

A possible Cure For Cancer & Disease

This is a possible cure for Cancer & all diseases, in the pictures, I have designed part of a machine that can CONCERNTRATE all the Energy of Radio Therapy radiation in to one spot in the middle where all frequencies cross over in the dead centre, but none of the frequencies touch each other until they reach the centre.

Centre Frequency in the middle is used to track the Cancer cells with a new type or MRI scanner All other frequencies is the radio therapy frequencies, which all the energy is concertrated in the middle where they all over lap there energies.

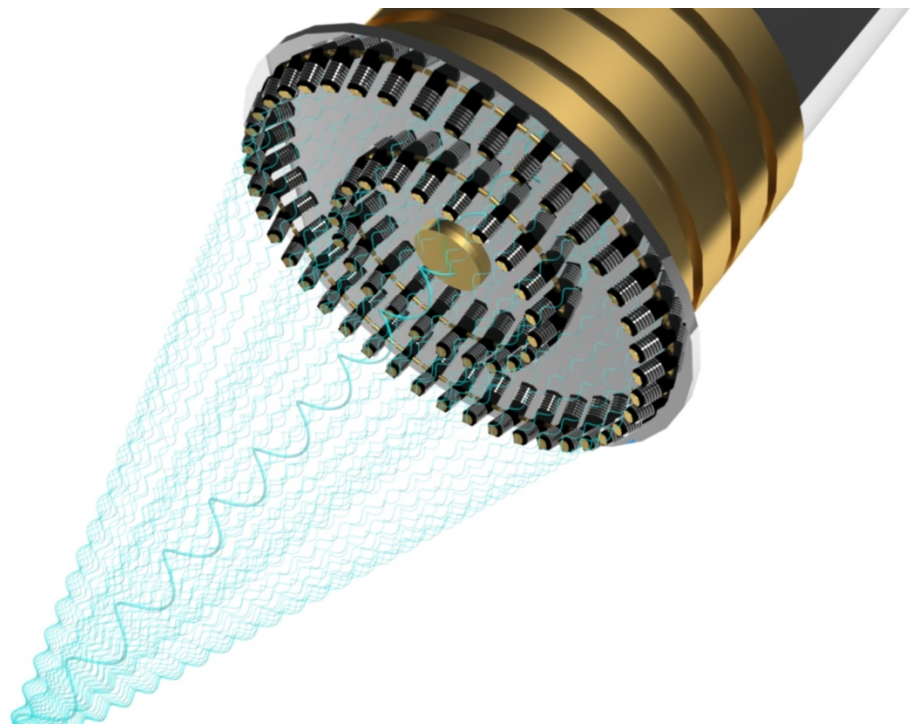

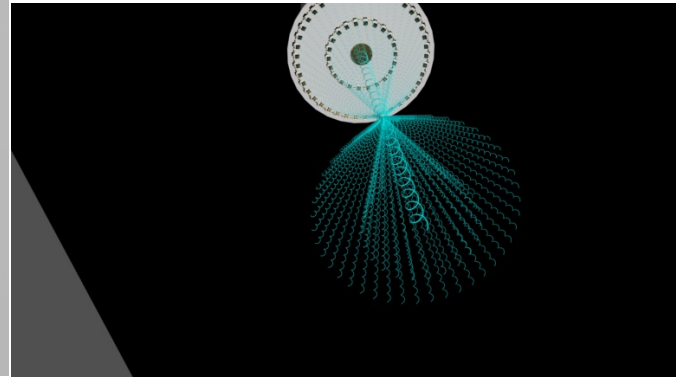

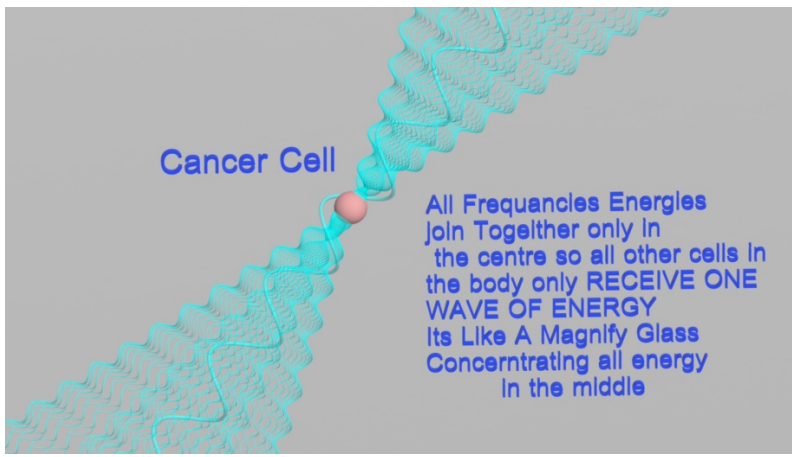

Also the cells in your body only receive one wave of energy untill they meet in the middle You can have each wave at 1% of the energy used in Radio Therapy

All frequency emmitters only have the space to emmit one wave of energy at a time.

The frequency emmitters are also on a hindege allowing them to track up and down the tracking frequency in the middle, allowing more precision.

If this works you will be able to lower the energy of the Radio Therapy frequency Radiation so it is not harm full until it crosses over in the middle allowing for high energy in the centre & low energy dispersed on all other cells the frequency touches. Destroying the cells reproduction malfunction

Like a micro wave oven you can have 500 watts of frequency energy or 1500 watts of frequency energy, nothing changes in a microwave apart from the amount of energy used.

Proteins & D.N.A

There is a protein in your body made out of ATOMS that can split the D.N.A code in two, & create other proteins according to what it reads on the D.N.A code. The ATOMS that make this protein uses quantum field energy to split the D.N.A and build proteins as well, Joining the atoms together, which gives a UNIQUE ability to break apart what we call Organic Materials in the body but is actually the ATOMS that make the building blocks of your body, ATOMS are ATOMS not organic but we are made from them using a D.N.A CODE.

These ATOMS if you can harness there energy field into your frequency wave energy then they can break apart organic mass if the energy is strong enough in the centre of my device, creating a machine that can ATOMICALLY BREAK APART ANY VIRUS including Corona & H.I.V.

Its all down to the emitter that produces the frequency. You could also use quantum field technologies to re-write the D.N.A code by building powered nano tweezer's made out of

the same ATOMS the body uses to break apart the D.N.A code and build PROTIENS for your body.

M.R.I scanner.

You might be able to build an atomic M.R.I scanner by picking up the energy of each atom in the body & instead of looking at the energy. You Render with a 3d program & replace each energy signature of like the Hydrogen atom is how it works at present, but put, and render around ball to represent the Atom itself this will give you an atomic resolution of the body. ATOM BY ATOM

Then your computer can track and trace any disease in the body & destroy it Atomically turning the disease back into Atoms.

New M.R.I Scanner

A new M.R.I scanner to cure all disease including H.I.V and the Corona virus (SARS 2). Lets start with the scanner itself, if you build a scanner using not electromagnetic fields as they use now, but by using STATIC ELECTRIC Fields, or gravity fields as that is what it is. You can then put my device inside as you can not put metal in an electromagnetic field but you can with an electro static field. The inside of the scanner you can create a bed of at least 100 of my devices all with their own armatures so they can move independent to one another, but working off the main scanner resolution so there all independent with there own processing power to cover the small area they cover, they could destroy the disease in the body using military missile tracking technology software to target the virus by its shape and form.

All you have to do is teach the computer the shapes of the viruses and to achieve this you need to render a ball to represent the Atoms themselves instead of looking at the energy signature. When you render as many Atoms of each atom you can, starting with the hydrogen atom as they use now, you will be able to create an accurate image of the body and viruses allowing you to track the disease in your body by looking at the shape of the virus.

This will take a very fast computer to render all the data that is needed and is probably the hardest bit, but if the computer takes ten minutes to get all the information and then saved as computer cache in its memory you will be able to then track the disease in the body.

An electro static field is almost the same as an electromagnetic field except an electromagnetic field you can not put metal in the machine, as it is a very powerful magnetic field, were as an electro static field is like gravity and pulls everything but not with a great force which means you can have metal devices inside the scanner. It will work the same way as the M.R.I scanner works at present but with a different field of

energy and 3D rendering technologies to represent the atoms themselves giving an atomic resolution of the body and everything in it.

This could be the cure for all disease.
