potatoes in the game—I can not state for the Victor—but simply speaking for one independent concern, there has been very little difficulty in upholding the phonograph prices. It seems that the public has gotten used to Victor prices, and if they buy the other article they will buy it at about the same price.

Mr. DIXON. They take the agency away in case they find the dealer violates the agreement?

Mr. GORES. I think that price proposition was settled in the Supreme Court not so long ago, when the decision was rendered that after the manufacturer made the sale and had no further prospects of royalty or profits—that was the Macy case—and it was held that the price control was “busted,” and so it is purely a matter of expediency as the dealers see their own interests.

Mr. OLDFIELD. Do you know whether they still have those contracts and try to enforce them on the retailers?

Mr. GORES. I really do not know, but it would seem to me the obvious answer would be that they can not attempt it after that decision.

Mr. OLDFIELD. I know they can not, legally.

Mr. RAINEY. We will now hear Mr. McCall.

#### STATEMENT OF MR. GEORGE McCALL, REPRESENTING THE WESTMORELAND COAL CO., PHILADELPHIA, PA.

Mr. McCALL. I just want to say a few words in regard to the method of assessment of the excess-profits tax, and chiefly with regard to the method by which you deduct the cost of improvements or renewals, before you begin to compute the income. That has been the great source of dispute with all the tax collectors that come around: Whether something that you do to improve your property is an improvement or is merely a renewal.

In anticipation that the excess-profits tax, when you do come to compute incomes, is going to be a great deal higher this year than last year and not leave so much money over to do anything with, I just want to call the attention of you gentlemen to the fact that the progress in the coal business, the improvement in the coal business—in the mining part of it—is almost entirely for two purposes: One is to conserve the number of men and make the number of men that you have there do as much work as possible, and the other is a matter of safety.

The only way in which the coal miner will possibly have any money to spend on improvements and extensions of this character is going to be out of earnings, because it is out of the question to raise any fresh money, and I merely wanted to draw to your attention the importance of allowing a deduction for improvements and betterments before you begin to figure income on which you have to pay excess-profits tax.

I will just cite you one instance: We have been, in our company, expending about \$300,000 a year every year in improvements—going over from compressed air to electricity and different things of that sort. We took two mines last year and we spent about \$115,000 to \$120,000 in having the steam plant concentrated at one mine, and at the other mine shutting down the boiler house and connecting it up with a central electrical station. We did away with three turns—since the eight-hour law went into effect—of about five firemen and water tenders corresponding. By the expenditure of that \$110,000, or \$120,000, we were enabled to take 18 men, who would have been working in that boiler house, and put them at something else. In fact, I do not know really how we would have kept the two boiler houses running, or the mines running, if we had not economized in the number of firemen necessary.

The whole question raised is—when you reach a point when you are going to take 40, or 50, or 60 per cent of what people earn in excess—unless you know you are going to have a certain amount of money to spend, you would not dare to go into a matter of that kind, in the first place; and then there is the dispute with the collector whether that is a new thing—and you can not deduct it from your expenses before you begin to figure income—or whether it is replacement of old things and you can deduct it from your income. For instance, we put up a central supply house for the economical conservation of our supplies. It was a small matter; it did not amount to much, but there was a case where the Government officials regarded it as a new thing and would not allow the expense of it to be deducted from our expenses before we began to figure income.

All I wanted to call you gentlemen's attention to was this, that if in the law it could be made pretty explicit about what is deductible, and what is not deductible—for it is one of the most disputed things in settlements with the income-tax collectors; and it is also, I think, proper that the improvement, the better utilization of your men, the better safety of your men, and the use to the best advantage of the men you have got, should be encouraged and not discouraged.

Mr. MOORE. Mr. McCall, would it interrupt you if I ask you one or two questions?

Mr. McCALL. I have said everything I want to say in regard to that.

Mr. MOORE. You said you made provision for the expenditure of \$300,000 for betterments last year?

Mr. McCALL. In that neighborhood; and we did also the year before that.

Mr. MOORE. Did that include the construction of cars?

Mr. McCALL. No; it was putting in new boilers, generally; it was another power plant that we built the year before—we have three mines now connected with one power plant and two mines connected with another power plant. The operations at these various mines are so connected that they only have boilers at the main stations.

Mr. MOORE. This was electrification?

Mr. McCALL. It was electrification; yes.

Mr. MOORE. Your mines are all in western Pennsylvania?

Mr. McCALL. They are all in Westmoreland County.

Mr. MOORE. And you produce bituminous coal?

Mr. McCALL. We produce gas coal. It is used in the gas works; it is used by the steel companies for making gas for melting steel and heating steel; and we sell some to the railways.

Mr. MOORE. That is your specialty?

Mr. McCALL. That is our specialty.

Mr. MOORE. I know you are large producers, and I want to ask you to what extent you use your own cars?

Mr. McCALL. We produce about three and a half to four million tons a year, normally. We have produced more than 4,000,000 tons a year. We have 2,000 individually owned railroad cars, and we own a line of barges—nine barges, I think, we have—that run, in capacity, from 2,800 tons to 2,600 tons, and some 1,600 tons.

Mr. MOORE. Do you supply the New England trade?

Mr. McCALL. We very largely supply the New England trade.

Mr. MOORE. How does your coal get there—in what proportion does it get there by rail and by boat?

Mr. McCALL. Part of it goes by rail; most of it goes by boat; some of it goes from Perth Amboy and some from Greenwich and Philadelphia.

Mr. MOORE. It goes by rail from your mines to the tidewater ports?

Mr. McCALL. Either one of the tidewater points.

Mr. MOORE. Do they ship much out of the Delaware River?

Mr. McCALL. Oh, yes; we shipped 32,000 tons last month out of the Delaware.

Mr. MOORE. A great deal of it goes in your own cars?

Mr. McCALL. Yes; in the 2,000 cars we own; and we try to keep those as much as possible on the mines back and forth between Pittsburgh and Philadelphia.

Mr. MOORE. Are you producing as much this year as you did last year?

Mr. McCALL. Not quite.

Mr. MOORE. You are not up to normal?

Mr. McCALL. No.

Mr. MOORE. What could you say to us about the prospects of having an ample coal supply to meet the conditions?

Mr. McCALL. Mr. Moore, it is the transportation question. We have man power. We are producing now about 11,000 tons a day, and we have man power to carry that on.

Mr. MOORE. Were you here when Mr. Dawson, of West Virginia, spoke?

Mr. McCALL. I heard him.

Mr. MOORE. He made the statement, in answer to one or two of my questions, that they were able to produce the coal, but the difficulty in the matter of distribution was due to transportation.

Mr. McCALL. I think you could say as a fair proposition that most of the mines in the country have a man power of about 75 per cent of their theoretical capacity, and they can produce that coal if they get the cars to put it in.

Mr. MOORE. You use your own cars to a large extent?

Mr. McCALL. We have 2,000 cars, as I have said.

Mr. MOORE. Do you them exclusively?

Mr. McCALL. Oh, no.

Mr. MOORE. You have to depend upon the railroad companies?

Mr. McCALL. We have to depend upon the railroad companies, too.

Mr. MOORE. I want to ask you just what the arrangement is between you and the railroads as regards the use of your cars?

Mr. McCALL. That has been a very discouraging feature of the privately owned cars. We got 6 mills a mile for cars, and we get the same price now for cars that are 50-ton capacity; we get paid by the railroad the same price that we used to get paid for 20-ton cars; we get the same price for cars that now cost \$1,000 that used to cost—I will not say now, because they cost \$2,700, and they have cost \$3,000, but in normal times the cost of these 50-ton steel cars is \$1,000, whereas the old wooden cars, when these rates were put into effect, were 20-ton capacity and the cost about \$400. We have never gotten an advance in rate.

Mr. MOORE. This helps in the matter of revenue, but it is very important in its bearing on the success of our industries?

Mr. McCALL. Yes.

Mr. MOORE. And I was very anxious to get Mr. Dawson's statement, and I would like to get something from you, if you will bear with me for a minute, and the committee will. Your price for coal has been fixed, has it not?

Mr. McCALL. Oh, yes. We sell all our coal under Government regulations, except two or three old contracts that are much lower.

Mr. MOORE. That does not make you very cheerful as to your own prospects; is that the idea?

Mr. McCALL. Which?

Mr. MOORE. The fact that the Government has fixed your price.

Mr. McCALL. I tell you what it is, Mr. Moore, there is no particular kick coming on the fixed price if we could get cars to continue our production. But, for instance, you take February and March. The normal movement last year of our cars for February and March was 850 miles a month per car; last February and March it was 352 miles in one month, and 325 miles in March. That was the lowest month we had. The railroads were just simply down and out. Our cars moved not much over one-third of what they had moved in the same month of the two years previous.

Mr. MOORE. Would you mind telling what the relation is between you and the railroads as to compensation for your cars?

Mr. McCALL. We have no relation except they give us 6 mills a mile.

Mr. MOORE. Six mills a ton-mile?

Mr. McCALL. No; 6 mills a mile.

Mr. MOORE. What change has been made since the railroad rates went up?

Mr. McCALL. There has not been been any change in 20 years; they pay the same old rate. We really give them the cars for nothing.

Mr. MOORE. Let us get that right, in fairness to you and in fairness to the Railroad Administration. You got for a small car, a 20-ton car—

Mr. McCALL (interposing). They were 40,000 ton cars, it was 20 tons really.

Mr. MOORE. You got six-tenths?

Mr. McCALL. Just the same as we do now.

Mr. MOORE. What do you get for the larger cars?

Mr. McCALL. Just the same.

Mr. MOORE. What would that car carry?

Mr. McCALL. It would carry 50 tons and cost over twice as much.

Mr. MOORE. The railroad rates have been going up—freight rates and passenger rates.

Mr. McCALL. Yes.

Mr. MOORE. We have been making appropriations to aid the railroads. They have been giving you no consideration, is that the point?

Mr. McCALL. Not the slightest. In fact, the private car owner has been looked upon with suspicion. Our company would have had instead of 2,000 cars, 4,000 cars in the field to-day if we had had decent treatment, but we were not paid enough to keep the cars in repair, let alone get any return on the money put into them.

Mr. MOORE. If you felt safe enough, from a business point of view, to make an investment, putting 2,000 more cars in the field, to what extent would that relieve the coal shortage next winter?

Mr. McCALL. You could not really go and buy 2,000 cars now, I believe. The price of cars is so terrific that a car normally worth \$1,000 is to-day worth \$2,500 or \$2,600.

Mr. MOORE. Do you mean to say it would not pay you as a business venture to purchase any more cars?

Mr. McCALL. Oh, no.

Mr. MOORE. Has the Government now operating the railroads sufficient cars to enable you to work to your full capacity?

Mr. McCALL. I could not tell whether it is the cars or movement. Cars are pretty good now, I will say that. But last winter it was awful.

Mr. MOORE. You did not get service to meet your capacity last winter?

Mr. McCALL. Oh, no; we could not.

Mr. MOORE. Now that the winter is gone and we are in fair weather, have you been working to capacity?

Mr. McCALL. We have been working pretty fairly up to our man capacity. We generally load about all the cars every day that we get. I think it is very seldom we have a surplus over at night.

Mr. GREEN. Speaking now of the cost of mining, do the operators file anywhere a statement showing the cost?

Mr. McCALL. Why, the most elaborate cost schedules go down to the Federal Trade; we send them down every month; our costs down to a cent.

Mr. GREEN. But those are not made public?

Mr. McCALL. Oh, no.

Mr. STERLING. They are open to inspection?

Mr. McCALL. Yes; I imagine so. They are all there.

Mr. GREEN. No; they are not open to inspection.

Mr. McCALL. Well, they are all there.

Mr. GREEN. In fact, when I went to Dr. Garfield to inquire about the cost of coal in my own State of Iowa, I found that while he had these elaborate statements from the Federal Trade Commission, they were not treating it as public.

Mr. McCALL. I know nothing about that part of it, but I know we send them down every month.

Mr. GREEN. I don't myself see any objection to that being subject to public inspection; do you know of any?

Mr. McCALL. I don't suppose these different people want everybody to know just what the mining costs. But the people are getting used to pretty searching questions these days.

Mr. GREEN. A public-service corporation like a railroad, we have long ago agreed their costs should be made public.

Mr. McCALL. They have about recovered from their attack of biliousness, although they had a hard time giving up that information in the beginning. I want to make one statement in regard to 60 per cent of the cost of coal being labor. I don't know what you call labor, but the officials and all have to work. I think about 90 per cent of the cost is labor, if you include the clerks and the officials that have to be there to get the coal on the market. I don't know why you mark off the band of labor a man that doesn't go out with a pick and shovel. He has to be there, and work, too.

Mr. STERLING. They are only paying about 3½ cents a ton royalty?

Mr. McCALL. Oh, no; 10 cents a ton is the lowest I ever knew in Virginia, and it has run to 25 cents.

Mr. STERLING. I am speaking of Illinois.

Mr. McCALL. I don't know anything about that. But 10 cents is the lowest I ever heard of in Virginia, and West Virginia, and I have known it as high as 25 cents around Pittsburgh, and that is as high as I have known.

**STATEMENT BY HENRY L. DAUGHERTY, REPRESENTING  
THE HENRY L. DAUGHERTY CO., OF NEW YORK CITY.**

Mr. DAUGHERTY. Mr. Chairman, and gentlemen of the committee, I represent the Henry L. Daugherty Co., of New York, who are operators of public utility, natural gas, and oil properties. I wanted particularly to call the attention of the committee to the situation regarding natural gas and the effect of taxation on the supply of natural gas. It is not generally recognized the extent in some parts of the country—natural gas is so little known that many of us do not know to what extent it flows, and what part it plays in the domestic and industrial affairs of the balance of the country.

Of the cities, villages, and communities supplied with gas in the United States, 55 per cent, or over 50 per cent—I don't want to attempt to be too exact—are supplied with natural gas.

This natural gas is secured by drilling after the fields have been located by the oil drillers. In other words, nobody ever does what we term wildcatting for natural gas, but we depend on the wildcatting of the oil companies to locate our natural gas for us.

Our particular concern is the control of natural gas; the principal operations are in New York, Canada, Ohio, and the midcontinental field, supplying probably 300,000 customers. Since the passage of the last revenue bill there has been a noticeable falling off in the exploration for oil, the tendency to wildcat, as we term it, in oil operation. Prior to the passage of the last revenue bill there was going on what might be termed a gaining process all over the country to find oil. Since the revenue bill was passed there has been a gradual falling off in wildcatting operations, and where it is carried on at all, it is only in the very promising districts. The oil men are not yet conscious of the situation the present revenue bill leaves them in; and because of this, and because they do not realize what the situation will be, they are abandoning, in some cases, operations that have been actually started.

The tendency is for natural gas to be in demand more and more; the excessive demand for fuel has made itself felt in the demand for natural gas; in the past winter, in many cases, there was a tax on the natural gas mains that it was hard to supply, due in large measure to the lack of coal and fuel in certain localities.

Mr. GREEN. I might say, Mr. Daugherty, that some of the oil operators, or explorers, have realized this condition, of which you speak, because we have had some of them here to present their case, and they want to be set aside in a separate classification for the purpose of excess-profits tax, so that it will not be so hard on them. We have heard several parties on that line.

Mr. DAUGHERTY. Well; I don't want to take up the time of the committee with old things. I didn't know anybody had taken up the natural gas situation with the committee.

Mr. GREEN. No; not the natural gas situation, but the oil situation.

Mr. DAUGHERTY. We are dependent, as I said, on the oil man to explore the field. Special consideration should be given to the natural gas situation, because we feel that more and more users of fuel will call on natural gas for their supply.

I am an oil man, and am generally familiar with what the oil men are doing. In the first place, the natural gas is confined to a very few people in this country, and so far as I know, they have not felt any particular interest in the revenue bill, aside from what an ordinary business man would feel, and they have made no special representations to the committee; and I feel that you men would like to know what the effect would be of this taxation. I am especially anxious that there should be no discouragement of the wild-cattling operations. I am not here with any solution as to how you are going to prevent discouraging wild-cattling operations, but that is the thing that I am especially concerned about.

Mr. LONGWORTH. Are you a member of the company that supplies Cincinnati?

Mr. DAUGHERTY. No; I am not, but I know something about it.

Mr. LONGWORTH. They had a very bad season there this past year, because of the lack of pressure; was there any reason for that?

Mr. DAUGHERTY. Yes; if you take out too much gas out of the mains, the consumer is always complaining of poor pressure. That is another way of saying that there is an inadequate supply of gas.

Mr. LONGWORTH. The supply is not exhausted there, is it?

Mr. DAUGHERTY. Last winter, in many cases, where the people had depended on coal for fuel, and couldn't get it, they made inordinate demands on us. We couldn't curtail it to them, because they could use it if anybody had gas; they had the connections, and they could use the gas if anybody had it. It was very critical last year, and it will become very critical next year, because our consumers have the means to draw on us, and if they have the power to draw it they will draw it when they need it. And for that reason we think we will have trouble next year, with the gas supply. You will always have trouble in houses where there is a gas connection and where there is a pilot light on the connection, when the pressure becomes low the pilot light will go out, and then when the pressure comes up the gas will escape and in heaters located in cellars and closed rooms it will form a mixture of gases that may cause very serious trouble.

Mr. LONGWORTH. The situation was serious last winter in Cincinnati.

Mr. DAUGHERTY. It was not as serious there as in some places in the country.

Mr. LONGWORTH. I understood it was as bad there as any place.

Mr. DAUGHERTY. No; it was not.

Mr. LONGWORTH. The cold weather itself does not have any effect on the gas pressure, does it?

Mr. DAUGHERTY. No; you can transmit a little more gas in cold weather than you can in warm weather.

The wildcatting operations in oil have, as I have said, fallen off at a very rapid rate. Heretofore, the producing of oil was in this way, describing it roughly; the larger companies, when they had to draw on their stock, when they were not producing as much as they were consuming, they would raise the price, and kept on raising it, until it caused a great demand for oil, and then the wildcatters would explore and produce oil in large quantities, and then they would decrease the price of oil as the production increased.

Now, in the wildcatting operations, one well in a hundred is a success; the other 99 are failures. The wildcatter has to take his loss if he secures no oil. Heretofore if he got oil he could take 100 per cent profit. As the law now stands, he will always have to pay an excess-profits tax, because in a successful oil operation, it is practically all profits. He may bore ninety-nine wells, at a cost of \$2,500,000, and that will be his loss if he does not have a success; and then he may make one success, and produce oil, and perhaps develop a field that is worth \$2,500,000 or more. His success in that one well will represent practically all profits, so far as that one well is concerned, and therefore becomes an income on which he must pay an excess-profits tax and pay practically all of it over in taxes.

Mr. LONGWORTH. Don't you think if we gave that class of men a larger exemption, it would stimulate production?

Mr. DAUGHERTY. No, I do not. If you want to encourage wildcatting, you must put them in a special class by themselves.

Mr. GREEN. You will find in the hearings a statement made by Judge Shea, and others, and Judge-Shea also promised to furnish the committee a concrete plan.

Mr. DAUGHERTY. I don't know whether that is in the record, or not. So far as I know, no man has tried to view this from the standpoint of natural gas production.

Mr. LONGWORTH. I wish you could make us a concrete suggestion, because I understand there is a pretty serious situation with reference to the prospect for natural gas. I didn't know you depended on the production of oil for it.

Mr. DAUGHERTY. Yes, sir; I am somewhat embarrassed because I have already taken too much time, and I don't want to trespass on anybody else's time.

Mr. RAINEY (presiding). You are not trespassing on anybody else's time; when the committee asks you questions you are on the committee's time.

Mr. DAUGHERTY. I can see no solution of it, except putting it in a classification by itself. As you can see, by working out an example, a man puts in \$25,000 and gets a \$3,000,000 well. He may have had 99 failures prior to that, but when he gets his \$3,000,000 well, he has to pay practically all of it in taxes. Take it in gold mining, economists say that more money is lost than is made in gold mining. It is the

success of the one man that encourages everybody to try gold mining. Out in Denver, Colo., where I used to live, practically everybody is grubstaking some man, who is up in the mountains, trying to find gold. If he finds his mine, the Government will say to him, "You will have to pay practically all of that over in taxes."

Mr. LONGWORTH. It is invariable that when they have a profit it is excess profit.

Mr. DAUGHERTY. It is in the nature of the business, that if a man makes a success at all, and makes a profit, it is an excess profit, in the oil business; it is the natural order of things.

Mr. LONGWORTH. We need all the oil we can get.

Mr. DAUGHERTY. Yes; it is away short. I might call your attention to another thing that might be of value to you. It is a serious thing with those of us who have to seek capital when you provide that borrowed capital shall not be regarded as capital. I am an oil man. I think all the capital ought to be used for producing new industry; we ought not to call in any of the money, but we ought to encourage the use of all the capital possible.

Mr. LONGWORTH. Speaking of the general situation, what do you think of a shortage of gasoline?

Mr. DAUGHERTY. I don't think there is any danger of a shortage of gasoline. Last winter there was an accumulation of gasoline. We take a crude product out of the field; the crude oils recently have been high in gasoline content. We distill the crude product we take from the field into the different commodities it will produce, and the crude oils have been recently, as I said, high in gasoline content.

Another feature of your revenue bill that makes me tremble is the talk of a heavy tax on gasoline. Whenever we take out the product out of the ground we will have to make it up into all the distillations we can in order to make the largest amount of profits. Just now we are short on fuel oils. In the spring of the year we are usually long on gasoline, and in the fall we are shorter on gasoline—not always short, but shorter. I look for a continuance of a heavy production of gasoline from now on.

Mr. LONGWORTH. That is encouraging.

Mr. DAUGHERTY. It won't be gasoline we will be short on, in my judgment; it will be fuel oil.

Mr. GREEN. Then you think natural gas should be in a classification by itself; and then would you have the rates lower, or would you have some system whereby they would have a larger allowance for capitalization?

Mr. DAUGHERTY. I know of no way to do it, except to make a larger allowance for capitalization. I would not advocate putting all branches of the oil business in a separate classification, except as you men might think it wise on account of the hazard involved.

Mr. GREEN. That is the thing I had in mind, the hazard.

Mr. DAUGHERTY. Let me put it this way. Some branches are safe, and some unsafe. The piping of oil is not considered a highly hazardous business, but the production of oil is a business by itself. I see no way to bring the wildcatting in oil production back to its normal condition without special inducement; and we need abnormal wildcatting.

There are two or three things that I did not cover, which I would like to present to the committee; and, if I may, I would like to file a written memorandum on them.

Mr. RAINY (presiding). Without objection, you may do so.

**STATEMENT OF MR. THEODORE G. ROBINSON, MANUFACTURER OF PEARL BUTTONS, AND PRESIDENT OF THE OCEAN PEARL BUTTON MANUFACTURERS' ASSOCIATION.**

Mr. ROBINSON. Mr. Chairman and gentlemen, I represent two organizations composed of manufacturers of small buttons made from ocean pearl shell, the Ocean Pearl Button Manufacturers' Association and the Mother of Pearl Industry Association, together with 15 other manufacturers. We appear in answer to the announcement of your committee that you will give careful consideration to all suggestions with reference to sources of revenue.

Before I start on my direct subject, may I say a few words about the work of the United States Tariff Commission? During the past year the commission has made an investigation of the button industry. Its investigation has been completed, and their report has just come from the press. I understand it is not to be released until next Monday, July 8, but the commission has allowed copies to be supplied to the members of this committee to-day for confidential use, in view of our appearance at this time. This work contains the latest data as well as the most comprehensive treatment on buttons of which I know. I think we are particularly fortunate to have it now, so that you can easily supplement any facts we draw to your attention and verify them in an authoritative way.

We do not appear to argue for a tariff on buttons in the usual sense with the proper protection of our industry uppermost in our mind. For such protection we firmly adhere to the belief that our industry requires a specific or combination specific and ad valorem duty. But now we propose for your consideration a large increase in the present ad valorem rate of import duty for the purpose of securing a large increase in revenue from the imports of pearl buttons as well, possibly, as larger tax returns from the industry in this country. We believe that such action will not lessen imports below what they would be otherwise.

Although the manufacture of pearl buttons is of comparatively recent development in Japan, she started under the old tariff of 1½ cents per line and 15 per cent ad valorem to export buttons to this country and under the new tariff her exports to America have increased tremendously. (In addition to the recorded exports from Japan under the old duty, it is well known that other Japanese buttons were imported into this country from France, whose exporters found that they could buy Japanese buttons and take care of their United States customers to better advantage than her own manufacturers could furnish them.) In the four years between 1912 and 1916, Japan increased her exports of pearl buttons to this country over 2800 per cent.

During the same time her exports to the rest of the world increased more than three times. One suggestion we wish to emphasize is that there is no indication that Japan has at any time felt the need of competitive struggle for business. Her sales have kept pace with

her power to produce and her capacity for production has been increasing at a prodigious rate. We therefore conclude that Japanese production would absorb a much higher import tax, no matter how levied, before it would reduce its exports to this country.

We are thoroughly of the opinion that an increase in the rate of ad valorem duty on pearl buttons will increase the revenue derived from their import duties practically in direct proportion to the increase in the rate; that is, if the rate of duty is doubled the amount of revenue will be practically doubled, and this will be true even in the face of much more extensive increase than thus suggested.

Mr. STERLING. Are you reading now from the Tariff Commission's Report?

Mr. ROBINSON. No, sir; this is a production of our own.

Mr. STERLING. Are you in harmony with them?

Mr. ROBINSON. I have not consulted with them. We have had our own industry uppermost in mind, and we have investigated the matter from our viewpoint, and we believe it would be preferable to have a combination of a specific and ad valorem duty; that is, specifically for the purpose of raising revenue.

If the rate of duty is doubled, the amount of revenue will be practically doubled, and this will be true even in the face of a much more extensive increase than thus suggested.

In other words, we do not believe that a change in ad valorem duty will have any appreciable effect on the amount of imports of pearl buttons.

We are of the opinion, further, that such an increase in the ad valorem duty may modify the character and average value of pearl button imports to such an extent as to allow domestic manufacturers to produce buttons more naturally and therefore to better advantage in this manner larger aggregate profits will accrue properly from the industry in this country on which higher income taxes will of course be paid to the Government. By making the production more naturally, I mean that manufacturers would be under less obligation to take unusual measures to increase the percentage of high value buttons above what would normally result from efficient manufacture. Such measures are necessary at the present time owing to the disastrous oriental competition, which is progressively intense the cheaper the buttons imported.

Mr. MOORE. Will you hold up there just a minute? Will you state what the tariff is you propose?

Mr. ROBINSON. We are advocating a combination of specific and ad valorem duty. The specific duty is 45 per cent on all buttons of 26 lines or over. All under that bear an ad valorem rate of 25 per cent.

Mr. MOORE. That is lower than the Payne rate.

Mr. ROBINSON. The Payne rate was a 25 per cent rate, together with a 15 per cent ad valorem.

Mr. MOORE. It is higher than the Underwood rate!

Mr. ROBINSON. The two are hardly comparable. The duty tends to change the character of the buttons coming in, as entirely different from the ad valorem rate.

Mr. MOORE. That is the reason I stopped you there. I think that needs an explanation.

Mr. ROBINSON. I think that will probably be cleared up if you allow me to proceed further.

Mr. FAIRCHILD. Are you able, too, to make a statement of the cost of labor?

Mr. ROBINSON. Yes, sir.

Mr. MOORE. You stated that the Japanese labor had increased?

Mr. ROBINSON. Yes, sir.

Mr. MOORE. And you are going on to give the rate.

Mr. ROBINSON. As I understand it, you want to understand how the income or imports under the prior or ad valorem rates of duty is different, and why they can't be properly compared.

Mr. MOORE. I wanted to know what the difference was as between the two laws.

Mr. GREEN. We understand perfectly the two theories, but I wanted to know, at least, and I think Mr. Moore did, in working out the Underwood law and the Payne law, which one worked the more advantageously to the manufacturers in this country?

Mr. ROBINSON. The Payne law, without a question. It is a duty which is a combination of specific and ad valorem, and it more definitely equalizes the labor, as I think will appear.

Mr. MOORE. The imports of pearl buttons to this country has increased considerably?

Mr. ROBINSON. They have increased 2,800 per cent; that is, between 1912 and 1916.

Mr. MOORE. Before you go any further—I don't think this will throw you off your track. Pearls are gathered in this country, are they not?

Mr. ROBINSON. You mean pearl shells?

Mr. MOORE. Pearl shells used for pearl buttons.

Mr. ROBINSON. Some are gathered in this country; the fresh-water pearl shells. Others are gathered in Australia.

Mr. MOORE. We have a heavy demand in this country for buttons now, due to the demand for Army clothes, do we not?

Mr. ROBINSON. Yes, sir.

Mr. MOORE. Are there enough pearl shells in this country to supply the demand?

Mr. ROBINSON. I don't think there is any question about it.

Mr. MOORE. You think the American pearl shells would be sufficient, if there were encouragement of the industry, to meet every demand?

Mr. ROBINSON. I mean to supply the manufacturers of this country. There are two branches of the industry in this country. Those manufacturers we represent are the ocean-pearl button makers. They make a crude button.

Mr. RAINEY (presiding). The more expensive buttons?

Mr. ROBINSON. Yes, sir.

Mr. MOORE. What kind are used for the manufacture of soldiers' clothing?

Mr. ROBINSON. I don't know that there are any specifications.

Mr. MOORE. I understood this class of buttons were used.

Mr. ROBINSON. It may be that they are, by some of the subcontractors; I don't think they are specified by the War Department.

Mr. RAINEY. The sweetwater pearls are disappearing?

Mr. ROBINSON. Oh, no.

Mr. RAINEY. That is true along the Mississippi and Illinois Rivers; I know, because I live out there myself.

Mr. ROBINSON. The source of supply is being changed; the sweet-water beds are found now in different rivers; new beds have been found and the Government is taking very serious steps to conserve the supply.

Mr. MOORE. Where are the buttons manufactured principally in the United States?

Mr. ROBINSON. The pearl buttons are manufactured chiefly in Iowa, and I think in Indiana, one factory.

Mr. RAINEY. They just make the blanks.

Mr. ROBINSON. Possibly. Those western concerns make largely the fresh-water pearl buttons. The eastern concerns are largely ocean pearl button manufacturers.

Mr. STERLING. What proportion of the button supply are fresh-water pearl buttons?

Mr. ROBINSON. In dollars and cents I should say about 60 per cent.

Mr. STERLING. How many men are employed in the business?

Mr. ROBINSON. In the entire business, the fresh-water people estimate about 20,000. And in our business we have no definite figures that I can estimate them on. The labor is higher in our work. In the ocean pearl button work the cost of the material is so much higher that we must conserve the labor in our product; we must get everything out of the material, which means that we must save time and labor. We can't afford to waste labor.

Mr. DIXON. Do you represent the manufacturers?

Mr. ROBINSON. Yes; the ocean-pearl-button manufacturers.

Mr. DIXON. And the raw material for them is all imported?

Mr. ROBINSON. It is all imported; it is all taken out of the ocean.

Mr. STERLING. Is there a duty now on the raw material?

Mr. ROBINSON. No, there is not; there is no duty on raw material.

I think your question will be answered, Mr. Green, somewhat as we go along, in showing the difference between specific and ad valorem rates. If I may go back just a little, by making the production more naturally, I mean, that manufacturers would be under less obligation to take unusual measures to increase the percentage of high-value buttons above what would normally result from efficient manufacture. Such measures are necessary at the present time, owing to the disastrous oriental competition, which is progressively intense, the cheaper the buttons imported. The likelihood of this result will appear without separate discussion in connection with the points we desire to call to your attention affecting the increase of gross import revenue from an increased rate of ad valorem duty.

We took considerable care in the matter we prepared for the United States Tariff Commission to explain the peculiar complexities in the manufacture of pearl buttons. On account of such conditions the percentage of labor costs has no consistent relation to the market value or selling prices of the different grades of pearl buttons. Consequently, an import duty based solely on selling price, such as an ad valorem duty, would not increase in amount with an increase in the percentage of labor costs. As a matter of fact, in the case of pearl buttons, a directly contrary relation is the result; that is, the duty is progressively lower the higher the percentage of labor cost is to market value. Inasmuch as labor cost for the various grades of buttons

varies only within comparatively narrow limits for the same operations, labor cost bears an increasingly higher percentage to selling price as the buttons approach the cheaper end of the range of grades. An ad valorem duty, thus, becomes nominal on the cheapest buttons where the percentage of labor cost to the selling price is highest. The result of this is particularly evident where some cheap pearl buttons made in Japan have been sold in this country carded, material and labor, profit and duty included, for 5 cents per gross, or at a price less than the cost of carding and boxing alone in this country.

As the value of the buttons rises this disproportion of labor costs to selling price gradually becomes reduced, then reverses itself, and if you go high enough the point is reached whereat an ad valorem duty changes in its effect and becomes prohibitive. Thus under an ad valorem duty the anomaly occurs that our labor is progressively underequalized where it needs equalization most—that is, where its percentage to the selling price is highest—and it is progressively more than equalized where it needs equalization least; that is, where its percentage to the selling price is lowest. My point in emphasizing this feature at this time is to show that while an increase in the present rate of ad valorem duty—doubling it, or increasing it to a greater extent—may reduce the point where equalization of labor changes, still the only effect of this would be to lower somewhat the cost per gross of the buttons which can be imported to advantage. Since our experience has been that the range of imports from the Orient has been advancing continuously to include buttons of higher and higher price, and since, so far as we can perceive, Japan has never been called upon to manifest her competitive ability, but her exports have been limited only by her power to produce, it is our firm opinion that while the character of her exports to this country may change to include quantities of cheaper buttons, still there will be no reduction in quantity.

In the matter we prepared for the Tariff Commission American and Japanese labor costs for a number of operations were compared carefully, and their effect in making a quantity of 100 gross of buttons was shown when shell of two different values was used. We took particular pains in preparing the matter we presented to the Tariff Commission to compare carefully the labor cost between the American and Japanese production. There are conditions which operate at all times and unavoidably involve the manufacture of pearl buttons in multiform variations. The chief of these are:

- (1) The manufacturing necessity of making a number of grades of pearl buttons widely varying in market value when one grade is made.
- (2) The practically identical labor cost per gross of making all grades.
- (3) The impracticability of selling the whole fall of seconds and low grades in one class (regarding them as an inconsiderable loss, as is done in many lines) on account of the large proportion and wide difference in quality of these low grades; this makes it necessary to classify them into a number of grades of different values and to modify the prices on first-quality buttons according to the income received from their sales.
- (4) The impossibility of selecting the poor-value buttons prior to investing enough labor expense in them to necessitate finishing them.

A comparison of the manufacture of two lots of buttons made from two different grades of the same species of shell will illustrate graphically the wide variation in results:

Material used in one illustration cost 16 cents per pound and the material in the other illustration cost 45 cents per pound. The cost of the American labor operations figured \$42.45, and the corresponding Japanese operations figured \$9.96. The cost of the 100 gross of buttons made from the 16-cent shell laid down ready for business in the United States with duty paid on those from Japan would be \$38.21 in the case of Japan and \$65.34 in the case of America. From the 45-cent shell the two costs would be \$76.06 in the case of Japan and \$91.44 in the case of America. With the 16-cent shell it would be necessary to increase the duty to 148 per cent to make its cost equivalent to that of the same product in America. With the 45-cent shell it would be necessary only to increase the duty to 74 per cent to equalize it. But it is obvious that no foreign manufacturer would choose to use 45-cent shell when such opportunities are open as lie with the 16-cent shell.

These illustrations show the wide variation possible in resulting pearl-button value from the same labor and also that a very high increase in ad valorem duty would not discourage importation even if it were necessary to import all grades of buttons which it is necessary to make in making a single grade of button. But in fact the latitude is much broader than this indicates, for a foreign manufacturer not only can select the cheapest material from which to make buttons for the United States so that the percentage of labor cost will be highest and the amount of duty lowest but he can also select for export to this country only the cheaper buttons in the range of grades it is necessary to make in making one grade from a given material. Consequently, in many buttons that are sold the value of the material is negligible, and in fact some of our buttons in this country are sold and have been sold for years, due to domestic competitive conditions, at as low a selling price as 20 per cent of the labor alone invested in them. It is our firm opinion that an ad valorem duty will not keep out all imports of such an article as pearl buttons from another country where there is an extreme difference in labor cost until the ad valorem rate approximates the difference in labor cost between the two countries. In the most accurate figures we have been able to obtain, those referred to above, our American labor cost is more than 420 per cent of the Japanese labor cost.

Mr. GREEN. From what you said about the buttons being brought in from Japan, I think the rate might be increased without hurting the consumer; for instance, the cost of the buttons on a shirt would make so little difference on the cost that it would not be noticeable; or on a suit of clothes.

Mr. ROBINSON. The consumer would never know it; he would never know anything about the increase made along the line of our suggestion here. I don't think the consumer would hear anything about it at all.

Mr. GREEN. The increase to the consumer, you think, would be negligible?

Mr. ROBINSON. I don't think there would be any increase to the consumer. He might use one button instead of another. To-day, for example, we can't make buttons out of certain portions of our

shell, because of the character of buttons we get out of them; that is, I mean, because of the selling value. We can't compete with the Japanese buttons that come in here. They have cheap labor and cheap material, and they come in here cheaper than we can afford to turn out our buttons. Now, if the ad valorem duty were raised so that we could make the scrap into buttons, we could afford to pay our labor to do it, and the consumer here could get his buttons at home instead of an imported button. We could use our material to better advantage, and we could afford to pay larger income taxes, and we could get more out of it, and it would not be coming out of anybody's pocket.

In the matter we prepared for the Tariff Commission, on pages 114 and 115 of the pamphlet that has been given to you, you will notice the illustration of the difference in cost of manufacture.

We have tried to show that the ad valorem duty segregates a range of values of buttons that can be imported to advantage at the cheaper end and definitely prohibits the importation of buttons of higher values at the other end. Consequently, if a higher ad valorem duty is placed on pearl buttons it may reduce the value of the buttons which will be imported, and thus allow domestic manufacturers to choose more freely what combination of grades of buttons they can manufacture most efficiently, and therefore make better aggregate profits in the manufacturing process itself. On these, of course, they will pay their larger domestic income taxes.

In connection with the articles on imports of which an embargo has been placed to conserve shipping space, the Shipping Board has communicated with us regarding pearl buttons. We have understood that restrictions on their import have been under consideration. If they are put on the embargo list, or if their import is restricted, such situation will emphasize the assurance with which increased duties may be expected in proportion to any increase in ad valorem rate. Whether such restrictions are put into effect or not, in our opinion there is little question but that all the buttons which were not restricted would come into this country so long as this amount does not exceed the power of the Japanese to produce, and that this situation would come about no matter what the ad valorem rate of duty might be. It seems to us that it is especially appropriate to have these imports pay a tax as high as they will stand at this time, when all domestic business is being taxed to the limit of its ability to pay. It is conceivable that the purpose of restricting imports for conserving shipping space might be served to better advantage and with less chance of international friction by imposing a higher duty on pearl buttons which would apply to all nations rather than by arbitrary action which would not be so general in its application.

Our purpose has been simply to bring a few matters to your attention, bearing on this subject, for the consideration which you think they deserve. We hope, very respectfully, that you will examine the report of the Tariff Commission at as early a date as possible, and are confident that you will give full consideration to the facts it presents. If there are any further questions on which your committee would like fuller information, I am sure the interests I represent would be glad to furnish them to you at any time.

In closing, will you please allow me to emphasize the fact that in suggesting only an increase in ad valorem duty on pearl buttons, we

have been actuated by a realization that present conditions are urgent and abnormal and that an increase in revenue is your chief object. We should not want our recommendations at this time to be regarded as an expression of our opinion that any possible ad valorem duty could adequately conserve the interests of the country so far as they depend upon our industry, or in fact allow our industry to continue to exist in the United States, under normal conditions, unless such an ad valorem duty should be so high as to be unthinkable.

Mr. SLOAN. Mr. Robinson, you are presenting to this committee a means of raising more money for the country?

Mr. ROBINSON. In our belief, we do.

Mr. SLOAN. Not many men who have come before this committee have come with that idea; we think the idea is very commendable, this idea of presenting the means of obtaining more money.

Mr. ROBINSON. I thank you very much.

Mr. SLOAN. I think this is true; nearly every product that is produced in other countries, and that is coming in here now is flooding our market; I think we are bringing in more goods now than we ever did in the history of the country.

Mr. ROBINSON. I think that is true.

Mr. SLOAN. And with less revenue.

Mr. ROBINSON. We wanted to feel that you will help us to pay larger taxes in this country.

Mr. SLOAN. In other words, you want us to have the foreigner pay it?

Mr. ROBINSON. We want the foreigner to pay it, and we want you to help us pay it. There are two methods of securing more revenue. One is a revenue from a higher ad valorem duty on the buttons actually imported, and then we believe a higher rate of duty might lower the flow of buttons into the country so that we can manufacture much more efficiently in this country, and consequently be able to pay higher taxes ourselves.

Mr. DIXON. Has the price of raw material greatly increased?

Mr. ROBINSON. No; our raw material is practically the same as it was.

Mr. DIXON. Do you do any exporting?

Mr. ROBINSON. No; we do no exporting at all. There are some classes of buttons which have been exported, the larger ones. The larger the size of the button the lower is the proportion of the labor going into the output of the button, consequently the large button has been exported in rather large numbers, especially since the beginning of the war.

Mr. DIXON. I notice the exportation of buttons has increased since the war began 100 per cent.

Mr. ROBINSON. That is in the larger buttons. In the small-sized buttons there has not been any increase. The manufacture of the small-sized buttons is practically a separate branch of the industry. We make them in quantity fashion, if you might call it that way, whereas the manufacturers of large buttons pay more particular attention to the material because of the value of the buttons.

Mr. RAINEY (presiding). We have a statement by the Manufacturing Perfumers' Association of the United States; a letter by Hon.

Edward E. Robbins, Representative from the twenty-second district of Pennsylvania; a statement by Warren Worth Bailey, editor of the Daily Democrat, of Johnstown, Pa., prepared on behalf of the Single Tax Association of the United States; a brief prepared by the National Cigar Leaf Tobacco Association; a letter addressed to me by Hon. Thomas Rees, editor of the Illinois State Register, at Springfield, Ill.; and a statement from the National Board of Fire Underwriters; and without objection, all of these will be printed in the record.

(The matter above referred to is as follows:)

THE MANUFACTURING PERFUMERS' ASSOCIATION OF THE UNITED STATES.

NEW YORK, June 28, 1918.

TO THE WAYS AND MEANS COMMITTEE,  
*House of Representatives.*

On behalf of the Manufacturing Perfumers' Association, I desire to lay before your committee certain facts and to point to certain considerations which we trust you will bear in mind should you contemplate any increase in the taxes imposed by existing law on the products of our industry. While we are without information as to the particular objects of taxation which the committee has in view, we feel it to be our duty to bring these matters to your attention in order that you may fully understand the present industrial and financial position of our industry before you take up the work of framing the important measure which Congress is now preparing to enact. Increased revenue can be obtained from our products if scientific methods of raising it are employed, with due regard to the distribution of the burden between manufacturers and consumers, following the general principles underlying the recently enacted French law of March 22, 1918.

BULK OF OUR PRODUCTS NOT LUXURIES.

We have no information that would induce us to surmise that Congress intends further to tax our products other than the published announcement that additional levies are to be made upon so-called luxuries, a classification which a costly experience has taught us has been applied to the products of our industry in connection with previous revenue legislation. As a matter of fact, however, only a very small proportion of the goods produced by our trade are in any sense luxuries, especially in view of the progress made in recent years in the departments of State and National hygiene and sanitation. The great bulk of the articles manufactured by us are to-day properly rated necessities of life, the use of which is recommended by medical authorities everywhere as important in the preservation of health.

It is true that we manufacture perfumery and toilet waters which, for the sake of argument, may be conceded to be luxuries; but these products constitute an almost negligible proportion of our output and there are, especially at the present time, controlling reasons chiefly relating to the revenue so vital to a nation engaged in war why the output of these goods, which is insignificant from any but a revenue standpoint, should be stimulated rather than discouraged. More than three-fourths of the products of our industry, however, are soaps, tooth and mouth washes, dentifrices, tooth pastes, talcum powders, and other similar goods. The use of these articles, each in its own sphere, is absolutely essential to the preservation of health, and the recognition of this fact by the Federal Public Health Service and by State and municipal boards of health is now so universal that it would be a waste of time to argue the matter here.

In this connection I would emphasize the importance of our products in sustaining the morale of our people, especially our women. Physical comfort, cleanliness, being mentally and physically fit, and a general sense of well-being contribute greatly to efficiency, and it has already been amply demonstrated in this great war that this is true of both our military forces and our civilian population.

USE OF DENTIFRICES ESSENTIAL TO HEALTH.

I would especially emphasize the importance of the position of dentifrices and tooth washes in the preservation of health. The nutrition of the body depends primarily upon the proper functioning of the digestive apparatus and this in turn is chiefly predicated upon sound and clean teeth. A national propaganda in the interest of the care of the teeth has been urged upon the public for more than a dozen years, and

to-day even the public schools are employed as channels through which to disseminate this knowledge. Every year witnesses some new discovery concerning the origin of disease, indicating that neglected and unsound teeth are the origin of disorders the real causes of which had not been previously suspected. Within a few days the announcement has been made on high authority that the surgeons with the allied armies have traced to unsound teeth a peculiar disease suffered by the soldiers in the trenches, and steps have been taken to prevent this disorder by the observance of the utmost cleanliness in the care of the teeth. For several years, however, the Surgeons General of the Army and Navy have been fully alive to the importance of the care of the soldiers' and sailors' teeth, and Congress has recently enacted laws creating dental corps in both branches of the service, one of the prime duties of which is to urge the importance of the regular use of reliable dentifrices. It is safe to say that among the American soldiers now going to France all but a negligible number carry a tube of tooth paste in their kits, and the furnishing of a regular supply of this essential article is an important duty fully recognized by the military authorities.

It has been said of late that France has been "bled white." This we believe to be an exaggeration, but no one will deny that France is reduced to revenue-raising expedients not yet approached in the United States. Nevertheless, in the carefully considered statute to which I have referred—which has just gone into effect and which was framed for the avowed purpose of taxing so-called luxuries—dentifrices are specially exempted from tax, unless they exceed a price at which standard goods can be sold.

#### ON WHAT THEORY ARE SOAPS TAXED?

We are at a loss to understand the theory upon which standard toilet soaps were taxed by the provisions of the act of October 3, 1917. It is certainly significant that soaps were not mentioned in the Spanish war revenue act or in the act of 1914 and that no attempt was made to bring them within the purview of those acts except in isolated cases where in advertising literature of one form or another the manufacturers claimed that the products in question were "good for the skin" or "beneficial to the complexion," claims which, fairly construed, we contend were merely equivalent to the assertion that they were pure soaps containing no injurious ingredients and that the regular use thereof would contribute to the health of the skin. It is certainly an extraordinary fact to which we trust Congress will give due weight that in finding a precedent in American legislative history for taxing soaps it was necessary to hark back more than half a century to the antiquated revenue act of 1862. It is inconceivable that in these enlightened days the Congress of the United States should tax soap as an article of luxury, unless its price clearly stamps it as such. Legislation contributing to its cheapness would be more in line with the world-wide movement for improved hygiene and better sanitation.

Concerning the taxation of soaps, France has again set us an example. Low-priced soaps, though intended for bathing and toilet purposes, are free of tax under the new law I have referred to, and only costly articles are burdened with an impost.

One of the most important products of our industry is talcum powder, an article upon which the existing law imposes a tax as a toilet powder. Neither in the statute nor the regulations thereunder has any attempt been made to differentiate talcum powder from face powders or other articles used for a purely cosmetic purpose. Yet it is safe to say that 90 per cent of the annual output of this article is employed in the nursery, where its use is absolutely essential to the care of every infant from the day of its birth, and in the hospitals, where it is employed in many ways for the relief of suffering humanity. A very considerable proportion of the talcum powder now sold is more or less medicated, and a hundred minor ills and discomforts suffered by men, women, and children yield to its use. Pulverized talc or talcum is also largely used in the manufacture of foot powders which the Government is purchasing in large quantities for our soldiers, who find it of the greatest possible value in keeping their feet in condition. It certainly requires a stretch of the imagination to regard an article of this kind, so clearly differentiated from a cosmetic and contributing so universally to the alleviation of suffering and to increased efficiency, as a luxury to be singled out for specific taxation by Congress.

#### PERFUMERY A RELATIVELY LARGE REVENUE PRODUCER.

I will now ask your attention to the item of perfumery, including toilet waters, concerning which Congress appears to have absorbed the impression that it is a dominating factor in our trade and a typical example of the products of our industry. The truth is that perfumery and toilet waters constitute a very small proportion of our

output, but to the extent that they are manufactured they yield an enormous proportionate revenue to the Government, which we believe it can not afford to ignore in this emergency. As a matter of fact, the interest of the Treasury in our sales of these goods is vastly greater than our own, for the taxes imposed by existing law upon their ingredients are far in excess of any profits we could hope to make from these articles under the most favorable circumstances.

Medium-grade toilet waters and extracts sell at from \$8 to \$10 per gallon and contain approximately 80 per cent of alcohol. Because of the doubling of the spirit tax, provided by the act of October 3, 1917, every gallon of these goods will pay to the Government a restrictive tax on the alcoholic content thereof amounting to about \$3.40. To impose a manufacturers' tax upon the sale of an article nearly one-half the price of which goes into the Treasury of the United States is certainly of doubtful economic value and we are unwilling to believe that as men familiar with the business problems incident to taxation this committee is prepared to recommend an oppressive increase in the manufacturers' tax which would simply place a greater obstacle in the way of the sale of these goods, thereby reducing the revenue from the alcohol employed in their production to a much greater extent than the revenue would be increased by adding to the manufacturers' tax. In this connection I can give you a graphic illustration of the relation of these two forms of tax that will give special point to our contention. Under the act of 1914 one of our members paid a stamp tax under Schedule B amounting to \$12,000 per annum, while he paid a spirit tax of no less than \$30,000, which under the present rate imposed on alcohol would have been \$60,000. It will thus be seen that by imposing a tax of \$12,000 on this manufacturer under the terms of Schedule B Congress imperiled revenue which to-day would amount to \$60,000.

#### TAX SHOULD BE PAID BY CONSUMER AT TIME OF RETAIL SALE.

The French law, enacted March 22, 1918, and which is serving as a model for an English statute of the same general character, is also notable in that the taxes imposed are not paid by the manufacturer, as are the taxes levied by our war revenue act of October 3, 1917, but are collected by the retailer from the consumer at the time of sale. This is as it should be, for the manufacturer merely employs American capital and labor, as does any other producer, and the real beneficiary of a luxury is the consumer.

As manufacturers we stand ready to contribute our full share of the cost of carrying on this righteous war for human liberty; but we submit that our contribution, under an economically sound law, should be taken from our profits and not from our gross receipts, which may or may not represent net gains. A flat manufacturers' tax on products operates most unjustly, bearing but lightly on the large and prosperous producer while affecting ruinously his small and struggling rival. It is also subject to manipulation resulting in unfair competition, as where a very large manufacturer may absorb the tax to obtain an advantage over his small competitors who can not afford to do so.

We would emphasize the fact that we clearly differentiate the manufacturers' tax from the war tax paid by the consumer, as under the French law. If the manufacturers' tax is added to the price of an article, the buyer, not readily distinguishing the tax, is exceedingly reluctant to pay the increased price, while he will cheerfully pay an added sum if he recognizes it as a contribution by him to the war funds of the Nation. The restrictive effect of the manufacturers' tax is thus made apparent.

#### RATES SHOULD BE ADJUSTED AT SCIENTIFIC REVENUE POINT.

We assume that in any increases which are made in existing taxes the primary object of Congress will be to seek the scientific revenue point; that is to say, the rate at which the industry can be made to produce the maximum amount of taxes. We trust that this principle will be kept constantly in view in the consideration of our schedule, and in this connection we would invite your attention to certain facts of the greatest possible importance. You are well aware that an active campaign is now on foot throughout the country in the interest of national economy. If the use of any of the articles manufactured by us can be dispensed with—that is to say, if they are in fact luxuries—the war crisis is already operating to restrict sales and cripple the manufacturers, and the movement referred to will operate progressively in this direction. It is therefore obvious that, even without an additional burden of direct taxation, we shall be obliged to contend with influences the natural effect of which will be to reduce our output and therefore the revenue which the Government will derive, both from any manufacturers' tax imposed upon our products and from the alcohol used in their production, as well as from the customs duties collected on certain of our essential raw

materials. This consideration should certainly be kept in mind in the framing of your bill, for our recent experiences have convinced us that it will be a comparatively easy matter for Congress to kill an industry that is providing a substantial amount of revenue.

Another adverse influence under which we have been laboring during the past year and which is daily becoming more acute is the rapid increase in our costs of production. Labor, such as is obtainable, is 100 per cent higher than two years ago. Glass bottles have risen from 100 to 300 per cent. Cartons and labels cost us an average of 100 per cent more to-day than in 1916. Our raw materials are higher by from 100 to 3,500 per cent and some of the most important of them can not be had at any price. What this cumulative movement will lead to we dread to contemplate.

#### PERPLEXITIES OUR TRADE IS NOW FACING.

Still another menace now hanging over us, the force of which we are beginning to feel very acutely, is the governmental discrimination against our industry on the ground that it does not contribute directly to the winning of the war. Without entering upon any discussion as to the justice or injustice of any classification that may be made of our products, we are face to face with the inescapable fact that in point of fuel supply and the transportation of our raw materials and finished products we are excluded from preferential treatment, which is only another way of saying that we are heavily discriminated against.

The shortage in the supply of tin has already caused our trade serious embarrassment. The tin-plate mills, acting under instructions from the War Industries Board, are booking no more orders for tin plate for containers for other food than purposes, and certain can manufacturers are refusing to make us any more cans for soap powders, talcum, etc. Collapsible tin tubes will soon no longer be available for certain uses to which we are now putting them, and we are at a loss to know where we shall turn for substitutes.

The necessity for conserving shipping space has also induced the Government to restrict imports of some of our most important raw materials, and the future of this movement is shrouded in great uncertainty. What the effect of these discriminations may be as the strain upon the country's resources increases can hardly be imagined, but that it will tax our ingenuity and our financial strength to the utmost is clear to all of us and must be obvious to your committee.

The view entertained quite generally that ours is a very profitable industry is wholly erroneous. It is a business of infinite detail, and our product units are very small. The records of one house in our trade having a reputation for high-priced goods show that in 1917 it sold 949,941 pieces retailing at 25 cents or less, 945,529 pieces at more than 25 cents but not more than 50 cents, 738,430 pieces at more than 50 cents and not more than \$1, and only 103,859 pieces at more than \$1 each. Another house handling less expensive goods made the following sales record in 1917: 10-cent packages, 8,297,701; 25-cent packages, 144,065; 50-cent packages, 13,912; \$1 packages, 17,290; and \$1.25 packages, 1,443. The selling costs of both of these houses were very heavy.

#### WILL CHEERFULLY CONTRIBUTE PROFITS.

I know I do not need to remind you that the men engaged in our industry are paying their full share of every tax which rests upon the people at large, on incomes, on excess profits—if we have any—and on transportation, which has recently been heavily increased, both in the item of freight rates and in the expenses of traveling salesmen. These burdens we bear cheerfully, and we stand ready to make any contribution of our profits which Congress can ask; but we urgently appeal to you not to destroy our industry but to so legislate in this crisis as to increase rather than diminish the revenues we may be able to pay into the Public Treasury.

In conclusion, we ask you to visualize the position of our small industry. Its supplies of raw material are dwindling; its costs of production are mounting rapidly; it is the object of propaganda intended to limit the consumption of many of our products; it is denied priority or preferential treatment in fuel and transportation, and it is slowly but steadily being driven into a cul de sac from which we now see no means of extricating it. Our burden of direct taxation is all we can bear, in fact is so great as to materially restrict the volume of our output, and we are confident that any increase in the direct load will spell widespread disaster to our entire industry and will diminish rather than increase the net revenues derivable by the Government from the manufacture and sale of our goods.

We ask for no special consideration; and, as I have stated, we stand prepared to contribute of our profits whatever proportion Congress may demand; but we earnestly

appeal to you not to single us out for a further special burden imposed in such a way as to destroy a small but legitimate industry and which will cost the Government a large part of the revenue which we can supply under a well-considered scheme of taxation.  
Respectfully submitted.

MANUFACTURING PERFUMERS' ASSOCIATION,  
G. A. PFEIFFER, *President.*

HOUSE OF REPRESENTATIVES,  
*Washington, D. C., July 2, 1918.*

HON. CLAUDE KITCHIN,  
*Chairman Ways and Means Committee.*

DEAR SIR: I wish to bring to your attention the question of a special consideration of the bituminous coal industry, so far as the matter of taxation for war purposes is concerned.

1. A bituminous coal mine when worked to exhaustion results in a complete disappearance of the capital invested.

2. It is therefore necessary during the progress of the mining to have sufficient funds set aside to replace capital in addition to the amount allowed for operating expenses, taxation, and fair return as profits.

3. A mining proposition from the time of its commencement to the time of its completion is one requiring constant outlay for extensions, improvements, replacements for wear and tear, and the expense of machinery, equipment, and supplies, which is extraordinarily high.

4. In order to bring about this result there should be allowed in addition to the amount deducted from net earnings as profits for unfair return of interest on the investment a certain sum not less than 10 per cent as an additional amount above capital to pay for these above extraordinary deductions in a mining proposition.

5. To illustrate just what I mean by a concrete example, say a coal proposition of 1,000 acres of bituminous coal lying in any region of Pennsylvania, West Virginia, or Ohio. It must be opened up by a large outlay as to railroad tracks, houses, tipples, engines, pumps, mine cars, and machinery.

All of these are worn out more rapidly in the mining business than any other. The machinery is quickly eaten up by sulphur water in a mining proposition, but if a coking proposition, by the sulphur fumes from the ovens as well as mine water. The expenditure for rails, cars, tracks, and inside equipment is extraordinarily large from the start, because it must precede the actual development from which coal is produced.

These mines are generally located away from the centers of population and require a store, amusement hall, ball park, and a number of large boarding houses, and a large outlay, much more so than in ordinary industrial improvement that can be located at a center of population and within reach of larger centers. The mining town is generally located on a branch railroad that has no passenger service, and in order to keep the population contented all these accessories must be provided at a greater or less cost.

The maintenance and repair of the mining houses, stable, and machinery is all extraordinarily expensive because of the character of the population who are indifferent and careless as to the care of company property and who frequently burn it down during strikes, and maliciously destroy it during hard times, regarding their employer as an enemy rather than as their friend.

The production of coal is dependent on transportation facilities, which are hard to control and thereby unnecessarily expensive.

The price of supplies of mines have, during 1916, 1917, and down to the present time, been extraordinarily high. A few of the items will illustrate this situation:

Steel rails, 32 pounds per ton, used in mines, usually selling from \$28 to \$30 per ton, average from \$90 to \$110 per ton.

Pit posts, formerly selling at 1 cent per foot, 6-foot posts, now sell at 25 cents per post.

Pit rails, usually selling at \$24 per thousand, now sell at \$50 to \$60.

Oats, usually selling at 40 cents per bushel, now sell at 80 cents.

Hay, usually selling at \$15 per ton, now sells at \$25 or \$30.

Mules, usually \$150, now \$300.

Powder increased four times.

Oil increased three times, etc.

It therefore seems to me that a fair treatment of the coal industry would require 10 per cent additional over and above the 8 per cent deduction allowed as a proper element or proportion net income set aside to protect these extraordinary expenses.

I am not now discussing the inequalities in taxation produced by taxation of capital as distinguished from taxation on the actual value of coal properties. I am only directing the attention of the committee to the fact in equity and justice there should be a larger allowance for new extensions and additions not charged either against capital account or not usually considered as absolutely essential operating expenses and that this amount should be approximately 10 per cent.

Respectfully,

EDWARD E. ROBBINS.

STATEMENT OF WARREN WORTH BAILEY, EDITOR OF THE DAILY DEMOCRAT, JOHNSTOWN, PA., AND MEMBER OF THE NATIONAL COMMITTEE, SINGLE TAX ASSOCIATION OF THE UNITED STATES.

Mr. Chairman, I appear before your committee on behalf of the Single Tax Association of the United States. I am a member of its national committee. The measure in which we are interested is known as the Crosser bill (H. R. 4024) by which it is proposed to raise by a direct tax on land values the sum of \$2,000,000,000, to be apportioned among the several States on the basis of population as required by the Constitution.

This is the only revenue proposition which has been submitted that does not carry with it the objection that it penalizes thrift, obstructs industry, and burdens labor. The tax on land values would have a directly opposite effect. Such a tax will in fact stimulate industry all along the line. It will encourage capital. It will give added impetus to industry. It will tend to lighten the burdens of labor, at once tending to raise wages and cheapen the cost of living.

Every tax thus far laid by Congress in support of the war is subject to the criticism that it hampers business, retards industrial progress, adds to the cost of living, imposes hardships on capital and labor alike, and tends more or less definitely to lessen the Nation's ability to meet the heavy obligations imposed by war. All taxes that are now levied are discouraging in their character and many of them are of a nature which permits them to be shifted to the ultimate consumer. They fall with distressing weight upon the shoulders of those least able to bear the burden.

This, of course, is not true of the income tax or of the inheritance tax, nor is it true of the excess-profits tax. These are all direct and they are not easily susceptible to the shifting process. Yet none of these taxes actually tend to stimulate production. They certainly do not encourage thrift or invite to higher industrial activity. If we note great industrial expansion, it has come in spite of the burdens which have been laid upon it through taxation. It has come in the very face of pains and penalties that under other than war conditions would bring paralysis and that will bring paralysis ultimately in any case, for even a great rich nation can not forever pile burdens on the backs of its people without wasting their substance and crippling their energies.

The direct tax on land values proposed in the Crosser bill would have the very opposite effect from any of the other taxes now levied or that have been proposed. It would infallibly promote production. It would lend spurs to capital and to labor. It would impart a stimulus to industry of every legitimate nature. It would do the very thing we most desire at this critical time in our country's life. It would result in a greater production of food and fuel, since it would open opportunities now closed and place a premium on use, where now the premium goes to idleness or nonuse.

Food will win the war. If we can not feed our armies, they can not fight. An army, as Napoleon said, travels on its belly. It becomes mutinous when the food supply runs low. Nor can a country be kept in harmonious support of its men in the field if the women and children at home and the workers in the industries are poorly fed. We must have an abundant food supply if we are to make certain of our future in the great struggle which is now perhaps in its most critical stage. But agriculture is receiving no greater stimulus through present forms of taxation than industry in general. The farmer too is penalized for doing the very thing we most want him to do. His thrift is discouraged. The cost of everything he has to buy is enhanced by the taxes that are being imposed on general industry. If the farmer is prospering under the present conditions, it is in spite of all discouragements and all handicaps imposed by the fiscal policy of the Government.

Mr. Chairman, I would like to invite the attention of your committee to a most significant fact, namely, that vast bodies of productive land, lying in or near our cities and industrial centers, are practically, if not absolutely, idle, held out of use for speculation, for that certain enhancement in value which comes with increasing population and expanding industrial life. On investigation you will discover that food

production in large measure has been driven back and still farther back from New York, from Boston, from Chicago, from St. Louis, from San Francisco, and from every other place of any consequence in the country. It has been driven back farther and farther by the tightening of the speculative band which is thrown around every center of population. The effect of this can scarcely be appreciated at first blush, but it is serious, so serious that it should challenge your attention and the attention of the country, for these idle areas ought to be producing, they ought to be yielding their products to the markets, they ought to be relieving the pressure which every American now feels through the high cost of food.

I wish that time permitted, so that I might go into this phase of the subject with some attention to detail. I am certain that the figures I might lay before you would startle every member of this committee and perhaps most people whom they might reach. But I may say in passing that hundreds of thousands, perhaps millions, of acres of the best land in the country adjacent to our industrial centers are to-day practically out of use, yielding little, if anything, held solely for speculation.

The adoption of the Crosser plan would tend to cure this evil. It would tend to force idle land into use. It would discourage the speculator, but only him. It would impart a stimulus to every one else. It would raise the margin of cultivation, bringing it nearer to the center, to the market, to the point where the produce is required for consumption. And at the same time this direct tax on land values would stimulate building operations in towns and cities. In every center of population in America the vacant-lot industry is a flourishing one. Urban development is hampered by it. Cities do not grow in normal ways. They sometimes have to make wide jumps to clear an obstruction in the form of vacant spaces held out of use by speculators. And in consequence there is overcrowding on the one hand and relative isolation on the other, population being herded in the tenements and widely scattered in the suburbs. Every observer must have noted this fact. It is not so certain that everyone who has noted the fact has grasped its significance or understood the reason back of it. Cities ought to grow normally, like a tree grows, but as a matter of fact they grow sometimes in the very opposite direction from that expected, because the vacant lot held for speculation stands in the way, diverting growth and sometimes arresting it altogether.

The constitutionality of the Crosser proposition is hardly open to question. And it is not without precedent in the history of the Republic. Direct taxes have been laid and collected in the United States by the Federal Government at least three times; first in 1798, second in 1813, and third in 1861. But while the direct tax in these cases fell on land and its improvements, it is the purpose and the high merit of the Crosser bill to confine the tax to land values alone, improvements of whatever name or nature, to be entirely exempt. Were the tax to fall on improvements as well as on land values the effect would be the opposite of the one aimed at, since taxes on improvements tend to discourage them and they place a premium on holding valuable opportunities out of use or out of their best and fullest use.

I believe in President Wilson's policy of pay as you go. I do not look with favor on the blanketing of the future with bonds. We should pay for our own wars and let our children and their children's children pay for their wars if they shall not know how to avoid appeals to the sword. President Wilson has taken the right ground in this matter, but Congress has not seen how it could raise sufficient money to carry forward our great undertaking without resorting to a mortgage on the future. It has plainly perceived that it can not go indefinitely forward in piling burdens on business and on thrift and industry. It has been said before this committee and by the chairman himself, I think, that there is already some fear that the taxes under existing legislation may so operate as to lessen the ability of the country to meet its obligations next year.

The goose that lays the golden egg is perhaps being rendered unfit for future effort. And there is a grave prospect that this very thing may come to pass. No man who has really studied the subject of taxation can have failed to note how taxes in many cases tend and strongly tend to lessen production, to check enterprise, to discourage capital, to dishearten labor, and in general to obstruct social growth. This is the necessary tendency of every tax which falls on labor or on industry. But the very opposite tendency is observed where the tax falls on land values. The land value tax can not be shifted. It stays where it is put. I can not possibly be passed along. It is more easily assessed and collected than any other tax. It infallibly and unfaillingly encourages the use of the land affected. It tends to open opportunities to labor and capital which speculation sets itself to deny. It drives the dog out of the manger and gives

the ox a chance at the hay. It offers capital and labor alike a premium for engaging in production, offering no premium whatever for idleness or nonuse.

I feel profoundly certain that the adoption of the Crosser proposition in providing revenue for carrying on the war and for meeting the obligations of the Government would be enormously helpful to the Nation in more ways than I have time to point out here. The committee can not go into this subject, I believe, without becoming convinced that here is a resource which can be drawn upon without in the least hampering the Nation in its economic life, without offering even a temporary setback to capital, without injuring labor, without hindering industry, without penalizing thrift and without any of the evil effects which follow the taxation of labor and capital and the products thereof. It is my earnest hope that the committee may seriously consider the Crosser proposition. It is economically sound and morally unassailable. Through it and through it alone we may secure ample revenue to meet the stupendous cost of the war without crippling our industry or penalizing enterprise.

---

THE NATIONAL CIGAR LEAF TOBACCO ASSOCIATION,  
New York, June 22, 1918.

HON. CLAUDE KITCHIN,  
Chairman Ways and Means Committee, Washington, D. C.

SIR: The National Cigar Leaf Tobacco Association desires to lay before your committee certain considerations which we trust will be borne in mind should it be deemed wise to make any changes in the schedules of the Underwood-Simmons Tariff Act. We have no official information that the committee contemplates any such changes, but we are aware that in the framing of the war revenue act of October 3, 1917, a flat increase in duties of 10 per cent ad valorem was recommended by the Ways and Means Committee, and our attention has recently been drawn to publications in the daily press to the effect that modifications of the existing tariff will be urged by certain members of the committee.

It is not our purpose to discuss in this connection the advisability of increasing the duties on leaf tobacco. We regard it as of the utmost importance, however, that the committee should be advised of the disastrous effects that will follow, both to the Government and to honest importers, should an increase be made in the form of an ad valorem surtax, as was proposed with reference to the war revenue act. There are controlling reasons why all duties assessed upon leaf tobacco should be specific rather than ad valorem and we would earnestly urge the committee to investigate this matter with great care and thoroughness and to take counsel with the customs officials of the Treasury Department before adopting ad valorem duties as applied to tobacco. We are confident that if the committee will consider this matter with due care it will unhesitatingly reject any proposition looking to the imposition of ad valorem rates on this important commodity.

Whatever may be said respecting the relative merits of specific and ad valorem duties from a theoretical standpoint it will certainly not be necessary to argue that the practicability of ad valorem rates depends upon the ability of importers and customs officials to determine the foreign market value of the merchandise in usual wholesale quantities on the date of purchase. If it is impossible or difficult to ascertain such foreign market value it will be correspondingly impossible or difficult to administer the law, and the opportunities for fraud upon the revenue will be so numerous as to put a heavy premium on dishonesty and to give the unscrupulous importer an advantage over his conscientious competitor that will speedily drive the honest merchant out of business and leave the industry in the hands of those who are willing to live by frauds perpetrated upon their rivals and upon the Government.

It is a practical impossibility to determine the foreign market value of any of the principal types of tobacco which are imported into the United States. Habana tobacco is purchased by American buyers largely in "vegas," or lots, at a round price for the vega and is afterwards subdivided and a part sold in Habana, while the remainder is brought to the United States. A vega will include numerous grades, and it is therefore absolutely impossible to set a hard and fast foreign market price on the portion shipped to this country, as such price must necessarily be arbitrarily fixed by the American buyer, who will have nothing to guide him but the average cost of the tobacco and the price which he believes he will be able to secure for it when resold in the United States, which price, of course, will depend upon many trade factors, including the special suitability of the tobacco for the particular factory for which it is finally purchased. It must be remembered that the individual requirements of the cigar manufacturer have much to do with the price of leaf tobacco, that which is greatly desired by one factory being almost valueless to another.

The situation with respect to Sumatra wrapper tobacco is similar and still further emphasizes the danger to the revenue and to the legitimate operations of the tobacco trade of an ad valorem duty. In normal times Sumatra tobacco is purchased almost exclusively at the auction sales held in Amsterdam. American buyers are able to sell in this country only certain grades of this leaf, but in order to obtain what they require it is frequently advantageous for them to purchase lots all of which are not available for use in the manufacture of cigars in the United States and a part of which are resold to other buyers and are finally consumed in the manufacture of cigars in other countries. The buyer of Sumatra tobacco, therefore, is frequently in the same position as the purchaser of Habana vegas in that he has no guide except his own judgment as to the value of the tobacco and no record of price except the average paid for the entire lot he has bought, which usually would be below the price he would pay if he had purchased only those grades suitable for consumption in the United States.

Under these conditions, which are typical of the great bulk of leaf tobacco importations; it will readily be seen that it is absolutely impossible to enforce the collection of an ad valorem duty on leaf tobacco. There is no class of merchandise imported into this country concerning the value of which there is at all times a greater diversity of opinion. The extraordinary "spread" between the rate of duty on filler tobacco, which is 35 cents, and that on wrapper, which is \$1.85, is emphasized by the fact that in some kinds of leaf tobacco, notably Havana, wrappers and fillers are mixed in the same bales, and when filler tobacco is mixed with more than 15 per cent of wrapper tobacco the entire bale becomes subject to the wrapper duty. In this connection it is a matter of record in the Customs Division of the Treasury Department that importations of tobacco appraised by six or eight different experts in the employ of the Government have been variously returned as containing all the way from 10 to 75 per cent of wrappers. This fact is cited merely to illustrate some of the difficulties that would be encountered in any attempt to fix the actual value of a bale of tobacco by so-called expert examination.

If, in the wisdom of your committee, it is absolutely essential that an import duty shall be levied upon leaf tobacco, which it is not our purpose to discuss at this time, we earnestly urge you to make the rate specific in order that honest importers and manufacturers may be guarded against the results of fraudulent invoicing. We would further draw attention to the fact that under normal conditions an increase in the specific duty amounting to any given percentage would produce considerably more revenue than an equivalent ad valorem increase.

We yield to no trade in patriotism or public spirit, and we beg to assure you that these representations are made, not for the purpose of avoiding the imposition of a burden, but rather in the interest of the revenue. We are absolutely sincere in the statement which we here solemnly make that any ad valorem increase in the customs duties on tobacco at this time will be fraught with the gravest consequence to our industry and to the revenue derived by the Government therefrom.

CHAS. FOX, *Chairman Legislative Committee.*  
W. L. CROUNSE, *Washington Representative.*

ILLINOIS STATE REGISTER,  
*Springfield, Ill., June 19, 1918.*

HON. HENRY T. RAINEY,  
*Washington, D. C.*

MY DEAR MR. RAINEY: In reply to your letter will say that we are to take up, with the local post office, the zone distribution of the State Register, commencing to-morrow. I am not able to give it to you at this time in exact figures but can do so approximately.

I will say for your information that the daily circulation of the State Register is now an average of 24,000 copies per day. This circulation is approximately one half inside the county and the other half outside the county. In other words, with a variation of only a few hundred copies, and which changes from day to day, there are 12,000 copies delivered within the county, about 8,000 of these being delivered by our carriers or sold on the street. The other half, or 12,000 copies, are distributed outside the county. Of the 12,000 copies distributed outside the county I would estimate that at least 11,000 copies are distributed within an average of 50 miles. The other 1,000 copies are carried into more remote zones.

A large amount of the 12,000 papers carried outside of the county are delivered in bulk on the platforms in the towns in which they are distributed.

To complete these 24,000 copies requires 1,200 tons of paper per year, or 100 tons per month. It is the aim of our paper, as is the rule of most publishers, to carry 50 per cent advertising and 50 per cent news and features. Owing to dull advertising business and the great pressure on our columns for war news, we hardly average these proportions at this time, but as a rule, a daily paper that does not carry at least 50 per cent advertising is in great danger financially.

The First Assistant Postmaster General stated before the Senate Post Office Committee, at the hearing given for the publishers on the 1st day of May, that the Post Office Department paid the railway companies 25 cents per hundred for carrying second-class mail 50 or 100 miles. It will be seen from these figures that we are already paying the Government \$1 per hundred for a service which costs them 25 cents per hundred on a considerable portion of our circulation.

My statements heretofore made, that if the new law continues for the next three years, and we have the least possible increase in circulation, at the end of that time it will cost the State Register, on account of that law if we use the postal service, about \$12,000 per year additional over what we would have to pay under the present law, are indicated by the estimates in this letter, while on most of our circulation we are already paying four times as much as it costs the Government for the service. Besides this, there will be the unmitigated nuisance connected with the classification of contents of the paper and zones of its distribution.

Yours, very respectfully,

THOMAS REESE, *Publisher.*

JUNE 26, 1918.

Mr. J. H. DOYLE,  
*National Board of Fire Underwriters,  
76 William Street, New York City.*

MY DEAR MR. DOYLE: We are engaged in framing, as you know, a very large revenue bill. It is necessary to find every possible source of taxation. I am advised that there are policies of transportation and marine insurance which were issued by companies having no place of business in the United States, and these companies, therefore, are not amenable to our taxing laws, neither National nor State. They are in direct competition with our domestic companies and are also in direct competition with those foreign insurance companies which have complied with our laws and which have a domicile in the United States, and which are subjected to the license requirements of our States and our State taxing systems, as well as our national income taxes, etc. I wish you would advise me as to the extent of this business.

Also, advise me as to the total amount of premiums which go abroad in insurance of this character. I understand the situation to be that vessels and their cargoes are to some considerable degree insured directly by the owners, who make their applications direct to a foreign country. I would like to know how much this amounts to. I am also advised that a good many foreign countries having a domicile in the United States and authorized to do business here sometimes refer business of this character to their home offices, and the business is conducted by mail or by cable between the home office and the person taking out insurance on a vessel or floating structure of some kind, or its contents, in this country. Do you think there is any foundation for a suspicion of this kind?

I will be very glad indeed to have any data you can send me as to the character of the insurance business I am discussing in this communication.

Very truly, yours,

HENRY T. RAINY.

THE NATIONAL BOARD OF FIRE UNDERWRITERS,  
*New York, June 28, 1918.*

HON. HENRY T. RAINY,  
*House of Representatives,  
Washington, D. C.*

MY DEAR CONGRESSMAN RAINY: We are in receipt of your favor under date of June 26, in relation to the proposed revenue bill.

Your information respecting placing of insurance by persons, firms, etc., in the United States with foreign companies is unquestionably correct. There is a very great volume of this business placed in companies and associations not authorized to transact business in the United States, and such companies share none of the expense of our National, State, or municipal governments, nor are the policies taxed under the provisions of the present revenue act. Their activities are not confined

exclusively to marine and transportation risks, but include all classes of property insurance; that is, fire, tornado, bombardment, invasion, etc., in addition to transportation and marine.

These companies make no returns to any taxing authority in this country, and it is impossible to do more than estimate the amount of the premiums. I have conferred with a number of our leading insurance officials and they assure me that a conservative estimate of marine and transportation business would be more than \$50,000,000 annually, and that other property risks combined will exceed the amount paid for marine and transportation. If this is true, and I believe it is, a conservative estimate of the total business would indicate a minimum of \$100,000,000 annually. Of this immense sum nothing is contributed to the support of either our National, State, or municipal governments, and the business is in direct competition with our domestic companies and the United States branches of foreign companies.

It is the general belief that the opportunity presented to foreign companies having United States branches to evade payment of any taxes in this country by transacting business direct from the home office is so apparent that many have availed themselves of same. In this practice I am quite sure the United States branches take no part, but the business is written at the home office abroad, at the instance of the assured or some broker acting for him, and the authorized branch in this country has no record or knowledge of it.

I understand the modus operandi of handling this business by foreign companies is to issue policies covering property in this country, basing their liability upon that paid by some American company covering the same risk. To illustrate: They will issue a policy for \$10,000 with a provision that they are liable and will pay upon the same basis at the same ratio and in like amount to the insurance company which is interested in the risk. By this means they not only escape the item of tax expense, but likewise escape the items of expense of adjustment, inspection, etc., and have but a small acquisition cost.

In a competitive way they have a further advantage of being immune from the application of our various State laws affecting the business of insurance, such as anti-discrimination in premium charges, the necessity for having policies countersigned by a resident of the State upon whom service of process may at any time be had, and the numerous other restrictive measures to be found in the statutes of the various States. They can charge one firm one rate and another firm under conditions almost identical an entirely different rate. Domestic and authorized companies are not permitted to discriminate in this manner and the result is that in a competitive way the foreign interests have a tremendous advantage and secure business through the very simple process of taking advantage of the rate which domestic companies must maintain to prevent discrimination.

This class of business, therefore, could bear a very much heavier tax than that imposed upon the premiums of domestic and authorized companies. I should say that a tax at the rate of 10 per cent upon insurance covering property interests placed with foreign companies not authorized to transact business in the United States, or if authorized, not placed through United States branches, would secure for the Government annually a sum in excess of \$10,000,000. This would not result in an increase in rates, as the items of the several taxes now imposed, plus necessary expenses which the domestic and authorized companies must bear, are in excess of the 10 per cent you mention.

All of the above is confirmed by the estimates of several of our larger companies based upon their competitive experience.

Trusting this is the information you desire, I am

Yours, very truly,

J. H. DOYLE  
*Assistant General Counsel.*

Mr. RAINEY (presiding). This will close the public hearings, except that Mr. Neal and Mr. Post, representing the publishers, have been given the right to appear later, and Mr. Rothschild, representing the jewelers' organization, has been given the right to appear later. The committee will be adjourned, to meet subject to the call of the chairman.

## REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Wednesday, July 10, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Dickinson, Oldfield, Crisp, White, Fordney, Moore, Green, Longworth, Fairchild, Sterling, Martin, and Hawley.

Mr. HAWLEY. Mr. Chairman, Hon. Charles F. Curry, of California, who has recently been ill, and for that reason unable to appear before the committee, has requested that there be printed in this hearing the following statement from him.

The CHAIRMAN. Without objection it will be incorporated in the hearing.

(The statement referred to follows:)

HOUSE OF REPRESENTATIVES,  
*Washington, D. C., July 8, 1918.*

HON. WILLIS C. HAWLEY,  
*Committee on Ways and Means.*

*House of Representatives, Washington, D. C.*

MY DEAR MR. HAWLEY: Inclosed I am forwarding to you for the information of the Committee on Ways and Means, a letter I have received from Mr. A. L. Cowell, secretary of the Irrigation District Association at California, complaining that the Commissioner of Internal Revenue has reversed the ruling of his predecessor and has ruled that assessments levied by irrigation districts are not deductable for income-tax purposes. I am also inclosing a letter addressed to Hon. Daniel C. Roper, Commissioner of Internal Revenue, by Mr. Cowell, giving reasons why the original ruling should not have been reversed; also a brief filed with the Secretary of the Treasury January 8, 1914, by Messrs. Pierce, Cowell, and Dennett; and a brief filed by myself in January, 1914, with the Secretary of the Treasury; also the opinion of the Attorney General on the subject and the original ruling of the Treasury Department, exempting reclamation, drainage, and irrigation districts from liability to this taxation.

It was not, and I do not believe it is, the intention of Congress to authorize the levying or the collecting of such a tax, and I believe the Committee on Ways and Means in framing the new revenue law, should so definitely exempt from taxation irrigation, reclamation, and drainage districts that the Commissioner of Internal Revenue can not misinterpret it.

I would appreciate it very much if, for the information of the Committee and of Congress, you would have this letter, with the inclosures, published in the hearings on the proposed revenue bill by the Committee on Ways and Means.

Respectfully, yours,

C. F. CURRY,  
*Member of Congress, Third District of California.*

IRRIGATION DISTRICTS ASSOCIATION OF CALIFORNIA,  
Stockton, Cal., June 20, 1918.

HON. CHARLES F. CURRY,  
*House of Representatives, Washington, D. C.*

MY DEAR MR. CURRY: I inclose a copy of a letter which I have sent to the Commissioner of Internal Revenue, in response to one from him under date of June 8. He advised me that the matter of assessments levied by irrigation districts had been fully reconsidered, and it was now held that such assessments are not deductible for income-tax purposes since they constitute assessments against local benefits. This reverses a ruling made by him last February to the effect that such taxes paid to meet current expenses of operation of irrigation districts were deductible. He also says that Treasury Decision 2090 with regard to special assessment districts is held to be applicable under the present law.

We are sure Congress did not contemplate such discrimination as is explained in my letter to the commissioner, and if the ruling is not modified, we believe the law should be amended to remove any doubt as to its meaning. Inasmuch as Congress is to revise the revenue law this summer, the time is opportune for such action.

I presume that the ruling in regard to irrigation districts applies also to reclamation and drainage districts, and other similar taxing subdivisions. It has been suggested that the law should be amended by eliminating the words "not including those assessed against local benefits" from the section authorizing the deduction of all taxes in computing net taxable income, and by inserting the words "and assessments" after the word "taxes," so as to make it clear that all taxes and assessments are to be deducted. While some assessments against local benefits, such as those for street improvements, do increase the value of the land assessed, yet they constitute a heavy burden upon the land, which results either in great public benefit or in an increase in the productiveness of the land. To tax money spent for increasing the productiveness of land, and then to tax the increased income resulting from that increased production seems like double taxation.

If, however, Congress does not desire to go so far, it surely ought to be willing to amend the law so as to exempt taxes levied by any district to meet such expenses as would be deductible if incurred by farmers outside of such a district.

I am writing a similar letter to the other California Representatives whose districts contain irrigation districts and to Senators Phelan and Johnson; also to Representative Hawley, the Pacific coast Representative on the Ways and Means Committee. Let me suggest that the matter be considered by the California delegation and perhaps with delegations of other States having irrigation, reclamation, or drainage districts, and that such steps as may be deemed proper be taken to secure a modification of the commissioner's ruling or the amendment of the law, or perhaps both. Our association is to meet Saturday, June 29, to consider the matter, and I have asked Representative Raker to wire me before that time what seems the most feasible plan of action for us to take.

Very truly, yours,

A. L. COWELL.

STOCKTON, CAL., June 18, 1918.

HON. DANIEL ROPER,  
*Commissioner of Internal Revenue,  
Washington, D. C.*

DEAR SIR: I am in receipt of your letter of June 8 IT:PA—CEK, advising that the matter of assessments levied by irrigation districts has been fully reconsidered, and it has been decided that such assessments are not deductible for income-tax purposes, since they constitute assessments against local benefits.

Permit us to suggest that this ruling involves consequences which we are sure were never contemplated by Congress in the enactment of the income-tax law, and we therefore respectfully ask that further consideration be given to the matter to determine whether the wording of the law requires an interpretation which penalizes the farmers who have adopted the plan of public ownership of their irrigation facilities.

Take the cases of four farmers, Smith, Jones, Brown, and Black; all having irrigated farms. Smith is a member of a mutual-water company; Jones obtains water from a private corporation selling water for profit; Brown has a large pumping plant on his place; and Black is in an irrigation district. In computing their taxable incomes, Smith will deduct as business expenses the assessments which he pays to the mutual water company, Jones will deduct his water rates paid to the private corporation, and Brown will deduct the cost of operation and upkeep of his pumping plant and something for its depreciation. The payments by Smith and Jones will probably

go in part into funds for the payment of interest on bonds and for sinking funds to redeem those bonds, and if Brown has borrowed money to pay for his pumping plant he will deduct the interest paid on it. Why, then, should Black be denied the right to deduct similar amounts for the same kind of business expense merely because he pays for irrigation service in the form of taxes?

Under the law of California our irrigation districts may charge tolls for the use of water. Tulare district does this. Such tolls undoubtedly are deductible in computing net income. If the farmer in the Tulare district is allowed to deduct what he pays for irrigation service, why should the farmer in the neighboring Alta district, whose cost of similar service is covered by his district taxes, be denied the right to a similar deduction?

North of this city is a territory now served with water by a private corporation. A farmer in that territory would undoubtedly have the right to deduct from his income what he pays the corporation for the use of water, even though part of the payment goes to meet interest on the company's bonds and presumably to build up its sinking fund. It is proposed to organize an irrigation district in that territory and take over the private system. If that should be done, why should that farmer be denied the right to deduct the cost of the same service because he would then pay for it in taxes to the irrigation district?

That it was not the intention of Congress so to discriminate against the people of irrigation districts is evident from the fact that mutual nonprofit-making organizations are especially favored by exempting their incomes from taxation. Furthermore Congress in 1916, after providing for the deduction from incomes of taxes levied by counties, municipalities, or school districts, inserted the significant words "or other taxing subdivision of any State." We respectfully submit that your ruling leaves these words without any meaning, although in the act they are emphasized by the repetition of the conjunction "or." To what form of organization can these words refer except such subdivisions as irrigation, reclamation, and drainage districts, which unquestionably exercise the taxing power? It seems clear to us that Congress regarded the phrase, "not including those assessed against local benefits" as well understood to mean taxes levied to pay for permanent improvements designed to increase the value of certain land and assessed in accordance with the benefits supposed to be conferred on the property taxed. Such taxes were undoubtedly regarded as a part of invested capital or for the personal comfort and convenience of the taxpayer. But Congress, of course, knew that considerable portions of the levies made by such districts are not of that character, but are to meet administrative and operating expenses and interest on bonds, and that in some districts even taxes for constructing works are levied on an ad valorem basis, without any consideration of the benefits to individual holdings. Congress must have meant to allow the deduction of at least some such portions of the taxes levied by "other taxing subdivisions of any State," for only by so assuming can we conceive of any good reason for inserting in the law the words quoted.

In considering the deductibility of irrigation district taxes paid for interest on bonds, it does not seem to us to be material that income derived from interest on such bonds is not taxable. A farmer may borrow money for a pumping plant from a Federal farm loan bank or from a mutual savings bank or building and loan association, whose incomes are exempt from taxation, but that will not affect his right to deduct from his income the interest on the money so borrowed.

Therefore, as the rule is that in case of doubt, such statutes are to be construed in favor of the taxpayer, we respectfully urge that it is possible to construe the law so as to give effect to what seems to be the intent of Congress and so as to be consistent with the policy to encourage, and not to penalize, cooperative effort for increasing the productiveness of the soil.

I have been unable to obtain here a copy of Treasury Decision 2090, referred to in your letter, but have written to the collector at San Francisco for it. If there are any other opinions or rulings throwing light on the matter we should be glad to have them.

Respectfully,

A. L. CORNELL,  
Secretary.

JANUARY 8, 1914.

Hon. WILLIAM G. McADOO,  
Secretary of the Treasury Washington, D. C.

SIR: Referring to Treasury Decision No. 1910, relative to the bonds of irrigation districts and their liability under the income tax law, in behalf of the Irrigation Districts Association of California, we would respectfully request a reconsideration of the said decision, and in support thereof submit the following points and authorities.

## WHAT IS MEANT BY A POLITICAL DIVISION.

Assuming as correct the definition of a political division given in the case of *Smith v. Howell* (60 N. J. L., 384), as "A division of the State, with its inhabitants organized for the public advantage and not in the interest of particular individuals or classes, the chief design of which is the exercise of governmental functions, and to the electors residing within which is, to some extent, committed the power of local government." irrigation districts, as organized under the laws of California, come very clearly within such classification.

## OPINION OF CONGRESS.

In the first place, if we endeavor to ascertain the attitude of Congress itself toward such corporations, we find in section 14, paragraph b of the Federal reserve act, that irrigation districts are included among the political subdivisions the bonds of which Federal reserve banks are permitted to handle.

The declaration of both the Legislature and the Supreme Court of California are even more pronounced as to the political character of these irrigation districts.

## ANALYSIS OF ORGANIZATION OF FUNCTIONS OF IRRIGATION DISTRICTS.

Before, however, considering in detail the legislative acts and the court decisions in California, an analysis of the functions of a district may not be improper.

In the first place it should be borne in mind that in the arid States, where water is essential for the cultivation of the land, irrigation districts are created for the management of a utility necessary for the general welfare.

Second. These districts are not created strictly for a special purpose and for the special benefit of persons residing therein and owning property within such districts, but for the benefit of all persons residing in such districts, and the water itself is delivered, just as tuition in the district schools is delivered, to all residents of the district desiring the same, without cost other than the payment of the taxes levied upon all taxable property.

Third. Assessments are not made against local benefits, since all of the land within the district is assessed according to its actual value, and not according to the amount of water that may be used upon it. Indeed, land in cities and considerable unimproved land in parts of the districts must pay taxes for the support of the districts, though deriving no direct benefit from the use of water.

Fourth. The vote necessary to secure the issuance of bonds of irrigation districts, and also to organize such districts and elect the officers thereof, is not confined to the owners of real property, but such bond issues are determined, and such organization is effected and officers elected by all of the voters within the district possessing qualifications sufficient to entitle them to vote at the general State elections.

## LEGISLATIVE AND JUDICIAL DECLARATIONS.

Article 14, section 1, of the constitution of California, provides that the use of all water now appropriated, or that may hereafter be appropriated, etc., "is hereby declared to be a public use and subject to the regulation and control of the State."

Section 31 of article 4 of the constitution of California, as proposed to be amended by a resolution submitted to the people by the legislature in 1913, is a legislative declaration of the legislative understanding that California irrigation districts are "political subdivisions of the State." As the section stood prior to the proposed amendment, it provided that the legislature should not have power to authorize the State, or any political subdivision thereof, to subscribe for stock or to become a stockholder in any corporation. A proviso is added by the amendment as follows:

"*Provided further*, That an irrigation district, for the purpose of acquiring the control of any international water system, necessary for its uses and purposes, a part of which is situated in the United States and a part thereof in a foreign country, may in the manner authorized by law, acquire the stock of any foreign corporation which is the owner of, or which holds the title to, the part of such system situated in a foreign country."

This amendment was proposed for the purpose of permitting the Imperial irrigation district to acquire rights to a canal system constructed in Mexican territory.

The supreme court even more clearly has expressed its opinion of the political character of irrigation districts. In *Merchants Bank v. Escondido Irrigation District* (144 Cal., 333), in passing upon a section of the irrigation act which permitted the directors to hypothecate, as additional security for its bonds, the works of the district, the court used the following language.

"To convey, in addition to the legal title, the statutory powers of the board to the possession and management of the water system and other property of the district would be in contravention of section 13 of article 11 of the constitution, which forbids the delegation of such powers. Which provision, it can hardly be doubted, must (with section 12 of the same article) be construed as applying equally to public or municipal corporations of this character, as to ordinary municipalities or cities."

Section 12 referred to, provides that the legislature shall have no power to impose taxes upon counties, cities, towns, or other public or municipal corporations, and section 13 provides that the legislature shall not delegate to any special commission, etc., "any power to make, control, appropriate, supervise or in any way interfere with any county, city, town, or municipal improvement, money, property or effects."

This case also cites with approval the case *In re Madera Irrigation District* (92 Cal. 308) which is a leading case in California on irrigation districts. In that case the court uses the following language:

"Inasmuch as there is no restriction upon the power of the legislature to authorize the formation of such corporations for any public purpose whatever, and as when organized they are but mere agencies of the State in local government, \* \* \* in the present case the legislature has chosen to authorize the creation of a public corporation in the manner and with the form specified in the act under discussion. \* \* \* an election shall be ordered, at which, if two-thirds of the electors within the district shall vote in favor of such organization, the district shall thereafter be organized, \* \* \* the objection that this vote may be carried by a majority of those who have no interest in the lands affected thereby is but an incident and not of the essence of the matter. It is no more than exists in every popular vote which involves the creation of a municipal debt or the adoption of a municipal organization. \* \* \* Property qualification for voting either in amount or character is strictly forbidden by the Constitution. (Con., Art. I. sec. 24.) \* \* \* That an irrigation district organized under the act in question becomes a public corporation is evident from an examination of the mode of its organization, the purpose for which it is organized, and the powers conferred upon it. \* \* \* The district officers thus become public officers of the State. \* \* \* Under this power of taxation—one of the highest attributes of sovereignty—the title of the delinquent owner of real estate assessed may be divested by sale. \* \* \* Here are found the essential elements of a public corporation, none of which pertain to a private corporation. \* \* \* Its officers are public officers, chosen by the electors of the district and invested with public duties. Its object is for the good of the public and to promote the prosperity and welfare of the public."

It is to be noted that the court uses the language "that the districts are invested with the power of taxation, one of the highest attributes of sovereignty."

It should also be noted that the tax levied is not an assessment for benefits but an ad valorem tax levied upon all real property regardless of whether it is irrigated or not. *Tregoe v. Modesto Irrigation District* (88 Cal., 334). The organization is absolutely the same as the organization of a school district where all of the property owners, whether they have children or not, pay a tax to support the school which becomes free to all children who are residents of the district but of which privilege, of course, the taxpayer who has no children can not avail himself.

In the case of *Boehmer v. Big Rock Irrigation District* (117 Cal., 28), affirming the Madera case, the following language is quoted:

"An irrigation district organized under the Wright Act becomes a public corporation and its officers become public officers of the State."

These cases have been affirmed by a continuous line of decisions: *Fallbrook Irrigation District v. Bradley* (164 U. S., 112); *Pioneer Irrigation District v. Walker* (20 Idaho, 605; 119 Pac., 304); 3 *Kinney* on irrigation, section 1404 et seq.: "the districts are public corporations and political subdivisions of the State" (2 *Wiel*, p. 1255).

#### GENERAL CONSIDERATIONS.

Considerations of the purposes of the exemption in the income tax law and of the Federal authority as to taxation, as well as of questions of public policy, supports even more strongly the contention that the bonds of irrigation districts are not subject to taxation than do these very explicit legislative and judicial declarations.

The act itself provides that "there shall not be taxed under this section any income derived from any public utility or from the exercise of any essential governmental function accruing to any State, Territory," etc. Both as a matter of fact and as a matter of legislative recognition, in the arid and semiarid States, water is an absolute essential for the proper development of the agricultural resources, and, indeed, for

the obtaining of a mere subsistence from the land itself, and has been declared by California to be a public use, and its use and distribution certainly becomes a public utility.

RURAL MUNICIPALITIES V. URBAN MUNICIPALITIES.

If a city issues bonds for municipal waterworks, there is no question as to the exemption of such bonds, and it certainly would be a very strange, inequitable, and unjust construction which would say to the farmer, whose labor is really the backbone of national prosperity, that, while his brother in the city is favored by national legislation to the extent that no tax is levied upon the bonds which he may issue for water, yet the farmer must be taxed for the water which is necessary for the cultivation of his farm. The act also provides in substance that corporations not organized for profit are not subject in their stock or bonds to such income tax, and irrigation districts are not organized for profit. They are not only political and municipal or quasi-municipal organizations, but they are absolutely without the purpose of private profit, and clearly come within the spirit of the exemption in first proviso of paragraph G (a) of the income tax law.

The Federal Government has seen fit to loan to farmers in certain favored regions the money of the United States for the construction of irrigation works, even without interest, and yet here, where the farmers have taxed themselves to obtain water and are paying interest upon their securities, it is proposed that an added burden should be imposed upon them from which their brothers under the national reclamation act projects are exempt. While agitation is being made for an improved system of rural credit, much of the small credit which he is obtaining would be taken away from the farmer if this ruling is sustained.

In substance and effect the only difference between the bonds of irrigation districts and the bonds of cities is that the irrigation districts are rural municipalities, organized for the purpose of obtaining for rural communities the use of certain utilities, while city bonds are issued by urban communities for the purpose of obtaining for the residents therein the use of certain other utilities not in most cases as essential, and we submit that it is an entirely unjust and inequitable discrimination which would operate against the rural municipalities and in favor of the urban municipalities.

The State of California recognized the injustice of this and in section 1314 of article 13 of the constitution provided that the bonds of irrigation districts should not be subject to taxation. This section reads as follows:

"All bonds issued by the State of California, or by any county, city and county, municipal corporation or district (including school, \* \* \* and irrigation districts) within said State shall be free and exempt from taxation."

Here, again, we have the solemn declaration of the people of the State of California through its constitution that irrigation districts are municipal organizations or political subdivisions of the State.

It perhaps is not improper that the department should consider, on the grounds of justice, the long struggle which the farmers of the arid regions of western America have undergone in order to obtain for their land the water which is necessary and which has added wealth to the United States which is almost immeasurable, and the bulk of this work in the State of California has been carried on by the farmers themselves in the organization of these rural municipalities, where all of the expense and labor and cost has been borne by the residents of the districts. At this time, after the people of California are beginning to see the fruition of their hopes in the reclamation of the arid portions of their State through the instrumentality of these agencies of the Government, to impose this additional burden is a hardship for which there is no justification or reason, and we respectfully submit that in view of the authorities that have been cited and of the reasons that have been given and of the congressional interpretation which in the Federal reserve act has been placed upon such securities, we are justified in asking that the bonds of irrigation districts be held to come within the class of bonds exempt from taxation under the income-tax law.

Respectfully submitted.

E. N. PIERCE,

*Secretary Irrigation Districts Association of California.*

A. L. COWELL,

*Secretary San Joaquin Valley Water Problem Association.*

L. L. DENNETT,

*Attorney for South San Joaquin and the  
Waterford Irrigation Districts.*

BRIEF FILED WITH SECRETARY OF TREASURY BY C. F. CURRY, JANUARY, 1914.

The Solicitor of Internal Revenue's attention is called to the fact that reclamation districts being authorized by the laws of California are duly authorized agencies. Also the law that the authorized act of an agent is the act of its principal, to wit: the State; and that these reclamation bonds are, in fact, the act of the State of California.

His attention is also called to the fact that the decisions of the highest courts of California defining and explaining these reclamation districts are the construction of the highest court of that State of a statute thereof, and that even the Supreme Court of the United States considers itself bound by the construction of the highest court of a State of the statute of that State. His attention is called to the fact that the highest courts of California have construed these reclamation districts as agencies authorized and created by the State, and that these decisions have been followed and approved and made part of such decisions of the Federal courts as have had occasion to construe or consider the statute of these reclamation districts.

It is submitted that these reclamation districts are utilities of the State of California and the coupons attached to the bonds, evidencing the interest thereon, are issued by the treasurer of the several counties of the State wherein the reclamation districts are located.

The Federal courts of California hold they are agencies and State utilities, and these Federal decisions approve, adopt, and cite as parts of their own opinions various opinions of the highest State court of California.

The bonds and coupons are issued by the State as they are issued by a legally declared political agency of the State.

The State of California is greatly interested in the income from these bonds being not taxed that they may have the advantage the income law gave them in paragraph "G," and which will enable their being marketed and of which they are in great need.

I respectfully request this brief may be carefully considered before any further action is taken, and suggest that in view of the fact that the interests of the sovereign State of California are involved that the matter should properly have the consideration of the Attorney General if you do not think the income from these bonds are exempt from tax.

A copy of the sections of the Political Code of California under which these bonds are issued you will find in a brief of Mr. Gregory transmitted by your collector.

Referring to the case of State of South Carolina v. United States (199 U. S., 437), the question now presented is not whether the Government can tax by internal-revenue taxation the utilities of a State. This question is not presented for the reason that by section G it is provided that "there shall not be taxed under this section any income derived from any public utility."

And, further, this case is illuminating as showing that these reclamation districts are utilities and State governmental functions and should not be taxed, as Justice Brewer therein cites with approval the doctrine of United States v. Baltimore & Ohio Railroad Co. (17 Wall., 332).

"The rights of the States to administer their own affairs through their legislative, executive, and judicial departments is conceded by the uniform decisions of this court and by the practice of the Federal Government from its organization. This carries with it an exemption of those agencies and instruments from the taxing power of the Federal Government."

Justice Brewer says, further: "These decisions, while not controlling the question before us, indicates that the thought has been that the exemption of State agencies and instrumentalities from national taxation is limited to those which are of a strictly governmental character and does not extend to those which are used by the State in carrying on an ordinary private business." (South Carolina v. United States, 199 U. S., 461.)

Justice Brewer further says the well established distinction between duties of a public character and those which relate to what may be considered their private business is their different responsibility for negligence. "The distinction is well established between the responsibilities for acts done in their public capacity, in the discharge of duties imposed upon them by the legislature for the public benefit, and for acts done in what may be called their private character." (South Carolina v. United States, supra.)

The test has been if the acts were of a public character the municipal corporation—or agency—could not be sued for negligence, and if the corporate functions or agency was of a private character or for its benefit or profit it could be, and in all the cases of the Federal as well as State courts it is seen that these reclamation districts can not

be sued because they are public agencies; and under the reasoning and decision of Mr. Justice Brewer they could not be taxed—even had Congress enacted they should be, instead of expressly exempting them therefrom. (St. Louis Southwestern Ry. Co. v. Board of Directors of Miller Levee District No. 2; 207 Fed., 338.)

"A state, under its general governmental powers, has the right, directly or through the agency of levee districts created for the purpose, to build levees to protect land from overflow; and such structures create no liability for consequential damages caused thereby to private property by reason of any provision of the National Constitution."

Sanborn and Carland, circuit judges, and Willard, district judge.

"The public object which the State might legally accomplish was the prevention of the overflow. The means employed were the levees."

Now the only income from these reclamation districts is the coupons or interest on their bonds, and these can not be taxed under the exemption. Income in the law does not necessarily mean earnings as an income from a State, or a political subdivision thereof, may be derived from its power to enforce payments through taxation rather than in the restricted returns from physical and mental labor or investments as in the case of natural persons.

These reclamation districts are similar to where the United States condemned lands for the Plaza near the Capitol in this city or for public parks and pays for them one half out of the Treasury and the other half out of the revenues of the District of Columbia, and which is compensated by taxation on abutting property supposed to be benefited thereby. If the United States and the District of Columbia were not in funds, as is not the State of California, and issued bonds, with coupons thereto attached, would these coupons be taxable? They certainly would not, whether the bonds were issued by the District Commissioners or any other agency elective or appointive that might be selected to issue the bonds to raise the money to pay therefor.

Section G of the law provides:

"That there shall not be taxed under this section any income derived from any public utility or from the exercise of any essential governmental function accruing to any State, Territory, or the District of Columbia, or any political subdivision of a State \* \* \*

The Federal courts of the United States have analyzed and defined what a reclamation district is and in such decisions have quoted and adopted the decisions of the State courts of California explaining and defining the nature of these reclamation districts. They have held that the reclamation districts are public agencies and the interest on the bonds, the income therefrom, are derived from such tax district and are paid by the county officers wherein the several reclamation districts are located, and come out of the exercise of the State of one of its public agencies and from an essential function accruing to the State—to increase its income by reclaiming waste land and making it more valuable for State taxation purposes.

Upward of \$30,000,000 worth of land have been made taxable through this agency, and twice that much is now contemplated being done additionally.

The increased value to the reclaimed land is paid for by taxation upon the land benefited by the owners thereof, but the State, not having the money in hand to make the improvements at once and render the land more valuable to it for taxation, has authorized the issuance of the bonds by a public agency it has created, and the owners of the bonds derive their income from and through such agency.

Political Code of California, section 3480:

"The board of trustees of the district shall cause bonds in the amount stated in the order for the election to be executed and delivered, together with the assessment list, to the treasurer of the county in which the greater portion of the lands of said district is situated.

\* \* \* \* \*

"They shall be signed by the president of the board of trustees of the district and attested by the county auditor of said county.

"Coupons for each installment of interest shall be attached to said bonds \* \* \* and attested by the facsimile signature of the county auditor.

"The coupon for the interest or income from these bonds is the promise that the treasurer of \_\_\_\_\_ County, California, will pay the holder hereof \* \* \*,"

"The treasurer of said county \* \* \* shall \* \* \* any of said bonds \* \* \*"

"Before making a sale of said bonds, notice shall be given by the county treasurer that he will sell a specified amount of said bonds.

"Any money derived from the sale of said bonds by said county treasurer shall be placed in the treasury to the credit of said district."

It should be noted here that the coupons are attached to and sold with and at the time the bonds are sold.

The improvements are done under the direction, supervision, and approval of United States Army Engineers and the purposes of the improvements and the operations of the reclamation districts are not only to enhance the land in value for increased State taxation, but to have the work performed in such manner that it will preserve and increase the navigability of the Sacramento and San Joaquin Rivers; prevent the destruction or loss in value of other lands outside the reclamation district; and coincide with the operations of the California Débris Commission, created by Congress and the State of California.

The United States Circuit Court of California says that a district organized under the Political Code of California (3440-3491) for the reclamation of swamp and overflowed lands, is a public agency.

*Sells v. Greene* (88 Fed., 129). Morrow, circuit judge:

"Reclamation districts organized under the provisions of the Political Code of California (secs. 3440-3491, inclusive), while performing in a sense, public functions, in the reclamation of swamp and overflowed lands, are not public municipal corporations. It may even be doubted whether they may be termed, with absolute accuracy, 'quasi public corporations.' They appear to be more properly designated as 'public agencies' for certain particular purposes, to wit, reclamation of swamp and overflowed land. The nature and functions of reclamation districts organized under the provisions of the political code of the State have been carefully considered by the supreme court of the State in *People v. Reclamation District No. 551*, (117 Cal., 114; 48 Pac., 1016), the same district proceeded against in the case at bar, and in *Hensley v. Reclamation District 53* (Pac., 401). In the case last cited it was said:

"They [reclamation districts] have been called 'quasi public corporations.' They are at least 'public agencies.' (Citing *People v. Reclamation District No. 551*, 117 Cal., 114; 48 Pac., 1016.) But, if considered corporations, they have only such powers and have only such liabilities as are prescribed by the law which creates them. They are not corporations organized under the civil code. Their characters are determined by the provisions of the political code, from which they derive whatever legal existence they have. The law which creates them does not anywhere provide that they may be sued, and they can sue only for one purpose; that is, to collect the assessments. There is no provision for perpetual succession, and there are only two or three usual powers of a corporation granted them \* \* \*

"\* \* \* No reason occurs to me why the trustees can not be enjoined and a proper case be made out against them. They are the representatives of the district—the public agents, so to speak—under whose authority and supervision the work of reclamation is carried on after the district is organized."

*Sells v. Greene* (81 Fed., 555), circuit court, N. D. Cal., 1897. Morrow, circuit judge:

"It is not disputed that a reclamation district is, under the laws and decisions of the State of California, a corporation of a quasi public character. See sections 3446, et seq. Pol. Code Cal.; *Dean v. Davis*, 51 Cal., 406; *People v. Reclamation District No. 108*, 53 Cal., 346; *People v. Williams*, 56 Cal., 647; *Lamb v. Reclamation District No. 108*, 73 Cal., 125; 14 Pac., 625; *Elmore v. Drainage Comrs.*, 135 Ill., 269; 25 N. E., 1010."

*Sells v. Greene* (81 Fed., 557). Morrow, circuit judge:

"Reclamation districts, like drainage districts, are for the purpose of 'the reclamation of large bodies of swamp and overflowed lands, and their consequent improvement is justly to be regarded as a matter of public concern.'" (*Elmore v. Drainage Comrs.*, 135 Ill., 275; 25 N. E., 1011.)

*Rec. Dist. v. Hagar*, 4 F., 366, affirmed.

*Hagar v. Rec. Dist.*, 108, 111 U. S., 701:

"A reclamation district being under the law of California a corporation of a quasi public character, is not liable to a private action for negligence in the performance of its duties, or for a nuisance." *Sells v. Greene* (C. C.), 81 F., 555.

*Bates County, Mo., v. Wills* (111 C. C. A., 358). Munger, district judge:

"Viewing the legislation of the State relative to these drainage districts, we think it is apparent that drainage districts were merely political subdivisions of the county for the special purposes of drainage and were not at the time the contract was entered into created corporations capable of suing and being sued."

*Dillon on corporations* (5th Ed., 63):

"In California a swamp-land reclamation district is a public corporation for municipal purposes." (Citing *Dean v. Davis*, 51 Cal., 406, 410; *People v. Reclamation Districts*, 53 Cal., 346; *People v. Williams*, 56 Cal. 6 and 7; *Hoke v. Perdue*, 67 Cal., 526.)

"A levee district organized under the laws of California to construct works for preventing portions of the territory from overflow, and clothed with powers, for this purpose, to issue bonds, levy and collect assessments, construct and repair highways, open canals, etc., is a public corporation." (Dean v. Davis, 51 Cal., 406.)

"Reclamation districts are public corporations." (People v. Williams, 56 Cal., 647.)

People v. Reclamation District No. 551 (117 Cal., 121):

"Certainly, these districts were not municipal corporations, as that term is used in the constitution, and I think it equally clear that they do not belong to any class of corporations defined in the Civil Code. Section 284 reads: 'Corporations are either public or private. Public corporations are formed or organized for the government of a portion of the State. All other corporations are private.'"

"These districts, in my opinion, belonged to neither of these classes. They are special organizations, formed to perform certain work, which the policy of the State requires or permits to be done, and to which the State has given a certain degree of discretion in making the improvements contemplated. They are described by Dillon in his work on Municipal Corporations, sections 24, 25, and 26. He calls them quasi corporations. Perhaps it would have been more accurate to say that they are not corporations at all, but are so classed because many of the presumptions and rules which apply to corporations have been made applicable to them. There are public agencies which would cease to exist when the policy of the State has changed so that they are no longer required, or when there is no further function for them to perform. And there is nothing in the constitution relating to municipal corporations which would prevent the State from so changing its policy as to put them out of existence."

Reclamation District No. 551 v. County of Sacramento (134 Cal., 478):

"The sole question presented is, whether property acquired by reclamation district is necessary and indispensable to the execution of its objects, is subject to taxation for State and county purposes. Section 1 of article 13 of the constitution declares that 'all property in the State, not exempt under the laws of the United States, shall be taxed in proportion to its value—provided—(that) property used exclusively for public schools, and such as may belong to the United States, this State, or to any county or municipal corporation within this State, shall be exempt from taxation.'"

"Appellant's contention is that a reclamation district is not a municipal corporation, hence its property does not fall within the exceptions of the above provision of the constitution. Plaintiff was organized under the provisions of section 3446 et seq. of the Political Code. It was held in People v. Reclamation District No. 551 (117 Cal., 114), that these districts are not municipal corporations, as that term is used in the constitution nor do they come within the classes of corporations defined by section 284 of the Civil Code. It was said: 'They are special organizations, formed to perform certain work which the policy of the State requires or permits to be done, and to which the State has given a certain degree of discretion in making the improvements contemplated.' Again: 'They are public agencies, which would cease to exist when the policy of the State has changed so that they are no longer required, or when there is no further function for them to perform.'"

"Referring to Mr. Dillon's designation of them as quasi corporations, it was said 'Perhaps it would be more accurate to say that they are not corporations at all.' Hensley v. Reclamation District No. 556 (121 Calif., 96), was an action against the district for damages sounding in tort. It was held that the action would not lie: that these districts 'have only such powers and have only such liabilities as are prescribed by the law which creates them. \* \* \* Their characteristics are determined by the provisions of the Political Code, from which they derive whatever legal existence they have. The law which creates them does not anywhere provide that they may be sued.' It was held that a judgment could not be enforced against a district, for 'it has no property out of which a judgment could be satisfied. It is, in its essential character, a mere agency.' \* \* \*

"It is not necessary to hold this property, thus created, to be the property of a municipal corporation in order to make it exempt from taxes. It would be sufficient to hold that it is public property of the State within the meaning of the constitution. The whole scheme of reclamation originates with the State and it is carried to conclusion by agencies of the State—the district, as we have already seen, being a public agency—in furtherance of public policy."

Swamp land, etc., District 341 v. Blumenberg (156 Calif., 537):

"A district which, though not a municipal corporation, is at least a public corporation performing some of the functions of government for the local territory interested."

"Expressions will be found in cases where such organizations have been designated 'corporations for municipal purposes,' or 'public corporations,' or 'corporations for public purposes,' but these were convenient phrases or designations, and descriptive

rather than judicial declarations, as to the nature and character of these agencies. The question is conclusively answered by *People v. Reclamation District No. 551* (117 (alif., 114). It is held that the Reclamation District, considering it to be a corporation, is not a corporation for municipal purposes within the meaning of the constitution, but as such Levee District or Reclamation District, are distinctly not private corporations, it must follow that, if they be corporations, they are corporations in a class by themselves and the general powers of the legislature for their creation, organization, and control are in no wise limited by the constitution of the State."

*Reclamation District No. 70 v Sherman* (11 Cal., App. 400) "Reclamation districts are governmental agencies which may be formed and organized by special act; and the general power of the legislature for their creation, organization, and control is not limited by the constitution of the State. They are formed to carry out a specific purpose."

*People v. Reclamation District No. 108* (53 Cal., 349), "a corporation of this character is, as already stated, a public corporation. Such a corporation can be created not only by the means and in the manner provided by the general law, but also by special act, or by implication of law."

If any bond shall not be presented for payment when the same becomes due, it shall cease to draw interest, but, if presented at such time and not paid for want of funds, the said county treasurer shall so indorse it and thereafter such bond shall draw interest until paid at the rate of 6 per cent per annum, compounded semiannually, until funds shall have been provided for its payment, which bonds shall be substantially in the following form:

"No. .... Reclamation District No. .... in the county of ....., State of California. For value received, promises to pay the holder hereof, at the office of the treasurer of said county, on the first day of ....., 19... the sum of ..... dollars, in gold coin of the United States, with interest in like gold coin at the rate of 6 per cent per annum, payable at the office of said treasurer semiannually, on the first day of January and July in each year, on presentation and surrender of the interest coupons hereto attached. This bond is issued by authority of section thirty-four hundred and eighty of the Political Code of the State of California, pursuant to an election held in said reclamation district on the ..... day of ....., nineteen hundred and ....., authorizing its issuance, and is based upon an assessment levied in said district and filed in the office of the county treasurer of said county on the ..... day of ....., 19...

"In testimony whereof, the said district, by its board of trustees, has caused this bond to be signed by the president of said board, and attested by the auditor of said county, with his seal of office attached, this \_\_\_\_\_ day of \_\_\_\_\_, 19—.

"\_\_\_\_\_  
President of said board.

"Attest:

"\_\_\_\_\_  
Auditor of \_\_\_\_\_ County."

And the interest coupons shall be in substantially the following form:

"No. \_\_\_\_\_  
The treasurer of \_\_\_\_\_ County, California, will pay the holder hereof, on the \_\_\_\_\_ day of \_\_\_\_\_, 19—, at his office in \_\_\_\_\_, \_\_\_\_\_ dollars, gold coin, out of the funds of Reclamation District No. \_\_\_\_\_ for interest on bond numbered \_\_\_\_\_ of said district.

"Attest:

"\_\_\_\_\_  
County Auditor."

INCOME TAX—SPECIAL ASSESSMENT DISTRICTS.

DEPARTMENT OF JUSTICE,  
January 30, 1914.

SIR: In your letter of the 8th instant you requested an expression of opinion on certain questions arising in the administration of your department in connection with the interpretation of the proviso contained in paragraph B, section 2, of the revenue act approved October 3, 1913 (the income-tax law), which reads as follows:

"That in computing net income there shall be excluded interest upon the obligations of a State or any political subdivision thereof."

In substance, your question is whether special assessment districts created under the laws of the several States for the purpose of the improvement of streets and public highways, the provision of sewerage, gas, light, and the reclamation, drainage, or

irrigation of considerable bodies of land within the same are "political subdivisions" of the State within the meaning of the above proviso.

I can not, of course, undertake to pass upon any particular obligation of any specific district of the character referred to. I confine myself to a statement of the principles of law involved, leaving to you the application thereof to specific cases.

The term "political subdivision" is broad and comprehensive and denotes any division of the State made by the proper authorities thereof, acting within their constitutional powers, for the purpose of carrying out a portion of those functions of the State which by long usage and the inherent necessities of Government have always been regarded as public. The words "political" and "public" are synonymous in this connection. (Dillon Municipal Corporations, 5th ed., sec. 34.) It is not necessary that such legally constituted "division" should exercise all the functions of the State of this character. It is sufficient if it be authorized to exercise a portion of them. Otherwise the principal advantage sought in making such subdivisions would not be attained. Counties, townships, wards, precincts, all lack something of the fullness of the State itself, and are created to give local government in minor matters to a particular district.

If, then the special assessment districts, to which you refer be lawfully created by a State for the purpose of exercising a portion of its public functions so defined, they are "political subdivisions thereof."

As indicated by the term "special assessment districts," these divisions are given the power of taxation—perhaps the most important power possessed by the State. A tax can only be laid for a public purpose (*Loan Association v. Topeka*, 20 Wall., 655), and therefore, where the power to levy a tax is given a district by the State, presumptively that district is created for a public use and is exercising a public function. (*Burington v. Beasley*, 94 U. S., 310; *Blair v. Cuming County*, 111 U. S., 363, 373; *Perry v. Keene*, 56 N. H., 514.) In *Blair v. Cuming County*, supra, the court said:

"And when the legislature has given to gristmills and the water-power connected with them such a public character as in the present case, the improvement of the water power must be regarded as a public work of internal improvement, which may be aided in its construction by the issue of bonds under the act in question."

Nor does it make any difference that the tax is measured by the benefit conferred. A man can not be compelled to pay money, even to benefit himself, and in special assessments based on benefits the question is still preliminary and vital whether the tax has been assessed for a public purpose or not.

Undoubtedly, the legislature might attempt to grant the power of taxation to a district for purposes purely private, but every presumption is against a construction to that effect, and it should not be indulged where the purposes for which the power of taxation is granted have by long usage been treated as public and have been sustained as such by the State courts.

The purposes to which you refer, namely, the improvement of streets and public highways, the provision of sewerage, gas, and lights, the reclamation, drainage, and irrigation of considerable districts of land are clearly public and have always been so treated.

In *Davidson v. New Orleans* (96 U. S., 97, 104) a special drainage law of Louisiana was sustained as providing for "a tax, assessment, servitude, or other burden" "imposed upon property for the public use, whether it be for the whole State or of some more limited portion of the community."

In *County of Mobile v. Kimball* (102 U. S., 691) the act creating a harbor board for the improvement of Mobile Harbor and authorizing taxation therefor was sustained as contemplating a public work.

In *Hagar v. Reclamation District* (111 U. S. 701, 704, 705) the reclamation act of California was sustained, the court saying:

"It is not open to doubt that it is in the power of the State to require local improvements to be made which are essential to the health and prosperity of any community within its borders. To this end it may provide for the construction of canals for draining marshy and malarious districts, and of levees to prevent inundations, as well as for the opening of streets in cities and of roads in the country. The system adopted in California to reclaim swamp and overflowed lands by forming districts, where the lands are susceptible of reclamation in one mode, is not essentially different from that of other States, where lands of that description are found. The fact that the lands may be situated in more than one county, can not affect the power of the State to delegate authority for the establishment of a reclamation district to the supervisors of the county containing the greater part of the lands. Such authority may be lodged in any board or tribunal which the legislature may designate.

"In some States the reclamation is made by building levees on the banks of streams which are subject to overflow; in other States by ditches to carry off the surplus water.

Levees or embankments are necessary to protect lands on the lower Mississippi against annual inundations. The expense of such works may be charged against parties specially benefited, and be made a lien upon their property. All that is required in such cases is that the charges shall be apportioned in some just and reasonable mode, according to the benefit received."

In *Wurts v. Hoagland* (114 U. S., 606, 614) the drainage act of New Jersey was sustained as being "a just and constitutional exercise of the power of the legislature to establish regulations by which adjoining lands held by various owners in severalty, and in the improvement of which all have a common interest, but which, by reason of the peculiar natural condition of the whole tract can not be improved or enjoyed by any of them without the concurrence of all, may be reclaimed and made useful to all at their joint expense."

In *Essex Public Road Board v. Skinkle* (140 U. S., 334, 339) the court made the following statement concerning a board created by the legislature of New Jersey to construct roads in a certain county:

"The public road board was an involuntary quasi corporation, created to construct a public work and authorized to procure the means to accomplish the improvement by the imposition of assessments upon private property. It was purely a governmental agency, existing wholly for public purposes, and whose interests belonged exclusively to the public."

In *Fallbrook Irrigation District v. Bradley* (164 U. S., 112, 161) the California irrigation law was upheld, the court saying:

"It is not essential that the entire community or even any considerable portion thereof should directly enjoy or participate in an improvement in order to constitute a public use."

In *New Orleans Gas Company v. Drainage Commission* (197 U. S., 453, 460) the Supreme Court held that a drainage commission was an agency of the State, and as such possesses its police powers; and said:

"The drainage of a city in the interest of the public health and welfare is one of the most important purposes for which the police power can be exercised. The drainage commission, in carrying out this important work, it has been held by the supreme court of the State, is engaged in the execution of the police power of the State."

In *Railway Company v. Drainage Commissioners* (200 U. S., 561, 592), the drainage commission of the State of Illinois was permitted, incidental to its operations, to cause a change of a bridge of a railroad without compensation, the court saying:

"We hold that the police power of a State embraces regulations designed to promote the public convenience or the general prosperity, as well as regulations designed to promote the public health, the public morals, or the public safety."

In *Little v. Williams* (231 U. S., 335) the Supreme Court held that a levee district in Arkansas which had an imperfect title from the State was bound by the subsequent action of the State affecting that title, saying:

"The district was a mere political subdivision of the State, created by the latter and invested with authority to construct and maintain levees to protect lands within its limits from overflow by the waters of the Mississippi River and to levy and collect taxes and take other measures to that end. (Laws Ark., 1893, pp. 24, 119.) It was essentially a subordinate agency of the State, was exercising a power of the State for its convenience, could have no will contrary to the will of the State, held its property and revenue for public purposes, and was in all respects subject to the State's paramount authority. In view of this relation, we are quite clear that the State's action was binding upon the district, and that the latter could not, by its subsequent deed to the plaintiff, invest her with a title which it no longer possessed."

And this decision was followed in the case of *Chapman & Dewey Lumber Co. v. St. Francis Levee District*, decided by the Supreme Court of the United States on the 26th instant, where the language of the supreme court of Arkansas in *Carson v. St. Francis Levee District* (59 Ark.), at pages 533 to 535, is referred to with approval.

These decisions establish that districts lawfully created by the State for the purpose of constructing works of the character referred to above, and of levying a tax therefor, are portions of the State itself, invested with a part of its sovereign functions, and are therefore political subdivisions thereof. \*

The decisions of the supreme courts of the several States have been very carefully examined, and it has been found that their conclusions are uniformly in accord. It would stretch this opinion to undue length to refer to them in detail. They may be found in *Dillon. Municipal Corporations* (5th ed., sec. 34, note 3) and *Page and Jones on Taxation by Assessment* (sec. 233).

In many of these decisions irrigation districts and the like are referred to expressly or substantially as "political subdivisions"; for example, *Carson v. St. Francis Levee District* (59 Ark., 513, 534); *Land and Stock Company v. Miller* (170 Mo., 240, 253);

Cook v. Port of Portland (20 Oreg., 580, 588); Wharton County Drainage District v Higbee (149 S. W. Rep., 381, 387); Reed v. Claypool Drainage and Levee District (122 Fed., 207, 211); People v. Hepler (240 Ill., 196, 199).

The case of State v. Englewood (41 N. J. L., 154), has been cited as determining that a special assessment district is not a political subdivision of the State unless it coincides with a recognized unit of local government, such as a county, township, or city, but this case must be read in connection with Essex Public Road Board v. Skinkle (49 N. J. L., 641, 670, 671), where the court said of the board:

"It may properly be termed a quasi corporation, whose functions are wholly of a public nature, and having corporate powers only for certain specified purposes. Such a corporation is a mere agent, employed as part of the machinery of government, to aid in carrying on a portion of its affairs of a local nature," and with Smith v. Howell (60 N. J. L., 384), where a street lighting district was held to be a political division of the State. So in a case in the court of errors, Van Cleve v. Passaic Valley Sewerage Commissioners (71 N. J. L., 574, 585) the court, while holding the assessment invalid because levied on territory outside the district, said:

"If, for instance, as was suggested by the arguments before us, powers adequate to the execution of the legislative scheme of drainage were conferred upon the entire area to be taxed, and duties respecting the exercise of such powers constitutionally imposed in such manner as indicated that their exercise was compulsory, a question not touched upon in this opinion would be presented."

The law of New Jersey, therefore, does not seem to differ from that of the other States as to the character of special assessment districts—at any rate, where the assessments do not exceed the benefit conferred.

In my opinion, therefore, the special assessment districts of the character referred to above, when lawfully created under the authority of the State, are "political subdivisions" thereof; but I desire carefully to refrain from expressing any opinion whether assessment districts might not be created for a purely private purpose so as to bring them within the principles laid down in the South Carolina Dispensary case (199 U. S., 437), rather than within those which governed United States v. Railroad Company (17 Wall., 322).

I have the honor to be, your obedient servant,

J. C. McREYNOLDS.

To the SECRETARY OF THE TREASURY.

(T. D. 1946.)

#### INCOME TAX.

Special assessment districts created under the laws of the several States for public purposes, such as the improvement of streets and public highways, the provision of sewerage, gas and light, and the reclamation, drainage, or irrigation of bodies of land, and levee and school districts are held to be political subdivisions of a State.

TREASURY DEPARTMENT,  
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,  
Washington, D. C., February 10, 1914.

To collectors of internal revenue:

Referring to paragraph B, section 2 of the income-tax law, which reads as follows: "That in computing net income there shall be excluded interest upon the obligations of a State or any political subdivision thereof," you are informed that under date of January 30, 1914, the honorable, the Attorney General, held that special assessment districts created under the laws of the several States for public purposes, such as the improvement of streets and public highways, the provision for sewerage, gas and light, and the reclamation, drainage, or irrigation of bodies of land within such special assessment districts when such districts are for public use, are political subdivisions of the State within the meaning of the above proviso.

It is held that the term "political subdivision" includes special assessment districts or divisions of a State created by the proper authority of the State acting within its constitutional powers and under its general laws, for the purpose of carrying out a portion of those functions of the State which by long usage and inherent necessities of government have always been regarded as public.

Levee and school districts, when lawfully created under the authority of the State and which are authorized by the laws of the State to levy a tax to meet the obligations of such districts, are also held to be political subdivisions of a State within the meaning of the income-tax law.

The income derived from interest upon the obligations of all such public districts shall, therefore, be excluded in computing net income for the income tax.

This decision supersedes Treasury Decision 1910.

W. H. OSBORN,  
*Commissioner.*

Approved:

C. S. HAMLIN,  
*Acting Secretary.*

The CHAIRMAN. Without objection, the statement of Mr. Van Derlip and Mr. Stevens will be printed in the hearing.  
(The statement referred to follows:)

STATEMENT SUBMITTED TO THE WAYS AND MEANS COMMITTEE OF THE HOUSE OF REPRESENTATIVES SUGGESTING MODIFICATIONS OF THE EXISTING REVENUE LAWS RELATIVE TO THE PROVISIONS (a) ALLOWING DEDUCTIONS FROM GROSS INCOMES FOR DEPLETION OF MINES IN CONNECTION WITH TAXES UPON CORPORATE INCOMES, AND (b) DEFINING "INVESTED CAPITAL" IN CONNECTION WITH TAXES UPON EXCESS PROFITS.

[By John R. Van Derlip, Frederick C. Stevens.]

This statement is submitted in behalf of various independent owners and producers of iron ores on the ranges constituting what is commonly referred to as the Lake Superior Iron Ore District in the States of Michigan, Wisconsin, and Minnesota; yet, while it is submitted primarily and directly at the instance of such owners and producers, its chief purpose is to aid the committee, if possible, in arriving at and formulating a law which will be just in its operation, both to the Government and to all business interests and business investments.

By the term "independent owners and producers" is meant those who own and produce ore, or who own ore produced by others, for sale in the market; as distinguished from those whose ore output is not sold as raw material, but who mine ores principally for their own consumption in the manufacture of pig iron, steel, and many forms of fabricated steel products.

#### THE INTERESTS AFFECTED.

The iron interests affected by the legislation herein suggested are enormous in their geographical as well as in their material extent. They embrace not only the Lake Superior ore bodies, but extensive iron ore bodies in the Southeastern States and in other parts of the United States. The legislation affects also other important groups of mineral deposits such as the coal deposits of the eastern, southeastern, central, and southwestern portions of the United States; the lead and zinc deposits of the Mississippi Valley, and in fact the greater part of all of the mineral resources of the United States. As respects iron ore, these deposits constitute the great reserves of the Nation; and, in the existing exigency, with its tremendous requirement of iron ore, they should be rendered available for immediate production, unhampered by every unnecessary and justly avoidable tax restriction; while the opening and developing to productive capacity of the other mineral deposits, above mentioned, in the United States, are of immediate and vital importance to the country.

#### ENCOURAGEMENT OF NEW MINES.

The amendments herein proposed will aid especially in clearing up the difficult problems to be faced in the development and operation of new domestic deposits required by the restriction of imports, particularly the manganese and graphite deposits of the southeastern United States and the chromite deposits of California. Up to this time, these last-named ores have been obtained in great part from foreign sources which can no longer be looked to on account of lack of available ships; so reliance must now be placed to a very large degree upon domestic sources for the requisite supplies of these essential elements in the production of ordnance, ammunition, and other fabrications demanded by the necessities of the Government and the general public. The deposits of these ores occur in small and scattered bodies and are capable of being operated only in a limited way. Furthermore, any undue restriction, by an inaccurate system of taxation which discourages the continued operation at fullest capacity of the underground mines, will have the double effect of reducing the available supply in the market of iron ore and of discouraging the searching out, exploring, and development of possible new mineral territory. Such exploration and development are the most hazardous features of the business, yet they are of the utmost importance, because they are the foundation for the future maintenance and expansion of the iron and steel business in the United States.

## THE PRESENT SITUATION.

The situation to-day in the iron mining industry is very precarious. The Government has entered upon an era of practical sequestration, just announced, of the entire steel output of the country (which will necessitate the use of all iron ores produced in the United States), to be used for its purposes and to be distributed in accordance with its requirements. The market prices for iron ores have for some months past been fixed by the Government, and the prices at which they can be sold hereafter will be named by it. The Lake Superior iron district in 1917 shipped 64,500,000 gross tons of iron-ore. Of this amount 48 per cent (about 32,000,000 tons) came from underground mines, and 52 per cent from open-pit mines, where steam shovels load the ore directly into railroad cars. Of the 32,000,000 tons of ore derived from underground mines approximately 20,000,000 tons are mined and sold by the independent operators.

On account of war conditions the labor supply has been much reduced, resulting in a materially lessened production. During the past year the labor cost per ton, which constitutes about two-thirds of the mining cost, has more than doubled, and the other one-third of such cost, covering fuel, explosives, machinery, lubricants, etc., has increased in varying percentages from 30 per cent up to 120 per cent. The recent advancement of freight rates has likewise added to the burden of costs to be paid out of the fixed market price of iron ores, and as a consequence some of the underground mines in the Lake Superior district have already closed down and others will follow.

The foregoing statements are the result of painstaking calculations by expert mining accountants and managers, and data in relation thereto can be found in and the statements herein made will be verified by documents on file in the office of the price-fixing committee of iron and steel of the War Industries Board.

One other consideration is important. The ore from the underground mines is superior in chemical and physical qualities to that taken from the open-pit mines and is the basis for all blast-furnace practice. Any substantial curtailment, therefore, in the production of the underground ores means not alone a lessening of available raw material, but a serious interference with the use of the other ores and with the production of pig iron which is made from the combined ores.

## WHY AMENDMENT NECESSARY.

The theory of the income-tax laws, and a purpose of the Congress in their exemptions, were to secure to business men the return of their invested capital tax free, while imposing upon all income, gain, and profits derived therefrom both income and excess-profits taxes.

But the laws as they now stand have laid upon business men and corporations, and especially upon mine owners, burdens which have seriously handicapped and will in the future affect even more disastrously their undertakings and markedly the operations of mines and the output of essential ores, in consequence of which the revenues that the Government might reasonably anticipate from the earnings of mines will be correspondingly decreased.

These dangers arise—

First. By reason of the inadequacy of the provisions relating to deductions from gross income allowed for depletion of mines, found in paragraph eighth of section 5 (a) and paragraph second of section 12 (a) of the income-tax law of September 8, 1916 (which provisions are practically identical in form).

Second. Because of the limitations of the definition of "invested capital" appearing in section 207 of the excess-profits tax law of October 3, 1917.

In detail, the defects complained of are:

1. A failure to recognize that royalties paid to mine owners, for ores disposed of under mining leases or other forms of contracts, in advance of mining and removing the ores, represent a conversion of invested capital. On the contrary, as the law has been construed and applied, such advance payments have been regarded by the Government as income and subject to income and excess-profits taxes; and, to the extent of such advance payments, the mine owner has been prevented from receiving back his invested principal represented by his mineral holdings free from such taxes which, it is not unreasonable to assume, will henceforward absorb the major part of it.

2. The second way in which existing legislation has operated injuriously and inequitably is by so restricting the definition of "invested capital" in the war excess-profits tax law as to impose excess-profits taxes upon capital actually used in business as well as to classify as excess profits a considerable portion of what is in fact that percentage of profits (not less than 7 per cent, or more than 9 per cent, upon business capital) intended by the law to be exempted from such taxation.

## DISASTROUS RESULTS TO BE APPREHENDED.

Each of these defects in the law not only works loss and injustice, but the tax burden thus added will necessarily lead to a restriction of output for several reasons:

(1) It marks in many cases the difference between a profitable or a losing operation and compels its suspension.

(2) It tends to cause suspension of operations until such time as the owner can be assured at least of a certain return of the investment which he has in his mine.

(3) Instead of stimulating the opening and operation of new properties actually necessary for the successful conduct of the war, it discourages such enterprise.

(4) Another consequence which can not be escaped is that, if incomes be diminished by reduction of mining operations, the public revenue derived under these tax laws will fall in like ratio.

(5) The same conditions operate to discourage all extensions by way of development in existing mines, and to destroy all initiative in seeking out and exploring new mineral fields. No one will open new mines or extend old ones with the certain prospect that his earnings will be doubtful and also that his capital invested will be in danger of loss by taxation upon a technical claim that a part of it constitutes income.

It is especially important that Congress should not prejudice the interests of the Government itself by casting obstacles, in the nature of unwarranted taxation, in the way of production in this country of those less common, but very essential, metals, such as manganese, graphite, chromite, etc., for which, in the past, we have depended almost wholly upon imports. As already stated, these metals occur in various parts of the United States, but in comparatively small deposits, and it must be anticipated that owners will not undertake development of these mines unless their capital therein is protected.

## PROPOSED AMENDMENTS.

Two amendments of the existing laws, which will overcome the objections above referred to, are proposed for the consideration of the committee.

## THE FIRST AMENDMENT.

The first amendment is of paragraph eighth of section 5 (a) (and the corresponding portion of paragraph second of section 12 (a) of the income tax law of September 8, 1916, relating to depletion deductions, and, together with the language which it is designed to supersede, is printed below:

*Present law.*

Eighth. (a) In the case of oil and gas wells a reasonable allowance for actual reduction in flow and production to be ascertained not by the flush flow, but by the settled production or regular flow:

(b) in the case of mines a reasonable allowance for depletion thereof not to exceed the market value in the mine of the product thereof, which has been mined and sold during the year for which the return and computation are made.

*Proposed amendment.*

"(a) In the case of oil and gas wells, a reasonable allowance for actual reduction in flow and production to be ascertained not by the flush flow, but by the settled production or regular flow:

"(b) In the case of mines, an allowance for depletion thereof equal to but not exceeding the market value in the mine of the ore content thereof which has been mined and sold during the year for which the return and computation are made; or, if the mine be operated or controlled, under a mining contract in any form, by another than the owner, an allowance equal to but not exceeding the market value in the mine of the ore content thereof which has been mined and removed, or for which compensation has been made in accordance with the contract in advance of mining, during such year,

such reasonable allowance to be made, in the case of both (a) and (b) under rules and regulations to be prescribed by the Secretary of the Treasury:

such allowances to be made in the case of both (a) and (b) to all parties interested therein, including owners, lessors and lessees, to the extent of the value of their respective rights or interests therein, under rules and regulations to be prescribed by the Secretary of the Treasury:

*Provided*, That when the allowances authorized (a) and (b) shall equal the capital originally invested, or in case of purchase made prior to March first, nineteen hundred and thirteen, the fair market value as of that date no further allowance shall be made.

No deduction shall be allowed for any amount paid out for new buildings, permanent improvements, or betterments, made to increase the value of any property or estate, and no deduction shall be made for any amount of expense of restoring property or making good the exhaustion thereof for which an allowance is or has been made.

*Provided*, that, if the mine was acquired prior to March 1, 1913, whenever the sum of such annual allowances shall equal the market value of the same as of that date; or, if the mine was acquired after said date, whenever the sum of such allowances shall equal (a) the actual cash paid therefor, or (b) the actual cash value, at the time of payment thereof, of tangible property other than cash paid therefor, or (c), if acquired otherwise than by purchase, the actual cash value of the mine at the time of such acquisition, then no further allowance shall be made.

No deduction shall be allowed for any amount paid out for new buildings, permanent improvements or betterments made to increase the value of any property or estate, and no deduction shall be made for any amount of expense of restoring property or making good the exhaustion thereof for which an allowance is or has been made."

#### PRINCIPLE OF TAXATION UNCHANGED.

In respect of this amendment it may be briefly pointed out that the principle of taxation already adopted by the Congress is not sought to be modified in any respect. The suggested changes are merely for the purpose of protecting the owners of mines in the return to them of the capital investment which they had therein on the 1st of March, 1913. It was the undoubted purpose of the Congress in the act of September 8, 1916, to accomplish this end by the depletion provisions referred to. Nevertheless, the act as framed failed to reach one phase of iron-mining operations through which, in a large percentage of instances, the owner of the mine receives back a large part of his invested capital. In the Lake Superior district the common method of disposing of iron ores is by mining contracts, usually in the form of so-called mining leases, under which the contractee or lessee pays to the mine owner in advance of mining the ore, if the mine be not actively operated (which occurs almost always before he begins active operations and, sometimes, when active operations, having begun, for one cause or another are suspended), an annual sum representing the agreed per ton compensation for a definite number of tons of ore, which sum is received by the owner, and understood by both parties to be in full payment for an equivalent amount of ore whenever it is removed thereafter. These payments are commonly designated as advance minimum royalties; but, whatever their designation, they constitute in fact installment payments to the mine owner for the ore in the mine, and to the extent of the value on the 1st of March, 1913, of the ore so paid for, they represent the return (and the only return) to the owner of such value.

It happens not infrequently that such advance payments are made for several successive years in which no ore is actually mined, but when mining begins (or is resumed after a period of discontinued operation) the whole number of tons represented by such payments of advance royalties are removable by the lessee without his being required to make any further compensation therefor.

Under the law as it now stands there is permitted "in the case of mines, a reasonable allowance for depletion thereof, not to exceed the market value in the mine of the product thereof which has been mined and sold during the year for which the return and computation are made." Under the construction placed upon this law by the Treasury Department, no deduction is permitted to a mine owner by way of depletion out of such advance royalties received by him for ore to be thereafter mined and removed. A moment's consideration of the subject, however, reveals that, when the operator of the mine applies such advance royalties in payment for an equivalent amount of ore subsequently removed by him, the owner of the mine receives no moneys from which he can make a depletion deduction on account of the ore so taken out; as a consequence, his capital represented by such ore is not received by him tax-free, but is treated as income by the Government and is accordingly subjected to both income and excess-profit taxes.

Should the mining contract be terminated for any reason before the ore paid for in advance has been removed, the mine owner would then be obligated to report such

advance royalty payments as income for the year in which the termination occurred, precisely as in all other cases of advance payments on contracts, as provided for in article No. 117 of regulations No. 33.

## THE SECOND AMENDMENT.

The second amendment proposes to modify that portion of section 207 of the excess-profits tax law of October 3, 1917, defining the meaning of "invested capital," so that it will read as printed below:

*Present law.*

(a) In the case of a corporation or partnership:

(1) Actual cash paid in,

(2) the actual cash value of tangible property paid in other than cash, for stock or shares in such corporation or partnership, at the time of such payment (but in case such tangible property was paid in prior to January first, nineteen hundred and fourteen, the actual cash value of January first, nineteen hundred and fourteen, but in no case to exceed the par value of the original stock or shares specifically issued therefor), and

(3) paid in or earned surplus and undivided profits used or employed in the business, exclusive of undivided profits earned during the taxable year:

*Proposed amendment.*

"(a) In the case of a corporation or partnership:

(1) The actual cash value of all the tangible property of the corporation or partnership, including mines and mineral deposits, as of March 1, 1913, if such property was acquired prior to said date; or, if acquired on or after said date, (a) the actual cost thereof in money, or (b) the actual cash value, at the time of payment, of tangible property other than cash paid therefor, or (c), if otherwise acquired, the actual cash value thereof at the time of such acquisition; and

(2) Paid in or earned surplus and undivided profits acquired on or after March 1, 1913, used or employed in the business exclusive of undivided profits earned during the taxable year."

Section 207, as it now reads, undertakes to define "invested capital" for the purpose of levying excess-profits taxes. It will be borne in mind that the one reason for ascertaining invested capital of a taxpayer, whether individual or corporate, is, to compute the amount of income received by the taxpayer which shall be free from excess-profits taxation. The income thus freed from the excess-profits tax is intended to be such a percentage of the taxpayer's invested capital as shall represent what the Congress deems to be, in war times, a fair return to the taxpayer upon the investment which he has in the business in which the income is earned. Manifestly, therefore, it is essential that the amount of that investment shall be accurately and justly ascertained; and, if the definition of "invested capital" as contained in the act of October 3, 1917, is inaccurate and works injustice, whether to the taxpayer or to the Government, the inaccuracy should undoubtedly be corrected.

## FOUNDATION OF INCOME AND EXCESS PROFITS LAWS.

The foundation upon which the present excess profits tax law and the income-tax law rests is, that, as between the Government and the taxpayer, a line of demarcation is drawn (on the 1st of March, 1913, as respects income taxes, and on the 1st of January, 1914, as respects excess-profits taxes), distinguishing between the period prior to the dates named, when neither of said taxes could lawfully be levied by the Government, and the period after said dates. Whether a taxpayer gained or lost in the carrying on of his business prior to the date constituting such line of demarcation is immaterial. Upon all income, gains, and profits derived by a taxpayer after the specified date, the Government has the authority, which it is exercising, to impose income and excess-profits taxes. The basis for the depletion allowance under the income-tax law, and for the deduction permitted under the excess profits tax law, should be the actual invested capital of the taxpayer on the 1st of March, 1913, and the 1st of January, 1914, respectively (unless, as would seem reasonable for the sake of uniformity and consistency, the date of March 1, 1913, should be adopted for both laws).

## PRACTICAL DEFINITION DESIRABLE.

The definition of "capital" in a tax law can not be abstractly accurate. And it is here urged that, on the contrary, the aim should rather be to make it practical. The definition, therefore, should be one which is in consonance with the recognized understanding and practice of business men of the country where the law is operative.

Such a practical definition, in the observance of which the commercial interests of the United States have developed and are being carried on, is proposed by the amendment. A deviation from the principle embodied in this definition will produce uncertainty and confusion at a time when stability and assurance are most necessary.

The adoption of the proposed amendment will eliminate one of the elements of complication and doubt which has produced so much confusion in the application of the law; and, as respects owners of mineral properties, will give the additional advantage of conforming the definition of "invested capital" in the excess-profits tax law, to the basis of valuation for the purpose of depletion allowances that has been incorporated in the income-tax law and which has been recognized as sound and just. It will also greatly simplify the administration of the law by the Treasury Department.

It is therefore submitted that, for the purposes of the excess-profits tax, the actual value of the invested capital of a mine owner, as of the 1st of March, 1913, should be adopted as the basis for determining the amount of his earnings which shall be free from excess profits tax. The proposed amendment seeks only to produce this result.

The suggested definition of invested capital (although proposed by representatives of a single industry) is as broad as the whole law. If adopted, it will in large part efface the inequality in the operation of the law of which criticism is so widely heard. It will give every enterprise the exact standing as respects income taxes that it had in the business world on March 1, 1913—a standing based upon its actual resources and not upon inaccurate and artificial standards of measurement.

#### THIS DEFINITION SANCTIONED BY SUPREME COURT.

The attention of the committee is directed to the recent decisions of the Supreme Court in *Doyle v. Mitchell Bros. Co.*; *U. S. v. C. C. C. & St. L. Rwy. Co.*; and *Hays v. Gauley Mountain Coal Co.* (all decided May 20, 1918), and *Lynch v. Turrish*; and *Southern Pacific Railway Co. v. Lowe* (decided June 3, 1918).

In those cases it was adjudged (1) that, upon the adoption of the sixteenth amendment in February, 1913, Congress, for the first time, was empowered to tax income from property without apportionment among the States; (2) that property owned by a taxpayer on the date when the tax law became effective (Mar. 1, 1913, as respects the income-tax law, the latest law considered by the court) represented his capital as of that date; and (3) that the enhancement of value that accrued between the time of acquisition and that effective date is to be included in such capital value, and is not subject to taxation as income, gains, or profits.

#### LAW MODIFIED BY REGULATIONS.

While the law does not expressly exclude losses which occurred between the time that capital was paid in and January 1, 1914, the regulations of the Secretary of the Treasury take them into consideration and allow only the actual value of the "invested capital."

The Secretary of the Treasury in so doing has assumed authority to protect the Government against the allowance of improper deductions, by excluding such losses, embracing losses arising from depletion, deterioration, etc. (Article No. 42 of Regulations No. 41).

The Secretary could not, however, without assuming to legislate, take into consideration the actual value, as of January 1, 1914, of that portion of the "invested capital" which resulted from an increase in property values after the property was acquired by the taxpayer. As a result, "invested capital" represented by a natural increment in values of such properties is (contrary to the adjudications of the Supreme Court) excluded from consideration as a basis for determining the deduction allowable to a taxpayer under the act of October 3, 1917, notwithstanding the fact that such increase may represent a very considerable proportion of the capital actually employed in business on January 1, 1914, and which produces a large percentage of the revenues derived from such business both by the owner and by the Government.

#### PROPOSED RELIEF ESSENTIAL.

It is needless to urge that, in the light of these considerations, the operation of the excess-profits-tax law is distinctly unjust to many taxpayers, and leaves a much smaller proportion of their earnings free from the excess-profits tax than they would be entitled to under a calculation of "invested capital" that accords with universal business understanding and procedure. The necessary consequence of this is, that a substantial portion of the earnings which it was contemplated by the Congress

should be freed from excess-profits taxation, is included in the amount subject to such tax.

As has been pointed out earlier in this statement, a disproportionate burden of taxation placed upon any business necessarily discourages the vigorous prosecution of that business and directly tends (a) to reduce production (which, in the case of iron mines, is one of the most important considerations at the present moment), and (b) thereby to reduce the income available for taxation under any form of income or profits tax. By the adoption of the proposed amendment, or some equivalent clauses, there will be extended to all of the business interests of the country the assurance that the Congress recognizes that the prosperity of the Nation depends upon their prosperity, and that nothing will more effectually encourage an energetic conduct of business than a confidence that the integrity of their invested capital will be protected by law.

#### COOPERATION OF BUSINESS.

The officials of the Treasury Department have borne cheerful witness to the fact that, speaking generally, all of the business interests of the country have endeavored to cooperate with the department in submitting full and honest returns of capital and income; and it may be unhesitatingly asserted that the temper of the people to-day is such that, accorded due protection of their capital investments, they will cheerfully contribute to the support of the Government and its purposes any proportion of their income, gains and profits, whether under the income-tax law or the excess-profits-tax law, that may be needed to provide required revenue.

The interests in whose behalf this statement is submitted to the committee are not seeking the lessening of the contributions to be exacted from them for the purposes of the Government. On the contrary, they stand ready to add to the contributions which they have already made to any extent that may be asked of them under the operation of equitable tax laws. They anticipate that they will be called upon to pay, and will willingly pay, both income and excess-profits taxes at such increased rates as Congress may ask. They simply urge that existing laws shall be so modified that the tax which they may be asked to pay in the form of income-tax assessments shall be based not upon invested capital but solely upon incomes; and that excess-profits taxes shall be based upon what are excess profits in the right definition of the term; that they shall not include, to a considerable part, the capital actually employed in the business and the percentage of reasonable return thereon which the law exempts from such taxation.

An incorrect definition of "invested capital" should not be retained to defeat the very purposes in the mind of the Congress, in allowing a deduction designed to permit the profitable continuance of established business and to invite the investment of additional capital therein, as well as in the initiation of new enterprises.

It is respectfully submitted that the spirit of the amendments herein proposed should be incorporated in the revenue measure which the committee is about to write, to the end that capital may not be withdrawn, from business and that properties in the nature of those represented by the independent iron ore owners and producers, shall not be forced into idleness.

JOHN R. VAN DERLIP.  
FREDERICK C. STEVENS.

JUNE 28, 1918.

#### STATEMENT OF MR. MEYER D. ROTHSCHILD, NEW YORK CITY.

The CHAIRMAN. Mr. Rothschild, whom do you represent in the hearings here?

MR. ROTHSCHILD. I represent 62 jewelry organizations in the United States, practically every jewelry organization with one exception; that is, every one that we knew of when we sent out the call for the meeting. That one exception is the National Wholesale Jewelers' Association, where we represent a great many of the members, executive officers, although the President of the organization, who was asked to join our organization, joined it twice and declined twice. We do not officially, therefore, represent that organization to-day. We asked labor organizations, organized labor and labor organizations, also to join us; in fact, we wanted to make it a democratic organization, and I would like, Mr. Chairman, if you will

permit me, in view of the conditions that exist of which you know, to be permitted to read a statement which we have carefully gotten up, and after that statement I am willing and the gentlemen of my committee, and there are 16 or 17 men here representing different branches of the organization, to answer any questions and to serve you in any way we can:

The CHAIRMAN. And in your statement you are representing the gentlemen who are present here?

Mr. ROTHSCHILD. Yes, sir; and I should like to be permitted to read this statement, because it may answer a great many questions.

Mr. MOORE. Before Mr. Rothschild goes on I would like to ask him about the National Wholesale Jewelers' Association. That is one association you do not represent?

Mr. ROTHSCHILD. I have just stated that.

The CHAIRMAN. You represent the manufacturers and producers?

Mr. ROTHSCHILD. And many members of the National Wholesale Jewelers' Association.

Mr. MOORE. I want to find out something about that before you proceed, for the information of the committee. Is Davis J. Gutmann, of Cincinnati, the president of that association?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. And he is the gentleman who did not join your association?

Mr. ROTHSCHILD. He is the gentleman who joined our association and declined twice after joining.

Mr. MOORE. The advisory board of that association consists of Edwin Massa, of St. Louis; A. G. Schwab, of Cincinnati; George H. Edwards, of Kansas City; Frederick G. Thearle, of Chicago; and Louis Sickles, of Philadelphia. Are any of those gentlemen members of the association that you represent?

Mr. ROTHSCHILD. Mr. Edwards is a member of our committee. Mr. Massa telegraphed me some days ago that he was with us. Mr. Sickles, I believe, is ill in a sanitorium. Mr. Thearle declined to serve on the committee because he was going away. Mr. Schwab declined to serve because he said that he wanted to stand with Mr. Gutmann.

Mr. MOORE. Before you started I wanted the committee to understand that there were some differences between your larger organization and this organization of National Wholesale Jewelers, of which Mr. Gutmann is the president. Who is the secretary of the National Wholesale Jewelers' Association?

Mr. ROTHSCHILD. A Mr. Fernley.

Mr. MOORE. Mr. T. James Fernley, of Philadelphia?

Mr. ROTHSCHILD. I think there are two Fernleys, father and son. Some member of the committee would know about that.

Mr. SHERWOOD. They both are.

Mr. MOORE. Is that the same Mr. Fernley who is secretary of the National Hardware Association?

Mr. ROTHSCHILD. I believe he is secretary of some 15 or 20 organizations.

Mr. MOORE. Trade organizations?

Mr. ROTHSCHILD. I believe so.

Mr. MOORE. He is opposed to the stand you are taking, is he not?

Mr. ROTHSCHILD. I do not know. We have not been able to find out.

Mr. MOORE. What about Mr. L. P. White, of Philadelphia, who is reported as being treasurer of the National Wholesale Jewelers' Association?

Mr. ROTHSCHILD. We have not heard from him.

Mr. MOORE. You do not know how he stands?

Mr. ROTHSCHILD. We do not know how he stands.

Mr. MOORE. It is clear, then, that you are not speaking for the National Wholesale Jewelers' Association as a body, but you are speaking for some of the members of it who perhaps may or may not agree with Mr. Gutmann, the president of the association?

Mr. ROTHSCHILD. That is the situation.

Mr. MOORE. Mr. Gutmann is a Cincinnati jeweler?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. Are you representing the association of retailers in New York that was spoken for here the other day by a Mr. Goldman?

Mr. ROTHSCHILD. No, sir.

Mr. MOORE. Do those gentlemen harmonize in their views with the associations you represent?

Mr. ROTHSCHILD. Frankly speaking, I had never heard of either of the organizations that Mr. Goldman represents. We tried to reach every organization and we have reached all those that our trade had any record of. I would have invited those organizations to become members of our committee if I had known of their existence.

Mr. MOORE. I ask you this because it is fair that you should know that Mr. Goldman was here representing certain retail jewelers of New York City and disclaimed any connection with any national organization, but in the course of his testimony some reference was made to you and the possibility of your appearing before the committee, and I desired to have you know that Mr. Goldman represented some retail jewelers who evidently differed from the views that you may express.

Mr. ROTHSCHILD. I thank you.

The CHAIRMAN. I would suggest to the committee that we allow Mr. Rothschild to finish his statement, because it is a consecutive one, and to pursue his line of thought uninterrupted, and then after he finishes his statement any member of the committee may ask him such questions and obtain such information as they desire. I know that will be preferable to you and also to the committee.

Mr. ROTHSCHILD. That is very agreeable to me and I have here special men who can answer questions that perhaps I could not answer.

A statement given out at Washington on May 29, to the effect that the Committee on Ways and Means would hold public hearings on a new tax measure, contained the request that persons having the same problems should agree upon one spokesman to present their views.

The jewelers' vigilance committee (incorporated) thereupon called a mass meeting of the entire jewelry trade, and on June 6, 1918, a large number of jewelers met at the rooms of the Merchants' Association in New York City and organized the jewelers' war revenue tax committee.

Meyer D. Rothschild was elected chairman, and he was directed to form a representative committee as soon as possible.

At this meeting a suggestion was made that every jewelry organization in the country be represented on this committee, and the

chairman has made every effort to carry out this democratic method of procedure. The jewelers' war revenue tax committee as now constituted is made up of 62 manufacturing, wholesale, and retail organizations, boards of trade and other trade organizations, besides a number of individual members, of which a complete list is included in this statement.

When the committee representing the jewelers of the United States appeared last year before the Senate Finance Committee, its spokesman presented resolutions adopted in mass meeting, from which we beg leave to quote as follows:

*Be it resolved*, That this mass meeting, representing every branch of the jewelry trade in the United States, patriotically affirm our willingness to pay any and all equitable taxes which may be levied by Congress to meet the requirements of the war.

That was our position in 1917, and, after a year of war, it is our platform to-day.

The jewelry trade not only cheerfully paid such taxes as were levied by Congress, but, acting in the spirit of another resolution, in which we offered our hearty cooperation with the Government in working out the details of the law, the jewelers conferred and co-operated with the Treasury Department through their jewelers war revenue tax committee, with the result that the Government undoubtedly received the maximum amount of money from jewelers that could possibly have been collected under the act.

We appear before you to-day as patriotic citizens, ready and anxious to assist the Government to win this war. We will try and pay our share of any commodities tax which Congress may assess on the industries with which we are now grouped under section 600 of the tax law, although, in the interest of an increased revenue, we trust that this group will be greatly enlarged.

Our industry asks of your committee only such consideration as we know that you, as wise legislators, will give to all industries, be they thought ever so nonessential at present.

Some day we shall win the war. When that time comes, the so-called nonessential industries, which are now justly obliged to yield men and materials for the paramount business which the civilized world has in hand, will come into their own again. The arts of peace will once more function freely, and it is well that every industry, including jewelry, shall maintain some organization in order to be able to win commercial victories in the coming business struggle, for which even our allies, notwithstanding the stress under which they are living, are now intelligently preparing.

While the jewelers of the United States do not ask special favors at your hands, we do expect fair play, and therefore beg leave to submit a few facts in complete refutation of the grave charges of maintaining a lobby, of profiteering, of lack of patriotism, and of failure to keep our pledges to the Government to conserve platinum, which were made on the floor of the House of Representatives on June 7, 1918. The Hon. Henry T. Rainey, senior majority member of the Committee on Ways and Means, said:

The jewelers' vigilance committee was organized about the time of our entry into the world war for the avowed purpose of protecting jewelers of the country in the manufacture and sale of luxuries against war taxes that might be deemed by them to be excessive, and the first thing the vigilance committee did was to establish here in this capital the most forceful and most aggressive lobby I have ever seen in the city of Washington.

In answering this charge, we submit the following facts:

The preliminary meeting of the jewelers' vigilance committee was held in January, 1917, and the committee was organized March 16, 1917, three weeks before we entered the war. The purposes of the organization are expressed in its preamble and constitution, as follows:

#### PREAMBLE.

The success of the manufacturer, importer, and jobber of jewelry depends primarily on the success of the retail jeweler, whose success in turn rests on the foundation of public confidence.

The jewelry business is conducted on a plane of straightforward and honest dealing, but occasionally, as in other lines, there are unscrupulous men who employ methods which tend to weaken the confidence of the public in jewelry and so menace the well-being of our trade.

Public confidence can be measurably strengthened if the various branches of our business—manufacturing, jobbing, and retail—make successful efforts to stamp out existing evils through devising simple legal safeguards which will restrain the evil-doer and reassure and protect the ultimate consumer.

To this end the jewelers vigilance committee is now formed, and pledges itself to try to prevent, minimize, or stop fraud, misbranding, and all kinds of misrepresentation of merchandise and materials handled by the jewelry and kindred trades.

It further pledges itself to defend the interests of all branches of our trade against unfair attacks and unjust legislation whenever prompt action is required and no other trade organization is prepared to undertake such defense.

In order to obtain a fair representation of the various branches of the trade, the charter members of the jewelers vigilance committee are appointed at the suggestion of various trade associations and trade interests, but they shall nevertheless in nowise incur liability against or be subject to any control by or represent any such association or interests on the jewelers vigilance committee, but shall act solely as individuals on the committee for the best interests of the entire trade and the public.

#### PURPOSES.

The purposes of the jewelers vigilance committee are to investigate complaints or violations of stamping, misbranding, false advertising, and similar laws relating to fraud in merchandising, to bring about the abandonment of these and other dishonest or doubtful trade practices, to assist the authorities in the enforcement of the laws covering fraud, misbranding, and misrepresentation, to defend the interests of all branches of our trade against unfair attacks and unjust legislation and the establishment of uniform trade definitions, standards of weights, measures, and qualities, and customs and practices.

The jewelers vigilance committee is primarily concerned with the enforcement of existing laws in New York City and vicinity, but may keep in touch with members of our trade in all parts of the United States, with a view to cooperate with such members and other bodies, in the enactment of needed legislation and particularly in bringing about National and State reforms in stamping, misbranding, and advertising laws, to the end that in time such laws shall be uniform and efficacious in all parts of our country.

These purposes do not contemplate special activity in regard to war taxes.

The actual attitude of the jewelers toward war taxes can best be gleaned from the resolutions which were presented to the Senate Finance Committee by the jewelers committee, a copy of which is attached to this statement. We challenge the production of a single bit of proof to show that there was a lobby established by the jewelers vigilance committee in Washington, or that any agent, attorney, or lobbyist was hired, or that a single penny was paid to anyone for any lobbying in connection with war-revenue taxes, platinum, or any other matter with which the vigilance committee had to do in Washington.

The activities of the war revenue tax and platinum committee of the jewelers vigilance committee with members of either House of Congress were as follows:

A representative committee of jewelers appeared before the Senate Finance Committee at the commodities tax hearing. A very brief hearing was further accorded to the chairman of the jewelers committee by the Senate Finance Committee, to bring out some point in regard to the wording of the act.

Several members of the war revenue tax committee called on Chairman Kitchen, but were not permitted to discuss the war-revenue tax bill, as Congressman Kitchen stated that he would not consider any matters connected with the war-revenue tax bill until the Senate had taken action on it.

The CHAIRMAN. Do you recall when it was that they called on Chairman Kitchen?

Mr. ROTHSCHILD. They called on Chairman Kitchen on the day when the Blue and Gray met here in Washington.

The CHAIRMAN. Was the bill then before the Senate?

Mr. ROTHSCHILD. The bill was then before the Senate.

The CHAIRMAN. And I told you that it was not proper for me to discuss the matter or to consider it until the Senate acted?

Mr. ROTHSCHILD. That is my understanding. We had a few pleasant words.

The CHAIRMAN. I do not want it to appear that I refused to talk with anybody, because I know that during the pendency of the bill I never refused to talk with anybody. I remember eating my breakfast at 7 o'clock, and then nine days out of ten I did not eat another mouthful until very late in order that I might give the lunch hour and time after the adjournment of the House to those gentlemen who came to talk with me about these matters.

Mr. ROTHSCHILD. I do not suppose that the chairman has any special recollection of this call.

The CHAIRMAN. Of course, if the bill was then before the Senate, I thought it was improper—and I so told the committee—for me to discuss the matter until the Senate had acted.

Mr. ROTHSCHILD. This is not a complaint, Mr. Chairman. I am simply running over our activities, and I could not leave that out.

The CHAIRMAN. I do not want it to appear, and I know that you do not intend it to so appear, that I refused to talk with anybody at the proper time.

Mr. ROTHSCHILD. The language may have been badly chosen.

The CHAIRMAN. I think I talked with everybody who came to see me. I can not say that I agreed with all of them, but I certainly gave them a full hearing.

You may proceed.

Mr. ROTHSCHILD. On May 21, 1917, the platinum committee waited on Congressman Rainey at the House of Representatives and presented a letter addressed to him by the Secretary of Commerce, giving certain facts about the Government's requirements for platinum at that time. The interview was brief, because Congressman Rainey declared his intention to urge a prohibitive tax on the making of platinum jewelry, regardless of Secretary Redfield's statements.

Mr. RAINEY. What date was that?

Mr. ROTHSCHILD. On May 21, 1917, when the bill was up. I think it was during the discussion. In fact, I have taken the date from the Congressional Record. It was the day when these commodities taxes were being considered.

The committee then went to the Gallery of the House, and when the platinum amendment to the war-tax measure was offered one of the members of the platinum committee sent for the Congressman from his district (Mr. Lehlbach) and showed him a letter which Secretary Redfield had written to the platinum committee, to be used as an answer to the propaganda of a small group of chemists, one of whom was a Government official.

Congressman Lehlbach had this letter read by the Clerk of the House.

These are the only Senators or Representatives who were approached at any time by any member or committee of the jewelers' vigilance committee. This, then, is the entire sum of the congressional activities of the tax and platinum committees representing the jewelry trade, and form but a slight foundation upon which to erect the charge of a "forceful and aggressive lobby."

On the charges of profiteering and breaking their promises to the Government, Congressman Rainey is reported to have said:

More than four years have elapsed since this awful world war started, but during that period of time no nation engaged in this war has produced profiteers more unpatriotic, whose efforts have been more unconscionable than the jewelers' vigilance committee and the 400 jewelers' establishments in the United States which have sustained them with funds.

A little further on he states:

The promised efforts of the jewelers of the country through their vigilance committee to conserve platinum failed miserably.

Platinum continued to increase in value, until to-day the Government has placed a value on it of \$105 per ounce, and as it increased in value its use as jewelry increased. Those jewelers who held the platinum stocks of the country and those dealers in platinum who held large stocks, without efforts on their part, made enormous sums of money, and while pretending to be discouraging the use of platinum they compelled its use by discouraging the use of substitutes.

The facts as to the actual cost of crude platinum and the actual selling prices of refined platinum, as taken from the books of a prominent dealer in platinum, are as follows:

Date.	Crude, purchasing price.	Refined, selling price.	Date.	Crude, purchasing price.	Refined, selling price.
	<i>Per ounce.</i>	<i>Per ounce.</i>		<i>Per ounce.</i>	<i>Per ounce.</i>
March, 1917.....	\$100	\$105	September, 1917.....	\$100-102	\$105
April, 1917.....	102	105	October, 1917.....	102	105
May, 1917.....	102	105	November, 1917.....	103	105
June.....	( <sup>1</sup> )	105	December, 1917.....	104	105-108
July, 1917.....	102	105	January, 1918.....	104	108
August, 1917.....	100-103	105	February, 1918.....	104-106	108

<sup>1</sup> No 1917 purchase

In February, 1918, this dealer's stock was commandeered by the War Industries Board.

The gross profit indicated here is less than 5 per cent, and the net profit, after deducting the cost of refining and other expenses is, of course, still less. These figures speak for themselves.

The price of platinum is entirely controlled by the foreign owners of the metal and speculation by the dealers or by manufacturers of jewelry would have been exceedingly dangerous, as it was a foregone conclusion that the minute the war stopped the potential release of large quantities of platinum used, or held in reserve, for war purposes only, would cause a great break in the price of this metal, which sold for about \$40 an ounce in 1914.

There was no speculation or profiteering in platinum by either the dealers in the metal or the manufacturing jewelers. On the contrary, it is doubtful if any considerable portion of the platinum taken over by the Government at \$105 an ounce represented even the actual cost price to the jewelers, especially as some of this platinum had a certain amount of labor expended on it.

This committee questions if any other commodity has been commandeered by the Government at exact cost, or at a loss, to the owner.

The jewelers have not complained about the commandeering of their platinum, but they are naturally averse to being charged with making enormous sums of money on the increase in price of the metal when, as a matter of fact and of record, the value has not increased 5 per cent since we entered the war, and the platinum taken over by the Government at \$105 an ounce cost them in many instances \$108 to \$120 an ounce. This is not profiteering.

The efforts of the jewelers to conserve platinum did not fail. That the jewelers patriotically and fully carried out their pledges to the Government to conserve platinum is evidenced by the testimony of the one man whose business it was to investigate this phase of the platinum situation. Prof. James Lewis Howe, of the Washington and Lee University at Lexington, Va., a noted platinum expert, was the special committee on platinum of the chemistry committee of the National Research Council.

In a letter published in the February, 1918, number of the *Journal of Industrial and Engineering Chemistry*, Prof. Howe writes (p. 159):

*Editor of the Journal of Industrial and Engineering Chemistry:*

Much has been written of late, and more said, regarding the use of platinum in jewelry, and it has been broadly intimated that the jewelers are not living up to their agreement of last April with the Government. It is worth while to repeat the terms of this pledge of the jewelers' vigilance committee:

"We pledge ourselves to discontinue and strongly recommend to all manufacturing and retail jewelers of the United States that they in a truly patriotic spirit discourage the manufacture, sale, and use of platinum in all bulky and heavy pieces of jewelry.

"During the period of the war, or until the present supplies of platinum shall be materially augmented, we pledge ourselves to discontinue and recommend that the jewelry trade discourage the use of all nonessential platinum findings or parts of jewelry, such as scarfin stems, pin tongues, joints, catches, swivels, springs, rings, ear backs, etc., where gold would satisfactorily serve.

"Be it further resolved, that the jewelry trade encourage by all means in its power the use of gold in combination with platinum wherever proper artistic results may be obtained."

Having been in close touch with the platinum situation, I desire to state from personal knowledge my belief that the jewelers have fully lived up to their pledge and in many cases gone beyond them in efforts to conserve platinum.

It was the manufacturing jewelers who entered into this agreement, and it is not surprising that some retailers have been making great efforts to work off their stock on hand, and have thereby opened themselves to criticism.

Whether a metal, so limited in supply and so invaluable in scientific industry, ought to be used at all in jewelry is a fair question, but it is not the question in point. A large and legitimate platinum jewelry industry has sprung up in recent years, and the question is whether the exigencies of the present platinum situation demand the

immediate wrecking of this industry by having the Government commandeer all platinum; personally, I do not believe that at present they do.

I hold no brief for the jewelers, but I think this statement should be made in fairness to them, and I may add that it is my conviction that, should the Government be placed in straits from lack of platinum for the manufacture of war material, the jewelry trade can be relied on to find a way of furnishing all that is needed.

JAS. LEWIS HOWE,  
*Special Committee on Platinum, Chemistry Committee of the  
National Research Council.*

WASHINGTON AND LEE UNIVERSITY,  
*Lexington, Va.*

As to the contributions of the jewelers to the vigilance committee, we beg to submit that these funds were voluntary contributions from all branches of the trade, and every penny expended was used to carry out the purposes expressed in the constitution of the organization.

As to the statement quoted from the letter of Dr. Van. H. Manning, that "There are other white metals equally valuable for the setting of gems, except that they are not as costly as platinum," we answer that the jeweler would welcome such a metal. As a matter of fact, if such a white metal exists, or has been produced, it is not known to the jewelry trade.

Platinum is par excellence the metal for fine and delicate jewelry, firstly, because its brilliant white color enables the jeweler to obtain beautiful effects in the setting of diamonds which can not generally be obtained with gold on account of its color; secondly, on account of its malleability, ductility, rigidity, and tenacity, because of which the most delicate and intricate designs are possible with a surprisingly small quantity of metal; and, lastly, because jewelry made of platinum will retain stones in their settings without the heavy beading required in gold and will not tarnish or oxidize from exposure to air, fumes, or acids, or when worn on the body.

This combination of qualities, which does not exist in any other metal known to jewelers, has made possible most of the great advance in the art of the jeweler in the United States in recent years.

Answering the further statement of Congressman Rainey, that "50 per cent of the supply of platinum is still used in the manufacture of jewelry," we wish to point out that the commandeering orders of the War Industries Board have cut off all platinum from jewelers, except the 25 per cent of their stocks of unmanufactured metal released some months ago.

Most of this platinum has probably been used for special orders, and as the jeweler can not buy platinum to-day from any source whatever without holding it for Government use, it is fair to state that very little platinum is now being used in the manufacture of jewelry.

The control of the War Industries Board is complete, and no platinum is released for any purpose whatever except with the consent of that board.

We also wish to point out that the jewelers' vigilance committee turned over the consideration of platinum on January 25 last to the newly formed jewelers' war-service committee, which was organized under the auspices of the Chamber of Commerce of the United States to serve, as other war-service committees were serving, as an intermediary between manufacturers and the Government.

The first official request for platinum was received by the chairman of the platinum committee of the vigilance committee on January 22, 1918. This request, which was in the form of a letter from Mr. Waddill Catchings, chairman of the war-service executive committee of the Chamber of Commerce of the United States, inclosed a letter from Mr. B. M. Baruch, chairman of the War Industries Board, which was as follows:

MR. WADDILL CATCHINGS,  
*United States Chamber of Commerce, Washington, D. C.*

DEAR SIR: The shortage of platinum in the production of explosives is such that it is necessary for the Government to have command of every bit of platinum that can possibly be had.

I wish you would express to the jewelry trade that it is the desire of the Government that no further use of platinum should be made in the manufacture of jewelry, and I should like to know where it is possible to obtain a supply of platinum.

I should like to know how it would be possible to secure possession of all the platinum in the United States.

Yours, very truly,

B. M. BARUCH.

These communications were handed to a special subcommittee of the jewelers' vigilance committee which had been conferring with Mr. Summers of the War Industries Board, and on January 25 the entire platinum matters were turned over to the jewelers' war-service committee.

The jewelers' war-service committee called on Mr. Baruch and Mr. Summers in Washington and recommended that all the unmanufactured platinum held by jewelers be commandeered.

Mr. Rainey states:

The War Industries Board have evidently followed the advice of the jewelers' vigilance committee. The statement is made that 10,000 men are engaged in the manufacture of platinum jewelry, and the industry must not be disturbed and the men thrown out of employment.

The fact is that the War Industries Board itself made the objection that it did not wish to disturb the jewelry industry to the extent of commandeering all the platinum and thereby throw the platinum workers out of employment. In the face of this objection, the jewelers' war service committee, without any definite knowledge of the actual requirements of the Government, was certainly justified in assuming that the 75 per cent commandeering order would suffice for the needs of the Government.

The jewelers' vigilance committee had no contact at all with the War Industries Board since January 25 last.

The jewelers of the United States were prepared at any time since April, 1917, to give up the unmanufactured stocks of platinum to help win the war. That this would practically put many of them out of business was an incident which they, as patriotic citizens, were facing with the best possible grace.

No intimation from any Government official charged with the duty of procuring platinum for Government uses came until January 22, 1918. When the request came, it was for 75 per cent of the unmanufactured platinum, and specific assurances were given from time to time that the platinum jewelry in the hands of the manufacturers was not required; that is the situation to-day. The commandeering order has been obeyed without a murmur, and any further orders of the Government will be obeyed in the same spirit.

While the jewelers have no word of criticism against the Government for the cutting off of what, to many of them, is the source of their livelihood, they protest most emphatically against an unfair and misleading propaganda which was started by some members of the American Chemical Society soon after we entered the war.

Such a propaganda based on the opinion that platinum (because of its scarcity and its great value in chemistry, and for certain indispensable war purposes), should not be used in the manufacture of jewelry during the war, might, if carried on in a manly, decent way, be above criticism. The propaganda of which we complain, however, has largely been a press campaign of half truths and misrepresentations; the prime mover therein, besides being an officer of the American Chemical Society and one of the managers of the Journal of Industrial and Engineering Chemistry, is a Government official, connected with the Bureau of Mines.

A recent press statement purporting to come from the Bureau of Mines, given out for release on June 16, contains all the stock arguments of the propagandists and states at the beginning of the article:

Every effort is being made by the Bureau of Mines to emphasize the urgent necessity of obtaining all the platinum it can possibly secure, and, as a part of its war program to bring this about is using every effort to discourage the use of platinum for jewelry, not only for the duration of the war but "for all time".

Here we see the chemists' propaganda in "full flower": Platinum jewelry is to be banned, not for the period of the war, but "for all time." It is made to appear in this statement that the Bureau of Mines, a branch of the Department of the Interior, is in favor of an appeal to patriotic women to help the Government obtain sorely needed platinum by abstaining from buying platinum jewelry. The Bureau of Mines knows, or could have readily ascertained from the War Industries Board, that no such Government necessity for platinum exists, and that the War Industries Board has full power, and is exercising this power, to obtain platinum ample for the Government needs.

If, under these circumstances, the Bureau of Mines actually authorized the statement released June 16, we submit that such action is open to the gravest criticism.

It is interesting to read the confession in this statement that the movement among the women of the country to discourage platinum in jewelry has been initiated by the American Chemical Society. The patriotic women who form the Women's National League for the Conservation of Platinum undoubtedly believe that they are justified in appealing to the patriotic women of the country not to buy platinum jewelry, because they have been told by representatives of the American Chemical Society that the Government needs the platinum jewelry which the jeweler has for sale and, inferentially, can not get it unless the public refuses to buy any more. Now, this is not true, as the members of the American Chemical Society, who are responsible for this and other like activities, know that the Government has full power to commandeer every piece of platinum jewelry owned by the jeweler.

If there are any thinking men among those propagandists, it must occur to them that a campaign such as they are trying to wage, if successful, must spell ruin to hundreds of reputable merchants who

are morally and legally entitled to sell their platinum jewelry, and who must sell this jewelry to pay their debts, especially in view of the fact that no responsible Government official who has the right to speak on the subject has, up to this time, objected to such sales.

Mr. STERLING. I do not understand what motive the American Chemical Society could have for taking that course.

Mr. ROTHSCHILD. I will come to that in a minute.

If, and when the time arrives that the Government needs platinum jewelry, the jewelers will meet such national need in a patriotic spirit.

It is thime that this insensate, selfish, and dangerous propaganda be stopped. The vast majority of the 12,000 members of the American Chemical Society would surely repudiate the methods which have been employed, if they knew the facts.

We have felt it necessary to make this statement on the question of platinum in connection with jewelry because of that part of Congressman Rainey's speech in which he said:

I now hereby most solemnly promise that, so far as I am concerned, when the new war-revenue bill makes its appearance it will impose a war tax so high on jewelry composed in whole or part of platinum as to make its use impossible in the manufacture of jewelry during the period of this war at least.

Congressman Longworth, one of the minority members of the Committee on Ways and Means, suggested that such a provision be put in in committee, and Congressman Alexander made the further suggestion that it be made a felony to use platinum for the manufacture of jewelry.

Platinum, iridium, and palladium are completely controlled by the Government at present. Every bit of platinum, in any form whatever, can be commandeered, and the War Industries Board is exercising this power as freely as the necessities of the Government dictate. If emergency requirements develop, there is enough platinum in the United States in one form or another to meet any possible war or scientific need.

These are facts well known to those officials whose duty it is, and who have ample power, to safeguard the platinum requirements of the Government.

The writing of a special prohibitive platinum jewelry tax into the new war revenue act will not add an ounce to the platinum reserves of the country or give the Government any added power to acquire or conserve this metal. Such a tax, or even its serious consideration by Congress, will simply furnish more ammunition for the group of chemists who, since April, 1917, have been persecuting the jewelers with the avowed purpose of getting cheaper platinum for themselves.

That is simply the animus of the cause.

Mr. STERLING. What do they use it for?

Mr. ROTHSCHILD. Scientific purposes.

Mr. MOORE. They put it in crucibles?

Mr. ROTHSCHILD. Yes; largely crucibles.

Mr. MOORE. It is better able to stand the acid test than any other metal?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. And if cheaper it would be more advantageous for their business?

Mr. ROTHSCHILD. And more advantageous for the jewelers and for everybody.

Mr. MOORE. They have accused the jewelers of having boosted the price?

Mr. ROTHSCHILD. The jewelers have no control.

Mr. MOORE. I say "they have accused the jewelers?"

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. And yet they use it in their business as chemists?

Mr. ROTHSCHILD. Yes, sir, and they have sold platinum vessels during the last year largely, so I have been told, in order to get a profit on the platinum bought long ago.

Mr. MOORE. I do not want to interrupt you.

Mr. ROTHSCHILD. I have only about half a page, and then I will be through.

On behalf of the 62 jewelry organizations whom we represent, we protest against any such discriminatory tax which, while not suggested to produce revenue, could only serve to strengthen the hands of those who are ruthlessly trying to prevent the sale of manufactured platinum jewelry to the public.

The chemists have no monopoly of patriotism and no right or warrant to speak for the Government. We therefore respectfully suggest that the Committee on Ways and Means should not lend itself to their purposes by reporting a special tax on the manufacture of platinum jewelry.

All of which is respectfully submitted.

Mr. Henry C. Tilden, Spaulding & Co. (Inc.), Michigan Avenue and Van Buren Street, Chicago, Ill.

Before I sit down I should like to say that we have come here with some matters on tax questions, but we felt that this matter ought to be cleared up first, because the trade or those who have been authorized to speak for the trade have not made a public utterance in any attempt to refute these charges until this minute.

Mr. RAINEY. When was the jewelers' vigilance committee organized?

Mr. ROTHSCHILD. There was a meeting, I believe, in January, 1917.

Mr. RAINEY. When was it organized for business?

Mr. ROTHSCHILD. In March, I think. I have the exact date. I can give you the exact date, because I made some inquiries. March 16, 1917.

Mr. RAINEY. At that time war was inevitable?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. Who was the chairman of the vigilance committee?

Mr. ROTHSCHILD. Mr. Harry C. Larter.

Mr. RAINEY. He stated on April 2 that the vigilance committee had been organized just 12 months. He is likely to be right about it?

Mr. ROTHSCHILD. I got my data from the actual records.

Mr. RAINEY. On the 18th of April, when the jewelers' vigilance committee held their meeting, he made this statement:

It hardly seems possible that 12 months have rolled by since the jewelers' vigilance committee actually came into existence.

What were the first activities of the jewelers' vigilance committee?

Mr. ROTHSCHILD. Platinum.

Mr. RAINEY. At whose request?

Mr. ROTHSCHILD. I think I started that.

Mr. RAINEY. How soon was the platinum committee of the jewelers' vigilance committee organized after the organization of the committee?

Mr. ROTHSCHILD. I have no exact data, but I can tell you approximately. I think about the 9th of April, some time early in April. A newspaper notice in New York indicated that the Government was interested in platinum, and a meeting of the executive committee, I believe, of the jewelers' vigilance committee was called to consider that matter.

Mr. RAINEY. Then the platinum committee was organized?

Mr. ROTHSCHILD. Soon thereafter. I have a copy of the telegram which was sent to Mr. Baker, the Secretary of War, and if you wish I can read it, in which we offered our services and offered to cooperate with the Government.

Mr. RAINEY. I know.

Mr. ROTHSCHILD. I could give you the exact date, but it would take some little time to find it. It was early in April.

Mr. RAINEY. At least as late as the 9th of April?

Mr. ROTHSCHILD. I think so; it was very early.

Mr. RAINEY. We were already then at war with Germany?

Mr. ROTHSCHILD. Yes.

Mr. RAINEY. Who was the first chairman of the platinum committee?

Mr. ROTHSCHILD. I was.

Mr. RAINEY. You were the first chairman?

Mr. ROTHSCHILD. The chairman of the platinum committee of the jewelers' vigilance committee. It went out of existence on January 15.

Mr. RAINEY. Who was the chairman on January 15?

Mr. ROTHSCHILD. I was.

Mr. RAINEY. It never had but one chairman?

Mr. ROTHSCHILD. It never had but one chairman.

Mr. RAINEY. At the time it went out of existence on January 15, it turned over its affairs to the war-service committee?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. Who organized the war service committee?

Mr. ROTHSCHILD. The war service committee was organized under the auspices of the jewelers' vigilance committee.

Mr. RAINEY. The same committee that appointed the platinum committee?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. Who was the chairman of the war service committee?

Mr. ROTHSCHILD. Mr. O. G. Fessenden.

Mr. RAINEY. Who is he?

Mr. ROTHSCHILD. I think he is the president of the Hayden W. Wheeler Co., large wholesale jewelers in New York, and is connected with other jewelry organizations.

Mr. RAINEY. What has he to do with platinum?

Mr. ROTHSCHILD. I think they use some platinum in their business. They are manufacturers and wholesalers. He is not the chairman to-day; he was the first chairman.

Mr. RAINEY. Who is the chairman to-day?

Mr. ROTHSCHILD. Mr. Robert B. Steele.

Mr. RAINEY. For what period was this chairman of the platinum committee selected?

Mr. ROTHSCHILD. You are speaking of the vigilance committee?

Mr. RAINEY. That is the same thing.

Mr. ROTHSCHILD. No, sir; it was not. They were elected for different purposes. They took that over as one of their duties.

Mr. RAINEY. For what period was the chairman selected?

Mr. ROTHSCHILD. For a year.

Mr. RAINEY. How did you happen to have two of them in six months?

Mr. ROTHSCHILD. I am not a member, but I believe that Mr. Fessenden resigned.

Mr. RAINEY. When did he resign?

Mr. ROTHSCHILD. I can not answer you. Mr. Steele, who succeeded him, is here.

Mr. STEELE. In the middle of May, this year.

Mr. RAINEY. What time in the month of May?

Mr. STEELE. About the middle of the month. Mr. Fessenden resigned on account of illness and he is now taking a long vacation in Maine.

Mr. RAINEY. Was that after or before I made the speech to which Mr. Rothschild has referred? He resigned after I made the platinum speech.

Mr. STEELE. Yes.

Mr. RAINEY. Who is Mr. Steele?

Mr. ROTHSCHILD. Mr. Steele is a manufacturer of platinum jewelry, or was.

Mr. RAINEY. Mr. Fessenden was not a manufacturer?

Mr. ROTHSCHILD. He manufactures some platinum jewelry; yes, sir.

Mr. RAINEY. And Mr. Steele was better able to take care of the platinum end of it, being a manufacturer of platinum jewelry?

Mr. ROTHSCHILD. I am not so sure about that.

Mr. RAINEY. You would think that he would know more about it than Mr. Fessenden?

Mr. ROTHSCHILD. About platinum?

Mr. RAINEY. Yes, sir.

Mr. ROTHSCHILD. I think so. I think he is an actual manufacturer. I do not think that Mr. Fessenden is.

Mr. RAINEY. Mr. Steele took charge the middle of May of this year of the war service committee, as I understand?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. What have you to do with the war service committee?

Mr. ROTHSCHILD. Nothing.

Mr. RAINEY. You are not even a member?

Mr. ROTHSCHILD. No, sir.

Mr. RAINEY. What committees are you a member of?

Mr. ROTHSCHILD. I am a member of this newly formed war revenue tax committee.

Mr. RAINEY. Does that committee take the place of the war-service committee?

Mr. ROTHSCHILD. No, sir.

Mr. RAINEY. Who appointed the revenue committee?

Mr. ROTHSCHILD. A mass meeting held on June 6 in New York at the rooms of the Merchant's Association.

Mr. RAINEY. A mass meeting of what?

Mr. ROTHSCHILD. Of jewelers invited from all parts of the country.

Mr. RAINEY. Who invited them, the jewelers' vigilance committee?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. When?

Mr. ROTHSCHILD. On June 6.

Mr. RAINEY. 1918?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. That meeting was called by the jewelers' vigilance committee?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. And they met and organized the war-service committee?

Mr. ROTHSCHILD. No; the war-revenue tax committee.

Mr. RAINEY. How could the jewelers' vigilance committee, which went out of business January 15, 1918, assemble this convention which did not meet until June and which resulted in the selection of the war-service tax committee?

Mr. ROTHSCHILD. You are mistaken in saying that the jewelers' vigilance committee went out of business. That committee is in existence. A subcommittee of the jewelers' vigilance committee, the platinum committee, went out of existence.

Mr. RAINEY. Well, on the going out of business of the platinum committee on January 15, the war-service tax committee was organized?

Mr. ROTHSCHILD. No; it had been in existence some time before that. Mr. Steele can probably answer that question.

Mr. STEELE. The jewelers' war service committee was organized on January 7, 1918.

Mr. RAINEY. Why did the platinum committee go out of business on January 15?

Mr. ROTHSCHILD. Because the platinum committee felt that the war service committee, which had been formed under the auspices and at the request of the Chamber of Commerce of the United States would be the proper body to carry on negotiations or any business between the Government and the jewelers as to any matters in which the jewelers could serve the Government.

Mr. RAINEY. And platinum—

Mr. ROTHSCHILD (interposing). Was one of them.

Mr. RAINEY (continuing). Being an important basis war metal, it looked better to have some other committee in charge of it, from your standpoint?

Mr. ROTHSCHILD. I do not think, Mr. Rainey, that that entered into it. The thing that entered into it was the point that the war service committee would have to deal with the Government on the question of using jewelers' plants to make war material, as they are using them to-day to make surgical instruments on the question of fuel and other questions, and it did not seem proper that there should be another committee butting in. In other words, the jewelers' war service committee was to be the intermediary between the Government and the jewelry trade for all Government needs.

Mr. RAINEY. But the platinum committee was organized first?

Mr. ROTHSCHILD. The platinum committee had outlived its usefulness at that point. There was another committee better fitted to take it over, and I admit that I suggested getting out and letting the war-service committee handle it from that time on. I had other things to attend to.

Mr. RAINEY. How much money did the platinum committee or the war-service committee raise in order to regulate the platinum question so far as Congress was concerned?

Mr. ROTHSCHILD. In order to regulate the platinum question, I do not think they raised one penny. The jewelers' vigilance committee had quite liberal contributions from the trade, and as the chairman of it is here, or the treasurer, they probably can tell you to a penny all the money contributed. No money was contributed for any particular purpose except the general purposes of the committee. I think Mr. Reichman could answer that question.

Mr. RAINEY. The president is Mr. Larter?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. Is he here?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. The president stated on April 2 of this year:

While other things have been accomplished and plans for the future discussed, because of existing conditions, they have been temporarily postponed. All of the above work has, naturally, imposed a large expense, and through the energetic and persevering work of the chairman of the finance committee has been met by contributions of large and small amounts by the generosity of over 400 persons and firms connected with our industry. We still have left a nucleus for a fighting fund, which can and will be used in the interest of every branch of the jewelry trade.

That is a fair statement of the activities of the vigilance committee, is it not?

Mr. ROTHSCHILD. It is a general statement.

Mr. RAINEY. Now, when did you quit looking after after the platinum situation?

Mr. ROTHSCHILD. About January 15.

Mr. RAINEY. Mr. Larter states that for 12 months prior to April 2, of this year, you had successfully looked after the platinum situation in the interests of the trade, and at the same time cooperated in every way possible with the Government. Twelve months would carry you down to April—

Mr. ROTHSCHILD (interposing). I quite agree with you that there is a misstatement there which probably was a slip.

Mr. RAINEY. Who made the misstatement?

Mr. ROTHSCHILD. Mr. Larter.

Mr. RAINEY. I am reading from his annual address to the jewelers' vigilance committee. You were present at the time?

Mr. ROTHSCHILD. I was not. I am not even a member of the jewelers' vigilance committee. I tried to get out of all these things, so did not accept reelection.

Mr. RAINEY. You read this report?

Mr. ROTHSCHILD. I am not sure I read it, but I am familiar with all the things that really did happen.

Mr. RAINEY. It was printed in the Jewelers' Circular-Weekly of April 10, 1918. You have never corrected it in any way?

Mr. ROTHSCHILD. Well, I would not consider that of sufficient importance to—

Mr. RAINEY (interposing). It might become important now.

Mr. ROTHSCHILD. I am willing to make it, Mr. Rainey.

Mr. RAINEY. In view of your former testimony. So this is the first denial you have made of your activities continuing up until the 2d day of April, 1918?

Mr. ROTHSCHILD. I am quite sure Mr. Larter would be willing to correct that. It was simply a slip or a lapse.

Mr. RAINEY. Well, this is the first denial you have made?

Mr. ROTHSCHILD. The first time I have been asked about it. The first time it has been brought to my notice.

Mr. RAINEY. Now you say that the platinum committee went out of business on January 15, 1918. On the 2d day of April of this year Mr. Larter made this statement:

While the platinum matter, in so far as its connection with the Government is concerned, is now in the hands of this platinum committee, the jewelers' vigilance committee is still interested in the adverse propaganda, started afresh against the use of platinum, etc.

So Mr. Larter, chairman of the vigilance committee, thought the platinum committee was still in charge of the matter several months after you say the platinum committee ceased to exist?

Mr. ROTHSCHILD. He does not say the platinum committee, but the jewelers' vigilance committee, the parent committee, which is naturally interested in anything that affects—

Mr. RAINEY (interposing). I am reading from his report.

Mr. ROTHSCHILD. But he does not say the platinum committee, but the vigilance committee.

Mr. RAINEY. Well, I will read it to you again, literally.

Mr. ROTHSCHILD. Please.

Mr. RAINEY. This was on April 2, 1918:

While the platinum matter, in so far as its connection with the Government is concerned, is now in the hands of this platinum committee, the jewelers' vigilance committee is still interested in the adverse propaganda, etc.

Mr. ROTHSCHILD. The platinum committee he refers to there is the war service committee.

Mr. RAINEY. Then the war service committee is a platinum committee?

Mr. ROTHSCHILD. It has the platinum matter among other matters. I really am not familiar with the report and am not responsible for it, but those are the facts.

Mr. RAINEY. He refers to it as the platinum committee, the war service committee.

Mr. ROTHSCHILD. Well, I think he would be very glad to correct that.

Mr. RAINEY. He will correct a lot of things, or you will, before we get through.

Mr. ROTHSCHILD. Well, I am giving you the facts, Congressman, as they are.

Mr. RAINEY. You and Mr. Larter do not agree on these matters. Now, you say the first activities of the jewelers' vigilance committee or the platinum committee or the war-service committee commenced about the 9th of April, 1917.

Mr. ROTHSCHILD. The first activities of the jewelers' vigilance committee commenced soon after we entered the war. The first question which came up or which was brought to our notice was the platinum matter.

Mr. RAINEY. That was your first activity. What else have you done since then?

Mr. ROTHSCHILD. The war-revenue tax.

Mr. RAINEY. What else have you done since interesting yourselves in the platinum subject?

Mr. ROTHSCHILD. War-revenue taxes, and I think there was one matter about flags. There was some legislation in New York State as to the use of flags or the national emblem on jewelry.

Mr. RAINEY. Did you ever take any interest at all, here in Washington or anywhere else, in connection with a tax on jewelry except the platinum tax?

Mr. ROTHSCHILD. Certainly. We are to-day very greatly interested in the general tax proposition and on the war-revenue tax bill there was a special committee appointed.

Mr. RAINEY. I know, but you say that committee was not appointed until this year?

Mr. ROTHSCHILD. That committee was appointed directly after that. That committee had hearings before the Senate Finance Committee. I think that must have been early in May of last year.

Mr. RAINEY. Is that the war service tax committee?

Mr. ROTHSCHILD. There were two committees formed. The jewelers' vigilance committee is a committee of 30 members. They in turn formed a subcommittee on platinum, when the platinum question came up. As chairman of the legislative committee of the jewelers' vigilance committee I was asked to serve as chairman of that committee, and I was also asked to serve as chairman, a little later, of the war revenue tax committee. I was chairman of both of those committees. I am entirely familiar, therefore, with all the activities of those two committees representing the jewelers, the platinum committee and the jewelers' war revenue tax committee, and we were occupied with both of those subjects about the same time. I believe the war revenue tax bill must have come up some time in May of 1917. I know we came down here, and I think it was the 12th of May that we appeared before the Senate Finance Committee.

Mr. RAINEY. Yes; Mr. Larter states here in his address:

The commodity tax, in which jewelry is a factor, developed in Congress just about a year ago in the war revenue bill, which, as you know, has since become a law. Again, our committee called a mass meeting, and at it another powerful, representative committee was appointed, headed by the former very able and efficient chairman, Mr. Rothschild.

What committee is that?

Mr. ROTHSCHILD. That is the war-revenue tax committee I have just referred to.

Mr. RAINEY. That is the war-revenue tax committee to which Mr. Larter refers as this platinum committee?

Mr. ROTHSCHILD. They are two separate committees. I happen to be chairman of each of them. They were two separate committees and they were appointed probably within a few weeks of each other, because the war-revenue tax matter came up soon after the platinum matter. The platinum matter developed directly after we entered the war.

Mr. RAINEY. How many meetings did you have here in Washington of the vigilance committee or of other committees which had to do with anything except platinum?

Mr. ROTHSCHILD. Well, I do not suppose the vigilance committee was in Washington on platinum more than——

Mr. RAINEY (interposing). I mean anything else except platinum.

Mr. ROTHSCHILD. Oh, we were here on war-tax questions five times, that is all.

Mr. RAINEY. How many times did the platinum committee come to Washington?

Mr. ROTHSCHILD. Probably two or three times.

Mr. RAINEY. Let me read you from the official records.

Mr. ROTHSCHILD. Go ahead.

Mr. RAINEY. Mr. Larter says you came here 16 times.

Mr. ROTHSCHILD. On platinum?

Mr. RAINEY. Yes, that the platinum committee came here.

Mr. ROTHSCHILD. Well, it might have been five or six times. I was forgetting the meetings we had with the Secretary of Commerce. We had two or three meetings with him.

Mr. RAINEY. How many meetings did the platinum committee have?

Mr. ROTHSCHILD. I do not remember. We had no stated meetings.

Mr. RAINEY. You had none at all?

Mr. ROTHSCHILD. No stated meetings. We would call a meeting whenever a matter of any importance came up and we would get as many men together as we could and talk things over.

Mr. RAINEY. The platinum committee had nothing to do with anything except platinum?

Mr. ROTHSCHILD. Nothing but platinum.

Mr. RAINEY. Mr. Larter states you had 16 meetings of that committee.

Mr. ROTHSCHILD. If he kept track of them that is possible. I did not remember there were any such number of meetings. I know there were a great many more meetings on the tax question.

Mr. RAINEY. You had more meetings on the tax question?

Mr. ROTHSCHILD. I was in Washington oftener and longer; much longer, that is, after the bill became a law.

Mr. RAINEY. That is the war service tax committee?

Mr. ROTHSCHILD. No; that is the jewelers' war revenue tax committee. The war service committee only came into being at the end of the year.

Mr. RAINEY. And you had more meetings of that committee than the platinum committee?

Mr. ROTHSCHILD. I was in Washington oftener; sometimes alone and sometimes with two or three other men.

Mr. RAINEY. The record shows that you only had 2 meetings of that committee, while you had 16 of the platinum committee.

Mr. ROTHSCHILD. You asked me about our activities in Washington. I imagine Mr. Larter refers——

Mr. RAINEY (interposing). I am asking about the meetings.

Mr. ROTHSCHILD. About the meetings held in New York? Your first question, I believe, was about the activities in Washington on platinum.

Mr. RAINEY. I am asking you how many meetings you had?

Mr. ROTHSCHILD. I could not tell you. I do not know.

Mr. RAINEY. And you said you had more meetings of the tax committee than the platinum committee, and the record shows you had

16 meetings of the platinum committee and only 2 of the tax committee.

Mr. ROTHSCHILD. In New York, possibly; but we were here in Washington. That was your first question. If that is not the question I would like to amend my answer.

Mr. RAINEY. How many trips did you make to Washington?

Mr. ROTHSCHILD. I could not tell you. There was one month I was here, I believe, half the time, probably here six or eight times.

Mr. RAINEY. What did you do on those trips?

Mr. ROTHSCHILD. We were trying to work out the war revenue tax law. We came here several times at the request of the Treasury Department and we tried to work out some rule or regulation, tried to get definitions, and I had to come here very often. Some Treasury decisions were rendered which the Treasury was dissatisfied with afterwards, or the Commissioner of Internal Revenue, and he telegraphed me to come here and the final upshot was the Jewelry War Tax Primer. It was a technical subject. We had offered our services at the outset and the commissioner accepted them.

Mr. RAINEY. The record shows that you made 18 trips to Washington.

Mr. ROTHSCHILD. Possibly.

Mr. RAINEY. Did you send out any circulars?

Mr. ROTHSCHILD. I did not.

Mr. RAINEY. Did the jewelers' committee send out any?

Mr. ROTHSCHILD. Probably.

Mr. RAINEY. What was the object in sending them out?

Mr. ROTHSCHILD. To notify the trade as to the things that had been done or was being done.

Mr. RAINEY. The only thing you were doing was interesting yourself in platinum?

Mr. ROTHSCHILD. In all these trips in regard to the war revenue tax I was interesting myself in various decisions and opinions, some of which had to be recalled or changed at the initiation of the commissioner himself, and the jeweler did not know where he was at; did not know what to pay taxes on; each collector had a different idea of the law, and we had to send out telegrams and letters and corrections from time to time. I dare say a lot of that paper stuff was in connection with that. I paid very little attention to it.

Mr. RAINEY. The record shows that prior to April 2 of this year you sent out over 17,000 letters.

Mr. ROTHSCHILD. Possibly. There are 35,000 jewelers in the United States.

Mr. RAINEY. And you sent out 445 telegrams, one of them containing 708 words.

Mr. ROTHSCHILD. That was a long one. I did not know anything about it.

Mr. RAINEY. Who got that telegram?

Mr. ROTHSCHILD. I do not know. I think Mr. Larter could answer a good many of these questions, Mr. Rainey.

Mr. RAINEY. That telegram went to 11 different firms, he says.

Mr. ROTHSCHILD. Yes.

Mr. RAINEY. Let me read you what Mr. Larter says your vigilance committee did during the year ending April 2, 1918:

An idea of some of the work done by the committee during the year was given in the report of Secretary Dickinson, which showed that during the year there have been 61 meetings of the directors and committees, divided as follows: Directors, 17; executive committee, 14; platinum committee, 16; legislative committee, 2; tax committee, 12.

There have been 10 mass meetings of the jewelers' vigilance committee with the trade at large, two on the subject of platinum, six on tax matters, one on watches, and one on war service committee. In addition to members of the jewelers' vigilance committee, incorporated, these meetings were attended by representatives of 832 firms.

There have been sent out 17,072 letters, circulars, announcements, etc., through the mail, and 455 telegrams, the shortest of which was 42 words, and the longest consisting of 708 words, this letter having been sent to 11 firms.

There have been 18 trips made by committees on various matters, 14 to Washington, 2 to Albany, 1 to Scarsdale, and 1 to Boston. In all, 115 members of the jewelers' vigilance committee and delegates from the trade at large making the trips.

That is a pretty active organization.

Mr. ROTHSCHILD. Well, I think it was blowing one's horn to a considerable extent. I suppose Mr. Larter wanted to show these people that their contributions were being used in very active work. I do not think it had any special bearing on our work, though. Some of those long telegrams were undoubtedly necessitated by a change in the rulings of the Internal Revenue Office, because there were some real serious conditions there as to the taxes.

Mr. RAINEY. Now, the Government wants platinum, you say, for the purpose of manufacturing acids, extracting nitrogen from the air for fertilizing lands and for war purposes, and for manufacturing acids to be used in explosives, and yet you say that was a selfish interest and not patriotic. Is that your position?

Mr. ROTHSCHILD. No, sir; it is not my position. My position is that the Government should have commandeered platinum long before it commandeered the platinum; that the Government should take no chances whatever in regard to the supply of platinum to win this war. That has always been my position.

Mr. RAINEY. In order to have platinum with which to win the war; is that your position?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. And in order to accomplish that your organization, the jewelers' vigilance committee, agreed to supply the country with all the platinum it needed?

Mr. ROTHSCHILD. It did not.

Mr. RAINEY. What did you agree to do?

Mr. ROTHSCHILD. To give up all our unmanufactured platinum whenever the Government requested it. That is what we agreed to do, and we agreed also to cut down on the use of platinum for bulky articles, for findings, for pin tongues, and things which in the aggregate amount to considerable weight; which we did as far as the jewelers were able to enforce the thing. We had no power, but we used moral suasion, and we went far beyond our power in getting the jewelers to do these things.

Mr. RAINEY. When did you adopt your resolution, the vigilance committee, with reference to platinum?

Mr. ROTHSCHILD. I think it must have been early in April.

Mr. RAINEY. Early in April of what year?

Mr. ROTHSCHILD. 1917.

Mr. RAINEY. Is this the resolution?

Whereas the Secretary of Commerce has requested the platinum committee of the jewelers' vigilance committee to bring to the attention of the jewelry trade of the United States the advisability of conserving platinum in order that our Government may have larger supplies to draw upon for war purposes; and

Whereas the jewelry trade has already clearly expressed its desire and determination to assist our Government to the extent of its ability in bringing the war to a successful termination: Be it

*Resolved*, That we pledge ourselves to discontinue and strongly recommend to all manufacturing and retail jewelers of the United States that they in a truly patriotic spirit discourage the manufacture, sale, and use of platinum in all bulky and heavy pieces of jewelry; be it further

*Resolved*, That during the period of the war, or until the present supplies of platinum shall be materially augmented, we pledge ourselves to discontinue and recommend that the jewelry trade discourage the use of all nonessential platinum findings or parts of jewelry, such as scarfpin stems, pin tongues, joints, catches, swivels, spring rings, ear backs, etc., where gold would satisfactorily serve; be it further

*Resolved*, That the jewelry trade encourage by all means in their power the use of gold in combination with platinum wherever proper artistic results may be obtained; be it further

*Resolved*, That copies of these resolutions be handed to the Secretary of Commerce, to the trade press, and be sent to all our trade organizations and to the daily press, in order that they may have the widest possible dissemination.

That is the order.

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. Those are the resolutions that you adopted?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. With reference to that resolution, and on account of it, the Secretary of Commerce addressed you a letter on May 21, 1917, as chairman of the platinum committee, in which he said in effect that no other conservation of platinum was needed than you had undertaken and as was expressed in the resolution that was adopted?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. And that called forth that letter?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. Which you succeeded in getting a Member of Congress to read on the floor of the House after I had refused to read it?

Mr. ROTHSCHILD. We did not ask you to read that letter, Mr. Rainey. I do not know that we asked you to read any letter.

Mr. RAINEY. I had a letter exactly similar.

Mr. ROTHSCHILD. I think you had a much longer letter and a much fuller letter.

Mr. RAINEY. Who requested the Secretary of Commerce to write that letter to me?

Mr. ROTHSCHILD. We went to the Secretary of Commerce with a copy of your proposed speech which had been sent out for release after you had delivered it to one of the trade journals. That journal believing it was of trade interest brought it to the notice of the committee, and we sent a wire to the Secretary of Commerce asking for a hearing, and we sent a wire to you at the same time stating that we would wait on you the next morning. We stated that we would like to speak to you about this proposed speech. We then went before the Secretary and showed him your speech, and he wrote that letter. He wrote a letter to you.

Mr. RAINEY. He being a democratic Secretary of Commerce and I being a Democrat, you thought you had me fixed?

Mr. ROTHSCHILD. No, sir; I did not think at all on that subject. I assumed that as the Secretary had up to that time been the only official who was thoroughly posted on platinum, he having before him every official of the Government or every branch of the Government that might need platinum, and they having stated that there were no platinum requirements within a week or two of that time—in view of those facts, we thought that his statement to you as to the facts of the situation might induce you to revise your views.

Mr. RAINEY. But it did not have much influence, did it?

Mr. ROTHSCHILD. It was not a question of influence, but it was a question of bringing certain facts to your attention.

Mr. RAINEY. At any rate, I refused to alter my views.

Mr. ROTHSCHILD. I am sorry to say that you did.

Mr. RAINEY. I am not sorry. What did you do to conserve platinum?

Mr. ROTHSCHILD. The resolutions were sent, as indicated there, to the trade journals.

Mr. RAINEY. I mean what was done to conserve platinum in addition to sending those resolutions?

Mr. ROTHSCHILD. Whenever any act on the part of any manufacturer in the direction of abusing those resolutions came to the notice of the committee, we requested and generally succeeded in getting those manufacturers to abstain from doing the things that they had been doing.

Mr. RAINEY. Suppose you mention one of them.

Mr. ROTHSCHILD. Well, for instance, some time during the summer the complaint was made to the Secretary of Commerce that solid platinum wedding rings were being manufactured. This complaint was sent to us by the Secretary of Commerce, and it came before the platinum committee, and that committee took the matter up, at once with the offenders.

Mr. RAINEY. Who were the offenders?

Mr. ROTHSCHILD. There were a number of them.

Mr. RAINEY. Who were some of them?

Mr. ROTHSCHILD. There was J. R. Wood, of New York.

Mr. RAINEY. Who else?

Mr. ROTHSCHILD. I called them offenders, but I want to amend that by saying that that was the first time it was called to our attention that those little wedding rings would be considered by the Government as bulky articles. Therefore, I want to amend that statement and not say that they were offenders, but I want to say those manufacturers who had not been particularly requested not to make those wedding rings. We did ask seven or eight concerns to abstain from making those rings and each one of them promised to abstain. They did abstain from making them, so far as we have been able to find out.

Mr. RAINEY. Who asked them to do that?

Mr. ROTHSCHILD. I did, as chairman of the platinum committee.

Mr. RAINEY. Who asked you to ask them?

Mr. ROTHSCHILD. Well, that communication from the Secretary of Commerce was my reason.

Mr. RAINEY. What communication?

Mr. ROTHSCHILD. It was a letter inclosing a communication which he had received, I think, from Dr. Hildebrand. Dr. Hildebrand had received a letter from some chemist.

Mr. RAINEY. When did you make this request?

Mr. ROTHSCHILD. That must have been last June or July. I could get you the exact date.

Mr. RAINEY. What else have you done to conserve platinum?

Mr. ROTHSCHILD. We have asked the trade journals not to advertise platinum, and we have asked individual jewelers to cut down on it and not advertise platinum for sale.

Mr. RAINEY. For instance, take this magazine Vogue; did you ask them not to advertise platinum?

Mr. ROTHSCHILD. I do not know anything about Vogue.

Mr. RAINEY. Did you protest against this article?

Mr. ROTHSCHILD. I had never seen an article in Vogue, and until I read your speech I had never seen the Vogue article.

Mr. RAINEY. Did you make any attempt to secure the use of platinum substitutes?

Mr. ROTHSCHILD. The only attempt I made to secure the use of platinum substitutes was by asking the Bureau of Standards, or Dr. Stratton, to tell us if they knew of any substitutes. We told Dr. Stratton that we wanted to know of any platinum substitutes.

Mr. RAINEY. They were using white gold as a substitute for platinum, were they not?

Mr. ROTHSCHILD. I think white gold was brought in some years ago as a substitute, but I do not think it has been successful. I do not think it stood up well. It tarnished, and you could not set small stones in it successfully.

Mr. RAINEY. Why did you protest through the jewelers' vigilance committee against these platinum substitutes?

Mr. ROTHSCHILD. I do not know that we protested against the use of platinum substitutes. We told the Secretary of Commerce that if there were any substitutes we wanted to be told about them, because we knew of none.

Mr. RAINEY. But they were using white gold as a substitute for platinum.

Mr. ROTHSCHILD. White gold is not a substitute for platinum.

Mr. RAINEY. Let me read you something here to show you what you have done. I am reading from the Jewelers' Circular-Weekly of May 22, 1918, which is quite a recent issue. This is against the use of white gold as a platinum substitute. This statement reads:

Prominent retail jewelers and platinum smiths met at New York and resolved to discourage the use of all metals that imitated platinum in any way.

Do you know anything about that?

Mr. ROTHSCHILD. I heard about the meeting, but I was not there. That was a meeting called, I believe, to consider the jewelry situation after platinum had been commandeered. The jewelers were at sea about it, and they did not know what to do. The suggestion was made at a meeting, I think, here at a table in Washington. I was present at the time, and it was suggested that it would be a good idea to call the principal jewelers together to see what could be done. Their business was practically at an end, because many

jewelers' organizations were only set up for platinum manufacturing. It was a serious question, and they thought that by getting together and talking it over some light could be shed on the subject.

Mr. RAINEY. What particular officials of the jewelers' vigilance committee were active in that conference?

Mr. ROTHSCHILD. I think the chairman was. Mr. Larter has been active. It was called by the jewelers' vigilance committee.

Mr. RAINEY. I have here before me his address on that occasion, speaking for that committee.

Mr. ROTHSCHILD. I am not a member of the jewelers' vigilance committee now.

Mr. RAINEY. I know that you are not now.

Mr. ROTHSCHILD. I am willing to accept blame for everything done while I was chairman, or even up to date.

Mr. RAINEY. I am perfectly familiar with your activities, Mr. Rothschild, in the interest of this jewelers' vigilance committee, and also on the subject of platinum. I suppose I am just as familiar with them as you are yourself. I do not want to offend you in any way, but I know all about them.

Mr. LONGWORTH. With regard to the influence that was used to prevent advertisements of platinum in jewelry, I have here a copy of the Jewelers' Circular-Weekly, with which, I assume, Mr. Rothschild has considerable influence. I have before me a copy of the issue of July 3, and I find—

Mr. RAINEY (interposing). Of what year?

Mr. LONGWORTH. Of this year and of this month. I find, for instance, on page 13, an advertisement by Untermeyer, Robbins & Co. It is a full page advertisement of jewelry, and reads: "Melee well matched in platinum tops," etc., the word platinum being printed in capital letters. I find on page 34 an advertisement of platinum made in Newark for jewelry purposes. I find on page 36 an advertisement by somebody called A. Suderov of a complete line of platinum and 18-carat white gold clusters on hand. On page 38 I find the advertisement of Shire & Strauss of fine diamonds and platinum jewelry; the word platinum in every case being printed in capital letters. On page 42 I find an advertisement by Goldsmith, Stern & Co., of platinum jewelry. I simply bring that up at this point to show what has been accomplished in the direction of preventing advertisements of platinum jewelry.

Mr. RAINEY. Is the Jewelers' Circular-Weekly the official organ of the jewelers' vigilance committee?

Mr. ROTHSCHILD. No, sir; it is a paper over which the jewelers' vigilance committee has no power or influence.

Mr. RAINEY. It publishes the reports of your meetings.

Mr. ROTHSCHILD. It publishes everything of interest to the jewelers that they can get hold of. The jewelers' vigilance committee has no connection with it. It is privately owned.

Mr. RAINEY. Did you try to get this Jewelers' Circular-Weekly to quit publishing platinum advertisements?

Mr. ROTHSCHILD. I have taken no action at all since I ceased to be the chairman of the committee. When I was the chairman of the committee, I took the matter up and requested that platinum advertisements be kept down as much as possible. I even made the suggestion at one time that they should decline to accept platinum

advertisements, and that, at least, they should be kept down or practically suppressed.

Mr. RAINEY. At any rate, your efforts to prevent the insertion of platinum advertisements in jewelers' papers does not seem to have been very successful.

Mr. ROTHSCHILD. Not from that statement; but, again, I want to say that it is not illegal or unlawful to use it in jewelry. Platinum costs \$105 per ounce, and it is an article used in trade. It is not illegal nor immoral for the jeweler to try to sell it. It would be illegal for him to keep on making jewelry of platinum in excess of the 25 per cent left to him by the War Industries Board. Now, these people are engaged in that business, and their fortunes and whatever they have are invested in jewelry. I can see no reason whatever, as long as the Government does not object to it, why the jeweler should not use it. That being true, I can see no reason why they should not take the usual mercantile methods of trying to get rid of it.

Mr. RAINEY. I agree with you that it is not illegal.

Mr. ROTHSCHILD. It is not immoral or unpatriotic.

Mr. RAINEY. I can not agree with that latter statement. Now, this jewelers' vigilance committee brought about this meeting of the retail jewelers and platinum smiths at New York, did it not?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. It was brought about for the purpose of taking steps to discourage the use of platinum substitutes, was it not?

Mr. ROTHSCHILD. I am not absolutely informed, but when the matter was discussed in my presence I understood that it was brought about at a conference to see what the opinion of the trade was on the subject, or as to the steps which ought to be taken in order for them to continue in business.

Mr. RAINEY. The Jewelers' Circular-Weekly stated that it was called for that purpose. Now, let me read from Mr. Larter's address:

The jewelers' vigilance committee thought that this was the psychological time to bring together representatives of the retail jewelers of the country and the manufacturers so that we might have an open discussion as to what to do in reference to the conditions now confronting us. You all have received, probably, the commanding order issued by the chemical division of the War Industries Board in reference to platinum, and I wish to state that the platinum committee of the jewelers' vigilance committee, and also the jewelers' war-service committee, have been endeavoring to their best ability to try and advise those in authority what ought to be done and how it should be done in reference to the platinum matter. Up to the present time—up to this past week—the matter has been handled as well as it could be under existing conditions; and while I do not hold a brief for the war-service committee, I wish to state that those of us who have come in contact with the officials in Washington appreciate the fact that it is often difficult to convey to their minds some very important matters that seem necessary in reference to the jewelry trade.

That is a fair statement of the attitude of the jewelers' vigilance committee, is it not?

Mr. ROTHSCHILD. I do not know what the attitude was. The only thing I know about it was that the meeting was called as a conference. I was not present. They met and conferred, and I think they passed certain resolutions.

Mr. RAINEY. Do you know what those resolutions were?

Mr. ROTHSCHILD. My recollection of the resolutions is that they did not believe that there should be an attempt made to use white gold in place of platinum, unless the white gold was distinctly stamped

so that the public would not be defrauded. That is necessary, because white gold does look like platinum, especially to the uninitiated. The difference is that white gold, as we know at the present time, will tarnish and will not hold stones in settings.

Mr. RAINY. So that the object or purpose of this resolution was to discourage the use of white gold as a substitute for platinum by putting upon it this brand so that nobody could claim that he had platinum jewelry when he had white gold jewelry.

Mr. ROTHSCHILD. It was also to prevent misbranding and fraud, Mr. Rainey, which we are always very much interested in in connection with our business, because we know that white gold has been sold for platinum by clerks in jewelry stores, sometimes with knowledge and sometimes without.

Mr. RAINY. This paper states that in the resolution they also declared that the best interests of the jewelry trade demanded that white gold should not be used in the manufacture of jewelry that contained diamonds or other precious stones.

Mr. ROTHSCHILD. I assume that it is again on the theory that white gold has not proven to be mechanically right. In other words, I know that some years ago when white gold was first brought to the attention of the great jewelers of this country, they tested the thing out. Now, a jeweler would generally rather have an investment of \$50,000 in a certain kind of jewelry than \$250,000, because there is always more or less danger, and there would be a greater amount of money involved, and if white gold had stood the test, and if it had shown strong qualities and the capacity for being used in connection with fine jewelry and for holding small stones in settings, I am certain it would have gotten into the market willy-nilly and would have crowded out platinum. It would have done that if it had had the merit. It may be that some day they will find a white gold alloy or combination that will make it possible to use it in that way, but that does not exist to-day.

Mr. RAINY. Do you think that you are assisting in the conservation of platinum by discouraging the use of white gold?

Mr. ROTHSCHILD. I do not think the two have anything in common.

Mr. RAINY. But the more white gold they use the less platinum they will use.

Mr. ROTHSCHILD. No, sir; the more white gold the jeweler uses, the more trouble he stores up for himself in the future.

Mr. RAINY. Did you ever pass resolutions against the use of white gold before the war started?

Mr. ROTHSCHILD. I do not know that any resolutions were passed. I know that the principal jewelers discouraged it.

Mr. RAINY. The jewelers' vigilance committee never called together any sort of convention of jewelers for the purpose of discouraging the use of platinum substitutes until we had been in war for nearly a year?

Mr. ROTHSCHILD. The committee did not call them together for that purpose. They called the convention to consider the situation that confronted them because of the taking over of platinum for Government purposes. The jewelers who were making platinum jewelry did not know where to turn. They did not know whether to use green gold, yellow gold, white gold, or what.

Mr. RAINEY. The result of the meeting which the jewelers' vigilance committee called was that they did meet and adopted resolutions protesting against the use of platinum substitutes, was it not?

Mr. ROTHSCHILD. I think they adopted further resolutions besides those. I think the jewelers who came there, including the big retailers and the manufacturers, received suggestions from each other, which suggestions will probably prove valuable to them. It was a matter of coming together and advising with each other.

Mr. RAINEY. Did you send out the resolutions that were adopted on that occasion?

Mr. ROTHSCHILD. I did not.

Mr. RAINEY. Did the jewelers' vigilance committee send them out?

Mr. ROTHSCHILD. I do not know.

Mr. RAINEY. This convention, which was called together by the jewelers' vigilance committee, adopted another resolution. This is a part of the resolutions that they adopted discouraging the use of white gold and other platinum substitutes:

*Resolved*, That full publicity be given to these resolutions and that the jewelers' vigilance committee be requested to send copies of these resolutions to the entire jewelry trade with a return card, upon which the recipient may signify his willingness to cooperate.

Did the jewelers' vigilance committee do that?

Mr. ROTHSCHILD. I prefer to have Mr. Larter answer that.

Mr. RAINEY. You are testifying on the subject of platinum.

Mr. ROTHSCHILD. I would like to give you light on any subject that you ask me about, but I do not know anything about that.

Mr. RAINEY. Was the jewelers' vigilance committee active in connection with these commandeering orders adopted by the War Industries Board?

Mr. ROTHSCHILD. I do not believe so, but I do not know. I have been out of it ever since January 25, absolutely.

Mr. RAINEY. They say they were. Here is the resolution, and you are speaking, of course, for all of them. I presume you know something about it.

Mr. ROTHSCHILD. I will tell you what I know.

Mr. RAINEY. Here is the statement issued by the war service committee. This refers to Mr. Larter and this platinum committee. They say, referring to their efforts with the War Industries Board on the subject of platinum with reference to those orders, and this is published in the May 22 issue of the Jewelers' Circular-Weekly:

While we were not successful in eliminating the requirement of a waiver signed by the owner for the release of articles containing platinum, irridium, or palladium, left with a jeweler for repairs, alterations, or setting, a modification of this requirement, as recently arranged by the committee, was confirmed and no acknowledgment before a notary is now necessary in such cases. Anticipating that many private customers might object to signing such a waiver, the committee secured the insertion of a heading which shows the official nature of the new waiver and that it is required by the Government and not by the jeweler.

Do you know anything about that?

Mr. ROTHSCHILD. No, sir.

Mr. RAINEY. Was that in the interest of the conservation of platinum?

Mr. ROTHSCHILD. Absolutely.

Mr. RAINEY. This was an effort on the part of the jewelers' vigilance committee to eliminate certain waiver requirements and to get

certain articles out in trade so that they could not be used for war purposes.

Mr. ROTHSCHILD. I have never seen that before, but it seems to me from your reading of it to be an effort to assist the Government, so that the private owner would submit his platinum and conserve it. I think Mr. Steele, of the War Service Board, who is here, could answer that question; I can not, but from your reading I should say that it was rather in the direction of conservation than otherwise. These orders have all to be more or less modified in order to make them workable. That is my experience.

Mr. RAINEY. On the 22d day of May Mr. Larter again makes this statement:

I wish to state that the platinum committee of the jewelers' vigilance committee and also the jewelers' war service committee have been endeavoring to their best ability to try and advise those in authority, and so forth, with reference to the platinum matter.

That was on May 22. You say——

Mr. ROTHSCHILD (interposing). I say that there was no platinum committee of the jewelers' vigilance committee in existence on January 15, 1918. I think Mr. Larter will admit that.

Mr. RAINEY. Mr. Larter said as late as the 22d of May, 1918, that the platinum committee was cooperating with the war-service committee in its effort to conserve platinum.

Mr. ROTHSCHILD. Mr. Larter is here, and Mr. Larter can speak for himself. I think that was simply a slip.

Mr. RAINEY. Now, you think that the vigilance committee was successful in conserving platinum?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. All that the Government needed?

Mr. ROTHSCHILD. I do not know what the Government needed. I do know what the Government needs to-day.

Mr. RAINEY. Let me read from another statement made by Mr. Fessenden, of the war-service committee, which is referred to as the platinum committee now. I am quoting from the Jewelers' Circular Weekly of May 22, referring to Mr. Fessenden:

He recited the conditions which led up to the taking of the census of platinum of the jewelers and the offer to the Government of but 10 per cent of the amount of stock that had been reported and how this had put the jewelers in a bad light before the officials of the country and made the commandeering orders necessary. He urged that every man present realize that this was the time to think of his country first and of his trade second.

Then Mr. Fessenden thought in the month of May of this year that your efforts had failed to conserve platinum?

Mr. ROTHSCHILD. I do not think there was any connection between the two things.

Mr. RAINEY. He says there was.

Mr. ROTHSCHILD. I should like to explain that the conservation of platinum which our committee attempted to secure and which we did secure, as far as we were able, was along pledges which were distinctly given and which Prof. Howell refers to in his letter in Engineering and Industrial Chemistry. That led up to these pledges. As to the request which the War Industries Board made of the war-service committee to ask the jewelers to voluntarily give platinum to the Government, I would like to make this criticism.

The war-service committee should not have attempted to put that request into execution. There should have been a statement made by the War Industries Board as to the amount of platinum required, they had the census, and the war-service committee might then have sent out a request to the jewelers stating that "we want such and such percentage of your platinum," and I am sure it would have been given. As a result of this criticism meetings were called and the first 500 ounces which were desired, I think, afterward augmented to 1,500 ounces.

Mr. RAINEY. At that time there were 5,000 ounces?

Mr. ROTHSCHILD. That was their entire stock. The War Industries Board did not say to the jewelers "You must give your platinum," but "how much platinum will you give?" There are thousands of jewelers, and the average jeweler probably thought that the other fellow was going to give the platinum—there are a great many jewelers and they were not going to be the "goat." I think that method of attempting to get platinum was rather a foolish one.

Mr. RAINEY. All of which means that you did not conserve the platinum for the Government as you agreed?

Mr. ROTHSCHILD. All of which means that we did as we agreed, and this had nothing to do with conservation. This was a question of taking away from the jewelers the stocks they still had on hand, which the Government finally did take to the extent it wanted to take. It was a request by the Government for a voluntary contribution of the jewelers stock in trade. The jewelers, I think, if they had understood the situation, would have made a better response.

Mr. RAINEY. There was no way of getting the platinum from the jewelers except by inducing them to make voluntary contributions?

Mr. ROTHSCHILD. You are mixing that up again. The vigilance committee had nothing to do with contributions. The government at that time had not asked for any platinum. They asked the jewelers to conserve the platinum. That was done. Then, after the Russian smash-up—

Mr. RAINEY (interposing). And in pursuance of that, as late as May of this year, you discouraged the use of platinum in jewelry?

Mr. ROTHSCHILD. As late as May the War Industries Board had already acted and by taking 75 per cent of all the platinum which the manufacturers had they discouraged the use of platinum in jewelry. They could have taken 100 per cent and they were advised by the jewelers war service committee to take 100 per cent, but they did not desire to.

Mr. RAINEY. Evidently relying upon the agreement of your organization to supply the country with sufficient platinum?

Mr. ROTHSCHILD. There was no such agreement at any time.

Mr. RAINEY. The resolution adopted did not even mean that?

Mr. ROTHSCHILD. How could it? We have no power, except the platinum we had. We said, "You can have that whenever you want it."

Mr. RAINEY. The letter you procured from the Secretary of Commerce did not mean that?

Mr. ROTHSCHILD. No; just what we had. The jewelers never had the platinum. The dentists, the photographers, the metallurgists, and the refiners had it. We only had a small portion.

Mr. RAINEY. You had 5,000 ounces and you only gave 500 ounces.

Mr. ROTHSCHILD. When the Government asked for platinum for 75 per cent, they got 75 per cent.

Mr. RAINEY. When they commandeered it?

Mr. ROTHSCHILD. When they commandeered it. The 500 ounces were augmented to 1,450 ounces of the 5,000 ounces.

Mr. RAINEY. After the commandeering order?

Mr. ROTHSCHILD. Before the commandeering order. The Government got 30 per cent of the stock in trade at less than cost, voluntarily. Ask that of the iron men or the copper men or any other industry in the country.

Mr. RAINEY. You are familiar with the fact that we have a platinum section in the Bureau of Mines?

Mr. ROTHSCHILD. I am not, not up to a short time ago.

Mr. RAINEY. A platinum statistical section?

Mr. ROTHSCHILD. There is in the Geological Survey, I believe, of the Interior Department, not in the Bureau of Mines.

Mr. RAINEY. You knew that the head of the Bureau of Mines, Dr. Manning, had stated that the platinum supplies were insufficient for the war?

Mr. ROTHSCHILD. Up to that time I had no knowledge that the Bureau of Mines had anything in connection with the platinum situation for Government purposes.

Mr. RAINEY. But you know their statistics showed that there was not enough platinum?

Mr. ROTHSCHILD. I did not know that they had any statistics. The statistics of the Geological Survey of the same department, the Interior Department, are probably the statistics they have been acting on, and I was familiar with those. I should like to make a short explanation if you please?

Mr. RAINEY. Of course.

Mr. ROTHSCHILD. Because of your inquiries, I should like to say that I am interested in this matter not only because I have been chairman of the platinum committee and of the war revenue tax committee, but because of certain assistance which I and another gentleman, Mr. Monroe, of New York, gave to our allies, before we entered the war in the conservation of industrial diamonds, which are very necessary to keep away from the enemy. The diamond committee was formed at the request of the War Trade Board. This diamond committee, of which I was the vice president, was afterwards asked by the War Trade Board to take over the conservation of platinum. I am really a Government official, a member of the War Trade Board, a platinum expert, and as such a great deal of this information came to me, information on the necessities of the Government's program, as indicated by various reports, information, of course, which I could not and did not give to the jewelers or to the vigilance committee, but which made me feel at all times the absolute necessity for conservation and which caused me in season and out of season to try to impress upon every branch of the Government that had anything to do with the war the necessity not so much of taking platinum from a few people in this country, but getting more platinum into this country.

There were 50,000 or 60,000 ounces which could have been obtained for this country during this year probably if the proper steps had been taken. That has been my entire work. All of these other

things have been side issues. The chemists, I think, have been very largely responsible indirectly for the frame of mind of Mr. Summers, of the War Industries Board, who thought that \$90 was the proper price for 21,000 ounces of platinum, when platinum was selling in the open market in New York at \$105; that frame of mind, that \$100 was too much to pay for platinum, when the whole world was willing to pay more, probably resulted in keeping 10,000 ounces, which could have come from Russia, from coming in.

Mr. RAINEY. When?

Mr. ROTHSCHILD. In January.

Mr. RAINEY. Of what year?

Mr. ROTHSCHILD. This year. I make this statement, because I do not want you to be under any misapprehension, if it should come about at some future time, that I have testified before this body of legislators and have covered these other views. I have had very intimate knowledge. I do not know what the platinum needs of the Government are to-day. I have never known. Probably the War Industries Board or some official would know. At the beginning of the thing, last April, there was nobody who wanted an ounce of platinum.

Mr. RAINEY. Are you one of the advisers of the War Industries Board?

Mr. ROTHSCHILD. I am not. I think I am persona non grata with that board. I am connected with the War Trade Board. I made a report to the War Trade Board on January 15, 1918, in which I strongly urged that from fifty thousand to seventy-five thousand ounces of platinum be obtained from abroad at once, including iridium. I also called attention to the danger of keeping the price too low, because it would keep platinum from coming here from Colombia, which was one source of supply. I also called attention to the absolute unbusinesslike attitude in fixing the price of platinum at \$90 which was worth \$105 in the open market and to the absolute unbusinesslike attitude of not being willing to pay that price if necessary. I think that the situation in this country to-day is largely due to the opinion honestly held by Mr. Sommers, of the War Industries Board, who estimated that \$105 was too much. We do not fix the price of platinum in this country and we can not fix it in this country. If the price of \$105 had been paid then we would have secured platinum from Colombia, probably 30,000 ounces a year, for which the refiners gladly pay \$105.

Mr. RAINEY. We get our principal supply from Russia?

Mr. ROTHSCHILD. Not since the war. I think some is coming from China and Japan. That metal naturally, like gold, is carried out. My own impression is that there are thousands of ounces of platinum in Japan and China which a liberal policy will bring to this country.

Mr. LONGWORTH. I do not know that I quite understand what Mr. Rothschild's relation to the Government is. Are you a dollar a year man?

Mr. ROTHSCHILD. Yes, sir.

Mr. LONGWORTH. You are on a subcommittee of the War Trade Board?

Mr. ROTHSCHILD. My business particularly is to pass on import licenses for platinum and diamonds. That has been done up until

the present time through a series of guaranties. We carefully check up the crude platinum as it goes into the hands of the refiner in order to be sure that none of it is smuggled out of the country to the enemy. That is also a part of the work of the War Trade Board.

Mr. LONGWORTH. What committee of the War Trade Board is that?

Mr. ROTHSCHILD. The committee on imports.

Mr. LONGWORTH. Who is the chairman of that committee?

Mr. ROTHSCHILD. Mr. Peterson.

Mr. LONGWORTH. Now, by virtue of your connection with the War Trade Board—are you in any way an advisor of the platinum section of the War Industries Board?

Mr. ROTHSCHILD. No; I think I am *persona non grata* there. I tried to be an advisor. I have been in touch with Mr. Summer and Mr. Connor at various times, saying over and over again *carthago delenda est*—"Get more platinum." What we have in this country ought to be an irreducible reserve.

Mr. MOORE. You said Colombia, \$30,000?

Mr. ROTHSCHILD. Ounces.

Mr. RAINEY. Of course, the greater part of the supply comes from Russia?

Mr. ROTHSCHILD. In normal times I should say 90 per cent.

Mr. RAINEY. At the time we entered this war Russia was prohibiting the exportation of platinum to any nation, wasn't she?

Mr. ROTHSCHILD. We could have gotten here in May—the Secretary of Commerce had a telegram, or a cablegram—

Mr. RAINEY (interposing). May of this year?

Mr. ROTHSCHILD (continuing). Last year—he had a cablegram from the attaché at St. Petersburg that there were 40,000 ounces available, which could have been gotten by the Government of the United States.

Mr. RAINEY. But at that time Russia did have an order in force which prohibited the exportation of platinum?

Mr. ROTHSCHILD. But they would have permitted the export to any of the allies and our Government could have gotten it.

Mr. RAINEY. But before we entered the war Russia had an order which did keep us from getting any platinum?

Mr. ROTHSCHILD. No, sir; precisely the contrary. I think 40,000 ounces were available, which Russia was willing to have us get.

Mr. RAINEY. Had we been getting any platinum from Russia during the year prior to our entry into the war?

Mr. ROTHSCHILD. The Americans bought their platinum from England and France. There was every opportunity of direct importation, as far as I have been able to learn. It was all handled by big English, French and German concerns before the war, big concerns.

Mr. RAINEY. Before the war we got it from Germany?

Mr. ROTHSCHILD. And England and France. We have been getting some platinum from France since the war started.

Mr. RAINEY. That was in connection with an international agreement?

Mr. ROTHSCHILD. I do not know. Platinum was always bought and sold freely. Before 1914 it was simply an article of commerce.

Mr. RAINEY. We got our supplies before 1914 from Germany?

Mr. ROTHSCHILD. There were a number of houses, Johnson, Matthey & Co., of London, the DeModis Co. of Paris, and W. C. Hereaus & Co., Hanan, Germany. Those were the three great

refining concerns and they sold platinum to the whole world. They had agents here. I think there was a combination. I think the prices were always more or less under one hat; that was my impression, but it was open commerce.

Mr. RAINEY. Who is David Kaiser?

Mr. ROTHSCHILD. He is a manufacturer and jeweler.

Mr. RAINEY. A large manufacturer?

Mr. ROTHSCHILD. I think he is connected now with a large concern. He had a business of his own up to a year ago. He is a well-known, reputable jeweler.

Mr. RAINEY. He is quoted in the Jewelers' Circular-Weekly of May 22, as saying this—

He (David Kaiser) quoted the words used by Chairman Fessenden of the War Service Committee before a meeting of the manufacturers and retailers that afternoon and said that the fact that the manufacturers of platinum had not lived up to the letter and spirit of their agreement with the Government had brought about the commandeering order from which they were now suffering.

Does that indicate that the jewelers' vigilance committee had succeeded in keeping its promise to the Government?

Mr. ROTHSCHILD. It did succeed in keeping its promise to the Government, and if you analyze that promise it was a promise to attempt to do certain things. There are 35,000 jewelers.

Mr. RAINEY. I am quoting a statement of David Kaiser on the authority of Chairman Fessenden who says they did not.

Mr. ROTHSCHILD. He does not say that the vigilance committee did not, but individuals. I will admit that there is an impression that some jewelers did try to get away from that, and probably kept on doing business as usual. It is quite probable.

Mr. RAINEY. What organization was instrumental in obtaining the release of 25 per cent of platinum at the time the last commandeering order was made?

Mr. ROTHSCHILD. The War Service Committee, I believe, had everything to do with the commandeering orders, and Mr. Steele is here, chairman of the subcommittee on platinum.

Mr. RAINEY. What organization of the jewelers' vigilance committee was instrumental in releasing iridium and palladium from the first commandeering order?

Mr. ROTHSCHILD. I do not know whether in the first place there was any such release. I believe that iridium and palladium, or the absence of them, was an oversight. I do not think that the gentleman who drew the order, who was probably some attorney, in the first instance knew of such metals. Palladium is not used by jewelers and is not used in war materials either. I have been trying to figure out why it was commandeered and probably it was because it was used by dentists and it would be needed in fixing the teeth of soldiers of this country and the allies. It was a case of giving them palladium to take the place of platinum which was taken away from them.

Mr. RAINEY. Is palladium used in connection with platinum?

Mr. ROTHSCHILD. No; not to-day. White gold was a combination of palladium and gold.

Mr. RAINEY. Is iridium?

Mr. ROTHSCHILD. Yes, sir; but not palladium.

Mr. RAINEY. What organization is responsible for the fact that iridium was not included?

Mr. ROTHSCHILD. No organization. It was an oversight—a lack of knowledge on the part of the man who drew the order.

Mr. RAINEY. Did the War Service Committee have anything to do with drawing that order?

Mr. ROTHSCHILD. I have no knowledge of their activities. The chairman is here and he can answer that.

Mr. RAINEY. Who is responsible for the fact that the first commandeering order only reached a few refiners?

Mr. ROTHSCHILD. The War Industries Board, undoubtedly, because if they had taken proper precautions they could have found the name of every refiner.

Mr. RAINEY. Did any organization of the jewelers' vigilance committee try to give them the names of every refiner so that they could all be reached by this order?

Mr. ROTHSCHILD. I do not know where the applications went, but I know that any application to the the jewelers' vigilance committee, or to any other committee, would have resulted in getting this information.

Mr. RAINEY. You did not tender anything of the kind in the interest of conservation of platinum?

Mr. ROTHSCHILD. As vice president of the American diamond committee, I did tender to the War Industries Board a list of all the names of jewelers and others who had platinum on hand as of April 1, 1918, because the diamond committee was instructed by the War Trade Board to take a quarterly census of the material which they were carrying for the War Trade Board—that is, diamonds and platinum. Such a census of platinum was taken, and we brought that fact to the attention of Mr. Connor, and told him that before he issued his commandeering order, if he would send it to the diamond committee, getting the permission of the War Trade Board, who are our superiors, we could check those names with the actual sworn returns which we had and give him the names of any that were missing. No notice was taken of that offer—that is, he said he would do it, but it was not done.

Mr. RAINEY. With reference to the supplies that you say could be obtained from Russia in May of last year, where did you get that information?

Mr. ROTHSCHILD. I got that information from the Secretary of Commerce, who said that he had a telegram or cablegram from Huntingdon, I think, the attaché in Petrograd, saying that 40,000 ounces were available, also stating the price. I do not remember what the price was. I think it was considerably below the market price in London and New York.

Mr. RAINEY. How much did they obtain from Russia?

Mr. ROTHSCHILD. As far as I know, the Government never obtained an ounce. There were 21,000 ounces brought from Russia by Mr. Draper, I think, and Mr. Stein, and one or two Americans who went out there, and Mr. Jannin, another engineer, I think the consulting engineer of the Bureau of Mines. They brought it over at their own risk. It had been financed by some banks there. They were assisted by the Government in bringing it out of Russia. I think the embassy's seals were placed on it.

Mr. RAINEY. When did they bring it out?

Mr. ROTHSCHILD. I think it came through to New York in December or January.

Mr. RAINEY. Of this year?

Mr. ROTHSCHILD. Yes, sir.

Mr. RAINEY. Part of the 30,000 ounces that you say have been obtained since May of last year?

Mr. ROTHSCHILD. Possibly some of it. That was the amount in bulk. This amount was brought in in different purchases. It was brought out as a patriotic piece of activity, and, as I said, I do not think that these men were very well treated after it was brought to this country.

Mr. LONGWORTH. Do you know what price they got?

Mr. ROTHSCHILD. I do not know. They said they were given \$90 as a starter, and would have to show costs if they got more.

Mr. LONGWORTH. I thought the \$90 referred to the other supply.

Mr. ROTHSCHILD. No; the 21,000 ounces was all they got, and to get over \$90 they would have to show actual cost.

Mr. LONGWORTH. But these men who actually brought the platinum, how much did they get?

Mr. ROTHSCHILD. I do not know how it was finally settled by the Government. It was taken from them on the basis of \$90 an ounce, plus some more money if they could show exact costs, which one of them told me would be difficult. They could have sold it in the open market at \$105. They believed they had been badly treated. The market had been \$105 practically all the year. Every Colombian who sent his platinum in got \$105 and these chaps only got \$90.

Mr. MOORE. And that was at a time when we were loaning money to the Russian Government, was it not?

Mr. ROTHSCHILD. I think so.

Mr. MOORE. I do not think the Russian Government was involved in it, but if the request had been made to the Russian Government I think there was no reason why the Russian Government should not have responded.

Mr. ROTHSCHILD. I think the British Government obtained some the early part of last year. I talked to someone in the British Embassy here, and they said that if the United States Government should get a request for platinum it would get it.

Mr. MOORE. It is very important that, if we need platinum which is in Russia, which is one of our allies whom we were helping, the War Trade Board or some other official body should have obtained it without intentionally driving jewelers out of business.

Mr. ROTHSCHILD. In all these months I never mentioned the word "jewelry." My idea—and I want you to take these words at par—my idea was that if we could get a sufficient stock of platinum abroad, the other things would take care of themselves.

Mr. MOORE. I think you are to be commended in trying to get it, and I am wondering whether our war bodies could not get it from Russia.

Mr. ROTHSCHILD. I think the Department of Commerce could enlighten you.

Mr. MOORE. The Bureau of Mines has asked for \$50,000,000 in order to discover platinum in this country, and I think it would be interesting to know what the value of the platinum is if they suggest that much merely to be used in prospecting.

Mt. ROTHSCHILD. One of the men offered to go into Russia and dredge platinum if he was backed up by the Government.

Mr. MOORE. This Government has facilities to get it without leaving it to a few heroic men to go over and get it. I may just say in passing that I am wondering why the Government does not get a little more activity from some of its bureaus for its interests.

Mr. ROTHSCHILD. We went so far, since we are on the subject of platinum, that the head of the Bureau of Foreign Exports, Mr. Carter, said to me some time last fall, "If we would help you—we have no appropriation—would you be willing to undertake to finance a large amount of platinum to be brought to the United States, if we would help you bring it over from Russia?"

I smiled and said, "I have no means of financing millions of dollars worth of platinum, but if there is no other way to get this out of Russia I will go around among the jewelers and bankers in New York and I will try to finance it."

Mr. MOORE. Do you know how much there is in the country to-day, the bulk value?

Mr. ROTHSCHILD. I have made a rough estimate, and I should say there is probably in the United States perhaps a million ounces.

Mr. MOORE. What would that be worth at your highest price, the Government price?

Mr. ROTHSCHILD. \$105,000,000. Much of it is unmanufactured.

Mr. MOORE. And the Bureau of Mines recently asked \$50,000,000 to prospect for platinum.

Mr. ROTHSCHILD. I have no criticism to that, but if one-fiftieth part of the \$50,000,000 was spent in sending merchants into Japan, China, and Russian Siberia, you would get a million ounces in three months.

Mr. MOORE. Most of that \$50,000,000 would be wasted.

Mr. GARNER. By the way, we did not give them the \$50,000,000.

Let me get at the idea of your controversy between you and Mr. Rainey.

Mr. ROTHSCHILD. We have no controversy.

Mr. GARNER. There seems to be some difference of opinion as to the good faith of this jewelers' emergency committee or vigilance committee, or whatever you term it. If I understand you, the Government sent out a request for contributions of what they had on hand, and they voluntarily gave 30 per cent of the platinum they had on hand?

Mr. ROTHSCHILD. Yes, sir.

Mr. LONGWORTH. Unmanufactured?

Mr. ROTHSCHILD. Yes, sir; and partly manufactured.

Mr. GARNER. You did not believe that that was the best method of getting the material. You thought they ought to tell what they had and each one give up a little. There has been some suggestion of criticism of the want of good faith of you gentlemen on account of the fact that you did not want to substitute for platinum. If I understood your statement it is that you do not want to substitute for platinum unless the substitute is branded so as to keep from defrauding the American people. Is that right?

Mr. ROTHSCHILD. That is our standpoint as to platinum and everything else.

Mr. GARNER. Your position is that the committee had a standard, and the reason you urged against substitutes for platinum was simply that you did not want to defraud the American people?

Mr. ROTHSCHILD. That is the only reason.

Mr. GARNER. And the only thing that you request is that if they used white gold that it be branded?

Mr. ROTHSCHILD. Yes, sir.

Mr. STEELE. I would like to make a statement in connection with the substitutes spoken of. Certain base metals had already been put on the market which had no precious metals in them, and some of the small jewelers, unfortunately for the trade, had already started in to manufacture jewelry with these substitutes, and it was to prevent the honorable trade of jewelry making from losing its high standing that we did not want any jewelers to use these base substitutes.

Mr. GARNER. In other words, the responsible jewelers of this country did not want the substitutes used except with the stamp on it, and, incidently, in trying to protect themselves they protected the public from being defrauded.

Mr. RAINEY. Mr. Rothschild, let me read you what the jewelers' war service committee said with reference to the commandeering orders. I am reading from your statement issued on the 15th day of May:

This country is in serious need of platinum, iridium, and palladium in order to carry out its war program. The jewelers' war service committee in two appeals asked the jewelers of the country to offer voluntarily and set aside for the Government a generous proportion of their manufactured platinum, with the result that an inadequate supply of the metal was pledged. Much speculation with its resultant artificial high prices has been prevalent in platinum. The only course for the Government to pursue, in order to control the market price of platinum, iridium, and palladium was to issue a commandeering order.

Do you think that is a fair statement of the platinum situation?

Mr. ROTHSCHILD. I do think it is, and if you will permit me I will explain the speculation. The thought that you called attention to a little while ago, the commandeering order, was issued covering refiners and dealers in platinum, and they could not sell to jewelers. There were no orders issued and no way of preventing anybody who had scrap platinum or any other platinum from selling to jewelers. There was no order preventing, no attempt to prevent jewelers using platinum they had on hand, and no attempt to prevent them from buying platinum. Now, the profiteer, the ugly little chap who is always ready to jump in on such an occasion, got around and picked up little lots where he could, and where platinum had been kept down to \$105 an ounce, for one year—and that is a remarkable thing that we have kept it down—these fellows got \$5, \$6, and \$8 a pennyweight, running it up to \$160 to \$180 an ounce. Jewelers bought it to fill orders because they could not get it through the regular sources. It ought to have been stopped by issuing a commandeering order on all users of platinum. The jewelers were opposed to that. No decent jeweler bought any of that platinum. Nobody with any self-respect bought that platinum.

Mr. RAINEY. The statement here that I have read indicates that the appeals of the jewelers' vigilance committee or the subcommittees resulted in an inadequate supply of the metal. Do you agree with that?

Mr. ROTHSCHILD. The appeal of the jewelers' war service committee had nothing to do with the jewelers' vigilance committee.

Mr. RAINEY. Do you agree with the statement that it resulted in an inadequate supply?

Mr. ROTHSCHILD. I think in the first offer 400 or 500 ounces was inadequate. It was increased to 1,450 ounces.

Mr. RAINEY. Do you think that was adequate?

Mr. ROTHSCHILD. I think when it was 30 per cent of the entire metal, some giving 75 per cent and some not so much, but they had little left. You can judge for yourself.

Mr. RAINEY. Some gave up enough and some did not.

Mr. ROTHSCHILD. Some gave up a large part of what they had and some did not.

Mr. RAINEY. Do you agree with the statement of the chairman of this committee now in charge of platinum—

Mr. ROTHSCHILD (interposing). I have nothing to do with platinum at present.

Mr. RAINEY. That the efforts of the vigilance committee and this subcommittee failed to get a sufficient amount of platinum?

Mr. ROTHSCHILD. The vigilance committee has had nothing to do with platinum since January, 1918.

Mr. RAINEY. Or the war service committee?

Mr. ROTHSCHILD. With due respect to the committee, I never should have issued such an appeal. I would have declined to send out such an appeal.

Mr. RAINEY. It does not make any difference what they did or what they tried to do, do you agree with the proposition that all these appeals resulted in the failure to get an adequate supply?

Mr. ROTHSCHILD. I believe that the original platinum committee did make good on its pledges to the country. I believe that the response made to the jewelers of the country for a voluntary offering of their unmanufactured metal on hand was a disappointment, and I think it was largely a disappointment because the jewelers did not realize the necessity of giving up the metal.

I would like to say right here that I was present at a meeting of a lot of little jewelers who met voluntarily after the suggestion came down from Washington that the jewelers had failed to meet the situation. They were very indignant. They said, "We did not know what the situation was. The appeal was not sent out in proper form." And I saw one man after another get up and offer 50 per cent of his platinum to the Government. The question was raised, "Isn't it possible for some people who have platinum on hand to try to get away from giving it up by putting it into a semi-manufactured state?" Then one man got up and offered a resolution that the Government be requested to include in unmanufactured platinum that on which not more than 20 per cent of labor had been expended, and that resolution was carried. Then it came out that the class of platinum on which 20 per cent of labor had been expended cost \$120 an ounce, while the Government was only paying \$105. Admitting that there were weaknesses, we have the main factor that there are 35,000 jewelers, probably three or four thousand jewelers who have to do with platinum. Perhaps nine-tenths of the jewelers have nothing to do with platinum. Take it all in all most of these men are

Mr. RAINEY. You made a long speech without answering the question. Do you agree with this statement of the chairman of the Jewelers' War Service Committee that all of the efforts prior to that time to conserve platinum, whether made by your committee or the War Service Committee or any other jewelers' organization, had failed to create an adequate supply. You can answer that if you want to.

Mr. ROTHSCHILD. Certainly; it was within the power of the jewelers.

Mr. RAINEY. And yet you persuaded the Secretary of Commerce to send that letter to me which was read on the floor of the House, and defeated this tax. You persuaded him that this position taken by the vigilance committee was all that was necessary in order to obtain a proper supply of platinum.

Mr. ROTHSCHILD. If you will read that letter, the Secretary of Commerce has suggested that there are four different sources of platinum, and the jewelers only wanted part of it.

Mr. RAINEY. Here is what the letter stated that you had read on the floor of the House and which defeated the attempt to tax you. I am reading from the letter which you persuaded the Secretary of Commerce to write.

No campaign said to be based upon the alleged present needs of the Government can therefore be properly made looking to the restriction of the use of platinum in jewelry further than the jewelry trade have already voluntarily gone as expressed in the resolutions adopted by them and which this department has published with its approval.

Mr. ROTHSCHILD. Does the Secretary of Commerce refer to certain sources of supply which he has?

Mr. RAINEY. I have read exactly what he has stated.

Mr. ROTHSCHILD. He doesn't refer to those sources of supply?

Mr. RAINEY. In referring to your efforts and your resolutions he says it is sufficient.

Mr. ROTHSCHILD. In conjunction with the other sources of supply.

Mr. RAINEY. He does not so state.

Mr. ROTHSCHILD. I have a letter, an official statement, I believe, in his letter to me, Mr. Rainey, referring to the sources of supply.

Mr. RAINEY. He refers to them all, I presume. I will read all the letter.

Mr. MEYER D. ROTHSCHILD,

*Chairman Platinum Committee, Jewelers' Vigilance Committee,  
New York, N. Y.*

MY DEAR SIR: In response to your inquiry, let me say that a supply of platinum is available to the Government from several sources: First, from domestic stocks, of which a census is now being made and which is known can be increased if need be; second, from stock now held by the Government which is available for sale to Government laboratories needing it for Government uses and to outside laboratories at the market price with the understanding that it is to be used for the purpose of the Government; third, from stocks existing abroad, known to be available.

No campaign said to be based upon the alleged present needs of the Government can therefore be properly made looking to the restriction of the use of platinum in jewelry further than the jewelry trade have already voluntarily gone as expressed in the resolutions adopted by them and which this department has published with its approval.

That is the letter that you had read on the floor of the House, and which defeated the attempt to conserve platinum.

Mr. MOORE. Mr. Rainey, may I ask if that is the letter to which you referred in the speech made by you on June 11?

Mr. RAINEY. Yes; I referred to it in the speech made by me on June 11.

Mr. FORDNEY. That wasn't all of that letter?

Mr. RAINEY. Yes; that was all of it.

Mr. MOORE. To whom was that addressed?

Mr. RAINEY. That was addressed to Meyer D. Rothschild.

Mr. MOORE. And that is the letter read by Mr. Lehlbach, of New Jersey?

Mr. RAINEY. That is the letter read by Mr. Lehlbach on the floor of the House.

Mr. STEELE. May I make a statement in regard to the question that you asked regarding the amount of platinum pledged by the jewelers in response to the call sent out by the Jewelers' War Service Committee? The Jewelers' War Service Committee was formed for the purpose of assisting the Government in all of its departments in any way possible by securing information and taking such action as they called for. When the War Industries Board called upon us to take a census of the unmanufactured platinum, by the manufacturing jewelers of the country, we had no option in the matter. We followed out the orders. We sent out the call for the census, which was of date February 1. On February 23 the commandeering order was sent to all the important refiners and importers and dealers in platinum throughout the country, the largest ones of the lot. In reference to this commandeering order, the wording of it, or the names of the people to whom it was sent, we were not consulted in any degree.

Mr. MOORE. That order went out from the Government?

Mr. STEELE. That order went out from the Government under date of February 23.

Mr. MOORE. Your committees had nothing to do with influencing that?

Mr. STEELE. We had nothing to do with that order in any way, shape, or manner. We knew that such an order was to be sent out.

Mr. MOORE. How many concerns did that apply to?

Mr. STEELE. We understand that the 14 most important dealers in the country were covered.

Mr. MOORE. How many others were not affected by that order?

Mr. STEELE. The refiners or the jewelers?

Mr. MOORE. Refiners and jewelers.

Mr. STEELE. The jewelers were not covered at all by this order.

Mr. MOORE. Can you explain why that order went out to only 14 refiners?

Mr. STEELE. I can not. If we had been consulted in regard to this matter, we would have advised them to cover all the jewelers also.

Mr. MOORE. Didn't that present an inequality in the trade at once, so that 14 were held out and the others went free?

Mr. STEELE. I think it did.

Mr. MOORE. How do you account for the Government proposition emanating from Washington?

Mr. STEELE. I do not think they understood that it was cutting off all these sources of platinum.

Mr. MOORE. Wasn't it calculated to create unrest in the trade?

Mr. STEELE. I think so.

Mr. RAINEY. Let me read in this connection, so that it can be in parallel columns, bearing in mind that 14 jewelers—

Mr. STEELE (interposing). Refiners.

Mr. RAINEY (continuing). Had been included, "An order has been sent to the jewelers."

Mr. STEELE. Well, this was the second order. This had no reference to the first order.

Mr. RAINEY. Then you proceed to say, "Our committee has been constantly in touch with the officers, advising them as to the necessary steps and the manner and form in which they should be taken."

Mr. STEELE. Yes, sir. There were three orders sent out. The first order was sent to 14 refiners and dealers in platinum, and with this we had nothing to do. We knew nothing of its wording or of its import. The second and the third orders that were sent out were in touch with the officials and we advised them as to what names should be covered, and the only thing in which our advice was not followed was that every jeweler in the country was not covered in the second order and third order.

Mr. MOORE. Did you advise that all be covered?

Mr. STEELE. Everyone.

Mr. MOORE. That is, you wanted fair play in the trade. These 14 were picked out of the rest.

Mr. STEELE. They were all covered only by the third order.

Mr. MOORE. That tended to unsettle conditions, I assume in the trade.

Mr. STEELE. The first order that was sent out—you ask why iridium was not covered. I have here a copy of that order. It was dated February 23, and it reads in the instructions to the refiners who received it—

You are to make on the inclosed blank an exact inventory of your stock of crude and refined platinum and platinum-iridium alloys as of March 1, 1918. Make affidavit to same and return it promptly with the accompanying receipt.

So that you really see iridium was covered in this first order, although as I say we had nothing to do with this. When the census was sent out by us it called for a statement of the unmanufactured platinum on hand in the hands of jewelers as of February 1. On February 23 the commandeering order was sent to the largest refiners and dealers of the country. It came, shutting off the most important source of supply of jewelers. Our census was called for about the middle of February and we reported about the 1st of March, a week after the commandeering order was sent to the refiners. We reported that almost 5,000 ounces of platinum was at hand in the hands of jewelers.

Mr. MOORE. You mean platinum already worked up?

Mr. STEELE. Unmanufactured. We then reported this to the War Industries Board. We tried to secure voluntary contributions. We sent out a call and a little before the first of April it was reported that 500 ounces had been offered voluntarily, but this was a matter of five weeks after the commandeering order had been issued shutting off new supplies of platinum, and two months after the date of the census, so that if we say that 30 per cent was offered voluntarily, it is not a true statement for the reason that the jewelers had been

operating for six weeks on the stock of 5,000 ounces reported February 1, and for five weeks they had been unable to secure any platinum from the ordinary sources of supply, so that it would be impossible to state just what proportion of their stocks they voluntarily offered. After that they finally offered to give 1,450 ounces which I should say was probably something like 50 per cent of the stock on hand at the time they made the voluntary offer, although no man can tell that definitely.

Mr. GARNER. It will not be my good fortune to be here this afternoon. We need a tax bill, and I would like to have a statement as to what you think ought to be levied on jewelers in the way of taxes. You are an official of the Government, and so is Mr. Rothschild. We have got to make up a tax bill and we want to get all the money we can without crippling your business.

Mr. STEELE. I am simply here to answer questions in regard to what has been accomplished by the War Service Committee, which has dealings in all matters between the Government and the trade. I am not a member of this tax committee.

Mr. GARNER. But you know a good deal about the jewelry business, do you not?

Mr. STEELE. I think I do.

Mr. GARNER. That is the kind of man we want.

Mr. STEELE. Mr. Rothschild can answer you in regard to that.

Mr. GARNER. We want to get from both of you a statement of the largest amount of money that we can get out of you by taxation so as not to put you out of business.

Mr. STEELE. My opinion is a personal one that the tax on jewelers should be levied when the article is sold to the consumer, when the highest value is on it. I would put a tax of 8 or 10 per cent on, and I think that would produce the largest revenue, and I think a much larger percentage than if a higher tax were put on.

Mr. MOORE. Mr. Garner is much closer to the Treasury Department than the rest of us, and he says they would like to have 50 per cent on your sales.

Mr. STEELE. I think the experience would be very similar to what the experience was in 1892, 1893, and 1894 when they jumped the tariff from 10 to 25 per cent on diamonds.

Mr. LONGWORTH. That is entirely different.

Mr. STEELE. And they got a much smaller revenue.

Mr. GARNER. Let me get you. You are of the opinion that the best way to get money from the jewelry trade is to levy it on the retailer when he sells the goods to the consumer.

Mr. STEELE. Yes, sir.

Mr. GARNER. And you believe that 10 per cent would get the largest amount of revenue?

Mr. STEELE. Yes, sir.

Mr. GARNER. You believe to go above 10 per cent would decrease the revenue?

Mr. STEELE. I think it would some.

Mr. GARNER. Well, I am sorry to hear you say that. What is your opinion, Mr. Rothschild?

Mr. ROTHSCHILD. Representing, as I do, practically the jewelry trade, I have tried to think the thing out as to what we should say—some constructive ideas. It is not my business to give away any

other man's business, but my own personal opinion is that the tax, whatever you gentlemen will decide, is a collectible tax, and it is a business proposition which you can get not from the jewelers alone but from a group of men which includes 19 industries now. We are willing to take whatever you will tax us if you will also tax the automobile people, the sporting goods people, the chewing-gum people, and the people who sell fine laces. You do not want to destroy the industry for many reasons. But after you have talked it over, and you decide that you can get 20 or 50 or 100 per cent, we are willing to try.

Mr. GARNER. In other words, you are perfectly willing to have us levy a gross tax, such as would get the largest amount of money into the treasury?

Mr. ROTHSCHILD. Yes, sir.

Mr. GARNER. Could you give me a rough estimate of the gross sales of jewelry in the United States in one year?

Mr. ROTHSCHILD. We also went over that. None of us had thought that over. One of our members went to the board of trade and figured out that there were about 35,000 jewelers in the United States. Lots of them are little fellows, men who started in the watch repairing business and grew up.

Mr. LONGWORTH. You mean retail jewelers?

Mr. ROTHSCHILD. About 4,000 wholesalers and manufacturers, and about 35,000 retailers.

Mr. LONGWORTH. None of you gentlemen are retailers?

Mr. ROTHSCHILD. Yes, sir. And in that connection just now I would like to have Mr. Hoffengle, who is president of the United Jewelers' Association, read those resolutions.

Mr. GARNER. But before he does that I wish you would give me an estimate of the gross sales of jewelry.

Mr. ROTHSCHILD. It is so large that I hate to give it.

Mr. GARNER. The larger it is the better.

Mr. ROTHSCHILD. Mr. Washburn went over those figures. It includes all cases, those where they probably sell \$1,000 worth, \$5,000 worth, and upward, and it totaled about a half a billion dollars sold by retailers. I think those are extravagant figures.

Mr. MOORE. It has been figured as high as \$800,000,000.

Mr. ROTHSCHILD. It may be. We have no way of judging.

Mr. GARNER. Let us get at that now. Say it is half a billion dollars. Now, to levy a tax of 50 per cent, and if the sales were an equal amount next year, that would net \$250,000,000.

Mr. ROTHSCHILD. "If," you suggest.

Mr. GARNER. I am putting the "if" in. If we levy a 50 per cent tax, how much would you sell?

Mr. ROTHSCHILD. There is where the psychology enters into it. If a man wants to buy a piece of jewelry and there is a 10 per cent tax on it, and he knows there is a 10 per cent tax on certain things, he says, "I am a good patriot, and I had better take this and give the revenue to the Government." But if you put a 50 per cent tax on it, about 90 per cent won't buy, so you would kill the goose. Not only that, but you have got 35,000 people in the industry. Assuming that there are only two or three men employed, it may be half a million people, depending upon this industry somehow or other, a perfectly legitimate industry, and they are dependent on it.

Many of those engaged in the industry would like to make munitions and help the Government and make money for themselves, but they are in the jewelry business, and if you levy a tax of that kind, you will hit men many of whom have sons in the trenches, who are doing their bit, putting burdens on them which are unfair, and I do not think you want to do that. I believe a reasonable tax, which will also be collected upon automobiles and other things of a like nature, but limited to what the commodities can pay without being unduly hampered, ought to be put on.

Mr. GARNER. That is a very liberal spirit. Let us get back to the practical feature of it. That premise is all right.

Mr. GOUGH. There are not annual sales of jewelry amounting to \$500,000,000 at retail in the United States. There are \$500,000,000 worth of goods sold by retail jewelers, but those \$500,000,000 of goods consist of silverware, watches, china, umbrellas, fountain pens, and anything that the dealer chooses to carry. Those are his sales, but he doesn't sell \$500,000,000 worth of jewelry.

Mr. ROTHSCHILD. I will accept that amendment.

Mr. GARNER. We will not quarrel about the amount, whether \$500,000,000 or \$800,000,000. It makes little difference except the amount of money we will get.

Mr. Rothschild, this committee of Congress does not want to destroy your business. It is a legitimate business, and it is not the purpose to put a tax on it which will destroy it. It may be the purpose of Congress to put a tax on certain people in certain industries that will cause them to go into other business that is important to the war, business essential to the war.

Mr. ROTHSCHILD. You are taking every available man to-day.

Mr. GARNER. This committee is not doing that. That is the executive branch of the Government. What we want to do is to levy a tax on your business so as not to destroy your business but to get the largest amount of money into the Treasury, and if it happens to drive some people out who are not making much now, it would be a good thing for the country. I want to get the greatest tax receipts that will do just what I said. I have got to get somebody's advice as to how to do it. I want you gentlemen and the Treasury Department to advise me.

Mr. ROTHSCHILD. My answer has been 10 per cent, because I believe 10 per cent would probably give you the maximum amount of revenue from the jewelry industry.

Mr. GARNER. I think I can outargue you and Mr. Steele on that. We will take \$400,000,000 as a basis; 10 per cent on that would be \$40,000,000, that is if you sold \$400,000,000 worth. Let us say we levied a 20 per cent tax, and your sales decreased to \$300,000,000. Still the tax would be \$60,000,000, although you had decreased the gross sales \$100,000,000, yet we get \$60,000,000 into the Treasury.

Mr. BUFFINGTON. As a retailer, I want to say that I think if you increased your tax to 20 per cent, your sales would decrease one-half.

Mr. GARNER. That, as I say, gentlemen, is a matter that we have got to determine, between your opinion and that of the Treasury.

Mr. FORDNEY. Before you go, Mr. Rothschild, I want to say that the people of each and every industry of the country that is affected by legislation here are criticized and accused of lobbying, if they come here properly to present the questions to the committees of Congress affecting their industry in which they are engaged, except

one great organization. That organization has lobbyists here by the score, and we never hear any criticism. I do not want Congress, never did and never will, to prevent any man legitimately engaged in business coming here and presenting to Congress his views about legislation affecting his industry. But, as I say, one great organization right now has lobbies here by the score, and there is never any criticism of them. You all know what organization I mean.

Mr. GARNER. What organization is that?

Mr. FORDNEY. Mr. Gompers. Can you ask me that? Every man connected with your party knows it.

Mr. MOORE. I would like to remind Mr. Rothschild that President Wilson delivered a message to Congress a short time ago, in which he declared that lobbies existed, and that they should be exposed. I do not think that ought to be kept out of the record at this particular stage of the proceedings. There is high authority for the charge that there are lobbies. I take the ground that Mr. Fordney does, that a business man has a right to come to his Representatives at any time, and have a fair hearing on any question.

Mr. FORDNEY. And not be termed a lobbyist.

Mr. ROTHSCHILD. I hope I have convinced you gentlemen present by a simple statement that there has been no transaction of any kind whatever with this committee nor with any Member of Congress and that we have not done any of the things which are commonly known as lobbying, or which might be called in the slightest lobbying.

(Thereupon the committee, at 1 p. m., took a recess until 2.30 p. m.)

#### AFTER RECESS.

The committee met pursuant to adjournment at 2.30 p. m.

Mr. RAINEY. The committee will be in order. Is Mr. Rothschild here? I am calling your attention again to these resolutions discouraging the use of white gold. I want to read you a part of it to see whether the jewelers have been following it or not.

*Resolved.* That in the best interests of the jewelry trade, white gold should not be used in the manufacture of jewelry or other precious stones, but when used for other purposes it should be properly stamped with the quality and description.

Was it Mr. Steele who was talking about this?

Mr. ROTHSCHILD. I think he was. I was not at the meeting and know nothing about it.

Mr. RAINEY. Is Mr. Steele here?

A VOICE. He has not arrived yet.

Mr. ROTHSCHILD. I think I could help a little by calling attention to the fact that white gold is, as I understand it, of different kinds. You could have 14 karats white gold, or 16 karat or 18 karat depending like all other colored gold, upon the amount of other alloys.

Mr. RAINEY. Is Mr. Steele here now? Very well. You were discussing the question of white gold as a substitute for platinum. The resolutions adopted at the meeting of May 22, protested against the use of substitutes contained the clause:

*Resolved.* That in the best interests of the jewelry trade, white gold should not be used in the manufacture of jewelry or other precious stones, but when used for other purposes it should be properly stamped with the quality and description.

This is the resolution adopted?

Mr. STEELE. Yes, sir.

Mr. RAINEY. The resolution then declares against the use of white gold in the manufacture of jewelry which contains precious stones, whether it is stamped or not.

Mr. STEELE. Yes, sir.

Mr. RAINEY. And if it is used for any other purpose than that, it should be stamped. Now, did you send out this resolution?

Mr. STEELE. This resolution was sent out; yes, sir.

Mr. RAINEY. To how many?

Mr. STEELE (continuing). By the business committee. I do not know the exact number that went out. It was handled by the business committee.

Mr. RAINEY. When was it sent out?

Mr. LARTER. It was not sent out.

Mr. STEELE. I beg your pardon?

Mr. RAINEY. As a matter of fact it was not sent out at all, was it?

Mr. STEELE. No, sir.

Mr. RAINEY. You think this resolution was adopted for the purpose of keeping up the standard of the goods so that the public should not be deceived?

Mr. STEELE. For this reason.

Mr. RAINEY. Well, I do not care for the reason.

Mr. STEELE. White gold is a substitute for platinum, and white gold can be used for a certain number of articles, but there is a certain amount of attrition in the use of some articles, such as a watch chain or a finger ring where it rubs against the finger, which makes it impossible to use it for those things.

Mr. RAINEY. I understand that, but did not these reasons exist before we got into this war?

Mr. STEELE. White gold has been used——

Mr. RAINEY. Was not there the same reason before the war for the use and nonuse?

Mr. STEELE. They could make a better white gold then than they could before.

Mr. RAINEY. Did not the same reason exist before the war as existed then?

Mr. STEELE. No, sir.

Mr. RAINEY. It did not exist then?

Mr. STEELE. No, sir.

Mr. RAINEY. They could make white gold then?

Mr. STEELE. They could make a white gold of palladium before we entered this war, but they could not get the palladium in recent years to make the white gold in any great quantities. White gold made of palladium is a much better white gold than that which would have to be made now.

Mr. RAINEY. You said that white gold was not used for war purposes at all?

Mr. STEELE. It has been commandeered; and further than that, as late as last January we tried to get quotations from the representatives of the French syndicate for the purpose of getting palladium into this country, and we could not get it.

Mr. RAINEY. Since the war you could not get it?

Mr. STEELE. No, sir.

Mr. RAINEY. Was that sent out to the trade?

Mr. STEELE. No; there was some reason, I believe.

Mr. RAINEY. Did you attend a meeting at the Hotel Biltmore on September 12?

Mr. STEELE. I was present.

Mr. RAINEY. Protesting against these resolutions which you say were adopted because you say you wanted to keep your trade—

Mr. STEELE. I was in favor of those resolutions.

Mr. RAINEY. Of what resolutions?

Mr. STEELE. Of the resolutions passed at the Biltmore, not to use white gold.

Mr. RAINEY. Then you were not in favor of these resolutions which were adopted at the meeting of the prominent retail jewelers?

Mr. STEELE. I was in favor of these resolutions; yes, sir.

Mr. RAINEY. You were in favor of the resolutions of May 22?

Mr. STEELE. Yes, sir.

Mr. RAINEY. And were you in favor of the subsequent resolutions which were adopted at the Hotel Biltmore?

Mr. STEELE. Those were the resolutions in question, that I was in favor of—the ones adopted at the Hotel Biltmore are the resolutions that I was in favor of—the ones you have just read:

That white gold should not be used in jewelry where precious stones were to be set, and declaring against substitutes for platinum, substitutes being open-market substitutes for platinum.

Mr. RAINEY. Was that May 15?

Mr. STEELE. I do not know the date at the Biltmore.

Mr. RAINEY. Yes; held at the Hotel Biltmore, May 15, on the fourteenth floor. Were you present, and were you in favor of them?

Mr. STEELE. Yes, sir; I was in favor of them.

Mr. RAINEY. Were you in favor of the resolutions also adopted at the Hotel Biltmore on a later date—a week later?

Mr. STEELE. I do not know of any other meeting at the Biltmore.

Mr. RAINEY. Yes. Let me read it to you. I read from the Jewelers' Circular-Weekly as follows:

That there is considerable difference of opinion in the jewelry trade of New York as to the use of white gold as a setting for precious stones was indicated at a meeting of manufacturers held late last Thursday afternoon in the directors' room of the National Jewelers' Board of Trade, 15 Maiden Lane, New York.

That is where this meeting was held.

Criticism of the action taken at the meeting at the Hotel Biltmore, Forty-third Street and Madison Avenue, May 15, was freely offered, and it was argued that the resolutions adopted at that meeting did not express the united opinion of all the members of the jewelry trade.

Then at this meeting which seemed to have been called also by Mr. Larter, of the jewelers' vigilance committee, these resolutions were adopted:

Whereas resolutions passed at a meeting held in New York May 15, under the auspices of the jewelers' vigilance committee, in regard to restricting the use of white gold in certain classes of jewelry, have been published; and

Whereas we feel that the publication of these resolutions was a grave error and calculated to harm the manufacturing jewelry interests of the country; and

Whereas the above-mentioned meeting was not a truly representative gathering of all the various branches of the manufacturing, wholesale, and retail trade; and

Whereas the Government has not encouraged the further use of platinum in jewelry; and, therefore,

Whereas a legitimate substitute of precious metal is not only desirable from the standpoint of the consumer, but bound to be looked upon with favor by the Government; and

Whereas we believe that it is perfectly legitimate, and not against the interests of the trade as a whole to use white gold in the manufacture of all kinds of jewelry, with or without diamonds, when the karat quality of the gold is stamped and when it is offered strictly for what it is and not sold under any other name than gold: Therefore be it

*Resolved*, That the jewelers' vigilance committee be requested to cooperate in taking action at once to counteract the harmful effects that may result from the publicity given the resolutions, which resolutions, in our judgment, are not in general.

Are you in harmony with those resolutions?

Mr. STEELE. I am very much opposed to them, because I believe—

Mr. RAINEY. Those resolutions are in favor of the substitution of white gold in jewelry, set with or without diamonds. Your resolution is opposed to it?

Mr. STEELE. Yes; I am opposed to it.

Mr. RAINEY. These resolutions favor the use of white gold because the Government is conserving platinum. Then these resolutions which were adopted in response to or in contradiction to the resolutions of May 15 do not meet with the favor of the jewelers' vigilance committee; is that true?

Mr. STEELE. I do not think it is a matter of the jewelers' vigilance committee. I think it is a matter of the kind of trade we want to do. I do not want to put out things that will keep their color for a certain length of time only, and I do not want to manufacture any white gold because I do not know any white gold that will keep its color, and I do not want to manufacture any jewelry that in the course of a short time is going to come back to me all discolored.

Mr. RAINEY. The truth is that the more white gold you use the more platinum you save?

Mr. STEELE. The platinum is not a question of saving; because all the platinum is commandeered. There is no more platinum available. I have not three pennyweights of platinum in my factory at the present time to work with.

Mr. RAINEY. Then why do you discourage the use of platinum substitutes?

Mr. STEELE. The platinum substitutes in question were base metal substitutes.

Mr. RAINEY. Let me read you this resolution. This was submitted to a committee of three. It is supposed to have been submitted to the jewelers' vigilance committee. Have the jewelers' vigilance committee ever taken any action in regard to it?

Mr. STEELE. That would have to be answered by Mr. Larter.

Mr. RAINEY. These resolutions I read you last that have been submitted to the jewelers' vigilance committee, protesting against the action of this meeting, have those resolution ever been acted upon by the jewelers' vigilance committee?

Mr. LARTER. May I answer that, Mr. Chairman?

Mr. RAINEY. Yes.

Mr. LARTER. We did not send out a resolution because there was a difference of opinion.

Mr. RAINEY. What was the difference of opinion?

Mr. LARTER. One was in favor of not using white gold in setting precious stones, and some of the smaller jewelers, who were trying

to put on the market some jewelry thought that it was a mistake to send out the results of the Biltmore conference.

Mr. RAINEY. And you did not send them?

Mr. LARTER. We did not send either one.

Mr. RAINEY. So that you have done nothing to prevent the use of platinum in jewelry?

Mr. LARTER. Up to the present time. We will, probably.

Mr. STEELE. That was in the Jewelers' Circular, which goes to all the jewelry trade.

Mr. RAINEY. So that both of them were published in the Jewelers' Circular, which reaches the entire jewelers' trade?

Mr. STEELE. Yes, sir.

Mr. RAINEY. Now, are you familiar with the letters recently written by Government experts on the subject of platinum? I have got them here somewhere.

Mr. STEELE. Do you mean the letters written by the War Industries Board?

Mr. RAINEY. No; written by Dr. Manning.

Mr. STEELE. I have read all those.

Mr. RAINEY. Here is a letter written by Dr. Van. H. Manning on May 16. He is the Chief of the Bureau of Mines. In this letter he states as follows:

I consider the use of platinum in jewelry is due to an entirely false conception, as there are a great many metals which could be used in the production of jewelry which would be used for that purpose to-day except for the fact that they are not so costly as platinum. When the price of platinum was practically that of gold, there was very small use of platinum with the possible exception of the slight use as the setting for jewels.

Do you agree with him on those propositions?

Mr. STEELE. No, sir; I do not.

Mr. RAINEY. You do not think 50 per cent is used?

Mr. STEELE. I do not know what percentage of the platinum of the country is used by jewelers, but I know that no white metal can be used in the place of platinum for the making of jewelry, as a practical manufacturer.

Mr. RAINEY. Now, I want to read to you from a letter of Prof. J. M. Hill, geologist in charge of the platinum department, dated May 15, 1918, in which he states as follows:

It is my impression, based on such information as is available to the United States Geological Survey, that the platinum situation is not better at present, but is far worse than it was six months ago. At that time a shortage of platinum metals for war purposes was indicated. Many plans made at that time have been enlarged and still further extensions of the war program are included by Secretary Baker's statements to Congress.

In view of these facts, it seems most unwise to permit the use of these metals in nonessentials, such as jewelry. To permit the continued utilization of 25 per cent of the stocks held by manufacturing jewelers at the present time appears to me to be the height of folly, since our stocks are low, demands for war purposes increasing with each addition to our Army, and our source of new materials strictly limited.

Yours, very truly,

J. M. HILL,

*Geologist in Charge, Platinum Statistics.*

Do you agree with him as to the conservation of platinum?

Mr. STEELE. I believe that the 25 per cent saved of unmanufactured platinum he has allowed only to the manufacturers and he has not allowed to any retailers, and all those quantities of platinum in the hands of manufacturers have been put in use.

Mr. RAINEY. I have no doubt they have been, by now.

Mr. STEELE. Permission was given to them to use that, because the War Industries Board felt that they did not wish the entire jewelry business of the country to be stopped the minute these war commandeering orders were received, and all of the workmen to be thrown out of work.

Mr. RAINEY. Do you believe that the platinum situation is worse than it was six months ago?

Mr. STEELE. I believe so, because I had a letter from Mr. Hill in January, in which he stated that there was no reason at that time for any drastic action in the way of commandeering platinum. I have a record here of such a conference held in January with Mr. Hill.

Mr. RAINEY. I want to ask Mr. Rothschild a few questions.

Mr. Rothschild, you delivered an address in May, 1917, to the jewelers' vigilance committee, in which it was reported you said this:

Though denying the scarcity of platinum for war purposes, the vigilance committee pledged itself to get the trade to cut the use of platinum in heavy articles and in unnecessary parts and findings.

You are correctly reported in that?

Mr. ROTHSCHILD. I believe I made the address there before the jewelers' vigilance committee, in which I made such a statement. I made that statement; yes.

Mr. RAINEY. Let me read again. [Reading:]

The jewelers' vigilance committee was barely organized and not yet incorporated when the platinum question came up; this assumed such important dimensions that an immediate call was sent out for the executive committee, and within a few hours thereafter a special platinum committee was appointed and a mass meeting arranged to place this matter before the trade.

That is correct?

Mr. ROTHSCHILD. That is correct, Mr. Rainey.

Mr. RAINEY. Were you here the day Mr. Longworth tried to get his amendment adopted in the House?

Mr. ROTHSCHILD. Yes.

Mr. RAINEY. What was the occasion for your visit to Washington at that time?

Mr. ROTHSCHILD. A Washington correspondent for one of the jewelry papers sent an interview which he had with Mr. Rainey to this paper—I think it was the Keystone Weekly, of Philadelphia—and it was to be released in a few days. This article was brought to the attention of the platinum committee, as it contained a certain statement that steps would be taken, I believe, to put a 250 per cent tax on platinum, or something to that effect. It looked like a very serious situation for the jewelers, and we immediately sent two telegrams, one to Congressman Rainey, asking for a hearing, I think, on Monday—I think we got this on Saturday—and the other to Secretary Redfield asking for an appointment. We came to Washington, a small committee, I do not remember how many, probably three or four—had an interview with the Secretary of Commerce and showed him this statement.

Mr. RAINEY. You knew the bill was under consideration then?

Mr. ROTHSCHILD. Why, surely. We showed him the statement, and the Secretary read the statement and wrote two letters, one to Congressman Rainey, which he handed to me to deliver, and another letter which was practically in the nature of an open letter which we

could use in general to repel what seemed to be apparently a systematic attack upon the jewelry industry in regard to platinum.

We saw Mr. Rainey, as I said this morning, and presented the letter of Secretary Redfield. He read it and there was a very short interview and Mr. Rainey went into the House, and we went to the gallery to listen to the proceedings, because we were very much interested, as our schedule, No. 600, was then coming up and under discussion. We would not have come to Washington to listen to the discussion on our schedule had not this matter brought us here. It was only incidentally that we heard of the intention to tax platinum as I have said.

Mr. RAINEY. The Jewelers' Weekly says:

Fortunately, on the very day of the debate a special committee had hurried to Washington and visited Secretary Redfield to get from him a true statement of the facts in regard to the Government's need of platinum. This committee, sent under the auspices of the vigilance committee, consisted of Harry Larter, chairman of the vigilance committee, Robert B. Steele, secretary of the Platinum Smiths' Association; M. D. Rothschild, chairman of the platinum committee of the jewelry trade and of the platinum committee of the vigilance committee; David Belais, president of the National Federation of Manufacturing Jewelers' Associations, and T. E. Wilson, editor of the Jewelers' Circular.

That is the committee that was here?

Mr. ROTHSCHILD. It is my recollection there were four or five men.

Mr. RAINEY. Fortunately you got here just at the psychological moment?

Mr. ROTHSCHILD. We got here because we got your advance sheet of your speech or your interview.

Mr. RAINEY. You did not get any advance sheet of any speech I made.

Mr. ROTHSCHILD. It was advance sheets of an interview to be released; of an interview with Mr. Lind, who sent it to one of his constituents.

Mr. RAINEY. I never gave out any interview in advance to be released. If I gave out any interview on platinum, it was not with any intention of its being held and released. Let me read, here, again [reading]:

As the debate proceeded and no one in the House was able to answer Mr. Longworth, Harry Larter, chairman of the jewelers' vigilance committee, took the letter written by Mr. Redfield earlier in the day, and calling out Congressman Lehlbach of New Jersey from the floor, explained to him that the facts before the House misrepresented the Government's needs and asked him to have this letter read. Just before the vote on the amendment was about to be put Mr. Lehlbach obtained the permission to have the letter read by the Clerk of the House.

And here they quote the letter in full. (Reading):

It is needless to say that the letter put an entirely different aspect upon the situation, and leader Kitchin, of the Democrats, rallying to the support of Secretary Redfield's suggestion, opposed the amendment, which on a final vote was beaten.

Mr. MOORE. That is to say, the courier arrived just in time to prevent the execution.

Mr. RAINEY. Yes; the courier got here just in time. I believe that is all I want to ask.

Mr. LONGWORTH. In the first place, Mr. Rothschild, I would like a little explanation of what a gentleman said here purporting to be representing a part of the jewelry industry, a few days ago. He was Mr. Charles Goldman, of 41 Park Row, New York City, and his testimony begins on page 1539 of our printed record. He stated that he

represented the United Retail Jewelry Storekeepers' Association and the Diamond and Jewelry Merchants' Association. I asked him this question:

Mr. LONGWORTH. Are either of your associations connected with the so-called jewelers' vigilance committee?

Mr. Goldman answered as follows:

Mr. GOLDMAN. I am happy to answer that they are not.

I then asked him this question:

Mr. LONGWORTH. Have you ever at any time been connected with them?

Mr. Goldman answered as follows:

Mr. GOLDMAN. I am happy to answer that in the same way.

Can you tell me why Mr. Goldman made use of that expression?

Mr. ROTHSCHILD. I can only explain that no organizations are members of the jewelers' vigilance committee. I think I described this morning the method in which the jewelers' vigilance committee was formed. There were 30 individuals who had been suggested by the organizations, who owed no allegiance to the organizations; and it is a kind of vigilance committee in the broadest sense of the word; and so far as Mr. Goldman is concerned, he is an attorney and would not have been eligible for membership on the vigilance committee. If he had been nominated and had been sufficiently desirable, he might have been invited. Otherwise, I have no means of explaining it.

Mr. LONGWORTH. Why did he express happiness that he was not a member?

Mr. ROTHSCHILD. Well, you saw Mr. Goldman, and you know. I have never met the gentleman, and I do not know his associations. They are incorporated, I believe, and I assume they exist therefore: I sent out notices and asked the people who keep track of the associations to give me the names of every jewelry organization in the United States, including the labor organizations, such as the cutters, and so on, and asking that the presidents of every organization be included as a member of that committee. Had we known of the two organizations that have been recently formed, they would have been invited. I do not know anything about them. They are little, East Side organizations—East Side of New York—and it is quite proper for them to organize to protect whatever interests of theirs they feel from time to time to be in jeopardy.

Mr. LONGWORTH. A little later on in his testimony Mr. Goldman made use of what I regard as a rather extraordinary expression. I read from his testimony as follows, on page 1551 of the record:

Mr. LONGWORTH. Do you know Mr. Rothschild?

Mr. GOLDMAN. I have never met the gentleman.

Mr. LONGWORTH. We expected him here to-day.

Mr. GOLDMAN. I was so informed, and that made me all the more delighted to be here.

Mr. LONGWORTH. Do you know why he isn't here?

Mr. GOLDMAN. I don't want to be boastful and say that he isn't here because I am here; but I do think he wanted to know first what would be said.

Why do you suppose that Mr. Goldman would say any such thing as that?

Mr. ROTHSCHILD. I have no idea, Mr. Longworth. I have not seen the gentleman, but I might suggest that he thought it might please

somebody to hear a remark of that kind. You know the old story about "Give a man a bad name and hang him"; but I have never met him. I assume that he is a perfectly reputable practitioner, and he was here representing his clients and doing what he could in their interests. It might have been, in good faith, best to have developed that a little farther so as to find out why he thought I would prefer to have him come here first.

Mr. LONGWORTH. Some other gentlemen asked him questions. Mr. Fairchild asked him some questions in the course of his examination, and I read from his examination on page 1548 of the record:

Mr. FAIRCHILD. What class of jewelers comprise the jewelers' vigilance committee?

Mr. GOLDMAN. Well, they represent the wholesale dealers, the importers, and the cutters. They represent the very large concerns.

Now, are those all the concerns represented by the jewelers' vigilance committee?

Mr. ROTHSCHILD. No; the jewelers' vigilance committee represents the jewelers of the United States.

Mr. LONGWORTH. Retailers?

Mr. ROTHSCHILD. Retailers as well as wholesalers; and there is no branch of jewelry represented officially on the jewelers' vigilance committee, but the jewelers' vigilance committee represents the jewelers of the United States; and appearing before Congress or before the Senate Finance Committee the jewelers' vigilance committee, or the war revenue tax committee of the jewelers' vigilance committee, were particularly anxious that the retail jewelers of the United States—the little man—should get proper treatment. They are the customers or the distributors; and for a large central body to represent only the top, would be, of course, obviously a mistake. There is nothing in that. The president of every State retail dealers association is a member, and you will see from the list that the president of the national retail dealers is a member of this committee. The vigilance committee could not possibly attempt to represent a class, and I do not believe that Mr. Goldman knows anything about the jewelry business, confidentially.

Mr. LONGWORTH. Then it is true that the retail jewelers are a part of your organization?

Mr. ROTHSCHILD. As any other branch, yes, sir.

Mr. LONGWORTH. Of course I assume this would be true of any tax such as was asked by Mr. Garner; it would be of no possible interest to any wholesaler or manufacturer how much the tax was on the retailer, except so far as it might retard production?

Mr. ROTHSCHILD. Well, if the tax was a sales tax, a consumption tax, it would make no difference to anybody along the line, except as you say, that it might destroy production or destroy sales.

Mr. LONGWORTH. In the morning you said that any tax that we would agree on here you would cheerfully pay?

Mr. ROTHSCHILD. Any tax that the Congress would put on like industries. In the present law we have been grouped with the automobile people and chewing gum people and sporting goods people, and some nine or ten commodities.

Mr. LONGWORTH. I am now speaking of a retail tax, not on the manufacturer.

Mr. ROTHSCHILD. These people also are retail distributors.

Mr. LONGWORTH. Of course, you would not pay that tax.

Mr. ROTHSCHILD. I beg your pardon.

Mr. LONGWORTH. I say, you would not pay that tax?

Mr. ROTHSCHILD. We are talking now for the whole trade. We are talking for the retailer. The retailer must consider it. It must affect his business in some way, and we say that anything the Congress does in a group way, in a commodities way, if the other people can stand it we will try to stand it.

Mr. LONGWORTH. Of course, it is one thing to stand it, and another thing, pay it.

Mr. ROTHSCHILD. Of course, we will pay any tax that you place. I do not want to have it understood that we will not do that.

Mr. LONGWORTH. Commenting on resolutions that your association passed in regard to conserving platinum, etc., Secretary Redfield remarked of your action:

This is wise, patriotic, and unselfish action, for which the merchants and manufacturers are highly to be commended. It will take time to work out fully its beneficial effects to the country. It will disarm adverse criticism of the jewelry trade in this respect and lead to general cooperation with them. Such is the earnest desire of the department. The jewelry business is a part, and an important part, of our commerce. It has acted fairly, its normal needs should be considered fairly. Platinum is required for many uses. Every use has its just claim. None may urge an exclusive demand. All have a part in our common country, and the Government of that country seeks, through the Department of Commerce, to secure for all a due and proper share. To this end the considerate course taken by the jewelers will directly contribute.

Do you agree with what Mr. Secretary Redfield says there?

Mr. ROTHSCHILD. I did agree with it; yes, sir.

Mr. LONGWORTH. Do you agree with the statement that platinum is required for many uses and that every such use has its just claim, and that none may urge an exclusive demand?

Mr. ROTHSCHILD. At that time I agreed with it.

Mr. LONGWORTH. You do not agree with him now?

Mr. ROTHSCHILD. No, sir; the conditions have changed. They have changed every month since then, practically.

Mr. LONGWORTH. Of course, that statement was made a year ago.

Mr. ROTHSCHILD. Exactly, Mr. Longworth; it was made in the face of a statement by the Army and the Navy and every branch of the Government, that the Government did not want an ounce of platinum then, and knew of no particular large demands in the near future. That was the time it was made.

Mr. LONGWORTH. Oh, yes; but he said a great deal more than that. He said that none could urge an exclusive demand. That would mean that the Government in time of war could not urge an exclusive demand.

Mr. ROTHSCHILD. Some remarks made by Secretary Redfield at that time would very much temper that, because he told us, and that was understood by us, that if the war requirements made platinum necessary, we would be required to give up the platinum; and as chairman of the war committee I went the limit on promising the Government that when they wanted the platinum they could take it; that they could take it without a murmur of objection on the part of the jewelers. And they have taken it that way. Now, we could have come down here and objected. We did not. We could have asked the Government, "What are your requirements? Tell us? We have the right to know something—some general statement." We did not ask that. We do not know what the

requirements are to be. We gave up the platinum when the Government asked for it, as much as they asked for. They commandeered 75 per cent. We said, "Commandeer 100 per cent." I think that would have been the wiser thing. I think they should have commandeered 100 per cent; but they did commandeer 75 per cent. That is my personal opinion.

Mr. LONGWORTH. You would agree, then, that the statement when the country was at war, coming from a high official of this Government, that no one had the right to an exclusive use of platinum, was justified?

Mr. ROTHSCHILD. I do not think that is a fair explanation of Secretary Redfield's statement, in view of the other remarks which he made to us at the time, which we very well understood. We understood him to mean during a time when there was no paramount war demand. This was a remark made for publication. Of course I do not know how he qualified it. I presume the Secretary can speak for himself.

Mr. RAINEY. I do not know whether it is justified, but at any rate conditions have changed now, and to-day that is not a justifiable statement.

Mr. ROTHSCHILD. Oh, absolutely.

Mr. LONGWORTH. Now, I want to ask you a very few questions, because Mr. Rainey has covered a great deal of ground, and other gentlemen have asked you some and others will want to ask you some questions, but I am just going to read an editorial that appeared in the last number of the Jewelers' Circular Weekly for July 3, and ask for your comments on it as I go along.

Mr. ROTHSCHILD. Excuse me, Mr. Longworth; the editor is here. Will you promise me protection?

Mr. LONGWORTH. I will promise you protection.

Mr. ROTHSCHILD. All right; now I will comment freely.

Mr. MOORE. Mr. Longworth is a good "protectionist." [Laughter].

Mr. LONGWORTH. This is supposed to be the instructions of the retail jewelers, evidently, to combat the theory that it is hardly the most patriotic thing in the world to do to buy platinum jewelry at this time. It begins this way:

The retail jewelers who are annoyed or whose business is interfered with by the misinformation in regard to platinum that has been disseminated by the newspapers at the request of the officials of the chemical societies will find it absolutely necessary to counteract the impression made on some of their customers who have been led to believe that platinum jewelry is unpatriotic and that the Government officials do not want it purchased or worn. The only way to meet this condition is by telling the customers the exact truth, no more or less, and leave it to the customers' common sense whether he or she will any longer allow themselves to be misled.

Do you think it is a fair statement to say that any statement made in regard to the scarcity of platinum in this country and its absolute necessity for war purposes is misinformation disseminated by the newspapers at the request of the chemists?

Mr. ROTHSCHILD. Just that statement alone would be absolutely fair; that there is a scarcity of platinum in this country for certain purposes, that statement would be perfectly fair.

Mr. LONGWORTH. I am not referring to that statement; I am referring to this statement, that it brings annoyance to retail jewelers

and interferes with their business to have misinformation in regard to platinum that has been disseminated by the newspapers at the request of the officials of the chemical societies. Now, do you think that is a fair statement?

Mr. ROTHSCHILD. I think it is the truth.

Mr. LONGWORTH. You think that there is nobody else in this country that feels it his duty to call the attention of the people to the scarcity of platinum than merely newspapers who are paid to disseminate that misinformation for chemists?

Mr. ROTHSCHILD. I do not know enough about it. Occasionally certain news items are released by chemical societies or by the Journal of Chemical Engineering, which is the organ of the society, and those articles are released to newspapers, and those articles have contained misinformation, or half information—half truths—no doubt about that, as I stated this morning in my formal statement; and we are willing to be put to the proof on that point at any time.

Mr. LONGWORTH. Then the only information that the public is now getting as to the scarcity of platinum and the need of the Government for platinum is misinformation, disseminated by officers of the chemical societies for their own interests, is that what you mean?

Mr. ROTHSCHILD. I would not say that. They are getting misinformation from the chemical societies. I would say this, that the only misinformation, or the only information, and that is the information with which the jeweler has to deal, is the information which comes to him in a practical way.

Mr. LONGWORTH. Then the motive of the officials of the chemical societies in all this matter is purely one of self-interest?

Mr. ROTHSCHILD. That was admitted, practically, at a meeting held in Secretary Redfield's office where two prominent chemists in Government employ admitted that the price of platinum was too high—even \$30 would be too high to pay for platinum—and they wanted cheaper platinum, and the Secretary of Commerce openly rebuked those statements.

Mr. LONGWORTH. Is it not true, or is it true, that the chemical societies have advocated a complete Government control of all platinum?

Mr. ROTHSCHILD. That I do not know. The American Chemical Society advocated at its annual meeting at its convention, I think in January, 1917, that the jewelers should not be permitted to use platinum in jewelry. That I understood.

Mr. LONGWORTH. Did they not advocate that the Government should control all of the metals?

Mr. ROTHSCHILD. I do not remember, but that is possible.

Mr. LONGWORTH. That would indicate that they were not wholly unpatriotic?

Mr. ROTHSCHILD. What is it?

Mr. LONGWORTH. I say that that would indicate that they were not entirely unpatriotic?

Mr. ROTHSCHILD. I say that their principal drive at platinum seems to have been in the effort to get cheaper platinum. They could always go into the market and buy platinum at the same price as the jeweler.

Mr. LONGWORTH. Well, we will not pursue that any further. I read further from the same matter from which I last read:

It will do the jeweler no good to get excited or protest against the action of the chemists or to deny the general stories that have been going around about the scarcity of platinum or its important uses as a war material. He must admit the scarcity of platinum, its importance to the Government, and emphasize the fact that the jewelry trade has been working in close touch with responsible Government officials and its members, and have only met every demand made upon the industry for platinum.

I presume that word "only" should be "also," so that it will read "and have also met every demand made upon the industry for platinum." [Continuing reading:]

In fact, they have suggested even more drastic regulations in regard to platinum than the Government officials have felt were necessary.

That I have read only as indicating a complete reversal of the situation described by the Secretary of Commerce about a year before.

Mr. ROTHSCHILD. The situation became acute in November and December, and seemed to become very grave in the early part of this year.

Mr. LONGWORTH. Then he goes on:

The jeweler should intelligently explain to his customer, that as a result of the increase in the war program and the breakdown in Russia, the conditions regarding platinum are decidedly different from what they were a year ago, or even six months, and it has therefore become necessary to commandeer the platinum in raw and metallic form, also that the jewelers have worked with the Government to get such platinum where it will be available. However, the point that the jeweler must forcibly impress upon his customer is that the War Industries Board has never contemplated, nor does it consider in any way, the question of commandeering platinum that has been manufactured into jewelry, nor will the responsible agents of the Government either accept as a gift or purchase platinum that appears in manufactured form.

Is that statement wholly true?

Mr. ROTHSCHILD. I would like Mr. Steele, or the gentlemen who have been in contact with Mr. Summers and Baruch to answer that. I believe it is true, but they can tell you absolutely whether it is or not. Mr. Steele can tell you that, I believe. I believe it is true, from hearsay, at least.

Mr. LONGWORTH. I want to read a little further and then I will ask a question. [Mr. Longworth here read further from the statement referred to.] Do you regard the members of the society known as the Daughters of the American Revolution as misguided women?

Mr. ROTHSCHILD. The editor can tell you whom he refers to. I believe he refers to this National Society for the Conservation of Platinum, of which Mrs. Spier is the president.

Mr. LONGWORTH. Yes; but the Daughters of the American Revolution have been for it.

Mr. ROTHSCHILD. I assume he referred particularly to those people, because the Daughters of the American Revolution have not made a strong campaign like the members of this other society; well-meaning and patriotic women, who feel they are doing their bit, who have made a strong campaign, and are doing it; and the jewelers are feeling it.

Mr. LONGWORTH. Then, any society of strong, patriotic women who make a campaign against the use of platinum in jewelry are misguided?

Mr. ROTHSCHILD. But the Chemical Society admit that they fathered it. In the statement of June 16, given out by the Bureau of

Mines, the statement is made that the American Chemical Society and that organization of women did that. They say that frankly and freely, and they undoubtedly have instructed these women, who believe these statements and are perfectly justified on the statements in doing what they have done. We question the statements and we question the propriety of the giving out of those statements by men who know better or ought to know better.

Mr. LONGWORTH. Then it is a very foolish thing to do, giving information to any patriotic society of women in this country to discourage the use of platinum?

Mr. ROTHSCHILD. Discouraging the use of platinum is one thing, but to say the Government does not want women to buy platinum jewelry is saying something which there is not the slightest evidence that the Government ever could say or will say or will stand for.

Mr. LONGWORTH. What do you mean by the Government?

Mr. ROTHSCHILD. I mean so far as we know the organization to-day—the Government arm that has the power and the duty of getting platinum for Government purposes, which I believe to be the War Industries Board, or had it up to the time this thing was written—the War Industries Board has distinctly stated that they will not take platinum even from the manufacturing jeweler. This goes several steps further, to the manufacturing jeweler and the retail dealers, and to the general public. Now, if it is unpatriotic for a woman to buy platinum jewelry, it will be unpatriotic for her to wear it. What is she to do with her jewelry? What is the jeweler to do with that jewelry, and what is the wholesaler to do with it? The Government will not buy it at present and pay the wholesaler or the retailer what it cost them, which would only be partial compensation. Now, if the Government was ready to do that, or whenever they are ready to do that, and they want that platinum jewelry they can undoubtedly get it. They can go a step further, and get all the jewelry in the hands of the retail jeweler, and pay whatever it cost the retail jeweler, without a profit.

Mr. LONGWORTH. That does not cover the question. "At all hazards, women must be urged not to buy platinum jewelry."

Mr. ROTHSCHILD. They may be urged not to buy platinum jewelry, but they should not be urged on the theory that the Government needs platinum and that the Government does not want them to buy it.

Mr. LONGWORTH. You see that is an absolute statement of truth. You would advise retail jewelers to make it plain to all their customers that the only suggestion that platinum should not be worn is from these misguided women or from the organizations who prompted their action. You say that is true?

Mr. ROTHSCHILD. I would not phrase it that way. I think that is too exact. I think that statement should be made more general, because suggestions probably have come from other sources.

Mr. LONGWORTH. Whether the Government shall absolutely commandeer all platinum, or whether the jewelers think otherwise or not, you think it is wrong to encourage women not to buy platinum jewelry now, under the circumstances?

Mr. ROTHSCHILD. I think it is wrong to tell them not to buy platinum jewelry, because the Government does not want them to buy platinum jewelry; yes, sir.

Mr. LONGWORTH. If one branch of the Government has been derelict in its duty do you think every other branch, including the legislative branch, should be derelict? If we believe, or if any one of us believes, that it is to the interest of this Government that the sale of platinum jewelry while the war is on should be discouraged, do you not think we ought to take the opportunity in revising this revenue bill to so discourage it?

Mr. ROTHSCHILD. Not unless you take over the existing platinum jewelry. There is no more platinum jewelry being made. There are hundreds of men who should be ruined if you took any such step, and without any benefit to the Government.

Mr. LONGWORTH. Let us read this editorial, the latter part of it. [Mr. Longworth here read further from the editorial referred to.] Is that a statement of fact?

Mr. ROTHSCHILD. I would prefer that Mr. Steele should answer as to that, because I do not know how positive the statement was on the part of the War Industries Board as to purchasing manufactured jewelry. I would prefer he should answer that.

Mr. LONGWORTH. All right, then. I would like Mr. Steele to answer that question. I will read two sentences from this, and then ask you my question. Here is the first one:

However, the point that the jeweler must forcibly impress upon his customer is that the War Industries Board has never contemplated, nor does it consider in any way, the question of commandeering platinum that has been manufactured into jewelry, nor will the responsible agents of the Government either accept as a gift or purchase platinum that appears in manufactured form.

Is that true?

Mr. STEELE. I believe these are all true statements.

Mr. LONGWORTH. Is it true as to what the Government has so far done, or what it may do?

Mr. STEELE. The attitude of the Government as expressed by the War Trade Board has been that they only contemplate taking the unmanufactured platinum. Well, it is possible that while they have not expressed any opinion as yet, or that they even contemplated taking the manufactured platinum, or may purchase in the hands of dealers or manufacturers or retailers, they might eventually, or in the future, change their attitude on this subject.

Mr. LONGWORTH. Would you feel justified in assuring one of your customers that the Government would not take as a gift during this war any manufactured platinum?

Mr. STEELE. We have a direct case where a man has written and offered to make a gift of jewelry—where a jeweler has written and offered to make a gift of a platinum crucible to the Government—and he has received a reply, of which we have copies, stating that there is no machinery by which the Government could either accept this crucible as a gift or could purchase it: but I can say this, that there are being arrangements made, I believe, at the present time by which any platinum available from such sources can be purchased through the Government agencies. At the present time the only way in which this platinum could reach the Government is through sale to a commandeered refiner, and when we have had people offer to sell to the war service committee any platinum, we have sent them to such a commandeered refinery or given them a list of a number of names so that they could sell it to a refiner, and in that

way it would have been made available to the Government, from the fact that every bit of the platinum entering into such a refiner's hands had to be turned over to the Government.

Mr. LONGWORTH. That is not the distinction I am drawing. I am drawing the distinction between manufactured and unmanufactured metal, and I am asking you if it is a fair statement to make to any customer that you can assure them that the Government has not purchased or will not purchase or accept as a gift any manufactured platinum, and that therefore it is a perfectly patriotic thing to buy it for the purpose of jewelry?

Mr. STEELE. I believe that is a true statement.

Mr. LONGWORTH. Are you not aware of the fact that every government engaged in this war has been using manufactured as well as unmanufactured platinum?

Mr. STEELE. In regard to the War Industries Board, we have had a statement that up to the present time they have never contemplated taking the manufactured article, one statement made being that they did not feel that it would be good judgment to pay \$10,000,000 for \$500,000 worth of platinum. That was one of the statements.

Mr. LONGWORTH. Who made that statement?

Mr. STEELE. That was made by one of the people at the War Industries Board.

Mr. LONGWORTH. Who was it?

Mr. STEELE. It was one of the assistants to Mr. Connor, expressing this as the view at that time.

Mr. LONGWORTH. And so that is the responsible official that is representing the views of this Government now as to platinum, I presume. Are you aware of the fact that a bank in New York is exchanging war savings stamps for platinum by direct arrangement with the Secretary of the Treasury?

Mr. STEELE. I believe so; yes, sir.

Mr. LONGWORTH. Yes. The Government is not recognizing the manufacture of platinum there?

Mr. STEELE. Those are supposed to be old articles, turned in.

Mr. LONGWORTH. What?

Mr. STEELE. Those are old articles of jewelry.

Mr. LONGWORTH. What is the difference between old articles and new articles, so far as the use of the platinum goes?

Mr. STEELE. People who wish to, can bring in anything containing platinum to what is called the War Savings Stamp Metal Market, on the corner of Fortieth Street—

Mr. LONGWORTH. No, that is not the point. You have not got the point yet. The point is that to-day jewelers are justifying the use of platinum as jewelry, claiming that it is a perfectly patriotic thing for women to buy all the platinum jewelry they want, because this Government can not use and will not use—will not buy or take as a gift—any manufactured platinum. Now, there is the point.

Mr. STEELE. The Government is not buying this platinum at the war savings metal market. The statement of the War Industries Board has made plain, through Mr. Connor and through Mr. Summers, that they did not propose to buy the manufactured platinum articles which are held by the jewelers; and on the other hand, they have already stated that there is no reason why the jewelers should not sell these articles which have been left in their hands, and which

are not commandeered, and they do not think that anybody should take any steps to prevent their marketing these manufactured articles, which were not commandeered, which were released for sale by direct special waiver; because when the commandeering order was sent out with it went a form of waiver of which Mr. Rainey spoke, and that waiver released for sale any manufactured articles which were on hand when the jeweler received the commandeering order and gave him full and free permission to dispose of them. In other words, the jeweler has full permission from the Government, from the responsible officials of the Government, who have the disposal of the platinum in their hands, to dispose of their manufactured articles of platinum.

Mr. LONGWORTH. I am not insinuating for a moment that that is illegal, but I contend that you are saying—that the jewelers are saying—that every woman is doing right to buy all the platinum jewelry she wants, and that you are giving her the direct and definite assurance that the Government has not purchased or accepted, and will not, during the period of the war purchase, or accept as a gift, any manufactured platinum.

Mr. STEELE. I would not make that statement, Mr. Longworth. I would not want to be understood as making that statement. I would say this, that the jeweler has a perfect right to tell his customers that his manufactured articles he has a perfect right to dispose of. I think he could also say, truthfully and honestly, that there has been no arrangement made up to the present time by which the Government could buy platinum articles or receive them as gifts. There are two answers, in other words, to your question—one in regard to the sale of the manufactured articles by a jeweler and the other answer that there has been no arrangement up to the present time by which these articles could be purchased by the Government.

Mr. LONGWORTH. But you, of course, would not insinuate that the time might not arrive when the Government would purchase such articles?

Mr. STEELE. I would not insinuate that the time might not arise when the Government needed them.

Mr. LONGWORTH. But you say, only that up to the present time there has been no arrangement?

Mr. STEELE. No, sir; there has not.

Mr. LONGWORTH. That is all.

Mr. RAINEY. This suggestion occurred in the Jewelers' Circular of April 3, just after the commandeering orders were made:

The platinum situation in the jewelry trade is unsatisfactory. The propaganda of the women fanatics, asking the public to give up platinum jewelry, has not been contradicted by the Government officials, who know it to be founded on erroneous statements, because those officials are "sore" on the jewelers.

Your organization sympathized with that statement—that this campaign for the conservation of platinum was carried on by women fanatics?

Mr. STEELE. We believe that these ladies who are conducting this campaign are honest, patriotic ladies, and they have a perfect right to state that it is not patriotic to buy platinum jewelry, if they want to do it, or to express it as their opinion; and that we do not object to; but in all this propaganda there is the insidious implication that the Government does not wish people to buy platinum

jewelry, which has been released for sale and which the Government recognizes the perfect right of the jewelers to sell.

Mr. RAINEY. You think they are not warranted in saying that on account of the position taken by Dr. Manning, speaking for the Bureau of Mines, that department of the Government which has charge of all metals, when he says that the use of platinum as jewelry is not an essential use of platinum—

Mr. STEELE. We do not recognize Dr. Manning as the official who has charge of platinum.

Mr. RAINEY. You recognize the War Industries Board?

Mr. STEELE. The War Industries Board; yes, sir.

Mr. RAINEY. And I agree that the platinum situation has been mismanaged by the War Industries Board from the start, with you and your organization acting as their advisers; and you are aware that it has been taken away from them in the last few days?

Mr. STEELE. I beg your pardon.

Mr. RAINEY. I say, you are aware that dealers in platinum are to be licensed now?

Mr. STEELE. Yes.

Mr. RAINEY. And are to be taken away from the War Industries Board even?

Mr. STEELE. Yes.

Mr. RAINEY. And you are aware that it has been turned over to the Bureau of Mines now?

Mr. STEELE. I have read so.

Mr. RAINEY. And that is the bureau of the Government which you say ought not to have been recognized before by any of these organizations?

Mr. STEELE. If the authority has been given to them now, we must recognize them as the authorities, but up to this time the authority has rested in this board, and they were the people who gave us our orders.

Mr. RAINEY. You agree, now, that the platinum situation is changed? You agree to that?

Mr. STEELE. Yes.

Mr. RAINEY. And you were contending a year ago that it was not and could not be; that is, your organization.

Mr. STEELE. I do not think that is the statement, but the statement I think Mr. Rothschild made was this: I was present at the conference with Secretary Redfield when there were present representatives of every branch of the Government.

Mr. RAINEY. You contend now that Secretary Redfield, acting upon your advice, did the proper thing or the wise thing in sending that letter down here advising the country and the Congress that the steps you had taken were the only steps necessary to conserve platinum? Do you think that was wise, looking back at it from the distance of a year?

Mr. STEELE. I think Mr. Redfield took his action upon several other things; that is, the supply abroad, and other things mentioned in his letter.

Mr. RAINEY. But looking at it now, you think that was wise—that letter that you induced him to write a year ago?

Mr. STEELE. I thought so.

Mr. RAINEY. But do you think so now?

Mr. STEELE. I think that conditions have changed, absolutely.

Mr. RAINEY. Then it is agreed that your action of a year ago was unwise?

Mr. STEELE. I do not think so. We acted upon the light and the information that we had at that time.

Mr. MOORE. Had the Russian Government fallen at that time, when that letter was written?

Mr. STEELE. No, sir.

Mr. MOORE. And we were still obtaining platinum from abroad?

Mr. STEELE. Yes, sir.

Mr. MOORE. So that at that time when that letter was written there was a very greatly different situation?

Mr. STEELE. Another fact in connection with that was that at a conference held in October, at which Mr. Larter, Mr. Rothschild and I were present, with the officials of the Council of National Defense, the statement was made that 48,000 ounces of platinum were then available for the supply of this Government, from Russia, and the conference decided and recommended that the United States Government use every means in its power to secure this 48,000 ounces of platinum, of which 21,000 ounces that were brought in in November or December were part. The gentlemen who brought this into this country we had luncheon with yesterday, and he told us that when he made the arrangements with the War Trade Board he stated to them that the other 27,000 ounces could be secured provided a price of \$105 an ounce was paid, but in view of the fact that a price of only \$90 an ounce was made, he was not permitted to go back and get this additional supply which he stated he could get.

Mr. RAINEY. I know, but back of and through all these elaborate speeches you gentlemen have been putting into the record to-day is the fact that a year ago, immediately after this war broke out, you organized your platinum committee, and you did not organize it until after that, and you sent your committee down here for the purpose of preventing the conservation of platinum, of preventing a tax on platinum jewelry, which would have prevented the conservation of platinum; and for several months after that you say you were in constant communication with the Secretary of Commerce and with the War Industries Board in your various reports here, and as a result no effort at all was made to commandeer platinum until quite recently, or to conserve it, other than the efforts which you undertook yourself and which the Secretary of Commerce said was sufficient. In other words, the situation is that the Nation is in great peril now on account of the fact that my efforts and Mr. Longworth's efforts, which you boast that you feel a year ago were not successful, and on account of the fact that for several months jewelers had the right to use platinum in the manufacture of jewelry; and you criticized these women who during that period of time tried to conserve platinum as "women fanatics," and you agree now that the situation—

Mr. MOORE (interposing). Mr. Chairman, I just beg to put in the record at this time that these gentlemen have not done that. This is an editorial referred to by Mr. Longworth and an editorial referred to by you by which these gentlemen are not necessarily bound. I do not think any one of the witnesses indicated that.

Mr. GARNER. May I break in for just a moment?

jewelry, which has been released for sale and which the Government recognizes the perfect right of the jewelers to sell.

Mr. RAINEY. You think they are not warranted in saying that on account of the position taken by Dr. Manning, speaking for the Bureau of Mines, that department of the Government which has charge of all metals, when he says that the use of platinum as jewelry is not an essential use of platinum—

Mr. STEELE. We do not recognize Dr. Manning as the official who has charge of platinum.

Mr. RAINEY. You recognize the War Industries Board?

Mr. STEELE. The War Industries Board: yes, sir.

Mr. RAINEY. And I agree that the platinum situation has been mismanaged by the War Industries Board from the start, with you and your organization acting as their advisers; and you are aware that it has been taken away from them in the last few days?

Mr. STEELE. I beg your pardon.

Mr. RAINEY. I say, you are aware that dealers in platinum are to be licensed now?

Mr. STEELE. Yes.

Mr. RAINEY. And are to be taken away from the War Industries Board even?

Mr. STEELE. Yes.

Mr. RAINEY. And you are aware that it has been turned over to the Bureau of Mines now?

Mr. STEELE. I have read so.

Mr. RAINEY. And that is the bureau of the Government which you say ought not to have been recognized before by any of these organizations?

Mr. STEELE. If the authority has been given to them now, we must recognize them as the authorities, but up to this time the authority has rested in this board, and they were the people who gave us our orders.

Mr. RAINEY. You agree, now, that the platinum situation is changed? You agree to that?

Mr. STEELE. Yes.

Mr. RAINEY. And you were contending a year ago that it was not and could not be; that is, your organization.

Mr. STEELE. I do not think that is the statement, but the statement I think Mr. Rothschild made was this: I was present at the conference with Secretary Redfield when there were present representatives of every branch of the Government.

Mr. RAINEY. You contend now that Secretary Redfield, acting upon your advice, did the proper thing or the wise thing in sending that letter down here advising the country and the Congress that the steps you had taken were the only steps necessary to conserve platinum? Do you think that was wise, looking back at it from the distance of a year?

Mr. STEELE. I think Mr. Redfield took his action upon several other things; that is, the supply abroad, and other things mentioned in his letter.

Mr. RAINEY. But looking at it now, you think that was wise—that letter that you induced him to write a year ago?

Mr. STEELE. I thought so.

Mr. RAINEY. But do you think so now?

Mr. STEELE. I think that conditions have changed, absolutely.

Mr. RAINEY. Then it is agreed that your action of a year ago was unwise?

Mr. STEELE. I do not think so. We acted upon the light and the information that we had at that time.

Mr. MOORE. Had the Russian Government fallen at that time, when that letter was written?

Mr. STEELE. No, sir.

Mr. MOORE. And we were still obtaining platinum from abroad?

Mr. STEELE. Yes, sir.

Mr. MOORE. So that at that time when that letter was written there was a very greatly different situation?

Mr. STEELE. Another fact in connection with that was that at a conference held in October, at which Mr. Larter, Mr. Rothschild and I were present, with the officials of the Council of National Defense, the statement was made that 48,000 ounces of platinum were then available for the supply of this Government, from Russia, and the conference decided and recommended that the United States Government use every means in its power to secure this 48,000 ounces of platinum, of which 21,000 ounces that were brought in in November or December were part. The gentlemen who brought this into this country we had luncheon with yesterday, and he told us that when he made the arrangements with the War Trade Board he stated to them that the other 27,000 ounces could be secured provided a price of \$105 an ounce was paid, but in view of the fact that a price of only \$90 an ounce was made, he was not permitted to go back and get this additional supply which he stated he could get.

Mr. RAINEY. I know, but back of and through all these elaborate speeches you gentlemen have been putting into the record to-day is the fact that a year ago, immediately after this war broke out, you organized your platinum committee, and you did not organize it until after that, and you sent your committee down here for the purpose of preventing the conservation of platinum, of preventing a tax on platinum jewelry, which would have prevented the conservation of platinum; and for several months after that you say you were in constant communication with the Secretary of Commerce and with the War Industries Board in your various reports here, and as a result no effort at all was made to commandeer platinum until quite recently, or to conserve it, other than the efforts which you undertook yourself and which the Secretary of Commerce said was sufficient. In other words, the situation is that the Nation is in great peril now on account of the fact that my efforts and Mr. Longworth's efforts, which you boast that you feel a year ago were not successful, and on account of the fact that for several months jewelers had the right to use platinum in the manufacture of jewelry; and you criticized these women who during that period of time tried to conserve platinum as "women fanatics," and you agree now that the situation—

Mr. MOORE (interposing). Mr. Chairman, I just beg to put in the record at this time that these gentlemen have not done that. This is an editorial referred to by Mr. Longworth and an editorial referred to by you by which these gentlemen are not necessarily bound. I do not think any one of the witnesses indicated that.

Mr. GARNER. May I break in for just a moment?

The CHAIRMAN. Just a moment, and then I am going to let Mr. Hill in.

Mr. FORDNEY. I do not want to interfere with your question, but there is a great deal to be asked those gentlemen yet.

Mr. MOORE. These gentlemen have had a four-hour ordeal on the other side, and I think it is pretty near time they had a chance to talk about their side.

Mr. GARNER. If Mr. Hill will indulge me and those who desire to hear him—

Mr. MOORE. If anyone here does not agree it is right to give platinum—

Mr. GARNER. Let me get at this platinum matter. I am interested in taxation more than in platinum. The platinum situation is about a thing of the past, as jewelers are not using platinum in the manufacture of jewelry?

Mr. STEELE. No, sir.

Mr. GARNER. Then, so far as the future is concerned, the jewelers have got nothing to do with the matter of taxation or conservation of platinum.

Mr. STEELE. No, sir; manufactured platinum has been commandeered.

Mr. GARNER. As to what your position in the past may have been is a disputed point between various gentlemen?

Mr. STEELE. Yes.

Mr. GARNER. So it makes no difference what tax is levied on the jeweler who is not now using platinum, it would not get any money?

Mr. STEELE. Except on the sale of the manufactured article.

Mr. GARNER. I mean, except on the sale of the manufactured article.

Mr. STEELE. Yes, sir.

Mr. GARNER. I will say very frankly that so far as I am concerned, I can see no reason, unless the Government can say it needs the platinum in manufactured jewelry, why you should not sell it. I want to suggest to you, Mr. Steele, and you gentlemen associated with him from the various States, two methods by which we can tax you: One is in the present bill and whatever rate they may determine; the other is the method suggested by one of you gentlemen. But we have not a suggestion as to the verbiage and language you would like to have in that bill, and I would like for you to put it in the record as to what you think the language should be and the rate which you think should be imposed, so that we may take into consideration your suggestions as to levying this tax against jewelry.

Mr. STEELE. Would it not be better for us to write you, after consultation?

Mr. GARNER. I do not care, so you put it in the record, in order that we may have some basis for getting your views as to the method of levying taxes against jewelers. It has got to be against the manufacturer, the retailer, or some other method.

Mr. STEELE. I believe that Mr. Rothschild and the committee would be glad to give you a suggestion.

I would like to state, Mr. Rainey, in the first place, that the war service committee have recommended on three separate occasions that all unmanufactured platinum in the country should be commandeered. In the second place, last year when we attended this

conference in Secretary Redfield's office, I would like to make very plain to you that there were present there representatives from every branch of the Government. We did not know the requirements of the Government at that time, and I do not believe any member of the jewelry business has since learned what the requirements of the Government were in platinum at any particular date. We heard with our own ears every department of the Government state that there was no need in their department for one ounce of platinum. On this later occasion Mr. Redfield gave us this letter stating that they had investigated other sources of supply and that they were satisfied from what they had learned—all of which was embodied in the letter to you—that there was no occasion for any uneasiness at that time about platinum. The Russian situation had not developed then, and we did not know what was going to happen in the future. For that reason, when Mr. Longworth asked the question about my personal views in regard to the future attitude of the Government toward manufactured articles of platinum jewelry, I could not honestly say anything except "my views up to the present time"——

Mr. LONGWORTH. What demand was it which caused the very great increase in the price of platinum?

Mr. STEELE. The law of supply and demand.

Mr. LONGWORTH. Was it not the demand on the part of the jewelers?

Mr. STEELE. I do not think so, Mr. Longworth. If you want to know what my real honest opinion is about the price of platinum and the advance in it, there can be only one reason—and I think it is capable of proof; you can investigate it yourself—the demand by the chemical interests of the country for the purpose of making war materials. At the time the war broke out, in 1914——

Mr. LONGWORTH (interposing). What was the price of platinum 20 years ago?

Mr. STEELE. In 1914 the price was \$40 an ounce, about.

Mr. LONGWORTH. What was it before 1914?

Mr. STEELE. Before 1914 there were varying prices.

Mr. LONGWORTH. What was it in 1900?

Mr. STEELE. I have a record here of the prices back to 1880, if you would like to have it. But the point is this: There has never been an open market price on platinum in America, since practically all of the source of supply was controlled by one interest, which, either through ownership of mines or through contracts made with producers, controlled practically the entire Russian supply; and there never was a price made in New York City on platinum in the last 25 years which was not based on the price that was made by the representatives of the syndicate.

Mr. RAINEY. What interests was that?

Mr. STEELE. That is the French syndicate. The Compagnie Industrielle de Platine. This syndicate was formed about 25 years ago, the main moving factor between the French house of Rothschilds, and they got control practically of 75 per cent at that time of the production of platinum. They were able to increase this control afterwards through confiscations of mines, through the arrangements

they made with other mines, so that they controlled the price absolutely, until the fall of 1917, after the Russian collapse, when platinum could not come here from Russia.

Mr. RAINEY. Reserve your statement at that point, and we will allow Mr. Hill to go on; and we will be glad to have you resume later.

Mr. RAINEY. Mr. Hill, state your full name, residence, and the interests which you represent.

**STATEMENT OF WILLIAM H. HILL, PRESIDENT OF THE W. H. HILL CO., DETROIT, MICH.**

Mr. HILL. My name is William H. Hill, president of W. H. Hill Co., proprietors of Hill's Cascara Bromide Quinine Tablets, a remedy of 22 years' standing for colds and la grippe, and an annual business of approximately 100,000,000 tablets.

In justice to myself I wish to say at the outset that I am not here as a representative of any organization, association, corporation, or even my own firm, merely as an individual; and I wish to make clear to you that my object in coming before your committee is not in the hope or with an idea of getting my taxes reduced or of dodging them in any way.

In a conversation with ex-Congressman Samuel W. Smith, I remarked that I believed I might suggest a plan to your committee so that the Government could obtain three or four times the amount of excise taxes it now receives on the proprietary line of business, yet distribute the burden in such a way that no one would feel it.

I might state that I am not a novice in the proprietary line, having had 40 years of experience, and traveled into every nook and corner of the United States. I do not think there are many angles in this business with which I have not had experience. I refer to this merely for the purpose of acquainting you with the fact that I talk from an angle of experience, rather than inexperience or theory.

To save the committee's time, which I know to be valuable, I have put my ideas in type, as follows:

In the proprietary line of business 90 per cent of the goods are put up in 25-cent, 50-cent, and \$1 sizes.

Manufacturer's prices are as follows: For the 25-cent size, \$2 per dozen or \$24 per gross; for the 50-cent size, \$4 per dozen or \$48 per gross; for the \$1 size, \$8 per dozen or \$96 per gross.

Manufacturers' selling prices are usually 10 and 5 per cent or 15 per cent off list. Therefore, taking the \$1 size at \$96 per gross less 15 per cent (\$14.40) the selling price of this is \$81.60. The present excise tax is 2 per cent on this \$81.60 or \$1.632, which is what the Government now receives per gross on \$1 goods.

If I understand correctly the Government desires the greatest amount of revenue possible, with the least disturbance to general business and to so spread the taxes that the burden will be felt as little as possible.

As I understand it, the present Canadian plan is this: The consumer, when purchasing a package, is told that the price is 25 cents, 50 cents, or \$1, plus the Government stamp. When the package is sold the dealer places the proper stamp on same and cancels it, which amount is added to the selling price, thereby distributing the tax in such a way that it is a burden to no one.

During the Civil War the excise tax was one cent for every 25 cents, or fraction thereof.

If your committee adopts a plan similar to the Canadian, with the Civil War rate, you will obtain the following results:

Taking the \$1 size for illustration, \$1.6 per gross less 15 per cent is \$1.36, on which the present excise tax at 2 per cent is \$1.632. If the plan suggested is adopted, the Government would receive 4 cents on every package—144 packages to the gross—or \$5.76, which is \$4.128 per gross more than the Government would receive than it now does. This would be over 3½ times the present revenue on the same volume of business done in this line and will distribute the tax in a way which can be a burden to no one.

I will be pleased to answer any question which is within my power to do.

As I have remarked here, I have had years of experience in the line. I remember well the Civil War tax, which I paid for a good many years after I got in business, which had not been done away with at that time.

Mr. FORDNEY. I have read the statement you prepared, and I do not believe there is anything I want to ask.

Mr. CRISP. I understand you to say that under your plan the consumer would pay the tax?

Mr. HILL. Yes, sir.

Mr. CRISP. Does not the consumer do it under the existing law?

Mr. HILL. Yes, sir.

Mr. CRISP. And the wholesaler and retailer pass the price on to the consumer?

Mr. HILL. They do not in a large majority of cases.

In further answer to that, I would say that before you or I were born these prices were established. For instance, a cold cure was sold for 25 cents as far back as I can remember, going back into the history of our line of business. There has been some candy cold-cure drops which have a medication in them which have been sold as low as 10 cents. While it is true that a few manufacturers have added an increase, calling it 30 cents to the consumer and charging a trifle more for their goods, it is also true that it is an odd price and disturbs one's business beyond measure.

Mr. CRISP. We have heard that argument by all who have come before the committee and we have heard you can not raise the price 5 or 10 or 15 per cent, and yet they have all been added to, and in my judgment—speaking from my own personal opinion—90 per cent of all taxes levied are passed on to the consumer.

Mr. HILL. It is not true in the majority of cases in our line of business.

Mr. GARNER. Suppose we wanted the consumer to pay it, Mr. Hill, and you have a box of patent medicine here that you sell for a dollar. Suppose the Government says, "All right, Mr. Hill, we will not bother you, but we will just add 50 cents on that dollar and have the consumer pay \$1.50."

Mr. HILL. The consumer would not do it.

Mr. GARNER. That is what I am getting at, and that is just what these gentlemen told us this morning. We say to them, "All right; we are willing for the consumer to pay this, and we are going to make the consumer know that he pays it; we are going to provide that

when he buys that he pays so much to the Government." But when we go to levy the tax, we are told that we are going to cut down the production, and everybody throws up their hands and says it is going to ruin their business. You say we can not transfer this to the consumer, and we are between the devil and the deep blue sea in regard to this tax.

Mr. HILL. May I play the Yankee and ask you a question in return?

Mr. GARNER. Sure.

Mr. HILL. I am going to illustrate it in a larger way, if you will allow me to use what I have heard to-day. If you went in to buy a watch for \$100 and the jeweler said to you, "That watch is \$100, but the Government requires you to pay \$50 more for the privilege of buying that," would you buy it?

Mr. GARNER. If I wanted the watch bad enough, I would.

Mr. HILL. Yes; but if the Government asked you to pay \$10, would not 10 people buy where 1 bought at \$50? That same thing applies to our business. You go into a store and say you want a bottle of proprietary medicine which is \$1. The Government asks you to pay 50 cents tax, and you say, "I don't want it." But if the tax you pay were 4 cents, 99 out of every 100 would buy and not squeal. They do it that way in Canada. There is not a manufacturer in the United States who has an average of two packages of his article sold to each family in the United States. Do you mean to say to me that the consumer will kick on paying 8 cents—and I am taking the dollar size—as long as I have paid this war tax? I would like to see that consumer.

Mr. GARNER. Probably not.

Mr. HILL. Excuse me. We have a large output. We put out over 100,000,000 tablets a year, which means between five and six million packages, and yet we card our business in every little four-corner town. I can step into my office and show you in an instant a card stating how many circulars have been sent to Podunk or Squeedunk; how many packages we have sold in that town. The two best States that we have only show a little over two boxes plus to the average family in the State. Do you mean to say to me that if they had to pay the Government 2 cents war tax because the two boxes of Hill's Cascara Quinine Tablets, anybody is going to kick? But you say to them, "That package is 25 plus 12½ cents war tax, and they will not touch it. It is unreasonable. You and I do not refuse to be loyal to our country, and I do not believe there are many but what are willing to do their bit in the war; but when the Government asks us to do unreasonable things, then we are apt to back up.

Mr. GARNER. Mr. Hill, in order to get at the method of taxation that you advocate, if I understand it, you want to change the present method?

Mr. HILL. No, sir; I do not.

Mr. GARNER. You want to keep the method that is down in the law?

Mr. HILL. I am perfectly willing to pay my tax on the present basis. I made that clear in my statement. I came here because Mr. Smith wrote the committee—both to Mr. Fordney and your chairman—stating that he thought what I had in mind should be presented to the committee, and they invited me to come.

I wish to say to every gentleman here that I am willing to pay my share of this war tax every time, but I want in that connection, while you are on that subject, to say to you that there are very few manufacturers that can stand any more than you are charging them to-day—2 per cent on gross receipts, and then pay in our business eight other different kinds of taxes, requiring us to have one clerk especially to figure out how to pay them.

Mr. GARNER. You think 2 per cent tax on your gross receipts is as high a tax as you can afford to pay?

Mr. HILL. It is a matter of record over in your Treasury Department that this year on our volume of business, which is quite large—\$350,000—we made less than 8 per cent. And that was before we had to pay these new taxes. As our fiscal year commenced March 31, we paid our present basis of taxes in June. That reduced us to less than 7 per cent on our gross receipts. To save anybody asking me, "What is your earning on your investment?" I would say there is just \$25,000 in our business less than our gross business—that is, we have \$325,000 invested and get 8 per cent, and I ask you, as business men, can our concern do business on less than that, when it is a fact that I can sell out and loan my money on mortgages at 6 per cent?

Mr. OLDFIELD. And take no risk of loss.

Mr. GARNER. I do not exactly understand you, I am frank to say.

Mr. HILL. I want to make myself plain. I want to clear the gentleman's mind of just one thing: I am not here to dodge one penny of tax.

Mr. GARNER. You have said that two or three times; and I want to say as one member of the committee that I am glad to have you here, but I think you ought not to be offended if I undertake to give you my views and get such information as I want. You are in the patent-medicine business, and we have selected that in the last bill as the subject of taxation. Do you think that is a legitimate business to be taxed?

Mr. HILL. I do.

Mr. GARNER. And you are willing to pay whatever rate of taxation will get the largest amount of money in the Treasury?

Mr. HILL. Provided it does not drive us out of business.

Mr. GARNER. Driving you out of business will not get any money in the Treasury. I say, you are willing to pay whatever rate of taxation will get the largest amount of money in the Treasury on what is a legitimate subject of taxation?

Mr. HILL. Yes.

Mr. GARNER. Do you not believe that if we did levy that tax directly on the consumer and did not levy any gross receipts tax on you at all—allow you to sell your medicine to whoever and at what price you pleased—but say to the consumer, "When you buy this medicine of Mr. Hill's, we are going to charge you so much money." What do you say about that theory of taxation applied to your business?

Mr. HILL. I believe it is the proper way to get at your tax.

Mr. GARNER. Probably the only thing we disagree on is the rate?

Mr. HILL. Probably.

Mr. GARNER. And you realize, Mr. Hill, whenever you begin to tax business, you must in the very nature of things decrease that business to an extent.

Mr. HILL. Not necessarily; no, sir.

Mr. GARNER. I can not understand how any business would not prosper a little bit more if you did not have any burden fixed upon it. The larger the burden the more the decrease in the business.

Mr. HILL. No; I do not agree with you. It may be the larger the burden the greater the decrease of profits, but it does not necessarily mean that it decreases the business, provided you do not put that burden on so heavy you can not get the consumer to purchase.

Mr. GARNER. That is what I am talking about—unless you decrease the volume of business to such an extent you can not make any money, the consumer would naturally pay the tax.

Mr. HILL. Not in our business.

Mr. GARNER. I am not talking along the present tax system. I am talking with reference to the taxing system I have suggested to you. When I purchase a bottle of medicine on which is laid 12 cents or 15 cents tax; then it could not interfere with your business except to decrease the volume of the business?

Mr. HILL. Do not get me wrong as to that 8 or 12 or 15 cents. I used that amount in this connection, that the proprietary medicine house—I do not know of a single concern in this country that has got an output of one package to the family in the United States—I therefore said that it would not be a tax on the consumer to exceed 1 or 2 cents, or on a dollar preparation 4 or 8 cents. I did not put it the other way.

Mr. GARNER. I am just trying to get your idea.

Mr. HILL. Let me clear up your idea. When I am talking business I am very earnest, but I am not in any way annoyed; I am not built that way.

Mr. GARNER. I am just going to illustrate. Your business has \$350,000 gross sales?

Mr. HILL. Yes, sir.

Mr. GARNER. And this year we levied on each bottle of medicine how much?

Mr. HILL. On each package?

Mr. GARNER. On each package.

Mr. HILL. I do not know. It would be so small, just 2 per cent of the gross receipts. For instance, we sell \$100 worth of goods and we pay Uncle Sam \$2.

Mr. GARNER. That would be 2 cents on a bottle if it sold at a dollar a bottle?

Mr. HILL. No; it would be less than one-eighth of a cent a package. You must remember that we only get a trifle over 10 cents a package for our goods.

Mr. GARNER. How much do you sell your goods at?

Mr. HILL. They sell at \$2 a dozen, less 15 per cent to the jobber, and the jobber makes that 15 per cent; and the consumer pays 25 cents a package.

Mr. GARNER. I do not want a dozen bottles of your stuff; I only want one. How much do I pay?

Mr. HILL. You pay 25 cents.

Mr. GARNER. And you pay 2 per cent gross tax and sell it for 10 cents?

Mr. HILL. We get 10 cents for it; that is what the jobber pays for the goods, at that ratio.

Mr. GARNER. How much do you get for it, if I may ask you?

Mr. HILL. We get \$20 a gross net.

Mr. GARNER. How much is that a dozen packages, or a bottle?

Mr. HILL. We get 13 cents plus.

Mr. GARNER. You take off 2 per cent gross?

Mr. HILL. Yes.

Mr. GARNER. How much would that tax be on each bottle?

Mr. HILL. That is on each package? You have got to divide that 13 into 144.

Mr. GARNER. You do not pay as much as 1 cent?

Mr. HILL. No, indeed.

Mr. GARNER. It is near one-eighth of a cent.

Mr. HILL. I do not think it is one-eighth of a cent.

Mr. GARNER. Probably one-sixteenth.

Mr. HILL. Somewhere around there—in the neighborhood of one-eleventh.

Mr. GARNER. Mr. Hill, do you believe it would make any difference in the production and sale of your goods if we should tax them 1 cent and just let the consumer pay 26 cents instead of 25?

Mr. HILL. I believe it would go and not a word be said.

Mr. GARNER. You told us a minute ago that the Government was levying all the tax that your business could stand, and now we are proposing an increase of 1,100 per cent, by adding 1 cent, and yet a moment ago you said your business had all the taxes it could bear.

Mr. HILL. There is quite a difference, my friend, if you are starting to go down to the New Willard Hotel as to whether you go directly in the opposite direction a mile and then go around another mile. The difference is that you are putting that directly on to our goods, which I am not finding any fault with now. My position is that if you put it the other way you get nearly four times the amount of money you now get for the Government, and at the same time distribute that tax in such a way that no one pays over 1 or 2 cents. There is a vast difference.

Mr. GARNER. I am very glad to agree with you. I agree with you that the other method is the best, and I agree with Mr. Crisp to a large extent, that where you levy a tax directly on the consumer, as I have suggested, of 1 or 2 cents on 25 cents, or 5 cents on 50, or 10 cents on \$1, we will get 50 to 100 times more out of that business than we are getting now, and I believe it can stand it.

Mr. HILL. You will get four times as much, and you will not get any more, which means a good many million in a year.

Mr. STERLING. Mr. Hill, if you pay the tax now you say you do—

Mr. HILL. Two per cent gross at the present time.

Mr. STERLING. Do you think manufacturers of medicine generally pay the tax you do?

Mr. HILL. I think a very large majority—in fact, all of them to-day are paying it.

Mr. STERLING. Suppose we were levying that tax on gross sales; that would not interfere a particle with this additional tax on the consumer, would it, and why should not we impose both taxes?

Mr. HILL. If you want my opinion on that, I do not know of any reason. At the present time I would say there are many manufacturers that did not come out even as well as we did this year in

making 8 per cent, and, as a matter of fact, it does not seem to me that a man can afford, at less profit, to run the risk he does in our line of business, where we spent a quarter of a million dollars last year in advertising. We are willing, so far as I am concerned individually.

Mr. STERLING. I think you have been a very fair witness, and it occurs to me that under your statement the wise thing to do is to levy the tax that you are paying now, as a manufacturer, then let the consumer also pay, say, 5 per cent or 4 per cent, as you suggest, and it will produce the revenue, and that is what we are after.

Mr. HILL. I would like to answer that question in this way: If you are going to put it on to the consumer, do not put it in the way of a percentage basis. If you put it on the consumer, the easiest way to collect it—and this is the same plan they have in Canada, which I have investigated and they say it works out fine—is to use the tax stamp and let the dealer keep the stamp. The reason I suggest that is this, gentlemen: That when you realize we are carrying 8,000 or 10,000 gross, and we have to carry that in our stock room, it would have to be stamped—you have got that arranged so that we do not have to do that now. On the other hand, if you put that tax on a 5 per cent basis, the little retailer with his clerk is very apt to make a mistake.

Mr. STERLING. You advise requiring them to put a 4-cent stamp on a 25-cent package, or a fraction?

Mr. HILL. Yes, sir. If that is done, there is no reason why you could not levy the tax as it is.

Mr. CRISP. In Canada do they put the tax on the package before it leaves the manufacturer, or only when sold by the retailer to the consumer?

Mr. HILL. Their plan is that the druggist himself carries the stamps. When the consumer comes in and says, "I want a box of Dr. Pierce's Medical Discovery, What is the price?" The dealer says, "A dollar plus the Government stamp, which is 4 cents." If the customer takes the package, the druggist then puts on the 4-cent stamp and cancels it.

Mr. CRISP. The stamp is not put on until the package is sold?

Mr. HILL. No, sir. With your permission, I will only suggest this: In talking this over with some other gentlemen who were very thorough business men, one of them said: "Will not the Government object to that for fear the dealer will make the mistake of not putting the stamp on?" Being pretty familiar with the retailer, I will say that one-eighth of a cent profit to him, or even less than that, he never forgets to get. Therefore, you will never lose a stamp by failure to be placed on the packages, if you will make up your minds to sell those stamps to the retail druggist at one-eighth of a cent less, that is, seven-eighths of a cent, because they are always looking out for that one-eighth of a cent, and you have a good collector working for you all the time.

Mr. STERLING. How much have you got to pay this year on proprietary medicines?

Mr. HILL. The Treasury Department says they have not got it figured up yet.

Mr. CRISP. Was it your idea that the Government would sell these stamps to the retailers cheaper than to anyone else?

Mr. HILL. It was not my idea. I only answered that in this way—that it would be cheaper than it would to send a collector around to see that they were not missing stamps. The reason I suggested that was this: That during the Civil War I was standing in a drug store in Pittsburgh when one of the Government inspectors came in and bought a bottle of Hoyt's cologne, which should have had a 1-cent stamp on it. He took the package and went out; was gone about 20 minutes; came back and arrested the druggist and imposed a fine upon him—I do not remember the amount—and yet he showed where he took the bottle out of the box and the stamp was laying in the box. It had got dry and come off there. What I mean to illustrate by that is this—it is only a suggestion, not my idea: that is, you sell the stamps to the retailers at a fraction less, that they would make mighty good collectors, and it would not cost the Government as much as inspection would.

Mr. CRISP. I was interested in your suggestion and I especially noticed that proposition. I do not think the Government has ever, as a matter of fact, sold its bonds or stamps to any class of individuals below par.

Mr. HILL. No; I do not think so.

Mr. STERLING. It sold documentary stamps to the banks and allowed them 1 per cent commission.

Mr. HILL. I have suggested one-eighth of a cent commission.

Mr. STERLING. The Government sold to the banks at \$99 for \$100 documentary stamps.

Mr. CRISP. That was a commission for handling them.

Mr. STERLING. That is his idea with reference to this.

Mr. FORDNEY. Mr. Hill, I will keep you for just a moment. There is a question, is there not, in a business man's mind, how far Congress can go in taxing an industry and get the largest amount of revenue without injuring the industry?

Mr. HILL. There certainly is.

Mr. FORDNEY. That is the thing for this committee to bear in mind?

Mr. HILL. That would be my impression.

Mr. FORDNEY. This year is not the only year we have to raise these taxes. If the war goes on, we will have to raise more. It is now estimated by the Secretary of the Treasury that our expenditures this fiscal year, beginning the 1st of July, will be \$24,000,000,000, \$6,000,000,000 of which we are expected to loan to our allies, leaving leaving our actual expenses for the Government \$18,000,000,000. I want to know if you agree with me. I do not believe we ought to raise \$8,000,000,000 in taxes this year. No country in the world ever raised any such sum; no country in the world ever raised 30 per cent. No country in the world now is raising that much except the United States. I believe we ought to raise a larger amount from the sale of bonds and tax the people less money than \$8,000,000,000, and I want to know what opinion, what you think this committee ought to do. For instance, if our actual expenses this year are going to be eighteen billion, not including our loans to the allies, none of which we ought to raise by taxes—we ought to borrow it all, because we expect the allies to pay the rate of interest we have to pay for that money and pay the principal and interest when due—what portion of our expenses do you think we ought to raise by taxes and

what proportion do you think we can raise without injuring the industries?

Mr. HILL. Perhaps I could answer that question better by stating that I was asked to speak before some business men in our city on that very subject.

Mr. HILL. I made this statement, which I firmly believe, that in view of the fact stated in the President's letter, that this country is fighting for democracy—that means, if it means anything, that we are fighting for posterity. That being true, it seems to me that posterity should do the same as we are doing to-day, even, help pay for this war. I do not believe that this Government or any other Government on earth can stand what our Secretary of the Treasury has proposed 40 per cent cash basis in this war and 60 per cent loans. If this war lasts, as some people think it will, anywhere from—and I read one article in a very reputable magazine, the North American Review, in which the gentleman who wrote the article said he would not be surprised if the war lasted 50 years; but if it lasts from 5 to 10 years this country will be bankrupt. The German country, the statement was made in their Reichstag that their wealth was \$75,000,000,000, and they have already drawn on it for \$74,000,000,000.

Mr. FORDNEY. Is that taxes or loans, or everything they have taken in?

Mr. HILL. That is taxes and loans. They have taxed very little.

Mr. LONGWORTH. About 10 per cent.

Mr. HILL. About 10 per cent as I understand it.

Now, my judgment is this: That we should not tax over 10 per cent and borrow on bonds the difference. We are loaning to nations that are practically bankrupt to-day. There is already a strong sentiment in this country to-day to give the French Government their securities when the war is over. I had occasion to appear before the National Congress of the Sons of the American Revolution in the last few days. A resolution of that kind was brought before the congress. It was held at Rochester, N. Y. The resolution was to petition Congress to send to France, or to refund the money—

Mr. MOORE. Do you think that is a wise thing to advocate at this time, at the very entrance of the United States into the war?

Mr. HILL. Just a moment.

Mr. MOORE. To advocate the refunding of a debt to any country at this time?

Mr. HILL. I am just coming to that. I had occasion to state, as I tried to say in that Congress, that I thought it was a very unwise thing to talk about such a proposition at this time; and the majority of the Congress agreed with that view, and it was voted down. I only spoke of that here for the purpose of showing that there is such a sentiment developing in this country.

Mr. MOORE. Pardon me, but that is propaganda. Somebody gives expression to a thought like that, and the country is aflame. At the very inception of the entrance of this country into the war, when the country is almost bleeding in taxes and high prices, to say that we are going to forgive anybody their debts is, in my judgment, most unwise.

Mr. HILL. I am glad you stated that; you are using almost entirely the identical language I used in the Congress, and I believe it.

To answer your question. We are loaning to nations that are certainly hard up; we all know that, and how many years will it be before they will ever be able to pay their debts? Now, it does seem to me—I never have got into politics very much, but I am quite a political student—and it does seem to me to be a mistake to tax, at the very beginning of this war, so heavily that you will eventually kill the goose that lays the golden egg. I thank you.

Mr. RAINEY (presiding). We thank you, Mr. Hill, for your statement.

**STATEMENT OF MR. ROBERT B. STEELE—Resumed.**

Mr. STEELE. Mr. Chairman and gentlemen, I was in the midst of a statement that I never believe that there ever has been an open-market on platinum which was not dictated by the people who had control of the supply of platinum in the entire world. This syndicate was formed, as I say, about 25 years ago, and it organized by having three branches for the distribution of the platinum. There was the Johnson-Matthey Co., which is an English house, which had the sale in England; and there was a French house, the De Modis Co., which had the sale of platinum for the French and Latin countries; and there was a German, Harmua, who was given the sale of platinum in Germany and in the United States of America; those were his countries for the selling of platinum.

Now, there was other platinum produced in the United States of Colombia, although that has been increased something like two and a half or three times under the needs of the war. But practically all of the platinum, and certainly the price of platinum in all the markets of the world, was controlled by the French syndicate, as it is called.

Mr. MOORE. May I interrupt you? I have some figures before me; see whether they will be confirmed by you. The normal Russian supply was 300,000 ounces; is that correct?

Mr. STEELE. Yes, sir; approximately.

Mr. MOORE. Colombia about 30,000 ounces?

Mr. STEELE. I think that is about right.

Mr. RAINEY. Of the entire world.

Mr. STEELE. Before the war.

Mr. MOORE. What was the American production?

Mr. STEELE. Very small.

Mr. MOORE. 10,000 ounces?

Mr. STEELE. I think within 5,000 ounces.

Mr. MOORE. What would be the fair, normal production of platinum?

Mr. STEELE. I think the figures you first mentioned.

Mr. MOORE. Three hundred thousand ounces?

Mr. STEELE. A little over 300,000 ounces.

Mr. MOORE. About how much did the jewelers of the United States use in their heyday, or before the war?

Mr. STEELE. I have heard it stated variously at from 40,000 to 50,000 ounces a year.

Mr. MOORE. Out of a world production of over 300,000 ounces?

Mr. STEELE. Yes, sir.

Mr. MOORE. Now, that 300,000 ounces is not available to the United States to-day?

Mr. STEELE. No, sir.

Mr. MOORE. That is, the market is not open for that amount?

Mr. STEELE. No, sir.

Mr. MOORE. But it is open to certain allied countries, is it not?

Mr. STEELE. I don't think at the present time there is any chance for any of the allied countries to get platinum from Russia, except Germany, of course.

Mr. MOORE. The supply would be cut off?

Mr. STEELE. I think they have control now of what was in the trade before the war.

Mr. MOORE. I am not intending to interrupt you to any extent, but I would like you to state to what extent restrictions are put on platinum in the allied countries, Great Britain, France, and Italy.

Mr. STEELE. In 1915 Great Britain commandeered all the platinum, making it a misdemeanor to have it in possession by any person.

Mr. MOORE. Did that include jewelry?

Mr. STEELE. Unmanufactured platinum was my understanding. The price at that time was practically \$40 an ounce in the open market, and the English Government paid \$50 an ounce for what they took, and took possession of it.

Mr. MOORE. Did they take possession of it?

Mr. STEELE. Of all the unmanufactured platinum; the raw material.

Mr. MOORE. What became of the manufactured articles?

Mr. STEELE. I don't know. I suppose it was left to be disposed of; I don't know definitely.

Mr. MOORE. As you have been free to dispose of it here since the commandeering order?

Mr. STEELE. I believe that was the case. In France, when the war broke out—

Mr. MOORE (interrupting). Do you know whether they are still controlling it there?

Mr. STEELE. I think they are out of it. I think they are using a palladium jewelry.

Mr. MOORE. What is done with what is called scrap?

Mr. STEELE. Scrap platinum?

Mr. MOORE. Yes; scrap platinum?

Mr. STEELE. The scrap platinum is remelted by the jeweler and refiner.

Mr. MOORE. Is it accepted by the mints?

Mr. STEELE. On the other side?

Mr. MOORE. Yes.

Mr. STEELE. Johnson-Matthey Co. have entire charge of the platinum there.

Mr. MOORE. They act as a sort of a war board?

Mr. STEELE. They act as the agent of the English Government.

Mr. MOORE. What is done with scrap in the United States?

Mr. STEELE. The practice has been to send it to the refiner and have it melted, or for the jeweler himself to melt it and use it in another form.

Mr. MOORE. Has it been the custom of the mints to accept platinum?

Mr. STEELE. They will, since the free coinage silver act, accept articles for minting.

Mr. MOORE. That is, old spoons, and knives and forks, and such articles?

Mr. STEELE. Yes, sir.

Mr. MOORE. But not platinum?

Mr. STEELE. No, sir.

Mr. MOORE. To whom was the platinum of value before it was commandeered?

Mr. STEELE. To jewelers, dentists, refiners, and telephone companies; refiners would melt it and use it indefinitely.

Mr. MOORE. Are you in position to say—I do not want to embarrass you particularly, but I will take advantage of the opportunity now that I have started—Do you know, are you in a position to say, to what extent the Government requires platinum for motors in aeroplanes?

Mr. STEELE. I don't think I am, sir; I am not familiar with the requirements, but I know how much platinum is involved.

Mr. MOORE. I would like to know, in view of the contention raised here, how far an ounce of platinum will go in equipping aeroplanes for Government use, 1 ounce, now worth \$105?

Mr. STEELE. One ounce would make 165 magneto points, of which there are possibly six on an average.

Mr. MOORE. How many aeroplanes—you can make the calculation there—can be equipped by the use of 1 ounce of platinum?

Mr. STEELE. I would figure 100, so far as the magnetos are concerned.

Mr. MOORE. Have you had any conference with anybody in Washington on the subject of the use of platinum in aeroplanes, as a concrete proposition?

Mr. STEELE. No, sir. My information on that is purely academic, as a matter of curiosity on my part.

Mr. MOORE. Mr. Rainey drove you quite hard awhile ago, and he drove his question farther with Mr. Rothschild. I want to know whether a year ago, or more, when the Secretary of Commerce, Mr. Redfield, wrote that letter to the jewelers' committee, and another copy that was submitted to the Congressional Record, whether the Government at that time expressed any concern whatever over the necessity for platinum for aeroplanes?

Mr. STEELE. There was nothing of that kind expressed at that time.

Mr. MOORE. Had the question arisen, so that it gave you and those with whom you were conferring here any concern?

Mr. STEELE. I don't think the aeroplane question was then to the fore.

Mr. MOORE. The latter was then a letter written out of a clear sky with reference to a business in which you were engaged.

Mr. STEELE. It was written with reference to the needs of the Government as expressed by the representatives present at that conference, representing the departments.

Mr. MOORE. Were you present?

Mr. STEELE. I was present.

Mr. MOORE. Who else were present?

Mr. STEELE. Mr. Hill, of the Geological Survey.

Mr. MOORE. He was quoted by Mr. Rainey.

Mr. STEELE. Dr. Parsons, of the Navy Department; the representative of the Bureau of Mines; Dr. Stratton, of the Bureau of Standards, and Dr. Hillebrand, of the Bureau of Standards, and also the representatives of the Ordnance Department of the United States Army and the Navy.

Mr. MOORE. Had the question of the construction of aeroplanes arisen at that time?

Mr. STEELE. It had not. I didn't know that it was discussed.

Mr. MOORE. Did we have anybody in Washington considering that question at that time?

Mr. STEELE. Not to my knowledge.

Mr. MOORE. No board here considering that question at that time?

Mr. STEELE. No, sir; not to my knowledge.

Mr. MOORE. Well, the War Board was represented at that conference?

Mr. STEELE. Yes, sir.

Mr. MOORE. May I ask how it came about that that conference was held? Was it called by the jewelers or by Mr. Secretary Redfield?

Mr. STEELE. It came about in this way: Representations were made by certain interests to Mr. Redfield that there was an alarming shortage of platinum—

Mr. MOORE (interrupting). Then, he must have had some knowledge of the subject.

Mr. STEELE. And Mr. Redfield called this conference, and it showed that the situation, as it then existed, had been in the minds of the chemists, who had access to the market, and it was shown in this conference, and when Dr. Hillebrand stated that only 7 per cent of the normal platinum in this country was used by the jewelers, it was then that Secretary Redfield rebuked the chemists—

Mr. MOORE (interrupting). Was the American Chemical Society represented at that conference?

Mr. STEELE. There were three important and prominent members of the society present.

Mr. MOORE. By invitation of Mr. Secretary Redfield?

Mr. STEELE. Yes, sir.

Mr. MOORE. Was there any secrecy in that conference, or was it held in the open?

Mr. STEELE. It was held in the open. And in spite of the rebuke to the chemists at that time by Secretary Redfield, the jewelers went in and agreed voluntarily to restrict the use of platinum by the elimination of many articles and also by the elimination of heavy plated articles.

Mr. MOORE. How long did that conference last?

Mr. STEELE. Two hours.

Mr. MOORE. Were speeches made there by different persons, or who did most of the talking?

Mr. STEELE. Secretary Redfield conducted the conference.

Mr. MOORE. He presided?

Mr. STEELE. He presided; and he asked the various departments, each in their turn, whether platinum was needed in that department.

Mr. MOORE. And each department of the Government then reported?

Mr. STEELE. Each department then reported.

Mr. MOORE. And the volunteer bodies, like yours, were they called upon?

Mr. STEELE. Yes; we were called upon.

Mr. MOORE. And asked—

Mr. STEELE (interrupting). Asked as to the possible supplies that might be reached.

Mr. MOORE. And then, following that open and voluntary conference, Mr. Secretary Redfield wrote to your committee a letter, and gave another to—who was it?

Mr. RAINEY. To me.

Mr. MOORE. Stating to Mr. Rainey that there was no great urgency in the matter of platinum at that time?

Mr. STEELE. Yes, sir.

Mr. MOORE. That is correct, is it?

Mr. STEELE. Yes, sir.

Mr. MOORE. And the letter to your committee was handed to a Member of Congress who, wholly within his rights, read it into the Record?

Mr. STEELE. Yes, sir.

Mr. MOORE. Is that right?

Mr. STEELE. Yes, sir; in addition to that, on April 30, 1917, Secretary Redfield made a statement, in commenting upon the resolutions adopted by the vigilance committee of the jewelers volunteering to restrict the use of platinum in the manner I have heretofore described, in winding up his statement said:

This is wise, patriotic, and unselfish action for which the merchants and manufacturers are highly to be commended. It will take time to work out fully its beneficial effects to the country. It will disarm adverse criticism of the jewelry trade in this respect and lead to general cooperation with them. Such is the earnest desire of the department. The jewelry business is a part and an important part of our commerce. It has acted fairly; its normal needs should be considered fairly. Platinum is required for many uses. Every such use has its just claim. None may urge an exclusive demand. All have a part in our common country and the Government a due and proper share. To this end the considerate course taken by the jewelers will directly contribute:

Mr. LONGWORTH. That is the statement I read.

Mr. STEELE. I didn't hear that.

Mr. MOORE. That is, Mr. Secretary Redfield's mind at that time was wholly in favor of the continuance of the use of platinum in the jewelry trade as before?

Mr. STEELE. Yes, sir.

Mr. MOORE. And he saw no real danger at that time?

Mr. STEELE. No, sir.

Mr. MOORE. Now, may I ask you this: I may not get a chance again. It has been charged—I do not mean offensively charged—that jewelers are using 50 per cent of the platinum available in the United States. What truth is there in that?

Mr. STEELE. I don't think there is any truth in that.

Mr. MOORE. I have been told, and I am asking you for confirmation, that the latest figures obtainable are that jewelers have not used but one-sixth of the platinum.

Mr. STEELE. I don't know about that, but you can get it from the War Trade Board, which has certificates signed for all the platinum used since fall.

Mr. MOORE. You are all under Government control now?

Mr. STEELE. Yes, sir; absolutely.

Mr. MOORE. Is there any attempt on the part of jewelers of the United States to deceive the Government?

Mr. STEELE. There have been a few cases, and where small amounts are involved, but nothing extensive.

Mr. MOORE. Are you familiar with any instance where a reputable jeweler has purchased platinum contrary to the Government's commandeering order, since the order was issued?

Mr. STEELE. I am not.

Mr. MOORE. Are they generally respecting that order?

Mr. STEELE. They are, sir.

Mr. MOORE. And doing what they can to go along with the Government's wishes in the matter?

Mr. STEELE. Yes, sir.

Mr. MOORE. I would like to know before you leave the stand, Mr. Steele, because I would like to talk to Mr. Rothschild a little bit, if in view of the wide extent of your organization, covering everything in the trade, as it does, except the National Wholesale Jewelers' Association, what would you association or whatever actuary committee now exists, do if you learned that some individual jeweler connected with the association was buying or selling platinum in violation of the Government's commandeering order?

Mr. STEELE. If these cases came to your knowledge it would be brought to the War Industry Board's knowledge and action asked. It has been done in some cases.

Mr. MOORE. You have done that since the order was issued?

Mr. STEELE. Yes, sir.

Mr. MOORE. And that is your purpose, to respect the law, and have those for whom you speak to observe it in the future?

Mr. STEELE. It is, sir.

Mr. MOORE. Can you help us at all in the matter of revenue by telling us whether we have reached—this is a little aside from the main questions brought up by you—but can you tell us whether we have reached in the present law all articles which the public denominates as jewelry, and which the jewelers hold, and which have not been reached by the language as expressed in the law?

Mr. STEELE. I don't believe that all the articles which might be reached have been reached. I believe our proposal that a tax shall be put on all sales by the retailer will bring a full return to the Government.

Mr. MOORE. I want to be fair to you, and also to the committee.

Mr. STEELE. I am speaking personally in regard to that.

Mr. MOORE. I have been advised that our 3 per cent tax does not cover everything that a jeweler, in the common understanding, handles, and that perhaps we might derive more revenue by making it more explicit.

Mr. STEELE. I think that this request of Mr. Garner for a suggestion from us can be carried out in such a way that everything can be covered.

Mr. MOORE. You intend to bear that in mind, as to how we may make it a little more water-tight?

Mr. STEELE. Yes, sir.

Mr. MOORE. The effect of the commandeering order has been to disturb the trade, in that it did not cover the entire trade; is that correct?

Mr. STEELE. It is, sir.

Mr. MOORE. What would your suggesting or recommendation be as to the most effective and beneficial commandeering order?

Mr. STEELE. I think that has already been covered by the third commandeering order issued by the War Board just recently, and commanders not only those who were under the commandeering language until June 30, but it extends it until January 1; it also practically commanders all of the other stocks of the country who would buy or sell or in any way use unmanufactured platinum. I think that has practically covered the situation.

Mr. MOORE. We have it unofficially that jewelry is a luxury. I suppose you will dispute it, and contend that a collar button is a necessity, and that a watch is a necessity, especially in war times; but it is regarded by some as a luxury, and it is contended that we should levy a 50 per cent tax on jewelry. I want you to think that over and say whether you think the business could stand a tax of 50 per cent, or whether the purchasers would withdraw from the market if we should do that, and that we would put a large number of your people out of business?

Mr. STEELE. It is absolutely my belief that a tax of 50 per cent on jewelry would kill the sales of jewelry to such an extent that it would bankrupt a large number of the jewelers of this country.

Mr. MOORE. It would mean that a \$100 watch would cost \$150; that a \$50 watch would cost \$75?

Mr. STEELE. Yes, sir.

Mr. MOORE. Would the effect be such that the purchaser would withdraw from the market and not buy?

Mr. STEELE. Yes, sir; I think it would.

Mr. MOORE. I would like you to think that over and make as careful an answer as you can for the record.

Mr. STEELE. I have thought it over since the suggestion was made here this morning of a 50 per cent tax, and I can't see any other result than that the great dropping off of the sale would bankrupt a large number of the jewelers of the country.

Mr. MOORE. I can say to you, I think, for all of the committee, that nobody on the committee wants to injure business. But it is absolutely necessary, in view of the statement of the President, that we must tax to the limit, and we must tax until it hurts. There is absolutely no escape from it. The question is, How far can we tax a great industry like the jewelry industry without putting the business men out of the business.

Mr. STEELE. I believe the tax suggested this morning—that is, 10 per cent, which is three times the tax of the last bill, 3 per cent—would give the greatest revenue for the country.

Mr. MOORE. You were engaged in a discussion of the foreign situation.

Mr. STEELE. I only wanted to cover one more point, and that is what has caused the high price of platinum in the last few years. In 1914, when the war broke out, or at the international conference in France, it was found that when the war broke out all the platinum jewelry in Paris was bought up and went to Switzerland, and where it went to from there we can all guess. And there was none manufactured, for the fear that it would get into one of the countries at war.

Mr. RAINEY. That is, Germany?

Mr. STEELE. Yes, sir; Germany. Now, then, they have permitted the manufacture of platinum jewelry at times since then under license, and while at intervals they have shut this off there have been numerous times during which the manufacture of platinum was allowed.

Mr. LONGWORTH. Before you go into that will you state when platinum first came into general use?

Mr. STEELE. I think the renaissance of platinum came in 1900, when it was found that iridium could be used as an alloy, and which made its use possible in a way that it could not be used before. Up to that time only platinum was used which had 1 or 2 per cent of iridium; soft and pure platinum could not be used. In order to get the strength in the jewelry a thick plate of gold was used, which was not desirable, as it made a yellow backing. When it was found that the iridium could be used as an alloy and that it did not interfere with the use of the platinum, but that it made it desirable for jewelry, made it malleable and ductile, and so on, then the beginning of the present platinum jewelry came. And about the time, 1908 or 1909, the idea of making jewelry of all platinum, which had not been done up to that time, was imported from France, using a high class of iridium with the platinum, which enabled the modern delicate jewelry to be made. In spite of this the price did not vary greatly, and in 1914 the price was about \$40 an ounce, when the war broke out. The price stayed about that until the following year, when the chemists, who had large contracts for powder, began to buy it up and make it very short, although it then did not go up greatly. The result was that, in 1915, the Du Pont Co. wanted a large amount, which they could not buy in this country; this was secured from the English Government; it was bought and sent to this country in the care of J. P. Morgan & Co; these facts can all be verified; 40,000 ounces was purchased, and this was brought in with the understanding that it should not be used in any other way, except by the people who bought it for powder manufacture. In other words, they couldn't sell it in this country; the supply was very scant. We continued to purchase for chemical purposes, and the price began to drop again, and then advanced. In the following spring the price was somewhere around \$60 an ounce, but then purchases for all kinds of industry began, with the result that platinum got up to its present high standard.

Mr. LONGWORTH. Now, from the time platinum came into general use in jewelry and the time the war broke out, it had increased nearly three times?

Mr. STEELE. I would have to see the figures on that.

Mr. LONGWORTH. Nearly three times?

Mr. STEELE. Yes, sir.

Mr. LONGWORTH. That was due to the fact that there was such a demand for it?

Mr. STEELE. I think one company controlled it.

Mr. LONGWORTH. Yes, but they couldn't have raised the price unless there was a demand for it?

Mr. STEELE. They couldn't have raised the price unless there was a demand to warrant it. Now, in 1917—I get this from several refining interests—the jewelers purchased very little in October,

November, and December, in December buying practically no platinum, and in December, 1917, the price of platinum took a jump, which I was told at the time was due to purchases by chemical interests.

Mr. FORDNEY. Mr. Steele, since this great world war has broken out supply and demand has increased practically everything in use, and platinum has not gone far in advance of other products, has it? For instance, wheat was selling for 75 and 80 cents a bushel before the war, and it is now \$2.20. Flour was selling for \$11 and \$12 a barrel, and now it is \$17 and \$18. Cotton was selling for 10 cents a pound, and now it is 30. Wool was selling for 25 and 30 cents a pound, and now it is 65. So platinum has not advanced beyond the price of other things, where there is a great demand for it, has it?

Mr. STEELE. It doesn't seem to have. In fact, from the time we entered the war, in 1917, until this year the price of platinum has been substantially at the same level. I don't think there has been \$2 an ounce difference between the price last spring a year ago when we entered the war and January of this year when the commandeering order went out at a lower price than the market price at that time.

Mr. FORDNEY. Supply and demand, or monopoly of an article, is always responsible for advanced prices?

Mr. STEELE. I believe it, sir.

Mr. HAWLEY. Reference has recently been made, in the course of this discussion, to the use of platinum in jewelry, and the amount that has been used. Do you know how many ounces are now in the hands of the trade made up in jewelry in some form?

Mr. STEELE. I don't know, but you can secure that information from the War Industries Board.

Mr. HAWLEY. Can you make an estimate?

Mr. STEELE. I couldn't make a sensible estimate, but this information is in the possession of the War Industries Board, from the fact that in the census it was called for, and a statement had to be made by each jeweler of the amount of articles he had on hand, and of the weight of each article he had in his possession when the commandeering order was received. So the War Industries Board can tell you the amount and the weight in the hands of the jewelers in this country.

Mr. MOORE. Mr. Steele, if the jewelry trade were forbidden to-day to sell platinum, what would the effect be on the trade?

Mr. STEELE. Manufactured platinum?

Mr. MOORE. Yes; manufactured platinum.

Mr. STEELE. I can speak for myself. It would mean bankruptcy.

Mr. MOORE. That is very important, and I would like to have you pause for a minute to have that soak in. How much manufactured platinum is there in stock to-day that was manufactured before any commandeering order came out?

Mr. STEELE. It was bound to be a large part of it, for the reason that from the time the commandeering order was first issued in February, the operation of it has in the meantime used up practically all of the supply of platinum.

Mr. MOORE. Now, let us take a given stock of \$500,000; how much of that would be in platinum manufactured?

Mr. STEELE. You mean now \$500,000 with the stone in?

Mr. MOORE. Yes, jewels and all, what would be the platinum value of a \$500,000 stock?

Mr. STEELE. The platinum itself?

Mr. MOORE. The platinum value?

Mr. STEELE. I would say possibly \$50,000.

A VOICE. Oh, less than that.

Mr. STEELE. I have not figured this at all.

Mr. MOORE. I want to give you credit for the danger that confronts the trade if the propaganda that has been referred to here is successful.

Mr. STEELE. This would depend on what class of stock you refer to, whether wholesale or retail.

Mr. MOORE. Take a wholesale stock of \$500,000, how much would be the proportion?

Mr. STEELE. I would say 10 per cent, or less.

Mr. MOORE. Then that would be \$50,000 to \$100,000?

Mr. STEELE. I should say \$50,000, or less.

Mr. MOORE. Then if the propaganda conducted by these patriotic ladies that has been referred to here should be successful and the Government should shut down on your manufacture, and any one who was seen in the theater or on the street with jewelry would be accused of being pro-German, by having platinum on their persons, it would mean that you would have to shut up your business?

Mr. STEELE. It would have that result, sir.

Mr. MOORE. What would be the effect of that propaganda in revenue to conduct this war?

Mr. STEELE. It would mean that the Government would lose the revenue on that part that could not be sold.

Mr. MOORE. Then the fact that we have platinum made up and which the Government apparently doesn't want, or has not taken it, if by reason of some outside interference you are prevented from selling it at all, and have to shut it up in your strong box, you get nothing?

Mr. STEELE. That is the result. May I read a copy of a letter?

Mr. MOORE. Is it that letter of June 16? If it is I want to ask you, who is the author of it? What is fair for the goose is fair for the gander. If there is a question of propaganda on the one side it is fair to bring up a question of propaganda on the other; this is what I have been after for four hours, to bring this up. I am speaking now of the question that confronts these gentlemen, with jewelry made up, which they are told by this propaganda they must not use, and if they do that, it is good-bye revenue.

Mr. STEELE. This letter was written upon American Chemical Society letterhead; northeastern section, publicity committee; chairman, Robert W. Neff, 22 India Square; publicity representative, William C. Bamburg, room 1259 Little Building, Boston, Mass., February 14, 1918. The letter is as follows:

AMERICAN CHEMICAL SOCIETY,  
Boston, Mass., February 14, 1918.

Mr. CHARLES F. KUNZ,  
Care of Tiffany & Co., New York, N. Y.

DEAR SIR: The editor of the Boston Post has referred to us your inquiry regarding the statement made in their columns mentioning your resolution regarding the conservation of platinum.

The article sent by this office to the Post was written as an interpretation of what we understood to be the absolute intention of your resolution dated January, 1918.

Our article contained three separate news items regarding platinum, (1) the transportation of the 21,000 ounces from Russia; (2) the special attempt being made by various societies to conserve platinum; (3) your own resolution. In the latter item we find the word "forbidden" was unquestionably erroneous, and we regret any annoyance that occurred to you as a result of the apparent misquotation. The word was used in a desire to accentuate the exigencies of the situation, and the reference to you was not intended to be interpreted as your attitude toward jewelry settings.

Yours, truly,

ROBERT W. NEFF.  
W. C. RAMBURGH.

Mr. Neff is the husband of one of the ladies who is in this league.

Mr. MOORE. Well, to give these ladies full credit. Whether they are going to contribute to the killing of the goose that lays the golden egg, I don't know. But as long as you are on the stand, let me ask you whether you know anything about this: In certain sections women's organizations have been formed to oppose the wearing of platinum jewelry, and in a recent publication of one of the journals of the society—I think this refers to the Chemical Society—it has been noted that an appropriation of \$2,500 has been made to continue this work?

Mr. STEELE. This appropriation was arranged for in April or May of this year.

Mr. MOORE. What society arranged for the appropriation of this money?

Mr. STEELE. The American Chemical Society.

Mr. MOORE. The American Chemical Society. I am asking you if it is a fact that the American Chemical Society, or any other society, made an appropriation of \$2,500 for an organization of patriotic women to urge that platinum be not used as jewelry?

Mr. STEELE. This, I believe, was stated, and Mr. Rothschild spoke of that point this morning, did you not, that this was a—

Mr. ROTHSCHILD (interrupting). I called attention to the fact that in a statement given out for release on June 16, at the Bureau of Mines, there was a statement about this organization.

Mr. MOORE. This statement was given out on June 16 at the Bureau of Mines in Washington?

Mr. ROTHSCHILD. It contained a statement that the Chemical Society had fostered, or fathered, an organization of women to discourage the use of platinum jewelry. I could give you the exact words.

Mr. MOORE. I was going to ask you to come back when we have finished with Mr. Steele, and you can refer to it then.

Mr. ROTHSCHILD. Yes; I can give it to you then.

Mr. MOORE. When we are discussing lobbies that are appearing here we might as well discuss these patriotic ladies. It is just as well that we understand their motives as that we understand the motives of the business men who are endeavoring to perpetuate their trade. I am saying this without prejudice to the American Chemical Society; they have a right to be heard on that subject.

Mr. STEELE. One of the immediate effects of this league is this: When my wife went to a meeting of a society the other day she heard a lady who stated that her husband had presented her with a handsome necklace and platinum chain, which she had very promptly made him take back to the jeweler. The Government lost the revenue on the sale of that, which was probably 7 per cent of platinum, and hundreds of dollars worth of diamonds.

Mr. RAINEY (presiding). When was this organization perfected which gave the control of platinum to Germany?

Mr. STEELE. This didn't give it to Germany; there were three agencies, one for England, one for France and the Latin countries, and one for Germany and America. Whether they agreed to buy a certain proportion I don't know, because that is a private arrangement, or whether each undertook to dispose of all he could in a given time is not known.

Mr. RAINEY (presiding). What year was this?

Mr. STEELE. It is not possible, although I have tried hard to find out the exact date, but I should say 20 to 25 years ago, in the nineties. There are concurrent circumstances that make me think the early nineties was the period that that was formed, although there is no particular proof and no one seems to be able to tell you when it was formed, although every one knows of its existence.

#### STATEMENT OF MEYER D. ROTHSCHILD—Resumed.

Mr. ROTHSCHILD. Before I am examined further I would like to ask permission for Mr. Haffnagle, president of the New York Jewelers' Association, to read these resolutions.

Mr. MOORE. Can't you insert them in the record?

Mr. RAINEY (presiding). Without objection they may be inserted in the record.

Mr. ROTHSCHILD. Very well.

Mr. MOORE. Mr. Rothschild, Mr. Rainey, my distinguished colleague, is a very good lawyer and a very forceful cross-examiner; you gentlemen are entitled to know that, if you have not already discovered it. He is interested in the subject of lobbies, and that is a subject that is being discussed in Washington, but he is not altogether to blame if he is more forceful to-day than he might have been, because the President of the United States, in bringing this matter of revenue to our attention on May 27 last, made this statement:

I, for one, am always confident that the people of this country will give a just verdict upon the service of the men who act for them when the facts are such that no man can disguise or conceal them. There is no danger of deceit now. An intense and pitiless light beats upon every man and every action in this tragic plot of war that is now upon the stage. If lobbyists hurry to Washington to attempt to turn what you do in the matter of taxation to their protection or advantage, the light will beat also upon them. There is abundant fuel for the light in the records of the Treasury with regard to profits of every sort. The profiteering that can not be got at by the restraints of conscience and love of country can be got at by taxation. There is such profiteering now and the information with regard to it is available and indisputable.

A little further on the President says:

The task to which I invite your immediate consideration will be performed under favorable influences if we look to what the country is thinking and expecting and care nothing at all for what is being said and believed in the lobbies of Washington hotels where an atmosphere seems to make it possible to believe what is believed nowhere else.

Now, that was the President of the United States, and I think it is fair to Mr. Rainey and some of these other gentlemen who made statements that you have objected to, that that address should be read so that the responsibility would be understood.

Mr. RAINEY (presiding). You read it once or twice before.

Mr. MOORE. Yes; I think it should be read several times. The President has said that.

I went to my office a little while ago and found there, amongst others, in mail that had just come in, two letters. One was from the Pennsylvania Federation of Labor, which has an organization in Pennsylvania, and which frequently writes to me upon matters of legislation, demanding that I vote this way or that way upon a bill. Do you think the Pennsylvania Federation of Labor has a right to address me as a Representative from the State of Pennsylvania?

Mr. ROTHSCHILD. Certainly.

Mr. MOORE. I think so, too. Do you think that I as a Representative in Congress, and representing my district, at least, should be unduly exercised because a person in my district asks my consideration of a certain measure?

Mr. ROTHSCHILD. No.

Mr. MOORE. The test is in the method employed. If they would use money, or attempt to use money, it would be reprehensible.

Mr. ROTHSCHILD. Certainly.

Mr. MOORE. This association has not attempted to use money in any way, has it?

Mr. ROTHSCHILD. In the statement I made this morning, I tried to be as specific as my power in the use of the English language would permit me in being, that not a penny was used, and that no one was hired, attorney, or agent, or anyone, to speak to anybody in connection with the interests we had in Congress.

Mr. MOORE. I want to say for your body that for four weeks we have been here and have heard attorneys on all sorts of questions, some far afield from the question of revenue, and the question of lobby was never raised. Amongst other letters was a letter from a proprietor of a large manufacturing concern. It stated that in his judgement the million dollars which it was proposed by the House to appropriate for the developing of an employment bureau should be increased to \$7,000,000, and the inference is that the Department of Labor would be very well satisfied if it was made. I presume that the manufacturing company had the hint to write me that letter. Still, do you see anything wrong in a manufacturing concern in my district writing to me and urging my consideration of that subject?

Mr. ROTHSCHILD. I do not.

Mr. MOORE. Do you think it is entirely proper for the Government of the United States to start a propaganda in favor of a certain measure it desires passed by Congress?

Mr. RAINEY (presiding). What do you mean by the Government?

Mr. MOORE. I mean any department or bureau of the Government. It may not be wise to ask that. I will not press that.

Mr. ROTHSCHILD. I would rather not.

Mr. MOORE. I will say, one or two jewelers' associations have been represented here. Do you see anything wrong about that?

Mr. ROTHSCHILD. No, sir; not in the slightest.

Mr. MOORE. The only difference is that yours is larger; that is a fair statement.

Mr. ROTHSCHILD. It is a fair statement.

Mr. MOORE. Now, I have in hand this article that was sent out from somewhere, an article for publication in the Sunday morning papers of June 16.

Mr. ROTHSCHILD. I have an article——

Mr. MOORE (interposing). You and I have not seen each other before, so we have not talked about this matter.

Mr. ROTHSCHILD. I have an article here headed "For Release June 16," the first page is written and the succeeding pages are type-written.

Mr. MOORE. Have you traced that article to its source?

Mr. ROTHSCHILD. Not except from the context. I know the song.

Mr. MOORE. It has been said that it came from the Bureau of Mines.

Mr. ROTHSCHILD. Yes; I asked Mr. Wilson, and he said that his representative in Washington, Mr. Lamb, sent it to him.

Mr. T. EDGAR WILSON. Mr. Lamb stated that it came to him in the ordinary way, with a statement on top of it that it came from the Bureau of Mines; he was given to understand that it came from the Bureau of Mines.

Mr. MOORE. Now, when Mr. Rainey was putting you through his very interesting cross-examination—I know Mr. Rainey appreciates this, because he is a lawyer, and I am not a lawyer, and he knows I know a good lawyer when I see one—he referred with great emphasis to the committees you had formed, the jewelers' vigilance committee, which I understand still exists; was there anything sinister or crooked or dishonest underlying that, and the creation of that committee?

Mr. ROTHSCHILD. There was not.

Mr. MOORE. Is there any reason why a vast industry like the jewelers' trade, in fact of the tax and the war, should try to get together and should try to do something as an organization?

Mr. ROTHSCHILD. There was another reason, and if you will bear with me I will tell you what it was. We have an organization known as the National Jewelers' Board of Trade, a thousand wholesalers all over the country; we had a good and welfare committee, which was contemplated to do work in the lines of national stamp and reforming views, and the men who were most active in this good and welfare committee, I think it was in the fall of 1916, found that their efforts were hampered, because, like all industries, certain interests felt that certain steps were or might be unwise and other steps wise. In other words, certain particular people took the attitude that the money of the National Jewelers' Board of Trade should not be expended in carrying on State work—in looking after State legislation, because if a stamping act is passed in New York, which does not operate in Ohio or Massachusetts, or some other State, the man who sells his merchandise in those other States might be at a disadvantage. They claimed this fund should be used only for a national act. The good and welfare committee was advised that the best and most effective way to get a good and effective stamping law was to get a few States like Illinois and Pennsylvania to pass acts as models, and if they were passed and were good they could come to Washington and get a national act passed. We would have to be free to do that thing. To work in a way that no part of this National Board of Trade could object to, this independent committee was formed, without being hampered in any way, their main business to look after New York matters, but their measure was to reach all over the country. Those are the facts of the organization,

and the few active men who has been on the good and welfare committee——

Mr. MOORE. Is it possible that you were organized to evade the antitrust laws?

Mr. ROTHSCHILD. That is the sincere intimation. I don't see how they could have evaded them.

Mr. MOORE. Is it possible that you were organizing or had organized for the purpose of controlling prices so that one jeweler might not be free to dispose of his products as he saw fit?

Mr. ROTHSCHILD. There was no such idea and it would not have been possible.

Mr. MOORE. I want to get at the worst side of it to see what the hellish purpose was in organizing the jewelers' vigilance committee in time of war.

Mr. ROTHSCHILD. This was before the war, and I have given the exact reason. The reason, as I told you, was to look after stamping acts, and they have not done it because there haven't been any stamping acts.

Mr. MOORE. There is no real secret from the trade as to what you were doing in your vigilance committee?

Mr. ROTHSCHILD. I think there was a little too much hornblowing; little too much publicity, from the accounts read here to-day. The newspapers were given all of the matter and it was published and republished.

Mr. MOORE. Sometimes they would write editorials which would irritate you and tie you up with somebody else?

Mr. ROTHSCHILD. The editor expressed his own views.

Mr. MOORE. Considerable stress has been given to the fact that you made trips to Washington in order to confer with the Secretary of Commerce and also the War Trades Industries Board. I think in your original statement you came down here three or four times and that was built up by your cross-examiner till it appeared to be about 18 times.

Mr. ROTHSCHILD. I think there was a mistake there. I think the report which our chairman sent to the papers included the trips to New York and also to Washington. I only had in mind my trip to Washington.

Mr. MOORE. Let's concede it was 18 times. You were here on business of interest to the Government as well as yourself?

Mr. ROTHSCHILD. In every case.

Mr. MOORE. And you visited those in authority to confer over matters of general concern?

Mr. ROTHSCHILD. Absolutely.

Mr. MOORE. When you heard all of these eloquent addresses in the House of Representatives proposing to tax platinum \$250, trying to put it out of business, you looked into your safes, knowing you had platinum manufactured and ready for sale and you might not be able to sell if the tax was put on. Were you guilty of trying to interfere with business in coming to Washington to see Congressmen?

Mr. ROTHSCHILD. We came to confer with Congressman Rainey and try to impress upon him that the facts that he was acting upon were not sound.

Mr. MOORE. But you did see the Secretary of Commerce and after this free and open conference about which we have heard, you

obtained two letters, or two letters were written by him, one of which was handed to you?

Mr. ROTHSCHILD. They were both handed to me.

Mr. MOORE. Did anyone of your party carry that letter up to the House of Representatives, where this steam roller was about to be pushed over the jewelry business?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. And deliberately hand that to a Member of Congress with a view of trying to save the platinum business?

Mr. ROTHSCHILD. That is a matter of record.

Mr. MOORE. Some one handed that letter to Mr. Lehlbach, a Member of Congress from New Jersey?

Mr. ROTHSCHILD. Mr. Larter did.

Mr. MOORE. What particular crime is it for a committee representing a large industry, seeing it is likely to be put out of business, handing a letter from a Secretary in the President's cabinet to a Member of Congress to be read in the open on the floor of the House? What kind of offense is that? You have been very alert in all of your answers. I would like to know how you would feel if your constituents came down and told you they would like for you to read a letter on the floor.

Mr. ROTHSCHILD. If it was a proper letter, I suppose I would do it.

Mr. MOORE. I think that is exactly what Mr. Lehlbach of New Jersey did, and I think he did exactly right, and I think I would do exactly the same under the same circumstances.

Mr. GARNER. Now, Mr. Chairman——

Mr. MOORE (interposing). Wait just a minute. These gentlemen have had four hours and I haven't had half an hour yet. I am not willing to put these gentlemen out of business without a fair show.

I want to ask you this: You have seen the statement of June 16, more or less celebrated now in these hearings here?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. And your information is now that that came from the Bureau of Mines. Would not the issuance of a statement to be released for the Sunday newspapers June 16 indicate that whoever instigated that statement was conducting a propaganda?

Mr. ROTHSCHILD. The contents of this statement indicate it.

Mr. MOORE. Will you let me read one or two sections because I expect to put the whole of this in the record with the consent of the chairman:

The Bureau of Mines is pleased to lend its effort to those of the American Chemical Society in such a patriotic endeavor.

Do you recall that section in a circular sent out for publication in such newspapers as received it on Sunday, June 16?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. What do you think actuated that statement:

The Bureau of Mines is pleased to lend its effort to those of the American Chemical Society in such a patriotic endeavor?

They were endeavoring to curb the sale of this manufactured platinum that was in your safes and in your show cases, is not that a fact?

Mr. ROTHSCHILD. Undoubtedly.

Mr. MOORE. Do you know who paid for the sending out of this information? Was it some individual? Was it the American Chemical Society or was it the Government of the United States? And if the Government of the United States, by whose authority is money expended for this purpose?

Mr. ROTHSCHILD. I can't answer those questions because I don't know.

Mr. MOORE. I ask you at this point to insert the statement for publication in Sunday papers of June 16 in the record as part of your testimony. Will you do that?

Mr. ROTHSCHILD. Why certainly. I see I have here this statement consisting of eight pages, which is headed "For release June 16." I personally do not know anything about the Sunday papers or anything of that kind.

Mr. GARNER. You don't care for that to go into the record as your statement, do you?

Mr. ROTHSCHILD. No, sir; not as my statement.

Mr. MOORE. I will ask you to permit me to insert this in the record without objection.

Mr. RAINEY (presiding). Without objection.

FOR SUNDAY MORNING PAPERS.

WASHINGTON, D. C., June 15.

The newest type of slacker and one who is doing his country a great amount of harm is the man or woman who buys, or even encourages the purchase of, platinum jewelry, according to the Bureau of Mines, Department of Interior. For the country is, and for many years will be, desperately in need of the scarce and precious platinum in its industrial work, and must have it if the war machine is to go full speed ahead.

A plan proposed by the Federal officials would stop the use of platinum in jewelry not only for the war but for all time. Officials of the Government who are in close touch with the situation are filled with apprehension as to the future supply of platinum. As far as can be learned, it is believed that aside from the large amount of platinum metals in the form of manufactured jewelry, a large part of which is in private ownership, there is less than 25 per cent of the normal stock of unmanufactured platinum in this country available for the needs of the war.

In an effort to fill the immediate pressing needs of the Government in its war program, the War Industries Board has ordered that 75 per cent of the stock of platinum in the hands of manufacturing jewelers be commandeered, and also the complete stock held by refiners, importers, and dealers, but this, it is said, will only fill a small gap and that temporarily.

It has been hoped by Federal officials and chemists throughout the country who understand the seriousness of the situation that the whims of fashion might yield to national needs and that purchasers of jewelry would demand gold and silver or a white alloy and so release platinum for its highest use, but the results have been disappointing.

The American Chemical Society, an organization composed of the leading 12,000 chemists of the country, which is also back of this movement, has issued an appeal to the people not under any circumstances either during the war or after the war to use platinum jewelry, but to conserve this unique and fast-dwindling metal now priced at five times the cost of gold for the exclusive use of the chemical and other necessary industries. The first purpose will be to obtain a sufficient supply of platinum for the needs of the war, and then to retain the production of the future for the industries. It is claimed that even before the war, as a result of this unreasonable craze for platinum in jewelry, the highly important work of the chemists has been curtailed and research work, especially in the universities, handicapped by inability to meet the constantly rising price for platinum.

"The utmost importance of the entire country coming to a full and serious understanding of the dire need of platinum in the industries, and especially the war industries, is apparent to all technical and scientific men," said Van H. Manning, director of the Bureau of Mines, but, unfortunately, the people generally have not the proper

conception of the situation. This condition has risen naturally through the insistent advertisement of platinum jewelry, the buyers being unaware of the need of platinum in the industries.

The scarcity of platinum throughout the world and its high price is apparently due almost solely to the fact that the women of this and other countries have been recently led to consider it a choice article for adornment. I believe this to be due to an entirely false conception, as there are other white metals equally available for the setting of gems and the production of jewelry, which would be used in jewelry to-day except for the fact that they are not so costly as platinum. When the price of platinum was less than that of gold there was practically no demand for it in jewelry and only a slight use as a setting for gems. Over 50 per cent of the country's supply of platinum is now used annually for jewelry, an entirely unessential purpose. No jewelry is more easily imitated than platinum, and much white metal jewelry is now on the market which can not be told from platinum by the uninitiated.

"It is inconceivable to me that any woman would wear a lead-colored ring or bracelet or adorn herself with lead-colored jewelry, except that its artificially produced high price has been made to give it a false value in her eyes. When our basic war needs for platinum are going to be met only with the greatest difficulty, I certainly can not consider the purchasing of platinum jewelry patriotic now, and it appears to me to be very doubtful good taste at any time.

"I am most heartily in favor of any crusade that will have for its purpose the banning of platinum for jewelry for all time and under all circumstances. I believe that the women of the country are as patriotic as in any other country, and that when they understand the situation they will decline to purchase platinum jewelry, and also, if the occasion ever arises, give up all platinum jewelry they now have.

"The Bureau of Mines is pleased to lend its efforts to those of the American Chemical Society in such a patriotic endeavor."

A movement among the women of the country to discourage platinum in jewelry has been initiated by the American Chemical Society. The Women's National League for the Conservation of Platinum has been formed as a national organization with Mrs. Ellwood B. Spear, Cambridge, Mass., as chairman. State councils have been formed in 14 of the leading States of the Union, and even the efforts of the college women have been enlisted. Already throughout the country thousands of women have signed the following pledge: "I will neither purchase nor accept as gifts jewelry and other articles made in whole or in part of platinum, so that all possible supplies of this precious metal shall be available for employment where they can do the greatest good in the service of our country; and I further pledge my influence to persuade others to take the same patriotic stand."

"The patriotic crusade to stop the use of platinum in jewelry has already had a splendid effect," said Dr. Charles L. Parsons, secretary of the American Chemical Society. "It is some months ago that the society recommended that an appeal be made to the women of the United States to discourage the use of platinum in jewelry and that all citizens be urged to avoid its use for jewelry, for photographic paper, and for any purpose whatever, save in scientific research and in the making of articles for industrial needs. The National Academy of Sciences adopted a resolution to this effect and the Daughters of the American Revolution at their recent meeting pledged themselves by formal vote to refuse to purchase or accept as gifts jewelry made in whole or part of platinum, so that the available supplies of this precious metal shall be available for employment where they can do the greatest good in the service of our country.

"I believe the only thing necessary is to show the women of the country what really bad taste it is to wear a metal which certainly in the form of rings, bracelets, mesh bags, etc., has no beauty over lead to recommend it and no advantage over many other cheaper metals, except its one item of high cost. The country is very short of platinum and we can not see where the necessary supplies are coming from. Of course, the jewelers do not wish to see their profits slip away from them. Platinum ought not to be used in jewelry either in war time or in time of peace. It is too greatly needed for the development of chemical science and industry. The Russian mines, from which 95 per cent of the platinum comes, are reported to be nearly exhausted. The Russian supply is now virtually in German hands. The United States has not nearly enough in sight for its probable war needs during the next two or three years, and as the jewelers now use over 50 per cent of the platinum that comes into commerce, they must be held responsible for its scarcity.

"Platinum, in my opinion, should be 'tabooed' by all American women who wish to see their country successful in this war and successful after the war in keeping its lead in the industrial and scientific developments. The opal has been considered unlucky. Accordingly, it carried in the feminine mind little value as a gem. I

believe that without ever using the phrase, the Women's League for the Conservation of Platinum has already begun to instill into the minds of American women what really 'bad taste' it is to wear a metal that looks like lead in rings, bracelets, etc., simply on account of its high price. I also believe that the 'slacker wedding ring' made of platinum will soon be a thing of the past.

"It is perhaps not realized by the public that platinum is necessary in the production of nitric and sulphuric acid, the essential in all explosives.

"It is absolutely essential in the manufacture of special pyrometer, and no gun can be made without the use of a pyrometer.

"Some necessary signal instruments are dumb without platinum.

"Platinum is essential in the composition of certain delicate gun mechanisms.

"The rapidly growing chemical industries, engaged in war work, need platinum in their laboratories.

"Platinum is required in the new plants the Government is erecting with such feverish haste for the manufacture of nitrates from the air, these nitrates being needed for fertilizers and munitions.

"Without platinum all experiments in gases would be greatly handicapped.

"The so-called platinum used in electrical work is like the jewelers' platinum, an alloy of platinum and iridium, but with the difference that the proportion of iridium is ordinarily greater in electrical platinum than in jewelers' platinum, and for some work may be as high as 50 per cent. Unless one is informed he does not realize that each telephone and telegraph instrument has platinum contacts, that every high-grade magneto for aeroplane, automobile, motor boat, or gas engine has from two to six contacts of platinum, and that the multitude of contacts on the telephone switchboard, on the relay instruments of both the telephone and telegraph lines are of platinum.

"There are a large number of different kinds of electrical control systems in which platinum is used, one of the most important of which are the thermocouples for the electrical control of heat in furnaces and ovens for a variety of purposes. While the actual quantity of platinum in any single piece of electrical equipment is very small and its value almost negligible in comparison to the value of the whole instrument, yet the great number of these instruments, which have been and are being made for the Government work, calls for an unbelievably large quantity of platinum and iridium for their construction."

The marvelous ductility of platinum, one of the elements that make it so necessary in industrial work, is better conceived when it is considered that out of a single troy ounce of the metal it is possible to make almost infinitely slender wire that would reach about 1,800 miles. To draw out platinum into so extremely a fine wire it is covered with a thin layer of gold. This new wire is drawn to the thinness of the former one, and the gold is dissolved away. A small section of this second wire is then given a coating of gold, redrawn, and the gold covering dissolved. After this process has been several times repeated the wire, finally secured, is still intact but virtually invisible.

Mr. MOORE. Turn to page 5 and read that sentence there. I will read it from my copy if you can't find it. "Rapidly growing chemical industries for use in war work need platinum in their laboratories." Now I want to ask you this, we have made a very large appropriation for Mr. George Creel, Director General of Publicity for the Government. Do you know whether any of the money we have appropriated to Mr. Creel went into the issuance of this document or like documents to go out from the Bureau of Mines?

Mr. ROTHSCHILD. I don't know.

Mr. MOORE. The Bureau of Mines wanted \$50,000,000 to prospect for ores in the United States. They came into Congress a short while ago and as Mr. Garner very properly said, they didn't get \$50,000,000; they got ten; that is, as the bill stands now. Do you know whether or not their purpose in asking for that sum of money was to undermine the jewelry business or any other business?

Mr. ROTHSCHILD. I have no knowledge on that point.

Mr. MOORE. Do you think it is proper for any committee or any department of the Government to apply money appropriated in any way to a propaganda for undermining any industry in the

United States, or to apply it to propaganda for building up such an idea?

Mr. ROTHSCHILD. I would like to state I do not believe it proper for any bureau or official to undermine or attempt to injure any business in the United States.

Mr. MOORE. Having this article for publication of June 16 in hand, would you say that this society, if it shall be organized, if the patriotic societies were carried out to their ultimate end, they would not affect the jewelry business?

Mr. ROTHSCHILD. They would affect the jewelry business very seriously.

Mr. MOORE. Suppose the purpose herein indicated, which is to prevent the use of platinum in jewelry, or effectuate it, through letters coming into Congress from patriotic societies urged to act everywhere, would they be able to get much revenue from the jewelry business from the plans adopted?

Mr. ROTHSCHILD. You wouldn't get any revenue from the platinum jewelry, and as that is the principal jewelry in the hands of high-grade jewelers you would probably get very little.

Mr. MOORE. We would probably lose revenue by it, wouldn't we?

Mr. ROTHSCHILD. Undoubtedly.

Mr. MOORE. And we would lose revenue because one of the departments of the Government was engaging in a course of action that would take revenue away from the Government and undermine the business; is that a fair statement?

Mr. ROTHSCHILD. That is undoubtedly a fair statement.

Mr. MOORE. You are assisting the War Trade Board in its work?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. You have been invited to cooperate with that board as I understand it, at \$1 a year?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. You suggested, taking the statement you previously made, that every effort was made as suggested before the commandeering order, I understand, to obtain a supply of platinum from Russia before Germany got a hold there. Is that correct?

Mr. ROTHSCHILD. The suggestion to obtain a supply of platinum from Russia was made at a conference which was held in Dr. Boyett's office, who was the immediate chief of Prof. James Louis Howe, at which conference Mr. Hill, of the Department of the Interior, the Geological Survey, and Dr. Hildebrand, were present, and at that conference I very strongly urged that the supply of platinum be obtained from Russia rather than through England, because in those days it was suggested England had the facilities for buying it and our going in to buy it would disturb the price. I suggested it about the time we got in direct commercial touch with Russia. We expected to do a great deal of business with her in the future; we were lending her money, that while the platinum was not a very large business in itself, I thought it was a very good thing for Americans to do everything they could to build up trade direct with Russia; that if we looked to England to buy it or attempt to buy it from Russia, it might result in a virtual monopoly by some of our allies after the war, and I didn't think that was good business.

Mr. MOORE. About what time was that?

Mr. ROTHSCHILD. I haven't the date here, but I should say some-time in October.

Mr. MOORE. Of last year?

Mr. ROTHSCHILD. Yes, sir.

Mr. MOORE. The Russian Government was still intact at that time, wasn't it?

Mr. ROTHSCHILD. I assume it was so, because if it had not been I wouldn't have made the statement at the time.

Mr. MOORE. The suggestion was made at a time when it was possible to go to Russia and get platinum?

Mr. ROTHSCHILD. Yes, sir. It was at such a time.

Mr. MOORE. We could have gotten platinum at that time from Russia had we made an effort to get it?

Mr. ROTHSCHILD. I was not certain.

Mr. MOORE. Let us be sure it was before Germany had such a stronghold on Russia that we could not get in there to get the platinum.

Mr. ROTHSCHILD. I can tell you in a minute. I have the date here I believe. I have a report here dated October 4, which is the report by Mr. Howe to Dr. Boyett, recommending that 30,000 ounces, and preferably 50,000 troy ounces of platinum be purchased. That was made before the meeting, so it must have been made in—

Mr. MOORE (interposing). Who was that made to?

Mr. ROTHSCHILD. To Dr. Balston T. Boyett, chairman of the national research council.

Mr. MOORE. Chairman of the national research council of what?

Mr. ROTHSCHILD. I suppose of the Council of National Defense. That report was made by Dr. James Louis Howe.

Mr. MOORE. And Russia was still an open trade country so far as this is concerned?

Mr. ROTHSCHILD. I suppose that was so.

Mr. MOORE. We did not buy that 30,000 ounces?

Mr. ROTHSCHILD. I couldn't tell you.

Mr. MOORE. When did that commandeering order come on?

Mr. ROTHSCHILD. I think it was in February, 1918.

Mr. MOORE. Between October and whenever the Russian Government fell we had opportunities to get these 30,000 ounces, or whatever was necessary for war purposes in the United States, and we did not get it.

Mr. ROTHSCHILD. In answer to that I will say that Dr. Howe did not recommend we get it from Russia. He recommended we get 30,000 ounces as soon as possible. My recommendation before that was that we get it from Russia.

Mr. MOORE. The action was not taken?

Mr. STEELE. May I say that Mr. Larder and myself were also present at this conference, and the statement was made that 108,000 ounces were available in Russia, of which England proposed to take 60,000, and the discussion arose that if we were to take the other as to how it could be brought to this country, and we finally decided the only available method to bring it was toward the east through the Pacific, just as this 21,000 ounces were brought a few weeks later.

Mr. MOORE. Do you know whether or not they got the 60,000 ounces?

Mr. STEELE. I presume they did, because Mr. Draper, who brought the 21,000 ounces over, stated yesterday that there was still in Petrograd the same amount as he brought over, which he offered to secure, but which he said he could not bring here for under \$100 an ounce.

Mr. MOORE. Up to that I do not see how any blame could rest on the jewelry dealers of the United States. England knew that there was a supply in Russia, and although we didn't get it, a recommendation was made that we should get it.

Mr. ROTHSCHILD. I find here a formal recommendation sent to me to sign. In section 6 Prof. Howe says:

There appears in Petrograd and Catrinburg a considerable stock, perhaps 50,000 ounces, which is undoubtedly purchasable by the United States Government.

Prof. Howe has been, I presume, the best posted man with the platinum industry in Washington or elsewhere. He had access to all of the reports in the various bureaus and everywhere.

Mr. MOORE. And instead of going after that 30,000 ounces which we could buy over there, apparently we were more anxious to get \$50,000,000 appropriated to prospect in the United States?

Mr. ROTHSCHILD. I would like to say I have no knowledge whatever of what action was taken on these recommendations. The only thing I know is that nothing was done because no platinum came over except the 21,000 ounces by this group of engineers.

Mr. MOORE. Was there any intimation by the Government authorities that you knew, or the gentlemen who interviewed you, that it would be necessary to sit down on the industry of platinum prior to commandeering it?

Mr. ROTHSCHILD. I was not in touch with the War Industries Board just prior to the commandeering order. Mr. Steele, of the war service committee, was. I can't answer that question.

Mr. MOORE. The fact is you got the commandeering order?

Mr. ROTHSCHILD. The jewelers got the commandeering order in February.

Mr. MOORE. Had you any instructions from the Government agencies up to that time that there was going to be such shortage of platinum as to justify the propaganda that women should give up their jewelry to be used by the Government if they were loyal?

Mr. ROTHSCHILD. I know it would not be necessary. But there was no suggestion of any propaganda.

Mr. MOORE. There was a good Government reason for issuing the commandeering order, I presume, in February?

Mr. ROTHSCHILD. The people who issued that order have not been engaged in propaganda.

Mr. MOORE. They issued that order for the purpose of checking up the supply and forcing a safeguard to the United States against a famine?

Mr. ROTHSCHILD. Undoubtedly.

Mr. MOORE. And to checkmate that commandeering order after the failure or neglect of the available opportunity to get a supply in Russia, that the Government didn't go after; is that correct?

Mr. ROTHSCHILD. That is my opinion.

Mr. MOORE. Then the burden fell back upon the jewelers of the United States; is that correct?

Mr. ROTHSCHILD. I think that is my conclusion

Mr. MOORE. Now, Mr. Rothschild, I don't know how much we got out of the jewelry business last year in taxes, but you are, as you said awhile ago, jumbled up here with automobiles, motorcycles, and so on. Could you tell about what the returns were on the 3 per cent tax?

Mr. ROTHSCHILD. I haven't the slightest idea.

Mr. MOORE. Will you make a statement to the committee as to those things dispensed by jewelers that have not been covered by the definition of jewelry as drafted in the act?

Mr. ROTHSCHILD. Silverware, silver plate ware, clocks, fine leather goods. Some jewelers carry so many lines.

Mr. MOORE. If we should extend the term jewelry to include those in some way or other, to what extent do you think the revenue would be increased? Would it be doubled?

Mr. ROTHSCHILD. At the same rate?

Mr. MOORE. Yes.

Mr. ROTHSCHILD. No; I do not think so.

Mr. MOORE. Then those goods that have been excluded from the definition are not the major portion of the goods sold by jewelers? They are the minor part?

Mr. ROTHSCHILD. Yes.

Mr. MOORE. You will join Mr. Steele and the other members in the preparation of that amendment making the term jewelry include other articles not now mentioned?

Mr. ROTHSCHILD. That would be very difficult. I suggest that we have this law so framed as to use the French method, or adopt the French method, giving the Treasury Department power to designate the articles to be taxed and appointing a committee of Treasury officials and different groups in order to designate the different articles. To tax the jeweler for everything he sells would be all right if it was not possible for the person to go to somebody else who sells the same article and did not have to pay a tax. You can't very well call a silk umbrella jewelry.

Mr. MOORE. You would be very glad to help the committee?

Mr. ROTHSCHILD. I would suggest the French method. They had a commission on luxuries and semiluxuries and the law was fixed that a final statement by this commission shall be the law on which the tax is made.

Mr. MOORE. Will you accept the boot to define the term jewelry?

Mr. FORDNEY. To put a tax on everything a jeweler sells—he sells fancy glassware and chinaware and leather goods?

Mr. ROTHSCHILD. And writing paper. The tax should be on the article.

Mr. MOORE. Have you conferred at all with the revenue collector?

Mr. ROTHSCHILD. No; I have not.

Mr. MOORE. I mean the trade?

Mr. ROTHSCHILD. I am quite sure the trade has not, because I am chairman of the revenue committee.

Mr. MOORE. The question has got to be faced and it would just as well be begun here. I thought possibly some of you gentlemen had discussed it with the revenue collector?

Mr. ROTHSCHILD. The English are handling their tax on luxuries, or commodities tax in practically the same way except they have a special committee of members of Parliament designating the articles by name; and I think in order to avoid the endless confusion in the

levy of the tax it should be made to apply to the article when sold by a hardware store or jeweler or anywhere else.

Mr. MOORE. Inasmuch as you are thrown generally with the public, in the luxury classes, will you define the word luxury as you understand it for the purpose of taxation? What about a watch?

Mr. ROTHSCHILD. An engineer is obliged to carry a watch that will run very closely, which is adjusted to a certain number of positions, and his job practically depends—perhaps the lives of his passengers depend—upon the action of that watch.

Mr. GARNER. Mr. Rothschild has been compelled to qualify as one of the greatest experts ever before this committee.

Mr. ROTHSCHILD. May I make this statement there before we go further? One important question was asked here that could not be answered; that is, in regard to the English practice in the selling of platinum jewelry. I have here a letter from the secretary of the speaker of the House of Commons, who happens to be the president of the National Association of Goldsmiths. This letter is dated June 18, 1918. In answer to some questions which Mr. Lauder asked him he said:

No platinum has been allowed to be used in the trade for over three years. All stocks of unmanufactured metals having been required, but manufactured metals were allowed to be sold or remain in stock.

Then, on the question of taxation, this may interest you. He says, Meanwhile—

I suppose he means the jewelry business—

a system by which taxes could be collected from customers of all commodities is made on the gross sales.

Mr. GARNER. I understood from Mr. Steele, I will get it from you, the Government now does not permit jewelers to use platinum in the manufacture of jewelry. That is out of business and so far as this committee is concerned we have nothing to do with that. That is in the past. Of course Mr. Moore has filled up the record in his own way, very properly from his standpoint, with the administration trying to get platinum. I would like for you to answer a question, as an expert in trying to assist us in levying a tax against jewelry and incidentally, as I understand it, representing about 35,000 jewelers in this country, which you have had about 10 minutes on that to-day and about four hours on something else. Do you favor the system now in vogue or the system advocated by Mr. Steele of levying it on the ultimate consumer direct?

Mr. ROTHSCHILD. I favor levying a tax on the sale of the article to the consumer when sold to the consumer.

Mr. GARNER. The Treasury can't determine anything except what this committee writes into the law. For instance, the articles to be taxed under the system you suggest must be enumerated in this bill in order for the Treasury Department to administer that law. We can't adopt the French system you suggest. What per cent, and I wish you would go as briefly as you can into detail, showing the per cent and no higher per cent, that can be levied on the ultimate consumer? For instance, the Treasury Department according to newspaper reports has suggested 50 per cent on jewelry, those articles to be enumerated, whatever they shall be. Some have said that is too high. I wish you would tell the committee what is the highest rate

you believe can be levied on the consumer without destroying the tax-producing power for next year out of the jewelry business.

Mr. ROTHSCHILD. I should say roughly, 10 per cent would not be considered a burden by the purchaser of any luxury or so-called semiluxury. It is possible a very much larger percentage could be levied and would not be considered a burden in many cases, but a feeling that the article is temporarily advanced so much in price because of the tax would have a very serious effect on the sales and if the sales drop off to any considerable amount the jeweler would be practically put out of business because these retail jewelers, these 30,000, and many of the wholesalers, have such a heavy overhead expense that unless they do a certain amount of business they make a loss. If you were to cut off one-third of the business as you suggested this morning and still get your full taxes or as much in taxes, that would be all right, but you would kill the retailer in doing it. If the retailer lost one-third of his business, many of them would go to the wall, because the retailer's overhead is so heavy he has to charge a very large percentage of his profit on most of his sales, especially on the sale of stuff very costly and goods that move slowly. That is one reason why the Government is going to get a very much larger revenue when they tax sales by the retailer and in some cases the expenses are so large I don't care to say in the record how large they are. They are idiotically large, because the average retail jeweler who may be considered by the public as a rich man because he is dealing in jewelry, his sales are small because of overhead expenses.

Mr. GARNER. Suppose this war should continue for five years, let's take the theory of taxation, and you should discontinue the jewelry sales of one-third of the jewelers in the United States, two-thirds of them should continue in business and you would get the same amount of tax as if they all stayed in business. Why would not that be a good economic problem for this Government? Assuming as some men have assumed that the jewelry trade is not essential for this war, therefore if we discontinue one-third of the jewelry trade of the country and continue two-thirds of it by taxation and out of the two-thirds we get twice as much revenue as if we continued the old system?

Mr. ROTHSCHILD. Briefly stated I should think it would be a suicidal policy on the part of the Government. I believe in a policy where you can say in event that one-third of a merchant class of 30,000 people on whom probably 100,000 people are depending is put out of business, is suicidal, is wrong.

Mr. GARNER. I am glad to hear you say that.

Mr. FORDNEY. Can you conceive of any law that will put one-third of the jewelers of this country out of this business that will not seriously cripple the other two-thirds?

Mr. ROTHSCHILD. Not only cripple the other two-thirds but would have a tendency seriously to cripple this Government in carrying on the war, any such unjust act.

Mr. GARNER. That is the reason I am drawing to your attention the importance of your organization assisting this committee in getting the right tax and if you don't do it and we levy 50 per cent and put half of you out of business, we are going to arrive at the same results you have suggested as suicidal and unless your organization

assists us, and you want to try to get the highest rate so that we may take your statement at 100 per cent and so that they won't say we recommended it at 10 per cent and they split it, put it 25 or 30 per cent and so on. I simply bring that out so as to show you the importance of your committee assisting this committee to get the greatest amount of revenue into the Treasury.

Mr. ROTHSCHILD. For the committee and for the trade I pledge every assistance.

Mr. GARNER. And see that you help this committee and help the Treasury get the greatest amount of revenue into the Treasury.

Mr. ROTHSCHILD. We believe it is going to be very serious for us to frame a law for ourselves. We believe that this bill can be framed so as to have a commodity clause with a commodity tax that will put a number of industries under it so that no one will be placed in a light as being so unnecessary that it will injure the business, and when you do that you don't get the tax.

Mr. GARNER. Any kind of tax that brings the most revenue into the Treasury will be a burden to the business to that extent.

Mr. ROTHSCHILD. I think that anybody who is able to buy jewelry is willing to pay a tax, but we want the tax based on automobiles and everything as before.

Mr. RAINEY (presiding). As stated in this interview with the officials of the Bureau of Mines to which Mr. Moore and yourself referred, it is true that the chemical industry engaged in war work needs platinum.

Mr. ROTHSCHILD. I don't know it.

Mr. RAINEY. You don't know that?

Mr. ROTHSCHILD. I do not.

Mr. RAINEY. Don't they have to have platinum?

Mr. ROTHSCHILD. They need it. I mean in the sense that they need platinum they can not get. They certainly need it; lots of it.

Mr. RAINEY. Do you think there is any harm in trying to conserve platinum so it can be used for our war industries?

Mr. ROTHSCHILD. A fine public work.

Mr. RAINEY. It is the same kind of work our Government is doing when it conserves sugar or when it conserves flour?

Mr. ROTHSCHILD. It is the method we object to, and not the policy of conservation.

Mr. RAINEY. The difference between the chemist and you is this, the chemist wants to use platinum for war work, and you want to use it for jewelry?

Mr. ROTHSCHILD. We do not want to use it for jewelry.

Mr. RAINEY. Your controversy with the chemists commenced a year ago and was carried through Secretary Redfield, and the question then was between you and the chemists—

Mr. ROTHSCHILD (interposing). On the question of price, and I think they have been the malign influence that has prevented platinum from being brought into this country in large quantities, on the question of price.

(Thereupon, the committee at 6 o'clock adjourned until Thursday, at 10 o'clock a. m.)

COMMITTEE ON WAYS AND MEANS.

HOUSE OF REPRESENTATIVES.

SIXTY-FIFTH CONGRESS, SECOND SESSION.

CLAUDE KITCHIN, North Carolina, *Chairman.*

HENRY T. RAINEY, Illinois.	JOSEPH W. FORDNEY, Michigan.
LINCOLN DIXON, Indiana.	J. HAMPTON MOORE, Pennsylvania.
CORDELL HULL, Tennessee.	WILLIAM R. GREEN, Iowa.
JOHN N. GARNER, Texas.	CHARLES H. SLOAN, Nebraska.
JAMES W. COLLIER, Mississippi.	NICHOLAS LONGWORTH, Ohio.
CLEMENT C. DICKINSON, Missouri.	GEORGE W. FAIRCHILD, New York.
WILLIAM A. OLDFIELD, Arkansas.	JOHN A. STERLING, Illinois.
CHARLES R. CRISP, Georgia.	WHITMELL P. MARTIN, Louisiana.
GUY T. HELVERING, Kansas.	WILLIS C. HAWLEY, Oregon.
GEORGE F. O'SHAUNESSY, Rhode Island.	ALLEN T. TREADWAY, Massachusetts.
JOHN F. CAREW, New York.	
GEORGE WHITE, Ohio.	

JOHN E. WALKER, *Clerk.*

# REVENUE BILL.

HOUSE OF REPRESENTATIVES,  
COMMITTEE ON WAYS AND MEANS,  
*Thursday, July 11, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman) presiding.

There were also present Representatives Rainey, Dixon, Hull, Garner, Collier, Dickinson, Oldfield, Crisp, Fordney, Moore, Longworth, Fairchild, Sterling, Martin, and Hawley.

## STATEMENT OF MR. CHARLES H. HERTY, OF NEW YORK CITY.

The CHAIRMAN. Doctor, give your full name and address and whom you represent.

Mr. HERTY. Charles H. Herty. I am the editor of the Journal of Industrial and Engineering Chemistry, the official organ of the American Chemical Society.

Mr. Chairman, it was not my purpose to participate in these proceedings when I came down from New York. I came down as an interested listener, but there were a number of developments during the course of yesterday's hearing that led me to believe that for the clearness of the record and the completeness of the issue I should add something to help to clarify the situation. I was courteously given yesterday a copy of Mr. Rothschild's brief, and I want to call attention to certain things in it which have given, or I think tend to give, a wrong impression, and I think this is a very bad time for a wrong impression to come into a situation of this kind, because this is a matter which directly affects the matter of our winning this war, and every good citizen of this country ought to feel disposed to get together and to keep the issue straight and to do whatever is best for the interests of this country, and for that alone.

We talked a good deal yesterday about the question of propaganda carried on by the American Chemical Society. To bear that out I want to call attention to two statements, one on page 7 of Mr. Rothschild's brief, where he speaks of the propaganda of a small group of chemists. That is also referred to again on pages 16 and 17 as "an unfair and misleading propaganda which was started by some member of the American Chemical Society soon after we entered the war."

Mr. Chairman, I would like to put in the record—unfortunately I did not bring any papers with me, because I did not expect to speak here, but I have gotten a copy of our Journal and had this copied from it, and if you desire it I shall file later with the clerk a copy of the Journal itself.

The CHAIRMAN. Just as you see fit about it.

Mr. HERTY. In fact, when Mr. Longworth comes in he has a copy of the Journal this is quoted from. I want to say, Mr. Chairman,

that we were in session in Kansas City just after war was declared, and on June 11 the following resolution was introduced at the council of the American Chemical Society, discussed by them, adopted unanimously, and on the following day was unanimously passed at an open, general meeting of the American Chemical Society:

*Resolved*, That the attention of the Council of National Defense be called to the scarcity of platinum under existing conditions and to the great need of the metal, more particularly in the prosecution of the war. We hold that its use at this time in the production of articles of ornament is contrary to public welfare. Therefore we recommend that an appeal be made to the women of the United States to discourage the use of platinum in jewelry, and that all citizens be urged to avoid its use for jewelry, for photographic paper, and for any other purpose whatever save in scientific research and in the making of articles for industrial needs.

Now, Mr. Chairman, that is not a movement started by a small group of chemists. That represents the unanimous vote of the members of an organization which embraces now some 12,000 and at that time 10,000 chemists from every section of the country, adopted after due consideration, and published in the official organ of that association.

I want now to take up another feature, and I wish some of our friends, the jewelers, were here this morning, because there are certain features of this which I think they do not understand, and that is the scientific-research part. I want to show the difference between the interest of the chemists of the country in this matter of platinum and the interest of any other body of men.

The men who are engaged in scientific research are university professors. The price of platinum does not affect them personally one particle. Their platinum is bought for them by their universities. They have given to them a certain amount of money as a budget by their university authorities. They buy their supplies out of that. When platinum is scarce and the price goes up for any reason their budget is hit just that much, so that the question of getting supplies of platinum for scientific research, from the chemist's standpoint, does not involve in any wise whatever his personal finances, but simply involves the question of his ability to carry on his work under the best conditions. In the industries, on the other hand, it is another matter. The great bulk of the platinum in the chemical industries is used in making those two most essential things in modern warfare, sulphuric acid and nitric acid, and that is where the bulk of the platinum goes.

A good deal was said yesterday about the propaganda carried on by the Women's National League for the Conservation of Platinum. It was read into the record yesterday that the American Chemical Society organized that league. Mr. Rothschild's statement is that it was initiated by the Chemical Society. I think the statement in his brief is a fairer statement than the statements that were used incidentally during the discussion. It was initiated by the American Chemical Society in that very resolution which I have read, urging and calling upon the women of the country to discourage the use of platinum in jewelry on account of its need in scientific research and for war purposes.

The statement was made further that a \$2,500 appropriation had been made by the American Chemical Society to support the propaganda carried on by these ladies. I wish to put in the record

here, sir, that every particle of the work those ladies have carried on, every letter they have written, every stamp they have used, every piece of stationery those ladies have used in their campaign has been paid by themselves. Not one cent of the American Chemical Society's money has been paid to aid these ladies in this campaign. That is simply to make the record clear from that standpoint, but I want to add this statement, that I am free to say myself, as a member of the American Chemical Society, I think it is a shame that the society has not aided financially these ladies in this praiseworthy undertaking to arouse this Nation to the question of the scarcity of platinum which confronts it at a time when we are expanding our armies and engaged in a war, and knowing that we are contracting our platinum supplies.

I am not trying to make this logical in the sense of a prepared address, but am simply taking it up in the order in which these statements appear.

A good deal of stress was laid yesterday upon a letter from Prof. James Lewis Howe, which is on pages 10, 11, and 12 of the brief, and it was mentioned in there that it was published in the Journal of Industrial and Engineering Chemistry, of which I am the editor. I want to say in this connection that so far as the mention of its occurrence there is concerned, that that journal is freely open to the opinions of any reputable chemist in this country who wants to publish his views about any matter; but that in the same number in which this appeared I editorially took issue with Dr. Howe upon this matter, and stated that in the midst of all this trouble he was giving the stock arguments of the jewelers about this situation. Unfortunately, I have not that copy of the journal with me, so that I can give you the exact words, but it was printed in the same issue in which the article appeared. In other words, I did not by publishing that letter indorse the statements of Dr. Howe in any wise, but simply said that he was giving the stock arguments of the jewelers.

In the next place, on page 13 of Mr. Rothschild's statement, he speaks of the 25 per cent of platinum that was allowed from the supplies turned over by the War Industries Board at the time of the last commandeering order. He says that most of this platinum probably has been used for special orders, and as the jewelers can not buy platinum to-day from any source whatever without holding it for Government use, it is fair to state that very little platinum is now being used in the manufacture of jewelry. I think it would be well to keep that situation clear. I understand that approximately 1,400 jewelers have been so commandeered. The commandeering orders apply only to such jewelers as have been commandeered, so that there are a great number of jewelers in this country to-day who are free to deal in platinum, if they can get it from any source whatever, buy it, sell it, and it is not against the law.

Mr. FORDNEY. And use it?

Mr. HERTY. And use it.

Mr. FORDNEY. He says not.

Mr. HERTY. I know, but I think that statement can be confirmed from the War Industries Board.

Mr. HAWLEY. Did not the last commandeering order affect all persons in the jewelry trade who had platinum?

Mr. HERTY. No, sir.

Mr. HAWLEY (continuing). And held it in stock in every section of the country.

Mr. HERTY. No, sir; it affected only such as had specific, individual commandeering orders forwarded to them by the War Industries Board. It seems that the War Department will not grant a general commandeering order; it has to be specific.

Mr. HAWLEY. I got the idea yesterday, probably an erroneous idea, that the first order was directed specifically to a certain number of people?

Mr. HERTY. The first order was directed to the importers and refiners, and the last order included the manufacturing jewelers who had not been included in the first, but in the application of that order only such were affected as those to whom individual commandeering orders were sent by the War Industries Board. The number totaled only about 1,400.

Mr. HAWLEY. Did your organization take any action regarding the platinum that was manufactured into jewelry in some form?

Mr. HERTY. This was the action which I read.

Mr. HAWLEY. I heard that.

Mr. HERTY. This is the only action that we have taken officially.

Mr. HAWLEY. Was there any action taken regarding the platinum that had been manufactured into jewelry?

Mr. HERTY. No, we recommended "that an appeal be made to the women of the United States to discourage the use of platinum in jewelry and that all citizens be urged to avoid its use for jewelry." That was the only official action taken on the subject.

Mr. RAINEY. No commandeering order has yet reached the scrap platinum in the hands of the Hebrew dealers?

Mr. HERTY. No, sir. I understand that many are disposing of their scrap platinum at from \$150 to \$200 an ounce.

Mr. RAINEY. There has been no commandeering or any other order made, unless the Bureau of Mines can control it, which will keep the manufacturing jewelers from getting their supplies from Hebrews who deal in scrap platinum?

Mr. HERTY. No, sir.

Mr. RAINEY. Then, they can continue manufacturing jewelry indefinitely by buying the scrap platinum from the Hebrew dealers?

Mr. HERTY. Any jeweler who has not been commandeered. I do not think, as I understand the situation, that a jeweler whose entire stock of unmanufactured platinum has been commandeered can buy it and use it.

Mr. OLDFIELD. Could not the War Department issue an order commandeering it?

Mr. HERTY. I was amazed when I found out the situation. I thought the Government had the right under the circumstances to say that the sale of platinum should stop. No man can sell a piece of platinum until a license is issued.

Mr. OLDFIELD. It seems to me they should know the situation as well as anybody else.

Mr. HERTY. They will not issue anything except an individual commandeering order. They have to get from the War Department itself a commandeering order on unmanufactured platinum.

Mr. FORDNEY. A gentleman told us yesterday that platinum is not used for the manufacture of jewelry at all now. Mr. Rothschild

said that one particular firm in New York had the absolute control of the purchase of crude platinum. What truth is there in that?

Mr. HERTY. I never heard of that.

Mr. LONGWORTH. I do not think that Mr. Rothschild said that.

Mr. FORDNEY. I may be mistaken, but my recollection is that Mr. Rothschild named the firm that had control of the platinum in New York.

Mr. LONGWORTH. The jewelers' war service committee has been designated as recipient for platinum of not less than 3 ounces in amount.

Mr. FORDNEY. He said that the jewelers had not been using platinum at all in the manufacture of jewelry. What have you to say about that, is he right or wrong in his statement when he says that the jewelers are not using platinum at all, and are not permitted to use it?

Mr. HERTY. I can not say.

Mr. FORDNEY. I am speaking now of crude platinum.

Mr. HERTY. I am not sufficiently in touch with what the jewelers are doing; that is out of my line. If I have some platinum myself I can go and sell it to a jeweler who has not been commandeered and he can use it.

Mr. FORDNEY. What I am speaking of is crude platinum; he made a distinction.

Mr. HERTY. I have never had any platinum which I had commandeered.

Mr. FORDNEY. Are you a manufacturer of platinum?

Mr. HERTY. No, sir.

Mr. FORDNEY. Do you manufacture jewelry?

Mr. HERTY. No, sir.

Mr. FORDNEY. Why should you be commandeered?

Mr. HERTY. I am a chemist and I have owned platinum in the past.

Mr. FORDNEY. Those gentlemen were speaking of the jewelry trade, and they did not mention what your rights were, but what their rights were, because the statement yesterday was about their rights under existing rules and regulations of commandeering orders.

Mr. HERTY. Everyone who has been commandeered, his rights—

Mr. FORDNEY (interposing). If they are using platinum they are using it contrary to that commandeering order!

Mr. HERTY. No; because they may have some of the 25 per cent left.

Mr. FORDNEY. I am speaking of that which has been commandeered; he says they are not using any at all in the manufacture of jewelry, and I should like to know whether you think that statement is correct?

Mr. HERTY. I do not know.

Mr. FORDNEY. I understood you to intimate that the statement was not correct.

Mr. HERTY. His statement was that very little platinum is now being used in the manufacture of jewelry.

Mr. FORDNEY. You do not know whether that statement applies to the platinum commandeered, or to the whole jewelry industry of the country?

Mr. HERTY. No. I do not know.

Mr. MOORE. You are still president of the American Chemical Society?

Mr. HERTY. No, sir.

Mr. MOORE. You are editor of the Journal of Industrial and Engineering Chemistry, to which reference has been made and from which Mr. Rainey and others have quoted?

Mr. HERTY. Yes, sir.

Mr. MOORE. Were you the author of the article in the June, 1918, number, entitled "The great gamble"?

Mr. HERTY. I was.

Mr. MOORE. In that article you argue very strongly against any stock argument of the jewelers and make a number of quotations from letters which you received in answer to a letter sent out by you stating that the jewelers were making an unfair use of platinum at this time. Do you recall that article?

Mr. HERTY. Yes, sir; I have it before me.

Mr. MOORE. In that article, on page 428 of the Journal, after referring to the necessity for winning the war, and that our Army may be increased to 5,000,000 men, and that the jewelers will seriously impede our progress if they continue to sell the platinum they have on hand, you say:

But, it may be argued, platinum was commandeered on March 1, 1918. So it was; and on May 15 the press throughout the country carried the announcement that platinum had again been commandeered. Why this duplication of commandeering orders. The answer is simple. In the preparation of the original order some one blundered in two regards—first, in failing to include iridium within the scope of the order; second, in assuming that manufacturing jewelers would comply with the spirit and intent of the order and hold hands off, which some did not, as set forth by excerpts from the jewelers' own publications in the May issue of this journal, in an editorial entitled "Platinum scraps."

A little further on in this same article, after you commend the Womans' National League for the Conservation of Platinum, under the able and fearless leadership of its chairman, Mrs. Ellwood B. Spear, of Cambridge, Mass., you conclude as follows:

Thus is begun the great gamble, under official authorization—

Which I take it to mean the authorization of the War Industries Board, which is the governmental body which has control of the distribution of platinum—

Between the paltry profits of the jewelers and the limitation of the number of men in our Army—unless some of the future drafts fight without ammunition and without supporting artillery, depending for their offense and defense upon the bayonet alone.

In all fairness, do you really think that the platinum situation is so serious that it would affect our Army of 5,000,000 men in view of the statements made by the jewelers here yesterday that their stock had been commandeered and that they were ready to deliver up anything that the Government would take and that they asked only for the right to sell that platinum which had already been manufactured and which the Government apparently did not want?

Mr. HERTY. That brings up, Mr. Moore, two points.

Mr. MOORE. We know you so well in this committee and esteem you so highly that I want to ask you if you consider the platinum situation so serious?

Mr. HERTY. I believe every word I wrote there. There is only one thing. When I spoke of the commandeering order, I thought it was a general thing. I have learned that it was a specific thing and that we have not any general commandeering order. The first part

of that article is a quotation from the President's speech in the New York Times, "Why limit it to five million?" Since that time Congress has granted him authority to indefinitely expand the Army. Secretary Daniels said in New York a few nights ago, "We will put 10,000,000 men in Germany, and 100,000,000 if needed." We are faced with the fact that Russia is shut off and that we have only a limited supply here and we are using that daily.

Mr. MOORE. In this same article you say that some one blundered in not making the commandeering order sufficiently drastic?

Mr. HERTY. Because the first commandeering order was so issued. I can not give you the figures. The order did not include scrap platinum, but it has since been put in; that is, scrap platinum which has not been manufactured.

Mr. RAINEY. I want to read an excerpt from a pamphlet which has been issued from the Department of the Interior, the United States Geological Survey, by Mr. James M. Hill, who is the statistician in charge of platinum, as I understand it. I want Mr. Moore to listen to this. This is the last expression from this department of the Government on the subject and confirms what Dr. Herty has said in the editorial to which you call attention.

During the war the United States has not been receiving so much platinum as is normally consumed here. New industries and machines that require platinum have been built at a much faster rate, the stock of platinum metals available for use during 1918 is evidently small and is constantly growing smaller.

The available supply of platinum metals can be increased somewhat by establishing a stable market at prices high enough to induce miners to save platinum and to stimulate imports of the metal—a step that has been taken by fixing the maximum price at which metal can be imported at \$105. The other means available is to husband the present supply of platinum metals. The supply is so short and the demand for essential war industries is so great that it may become necessary to commandeer stocks of partly manufactured platinum jewelry to meet the demand, though it is hoped that judicious administration of the metals already commandeered may obviate the necessity of such drastic action.

I read that because it made its appearance after your editorial and confirms the opinion you expressed in that editorial.

Mr. MOORE. I think no one disputes the necessity for platinum, but Congress has been making appropriations to the very limit of the demands of the departments for every resource required by the Government to prosecute this war, and it does seem, in view of the apparent dispute between the American Chemical Society and the jewelers, because that is as plain as the nose on your face, judging from the editorials in both their journals and their testimony here, it does seem as if we were fighting over straws when you bear in mind the great work that the Government has to do and the fact that Congress has done everything in the way of taxing people to raise money to permit the Government to get what it needs, and it was shown here yesterday that prior to this commandeering order we had an opportunity to get all the platinum from Russia that we needed and did not move while England stepped in and got what she needed, while England is an ally of ours and certainly could help us if she chose.

Mr. RAINEY. In reply I will say as to the controversy between the chemists and the jewelers that the chemists want to conserve platinum for war purposes and the jewelers want to use platinum for the purpose of making jewelry.

Mr. MOORE. The jewelers distinctly denied that yesterday. They want to dispose only of that which they have manufactured.

Mr. RAINEY. But they appeared before the Secretary of Commerce and induced him to write that letter which had the effect of permitting the manufacture of jewelry until the——

Mr. MOORE (interposing). No; the Secretary wrote that letter before this present controversy arose.

Mr. RAINEY. Which appeared exceedingly unwise on the part of the Secretary of Commerce and his advisers, and his advisers were the jewelers.

Mr. HERTY. May I answer Mr. Moore's question? I want to throw any light that I can on this matter. Mr. Moore asked me two questions. I do not know anything about this question of the platinum in Russia, and before I had any information——

Mr. MOORE (interposing). I should think having been at this conference you would know something about it, because your article shows that you were one of those that conferred with Dr. Manning and other celebrities.

Mr. HERTY. At which the subject of platinum was not discussed.

Mr. MOORE. You mean to say now that you know nothing about the world situation?

Mr. HERTY. I learned more about it yesterday, about this platinum in Russia, than I ever knew.

Mr. MOORE. I want you to think over that statement. Having started to encourage the women of the country to organize and prevent the sale of platinum jewelry, you now say that you do not know anything about the world conditions?

Mr. HERTY. About the extra 20,000 ounces. This gentleman got his information from the inside, the War Trade Board. I am not in the secrets of the War Trade Board.

Mr. MOORE. But in the article to which I have referred you have indicated that there is a shortage of platinum and that it involves the lives of 5,000,000 men.

Mr. HERTY. Undoubtedly.

Mr. MOORE. And yet you mean to say that you do not know what the world condition was in platinum?

Mr. HERTY. I had no knowledge of the platinum in Russia.

Mr. MOORE. You certainly knew that we got the bulk of the platinum from Russia?

Mr. HERTY. Undoubtedly; but do you think that I was to blame for not knowing what was taking place in the inside of Russia at that time?

Mr. MOORE. I do not know that anybody is. You are attempting to criticize the jewelers.

Mr. HERTY. For using platinum necessary for this Government?

Mr. MOORE. They have said that every ounce of platinum they have that is in crude form available for use by the Government is subject to use by the Government orders.

Mr. HERTY. Since this last commandeering order.

Mr. MOORE. And that such platinum as has been worked up into jewelry would be a dead horse on their hands which they could not sell, and if they could not sell it it would not bring any revenue to the Government, which is what this committee is after.

Mr. HERTY. You bring up a very interesting point, and that is one of the main things that led me to want to speak to you to-day. In the brief of Mr. Rothschild on yesterday he placed in the record a

letter which at the time I did not appreciate the complete significance of and so I will read that letter, because I do not know whether the members of the committee got the full import of that letter.

The CHAIRMAN. You may proceed.

Mr. HERTY (reading):

The first official request for platinum was received by the chairman of the platinum committee of the vigilance committee on January 22, 1918.

A number of days after the time of the Russian collapse, January 22, 1918.

This request, which was in the form of a letter from Mr. Waddill Catchings, chairman of the war service executive committee of the Chamber of Commerce of the United States, inclosed a letter from Mr. B. M. Baruch, chairman of the War Industries Board, which was as follows:

"Mr. WADDILL CATCHINGS.

*"United States Chamber of Commerce, Washington, D. C.*

"DEAR SIR: The shortage of platinum in the production of explosives is such that it is necessary for the Government to have command of every bit of platinum that can possibly be had.

"I wish you would express to the jewelry trade that it is the desire of the Government that no further use of platinum should be made in the manufacture of jewelry, and I should like to know where it is possible to obtain a supply of platinum.

"I should like to know how it would be possible to secure possession of all the platinum in the United States."

That letter is signed "Yours, very truly, B. M. Baruch," and it was written by Mr. Baruch as chairman of the War Industries Board. Now, let me go a little bit further. After stating that these communications were handed to a special subcommittee of the jewelers' vigilance committee, which had been conferring with Mr. Summers of the War Industries Board, he states that on January 25 the entire platinum matters were turned over to the jewelers' war service committee, and that the jewelers' war service committee called on Mr. Baruch and Mr. Summers in Washington and recommended that all the unmanufactured platinum held by jewelers be commandeered. That was an amazing statement. When I heard that statement yesterday I was amazed, and if that statement stands uncontradicted, then, in the next issue of my journal, I propose to give the jewelers credit for that fine stand.

Mr. MOORE. They said that that is what they stood for—to commandeer all the platinum.

Mr. HERTY (interposing). If it stands uncontradicted, we propose to give them credit for it.

Mr. MOORE. They said that that is what they said to them—to commandeer all the platinum, and not commandeer a part and leave the rest.

Mr. HERTY. If that statement is not contradicted by the War Industries Board, which is now handling this matter, I propose to give them a pat on the shoulder as heartily as I can. I think that was a fine stand for them to take.

Mr. RAINEY. I want to say that that statement surprised me very much, and I intend to bring it to the attention of the War Industries Board and ask them for their version of the statement. The idea that the jewelers have been self-sacrificing and have been demanding that the Government take over all of their platinum, while, at the same time, they have been manufacturing it as rapidly as possible—so rapidly that they admit that the one-fourth which was exempted

is now all manufactured—as I say, that statement is so incompatible with their own position in the matter and with the position that the War Industries Board took, that I am going to present the whole matter to the War Industries Board and ask them for a statement of the matter.

Mr. HERTY. Let me run over these points: First, it appears that Mr. Baruch says that the Government of the United States wants every bit of platinum, and he decries the use of it in jewelry. He says, "I should like to know how it would be possible to secure possession of all the platinum in the United States." Now, according to this statement they said that he could take it all. According to the statement here he could take it all. Then, according to Mr. Rothschild's statement, when the War Industries Board was informed of this recommendation that they could take every bit of platinum, the War Industries Board itself made the objection that they did not wish to disturb the jewelry industry to the extent of commandeering all the platinum and thereby throwing the platinum workers out of employment. Mr. Rothschild stated:

In the face of this objection, the jewelers' war service committee, without any definite knowledge of the actual requirements of the Government, was certainly justified in assuming that the 75 per cent commandeering order would suffice for the needs of the Government.

Now, all that I want to do is just to make my position clear, and to make it clear to Mr. Moore especially. All of that was news to me, and I was startled when I heard it yesterday. The chairman of the War Industries Board said that it was necessary for the Government to have command of every bit of platinum that could possibly be had, and the jewelers said, according to this statement, "take all of it." Then, according to this statement, the War Industries Board said, "No; we must not disturb the industry; you must have some platinum in spite of the war necessities."

Mr. FORDNEY. Who said that?

Mr. HERTY. Mr. Rothschild.

Mr. FORDNEY. He did not say that yesterday. He said, or those gentlemen who testified yesterday said, that they were ready to give up everything they had, manufactured or unmanufactured, but they said, "If you take away our manufactured platinum, we want you to pay the value of that property, or the value of the platinum that is connected with the jewelry." That is very valuable, and they did not want to give up the platinum that was manufactured without being paid for the loss that they would sustain. That was their statement. Now, the Government has the right to commandeer all of the platinum in the country. We have been sitting here for nearly two days listening to a dispute between jewelers and chemists, and I want to know from the chairman what it is that we are expected to listen to. We sat here all day yesterday listening to a dispute between those two industries, the chemists and the jewelers, and I want to know what we are sitting here to-day for. I want to know why we should sit here and listen to a discussion of platinum when the Government has a perfect right to commandeer it. That being true, I do not understand why we should listen to a dispute between the chemists and the jewelers. This same dispute is going on to-day, and, apparently, we will have to sit here for two days listening to a dispute between these two industries. I want to know what we are doing it for.

The CHAIRMAN. We have given them the time, and, perhaps, finally, before they get through, they will tell us something about taxes.

Mr. HERTY. I am coming to that point. That is what I am leading up to.

Mr. FORDNEY. Let me ask you this question: I do not want to prevent the chemists from answering statements made about them, but I do want to know this: I want to know something about what you, as chemists, and what the jewelers would recommend to this committee as to a tax upon jewelry or platinum.

Mr. HERTY. I am coming to that.

Mr. FORDNEY. We have had practically no testimony yet, except for just a few minutes yesterday from the jewelers, as to what sort of tax should be imposed upon jewelry. That is the main point that we are interested in here, and not in the dispute that we have been listening to for two days, when Congress is in a hurry to get this matter up for consideration.

The CHAIRMAN. It is possible that the chemists and others who are interested in the conservation of platinum for Government purposes fear that, perhaps, the Government can not commandeer that article fully and completely, and believe that we might impose upon jewelry of which it forms a component part a tax so high that it would be impossible to use it for that purpose, and that, therefore, it would be turned over to the Government.

Mr. FORDNEY. I would like to hear something about the question of taxation. I do not care anything about a controversy between the chemists and jewelers. I am willing to take it for granted that both of them are right. I am getting tired of listening to a row between these two bodies of men.

Mr. LONGWORTH. If we can not see in it anything more than a row between jewelers and chemists—

Mr. FORDNEY (interposing). That is all I have seen yet.

Mr. LONGWORTH. I regard it as one of the most important questions that this committee has to consider.

The CHAIRMAN. Really, Mr. Fordney is the only man I ever saw who did not like a row between men, animals, or anything else.

Mr. HERTY. Mr. Chairman, I have had only one motive in this matter.

Mr. FORDNEY. Let them wash their linen somewhere else.

Mr. HERTY. I do not think that there is any linen washing going on here. I have been engaged in a campaign to conserve for the Government every particle of platinum that can be obtained.

Mr. FORDNEY. I want to help the Government in every way I can, but I am tired of listening to this discussion. I am tired of this washing of dirty linen.

Mr. HERTY. I can not see any dirty linen in that. There has been some blundering done in allowing platinum to get into places where in order to get it back it will cost the taxpayers some money.

Mr. LONGWORTH. As a matter of fact, how much platinum does the Government use as compared with the amount that the jewelers use?

Mr. HERTY. That is a very difficult question to answer. There are no definite statistics along that line. For chemical industries, or in the chemical laboratories, I should say that the chemists probably use some 25 or 30 per cent of the platinum that comes in to the country.

Mr. HAWLEY. How many ounces of platinum are now manufactured in the form of jewelry? Have you any idea of that?

Mr. HERTY. I do not know.

Mr. HAWLEY. Are you in favor of taking that platinum that has been made up into jewelry? Are you in favor of taking that platinum and removing the stones or other materials set in the platinum and using it for Government purposes?

Mr. HERTY. That brings me to the point of the definite recommendation that I will now make about taxation. I think myself that no platinum ought to be where it can be taxed. I think that no platinum in this country now ought to be in a place where it can be taxed, but it should be in the vaults of the Subtreasuries of the United States. It should be placed there as quickly as possible.

Mr. MOORE. Do you think the jewelers would object to the Government's commandeering platinum if they commandeered all of it?

Mr. HERTY. I think they have an entirely wrong idea about that.

Mr. MOORE. If they took everything they had in that line, they would be satisfied, would they not?

Mr. HERTY. I think they are right in that position, that everybody ought to be commandeered. I agree with you fully on that point, and I do criticize the insufficiency and inadequacy of the measures taken.

Mr. MOORE. Inasmuch as Mr. Rainey interrogated those gentlemen yesterday for two hours and put questions to them that reflected upon their motives, if not upon their patriotism, I feel that it would be only fair that something should go into the record on the other side of the question.

Mr. HERTY. You have heard my statement.

Mr. MOORE. We know who you are and we have a very high appreciation of your professional standing and your standing as a man. I want to ask you whether it is a fact that the idea of organizing patriotic women in a movement to discourage the use of platinum in jewelry originated with the American Chemical Society?

Mr. HERTY. The idea did. I read that into the record this morning.

Mr. MOORE. The resolutions that you passed at the Kansas City convention?

Mr. HERTY. That was an appeal to the women.

Mr. MOORE. A specific appeal to the women. You made a specific appeal to the women of the United States to discourage the use of platinum in jewelry; that is a fact, is it not?

Mr. HERTY. Yes, sir; that is true.

Mr. MOORE. It was charged against those reputable business men who were here yesterday representing 35,000 business concerns of the United States that they had established and were conducting here a lobby, the activities of which were very severely questioned. That having been brought out in the evidence yesterday, I want to ask you whether or not it is equally fair to criticize those who conducted a lobby on the other side—for instance, the American Chemical Society?

Mr. HERTY. I think not. The American Chemical Society is working with all of its force and strength and united opinion to get platinum for the United States Government and not for itself.

Mr. MOORE. I want to ask you whether you wrote a letter to the Director of the United States Geological Survey some time in May,

to which you received an answer from Mr. George Otis Smith, the director, under date of May 16, 1918?

Mr. HERTY. Yes, sir; I asked Mr. Smith for a letter, and he wrote me this letter in reply to my request.

Mr. MOORE. In the concluding paragraph of the letter Mr. Smith says:

Of course, Mr. Editor, I indorse your protest against the halfway or a 75 per cent or even a 99 per cent restriction of nonessential use of platinum. No American with his eyes open to the facts can do less than stand behind you.

Now, would not that clearly indicate that you brought the matter up with the Director of the Geological Survey and inspired the idea?

Mr. HERTY. No, sir; every proposition that I made touching the matter of platinum from month to month—

Mr. MOORE (interposing). There is no question about your activity.

Mr. HERTY. Absolutely none.

Mr. MOORE. You conducted this propaganda against the use of platinum?

Mr. HERTY. Yes, sir; we have been doing that all the time. The American Chemical Society has done that.

Mr. MOORE. I will say to you, as I said to those gentlemen who testified yesterday, that I think you are entirely within your rights. You were entirely within your rights when you organized the women to stir up trouble for anybody, but I assume that the other gentlemen, or the business men who were affected, had a right to defend their interests. Now, you wrote a letter to the Director of the Bureau of Mines at about the same time you wrote to the Director of the Geological Survey, and you received a letter in reply to that under date of May 16, 1918, in which the Director of the Bureau of Mines indorses your propaganda. That is a correct statement, is it not?

Mr. HERTY. It is in the record.

Mr. MOORE. That letter is published in the Journal of Industrial and Engineering Chemistry. You also wrote a letter to Mr. J. M. Hill, the geologist in charge of platinum statistics, and you received an answer from him under date of May 15, 1918, which is also published in the Journal of Industrial and Engineering Chemistry?

Mr. HERTY. All of those letters came in response to verbal requests.

Mr. MOORE. But you were agitating on the subject.

Mr. HERTY. Yes, sir.

Mr. MOORE. You were agitating in this matter, just as I agitate in the matter of improved waterways. You were doing what you thought was the proper thing. You were at the same time inserting certain articles in the papers against which the jewelers were endeavoring to defend themselves. You criticised Mr. Larter, for instance. On page 420 of the June number of the Journal of Industrial and Engineering Chemistry there appears a letter signed by Hon. Henry T. Rainey, a Member of Congress, who has been very much interested in this question, and who made a speech on the subject on the floor of the House, against which the jewelers on yesterday attempted to defend themselves. In that letter, after reiterating the statement that the jewelers maintained an insidious lobby here, and that they had induced Secretary of Commerce Red-

field to commend their action as wise and patriotic, Mr. Rainey is quoted as saying in this letter to Mrs. Ellwood B. Spear:

The organization which maintained a lobby here in Washington ought to be held up to the contempt of patriotic citizens of the United States. Although I am a Democratic member of the committee which prepares the revenue bills, I did the unusual thing from a standpoint of a Democratic supporter of the measures which come from the committee, and joined with Representative Longworth in his attempt to amend the bill, which failed on account of the efforts of the jewelers' lobby.

Mr. OLDFIELD. It seems to me that the place for the jewelers' lobby to work would be with Mr. Baruch or the War Industries Board. It seems to me that they would lobby with Mr. Baruch and the War Industries Board in regard to platinum. It seems to me that they have gotten by with it, whether right or wrong.

Mr. MOORE. Mr. Rainey may be entirely right, but I think he is a little overzealous sometimes. I make that statement in fairness to the people I represent.

Mr. RAINEY. I can not be overzealous in the defense of the country at the present time.

Mr. MOORE. Is Mrs. Spear the head of the Woman's National League for the Conservation of Platinum?

Mr. HERTY. I understand so.

Mr. MOORE. She and her organization work in cooperation with the American Chemical Society, do they not?

Mr. HERTY. I do not know what you mean by cooperation. We are very sympathetic with her intentions.

Mr. MOORE. You work with her along sympathetic lines?

Mr. HERTY. Yes, sir; entirely so.

Mr. MOORE. You have denied that an appropriation of \$2,500 or any other sum was made by the American Chemical Society for the purpose of encouraging those women in sending out patriotic literature on the subject of platinum?

Mr. HERTY. Yes, sir; I did.

Mr. MOORE. How do you account for that statement, because the gentlemen who were here yesterday, when I interrogated them about it, stated that they had information that \$2,500 had been appropriated in order that these women might go on with this work of discouraging the use of platinum?

Mr. HERTY. Their information was altogether faulty. I was responsible for the appropriation of that amount, which was to be used in bringing the American public and the working chemists closer together by means of popular articles in the daily press. I know that not one cent of that money has gone to the work of those ladies. That information is altogether false.

Mr. MOORE. You deny it altogether.

Mr. HERTY. Yes, sir, I deny it absolutely; but remember that I say also that I think it is a shame that some of it has not gone to them. I would like to put that statement in the record, because they have done the most patriotic piece of work of any set of people.

Mr. MOORE. You would not say that that does not show animus?

Mr. HERTY. It shows the spirit in which we have gone about it.

Mr. MOORE. On the front page of the Journal of Industrial and Engineering Chemistry, dated May 1, 1918, I read:

All communications should be sent to the Journal of Industrial and Engineering Chemistry. Subscriptions and claims for lost copies should be referred to Charles L. Parsons, box 505, Washington, D. C.

I will ask you who Mr. Parsons is?

Mr. HERTY. He is the secretary of the American Chemical Society.

Mr. MOORE. He is the secretary of the American Chemical Society, which is opposing the jewelers on this question of the use of platinum in jewelry?

Mr. HERTY. He is opposing likewise the photographers or any other user of platinum, you will find in that resolution.

Mr. MOORE. Dr. Parsons—he is a doctor, I assume.

Mr. HERTY. Yes, sir.

Mr. MOORE. Dr. Parsons has his correspondence addressed to box 505, Washington, D. C. Is that box the box of the American Chemical Society?

Mr. HERTY. The American Chemical Society.

Mr. MOORE. Is Dr. Parsons connected with the Bureau of Mines?

Mr. HERTY. He is chief chemist of the Bureau of Mines.

Mr. MOORE. Does he receive a salary from the Government?

Mr. HERTY. He does.

Mr. MOORE. Do you know what his salary is? It is a matter of record.

Mr. HERTY. I could not answer.

Mr. MOORE. Is it \$3,500 a year?

Mr. HERTY. No, sir; it is not. At least, his salary from the American Chemical Society is \$3,500, or not to exceed \$3,500. It is on a commission basis, not to exceed \$3,500.

Mr. MOORE. At any rate, Dr. Parsons is the chief chemist of the Bureau of Mines under the direction of Mr. Manning, and is an employee of the Government of the United States?

Mr. HERTY. Yes, sir.

Mr. MOORE. And still retains his position as secretary of the American Chemical Society and is one of the editors of the Journal of Industrial and Engineering Chemistry?

Mr. HERTY. Not one of the editors; no.

Mr. MOORE. He has some connection with it?

Mr. HERTY. He is a director of the American Chemical Society. Through being its secretary he is ex officio a director.

Mr. MOORE. What sort of checks does he receive in box 505 and for what purpose are those checks sent to him?

Mr. HERTY. Dues in the American Chemical Society.

Mr. MOORE. Are they subscriptions?

Mr. HERTY. And subscriptions to its Journal.

Mr. MOORE. Does he receive any checks or subscriptions for the purpose of pushing this propaganda?

Mr. HERTY. No, sir; the American Chemical Society has spent simply its money out of its normal income. It has never received any outside money for any propaganda at all and never sought any.

Mr. MOORE. Is he associated with the society of which Mrs. Elwood B. Spear is chairman, or does he collect any money for that purpose?

Mr. HERTY. Not that I have ever heard of, and I feel sure he has not, because they have never had any money.

Mr. MOORE. But the fact remains that Dr. Parsons, an official of the Government and a director of the Journal of Industrial and Engineering Chemistry, of which you are the editor, is engaged with you in the work of urging that the sale of platinum by the jewelers be discouraged at this time?

Mr. HERTY. As all other members of the American Chemical Society stand committed.

Mr. MOORE. Do you know whether Dr. Parsons was the author of the press notice about which you heard yesterday, dated June 16, which was sent out for publication in the Sunday papers of June 16?

Mr. HERTY. I have a copy of that in my office which was sent to me, but I do not know anything about who wrote the article.

Mr. MOORE. Who sent it to you, doctor?

Mr. HERTY. I do not remember, sir. My secretary opens all my mail and puts it on my desk.

Mr. MOORE. Does the Bureau of Mines have a press agent?

Mr. HERTY. I know nothing about it.

Mr. MOORE. Does the American Chemical Society have one?

Mr. HERTY. It has a press and publicity committee.

Mr. MOORE. Did that matter emanate from the press and publicity committee of the American Chemical Society?

Mr. HERTY. No, sir; it did not. I have a copy of all of the sheets that they sent out. That is in an office right near me.

Mr. MOORE. Have you any means of ascertaining who sent out that press notice?

Mr. HERTY. I think to ask Dr. Parsons would be the easiest way. Summon him up here and he would tell you in a moment. He is very active in the campaign and very glad to be in the campaign, I know from his convictions, because we are all agreed on this point, and I would suggest that Dr. Parsons be asked to appear and answer that question.

Mr. MOORE. I would like to have him appear. While I am not the chairman of the committee, I would be glad and would suggest that he appear.

Mr. HERTY. I am very sure he would be glad to come before the committee and answer any questions.

Mr. MOORE. But I want to make it clear, since Mr. Rainey made such a vigorous assault upon the jewelers of the country, not only in his speech, but in his cross examination yesterday, because they sought to defend their business; I want to make it very clear, through you, that an official of the Government of the United States who is connected with an independent organization and cooperating with it is responsible for a propaganda and is actually at work lobbying on his side of the question.

Mr. RAINEY. I want to say that I hope you will make it very clear; because I can not think of anything more commendable for an official of this Government to do than to try to keep platinum from going into jewelry at the present time.

Mr. MOORE. Well, I know that is the gentleman's position.

Mr. HERTY. In order that the Government may have it, Mr. Moore.

Mr. MOORE. I am submitting to the judgment of fair men that if one has a right to assail a man in his business, and I will concede that right so far as he keeps within the law, it is wholly within the right of the man assailed to defend himself. That is the very principle of justice in the United States, and this situation is aggravated somewhat from the fact that officers of the Government of the United States associated with independent organizations evidently have

banded themselves together, on the ground that it is patriotic to do so, to disturb existing business conditions.

Mr. RAINEY. Do you question their patriotism?

Mr. MOORE. When business men come before this committee, Mr. Rainey, as they did yesterday, and say that they have given up what has been asked of them and that they are willing to give up everything that will be asked of them, I say it is not unreasonable that those men should say: "If you desire revenue from us, then give us an opportunity to dispose of at least that which is still in our hands and in our stock, which the Government will not take from us."

Mr. RAINEY. I am wondering whether you think revenue of the Government is more important now than platinum, which is a basic war metal?

Mr. MOORE. I agree with you fully as to the necessity for furthering this war and hastening it, but I also call to your attention, and will be glad to have it go into the record, that it was stated yesterday and confirmed by Dr. Herty, of the American Chemical Society, to-day, that some one in the Government blundered in not obtaining platinum when platinum could be had, and that this matter of—

Mr. HERTY (interposing). No; my statement was that some one blundered in issuing the first commandeering order.

Mr. MOORE. You admitted that.

Mr. HERTY. That is my statement there.

Mr. MOORE. In fact, you charged that in the article here.

Mr. HERTY. That some one blundered in the writing of the first commandeering order.

Mr. MOORE. The second commandeering order did not cover the situation.

Mr. RAINEY. I guess everybody knows that.

Mr. MOORE. While you dispute it, I observe that you quote here in your article of June from some jewelry concern that this 25 per cent of the total reserve stock, however, is enough to fill all war needs for five years, even under a much larger war program than outlined above.

Mr. HERTY. Will you read the sentence that follows that?

Mr. MOORE. And, of course, you dispute that?

Mr. HERTY. Will you read the next sentence? If not, I will read it myself.

Mr. MOORE. I prefer that you should read it, Doctor.

Mr. HERTY. I will read it. I would like to put it in the record. That is a statement made by a jeweler in Philadelphia.

Mr. MOORE. The company quoted there is a very reputable one. Read just as much of it as you care to read.

Mr. HERTY. I would like to read this sentence:

The effort to create the impression that war needs of platinum for five years are provided for in the present reserves is so seditious in character that it deserves the serious consideration of Government officials.

Mr. MOORE. And yet, Doctor, that is your comment, and you stated a moment ago you did not know anything about the world's supply of platinum and had no means of knowing about it.

Mr. HERTY. No, sir; but I say when the President—

Mr. MOORE (interposing). And yet you stated in this same article that some one blundered in the first commandeering order, indicating

that you did know something about it, and you go on to seriously criticize the second commandeering order.

Mr. HERTY. No, Mr. Moore, let us get this straight. I said some one blundered in the first commandeering order, and therefore it was necessary to issue a second one, and that was proof that there was a blunder, because it was necessary to issue a second one, and include the manufacture of jewelry. That was my position.

Mr. MOORE. But in the answer you have just read which I asked you to read, you attribute it to those who make that statement, and you say that is was not only absurd in itself—I do not know just what part you did read.

Mr. HERTY. I read the last sentence.

Mr. MOORE. Yes; but you said it presented a situation so seditious in character that it deserved the serious consideration of the Government officials. Now you will pardon me for saying there that you impute to these 35,000 business men—

Mr. HERTY (interposing). No, sir; that is confined to the statement of one man.

Mr. MOORE (continuing). Intent to be unpatriotic. The word "seditious" is about as serious a word as you can use, and it is used so flippantly in these times where anyone has a grievance against some one else that I question whether you considered the serious import of it.

Mr. HERTY. I considered it extremely carefully and discussed it in my office with my secretary. I said, "This has got to be strong and as strong as we can make it, because who can tell what this country has got to go through in the next five years, and to try to assure the people that there is enough platinum in reserve for five years when we are engaged in a war with Germany is putting the people in a frame of mind which is dangerous for the people."

Mr. MOORE. And yet at the same time, quoting an article which I can not lay my hands on right now; but one to which Mr. Rainey and Mr. Longworth have referred several times, we had assurance from the Secretary of Commerce, who is presumed to know something about commercial matters in the United States, that the action of the jewelers throughout has been intensely patriotic, and yet we have your suggestion here that their action has been seditious. I think it is a very serious matter.

Mr. HERTY. That was a year and two months before that editorial was written.

Mr. LONGWORTH. Mr. Rothschild said he did not agree with what the Secretary had said, and that conditions had absolutely changed and absolutely repudiated that as expressing existing conditions.

Mr. RAINEY. And admitted that both he and the Secretary were seriously wrong a year ago.

Mr. MOORE. In view of your statement and insistence that their action has been unpatriotic, I will just read at random, following a reference to Congressman Longworth, from an article from the Jewelers' Circular of May 30, 1917, which is as follows, and is attributed to one of the jewelers whose opinion may be as good as that of any other man:

The selfish chemical interests which had started this attack on our industry with the avowed and shameless purpose of bearing the price of platinum in order to get it cheaper now began a misleading press campaign which the platinum committee met

from day to day by press corrections and general statements of fact to the press and to jewelers. This campaign culminated in an attempt by Congressman Longworth to place a prohibitive war tax of 250 per cent on platinum jewelry, which the platinum committee was happily in a position to frustrate by the timely presentation of a letter from the Secretary of Commerce, which was read on the floor of the House of Representatives, defeating this effort to tax platinum jewelry out of existence.

So that you can "call the cat black"—any one can do that—and accusations may be made on either side, and this matter has resolved itself into a question of fact between the jewelers and the chemical interests.

Mr. LONGWORTH. If it has resolved itself into a question of fact between the chemical and the jewelry interests, which is more essential now to this country in the prosecution of the war, jewelry or chemistry?

Mr. HERTY. I do not think any one can question the fact that the whole chemical industry is more essential.

Mr. LONGWORTH. If there is one more useless thing in time of war than jewelry I do not know what it is, unless it is artificial flowers. Possibly that is less essential to the winning of the war.

Mr. RAINEY. And aigrettes.

Mr. LONGWORTH. Yes; and the jewelers made the same fight against the abolition of aigrettes that they are making now against the sale of platinum.

Mr. RAINEY. Certainly.

Mr. LONGWORTH. And Congress took the bull by the horns and provided that they should not sell aigrettes, although they said they would be ruined if we destroyed that industry.

Mr. MOORE. Doctor, let me ask you this question, and then I will conclude. Giving you full credit for valuable services, brain, and talent rendered to the country in this time of its need, may I ask you just how we may derive any revenue through the auspices of the American Chemical Society for the purpose of prosecuting the war? That is a very serious question and bears right on what Mr. Longworth and Mr. Rainey have been contending for—

Mr. HERTY. Now, Mr. Moore and Mr. Chairman, I want to sum up what I have to say here.

Mr. MOORE (continuing). Because Dr. Parsons is connected with the Government and is drawing a salary, and we have got to find money to pay him.

Mr. HERTY. I can not speak at all about the question of taxation of jewelry. I do not know anything about the jewelry business outside of the question of platinum, which is used in it; but this question of platinum I do not think ought to come within the purview of this committee at all. There ought not to be any platinum available for taxation.

Mr. MOORE. I think we can agree with you on that up to the point of getting revenue, which is the one thing we are interested in.

Mr. LONGWORTH. I do not agree with that at all. I think it is within the purview of the committee to tax it out of existence in the sale of jewelry.

Mr. MOORE. Not necessarily in a war-revenue measure.

Mr. LONGWORTH. Yes; in a war-revenue measure.

Mr. MOORE. Then I will follow that up and ask about that.

Mr. HERTY. Let me answer your question about revenue.

Mr. MOORE. What can we get out of the American Chemical Society or its members in the way of revenue for prosecuting this war? We have got to get \$2 next year for every \$1 we got last year.

Mr. HERTY. Out of the American Chemical Society?

Mr. MOORE. Yes.

Mr. HERTY. Whatever is taxable. I do not know whether it has any assets except its publications. We pay dues.

Mr. MOORE. Now then, if you do not know how much we can get out of the American Chemical Society and its members except in income taxes—

Mr. HERTY. The treasurer of the society can answer that question. I do not know whether he pays taxes or not. I have never heard of it.

Mr. MOORE. I think that is a fair question, because we are trying to further the war and hasten the winning of the war, and we must have the money to win it. If you can not make any suggestions as to how we can get it out of the American Chemical Society, you can make suggestions as to how we can get it out of the jewelers, can you not?

Mr. HERTY. Put taxes on the platinum jewelry.

Mr. MOORE. We ought to tax their incomes, ought we not?

Mr. HERTY. The jewelers' incomes?

Mr. MOORE. Yes.

Mr. HERTY. You tax mine, and I suppose you ought to tax theirs.

Mr. MOORE. Of course we do, but it is said that a chemist is somewhat like a lawyer, although I do not quite believe it, and that his income is not as high as a jeweler's.

Mr. HERTY. I can not say about the incomes of jewelers, but I know about those of the chemists being low.

Mr. MOORE. As a matter of fact, in order to get platinum or any other article for this war, we have got to tax somebody and tax them hard.

Mr. HERTY. You have got to get the platinum, too.

Mr. MOORE. And we have got to tax jewelers, if we tax anybody, because they are engaged in a business which is supposed to handle a luxury, and we tax their incomes, we put supertaxes on their incomes if their incomes are sufficiently large, and we have got to tax their excess profits and their corporation profits, if they are incorporated, and now if we take away that which they say is important to-day for the continuation of their business, to wit, such platinum as they already have worked up into jewelry, are we going to increase the taxes or reduce the taxes for the purpose of carrying on this war?

Mr. HERTY. If you take away the platinum?

Mr. LONGWORTH. You will recall one man said here yesterday that of a stock of \$500,000 of jewelry, not to exceed \$18,000 was platinum.

Mr. MOORE. I do not recall that. One said only \$50,000.

Mr. LONGWORTH. And one reduced it to \$18,000.

Mr. HERTY. Jewelry made of platinum is simply one line of their business.

Mr. MOORE. But if we put them out of that line of business we get no revenue; is not that the fact?

Mr. HERTY. Yes; if you tax the platinum out of their hands.

Mr. MOORE. Now, since the manufactured article is already in hand and the Government does not want it and will not take it and has not commandeered it—

Mr. HERTY (interposing). Mr. Chairman, the War Industries Board says they want it.

Mr. MOORE. Are we going to tell them to lock it up or tell them to sell it so we can get something out of the profit in the way of the revenue which we need?

Mr. HERTY. You want my idea about it?

Mr. MOORE. Yes.

Mr. HERTY. I think whoever has got the authority for the Government ought to go to the jewelers and say, "Give us all of your platinum and we will make an equitable settlement for it," and take the platinum and have it in the vaults of the Treasury, accessible to the Government when the need comes.

Mr. MOORE. I believe you and the jewelers are thoroughly in accord on that question, and if the Government will say to them, "We will take all the platinum you have got," they will be entirely satisfied and that will relieve their situation, and the minute the Government does that we get some revenue out of it.

Mr. HERTY. I think the Government should take every step that has not already been taken in view of the Russian situation.

Mr. MOORE. I think you will concede that if we destroy their business we get no revenue. If we let them sell their stock on hand and do not undermine them by starting the women to call everybody pro-German who wears platinum jewelry, we will get some revenue and thus be able to prosecute the war.

Mr. COLLIER. You are not advocating that the Government confiscate the jewelry without paying them for it?

Mr. HERTY. No, sir; not at all.

Mr. MOORE. Then, you and the jewelers agree.

Mr. HERTY. It is simply an adjustment of what is a fair price for the Government to pay.

Mr. MOORE. They agree to that.

Mr. HERTY. Let me show you why the campaign of this Chemical Society is important to this country. I have taken a great deal of time here, but this is vital. It was stated by Mr. Steele here on this floor yesterday that when war broke out between France and Germany that the manufactured platinum in France was sent into Switzerland and from there sent into Germany. You remember that. There is a lot of manufactured platinum in this country to-day, and what is to hinder some pro-German securing that for the use of Germany similar to the use made of the New York Mail? What is to hinder that?

Mr. MOORE. All of that money it now appears came from a source which was intensely pro-American. It becomes more interesting. That is worth while looking into before making any direct charge.

Mr. HERTY. I am simply giving you what I saw in the paper in New York.

Mr. MOORE. Do you know whether the United States Government will take this scrap platinum at the present time?

Mr. HERTY. Yes, sir. If provision is made, I think there are three ways in which it could be disposed of.

Mr. MOORE. Will it take the manufactured platinum?

Mr. HERTY. That point has not been taken up yet.

Mr. MOORE. Would not that solve the problem?

Mr. HERTY. I think it would. I think that Mr. Longworth's amendment is good.

Mr. LONGWORTH. The jewelers are conducting a propaganda to the effect that the Government not only will not buy it, but will not take it as a gift.

Mr. MOORE. Yesterday the statement was made that the mints would not take that material just as they take old gold, that the mints will not take it.

Mr. HERTY. Yes; the mints will take it.

Mr. HULL. In view of what has occurred in the platinum situation pro and con, if the Government thinks it is advisable to take action with respect to the manufactured platinum in the country, whether in the hands of individuals or in the hands of merchants or manufacturers, would not the most feasible course be for the Government simply to direct every holder of platinum to turn it in, and would not that be much better than discussing the question of taxing it or reaching it for war purposes in any other way?

Mr. HERTY. I think that the situation would be met if the Government would take over the stock that the jewelers carry.

Mr. HULL. And at whatever expense might be necessary.

Mr. HERTY. Yes, sir.

Mr. HULL. Pay for it and put it away?

Mr. HERTY. Yes. I do not think that it would be necessary to call upon private individuals. I think if the Government made it known each loyal citizen would hold on to the platinum without expense to the Government until it was needed.

Mr. HULL. If it is advisable for the Government to put its hands on the platinum in this country it could simply take action and pay for it, and that would be the end of it.

Mr. HERTY. Yes, sir. I think that it should take all the stock from the jewelers and pay for it on an equitable basis.

Mr. HULL. I agree with you that the Government should take every precaution to obtain whatever amount of platinum may be deemed reasonable and necessary now and in the future and take it in whatever form it may find it or in whoever's hands it may find it.

Mr. OLDFIELD. As I understand, platinum is used in sulphuric acid and nitric acid?

Mr. HERTY. Yes, sir.

Mr. OLDFIELD. Is there any other war use for platinum besides that?

Mr. HERTY. Yes, sir.

Mr. OLDFIELD. What are the uses?

Mr. HERTY. The airplanes, every gas engine, and the X-rays.

Mr. OLDFIELD. Is it mined out of the ground like gold and silver?

Mr. HERTY. It is like placer mining; it occurs in the sand.

Mr. OLDFIELD. Where?

Mr. HERTY. This bulletin issued by the Geological Survey gives all of that information. Do you want that in the record?

Mr. OLDFIELD. Yes, sir. Where in this country, in Colorado and California?

Mr. HERTY. Yes, sir. In the United States, in Alaska, California, Nevada, Oregon, Washington, and Wyoming, but the total amount

in those States, as I understand, is less than 1 per cent of the normal consumption.

Mr. OLDFIELD. The principal place from which it comes is Russia?

Mr. HERTY. Yes, sir.

Mr. LONGWORTH. Yesterday Mr. Steele testified that about 1900 platinum first came into general use. Since then, up to the time of the war, what effect do you think the use of platinum by jewelers has had upon the price of platinum?

Mr. HERTY. I think it has undoubtedly raised the price, because it was not used in jewelry to any extent up to that time. A good deal is used now.

Mr. LONGWORTH. At the time of the war the price of platinum was about three times as high as it was in 1900, before the demand for war purposes. Do you not think it is fair to say that the use of platinum in jewelry is what caused the rise in price?

Mr. HERTY. Undoubtedly; it has been the main factor, but not the only factor.

Mr. LONGWORTH. It would be a good thing for this country if platinum was cheaper?

Mr. HERTY. Undoubtedly.

Mr. LONGWORTH. Has it been an unpatriotic thing for the chemists to bear the price?

Mr. HERTY. No. All scientific and industrial progress which is based upon research in this country depends on platinum.

Mr. LONGWORTH. It is a fact that none of the explosives can be made without platinum?

Mr. HERTY. I would not say that you could not make old black powder.

Mr. LONGWORTH. I mean modern high explosives.

Mr. HERTY. Yes; they all depend on platinum.

Mr. LONGWORTH. And it is absolutely essential?

Mr. HERTY. Yes, sir.

Mr. RAINEY. The platinum supply of Columbia has been made now a Government monopoly?

Mr. HERTY. I have seen that in the public press.

Mr. RAINEY. Last week.

Mr. HERTY. I did not know that.

Mr. RAINEY. In the last two years, since the Russian supply has been shut off, we have been getting some supplies from Colombia, but on account of the fact that we have diplomatic difficulties with Colombia that supply may not come in the future. In furtherance of your campaign for platinum I want to call your attention to some analyses which I have been making here of our receipts of platinum for the last two years, 1916 and 1917, omitting the Colombian supply, which, of course, is of the unmanufactured platinum. Leaving out the Colombian supply, in the year 1916 we received in the United States from all sources 16,462 ounces of unmanufactured crude platinum. It is just as important for our allies to have platinum as it is for us. In 1916, although we were not at war, our allies were purchasing their explosives in this country, and in 1916 of crude platinum we took from England and France 15,282 ounces in order to manufacture the explosives which we were sending and other war material, which left us with only 1,180 ounces that we got from all

other sources. In 1915 both England and France had stopped the manufacture of platinum jewelry entirely and were conserving platinum. In that year we secured of the manufactured platinum ingots and bars which, I presume, is the refined platinum, 12,248 ounces.

We got none of that from Colombia, but we did take from England and France 11,482 ounces, leaving only 766 ounces that we got from all other sources. We were at war in 1917 ourselves, and leaving out the Colombian supply of crude platinum we only received 3,001 ounces, of which we took from our allies, England and France, 2,236 ounces—at that time both of them conserving platinum and had stopped the manufacture of platinum jewelry—leaving only 765 ounces that we got from all other sources. Of ingots and refined platinum in 1917 we brought in altogether 4,170 ounces. Of course, none of that was from Colombia. Three thousand two hundred and seventy-five ounces came from England and France, and from all other sources we only got 895 ounces. In other words, with the Colombian supply shut off, if we had not succeeded in getting platinum from our allies during these two years that they were conserving platinum we would not have had any platinum to carry on this war, which leads us to the conclusion that in carrying on this war, in so far as the manufacture of war material is concerned, that England and France have been wise in their policy of conserving platinum and that we are not entitled to any of the credit for any kind of judgment or wisdom or foresight in the matter of conserving platinum.

Judge Hull's proposition is excellent if this Government would do it, but up to this time the Government has not done it and this Government will not do it. So far as the efforts of the platinum users, the jewelry users of this country are concerned, they have not assisted any in creating a sentiment which would lead to the necessary supply, but it is such patriotic organizations as yours that are creating the sentiment and carrying on a patriotic propaganda which may result in securing that which the jewelers have not contributed to.

Something was said yesterday by the jewelers about the use of white gold. They said that white gold could not be used now in the manufacture of jewelry as it was used before the war, that the white metal was not of the same quality because it did not have palladium mixed in it now, that palladium had been commandeered, and that therefore they stood for the proposition of marking "W" on the white metal and discouraging its use. Palladium is not used in the manufacture of war materials, is it?

Mr. HERTY. Not so far as I know; no.

Mr. RAINEY. You are right about that. I read from this latest pamphlet on the subject of platinum.

Palladium is employed chiefly in making palladium-gold alloys, which are now extensively used in dentistry and to some extent in the jewelry and chemical industries. Palladium may be considered valuable as a war metal to the extent that it replaces platinum in dental and jewelry work, for to that extent its employment releases platinum for military uses.

That is the reason for commandeering palladium and this license order.

Something was said yesterday about platinum points and Mr. Moore tried to minimize the importance of platinum as a war material by insisting that 1 ounce of platinum would furnish ignition points for 100 automobiles.

Mr. MOORE. I agreed with you as to the importance of platinum. It was only to show that the demand might not be as great as indicated.

Mr. RAINEY. You can not show it. That is what they call electrical platinum.

Mr. HERTY. Yes, sir.

Mr. RAINEY. Do you know how many ounces of Colombian platinum it takes to make an ounce of electrical platinum?

Mr. HERTY. No, sir; I do not know.

Mr. RAINEY. Colombian platinum is, of course, crude platinum. It takes 126 ounces of Colombian platinum to make 1 ounce of electrical platinum. In other words, when you are talking about the importation of platinum, which is inconsiderable except through our allies, if the Colombian supply should be cut off, you are talking of crude platinum, and when you speak of 1 ounce of platinum electrified furnishing ignition points for 100 automobiles, you mean 126 ounces of crude platinum.

Mr. HERTY. May I conclude my statement by putting one thing in the record?

The CHAIRMAN. Yes, sir; certainly.

Mr. HERTY. I want to say my conviction on this matter is that any chemist who sells his platinum to anyone other than the Government would be just as unpatriotic as any jeweler.

#### STATEMENT OF DR. LOUIS J. WEINSTEIN, COLUMBIA UNIVERSITY, NEW YORK, N. Y.

The CHAIRMAN. State whom you represent.

Dr. WEINSTEIN. Mr. Longworth, will you ask me those questions?

The CHAIRMAN. You can make such statements as you desire.

Mr. LONGWORTH. I went over with Mr. Weinstein the matters that he wanted to talk about.

Mr. MOORE. Do you appear for yourself or for some one else?

Dr. WEINSTEIN. I appear for myself in a concrete way, rather than on behalf of anyone else. It is my chief interest and desire to aid in this matter.

Mr. MOORE. What is your business?

Dr. WEINSTEIN. I am director of the department of physics and metallurgy of Columbia University, dental department.

Mr. MOORE. You are not connected with the Government in any way?

Dr. WEINSTEIN. No, sir; except that I have been assisting in an advisory way Mr. Conner, of the War Industries Board.

The CHAIRMAN. All right, Doctor, you may proceed.

Dr. WEINSTEIN. I have a number of questions here, and I would prefer for Mr. Longworth to ask them.

Mr. LONGWORTH. In the first place, platinum is used in dental chemistry, is it not?

Dr. WEINSTEIN. Yes, sir.

Mr. LONGWORTH. To what extent?

Dr. WEINSTEIN. At one time it was used to the extent of probably 35,000 ounces, but in recent years it has been gradually reduced. It is now probably 20,000 ounces.

Mr. LONGWORTH. For what purpose is it used in dentistry?

Dr. WEINSTEIN. A good deal of it is used for pins for teeth, and a good deal of it is used for plates, bridge work, crowns, and dental restorations.

Mr. LONGWORTH. How is platinum obtained now by dentists?

Dr. WEINSTEIN. Either by a permit issued by the War Industries Board or by purchasing it in the open market. It is not commandeered. It is not commandeered so far as the dentists at large are concerned.

Mr. LONGWORTH. So you purchase either from the Government—

Dr. WEINSTEIN (interposing). Either from the refiner under the control of the Government, or from dental dealers throughout the country.

Mr. LONGWORTH. What price are you paying for it nowadays?

Dr. WEINSTEIN. If purchased from the Government, you pay \$108 for platinum ready for dental use. If you purchase from dealers, it depends upon how they feel that morning. If they feel like charging you \$130 for it, you pay it, or if they feel like charging you \$140 for it, you pay it if you want it.

Mr. LONGWORTH. How does that compare with the price of platinum scrap that is bought by small dealers?

Dr. WEINSTEIN. I have heard so much said about platinum scrap that I must say something to define what platinum scrap is. Platinum scrap is platinum cut up in pieces; it is platinum that is cut up in small pieces, and it can be readily remelted and worked up at a cost of probably \$2 per ounce. So that platinum scrap is really just as good as the refined platinum.

Mr. LONGWORTH. They are the sweepings?

Dr. WEINSTEIN. No, sir; not sweepings, but cuttings.

Mr. LONGWORTH. I notice here in the Jewelers' Circular-Weekly of June 12, 1918, an advertisement by Baker & Co. in which they state that they will make full returns for the platinum contained in sweepings and polishings, as well as in filings, scrap, and other waste.

Dr. WEINSTEIN. Yes, sir; you see that they define between scrap and polishings. The polishings have a certain percentage of dirt, whereas the scrap platinum is practically pure platinum, except as to such impurities as might be gathered in the process of handling.

Mr. LONGWORTH. Can anyone buy scrap platinum? They do not have to have a permit to buy that, do they?

Dr. WEINSTEIN. There is no prohibition on the part of anybody buying platinum to-day. They can buy it in any form.

Mr. LONGWORTH. I understood you to say that you bought some under a permit.

Dr. WEINSTEIN. There is no permission. I will qualify that statement. Theoretically you must have it. If you want to obtain platinum in a legitimate way, you must have the approval of the War Industries Board.

Mr. LONGWORTH. What is the price at which it is purchased?

Dr. WEINSTEIN. At \$108 per ounce if the sale is approved by the War Industries Board.

Mr. LONGWORTH. I am speaking of scrap.

Dr. WEINSTEIN. As for the buyer of scrap, the reputable buyers who are commandeered by the War Industries Board allow \$105 per ounce for the platinum content and make a charge for the labor.

Mr. LONGWORTH. Do the jewelers buy scrap platinum?

Dr. WEINSTEIN. To my utmost regret, I must state that during the last few months the jewelers have been using the utmost efforts to buy the platinum held by dentists, scrap or otherwise.

Mr. LONGWORTH. Do they buy platinum that is held by the dentists?

Dr. WEINSTEIN. Yes, sir. I will not say that the commandeered jewelers have done it, but if there are 35,000 jewelers in this country and 1,400 of them have been commandeered, how about the 33,600 who are not commandeered? Surely they have not been asleep at the switch.

Mr. LONGWORTH. Is manufactured platinum purchasable now?

Dr. WEINSTEIN. Small quantities in the open market. There is no difficulty whatever.

Mr. LONGWORTH. Just what is manufactured platinum?

Dr. WEINSTEIN. Just what it is is exactly what the holder chooses to interpret it. Crude platinum is platinum that is found in the mines in the form of grains, mixed with sand, dirt, and other less valuable metals. That is crude platinum. When it is brought into a refinery it is purified and poured into ingots. It is melted and poured into ingots. It is made into the form of sheet or wire. It is either in the form of sheet or wire.

Mr. LONGWORTH. There is no difference between platinum for war purposes and platinum for jewelry work?

Dr. WEINSTEIN. Yes, sir.

Mr. LONGWORTH. I mean in the platinum itself.

Dr. WEINSTEIN. The jewelers' settings made of platinum containing a percentage of iridium to harden it. It contains, say, 10 per cent, or possibly 14 per cent, and in some instances 20 per cent of iridium.

Mr. LONGWORTH. You said a moment ago that you regretted that the jewelers were buying platinum from the dentists, and that the dentists were selling it to the jewelers.

Dr. WEINSTEIN. Numbers of them, to my regret. We have a number of unpatriotic dentists.

Mr. RAINEY. Those dentists are released from the control of the War Industries Board, and they buy platinum and turn it over to the jewelers?

Dr. WEINSTEIN. No, sir; I do not believe that. The average dentist in this country has platinum in some form or other in his possession, and it is very hard when the jeweler comes along, or rather the peddler, who is the intermediary, comes along and offers something like \$160 per ounce for platinum which cost the dentist at one time \$60 or \$80 per ounce, for him to resist. It takes a man of high ideals to resist the temptation.

Mr. LONGWORTH. Do the jewelers pay as much as \$160 per ounce?

Dr. WEINSTEIN. Yes, sir; and I have heard of their paying \$200 an ounce.

Mr. LONGWORTH. It was testified that the jewelers were not using much platinum nowadays.

Dr. WEINSTEIN. If there are 1,400 of them commandeered, there are 33,600 who are not.

Mr. LONGWORTH. That is the question I was about to ask you. What proportion of the jewelers have not yet been commandeered?

Dr. WEINSTEIN. I understand recently that there were 900 commandeered, but this morning I understand that there are 1,400.

Mr. LONGWORTH. How many jewelers are there?

Dr. WEINSTEIN. According to the statements made yesterday, there are 35,000 jewelers, not including manufacturing jewelers and wholesalers.

Mr. LONGWORTH. Do you mean to say that an enormous proportion of them have not been commandeered at all, and that they are in the market buying platinum to-day?

Dr. WEINSTEIN. I will state it this way: According to the figures given yesterday, there are 35,000 retail jewelers and 4,000 wholesalers and manufacturers. You have 3,600 manufacturing jewelers who are not commandeered, and it is perfectly legal for them to purchase platinum anywhere they can get it.

Mr. LONGWORTH. In other words, two-thirds of the jewelers to-day—

Dr. WEINSTEIN (interposing). Of the manufacturing jewelers.

Mr. LONGWORTH (continuing). Are buying, using, and manufacturing it, because they are not commandeered.

Dr. WEINSTEIN. Presumably.

Mr. LONGWORTH. That is a very different situation from the one that was brought out.

Dr. WEINSTEIN. I am only taking the figures that the gentlemen quoted here yesterday.

Mr. MOORE. Then, is it not a fact that the Government has actually encouraged this kind of speculation by the manner in which it has commandeered the product?

Dr. WEINSTEIN. I should hate to admit it, but I am afraid that it has worked that way.

Mr. MOORE. Is it not a fact that the Government has commandeered it only in a few instances, leaving a large proportion of the jewelers able to do with it as they pleased? Has not that encouraged speculation in platinum?

Dr. WEINSTEIN. You do not—

Mr. MOORE (interposing). Is not that the fact?

Dr. WEINSTEIN. I will answer it in another way. I have been very fortunate to be in contact with Mr. Conner and some other gentlemen on the War Industries Board during this trying period, and I want to say that those gentlemen have done the best that it was humanly possible to do, in view of the restrictions under which they worked. They can not commandeer broadcast, but they have got to get individual orders from the War Department for every commandeering order that they issue. They must have a specific case.

Mr. MOORE. Then, you must take issue with Dr. Herty, who was here speaking for the American Chemical Society, because his idea was that all of it should be taken.

Dr. WEINSTEIN. I have not come to that.

Mr. MOORE. The argument of the American Chemical Society is that no platinum should be sold as jewelry.

Dr. WEINSTEIN. I subscribe to that.

Mr. MOORE. And yet the Government has commandeered in only 1,400 instances, if your statement is correct, and has left uncommandeered substantially 33,000?

Mr. LONGWORTH. He was speaking only of the manufacturing jewelers.

Mr. MOORE. He said that they left 33,600 free to buy and sell platinum, scrap or otherwise, as they saw fit.

Dr. WEINSTEIN. I do not believe they could do otherwise. They did not have the power.

Mr. MOORE. Then the market is open to speculators just the same?

Dr. WEINSTEIN. Yes, sir.

Mr. MOORE. Then—and I am using Dr. Herty's language again—does it not indicate that some one has blundered?

Dr. WEINSTEIN. I am afraid so.

Mr. HAWLEY. In the case of those dentists you mentioned a minute ago who sold their platinum, did they restock themselves with platinum obtained from those who were allowed to sell, and then resell it again, and thus continue an illicit trade in that article?

Dr. WEINSTEIN. I have no proof to that effect. At the same time, a man so unpatriotic as to work against the spirit of the order would be apt to do almost anything.

Mr. HAWLEY. How many dentists in the country do you suppose are doing that?

Dr. WEINSTEIN. I do not know; that is hard to tell. I know of instances here and there, or several of them.

Mr. HAWLEY. How many ounces of platinum would be used by the dentists in the course of a year?

Dr. WEINSTEIN. I should say at this time probably 20,000 ounces.

Mr. HAWLEY. Is there any other material that can be used in place of platinum by dentists so as to reduce that 20,000 ounces now used by them?

Dr. WEINSTEIN. That 20,000 ounces can be reduced very materially, and surprisingly so. I believe there are some questions on that subject.

Mr. LONGWORTH. Are there many dental alloys or anything that can be employed by dentists as a substitute for platinum?

Dr. WEINSTEIN. Dentists can use to advantage substitutes for platinum, which substitutes contain alloys of gold, platinum, palladium, and other baser metals. We can use substitutes in some instances as well as we can use the pure platinum, and in other instances we can use them better than we can use pure platinum, because they are more suitable for the purpose mechanically, physically, and chemically. That is a broad statement, but I make it with a full realization of what it means.

Mr. HAWLEY. Those substitutes do not corrode the mouth?

Dr. WEINSTEIN. No, sir; the average dentist who has just left the dental college has a rather vague knowledge of metallurgy, and he has the impression that iridio-platinum is about the only substance that does not dissolve in acids and does not discolor in the mouth, that it is infusible, and that it possesses numerous other virtues. Now, it is true that iridio-platinum possesses those virtues, but there are some disadvantages in the use of iridio-platinum. To start with, it is an ununiform metal, and it does not work as well mechanically as some alloys which are more constant, and it will not work as well under tools as some other metals. The jewelers know that they do get faulty iridio-platinum continuously that will not work well under their tools, and they must discard it and get other metals. A great many dentists use iridio-platinum or platinum because of a lack of knowledge of other suitable material. Picture to yourself a man

soldering at a temperature of 1,900° F. If he uses gold, it melts at 2,000°, and he is close to the burning point. If he uses platinum, that melts at 3,300°, but if he gets an alloy that melts at 2,300°, that gives him a margin of about 300°, and such an alloy would contain only about 10 per cent of platinum, and it is just as efficient in every way.

Mr. LONGWORTH. What is the attitude of the dental profession toward the conservation of platinum?

Dr. WEINSTEIN. The dental profession is one that will do as it is told. We will take our medicine. If it is a question of saving platinum for war purposes or a question of his getting it, there will be no question about it.

Mr. RAINEY. There is a plenty of substitutes for platinum that dentists can use during the war, is there not?

Dr. WEINSTEIN. The dentists can get along wonderfully well with alloys containing a comparatively small percentage of platinum in place of pure platinum.

Mr. LONGWORTH. How much of that 20,000 ounces now used by dentists could be dispensed with by them through the use of substitutes?

Dr. WEINSTEIN. I believe that with proper publicity coming from authoritative sources it could be cut down almost immediately to one-fourth of that amount without detriment to dentistry.

Mr. LONGWORTH. That would release at least 15,000 ounces a year for other purposes?

Dr. WEINSTEIN. Yes, sir.

Mr. HAWLEY. Are the dentists conducting any propaganda of their own among their customers to induce them to use in their teeth alloys in place of pure platinum, so as to release that amount for Government uses?

Dr. WEINSTEIN. Do you mean the dentists or dental manufacturers?

Mr. HAWLEY. The dentists.

Dr. WEINSTEIN. The dentists do not tell their patients what they will put in their mouths. That is not put up to the patient to decide, but it is up to the dentist to decide that.

Mr. HAWLEY. He does not consult with them about that?

Dr. WEINSTEIN. No, sir.

Mr. RAINEY. The patient takes his chances on that?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. When did they commence the use of platinum in dentistry?

Dr. WEINSTEIN. I should say about 60 years ago, or 80 years ago.

Mr. RAINEY. They did not discover platinum until about 1842, did they?

Dr. WEINSTEIN. Then they commenced about 60 years ago.

Mr. RAINEY. They commenced to use it in dentistry about the time they discovered it?

Dr. WEINSTEIN. They commenced to use it 60 or 65 years ago. They began manufacturing teeth about that time, and they used platinum pins.

Mr. RAINEY. Was that before they found out about using iridium to harden it?

Dr. WEINSTEIN. Yes, sir; most of the pins in the old teeth are found to be comparatively soft. The platinum contained a trace of iridium, which was not recognized at that time.

Mr. RAINEY. There are substitutes that they can use during the war?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. Now, speaking of commandeering orders, it is your opinion that the War Industries Board have done all that they could do?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. How are those commandeering orders issued?

Dr. WEINSTEIN. When John Jones decides that he wants to purchase platinum—

Mr. RAINEY (interposing). I am talking about the commandeering orders.

Dr. WEINSTEIN. I beg your pardon. They have not been issued against any individual dentists.

Mr. RAINEY. I am talking about jewelers or anybody else against whom commandeering orders are issued.

Dr. WEINSTEIN. Notice is sent by the War Industries Board to a particular individual specifying to him that his stock of platinum is now subject to the orders of the War Industries Board and instructing him to make reports, for which blanks are furnished.

Mr. RAINEY. Do they get authority for that from somebody higher up?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. That, I suppose, is merely a matter of form. They go to the Chief of Staff, do they not?

Dr. WEINSTEIN. Yes, and he signs them.

Mr. RAINEY. He simply signs them. He signs them when he is asked to do so?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. But he does not question it at all?

Dr. WEINSTEIN. I understand that they have difficulty in getting orders because of the volume of orders.

Mr. RAINEY. If you should have had written out a list or had a printed list of the 3,600 manufacturing jewelers and had taken that up to the Chief of Staff and asked for a commandeering order against them, could you have gotten it?

Dr. WEINSTEIN. I do not think so, personally.

Mr. RAINEY. Why not?

Dr. WEINSTEIN. I do not think they would permit that number.

Mr. RAINEY. Who would not permit it?

Dr. WEINSTEIN. The War Department.

Mr. RAINEY. The War Department does not have anything to do with it, except the Chief of Staff.

Dr. WEINSTEIN. Well, the Chief of Staff.

Mr. RAINEY. You do not think he would do it?

Dr. WEINSTEIN. It is my opinion, based upon what I have been told, that they have great difficulty in getting those orders signed. They could not get such a thing as a blanket commandeering order, but they must be issued in specific cases.

Mr. RAINEY. The objection to it is that 3,600 would be too many and would involve too much labor for the Chief of Staff.

Dr. WEINSTEIN. I do not know. I know there is difficulty.

Mr. RAINEY. Mr. Connor can not get these orders from the Chief of Staff?

Dr. WEINSTEIN. Mr. Connor told me that he had difficulty in getting those orders passed or approved.

Mr. RAINEY. Difficulty in getting them approved?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. Is that the reason why they did not commandeer all of those jewelers?

Dr. WEINSTEIN. I do not know.

Mr. RAINEY. That is very interesting. Apparently, somebody is at fault, and we want to find out who it is. Now, with reference to the releases: If a dentist wants to get a release for platinum and finds out who he wants to buy it from—

Dr. WEINSTEIN (interposing). He sends an order.

Mr. RAINEY. Then, that platinum dealer comes in and makes his sale to the dentist?

Dr. WEINSTEIN. The platinum dealer gets the blank form and sends it back to the dentist to sign.

Mr. RAINEY. Then he gets nominal permission from the Chief of Staff, or whoever the authority is, that he can sell to a dentist a certain amount of platinum, the dentist having stated he wanted to use it for dental purposes?

Dr. WEINSTEIN. The Chief of Staff has nothing to do with releases. No one but the War Industries Board and the refiner have anything to do with that.

Mr. RAINEY. You are right about that?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. Then the War Industries Board or whoever it is authorizes the refiner who has the stock to sell to let a certain dentist have so much platinum, and that is what they call a release.

Dr. WEINSTEIN. That is a release.

Mr. RAINEY. But there is not any way of digging down into the hands of the dentist to see that he puts it in anybody's teeth?

Dr. WEINSTEIN. Hardly.

Mr. RAINEY. So that a dentist can sell that platinum to the jeweler if he wants to?

Dr. WEINSTEIN. I suppose so.

Mr. RAINEY. Then the only way that we are able to regulate this matter so as to prevent that is to tax his platinum and alloys used in dentistry.

Dr. WEINSTEIN. I prefer to discuss it a little later, if I may.

Mr. RAINEY. You can discuss it whenever you want to. I only want to get your opinion.

Dr. WEINSTEIN. Each application for platinum comes into the War Industries Board and is thoroughly studied and examined to see if the man who applied for that material really needs it. They do not really throw these things in the mail O. K.; they study them.

Mr. RAINEY. Any dentist might need it who is filling teeth?

Dr. WEINSTEIN. You see it is not merely dentists that they have to release to. Dentists are the least part.

Mr. RAINEY. Do you think they would actually send somebody to that dentist who applied to buy an ounce of platinum to see if he had orders requiring that amount for bad teeth?

Dr. WEINSTEIN. They would not go to that extreme.

Mr. RAINEY. So that is a leak where it might get out through jewelers or through persons who can manufacture jewelry, whether engaged in the business or not, unless it is stopped?

Dr. WEINSTEIN. If there is any leak there I do not believe it is through the dentist to whom it may be released direct, and it may be through the manufacturers who may employ the platinum, because I do not believe there is any way of checking up what the dental manufacturers do with the material.

Mr. RAINEY. So if there is no way of checking up there will always be a leak unless we stop it some way.

Dr. WEINSTEIN. I presume so.

Mr. LONGWORTH. Why could not the Chief of Staff instead of writing his name use a rubber stamp?

Dr. WEINSTEIN. I do not know, sir. Of course, gentlemen, we must divide this proposition into two distinct classes. We are speaking of the past; the future is before us, which puts an entirely different light on the situation, because it is now to be controlled by the Bureau of Mines and the act is passed.

Mr. LONGWORTH. I think this investigation has had something to do with it.

Dr. WEINSTEIN. Oh, yes. I happen to know something about this licensing bill, because Dr. Herty and I, I think, are the instigators of it.

Mr. MOORE. Doctor, Mr. Rainey asked you for how long platinum had been used in dentistry, and I understood you to say about 60 years?

Dr. WEINSTEIN. Yes, sir.

Mr. MOORE. How long has it been used in jewelry?

Dr. WEINSTEIN. I can not say, exactly.

Mr. MOORE. It is comparatively new?

Mr. LONGWORTH (interposing). It was 1900.

Mr. MOORE. I think 30 years would be the outside limit.

Dr. WEINSTEIN. Probably.

Mr. MOORE. So far as its use in the manufacture of jewelry is concerned?

Dr. WEINSTEIN. Probably.

Mr. MOORE. It is an interesting topic, and I am going to ask you, merely to make the record as complete as possible, this question: You are familiar with the Dictionary of Arts, Manufactures, and Mines, compiled by Dr. Andrew Ure, M. D., an English publication.

Dr. WEINSTEIN. I am not, sir.

Mr. MOORE. Just as showing that platinum is not new, I quote from this book, which was published in 1840. Under the head of "Platinum":

Platinum has been known in Europe only since 1748, though it was noticed by Ulloa in 1741. It was compared at first to gold, and was, in fact, brought into the market under the name of white gold. The term platinum evidently is derived from the Spanish word plata, silver, on account of its resemblance in color to that metal.

This article on platinum, published in 1840, tells of a number of countries from which platinum comes, and the quantity found in the United States appears to have been negligible. But it states that—

The greatest lump of entire platinum known, till of late years, was one in the Royal Museum at Madrid, which was found in 1814 in the gold mine of Condoto, Province of Novita, at Choco. Its size is greater than a turkey's egg.

So that platinum is no new mineral?

Dr. WEINSTEIN. No.

Mr. MOORE. This interesting statement appears in this dictionary of Dr. Ure, published in 1840, and I assume this would be interesting to Dr. Metz, who said, on behalf of the American Chemical Society and tending to show the vast interest of that society in this whole question:

Platinum furnishes most valuable vessels to both manufacturing and analytical chemists, who may beat it into leaves of such thinness as to be blown about with the breath.

Dr. WEINSTEIN. Yes, sir.

Mr. MOORE. So that the chemists have been using it for a long time?

Dr. WEINSTEIN. Yes, sir.

Mr. MOORE. This definition having been published in 1840; the dentists having used platinum for 60 years—

Dr. WEINSTEIN (interposing). Or longer.

Mr. MOORE (continuing). In that respect it certainly should not be regarded as a luxury?

Dr. WEINSTEIN. Oh, no.

Mr. MOORE. And the jewelers have been using it only since 1900, or certainly not more than 30 years, and the jewelers have probably been using it for this very reason that the chemists have been using it, as illustrated in this last line, that it may be beat "into leaves if such thinness as to be blown about with the breath."

Dr. WEINSTEIN. Not for that reason.

Mr. MOORE. The jewelers say it has been attracted to people because of their ability to work it into filigree work and graceful curves, and all that sort of thing?

Dr. WEINSTEIN. Oh, yes.

Mr. MOORE. So that there is really nothing new, Doctor, in the chemical world or in the governmental world, if it were looking out for war conditions in the matter of the supply of platinum or in the use of platinum, and might have fairly well been put upon notice if it had been wide awake to have a had sufficient quantity platinum in its possession to meet this war emergency if it had been on the job.

Mr. RAINEY. They did not use platinum in jewelry until they discovered that palladium would harden it?

Dr. WEINSTEIN. No, sir.

Mr. RAINEY. That is, about 1900?

Dr. WEINSTEIN. Yes, sir.

Mr. RAINEY. That is about the time it got its value also in chemistry?

Dr. WEINSTEIN. Oh, it was used in chemistry much before 1890.

Mr. HERTY. May I interrupt to say that gold may be beaten into small sheets by the dentists?

Dr. WEINSTEIN. Finer than platinum.

Mr. RAINEY. That is, its strength?

Dr. WEINSTEIN. Its power of resistance is something greater than that of gold.

Mr. LONGWORTH. If, by the imposition of a very high tax or otherwise, the prohibition of the manufacture or the sale of jewelry were effected, in your opinion would not that result in decreasing the price of platinum?

Dr. WEINSTEIN. Oh, absolutely.

Mr. LONGWORTH. In other words, there would be no object in these peddlers going about and buying platinum at \$150 an ounce and selling it to these jewelers for \$200.

Dr. WEINSTEIN. There is a principle back of all this, and that is the almighty dollar. If platinum was not expensive there would not be any need for platinum jewelry.

Let us see how this works out. Platinum was very cheap four or five years ago or six years ago.

Mr. LONGWORTH. At the time platinum first came into use for jewelry purposes, which, as these gentlemen testified, was 1900, the price of platinum was \$17 an ounce?

Dr. WEINSTEIN. Exactly. If you could get the statistics of the production of platinum jewelry for the last six years you would find that the production went up as the price went up, and the more expensive it is the more there is made of it.

Mr. LONGWORTH. It went steadily up from 1900. This is the list of prices handed me yesterday by the jewelers themselves: In 1900 it was \$17 an ounce; in 1910, 10 years later, it was \$36 an ounce; and before the war broke out, early in 1914, it was worth \$50 an ounce. It has about trebled in price since it came into use.

Dr. WEINSTEIN. I will wager my life that there was more platinum jewelry made in 1915 than there was in 1912 and 1913, and I do not know the figures.

Mr. LONGWORTH. I will tell you what the price was in 1916—\$92 an ounce; in 1917 the price varied from \$110 to \$105.

Mr. MOORE. How do you account for that, if your wager should be correct?

Dr. WEINSTEIN. There is such a thing as manufacturer's profit, and there is such a thing as jobber's profit, and there is such a thing as retailer's profit.

Mr. MOORE. Was the supply of jewelry shut off in England from foreign importation?

Dr. WEINSTEIN. Oh, no; that foreign price of platinum war restrictions in foreign importation had nothing to do with the highly increased amount of production.

Mr. MOORE. If there is more made in the United States there must be some special reason for it; either they could not get the foreign product—I am speaking of manufactured jewelry—or the people had more money to buy.

Dr. WEINSTEIN. The people had more money to buy and the jewelers have advanced in their art.

Mr. MOORE. We had not entered the war at that time?

Dr. WEINSTEIN. No, sir.

Mr. HULL. You mean increase in value or quantity of production?

Dr. WEINSTEIN. The quantity.

Mr. HULL. The quality as well as value?

Dr. WEINSTEIN. The quantity as well as value, absolutely.

Mr. LONGWORTH. Do you happen to know as to how the volume of sales of rather cheap jewelry compares to-day in this country with what it was three or four years ago?

Dr. WEINSTEIN. I spoke to a retail jeweler last week and he said the business was fine, because the poor people were getting a little more money and could afford to buy. But there is one consideration, and that is to differentiate between the high-priced jewelry and the moderate-priced jewelry.

To come back to this question of the jewelers using platinum, and why they refused to use anything but platinum, and why they pay \$200 for scrap. Take a piece of jewelry worth \$500, set with diamonds. It contains about \$20 worth of platinum if purchased at the normal Government price. Take that same jewelry, that is, the same jewels, set in gold, and probably it will not fetch more than \$300. Is it not good business for the jeweler to pay \$200 an ounce for that platinum, pay \$40 for the platinum it contained, instead of \$20 and make \$100 more? Why should he use substitutes?

Mr. LONGWORTH. Because of the mere fact that platinum is more expensive, the public is willing to buy it?

Dr. WEINSTEIN. Exactly. A jeweler would be foolish to use a substitute. He tells the customer, "This is genuine platinum; that is valuable." And we are all human; none of us want imitations in our pockets or on our ties or anywhere on our persons. We want the genuine thing.

Mr. MOORE. Doctor, this may not be patriotic from the viewpoint of some of the gentlemen who have spoken here, but if we can bring from its hiding place these large sums of money necessary to purchase platinum which foolish people are willing to spend for that purpose, and we can get revenue out of it, would we not be doing a public service in drawing the money out so that we can tax it and get some of it for the Government?

Dr. WEINSTEIN. I would like to get this question straight.

Mr. MOORE. If a woman is so foolish that she insists upon buying platinum when gold or some other commodity would be just as beautiful and just as attractive, and she is willing to pay the excess that she seems to be willing to pay for the fad or the fashion, do you not think the Government could get more money out of that woman by letting her spend it than having kept it in her pocket because she did not want to buy something else?

Dr. WEINSTEIN. Exactly. That is the very thing I want to speak about, and in the suggestions which I am going to be presumptuous enough to offer on this subject of taxation that is the very thing I want to discuss.

The CHAIRMAN. We have another gentleman we want to hear before we adjourn. I wish you would conclude as early as possible.

Mr. RAINEY. In the discussion of the origin of platinum and the discovery of it, I stated a while ago that from my examination it was discovered about 1840, and whereupon Mr. Moore produces a book which was published in 1840 and which states that it had been known in Europe since 1748, which is true, but this publication states that discoveries in Russian territories have just been made prior to the issue of this book, and I find that in 1840 we produced in all the United States only 8½ pennyweight of platinum, and that in 1830 the Russian supply was only 1 pound.

Dr. WEINSTEIN. Exactly.

Mr. RAINEY. And from 1831 to 1833 we only produced 15 pounds in Russia. So that platinum was not discovered and was not in commercial use until about the time I stated.

Dr. WEINSTEIN. Until about 1840.

I was speaking before of the use of substitutes for jewelry. I might say that I have published various articles on metallurgy giving the formulas and methods of combining metals, so I have nothing up my sleeve or any secret formulas or anything of that sort. About two years ago I offered some jewelers substitutes for platinum—alloys consisting of approximately 60 per cent gold, about 15 per cent each of platinum and palladium, and about 10 per cent silver and copper. They laughed at it and said, "It is very beautiful material; it would look fine." But they could not afford to use anything like that because they could not get the price—"it is not genuine"—they would not degrade their business that way.

I purposely went to a cheap little jeweler with the very same thing, and he said, "That is too expensive; I can use light gold."

Two men said the metal was very interesting, because you could not tell it from platinum; and it is my belief that if it were not for the fact that they were afraid of the law they would have put it out as platinum.

So you see the high-class platinum substitute does not appeal to the jeweler at all, and there is really no discussion required on this point, because as it is the jewelers can not have any more platinum after a given date. So it would not serve the purpose to urge the jewelers to use substitutes because the substitutes contain 30 per cent platinum. If there was plenty of platinum in sight and, as they claim it would disturb their industry to prevent the manufacture of anything containing platinum, well and good; they might be allotted a certain amount of platinum which could be used in substitutes, but as the alloy is such, and we have not enough for war purposes, as the Government has already passed a bill that they can not have any more for luxuries purposes, there would not be anything to urge.

Mr. MOORE. As a metallurgist, will you answer this: Is gold of sufficient hardness or has it the qualities to be used as a substitute for platinum in the construction of aeroplanes or motors?

Dr. WEINSTEIN. Oh, no; it is an entirely different metal. It would not do for contact points.

Mr. MOORE. Is there any known substitute for platinum for these spark-plug points?

Dr. WEINSTEIN. Hardly.

Mr. MOORE. Platinum must be had?

Dr. WEINSTEIN. Platinum must be had.

Mr. MOORE. These other metals which are cheaper than platinum will not do for that purpose?

Dr. WEINSTEIN. Gold will not do for that purpose, and it is too serious a matter. We can not experiment with contact points for aeroplanes; we can experiment with jewelry. There is a big difference there.

This question of taxation has been really merged with the question of the advisability of letting jewelers have platinum. I believe that they are two distinct and different propositions. I believe it is not

a question of whether the jewelers are to have more platinum or not; that is past. But it is a question of what platinum there is available in this country and how much of it the Government needs, how much of it can be spared for essential purposes after the Government has had what it needs, and if there is any left whether or not it should be used for known essential purposes, as well as jewelry, or held subject to a possible increase in war needs. I think that is the situation. The jewelers are objecting to this propaganda, for which I thank God. Well and good. The American Chemical Society is going to be wiped out of existence in five minutes. It is off the map. Do you mean to say that propaganda will cease? No; it is barely started. What is the result? It does not make any difference whether you tax platinum jewelry 10 per cent or whether you tax platinum jewelry 50 per cent. The clean, decent, patriotic American women will not buy platinum jewelry when told by the Government or by people who stand as clean American citizens that platinum is essential for war needs.

Mr. LONGWORTH. Did you happen to see that editorial I read yesterday advising jewelers how to reduce their use of platinum?

Dr. WEINSTEIN. Yes. Then there is another thing. You must divide jewelry into two distinct and different classes: Platinum jewelry on the one hand and gold jewelry on the other hand. The cheaper class of gold jewelry is purchased by an ordinary class of people. Put a tax on there that is reasonable, so that the ordinary people can buy it. But platinum jewelry is bought by wealthy people, and the wealthy, decent people will not buy it any way when they know that the Government needs it, and let the wealthy, indecent people pay a good, stiff tax. Who cares about them? Let them show their colors.

Mr. LONGWORTH. That is my theory of it.

Mr. MOORE. Suppose we agree with you on that proposition: What, then, have you to say as to the platinum that is now made up into jewelry, which the Government will not take and which you want to prevent the jewelers disposing of? They manufactured in good faith and entirely within their rights. What are you going to do with that? Confiscate it or throw it into the waste basket?

Dr. WEINSTEIN. First I want to thank you for that question.

Mr. MOORE. That is the whole question with me, because I asked Mr. Steele, the head of the jewelers here yesterday, this question: "Can you explain why that order went out to only 14 refiners?" That is the first order. "Mr. Steele: I can not. If we had been consulted in regard to this matter we would have advised them to cover all jewelers also," which I think is a fair proposition, otherwise, that element of speculation which you first referred to is bound to enter in there.

The CHAIRMAN. Now, answer this question as to what you would do with the jewelry already manufactured which has platinum in it.

Mr. WEINSTEIN. Very well. If I may be permitted, I will answer this question in rather a lengthy way, but comprehensively at least; and I will endeavor to be brief. To start with, there is not a man in the United States who knows how much platinum there is, and there is not a side partner to him who knows how much the Government needs. The census that the jewelers have taken surely means nothing. Who have they taken it among? They would not dare

take the census of platinum held by men in the business, because if they sent that information to the War Industries Board the War Industries Board would commandeer it. But those jewelers say they have taken the census of 35,000 of the amount of platinum they hold and given that to the War Board. So we do not know how much platinum there is in existence in this country to-day.

The first thing we must have is the census, then automatically with it we must get the maximum Government needs. Then and then only will we know what platinum can be spared to the dentist, what platinum can be spared to the chemist, and what platinum can be spared to the jewelers, etc. If I understand correctly, this license law goes into effect on the 10th of August, 40 days after the 1st of July. If action is taken immediately by the 20,000 agents of the Bureau of Mines, plus a circular letter sent to the Government to every holder of platinum, whether he be dentist, chemist, jeweler, or what not, under the seal of the Government, demanding a report, just the same as the various narcotic laws which apply to physicians and dentists, etc., they must make a report by a given date, under penalty.

Mr. MOORE. If this is so important, why is not that done? Mr. Rothschild said yesterday, in answer to a question that I put to him, that he on a rough estimate calculated that there were 1,000,000 ounces of platinum in the United States.

Mr. WEINSTEIN. And 5,000 in jewelry.

Mr. MOORE. If that is so important to the Government for war purposes, why does not the Government take a census and find it?

Dr. WEINSTEIN. That is the very thing.

Mr. MOORE. And commandeer it all when we need it.

Dr. WEINSTEIN. That is the very thing.

The CHAIRMAN. What would you do with this manufactured jewelry?

Dr. WEINSTEIN. To come to this subject of manufactured jewelry—

The CHAIRMAN. You understand that if the Government wants to do anything, to commandeer, it has got to take a census and see how much there is, how much can be spared to dentists. What would you do as to manufactured jewelry?

Dr. WEINSTEIN. If, for the sake of argument, the Government needs 100,000 ounces for its war program for the next three months, surely, among the various heads of departments concerned with the production of war requirements, there must be some way of determining approximately what they will require, and then adding 100 per cent to it. That is fixed, for the sake of argument, as 100,000 ounces. At the present time, suppose the census shows 150,000 ounces available platinum in this country. That means there is 50,000 ounces which the Government does not need. If the jewelers are truthful in the statement, that there is a comparatively small amount of platinum in use in this beautiful, fine jewelry, let them have it and tax it low.

Mr. HAWLEY. I asked the question yesterday. "What amount of platinum was in manufactured jewelry, the number of ounces," and I did not get any answer; nobody seemed to know.

Dr. WEINSTEIN. Of course not.

Mr. HAWLEY. At least, no information was furnished.

Mr. MOORE. The Government does not know.

The CHAIRMAN. What we want to know is this: Here is a jeweler who has got a ring set in platinum. It is already manufactured.

Mr. WEINSTEIN. Yes, sir.

The CHAIRMAN. Now, then, should the Government tax that 25, 50, or 100 per cent, or should the Government commandeered that ring and get the platinum out of it? What do you think about that?

Dr. WEINSTEIN. Suspend the traffic in platinum in jewelry for 30 days, pending the investigation into the needs and supply. At the end of 30 days, if the needs are really great, as I believe they are, some equitable method of taking it away from the jewelers will have to be found.

Mr. MOORE. In either event the Government loses the revenue?

Dr. WEINSTEIN. If it has to choose between the platinum it needs and the revenue through the sale—

The CHAIRMAN. We understand all that. If the Government needs it, we should take it and pay the fellow for it.

Dr. WEINSTEIN. And if it does not need it, let him have it and collect the revenue.

Mr. LONGWORTH. Or, to answer Mr. Kitchin's question more specifically, this committee has power to tax to the source an industry. Would not the effect of the imposition of a tax of 250 per cent, say, on the sale of jewelry, wholly or partly made of platinum, have a tendency to reduce the price of platinum generally?

Dr. WEINSTEIN. Absolutely, sir.

Mr. LONGWORTH. And we having only that power, would you not advise us to exercise it?

Dr. WEINSTEIN. Speaking for myself, absolutely, yes—500 per cent tax.

Mr. RAINEY. Platinum would mean more to the Government than any possible revenue it could get out of it?

Mr. LONGWORTH. An infinite return to the Government, because every dollar you reduce the price of platinum it is just so much more than revenue.

Dr. WEINSTEIN. But the minute this high tax on platinum, let us say, 20 per cent, is levied, the people want to know immediately why this tax; and when they learn that the Government needs that platinum they will not buy it.

Mr. HAWLEY. Suppose a jeweler takes an ounce of platinum and makes it into some nice form of jewelry. A certain amount of labor has been put on that platinum to make it useful as jewelry?

Dr. WEINSTEIN. Yes, sir.

Mr. HAWLEY. How much is that labor worth, on the average?

Dr. WEINSTEIN. It is hard to tell. It might be worth some amount as platinum in one instance and it might be worth twice as much in another instance.

Mr. HAWLEY. So the price would probably be—

Dr. WEINSTEIN (interposing). Probably three times as much.

Mr. LONGWORTH. If you mean either way, by a high tax an absolute prohibition, and it seems a question whether Congress has the power to prohibit, for instance, when we determined to stop the manufacture of white phosphorus matches and put a tax of 1,000 per cent on the manufacture of white phosphorus matches, since this

is very much the same thing—the proper use of the same power—phosphorus matches manufacture was dangerous to the man engaged in it—

Dr. WEINSTEIN. Very good.

Mr. LONGWORTH. This proposition is that if we fail to use all the platinum available in the country, we may cause the loss of the war. Is it not even more a proper duty of Congress at this time to destroy the demand for platinum as used in jewelry, thereby decreasing the price and making it useless for jewelers to go into the market and buy platinum?

Dr. WEINSTEIN. Absolutely. For a moment I will argue for the jewelers. You propose a confiscatory tax, for the sake of argument. The jewelers come here and say it will bankrupt them. Let us give them a show. Thirty days suspension of business is not going to ruin or put out of business any of them.

Mr. LONGWORTH. We have not the power.

Dr. WEINSTEIN. The Bureau of Mines has that power. And the War Industries Board has that power.

Mr. LONGWORTH. I am speaking about this committee.

Dr. WEINSTEIN. Can not this committee impose a tax and can not the Bureau of Mines on top of this suspend the sale of such material for a given time, and work all right—two departments working independently?

Mr. LONGWORTH. Surely, I think the other branches of the Government have overlooked their duty too far.

Dr. WEINSTEIN. Unfortunately. At the end of 30 days, when the census is taken, this platinum will probably be released back to the jewelers, and the Government, the Treasury Department, get a tax. On the other hand, if the investigation shows there is not enough platinum and that this platinum must be had, then it must be commandeered at any price.

Mr. HAWLEY. There is another question involved in there, the question of a future supply. Are we going to get it for the next year and the next year, perhaps, from outside sources or from sources in this country?

Dr. WEINSTEIN. We will take it from every source we can get it, and we will take it from the American people who are wearing platinum jewelry.

Mr. HAWLEY. What about those new sources of supply of platinum?

Dr. WEINSTEIN. That is very slim.

Mr. HAWLEY. How much new platinum will come into use or come into existence in a year?

Dr. WEINSTEIN. I understand that the Columbian supply is 12,000 ounces a year, 1,000 ounces a month, and I understand distinctly it is dwindling down because of German influences down there.

Mr. RAINEY. Do you not also understand that the ratio of supply, even if you could get it, is also dwindling, and our statisticians figure that in 10 years, with the new discoveries in Russia, there will not be any coming from Russia?

Dr. WEINSTEIN. I was not thinking of Russia in this calculation. I was thinking of Russia as out of the question at this time, but it must be considered for the future. You see the big point I am

trying to impress on you gentlemen is that I believe the jewelers have misrepresented the amount of platinum in their stocks. If it is the small quantity they claim, it is a simple problem. But I believe it is a tremendous big quantity. They have not been asleep at the switch during this last six months. They have been working day and night producing manufactured articles, because they know that when the Government takes it away they will not take it by force, they will pay them well, and what do they care where they get the money from, whether from the people or from the Government? They want the money. They are manufacturers. But I believe that the imposition of a higher tax on platinum jewelry than on ordinary jewelry is a fair one. I believe that before the decision is made as to whether you want to confiscate platinum jewelry that this investigation should be made—forgetting jewelry entirely—this investigation must be made, because if the Government has not enough platinum then it is a crime to let the dentists have 4,000 ounces; they ought to have none; they will have to do without it.

Mr. LONGWORTH. The people ought to have to take it out of their teeth, where they have platinum fillings.

Dr. WEINSTEIN. If the time comes every person who has platinum in their mouth will have to take it out.

Mr. HAWLEY. If the war continues five years and we increase our operations as now anticipated, will we have platinum enough at the end?

Dr. WEINSTEIN. There is another thing, gentlemen, you must remember: That the need for platinum does not increase in exact ratio as the amount of war material produced. The point I want to make is this: If we get a large amount of platinum or an adequate amount of platinum for war purposes, comparatively little of that will be lost. It means that if we need 100,000 ounces this year, we are providing for a big war program. The chances are we will not need 100,000 ounces next year in addition to what we need this year, but that we will need 25,000 or 30,000 or 40,000 ounces.

Mr. HERTY. We will need more platinum as the Army expands.

Dr. WEINSTEIN. We should provide for the maximum Army.

Mr. HERTY. We do not know what that is. That is the whole point. We do not know what the size of the Army is to be.

Dr. WEINSTEIN. Is it not fair to provide for an Army of 5,000,000? We will not need to provide for 5,000,000 more next year and a duplication of those plans.

Mr. HERTY. The plans in existence at this time are to take care of 5,000,000 men, and we should consider what platinum we will need when we go for the next 5,000,000.

Mr. MOORE. If needed, and the jewelers have it, I do not see why you do not go ahead and get it.

Dr. WEINSTEIN. There is the very thing. I am sorry to take your time. I am going to subside in another minute. The big thing involved here is the needs of the Government on the one hand and the disturbance of the jewelry industry on the other hand. Who is going to win? Who is going to get it—one of the two, and there is no question but that the Government has got to have it.

Mr. MOORE. The jewelers would have to yield to the Government?

Dr. WEINSTEIN. The jewelers would have to yield to the Government.

Mr. MOORE. The next thing is that if you are going to take it out of the teeth of the people, the jewelers ought to give it up first. I do not see why something is not done. These commandeering orders go out in a special way to 14 firms first, and then 1,400, or whatever it is on the second order, leaving others to speculate on this thing, with the market left open. Why does not the Government say what it wants and go and get it?

Dr. WEINSTEIN. That brings us back to the establishment of this tax, which is your gentlemen's work, and the determination as to how much platinum is required and where it is, to be determined by the Bureau of Mines or the War Industries Board or whatever board is authorized to do that. Then if this draft in platinum jewelry is suspended pending this investigation, you are doing the jewelers a greater justice or doing them less injustice than if you put this 50 per cent tax on, which may be entirely unnecessary. In other words, I am willing to give the jewelers the benefit of the doubt, as much as I despise their needs as compared with the Government needs.

Mr. FORDNEY. My friend, why would it not be perfectly proper if the Government needs all the platinum that can be gathered to give the Government power to take that, whether in the hands of the individual or manufacturer, and put a tax on it in the hands of the individual so high that no individual can have it?

Dr. WEINSTEIN. Absolutely. But the great argument here has been to avoid retroactive taxation.

Mr. MOORE. They have the power to commandeer now.

Dr. WEINSTEIN. And my argument is that in this method of taxation on the one hand by Congress and restriction or temporary injunction by the Bureau of Mines on the other, you have there a happy solution of the problem, because if it turns out there is enough platinum for the jewelers after the investigation is made, you have set a fairly reasonable tax on them, and they can not object; on the other hand, supposing we let them sell it to-day, and we find 30 days from to-day that the Government needs that platinum, where the Government? The Government will have to pay six times as much as it does now.

Mr. HAWLEY. Do you think it ought to be a one-year program? Should it not be a five-year program?

Dr. WEINSTEIN. About that five-year program—

Mr. HAWLEY (interposing). Should not the surplus of this year, instead of being used for another purpose, be conserved for next year?

Dr. WEINSTEIN. Absolutely.

Mr. HAWLEY. And not let it be manufactured, and then bought back by the Government at a higher price?

Dr. WEINSTEIN. The point is this: The Government's war program is indefinite. Everything hinges upon that; everything else is secondary. The Government must first determine its maximum program and try to get the platinum to fill it.

The CHAIRMAN. I think you and Dr. Herty and every other gentleman who is interested in the conservation of platinum for the Government should get together and insist on the passage of a bill immediately, putting the whole platinum production or ownership into the hands of the Government for its use, and then it could release as much as it wanted to, and the necessities, as you and Dr. Herty make them out, it seems to me would almost compel the Government

not to wait two or three or four or five months for this bill to become a law, because it will take several months for this bill to become a law. But is not the proper thing to enact a measure now, giving the Government control of the whole platinum supply? Why do not you gentlemen get together and insist on that? This bill would probably not become a law before some time between October 1 and November 1.

Dr. WEINSTEIN. The new bill?

The CHAIRMAN. Yes; this bill we are now discussing; this revenue bill. In the meantime, they could consume and destroy a great deal of platinum for jewelry or anything else. You gentlemen should go up there and see the department.

Dr. WEINSTEIN. Very well, Mr. Chairman, if that is the case, that puts an entirely different light on the matter.

The CHAIRMAN. Would you not think that ought to be done?

Dr. WEINSTEIN. Within 20 days the Bureau of Mines assumes absolute control of all the platinum in the United States of America.

The CHAIRMAN. But, under the provision put in the sundry civil bill?

Dr. WEINSTEIN. Yes.

The CHAIRMAN. I understand that was simply a licensing power?

Dr. WEINSTEIN. To deal, to traffic, to use.

The CHAIRMAN. Let me say to you and Dr. Herty, because what you have said has impressed me, and I know and everybody else knows that platinum is an absolute necessity to carry on this war, and the gentlemen who understand the necessity better than we do are the gentlemen in the War Department.

Dr. WEINSTEIN. Exactly.

The CHAIRMAN. Now then, if the necessity is so pressing—and I think it is—one letter of five lines from the President would put a platinum bill through Congress in 24 hours. Just send us down such a request and say it is necessary for the Government to have control of all the platinum in the United States and all the future production as a war necessity, and neither the House nor the Senate would hesitate, and you can do that in 48 hours.

I would suggest that you gentlemen see the War Department and the proper authorities there, and they ought to know whether it is necessary or not, and perfect something like that and get Congress to pass such a bill, because, as I said, they understand the necessity more than you or Dr. Herty or this committee. And I say this, if it is a pressing necessity, as you think it is, and as it seems to me it is, well, they could relieve that necessity in 48 hours and not wait for this bill to go through the committee, and then through the House, then through the Finance Committee of the Senate, then through the Senate, and then through conference before it becomes a law, which would be several months.

I suggest that you gentlemen take that course.

Mr. HERTY. I have already put into the record an article which I wrote, in which I said the important place for this platinum is in the vaults of the Treasury Department, and I sent a copy of that editorial to the President.

The CHAIRMAN. I agree with what you gentlemen say, that the Government ought to take immediate control and not wait until this bill becomes a law, because it may be too late.

Dr. WEINSTEIN. You see, Mr. Chairman, the point is this: The jewelers have come here and tried to prove that the Government does not need it. This "scrap" had to go through.

The CHAIRMAN. There is no criticism at all on you and the doctor coming here; it is all right; we are glad to have had you; but I am suggesting a shorter method than this roundabout one, because a thousand other things will be in this revenue measure and other considerations this committee must give. But here is a matter which the War Department, with a letter from the President, can conclude in 48 hours, and I think they ought to do it.

Dr. WEINSTEIN. Granting, for the sake of argument, and undoubtedly it would be a comparatively simple matter to accomplish this, to have proper authorities issue immediate orders preventing any traffic in platinum except according to Government directions. How does this affect this taxation question before you gentlemen? If there will be no more platinum for jewelry, then there is really no taxation of platinum jewelry. But, on the other hand, if it is possible, or if they will force in some way or other the continuation of the sale of platinum, then the question of taxation is a pregnant one.

The CHAIRMAN. Undoubtedly if the Government leaves any platinum, after passing this bill, as I suggest, or under the operations of the present provision in the sundry civil act, for the jewelers' use, we will have two or three or four months to know whether there is, and we will put a proper tax on. I rather think there will be a tax of jewelry.

Dr. WEINSTEIN. One more word I want to say.

The CHAIRMAN. All right, sir.

Dr. WEINSTEIN. For the welfare of the United States of America, please make the tax on platinum jewelry just as high as possible to remove temptation to those who might want to get platinum legitimately or illegitimately and turn it into jewelry.

The CHAIRMAN. Are the dentists of the country going to help conserve platinum and use less than heretofore; are they going to try to find some substitutes?

Dr. WEINSTEIN. The dentists of this country will do their level best, I promise.

The CHAIRMAN. Now, get up an organization among the dentists, swear them for this patriotic service of using less platinum than before, and that will be one good service you will render to the country, and we will help you render that service.

Dr. WEINSTEIN. Mr. Chairman, may I have a copy of those last few words of yours to use in a letter to the dentists of America?

The CHAIRMAN. Yes, sir.

Mr. MOORE. Do you not think from a point of patriotic duty the jewelers, when the Government calls for the platinum, will respond?

Dr. WEINSTEIN. I have no doubt of it.

The CHAIRMAN. And I have no doubt of it.

The CHAIRMAN. Mr. Winston has been here a long time waiting to be heard, and we will now hear him.

**STATEMENT OF MR. JAMES H. WINSTON, LAWYER, REPRESENTING CERTAIN DEALERS ON THE CHICAGO BOARD OF TRADE, CHICAGO, ILL.**

The CHAIRMAN. State your full name, address, and for whom you appear.

Mr. WINSTON. My name is James H. Winston, address, Chicago; and I am a lawyer, and appear on behalf of a certain class of dealers on the Chicago Board of Trade.

The CHAIRMAN. You are an attorney in Chicago?

Mr. WINSTON. I am a lawyer in Chicago.

The CHAIRMAN. And you appear on behalf of whom?

Mr. WINSTON. As I said, I appear in behalf of a certain class of dealers on the Chicago Board of Trade.

I wish to discuss very briefly the advisability of a modification in the stamp taxes as applied to sales on boards of trade and exchanges from a revenue standpoint.

I think now, Mr. Chairman, it will perhaps take 20 or 30 minutes, but it will be very brief. But it will be a very brief discussion, if you can take that much time now; if you can take that much time now I would like it, if it is your pleasure later—

The CHAIRMAN. We had better proceed right now and get through with it.

Mr. WINSTON. Mr. Chairman, the kind of tax that we wish to have a modification in is tax as applied to so-called transfer or scratch sales. That appears in the act as follows. It is under title 8, schedule A, paragraph 5:

Upon each sale, agreement of sale, or agreement to sell, including so-called transferred or scratch sales, 2 cents on the hundred.

This tax falls upon a class of dealers who are popularly known as "scalpers."

It is not our purpose to come here and ask for a modification of anything that merely bears heavily upon them, but it is a matter that is vital to their existence. It means that if this tax is permitted to remain as it is at the present time that those men can not profitably engage in that business, and they will cease trading altogether and the Government will get no tax. That is not a theory, but it is a fact. I speak particularly of one man, Luther Dickey, whom I know best, and who is typical of all the balance, that he tried to trade during the months of December, January, and February, after this present tax went into effect, and that he discovered that while he was making \$800 a month that the tax would come to \$800 or \$900 or \$1,000, and that in some cases the tax exceeded the amount he would make out of it.

In order to understand how that occurs, it is necessary to give you a slight insight into what a scalper is. This transferred trade does not affect the Armour Grain Co., who likewise are clients of mine, nor the big dealers, nor does it affect the big millers; it is the little fellows who are affected by it, these scalpers, who serve the important function of creating an ever-ready market, so that whenever the farmer wants to sell he finds a market for his produce, whether the ultimate consumer is ready to buy or not. These men who stand in the wheat pit are always ready to buy and are always ready to sell.

The kind of transactions that they do, as distinguished from a speculator, and as a typical illustration I will refer to Mr. James Patten, whom we know of in connection with wheat. Mr. Patten's typical kind of a transaction would be to buy a large quantity of grain, say a half million bushels or a million bushels at \$1.80, for illustration. Mr. Patten would then go away to California and wait three or four months in the expectation of wheat going up, and it probably would, and he would come back after several months and sell at a large profit of 20 or 30 or 40 cents a bushel, making, as can readily be seen, a large profit. What is the tax on that transaction? Only 2 cents on the 100, and if the amount involved in the transaction was \$1,000,000 and the price a dollar a bushel at 2 cents it would cost \$200, and of course he can readily pay it. But the scalper is a man who deals every day in a matter of 200,000 or 300,000 or 400,000 bushels, or perhaps half a million bushels, because it is his business to buy and sell, and he does not expect to make more than one-eighth of a cent profit or one-fourth of a cent profit at the most. He buys at \$1.50, and the minute the market changes so that he can sell at \$1.50½ or \$1.50¾ he sells and makes his little profit; but in so doing he makes an immense number of trades.

He is perfectly willing and expects to pay wherever he makes what is considered on the Board of Trade an "ultimate sale," meaning by that a sale where it goes on his books, where he is connected with the sale after it is finished. But he does want to be relieved from the tax in the case of transfers. A transfer is this: I will illustrate it by myself being a scalper in the pit. I buy from A at \$1.50 to the bushel 10,000 bushels for September delivery, say. At the same session of the board of trade I sell to B 10,000 bushels at \$1.50, the identical price. Under the rules of the Board of Trade and under the practice that has been in vogue there 30 or 40 years, it has always been the custom to permit a transfer to take place there; that is, I say to A, "You deliver that to B, and scratch my name out," and he does that; he agrees to it. I go to B and I say, "I have sold you 10,000 bushels at \$1.50. Won't you take that from A?" He says "Yes"; and he scratches my name out. A transfers to B and A pays the price. Of course, there is no complaint about that; that is understood, and that is the practice. The tax is paid there. What we wish to be relieved of is my having to pay the tax on that transaction and that transaction alone. It is confined to transfers.

The CHAIRMAN. If you are relieved in that case, does A pay the tax?

Mr. WINSTON. A pays the price.

A transfer can take place under the rules of the Board of Trade only in the instance where the sale is at the same price, where I buy from A and sell to B at the same price, and at the same session of the Board of Trade. If I buy from A at \$1.50 to-day and sell to B to-morrow at \$1.50, under the rules of the Board of Trade, that can not be transferred.

The CHAIRMAN. Suppose you sell at \$1.50¾?

Mr. WINSTON. That can not be transferred. It has got to be at the same price. It is in the nature of being a blank cartridge. It is an attempt to make a sale, but he does not make it—I mean an attempt to make an ultimate transaction. If he sells at a loss, if you please, there can be no transfer. Now, the question naturally

arises as to whether I, the trader, am buying and selling at the same price. Now, understand, if you please, that I do not hope to make but one-eighth of a cent or one-quarter of a cent profit, and I make my living out of having a large number of such trades. It frequently happens that there is a transfer under this kind of a circumstance. Suppose I am a commission man, as well as being a scalper. I get an order by telegram to buy for a man in Indiana 15,000 bushels—15,000 bushels is an odd lot. I go into the wheat pit, and probably some of you are not familiar with the way the wheat pit is conducted. It is a large arena. You are jammed in there so that you can not move about. All the trading is done by signals—buying and selling by means of the hand.

I have this order to buy 15,000 bushels. I don't find anybody that wants to sell 15,000 bushels. But I see one who wants to sell 25,000 bushels, and I see another who wants to buy 10,000 bushels. The 15,000 bushels and the 10,000 bushels make the 25,000 bushels, so I buy the 25,000 bushels. Then I go to B, who wants the 10,000 bushels and I say, "Will you take your 10,000 bushels from A?" and he says, "Yes," and both of them scratch off my name and I am eliminated from the transaction. It goes off my books. I do not consider it a trade. I don't have to pay any commission to the clearing house, to which I would have to pay a commission if they recognized it as being an ultimate trade, and it has been the practice and the rule of the board for 30 or 40 years. If I am a member of the clearing house I have to clear all my transactions through a clearing house by paying a commission, but under the rules of the board of trade that have been in force long before the act of 1898, it is recognized that a transfer is not an actual transaction, and it is not an ultimate transaction, and I do not have to pay any commission.

Now, then, we are asking that these men be freed from the necessity of paying a tax on these so-called transferred trades, limiting it to transferred trades, because if the tax is retained on those transferred trades, the amount of the tax is greater than they would make out of it.

Now, then, just a moment from a historical standpoint.

Mr. RAINEY. Don't they make anything out of it?

Mr. WINSTON. They do not make anything. It is an attempt to do something and not doing it. It is like buying a lot of cartridges for bird shooting and finding that a number are blanks or have poor caps and don't fire.

Under the act of 1898 it read, "Upon each sale, agreement of sale, or agreement to dell" and stopped there. Only in the act of 1917 were the following words included: "Including so-called transferred or scratch sales."

Mr. RAINEY. That is what you want out?

Mr. WINSTON. That is what we want out.

Under the act of 1898 the Commissioner of Internal Revenue held that transfers were not sales and were not taxable under the act and no tax was paid by the board of trade men on transfers under the act of 1898.

Mr. RAINEY. It is not doing any good in here any way.

Mr. WINSTON. I don't follow you, Mr. Rainey.

Mr. RAINEY. Well apparently this language imposes a 2-cent tax on transferred sales, but the courts have held that transferred sales are to be taxed.

Mr. WINSTON. No, they have held that they are to be taxed.

Mr. RAINEY. I didn't understand that.

Mr. WINSTON. Under the act of 1898 the commissioner did not attempt to collect any tax on transfers. Along came the act of 1914 with the terminology of the 1898 act, and some question was raised by the board of trade men as to whether or not transfers were taxable and they applied to the local revenue agent who had supervision of the taxes on the board of trade, and he contended that transfers were not taxable so they continued for some 16 or 18 months.

Mr. MOORE. This kind of transfers that you referred to?

Mr. WINSTON. The exact kind that I mentioned.

Mr. MOORE. The commissioner held that they were not taxable?

Mr. WINSTON. Not taxable under that act. It has been subsequently amended so as to make them expressly taxable.

Mr. MOORE. That is in our last revenue law?

Mr. WINSTON. In the last revenue law. I am now referring to the act of 1914 as it was written.

Mr. MOORE. I would like you to explain—not desiring to interrupt you at all—why those transfers which seem so futile are made at all. Of course you say they are not entered in the books of the brokers.

Mr. WINSTON. Yes, I will, Mr. Moore, if I may—

Mr. MOORE (interposing). There seems to be no substance in them.

Mr. WINSTON. If I may complete the historical statement as to how these words came into the act. After about 16 months of operation under the act of 1914, the question was then raised as to whether or not transfers were taxable, and Commissioner Osborn, who always got revenue wherever he could get hold of anything that was taxable, directed his agents to put a tax on transfers. So after these men had been trading for more than 16 months, under the belief and expectation, being told by the local special agent who had supervision of the board of trade taxes that transfers were not taxable—I say after 16 months of that, the tax on transfers was demanded from them, and it was alleged to be a very large sum of money. In the controversy I represented about 25 or 30 of the larger people there who were to be affected by it, and we ultimately procured a compromise by which the particular clients that I represented paid something over \$150,000. I understand that the Government collected from all the board of trade men about \$1,089,000 both on transfers and on other kinds of trade where they neglected or failed to pay their tax.

Now while this question was being raised, certain board of trade members started litigation to test the question as to whether or not transfers were taxable under the language of the 1898 and the 1914 acts, and I presume that while that litigation was pending, before it was ultimately decided by the Circuit Court of Appeals—it never was decided by the Circuit Court of Appeals but only by the nisi prius judge—during the pendency of that this act was passed so as to remove all doubt as to whether or not transfers came within the language of the act. They put it in by express language.

In the various appearances that I had before the commissioner I argued before him that it was an injustice to these men to have permitted them to go ahead trading for 16 months under the belief that there was no tax on transfers and under their representation that if they had known transfers were taxable they simply would not have

traded at all, because it would not have been profitable, because the tax would have exceeded the profits derived from engaging in the scalping business. The commissioner said that those were considerations that would have to be taken up by Congress. He had to construe the act as the attorney did. I would not like to quote the commissioner and those who were with him, but we got the impression that he thought it was a hardship and an injustice to make transfers taxable, but he said that they were things that he had no power over; that those considerations should be addressed to Congress.

Now, Mr. Moore, to come to your point as to why these things are done. I gave one illustration how it happens, namely, where a man wants to buy 15,000 bushels and is compelled to buy 25,000 in order to get 15,000, and he lets go of 10,000 because the other man wants it. He gets it in order to make change.

Mr. MOORE. Is it a bona fide transaction in the beginning? Does he really want the 25,000 bushels, or is he just taking a chance?

Mr. WINSTON. Absolutely. He is a dealer in grain. He does not expect to grind it up into flour, but he is a dealer in grain.

Mr. HAWLEY. Does he expect delivery?

Mr. WINSTON. Absolutely.

Mr. MOORE. He is buying it now on the expectation that he may dispose of it to somebody else?

Mr. WINSTON. That is the thing that creates the ever-ready market. That is the thing that makes hedging possible.

Mr. MOORE. It raises the question whether he is an independent dealer or middle man.

Mr. WINSTON. I wish to address myself to that.

Mr. RAINEY. It is true he may be buying for the country elevator man who is hedging against a purchase he has made from a farmer.

Mr. WINSTON. He may be buying for a miller who is hedging. Hedging is recognized as necessary and proper conduct of a miller. I am going to explain hedging.

Mr. FORDNEY. Let me see if I understand you. You start out by saying, suppose you are the broker and you know that a certain miller in Indiana wants 15,000 bushels; but you don't find anybody that has 15,000 bushels to sell, but A has 25,000 bushels and you know that B wants 10,000 bushels.

Mr. WINSTON. He is signaling.

Mr. FORDNEY. You take the entire 25,000 bushels in order to get that 15,000 and transfer the 10,000 to B without any profit.

Mr. WINSTON. Without any profit, at the identical price. If it were not at identically the same price it could not be transferred under the rules of the board of trade.

Now, hedging is this kind of a transaction: Suppose a miller who grinds up the grain is going to produce flour or is going to produce meal. He is engaged in the legitimate business of making a manufacturing profit. He is not in the business to make a profit on the fluctuations of the price of grain. Nor does he wish to be subjected to the dangers of a decline in the price of grain. Therefore, for his own protection against the fluctuations of the market, he does what is known as "hedging," and that would be this: Suppose I am Washburn & Crosby and I am going to buy 100,000 bushels of wheat that I know can not be manufactured into flour for three or four months from now and I recognize, which is a fact, that between now and

that time there may be a decline of 20 cents a bushel in the price of wheat, and I will have bought at a price that is 20 cents higher than the price at the time I get it manufactured into flour. Now, then, in order to insure myself against that loss by the decline in the market, at the same time that I buy this 100,000 bushels I sell short 100,000 bushels for September or December delivery.

So that when I get my wheat manufactured into flour, I will then buy in that 100,000 for contract and cover myself against the fluctuations of the market. So that if the market has gone down, and I buy any cheaper than what I sold it for, I make that profit, which covers me against the fluctuation. Of course it takes away the chance of my making a profit if the price of wheat increases in value, but I am not engaged in the business of speculating upon the price of wheat. I am engaged in a manufacturing business and getting my manufacturers' profit. So these board of trade men who are called scalpers, who create that every ready market, who are there ever ready and willing to buy grain from whoever offers it or to sell it to whoever wants to get it, and it enables the farmer at all times to get his market. It therefore follows that they are engaged in a legitimate enterprise, and I don't think it is the purpose of Congress to tax out of existence anybody who is engaged in a legitimate enterprise.

I realize very well that it would be more satisfactory if I had these men here. I came down to present these views to the Commissioner of Internal Revenue, and he can by reference to his records and the statistics and reports that are made to him verify and confirm whether this is a fact.

Three hundred of these men who are these so-called scalpers have come together in a meeting and appointed a committee for the purpose of presenting their views down here.

Mr. HAWLEY. These men that you represent when they buy or when they sell under the rules of your board of trade must either make or accept delivery?

Mr. WINSTON. They must, sir. That is the only way it makes it a legitimate transaction under the laws of Illinois.

Mr. MOORE. How are their transactions checked up now for the purposes of revenue by the Internal Revenue Bureau?

Mr. WINSTON. They have cards.

Mr. MOORE. You say these transactions are not entered on their own books. How does the Revenue Commissioner check them up for taxation?

Mr. WINSTON. They are required under the present law to make out memoranda of sale covering these transfers, and that is done under the present law.

Mr. MOORE. Does the exchange keep that record?

Mr. WINSTON. He is required to render monthly reports.

Mr. MOORE. To the exchange?

Mr. WINSTON. The Commissioner of Internal Revenue.

Mr. MOORE. Though the transaction may not be entered on their own books they are required to make a report?

Mr. WINSTON. They are.

Mr. MOORE. You propose to have us waive that in the new law?

Mr. WINSTON. The necessity of making reports?

Mr. MOORE. You want to strike out half a line affecting sales?

Mr. WINSTON. Yes, sir.

Mr. MOORE. And you state that they contend that if we continue to impose the tax there will be no profit in their business?

Mr. WINSTON. They would have to cease doing business, that particular class of trader.

Mr. MOORE. I would like to know just how severe that would be on business generally before you go. But I want to use the illustration you used in the beginning—Mr. Patten's operations—where you said that Mr. Patten would buy a million bushels and go away to California or somewhere and wait until the rise in the market and then cut his melon. Would our remedy be, seeing that we have got to raise more taxes, to let the tax on the scalping operations stand and devise some method of reaching Mr. Patten's transaction?

Mr. WINSTON. That would be reached through the income tax and excess-profits tax and the additional tax, as I take it.

Mr. MOORE. If he makes but one transaction and waits six months, or whatever time may be required for him to derive his profit, while your man is making changes every day and constantly throughout the country, it may bear more heavily on your man than it would on Mr. Patten. Would our remedy be, since we have got to get more taxes, to still hold your man but reduce the tax on him and raise the tax on such transactions as Mr. Patten's?

Mr. WINSTON. I don't see how that could be done, Mr. Moore, because this is a tax upon a facility, and Mr. Patten doesn't use that facility but just the once, and consequently as a stamp tax, the tax that is an equal tax, it could not be applied more heavily to Mr. Patten than to anybody else.

Mr. MOORE. Except as to income and excess profits?

Mr. WINSTON. Except as to income and excess profits. When I used Mr. Patten's name I did it merely for the purpose of making a distinction between a speculator and a so-called scalper. A speculator is not dealing constantly during the day. He buys and waits a long time for a rise in the market or decline, such an illustration as I gave applying to normal times.

Mr. MOORE. There is a great deal of talk about middlemen in these times, and we are hearing a great deal about propaganda of one kind and another, and there is a propaganda against the middleman, who is regarded as essential in many relations between consumer and purchaser. But your kind of middleman is a little more aggravated than any other kind, and I thought you might like to dwell upon the actual necessity of his existence at this present crisis and give a particular reason why he should be relieved from taxation, since he is a go-between, and some of these transactions will not be of a substantial nature, but of a speculative nature.

Mr. WINSTON. I do not ask, Mr. Moore, that he be relieved from taxation. I ask that a particular kind of machinery that is necessary for the conduct of his kind of business be relieved from taxation in order that he may engage in the business at all. Now, I am well aware that it is a disputed economic question as to whether or not dealing in futures is necessary at all. That is a mooted question, and people assert that it is necessary, and there are those who take the opposing side of it.

There is an investigation on foot to determine that question, and I believe that they are going ultimately to find out that they are engaged in a necessary enterprise, not only in times of war but at

all other times, and that it is necessary to maintain the affairs of the country. But I do not take it that this is the time for Congress, in the consideration of raising revenue, to tax out of existence men whose business has been recognized as being legitimate and the Supreme Court of the United States, in the Christie case, has said that hedging is a thing that is necessary to properly conduct the milling and other businesses where they use cotton and grain.

Mr. RAINEY. Is this an example of hedging? A farmer has 40 acres of wheat in Illinois or Missouri. He wants to sell it at \$1.50 a bushel. Assuming that your exchange is running, he goes to his elevator man to sell. The elevator man gives him \$1.50. Then the elevator man wires to his broker to sell. The wheat may amount to 1,000 or 1,500 bushels perhaps, but enough to realize a small profit for the elevator man plus the cost of getting it there. The dealer then goes and sells that small amount of wheat. Is that a hedging transaction made possible by this system?

Mr. WINSTON. I think it is.

Mr. RAINEY. That occurs frequently. We have got to raise money upon something. How much will we lose if we strike out these words "including so-called transferred or scratch sales"?

Mr. WINSTON. The contention is that the Government should get more money by striking it out than by leaving it in.

Mr. RAINEY. I can't see that, because you said that in 15 months in this dealing the Government collected over a million dollars.

Mr. WINSTON. The answer to that is that under the 1914 act the tax on transfers was not covered in express terms. That act read merely "sales, agreements of sale, or agreements to sell." These board of trade men had been told that transfers were not taxable, and for 16 months they proceeded upon the theory that they were not taxable and did a wide-open business of making these transfers, and after 16 months they learned for the first time that they were taxable.

Mr. RAINEY. And then they paid up?

Mr. WINSTON. And then they had to pay up. But their contention has been, and it was a fact, that if they had known that transfers were taxable, they would not have engaged in the business. They could not have afforded to, and that is the fact. Under the operation of the present act they say "We are expressly covered, and if we have to pay a tax on transfers, we can not engage in business."

Mr. RAINEY. Has the market been closed since this act went into effect?

Mr. WINSTON. Yes, sir.

Mr. RAINEY. It has been for two years?

Mr. WINSTON. It is open now.

Mr. RAINEY. On wheat?

Mr. WINSTON. No.

Mr. MOORE. What would be the effect if they went out of business? That is putting it bluntly.

Mr. WINSTON. The Government would lose all the tax.

Mr. MOORE. Would the farmer suffer in the matter of his sales?

Mr. WINSTON. Well, I doubt if he would during the present time, because the demand for grain is much greater than the supply.

Mr. MOORE. Can the farmer dispose of his grain to the elevator man without the intervention of the exchange scalper?

Mr. WINSTON. I imagine he could, Mr. Moore, but that is a technical grain question that I would not feel qualified to answer. But the miller could not hedge. He could not protect himself against the fluctuations of the market. The miller who buys grain now has no assurance that when he gets his grain manufactured into flour or meal next fall that he may not have to stand a loss of 20 cents on the decrease in the price of grain.

The CHAIRMAN. Is the scalper now on the market?

Mr. WINSTON. To a much less extent than formerly because of this act. Mr. Dickie, whom I used as an illustration, has not done any trading to amount to anything since February, and he says that everyone of them sooner or later will recognize that that kind of business can not be engaged in unless they are excused from paying a tax on blank shells where they do not fire, where they do not make the sale. Unless they are excused from that tax on that single kind of transaction they can not engage in transactions on which they do pay the tax.

Mr. FORDNEY. If they make a profit, they must pay a tax?

Mr. WINSTON. Yes.

The CHAIRMAN. Or a transfer on another day.

Mr. WINSTON. A transfer on another day. A transfer does not exist, under their understanding of and under the rules of the board of trade except only in the case where you buy and sell at the same price, on the same day, at the same session of the board of trade.

The CHAIRMAN. This is what I understand hedging to be. A miller says, I am a miller and will buy 100,000 bushels of wheat at \$2 per bushel to be rolled into flour between now and September 1. To protect myself from the falling of the price of wheat I sell, say, on exchange 100,000 bushels of wheat for September. If wheat goes down to \$1.50, I lose 50 cents a bushel on the wheat in rolling, but my future sale will protect me because I make up my loss of 50 cents on my September sale for which I get \$2 instead of \$1.50.

Mr. WINSTON. That is it exactly. That is the exact proposition and on the other hand you would clear your profit in wheat if the price had advanced from \$2 to \$2.50.

Mr. RAINEY. Would you exempt from this tax the smaller scratch sales, say, along 15,000 bushels?

Mr. WINSTON. Well I don't understand, Mr. Rainey, that there would be any distinction as to the amount they sold, whether 5,000 or 10,000 or how much.

Mr. RAINEY. We could make an exception here in this law, couldn't we, so that it would not apply to the smaller sales?

Mr. WINSTON. I don't think, Mr. Rainey, that that would give the relief that they are asking for.

The CHAIRMAN. Suppose we limit it, and say that what are known as scratch sales, provided they make the transfer the same day of the regular purchase, without profit. That would cover the case, wouldn't it?

Mr. WINSTON. That would cover the case exactly.

The CHAIRMAN. I don't know anything about the rules of the board of trade, but we could put in that, "Provided that if the transfer is made without profit, on the same day the original purchase is made, there shall be no tax." That would cover your case?

Mr. WINSTON. From the standpoint of the Government I think that it should be more explicitly drawn than that.

The CHAIRMAN. If you simply strike out these words, the board might change its rules.

Mr. WINSTON. I think a definition of "transfer" should be in the act, and it would be something like this—

The CHAIRMAN. Suppose, after you have concluded, if you are not prepared to give it now, that you prepare what you think is an amendment that would cover the case you desire to cover and also protect the Government from any changes in the rules.

Mr. WINSTON. I could readily give it and read it into the record

The CHAIRMAN. All right.

Mr. WINSTON (reading):

Upon each sale, agreement of sale, or agreement to sell, excluding so-called transferred or scratch sales.

Then the act follows. Then put in a provision—

Transferred or scratch sales shall be the following: Where the trader buys and sells at the same price, at the same session of an exchange, and eliminates himself by transferring his purchase to his seller.

I think that would cover it.

Mr. FORDNEY. "Without profit."

Mr. WINSTON. That is covered by "at the same price."

Mr. MOORE. That probably answers the question I was going to ask you in the windup whether you contended that this would be double taxation, that is on the transfer.

Mr. WINSTON. Yes; it means manifold taxation, Mr. Moore.

We are not asking to be excused from paying taxes in cases where there is no transfer and there can be a transfer, but only in the cases where there is a purchase and sale at the same price at the same session, which would result in a loss if I have to pay the tax.

Mr. FORDNEY. The point I would like information on is, suppose you buy, to use the illustration you gave, from A 25,000 bushels and sell to me 10,000 and to Mr. Kitchin 15,000. You sell to me 10,000 at the same price you paid for it. You have got to pay a tax unless that is transferred to me direct? It is paid twice unless you are freed from the tax on the transfer?

Mr. WINSTON. That is correct. Mr. Dickie tells me that he could guarantee in his own case that if he could have the tax removed on transfers he would pay a tax on that kind of transactions of a minimum of \$3,000 a year, whereas if that tax on transfers is retained, he can not prosecute his profession and can not engage in his business but shall be compelled to retire and the Government won't get anything, and he says that he is typical of 300 more; that they will have to retire from business. Our belief is that with the tax eliminated the Government can get a million dollars from this class of traders, whereas if the tax is kept on this class of traders the Government would get no tax from that source. I realize that this is a lawyer's statement and that it is not backed up by the witnesses here. But if Congress should see fit to have an investigation made, and especially if the facts from the Commissioner of Internal Revenue, I believe that he can by an examination and an analysis of the reports and of the records and statistics of his office ascertain that the Government would lose nothing but a comparatively small amount.

I have not touched upon the thought that it is a hardship and taxes these men out of existence and deprives them of a means of making a living. It is a business that they have been engaged in and recognized for 50 or 60 years, and when Congress comes to decide whether or not it is a useful enterprise and necessary to the commercial world, then they can decide it independently of any question of taxation. But at this time you are discussing the question of getting as much revenue as possible, and it is a source for getting revenue, and if you levy that tax it is my opinion that the Government will lose the revenue from that source.

Mr. RAINEY. In your judgment could they stand a higher tax than 2 cents?

Mr. WINSTON. I think this tax is as much as the traffic will bear.  
(Thereupon at 1.40 p. m. the committee adjourned until Friday, July 12, at 10 o'clock a. m.)

# REVENUE BILL.

COMMITTEE ON WAYS AND MEANS,  
HOUSE OF REPRESENTATIVES,  
*Friday, July 12, 1918.*

The committee met at 10 o'clock a. m., Hon. Claude Kitchin (chairman), presiding.

There were also present Representatives Rainey, Dixon, Garner, Dickinson, Oldfield, Crisp, White, Fordney, Moore, Green, Longworth, Sterling, Martin, and Hawley.

## STATEMENT OF MR. JESSE H. NEAL, NEW YORK CITY.

Mr. NEAL. Gentlemen of the Ways and Means Committee, I appear before you in my capacity as executive secretary of the Associated Business Papers (Inc.), which is the national organization of trade, technical, industrial, and scientific publications. I represent a branch of the publishing business which for some reason is seldom referred to in these postal discussions. The custom has been in your debates to refer to newspapers and magazines, and the term magazines is understood by most Congressmen to signify the larger and better-known publications, such as you see upon the news stands, and I want to take just a few minutes of your time to invite your attention to the fact that there are in the United States hundreds upon hundreds of valuable and necessary periodicals which can not be classed either as newspapers or magazines.

For instance, we have nearly 200 papers devoted to the subject of education. I will mention just a few of the numerous classifications in which you will find many worthy publications of moderate size performing very useful service. Among these I note papers going to officials and employees in fire and police departments, publications dealing with forestry and irrigation, hygiene and sanitation, labor publications, law periodicals, papers for boys and girls, publications covering philanthropic and humanitarian subjects, scientific subjects, Sunday schools, and many other religious and denominational publications. You will also find 10 periodicals in raised type for the blind. You will find, too, 12 progressive publications going to the Indians and which are doing much to make good citizens and good Indians out of our North American aborigines.

This is wholly aside from the particular publications which I personally represent. These business papers, or possibly you are accustomed to call them trade papers, play an essential part in the daily life of merchants, manufacturers, engineers, miners, captains of industry, shipyards, steel mills, chemical plants, the coal industry, aviation factories, textile mills, etc. Yet they form less than 4 per cent of the total volume of second-class mail. No matter how widely separated are the units of any business or industry, the paper serving that field unites them all together into one closely connected group.

Every one of the munitions used upon the battle field or behind the lines—the artillery, the machine guns, the rifles, the ambulances, the clothing, the ammunition, the railroads, the airplanes, the gas masks, the motor transports, etc.—are all products of men who read trade and technical papers. You will not find an engineer engaged in the creation of any of the huge commercial or military projects who does not read and depend upon one or more engineering papers for news, for inspiration, and for continuous education in his line of work.

All trade and industry to-day, gentlemen, is in a state of flux and of change, and did we lack the established channels of information furnished by our trade and technical press, it is not too much to say that a state of utter chaos would prevail in many of our most important industries.

Important as these papers are in ordinary conditions, they have become in war conditions only less essential than coal and transportation. Speeding up production beyond limits ever dreamed of is one of the most important features of our war program. This is only one of the high functions of the business press.

The Senate Committee on Printing wrote with a pen inspired by truth and the spirit of Americanism when they said, a few months ago:

To jeopardize the existence of the press is to imperil the life of the Government itself, so dependent is a democracy upon the prompt and widespread information of its people. Therefore whatever affects the publication of its newspapers and periodicals likewise affects the welfare of the Government, and the necessities of such publications become in fact public necessities.

Let me digress for a minute from this discussion of the war function of business papers and call your attention to the place they occupy in the home towns and cities of every gentleman in this room. You will find that every business house in your community takes a so-called trade paper, and this applies to the automobile man, the banker, the blacksmith, the man in the brickyard, the butcher, the cotton buyer, the cement mill, the clothing store, the creamery, the dentist, the drug store, the dry goods store, the electric shop, the implement man, the flour mill, grocery and hardware stores, the hotel, the laundry, the lumber yard, the jewelry store, the plumbing shop, your printer, the shoe store, the telephone man, and your undertaker, not forgetting the hospital, the doctor, and your municipal officials. You will pardon this cataloguing of names. I do not want to be tedious, but I do feel under the necessity of impressing upon you the variety and importance of the interests that are indissolubly linked up with these so-called trade papers.

One of the greatest problems of present day existence is the problem of distribution, the getting of merchandise from its source to the consumer cheaply and efficiently. That problem, gentlemen, is being solved largely through the work of the business press. Civilization itself has advanced almost in exact proportion as we have overcome the immobility of thought and things. The business press has been compared to a pipe line connecting all of the units in each field, so that each receives in proportion to its needs all necessary trade information, instruction, and advice.

The advertising in trade and technical papers is just as essential as the reading matter to the various fields of industry reached by these papers; in fact, the readers demand the kind of service that is

rendered through the advertising pages, and it would be impossible to build a subscription clientele of any size or permanency without a representative volume of clean, well-written advertising. Many business papers lay particular emphasis upon the character of their advertising in presenting the advantages of their papers to prospective subscribers.

A story about new materials, new processes or new appliances can be used only once in the editorial columns as news. Any repetition of the story becomes advertising, and must be given through the advertising pages.

It is not human nature to at once be impressed with a new idea, and many of the most important improvements in all branches of industry have resulted solely from the steady hammering of attractive and scientific advertising in business papers. These advertisements benefit not only the advertiser, but have an undoubted economic value for the entire industrial organization of the nation.

Right here I want to correct, if I can, an all too prevalent misconception of the nature and function of advertising. I refer to the erroneous belief that advertising is merely a clever sales instrument which is used by advertisers to obtain some special advantage for themselves alone. On the contrary, gentlemen, I but voice the belief of our deepest thinkers and wisest economists when I say that advertising is an economic force in American life, that should be recognized as such by Congress, and given every opportunity to develop to its fullest capacity for good.

Advertising is not an added expense to either the seller or the buyer. It is not a luxury indulged in by wealthy manufacturers, vain of their success and desirous of puffing out their chests in the public prints. It is not a device through which unscrupulous men may put something over upon unwary victims. It is none of these things, gentlemen, which some, in perfect sincerity, but in the imperfect light of their limited knowledge, may have claimed.

What, then, is this strange and wonderful force which is peculiarly an American institution, and which has done so much for the American business? I will tell you what it is. It is analogous to the typewriter, which emancipated us from the drudgery of handwriting. It is comparable to the telephone, the adding machine, the automatic reaper and binder, the sewing machine, and the cotton gin. It is the twentieth century limited taking the place of the oxcart. It is, gentlemen, the very quintessence of American inventive genius and superior commercial enterprise.

All the world comes to sit humbly at the feet of America to learn of our achievements in the art and science of advertising. Do you know what the national emblem is of the associated advertising men of the country? It consists of just one word, but it is a word which preaches sermons concerning the ideals and aspirations of the splendid body of men composing the advertising profession. That word is "Truth." I am proud and glad of the opportunity of standing before this important committee of Congress to ask you to hesitate long before you endanger this great and beneficent motive force in American business, especially at a time when we need its inspiration, its influence and dynamic impulses.

More than any other one force, modern advertising is responsible for the prosperity of United States industry. The great majority of

our improved manufacturing, selling, and distribution methods have been the outgrowth of advertising; advertising which has scrapped obsolete machinery; advertising which has standardized production operations; advertising which has made better merchants and distributors; advertising which has provided consumer markets at a minimum of cost. All of this has enabled quantity production by economical processes and has enabled us to pay higher wages than any other country and yet to be able to compete in the markets of the world with the low paid and oppressed workmen of less progressive countries.

At the same time, gentlemen, the advertising revenue has built up able trade paper organizations, which have become not only the channels but the very springs of higher industrial and trade education. As an instance of what this means, I will cite the case of a typical trade paper selling for \$6 per year, which has a net subscription income of \$30,000 and which spends \$85,000 annually for editorial service. In papers such as these you can not separate advertising from the editorial matter, because each performs an indispensable service to trade and industry, and each is so dependent upon the other that, like the Siamese Twins, they would die if you separated them.

There is a scarcity of salesmen at the present time. Moreover, the cost of traveling has increased tremendously, but advertising has come to the rescue and is filling the deficiency. The existence of this labor-saving force makes it possible for manufacturers to continue their contact with the trade, even though the field force may be "over there" distributing samples of American shrapnel to the Huns. A prominent Ohio manufacturer of steel products told me that 30 of his salesmen had enlisted or had been drafted into the Army, but that he could not attempt to fill their places; he would simply put a little more pressure upon his advertising, hoping in that way to hold these jobs open for his men until they had returned from the battle fields of France, as he hoped they might.

Do you realize that a page of advertising in a business paper will call upon 5,000 stores or factories in one week, at a total cost of \$50? To undertake the same work with salesmen would require 100 men and an expense of about \$10,000.

A few weeks ago our Government commandeered the entire output of Bull Durham tobacco for the use of our Army of Liberty. The famous Durham bull has stepped forth with shameless boldness from the protecting shelter of that little rail fence and has gone "over there" for the period of the war. He will stay there until our boys roll their pills in the home town of Kaiser Bill. In the meantime advertising will stand guard at home over the precious Bull Durham good will.

In many other like cases, advertising is the only insurance that can be taken out by concerns whose factories are engaged in war work to maintain reputations and contact with markets over against the time when American industry must again resume the arts and practices of peace.

During the period of the war, it is almost providential that we possess highly developed advertising skill and the great public channels of intercommunication afforded by our newspapers and periodicals. Without these forces it would be impossible to make the

revolutionary adjustments in many lines of business and hold the country together, acting, thinking, and working with irresistible unity.

If you think that Germany is not watching hawk-like over American advertising, let me read to you the following quotations from two great German newspapers. This one is from the Lokal Anzeiger of April 20:

Nothing is more acceptable to the German nation than to note the fact that the North Americans have abandoned advertising their goods in practically all of the foreign markets. In the Latin-American publications, the market which they have always tried hardest to acquire, there has been a heavy loss of advertising. A prominent Buenos Aires agency announces the fact that 83 per cent of their United States advertisers have canceled their contracts. This is also true in the Orient, and a careful compilation of the decrease in advertising there shows a greater depreciation than in South and Central America. In the United States itself there is not a paper which has not suffered a loss in its advertising lines, and that despite the fact that the last year showed an increase in the millionaire class of 973 individuals. In other words, the war has terrorized the American nation, but not the Germans, for a perusal of their periodicals will show that manufacturers still advertise even if they have not the goods to deliver, but with the idea of keeping their name before the public.

Here are the views of the Berlin Tageblatt, expressed April 26, 1918:

If the despised Yankee nation think they are going to win the war and force Germans out of foreign markets, there is nothing to indicate this sentiment in their local and foreign advertising. Many of their advertising agencies have closed their doors through lack of patronage. Their much-talked-of captains of industry have canceled their advertising contracts everywhere. Germany and German merchants have increased their advertising space in neutral markets and at home. It pays to advertise in war as well as in peace. The far-seeing merchant never stops advertising.

The above paragraphs have moved Dr. W. E. Aughinbaugh to write an admirable article on the subject of "Germany Preparing for Peace and World Trade by Advertising," for the New York Commercial, on which paper he is foreign and export editor.

Germany would like nothing better than to witness the weakening of our national morale through the poisoning or the drying up of our springs of information.

I have need here only to cite the case of the New York Mail and Express, which is still under consideration and is fresh in the minds of all of you, and the statements made on the authority of the United States attorneys that sums ranging possibly from five to thirty million dollars have been raised to promote German propaganda and German sentiment in the United States. If you will pardon the digression, gentlemen, I will say as an advertising man, and I voice the sentiment of the advertising fraternity when I say it, that we deeply regret that Congress has seen fit to appropriate only a little over \$1,000,000 for the propaganda work of the Committee on Public Information to combat those countless millions being spent by those master propagandists.

Whatever Congress may do after the war, it is to me unthinkable that they could knowingly endanger now through adverse legislation the fullest functioning of the American press.

Should you happen to pick up a trade paper serving any of the war industries, such as shipbuilding, coal mining, machinery production, steel making, mining, hospital work, transportation, or in fact any of the allied war industries, I hope you will bear in mind that the volume and character of their advertising is the measure of the service they are performing.

I have heard advertising pages spoken of as high priced, as a species of bonanza which vomits forth nefarious profits in such volume as to necessitate the restraining hand of burdensome taxation. To the average trade paper publisher, this is satire, pure and simple. In the records of the revenue office is the best evidence as to the absurdity of the claim that the publishing business is excessively or even fairly profitable.

It is greatly to the credit of our Government that it has promoted and encouraged, through a low flat rate of postage, the dissemination of all this life-giving and necessary information throughout the land without prejudice to any locality and on an equal basis to all men regardless of their place of residence. Our beneficent postal system of flat rates has overcome the handicap of our magnificent distances, has obliterated sectional lines, and has shortened the distance between human minds, just as certainly as the railroad has shortened the distance between places.

We are here to-day in protest against any measure, whether it is presented under the guise of taxation or an adjustment of postal rates, which will endanger in the slightest degree this vital and complex system of commercial, industrial, and professional intercourse which has been built up over a long period of years upon postal principles that have justified themselves a thousand times over in the results and benefits to the Nation.

We do not protest against the payment of taxes. We ask merely that you do not institute postal laws which will prevent the payment of taxes by preventing the earning of profits. We are paying now all taxes that any business is paying, and in fact, more taxes proportionately than businesses of similar size.

Few concerns in any line of business use as much first-class postage as do publishers. In our particular field, the bill for first-class postage more frequently than not, equals or exceeds the bill for second-class postage. We are paying the extra cent on letters without protest, because it is frankly a tax and will be discontinued at the close of the war.

We are paying our income taxes, our surplus taxes, our corporation taxes, all of them cheerfully and gladly. Moreover, we are cooperating with the Government in helping them to administer and collect the complicated taxes imposed on the present revenue bill.

Commissioner Roper has on several occasions expressed the obligation that he is under to the press for aiding them to make collections of the taxes under the present revenue bill.

We ask no exception on that score, but we submit, and I hope to demonstrate that our relations to industry; yes, and our relation to Government itself is such that we should not be called upon to pay an extra tax, a supertax, or, what some of our publishers have regarded as punitive damages for wrongs, real or fancied, which may have been suffered by public men at the hands of the more popular mediums of thought.

The charge has been made that we, the publishers, have been enjoying a subsidy at the hands of the Government, and that we must now be made to disgorge and to pay a prohibitive postal rate in the future. To that charge we take emphatic exception. A low transportation charge on intelligence is no more of a subsidy to the publisher than a low freight rate on wheat is a subsidy to the farmer.

It is no more of a subsidy to the publisher than the money spent on public highways is a subsidy to vehicle owners.

If you, in your wisdom, should decide to place an extra tax upon the coal producers, would you set about it by raising the freight rate on coal? Obviously the only effect would be to contract the area over which the coal could be shipped and to increase the price to the consumers within that district.

The converse of this proposition is necessarily true—that a low freight rate is obviously of primary benefit to consumers.

You annually appropriate millions of dollars to maintain navigable streams. Do you do this for the benefit of the navigation companies who operate boats for a profit, or is it in the interest of the national welfare to maintain every possible channel of intercommunication.

It is not a question of a Government bounty to publishers, if indeed there is a loss on second-class service, but it is a question as to whether you shall continue our long established policy of making it easy and inexpensive to disseminate knowledge, literature, news, merchandising information, and current scientific, technical, and professional literature. It is a matter largely between Congress and the American people, and if I mistake not, it is the voice of the people which will determine this question in the end.

I want to say, in passing, that there are few issues before the American people to-day of greater moment to our whole social and industrial fabric than this question of zone postal rates.

In this opinion I do not stand alone. Let me fortify this statement with a few excerpts from recent interviews with well-known men on this question of zone rates:

George W. Wickersham, former Attorney General of the United States: There should be no law against limiting intelligence. I mean that there should be no embargo on sane intelligence. It is against the public interests. The people are entitled to all the truthful information they can get. In this way they are educated.

Prof. Charles Austin Beard, formerly professor of political economy of Columbia University, and now associated with the Bureau of Municipal Research: The whole spirit of the new postal zoning law is contrary to the principles on which our Government was founded. Jefferson, more than a hundred years ago, promulgated the theory that newspapers and periodicals were essential to the success of our democracy.

It is wrong in spirit and wrong in theory to hamper the national development of the country. It will result in sectional feeling, and will aid in destroying our national unity. It is particularly obnoxious at this time when the people of the country, east, north, south, and west, should be blended together with a common purpose.

Newcomb Carlton, president of the Western Union Telegraph: It seems to me, from the standpoint of constructive criticism, that the mail zone measure should be repealed and a more equitable method of raising revenue be substituted.

I regard this contemplated zone change as a serious detriment to the distribution of what must be useful and constructive material. It does seem to me that some more equitable plan for raising money could be devised than this taxing of periodicals.

A. Barton Hepburn, chairman of the board of directors of the Chase National Bank: If this measure (the postal zone law) applies to all magazines, as I understand it does, I should think that it is very unwise.

Hon. Tom C. Rye, governor of Tennessee: Tennessee papers have shown wonderful patriotism and have been of great help to us in our work. I hope the matter can be arranged so that the papers can pay their proportionate part of the additional revenue needed without forcing any out of business or crippling them in their work.

Prof. Walter B. Pitkin, of the Columbia University Faculty: The new postal zone law is based on "peanut-shell politics." It should never have been enacted; it most certainly should never go into effect.

There is practically nothing to be said in favor of the new system. It will aid a few of the sectional periodicals and it will bring a little additional money into the Post Office Department, but to offset this it will destroy many magazines of national importance; it will curtail the nation-wide circulation of our leading newspapers; it

will result in increase of cost both to the reader and to the publisher, and to dissatisfaction on the part of the advertisers. It is on the whole obnoxious and unsatisfactory and should be repealed.

The new law destroys national unity and creates sectional spirit. It limits national intelligence. The people in the West are entitled to know what the East is doing, and vice versa. Without this knowledge, which only can be disseminated by magazines and newspapers, our spirit of nationalism will be destroyed.

Hon. James Withycombe, governor of Oregon: To my mind it would be unwise at this time to discourage unduly the circulation of good literature. First of all, this Nation is passing through an epoch-making period, and the many issues which are now before the people are of such importance that a full understanding of all questions and events is highly desirable.

Hon. Frederick D. Gardiner, governor of Missouri: Any restriction upon the dissemination of information is indefensible even in ordinary times. At this time it would be a most serious mistake.

It is extremely important that the people be kept advised as to the war program and the progress of events. The best possible vehicles for the spreading of such information are the newspapers and magazines.

Public speakers can not reach all the people. In many inland districts speakers and the people can not be brought together. Therefore, I am firmly convinced that the zone law effective July 1 should be repealed.

A tax on intelligence should be the last to be imposed. The Government should not take any action that will increase cost of periodicals. The small profits to publishers will not stand the increase. Hence it will fall on the people, with the result that many most needing information will be unable to procure it.

Hon. Arthur Capper, governor of Kansas: If Congress can be made to see that the industry can not pay this tax and that its imposition will result only in a demoralization of business, it seems to me that even the most rabid opponents of a free press will hesitate to place this unbearable injustice upon the people. It is especially important at this time, when the Government must have the loyal support and hearty sympathy of every citizen, that the American press receive encouragement rather than discouragement.

The winning of the war depends upon the people at home, and though the Government printing plants work overtime, we still must depend upon the press to inform, educate, and unify the people. The imposition of the zone system at this time would be a strategical blunder that would amount to a national calamity.

Hon. Richard I. Manning, governor of South Carolina: I think that any law which bars the publication of magazines and newspapers, and especially hampers their distribution to those who are less able to pay for it, is a step backward in the progress of education and enlightenment.

I also think that such a regulation should not be put into effect during the progress of the war unless its necessity to the Government prosecution of the war is absolutely required.

Hon. Walter E. Edge, governor of New Jersey: It is unquestionably unfortunate if necessity requires any Federal action which would increase the cost to the public, in order to be kept informed properly of the unusual happenings of the day and their review from all angles through the medium of the public press.

In my judgment the press of the country has furnished the greatest selling agency for Liberty bonds and for organizing and popularizing every activity to which the public's support was imperative. It would seem to me, speaking generally, that every effort should be made by the Government to increase the opportunity for a still greater distribution.

John Mitchell, chairman of the State Industrial and Federal Food Commissions: I am opposed to any and all legislation which will circumscribe the circulation of American magazines and newspapers. Without these mediums the enlightenment and education of the people throughout the country would be impossible. This zone law certainly should be held in abeyance at least during the war, for it is impossible to calculate the good which the periodicals are doing the country and the harm which would result if their circulation were cut off.

Hon. Robert L. Williams, governor of Oklahoma: I believe the law should be held in abeyance, at least until after the war.

The newspapers and other periodicals of current comment are vital war agencies in disseminating news concerning the war. Liberty loans, the Red Cross and other organizations, and much of the credit for the success of the draft, the three Liberty loans, the two Red Cross campaigns, the Young Men's Christian Association campaign, and the Knights of Columbus drive is due to a favorable public sentiment which these publications have had no small part in forming.

Hon. James W. Gerard, ex-ambassador to Germany: Now we have got to meet this German propaganda. The war is not going to last forever—and you have seen what German propaganda has done in Russia. These are grave dangers, and they only go to show what can happen in a country like Russia.

Fortunately, they can not propaganda this country as they can Russia, because we have great publications that go all over the country and have unified the whole country and the whole continent. That is why I am against the postal zone law passed in the last Congress putting an extra tax on papers sent from the cities where published.

Hon. Charles S. Whitman, governor of New York: Never was the call more imperative, the necessity more obvious than now for the businesslike conduct of business. We speak of the Government's business, we speak of the Nation's business. Why, gentlemen, all business that is honestly transacted in this country to-day is essentially the Nation's business. General information upon business matters must be widely disseminated, so that the most progressive and practical ideas developed by American ingenuity may be placed at the disposal of our people in every section of the country, and that, too, without delay or unnecessary cost.

No publications of a similar nature in any other part of the civilized world, and this is known all over the world, have approximated in character and in quality the trade journals of the United States.

In the present crisis, every individual and every State as well must forget local ambition, local interests perhaps, and even requirements of special localities in response to the great national call, the call of our country which must be heard and heeded everywhere. It is for this reason that I have in the past protested and will continue to protest against the imposition of zone postal rates, which must inevitably with such rates tend to confine their distribution to the neighborhoods comparatively near their publishing houses, and must of necessity restrict their efficiency as nation-wide distributors of business news. It isn't good national policy, whether it is good for your business or not.

I have been and shall be unqualifiedly opposed to the zoning system of postage rates which will tend to paralyze the wide extension of the nervous system of business provided by trade newspapers.

Charles E. Hughes: I hope that Congress will repeal the provision for the zone system which is decidedly a looking-backward and walking-backward measure.

You are abandoning a postal system which has made this country the most enlightened and best informed on earth. You are going back to old discarded and discredited postal principles when you erect zone fences every few hundred miles to obstruct and impede the interchange of life-giving information, call it advertising or what you will, between the people of the United States.

You recognize and no one would dream of attacking the principle of a flat rate on letters or on third-class matter. The civilized nations of the world have recognized the necessity for uniform flat rates for international intercourse, if the barriers of distances are to be destroyed and the nations of the world brought together.

When this destructive zone system of rates is in full force and operation, a publisher can send his paper around the world for about the same as the rate to the eighth zone. It will make no difference either whether the ocean steamship carries the paper 1,000 miles or 5,000 miles, for the rate is a flat rate to any point in any nation in the universal postal union. Furthermore, publishers in Canada will be able to ship their papers to any point in the United States for less than it will cost to send papers from San Francisco to Chicago. Moreover, under the present, second-class rate any private individual can mail a paper to any point in the country for a flat rate of 4 cents a pound, which will be less than the average zone rate beyond the fourth zone. I respectfully submit that there is something wrong with a bill which permits such inequalities.

Every deep student of postal matters has advocated flat rates. Let me quote here a man for whose opinions I have profound respect—Daniel C. Roper, formerly First Assistant Postmaster

General and now Commissioner of Internal Revenue. These extracts are from Roper's History of the United States Post Office:

The postal reforms successfully carried out in England between 1837 and 1840 established the important principle that postal efficiency depends on uniformity of rates and standardized conditions.

It is because of the economic utility of the post office that extensions of postal service where needed are justified although the return in postage receipts may not defray the cost of the extension.

The importance of postal service should be measured by the benefits which it confers and by the wealth it creates rather than by the postal charge or the postal revenue.

Taxation obviously is not the motive underlying the operation of the postal service by the Federal Government; it is not permitted to be even an incidental phase of the post-office administration. The people and their representatives are most jealous of any restraint of the operation of the post office. They require it to be untrammelled, and have even been willing that it should be subsidized out of the Treasury to the extent necessary to make its facilities more generally useful. The reason for this attitude lies in the economic utility of the post office.

It is not fair to muddy the issue by attempting to compare the distribution of information and education with material commodities. Pork and information are as unlike as brick and brains. Free intercourse between the people is the necessary antecedent of all business transactions. It is good economics and good statesmanship to promote such intercourse, because it is only through that means that a sale can take place, that merchandise can be produced or shipped. This is a big country, gentlemen, and national unity of thought, purpose, and action is an absolute necessity.

We are not united simply by the Constitution, or even by a common language. Even the physical union which is accomplished by the railroads would be of no avail without the unity which is the product of common ideals, uniformity of education, and singleness of purpose. People do not think together, do business together, act together, and fight together unless bound together by a common bond of sympathy, which can only result from a free interchange of ideas on an equitable basis to all sections. Keep the country together, gentlemen. Don't impose at this time any conditions that tend toward disintegration. Look at Russia. Did she lack men? Think of her hordes, millions on millions. Did she lack material? Think of the vast resources of the Russian Empire. Yet to-day she lies prostrate before Germany, a mass of wreckage, because of the lack of unity on the part of the Russian people.

Mr. STERLING. What are Russia's rates on that class of matter through her post offices?

Mr. NEAL. I do not know, sir. I presume that could be ascertained from the Library of Congress, or I would be glad to get it for you.

Mr. STERLING. I think it would be more informing if you could give us that information.

Mr. FORDNEY. Don't you think Russia's trouble was due to having too large a percentage of Socialists?

Mr. NEAL. The diagnosis of the Russian disease is a job that has baffled and is baffling some of our wisest statesmen and I would be bold, indeed, if I attempted to pass any comments on the nature of their trouble.

Mr. STERLING. Then you are not pretending to say that her condition is due to high postal rates?

Mr. NEAL. I say this, that her condition is obviously, due to lack of unity among the Russian people.

Mr. STERLING. Was that due to high postal rate?

Mr. NEAL. It was due to the lack of inter-communication, to the lack of a national medium of thought, to a lack of a national policy, and to the lack of any binding influence with the exception of autocracy and when the autocracy—

Mr. STERLING (interposing). Was her lack of unity due to high postal rates?

Mr. NEAL (continuing). And when the autocracy was abolished she fell apart like a house of cards.

Mr. STERLING. Will you answer my question? Did high postal rates have anything to do with her lack of unity?

Mr. NEAL. Gentlemen, I have said that the lack of unity was due to the lack of unifying influences. They lacked periodicals, they lacked newspapers, they lacked the reading habit, they lacked common ideals and they lacked common purposes which would be inculcated by that sort of thing, and consequently there was nothing to hold them together. It is probably true that little, if any, attempt was made to promote national periodicals in Russia. We know they are extremely backward. I anticipate if the Government had made an effort to promote periodicals of that kind, such as a democratic government would have done, conditions there would have been far superior to what they were when Germany broke them down.

Mr. FORDNEY. Was not her condition due to too much circulation of socialism?

Mr. NEAL. That is a very deep question, Mr. Fordney.

Mr. FORDNEY. I think it is, too, but you did not answer Mr. Sterling's question.

Mr. NEAL. And then, too, Mr. Fordney, the discussion of socialist principles at the present time is a rather delicate one, because some of the socialists tell us that the United States Government is now espousing some of their most beloved doctrines.

Mr. FORDNEY. That comes from Mr. London, the Socialist Member of Congress, and he is a highly educated man and gets all sorts of literature in this country and keeps posted on the subject as perhaps no other man in Congress is.

Mr. GREENE. I do not think every one would agree with the latter part of that statement.

Mr. FORDNEY. I mean on socialism, Mr. Greene.

Mr. GREENE. Oh, yes.

Mr. NEAL. I wonder if you realize that only 7 out of every 100 boys and girls go through our high schools and that only a small percentage of these are able to enter a university? The schooling possibly of some here was confined to a high school, but our education has been carried on ever since, chiefly through the reading of educational or cultural periodicals.

Professional men find the publications of their professions practically a post-graduate course. No doctor, electrician, chemist, engineer, dentist, or other professional man could possibly keep pace with current scientific progress without his own professional paper.

If it is worth while for us to make any sacrifice to maintain our institutions of learning, none of which are self-supporting and which have the teaching of our children for not more than eight years in a

great majority of instances, how much more important is it to cultivate by every reasonable means sources of education and enlightenment upon which our children must depend after they leave the common school, over a period of many time eight years.

We favor the widest possible extension of postal service and its reduction in cost wherever possible, rather than increased cost or contracted service. We instituted the rural free delivery, not to produce revenue, because it was merely an extension of service, involving many millions of additional cost, but to still further unite or bring together the people of every district, however remote from cities or towns. That, gentlemen, is another striking example of the benefit of flat rates. We didn't say to the man who lives 20 miles from the post office that he would have to pay more for the delivery of his mail than the man living 1 block from the post office, but we said, in effect, "this is one country, one people; under one Government, and we propose that every man in this country shall have access to information of all kinds on exactly the same basis as every other man."

You instituted the rural free delivery, not to benefit the publishers, not even as was falsely claimed to benefit the mail order houses, but you passed that law as a measure of justice and equality to our rural citizens. It would be a rash statesman indeed who would now advocate the withdrawal of this service.

The 1 cent flat rate on newspapers and periodicals was likewise a measure of justice and equality to citizens, both rural and urban, in all sections of this widely flung land of ours.

When I was here a couple weeks ago there was some comment made upon the fact that a large number of periodicals are published in New York State, and that, therefore, the charge of sectionalism would apply against periodicals being published in that section of the country.

In the first place, it is a mistake to say that the majority of periodicals are published in New York. New York State, you must bear in mind, contains 12 per cent of the population of the country, but it produces only 25 per cent of all newspapers and periodicals and of all general printing. The other 75 per cent is scattered all over the country. Next after New York comes Illinois, then Pennsylvania, Massachusetts, Ohio, Missouri, and California, in the order named.

Mr. STERLING. You are speaking now of newspapers?

Mr. NEAL. I am speaking of publishing and printing of all kinds.

Mr. FORDNEY. If New York, with 12 per cent of the population, has 25 per cent of the publications, she has a larger percentage than any other 12 per cent of the people?

Mr. NEAL. Yes, Mr. Fordney; just as Detroit has more automobile manufacturers than St. Louis.

Mr. FORDNEY. I am not criticizing it; I just want to know if that is right.

Mr. NEAL. Yes.

A national periodical circulates all over the country, but quite obviously must be published in some one place. The various centers of publication throughout the country have grown up under a flat postal rate, which gave no advantage to one section over another. A paper published in Wichita, Kans., up to this time has had the same postal rate to all sections of the country as a paper published in San Francisco, Cincinnati, St. Paul, or New York.

As a result, the publication business has gravitated naturally to the cities best adapted to the particular requirements in each case. Such publications as may be issued in New York or Chicago, which are the two main centers, are published there because those cities afford superior advantages from every standpoint.

This condition is no more forced or artificial than the location of the flour mills at Minneapolis, the steel mills at Pittsburgh, the automobile factories at Detroit, the meat-packing business in Chicago, or the rubber industry in Akron.

Mr. GREENE. But those institutions do not get a flat rate all over the country?

Mr. NEAL. No.

The new zone system of postal charges will, however, introduce an influence which will make it exceedingly difficult for national publications to continue their location at the most suitable points.

The editorial policy of national papers is not in the least affected by the location of the publishing office. A paper can not get and hold a national circulation unless it reflects national thought and serves national interests. Its circulation depends entirely upon the nature of its appeal and not upon its location. It is just as true that a sectional publication must confine its activities to the interests of the section in which it circulates.

This is no criticism of sectional papers. These are no less necessary than national periodicals. But to say that sectional papers can serve the interests of the country as a whole is as much opposed to reason as to say that we could do away with the great trunk lines of railroad and get along better with nothing but city trolley lines and innumerable little pocket-edition railroads.

So I say, gentlemen, that it is beside the question to assail periodicals because many of them happen to be published in New York State.

The prominence of New York in many of our industries is something which should inspire pride on the part of the country as a whole. I am no less a good citizen of New York, because I am proud of the achievements and progress of Ohio, of Massachusetts, of California, of Pennsylvania, of Illinois, or of any of the other great States of this United States, and I might add that, if we are to prevent the growth of narrow and stifling prejudices and jealousies, our first duty should be to encourage by every means within our power the developments of great interlocking and interlacing highways of national thought.

Now, gentlemen, I am going to venture upon what to me is an uncharted sea and I may get into very, very deep water, but I have an idea that rather hit me in the right spot and I am just foolish enough to want to "get it off my chest."

Six years ago, I think it was, the Postmaster General figured that free, franked, and penalty mail was costing \$20,000,000 a year to handle. What it is now is largely a matter of conjecture. Early in 1917 I read some unofficial estimates which gave the current cost as \$25,000,000. I believe it is even higher now, on account of the vast amount of matter being sent out because of war requirements by the different departments.

This is an item which can not be ignored in any cost investigation of postal finances.

Now, if this \$25,000,000 had been properly charged to the various Government departments, the post office would have shown a profit last year of \$37,000,000 instead of \$12,000,000.

Let's carry this a little further—

The rural free delivery, a splendid and necessary Government service, now costs approximately \$50,000,000. It is not used at all by trade and technical papers; neither is it really necessary for weekly and monthly periodicals. Every family gets to the post office at least once a week. If we had not put in the rural free delivery the Post Office would not be spending the huge sum required for its maintenance, and the \$50,000,000 thus saved would be added to the surplus of \$37,000,000 just alluded to, making a total of \$87,000,000 surplus over expenditures.

Mr. GREENE. There is nearly always one charge that is forgotten, the cost of keeping up the post-office buildings and the interest on the cost of their original construction which are never represented as a charge against the Post Office Department. I have never seen that estimated, but it must run up into the millions.

Mr. FORDNEY. Over \$30,000,000 is the correct estimate of what is paid out by the Treasury Department, not through the Post Office Department.

Mr. GREENE. Does that include interest on the value of the buildings?

Mr. FORDNEY. No; that is just the maintenance of the property.

What becomes then of the forty, fifty, sixty, or seventy million dollars variously estimated as loss due to second-class? And remember, too, that \$3,000,000 of this alleged loss is chargeable to free in county newspapers.

Mr. FORDNEY. Is there any comparison now between the franking privilege and magazine postage? You have told what the receipts of the Post Office Department would be if the mail matter sent out by Government representatives and bureaus paid postage. Now, what comparison is there between the franking privilege and the postage on second-class mail matter?

Mr. NEAL. If I mistake not, a number of Postmasters General have advocated the distribution of the cost of handling Government mail to the different departments producing the mail. For instance, they are handling now an enormous quantity of mail for the Army. Take the Ordnance Bureau; they had 80 officers in Washington before the war and they have 5,000 here now, and every one of them has a very large mail. I never used a franked envelope in my life before, and I now send out from my office thousands of letters in a penalty envelope.

The CHAIRMAN. Are you making any profit by doing that? Are you advertising your business by sending out those franked letters?

Mr. NEAL. I see what you are getting at, Mr. Chairman—

The CHAIRMAN. So you can sell some of your goods or products to the public and make—

Mr. NEAL. The only point I am making is that if the cost of handling this mail was charged to the proper Government departments, then the cost would appear not as a debit charge against the Post Office but as a credit charge, and they would be able to show receipts of \$25,000,000—that is, so far as their bookkeeping is concerned—rather than now having to absorb the cost of that transaction out of the other revenues of the Post Office Department.

Mr. STERLING. Do you understand that in computing the loss to the Government in carrying second-class matter they do not take into consideration the franked mail matter? As I understand it, that has not anything to do with the estimate made by the Post Office Department in reference to the loss which they suffer by reason of carrying second-class mail matter?

Mr. NEAL. No; it has not. The only point I am trying to make—and it is as far as I can or dare, really, to go into the realm of figures, because that is one thing I always flunked on in school—is the fact that \$25,000,000 should be a surplus rather than a deficit in Post Office accounting, because they render this service to other departments of Government and get no credit for it. They have to absorb the cost of that service out of their own revenues instead of getting credit for it from the different departments of the Government, and if they had a surplus of \$12,000,000 last year, which the report stated, and were able to add this \$25,000,000 to it, as they would be if they were given credit for it, they would have a surplus of \$37,000,000.

Mr. STERLING. That would simply mean that the charges for first-class mail and the charges for carrying mail which is now franked would produce that much surplus in spite of the fact that there was a \$7,000,000 loss on second-class mail.

Mr. NEAL. And then if you added \$50,000,000, the cost of rural free delivery, you would have \$87,000,000 over expenditures, which rapidly gets the thing to a point where it is hard to believe there can be in addition \$90,000,000—

The CHAIRMAN (interposing). If you add the eighty or ninety million dollars of cost of your second-class mail service above what the publishers pay, or the eighty or ninety million dollars of loss that we sustain now on that matter, we would have \$177,000,000 of surplus.

Mr. CRISP. And if you add what they pay the city delivery letter carriers—

The CHAIRMAN. You would have \$48,000,000 more of surplus. In round numbers that is the amount expended last year on city delivery.

Mr. MOORE. And if you include the cost of the free county delivery—

The CHAIRMAN. That would add about \$4,000,000.

Mr. NEAL. Where do you get these figures?

The CHAIRMAN. I get the figures in this way: You have for last year 1,200,000,000 pounds of second-class mail matter, and the lowest estimate made by any administration, or by the Postmaster General under any administration, in the last 15 or 20 years, is that it has cost on an average at least 8 cents per pound to handle it, making a total cost to the Government of at least \$96,000,000. From that I deduct \$12,000,000 paid the Government by the publishers, and that will give it to you. The Postmaster General in his last report said that the loss on the handling and delivery of second-class mail matter for the preceding year was at least \$72,000,000. He knew the expert's estimate was more but he put it at a figure that would admit of no doubt.

Mr. NEAL. As to the figures, do you remember a speech made by Congressman Steenerson?

The CHAIRMAN. Yes, I remember that. I remember that a lot of speeches were made by a lot of people in and out of Congress who were opposed to the zone system, which have never been and can not be verified.

Mr. NEAL. Congressman Steenerson was a member of the Post Office Committee, and he produced a little table here in which he took the cost figures claimed for the year 1909 or 1908, and then took the total tonnage of each section of the post office. By his process he produced a most remarkable result, and I think those cost figures are correct. They show that it cost the Government \$590,600,000, or nearly \$600,000,000 to handle the entire post-office business for that year, when, as a matter of fact, the entire cost of the Postal Service was only \$306,000,000. The table is here. I will not take the trouble to go through it. The speech is here in which Mr. Steenerson endeavored to demonstrate that the cost of transportation alone had been cut absolutely in half, and that a great many other economies had taken place since the 8 or 9 cent figures were determined, and it would be reductio ad absurdum to take the cost figures of over 10 years ago and apply them to current operations.

The CHAIRMAN. The experts of the Post Office Department have in each year figured up from all the data before them the cost of the service and the cost of the different classes of the service, and they do not, as you gentlemen say, take figures that are 10 years old. They bring the figures up to date. In 1909, under an act of Congress of 1907, the experts of the Post Office Department went to work to make a full investigation of the matter, with all the available data before them. After a year of diligent work they reported that it cost on the average 9 cents per pound to the Government to haul and deliver second-class matter. The experts have been keeping up with the processes ever since, and they think from economies effected it has been reduced now down to 7½ or 8 cents.

Mr. NEAL. I attended a meeting or a hearing before the Senate Post Office Committee, which was given to newspaper men, and Mr. Koons, the First Assistant Postmaster General, was called in as an expert from the Post Office Department.

The CHAIRMAN. When was that hearing?

Mr. NEAL. That hearing was held possibly two months ago.

The CHAIRMAN. I have a copy of it before me.

Mr. NEAL. I observed with a great deal of interest that Mr. Koons's bible, or the one book to which he referred continually and the one book upon which he based almost all of his statements there with reference to costs was the report of the Hughes Commission, which was based on operations of the Post Office Department of 10 years ago. So I assume that if there were later statistics available, Mr. Koons did not consider them as of as much value as those gotten up 10 years ago.

The CHAIRMAN. He had the figures of the Hughes Commission and present figures. He had the system of accounting, or the method by which they proceeded in arriving at the costs at that time. Then he knew how many pounds of mail matter, or second-class mail matter, had been transported and how much it had increased in each year since. Then, he knew exactly how many dollars they paid to the rural carriers at the time of the Hughes Commission's report,

and how many dollars they were paying them now; he knew how many dollars they were paying the city delivery carriers at the time of the Hughes Commission's report, and he knew how many dollars they were paying them now; he knew then how much and by what method they were paying the railroad companies for handling that mail matter at the time of the Hughes report, and he knew how much and by what method they were paying the railroads now for the like service. Then, when he calculated it on the same basis, he came to those conclusions, or reached those results. He first came to the conclusion that that was the proper basis, and it was the basis that the newspapers and magazines of the country accepted at the time as the proper one. It has been generally accepted as the true basis, and when he referred to the Hughes Commission there, he referred to that as the proper method of procedure.

Mr. NEAL. I find here that in answer to a question by Senator McKellar, on the bottom of page 65, with reference to the statistics on second-class mail matter, Mr. Koons put into the record an entire table from the report of the Hughes Commission.

The CHAIRMAN. On what page is that?

Mr. NEAL. That is on page 65. He furnished there a table from the report of the Hughes Commission as to the cost of transportation and handling of second-class mail matter.

The CHAIRMAN. It shows exactly what it was then, and they have kept it up to date. They are getting the figures now each year as to the costs of handling second-class mail matter.

Mr. NEAL. He had no later figures, and I remember very definitely that he rested his case upon the figures of the Hughes Commission.

The CHAIRMAN. Does not the Post Office Department in every report, and does not the statistical abstract also, refer, in each year, to the increase in the pay of city letter carriers and rural carriers, and to the increased poundage of newspapers and other second-class mail matter carried each year, and to what is paid to the railroads for handling that matter? Mr. Koons took, as you gentlemen took, the Hughes Commission's method of arriving at the costs of transportation as the correct basis, and I think that basis is the correct one.

Mr. NEAL. We are perfectly willing to take the findings that appear in the report of the Hughes commission, or the principles laid down there, but I think it is obvious that the cost figures contained in that report do not apply now. When I was here two weeks ago, the remark was made that we had had seven postal investigations in 25 years as to costs, and by some that was thought to be sufficient. Now, most business houses or factories make cost investigations almost hourly, or, at least, annually, and it would be impossible for them to do business upon the basis of costs ascertained 10 years ago.

The CHAIRMAN. Let me ask you a question: Suppose you took the weighings and poundage of 1908, and the basis of cost or the rate which we were then paying the railroads per pound for carrying the mail, you could very easily find out exactly what you paid the railroads for carrying second-class mail matter, could you not?

Mr. NEAL. Yes, sir; and it is fully 2 cents per pound less now than then.

The CHAIRMAN. It could be ascertained?

Mr. NEAL. Yes, sir; it could be done.

The CHAIRMAN. If you take 1917 or 1927, or any other year, and know the weights and the amount per pound you pay for transporting it, you can ascertain the cost of transportation for the whole. The department finds out what the weights are every month. If you gentlemen connected with the newspapers and magazines certify to the truth about the weights, and if those who weigh them do the weighing correctly, the weights are ascertained. Then, for any year, whether for 1917, 1918, 1919, or 1927, if we get the number of pounds of second-class mail matter that is hauled by the railroads, and then get the contracts that we have with the railroad and other transportation companies and see what the rate per pound is that we pay for the service, is it not just a matter of simple calculation to ascertain the cost of carriage to the Government? That is so, is it not?

Mr. NEAL. Will you let me answer that by reading a letter from Mr. KOONS?

The CHAIRMAN. Is that not true? Don't you know whether or not that is a fact?

Mr. NEAL. As I said before, I would like to answer that by reading a letter from Mr. KOONS.

The CHAIRMAN. You can answer that question yes or no.

Mr. NEAL. I am not nearly as well versed in that as you are.

The CHAIRMAN. You are not able to answer that question yes or no—

Mr. NEAL (interposing). I want to answer that with a letter from Mr. KOONS, in reply to a letter in which he was asked for that specific information. This letter is dated June 13, 1918, and is as follows:

I wish to acknowledge the receipt of your two letters dated July 11, 1918, addressed to the Postmaster General, requesting information in connection with the statements which I made recently before the Senate Post Office Committee.

The act of March 2, 1907, making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1908, and for other purposes, provided for a record of the weights of the various classes and subclasses of mail matter and made an appropriation of \$300,000 to cover the expenses of such weighing and counting, and the recording and compilation of the information acquired. However, I am informed that less than \$250,000 of this amount was used. The committee submitted a report under date of May 1, 1908, which was published as Document No. 910 of the Sixtieth Congress, first session.

Hearings have been had and reports submitted from time to time covering the different facts which I presented before the committee, but I regret that I have no copies of these publications except my office copies, which must be retained for my files. Knowing that the supply had been practically exhausted, I inserted in the record of the hearings before the Senate committee, on page 64, a table showing the estimated weight and expense of the various classes of publications; also, on page 65, the report of the Post Office Department to the Hughes Commission on October 21, 1911, showing the revenue, expense, etc., per pound of each class of mail, which is a summary of all the expenses outlined in your one letter.

Mr. KOONS's letter was in reply to a letter requesting current information on this subject, and he refers Mr. Post to the table prepared by the Hughes Commission. I take it that the reason these figures are so constantly referred to is the fact that there has not been since such comprehensive and exhaustive weighings and compilations of costs as were made at that time.

The CHAIRMAN. When the Saturday Evening Post or the New York Times or the Review of Reviews goes out, how does the department arrive at the number of pounds that their publishers send through the mail each time?

Mr. NEAL. How they do it under the zone system I do not know.

The CHAIRMAN. I mean now, or under the old system. How do they find out how many pounds of those several papers or periodicals are sent through the mails?

Mr. NEAL. That is simple, of course.

The CHAIRMAN. Let us see how simple it is. How do they do it? An agent of the Government and a representative of the newspaper or magazine weigh it together, do they not?

Mr. NEAL. I believe they do.

The CHAIRMAN. Let us see how intricate is this matter of weighing and determining how much is the cost per pound of transporting this matter. Do you say that it is a difficult matter to find out the poundage? Now, if all of the papers and magazines do the same thing, or go through the same process just described, then, is it a difficult matter for some gentleman here in the Post Office Department to add up the number of pounds that are sent out by each one of these newspapers and magazines and thus get the total number? It is simply a matter of calculation, is it not?

Mr. NEAL. It would seem to be a very simple process, and yet the facts are as I have stated, that in every hearing that they have held on the question they go back to the figures of the Hughes Commission.

The CHAIRMAN. No; they say that at that time they were the correct figures; that according to the weighings in 1908 and the basis or method of allotting the costs to the second-class matter, which they adopt as the proper basis, the cost of transportation and handling in transit was so much. They calculate the cost on the scientific and proper basis established by the Hughes Commission, and that is what they mean when they refer to the report of the Hughes Commission. They start with that. They know what was the cost in 1908, and they start with that and do not go any further back. Now they calculate the cost each year upon that basis or they employ that method.

It is simply a matter of adding up the number of pounds of second-class mail matter that is hauled or delivered through the mails each year, or each month, or each week. When that is done it is a simple matter for the department to tell how much they are paying the railroads or transporting company for carrying that poundage. The rate is stated in the contract, and with reference to both railroad and other common-carrier transportation it is very easy to ascertain the cost. They know, too, how much railway-mail clerks cost and the amount chargeable to second-class mail for their services. When you come to other methods of transportation, such as star route, rural route, and handling by city carriers, of course it then becomes more difficult to ascertain exactly what part of the cost for this service should be chargeable to second-class matter; but experts of the department have worked that out. Now, the Hughes Commission, which you gentlemen cite very often here, not only found the costs for carrying such mail for 1908, but ascertained that the cost of transportation and the handling of mail during transit in 1910 that was properly chargeable to second-class mail matter was \$45,000,000, or an average of 5.58 cents per pound. That was only for the transportation cost and the cost of handling during the transportation, including the pay of railway-mail clerks, rural-carrier service, etc. It

did not include overhead or general post-office expenses, the proportionate part of which is properly chargeable to second-class mail matter.

Mr. GARNER. How much postage did they pay that year?

The CHAIRMAN. About \$8,700,000.

Mr. NEAL. I will admit that the tonnage is easily ascertained, but the distribution of the expense and the ascertainment of the correct proportions is an entirely different matter.

Mr. GARNER. You speak for these trade magazines, and I want to ask you a question that I asked Mr. Post and a number of newspaper men, and that is, whether or not, if, after a thorough investigation, or an accurate investigation, we will term it, a determination is made as to how much it costs to transport magazines and papers through the mails, you are willing to pay that cost?

Mr. NEAL. Yes, sir; on this condition; provided that the commission or body intrusted with that work shall be so constituted that it will be possible for them to properly weigh and balance along with their ascertainment of cost figures the most important question of all to me, and that is the question of public policy. I will call your attention—

Mr. GARNER (interposing). I want to get your answer directly, yes or no. I have assumed a case here. I have assumed that we are going to accurately determine what it costs to carry each of these papers and magazines through the mails, and I am going to assume that Congress has determined the policy. I am going to assume that Congress has determined that the policy of the Government is to require each piece of mail to pay its way. Now, if that policy is adopted and an accurate ascertainment of the costs is made—that is, if it is accurately ascertained what it costs to handle these trade papers through the mail—are you willing to pay that cost? I think you ought to be willing to answer that question yes or no.

Mr. NEAL. I said that if the question of public policy was weighed and balanced in connection with the costs, I would. If that were determined by a commission like the Hughes Commission, which was composed of Mr. Hughes, a jurist and a man of judicial mind, President Lowell, of Harvard, an educator, and Mr. Harry A. Wheeler, a business man, there could be no objection. Those men were not appointed because they were accountants; they knew practically nothing about accounting, and employed accountants to do that work.

Mr. GARNER. You are now delivering a lecture on the question of public policy. These 435 gentlemen who have been elected as Members of the House and the 96 gentlemen who have been elected to the Senate determine the public policy of the country, so far as laws on the statute books are concerned.

Mr. NEAL. Yes, sir.

Mr. GARNER. We do not need any commission at all to deal with the matter of public policy. In this matter Congress should determine the public policy. Now, if Congress determines that that shall be the public policy, that is, that each piece of mail shall pay its way through the Post Office Department, and if that cost should be accurately ascertained, would you be willing to pay that cost for your periodicals? You ought to be willing to answer that question, yes or no.

Mr. NEAL. I have answered that question.

Mr. STERLING. His answer means no.

Mr. GARNER. He said yes, with some qualifications. I asked Mr. Post the same question, and he undertook to qualify his answer. You are a very apt student of Mr. Post.

Mr. POST. I answered you very promptly on that question of public policy. I said that if that was the public policy we would abide by it. I made a prompt answer.

Mr. GARNER. I am assuming that that public policy has been determined by Congress. I am assuming that as a matter of public policy it has been determined that we are going to have each piece of mail pay its way through the Post Office, and I want to know from you as the representative of trade papers, whether or not, you would be willing to pay your part of it?

Mr. NEAL. You stated that Congress would determine the matter. I suppose you mean to infer that Congress would determine the matter as reflecting the viewpoint of the 100,000,000 citizens of the United States rather than their individual views on the matter.

Mr. GARNER. Congress must determine the public policy anyway. Whenever we enact a law, we do that. I am assuming for the sake of this question that we have determined that to be the policy of the Government—that is, that every piece of mail shall pay its way through the Post Office. Now, whether that represents the views of 100,000,000 people or just the view of Congress, if that is the policy that is adopted, to make each piece of mail pay its way through the Post Office Department, are you willing that your trade papers shall pay their part of it?

Mr. NEAL. The answer I made I will let stand.

Mr. GARNER. Was that answer yes or no?

Mr. FORDNEY. If these gentlemen were willing to pay it, they would not be here protesting against it.

Mr. GARNER. These gentlemen will not say yes, because if they do that, their promise will be given, and they dare not say no, because the American people will not tolerate any such policy.

Mr. NEAL. The Hughes Commission said that—

If a rate were established commensurate with the present rate of cost, it would dislocate this part of the service and produce such entirely new conditions that a new computation of cost would be necessary, in the light of which alone it could be determined whether the rate furnished the desired correspondence between income and outlay as to this sort of mail.

The CHAIRMAN. Let me get back to where we left off as to the cost of transporting and handling during and in transit second-class mail matter, and what the Hughes Commission said about it. Here are some things that we can get pretty accurately, almost without definiteness, as to the cost and the proper cost to be chargeable to second-class mail matters. On pages 134-135, Hughes Commission report, we find:

If, further, we take the outlays for the fiscal year 1910 and the services mentioned in the above comparative statement (transportation, post-office cars, railway and mail service, and rural delivery service), amounting to \$177,604,672.26, and assume that pound rate matter had the same proportionate share of this total amount as it had of aggregate of the corresponding items for the fiscal year 1908—

And just before that it said that was not prejudicial to the newspapers and magazines, because poundage had been increased and was favorable to them—

its share would be \$45,630,612.84, or, distributed over 817,772,900 pounds, an average of 5.58 cents a pound, as against the charge of 6.205 cents a pound for these services in 1908.

Now, then, the Hughes Commission found in 1910, with the situation and conditions favorable to the second-class mail matter, that its proportionate charge for transportation and handling during transit was \$45,630,000—that is exclusive, of course, of all overhead charges and general post-office expenses—while in that year newspapers and magazines paid to the Government on the 817,772,900 pounds only \$8,177,729, according to the Hughes report. There, you see, you have the cost (exclusive of overhead and general post-office expense charge) five or six times more than the publications paid it. Since then, under Mr. Taft's and the present administration, from economies effected, such cost has been reduced about 1 cent. Now, then, to transport, including the cost of handling in transit, it cost the Government over four and one-half times more than it receives from the newspapers and magazines for such service. Do you really think that it is right, as a matter of public policy, to permit that to continue to go on?

Mr. NEAL. And in the light of all those facts, these distinguished gentlemen recommended a flat rate of 2 cents a pound, since which time, according to a number of very good students of postal financing, the cost of handling second-class matter and all classes of matter had declined in many instances to one-half of their former figure. If, then, 2 cents was an adequate recommendation at that time, less than 2 cents, on the same basis of reasoning as adopted by the Hughes Commission, would be thoroughly adequate at the present time.

The CHAIRMAN. No; we were then losing about \$60,000,000 annually, and now, on account of the increase in poundage of second-class matter, we are losing from \$75,000,000 to \$90,000,000. The Hughes Commission did not recommend that a 2-cent rate was a final adjustment of this; they recommended that as a step in the right direction; they concluded that as you had built up the magazines and periodicals and newspapers upon a flat 1-cent basis, that it would be unjust to suddenly increase the rates sufficiently to pay all the costs, because it would destroy a great many of them. Instead of 2 cents per pound, which it recommended, to pay the carriage cost alone the rate would have to be at least 5½ cents or five and one-half times more than publications were then paying. We believe when this zone rate goes into effect it will cost the Government more than \$40,000,000 for handling, delivering, and transporting second-class mail in excess of what the publishers will pay. Another reason we made a graduation over four years was in order to give the publishers time to adjust their business to the new rates.

Let me read the report of Mr. Hitchcock, the Postmaster General, submitting the Hughes report, in connection with what you said about these gentlemen recommending a 2-cent flat rate, but before reading let me say this, that after the Hughes Commission—the membership of which was indorsed by the newspapers and magazines—had given thorough study and had made the report recommending as just both to the Government and to the magazines an increase from 1 cent to 2 cents, every magazine and newspaper in the country denounced it, declaring such increase was ruinous and unfair and unjust; and now because this zone rate is higher than that which the Hughes Commission recommended, they are all applauding and approving the Hughes Commission recommendation.

I will now read from Postmaster General Hitchcock's report to the President and Congress when he submitted the Hughes report—I read from the report, in House Documents, volume 36, second session, Sixty-second Congress, pages 17-18:

Next to the question of establishing a parcel post, the most important problem to be considered by Congress at the coming session will be that of readjusting postage rates. In the last two annual reports of the department attention was directed to the great loss sustained in handling and transporting second-class mail at the present low rate of 1 cent a pound. In view of the large profit accruing, on the other hand, from first-class mail, it was pointed out that a readjustment of rates on the basis of cost would eventually permit the adoption of 1-cent postage for letters.

That is, we were charging letters 100 per cent more than they cost in order to meet the loss incurred by handling and delivering second-class mail matter. He continues:

The controversy over the department's recommendations on this subject had the desired effect of directing proper attention to the second-class mail problem and the final outcome was the adoption by Congress of a joint resolution creating a commission to investigate the subject and make report. Extensive hearings were held by the commission during the summer, at which the officers of the department presented data in support of their contention as to great loss incurred in handling second-class mail and submitted recommendations for a gradual equalization of postage rates on the basis of cost. As the first step in that direction the department suggested that the postage rate on second-class mail be increased 1 cent a pound, thus making a flat rate of 2 cents a pound, which charge should be regarded as merely tentative, however, leaving for future determination such additional increase as may be found necessary to meet the cost.

Mr. Hitchcock had recommended the 1-cent increase as a first step in the right direction of finally making the newspapers and magazines pay in going through the mails the full cost of the service rendered them by the Government.

Mr. NEAL. These were flat rates.

The CHAIRMAN. Yes; I understand that.

Mr. NEAL. Mr. Kitchin, let me interrupt you.

The CHAIRMAN. No; let me get through with it.

Now, the commission agreed with the recommendation of Mr. Hitchcock and his experts here, and recommended, as the first step in the right direction, an increase from 1 cent to 2 cents and, as I said a while ago, you gentlemen—the newspapers and magazines—denounced that as bitterly as you are now denouncing the zone system; and you fought it in Congress, and my recollection is that we could get only a few men in Congress to favor this increase in face of the vigorous opposition of the newspapers and magazines.

I want to read you something from the Hughes Commission about this matter.

Mr. NEAL. That was the statement by Mr. Hitchcock, was it?

The CHAIRMAN. That was Mr. Hitchcock's statement in submitting this report.

Mr. NEAL. That was his interpretation; that was not the Hughes Commission's statement.

The CHAIRMAN. Yes, it was. I am now going to read you something from the Hughes Commission. The Hughes Commission takes up your educational viewpoint and the matter of disseminating intelligence and information, and they practically say there is little or nothing in that. It says:

The educational purpose has been accomplished only in part; it is wholly impracticable to make a low rate for publications with a considerable educational value and

a higher rate for the rest; and under the actual working of the law, large business enterprises, which are maintained by the commercial advantages they offer as advertising media, receive the benefit of a rate so low as to amount to a subvention by the Government.

In these circumstances there would seem to be no reason why there should be such a wide difference between rate and cost, and it is the judgment of the commission that there should be an increase in the charge for second-class mail in order that a more equitable adjustment may be made.

Yet you were at the time opposed to that and thought the Hughes Commission did not know what they were talking about.

Mr. NEAL. And here is another thing that I hope you will not overlook, and that is the statement they made that that charge for the proportion of magazines devoted to advertising is open to grave practical objections, and objected also to the zone system.

The CHAIRMAN. They said the zone system was impracticable. They had not been accustomed to it; had not had the parcel-zone system; it had not been worked out; its successful and practical operation had not then been demonstrated as it is now. The same objections made to the zone system by you gentlemen were made to the parcel-post zone system, and the people who opposed that used the same identical argument.

When Mr. Hughes made that report we did not have the parcel-post zone system, and people then said it was impracticable, that you could not operate it, and that there would be discriminations and injustices. But we have now, and when we passed on the zone system last session, the parcel-post zone system perfectly administered, everybody favoring it, and the only people I have heard intimate any opposition to it are the newspapers and magazines.

Mr. NEAL. That is not exactly true, Mr. Chairman.

Mr. GARNER. In that connection, these gentlemen are not willing to even pay the cost of having their stuff handled on a flat basis.

The CHAIRMAN. No; not one-fourth of the cost on a flat basis.

Mr. NEAL. And Mr. Hughes, in the light of all these recent developments as to parcel post, less than three weeks ago reiterated his objection to the zone system.

The CHAIRMAN. I said to Mr. Post when he read the Hughes letter that it would have been a great deal better, if he wished us to know the reasons he has for his conclusions now, in the light of all the new developments in the zone system and postal matters, and if he wanted to give some real information on the subject, for him to come here before us and let us cross-examine him as we have you gentlemen, and possibly we could show him that he had been too busy a man with matters on the bench and running for President and practicing law to have kept up with the postal developments made since the report of his commission.

Mr. NEAL. He was offered a retainer to come here and state his reasons for not doing so.

The CHAIRMAN. As I said to Mr. Post, we would be glad to have him here before us.

Mr. GARNER. Mr. Hughes did not have to have a retainer to come here and assist this committee.

The CHAIRMAN. Mr. Neal, you have not a retainer?

Mr. NEAL. No; simply my own weekly stipend.

The CHAIRMAN. We have had man after man to come here without a retainer. And so could Mr. Hughes.

Mr. MOORE. Mr. Hughes has been selected by the President recently to make an important investigation?

Mr. NEAL. Yes; I believe he has.

The CHAIRMAN. They would not take Mr. Hughes's opinion about that matter until he did investigate. If Mr. Hughes comes here and says to us "Since I made that report I have gone thoroughly into a full investigation with the data now available before me, and all the facts and figures now pertaining to hauling and delivery of second-class mail matter, and with the successful operation of the parcel post zone system before me, and my conclusion is so and so," it would be worth a good deal more than the hurriedly written letter which he sent to Mr. Post. We would have given the most serious and careful consideration to his statements and opinions.

Mr. NEAL. I was going to say that I think you can save the committee a great deal of time and possibly enable us to finish to-day if you will let the financial and figure end of it be handled by Mr. Post. He is much more conversant with that, and I question whether, when you get into the fine details, I can really give your committee any information you do not already possess; and I have possibly the most important evidence yet to submit here, Mr. Chairman, and appreciate an opportunity of getting in this matter.

Mr. MOORE. I do not want you to leave Mr. Hughes in the way you did. Mr. Hughes has very important and confidential relations with the President just now, has he not?

Mr. NEAL. I imagine he has.

Mr. Chairman, as I said, I can add nothing to the information you have already here.

The CHAIRMAN. I know, but I am going to put this in. In your remarks you have quoted the Hughes Commission report, and I want to quote some more from it. On page 147 he says:

The question of raising the rate on second-class matter mailed by publishers and news agents from 1 cent to 2 cents a pound is a more serious one. But we are of opinion that the change is reasonable and should be made.

Yet you gentlemen fought it.

To deny such a moderate increase is virtually to say that the present rate, despite the heavy loss it entails, must be deemed satisfactory, or if not that it is wholly impracticable to attempt any change in it. We regard either conclusion as without foundation.

Such an increase will not, in the opinion of the commission, bring distress upon the publishers of newspapers and periodicals, or seriously interfere with the dissemination of useful news or information. A reasonable time should be allowed, after the rate is fixed, before it is put into effect. While the new rate will be very far from compensating the Government for the carriage and handling of second-class matter, it will to some extent relieve the existing burden and result in a more equitable adjustment of rates.

Yet, every magazine and newspaper in the country said it would ruin them, just like they are saying now relative to the new zone system, and this commission found it would not seriously hurt you at all.

It states that after you paid the 2 cents flat rate it recommended there will be a great loss to the Government.

Mr. NEAL. And yet they made the 2-cent recommendation in the light of all those findings.

The CHAIRMAN. Yes, as a first step in the right direction, and you turned down their recommendation.

a higher rate for the rest; and under the actual working of the law, large business enterprises, which are maintained by the commercial advantages they offer as advertising media, receive the benefit of a rate so low as to amount to a subvention by the Government.

In these circumstances there would seem to be no reason why there should be such a wide difference between rate and cost, and it is the judgment of the commission that there should be an increase in the charge for second-class mail in order that a more equitable adjustment may be made.

Yet you were at the time opposed to that and thought the Hughes Commission did not know what they were talking about.

Mr. NEAL. And here is another thing that I hope you will not overlook, and that is the statement they made that that charge for the proportion of magazines devoted to advertising is open to grave practical objections, and objected also to the zone system.

The CHAIRMAN. They said the zone system was impracticable. They had not been accustomed to it; had not had the parcel-zone system; it had not been worked out; its successful and practical operation had not then been demonstrated as it is now. The same objections made to the zone system by you gentlemen were made to the parcel-post zone system, and the people who opposed that used the same identical argument.

When Mr. Hughes made that report we did not have the parcel-post zone system, and people then said it was impracticable, that you could not operate it, and that there would be discriminations and injustices. But we have now, and when we passed on the zone system last session, the parcel-post zone system perfectly administered, everybody favoring it, and the only people I have heard intimate any opposition to it are the newspapers and magazines.

Mr. NEAL. That is not exactly true, Mr. Chairman.

Mr. GARNER. In that connection, these gentlemen are not willing to even pay the cost of having their stuff handled on a flat basis.

The CHAIRMAN. No; not one-fourth of the cost on a flat basis.

Mr. NEAL. And Mr. Hughes, in the light of all these recent developments as to parcel post, less than three weeks ago reiterated his objection to the zone system.

The CHAIRMAN. I said to Mr. Post when he read the Hughes letter that it would have been a great deal better, if he wished us to know the reasons he has for his conclusions now, in the light of all the new developments in the zone system and postal matters, and if he wanted to give some real information on the subject, for him to come here before us and let us cross-examine him as we have you gentlemen, and possibly we could show him that he had been too busy a man with matters on the bench and running for President and practicing law to have kept up with the postal developments made since the report of his commission.

Mr. NEAL. He was offered a retainer to come here and state his reasons for not doing so.

The CHAIRMAN. As I said to Mr. Post, we would be glad to have him here before us.

Mr. GARNER. Mr. Hughes did not have to have a retainer to come here and assist this committee.

The CHAIRMAN. Mr. Neal, you have not a retainer?

Mr. NEAL. No; simply my own weekly stipend.

The CHAIRMAN. We have had man after man to come here without a retainer. And so could Mr. Hughes.

Mr. MOORE. Mr. Hughes has been selected by the President recently to make an important investigation?

Mr. NEAL. Yes; I believe he has.

The CHAIRMAN. They would not take Mr. Hughes's opinion about that matter until he did investigate. If Mr. Hughes comes here and says to us "Since I made that report I have gone thoroughly into a full investigation with the data now available before me, and all the facts and figures now pertaining to hauling and delivery of second-class mail matter, and with the successful operation of the parcel post zone system before me, and my conclusion is so and so," it would be worth a good deal more than the hurriedly written letter which he sent to Mr. Post. We would have given the most serious and careful consideration to his statements and opinions.

Mr. NEAL. I was going to say that I think you can save the committee a great deal of time and possibly enable us to finish to-day if you will let the financial and figure end of it be handled by Mr. Post. He is much more conversant with that, and I question whether, when you get into the fine details, I can really give your committee any information you do not already possess; and I have possibly the most important evidence yet to submit here, Mr. Chairman, and appreciate an opportunity of getting in this matter.

Mr. MOORE. I do not want you to leave Mr. Hughes in the way you did. Mr. Hughes has very important and confidential relations with the President just now, has he not?

Mr. NEAL. I imagine he has.

Mr. Chairman, as I said, I can add nothing to the information you have already here.

The CHAIRMAN. I know, but I am going to put this in. In your remarks you have quoted the Hughes Commission report, and I want to quote some more from it. On page 147 he says:

The question of raising the rate on second-class matter mailed by publishers and news agents from 1 cent to 2 cents a pound is a more serious one. But we are of opinion that the change is reasonable and should be made.

Yet you gentlemen fought it.

To deny such a moderate increase is virtually to say that the present rate, despite the heavy loss it entails, must be deemed satisfactory, or if not that it is wholly impracticable to attempt any change in it. We regard either conclusion as without foundation.

Such an increase will not, in the opinion of the commission, bring distress upon the publishers of newspapers and periodicals, or seriously interfere with the dissemination of useful news or information. A reasonable time should be allowed, after the rate is fixed, before it is put into effect. While the new rate will be very far from compensating the Government for the carriage and handling of second-class matter, it will to some extent relieve the existing burden and result in a more equitable adjustment of rates.

Yet, every magazine and newspaper in the country said it would ruin them, just like they are saying now relative to the new zone system, and this commission found it would not seriously hurt you at all.

It states that after you paid the 2 cents flat rate it recommended there will be a great loss to the Government.

Mr. NEAL. And yet they made the 2-cent recommendation in the light of all those findings.

The CHAIRMAN. Yes, as a first step in the right direction, and you turned down their recommendation.

Mr. NEAL. Mr. Chairman, let me say again, that so far as I am concerned, it will be perfectly futile to get into a discussion of a maze of figures and details, because I have the viewpoint of the man on the street of those matters, and I have other matters which I do know something about which I can possibly give you some valuable information on.

The CHAIRMAN. Before that, let me refer to another matter. You said that Mr. Roper wrote a book once on postal matters, which he did, a very valuable book, a very informing book—I read it with a great deal of pleasure. You quote from it, and the substance of that recording to your interpretation is that the great success of the postal system in Great Britain was on account of a uniform flat rate.

Mr. NEAL. No, he did not say that.

The CHAIRMAN. Let us see what you said he said.

Mr. NEAL. What I said he said he did say.

The CHAIRMAN. In substance he said it was a uniform flat rate.

Mr. NEAL. No; he said that the postal reforms of 1835 and 1837 established the fact that postal efficiency, if I remember correctly, depended upon uniform rates and standardized conditions.

The CHAIRMAN. I suppose that is about the only page of that whole book you read. Do you not know—if you had read it you would know as a fact—that Mr. Roper was not referring in any way to the second-class postal mail matter in Great Britain, because Mr. Roper would have known that the second-class mail matter—magazines and newspapers that go through the mails in Great Britain—is not a drop in the bucket compared to the mail that is carried, and Mr. Roper would have known that the Curtis publications and Collier's Weekly that go through the mails of the United States amount to more in poundage than all the second-class mail matter that goes through the mails in Great Britain.

Mr. NEAL. I suggest that you ask Mr. Roper to appear here in person and state his views.

The CHAIRMAN. I am going to get Mr. Roper straight, and I do not want any impression left on the committee or on the public that Mr. Roper was testifying about second-class postal rates in Great Britain or in this country.

Mr. NEAL. Again I suggest that you get him before the committee:

The CHAIRMAN. Did you ever read his book through?

Mr. NEAL. I did; yes.

The CHAIRMAN. Did he refer in his book at all to the second-class mail matter?

Mr. NEAL. He did.

The CHAIRMAN. And was he referring to second-class mail matter in the quotation which you just read?

Mr. NEAL. He referred to second-class mail matter as late as last year; the book was only published this year.

The CHAIRMAN. Have you got the book? The book does not take up second-class mail matter, and, if in the quotation—

Mr. NEAL (interposing). He refers to the increase in the present bill.

The CHAIRMAN. Did you say he opposed that?

Mr. NEAL. He simply chronicles that as a historian; he refers to the fact of the increase being made.

The CHAIRMAN. He did not discuss second-class mail in this country or in Great Britain. If Mr. Roper in his book was referring to second-

class mail matter in the quotation which you made then Mr. Roper is just about as badly mistaken and unintentionally is deceiving the public who read the book as much as you are unintentionally doing so in the statements you have made. Every magazine and every newspaper I have seen told the public what low rates the British postal system has, and it was frequently asserted that any one could send to any part of Great Britain or the British Kingdom at a half cent a pound newspapers and magazines.

Mr. NEAL (interposing). Not in Great Britain; in Canada only.

The CHAIRMAN. Great Britain, I am talking about.

Mr. NEAL. From Canada to Great Britain.

The CHAIRMAN. All right.

Mr. NEAL. But not in Great Britain locally.

The CHAIRMAN. You claim it is a half cent a pound in Canada?

Mr. NEAL. A quarter of a cent a pound in Canada.

The CHAIRMAN. What is the British rate, then?

Mr. NEAL. The British rate on second-class matter I do not recall exactly, but I do know it is so high as to practically exclude from the mails nearly every variety of that kind of matter.

The CHAIRMAN. You are the only publisher in this country I have ever heard say the rate was high in Great Britain. It is high for the small, light weight paper or magazine because it is by the copy and not by the pound. In 1917 the rate was increased on publications weighing over 6 ounces.

Mr. NEAL. The rate in Great Britain is so high that it practically excludes from the mails periodicals, and it is also well known that Great Britain is years and years behind the United States in the matter of its periodicals, largely because of that fact. There have come to this country delegations of business men, within my own personal knowledge, to ask of our publishers of trade papers that they go over into England and publish a real trade paper for them.

The CHAIRMAN. Let me ask you about Great Britain. Has this high rate—and it is higher than this rate in our zone bill—on small, light-weight papers—

Mr. NEAL (interposing). But it is a quarter cent in Canada.

The CHAIRMAN. You said you wanted to hasten up and get through. If you will just answer my questions yes or no, when you can do it, we will get through a great deal earlier, and you will get off the stand earlier. You say the rates in Great Britain are so high that practically little newspaper and periodical mail goes through the postal system. In spite of what you say, is not Great Britain a very literary and well-educated country, and do the people not exchange views from one part of it to another, and has the alleged high postal rate had the effect of destroying the newspapers and magazines?

Mr. NEAL. Great Britain is an exceedingly small, complex country. You could put it into a few words as to the importance of distribution for periodicals: The smaller the country the less need for the low rates to encourage wide dissemination of information. The distributing agents in Great Britain are sufficiently active and can handle matter at such a low price that the Government does not get it, and when you can ride in one night from one end of that island to another it is a comparatively simple matter to make distribution of the printed matters and periodicals, compared to what it would be in the United States, which is thousands of times greater compared to

that little island. The situation is almost exactly the same as it would be in the State of Rhode Island by itself, where stuff can be handled and is handled by baggage cars and express cars, automobiles, and various other means of rapid transit that beats the railroads.

The CHAIRMAN. Mr. Neal, will you please answer this question yes or no? Has the alleged high rates of postage on second-class mail matter in Great Britain had a depressing or impairing effect upon the intelligence and the education of the people in Great Britain, in your judgment?

Mr. NEAL. As I understand it, they have no second-class rates there, as you refer to them.

The CHAIRMAN. I refer, of course, to newspapers and magazines and periodicals, which is second-class mail matter here.

Mr. NEAL. The only reason it has not, Mr. Chairman, has been it was small enough to enable other agencies to undertake the distribution.

The CHAIRMAN. You may impress the committee as being untruthful and uncandid in continuing to make such evasive answers. I know you are a truthful gentleman, and I believe you are a candid fellow.

Mr. NEAL. I think we better pass the discussion.

The CHAIRMAN. Why do you not catch yourself, and keep in your mind the question I ask? I asked you, Do you think that the high rate of postage on newspapers and magazines in Great Britain has had an impairing and depressing effect upon the intelligence and education of the people in Great Britain?

Mr. NEAL. I think that it has, if you want an answer yes or no.

The CHAIRMAN. Do you think that the high rates on second-class postage in Great Britain has destroyed or put out of existence any periodical, newspaper, or magazine?

Mr. NEAL. It has prevented a great many of them from coming into existence.

The CHAIRMAN. Under that high rate in the last 10 or 15 years have not the newspapers and magazines and periodicals greatly increased?

Mr. NEAL. That I do not know. I have only a general knowledge that most advertising men have as to the character of English periodicals, which is exceedingly poor, both general and trade.

The CHAIRMAN. Have they not some of the best newspapers and periodicals in the world in Great Britain?

Mr. NEAL. I think they have some good newspapers, but I draw the line when you say periodicals.

The CHAIRMAN. They do not carry as many advertisements as they do here; they have more reading matter, of course, and you represent mostly the advertising magazines, that is, business journals.

Mr. NEAL. If they do not carry it, it is not their fault.

The CHAIRMAN. It may be your criterion of a good or bad journal is the amount of advertisements it carries. But in Great Britain they carry a great deal more reading matter than our magazines and papers here.

Mr. MOORE. Do you think any man would exchange an American thoroughbred for an English draft horse? Does not that about size up the comparative literary situation?

Mr. NEAL. I am not in a position to go very deep into that.

Mr. MOORE. They are not lower, but they are heavier.

Mr. NEAL. The percentage of illiteracy in Great Britain is very much higher than in the United States, generally speaking.

The CHAIRMAN. You charge up to the rural delivery in 1917—

Mr. HAWLEY (interposing). Before you go into that, Mr. Chairman, may I ask one question?

The CHAIRMAN. Yes; go ahead.

Mr. HAWLEY. Did I understand you a moment ago to say the high rate on British periodicals had caused the publishers to use other means of distribution?

Mr. NEAL. Almost altogether. It had the same effect that the Hughes Commission felt it would have, by simply throwing it out of the post office altogether.

Mr. HAWLEY. I was asking for information, Mr. Chairman, if it was his statement if the high rate on British periodicals had caused the publishers to use other means of distribution than the mails?

Mr. LONGWORTH. A little further as to the question Mr. Garner asked you: I will agree with you that if the zone system does result in preventing the spread of intelligence in this country, it is not a good thing. I have never heard anybody but you and Mr. Post practically admit that second-class mail is not paying its way. I do not want to go into that question. Mr. Farely was before the committee, and, as you know, he is general manager of the American News Co., of New York; and I wanted to get his viewpoint on the general public policy, and I asked him some questions, which I will read, together with his answers, and ask if you agree with the broad proposition he lays down:

Mr. LONGWORTH. As a broad general proposition, do you think second-class mail ought to pay its way?

Mr. FARELY. No; I do not.

Mr. LONGWORTH. How far short should it come of paying its way?

Mr. FARELY. Well, that would be scarcely a fair proposition for me to answer, because it would be an estimate based upon no real facts.

And then one or two other questions that do not bring out the points, after which I ask again:

Mr. LONGWORTH. If you do not think it ought to pay its way entirely, how much of its way ought it to pay?

Mr. FARELY. That would be a vague guess, not based upon any facts. You could easily reduce the cost, and, instead of 30 or 40 or 60 million dollars, reduce it down to 20 or 30 million dollars, and you would get more than that compensation from your increased revenue from first-class mail.

Mr. LONGWORTH. Precisely; and if you carried them free, it would be of even greater benefit to the first-class mail?

Mr. FARELY. Well, that is the educational feature.

Mr. LONGWORTH. Exactly, and I say the logic of your position is that it would pay the Government to carry second-class mail free of any charge whatever.

Mr. FARELY. I think it would pay the Government. You can not colonize Alaska or the great Northwest or the Hawaiian Islands unless you give those people some encouragement and give them the opportunities they had in their home towns. If you are going to penalize them because they have gone to these outlying districts, then they will not go. It has been shown and demonstrated clearly that whenever you put the facilities of the mails at their disposal it has increased the population and encouraged emigration to those sections.

Mr. LONGWORTH. Well, that was exactly my first question, whether you did not think the Government ought to carry second-class mail free?

Mr. FARELY. Yes; it is going to the extreme, but even then I think it would be good public policy and for the benefit of the great mass of the people. For instance, take Canada; Canada goes down to a quarter of a cent, and why? Because of the vastness of their territory. They go up to the Alaskan border for one quarter of a

cent from Montreal, and that does not begin to pay one-third or one-fourth of the real transportation rates, but that is done for the benefit of the people in those remote sections of Canada.

Mr. LONGWORTH. Your general proposition includes both the educational side and the advertising side?

Mr. FARELLE. That is right.

I want to ask you if you agree with Mr. Farelly?

Mr. NEAL. Which point, in particular. You enumerate a great many?

Mr. LONGWORTH. There is only one point involved, and that is admitting second-class mail is of educational matter, would it pay the Government to carry it free. I will ask you this definite question first: Do you agree with his answer to this proposition:

Mr. LONGWORTH. As a broad, general proposition, do you think second-class mail ought to pay its way?

Mr. FARELLE. No; I do not.

Mr. NEAL. Of course, you know the Government does carry free county mail at the present time. I do not know the principles upon which that action is based. I assume that it is considered that the country newspapers are of sufficient value to the county residents to make it easy for him to get it in the county. But I have never favored that absolutely free rate, personally. I speak now only in my individual capacity. I believe that a nominal charge should be made, but I believe also—and in this I am stating the position of my organization—that whatever charge is made should be on a flat rate basis.

Mr. LONGWORTH. Then, that, of course, is not paying its way?

Mr. NEAL. No; I do not think second-class matter ever will pay its way.

Mr. LONGWORTH. Do you think it ought to pay its way?

Mr. NEAL. I do not think second-class matter ought to be charged with the total costs, as I have seen them expressed here. I believe, with the Hughes Commission, that the attempt to do that would dislocate the entire postal system.

Mr. LONGWORTH. It is a fairly debatable question. My mind is not by any means made up that the zone system is the very best that can be possibly devised, and if it is going, as gentlemen think, to actually destroy this means of education to make zones of learning, it would probably not be a good thing. But the question is, is Congress going to attempt to make second-class publications pay their way or not? Now, I ask you to answer just as this gentleman answered, categorically, do you think it is wise public policy for Congress to attempt to make second-class mail pay its way?

Mr. NEAL. I do not.

Mr. LONGWORTH. Then you agree with Mr. Farelly to that extent?

Mr. MOORE. That answers Mr. Garner's question.

Mr. LONGWORTH. It answers Mr. Garner's question.

Mr. MOORE. It is an important answer.

Mr. LONGWORTH. Yes; I think so. Let me go a little further. If you do not think it ought to pay its way entirely, how much of its way ought it to pay?

Mr. NEAL. I would probably make the same answer to that which Mr. Farelly did. The one thing we have been contending for is a commission or body of men who would go into the matter with sufficient detail.

Mr. LONGWORTH. Please do not get back to the bookkeeping; let us admit it did not pay its way.

Mr. NEAL. All right.

Mr. LONGWORTH. As I say, I have never heard anybody agree—

Mr. NEAL (interposing). Speaking for my own organization, they would be perfectly willing to accept a flat rate of 2 cents a pound; that is a 100 per cent increase.

Mr. LONGWORTH. That involves the admission that it is not paying its way. You would not ask it pay more than it is worth?

Mr. NEAL. No. If Congress feels an increase must be made, so far as my organization is concerned they would accept 2 cents a pound flat.

Mr. LONGWORTH. Would you be willing to accept 2 cents a pound flat, if that was put to a finality on second-class mail to make it pay more than it is worth?

Mr. NEAL. Oh, no.

Mr. LONGWORTH. It involves the admission that it does not now pay its way?

Mr. NEAL. I do not know what it costs. It probably costs more than it pays the Government, but as I said, I would prefer to leave the discussion on that as much as possible to Mr. Post, because I am not informed on the subject as I should be in order to talk to this committee. What you want is facts.

Mr. LONGWORTH. I am assuming it is not paying its way, and, if not, you have said you do not think it ought to pay. Mr. Farelly went even further. He did not answer definitely this question I just asked you:

If you do not think it ought to pay its way entirely, how much of its way ought it to pay?

He said:

That would be a vague guess, not based on any facts.

Then I said:

I say the logic of your position is that it would pay the Government to carry second-class mail free of any charge whatever.

Mr. FARELly. I think it would pay the Government.

You agree to that?

Mr. NEAL. I answered that before when I said that while a part of the mail was now carried free in the counties in which published, I think that a nominal and only a nominal charge should be made. The mail service has been extended through the western country from the time of the Pony Express up into Alaska, and, if I remember, the cost of carrying letters many times, I have heard it stated, was as high as \$200 a letter, by one of the postal officials in Alaska, for which the Government got 2 cents. I think the main object to bear in mind is the question of service rather than of revenue.

Mr. LONGWORTH. I wish you would really answer that question. It is a perfectly simple question. I am asking it as a man whose mind is not definitely made up, and I want enlightenment, and I want to know whether you believe that second-class matter ought to pay its way, or not; you say it ought not?

Mr. NEAL. I say it could not.

Mr. LONGWORTH. How much of its way ought it to pay? You ought to be able to answer one-fourth or one-half?

Mr. MOORE. I feel as Mr. Longworth does. I think it is an open question, and I think it is a fair question for you to answer, whether or not those whom you represent actually feel they ought to have some free carriage for their mail matter.

Mr. LONGWORTH. Or at least a nominal charge only.

Mr. NEAL. Let us put it the other way, for the sake of the record. The publishers, of course, will suffer; but you represent in a very large sense the people generally, and you are considering the welfare of the people generally in the dissemination of news and information.

Mr. MOORE. You say it is important because the 2-cent flat rate offered as an amendment to the existing revenue law would be acceptable. We are interested in getting favorable legislation. Why not face that situation and let the committee know just what your position is, whether, as Mr. Longworth suggests, you feel the Government should pay everything in excess of a 2-cent flat rate, as a matter of principle, or in the interests of public education, or whether you think it should pay its way in full?

Mr. NEAL. Why not let men more competent than myself determine that question? I can state only the position of my own organization.

Mr. LONGWORTH. We are only asking what is your view. I think it is a perfectly fair question to answer, and I think it is your duty, representing your people, to answer that question to the satisfaction of this committee. It is the simplest possible way, and you, on the contrary, branch off and discuss the question of bookkeeping.

Mr. NEAL. The tendency of all our postal rates has been constantly downward, either that or an extension of service, and there must be an ultimate step somewhere.

Mr. LONGWORTH. Will you answer the question?

Mr. NEAL. What question?

Mr. LONGWORTH. I ask you again, for the third and last time. Do you believe that second-class mail matter ought to pay its way; and if not, how much?

Mr. NEAL. Answering the first, I said no; I do not believe it should pay its way.

Mr. LONGWORTH. We have got——

Mr. NEAL (interposing). As to exactly what the rate should be, I do not feel qualified to answer, from the standpoint——

Mr. LONGWORTH (interposing). But you say it ought not to be carried free?

Mr. NEAL. Oh, yes.

Mr. LONGWORTH. Mr. Farelly's proposition was the need of the spread of education and the increase thereby in first-class mail would be of advantage to the country. You go to this point, that you do not think it ought to pay its way. Then, I should think you would be able to say whether we ought to charge it half or one-fourth, or about that.

Mr. NEAL. I can not answer. I would, if I could, Mr. Longworth. But it would be merely a personal opinion, and I am appearing here in an official capacity, and I would prefer to let the record stand as it is. I appreciate your position. I wish I could enlighten you.

Mr. POST. I presume you are going to ask me the same question a little later.

Mr. LONGWORTH. Yes; I will be pleased to do that.

The CHAIRMAN. Your remarks are very interesting. In your very well prepared paper which you read to us this morning you spoke about rural delivery, that it cost so many million dollars. In 1917 it cost us \$52,420,000.

Mr. NEAL. Yes.

The CHAIRMAN. As I understand you, you said that could be eliminated, and if that were eliminated our surplus would be so much. Did you intend to convey by that that you and your associations were favorable to the abolishment of the rural system?

Mr. NEAL. Absolutely no. I said in a dozen places, Mr. Chairman, that we considered it one of the most beneficent extensions of the postal service ever made, and I quoted that as an instance of the value of flat rates.

The CHAIRMAN. And I think you said papers and periodicals did not use it so very much?

Mr. NEAL. Not business papers. Very few of our trade papers are on rural routes.

The CHAIRMAN. As I recall, Mr. McAneny, of the New York Times, in his testimony said that his paper used the rural delivery service more than the city carrier service. So papers like the New York Times could not criticise or complain of rural delivery, because they were using it to so large an extent.

Mr. FORDNEY. I want to say, in answer to that question, that not long ago I asked a rural carrier how many patrons he had on his route, and how many daily papers he delivered. He replied that he had 151 patrons and delivered the Detroit Free Press to 126 of them every day. You say the business papers do not go by rural free delivery. There is an illustration that they do. That is a business paper.

Mr. NEAL. What paper?

Mr. FORDNEY. The Detroit Free Press.

Mr. NEAL. I represent trade and technical papers.

The CHAIRMAN. You mean what are called trade journals?

Mr. FORDNEY. You mean magazines?

Mr. NEAL. No; trade papers.

The CHAIRMAN. You are favorable, I believe, to rural delivery, and also favorable to the carrying of mail by city carriers. It cost us in 1917, \$52,420,000 for rural delivery, and for city delivery, \$48,047,000. If there is a loss in the rural-delivery system do you not think it would be right and fair that each class of mail should contribute its proportion to that loss, in order to maintain it, and such loss should not be attributed to first class or second class or third class or fourth class alone. In other words, every class of mail, if there is a loss in a part of the great system of mail delivery, should help to sustain that loss in proportion to the service rendered that class of mail?

Mr. NEAL. Provided it is not necessary to increase the rates for other branches of the Postal Service. I would say that both personally and as representing my association, we would never consent to the destruction of any single branch of the Postal Service in order to benefit another branch.

The CHAIRMAN. Something was said by you, and very much of it by the press, especially the magazines, about the enormous loss the Government was sustaining through the free delivery of county circulation?

Mr. NEAL. I did not say anything about the enormous loss. You probably have me mixed up with somebody else. I said there was a cost which had been estimated at about \$3,000,000.

The CHAIRMAN. I want to say that this fee in the county circulation only amounts to 5 per cent of the total second-class mail handled. Last year the total mail was 1,202,000,000 pounds in round numbers, while free circulation only amounted to 60,000,000 pounds.

You referred to the franking privilege, that is—to the loss which the Government must sustain because such mail goes free—and you estimated that to be about \$25,000,000, did you not?

Mr. NEAL. Yes.

The CHAIRMAN. Who made that estimate for you?

Mr. NEAL. The estimate of \$25,000,000 I obtained from an article commenting on the Postmaster General's report of about six years ago, in which he had advocated the distribution of that expense among the various departments which incurred it.

The CHAIRMAN. Do you think that is a proper or correct statement?

Mr. NEAL. I confess I do not know. I simply took the statement as I found it and gave it frankly as an estimate.

The CHAIRMAN. I did not know who made it for you. I was going to ask this question: If you can approximate the carrying cost and overhead charges and general post-office expenses with respect to the franked mail matter, why was it not equally as easy to approximate the carrying cost of newspapers, magazines, and other second-class mail, including overhead and general post-office expense charges?

Mr. NEAL. I did not make the approximation, and I considered it only an approximation.

The CHAIRMAN. I imagine that the Post Office Department, with its experts, who have been studying this matter for years and years, giving their whole thought and attention to it, can readily and easily approximate the cost to the Government of the franked matter that goes in the mails as well as the cost of second-class matter. I am in great sympathy with the thought that the franking privilege ought to be curbed to a considerable extent. It is abused considerably, like the abuse of advertisements by these periodicals. I think you were here the other day when I showed that one of your trade journals took bodily a catalogue of a firm and put it between the covers and sent it out, which would have cost and was costing the firm at least 8 cents a pound going through the mails alone, but when put inside of the magazine's covers it was sent out at 1 cent a pound?

Mr. NEAL. Metallurgical and Chemical Engineering that paper was?

The CHAIRMAN. Yes. While Mr. Post would not say whether he indorsed that method on the part of the engineering magazine, I am sure to-day you will disapprove of it?

Mr. NEAL. You having said that, Mr. Kitchin, it immediately became public property. Anything you say seems to have a very wide dissemination.

The CHAIRMAN. I will tell you the reason of that—the papers and magazines are so fond of me. [Laughter.]

Mr. NEAL. You make what the newspapers call good copy, and the publisher of that paper sent me a little statement here. Their feelings seem to be very much hurt, and I think possibly at the time you did have a little misconception. You are a good debater and like to make a point.

The CHAIRMAN. Mr. Neal, I did not have the misconception. I had the fact before me, the magazine itself. What do they say about it?

Mr. NEAL. Possibly we will all get together on this.

The CHAIRMAN. I understand the Post Office Department got after them?

Mr. NEAL. I do not know about that.

This issue that you had there was entitled The Annual Guide to the Industries, and they ask that you consider the conditions of the chemical industry as they were last September. In less than two years American capitalists, chemists and engineers had to create an enormous industry as large or larger than Germany, and it took Germany 20 years to do that work. I saw stated in the paper the other day that \$380,000,000 of new capital had been invested in chemical industries in the United States. When you realize that this industry mushroomed up over night—

Mr. LONGWORTH (interposing). Since the war?

Mr. NEAL. Yes; in every section of the country, when it is an acknowledged fact that no one man or organization has an adequate idea of the actual development of the chemical industry in this country; when it is realized that chemical engineers were compelled to adapt standard machinery for entirely new purposes; when apparatus manufacturers are called on to produce new and strange equipment for the evolution and development of chemical processes which have never been attempted before in this country, then the value of the compilation and presentation in one volume of a complete arraignment of all these types of machinery, apparatus, and equipment will be thoroughly appreciated, and the purpose of such a volume understood.

The one object at the time of the chemical exposition number was to incorporate in one book, complete, up-to-date information about all of the various kinds of equipment necessary for the chemical dvestuffs, chemical explosives, and allied industries. We accomplished this, and attached testimonials are evidence of how well this was appreciated.

The total number of copies printed of this issue was 11,920. Of these, approximately 600 were distributed at the exposition, 10,002 were mailed to subscribers here and abroad, and of the remainder many were sent by special request to firms in various parts of the world.

We are still hearing, in traveling in various parts of the country, about the real service which this exposition number rendered. Any engineer will testify that one of his greatest problems in time of stress is to find quickly the kind of equipment which will insure the success of the processes as they are developed. Engineers have told us that it has saved them weeks of time in enabling them to turn to this one book and find not only the highly specialized chemical equipment which they need but also the new adaptabilities of standard engineering equipment, such as valves, conveying machinery, etc. In their effort to locate the proper equipment at the greatest speed they found this book of tremendous value.

The 64 pages of the Buffalo Foundry & Machinery Co's advertisement were of tremendous assistance to mechanical engineers who have had to tackle chemical problems and who were at sea to know just

where they could get the proper kind of equipment. The detailed uses and descriptions as contained in the Buffalo Foundry advertisement were of greatest help.

This advertisement was afterwards used as a catalogue by the Buffalo Foundry & Machinery Co., and we reprinted 30,000 of them which they distributed. It was in no sense a subterfuge to enable them to mail their catalogue at second-class rates.

Another and very fundamental service of this issue was the fact that it, more than any other one thing, called to the attention of the whole established engineering industries and of capital at large the fact that the chemical industry had arrived. This industry, even when its importance was apparent to the technical man in the field, was not apparent to the commercial fields at large. Its recognition and the interest which has been aroused in all industries producing supplies and equipment which might be utilized in chemical production, received a tremendous impetus from the huge issue, which, to quote one of the representative companies in the field, "more fitly shows the size and breadth and importance of the chemical industry than any other one thing."

Mr. LONGWORTH. May I interject a remark there? Since the war began, in my own district, the dye works have been erected, and they are now producing about 300 different colors, which is 15 times as many as we produced in the whole United States when Germany had control. But I have the suspicion that what was known as the Hill dye bill from this committee had more to do with the establishment of this industry than this magazine.

Mr. NEAL. If so, I congratulate you gentlemen. It is hardly necessary to emphasize the importance of the American chemical industry to the general public. This, however, is absolutely certain: In the creation and development of the chemical industry, and in its continuous and remarkable progress during the past few years, chemical and metallurgical engineering has been one of the most potent factors. This fact will be attested to by chemical engineers in every section of this country.

Apart from this, Chemical and Metallurgical Engineering and all the McGraw-Hill publications pride themselves on the fact that they are, and have been so designated, as one of the strong arms of the Government. We do not boast of this, but rather accept it as a duty incumbent upon them.

He sends me here letters from famous professors and engineers in various fields telling of the tremendous help that big number was to them in the conduct of their work.

(The letters referred to are here printed in full, as follows:)

THE HYDRAULIC PRESS MANUFACTURING CO.,  
Mount Gilead, Ohio, U. S. A., September 24, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
239 West Thirty-ninth Street, New York City.

GENTLEMEN: This letter will acknowledge receipt of a copy of Metallurgical and Chemical Engineering, September issue.

We wish to congratulate you upon the scope and excellence of this publication. It is so exceedingly well done in every particular that you are deserving of this special commendation.

We have placed it in our files for convenient reference, and the wonder is that a publication so good could come out of an industry so young and limited.

Yours, truly,

THE HYDRAULIC PRESS MFG. CO.  
O. A. WHITE, Advertising Department.

H. REEVE ANGEL & Co. (INC.),  
New York City, September 19, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
239 West Thirty-ninth Street, New York City.

Attention of Mr. J. M. Muir.

GENTLEMEN: Two copies of your Chemical Exposition number to hand. This issue certainly is a wonder, for which you are to be congratulated.

The advertising pages are an education—a veritable encyclopedia—and will offer our British friends a far better view of industrial America than we could attempt to convey, therefore we wish you to send one copy to Messrs. H. Reeve Angel & Co., 15 New Bridge Street, London, E. C., and a copy to Messrs. W. & R. Balston (Ltd.), Maidstone, Kent, sending invoice to us.

The fine position given our "ad" is much appreciated.

Yours, very truly,

H. REEVE ANGEL & Co. (INC.),  
E. CHILD, *President*.

THE COLLEGE OF THE CITY OF NEW YORK,  
September 29, 1917.

Mr. J. MALCOLM MUIR,  
239 West Thirty-ninth Street,  
New York.

MY DEAR MR. MUIR: I congratulate you upon the wonderful number of the Metallurgical and Chemical Engineering which has just come to hand, and which I have read and admired.

Cordially yours,

CHAS. BASKERVILLE.

B. F. STURTEVANT COMPANY,  
BOSTON, MASS., September 22, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
239 West Thirty-ninth Street,  
New York City, N. Y.

Gentlemen: Attention of Mr. J. Malcolm Muir, Secretary.

We wish to congratulate you on the remarkable volume that you have issued to your subscribers and advertisers as the September 15th issue of your paper. This issue will make a work worth saving as it almost becomes a buyer's directory for chemical apparatus.

Yours truly,

B. F. STURTEVANT COMPANY,  
By F. R. ELLIS.

CORNELL UNIVERSITY,  
Ithaca, N. Y., October 8, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
239 West Thirty-ninth Street, New York City.

GENTLEMEN: We have received the exposition number of the magazine and will, I am sure, find it very useful as an aid in securing supplies for this department. Please accept our sincere thanks for your kindness in sending us this magazine.

Yours, very truly,

DEPARTMENT OF CHEMISTRY,  
LOUISE H. COLE, *Clerk*.

ARTHUR D. LITTLE (INC.),  
Boston, September 20, 1917.

Mr. J. M. MUIR,  
Metallurgical and Chemical Engineering, New York, N. Y.

DEAR MR. MUIR: I want to congratulate you on your chemical exposition number. The issue was certainly a great credit to you and will be a very valuable book of reference, and I shall want one of those leather covered copies, with gilt lettering, etc., for my office.

We are all very much pleased with our advertisement, which seemed to come out nicely.

Hoping to see you the next time you are in Boston, I remain,

Yours, very truly,

H. J. SKINNER, *Vice President*.

CARNEGIE INSTITUTE OF WASHINGTON.  
Washington, D. C., October 8, 1917.

The EDITOR OF METALLURGICAL AND CHEMICAL ENGINEERING,  
New York, N. Y.

DEAR SIR: Acknowledging the due receipt of your letter of September 29, announcing that at the instance of my friend, Dr. Baekeland, a copy of the latest issue of your journal would be sent me. I now beg to state that the copy in question has just reached me. This is a remarkable number not only by reason of the contribution it furnishes to a knowledge of electro-chemical affairs in the United States, but by reason also of the large number of high-class advertisements it contains.

Congratulating you on the issue of such a noteworthy publication, I am, with all best wishes,

Very truly, yours,

R. S. WOODWARD.

---

VALLEY IRON WORKS,  
Williamsport, Pa., September 20, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
New York City.

GENTLEMEN: We are just in receipt of our copy of Metallurgical and Chemical Engineering, and wish to compliment you upon this very fine issue. We wish to keep this book as a reference, and trust that you will forward to us at once one of the cloth binders referred to in your letter.

Thanking you for your prompt attention to this request.

Respectfully,

VALLEY IRON WORKS,  
Per R. L. RILEY.

---

RAYMOND LEAD COMPANY,  
Chicago, September 22, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
New York City.

Attention of Mr. J. Malcolm Muir.

GENTLEMEN: Please accept writer's best thanks for copy of your September 15 issue, which is very much appreciated. In looking it over hurriedly—later on shall read it thoroughly—would say that from all viewpoints it is about one of the best publications that the writer has ever seen, but this is not strange, as we would expect nothing to the contrary from you company.

Yours, very truly,

RAYMOND LEAD COMPANY,  
WM. T. MORGAN, *President*.

---

MISSISSIPPI AGRICULTURAL AND MECHANICAL COLLEGE,  
Agricultural College, Miss., September 27, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
New York City.

DEAR SIR: We acknowledge your letter of the 19th, and also your copy of chemical exposition number of your magazine. This edition is superb, and I am certain that the immense amount of work expended upon it will be highly appreciated by your subscribers. We intend to have the entire issue (including the advertising matter) bound with this volume.

Very truly, yours,

W. F. HAND,  
*State Chemist*.

---

DOAK GAS ENGINE CO.,  
San Francisco, September 29, 1917.

METALLURGICAL AND CHEMICAL ENGINEERING,  
New York, N. Y.

Attention of J. Malcolm Muir, manager.

GENTLEMEN: Please accept our thanks for your letter of September 19, and at the same time to acknowledge receipt of the September 15 issue of your journal.

It is certainly a wonder from the wealth of information it contains, the wide range it covers, to say nothing of its artistic features from an advertising standpoint. You may rest assured that it will be carefully preserved.

Yours, very truly,

DOAK GAS ENGINE Co.,  
W. D. LEA, *Sales Manager.*

---

STIMPSON EQUIPMENT Co.,  
*Salt Lake City, Sept. 24, 1917.*

MR. J. MALCOLM MUIR,  
*Manager Metallurgical and Chemical Engineering, New York.*

MY DEAR MR. MUIR: I have your two letters of the 19th instant, and have also received the September issue of *Metallurgical and Chemical Engineering*.

I take this opportunity of congratulating you upon this issue as it is perfectly splendid. I have not had a chance as yet to go through it carefully as I will do, but it is certainly a splendid piece of work.

I may be in New York before very long, in which case I will, of course, have the pleasure of seeing you.

With kindest regards, I remain,

Very truly, yours,

STIMPSON.

---

THE ARCO Co.,  
*Cleveland, Ohio, October 3, 1917.*

METALLURGICAL AND CHEMICAL ENGINEERING,  
*New York, N. Y.*

GENTLEMEN: We are inclosing 40 cents for which please send us a cloth binder for the chemical exposition number of *Metallurgical and Chemical Engineering*.

We believe that you are to be congratulated on the make-up of this number of your magazine, which is undoubtedly the most remarkable issue of a technical publication that the writer has ever seen.

Very truly, yours,

THE ARCO Co.,  
MAX Y. SEATEN,  
*Technical Director.*

THE CHAIRMAN. That does not answer what I said or even explain what they did. The fact was that that magazine was paid for this advertisement by this foundry concern, that it put bodily their catalogue into its covers and sent it out through the mails at 1 cent a pound, and while if the foundry company had sent it through the mail as it had been doing it would cost them at least 8 cents per pound, and the mailing of that issue of the magazine the loss to the Government was several thousand dollars. Any magazine can do that, take a catalogue of concerns and send it through the mail at a cent a pound, by putting them inside their covers, hooked up with a little reading matter, while the same catalogue not hooked up with the reading matter would cost the concern at least 8 cents per pound.

MR. NEAL. What limit should be imposed upon the size of advertisements?

THE CHAIRMAN. Let them be just as large or small as they want but they should pay their cost through the mail.

MR. NEAL. I am really asking for information.

THE CHAIRMAN. Let me give you a little thought about those advertising propositions in the magazines going out at 1 cent a pound. Take any of the magazines—it makes no difference—The Ladies' Home Journal, the Ladies' Home Companion, or the Saturday Evening Post.

MR. NEAL. I am discussing trade and technical papers.

THE CHAIRMAN. Take, say, a magazine that has 50 pages of advertisement, which may have 50, 40, or 30 of reading matter. I took, I

believe, the Saturday Evening Post as an illustration in my calculation. But any of your trade papers would do as well. It has, we will say, 50 pages of advertisements and frequently it has more, and each page has different advertisements of different concerns. In round numbers about 800,000 copies of each issue go through the mail each week—that is, 40,000,000 pages of advertisements are sent out each week. For the year, 52 weeks, 2,000,000,000 pages or pieces of advertisements in the Saturday Evening Post go through the mail.

If the advertisers sent through the mails the same advertisement in separate sheets or pages, the Government would receive over \$10,000,000 for the carrying and delivery of it and make a profit by it. It would go at circular rates. But when the same is hooked up with the Saturday Evening Post's reading matter and put between its covers, several pieces of advertisements of different concerns going together, the Government, under the old low flat rate, carries and delivers it for the Post—and does for any other publication—at the small cost of \$265,000 and at the large loss to the Government of over \$1,700,000 annually. But the Post receives over \$15,000,000 from the advertisers a year for handling and carrying such advertisements. Last year the Post paid the Government for handling, hauling, and delivering \$530,000—reading matter and advertising—more than 50 per cent being advertising matter. It cost the Government to render such service over \$4,000,000. The Government lost over \$3,500,000.

Mr. NEAL. Did you ever stop to think, Mr. Chairman, why they do that?

The CHAIRMAN. I will tell you why. Because it is cheaper for them to do it, and the law has made it possible for those journals and periodicals to deliver through the mails this immense poundage of advertisements at one-eighth or one-tenth of the actual cost to the Government—even when sent altogether in a magazine.

Mr. NEAL. You are not opposing advertising as such?

The CHAIRMAN. No; I am in favor of it, but I think advertisements should pay the cost, certainly approximately the cost of carrying and delivering them through the mail.

Mr. NEAL. I am afraid that is where we differ.

The CHAIRMAN. Of course that is where we differ.

Mr. NEAL. If you are going to recess at 1 o'clock, I can finish at that time.

Mr. MOORE. You have considerable to present yet, have you not?

Mr. NEAL. I do not know how long it will take.

Mr. MOORE. I may not be able to get back this afternoon, and there are one or two questions I want to ask. I will confine you to one topic and bring you at once to free-in-county circulation, to which reference has been made. What is your estimate of the loss to the Government on free-in-county circulation?

Mr. NEAL. I have no estimate because I have no basis on which to make one. Someone has said that it is \$3,000,000.

Mr. MOORE. Someone has put it at \$3,000,000. Did you say \$3,000,000?

Mr. NEAL. I think so.

Mr. MOORE. That has been disputed, and \$1,000,000 has been used as a substitute. Now, what is the difference in principle in the

matter of dissemination of information and education between giving free circulation to newspapers circulating in the county and giving it to those that circulate more widely?

Mr. NEAL. The only difference so far as we are concerned is that the county paper has political influence and we have not.

Mr. MOORE. I do not want to get into the realm of politics, because that is a very dangerous subject; but since you have been asked pointedly, and I was one of those who wanted to hear you answer that question, whether or not second-class matter generally should be free because of its educational advantages. As you have been asked that question, I would like to know whether if that is a subsidy as it stands to-day free-in-county circulation is not also a subsidy and perhaps a more direct one to those who are the beneficiaries of it?

Mr. NEAL. It is to the readers; yes, sir. I question whether the county publishers get anything out of it. Most of them are struggling along with a bare existence.

Mr. MOORE. Have you observed that any Member of Congress in either House coming from any rural district has ever raised the question of making the papers that circulate free in counties pay their way?

Mr. NEAL. That I do not know. I have not observed any.

Mr. MOORE. I heard something to-day about the salaries of city letter carriers, contrasting them with the free rural delivery carriers. Don't you know that in large cities where we have letter carriers the post office not only pays its way but makes a profit?

Mr. NEAL. I have heard so. I have no exact information on that. I believe that is so, however.

Mr. MOORE. Isn't it fair to assume, however, that if they do make a profit it is a fact that a large proportion of it might go into the expense of making up the deficiency of the Rural Free Delivery Service?

Mr. NEAL. It is a fair inference.

Mr. MOORE. On the question of principle, on which you apparently did not want to commit yourself, let me again ask you whether there is any difference in principle whatever between giving free circulation to second-class matter generally and giving free-in-county circulation?

Mr. NEAL. I do not think there is any difference in principle.

Mr. MOORE. Well, we do give free-in-county circulation without any question, do we not? The law authorizes it; it is so specified, so written in the law. You see no difference in the principle?

Mr. NEAL. I see no difference in principle.

Mr. MOORE. That is all.

Mr. NEAL. Do you wish me to proceed now?

The CHAIRMAN. Just one minute on that. You say that you thought the reason the Government did not make any charge for the free-in-county circulation was because the little local papers had more influence than you people have?

Mr. NEAL. Trade papers do not deal in politics at all.

The CHAIRMAN. The estimated cost is at least 8 cents per pound to handle the papers and magazines through the mails, and they pay 1 cent. The Government pays seven-eighths. Now, the man who gets it free in the county only gets one-eighth more than those that use

the mails not free in the county. So wouldn't it appear that while the local fellows have an influence with the Members of Congress you publishers have seven-eighths as much influence? You are not going to be jealous of them over that one-eighth, are you? [Laughter.]

Mr. NEAL. We are not. That is a very clever argument, Mr. Chairman.

The CHAIRMAN. Since 1845 or 1850 this free-in-county circulation has been on the statute books. Nobody has ever objected to it. The big papers as well as the little papers get the benefit of it. Take a paper in a county that circulates widely; the part that goes in the county goes free, of course. The part that goes out pays its 1 cent flat rate and will pay this zone rate. So the big papers as well as the little papers get the benefit of this free-in-the-county circulation.

Mr. NEAL. Aren't you mistaken, Mr. Chairman? It is the paper published in the county.

The CHAIRMAN. I understand, but if it is published in the county under the same conditions, then it goes free in the county.

Mr. CRISP. That is only true where there is no free delivery.

The CHAIRMAN. That is true.

Mr. NEAL. There is no free delivery in the office of mailing, but it does apply to the place of destination.

Mr. MOORE. But the Government still pays something.

Mr. NEAL. Of course.

The CHAIRMAN. Then the free-in-county circulation goes such small distance the cost of transportation is estimated at a very small fraction of a cent, but when it goes out farther, 200, 300, or 1,000 miles, that your magazines go—the average of your magazines or trade papers is over 600 miles—then the cost to the Government amounts to considerable.

Mr. DICKINSON. It is all free, whether published in the county or not.

Mr. NEAL. It is well to bear in mind that the main cost through the post office is in the terminal charges and the cost of handling and not in the cost of transportation itself, just as it is true in railroad transportation and all other forms of transportation that terminal charges are the big element.

The CHAIRMAN. Mr. Koons says it will average about 1 cent for every 200 miles; that is, the transportation cost.

Mr. NEAL. Mr. Koons gives the overhead at 3.86 cents, which is more than the average rate of transportation on a transportation line.

Mr. MOORE. The chairman thinks it is a little thing, but isn't it as great a sin to steal a pin as to steal a gold watch?

Mr. NEAL. I am afraid that I am a little limited on my theology, but I get the point.

The CHAIRMAN. But you have heard of exemptions in other laws—in the tax law, for instance—so we have an exemption in this postal law, and have had for over 60 years.

Mr. NEAL. The papers which I represent weigh less than the free-in-county papers, nearly 50,000,000 pounds.

The CHAIRMAN. And your papers cost the Government three times more. They are carried over ten times the distance as the county-free-circulation papers.

Mr. NEAL. It costs less.

Mr. MOORE. A substance by another name will smell as sweet.

Mr. NEAL. I think you put it very well. The average weight of the trade paper is  $1\frac{1}{2}$  to 2 pounds, which requires one handling, one delivery. The average weight of a small country newspaper would run about 5 to the pound and take 10 to 15 handlings of the paper, where it would take only one of the technical paper.

The CHAIRMAN. Yet that pound of your paper, considering the distance hauled, costs about eight times as much.

Mr. NEAL. I doubt that. I can not recall the figures, but I doubt that, because it has been brought out that the main cost is the delivering cost.

The CHAIRMAN. 3.86 cents is the overhead general post-office expense.

Mr. NEAL. Shall I go ahead and finish? I have the utmost sympathy for you people——

The CHAIRMAN (interposing). We get a lot of information——

Mr. NEAL. And I will try to make it as interesting as I can.

I have told in a way which I wish might have been stronger and more impressive something of the invaluable service that the trade and technical papers are rendering industry and the people. Now, let me call your attention to the vital relationship of these papers to the United States Government at this tragic and critical hour in our history. You have appropriated thousands of millions of dollars; you have not hesitated to delegate unlimited powers to the executive and administrative branches of the Government; no just appeal for legislative action has gone unheeded; you have realized that quick, smashing blows must be struck; that every hour's delay would mean the needless sacrifice of our splendid young soldiers.

And if I may pause to make a personal remark, I want to say that as a citizen and as a father you have my gratitude for the speed you have made in these matters, because my only son, who is a 20-year old boy, is pumping machine-gun bullets into the Huns over in France, and I have a deep personal interest in anything that has to do with the winning of the war.

I would not withhold from you one iota of the credit that is due you for the eager support you have given to our boys in khaki and to our entire war program. In the light of all that you have done, I can not believe that you will knowingly take away from the departments of Government here in Washington one of the chief instrumentalities which they are employing in the prosecution of the war.

That has not been your way—you have been giving, giving, giving without stint, whether it was men, money, or power that was needed.

Gentlemen, the trade and technical press, and the other papers, have become practically an arm of the Government, as I will soon demonstrate, and I am here to plead with you to let our Government continue to use the full power and strength of this arm.

I ask you to remember that the huge sums you have appropriated are flowing back into almost all necessary industries with the exception of the publishing business. We are getting none of it; we have no "war babies." On the contrary, we are struggling against high prices and shortages of material without any compensating advantages. Besides all this, we are the only industry in this country which is giving its product to the Government without limit, condition, or cost.

Back in April, 1917, I came to Washington in company with a committee, and laid before the various departments of the Government this offer:

In common with others, the business papers of the country—technical, trade, and class publications—place service above expediency and patriotism above profit.

There are bonds to be sold. Industries are to be mobilized. The Government must speak to the men who plan and do things. The business of the country must be enlisted. Knowing that we can perform this service at this critical hour, and answering the President's call, we, the publishers of the following papers, hereby tender to the Government our advertising pages without expense, and our editorial columns.

And, gentlemen, at the time that this offer was made, the question of whether the Government should pay for advertising was very seriously discussed, and the organization that I represent took this action by telegram. Since that time we have had 100 or 200 names—I haven't the exact number, but it was between 400 and 500 publications that report to my office, whose columns absolutely belong to the Government. As an instance, the trade and technical papers with which I am in contact—and I represent only the trade and technical papers—donated for the three liberty loans alone 11,000 pages of advertising and specially written editorial matter. When we were here before it was on war-savings day. At that time over 300 of our papers were carrying trade advertisements of war-savings stamps.

On November 23, last fall, we had this letter from Hon. Newton D. Baker, Secretary of War. It was addressed to my office:

NOVEMBER 23, 1917.

SIRS: The great need for skilled mechanics in the Aviation Section of the Signal Corps is well known to your association.

Appreciating the fact that your members, publishers of technical and trade papers throughout the United States, are in close touch with the employers of such skilled labor as we need, and fully appreciating the influence and efficiency of the business papers in their respective industrial fields, you are asked by the War Department of the United States to assist, through publicity and organized personal effort, in securing for the Aviation Section the large number of mechanics and skilled workmen necessary back of the lines to keep the air service in effective action.

The Government knows and appreciates your excellent work and previous patriotic efforts, and notwithstanding your previous work in the present crisis, feels that you will welcome this further urgent call for efficient patriotic service.

Very truly, yours,

NEWTON D. BAKER,  
*Secretary of War.*

ASSOCIATED BUSINESS PAPERS (INC.),  
220 West Forty-second Street, New York City, N. Y.

That was written on November 23. You may realize the rapidity with which we moved in that matter when I read you this quotation from a letter signed by Maj. W. L. Moose, of the Signal Corps, who is in charge of that section of the work. I may state in passing that one of the officers told our committee that if they got 12,000 men before the 15th of December they would be breaking all records. This letter from Maj. Moose, which I will not bother to read in its entirety, states that, according to the Adjutant General's Office, there were approximately 42,800 men secured in the drive between December 1 and December 15 for the Signal Corps. The total number of enlistments

for the Signal Corps for the month of November was 9,870. He states that "this office is very grateful for this most successful campaign which was conducted under you directly. For without the aviation section of the Signal Corps would be much in need of men at the present time."

(The letter is as follows:)

FEBRUARY 7, 1918.

SIRS: With reference to our conversation in regard to the number of enlistments that were procured between December 1, 1917, and December 15, 1917, in your campaign for men for the Aviation Section of the Signal Corps, I have been unable to get accurate data as to the number of enlistments. According to the record in the Recruiting Division of the Adjutant General's Office, there were approximately 42,800 men secured in the drive between December 1, 1917, and December 15, 1917, for the Signal Corps. The total number of enlistments for the Signal Corps for the month of November was 9,870.

From the above you can see that the enlistments after your drive was started were more than four times what they had been during the previous month. I am of the opinion that most of this increase was due to you and your committee's advertising campaign.

This office is very grateful for this most successful campaign which was conducted under your direction. For without it the Aviation Section of the Signal Corps would be very much in need of men at the present time. The stoppage of enlistments in the draft age and the delay in starting the special draft of the Provost Marshal General's Office has made it practically impossible for the Aviation Section to secure men before February 15, 1918. For this reason you can see that your campaign was a godsend to the Aviation Section.

Again thanking you and your committee for your untiring efforts in this campaign, I am,

Very sincerely, yours,

W. L. MOOSE,  
Major, Signal Corps.

ASSOCIATED BUSINESS PAPERS (INC.),  
Committee on Recruiting for Aviation Section, Signal Corps,  
220 West Forty-second Street, New York, N. Y.

I have a letter from Maj. Steever, of the Signal Corps, in which he refers to the same matter, and credits the committee with the responsibility for the success in the campaign.

(The letter is as follows:)

WAR DEPARTMENT,  
OFFICE OF THE CHIEF SIGNAL OFFICER,  
Washington, January 17, 1918.

SIRS: You will, no doubt, be gratified to know that the recent recruiting campaign for skilled workers was successful beyond our needs and expectations. The number of men obtained by far exceeded the requirements of the moment.

The earnest and active cooperation of the business papers in this recruiting drive was a great factor in its success. The publicity, reaching directly into the business houses of the trades required, exerted a powerful influence, as was shown by the number of direct inquiries coming into this office traceable to the business papers.

In addition to the combined efforts of the business papers for publicity, this office wishes to express its appreciation of the individual efforts of the members actively engaged, through whose activities it was possible in record time to print and distribute a large quantity of literature, posters, etc.

Very truly, yours,

E. E. STEEVER,  
Major, Signal Corps.

ASSOCIATED BUSINESS PAPERS (INC.),  
Committee on Recruiting for Aviation Section, Signal Corps,  
220 West Forty-second Street, New York, N. Y.

I wish to state in passing that I am a member of the Federal division of advertising, one of seven men who are handling all of the Government publicity and advertising absolutely without cost to

the Government except \$1 a month. We get that whether we earn it or not.

Mr. MOORE. Are you stationed here in Washington on that work?

Mr. NEAL. I am here a great deal of time on the work, but we have as our headquarters an entire floor of the Metropolitan Tower in New York.

Mr. MOORE. Are you a dollar a year man?

Mr. NEAL. A dollar a month, which is 12 times as good as the dollar a year man.

Mr. MOORE. That doesn't pay your expenses going back and forth to New York.

Mr. NEAL. No; I think I have put in a bill only once to the Government for my expenses, and there was so much red tape that I have since paid them myself.

Mr. MOORE. How many members of the advertising committee are there?

Mr. NEAL. Seven directors, but we have a clerical force of some size.

Mr. MOORE. To whom does your committee report?

Mr. NEAL. We report to George Creel's Committee on Public Information.

Mr. MOORE. Do you receive funds from the Creel Bureau—

Mr. NEAL (interposing). Not one cent.

Mr. MOORE. To pay for advertising, or do you prepare the advertisements?

Mr. NEAL. We work for nothing, and the advertisement writers work for nothing; the artists work for nothing; even the printers who set the advertising—who do the composition work—do it absolutely free, because we have allowed them to use the name United States Volunteer Print Shops; or some such name.

Mr. MOORE. Is this a supervisory committee; I mean to say, do you come together for consultation purposes, or do you do the work yourselves?

Mr. NEAL. We each have a desk in the office of the division in New York, and we report there at regular intervals, and the planning of the work is done by the director. Of course, the detail work is done very largely by clerks.

Mr. MOORE. Do you cover the matter of the liberty loan?

Mr. NEAL. We did a great deal of work for the liberty loan. We are not able to properly coordinate all the advertising activities on that, and as they probably will be coordinated a little later. We did handle the Red Cross campaign complete from start to finish.

Mr. MOORE. That is not paid for by the Government, is it?

Mr. NEAL. No.

Mr. MOORE. I mean the Red Cross expenses. That is not paid for by the Creel Bureau?

Mr. NEAL. No; nothing at all. The total cost of the millions upon millions of dollars worth of work that has been done by our committee was estimated to coast about \$9,000 or \$10,000 a year, and that covered rent, hire of stenographers, and the clerical force.

Mr. MOORE. You spoke of the franking privilege, with which you are familiar, in the early part of your statement. I intended to mark it up and ask you about that when my turn came. You are sending out a vast quantity of literature now.

Mr. NEAL. Not a vast quantity, but we have to keep in constant touch with the various publications throughout the country, and the advertising men.

Mr. MOORE. Have you anything to do with the circulation of the volume of information on German kultur, and things of that kind, prepared by Mr. Creel?

Mr. NEAL. We have prepared advertisements sent by the Committee on Public Information describing these volumes and asking people to send for them.

Mr. MOORE. So that you have a propaganda working to bring to their attention Mr. Creel's publications?

Mr. NEAL. Well, we have—I would not put it exactly that way. They are the publications of the Committee on Public Information, most of them.

Mr. MOORE. Is your system something like that which Mr. Post adopted with regard to obtaining expressions of opinion from the people?

Mr. NEAL. No, not at all.

Mr. MOORE. You do not cover the literary work, as I understand it, except as it is part of the advertisement?

Mr. NEAL. That is all.

Mr. MOORE. Does your advertising include posters that go upon the billboards?

Mr. NEAL. A great many of them that are in some way connected with the publication advertising. Many of them have come direct from the artists who are organized under Charles Dana Gibson. Some of the highest priced men in the world are donating their services, and they have been dealing direct with some of the departments in Washington without our intervention, but little by little most of that work is gradually being coordinated and being carried out through our bureau.

Mr. MOORE. Take this well-known poster, Uncle Sam with his white hat and his finger pointed out saying, "We want you." Who puts that out?

Mr. NEAL. It comes from our department.

Mr. MOORE. That is what we want to know. I wanted to know whether this work is centralized in the Creel Bureau, or whether a department of the Navy and a department of the Army have separate bureaus, and whether this is duplicated. There is so much of it that there seems as though there must be duplication of the work and unnecessary expense.

Mr. NEAL. The development of that work was so rapid that there was a great deal of duplication, and President Wilson has said several times that he had appointed the advertising division to eliminate this waste, stepping on each others toes, and working at cross purposes, and have the thing handled in a clean businesslike way, and little by little this work is being correlated and coordinated and brought to one place.

Here, for instance, is a poster that came from our division of advertising. The man who drew that got not one cent. He was not paid even for the drawing material, nor was any one connected with the printing, except the printer who reproduced it in large quantities.

Mr. MOORE. Who arranged for the distribution of that?

Mr. NEAL. One of our directors, Mr. Thomas Cusack, who is the king of the outdoor sign business in the United States.

Mr. MOORE. The man whose name appears on the billboards along the railroads?

Mr. NEAL. Yes; he is one of the seven men.

Mr. MOORE. The seven men, including Mr. Cusack and yourself, are \$12-a-year men?

Mr. NEAL. Yes.

Mr. MOORE. You are serving the Government for a nominal consideration?

Mr. NEAL. Yes.

Mr. MOORE. How many people are employed by those seven men?

Mr. NEAL. In our New York office?

Mr. MOORE. Yes; there and elsewhere, at your distributing points.

Mr. NEAL. I do not recall the exact number now that we have. It is in the vicinity of 10.

Mr. MOORE. Is that all, to handle all this advertising matter and all these posters?

Mr. NEAL. You understand that we are able to call upon every advertising agency and any writer and printer of consequence in the United States.

Mr. MOORE. Do they get pay?

Mr. NEAL. They do not.

Mr. MOORE. Do you mean to say that that circular costs the Government nothing?

Mr. NEAL. Except the printing. The printer does not get paid for the composition on advertising. The printers are donating that work.

Mr. MOORE. But that circular goes through the mails franked, does it not?

Mr. NEAL. I do not know how they are distributed.

Mr. MOORE. You said in the beginning, and that attracted my attention, that you were sending out a great deal of franked matter.

Mr. NEAL. The matter that I send out is only to trade and technical papers, inclosing copy for their publications, that is being donated to the Government.

Mr. MOORE. There has been a great increase in second-class matter since the war began, owing to its own activities.

Mr. NEAL. That is true, of course.

Mr. MOORE. Isn't it a fact that you have been sending out tons upon tons of matter through the Creel bureau?

Mr. NEAL. That I do not know. I would refer you to a hearing had before the House Committee on Appropriations. It is there, I believe, in every detail. I would hesitate to quote from that without having it before me.

Mr. MOORE. It would have some bearing on the general questions of the loss of profits from second-class matter, because if the Government is increasing the cost, that is a matter that might be very well considered in connection with the matter that you are presenting now.

Mr. HAWLEY. When you spoke about the printer getting no pay in the printing of the posters—

Mr. NEAL. (interposing). I said the artists.

Mr. HAWLEY. And the men who set the type up. All they get paid for is the actual presswork and printing.

Mr. NEAL. Yes. I tell you, gentlemen, it has been a refreshing, wonderful experience to see the almost unanimous and eager expression of patriotism on the part of these people, who would be insulted almost if you offered them pay for anything. I have said with Dr. Frank Crane that anyone on our committee could agree with the statement that the American people, generally speaking, are not going over the top for pay—at least, that has been our experience. A short time ago the United States Shipping Board wanted 350,000 shipyard volunteers. The first thing that Mr. Hurley did was to take the train to New York, and we elaborated the entire campaign. Mr. Hurley and the others connected with it, including the Secretary of Labor, credit that campaign with getting not 350,000, but 400,000 shipyard workers.

This is the letter that Mr. Hurley addressed to me:

MAY 14, 1918.

Mr. JESSE H. NEAL,  
*Executive Secretary the Associated Business Papers,  
220 West Forty-second Street, New York City.*

MY DEAR MR. NEAL: I want to tell you and those connected with the division of advertising that the services rendered to the United States Shipping Board and the Emergency Fleet Corporation by the business papers in our recent campaign for shipyard volunteers deserves our highest commendation.

The editorials which these papers published and the advertisements bearing coupons and post cards to be filled in by those desiring to enroll in the shipyard volunteers materially helped us in securing our full quota of volunteers.

I recognize the great force of the technical and trade press of the country and particularly in these critical times, both with relation to business as well as to the war.

Please accept this as a testimonial of my appreciation of your very-valuable services and the assistance given us by the Associated Business Papers.

Sincerely yours,

EDWARD N. HURLEY, *Chairman.*

Shortly after that we entertained the President's Cabinet and the heads of the Government at a dinner at the Willard Hotel, and in the course of that dinner the Secretary of Labor stated:

Mr. MOORE (interposing). Who is "we" there?

Mr. NEAL. The directors of the division of advertising.

Gentlemen, we of the Department of Labor have already had considerable experience with your work. In connection with the Shipping Board and the Fleet Corporation, we undertook the registration of 250,000 workingmen. We secured the cooperation of your advertising agencies, and as a result, in the time that we had specified, we registered more than 300,000 workers who are made available for shipbuilding operations. We have other work developing which I believe you can help us to bring to a successful conclusion.

Then Mr. Julius Holl, of the shipyard organization, said:

Last January, when the Shipping Board started to enroll 250,000 volunteers for work in the shipyards, we welcomed the assistance extended to us by the division of advertising. Your cooperation, your skill in preparing editorials and advertisements, enabled us to reach practically every trade and industry throughout the country from which we desired shipyard volunteers. In a little over two months we enrolled over 275,000 men.

Your campaign, which consisted of placing editorials and advertisements in 36 of the foremost magazines and 42 trade and technical journals, having a combined circulation of 8,000,000, helped to make our enrollment a great success. We enrolled thousands of men as a direct result of the coupons received in response to these excellent advertisements and editorials.

You know what that service was worth in dollars and cents to the Government? I question whether you could put a money valuation upon it.

I have here a letter from Mr. Clarkson, secretary of the Council of National Defense.

JUNE 24, 1918.

MY DEAR MR. NEAL: \* \* \* Your aid to us, I am already well aware, has been of the most definite, wise, and unselfish nature, and we consider ourselves greatly in your debt for the generous manner in which you have contributed the columns of your papers, which may almost be said to be the official organs of the industries and trades which they represent. \* \* \*

Very truly, yours,

C. B. CLARKSON,

*Secretary of the Council and of the Advisory Commission.*

JESSE H. NEAL, Esq.,

*Executive Secretary, the Associated Business Papers (Inc.),  
220 West Forty-second Street, New York.*

I have a letter here from E. J. Johnston, colonel of Engineers. In this connection I will state that our papers have undertaken to recruit the members of engineering and technical regiments. Mr. Hawley's son is in a searchlight division. A great majority of the men in that division were obtained by the technical papers serving the electrical trades.

This letter is addressed to the editor of the Engineering News-Record, from Camp Meade. He says:

HEADQUARTERS TWENTY-THIRD ENGINEERS,  
Camp Meade, Md., January 4, 1918.

Mr. C. N. LURIE,

*Editorial Assistant, Engineering News-Record,  
Tenth Avenue at Thirty-sixth Street, New York, N. Y.*

MY DEAR SIR: Referring to past correspondence, I take this occasion to thank you heartily for the effort which you made to assist the recruiting for this regiment. The result of your effort has been very gratifying indeed.

The regiment now contains about 4,500 men, of a finer type, I believe, than will be found in any other regiment of the Army. To obtain this large number of recruits by voluntary enlistment within about two months and a half is, I believe, a remarkable achievement, especially when the character of the personnel is considered.

Again thanking you for your efforts in behalf of the regiment, I am,  
Very sincerely,

E. N. JOHNSTON,

*Colonel of Engineers, National Army.*

Further, an extract from a letter from C. H. Sessenden, captain of ordnance:

Could you furnish us with about 500 reprints of the series of articles on the manufacture of the panoramic sight? We would like to have these copies as soon as possible, as we desire to furnish them to enlisted men who are being sent here to receive instructions in the repair of fire-control instruments.

Col. Carter, of the Ordnance Department:

May I thank you for the poster left here entitled, "Is this my boy?" The caption on this is so very good that we wish to use it on a poster, 100,000 copies of which will be distributed to plants engaged in the manufacture of ordnance material for Pershing's forces overseas.

Gen. Crozier, of the Ordnance Department:

Accept our thanks on your wonderful accomplishment in securing 100 skilled draftsmen and designers. Your efforts in this matter constitute a constantly valuable aid to the Government.

One of our editors came to Washington and found that they had working here, if I remember correctly, about a half a dozen skilled machine designers. They had scoured the country for men. The

wages were less than were paid in other divisions of the industry, and they were not able to get them. This man went back and in three weeks' time, through personal efforts, brought to Washington over 100 of the best draftsmen and designers in the country, which he was able to do because of the connection with the trade of the paper which he was on.

A letter from Col. S. E. Blunt, Ordnance Department:

I would remark that your magazine has for many years been consulted by the ordnance arsenals and by a great majority of its employees, containing as it does not only reading matter but also many advertisements of kinds and methods of manufacture. It is of great value to the employees and also to officers directing the work at manufacturing establishments.

The CHAIRMAN. I suggest that you print those. We want to try to close in five minutes.

Mr. NEAL. I hope, however, that when I do print them you will read them. They are most remarkable.

The CHAIRMAN. We will do that.

Mr. NEAL. Here is one that I would like to call your attention to, one from Mr. Garfield, addressed to Mr. Floyd W. Parsons. Mr. Garfield says:

APRIL 9, 1918.

Mr. FLOYD W. PARSONS,  
*Editor Coal Age,*  
*Tenth Avenue and Thirty-sixth Street, York City.*

DEAR MR. PARSONS: I have read with great interest your recent articles, and wish to express my appreciation of these contributions to a too little known subject. It is unimportant that the Fuel Administration should be justified, but it is highly important that the public should understand the problems with which the Government is confronted at the present time, and none is more fundamental and important than the one with which the Fuel Administration is called upon to deal. Pray accept this word of appreciation from the Fuel Administration as a whole. You are telling the story accurately and effectively.

I have expressed to you, on other occasions, my appreciation of the articles you have published concerning the work of the Fuel Administration. You have the great advantage of speaking to the industry directly and with more insight than most other writers. Possibly your entire freedom from connection here lends more force to what you write than as if you were formally associated with the Fuel Administration, but I venture to ask whether you would find it possible without formal association here to devote a definite amount of time each week to publicity work, giving special attention to magazine articles, both in the technical and nontechnical publications. Awaiting your reply, I remain,

Very truly, yours,

H. A. GARFIELD,  
*United States Fuel Administrator.*

The CHAIRMAN. Just file the others; give them to the stenographer. (The letters and statements referred to are as follows:)

DIRECTORS OF THE DIVISION OF ADVERTISING,  
*Committee on Public Information, Washington, D. C.*

GENTLEMEN: Mr. Creel has kept me informed of the work done by you and your associates, and I beg to convey my very deep appreciation of what seems to me a remarkable record of achievement. The effective campaigns carried through by you in behalf of the departments of Government have amply demonstrated the value of coordination, and it is my hope that the advertising profession will perfect still further the splendid machinery of service.

Cordially and sincerely,

WOODROW WILSON.

Mr. Chairman, I am very much more interested in hearing from the gentlemen who are going to tell us what you have been doing and I feel that I should trespass on your time if I were to attempt to say anything.

The Department of Agriculture has profited through this service and I hope will discover ways of profiting very much more largely than it has.—From address of the Secretary of Agriculture.

JUNE 7, 1918.

Mr. WILLIAM H. JOHNS,  
*Chairman Division of Advertising,  
 Committee on Public Information, Metropolitan Tower,  
 New York, N. Y.*

DEAR MR. JOHNS: Mr. Frank C. Bulta has told me how splendidly your committee cooperated in helping us get out advertising for our campaign culminating on national war savings day June 28. He has also handed me a report showing that you have during the last month placed war savings advertisements in 1,130 national publications with a circulation of more than 55,000,000 copies.

I want to tell you how grateful our committee is for the help you have given us. It would have been practically impossible for us to have turned out the advertising for our June 28 campaign without the assistance of your committee, and, of course, we could have done nothing in getting space in national publications.

It is expected that the campaign for the sale of war savings stamps will last as long as the war does, and we shall from time to time take advantage of your very kind offer to prepare special advertisements for us and shall greatly appreciate such space as you are able to give us in publications of general circulation.

Sincerely, yours,

H. E. BENEDICT,  
*Executive Secretary, National War Savings Committee.*

JUNE 3, 1918.

Mr. WM. H. JOHNS,  
*Division of Advertising, New York, N. Y.*

DEAR MR. JOHNS: On behalf of the American Red Cross and all of us here at headquarters, may we express our appreciation and indebtedness most heartily for your splendid cooperation and practical support which you have given in the second war-fund campaign.

Our subscriptions went over the top by 68 per cent, and this splendid achievement is due in no small part to the advertising in the magazines, farm press, and trade papers which supplied space for publicity purposes through the division of advertising.

Your cooperation was invaluable to us, and we want you and all who aided us to know how warm our feelings are toward each and every one for the help which has been given to the Red Cross.

Very truly, yours,

HENRY P. DAVISON,  
*Chairman Red Cross War Council.*

John G. O'Kelley, of the Fuel Administration: Advertising is one of the most powerful weapons which the Federal Fuel Administration has made use of in winning its fight against a nation-wide fuel famine. No man, who has followed the course of public events since this country entered the war, can help but realize that publicity is doing its part in helping this country to defeat Germany.

Mr. GEORGE FOWLER, of American Red Cross: Mr. Chairman and gentlemen, from Mr. Davison down—or, as Mr. Davison would say, from Mr. Davison up—everybody at the Red Cross appreciates the thing that has been accomplished by the work of you men who are working in the Division of Advertising under the Committee on Public Information. We had faith. Faith has been spoken of as essential. We have felt that the first war fund was raised largely on the faith of the country. That may or may not apply in the second war fund. It will apply if we use publicity, advertising, in the proper way, to create faith.

I had the pleasure of sitting next to Mr. Britton, Mr. Daniels's secretary, who, before he came to the Navy Department, was running a few papers down in North Carolina, and I said to him that it seemed to me that this meeting was an indication that advertising is coming into its own, along with the editorial locally, as a national force to mold and make public opinion. In fact, this body here is putting the order into coordination and serve into conservation. That is what they are accomplishing.

The recognition by the Government of advertising has affected, first, I am happy to say, the work of the Red Cross for the second war-fund campaign. Owing to the difficulties that the Treasury Department experienced, naturally, in the settling upon the date for the Liberty loan, the Red Cross did receive that earlier help, and it was not an ill wind for us.

When Mr. Newell and I first met with the Division of Advertising, we said to Mr. Johns and his associates, "We want to get help for the Red Cross war-fund campaign." Mr. Johns said, "What can we do now?" He used the word "now," which I think was typical of Johns and typical of the committee on advertising. It was not what we can do next week or next month, but what we can do now. The work that we have done with the Division of Advertising has been to act as their client.

The preparation of copy, as Mr. Johns has outlined, was arranged through the various advertising agencies. We took our cue from Cusack in the Outdoor Advertising, and at the end we found ourselves with the modest 57,000,000 of circulation, and an appropriation for advertising, through the patriotism of the advertisers and publishers, contributed through the division, to the extent of \$170,000, which is a very respectable appropriation for many commercial houses extending over a whole year of time.

There has come to my mind, as I have seen the mechanics of the division worked out, as I have seen them prepare copy, take all charge of the preparation of plates, produce such drawings as "The greatest mother in the world," which you see on the screen—as I have seen them do things, which are going to affect, not the mere raising of this \$100,000,000 which the Red Cross is going out after, but the attention of the country as a whole, through the Red Cross, it has seemed to me that the division, while it is occupying a higher place, will find maybe even a greater place for itself in those days of reconstruction which shall come after the war is over, and that there is something which has naturally occurred, and I believe that they will lay their lines so that the work after the war shall be one of education, and that the work done now shall have, as Mr. Schwab says, words of encouragement.

The Napoleon story that Mr. Schwab told made me feel that we were fortunate in having the division take the Red Cross as its first battle, because it is going to win, and in winning the Red Cross battle I think that possibly the Red Cross will help to serve the purpose of putting advertising on the governmental map, as it should be placed.

The Red Cross is not actually a governmental department. It is headed by the President. It is authorized by Congress, its accounts are audited by the War Department, and in all but name it is a part of the Government. It seems to me the Red Cross comes very close to the Government in placing, as it did last Christmas time, twenty millions behind the Red Cross. Anything the Division of Advertising can accomplish will affect the country as a whole, because practically no family now is without a member of the Red Cross, practically no newspaper is without 90 per cent of its readers members of the Red Cross.

And so it seems to me that the mere raising of \$100,000,000 is a very minor part that the Division of Advertising will have to play. They will play the much larger part of taking the country to the Red Cross and the Red Cross to the country. That is what the Division of Advertising has done. As I heard the other night Solicitor John Davis tell a story of a Scot who believed in predestination, and before he went over the top he stuck an extra pistol in his belt. The man next to him said, "Scotty, I thought you believed in predestination." "Ah, but I thought I might meet a German whose day had come." So in the Division of Advertising you have no need for extra pistols, because you have seven good revolvers.

JUNE 21, 1918.

MR. FLOYD W. PARSONS,  
*Editor Coal Age, Tenth Avenue and Thirty-sixth Street,  
New York City.*

DEAR MR. PARSONS: I have seldom read an article dealing with so technical a subject as coal with as much interest as I read your War as an industry last week. You not only have made a clear exposition of dry facts, but have illuminated them and given the public a very readable article.

Sincerely, yours,

H. A. GARFIELD,  
*United States Fuel Administrator.*

Capt. L. B. Lent, Signal Corps, United States Army: I have been a reader of the American Machinist for the past 17 years and in my present duties as chief Engineer

officer at this flying field, I find it to be of great assistance. Our method of keeping in touch with what is doing in the machinery world, and of finding out how others would do the things that we are called upon to do, is to read the American Machinist.

---

Commander H. E. Lackey, Naval Proving Ground, Indian Head, Md.: Upon the receipt of the American Machinist it is looked over by the officer in charge and passed on to supervisory force with articles of special interest marked for attention. The magazine then goes to machine shop and drafting room at which points supervisory mechanics and all draftsmen have access to same. The advertisements are of particular interest to those charged with getting out specifications.

---

Inspection Division, Ordnance Department: The articles on the production of war materials have been timely and instructive. You have attempted with a great degree of success the coordination of the Government's requirements and manufacturers' production along essential lines. The munitions makers as a body avail themselves of the information contained in your advertising columns as to machine tools which will meet their requirements in the production of war material.

---

Gen. Dickson, Ordnance Department: The American Machinist has for some time past printed illustrated articles describing the methods employed in Government establishments which have helped manufacturers to produce different articles of ordnance. These articles have been of assistance in obtaining prompt and economical production of urgently needed ordnance.

---

President Dayton-Wright Airplane Co.: We feel it would be improper to the manufacturers, especially to those who are assisting the Nation by supplying it with war material, to deprive them of the invaluable assistance which your magazine affords. We find the American Machinist a great help in many lines of our work.

---

Curtiss Aeroplane and Motor Corporation: Your paper is invaluable to us and I do not see how we could get along without it. It has kept us posted up to the minute on all new machine-shop practices; also on the designing of new tools and equipment. It further has been of great value to us in placing orders for new machinery.

---

War Board American Electric Railway Association: We appreciate very much what the Electrical Railway Journal is doing, and especially in this particular case. Mr. Cole's work is a very valuable one and should have the attention of the electrical men throughout the world. Our board was very much pleased with the spirit of cooperation shown by you in this manner and on behalf of the board I desire to express our great appreciation of your assistance.

---

Mr. NEAL. I can finish in about 15 minutes, when you get back from lunch.

The CHAIRMAN. Mr. Post wanted to come in then. It was hoped that we would be ready for him.

Mr. POST. You said that Mr. Post wants to be heard. I am at the service of the committee. I think that that would be the more accurate way of putting it.

The CHAIRMAN. We are rushed for time now to write the bill, and I promise you that I won't keep you as long as we did the other day. In fact, I think that I have asked you practically all I want to, because we have got the information from other gentlemen and you together. I just want to make a little correction of the figures, and

I will do that the first thing. You can make any correction you may want to.

Mr. POST. I am at the service of the committee.

The CHAIRMAN. And I may want to put in some quotations from the Post Office Department.

Mr. POST. That will make it a mutual affair, so we will exchange quotations.

The CHAIRMAN. We will give you the 15 minutes, Mr. Neal. You quoted in your remarks this morning a great many prominent men, governors of States and I believe, others, judges, giving their opinion generally that the zone system was improper and unjust. I want to say that we would be glad to hear any of those gentlemen whom you quoted, and if they desire to appear before us it would be our pleasure to allot them time, and I am sure that it would be a matter of enlightenment to us and perhaps to them if they would appear before us and give us the data on which they formed an opinion, and let us know the extent of their investigations, how minutely they had looked into this matter and weighed the proposition pro and con, what investigations they have made, and what data they have.

Mr. FORDNEY. And whether they wrote those letters at the request of these gentlemen or whether they came voluntarily.

The CHAIRMAN. I believe that if they would do that, would come before us, who have given some little attention and study to this subject of zones and rates and increased rates on second-class matter, and who have made investigations—thorough investigations, some of us—that we would enlighten those gentlemen, and it may be that we would convert them to change their opinion. I wish you would let them know.

Mr. NEAL. I will do so.

The CHAIRMAN. We will be glad to hear them, and stop work on the bill at any time to hear them. They are prominent men. I would not say they are politicians; they are prominent men, and we would not want to cut them off. We think it fair to us and to Congress that such gentlemen, in giving their opinions, should come before us to give us an opportunity to see what they really know about this matter, you know, like you and Mr. Post. You have given your opinions and have given your reasons, and we have cross-examined you, as it were, to see what you really did know and whether or not your opinions were worth anything.

(Thereupon, the committee at 1 p. m., took a recess until 2 p. m.)

#### AFTER RECESS.

(The committee met at 2 p. m., pursuant to adjournment.)

The CHAIRMAN. Mr. Neal, you said you wanted 15 minutes more. Well, go right ahead and finish.

Mr. NEAL. Mr. Kitchin, I gave the stenographer practically all that I had there. The only thing that I would have done at all would have been a summing up, and that is not really necessary. You fellows have got it all anyhow, and it will save the time.

The CHAIRMAN. I wish to say that you had a very splendidly prepared paper.

Mr. GARNER. You were a good witness, and probably avoided the issue as much as a man could.

MR. NEAL. Gentlemen, the following extracts from letters refer to the patriotic service now being rendered the South by the Manufacturers' Record, of Baltimore, Md.

Stanley Howland, vice president and general manager Ashville & East Tennessee Railroad Co., Asheville, N. C.: I wrote a letter to the Manufacturers Record last week asking them to send me some reprints in pamphlet of their leading editorial, and ended my letter by saying, "Keep up the good work. I wish you had 10,000 subscribers in this county." If I had the means, I would invest in subscriptions to the Manufacturers Record with just about the same feeling I would buy liberty bonds, to make a dollar go just as far as possible and do the country the most good and the damn Huns the most harm.

I have done some soliciting for bonds in the country and I am absolutely satisfied that if people out in these mountains were in the habit of reading the Manufacturers Record, solicitors for bonds would find very little to do. They are very patriotic but they don't understand the situation and German propaganda is rampant. I denounced two men in two days for pro-German talk, though I feel satisfied it was simply ignorance. Such talk as this, though, would be promptly counteracted if the most intelligent were reading the Manufacturers Record, and a tremendous blow would be struck for liberty and civilization.

---

Warlick Lumber Co. (Inc.), Gilkey, N. C.: I have at least begun to realize what a potent force the Manufacturers Record is in the great struggle in which we are now engaged, and for some time I have been passing my copy on to others and have been pointing out to them the editorials of most force.

---

P. G. Bush, Nashville, Tenn.: As it is my desire to help, in my small way, this movement of awakening the people to a realization of present circumstances, I will volunteer my service to your paper, gratis, and secure any data or articles on any subject desired from this section. I wish to thank you for your article on the local powder plant and its record which stands as a monument to the "Awakened South."

---

John R. Boddie, St. Louis, Mo.: Your fly leaf article on the front of June 6 number rings with a melody akin to that of the Liberty bell at the birth of America, and will awaken patriots to a realization of their duty to suffer death rather than leave their posterity to the Hohenzollern and Hapsburg dynasties.

---

Laurel Coal Corporation, Putnam, Va.: Your work for our Nation is invaluable. You certainly express my views more fully than I can hope to do. Keep the good work going. We must and will win.

---

Burnham, Glenwood, on the Caddo, Ark.: The Manufacturers' Record is a power. Every issue is a 40-centimeter shot for Americanism and in every issue the red corpuscle glows. The last number is a classic. I wish I could be the means of putting your publication in every business office and home in America and then begin on a foreign list to Pan-American friends who need it.

---

Atlas Powder Co., Knoxville, Tenn.: Am of the opinion that what you are writing is doing more for the good of this country than what is being published in any other paper or periodical in the United States.

---

Philadelphia Wool and Textile Association, Philadelphia, Pa.: We desire to express our appreciation of the good work which you are doing, both from a patriotic standpoint and from the standpoint of intelligent effort for a constructive development of our national resources.

Mobile Oil Co., Atlanta, Ga.: This is the best paper ever published for the man who loves his home, his State, and his country, and the development of it. You are doing more to the upbuilding and improvement of the South than all of the daily papers combined. It has all the local and world-wide news of importance.

Respectfully, yours,

CHAS. C. BRASWELL.

---

G. C. Weeks, Scotland Neck, N. C.: I am passing Manufacturers Record around to my friends on account of your strong editorials on the war.

---

F. K. Huger, Melbourne, Fla.: Next to my Bible, I swear by your publication; if we fail to win this war, it will be because the administration and the people have failed to follow your lead.

---

Warlick Lumber Co. (Inc.), Gilkey, N. C.: The writer is a member of this firm, and in talking with Mr. Killian, the manager, this morning, we decided that it would be a good thing to subscribe for the Record and just leave it lying in a conspicuous place in the store where the public would have access to it and thus get some of the good things with which it is filled every week.

I believe that this will produce larger results than the investment of a similar amount in war-savings stamps, because it will no doubt be the means of bringing many indifferent ones to a sense of their duty and bring about the sale of many war-savings stamps.

---

J. J. Finklea & Son, Buena Vista, Ala.: Keep up the good fight you have been making, and the great God of Heaven help all of us to do as well in this hour of trial.

---

Morgan Lumber & Manufacturing Co., Charleston, Kanawha, W. Va.: We have been reading this journal with a great deal of interest and satisfaction, particularly so throughout the present war period, and we only regret that it is not within our power to express to you our full appreciation of the grand and noble work you are doing along this line. We feel that you are doing considerably more than your "bit," and wish it were within our power to place your journal in the hands of millions of readers throughout our country.

---

Home Canner Manufacturing Co., Hickory, N. C.: In our opinion there is no paper in the country that is doing more for America than is the Manufacturers' Record.

---

Wier Long Leaf Lumber Co., Houston, Tex.: Please permit me in behalf of myself and associates to thank you for the patriotic, effective work you are doing toward winning this great war. The writer has just finished reading your issue of the 9th, and surely no thinking, free people could resist the call to support the Government to the last man and dollar.

---

United States Cast Iron Pipe & Foundry Co., Austin, Tex.: I congratulate you on your several articles, "America's Relation to the World's War." I wish it were possible that your pamphlet containing these articles could be placed in the hands of every citizen in this country.

---

Asheville Board of Trade, Asheville, N. C.: Your journal is doing a national service and we will in every way possible endeavor to increase its circulation.

**ADDITIONAL STATEMENT OF MR. CHARLES JOHNSON POST,  
DIRECTOR OF THE PUBLISHERS' ADVISORY BOARD.**

The CHAIRMAN. Mr. Post, we will get through in a very few minutes, I know. I want to call the attention of Mr. Post and this committee to an error in the hearing of June 29, No. 19, on page 1740. It appears at the top of the page that I said this:

Instead of being what you said, for the 6 years preceding this reduction of the postal rate on second-class matter in 1885 the deficit in the Post Office Department on domestic mail averaged yearly \$14,600,000.

Then I subsequently said:

For the 6 years immediately succeeding or following 1885 the reduction of the second-class postal rate, it averaged \$23,000,000.

Down near the bottom of the page the reporter has me saying, which doubtless I did:

The deficit in 1885 was \$15,000,000. The next year it rose to \$16,500,000, and so on for several years.

This is a mistake, and the mistake was made by deducting the wrong row of figures in the statistical abstract. While the figures even as they appear in the hearing are very unfavorable to the statement you made as to deficits and to your map, still the actual figures are more unfavorable but not as large as these, and I want to correct them.

The facts are that the total deficits from 1880 to 1885, inclusive, under the old rate, prior to the taking effect of the act of 1885, amounted to \$13,995,000, while the total deficits from 1886, the year the reduced rates took effect, to 1891, inclusive, 6 years, were \$33,705,000, more than twice as much for the 6 years after the reduction of rates as the 6 years before. The average annual deficit for the 6 years prior to the taking effect of the reduced rates was \$2,333,000, while the annual average for the 6 years following the reduction of the rate was \$5,617,000, more than twice as large annual average deficit the 6 years after the reduction of the rate as it was before.

In 1882, under the old rate, prior to the reduction of 1885, there was a surplus, a favorable balance to the Government of \$1,253,000, and in 1883, under the old rate, a balance or surplus of \$2,181,352. This was the first surplus since 1865, and the 1865 surplus was the first surplus since 1852.

Mr. Post. 1851.

The CHAIRMAN. It was the year 1851-52, and from 1883 to 1911, there was not a surplus or balance in any year. The next one appeared in 1911.

I have changed it for the permanent record in accordance with the statement I have made.

Mr. Post. On that matter, Mr. Chairman, you will recall that you referred to a map or a chart which I had here, and it became apparent when I went over the record that we were talking at cross purposes, although dealing with the same facts. These charts, whose accuracy you challenged at that time, were on the ground of variation that I spoke of at that time, in volume 6, \$10,000,000 or \$9,000,000, or whatever it was, and I had computed them on the percentage of deficit, on the difference between the money expended by the Post

Office Department and its receipts, the deficiencies being expressed in terms of percentages, so of course we were comparing unlike quantities, and the figures you were reading would not correspond with those. As a matter of fact, these percentages are from the identical figures that you mention, and give the same situations on the percentage basis.

The CHAIRMAN. The figures which I have just given are taken from the Statistical Abstract, and I compared it with the Postmaster General's reports, both of which I have before me.

Mr. Post. They are identical, only I took them from the Postmaster General's report, and computed them in terms of percentages, so the variations are the same, and in that connection, I have, at the request of the committee, had plates made of these charts, which I am ready to turn over to the committee and have printed, and they will speak for themselves.

The CHAIRMAN. The main thing in your statement to which I referred in producing the figures when you introduced the map was to the effect that the reduction of the rate in 1885 was accompanied by a reduction in postal deficits.

Mr. Post. The percentage of deficits.

The CHAIRMAN. And you said the reduction in rate on second-class postal matter caused a reduction in deficits. I looked up the figures to be accurate, and my point was that the figures showed that there was an actual increase of deficits and that the reduction from 2 cents to 1 cent in 1885 on second-class matter could not have had any effect in decreasing the postal deficit or increasing receipts. It decreased its receipts 50 per cent. That was the only point I desired to make.

Mr. Post. I think we were talking about the same thing.

The CHAIRMAN. I had one map, maybe, and you had another. I never did understand it, and it may be your map sustains the figures I have given this morning. If so it refutes many of your statements and arguments.

Mr. Post. It does, Mr. Chairman. It does not make any difference whether we compute it in volumes or percentages, provided we bear in mind the fact. Suppose the appropriation was \$100,000,000 and the loss was \$5,000,000. The loss is very much less if the appropriation had been \$300,000,000 and the loss \$6,000,000. Six million dollars would be a less percentage of loss in the latter case than \$5,000,000 in the first case.

The CHAIRMAN. You must remember, and the figures will show that, while you stated the other day, and perhaps your map shows, that there was an increase in receipts, general receipts, of the Post Office Department after 1885, there was also the same or larger proportion of increase of expenditures. For instance, if we received \$250,000,000 and expended \$260,000,000 at one time, one year, and another year we received \$300,000,000, the net receipts would increase, but suppose our expenditures went up to \$325,000,000, there would be a corresponding increase in expenditures and a larger deficit. So while you stated the receipts had increased, you failed to state that the expenditures had increased also. That is the point.

Mr. Post. I feel that I expressed both of those factors by computing the percentages.

Mr. STERLING. I asked you about that while you were exhibiting those maps, and I said that they did not amount to anything unless they showed expenditures as well as receipts.

Mr. POST. Then I did not grasp the full import of your question; because the answer that the percentage embodies that fact would be the correct answer.

The CHAIRMAN. But you just took the percentage of the receipts.

Mr. POST. The difference between the expenditures and the appropriation, because the appropriation covers the expenditures and the deficiency, was the difference.

Mr. STERLING. The figures on the map did not show the net receipts, they simply showed the increase in gross receipts. It did not show whether expenses were increased or not.

Mr. POST. This is the map [indicating] as I recollect it, to which your question applied. That map does not. It did not show it on that map, but in this chart [indicating], in these two charts in both of which the computation is made on the basis of the percentage, that does include those two factors that you speak about.

The CHAIRMAN. All right, Mr. Post.

Mr. POST. I do not think there is a difference of opinion on that factor at all.

Mr. GARNER. I would like to ask you again the questions that I asked this morning, to see just what your opinion would be now. Assuming it to be the public policy of this Government to have each piece of mail pay its way through the Post Office Department, and it should be ascertained what the cost of transporting magazines through the Post Office Department would be, would your organization object to it?

Mr. POST. There is no question about that, Judge Garner. The sole point that I was emphasizing in that connection, and Mr. Neal was emphasizing, was that you suggested that if the Congress made that decision, well, we would have the natural right to appeal to the country if we did not agree with it, to propagandize the country. That is an inherent American right. But if a competent tribunal, such as Congress, should come to a decision, considering that factor—which I feel it is not considering at present in the passage of this law, from which we are appealing—I think that would be all right.

Mr. GARNER. I have read some of your ideas about government, and I gather, maybe erroneously, that one that you had in your mind was that it would be well to cut out all matter that went through the mail free.

Mr. POST. No; if I have given that impression, I want to correct it most energetically. I believe that the mail, the postal function, is one of the greatest democratic functions—and I mean that with a little "d," not in the party sense—is one of the greatest democratic functions of modern civilization, this means of communication. I do not believe that the cost of that service bears any relation whatsoever to the charge that should be made. I think that that is perfectly illustrated in Alaska, where, I think, Mr. Kuhns in some of his testimony stated that it cost \$6.80 for delivering a letter there which carried only a 2 cent stamp to Americans at Point Barrow.

Mr. GARNER. I agree with you, but I do not think you got the exact point I made. It has been suggested by some that it might be well to take away from Congress the franking privilege, because

it has been sometimes abused, and they have the idea that we could better ascertain the cost of transacting the business of the Post Office Department if we did not have so much franking matter. You do not agree to that?

Mr. Post. No, I do not; and I think that calls for just a little more than a yes and no answer. I think, and I think a great many Congressmen hold similar views, that there may be better ways of applying the franking privilege.

Mr. GARNER. I am one of them.

Mr. Post. In the early days, a great many years ago, they sent pianos and trunks under the franking privilege.

Mr. GARNER. I believe in a limitation, but I do not believe that it would be good public policy in this country to in any way interfere with the legitimate circulation of the Congressional Record or speeches made in Congress among the people. But there can be a limitation on it so that any one of the 435 in the House or the 96 in the Senate can not abuse it. It is the abuse only that I would complain of, and I judge that is your view.

Mr. Post. Absolutely. I do not think that under present conditions there is any substantial abuse, and I do not think there is any abuse in the direction of the volume of matter that is sent out by Congress itself.

Mr. GARNER. There hasn't been abuse in this particular and I can illustrate how it can be abused in this particular instance that we have here. These hearings are published documents, and they can be sent out through the mail under the frank of a Congressman. Let us suppose that your organization desired to take advantage of the privilege, and it was able to find one Member out of the 435 that could use the franking privilege and he sent out millions of copies, presenting your viewpoint, that would be an abuse, and an abuse that I would want to correct.

Mr. Post. There is no disagreement between us at all on that. The whole point is this, that it would be unfair to ask the publishers' advisory board or any particular organization that it cease to avail itself of that opportunity of its own free will when it is open to every other element in the country. If that prohibition or that regulation should apply, it should not be left to a man's individual conscience.

Mr. GARNER. I agree with you, but when a Member of Congress, for instance, loans you his franking privilege and you at your own expense have printed documents and have them go out and become subject to be sent under his frank, that is abuse of it.

Mr. Post. I do not think there is any question about it; that right has been abused.

Mr. GARNER. That kind of abuse is the kind that I would like to put a limitation upon, and therefore I would like to have some other regulation than the present law.

Mr. Post. I assume that you do not want to put it on the publishers' advisory board merely. I think there is no question at all as to the absolute soundness of your position. I would like to say also in regard to the Congressional Record that I have a very strong criticism to make of the Congressional Record and its publication in that its price is prohibitive, and I think the number of copies that are available for distribution—I think it is 50 copies—should be increased.

Mr. GARNER. It is 60 now.

Mr. POST. And then the price he has to pay for it. It is \$25 a year, isn't it?

Mr. GARNER. It is according to the length of the session. It is about \$8.

Mr. POST. That is a prohibitive tax.

Mr. GARNER. One of the reasons of that is—probably Congress is responsible, the House and Senate. You send—an American citizen sends a petition to Congress with certain grievances. Now, under the viewpoint of some Senator, not us in the House, you will see that all those petitions are inserted in the Congressional Record, and the result is that it becomes voluminous, and the larger the Record the higher the price. If the Record simply contained the proceedings of Congress and not the proceedings before this committee or any other committee, you could get that Record and it would not cost more than \$2 to \$5 a year.

Mr. POST. What you are urging is what I believe should be the rule. The daily proceedings of Congress should be most accessible.

Mr. GARNER. And confined to the business of Congress.

Mr. POST. And confined to the business of Congress; and these other things should be separated, and people could get them if they sent for them.

Mr. RAINEY. The entire issue amounts to 33,000 copies a day.

Mr. POST. I think it would amount to more if the cost was not so high.

Mr. RAINEY. It is only 33,000 copies.

Mr. POST. It should go out like reports from the Agricultural Department.

Mr. RAINEY. I agree with you.

The CHAIRMAN. If you have anything special, we want to hear it.

Mr. POST. There are other corrections that I want to make in the hearing of June 29, on page 1403.

Mr. RAINEY. What page is that on?

Mr. POST. Page 1403. That is, in regard to the zone rate in Texas and the letter you quoted. I feel that I am responsible for the letters and statements that go out from my office, and I assumed responsibility there which I think I might better have waived, in that thing; and your correction of the rate of postage on zone magazines containing 50 per cent reading matter and 50 per cent advertising matter sent to a subscriber in Texas, that it was 2½ to 3 times more than it was on the same magazine sent to a subscriber in Boston, or that the Texas reader would have to have paid 2½ to 3½ times more postage than the reader in the first two zones of publication was right. Boston is just outside of the first two zones. That was an error. But I think it was venial one, in view of the fact that you and Congressman Rainey have spoken of \$90,000,000 deficit, and we differ very materially about that. I do not know of anything that would correspond to \$90,000,000 deficit, and I think that in Congressman Rainey's own speech he spoke of that and spoke of a very much less amount.

On page 1379 Congressman Rainey asked about a letter from "Mrs. Holland Louise Johnson." That name should be "Helen Louise Johnson." It was suggested very positively that she denied that she ever gave authority or permission to use a letter from her.

I have here a letter dated February 15, 1918, from her, which reads as follows:

FEBRUARY 15, 1918.

CHARLES JOHNSON POST,  
*Director Publishers' Advisory Board,*  
*New York City.*

MY DEAR MR. POST: Your letter dated February 6 would have had an immediate answer had it not been for the fact that I have been suffering from an attack of grip.

You ask for permission to send out copies of my letter to you dated January 22, 1918. "Of course I should like to take out of it that which is of a purely personal character."

If my letter to you will be any help you surely have my permission. My permission is based as in the above paragraph. One change must be made, however; second paragraph, "through the records of the —" should read, "through the recommendations of the —."

I shall be glad to receive a full reply from you relative to joining the periodical Publishers' Association.

Very truly, yours,

HELEN LOUISE JOHNSON,  
*Director Service Office, G. F. W. C.*

MATTER OF ZONE POSTAL REPEAL.

THE GENERAL FEDERATION MAGAZINE (INC.),  
*Washington, D. C., March 8, 1918.*

MY DEAR CONGRESSMAN: As I understand the matter, the original bill was introduced through the recommendations of the Postmaster General, Mr. Burleson, "to clean up the magazine situation," whatever that may mean.

His stated belief was that too many magazines were issued and they should not carry advertising matter. Further, the discussions in Congress were based almost wholly on the circulation of the Ladies' Home Journal and Saturday Evening Post and their advertising rates and income.

This is manifestly unjust to the educational magazines and those disseminating the data by which public opinion is formed, whose circulation is limited and advertising rates in keeping.

The enforcement of this unjust and unintelligent zone postal law means as great a detriment to the men and women of rural and small towns as the breaking down or limiting their school systems.

The most valuable and needed magazines will be forced out of business while those published by the extremely wealthy corporations can continue. Such medium of public expression as *The Independent*, the *Outlook*, etc., can not distribute far.

As for advertising matter in magazines, it seems incredible that any intelligent person should fail to recognize the impossibility of selling goods without letting the public know they are made and where to get them, and I predict the utter destruction of the scenic beauty of the country if magazines are forced out of business. The billboard nuisance will become a necessity of trade.

Yours, very sincerely,

HELEN LOUISE JOHNSON,  
*Editor General Federation Magazine,*  
*Director Service Office, G. F. W. C.*

It was on the basis of that letter that we made use of the facsimile of Miss Johnson's letter.

Mr. RAINY. She evidently did not understand, when she was talking to me, that she had given that permission.

Mr. POST. I saw Miss Johnson, she called on me in New York, and I recalled her letter and showed it to her, and she felt that I had not read it in the same sense in which she read it; but the letter itself of course is the best evidence as to that.

Mr. RAINY. I think myself that it was sufficient to warrant you in making that use of it.

Mr. Post. Yes; she said she had an interview with you when the matter came up, there. Now in the hearings, page 1414, June 29, Chairman Kitchin referred to a quotation from a letter to Congressman Helvering of Kansas, and I should like to introduce that letter into the record as a full statement of the conditions and surroundings there.

The CHAIRMAN. All right.

Mr. Post. This is to Congressman Helvering. [Reading:]

MAY 8, 1918.

Hon. GUY T. HELVERING,  
House Office Building, Washington D. C.

DEAR SIR: Your letter of the 6th in regard to your Kansas constituent and the postal "zone" law, and my reply thereto, at hand. For the length of my present letter I offer you my apologies, together with the importance of its subject matter as justification!

While you characterize my statement as to the \$4.40 special carrier service in Lawrence and the \$1.50 mail rate in California and elsewhere as "ingenuous" (sic), yet I can not help but comment on the fact that you do not argue it or discuss it and merely add that it is begging the question.

I am unable to determine whether you understand what the carrier system means or not. The carrier system means that a newspaper is delivered by a news dealer who has a news route and who delivers the papers as soon as they come from the press. The mail service does no such thing unless first-class postage is paid at 3 cents an ounce and an additional special-delivery stamp of 10 cents is affixed.

The point is that you stated that the Lawrence newspaper was charging a California subscriber \$1.50 a year for the identical kind of service given in Lawrence for \$4.40 a year—which is not in accord with the facts.

You believe that low postage is a "subsidy" to publishers. That line of thought has been successfully challenged by every student of postal matters and by the development and principles of the postal function itself. A low postage rate is a benefit—"subsidy," if you choose to call it—to the readers of a nation. It makes accessible intellectual intercourse in the exact measure of the cheapness of postage.

Let me answer the rest of your letter seriatim:

1. Neither I nor the Publishers' Advisory Board is "intimidating" Congress, as you state. We are bringing this important matter of hasty and disastrous postal "zone" legislation to the consideration of the citizens and homes of the United States. This is not "intimidation" of Congress, unless Congress regards its acts as sacrosanct and to discuss them or oppose them through the channels of discussion lese majeste. I feel, for myself and for the Publishers' Advisory Board, that we are correct and within our fundamental constitutional rights in presenting this serious postal "zone" question to the public for discussion by them.

2. I think you are under a misapprehension as to the handbook of petitions. It is not a handbook of petitions; it is a campaign handbook presenting the views of various able thinkers, including many Congressmen. It is indexed so that the reader may follow any line of argument he desires. I inclose one in order to set you right on this minor point.

3. You characterize my work as "coarse." I am sure that your belief in the coarseness and clumsiness of this campaign will reassure you as to its ineffectiveness. The public can never be deluded on great public questions by coarse and clumsy stimuli.

4. The Tribune is cordially for this "zone" law, as I am aware. It is the only paper in New York that is. The Tribune is further celebrated in New York for its persistent efforts to hamstring the Administration since the war began. Furthermore, the Tribune has been for 30 years the strongest Republican champion of Mark Hannaism, of reactionary policies, and an unswerving supporter of Wall Street and the special-privilege interests. When any question of public policy has ever confronted the Nation, the Tribune invariably showed the side of special privilege. Your quotation of their editorial is simply additional proof of the infallibility of their instincts.

May I ask if on any other public matter, or at any other period in our national history, you have ever taken the Tribune for mentor and guide?

5-a. Now as to the Tribune's argument. It is only entitled to consideration because you have adopted it. The Tribune regards low postage as a "subsidy" to publishers. I assume that you will agree with the authorities in the field of economics that the ultimate consumer pays the tariff, and that it is the reader of periodicals who receives

the benefit of low postage thereon, or who pays the high postage which is embodied in the subscription price or reflected in the decreased quality of the product. I can not assume that you stand alone in opposing the established principles of this economic law.

5-b. Now as to the value of widespread circulation of printed matter. You will be interested to know that two years before the American Revolution, the British postal authorities, in order to suppress the spread and dissemination of the restlessness born of liberty-loving idealism, raised the postage charges in order to prevent the spread of ideas. I am sure you will be struck by the startling contrast of that action by the British authorities to suppress liberty with the action of our own Congress in similarly raising postage rates during a war period and with the avowed effect of restricting newspaper and magazine circulation and their accessibility to reading and thinking Americans.

5-c. George Washington has a large place in our history. When the Constitution was before the States for ratification, he said in a letter to Mathew Carey, on June 25, 1788:

"I entertain an high idea of the utility of periodical publications, insomuch that I could heartily desire copies of the Museum and magazines, as well as common gazettes, might be spread through every city, town, and village in America. I consider such easy vehicles of knowledge more happily circulated than any other to preserve the liberty, stimulate the industry, and ameliorate the morals of an enlightened and free people."

And three weeks later, July 18, he wrote to John Jay:

"It is extremely to be lamented that a new arrangement in the post office unfavorable to the circulation of intelligence should have taken place at the instant when the momentous question of a general government was to come before the people. \* \* \* Now, if the Postmaster General, with whose character I am unacquainted, and therefore would not be understood to form an unfavorable opinion of his motives, has any candid advisers, who conceive that he merits the public employment, they ought to counsel him to wipe away the aspersion he has incautiously brought upon a good cause. If he is unworthy of the office he holds, it would be well that the ground of a complaint apparently so general should be inquired into, and, if unfounded, redressed through the medium of a better appointment. It is a matter in my judgment of primary importance that the public mind should be relieved from inquietude on this subject."

This was in the discussion of the circulation of newspapers and periodicals. Further, in his fifth annual message to Congress, December 3, 1793, he said:

"But here I can not forbear to recommend a repeal of the tax on the transportation of public prints. There is no resource so firm for the Government of the United States as the affections of the people, guided by an enlightened policy, and to this primary good nothing can conduce more than a faithful representation of the public proceedings, diffused without restraint throughout the United States."

The CHAIRMAN. Did you ever really write that?

Mr. MOORE. He is coming to the signature, and I wanted to see who wrote that.

Mr. POST. I am a little bit confused as to what you want. Do you want me to—

The CHAIRMAN. Go ahead and read the rest of it.

Mr. MOORE. It is a pretty powerful letter.

Mr. POST (reading):

6. The postal "zone" system was abolished by President Lincoln in 1863, upon the recommendation of Postmaster General Blair, who made an elaborate report based upon an exhaustive study of the "zone" system and its disadvantages. Since then United States postal commissions appointed to consider postal matters have also joined in the condemnation of the postal "zone" system.

I can not forbear quoting Ambassador Gerard, who said in a speech in Philadelphia: "Now we have to meet this German propaganda. The war is not going to last forever—and you have seen what German propaganda has done in Russia. These are grave dangers, and they only go to show what can happen in a country like Russia.

"Fortunately, they can not propagate this country as they can Russia, because we have great publications that go all over the country and have unified the whole country and the whole continent. That is why I am against the postal zone law passed in the last Congress putting an extra tax on papers sent from the cities where published.

"They forget that, whether these publications go from Philadelphia, from San Francisco, or from Chicago, it is the exchange of these papers from and to all parts of the country that makes one, universal, united America.

"They unify the sentiment, and that is worth far more in this war than the small amount of extra postage which the Government will obtain."

The foregoing are considerations involved in the postal "zone" legislation.

The only sound basis for postal legislation is the consideration of the postal function and its service to the people of this Nation. The Post Office is not a business institution, nor was it ever intended as a revenue-producing agency. I can not do better than quote you from the speech of the Hon. Charles Sumner, delivered in the Senate on June 10, 1870, which discusses the Post Office and the postal function in a most comprehensive manner:

"Of all existing departments the Post Office is most entitled to consideration, for it is most universal in its beneficence. That public welfare, which is the declared object of all the departments, appears here in its most attractive form. There is nothing which is not helped by the Post Office. Is business in question? The Post Office is at hand with invaluable aid, quickening and multiplying all its activities. Is it charity? The Post Office is the good Samaritan omnipresent on all the highways of the land. Is it the precious intercourse of family or friends? The Post Office is carrier, interpreter, and handmaid. Is it education? The Post Office is schoolmaster, with school for all and with scholars counted by the million. Is it the service of Government? The Post Office lends itself so completely to this essential work that the national will is conveyed without noise or effort to the most remote corners, and the Republic becomes one and indivisible. Without the Post Office where would be that national unity with irresistible guarantee of equal rights to all, which is now the glory of the Republic? Impossible—absolutely impossible. Therefore, in the name of all these, do I insist that now, in these days of equality, the Post Office shall be admitted to equality with all other departments of the Government, so that it may discharge its own peculiar and many-sided duties without being compelled to find in itself the means of support. It has enough to do without taking thought of the morrow. On every side and in every direction it is the beneficent helper."

A surplus in the Agricultural Department would mean that the farmers of this country had been deprived of the service and educational possibilities of that department by just the amount of such surplus; a surplus in the Department of Commerce would mean inefficiency in administering its functions; so does a surplus in the Department of the Interior, the Department of Labor, etc. In the Post Office Department a surplus by some strange, illogical process of political reasoning is regarded as a triumph. The Postal Department makes a surplus out of decreased efficiency of service. Merchants and business men all over the country know that mails are retarded and delayed, not only to our soldiers but in the old-established channels of post-office administration, and all with a view to economy. The business of the post office is not to economize in service, but to develop its functions to the highest and widest possible state of efficiency.

In view of the importance of this matter, may I ask the following questions:

This postal "zone" law is a revival of a system abolished by President Lincoln. It is clearly legislation of the most serious character.

(a) Do you approve of such serious legislation being passed without consideration from the Post Office Committee?

(b) Do you approve of such legislation being adopted hastily, without hearings or representations as to these various factors involved?

(c) Do you believe that such legislation is justifiably attached to a war-revenue act and forced through under implied threat that otherwise that vitally important war-revenue act would be held up?

(d) Since Representative Kitchin, chairman of the Ways and Means Committee, stated on the floor that this was not a war tax but permanent postal legislation, do you believe that permanent postal legislation of such seriousness should originate in the Ways and Means Committee and be passed in the manner it was?

These perhaps are questions of detail, for I am perfectly willing to concede that great parliamentary shrewdness was used in securing the adoption of this postal "zone" law and that no attention seems to have been paid to the discussion of the fundamental principles of the postal function to the people of the country.

Respectfully, yours,

Director.

Mr. POST. (That is signed by myself.

The CHAIRMAN. As I showed the other day, when you were before us, many of the statements you reiterate in this letter are absolutely unfounded.

Mr. RAINEY. To whom was that addressed?

Mr. POST. To Congressman Helvering, and I asked that the letter be introduced because Congressman Kitchin had brought up the correspondence with Mr. Helvering.

Mr. RAINEY. Who wrote that letter?

Mr. POST. This is a letter from myself.

Mr. RAINEY. Oh.

Mr. MOORE. You did not confer with Postmaster General Burleson before you wrote that letter, did you?

Mr. POST. I did not.

Mr. MOORE. I was wondering if you had conferred with any Democratic member of the committee before you included your reference to the New York Tribune?

Mr. POST. No; I did not consult with anybody. I have lived in New York for a good many years—there, and elsewhere, outside—so that I felt that I knew the Tribune.

Mr. MOORE. That was a rather offensive proposition, about Mark Hanna; that is calculated—

Mr. POST. I am an old, old, man. I can remember back that far and farther.

The CHAIRMAN. You did not write that letter to that lady in Texas, did you?

Mr. POST. No. That was an individual letter to Congressman Helvering.

The CHAIRMAN. Well, Brother Post, I see that you repeat in that letter all these misstatements as to the real facts, and I am not going to bother you any more on that, to try to have you correct them. I am going to heed the scriptural admonition and let you alone, for I see that "Ephraim is joined to his idols."

Mr. POST. I think that most of the quotations that we can quote at each other bear with equal force both ways.

Mr. RAINEY. That letter, of course, was written before our examination of the other day?

Mr. POST. Oh, yes; long before that.

Mr. RAINEY. Yes.

Mr. POST. I only felt that I would like to have this letter speak for itself.

Mr. RAINEY. That is all right.

Mr. POST. On page 1405, in the hearing of June 29, I just want to amplify my answer to your question there, in regard to the increase of rates, from 50 per cent to 900 per cent, that some portions of those rates are embodied in each publication, and that the postage is paid as a lump sum.

Mr. LONGWORTH. Mr. Post, I do not know whether I got the statement correctly. I have just come in. Did you say that the New York Tribune was the only newspaper that advocated the zone system?

Mr. POST. No; my recollection is that I said it was the only newspaper in New York. That was my statement.

Mr. LONGWORTH. I did not know how broad your statement was.

Mr. POST. Oh, no; because I can tell you that there are 15,000 papers of very local circulation which think that the postal zone law is a grand thing because it is going to give them discrimination for their own advertisements as against periodicals, and who state that with

perfect, absolute frankness. I would like to read that, because it is perfectly naive.

Mr. GARNER. Just to be perfectly fair, all of these papers advocating the zone system do not advocate it on that ground.

Mr. POST. I think that is a fair statement.

Mr. GARNER. Many of them advocate it on the ground that in fair dealing and justice and equity with the American people no business in this country ought to be subsidized; that no business ought to lean on the entire people for its prosperity; and you, by your argument, and these gentlemen this morning, have shown that you are leaning on the Government and the people, because if the Government should collect from you what it costs the Government to furnish these facilities for the transportation of your publications, you would not be quite so prosperous as you are now.

Mr. POST. Let me amend this, now, by saying that this is true, as it is of other public questions, that there are honest differences of opinion on fundamental policies; but I have in mind those who make no pretenses of having honest differences of opinion as to principles, but who frankly acknowledge that they are interested in it and advocating it simply because they think that it means more money for them in their business; and devil take the hindmost.

Mr. GARNER. That would not apply to all of them.

Mr. POST. Oh, no.

Mr. GARNER. Because there are many of them that carry no advertising.

Mr. POST. I do not know of any newspaper that does not get advertising, and try to get it. This is the Publishers' Auxiliary, the official publication of a western newspaper organization, that represents around about 1,000 newspapers; probably a Hughes organ. In an article of the issue of June 1, 1918, signed "Wright A. Patterson," this was their general argument:

The contents of nearly all of these classes of publications range from 50 to 80 per cent advertising. For them the Government has been for many years carrying this vast quantity of advertising at the flat rate of 1 cent per pound, and it is this cheap postage rate that has made it possible for them to carry national advertising at rates ranging from 5 cents per inch per thousand of circulation down to as low as 1 cent per inch per thousand of circulation.

It was debated on the floor of Congress as a war revenue measure—as a war tax to be levied upon the advertising manufacturers and merchants of the country through the newspapers and other publications.

That, of course is a misstatement of fact, because the disproportion was not argued on that ground. It continues:

But the increased cost on that portion of the Saturday Evening Post devoted to advertising will be heavy, and this increase the advertisers will have to pay in the form of an increased advertising rate.

Now, continuing, this article says:

If the advertiser wanted to cover only certain communities he could not afford to use the national mediums, but when he wants all communities he can do so, and at a price per thousand below any price the local newspaper can possibly name and live.

Then, speaking of the magazine, again, it says:

But if it does not wish to pay this transportation charge it can get circulation in Colorado and Wyoming and other States by sending its advertising to the papers published in the several communities in the United States, and they will not have to make the heavy additional charge for space because they will not have to pay extra postage for this advertising on any papers circulated within a radius of 150 miles from the point of publication.

Then again:

He must pay it if these publications are to live. When the advertising rates are made high enough to cover these costs it will then be possible for the country daily and weekly newspapers to meet these advertising prices and so secure at least some of this national publicity business.

I do not think these gentlemen are considering this matter upon any grounds of differences of social conditions and functions at all. It is purely a matter of bread. They are in favor of the discrimination.

Now, I want to just mention one other point on that, Congressman Garner; that is that, these newspapers totally misapprehended not only the function of advertising but the principles that govern advertising, both as to publications and as to advertisers. The national periodicals are used by advertisers as a great means, widely spread all over the country, for the purpose of establishing a brand and general knowledge of a business. For example, to make it concrete, if a manufacturer is going to put out a new product, or he is going in for a popular product that he wants to put before the public, he starts a tremendous advertising campaign all over the country through the national periodicals, because they are the only papers that can serve his purpose. His salesmen can then go out to the jobber or the wholesaler and show him a copy of this advertising matter, and they will say—

We are going to spend \$100,000 or \$250,000 or \$500,000 in advertising this product. Now your local people, your retail merchants, who are buying from you, will have to stock up on this product. You will have to stock up on it in order to supply them or else they will have to go somewhere else and get it.

It proves to him that here is a great demand that is going to be made for some necessary article of household economy or manufacturing, or what not; so that the retailer, instead of having to stock up on a product that you take and show to him and tell him is pretty good, that you think it is pretty good, but something that the merchants and the people do not know anything about because there is no sale for it, can stock up with articles as to which he knows there will be a sale because there is going to be this great advertising campaign for their sale all over the country. They sign up not only for months but years, in making the public acquainted with a slow selling article. That is the first stage; advertising in national periodicals.

The local periodicals and country papers and newspapers have a very high intensive circulation.

For example, I think it was down in Steubenville I was talking with an editor there, and he said that his paper had a circulation of 8,000. I said, "What do you suppose is the greatest circulation that any national periodical has in your territory?" He was very much in favor of a zone law. The national periodicals he thought were terrific competitors of his and he would like to see them put out of business. I said, "What is the national periodical that is your greatest competitor in that zone? You have 8,000 circulation there. How big is the circulation of the biggest national periodical you can think of?" Well, he sort of hesitated, in that district, between the Saturday Evening Post and Colliers. He named one of them. I said, "How many do you think circulate?" He said, "I think the circulation is 300 in that district." I said, "There is no competition over that." He admitted it. I said, "There is no competition there because that circulation can only serve 300 or 500."

As for the business proposition, when an advertising agent goes to an advertiser and the advertiser says, "I have covered the whole country and my retailers are stocked up with this," and he sees that he is getting splendid sales in the Middle West States—Illinois, Indiana, Ohio, and Iowa—but he is not getting sales proportionate to the population or the general character of the country in New England, he says, "I have got to do some local, intensive advertising there;" so he maps out a local advertising campaign; it may cover a State or it may cover a group of States or a section of the United States, in which he uses newspaper advertising heavily and intensively for the purpose of making a great intensive selling campaign in that district. Now, so far as these people being correct in assuming that if they can kill national periodicals they will fall heir to their advertising, I think it is generally a perfectly safe statement to make that there is not a dollar's worth of appropriation by any great manufacturing concern that goes into a newspaper merely by reason of shrewd, adroit selling. It is the interest and the policies of that great national advertising manufacturer that dictate whether he will use national or local advertising. Now, these people do not understand that thing. They think they are competitors; but that gets back to our point—

MR. GARNER. You have an additional burden, then, of educating the newspapers of the country as well as the entire public, with reference to your viewpoint of this matter?

MR. POST. I do not think of the newspapers, because there are many of them that we both like to think of that are open-minded and are anxious to get the facts underlying these figures. The figures are of no more consequence at this period, on this factor, than the figures of the amounts levied on tea imports prior to the revolution. Then the country needed democracy and liberty, and it did not give one whoop whether the tax on tea was too high or too low, but the principle that a foreign government should be able to impose an injustice, and wrong in principle was the only matter that was at stake.

MR. CRISP. I unfortunately did not hear all your former testimony, and you may have answered this question:

Assuming that Congress feels like there should be some increase made in second-class postage rates, which would you prefer, a flat rate with a tax on all advertising, or a zone rate, as is now the law?

MR. POST. A flat tax of any kind. The objection to the zone rate is that it is a discriminatory rate against periodicals of national circulation, and their advertising pages or columns, in favor of periodicals, weeklies, or dailies of comparatively local circulation who, as this paper from which I have read very plainly indicates, will be able to make a less charge for their advertising or subscriptions for the periodicals they name.

I think, Mr. Chairman, you computed that this postal law would bring in about \$3,000,000, or \$4,000,000 the first year. Did I not hear some such figures?

THE CHAIRMAN. No; the daily newspaper men said that Mr. Koonz said that the first year we would get \$2,000,000 from daily newspapers.

MR. POST. Well, the exact figures, \$2,000,000 or \$3,000,000, would be unimportant in this. It would be, I assume, under \$5,000,000?

THE CHAIRMAN. That was on daily newspapers alone. On all

second-class mail it would be much over that. They calculated on the same poundage as last year. Of course, the poundage would increase. It would probably bring in an increased revenue of from \$25,000,000 to \$30,000,000 when the system goes into full effect, or if the magazines and larger papers that go long distances should be carried and delivered other than through the mails, the Government would save that much, and perhaps more.

Mr. POST. That was after the first year?

The CHAIRMAN. Yes. The \$2,000,000 on daily papers was for the first year, and the \$25,000,000 to \$30,000,000 was after the system went into full operation—after July 1, 1921.

Mr. POST. The only point I had in mind was that the revenue this year would be virtually negligible. If you want to approach this from the standpoint of a war-revenue measure that would give an immediate return, to be put on as you have put on letters a war-revenue tax of 1 cent a pound, it will give \$12,000,000 instant revenue, without raising any of these questions of what we regard as destructive postal laws. It will raise none of those questions at all.

Mr. CRISP. For what rate do you think business would stand?

Mr. POST. That is a question I do not think anybody could answer, even a publisher. You gentlemen know the general principles underlying these business conditions as well as I do; that any manufacturer is charged all that he can get for that production in the open and live. Now, how much tax can be put on without extinguishing production; that is, the service itself, is a matter that I do not believe anyone could decide. I could not even make a guess at it, but I could say this much, that a flat rate that cuts evenly through the classes of publications would affect them all alike and would not raise distinctions and discriminations, and it is the discriminations in this bill that are most serious; so that a flat rate is favored.

The CHAIRMAN. Let us see whether there is any great discrimination. Take the Ladies Home Journal, Collier's, and the Saturday Evening Post, the strongest publications. It is estimated that their average haul throughout the country is from 1,000 to 1,200 miles. The Saturday Evening Post averages 1,200 miles. The average haul of the daily newspapers is estimated—the Hughes committee reported that, by the way—at 255 miles.

Now, do you think that the Saturday Evening Post, for instance, that is carried by the Government an average of 1,200 miles, should pay the same rate as and no more than, say, the New York Tribune, whose average haul is about 250 miles, and especially in view of the fact that the Saturday Evening Post costs the Government to transport it over four times as much as does the Tribune. Do you think that is not a discrimination existing in the old law by making the New York Tribune pay four times more for the service it receives than it makes the Saturday Evening Post pay?

Mr. POST. No, Mr. Chairman, I do not. I do not think that the question of distance enters into this matter of first and second class at all.

The CHAIRMAN. Yes, but the Government must pay the railroads on the classification according to the distance hauled. If the railroads would give the Government a flat rate of 1 cent, all over the United States the Government could afford to haul at a flat rate.

Mr. POST. I will answer that the question of distance does not enter into first and second class postal matters at all, for the reason that they are means of communication of human intelligence. That you can illustrate perfectly well in that case of the Point Barrow, Arctic Circle, delivery, \$6.40 a letter. It is a tremendous haul up there, and it costs tremendously there. It is unquestionably a good thing. I think where the fundamental difference lies is in this, that your question is based upon the theory that a periodical is a commodity in the ordinary sense, and that is where the difference arises.

The CHAIRMAN. I am comparing the New York Tribune now with the Saturday Evening Post. One has an average haul of 255 miles and the other has an average haul of 1,200 miles. The Government pays the railroads for transportation according to the distance, on the second class mail matter, and the Saturday Evening Post costs the Government four times as much to transport it, that it has got to pay out of its pocket to the railroads and other transporting agencies—four times as much to handle the Saturday Evening Post as it does to handle the New York Tribune. Now, I can not see, to save my life, the justice and fairness in making the Tribune pay as much per pound for hauling it 250 miles as the Saturday Evening Post pays for hauling 1,200 miles, while the Government is compelled to pay four times as much for hauling the Post as for hauling the Tribune.

Mr. POST. Mr. Chairman, I believe that it is just as important to send the one paper 1,200 miles or 3,000 miles away from its publishing point as it is to send the other 250 miles away; that these things which bear on the question of remoteness—

Mr. GREEN. You are forgetting provisions as to the flat rate on reading matter and on advertisements.

Mr. POST. That is a nice bookkeeping distinction, Congressman; but as I think you recognize, it is of no substantial value or application, in that whoever pays the postage pays postage from cover to cover; that the advertising pages make the magazine possible by reason of this peculiar condition, that magazines to-day are the only manufactured product in the world that are sold to the ultimate consumer at less than the actual cost of production.

The CHAIRMAN. It is conceded, I think, that the overhead charges, and general post-office expense, whether just or not, are more than a cent a pound for newspapers and magazines. That being admitted, then the Government is transporting and handling in transit the periodicals and newspapers and magazines for nothing. That is true. And the publishers put it upon the ground that it is a dissemination of intelligence and information, and bringing the minds in the different parts of the country, close together. Why should we not take off, then, this 1 cent tax, and why should we not pay the transportation to the newspaper plant of print paper upon which this news and intelligence is going to be impressed? Would not that be still more in the interest of the dissemination of information and intelligence?

Mr. POST. No, sir; the distinction still exists between unprinted paper, which is absolutely a commodity, and the printed paper, which is a means of communication.

The CHAIRMAN. That print paper is worth nothing except to print on, and your periodical buys the paper to print its reading mat-

ter and advertisements on, and it is worth nothing except for that. I can not see the difference; if you are going to transport free of cost and in the interests of dissemination of intelligence and information the periodical, the paper that has got the print on it, why the same reason would not apply to the Government hauling free to the publisher's plant the paper from the paper plant, because you must get that paper into that printing house from some paper mill, somewhere, before you can get this intelligence impressed upon it to send it out; and then why should it not also be in the interest of this same dissemination of intelligence and information and bringing of minds together for the Government to pay the transportation—all transportation—upon the apparatus, the type and printing presses, and everything else that a newspaper or a magazine publisher must use in getting this information and intelligence out? Now, you can not name a reason, on principle, to save your life, why the Government transports one free and not the other.

Mr. POST. If you are arguing for the free transportation of those things, I would not want to contradict you; but it does not seem to me that it is a logical deduction.

The CHAIRMAN. I am not arguing for that, but I say I see no reason why there should be any difference.

Mr. POST. I know that you are not arguing for it; but, Mr. Chairman, there is a vital and fundamental distinction. If you take that paper before it is printed upon, it is nothing but a commodity which can be utilized for a dozen things; but a stage farther on it has become one of the most important instruments in civilization. We had paper long before we had civilization.

The CHAIRMAN. All right; suppose, now, the Government should say: "In the interest of the public we are going to haul shoes free. It is in the interest of the public to keep people's feet warm and protected." Would not the same principle apply to say that the Government should haul the leather that went to the shoe factory free? Would not that be still more to the interest of the people, to the keeping of their feet warm and protected?

Mr. POST. I will say that every time a social emergency is presented we do haul shoes and medicines and everything else free; as, for instance, in the instance of the Galveston flood and of the disaster at Dayton, Ohio.

The CHAIRMAN. You have now appealed to my sympathy, and you may get away with something on that line. Now, you really want us to treat the newspaper publishers as objects of charity. That would touch me quicker than anything else.

Mr. POST. If I have reached you through your sympathies, Mr. Chairman—

The CHAIRMAN. When these gentlemen are down on their knees, just begging somebody to come to their relief as a matter of charity, begging the Government to give them something—[Laughter.]

Mr. POST. No; we are debating as to a matter of social service. There was no charity in what was done in Galveston and in Dayton and in other great social emergencies.

I just want to finish that one thing. Bricks in any schoolhouse are on a par with paper before it is printed upon. It might be conceivable under certain social conditions that in the future anything connected with the publishing business might be of such importance that

the Government would facilitate it in innumerable ways, just as we facilitate the building of schoolhouses. Bricks are a commodity. A schoolhouse is an educational construction.

The CHAIRMAN. How about the Bible. Is that a commodity or is it a means of disseminating of Christian intelligence?

Mr. POST. Sometimes the Bible is a commodity.

The CHAIRMAN. Sometimes it is not?

Mr. POST. Sometimes it is not. The distinction I made the other day I think is absolutely sound. When the Bible is sent to the ultimate consumer, the reader, it should be accepted at the same rate as the periodicals. It is just as important an element of social progress. When it is sent by box loads or car loads to a merchant for resale, it is a commodity.

The CHAIRMAN. You must give me credit for converting you to the view that the Bible is almost as good as a periodical—was as much entitled to the 1-cent flat rate as a magazine. You never before advocated such a rate for the Bible. The Government charges them about two to twelve times more to send the Bible the first way you stated it, to the ultimate consumer, than to send a newspaper or a magazine. You publishers never opposed that.

Mr. POST. That is merely the provision of the law. I was simply laying down what I believed to be the principle there, and I believe the law should conform to it.

The CHAIRMAN. The fact is that you have got to get away from this idea that the Government must transport it free because it disseminates intelligence and information and educates the people—

Mr. POST. I have not argued for freedom.

The CHAIRMAN (continuing). Unless you also send histories and novels and schoolbooks and Bibles to the people free of cost?

Mr. POST. There are several classes of books that you have named there, and I should not like to make a blanket answer as to all of them; but taking educational books, I think that distinction is sound.

The CHAIRMAN. Here is a publisher of the Bible. He could say, "Gentlemen, we ought to have one flat rate, and the Government ought to carry the Bible free of all cost. While, of course, I am in it for a profit that we will make, that is not my main object. My main object is to spread Christianity among these people, and I think that the Government should carry this free and it is an outrage to tax Christianity, as you are doing by compelling the publishers of Bibles to pay any postage charges." And then the publisher of the geography and the spelling book and the reader used in the schools, could come to us and say, "We think that the Government ought to carry these books free of all postal charges to the school children throughout the country. It prepares the little minds. It brings the little children out of ignorance. Without the education of the children our civilization will be lost. The postal rates on these books is a tax on education, a premium on ignorance, and an outrage on the millions of little ignorant children throughout the country. It is a tax on civilization. Repeal it. Repeal it." They could make a much better and more plausible argument for sending out spelling books and readers and geographies to school children free of all postal charges.

Mr. RAINEY. How much does Everybody's Magazine sell for, a year?

Mr. POST. I will have to refer, for that. I think of those magazines in terms of the copy. If you have the figures, I have no doubt they are correct.

Mr. RAINEY. It is \$2 a year. Do you know that magazine is going to increase its subscription price on account of the zone rate?

Mr. POST. I do not; but as that is one of the Butterick publications, and the Delineator has already changed its rate by zones, I think it is probable that Everybody's will change.

Mr. RAINEY. You do not know that Everybody's Magazine has changed?

Mr. POST. No; that is only my inference from the fact that the Delineator has changed.

Mr. RAINEY. Taking \$2 as the price of the publication known as the Review of Reviews, do you think that they will increase that on account of the zone law?

Mr. POST. I think it is a fair inference. I think they will have to.

Mr. RAINEY. The Metropolitan Magazine sells for \$3 a year. Do you think they will increase that, too?

Mr. POST. I think it is fair inference from the facts. I have no right to speak for any individual publication in a matter of that kind.

Mr. RAINEY. I know you have not. I am going to speak from what they have done since this zone rate went into effect. These three magazines, the subscription price of which is \$7, have sold for \$2.68 on the 10th of July.

Mr. POST. What are the three?

Mr. RAINEY. Everybody's, the Review of Reviews, and the Metropolitan, all of which Mr. Post says are going to increase their subscription price.

Mr. POST. I said that was my inference.

Mr. RAINEY. You have studied this situation so closely that you ought to know if anybody does.

Mr. POST. Oh, no; not in a matter of that kind.

Mr. RAINEY. Those three magazines, the subscription of which is \$7, you can buy, since July 10, for \$2.68.

Mr. POST. That is under one of these clubbing offers, is it not?

Mr. RAINEY. On the 10th day of July, eight days after the law went into effect, these magazines were sold, on account of a clubbing offer, by the Mother's Magazine, of Cleveland, for \$4.80 a year, less 15 per cent off for cash. This purchaser of this magazine paid the cash, so that he got them for \$4.08; \$7 worth of magazines on the 10th of July.

Of this amount, 40 cents went to the solicitor who came around and got the order, and at least \$1, and perhaps \$1.50, went to the Mother's Magazine for its commission. We will call it \$1. Therefore, taking away 15 per cent cash deduction that this subscriber got and the \$1.40 which went to the Mother's Magazine and the solicitor, that left the price of these \$7 magazines at \$2.59.

Now, that was not all they did. They gave this purchaser of these subscriptions three months' subscription for 40 cents, to each of these magazines. In other words, for 40 cents they gave him a magazine which would cost, at the regular price, \$1.75. So that on July 10, 1918, a subscriber purchased these three magazines for 15 months for \$3.08.

Mr. POST. Those are simply attractive methods of disposing of one's goods, that are common in all merchandising enterprises, to

make one's goods to appear as attractive as possible through these well-known clubbing offers.

Mr. RAINEY. They can not be losing anything on that, can they?

Mr. POST. It is not infrequent for magazines to lose money on their circulation in order to secure circulation, just as is done in any other merchandising enterprise. I am not speaking with my figures up to date, but this was some years ago that I have this information; it used to be that the cost of getting a new subscriber was about \$1. The advantage came, in having a subscriber, that through the habit of taking that periodical the subscriber would continue, and a publisher was, in general, willing to spend \$1 to secure a new subscriber.

Mr. RAINEY. That is not the advantage. The advantage is in getting another subscriber to add to their list of subscribers in order to be able to charge more money for their advertising.

Mr. POST. Well, if one makes a product more valuable he naturally receives a better price for his services; but that is entirely apart from the ordinary business routine. These figures and these computations that you have there are simply on these clubbing offers; the energies of the periodicals in getting new business, in setting forth their wares as attractively as possible. I see nothing new or uncommon in that, nor do I see that it has any bearing on the fact that if a publication or any product becomes more expensive, somebody will either have a decrease of quality or an increase in its price.

The CHAIRMAN. Take these figures that Mr. Rainey called your attention to showing the price for which the subscriber gets Everybody's Magazine, the Review of Reviews, and the Metropolitan Magazine—

Mr. POST. That is one of these clubbing organizations, is it not?

The CHAIRMAN. Yes. Is not that evidence that these magazine folks are stating to their subscribers something that is not so, to wit, that they are going to increase the price of the subscriptions according to the zone rates? That does not even ask them what zone they live in. It is a flat rate that they offer, here. Is not the continual statements by publishers here and in their propaganda against the zone system that subscribers living in far-off zones must pay much more for the magazine or paper than those living in a nearer zone a bluff they are making to Congress and the public?

Mr. POST. If it costs more to deliver them in Texas, of course, the people in Texas will have to pay more. That is simply the ordinary business rule.

The CHAIRMAN. But you do not know that they are going to strike an average as to the increased postage cost and give the same price to every subscriber?

Mr. POST. No; I do not know, Mr. Chairman. I think I can illustrate that.

The CHAIRMAN. But I ask you if what Mr. Rainey quotes is not evidence of that?

Mr. POST. That is what I want to reply to, Mr. Chairman. Let me illustrate it in this way: Here is your starting point with the postage rate [drawing diagram]. This, we will assume, is New York, or in the first zone. The postage rate constantly rises as it goes across the continent until, we will assume, here is the highest rate [making drawing]. I would like to ask Mr. Neal to illustrate this, because he is letter-perfect in this sort of thing.

The CHAIRMAN. I know how this zone matter is going to work, and I know what the increased cost will be in each zone. But, tell us, is it your opinion or not that the magazines and periodicals are going to charge the subscribers of next year or any other year a price, say, of \$2 in Washington City and \$3 in Texas?

Mr. POST. There will be a ratio; I would not pretend to say whether it is \$2 or \$3.

The CHAIRMAN. But you do not mean to say that this was considered on July 10, here, when this subscription was made, eight days after the zone rate system went into effect? This magazine does not seem to have increased the price on account of the zone rate or made a different price for the different zones.

Mr. POST. I think you are taking that clubbing offer too seriously.

Mr. STERLING. Have you an instance where they have raised the price on distant subscribers?

Mr. POST. Yes.

Mr. STERLING. Where?

Mr. POST. In the instance of the Butterick publication, the Delineator magazine, they have raised the price by zones.

Mr. STERLING. Do you know of any other instance?

Mr. POST. I do not, no; but that is a matter that is under discussion in every periodical office in the country, because it is something that confronts them, and action must be taken on it. As you gentlemen know, the rates are lighter the first year and increase in severity. I can not give you any information as to time, or any date, but it is inevitable, in the very nature of this law, that since the law makes discriminatory charges, these discriminatory charges must be faced.

Mr. GREEN. Let me see if this is inevitable. I will show your statement is wrong, because the Independent, a \$4 magazine, is putting out an offer to send that magazine for five years at \$10. That goes clear beyond this rate, and does not have anything to do with zones, and it does not make any difference where a man lives. The Independent evidently believes that it will get enough increase of circulation to make up for the payment of the tax.

Mr. POST. That is making a gamble on the future, in which they bet that the zone law will be repealed. [Laughter.] You know that anybody who makes a proposition five years ahead is betting on the future. I think it is a good bet from the publisher's point of view.

Mr. Chairman, I would like to show you this one question about these flat zone rates; while I understand the theory very well, I would like to have Mr. Neal take the time and present this matter to the committee.

Mr. STERLING. Before you do that, Mr. Post, I would like to ask you a few questions. You think it is thoroughly logical that the magazines should increase their prices to distant subscribers?

Mr. POST. Oh, it is inevitable.

Mr. STERLING. That is based on the fact that it costs more to get the magazines to the subscribers?

Mr. POST. Yes, sir.

Mr. STERLING. Isn't it just as logical that the Government should charge more, since it costs more to get the magazines to the subscribers than the publishers are now paying?

Mr. POST. If the Post Office is to be run on commercial principles, and if every article that goes through the Post Office is to pay its cost, there is nothing to be said against that, but we contend that that is not the—

The CHAIRMAN (interposing). Aren't these magazine publications, and the corporations that publish them, organized on commercial principles?

Mr. STERLING. I would like to have you answer the chairman's question.

Mr. POST. He hadn't finished, I think.

Mr. STERLING. Every one of these magazines is a commercial business enterprise, carried on for the purpose of making money?

Mr. POST. No; there are many of them that are not. But I don't want to appear to evade the question in that way. The publisher is in the publishing business, it is true, to make money, or many of them are in it for that reason. But there is an element that enters into the publications; the element of social service; the element of conveying thought; it is the one great civilizing instrument of all the world. It is not, therefore, a commercial product merely.

Mr. STERLING. Do you think the character of magazines has improved since 1885?

Mr. POST. I think perhaps there can be no question as to that.

Mr. STERLING. Let us go back. Prior to 1885 I can remember the Atlantic Monthly, Scribner's, and Harper's Weekly, and magazines of that kind. Is the general run of magazines to-day better than those were in that day?

Mr. POST. All of those magazines you mentioned are still in existence, and are still of fine quality, with the exception of Harper's Weekly, which has merged with the Independent. In addition to them, there have come in a large number of magazines of which there was no counterpart in that day. You take the Ladies' Home Journal, which is mentioned so much here, or you take the Woman's Home Companion; prior to 1850 they had Godey's Ladies Book, and if you want an amusing experience you get an old file of Godey's Ladies Book and look it over, with its illustrations of crinolines—they were supposed to have skirts of crinolines. Just see what a tremendous improvement there is in women's home magazines.

Mr. STERLING. Do you know that prior to 1885 these magazines I mentioned, and similar magazines, did not carry more than 14 per cent of advertising?

Mr. POST. Advertising was not the instrument of business then that it is now.

Mr. STERLING. The North American Review had but two pages of advertising, and they paid their way.

Mr. POST. Those magazines you are mentioning, those are not the magazines that sold for less than the cost of publication. They are the 25 and 35 cent publications. Harper's Monthly is 35 cents, and Scribner's is 35 cents, and were even in those days. The North American Review up to 50 cents.

Mr. STERLING. In those days there were very few trashy magazines?

Mr. POST. Do you remember the counterpart of them, Dick Deadeye, and Jack Hudaway, and those?

Mr. STERLING. Those were books that gentlemen read, like you and Mr. Moore.

Mr. MOORE. They did not carry advertisements?

Mr. POST. No; they did not.

Mr. STERLING. Isn't it a fact that the cheap postage, the Government subsidizing it, is responsible for these cheap magazines?

Mr. POST. It is responsible for the cheap magazines at low cost. You mentioned the Atlantic Monthly; it used to be 50 cents in those days. The people paid it and got the worth of their money.

Mr. GREEN. The price, I think, was always \$4 per year.

Mr. POST. Well, I was speaking of the per copy price; it is easier to compute in that way. Harper's was 35 cents.

Mr. STERLING. The North American Review had 160 pages of substantial reading matter and it was worth the money?

Mr. POST. I think good reading matter is always worth the money.

Mr. STERLING. And the people spent their money and bought it.

Mr. POST. Yes; there is no question of that. They were very expensive, and from the purchasing power of money to-day, those would be worth to-day 75 cents to \$1, and the reading would not be as widespread.

Mr. MOORE. You take Godey's Ladies Book, it didn't have a circulation beyond 200 or 300 miles of Philadelphia, the point of publication, did it?

Mr. POST. I don't believe it did.

Mr. MOORE. It couldn't get beyond that. I want to ask you this on the subject of advertising, because there is a disposition to tax advertising and some feeling that magazines are published for the benefit of advertisers. If that is true I am not sure that it is a good proposition from a revenue viewpoint. How long would Scribner's last without advertisements to-day?

Mr. POST. I don't think that, even at its high price, Scribner's could continue without advertisements.

Mr. MOORE. Well, this publication that George Harvey is the editor of has been running along in various forms for some years, and has got down finally to a mere vehicle for the expression of opinion.

Mr. POST. The North American Review.

Mr. MOORE. Is that a profitable paper?

Mr. POST. I really don't know.

Mr. MOORE. It has very little advertising in it?

Mr. POST. It has very little advertising in it. It is a paper in which Col. Harvey takes a great deal of personal pride, and if he was facing a total loss I think he would still continue it.

Mr. MOORE. Magazines come and magazines go, like men. Everybody's Magazine, everybody was reading it in its heyday, when Mr. Lawson was writing his sensational articles which it published. How long would Everybody's last to-day if it had no advertising?

Mr. POST. It wouldn't last at all. It couldn't exist at all except for the advertising.

Mr. MOORE. Pearson's was a popular magazine?

Mr. POST. Yes, sir.

Mr. MOORE. Its editorial policy changed twice, and it has deteriorated, I suppose, from the point of view of thinking men, and did not its advertising fall off?

Mr. POST. Yes, sir; Pearson's changed its policy three times. First it was purely fiction; it built up a clientele as a fiction magazine; it changed then to more serious articles, and fiction, also; and it built up a clientele in that way; and then it ran into extreme radicalism, or bolshevism.

Mr. MOORE. Let us take two publications, the Saturday Evening Post, which is constantly quoted here, and which is a very successful publication; and Successful Farming, which is published by Mr. Meredith in Des Moines. The Saturday Evening Post has a very large circulation; is that a fact?

Mr. POST. Yes; it is a fact.

Mr. MOORE. And it maintains its prices, both on circulation and advertising?

Mr. POST. It does.

Mr. MOORE. It does not make any reductions or any rebates?

Mr. POST. No, sir: it is like joining a club to get into the advertising columns of the Saturday Evening Post.

Mr. MOORE. It is a solid publication?

Mr. POST. Yes, sir.

Mr. MOORE. That attracts the business man who pays as high as \$6,000, or \$9,000, and I think Mr. Rainey said here the other day sometimes as high as \$11,000 for a back-page advertisement?

Mr. POST. Yes, sir.

Mr. MOORE. And you were interrogated about that and interjected this suggestion, that possibly the use of that back page was worth \$11,000?

Mr. POST. It is, by virtue of the service it gives.

Mr. MOORE. Isn't it presumed that if a business concern is willing to pay \$11,000 for the back page of a publication like that it is getting something out of it?

Mr. POST. It is getting back every dollar, and more, in its business.

Mr. MOORE. Do you know anything about the limitations of the Saturday Evening Post, which is highly respected, notwithstanding what is said here? Do you know what limitation it places on its advertisers?

Mr. POST. I do.

Mr. MOORE. As to the truthfulness and business standing and the tone and fair dealing of its advertisers?

Mr. POST. Yes, sir.

Mr. MOORE. If you know anything about those things I wish you would state them.

Mr. POST. As I said a moment ago, in order to become an advertiser in the Saturday Evening Post, it is like joining a club. You put your name up and you are very carefully scrutinized; your standing as a business man, your reputation for fair dealing, and your ability to carry out your promises, and all those things are carefully scrutinized and investigated before you are admitted. It isn't like putting up your money and furnishing your copy and being admitted, but you are investigated as to its truthfulness.

Mr. MOORE. Could you put a cheap patent-medicine advertisement in the Saturday Evening Post?

Mr. POST. You couldn't put a cheap or expensive patent-medicine advertisement in the Saturday Evening Post or in any of the Curtis publications.

Mr. MOORE. You can't get your advertisements about all kinds of hair restorers and kink producers and things of that kind into the Curtis publications?

Mr. POST. No, sir. They make too great a distinction between those things and the high-grade goods which they will permit to be advertised. In fact, the Curtis people were the first, or among the first, to start a campaign against the advertising of these cheap patent medicines and all kinds of nostrums. You can find those in many magazines.

Mr. STERLING. This is in papers with a low rate for advertising?

Mr. MOORE. When you see an advertisement published of one of those things in the large cities, what would be your estimate of the life of the publication that has that as its course?

Mr. POST. It is down hill. The good advertiser will demand a good magazine to advertise in.

Mr. MOORE. So a high-grade magazine that is built up to demand high prices, such as the Saturday Evening Post is, protects itself as well as its readers and subscribers by scrutinizing everything in that publication, so that the public may not be deceived.

Mr. POST. Yes, sir; and so that the reader may not have occasion to complain.

Mr. MOORE. So much for the Saturday Evening Post. Let us take the Successful Farming, of which Mr. Meredith is the editor, and he was here the other day speaking for himself. That paper, circulating in the farming communities, has to depend on the circulation——

Mr. POST (interrupting). Yes; and advertising.

Mr. MOORE. I mean, it seeks circulation for the purpose of selling advertising?

Mr. POST. Yes, sir.

Mr. MOORE. Mr. Meredith admitted that when he was here.

Mr. POST. Yes, sir; that is the fact.

Mr. MOORE. Now, isn't it a fact that such a paper, with a view of getting circulation to attract business men to its columns, offers some inducements that the other papers do not offer?

Mr. POST. Yes, sir; there is competition to secure circulation to attract the business.

Mr. MOORE. Isn't it a fact that the price is fixed for farm papers sometimes as low as 2 cents, and they produce no return whatever for the publisher?

Mr. POST. I would like to comment on that.

Mr. MOORE. So that in a case of that kind, where a bid is made for circulation by reducing the subscription price, it is for the purpose of getting advertising? I mean, from the publisher's viewpoint?

Mr. POST. The one thing which he has for sale is the columns of his paper for that purpose; he must make his product as attractive to the public as he can; in order to give a high-class publication to the public, you have to get a high grade and quality of paper, and some of those that were mentioned here are low grade. It is high grade that attracts the public.

Mr. MOORE. You are well posted on this subject, and I want to ask you—I am interested in the revenue end of this thing particularly. I want to ask you if you can tell what the aggregate amount of advertising is in the magazines you represent, per annum, or any given period?

Mr. Post. I don't think I have that compilation, but I could give it to you in a few hours. I have the data from which it can be compiled. I would have to separate out the trade journals, because they are in a different class. The periodicals of general circulation, I should say that it would run between—a few publications would run 25 or 30 per cent, and it would run from there up to about 65 per cent, because there is a fixed ratio, or almost fixed ratio between the amount of advertising a periodical can carry and its reading matter, because if the reader feels he is getting too much advertising he loses interest. That balance is very nicely fixed; it makes all the difference between a successful publication and one that is going down hill. I should say an average would be between 40 and 50 per cent, but I can compute those figures.

Mr. MOORE. That would be the proportion of advertising matter to literary matter?

Mr. Post. Yes; the average from 65 to 10 per cent.

Mr. MOORE. Can you estimate the worth of that?

Mr. Post. Yes; I can tell you that no advertiser ever invests a dollar in advertising in these days without knowing he will get his dollar back, and a good return on his investment, because advertising in these days is not a hit or miss proposition, but it is a science, with indexes and cross indexes, showing the investment in it and the returns from it.

Mr. MOORE. He undoubtedly gets some return.

Mr. Post. Not only some returns; but profitable returns.

Mr. MOORE. What I want to get, if you can give it, is the amount of aggregate income from advertisements?

Mr. Post. You mean the income—the amount of income to the publishers?

Mr. MOORE. Yes, sir.

Mr. Post. I could compute it on some——

Mr. MOORE. Would it be \$100,000,000 or \$500,000,000?

Mr. Post. That amount never has been asked for before, and I am a little at a loss how to answer it.

Mr. MOORE. It is extremely important, if we are going to take up the question of taxing advertising.

Mr. NEAL. The total volume of advertising in the trade and technical papers does not exceed \$25,000,000 for the entire country.

Mr. MOORE. In these papers for which you have been spokesman?

Mr. NEAL. Yes, sir.

Mr. STERLING. He said for the entire country.

Mr. NEAL. That is the trade and technical papers; they go to the trades and different professions.

Mr. MOORE. In the papers spoken of by Mr. Post it is more extensive?

Mr. NEAL. Yes, sir.

Mr. MOORE. And in the newspapers it is still more?

Mr. NEAL. Yes, sir.

Mr. MOORE. The newspapers carry the largest value and volume of advertising?

Mr. NEAL. Yes, sir.

Mr. MOORE. The newspapers first, and then the papers spoken for by Mr. Post?

Mr. NEAL. Yes, sir; first, the newspapers; then Mr. Post's papers; then the farm papers; and then the religious papers.

Mr. MOORE. And if we are looking for revenue it wouldn't help us to discourage the paper that seeks advertising?

Mr. POST. It would cut off sources of revenue, if you have in mind a specific tax; if you have in mind a specific tax it would be very difficult to administer. Of course, on a percentage basis it would be equal.

Mr. MOORE. Why would it be difficult to levy a tax of 5 per cent on advertising receipts?

Mr. POST. No; that wouldn't be so difficult. I thought you had in mind \$1 a page, or something, ad valorem.

Mr. MOORE. I thought you didn't disagree to it if we had to come to it.

Mr. POST. The publishers do not object to a war tax at all, but it should be a flat basis, and equal.

Mr. MOORE. All like.

Mr. POST. Alike.

Mr. MOORE. They would be in position then to pass that on?

Mr. POST. They would be in position to pass it on.

Mr. MOORE. Then the second-class publishers, those you represent and those Mr. Neal represents, would be satisfied with a 2-cent flat rate?

Mr. POST. Any rate that was a flat rate.

Mr. MOORE. Any rate that was a flat rate, in lieu of a zone rate?

Mr. POST. Yes, sir.

Mr. STERLING. You didn't understand, Mr. Post, that the price quoted by Mr. Rainey, or any other member of the committee, was by way of criticizing those prices, did you?

Mr. POST. No; I didn't take it that way, exactly.

Mr. STERLING. You didn't understand that the members of the committee did not consider that the advertising space was not worth that much for it?

Mr. POST. Well, I rather inferred that they regarded that as beyond any conceivable value attached to it.

Mr. STERLING. I understood them simply to mean this: That if they got rates of that kind for advertising, that they certainly ought to be able to pay the cost of sending the advertising through the mails, which the Government expends for it; that is the only purpose of mentioning that.

Mr. POST. The question we are presenting is the question of the principle of postal operations. This discriminates against publishers of a certain character of national scope; it follows that by virtue of such discrimination and rate, which must be passed on to the subscriber, this and other things which have been mentioned, show the destructiveness of this law.

Mr. STERLING. If they do not raise the subscription rates?

Mr. POST. It is evident they must raise the rates.

Mr. STERLING. It is evident they are not raising them; they are not raising the price, and some are even lowering them. Wouldn't it give additional advertising pages; that is, couldn't they get additional amounts by adding additional advertising pages, and thereby make up the difference in amount.

Mr. POST. If they could add any more advertising they would do it; they are not looking any bet in a business way.

Mr. STERLING. Didn't it develop in the Senate hearing that they were increasing the advertising to make up the deficit?

Mr. Post. No, sir; I think not.

Mr. STERLING. Mr. Koons testified on that subject, I believe.

Mr. Post. Mr. Koons is hardly an expert on publishing matters. I understand he is a postal expert.

Mr. STERLING. You stated a while ago that Everybody's and some others you mentioned could not exist without advertising.

Mr. Post. I don't think any of the magazines known as the popular magazines could exist without advertising.

Mr. STERLING. The North American carries a good deal of advertising.

Mr. Post. I am speaking simply from impression, but I think—

Mr. STERLING (interposing). I know it was carrying two pages before the increase, and now it is carrying more.

Mr. Post. It is not regarded as a strong advertiser.

Mr. STERLING. The magazines that were regarded as strong advertisers prior to 1885, those magazines have been compelled to increase the advertising space 50 and 60 per cent by reason of the fact that the low postal rate has made it possible for cheap, trashy magazines to come in and crowd them out.

Mr. Post. They did not compete with them at all, say Scribner's and Harper's—I take those because they are illustrative, and they are outside of the 5 and 10 cent line. The cheaper magazines appeal to people who like easy reading; facile, easy reading.

Mr. STERLING. If we did not find on the news stands the cheaper, light magazines, don't you think we would be more liable to buy the standard magazines if we could not buy the others?

Mr. Post. I don't know. Of course, that involves the censorship of the public taste. I don't think they would. I wonder if we are talking with the same magazines in view. I have in mind, and possibly you have in mind the gaily covered magazines, which may indicate cheapness, and appeal to the people; that does not follow at all. The lowest magazine, the most trashy, are the ones you don't see on the news stands at all. But these important publications I don't think we would differ as to the improvement of those, such as the Ladies Home Journal and the Woman's Home Companion and the Popular Science Monthly, which has a very gaudy cover.

Mr. STERLING. I take that, and think it is worth double the money it costs.

Mr. Post. So do I.

Mr. STERLING. A lot of them are worth double the cost. But you must admit that there are a lot that the country would be better off without.

Mr. Post. I don't deny that, but I don't think you or I, individually or as legislators, have a right to censor matters that are matters of taste and education in the process of development.

Mr. STERLING. I think it is possible to cultivate the public taste, and it is better to do that with good literature than poor. The only point I am making is this, that the low postal rate has made it possible for the cheap trashy magazines to come in and crowd out a lot of good ones.

Mr. Post. No; I don't think that is correct. I spoke of a number of publications, 12 weeklies and 19 monthlies, my recollection is that there wasn't one of those publications in existence prior to 1885; all of them have come in since that time. They reach 12,

people. I will venture to say that the magazines you have named, Atlantic Monthly, North American Review, Scribner's, and Harper's, all combined, their circulation was not 1,000,000 then.

Mr. STERLING. How many people are reading them now?

Mr. POST. Twelve million.

Mr. STERLING. Of these high-class magazines?

Mr. POST. You mean the ones I have just named?

Mr. STERLING. Yes.

Mr. POST. I don't think there is a single one of those 12,000,000 that are taking these publications. You see, these publications that have grown up under this low rate, have grown up not by stifling readers, but by cultivating reading; they go to people who never read before, or to people who read very slightly, and who now come in contact with these publications.

Mr. STERLING. I agree with you in that, and understand what you say. I say good magazines have grown in number in the last 25 years. Do you say the standard magazines in existence prior to 1885 have increased or have remained about the same?

Mr. POST. No; they have increased. The circulation of the six highest-class magazines, the big-gun magazines, is 760,000; their circulation has doubled, while others have come along from almost nothing.

Mr. STERLING. I agree with you that they have increased greatly.

Mr. DICKINSON. They naturally would, with the growth of wealth and population.

Mr. POST. It is not the growth of wealth. The growth of population does not show that there is an increase always in magazines. Before the days of printing presses, the population increased. The growth of magazines is due to the performance of a great service by the publishers and a profit to the people thereby.

Mr. STERLING. While the good magazines have increased in numbers and circulation since that time, it is also true that the trashy magazines and, I will say, harmful, because some of them are harmful, magazines have sprung up since that time.

Mr. POST. I couldn't agree to that.

Mr. STERLING. The only one there was before that was the Police Gazette.

Mr. POST. That is still going. The Police Gazette is one of the survivals of the almost pre-Victorian era.

Mr. STERLING. The Police Gazette has been barred by the Post Office Department?

Mr. POST. I don't know. I guess it has, from time to time, perhaps. But, Congressman, the point is this; I am not contending that there are not trashy magazines. There are. Those are the magazines this law helps; they carry the smallest amount of advertising of any of the magazines, consequently they are carried for less. As to the question of developing or restricting magazines, the law of the survival of the fittest applies there, the same as anywhere else. As people grow and develop, they will outgrow their taste for them. Your recollection and mine proves that perfectly. As to the character of magazines to-day, the trashy magazine is comparable with the dime novels and the character they were.

Mr. STERLING. I am speaking about magazines, the novels did not circulate on second-class mail rates.

Mr. POST. They were issued weekly, and there was a big fight to bar them. They did circulate for a long time.

Mr. STERLING. I think they should have been suppressed, don't you?

Mr. POST. We can not disagree as to that.

Mr. STERLING. I think also some of these cheap, trashy magazines should be suppressed.

Mr. POST. We can not disagree as to that, either.

Mr. STERLING. They should, at least, be made to pay their own way.

Mr. POST. The Post Office Department has ample power to make effective an order as to this harmful matter.

Mr. STERLING. I know it has.

Mr. POST. That lies with the Post Office Department, and not with the publishers.

Mr. HAWLEY. Mr. Post, before you close your testimony, I want to ask you about a few things that have been referred to here: During the progress of the hearing this morning mention was made of the rate on second-class matter in Great Britain and the method by which publications were distributed there. Have you any information on that subject?

Mr. POST. Yes, sir; I would be glad to inform you. I was talking not long ago with a publisher from England, who publishes one of these magazines. Great Britain has absolutely nothing that could be compared with our periodical postage laws. They have no periodical postage rate. In the first place, Great Britain is a very compact country; Birmingham and Liverpool and London can have a daily paper delivered to them on the same day of issue; it is a very highly populated country. The magazine distribution is similar to that which is conducted by the organization Mr. Faraly represented, the News Distributing Co. I am also informed that the New Distributing Co. in England is also practically the censor. The periodicals there have such a high rate in the mails that there is no distribution in the mails to speak of at all.

This gentleman of whom I speak was publishing a magazine in England with a circulation of 150,000, and the number he circulated through the mails was less than 200. Their rate there is 8 cents a pound; the result is that the distribution is done by this distributing company, and they do not want cheap postage because it would take away their business if the magazines were to be circulated through the mails, and therefore they try to prevent the enactment of liberal postage laws for the distribution of the magazines.

Mr. HAWLEY. Now, take two magazines, one published in this country and one in Great Britain, that you would say were of the same literary quality, what would be the price of that one in England as compared with the one in America?

Mr. POST. I can give you a concrete example; take *Colliers*, or the *Saturday Evening Post*, both are 5-cent publications. They have editorials, art subjects, cultural matters, articles by prominent writers, pictures of current events, and fiction. I think a perfectly fair comparison would be the *London Illustrated News* or *Graphic*; they are a little bit larger than the *Saturday Evening Post* and larger than *Colliers*; they are printed on heavy paper, superfinished; they carry incidentally a heavy amount of advertising, more than the

American papers do; they carry pictures and reading matter, fiction, and other matter, and they sell for a shilling; that is, 25 cents. That is five times as much as *Colliers* and the *Saturday Evening Post*.

Mr. HAWLEY. Do you think that is a fair comparison between the magazines in England and this country?

Mr. POST. Yes, sir. When you come to the lower priced publications, there is *Tid-Bits*. I am not certain of the price, but my recollection is that it is 4 or 5 or 6 cents. It is a publication about the size of *Colliers*, published on news-print paper; it is edited in good part with paste pot and shears; there are some articles in it. That magazine has attained a very good circulation from the news stand, their only means of distribution. It appeals to a certain class. The English publications are expensive publications. I should say, in fact, that the bulk of the periodicals, the periodicals of that country, compare with some of the more voluminous publications in this country. The publications are expensive and intended for the upper class, while our publications reach out and reach a large number of people who can read and who do read. Their publications are mostly of the 25 and 35 cent variety.

Mr. HAWLEY. How does the *Illustrated News* or *Graphic* compare with the circulation of publications of like character in this country, taking into consideration the population of England as compared with the population of America?

Mr. POST. I should say infinitely less. There are not many people in England who can afford them; I am informed it is around 125,000. It is a large publication, circulating in the Crown colonies, circulating outside of the Crown Kingdom.

Mr. HAWLEY. The point with me was I understood this morning that there are very few periodicals go through the post office in England.

Mr. POST. Very few; practically none. Out of 150,000 copies published by the gentleman I spoke of, under 200 copies go through the post office. He said, in fact, 150 or 175, he thought.

Mr. HAWLEY. Then they have a very small subscription list?

Mr. POST. Practically none.

The CHAIRMAN. We have a roll call for a quorum in the House. Are you through?

Mr. POST. Yes, sir; just two corrections. I want to make this change in the map—

The CHAIRMAN (interposing). All right.

Mr. POST. In making the map of the circulation in Canada I want to make a change in that map.

The CHAIRMAN. All right, you may make the correction, Mr. Post.

Mr. POST. And I would like to put in that one portion of the testimony that was left out. On page 1424, the hearing of June 29, in reply to the chairman's question in regard to the newspapers of local circulation, my reply was intended to apply to local as well as free-in-county papers. And I would like that portion of the colloquy that was omitted by request, I would like to have that in. I am afraid that by leaving all of that out, and the stenographer's memorandum showing that something is being left out, conveys something to the reader that was not intended; that is, in regard to my calling on officials here. I would like to state that the official I called on was my father, who is an official over there.

The CHAIRMAN. Very well, your statement corrects that.

Mr. POST. And in regard to the Shepherd's Journal. Have you a letter from Mr. Meredith in regard to the Shepherd's Journal?

The CHAIRMAN. No, sir.

Mr. POST. On page 1300 of the hearings, on June 28, when Mr. Meredith was here, he was inquired of about the Shepherd's Journal, and in which it was stated that that publication was still in existence. Our information is as follows: That the Shepherd's Journal was discontinued; it was printed by the Western Newspaper Union, and a representative of the Western Newspaper Union familiar with the facts states, to the best of his knowledge, that nothing has been printed in the Shepherd's Journal for the last 12 months, and that all cuts are still in the possession of the Western Newspaper Union, as well as a lot of accumulated matter. Information leads to the belief that it was discontinued because of inability to take care of printing accounts.

The office of the Shepherd's Journal, formerly in the Tower Building, Chicago, and investigation shows that there is no longer the sign of an office there, and the building knows nothing of the former editor, except that he is in Washington somewhere, apparently identified with the Food Administration. Inquiry at the office of the American Sheep Breeder, a publication that is in close contact with all sheep breeding or shepherd publications, revealed the fact that they had not seen nor heard of a copy in a long time. I wrote to the committee asking for a copy of the testimony of Mr. Reid, publisher of the Shepherd's Journal, but up to the time of making this statement have not received a copy of that testimony, or I should be glad to have it referred to for further details. That covers the Shepherd's Journal.

I just want to reiterate the fact that copies of all of the correspondence of the Publishers' Advisory Board, all of its financial transactions, is entirely at the disposition of the committee, and if the committee desires, we will furnish copies of that as it occurs from time to time.

The CHAIRMAN. If you think it will add anything to the enlightenment of the committee and Congress, and will relieve any suspicion that may rest on you gentlemen for the propaganda you have been carrying on, you might file it; all the receipts and expenditures—we will leave that to you.

Mr. POST. Just one other point in conclusion.

The CHAIRMAN. Very well.

Mr. POST. And that was, in view of the publicity that has been given to your statements in regard to a publishers' lobby or organization of any kind, of a sinister character, otherwise than as we have laid our matters before you, we want to absolutely disavow any such.

The CHAIRMAN. I think there is sufficient evidence before this committee of what the public would call a lobby—of a real lobby. There is abundant evidence that such a lobby has been maintained in Washington; but there is no intimation from anybody that there was any sinister influence, that is, that you gentlemen were trying to corrupt anybody or that you were trying by foul methods to unduly influence anybody.

Mr. POST. We are appealing to the public, as the record shows. I have only seen two Congressmen, both of whom are personal friends.

The CHAIRMAN. I think there is evidence to show, as I say, that there was maintained in Washington a publishers' lobby—that is, what we understand is meant by a lobby. I think the evidence shows that Maj. E. B. Stahlman spent a great part of his time here at the Willard Hotel at the expense of the Newspaper Publishers' Association as a lobbyist against the zone system. All of us here as well as the newspapers know that he has been most active last session and this session in his opposition and against the zone system. I think the evidence shows that Mr. Glass, president of the Daily Newspaper Publishers' Association, was here a part of his time, stationed at the Raleigh Hotel, in the interest of repealing or suspending the operation of this zone provision. While it was stated in his behalf that most of his time was given to the print-paper proposition, I think there is evidence that he and others were here in the interest of this zone matter; and he was maintained here—all his bills paid—by the Publishers' Association. There is no evidence, nor has there ever been a charge, that there was any corruption, or attempted corruption, or direct attempt by any sinister method to force any Congressman to change his views or to vote for the publishers.

I think there was a lobby, a very adroit lobby; I don't think there is a shrewder or more adroit lobbyist than Maj. Stahlman. He is a confirmed veteran lobbyist. We were anxious for him to appear before the committee. As active as he has been with the papers and Congressmen against the existing postal provision, and owing to his prominence officially and otherwise in the newspaper associations, it was his duty to appear here. But he dared not do so. He knew and knows that the committee knows him and knows him and his lobbying character well. He was the gentleman that made the fight last session for the newspapers. He has been a big factor in their propaganda. It is very significant that neither Mr. Frank Glass, president of the Newspaper Publishers' Association, who has been in Washington up to the time these hearings begun, a great portion of his time in the interest of the daily newspapers, nor Maj. Stahlman, who represented the Southern Publishers' Association, as well as the National Publishers Association, and who was in Washington most of his time, up to the time these hearings begun, has put in an appearance before this committee. It is a little strange that both these gentlemen had to leave Washington just about the time the hearings were begun, although they were invited to come before the committee. And I want to say to you, Mr. Post, that I was a little surprised that you came in view of your propaganda and the letters you had written, but you came like a man and presented your views, and that you did it mighty well.

Mr. POST. You can expect anything, Mr. Chairman, from a man who will maintain such a lobby as we are charged with maintaining.

Mr. MOORE. You do not speak for the newspaper publishers, I understand?

Mr. POST. No.

Mr. MOORE. I want to state this, in view of the chairman's statement, that these gentlemen are reputable men in the profession, and that they probably acted within their rights in appealing to Congress in the way they did.

Mr. POST. I want to point out, also, that the organizations which you mentioned, that Mr. Glass and Mr. Stahlman represented, are not members of the Publishers' Advisory Board, and never—

The CHAIRMAN. Let us understand that: That Publishers' Advisory Board—your board—represent the magazines?

Mr. POST. Yes, sir.

The CHAIRMAN. And trade journals?

Mr. POST. Yes, sir; and the periodicals.

The CHAIRMAN. And then, there is the Publishers' Association of daily newspapers, of which Mr. Frank Glass is president.

Mr. POST. Yes, sir.

The CHAIRMAN. Then there is a Southern Association representing the southern newspapers?

Mr. POST. Yes, sir.

The CHAIRMAN. And members of that are members of the American National Association? And there may be other associations representing publications?

Mr. POST. Yes, sir. I am very glad you made the distinction, Mr. Chairman. It is very important. Mr. Stahlman is not a member of our advisory board.

The CHAIRMAN. Maj. Stahlman and Mr. Glass do not represent your association? They represent the newspaper publishers.

Mr. POST. No, sir.

The CHAIRMAN. In fact, as I understood it, they were a little opposed to the same proposition that you gentlemen favored.

Mr. POST. They are for the zone system. That is the reason I am glad you have characterized them as you have.

The CHAIRMAN. They indorsed the zone system, but desired to limit the rate to the present rate within the third zone, which would take in all their papers, and they would not have to pay any increased cost; and they tried to throw the burden of increased postage wholly on the papers and publications you represent by increasing the rate within the zones to which they would go.

Mr. POST. They were willing for further discrimination if it did not affect them.

Mr. MOORE. Let us understand that more fully. Do you speak for the Newspaper Publishers' Association?

Mr. POST. No, sir; they are for the zone system.

Mr. MOORE. You speak only for the magazine publishers?

Mr. POST. Yes, sir; only for the magazines and periodical publishers.

Mr. MOORE. And there is a difference of opinion between your publishers and the newspaper publishers as to the zone system?

Mr. POST. Absolutely.

Mr. MOORE. A difference of opinion as to the application and manner in which the zone system should operate?

Mr. POST. Yes, sir. We ask that whatever tax might be necessary in the opinion of the committee, be a flat rate. We ask for a flat rate on all publications included within the publications which we represent, and that includes the newspapers who are before you contesting the zone system.

The CHAIRMAN. Now, on the other hand, after saying that the newspapers are in favor of the zone system, but no increase within the three zones in which they circulate, but that they desire to throw the burden on the magazines and periodicals. I should in justice to them say that the publishers of the magazines and periodicals are for an increase, if an increase is to be made at all, on a flat-rate basis, which would throw a larger burden upon the newspapers than they

themselves would share, for the reason that they go to a farther zone, and the newspapers go to the closer zones; the magazines, going to the farther zones, cost the Government more; the newspapers going to the closer zones cost the Government less, and therefore if you have a flat rate, the newspapers circulating in the near zones would pay the greater part of the increase, much greater than the magazines would pay to the farther zones. In justice to both I should say that as to both, each is trying to throw the burden of cost on the other.

Mr. POST. They would reach more people—

The CHAIRMAN (interposing). But the interest of your association is to have a flat rate?

Mr. POST. Yes, sir.

The CHAIRMAN. And their interest is to have no increase in the zone in which they circulate?

Mr. POST. Yes, sir.

Mr. RAINEY. But neither group has evinced any desire to protect the Treasury of the United States.

Mr. POST. Oh, we have, Mr. Rainey; I don't want that statement to go unchallenged.

Mr. RAINEY. But the attempt is to throw it on the other group.

Mr. POST. We want a flat rate, and are perfectly willing to pay any tax on the same basis any other publisher does, a 5 per cent tax, or 1 per cent tax, or whatever is levied on a magazine, a national magazine, exactly the same as that rate is on the newspaper, whatever it is.

The CHAIRMAN. Now, as I said the other day, while the Newspaper Publishers' Association and the Magazine and Periodical Publishers' Associations are not together on the zone rate, or system of rates, one wants one thing and the other wants another—whichever will make the other pay it—while they are very wide apart on that matter, they are an absolute unit and unanimous all round in the effort to prevent any increase in rates; they are together on that proposition.

Mr. POST. No; the testimony is to the contrary.

The CHAIRMAN. The testimony is—

Mr. POST (interrupting). The periodicals already have given, and they are the only manufacturers who have given of their product to the country. I have a telegram from the Committee on Public Information saying that the publishers have already given \$500,000 of their product to the country.

The CHAIRMAN. Yes; both newspapers and magazines have patriotically responded to the call of the administration, and the Secretary of the Treasury in giving to the country free advertisements, and all that, but you must remember that even if this zone rate goes into effect this same Government to which you have responded so liberally is going to pay for you gentlemen about \$50,000,000 a year, more than they get back from you—more than you pay to them, for the service rendered you and your patrons. In common gratitude you ought to have helped the Government out in its war aims. I am sincere in saying that you have patriotically responded. You ought to give the Government considerable credit for not making you pay even by the zone system the total cost of the service rendered you. We are only getting about one-third or one-fourth by the zone system.

Mr. POST. I think that is a safe proposition to accept that. I am v the committee did not take up the theory discussed and ad-

vanced the other day, which is absolutely sound. The publishers are paying their way. Not on the figures of the Third Assistant Postmaster General, but on the evidence we would like to produce.

The CHAIRMAN. I know your opinion is entitled to great weight in the matter of cost of carrying and delivering the second-class mail matter, but against your opinion is the Postmaster General's under Cleveland's administration and the experts they had in the department; the Postmaster Generals under McKinley's administration and their experts, who investigated this question thoroughly; the Postmaster Generals and their experts under Mr. Roosevelt; the Postmaster Generals under Mr. Taft's administration and their experts; and the Postmaster General and his experts under Wilson's administration; and in addition to that we have the solemn declaration of the resolution of the National Newspaper Publishers' Association saying the Government is sustaining enormous losses by reason of handling second-class mail matter and demanding an increase by a zone system; of the Southern Association of Publishers, and the National Editorial Association, that met in Kansas City just recently, in June, all of which in convention solemnly and emphatically declared that enormous losses were sustained by the Government each year in handling second-class matter for the publishers and that an increase in rate should be made. We have, also, against your opinion, not only these authorities but the authority of Mr. Justice Hughes, of President Lowell, of Harvard College, of Mr. Wheeler, a prominent business man and at that time he was appointed president of the Chamber of Commerce of Chicago, constituting the Postal Commission of 1911, who, after a full investigation and hearings, at which the publishers of the country were present or represented, declared emphatically that the loss to the Government annually was exceedingly large and that even with the increased rate from 1 to 2 cents a pound, which they recommended, there would be an enormous loss to the Government in transportation costs alone on second-class mail matter. Now, you wouldn't blame us for taking the judgment and estimates as to costs of those whose sole duty was to get at the facts for the Government and some whose life study has been devoted to the work, in preference to you, who are financially interested, who are a paid representative of the publishers and paid to make out as good a case for them as possible?

Mr. Post. If I was only an individual—if it was only my individual opinion—I would agree with you; but I have in support of that theory, Mr. Chairman, Prof. Taussig, the head of the—

The CHAIRMAN. Dr. Taussig is a very fine gentleman, and one of the most scholarly gentlemen in this country, a great student and thinker, and a gentleman preeminently well equipped to be chairman of the great Tariff Commission, and who is doing a great and valuable work with the commission; but he knows no more about the cost of the service rendered by the Government to these magazines and newspapers than the bootblack of the man in the moon if he says it does not cost the Government more than 1 cent a pound to transport and deliver the second-class mail matter. If he takes that position, I will have to change my opinion of Dr. Taussig. But you are mistaken. Dr. Taussig has been misquoted to you. He never said anything of the kind.

(Thereupon, at 4.45 p.m., the committee adjourned to meet Monday, July 15, at 10 o'clock.)
